**First Publication in this Volume**

These are novels. The stories they tell, conceived and written purely for entertainment purposes, are completely fictional. All characters, except public figures mentioned in passing, are altogether imaginary and are not intended to represent any individuals, living or dead. Similarly, all events described are products of the author's imagination and, to the extent that they may reflect some basis in reality, are not intended to disparage or defame entities associated with those events.

# Fourteener: Four Corners Mysteries

## Foreword

In Colorado, where there are 53 of them, and in the mountaineering community generally, a “fourteener” (or, sometimes, “14er”) is a 14,000<sup>+</sup>-foot mountain. From my living room windows, I can see the very top of one of the more well-known fourteeners, Longs Peak (14,255'). A different view of Longs and the “Keyboard of the Winds,” its southwestern ridge, is shown on the cover.

Title and cover picture notwithstanding, such lofty topography is not what this book is about (although Longs plays a small role in the Prologue to *Wet Work*). Rather, *Fourteener* is an anthology of the fourteen novels I've written in my “Four Corners Mysteries” series, including a brand new one, *Climate for Murder*. So, sorry, no mountaineering here. There is, though, plenty of murder and mayhem, rollicking romance, food and fly-fishing, and southwestern scenery—nearly a million and a quarter words worth, in fact.

\* \* \*

I began writing these novels some twenty years ago, as a sort of challenge to myself. At the time, I had been working in positions that required significant travel between Denver or Albuquerque and Washington D.C., usually to Reagan National Airport. Back then, such trips required changing planes, for reasons I've never understood, so the trip in either direction took six hours or so. I've never been able to get real work done sitting on an airplane, so I always stopped in the airport bookstores to find something to read. And because I've always been a mystery fan—I read *The Complete Sherlock Holmes* at least three times before I got my driver's license—I gravitated toward that genre.

At first, I read books by authors whose names I recognized. Eventually, however, I ran through those and began picking out books more or less at random, based on the covers, or the synopses, or the blurbs, or some flash of (flawed) intuition. In doing so, I had decidedly mixed success. Indeed, some of those books, published by respectable, big-name houses, were just awful. Terrible. They were boring, ridiculous, overly graphic in some way, horribly written, or just dumb—or, often, some combination of these.

“I can write better than that!” I'd say to myself, frustrated with what I'd picked out.

Now, scientists are trained to be skeptical of unsupported assertions. Consequently, it didn't take too many of those exclamations of frustration for a little voice in my head to say “Oh, yeah? Care to prove it, pal?”

Switching from writing factual, carefully documented, technical papers for scientific journals—and I've probably produced another million words of that sort of prose—to writing fiction wasn't without its little adventures. My first such experience came early in the first draft of *The Dean's Murders*—I'd written myself into a dead end. Like a novice floor painter who winds up in a corner, I was stuck. The solution, of course, was to back up—I tried a sentence, then a paragraph, then a chapter section before I

found that I had to return to the beginning of that chapter to get unstuck. To get unstuck, of course, I had to make up a new storyline. But I found myself in my technical-paper-writing mode: No, I thought, I can't change anything—that's the way it happened! It took quite a while before that same little voice reminded me that I'd made the first version up from thin air, and surely I could just do that again.

Eventually, that reminder soaked in and I managed to avoid the first-version pitfall of having to kill off Dean Hal Weathers. That he's survived for twenty years, providing support and even assistance to my lead detective, validates, I hope, that initial revision.

\* \* \*

Hal may have survived for twenty years, but, through the miracle of literary license, he's not twenty years older now. Fourteen novels in twenty years is not quite three-quarters of a book per year, and at that pace it didn't take too long for me to realize that my characters were aging too fast for them to continue the lifestyles to which they had become accustomed early on. So I began writing "flashback" novels, stories that fill in gaps in their personal chronologies. Although there's no reason to be precise about it, it's fair to say, based on various bits and pieces of these stories, that they all take place in a six-to-eight year span somewhere during the first decade of the twenty-first century. Cell phones (always called "cellular" phones when all this begins) are evolving from in-car versions and dumb flip phones with towers few and far between to sort-of-smart touch-screen phones; the internet (used for "e-mail") is at first slow with difficult accessibility but becomes more and more of a real tool eventually; computer diskettes are still a thing; car models, locations (especially restaurants), and other hints point to this time period as well. I've also taken liberties with the timing of real events (such as the 2013 flood in Estes Park, a central character in *Wet Work*) to use them in these stories.

I mention this to emphasize that I've arranged the order of the novels here to match the characters' personal chronologies, rather than the publication order of the books themselves. (The publication order is shown above in the Publication History; the chronology is in the Table of Contents.) This means that *Nuclear Family*, FCM number eight in the publication order is included here third. And the newest FCM, *Climate for Murder*, first published here, is eleventh.

\* \* \*

I've omitted here the many "Afterword" sections that appeared in the original novels, but I believe it's appropriate re-acknowledge Craig Tigerman and Julie McKie for their help and encouragement throughout my efforts. My wife Claire deserves special thanks for putting up with me for all these years and for providing me with the gratification of hearing her chuckles, giggles and, occasionally, outright laughter during her reading of these stories.

I'm not in a position to say whether or not I've succeeded in meeting the challenge I set for myself twenty years ago, to "write better than that!" I can hope, however, that some of the fun I've had writing these stories comes through, and that they're enjoyable to read. Thanks for taking the time to do so.

# The Dean's Murders: A Four Corners Mystery

## Prologue

Whitby Bradford finally exhaled a huge cloud of marijuana smoke, which mixed with the steam coming off the churning water and floated away into the Sunday night sky. He was sitting in a hot tub on the redwood deck of a condominium near the base of the Purgatory Ski Area, about 25 miles up the Animas River Valley from Durango, Colorado, pondering his good fortune and trying not to feel too smug. Which was the better score, he asked himself, the pound of Mendocino County flower tops that he'd managed to purchase just before Thanksgiving, or the athletic young lady he'd met in the moguls of Upper Catharsis earlier in the day? Her tolerance for high-grade cannabis being far lower than his, she had gone inside a while earlier to sleep, and he had the hot tub, the joint, and the stars above all to himself. Which was just fine, because he needed to think, difficult as it was in his fuzzy condition.

The new pound of smoke would see him through the rest of December, and maybe even for the next several months if he didn't sell any of it. Which meant he wouldn't have to worry about making a personal purchase again for quite a while—and a good thing, because the local distributor he dealt for down in Durango didn't like his street dealers using too much themselves. But Bradford had saved enough for at least a month of groceries, partly on the volume and partly because he had bypassed Frank, the middleman, and avoided the additional markup. No way did Bradford want to end up like Frank.

Despite the hot water, the thought of Frank, so newly imprinted on his memory, made him shiver. Better try harder to think more pleasant thoughts.

In contrast to the dope, he had no idea how long his new companion would last him. She'd certainly proved earlier that she could more than hold her own in the sack as well as on the snow. Pleasant thought, indeed! He'd have to wake her up later and see if she was ready for an encore.

But the purchase of a whole pound had put a big dent in his cash flow situation despite the savings, so maybe he'd have to make a sale or two just to get rent and gas money. If things got desperate, he had the use of his Mom's condo here at Purgatory, but if he gave up his apartment in Durango, he'd have to commute, and the additional gas bills would partly eat up the savings on the apartment. And it would sure cramp his style socially not to have a place in town. His other large expense for the winter, the season lift ticket, was already taken care of, but funds would still be a bit tight for a while. Maybe he could mix the leftover Colorado home-grown he had in with some of the new stuff and sell it at a profit. But he'd have to be extremely careful, given what happened to Frank. He shivered again, and, even in his fuzzy condition, the memory of the recent events culminating in last night's conversation came flooding back.

\* \* \*

Bradford knew Ty Bortle's habits well enough that he'd had no trouble finding him the previous evening. Bortle liked to come into town every Saturday for supplies and a good drunk, and he rotated his business among several bars, all at the low end of the trendiness scale. Bradford had simply cruised past Bortle's various haunts until, at about 7:00, he'd spotted Bortle's battered pickup truck in front of the

Horse Gulch Saloon. Bradford had fed several dollars into the jukebox to provide some camouflaging noise, because he surely did not want anyone to overhear the conversation. His taste in music—new age jazz—did nothing to relieve the depressing atmosphere in the nearly deserted bar.

Unfortunately for Bradford, Bortle had been in the Gulch since mid-afternoon and was only marginally coherent. And the last thing he wanted to do was to discuss what Bradford had on his mind.

“Look, Ty, I know you don’t want to talk about what happened with Frank, but I’m worried that we could be next. I’m also worried about what’s going to happen next spring, when the snow melts.”

“Ahhh, don’t sweat it. Unless you’re trying to pull the same tricks that Frank did. Or you’re acting like a prima donna, like those people up on the campus.” He weaved on his bar stool and leaned his chin on his hand. “Besides, we’re just small-fry, not like Frank. And I’m going to worry about next spring next spring. Hey. How about buying a round for once?”

“I think what you need is some food, Ty. How about one of those pickled eggs? At least one good thing from all this is that we won’t have to buy from Frank any more. His prices were inflated and his stuff was cut. But I still don’t understand why Sal did what he did.”

“Because his prices were inflated and his stuff was cut, stupid. As a warning. For us and for Sal’s other people, here and down south and over in Cortez. And I sure got the message: Don’t mess with the quality at the street level. Sal’s worried about his reputation, or what his bosses will do, or something. Frank just got too greedy.” The very notion of a pickled egg seemed to have done wonders for Bortle’s thought processes. Unfortunately, his coordination was not similarly affected, and he had keeled over, face down on the bar.

\* \* \*

Bradford’s reverie was interrupted by a beeping noise, and it took him a few seconds to realize that he had drifted off and the telephone was demanding his attention. He shook the water off his right hand, reached over to the redwood bench, and picked up a portable handset, pushing the “Talk” button.

“Yeah?”

“Bradford? So I finally found you. You sure are a pain in the ass to track down.” Bradford recognized the voice from his last meeting with his main connection in Durango. And it got his attention. Sal had imported muscle from out of town recently, and this one was scary.

“Hey, come on, man, this number’s on Sal’s list of where to find me. What’s the problem?”

“Where are you, anyway? What’s this ‘Purgatory’ place?”

“The ski area, way north of town. Sal told me to get out of town tonight.”

“Yeah, well, he wanted me to check on where you are, just to make sure you did what he asked. You staying there all night?”

“Until morning. I’ve got to get back to town by 9:00. That OK?”

“Just stay away from that campus office of yours until then. That way, Sal will stay happy. And you want Sal to stay happy, don’t you?”

“Hey, man, Sal’s happiness is my number one priority. And I’m not going anywhere tonight.” The phone went dead.

He reached over to the bench to set the phone down and watched in detached fascination as his hand shook uncontrollably. Maybe another joint would help.

\* \* \*

## **Part I**

### **Winter Break: A Very Merry Christmas...**

#### **One**

Thinking about it later, it was pretty easy for me to reconstruct how the students found Ralph's body, based on what they told me and what I know about how students act.

It was the first Monday in December, the last full week of classes before final exams, and the students were arriving for Ralph's—that is, Professor Ralph Stiller's—course on Natural Chemical Systems. They took it in stride when the boy wonder of the chemistry department didn't show up on time, because this had happened before—as dean of his college, I got to be the one to remind him about his transgressions when his department chair got fed up. But it happened enough that the students were almost used to it, and they were usually able to find him just down the hall in his research laboratory anyway, deep into some experimental problem or other. Like many of our faculty members with esoteric research interests, Ralph was notorious for his absent-mindedness.

What they told me later was that their first concern was the set of chemical equations written in green marker on the white board behind the lecture table at the front of the classroom—the equations were far more complicated than anything discussed during the previous 14 weeks of the semester, and to make things worse, they were all one color. It seems Ralph normally used a variety of colors to illustrate the pathways of particular atoms as they were transformed through a sequence of reactions, and his lecture boards wound up covered with rainbows of the chemical elements. Absent-minded he may have been, but he was also an innovative and meticulous lecturer.

They probably gave him about ten minutes' grace, speculating about those equations all the while, before going to look for him. Finally, Fred Smits, a student of uncommon initiative, decided to check Ralph's lab. He told me that he walked down the hall and found the door to the lab slightly ajar, knocked and, when he didn't get an answer, peeked in. There was Ralph, sitting on a stool with his head down on the top of a lab bench, looking for all the world to be asleep. Smits tried to awaken him by calling his name, but that had no effect. He finally worked up the courage to try to shake the comatose form awake, only to have it spill unceremoniously off the lab stool and fall hard to the floor. Smits searched for a pulse, and when he didn't find one he dashed out to spread the alarm, first to the classroom and then to the chemistry department office, where he found me.

By some strange set of coincidences, I managed to be in on two of the gruesome discoveries in this strange episode, and this got me into the mode of feeling ownership, somehow. Not responsibility, just ownership. As if I should do something, figure things out, maybe. For one thing, they were sure a lot more interesting than the normal administrative foolishness I get to deal with. Gruesome, yes, but interesting, too.

The reason I was in the chemistry department office that Monday morning was for a visit with Prof. Linda Harmon. As the department chair, she had requested a meeting with me to open a discussion of the possibility of additional chemistry faculty positions, and I knew that I would have to say “no.” Of course, this was before I heard about Ralph's demise.

One of the first things I learned in my relatively few years as dean is that saying “no” to requests such as this is far less difficult, both for me and for the petitioner, on the petitioner’s home turf, so I had scheduled the meeting for her office. I’ve also learned that faculty expect their dean, on such occasions as this, to look authoritative but not to act like it, not too much at least. To play the part, I wore a three-piece suit, dark tan with subtle brown pin-stripes, a white shirt with a button-down collar, to acknowledge campus informality, and an understated green and brown club tie—a costume far more formal than my usual mode of dress. I knew that this would make me radiate the expected air to Linda and others, but it made me feel overdressed, like a lawyer trying to impress a jury. I tried to keep away from mirrors.

Anyway, Linda and I were pouring cups of coffee in the departmental kitchenette outside her office prior to our meeting, when a breathless student—Smits—burst in and announced, to no one in particular, that Prof. Stiller seemed to be dead on the floor of his laboratory and perhaps someone should do something. We had him lead us to the lab.

Striding down the stairs after Smits, with Linda scurrying close behind, I fumbled with my new cellular phone, first to call 911 and then to call my office to let Alice, my administrative assistant, know where I was headed and why. I knew that the call to Alice would also put the campus rumor mill into high gear and pave the way for official announcements to follow.

When we arrived at the laboratory, we found that about half the students were clustered in the hall outside, peeking in and whispering among themselves. I worked my way through the crowd, knelt to check for life signs, and, finding none, I stood and addressed the crowd through the open door.

“I’m not a physician, but it appears that Professor Stiller is dead. Uh, you may know that this is Professor Linda Harmon, the chair of the chemistry department, and I’m Dean Harold Weathers.” I looked around to find Smits. “What happened?”

Smits looked uncomfortable and seemed to be hoping that someone would rescue him, but no one volunteered. He wiped the mop of dark hair from his face and took a deep breath.

“Well, when he didn’t show up for class by ten after, I came here looking for him and found him sitting on that stool with his head down on the lab bench, and I thought he was asleep. I tried to wake him up and he fell off the stool to the floor, and when I couldn’t find a pulse I went looking for help.” He was clearly shaken.

I recognized confusion and incipient panic, in the group as well as in Smits, so I smiled gently and turned on my clergyman persona, trying to be as soothing and reassuring as possible.

“This is a terrible, terrible thing. I know that this has to be a huge shock to everyone, it certainly is to me. I’ve called 911, and the police or paramedics or someone will be here soon to take care of things. Why don’t we all go back to the classroom to talk about this.” I managed to shepherd them back into the lecture hall, carefully closing the laboratory door after everyone had left. Standing in front of the reassembled class, I maintained the clergyman approach.

“Now, I don’t quite know if I can help, but does anyone have anything to add to what’s been said or any questions?”

“Well, it *is* the end of the semester...,” came a voice.

“Oh, yes: we will need to take care of some practical matters won’t we?” I knew that some students, at least, were focused closely on their course work, especially as the semester wound down.

“You will all certainly get credit for your work in this course this semester; to do anything else would be to dishonor Professor Stiller’s memory. Linda, do you have any suggestions about this?” She had followed me and the crowd of students back into the lecture hall.

It was interesting to watch the students separate into two camps, those who had done well in the course and wanted their high grades, and the others who hadn't and hoped that the course would mercifully be canceled, or that some other reprieve would emerge. It appeared that the students in the middle of the pack had departed. I was impressed with the workman-like way in which Linda took charge of the situation, the more so for her appearance. She was only about five feet tall, and very slight; with her strawberry blonde page-boy hair, freckles, and granny glasses, she looked to be younger than some of the students. But she changed to her classroom lecture voice and everyone paid attention.

I interrupted her ad-libbed remarks about the final exam and the grades for the course to ask a couple of questions, and found that the board had been touched only by Fred Smits. None of the students had the vaguest clue about the chemical equations on the white board, beyond the fact that they looked sort of like Stiller's equations, and the class seemed intimidated by them—a couple of the students seemed to be worrying that the equations were some kind of test. Linda, a crackerjack chemist in her own right, seemed surprised to see them but had little to say, beyond noting that they were badly out of stoichiometric balance.

"Looks like gibberish to me," she concluded. "Probably just an exercise for the students to work on, homework, or maybe something he was going to use as an example in this class. He must have had a heart attack just before class, while he was sitting in his lab thinking about his lecture."

"Was he a nervous lecturer?" I didn't think so but wanted to verify it with her.

"He took teaching very seriously, and prepared everything carefully to avoid slip-ups. I expect that it was pretty stressful for him." She had taken a white-board eraser from a pocket of her lab coat and was starting to erase the board, but I stopped her. It was a little strange: she acted surprised and somewhat annoyed at this, and I had to pull rank and remind her that nothing could be touched before the police were finished with a detailed examination. Besides, it looked to me as if something was strange about the white board.

About then, the paramedics and the campus police arrived, and things got busy. I showed them to the laboratory, and then returned to the lecture hall to get the names of the remaining students and to make arrangements to pass the entire class roster along to the appropriate authorities. By then it was nearing 10:00, but someone, probably Alice, had called classroom scheduling, and they had apparently made arrangements for alternative locations for the rest of the morning classes. A note to that effect had appeared on the lecture-hall doors.

It was about 10:30 when I was finally alone, sitting in the front row of seats near the door, looking around carefully and thinking. I was sitting in a typical chemistry lecture hall, with risers for the rows of theater seats, each with its fold-down desktop, all rather well-used and worn. At the front of the room there was a table, more of a counter really, waist high, with a lab sink in one end, for demonstrations and for the professors to sit on when they wanted to be informal. None of the drawers on the white-board side of the table had been open when I came into the room, and I discovered that they were all unlocked and empty except for a couple of white-board markers—orange and blue—in one of the top ones. Large copies of the Periodic Table of the Elements hung from the walls on either side of the room, near the front where everyone could see them. The projection screen was up, so Ralph had apparently intended to lecture in the traditional "chalk talk" mode—although chalk is an anachronism with the advent of the white boards, academic clichés die hard.

While typical, the room also held certain interesting indications. A white powder at the base of the wall under the white board where the chemical equations were written was curious. So were certain aspects of the equations themselves, as I'd noted to Linda. There had been no indication of foul play mentioned to the bystanders by the paramedics or the campus police, but there was still plenty of activity in the lab down the hall, I could tell. Everyone seemed to be assuming that Linda was right: Ralph had

been victim of a heart attack, despite his well-known athleticism and healthful lifestyle. I began to think about how we would manage to replace him, given our tight budget and the difficulty we have recruiting people as good as he was.

As I was thinking about this and pondering the white powder by the baseboard, my attention was distracted by a male voice.

“Oh, man, isn’t organic chem meeting today?” I turned to find a somewhat forlorn-looking figure standing in the doorway, tall and thin, but athletic; rather older than most of the students and dressed somewhat more carefully than the typical 20-year-old.

“I thought they’d be meeting in here,” he was nearly whining.

“Isn’t there a sign on the door?” I was curious about the appearance of this person at a time that normally would be about mid-class, particularly given the strange events of the morning. “Whose course are you not finding?”

The confused student had begun examining the notice of class relocation and seemed not to hear my last question.

“Oh, here. Far out. It says that it’s been moved to some room in the administration building. Where’s that?” This question raised my curiosity even higher, because an upper-division student (organic chemistry being an upper-division course, I knew) would surely know the administration building from having paid several semesters’ worth of tuition and fees there. But he dashed off before I could do anything else, so I went back to my speculations about the classroom and our future.

I was staring off into space thinking, when at the edge of my vision I noticed yet another figure enter the room, one that got my attention instantly. I looked around at a woman in her late 30s, tall and slender but with the right curves, and long, light-brown hair. She wore a well-tailored but decidedly conservative grey business suit and had her hair pulled back rather formally. Her shoulder bag looked heavy. It had a badge in a leather wallet showing prominently.

“You must be the university official who found the body.” She consulted a note pad. “Dean Weathers? Is that right?” She had a wonderfully fluid voice and, I realized, was drop-dead beautiful despite trying to hide it. I tried not to act smitten.

“It was actually found first by one of the students. He said it was sitting on a lab stool in that laboratory down the hall and he thought the professor was just asleep. So he tried to wake him up and the body fell to the floor. He, that is, the student, found me in the chemistry department office.”

“Well, I’m glad you didn’t run off like the students and probably other people, too. I’d hate to have to put out a warrant for you.” She smiled. “I’m Lieutenant Annette Trieri, investigations unit of the Durango police. I need to ask you a few questions.”

“When your people finish in that lab, you ought to have them look around carefully in here, too. He, I mean the professor, was going to lecture in here and it looks as if he was here sometime just before he died. The students said that stuff on the white board looks like something from him, sort of. I’ve been sitting here keeping tabs on things, since no one seems to have thought to secure this room along with the lab.”

She smiled even more, which made her face light up. “You trying to do our job for us, Dean Weathers? I’ll get someone in here and then we can talk.”

I decided right then I’d have to be very careful not to make a fool of myself with this beautiful creature.

\* \* \*

We walked across the campus to my office in the natural sciences building, a pleasant stroll even in December. The variety of conifers keeps things reasonably green, and this year the November rains had helped the lawns maintain some of their summer color. Despite the season, the day was warm and sunny, with just a few high clouds. The low, winter sun angle cast crisp shadows from the buildings.

We got comfortably seated in the easy chairs in my office, drinking Alice's fresh coffee, awaiting the arrival of a pizza we'd ordered for lunch. Trying to be a gracious host, I absolutely insisted that Lt. Trieri order the toppings. As embarrassing as it is to admit, I fancy myself something of an epicure, so I was quite curious to see what a barbecued chicken and red onion pizza would be like.

"I grew up eating Italian food and had my fill long ago. Besides, it's way too rich for me now that I'm mostly behind a desk. It goes to all the wrong places," was how she explained the unorthodox combination.

Despite my attendance in recent years at a fair number of gender sensitivity training classes, sexual harassment awareness workshops, and other neutering propaganda sessions, I found myself wondering if she really had any "wrong places" and what they might look like. At least, since moving beyond Carol's death, I've been able to engage in such speculation guilt-free.

She proceeded to guide me through the process of making a formal statement. In the classroom, I'd shown her the powder on the floor and the curious aspects of the equations, and she had rewarded this contribution by mentioning that a puncture wound, as if by a stiletto or ice pick, had been found on the body and was the most probable cause of death, its being in the area of the heart. She then steered my statement toward my opinion of possible suspects, and I found myself speaking in my classroom lecture mode, sounding like a stuffed-shirt. It fit right in with my suit.

"If we limit the field to those with the skill to inflict such a wound, I should think that there are rather few on campus. If we include those who might be motivated to hire a killer, well... I don't want to slander a colleague, especially one who can't defend himself, but Professor Stiller wasn't universally loved. His brilliance engendered considerable professional jealousy among his departmental colleagues, I know. You should probably interview the department chair to find out if there are any real possibilities there."

"I should interview a piece of furniture?"

"Huh? Oh. Professor Harmon. She's the department chair right now." She continued to look puzzled, so I explained at some length how the campus gender-issue sensitivity committee, the honor of which service I'd managed to dodge so far, had set policy. After three years of often acrimonious deliberations, they had settled on "chair" to replace the horribly sexist "chairman" as an alternative to a proliferation of "chairman," "chairwoman," and "chairperson."

It had all come to a head in the theater and dance department, when an individual who'd had a sex-change operation wanted to be called a "chairtrans." The campus newspaper had carefully maintained a journalistically straight face while printing various letters pro and con. I pointed out that, if nothing else, "chair" saved on the cost of signage, given that the positions rotated among faculty members every couple of years. Her amusement was infectious, and I found that I was able to loosen up a little.

"Anyway, even if he was unpopular, I doubt that there is anyone on campus with the motivation to actually kill the man. And, as I said, I can't imagine anyone with the skill to do it this way."

"There are no medical doctors, surgeons, on campus?"

"Not on the faculty. There are some physicians at the student health center, but I don't think any of them are surgeons. And I have no clue about whether there was contact between them and Professor

Stiller. I think he was an eclectic sort of chemist. His brilliance and awards put him in the position of deciding what he wanted to teach and when he wanted to teach it and how much research he wanted to do in the meantime. Seems like he was mostly oriented toward physical and inorganic chemistry, though, so I don't know what contacts he might have had in the medical community. Again, Professor Harmon would have more to say about this."

"What about other people around here?"

"Well, in addition to the professional jealousy of his departmental colleagues, he seems to have made a variety of other folks mad at him as well. I got involved a while back in a complaint from the university library about overdue journals he'd checked out. They guard those carefully, and his cavalier attitude really disturbed them. And, when I was on the staff grievance committee, his name came up on a couple of occasions."

"In what context?"

"He was pretty arrogant when it came to his behavior with people he considered his inferior—which was just about everyone. I think that was partly his age. For a full professor, he was quite young and, well, immature. We try hard to be egalitarian by way of human resources policy around here, and staff members are encouraged to bring complaints about faculty behavior to the committee. He even offended Alice Swan, my assistant out front, who's about the most unflappable person on campus."

On cue, in walked Alice, with barely a knock.

"Lieutenant Trieri, there is a gentleman here to see you. What can I get you to drink? Your pizza has arrived. Dean Weathers, don't forget that you have the reception later this evening, but I've managed to cancel the rest of your afternoon schedule." She set down a Diet Pepsi on the coffee table in front of me, on a coaster, handed each of us a folded paper napkin (the big, expensive kind), and stood in front of Lt. Trieri looking expectant.

"Alice, why don't you send Lieutenant Trieri's visitor in, and she looks like a seltzer-water person to me." I'd noticed the confused expression and decided to rescue her from trying to keep up with Alice.

I continued, "Anyway, even if Stiller wasn't the most popular of guys, it's hard to imagine that someone on campus did the killing. Look, we're talking about murder here, and not a 'heat-of-passion' kind of killing, either, given the appearance of the crime scene. If I understand what you've told me correctly, this was premeditated and professionally executed; and the dead body was carefully arranged to appear to be asleep. I surely don't know of anyone who could have done all that."

"Um, yeah, right. Listen, did something just happen? Who was that?"

"Hmm?" I had begun looking at the sheaf of papers that Alice had handed me. "Alice? Oh, that's right: she wasn't out there when we came in. That was my administrative assistant, Alice Swan. And Alice was what happened. How, you ask, did she know that you were in here and who you are and that the visitor was yours and that we ordered the pizza? She does that kind of thing all the time. I have several theories, all revolving around the fact that she seems to be psychic, even though, as a scientist, I know that there's no such thing. Also, she operates in a mode that the computer guys would call 'multi-tasking.' Fortunately for me, she has to switch into single-task mode to talk, or else I'd be in big trouble. Come in, come in," this last I directed to a decidedly non-academic looking individual in a white lab coat with the word "POLICE" stamped across the front.

She turned around and seemed to get her bearings "Hi, Jack. All finished?"

"We think so, Lieutenant. We took a sample of that chalk dust, like you asked, and made careful pictures of the stuff on the board. With all the other traffic from the students and all in there, there

doesn't seem to have been much else. There are prints all over the place, of course, but I don't think anything will be helpful. We did find what looks like ashes on the floor of the second row of seats."

Chagrined at having missed the ashes in my inspection of the classroom, I gently cleared my throat to get into the conversation, and she nodded at me. "Did you take prints from the white-board markers? And, with all due respect, I don't think there's been chalk in there for years, since we switched over to the white boards."

"Well, whatever. And, yes, we got lots of prints from the markers."

"Thanks, Jack. I'll see you back at HQ later." At which point I walked Alice, with a pizza aloft on one hand, and in the other a small tray with a glass of soda water, with ice and a slice of lime. She set the pizza in front of us, handed the soda water to Lt. Trieri, and departed. "Thank you very much, Alice; I appreciate it," Lt. Trieri called after her. Then, more softly, she asked, "How does she do that?"

"You remember the character in the TV show M\*A\*S\*H, Radar O'Reilly? He took lessons from her. Say, this pizza smells wonderful! Barbequed chicken and onions, huh? Who would have thought?"

\* \* \*

"Ladies and Gentlemen, I believe that most of you are aware that I have an extremely painful announcement."

I had made the usual chiming noises on my wine glass and received in return the rapt attention of everyone at the reception. It was being held at the faculty club, an elegantly shabby building in the older part of the campus. Originally built several decades ago as living quarters for unmarried faculty, it had private rooms on the second floor and a dining area and large reading room on the first, where the reception was being held. The circumstances earlier in the day had been widely reported by the campus rumor mill, and, as a result, attendance was at least triple the usual for this sort of thing.

Now, I'm not an especially public person by nature, so I'm uncomfortable playing host and master of ceremonies at these sorts of gatherings. But this one was going to be particularly difficult. To make matters worse, no one but I knew that we were dealing not with a simple heart attack but more likely with murder. Every now and then I regret having given up drinking, and this was one of those times. A hefty shot of a good single-malt—that 12-year-old Macallan that my fly-fishing pal Jack Hardin carries—would have been helpful about then. I took a sip of my water as people composed themselves to hear what they thought they knew about.

"When we planned this reception to honor Professor Ralph Stiller, it was because his upcoming receipt of the Hedgeworthy Medal in Physical Chemistry was cause for celebration. Events today have dimmed the celebration, but we should remember that the honor, both for him and for our university, transcends his passing." There were murmurs at the last, and I realized that not everyone knew about the death. Despite its reputation, the rumor mill was not 100% efficient.

"For those of you who have not heard, Professor Ralph Stiller died this morning, in a place he loved and revered, his laboratory. We therefore are here to honor the memory of a brilliant colleague for one of his greatest triumphs, the Hedgeworthy Medal, and to remember a beloved friend and teacher as well." The hypocrisy worked as well in this setting as in church. I raised my glass in the traditional salute and was amused to see everyone in the room, even Stiller's worst enemies, follow my lead. "Linda, would you like to say a few words?"

Linda Harmon, in the middle of her first year in the rotation as department chair, was a typical middle-aged faculty member, which, given her gender and her small stature, meant that she was an assertive, no-nonsense scientist with considerable classroom and laboratory experience. But, like most

faculty members, she had almost nothing in the way of administrative or managerial training, and her public speaking experience was mostly limited to lecture halls and technical topics.

But I had warned her that I would be calling on her, so she was prepared. My puckish streak delights in asking people without warning to “say a few words” at receptions such as this, especially if they’ve had one too many glasses of wine. But it was just too unfair to Linda to do so on this occasion. As she launched into a careful and obviously prepared eulogy, I considered just how to present the rest of the information that I needed to convey. Faculty members are insatiably curious, making reporters look blasé by comparison, and this group wouldn’t be satisfied with half-truths or waffling. At least Annette had told me that there was no need to conceal anything.

\* \* \*

I had to smile to myself when I remembered exchanging first names. Eating pizza with someone is a first-name kind of activity, so as soon as I’d had the chance I said, “Please, call me Hal. I get ‘Dean Weathers’-ed to death around here.”

“What? I’m supposed to call the dean—the person I was always deathly afraid of because of my lousy grades and who I always went out of my way to avoid—by a nickname? I don’t know if I can manage that one. Anyway, I’ll try, if you’ll call me Annette.”

“Well, I’m an academic dean, of the College of Natural Sciences. You probably worried about the Dean of Students, who’s a guy named Homer Tuckel on this campus. And, you’re right, nobody calls him “Homer,” it just doesn’t fit. But instead of dealing with students and bothering them about their grades and conduct like he does, my job is to listen to faculty whine and figure out how to tell them ‘no’ without really saying it in so many words.”

“How do you do that? ‘No’ is pretty succinct, after all.”

“I just turn it around and use lots and lots of words, mostly about policies and budgets—their requests always seem to involve bending rules and money in some way—and watch carefully until I see them glaze over, and then end up with something bureaucratic like ‘I’m sure you can see my situation here.’ By then they’re usually too confused to know how to rephrase their request in a reasonable way, so they leave.” I couldn’t help but notice again how beautifully her face lit up with her smile. The rest of our lunch went by far too quickly for me, and to my delight she also seemed reluctant to leave after the pizza was eaten, so we continued our conversation until she finally had to get back to the investigation.

\* \* \*

I was startled to notice everyone looking at me—Linda, it seemed, was passing the baton of master of ceremonies back. Since Annette had told me that it was OK to inform the campus community of the wound, I was now about to change the reception in a way that would really give everyone something to talk about.

“Thank you, Linda. I’m sure that there will be a memorial service sometime in the next few days, and we’ll be certain to make the information about it widely available. Now, before you read it in tomorrow’s paper, I think I should pass along additional information that has emerged this afternoon. As I mentioned, Professor Stiller was found this morning in his laboratory, and, initially, it was assumed that he had suffered a fatal heart attack just before his 9 o’clock class this morning. In retrospect, that assumption was premature.”

If only I could get and maintain this level of attention from my students, what an exceptional teacher I could be! I let the pause go on long enough that several people began to shift from foot to foot and finally someone in the back let out a “Well?”

“What I’m about to say is going to shock you. However, please keep in mind that it doesn’t alter anything Linda had to say just now, and the honor and esteem in which we hold Ralph’s memory is also unaffected by it. What you will see in news reports is that Professor Ralph Stiller may have been murdered, by someone wielding a thin knife or similar weapon.”

There were gasps and several small screams, and one person dropped a glass on the ceramic tile floor out in the hall, the crash only increasing the level of tension in the room. Then, after a crescendo of conversation, the lull induced by my continued presence on the rostrum brought the questions. It turned out to be a long evening.

\* \* \*

## Two

By 7:15 the next morning, I was in my early-morning high-tech mode (or maybe I should call it my “computer weenie mode”), in front of my computer wearing an operator’s hands-free telephone headset, answering yesterday’s e-mail and simultaneously participating in a conference call. The laser printer hummed almost continuously as I cast the really important electronic messages onto a more permanent medium. Because of the conference call, which involved other natural-sciences deans around the country, I was being particularly vicious in my assignment of e-mail messages to the trash receptacle icon. But at least conference calls beat getting on an airplane.

I noticed my other telephone line blinking, and took the chance that the conference wouldn’t miss me for a minute or two. “This is Dean Weathers,” I said, after pushing the appropriate buttons.

“Hal? Annette Trieri. Geez, I thought I’d just be leaving you a voice mail message or something at this time of day. Don’t you academic guys keep bankers’ hours? How was the reception?” We had discussed it yesterday afternoon.

“No, don’t ask, and good morning indeed. This is about the only time I can get any real work done, so I try to get in before anyone else. Listen, I’d really love to talk, but I’m playing hooky from a conference call on my other line.”

“Oh. Well, I was going to ask if we could get together for one more conversation about yesterday. I didn’t quite get what you were trying to tell me about the scribbles on that white-board in the lecture room.”

“Uh,” I popped up a window with my daily calendar in it on the computer screen. “It looks like the gentle Alice has left me open for lunch. Can we do that?”

“Sure.”

“Great. It’s on in ink, and I’ll call you back later this morning about details, OK? Got to get back to the conference before they discover I left. ’Bye.”

She left a telephone number and I, with a considerably lighter heart, rejoined my distinguished colleagues in a discussion about relationships between faculty in the natural and the other sciences. The discussion, although smug, tended to be carefully diplomatic because there were several relative

newcomers whose trust we had not yet established. Even I, with three years as a member of the club, was still on a sort of probationary status. No one wanted to say anything about “unnatural” sciences and have it reported outside the clique. Fortunately, being from one of the smaller universities in the discussion, I didn’t have to say much. It was dominated by the deans from the bigger research factories, and I kept my peace.

At 8:15, Alice simultaneously sent me a computer notification and stuck her head in the door (how did she do both together? I wondered. It’s impossible to time the arrival of a computer packet) to tell me that the provost was here for our appointment. I cleared my throat.

“Gentlemen and ladies, excuse me. I’m afraid that my provost is waiting to speak with me, so I’ll have to leave you. This has been most interesting, and I’ll be thinking over the proposal for new interdisciplinary seminars for our next conversation. Have a good day, all.”

I heard a chorus of ‘Bye, Hal’s as I disconnected, unplugged myself, removed the headset, and walked out to greet the provost.

“Good morning, John. Come in. Alice will have a cup of coffee for you in a flash, I bet.”

Provost John Martin, tall and patrician, distinguished-looking with a crew-cut fringe of salt-and-pepper hair circling the top of his head and half-lensed reading glasses perched on his long nose, radiated an aura of aloofness and paternalism. He had a reputation on campus for being a master delegator, a trait not entirely inappropriate for someone in his position but one that put those who reported to him, including all the campus deans, continually on their guard. At least he was also fair and apportioned credit to the people to whom he assigned the work.

“Hal, I want to say that you did a wonderful job at the reception last night. Couldn’t have done it better myself, especially the question and answer session. That was a good idea, even though some of those questions got outright nasty. Officially, I have to ignore who asked them, of course, but sometimes I wonder about the level of collegiality around here. That question about whether this was being investigated as a conspiracy or whether it was a single killer was especially troublesome, given its implications. And source. Not that I’m too surprised, or even too upset, really, given the victim. After that son of a bitch seduced Terri, I was about ready to do something like this myself.”

I was not about to let a discussion of Martin’s daughter’s problems get started. “Well, I think we all know that there has been simmering resentment about Ralph’s behavior by a number of folks, and I expect that some was bound to come out last night. I imagine you’d like to talk about further damage control.”

“Yes, the flacks in the PR office are in a dither and don’t know quite what to do beyond saying that it’s a real shame and so on. Reporters are going to be asking things like ‘how are you going to replace him, given the budget crisis?’, and things like that, on top of questions about the circumstances. I wonder if you could stand double duty today and do a press conference this morning on behalf of the college?”

Great, just what I needed. “Well, I have a class to teach at 10:00, and that clearly has to be a top priority even in this time of crisis. And the police department has asked to talk with me again, and I can hardly say ‘no’ to them. Besides, I wouldn’t know how to answer questions about how to replace Ralph anyway, given how productive he was, unless you give me the go-ahead for at least two new faculty slots.” I just loved getting my boss over a barrel this way. “Perhaps you and President Black could appear together. The two highest-ranking university officials together would certainly show the press that we’re serious about this matter.”

“Hmm. Good idea. Alice!” Martin had moved up from being the natural sciences dean to his current position of provost and executive vice president, and he was quite unhappy that Alice had elected to

remain in the natural sciences office. She appeared almost before he said her name. “Could you please find out when President Black could be available for a press conference today? Given what happened yesterday, I should think he’d give it his top priority.” As astonishing as it might have seemed for him to expect her to demand a schedule change from the president’s office, he had seen her in action for years, and he knew it would happen.

“Now, Hal, about those questions last night. Officially, I’m going to forget that I heard them asked, like I said. But I wonder if we shouldn’t follow up with a little sleuthing of our own, to check possible motives and so on. I would hate to be informed by the police about something I should already know about. Do you think it’s possible that any of our people are involved?”

“I’ve been giving it a lot of thought, and I don’t think I can find any reason to change what I told the police investigator yesterday. It just doesn’t seem possible that anyone on campus would have the motive or skill to pull something like this off. It was obviously planned well in advance and carried out with a high degree of professionalism. Did you hear that whoever did it arranged the dead body to make it look like Ralph was just asleep? I think we ought to leave this in the hands of the police.”

“Well, I’ll be in touch after we get the press off our backs. Let me know if you find anything more from the police.” He strode out purposefully after confirming with Alice that she would find out when the president would be available for the press conference.

“Thanks, Alice,” I said as I headed out the door, toward my faculty office up on the fourth floor. “I don’t know that I could function here if you’d moved into the provost’s office. I’m sure glad you stayed here to take care of me.”

Alice smiled primly, “Me, too,” and reached for the phone.

\* \* \*

The lecture that I had planned in my own course was to accomplish what Ralph’s students had been hoping for yesterday, a review of the first part of the course in preparation for next week’s final exam. But first, I had to figure out just how to make my lunch date—which I decided I’d better call an “appointment”—with Annette as effective as I could. I had begun to think of it as a “date” almost as soon as she had called, and I knew that I would have to keep reminding myself that the purpose of the lunch was only to discuss the murder some more. Still... I stopped in a men’s room on my way between offices to have a careful look at myself in a mirror. It was clear to me that she was a number of years younger than I, and I had to decide if I would make a credible suitor. The guy looking back at me from the mirror didn’t look too sure of himself. At least he didn’t look like a lawyer today, as I’d dressed in a variant of my more usual uniform, chino slacks and a blue blazer over a red/yellow on white tattersall button-down, collar open. I kept several ties on a hook on the back of the door of my office in case something came up that called for one, such as this lunch. Older than her I may have been, but I still had a full head of dark brown hair, and my wrinkles were limited to smile-induced crow’s feet around my eyes, which looked back at me gold-flecked and brown, still bright and full of humor, at least most of the time. And all that work staying in shape had really paid off.

I decided that if I didn’t give it a shot, I’d never know.

An “effective” lunch with Annette meant getting off campus, but not overdoing things. Up in my faculty office, I began composing a list of discreet, middle-of-the-road possibilities. Durango, although small, was both a college town and a tourist center, and I had a number of choices, including an overpriced seafood place, several health food restaurants, a new Tex-Mex place that I’d not been to yet, and, just in case she was really hungry, a steak house. I almost included an Italian restaurant with dark

corners and low lighting, but then I remembered her comment yesterday about having grown up on Italian food. I thought carefully about my choices and finally called the number she'd left.

"Trieri, investigations," was the curt greeting on the other end of the line.

"I like that. I think I'll start answering my phone 'Weathers, science' in the future."

She giggled unprofessionally. But very nicely indeed, I thought.

"So, Lieutenant, where should we have lunch? Are your questions going to be tough enough to make the Palace Grill appropriate?" Ouch. Too weird. Nerves?

"Good grief. I refuse to comment on the grounds that it could incriminate me. Well, you're not going to believe this, but the best place for me will be Fannie's Saloon. I have to be out there to finish off an investigation and it's the only place in the vicinity. Think you can handle it? Just so you'll know, it's all part of the job for me, and I'm used to it. And, believe it or not, the food's pretty good. I can bring you a blindfold, if your sensitive academic nature is aroused—er, offended, I mean."

I was flabbergasted. Like any good university town, Durango had its topless joints (and bottomless ones as well, during certain easy-going city administrations) where the fraternity boys could have their fun and the more adventuresome college girls could pick up spending money. To be sure, Fannie's had a reputation for being one of the less sleazy ones, but, still, I had been thinking along far more, well, genteel lines for our first time "out" together.

"Er, yes, well, as a scientist I'm used to maintaining a certain level of detached objectivity, so it'll be no problem for me, either. I think. I'm afraid I've never had the opportunity to go in there, though, so I don't know quite what to expect."

"Oh, they have burgers, a few salads, various other hot and cold sandwiches, pizzas, a bar; pretty much what you'd expect..." She was clearly going to have her fun with this.

My real concern was not so much with being in Fannie's; it was with getting in, and getting out. I had a brief vision of myself coming out of Fannie's Saloon, with an attractive woman on my arm, and being seen by President Black and Provost Martin driving by on their way to their press conference or somewhere. Or, even worse, by Alice. Whatever this lunch is like, I decided, it better be good. At least Fannie's was well south of downtown, out on the highway on the way to Bayfield. If it had been located downtown, even far up on north Main Avenue, I'd really have to worry about being seen.

\* \* \*

It turned out that she was right. The menu looked as if the food would be fine, the place was clean and the decor was pretty generic, and the waitresses were not too distracting, as long as I stared carefully into Annette's eyes. Lovely green, I noticed, with at least as much humor as mine. She was already quite amused by my minor level of discomfort.

"Are you going to do OK with this? I'm really sorry that we had to meet here, but I was plugged into this investigation by the chief himself. Seems his other guys lose their objectivity out here, for some reason. He wants me to finish this little matter up today so I can concentrate on the killing."

"I'll be fine. It's strange, for sure, but fine. And you're right, the food looks good. I just hope that none of my students happens to work here. I imagine she'd be embarrassed beyond belief."

"Surely it would just give her a chance to get a better grade..."

"Ha! You, my good Lieutenant, need desperately to attend one of our gender sensitivity training sessions. Besides, I'm probably wrong. She wouldn't be embarrassed, working here all the time. She'd

just want to ask questions about the final next week and I'd end up in a discussion with a half-clothed young girl about how clouds influence the climate system, or something. Tell you what. If it happens, we ask her to sit down, so my face won't be at the level of her chest, OK?"

I was careful to study the menu as a young woman walked up behind Annette. "Hi! My name's Busty, and I'll be your server today? Um, somehow you folks don't look like our usual clientele?"

"No, probably not." I had decided that anonymity would be too hard to maintain and could even backfire, and my puckish streak had kicked in. I finally looked up. "I'm Dean Weathers from the university, and this is Dr. Trieri, a candidate for a faculty position whom I'm showing around town. I thought she'd like to see some local color." I watched the stain of a blush spread in interesting patterns below Busty's collar-bone.

"Oh. Um, does this mean that you'll be teaching at the university, ma'am?" It seemed that Busty was about to become extremely flexible in her future course scheduling.

"Don't worry about it. What's your real name, 'Busty'?"

"Lisa?"

"Lisa, I'm not going to be on the faculty. I'm really a detective from the police department and I'm looking into that harassment complaint you've probably heard about, so I'll be talking with you later. His Deanship here seems to have a mean streak, but don't worry, I'll take care of him. We really do want lunch, though. I'll have the grilled chicken Caesar salad with an iced tea."

Chastised, I resisted the temptation to order a chicken breast sandwich and asked for a soup and salad instead. "I didn't mean to be nasty, or anything," I said after Lisa had left. "Just trying to lighten things up," I added lamely.

She stared at me for a minute, her green eyes drilling into mine. "Look. I don't want to lecture, because I'm sure you get lots of that from the campus feminists. But these girls, even though they're pretty used to walking around with their shirts off, they tend to be close to the edge. Think about it. Most of the customers here are horny college guys or younger, blue collar workers from the community. Or stockbrokers and lawyers, for some reason. You're old enough to be Lisa's father, and a dean to boot. And you announced it. Don't you think she'd be embarrassed? Would you want your daughter to be working in a joint like this?" She reached across the table and put her hand on mine. "End of lecture. But it upsets me to see them here, when they should be in class, and fully clothed." She leaned back and cocked her head sideways, seeking understanding.

I found I'd been holding my breath, and let it out. "You're right. I'm sorry. Sometimes when I'm nervous, I screw up. But I have to say, if I had a daughter, I'm not sure but what I'd be proud to have her working in a place like this. Assuming, you know, that it's safe and all. And I bet the tips are a lot better than the usual fern-bar restaurant. The thing is, I'd want my daughter to have the self-confidence and inner strength to be able to handle this sort of thing. I'd like to think that I would raise her that well." I smiled. "Of course, I'm a great theoretician. My experimental abilities are a bit less well-tested. Who knows how I'd really react?" I was hoping that more hand-holding would be in our near future.

She studied my face carefully. "Apology accepted. And a graceful one it was. I'm not mad. Really. Now, maybe you can fill me in on your hints about those chemical equations before lunch arrives."

\* \* \*

"I'm not a chemist, but I play one on TV, as the saying goes." I reached over to the next table and snagged a fresh napkin. "Just so I know where to start, what did you learn from Professor Harmon?"

“Well, she really didn’t have much to say about the equations. She thought they were just made up, for homework, and she didn’t seem to want to talk about them. She said something about their being an example of bad stoichiometry, or something.” She pulled a Polaroid photo out of her bag.

“Stoichiometry. As in stoichiometric balance. Making sure all the atoms add up right.”

“Huh? I have to warn you, I did very poorly in chemistry. Remember my comment yesterday about being afraid of deans? Present company excepted, of course.”

I pointed at the photograph. “It’s pretty easy. See what the first equation looks like? Not the details, but the overall form? It’s something like this.” I took out a pen and wrote on the napkin:

“Except the little a, b, c, and d are numbers and the capital letters are chemical formulas for molecules. Capital D is water, H<sub>2</sub>O. Right?”

“Yeah, and this means that the stuff on the left reacts to make the stuff on the right, no?”

“Right. Now, the big A, B, C, and D are molecules made up of various kinds of atoms,” I pointed back at the photo. “See, here’s an N for nitrogen, here’s a C for carbon, H is hydrogen, O is oxygen, of course—what this says is that the A and B molecules react, which means that the atoms recombine, to make the C and D molecules. But unless this is a nuclear reaction—and let’s assume it isn’t, because the elements are all wrong for that—we have to end up with the same numbers of the same kinds of atoms that we started out with. Atoms don’t change unless there’s a nuclear reaction. You make them balance by adjusting the little a, b, c, and d to make it work out. Then, it’s in stoichiometric balance. A homework problem.”

“So, Professor Harmon was just saying that the numbers were wrong?”

“Yep. But I was more interested in something else. Here, look at this.” I pointed at the snapshot again. “I’m no handwriting expert, but it looks to me as if at least two different people wrote these equations. The molecular coefficients look like they’ve been erased and changed, and some of the atomic coefficients, these subscripts, looked messed with, too. And the atomic coefficients are what determine the character of the molecules involved, what’s reacting and being created. So someone was either trying to invent new chemicals or was trying to hide what they’d done by changing it.”

“Why didn’t they just erase the whole thing?”

“Yeah, I thought of that, too. But did you see a white-board eraser in there? There wasn’t one in the drawers, I checked. They have a habit of walking off, and savvy lecturers always carry one with them. Linda had one in a pocket that she pulled out to try to erase the board before I stopped her. And if there wasn’t one there, erasure becomes a problem. That marker ink rubs off easily, but it messes up your fingers quickly and then you just start smearing it around. And nobody wants it on their clothes. So it would be a lot easier for someone to cover his chemical tracks by changing a few numbers than by trying to erase the whole thing.”

“There was no eraser on Stiller’s body when we did the inventory yesterday.”

“I wondered about that. Despite his faults and foibles, he was always well-prepared for class. No way was he going to look foolish in front of a room full of students. So I’m sure he would have always carried an eraser into class.”

“So you’re saying that he wasn’t really ready for his class?”

“Looks to me like he and someone else were in there, I mean in the classroom, discussing chemistry sometime before he was killed in the lab, and they were using the white board in the classroom to illustrate their conversation to each other. Hmm. Although I suppose he could have been killed in the classroom and carried into the lab. Anyway, whoever the someone was, he didn’t want anyone else to know what they were talking about. Is the time of death fixed yet? I suppose it’s too soon to have word on the make-up of that powder.”

“I don’t think the coroner is finished yet, and chemical testing usually takes about a week. But, look, if you’re right, it means that Stiller and whoever were in the building well before the class, maybe before dawn. How would they be in there at night? Surely the buildings aren’t left unlocked?”

“Professors, especially ones who do research, get pretty much what they ask for in the way of keys, so I expect he had 24-hour access to the chemistry building. I think what will be interesting is the results of the chemical tests.”

\* \* \*

Lisa/Busty came back with our lunch, holding the serving tray strategically in front of her. As she was distributing the food, I grasped the nettle.

“Lisa, I’m truly sorry if I embarrassed you. I was just trying to have some fun at the university’s expense. I think you can be assured that we’d never bring job candidates here for interviews, male or female. Although I may be wrong about the athletic department.” I smiled encouragingly.

She brightened. “Well, thanks, I’m, like, really glad because I worry, you know, about the women professors sometimes? The men are pretty easy to deal with, but the women can be pretty tough.”

“Lisa, listen. And tell the other girls this, too. If anyone from the university, faculty or staff or whatever, gives any of you any grief at all about your working here, I want you to let me know. I promise to do something about it. We’re here to educate people and to provide them with the tools to help them find rewarding lives in the future. Not to make judgements about what they’re doing to put themselves through school. OK?”

She walked away, her mood noticeably improved. I looked over to find Annette poking at her salad. “Better?” I asked.

She looked up and arched an eyebrow. “Let’s just say that you scored enough points to bring your total back up above zero.”

“Well, that’s a relief. And I’ll work hard to get it higher, believe me. Maybe this will help. Yesterday, I forgot to mention one additional thing about the time I was sitting in the classroom before you arrived. A guy, I assume he was a student, came to the door asking about an organic chemistry course. I guess he didn’t notice the classroom change note on the outside of the door, or something. I didn’t really think much of it at the time, but it was at about 10:30, in the middle of the class hour, and he didn’t know where to find the administration building, where the class had been rescheduled. It seemed to me at the time that anybody who’d been around long enough to get to organic would know such a thing. Maybe it’s no big deal.”

“You didn’t get a name, or anything?”

“No, he disappeared just as I was about to ask, but I could probably recognize him if I saw him again. Reasonably well-groomed as students go, athletic-looking. He had a sort of an older look, like what we call “nontraditional” students. People who don’t go straight from high school to college.”

Her green eyes stared into mine, and she smiled. “Looks like we’ve a reason to stay in touch, no?” For some reason, that made lunch taste especially good.

\* \* \*

### Three

As I walked through the door into my office suite, Alice looked up and asked dryly, “How was lunch? I’ve heard that the menu there is better than the atmosphere.”

I couldn’t believe it. How could she know where I had gone for lunch? It wasn’t possible that Alice would have had my telephone tapped, especially the one in my faculty office, but how else could she have known? Of course, I’d announced my presence to Lisa at Fannie’s, and no doubt others there had heard me, but how in the world did Alice find out so quickly? And who else knew?

“It’s strangely incongruous. Except for the dress code, it’s like any other yuppie chain restaurant. Lieutenant Trieri was out there investigating a harassment complaint. She’s sure a pro.” Maybe that would defuse matters.

“No doubt she feels the same way about you.” Now what the hell was that supposed to mean? I fled to the relative security of my office. As I was closing my door, she got in a final shot:

“Don’t forget your meeting with the sabbatical policy committee at 2:00, Dean Weathers.”

As I was digging out my sabbatical committee file in preparation for the meeting, I realized with glee that I had two separate, but not completely unrelated and by no means unpleasant, problems to mull over during the coming meeting. Maybe I could stretch them for the rest of the afternoon, which included meetings of the provost’s budget committee (at 3:00), the faculty of the physics department (at 4:00), and an informal gathering at the faculty club at 5:00 to discuss the future of athletic scholarships.

On the one hand, I had to figure out how to arrange for another meeting with Annette, or if I should just ask her out on a real date. I’d only met her yesterday, of course, so there was no real rush, beyond my rather boyish enthusiasm. But I didn’t want to wait too long. Lunch had been very, very encouraging, despite my gaffe with Lisa, and I wanted to maintain the momentum.

And on the other hand, I had to decide just how much additional eccentricity my campus reputation could stand. What if I became a semi-regular at Fannie’s for lunch? The food was good, and the scenery was truly outstanding. Such variety! Solving one problem could well solve the other, of course, because I suspected that Annette really didn’t like the food enough to go there.

As I was walking out the door, my cellular phone tweedled, startling me. I hadn’t remembered it was turned on. Only a few people knew its number (including, as of lunch, Annette), so the potential was limited. I fished it out of my jacket pocket and managed to work it open as I strode out the door past Alice.

“Hello? This is Dean Weathers.”

“Listen up! You’d be smart to keep your nose out of police business in the future. You academic types are out of your depth with this one, so butt out!” Click. I felt a chill slide up my spine, and I stopped cold, staring at my phone. Just then, classes burst forth (so, it was 10 minutes ’til 2:00, I noted absently), and I had to move or be trampled. As I walked, I punched in Annette’s number, which, I realized, I’d memorized from only one other call to her. Hmm.

“Hello, you have reached voice mail for Lieutenant Annette Trieri, investigations unit, Durango police. Please leave a message after the tone and I will get back to you as soon as I can. You can press one now for a human, but I don’t know who it will be.”

“Well, I wish it were you. Annette, this is Hal Weathers. I just got a threatening phone call, apparently related to the Stiller case. Could you call me on my cellular phone please? I’d really appreciate it. Thanks.”

It was during an especially pompous speech by one of the math professors on the sabbatical committee that Annette called me back. I always resent it when other people’s phones interrupt meetings, so now I felt like a jerk. I jumped up and, on the way out of the meeting room, answered in a stage whisper, “Weathers.”

“What, no ‘science’?”

“Uh, just a sec... There. I was in a meeting. Sorry.”

“What’s this about a phone call?”

I was much, much calmer than I had been when I left her the message, having had about 45 minutes of a soporific meeting to relax, so I was a little embarrassed that I’d called her at all.

“Well, I don’t know. I give you my secret phone number, and the next thing I know, some torpedo is telling me to butt out of police business if I know what’s good for me. Did you write the number on the wall somewhere, or what?” I hoped I conveyed a sense of lightness and humor.

“You’d be surprised to know how public these numbers really are. Who else knows it, officially, and what did he say exactly?”

“I told you the number at noon, and about a dozen other folks around here know it. I haven’t had it very long, so it hasn’t gotten around much. The provost. Alice. Nobody particularly threatening. And he said something like ‘you’d better keep your nose out of police business in the future. You’re out of your depth, so butt out.’ It was two sentences and click. No time for a response or anything. Hey, does this give me an excuse to come down to the station so I can make a statement and see you again?”

I could feel her smile over the phone, or at least so I imagined. One problem solved.

“I guess that would be a good idea. I’ll be here until about 8:00.”

I resisted the temptation to ask if she wanted to have dinner after that.

\* \* \*

For the rest of the afternoon, I killed the time in my meetings by reconstructing the “incident,” as I began to think of it, as precisely as I could and writing it down. I managed this by pretending to take notes of the salient points (few and far between) made by various people at the meetings, and, when called on at the physics meeting to speak—that’s why I was there, after all—impressed all present with my commitment to the physics department, its outstanding faculty, and its ambitious teaching program. At least I knew exactly what time the thug had called. Maybe the cellular people could do a backtrack from their records and see where the call had originated.

That evening, after a light supper I drove downtown and parked across from the police station on Tenth. The front desk sergeant was not particularly impressed when I asked for Lieutenant Trieri, but he did look surprised when she showed up so quickly and greeted me so warmly.

“You know, your Deanship, we seem to be seeing a lot of each other lately.”

“I hope that’s OK with you. I certainly am enjoying it.”

“A meeting in a classroom at the scene of a murder; two lunches in two days, one in your office with no chaperone and one at a strip joint; and now this. At least I can’t suspect you of setting me up, though. Surely you’d do better than the police station for that.” She fairly twinkled. “And wipe that grin off your face. People will think I’m not doing my job and being serious enough.”

“Yes sir, ma’am. And I confess. To anything. Just promise me you’ll come and visit me in the stir.”

“Ha. You wouldn’t last ten minutes in prison, pretty boy. Have a chair—the kind you sit on. Now, do you want to make a formal statement, or what? I don’t know how long it will take to get a steno in here.”

“Well, actually, I’ve calmed down a lot since we talked about this before, but it is a little scary. I mean, all we’ve been doing is talking, and I’m not snooping around or doing any real investigating, or anything. I guess what’s the strangest thing is that someone would know that I’ve taken an interest in this case and have talked with you beyond my initial statement yesterday. But it looks like this person is threatened by me, and that’s real weird. Remember what I said to Lisa today at lunch, about letting me know if anyone from the university got out of line with her? Dealing with that would be about as threatening as I ever get with anyone.”

“Yeah, I’m puzzled, too. Not about the mechanics of someone getting your number or even having seen us together. But why the perp would be worried at all. We have basically nothing to go on, no one to suspect.”

“Uh, ‘perp’? Is that some kind of law-enforcement jargon?”

“‘Perpetrator.’ Bad guy. Killer, in this case.”

I gave her the reconstruction I’d written out, and she said it would get added to the case file. She was impressed with my thoroughness. “Can I hire you to do my homework assignments for me? How much do you charge?”

\* \* \*

She walked me out of the station, continuing the conversation. We were standing on the sidewalk outside the front door, each trying to find an excuse to let the conversation continue, when I noticed her stiffen and stare over my shoulder toward the street. “Hal, I want you to sit down. On the sidewalk. Right now!” She wasn’t exactly whispering, but I’m sure no one else heard her.

“Huh?” I responded, in my usual highly intelligent fashion.

“Sit. NOW!” No whispering this time. Just as I started to crouch down, I saw her reach behind her back and pull out a service revolver. My sitting motion halted abruptly when her voice changed completely and, with astonishing authority, she commanded “FREEZE!!” as she aimed her weapon at something behind me. Then, even louder, “SERGEANT!” I sat down with a thud that jarred my fillings.

There was a popping noise from across the street, followed by several very loud booms from her revolver. The door to the station opened and a half dozen officers rushed out, weapons drawn. “Over there; I think he’s down for good,” I heard her say. Then, “Well, shit. Excuse me. Hal, you OK?” She was fiddling with her weapon, putting it in a baggie that she’d pulled from somewhere. “I just hate that. Some guys get off on the adrenalin rush, but I just get the willies. And that poor, stupid schmuck over there! Right in front of the station, no less. Where do they find these guys, anyway?” She was staring across the street.

I had risen, but found that my knees were strangely wobbly. I turned and saw, across the street, several officers bending over a prostrate form near my car. I noticed that my breathing was off kilter, too shallow and too fast, so I consciously took several deep, slow breaths.

“What...?” I was completely bewildered. To think, a couple of hours ago I’d been listening, not too carefully, but listening nonetheless, to Profs. Samuel Fix and Lewis Wilbanks bicker about how the athletic department was a bloodsucking leach on the university’s neck and only degraded the high academic standards of the institution they loved so deeply... I staggered slightly, then righted myself.

“Hal, are you OK? You look awfully pale.”

“Um, well, this is not my usual way to spend the evening. Is this something you do often?”

“Nope. My first time in anger. I don’t like the feeling. But you look awfully shaky. Can I do anything?” She stepped toward me and took my arm to help steady me. Her touch helped, probably more than she knew, and she guided me back inside the station.

\* \* \*

In Annette’s office, they seated me in the same chair as before, only off in the corner. She walked over and asked me, politely and kindly, but very firmly, to sit and be quiet. “Listen and learn.”

I watched as they rustled up a stenographer and began the questioning of Lieutenant Annette Trieri concerning a firearms incident in which a civilian was killed. There was a lot of preliminary mumbo-jumbo, badge numbers and so on, and I drifted away for a while. I came back at the point that things had gotten interesting.

“Mr. Weathers and I were standing on the sidewalk in front of the station, face to face, I was facing the street. Over his shoulder I noticed an individual crawl out from under a car on the opposite side of the street.”

“What car?”

“I’m not sure of the make, but it’s dark green, a European-looking four-door mid-sized sedan.”

I was startled. “That sounds like my Audi.”

One of the others, an individual in street clothes who was clearly the senior person present, said “This sounds relevant. Be sure and get this, Millie. Mr. Weathers, I’m Captain Walter Jankowski, Lieutenant Trieri’s superior officer. Did you say you own an Audi?”

“Yes, dark green, four doors—it’s an A4, the little one—and I got lucky when I came down earlier and found a parking spot just across the street from the station.”

“Hmm. Millie, let’s put things on hold for a minute while we all troop outside and make a positive ID.”

Troop outside we did, and I found my car being swarmed over by two people in jumpsuits.

“Hey, what are those guys doing to my car?” I’m very possessive of it and tend to resent even a foreign fingerprint.

“Those guys’ are from the bomb squad, Mr. Weathers. Any more questions? And is that indeed your car?”

“It sure is my car. Um, do they need a key, or anything? It’s got a rather elaborate alarm system.”

“Looks like they’ve already got it open. Hey, Joe, find anything?”

“There’s about a pound of C4 wired through the ignition on a timer,” came a voice from across the street. “Looks like it was supposed to go off after about five minutes of driving.”

Five minutes, I thought, would have put me on my neighborhood street, or just at home in my driveway. “Excuse me. Is ‘a pound of C4’ significant somehow?” I asked meekly.

“Just about enough to put you into orbit, in tiny pieces, of course.”

My small squeaking noise was not up to my usual level of eloquence.

\* \* \*

Back inside once more, the interview continued, after a plain-clothes officer summarized for the stenographer what had happened outside.

“So, Lieutenant Trieri, you saw an individual crawl out from under the car we’ve been discussing. What then?”

“Well, he looked up and noticed us, and while he was standing up he reached inside his jacket and pulled out a handgun. It looked like a small-caliber revolver, a .22 or .25, probably. Immediately, I ordered Mr. Weathers to sit down and reached for my service revolver. It took me a second try to get Mr. Weathers seated, and by then the perp had begun to raise his revolver in our direction. I gave the ‘freeze’ command, but he didn’t. I also shouted for the desk sergeant, but I don’t know if he heard me. The perp fired and I fired back, three shots, I think, and I saw him go down. If the desk sergeant hadn’t heard me yell, he must have heard the shots, because the next thing I knew the street was flooded with uniforms.”

“Why did you ask Mr. Weathers to sit, rather than getting him prone?”

“Well, it just seemed like a better thing to request of him. He works at the university and those folks are notoriously hard to command and control. Like I said, it took me two tries just to get him seated; I don’t think it would have worked fast enough to try to get him to lie down on the sidewalk there. He was facing me and didn’t know what was going on behind his back.”

“OK, thank you, Lieutenant. Now, Mr. Weathers, do you concur with this narrative?”

“Well, I can’t verify under oath what was going on behind me—the first I saw of the guy with the gun was after he’d been shot by Lieutenant Trieri. But everything else she said was dead-on accurate. And she’s right. The first time she asked me to sit down, my natural reaction was ‘huh?’ and ‘well, whatever for?’ Then, when she said it more firmly the second time, I started to. Then, when she hollered ‘freeze,’ I by-God froze, just for a second. Do you guys take command language 101 or something to learn to yell like that?”

“Mr. Weathers, this is very serious.”

“I understand, and I’m being serious. I never would have thought that such an authoritative command could issue from someone like the Lieutenant. However she learned to do that, it sure worked.”

“Now, Mr. Weathers, could you please state for the record why you were down here?”

I briefly recounted the telephone call, and Annette fetched my written account from the Stiller file and marked it for copying into the new file on the shooting. The plain-clothes officer looked satisfied, and released the stenographer. Captain Jankowski took the floor. “Annette, you know the drill on this. It looks pretty straight-forward, and I expect that internal affairs will put you back on active duty in only a couple of days. Meantime, you’ve earned a vacation. And you know how to find the shrink, if you want

to talk about it, OK? Based on what I've heard here, I'd say that you did an exceptional job, and prevented not only Mr. Weathers here from getting blown to pieces but also a big part of our town. Good work. I have to say, though, I'd sure like to have been able to question the perp to find out what's going on. In the meantime, while you're on leave, I'll take over the investigation of both this and the Stiller case, because it looks like they're connected, and we'll also have some lab results for you when you come back."

\* \* \*

"So," she looked at me, hunkered down over in the corner, when everyone else had left. "I've heard that campus politics can be rough, but a pound of C4? Good Lord. Who have you offended lately, anyway?"

I looked up at her blankly. "I sure wish I knew what's going on here. And I sure wish I knew what to do to get these guys off my back. Somehow I don't believe that your poor schmuck out there is the only one after me. He's probably just a flunky, and the real bad guy, or probably guys, are even now sending out the second wave. What am I gonna do? I'm just an obscure dean at a mid-sized university in semi-rural America. Christ."

She walked over to me and took my hands. "Here. Stand up. You need a hug, and it wouldn't hurt me, either. Despite my tough exterior, I'm not used to this stuff."

I was more surprised, and delighted, by this development than I would ever be able to express. "Mmm. Your exterior doesn't feel so tough to me. I hope you know how much better this makes me feel."

"Don't worry, it works both ways. Now, then..." She squeezed me tightly, and leaned back and actually kissed me on the tip of the nose. "I don't do this with just anybody, you know. Ah, you romantic academics. Lunch at the strip joint, followed by a grope in a semi-public office inside the police station." I noticed sheepishly the several onlookers outside the glass walls of Annette's office. "One of these times," she grinned "we should consider finding a place that's a little more private."

"And a lot more romantic," I added. "I absolutely promise."

"But that means that we have to keep you alive in the meantime, no? Hmm." She stared off into space.

Just then, a young woman stuck her head in the door. "Annette? Can I have a word?"

"Oh, hi Amy. Come in. What's up? Have you met Dean Weathers, from the university?"

"Hello Dean Weathers. You probably don't remember me, but I took your earth science for journalists course, back before you became dean."

I didn't, of course, and had learned that it was better not to pretend, so I didn't say anything.

"Listen, Annette, the beat reporter for the *Herald* is outside asking all sorts of questions about what happened out there in the street. He's got a deadline shortly and is getting panicky for the story. I really don't know what happened either and don't know what to tell him."

"Well, I'm suspended because of the shooting, so I can't talk to him, at least not on the record. But wait a minute..." she reached for the telephone. "Hello, Captain Jankowski? Trieri here. I'm glad I caught you. I know I'm on admin leave, but I have one more problem to solve. Seems that Mr. Weathers has this strange preoccupation with staying alive. And I may have a solution, but I'll have to talk with Randy Fredericks to get it done. Can I go on leave, officially, after I do that?"

She listened for a minute. “Well, OK, how about if I get him not to quote me except on ‘deep background?’ He can quote Mr. Weathers, and will need to to get this done. What I figure is, if Mr. Weathers just says publicly that he doesn’t have any idea of what’s going on beyond having had one of his faculty members killed and he can’t imagine why people are trying to kill him, but that he has complete confidence in the police protection assigned to him... Well, maybe they’ll read that and figure he’s not worth the risk. And leave him alone.”

Pause. “OK, thanks. I’ll get to Randy in time for his deadline. Bye.”

And so it was, in the next morning’s *Durango Herald*, that I would find myself quoted with reasonable accuracy:

### **Bomb Suspect Shot**

*By Randall Fredericks  
Herald Staff Writer*

*Durango* — An unidentified man was shot and killed Tuesday evening by Durango Police Lieutenant Annette Trieri after he drew a handgun and fired at her. He is suspected of planting a car bomb before the shooting. The incident occurred on Tenth Street, across from Police Headquarters.

The DPD Bomb Squad later defused an explosive device attached to the underside of a car at the scene belonging to Harold Weathers, Dean of the College of Natural Sciences at Frémont State University. Weathers was at a loss to explain why anyone would want to bomb his car, although he speculated that it may be somehow connected to the murder of a Frémont State faculty member yesterday (see related story, below).

Mr. Weather’s involvement in that case is, however, minimal. “Of course I have an interest in it, because Professor Ralph Stiller was one of our most distinguished faculty members. I also happened to be the first university official to reach the body, and I was required to give a statement to the police. Naturally, they want my statement to be as clear as possible, so we have had more than one interview. But all I can tell them is that I found Professor Stiller’s body in his laboratory and it looked like a heart attack to me. I don’t know anything about murder. In any case, I have every confidence that the protection afforded me by the Durango Police is all I need for my safety.”

The suspect in the attempted... (continued inside on p. 7)

\* \* \*

### **Four**

I was in the habit of walking from home up the hill to the campus, so it didn’t bother me the next morning that my car was still impounded—it seemed like a good idea not to complain anyway, as they’d promised to remove the bomb. I made arrangements for it to be transported to my mechanic after the police were finished with it so that the electrical system could have a complete check-out. I folded the *Herald* under my arm, stuck a computer diskette in my pocket (the ultimate in miniaturized briefcases) and headed out the door. Outside, the air was cold and damp. The usual coal smoke from the Durango and Silverton Narrow Gauge Railroad was significantly enhanced by the smell of wood smoke; from

where I was, I could see a haze layer over the valley. So far, December had been kind, but people still liked the romance of fireplaces. Now, why was romance on my mind so early in the day?

I was simultaneously startled and pleased to see the police cruiser at the curb. So they really were providing protection. I had been relieved to wake up in a house that was not burned to the ground—hell, I had been relieved to wake up at all—but I had not given the protection issue much thought. I walked around to the driver’s side window.

“Good morning. Nice to see you here! Is there anything special I should be doing?”

“Well, my orders are to watch your house for suspicious activity and to keep tabs on you. Or at least try to. Lieutenant Trieri seemed dubious about whether that would be possible.”

“I thought she was on leave because of the shooting.”

“Well, yeah, she is, but before she left the station last night, we were hit with one of her avalanches of paper. And so here I am with instructions from her. She probably also left instructions for everyone else, including Captain Jankowski on how to run her case load. What’s your plan for the day?”

“I’m on my way up to the campus, to my office. I think everything on my schedule today is on campus, and I can’t imagine that there’d be a threat there. Too many people around.”

“Hop in, and I’ll give you a ride up. It wouldn’t do for you to have an ‘accident’ on your way to work. Bad for my record and all, not to mention for you.”

Even with the delays associated with getting the police cruiser through the maze of parking gates guarding the outskirts of the campus, I managed to arrive at my office before anyone else and settled in to my morning routine of telephone calls and e-mail. I had the usual number of e-mail messages queued up, waiting for something to happen to them, and several of them were from someone new to my correspondence, with the address atl@pineserv.com. This was a bit strange. Most of my mail is from someone at “edu” or “gov”, the educational and federal government mail domains, and I’m always suspicious of anything from the business world. They’re usually ads, electronic junk mail. What in the world was “pineserv?” A landscaping company?

Before I could really get started, there was a knock on my door, but nothing else happened. I’d gotten used to Alice’s brief knocks immediately followed by grand entrances, so I forgot for a minute that I should do something.

Finally I woke up. “Come in, it’s open.”

What in the world? It was Alice, waiting to be invited in. Had a very hot place frozen over, or something? She look as elegant as ever, but her demeanor was clearly sub-par.

“Dean Weathers, I wonder if I might speak with you for a moment?”

“Of course, Alice.” I sensed something was seriously amiss. “Please, come in and sit down.”

She did, and I could see that she was trembling. The unflappable Alice Swan was, well, flapped. She sat primly on the edge of the couch, back straight, and pushed a stray end of her grey hair into place.

“Alice you look upset. Now you sit right there and compose yourself, and I’ll go out and get you a cup of tea. No, don’t move. That’s an order.”

I hustled out to the little staff kitchenette next door. Normally I would have splashed some water in a coffee mug to rinse out the dust and poured water from the simmering electric kettle into it and dunked a teabag, but this was Alice. So, I emptied and refilled the kettle with fresh cold water, turned it to high, found a real teacup with a saucer, washed and dried both, found and folded a tea napkin, rinsed the stainless tea ball and filled it with loose chamomile tea, and, when the water had come to a rolling boil,

poured some into the cup to heat it, emptied the cup, put the tea ball in the cup, and refilled it with hot water, gently raised and lowered the tea ball a few times, and then set it aside. I also grabbed a coffee mug, swished some water in it to get the dust out, and poured myself a cup of coffee from the community pot.

When I got back to my office, with the teacup and saucer in one hand and my coffee cup in the other, I gently kicked the door shut and carefully set Alice's tea on the coffee table in front of her, placing the napkin beside it. She was reading my *Herald*, eyes wide.

"This, Dean Weathers, is what I wished to speak with you about. I read it at home this morning."

I decided to let her take the lead. "Yes, Alice?"

She shifted on the couch, then picked up the saucer, and took a sip of the tea. "Well. Dean Weathers, I have worked for you now for just over three years, ever since you became dean. And, I don't know if I ever have said this is so many words, but, well, I have to say that I was overjoyed when the previous dean moved to the provost's office and you took the position here. Your style has allowed me to do my job to what I feel is the best of my ability, and I have been able to flourish, I believe, and this office, too."

"Thank you, Alice; I try. And you do an outstanding, a spectacular job. But what does all this have to do with the newspaper?"

She cleared her throat gently. "I realize that people in administrative positions here at the university tend to change jobs every few years, but I have been secretly hoping that you would stay in this position long enough for me to retire with you in this office. I'm only about five years from retirement, and I just don't like the idea of having to adapt to yet another new dean."

You mean train a new dean to adapt to you, I thought. But I was touched. "Alice, I'll make a deal with you. You keep me informed about your retirement schedule, and I'll stay in this job long enough to throw you a retirement party that'll be the envy of the entire university. And then you can retire, and that very same day I can go back to teaching. I'm certain that I couldn't function in this office without you here."

"Yes, well, we can discuss the details when the time comes." She seemed disturbed and somewhat put off her stride by the prospect of leaving the college in the lurch, as it were. "But my main concern just now is getting there. You seem, if you'll excuse my saying so, to be awfully casual about what happened last night. And, well, we have already seen violence on campus and the last thing we need..."

She trailed off, and I realized that she was on the verge of tears. And it also dawned on me that she was worried about me, not herself. Time for the clergyman persona again.

"Alice. Please listen carefully. If I seem casual, it's because, first, you know that's my style, and second, acting any differently would only make things worse. And you can be sure that I'm taking all this very seriously indeed. That long quote in the paper was carefully staged last night at the police station, designed to make the bad guys lose interest in me. And this morning, I rode to the campus in a police car, one that had camped outside my house overnight. Annette—I mean, Lieutenant Trieri—came up with the idea that open publicity is the best approach to my safety, and I think it was brilliant. I've not told anyone this, but I'll probably spend the night here: I have lots of work to catch up on anyway, and it'll be the safest place I can possibly be. During the day, there are people everywhere, and at night, things are pretty well locked down. OK? You can bet that I'm as concerned for my safety as anyone else is. Last night, when they found that bomb after Annette had shot that guy, I had a bad case of the shakes. But she got me calmed down and invented this publicity approach, and I feel a lot better."

I looked out the window. "She's quite an amazing woman."

“If you don’t mind my asking, will you be seeing her again?”

I could tell that the conversation had suddenly taken a right-angle turn. “Well, she’s on leave because of the shooting, and I think we’ve pretty much covered all the legal bases related to Monday’s tragedy, so I don’t know that I’ll have any reason to. Why? What do you think?”

Ha! Got her. I watched as she squirmed slightly in her seat on the couch.

“It’s not for me to say, sir. But, if I may, I can make a couple of observations. First, it’s been over two years since Mrs. Weathers passed away. And when you came back from lunch yesterday, I noticed a look in your eye and a lightness in your step that I haven’t seen for a long time. I don’t mean to pry into your personal life, but, well, life goes on, and all.”

How to get out of this one? “Well, you seem to have been aware of where we had lunch yesterday. And there’s just something about that place that could put a look in my eye, if you know what I mean, Alice.”

“Yes, well, there are different kinds of looks, if you know what I mean. And yesterday’s was more like Monday’s, when you were eating lunch in here with her.” She had me.

“Oh, I don’t know what to do. She’s a police officer, for heaven’s sake, and I’m a college dean. And I’ve forgotten everything I ever knew about dating. Will you be satisfied if I tell you I’ll think about it?”

She looked down at her teacup and smiled in her prim way. Then she looked up and began on the day’s schedule.

\* \* \*

Forty-five minutes later we had dealt with the accumulated paper correspondence, and I was again contemplating my backlog of electronic messages. I had long ago discovered that it was imperative to read each and every message, because the “Subject” lines on the message headers were often no indication of their importance. And that it’s better to deal with old business first, then to move to new items. It was 9:30 by the time I got to those landscaping ads. I expanded the header list and found that the five messages from pineserv.com had arrived overnight, between midnight and 3 am. Probably one of those auto-mailers, designed to flood the network with advertising during slack times: a “SPAM” attack. The subject of the first message was “Hi! Found ya!” Yeah, right. If these folks thought they were gonna sell me any bushes...

Oh. Well, glory be. atl@pineserv.com was one Annette Trieri, mailing via her local internet/mail service provider, pineserv. Why “atl,” though?

*Hello your Deanship! It only took me about 15 minutes to find Fremont State on the web and then to find your address. Probably too long, but I’m learning! My adrenalin level is still too high to sleep, so I’m trying to figure out how to tackle the Stiller killing when I get back to work. You can bet I’ll be in touch! :^) A.*

I could tell that I was clearly going to have to do something about this “your Deanship” stuff. And, normally, I thought of people who use the little sideways faces in their messages as dolts. I’d have to make an exception here, even if it didn’t look at all like her (her nose was more of an apostrophe shape, I decided). The next message was only about 10 minutes later:

*Hal: It occurs to me that your cellular phone is a clear player in this little drama of ours. It would help if you could do two things. Make a list of everyone you know who knows the number. And make a list of every call you made or received, with as much information as possible (who, when, summary of content) since Sunday night. :^)* A.

Eminently sensible, I thought. Yes, ma'am, I'll get right on it. Then, only five minutes later:

*Hal: I didn't mean to sound curt with that last message, like I'm giving orders. E-mail is so hard to put feelings into. I hope you're sound asleep right now. Sweet dreams. :^)* A.

This took me only to 12:45; but the next message wasn't until 2:30:

*Hal: Here's what I'm thinking. I want to get this written down now, before I forget it, and also before the lab results come in. Then, if they back me up, there will be two independent indications (the lab stuff and my suspicions) to point the way. Anyway, I'm thinking drugs. The white powder, of course, makes that pretty obvious. Stiller and the perp went to that classroom to do a drug deal, and something went foul. Stiller ended up dead. How, you ask, does the stuff on the blackboard fit in? Well, Stiller was a chemist through and through, you've told me. Maybe he sampled the merchandise and got high, and then went off on one of those drug-induced creativity jags that happens sometimes. This doesn't solve the crime, but it points to a specific direction. Also, the drug crowd is not to be messed with, and they could be the people after you. They know their explosives and so on. How does this sound? :^)* A.

The kid's on a roll, now, I thought. Finally, at 2:55, there was this.

*OK, the adrenalin is all gone and I'm sleepy. I wish you were here to give me one more big hug. In private. I'll think about that and have sweet dreams myself. Bye. :^)* A.

I didn't let myself dwell on that last one too long, even though I knew it would feel good to, but rather I reminded myself that people often put stuff into e-mail messages that they later regret. Nonetheless, it was a wonderful sentiment, one that would sustain me through all the meetings of the day.

\* \* \*

When I returned from my 11:00 meeting, having planned to answer Annette's messages over lunch when I had time to think, I was disappointed to find a new message from her, with the header "Last one for a while..." I popped it open at once:

*Hal: I've just reviewed all my rantings from last night, and I hope you don't think I'm shameless. I have to keep reminding myself that we met only on Monday, barely 48 hours ago! Anyway, since I'm on suspension until next Monday (they told me this morning), I think I'll use the time to relax and get away for a few days. I've got an old friend in Miami I haven't seen since her divorce, and I bet we would both profit from some rum punches on the beach together. Hope to hear from you when I get back. And I do think those lists I mentioned would be a good idea. Also, it would probably be a good idea not to use your cellular phone until this is all cleared up. See ya next week. :^)* A.

I was disappointed, relieved, and a little excited, all at once. She didn't exactly regret what she'd said in her e-mail last night, but was a little embarrassed by it. Fair enough. She was leaving town for a few days, which meant I couldn't see her, but she'd be back, and maybe I needed some time, too. But, then again, maybe not. I knew where she was going, it didn't seem to involve another man, and it classified as a romantic place, potentially at least. The outline of a plan began to form in my head. Meantime, though, there were more meetings to deal with, students to encourage, and some more detective work to be done, maybe.

I wandered over to the chemistry building to examine the state of affairs of the fatal lecture hall. Despite tight scheduling, it was empty during the lunch hour, and, not surprisingly given the university's budget, it had not been cleaned recently. Because it was out of the traffic flow, it was just possible that there was still some of the white powder left from Monday. Yep. I'd thought so, and used the fresh envelope I'd brought along to gather some up. I didn't know how much was needed to run a good sample on, but maybe there would be enough here.

The chemistry department supported, based in part on the urging of the late Prof. Stiller, a shared analytical laboratory, with state-of-the-art equipment including sophisticated mass spectrometers and high-performance gas and liquid chromatography systems. Faculty members who couldn't afford their own equipment, graduate students with specialized needs for their research projects, and a variety of clients from the real world outside the campus paid by the sample to find out the chemical composition of mystery substances they brought in. And, as a dean, I had a small slush fund burning a hole in my pocket. I happened to know the technician, Gil Taylor, from our work together on a research project with one of the atmospheric chemists on the faculty. Taylor was munching on a sandwich when I walked into the lab.

"Hello, Gil. Long time no see. What's the going rate for mass spec these days?"

Taylor, all 6'6" of him, stood up to shake hands. "Hal Weathers. What are you doing in these parts? Ah, it depends on what you think you've got, and whether it's radioactive."

"Well, it's probably not radioactive. I suspect that it's some sort of contraband, a white powder, probably with some common classroom floor dust thrown in. There's not much here, which is probably just as well if it really is a controlled substance. Hope there's enough for you to analyze."

"Does this have anything to do with the Stiller case?"

"Seems the police department neglected to sweep the floor when they were done with the crime scene. They're doing an analysis, too, but I figure an independent verification of their results by a state-of-the-art facility like yours would be useful. You need an account number up front?"

"Naw, I'll run it for free, considering it's sort of chemistry department business. The rumors have been flying thick and fast ever since Monday. I even heard that Stiller and our worthy department chair had a little fling a couple of years ago. Kind of strange, considering their age difference."

“No kidding? Ralph had a reputation as a womanizer, but I wouldn’t have thought Linda to be his type. He liked ’em young, real young. Anything else you need for this sample?”

“I am a little concerned about the illegality.”

“Got a piece of paper? I’ll just write out an instruction, noting that it may be contraband, to take the heat off you. And if it’s just the two of us who know about it, there’s nothing to worry about. If the police analysis matches yours, I’ll probably not say anything anyway. What’s a good time scale for this?”

“I’m motivated. Not by your being Mr. Bigshot Dean now, but by the detective work. I’ll see if I can figure it out by tomorrow.”

Excellent. One down and one to go. What do you suppose Amy-the-police-journalist’s last name is?

\* \* \*

I didn’t know it, but I actually had two more items on my detective agenda. When I returned to my office, I found a student waiting in the foyer to see me, Fred Smits, the one from Stiller’s class who had spread the alarm. Smits stood up when I walked in.

“Dean Weathers, I’m Fred Smits. I was in Professor Stiller’s last class. Maybe you remember me from the chemistry office and the walk down the hall.”

“At the time, I thought it more of a ‘run’ down the hall, Mr. Smits. And I don’t think I ever commended you for your quick decision-making and your leadership. Thank you.”

Smits was dazzled, as I knew he would be. “Ah, well, thank you, sir. But I wonder if I could talk with you for just a minute. I know you’re real busy, but…”

“Surely. Come in and sit down.”

We settled ourselves in my office. “Now what can I do for you?”

“Well, some of us in the class study together. It was a bear of a course, and, since we’re chemistry majors, we need a good grade. Anyway, we heard about how Professor Stiller really died, and we’re wondering if there’s anything we can do?”

“As far as I know, the only thing that the police have to go on is the wound and those mysterious equations on the blackboard. Did you hear Professor Harmon’s comments about them?”

“Well, a bunch of us heard her say that she thought they were homework for us, and we’re all glad she didn’t assign them. They were very different from anything else that we’d had all semester, lots harder looking. The whole class was talking about them for the time before I discovered that he was, uh, dead.”

“Well, I thought they were strange looking, too, because it looked like more than one person had worked on them. Did they look like Professor Stiller’s handwriting?”

“I never thought of that. I don’t remember. But I know how we can find out. Professor Stiller always wrote chemical equations real fast, and he was hard to keep up with. So one of the guys in our study group, Bobby Garcia, got one of those digital cameras—the ones that take pictures you can load directly into a computer?—and he has been taking pictures of Professor Stiller’s equations all semester. Color pictures, so that we could follow the colors that Professor Stiller used. And I bet he took a picture of the equations on Monday, too.”

“Colors?”

“Yeah, Professor Stiller would use different colors in his equations so we could follow specific atoms through the reactions more easily. He was tough, but he was the best chemistry lecturer I’ve had. One of the things that threw everyone off Monday was that there was only the one color.”

“How were you doing in the course, Fred? Need me to put in a good word with Professor Harmon?”

\* \* \*

It wasn’t hard to find that Amy’s last name was Hodges, or to get her on the telephone.

“Ms. Hodges, this is Dean Hal Weathers. I’m calling about last night.”

“Oh, Dean Weathers. How nice to hear from you again.”

“I didn’t say anything last night, because, you were right: I didn’t remember your taking my course. It was quite a while ago, I believe.”

“About six years, I think. I wasn’t expecting you to remember, or anything.”

“What did you think of the course?”

“Well, I got a ‘C’.”

“Ouch. Um, was that what you thought you deserved?”

“Well, actually it was probably generous. I was never very good at science and so I blew the factual parts of all the tests. But, really, the course was very good for me, because you spent a lot of time talking about how to apply the scientific method, scientific thinking, to earth science problems, and I did follow that. And that’s what the detectives do around here, is to use the scientific method, in their own way, to solve crimes. So your course really helped me understand how things work around here, if you can believe it.”

I was immensely relieved. I was probably going to have to ask her to bend, if not outright break, some rules and I needed her on my side. “Well, I’m sorry about the ‘C’, but I’ve never thought that grades are very important anyway. What’s important is that you actually learned something interesting and useful, and it sounds like you did. And, if I ever teach that course again, I’ll remember this conversation and emphasize process over factual content. Now. I really called because I need a favor.”

\* \* \*

One of the perks of being dean is that I always get teaching assistants for the courses I teach. And, since I had run the review session on Tuesday, it was only fair that Roberta run the one on Thursday. The exam was already made up, on a diskette locked in my side desk drawer, and it wasn’t scheduled until a week from today in any case. Now, what else was on the schedule for tomorrow and Friday? And what about the weekend?

Alice was back to being her unflappable self when I emerged from my office at 4:30 and announced that I’d be out of town until Monday. Her blue eyes looked at me over her reading glasses with an “Oh? Who says?” kind of look, but, when I reassured her that I’d taken care of the various meetings on my schedule for Thursday and Friday, and that I’d talked with Roberta about taking the Thursday class, she was mollified enough to ask simply “Do you need any travel arrangements made for you, Dean Weathers? And I do hope you’ll leave a contact telephone number?”

I dropped an itinerary onto her desk, and was out of there almost before it landed. I walked home and took care of the little chores I needed to get finished ahead of time, and then found there was the rest

of the evening to occupy. I always have a hard time getting to sleep the night before a trip anyway, so I decided to tackle the puzzle of who at the university could have supplied information to the guy that Annette had shot. Her suggestion that I make a list of who might know my cellular phone number had started me thinking already, and now I knew it would gnaw at me all night.

The obvious people were those I had mentioned to Annette on the phone yesterday afternoon, faculty, staff, and administrators at the university. But anyone who would set me up to be killed would also have had to be a part of the Stiller killing. Maybe I could find out more about Stiller.

I sat down in front of my home computer—which was actually my old office computer, with the previous generation of processor, still serious overkill for home applications—and called the modem pool at the university. Once logged into the administrative fileserver, I had access to several large databases of personnel information, including one of recent faculty research and teaching activities and another of faculty curriculum vitae. Stiller, I discovered, figured prominently in both, and even had his own research home page.

Let's see. Ralph L. Stiller, born in Peoria, Illinois, undergraduate at the University of Illinois at Urbana-Champaign (B.S., Chemistry, Highest Honors); graduate student at the University of California at Berkeley (Ph.D., Physical and Analytical Chemistry), graduating in only 3 years(!). Two-year post-doc at Harvard. Over 45 journal papers in the eight years since graduating, an astronomical publication rate. Full Professor for the past two years, meaning he'd been promoted to that level after only four here in Durango. I recalled vaguely that this had happened in order to entice Stiller not to accept an offer of a position at UCLA. No current graduate students (strange), but 5 active research grants (impressive, especially for us). No evidence of family life; apparently single (which would fit with his dalliances with students, including the provost's daughter a year ago). On the face of it, we were lucky to have someone at this level on our faculty, trouble-maker or no. In fact, it was rather amazing that Stiller had accepted a position here after the Harvard post-doc. He could have had about any position anywhere with those credentials. This implied that there was something a little off kilter about his background or his references. Or something.

But so what if he was an egotistical jerk? This made him no different from about a third of the faculty generally, and it certainly didn't lead to reasons for anyone to kill him. So the connection must be to his research work, or his technical expertise. This would fit with my discussion with Annette about the equations in the classroom. But how? That was over my head, and besides, it was getting late. But I knew I still wouldn't be able to get to sleep easily.

\* \* \*

## Five

Just after 2:30 the next afternoon, I was poking along at the speed limit, and thereby creating something of a traffic hazard, outbound on the Rickenbacker Causeway. My Hertz Gold Card had procured a bright yellow Mustang convertible, the top was down, Jimmy Buffett was blasting from the tape player, and life was good.

Yesterday, Amy Hodges had been a most willing conspirator and ferreted out the fact that Annette had registered at the Golden Palms Resort on Key Biscayne. And today, fifteen hundred or so miles later, the fine, flexible needles of the casuarina trees between the roadway and the beach rippled in the breeze. The weather was one of those made-to-order Chamber-of-Commerce days, with little puffy trade

cumulus clouds decorating an otherwise deep blue sky. Biscayne Bay on both sides of the Causeway sparkled and shimmered, occasionally making one of the many neophyte windsurfers pay the price of ambition with a big splash.

But it was so humid, compared to home. I'm always amazed to return to the Florida humidity. Just stepping off the airplane onto the airport jetway reminds me of walking into a steam room, and the airport is supposedly air conditioned. How could I possibly have survived living here without having been eaten by fungus, or slime mold, or something? And what's even more amazing, particularly in December, is the green. Durango has its share of coniferous forests, and practically everyone in town has a blue spruce or two, so it isn't as bad as the midwest. But it was definitely winter there, and the aspen groves on the mountain sides were brown-gray and most of the town was exceedingly dreary, Christmas decorations notwithstanding. But Miami was green, so green it almost hurt.

I was actually rather proud of myself for being here: I'd managed to follow through with my plan, which involved significant emotional risk and a considerable nuisance factor. Because of the time change, I'd had to get up at about 4:00 that morning to arrive in Miami in time to have some day left, the hop from Durango to the new Denver International Airport having taken off an ungodly hour before dawn. A cloud deck was pushed up against the Front Range, and the Denver area was in store for one of the wet, heavy snows the locals call "upslop." The dawn under the cloud colored everything with sunrise, casting a pink tint on the DIA terminal's circus-tent roof. I decided that the Denver pundits' claims that the building looked like nothing so much as a giant pregnant sow lying on her back, teats straining skyward, was not really all that accurate—too many nipples. I spent the layover between flights trying to imagine a better metaphor without much success. At least I'd been able to catch up on sleep on the flight to Miami, having remembered to bring ear plugs.

On arriving in Miami, my first visit in several years, I was astounded at the craziness of the airport and felt like a hick from the country, lucky to successfully negotiate baggage claim and the ride to the Hertz garage. At least I managed to find both a perfect car (except for the color) and an equally perfect room, on the twentieth floor of the Coconut Grove Hotel, with a balcony overlooking the marina at Dinner Key. From the balcony, the masts of the sailboats in the marina looked to be keeping time to the waves like a forest of out-of-sync metronomes. I could hear the squawks of the feral parrots in the ficus trees that lined Bayshore Drive, and the sea breeze smelled like ocean. After changing into my Miami uniform, loose, lightweight white cotton everything, with sandals, shades, and a University of Miami Hurricanes visor, I was ready. And now as I was cruising past my alma mater, the Rosenstiel School, and across the Bear Cut Bridge, the rest of the traffic whizzed by on my left.

Even as I was enjoying being back in Miami again, relishing the weather and the scenery, I was mentally rehearsing three different speeches I'd composed to cover upcoming bases. I hoped I'd have to use only two.

Traffic was relatively light, at least if the inherent differences between Durango and Miami were taken into consideration, and I made it out Crandon Boulevard to Key Biscayne in good time. Even though I'd been back to Miami on a couple of occasions since the big hurricane, I was still amazed at how different the vegetation looked. Just as green as before, but still shorter, as if it had been severely pruned. Some of the buildings, I recalled, got pruned as well.

I remembered the Key as a sleepy retirement community, before it became a Mecca for South American glitterati, but I was still able to find the obscure side street down to the beach and the Palms. I pulled in and parked in one of the restaurant spots and gave myself a little pep talk. If she seemed disturbed that I found her, or if she wasn't alone, I could excuse myself and spend a couple of days visiting with old friends. But maybe she'd be happy to see me. And I wasn't planning to hit on her, at least not without obvious and explicit encouragement. Of course, there was no reason to think that she'd

even be here at a quarter to three in the afternoon. All I knew was that she was registered here; I'd confirmed Amy's information earlier with a call from my hotel.

I didn't find her by the pool and was about to wander up to the second floor observation bar, when I spotted her on the ocean-side deck at one of the outdoor restaurant tables, under the coconut palms. Alone. It looked like she had an empty glass in front of her, and a soup bowl. I couldn't tell if it was also empty. My personal pep talk continued—OK, kiddo, just sit there for five more minutes, and then we'll see which speeches I get to use. As if to cooperate, she leaned forward, propping her chin on her hand, and stared out at the Atlantic.

I retraced my steps back around to the pool-side bar and got a rum punch for her and a seltzer for myself. Returning to the restaurant, I kept up the pep talk, and I stopped to pluck a garish red and orange hibiscus blossom from one of the dozens of bushes along the path. And then I walked carefully up behind her.

As anonymously as I possibly could I said, "Your rum punch, ma'am?" and set it down in front of her.

"Oh, thank you! But I didn't ord..." She looked up at me. "Hal! My God! What ... how ... oh ... but..."

While she searched about for her vocabulary, I rounded to the opposite side of the little table and sat down. Time for speech number one. I'd thought about being tritely flip ("Fancy meeting you here. Small world, huh?"), but finally I decided on full-out sincerity.

"Hi! You were pretty easy to find. You sent me all those e-mail messages and then ran off before I had a chance to respond. And I figured that you wouldn't carry a portable computer everywhere, unlike me. So, I really had no choice but to come find you. You certainly do look fetching." She was wearing a beach cover-up, probably over a swim suit, and no shoes, and her hair was pinned up. She'd painted her toenails bright red.

"Here." I handed her the hibiscus flower. "Put this in your hair over your left ear. That means you're single and the right ear means married, or else it's the other way around. I can never remember which. At least it'll match your toenails, sort of." I felt as if I were rattling on and on, but she seemed to appreciate the flower and wasn't talking much anyway.

"Hal! How wonderful! But..." Most of her vocabulary, except, I noted with gratification, my name, seemed still to be missing, so I plunged ahead while she fumbled with the flower and her hair.

"Anyhow, with regard to your last e-mail message yesterday, where you were worried about your mail of the night before. I need to say categorically that in no way, shape, or form do I think you're shameless. What I think is, or what I hope is, that you've been wrestling with the same little dilemma that I've been debating with myself about. You know, how quickly to let things develop between us and so forth. So what I finally decided to do was to stop debating, turn my brain off, and just follow my heart. And so here I am."

"Oh..." her eyes started to fill up with tears, and the left one overflowed down her cheek, so I unrolled the unused place setting and handed her the fresh napkin.

"I don't want to be too forward, or aggressive, or anything like that, so I'm going to make sure that you have all the space you need, for whatever reason, and I decided specifically not to stay here at the Palms because of that. But I hope it's OK that I'm in Miami. And that I looked you up."

"You're not staying here? Where...?" Her vocabulary was beginning to recover, little by little.

“I’m registered and checked in over at the Coconut Grove Hotel.” I chuckled. “It’s not like I wore these clothes all the way from home. Say, are you going to eat that conch chowder? They don’t serve real food on airplanes anymore and I’m famished. It’s still lunchtime at home.”

“Huh? How did you know what...? I think it’s probably cold. Where’s Coconut Grove? How far away?”

I saw my opening for speech number two, although it would need some editing on the fly, and smiled. “You’re the one who reminded me yesterday that we met each other only Monday, and a corollary of that is that we hardly know anything about each other. Tell you what. Unless you have a different idea, I propose that we spend some time over the next few days fixing that. I’ll start: I went to graduate school here, a few miles down the road. You passed it on your right just before coming over the last low bridge on the way out here. The place with the antennas and the geodesic dome—which is really a weather radar—on the roof. We grad students used to hang out at the bar here all the time, before, when it was a funky beach bar and fleabag motel. Your cold soup there, which should be hot, is one of the two best bowls of conch chowder in Miami, as far as I’m concerned. The other one is sort of across the street from my hotel in the Grove, at Monty Trainer’s.” I waved vaguely westward. “It’s over that way past the other side of the island, across the bay from here. Remember the toll plaza at the entrance to the Causeway? About two miles south of that. Miami is one of my absolutely favorite places anywhere, at least for visiting. Seen any local fauna yet?”

“You lived here? What fauna?” Before I could answer a waiter appeared behind her.

“Welcome to the Sand Bar, sir. Can I get you anything? Ma’am, are you finished with your chowder?”

“No she’s not, but it got cold waiting for me to show up. Damn traffic. How about bringing me a bowl of conch chowder, too, with extra crackers, and taking hers and heating it up in the microwave, or something? Or just getting her a new, hot bowlful? Thanks.”

“You lived here?” she repeated. “I’ve just been sitting here feeling like a stranger in paradise. I had no idea what to do next.”

“Oh, come on. I should think that all you have to do is snap your fingers and you’d be knee deep in beach hunks.”

She snorted, then burst out laughing. “Yeah, well, I like my guys to be able to speak in complete sentences. Besides, you haven’t been for a walk on the beach yet. It’s crawling with babes, 20-ish, silicon enhanced, wearing bikinis that seem to have been sized to fit a Barbie doll. There’s enough skin out there to keep the hunks away from me for a long time. It actually makes Fannie’s seem puritanical by comparison!”

“You mean I’ve got no competition? I guess I can live with that. But I thought you said something about a divorced friend down here.”

“Sherry and I got together for dinner in Little Havana, or whatever it’s called, last night, and we discovered that we really don’t have anything in common any more. She’s over her divorce with flying colors and has a new Cuban boyfriend with gold chains and something called a cigarette boat. We had a nice dinner and visit, but... Been there, done that, as they say. I really had no idea what to do tonight. Since I don’t know the area, I’m too intimidated to just jump in my car and go sightseeing, especially at night.” She reached across the table and took my hand. “Hal, I can’t tell you how glad I am to see you!”

I took a deep breath, relaxed, leaned back in the chair, sighed, and looked around in comfort. Speech number three, the face-saving one, would be unnecessary. “That’s the best thing I’ve heard anybody say all day. Including the person at the airport who told me that they’d have to upgrade me to

first class because coach was full. Even if all you need is a tour guide. You like seafood? Ever eat stone crabs?”

“Wait. Back up. You’re as bad as Alice. What local fauna am I supposed to have seen?”

“Oh. Well, you’d know if you had. The owners have probably upgraded this place too much to have them anymore. When Hurricane Andrew blew through here a few years ago, this place really got hammered, and they took the opportunity to rebuild just about all of it. But back when it was funky, it used to be famous for its palmetto bugs. Big cockroaches. That fly. Lots of them lived under the deck here.” I tromped on the flooring, and, obediently, a 3" long brown bug, with wings, crawled out from between the boards and waddled toward her feet. “Don’t worry, just give it a flick with your toe if it tries to climb on your foot. They’re harmless, really. If you live down here for very long you get used to them walking on you, at least if you live in graduate student housing. They tickle. What’s neat is to watch one of those little four-inch gecko lizards eat one.”

She tucked her feet up under her on her chair. “I’ve seen the lizards, over by the pool, doing push-ups. Please don’t thump the deck any more, OK? Yuck. Let’s see. Yes, I like seafood. And I’ve read about stone crabs somewhere but never had them. Can you get them around here?”

My contentment deepened, and I settled back into the chair even further. God, she has beautiful eyes.

“Annette,” I said softly, “I don’t have any idea about the future of our relationship—although I do have my hopes, and they’re growing—but I promise you that you’re going to have the time of your life until Sunday, or whenever you have to fly home. Ever since I got my degree and moved away from here, I’ve learned how to come back for visits and spend money really enjoying the place. And I’d like nothing better than to share it with you. How about this for tonight: we eat this conch chowder I see coming, then go for a long walk on the beach, down to the light house and back. Just past that last condo ’way down there is the state park, no more buildings for most of the walk, so it’s really lovely, about as close to ‘nature’ as anything around here. That’ll take the rest of the afternoon. Then you get dressed up a little—meaning casual evening wear instead of a swim suit—and we hop in my convertible, drive over to Monty’s and have stone crabs for dinner. All you can eat. That’ll take all evening, and if it doesn’t we can just go outside and listen to the reggae band and even dance. I’ll get you back here, all tucked in for a big day of playing tourist tomorrow, by midnight, so you won’t turn into a pumpkin. Then tomorrow morning we can get together here for breakfast and do some serious planning for the weekend. I’ll show you the real South Florida, along with the tourist stuff you’d probably miss otherwise. Sound OK?”

The chowder arrived, and so it began.

\* \* \*

Noon on Sunday found us holding hands in the executive lounge at Miami International Airport, waiting to head back west. I had changed flights to be on hers and then, in a fit of vacation largesse, had upgraded both of us to first class. We were sunburned and slightly stupefied from a mutual sleep deficit. But very, very happy. Two days and three nights in Miami and the upper Keys had, as I had proposed, fixed the problem of our not knowing anything about each other. And I’d been right all along. No “wrong places” on this woman.

I was delighted to discover that she liked the same kinds of off-beat touristy stuff that I find so charming in South Florida. The baby macaws and cockatoos at the Parrot Jungle. The Fruit and Spice Park out in Redlands, where she was able to see the way that carambolas grow. The long drive down to Flamingo through the sweeping vistas of the Everglades. The tidal channels in the mangroves in Pennekamp Park, through which you could just fit a canoe. Dinner at the Lorelei in Islamorada,

watching the sunset over Florida Bay. Not once had she mentioned shopping, cruise ships, race tracks, jai-alai, or Miami Beach. And when she ate stone crabs, she didn't fuss about the mess or just pick at them trying to be neat, she dove in head first and hardly came up for air. This, I'd decided, was a keeper. And she seemed to feel the same about me, miracle of miracles.

My reverie was interrupted by business.

"So, you told me that you'd brought some stuff related to that case back home, but we never looked at it or anything. Real life begins tomorrow, but I'm beginning to be curious about it. What've you got?" She sipped at her Cuban coffee.

"Oh, yeah. Guess we must have been distracted or something. Well, first, there's a fax that came for me at my hotel Thursday, just as I got in."

I pulled out of my briefcase the information from the analytical lab. Gil Taylor had stayed up most of the night working up the analysis, and the results were revealing. "I don't really know how to interpret these graphs, but Gil's made notes on them. He says the powder, which Durango's finest left some of behind in the lecture hall, is some kind of strange alkaloid organic compound that he's not able to put a name to. He thinks it's one of the 'designer drugs' that have been coming out of California lately. So you were right. Drugs, but not the usual suspects. It'll be interesting to see how this matches up with your lab's results, and if the blood work from Stiller's body has any relationship to it."

"Geez, I leave the office for a day and people start doing my job for me. Hmmph." But she looked pleased to have been right. "What else?"

"Well, it seems that one of the students in Stiller's class was in the habit of photographing his lecture notes from the white board. So we have lots of examples of Stiller's handwriting to compare with those equations from last Monday. And there's more to this than just the handwriting, as you'll see. That's all in my computer, and we can fire it up on the plane. Except I want to snuggle under a blanket with you and take a long nap."

She giggled. "I know what you really want to do under that blanket, you old goat."

"Oh, no, not that again. You're gonna kill me yet. I'm an old geezer, you know. And I sit behind a desk all day and my heart's all flabby and just think of the headlines." I made framing motions in the air with my hands,

“ ‘Respected University Dean Found Dead  
With Big Smile on Face In Arms of Sexy Police Woman’ .”

"Ha. Who woke up whom at 3 this morning? Hmm?"

"Well, I thought for sure you'd want to see the crescent moon rising over the Gulf Stream, and, as long as we were awake anyway..."

\* \* \*

I woke up earlier than I'd intended the next morning, partly because of the time change and partly because my bed was empty again. Amazing how quickly I'd re-adapted to sharing it. We had reluctantly decided to go our separate ways the evening before, only because practical life beckoned. Laundry was a priority, and we both really needed a full night's sleep to be ready for work again. We checked in with the police desk and found that there had been no suspicious activity in the vicinity of my home. Her publicity plan had worked, at least for the present.

Rather than try to go back to sleep, I got up and spent some extra time on my Nordic Track ski machine, to work off the stone crabs (75% cholesterol-laden fat, I read somewhere), spiny lobster, and other rich South Florida food I'd indulged in.

On my walk to work, I had the impression that I was strolling along with a stupid grin on my face, whistling a silly tune, off key. But it didn't matter, somehow. I was actually looking forward to being confronted by Alice about my long weekend away. And I was already anticipating dinner. Annette and I were going shopping to find something to make together at her place.

Getting to work extra early turned out to be a bonus, because the e-mail had piled up beyond belief. And there were several phone calls I could deal with as well. I popped open my weekly calendar to see what new meetings had been scheduled in the past two days, and found that I was still free for most of the morning. Monday morning! It was only a week ago that Stiller had been found dead and I'd met Annette.

Alice arrived punctually at 8:00, and swept into my office with a fresh cup of coffee for me and, naturally, questions. "I hope your weekend in Florida was relaxing, Dean Weathers. And that Ms. Trieri is well. It looks as if you got some sun."

I had, of course, given her that itinerary, so she knew where I went, but I hadn't said anything about Annette. Was she bluffing?

"Lieutenant Trieri was fine when I saw her last week. And I did manage to stop worrying about my safety for the weekend and relax, so I think it was worth the trip. Even if it is something of a contradiction in terms to think of South Florida as a place to go to be safe. I presume you held down the fort here, Alice?"

My first sentence had stopped her cold, and while I was talking her look evolved from her usual detached politeness to one of skeptical incredulity. I began to feel like a second-grader caught telling a whopper by his teacher, but she let me off the hook by continuing as if nothing had happened.

"There was a memorial service on Friday, and some of the other normal events were canceled. The standard pre-finals-week jitters on the part of the students. Nothing unusual. Oh, Provost Martin wondered when you'd be able to meet with him, but I didn't schedule anything. He didn't say that it was urgent, so I thought I would consult with you first."

"Thank you. Maybe I can put it off for a couple of days, so that this sunburn will have a chance to fade a little. And, Alice? Remember our conversation Wednesday morning? Well, I decided to see Annette again. And you were right. It's been long enough. Thanks."

She actually blushed.

\* \* \*

I was glad to have the morning free, because I still had not managed to put together Annette's lists, of who knew my cellular phone number and the calls of early last week. Of course, I couldn't know who knew the number, only whom I'd told it to. Let's see. There was Annette, of course, and Alice, and

Donna, who worked for Alice but was out on maternity leave just now, Provost Martin and his secretary, Jane van Boort in the President's office, and...who else? Well, anyway, the calls would be easier. I detested the little gadget, and it didn't get used very much. The calls to 911 and to Alice when I was on my way to Stiller's laboratory last Monday morning; the call from the thug and the subsequent call to Annette and back from her on Tuesday. Oh, yes, Linda Harmon had the number, or at least had had it at one point, and probably her secretary. I made a neat list on my word processor, and then copied it into a mail message to Annette:

*Good morning, and I hope you got caught up on your sleep (because I have the idea that tonight may put us behind again...). By the way, why is your mail address atl? It threw me off last week. Anyway, the homework about my cell phone follows. See ya later. And I missed you last night. H.*

Since I did not expect to hear back immediately, I went for a walk over to the chemistry building. Gil Taylor was preparing samples and looked up as I walked in to the lab.

"Well, if it isn't Mr. Beach Bum. Looks like you hit good weather down there. Did you get my fax?"

"I did, thank you very much, and I came by to see if I could make a high-quality copy of your report, so that I can send it over to the police department. I think they'll be very interested. I don't suppose you have any other ideas, beyond the designer drug stuff? Like, what would this particular combination of chemicals do to someone who took some of it?"

"No, and I used it all up in the mass spec so there wasn't any for me to try. I was pretty surprised when it didn't turn out to be plain old coke. Generally, these new things seem to be depressant/stimulant combinations that produce a weird sort of euphoria. Like that one called 'Ecstasy.' But there's no way to know without experimenting. I guess it's still too soon to have anything from the police lab?"

"Probably; I just got back last night and haven't heard anything. Um, I don't want to ask the wrong question here, and so don't feel you have to answer if you're uncomfortable, but I really don't know anything at all about this designer drug stuff. I know that the South American cocaine trade is responsible for a really nasty underworld, and there's also some heavy-duty characters marketing marijuana. All because of the big bucks involved. But I've never heard anything like that about these designer drugs. I guess I thought that this was just penny-ante stuff."

"Well, I'm no expert either. Hell, I don't even know where to buy a good joint anymore. But this is a college town, and there's definitely a market for all sorts of chemicals that get you high. It could be that the local market is controlled by one group, so that the coke heads are running the frat-crowd designer-drug trade as well as selling joints to the junior high kids. Who knows? And who knows how to find out?"

"Yeah. I can just see myself, with my suit and my little Frémont State stickpin here, asking around up on Third Street. 'Uh, excuse me, I'm looking for information about illegal drugs and wonder if you could help me?' There are drawbacks to being a dean, that's for sure. On the other hand, there are also perks, and one is that I can return favors. Be sure to give me a call if your lab gets crosswise with the chemistry department budget, OK? And I'll send you back the original of this report. Thanks for your effort on this, Gil."

\* \* \*

Back in my office, I fished the diskette that Fred Smits had provided me, the one with the photographs of Stiller's equations, out of my coat pocket, and plugged it into my desktop computer. The pictures had looked fine when Annette and I checked them out on my portable on the plane ride home, but they would be easier to see on the 21" monitor I had in my office. Also, I could print them out in color. I'd have to remember to put in a good word for that student, Fred's friend, what was his name?, who had taken them.

I found the equations from last Monday, and then found several sets from earlier in the semester that would make good comparison. And, even without being a handwriting expert, it looked to me as if the ones from last Monday were written by someone else, at least partly. And the Monday ones were all the same color of green, in contrast to those from earlier in the semester, which had been written using the entire spectrum of marker colors. The copy of the lab report and color printouts of these pictures would make a good present for Annette tonight. Along with a dozen red roses. Better yet, why not have them delivered to her office now? Give the guys in the station something to speculate about. I called a florist.

And I had a message from her:

*Hal: I missed you last night, too. And I'm all caught up. Thanks for the lists. atl is Annette Trieri Lundberg. I signed up with this e-mail company back when I was married to Steve and just never changed it. Makes for a good disguise. I'm looking forward to tonight. See ya later. :^) A.*

God help me, I was actually glad to see that stupid little smiley face. I should have made it two dozen roses.

\* \* \*

She picked me up on the campus perimeter at 6:00 after I'd spent an uncomfortable 10 minutes standing in the dark and rain, wondering about the occupants of the few cars that drove by. One of the drawbacks of being chronically early for anything and everything is that I end up waiting a lot. At least she was punctual. As I climbed in, I noticed a vase of roses on the back-seat floor.

"Gee, where'd you get those? For me?"

"No, they came for me. At work. No note. Lots and lots of the guys hanging around, making wisecracks. Wanting to know who my secret admirer is, and so on." She didn't look as mad as she was trying to sound.

"A 'secret admirer?' Just how many guys have you got in your stable anyway, Lieutenant?" Oops. Now she was pouting. "Oh, they're probably just jealous. Nobody ever sends them roses. I got to thinking about you today and couldn't resist. Besides, I'll make it up to you with a really professional present when we get to your place. A clean copy of the chemistry lab report and printouts of those photographs of the equations. OK?"

"You old charmer you. You might be interested to know that while we were off frolicking in the sun the lab guys here were hard at work. Their read on the powder is similar to what you told me about your lab's, and the blood work from the body came in. Your esteemed colleague, the late Professor Stiller, was stoked to the gills on cocaine at the time of his death. The coroner even found some, of a very high

purity, unabsorbed in his nose. So, whatever was going on in that lecture hall didn't involve their trying out the powder on the floor. At least not in quantity enough to show up in Stiller's blood work."

I thought for a while. "Any word on that little guy you shot the other night?"

"Oh, yeah. A loser called 'Weasel,' name of Johnny Stogle. Lots of priors, but mostly pretty trivial stuff. Extortion, threats, a couple of hold-ups. No explosives history or anything, but our bomb guys said he knew what he was doing with your car. By the way, did you get it back yet?"

"I'm going to call tomorrow and see if it's ready."

"Stogle was tied into a rough crowd in the Denver metro area, but he was new to here. Must have been hired to get you out of the way. And thanks for sending me your list. I started running it down, and I bet you'll be amazed at some of the stuff I'm finding out. How many of the people on it do you suppose have an alibi for Sunday night a week ago?"

"Ahh, well I suppose it wouldn't be too hard to find out. But...well you're the crime expert here, but I'm not too sure that that's likely to be productive. I mean, hell, I don't have an alibi for that night. I was home in bed, alone. And I 'just happened' to be in the chemistry office the next morning and the first university person to find the body."

She looked sideways and grinned. "Well, I guess I could get a warrant for you after all."

\* \* \*

I was sitting in an easy chair in her living room, glancing through her accumulated magazines. Very different from mine. So was her house, a renovated miner's two-bedroom cottage of early-century vintage, on the west bluff. More spartan than I would have thought, but then, I decided, police work was a huge time sink, leaving little time for home decorating.

She'd insisted on sitting me down while she cleaned up after dinner—it was her place, the kitchen was too small for the both of us, and so on. Strange how little incompatibilities crop up in the most unexpected places. She and I had opposite shopping and cooking styles. We spent about a half hour in the market finding ingredients for dinner, a task that would have taken me, alone, about 10 minutes. She seemed intent on trying to find the sale items, and we'd spent about 20 minutes saving about a dollar. Not even minimum wage.

Then I was surprised to find that she was completely ad hoc when it came to cooking. We decided to make braised chicken breasts in a light sauce with herbs, with new potatoes and asparagus, from Mexico this time of year, I guess. I would have researched the sauce in my collection of cookbooks and followed some recipe or other closely. She just threw things together. Maybe I could adapt to this approach to food preparation—it turned out to be wonderful—but from now on, we were going shopping separately.

She came up behind me and kissed me on the top of the head. "You said you had presents. Here's a cup of coffee. I want to finish our conversation about alibis."

I dug out the lab report and large-format printouts of the photos of the equations and handed them to her. "Like I said, I don't know how productive pursuing alibis for the people on my list will be. I think it's more likely that one of them unknowingly passed the number along to someone else, and then it somehow wound up in the hands of the bad guys."

"Well, now don't get your feelings hurt here; but you did say that I'm the crime expert. And your hunch looks right to me. It's quite clear from these pictures that there were at least two people working on last Monday's equations. We'll get a handwriting expert to figure out which parts of them were

written by Stiller. And the lab guys found his prints on the markers and the white-board. Some of them are smeared and some are only partials, especially on the white-board, so it looks like the other person was wearing gloves. But the thing about the alibis is, you have to remember that whoever was there with Stiller—and this person is probably the murderer—knew chemistry. So this gives us a factor with which to winnow your list.”

“That means Linda Harmon. But, come on, it couldn’t be her.”

“Why not? I bet that you didn’t know that she trained as a nurse before going into biochemistry. A surgical nurse. Also, this Provost John Martin is, or was, a chemist.”

“Oh, right, I’d forgotten about that, he’s been in the administration so long. And I didn’t know about Linda. But...well, I just have a hard time believing that one of our administrators stabbed one of our faculty members. It’s just too weird.”

“Anyway, this is why the alibis become relevant.”

“Is that the extent of your suspicions about the folks on my list?”

“The ones on the list, yes. But they could have told other people about your phone number, or left it lying around or something, so there’s a second-order group to think about, too. Did you know that one Francis Swan is a standing member of our dope-dealer suspect list? We’ve never arrested him, but we’ve been real close on a number of occasions.”

“Alice’s kid? No, I sure didn’t. But does he know any chemistry? I guess I remember that he graduated from Frémont State a couple of years ago, and Alice was certainly the proud parent. Wonder what his major was.”

“Pharmacology, with a minor in chemistry. Also, he was what you called a nontraditional student, with a hitch in the service between high school and college. The plot thickens, no?”

“There’s a big leap from smoking and selling joints to cocaine and murder, though. It would kill Alice if he’s the murderer.”

\* \* \*

The next afternoon, it was raining again, but I knew that meant more snow in the high mountains. Late fall had been relatively warm and wet this year, which translated to cool, damp conditions in town and abundant snow at the ski areas. This was good news for the town, and for me personally. But from my dean’s perspective, it was a distraction, at best, for the students.

Durango was founded in 1880 by the Denver and Rio Grande Railroad company as a reaction to the less-than-warm welcome to the region offered by the citizens of the five-year-old Animas City. The railroad wanted free land for its depot and expected it to be enthusiastically offered; when it wasn’t, they took their marbles elsewhere, specifically down the Animas River about two miles. Durango succeeded where Animas City didn’t, at the latter’s expense, speaking to the power and effectiveness of the corporate strategy. Blessed with a local supply of coal, Durango became the regional smelting center for the mining districts higher in the San Juans to the north and west. In the decades to follow, the fortunes of individual mining towns waxed and waned according to the richness of their lodes and the national economy, but Durango persevered, in no small part because of the nearby agricultural lands and the surprisingly mild climate, given its location deep in the Rockies. The current economy had evolved from depending on the historical extractive activities to being based on the government business of the county seat, a booming—too booming, according to some—tourist trade, and both the benefits and burdens of a typical university town.

Frémont State University began as a junior college in the 1950s in nearby Hesperus and then moved to Durango as a regional teachers' college, where it grew to become the premier public, four-year liberal arts college in Colorado. Then, during the go-go years of federal research spending in the '70s, the college's trustees hired a particularly ambitious university president with east coast connections. His "strategic vision" appealed to the dollar signs in the trustees' eyes, and he persuaded them to expand the college into a research university and to change its name. The more recent decline in the availability of research funding had validated the conservatism of much of the faculty, who had wanted to avoid the trap of investing in research infrastructure and stick with teaching instead. The ambitious president, meanwhile, moved on to greener, and more naïve, pastures, leaving behind a "success story" that he could tell over and over. The only real lasting marks of his administration were the name change and the heavy debt load that we have to continue to deal with.

But whatever the name, the institution had no problems attracting students, particularly students from other states who paid the private-college-level out-of-state tuition, thus subsidizing both the in-state students and the dwindling research budget. Durango's climate and proximity to world-class ski areas were major factors that attracted students and allowed recruitment of better faculty than is usual for such institutions. Frémont State fought a running battle against its reputation as a party school, in no small part because of Wolf Creek, Purgatory, and Telluride. As dean of the college at Frémont State with arguably the hardest curriculum, I'm an old soldier in the campaign to enhance the school's reputation, but I also appreciate the recreational opportunities of the area.

And this year, the early-season skiing was outstanding. Wolf Creek, always the snowpack leader in Colorado, already had something like 105", Telluride had 70", and it was only mid-December. With winter commencement coming up on Friday, it was time to plan for Christmas break, and so I called my old friend from Miami, Winston Fredrickson. Win had become respectable since graduate school, wealthy to boot, and he owned a place in Winter Park that he hardly ever had time to use. Even though it was the better part of a day's drive from Durango up and over to Winter Park, the ski area was outstanding (they probably had even more snow than Telluride) and Win's condominium was near the base of the high-speed lift with access to Mary Jane, the experts' side of the mountain.

Win and I had a deal: I drove up there every now and then and made sure that the toilet paper supply was adequate and that the plumbing was working, in case Win should happen to come for a weekend. Like other rich folks, Win had his eccentricities, and one of his was that he wanted his toilets to flush perfectly the first time, every time. In return for my trouble, I had a key and carte blanche to use the place when Win wasn't, which was mostly.

It turned out that this year, Win and his latest trophy wife were spending the Christmas season "on the continent." I expressed my deep disappointment at not being able to see my old friend, and immediately called Annette.

"Hello, m'dear. I know you're probably busy, but I want to try to get something on your calendar soonest. Got a sec?"

"I was just sitting here trying to decide whether to feed you my famous Hungarian goulash or to order Chinese tonight. It's been a hectic morning."

"What's the possibility that you can take some vacation before Christmas, like, this weekend and early next week? I want to spirit you away for a few days of skiing."

"What? And listen to you complain about being an old geezer and would I please ski the green runs with you and don't go so fast because you can't keep up? Sounds like a ton of fun. Where?"

"Now, now. I saw your skis and boots last night at your place, so I have an idea of your ability. You haven't seen mine. Ever skied Mary Jane? I have access to a condo there. Belongs to a rich friend of

mine from Miami. Private hot tub and sauna, ski out the door to the lift, all that good stuff. I thought we could drive up Saturday and ski until our legs fall off, and then come home in time for Christmas, like Wednesday or Thursday. I want to decorate a tree with you. We can flip for my place or yours.”

There was a long pause.

“You mean decorate a Christmas tree? This is sounding serious. Shacking up and vacations together are one thing. But a Christmas tree? Next thing, you’ll be proposing.” She was trying to sound like she was joking, but she didn’t completely succeed.

“Well, I thought I’d let you do that. And I figured we ought to get the argument about tinsel or no tinsel out of the way first. Anyway, what about your vacation situation? Can I bribe you with a new ski outfit? Or, better yet, how about some new skis and boots? The new parabolic side-cut skis are supposed to be very helpful for beginners and intermediate skiers...”

“‘Intermediate,’ huh? Beginner!! I don’t know if they can spare me around here or not, but they’re going to have to. You, my fine friend, are in big trouble, or will be when we hit the hill. Hmmp. And you can well bet you’re going to buy me a new outfit, after that. Did you say ‘private hot tub’? Does that mean that I don’t have to bring a bathing suit?”

“Your birthday suit will work just fine. And it’s not really a hot tub, more of a Jacuzzi, one of those things with all the water and air jets, to soothe stiff muscles from a day of trying to keep up with me skiing the bump runs at Mary Jane.”

“Keep it up, buddy. You’ll get yours. ‘Intermediate’ indeed.”

“Can’t wait. I may be an old geezer, but keeping it up is my specialty. See ya later...”

\* \* \*

This made it imperative that I get my car back, so I called the mechanic. It had been delivered to the garage earlier in the week, and he had replaced some of the electrical wiring harness. I decided it would be a good idea to have some snow tires put on, even with its all-wheel-drive, so I made arrangements for some high-performance European winter tires with studs. Unless the snow got so deep that the car floated, I’d not be stopped for anything with those, even glare ice. And I’d have to get my skis tuned up. I hoped that I hadn’t teased Annette too much. Maybe she was good, after all. There was still so much I didn’t know about her. But our future together had been creeping more and more into my consciousness lately. And I wasn’t kidding about the Christmas tree.

\* \* \*

## Seven

We had finished lunch on Saturday, in Silverthorne, and had just hit the interstate eastbound when I studied my rearview mirror and asked, “Before you go back to sleep, what does it say in the law enforcement manual about how to tell if you’re being followed?”

My reference was to the fact that she had fallen asleep almost immediately upon getting into the car that morning, and I drove from Durango to Silverthorne as if alone. This was OK with me, because I liked to drive and the solitude allowed me to review events of the past couple of days. I spent Wednesday afternoon and most of the evening grading the final exams from my course, and I was

disappointed with the below-par performance of the class as a whole. It was not outside the range I was used to, but I want to see my students succeed. And no one had done well on the question about how to distinguish global warming from “natural” climatic variability. Of course, the professional scientific community doesn’t really know the answer either (“wait and see” being the most widely accepted approach), so I had not expected too much. But the degree of critical thinking I’d been looking for was missing. How could I improve the course next time to make this connection?

And winter commencement on Friday had been the expected mixture of looking back, including veiled references to the tragedy of the week before, and looking ahead with exhortations for the graduates’ futures. Annette’s speculations about the murder earlier in the week had made the speeches by Linda Harmon and John Martin especially interesting, and Harmon’s partial reiteration of her eulogy of Stiller had seemed doubly hypocritical given the information about his drug use. But I still had no particular reason to suspect either of them.

The trip from Durango east and then north to Silverthorne had progressed several times from dry road surfaces at the lower elevations through a wet surface to slush and finally to hard-packed snow and ice over the passes and then back to drier conditions again. The high passes were each well sanded, with the worst conditions correlated with the highest, Fremont Pass north of Leadville. I’m always amused when I’m reminded about the university’s retention of the European spelling of its namesake while the county and the pass in Colorado use the Americanized version. I was there when the university’s name had been changed, and the arguments over the spelling had been academically long and acrimonious, typical for such a trivial issue.

There were still two major ascents to come, however, to the Eisenhower/Johnson Tunnel and, later, over Berthoud Pass, each up to about 11,000 feet once again. And, since we were getting closer to the Denver area, traffic was beginning to be a nuisance. At least we were headed in the direction opposite to most of it, for now.

\* \* \*

“What do you mean, ‘being followed’?” Annette was swiveled in her seat, staring out the rear window.

“Well, that brown sedan back there pulled out of the gas station next to the cafe right after we went by, and followed us onto the road here just behind me. And I could swear that he was behind us, within a mile or so, all the way from Durango this morning. I wouldn’t have said anything except that he’s there now.”

“I know how to follow people, discreetly or obviously, take your pick. But I don’t know anything about being followed. Can we try to lose him?”

By this time we had started up the long, steep grade to the Eisenhower Tunnel, and I was in the far left lane doing about 10 miles per hour over the speed limit, easily passing cars in the center and right lanes.

“Now there’s an idea. As long as you’ll promise to talk our way out of speeding tickets, I bet I can get up to the tunnel a lot faster than he can. That looks like a rental car, from the plates.” I downshifted to fourth, and the car shot forward.

“Whoa! What did you feed the hamster this morning, anyway? Even for a German car, this seems like a lot of uphill acceleration,” her eyes were wide, watching the upcoming curves.

“Well, I’ve had several of these cars, in various model incarnations, and each time they came with more and more power. And each time I was just never satisfied. But I finally found a company that sells after-market superchargers and had my mechanic put one on. A little self-indulgence. Or maybe a big

one. You know, guys my age have these mid-life crises and deal with them by getting toys. I tried to persuade my insurance company that it wasn't that big a deal, just something that's needed at high altitude, but they raised my rates anyhow. But I promise that those guys will not catch us going up this hill."

By now we were hurtling up the grade at about 90, slowing just a little to negotiate the snow-packed surface on the curves. The brown sedan was quickly falling far behind.

"Trouble is," I continued, "if he really is following us, it's downhill for about ten miles after the tunnel, all the way past Georgetown, and he'll be motivated to really fly to catch up to us. And even that rental car can probably go fast downhill."

We reached the tunnel at the top of the grade and had to slow down to deal with the merge into two lanes of traffic. Out into the sunlight on the east side of the Continental Divide, I was able to speed up again, but the road stayed at two lanes, limiting my maneuverability and options. We continued to pass the slower traffic, which was all the other traffic, without incident past the old Bakerville exit. A few minutes later, on the long, straight stretch down into Silver Plume, the brown sedan reappeared, still well behind us, going much too fast for conditions.

"Well, there he is and it looks like he's on the bare edge of control. So either he's following us or he's a seriously wild and crazy driver."

"We could pull off and stop, and see if he stops, too. That would resolve the matter pretty clearly, I'd think."

I looked at her with new respect.

"I wish I'd thought of that. We could have used the Silver Plume exit here." I watched it zip by. "Too late now. But there's a scenic overlook pullout halfway down the next grade."

We were in the left lane, passing an 18-wheeler carefully negotiating the 7% downgrade, when the exit for the overlook appeared. I accelerated, pulled across the front of the big truck, eliciting an irate blast from its air-horn, and onto the exit ramp. I couldn't see where it went because of the convex hillside and didn't remember how much stopping distance I had, so I immediately began braking, and the anti-lock brake system chattered nervously as the tires struggled for a grip on the snow and the gravel from the sand trucks. I managed to guide the nearly skidding car back toward the re-entrance ramp, and we saw the brown sedan, brake-lights ablaze, careen past down the hill. But it was only slowing down; it didn't stop. My Audi finally came to a halt, and we both took a deep breath.

Annette began to giggle. "Now you're really going to think I'm shameless. The reason I married Steve was because he had a Corvette and liked to drive like Mario Andretti. I'm a sucker for fast cars. They get me horny. Of course, that was a stupid reason to get married, but I was young and full of guilt, and it was the thing to do. Naturally I'm all grown up now, so there's no more guilt. But it still gets me horny."

I became quite interested in where this might go. "Well now. There aren't any other cars in this parking lot, and, like the sign says, it's a scenic view. What more could you want? I think there's even a blanket in the back."

It was her turn to make framing motions in the air with her hands.

“ ‘Respected University Dean  
And Horny Police Lieutenant

Caught In Flagrante Delicto  
In Interstate Parking Lot'

The perfect Christmas present for our respective bosses, no?"

"Tell you what. You just nurture that horniness for an hour or so, and by then we can be in the hot tub. We ought to be able to figure out a cure there. Hmm?"

\* \* \*

We pulled back on to the highway and were approaching the Georgetown exit at the bottom of the grade when we both spotted the brown sedan, sitting on the east-bound entrance ramp. It pulled out behind us as we cruised by.

"Well, that would seem to be the proof we've been looking for. He's following us all right. Wonder who it is."

"If it's a rental car, it must be more out-of-town bad guys, like that Stogle character. Any more ideas?"

"We have one more pass to go over before Winter Park, and I can pull the same go-fast stunt there. And it'll be harder for him to catch us on the way down, because the road is twistier. But he must know that we know, so things could get unpredictable. Got your gun?"

"Great. A car-chase shoot-out. Like, I'm supposed to lean out the window and blast away, or what?"

"Just in case. I sure don't want to have any bullet holes in my car. And, by the way, I never thanked you for being such a good shot and hitting Stogle instead of my car. Good shooting!"

"Hey, come on. I killed the guy."

"Yeah, and he shot first. After planting a bomb in my car. I'd call that exemplary self-defense. And dean-defense. Hey, wait. Before Berthoud Pass, we've got to go through Empire. They've got a skier speed-trap there. Maybe we can use it to our advantage. Got your badge?"

"I've got both my shield and my service revolver. Now what are you thinking about?"

"It depends on whether the Empire town marshal is on the job or not. But it's Saturday, so he probably is. I'll see if I can entice him into stopping me for speeding. You can use your badge to explain the situation, and maybe we can talk him into following that sedan for a ways, which will slow them down, and we can get away. Even if he winds up writing me a ticket, it'll be worth it if we can get a good start on them up the pass."

\* \* \*

We swept around the loop-the-loop curve taking us from the eastbound interstate onto west-bound US 40, toward Winter Park, and joined the cars headed in the same direction from Denver. I used the passing lane up the grade to Empire to improve my position, and noticed that the brown sedan lost ground on the hill. As the stream of cars slowed for the 35 mph speed zone in Empire—the speed trap was well known to local ski traffic—I began scanning both sides of the highway for the expected patrol car.

“There he is, just on the other side of that last building on the right. The front-end of his Blazer is sticking out.”

I checked the rearview mirror, downshifted, and pulled across the double yellow line into the left turn lane, leapfrogged two cars full of skiers and received a one-fingered salute from the one I had to pull back in front of. I then kept accelerating to about 60, and left Empire behind.

“Well, what’s he doing back there? Taking a nap? There’s never a cop around when you need one.”

“I’m right here. Want me to write you up? That was about four violations in one, depending on their ordinances around here.”

“Yeah, well, I drive fast sometimes but never, ever do stuff like that. Especially in small towns. They’ve got that speed limit and enforcement to make life easier for the folks who live there and have to cross the highway to get to the post office and so on, and I have to respect that. Now I feel like a real jerk, since I didn’t get caught.”

“So now what?”

“Where are we? Plan A, B, or what?”

“Well, if Plan A was trying to out-race them and Plan B was to stop at that overlook, the Empire marshal must have been Plan C. We’re getting pretty far down the list. Got your phone?”

“I thought of that, but I don’t know what to say. ‘Help, we’re being followed and we’re breaking every traffic law in the book and it’s not working’ doesn’t seem just right, somehow. I guess it’s back to Plan A. At least there’s lots of passing lanes uphill from here. I’m glad that Win’s condo has its own garage. We’re going to have to hide this car, not from the bad guys so much as from the irate skiers we’re going to have to pass. Hang on.” And I accelerated up the first grade toward Berthoud Pass.

\* \* \*

Despite excessive speed and using the oncoming lane to pass traffic that was in the uphill passing lane, I was able to gain only a little ground on our pursuers. I was trying to be as careful as possible, whereas they seemed to have no compunctions about running people off the road, so they were able to keep up. I took a 180-degree hairpin curve to the right at a full sideways slide and she bumped into me.

“Sorry. Listen. I’m plenty horny, so you don’t have to work extra hard on that, OK? Do you really know what you’re doing, driving like this? There are cliffs here.”

“I’m being lots more careful than it probably seems to you. I know this road pretty well, and I’ve got these new tires that are better than what I’m used to. Besides, a few years back, Carol and I went to Steamboat Springs for a week of skiing, and we both took the Bridgestone Ice Driving course. What a blast, driving on a frozen lake and learning how to do controlled slides and just what it feels like when the tires begin to break loose. And Carol was amazing. You wouldn’t have believed how aggressive a quiet, reserved English literature professor could be, until you saw her on that frozen lake! Anyway I do know what I’m doing, pretty much. Although this is a little different from that lake. All we had to worry about there was orange cones. No cliffs or other cars.”

I knew that Annette was intensely curious about Carol, but she didn’t use the opportunity to ask questions. She was too preoccupied with the task at hand, and she turned around to look out the back.

“I think you’re gaining on them a little. Looks like they’re not getting sideways as much as you are, though.”

“That car is probably front-wheel drive, which is actually a little better uphill than this one, because the rear wheels don’t fishtail so much. But I know I’ve got better tires and even sideways I can go faster. Except for all this other traffic. Say, I just thought of a Plan D. Their car will do fine uphill, but front-wheel drive is lousy downhill, because the back wheels want to break loose and make the car swap ends. And we’ve a lot of that coming up. Maybe I can sucker them into a mistake on the way down.”

“If this traffic will let you.”

“The west side of the pass has an uphill passing lane for the entire grade, and there’s not much traffic coming at us, so I should be able to use it. And there are some deceptive curves that could be just the ticket.”

“Speaking of tickets, surely you’re not the only person with a phone. If I were in one of those other cars, particularly one of the ones those guys ran off onto the shoulder, I’d be trying like crazy to get the State Patrol involved in this thing.”

“Me, too. Maybe they’ll set up a road block somewhere and we can get them to delay our friends back there. Sounds like a modified Plan C. I’m glad we’re back to more options.”

\* \* \*

At the end of a long passing lane, which I used to good effect by getting around a bus and several slow cars, we came to the crest of Berthoud Pass, at 11,315 feet. The parking lot of the old ski area was full, and families were using the beginner runs on the southeast side of the road for sledding and other low-tech winter fun. Snowboarders and backcountry skiers were crossing the road for access to the more demanding terrain on the northwest side of the pass. We would see many of these hearty souls farther down the road, hitchhiking rides back to the top. But up here, the pedestrian traffic only made the automobile traffic the more challenging. It was just as well that we had to slow for the congestion, though, because the road surface had been rippled by freeze/thaw cycles into a series of severe dips, which would have sent us airborne at high speed.

On the west side of the pass, the morning sun had melted the snow-covered surface and it was beginning to re-freeze in the shade, so the downhill traffic was extremely cautious. I took advantage of the oncoming passing lane to widen the road available to myself, and my studded tires began to pay dividends. Annette reported that the chase car was slewing more and more, on the edge of control, as it tried to keep up.

Even though I was concentrating on the driving and not a little worried about what might happen should they catch us, I was enjoying myself immensely. “Too bad I don’t have a switch to disconnect my brake lights. Then Plan D, the sucker gambit, would surely work. I have a friend who likes to tell a story about how he and his brother, back when they were in high school, put together an old jalopy hot rod and added a switch to disconnect the brake lights. They’d make somebody mad enough to chase after them, drive like crazy down some back road, come to a right-angle turn, switch the lights off, and slam on their brakes to make the turn. The guys chasing them wouldn’t see any brake lights to warn them and so wouldn’t see the turn until too late, and they’d end up in a field. That’s what we need just about now.”

We negotiated several hairpin curves and were on a relatively straight stretch, with a moderate downhill grade. Fortunately, there was a break in the traffic. I could see in the mirror that the chase car was about two blocks behind us. I sped up into a sweeping left curve that was deceptively sharp, with a decreasing radius throughout the curve, and I downshifted as the car settled into a four-wheel drift toward the outside of the pavement, approaching an abrupt edge. Annette looked at the treetops just outside her window and moaned quietly.

“It’s OK, I’ve got hold of it, and I didn’t want to use the brakes right here. Watch them for me, OK?” I had traffic ahead to deal with and needed to pay attention.

“Here they come, oh, but they’re getting sideways... I think he’s lost it. Now they’re backwards, headed for the edge... Now they’re sideways... And they disappeared in a big splash of snow. Over the edge.” I let out my breath, braked to the speed of the rest of the traffic, and, trying to look innocent, joined the single downhill lane, once again legal.

“There’s another switchback up ahead that goes down below there. We can stop and see if we can spot them.”

Two curves later, we were at the bottom of the grade, and I pulled out of the traffic to the roadside. I reached over and retrieved a pair of miniature binoculars from the glove box, and we got out and leaned on the car to scan the mountainside above us. It was easy to see where the other car had gone over the edge, because a small crowd had gathered and there was a break in the snowbank at the edge of the road above. The rocks on the steep, pine-covered mountainside below were covered with snow blown off the highway above by road crews.

“Up there, just to the left of that outcropping. Does that look like a tire?” I handed her the binoculars.

“Yeah, and it’s in a good place relative to where they went off the road up above. I hope none of those folks is dumb enough to try to climb down. That snow doesn’t look all that stable.” I realized that she might be a good skier after all, if she could read snow conditions like that. I’d been thinking the same thing.

Suddenly there was a huge poof of snow on the mountain side, a brief flare of flame, and, a couple of seconds later, the whump of a muffled explosion. “I thought that only happens in cheap action movies,” I remarked.

“I guess there was a gas leak that finally found a hot place. Look, the hillside’s letting go.” Sure enough, the explosion had broken the thick layer of snow loose from the rocks, and a wide mass of snow and ice slumped toward the highway below. Although we were out of the path of the slide, other cars were not so lucky, and several were partially buried.

“That’ll make their ski weekend a little more exciting. I hope no one is hurt. Listen, we probably ought to help them, but there are lots of people around and we aren’t really needed. Let’s get out of here.”

She was obviously feeling as if she should take charge of the situation, but then we heard sirens coming up the valley. Apparently, cellular phones had been in use, as she had predicted, so she climbed back in the car and shut the door. I started the engine and pulled onto the road, heading down the valley well below the speed limit.

\* \* \*

We arrived at the condominium a few minutes later and were glad to get the car into the garage and the door closed. There would undoubtedly be descriptions of my Audi, license number and all, by witnesses of the chase, and the last thing we wanted was involvement in an investigation of the accident. And we really didn’t need the car for our stay anyhow. There were shuttle buses into town, and we could ski out the door of the condominium to the ski lift.

I unlocked the door and ushered Annette in. The lights were on, and the temperature was a comfortable 70°. I uncovered the hot tub, and saw the thermometer was reading 103°. The rich, indeed,

are different from the rest of us, I thought. Wonder when Win was here last. I wandered into one of the bathrooms and flushed the toilet. Yep, this one still works.

She was in the kitchen, looking in the refrigerator. “Hey, Hal. Look at this. Completely stocked. Even eggs and milk. You sure that your friend isn’t here and just out skiing?”

“Nope. He has this arrangement with the management to keep things stocked like that. I think that eggs and milk are the only perishables, though. For Win, it’s peanuts, and probably costs less than keeping the heat turned up all the time. Is there any NA beer in there?” I crossed my fingers.

“Ah...some Boulder Pale Ale, which looks like real beer, and something called Clausthaler.” Bingo. Win had good taste to go along with his money.

“Um, I’m still a little pumped up by all that excitement back there, so I’m going to open one of those Clausthalers and jump into the hot tub. Care to join me? There’s probably some white wine in there, too. And there’s a liquor cabinet just to the left of the ’fridge, if you want something truly medicinal.”

“Yeah, there’s some wine here. But, um, the explosion and all kind of took the romance out of all that fast driving for me, so, well, how about if we just soak and relax for a while?”

“Exactly what I had in mind. We’ve got lots of time. Although, with the car stuck in the garage, I guess I’ll just have to rely on my geezerly charms to re-ignite the romance.”

“Oh, I don’t know. Just make some ‘vroom, vroom’ noises later, and see what happens. You might be pleasantly surprised.” And we weren’t going anywhere until next Thursday, I reminded myself.

Lots of time indeed.

\* \* \*

## **Eight**

“Well, Hal,” we were once again in my car, headed home at a far more reasonable speed. “I’ve been trying to think of a clever way to say this, but I guess I’ll just blurt it out. You certainly are a lot better skier than I ever would have thought. I can’t remember when I’ve had so much fun. And I wish I’d known about Mary Jane years ago before my knees started to give out. Back then I could have really skied Outhouse the way it should be.” She had finally admitted to being on the ski team in college.

“I still think they should have skull-and-crossbones pictures on those warning signs up at the top. There were some people on that run that clearly didn’t pay enough attention to the signs.” She chuckled. “And the path through the woods over to the top of Outhouse also needed better warnings. Remember that guy upside-down in the tree well?”

I looked over at her fondly and took her hand and squeezed it, also basking in the satisfaction of an outstanding few days of skiing. It had snowed from Saturday night through Monday, so we had two days of new, light powder, and then the sun had come out and the moguls had emerged. I’d been having a wonderful time following her down the bump runs, resting a lot so I could watch her from behind in the form-fitting ski suit I’d bought her. And a wonderful form it was.

After our arrival on Saturday, a long, relaxing soak in the hot tub had led to a mutual crisis of conscience, so Sunday morning we called the State Patrol to check in and admit to our role in the Berthoud Pass Tragedy, as the television news in Denver was calling it. By Monday, when we met with

the accident investigation team to discuss the matter, the identities of the two occupants of the brown sedan had been determined, and their relationship to the Denver and west coast drug crowds had given the TV people even more to speculate about. The explanation we offered the investigators, coupled with Annette's police credentials and the wide-spread publicity about her involvement in the Durango shooting of two weeks earlier, kept us out of trouble as well as the limelight. The credibility of our story was verified when the investigators found, amid the wreckage, two Uzis, a sniper's rifle, and several handguns. Consequently, my Audi and its license number were no longer on the State Patrol all-points bulletin list, and our trip home was leisurely.

"I can't remember when I've had a better time. Let's do it again real soon. Ever been up to Steamboat Springs?" I knew I would be able to get away again before the spring term began.

"Well, I talked my way out of work this time, but I think I'd better plan to buckle down and make some progress on this Stiller thing before I take any more time off. But there will probably still be time this ski season, maybe in the early spring."

"You know, the first few times we got together, it was to discuss that case. And then we continued to discuss it when we started seeing each other, ah, socially. But we didn't talk about it in Miami. I guess you could say that we had better things to talk about, getting to know each other and all. And we hardly talked about it at all this week. I like that. It means we have more in common than Stiller's murder. Like I told you in Miami, I have high hopes for the future of our relationship."

She took my right hand off the steering wheel and kissed it, taking my breath away for a second. "Me, too. And you know what I've been thinking about? Christmas trees. You still want to put one up? I haven't seen your place yet, and I'd like to. I bet you have the perfect location for a tree, unless it's buried in dirty socks and other bachelor debris."

"I can drop you off at your place and you can come by later if you'd like. I'll even leave room for your car in the garage. How about that for domestic bliss? And there'll be plenty of time for me to pick up the dirty socks. Don't know about the pictures of me and Carol, though. Is it OK if I leave them around?"

She leaned over and kissed me on the cheek. "I'd be worried if you didn't."

I had finally satisfied her curiosity with a long conversation about my marriage and its unfortunate end, and she had become secure with my occasional references to the first love of my life. As I thought: a keeper, this one.

\* \* \*

Back in Durango late that evening, real life intruded once again, and, even more reluctantly, we went our separate ways. We resolved to get together the following evening to find a Christmas tree, decorate it, and snuggle in front of the fire.

Although Christmas Eve was a university holiday, I went into my office on Friday to catch up with the correspondence from the first part of the week. The university might be on Christmas break, but an administrator's paperwork wasn't. Also, I had to admit, my office would be less lonely than my house. I had lived alone for the better part of two years and adapted well, but suddenly I was finding my house to be terribly empty.

Annette had warned me that the interviews conducted by her detectives might have caused some ruffled feathers on campus, so I wasn't too surprised to see several e-mail messages from Linda Harmon. Annette's investigating team had spent the week interviewing the various people on my list, and Harmon, given her background, was paid special attention.

The first message was from Monday, before her interview, and before, apparently, she knew I was going out of town again:

*hal: got a call from the durango police today, asking to set up an interview. any idea what this is all about? linda*

Linda took herself far too seriously to use smiley faces, but not seriously enough to use the shift key. The second message was a little more desperate:

*hal: the police are coming to see me tuesday afternoon, and i'd really like to hear from you about this. i thought i made it clear to them that the statements i made the day of the murder included all i knew. what's going on? linda*

The third message was from Tuesday afternoon, after her interview. Her formality undoubtedly matched her level of outrage, and I could tell that she was serious if only because she paid attention to her typing:

*Dean Weathers: I have just concluded an interview with the Durango Police Department, in which it became clear that I am a suspect in the murder of Professor Stiller. Apparently, Ms. Trieri has made the decision to include me on the list of suspects. Because of your relationship with her, I believe that it is imperative that you step aside as Dean of the College until this is resolved. I will be calling a Department Chairs meeting to discuss this matter with my colleagues. Professor L. Harmon, Chair, Chemistry Department.*

This one, I noticed, was copied to Provost Martin. Linda was new to the job of chair, and she had not yet figured out that she had a lot to learn about administrative life. Her little attempt at mutiny was bound to fail, if only because of the time it would take to mature: there was no chance of a department chairs' meeting for at least two weeks. And copying the message to the provost had been, well, a real blunder. I knew John Martin well enough to know that he would assume that I had everything under control, which, of course, I did. Or would, as soon as I met with the chairs' committee. And no department chair needed to have the provost think he or she was a trouble maker. From my perspective, one advantage of the rotating chair system was that the learning curve was pretty steep for newcomers to an essentially part-time job. They were no match for full-time administrators such as deans.

There was also a message from Alice, unusual, but not entirely unexpected after my four-day absence:

*Dean Weathers: So you'll know, I'm certain that the only place that I have your cellular telephone number written down is here, at my desk, and Francis has never been in this office. Moreover, he has been out of town (and out of touch, I'm afraid), since before Thanksgiving. I made all this clear to the police detectives today. (And I understand perfectly why I was questioned, but I wanted to reassure you as soon as*

*possible.) Have a Merry Christmas and please pass along my best wishes to Ms. Trieri. I will be back in the office on Tuesday. Alice Swan.*

I was immensely relieved that Alice's son was out of the picture. That would have been too hard on her.

So that left President Black, Martin, and Linda, and I would have to try hard not to suspect her despite her crankiness. And their respective office staff people.

No doubt the interviews with the provost and the president were on the two extremes. The provost would have behaved quite formally, in his usual pompous, stand-offish fashion, and the president would have turned up his folksy manner to full blast and probably acted confused as well. Given Linda's obvious pique, I didn't envy the detectives their jobs.

\* \* \*

I got home just before 3:00 pm, and Annette arrived a while later. After considerable driving around, and plenty of critical discussion, we finally managed to find a not-too-scruffy Christmas tree in the left-overs at the fourth lot we visited. We took it back to my place, and then put dinner on to simmer and went for a walk.

It had started to snow, and the flakes made soft patterns in the streetlights. Christmas decorations on my neighbors' houses competed for our attention, and, looking back, we could see that my house was the only one on the block without strings of lights on the shrubs. Downtown was deserted and quiet, the last-minute Christmas Eve shoppers off on the other side of town, at the mall, and the lights were the only thing there to remind us of the season. We had our own little world to share, but it was cold, so we didn't stay long.

We got warmed up a little on the way back up the hill. When we got back to my house, the front porch light was out and, by the streetlights reflecting off the new snow, we could just make out two shadowy figures on my porch. One was vigorously shaking something. And they looked to be big, even taking into account their bulky clothing.

"I'm certain that light was on when we left," Annette whispered in my ear. "That shaking sounds like a spray-paint can. Strange weather for graffiti artists, no?"

I noticed that she had her service revolver in her hand. Did she carry that thing all the time? And where?

As we stole quietly up to the porch, we were able to hear big guy number one complaining that it was probably too cold to get the paint can to work and this was a stupid thing to be doing anyway. Big guy number two wanted to just get it done and get out of here.

Before Annette could do anything, I took the lead: "Evening, guys. What's going on? Did you break the light or just unscrew it? Easy, there. The lady has a gun aimed at you, and I can tell you from experience that she's a crack shot. Better chill out."

At my first words, the two young men, and they were indeed large, jerked around to look at us, poised themselves for flight, and then froze in place at the mention of a gun.

"Uh, we just unscrewed it."

"Well, OK, reach up and screw it back in and let's introduce ourselves."

They seemed receptive to instruction—it may have been the gun—and the taller of the two reached up and fiddled in the fixture. The light came back on.

“Hey, don’t I know you guys? You look familiar. Anyway, I’m Hal Weathers, a dean up at the university. And this is Annette Trieri, of the Durango police. What did you have in mind to spray on my door? Wait. I know, you’re the Twin Towers of the Marmots’ defensive line, Kolocek and, uh, Washington, right? Why don’t we all go inside and you can tell us what this is all about.”

Big guy number one, Kolocek, it seemed, had the presence of mind to respond to Annette’s introduction with a heartfelt “Well, shit.”

\* \* \*

Annette was sitting in an overstuffed chair, her gun placed discreetly, but within easy reach, on the table beside her, and the Twin Towers were sitting nervously on the couch across from her. I was bustling about, lighting a fire in the fireplace, making chit-chat about the recent Marmots’ season to try to break the ice, and refilling the visitors’ glasses as soon as they were emptied. Even though I quit drinking years ago, I keep a full liquor cabinet for guests. I estimated that it would take at least three stiff shots each, with beer chasers, to begin to affect them, given their size. At least they didn’t seem as nervous as they had been at first.

“You know, I’ve never been concerned that Frémont State is a Division II school until this year. But having won the national championship in such handy fashion, you guys deserve to go to a major bowl game. It’s too bad that they’re all for the Division I schools.”

“Uh, yeah, well, from the bowl lineups it looks like we could have beat some of the teams. Maybe not in the big-time games, but in some of the other ones, like the Gator Bowl. Mississippi State doesn’t look like they’re all that good this year, and we would have had a good chance, I bet.”

“Yeah, or the Copper Bowl. Arizona is pretty weak.”

The liquor was having its desired effect, and they were getting loosened up.

“Anyway, the combination of you guys on the defensive line with that explosive offense made for as exciting a football season as we’ve seen around here in a long time. And I guess that almost everyone will be back next year, so that’s good news. Now, guys, I’m sure the Lieutenant here is just full of questions about what’s going on. And I hate to keep the lady waiting. What message were you going to leave me? A Christmas greeting? Or what?”

“Uh, we’re not supposed to say anything to anyone about it.”

“Well, let’s see. Do I remember that you were both red-shirted for a year, and that you both have another year of eligibility? Division II or not, I bet you’re both NFL material, if you have another year next year like you just did. But, come on, getting caught red-handed like this is bound to put a crimp in those plans. Look. I’m a dean and I’ve got lots of clout on campus, even with the athletic department. Why don’t you just fill us in, cooperate completely, and I can make sure that nothing gets in the way of your playing next season. Ahhh... Except grades. I really can’t help with those, unless you need tutoring in a subject I know something about. Anyway, I can’t believe that this was your idea. You’ve got no reason to muck up my house. So someone must have put you up to this. And it’s potentially serious, because somebody put a bomb in my car a couple of weeks ago. Did you see it in the paper? Anything strange happening to me is of interest to the detectives investigating that. So you’ll come out of this in much better shape if you just fill us in.”

They were both looking at Annette, and she smiled encouragingly back. “I’ve been thinking about this and, well, you’re not in any real trouble. Yet. I mean, you unscrewed a light bulb and shook up a can of paint. Nothing illegal there. But Dean Weathers is under police protection, and your actions could lead to charges related to that. And that’s related to the bomb, like he said. And it’s also related to the murder of Professor Stiller. So it probably would be a good idea if you cooperated. Once you tell us everything, we don’t need to bother you anymore. You can take off and try to get home for Christmas, or whatever. I need to emphasize that you don’t have to say anything, of course. But it will sure make your lives easier if you do.”

I was thinking what a good team we made, good cop and better cop, when Washington made his decision. “We were just gonna do a favor for the coach, but you came home too soon.”

“The football coach wanted my house tagged?”

“Well, no. The coach was doing a favor for the AD, see. And he was doing a favor for somebody else, who we didn’t meet. We just heard his voice, telling us what he wanted us to do. It was kinda strange.”

I translated for Annette’s benefit. “The athletic director? Sounds like a lot of hocus-pocus. What message were you supposed to leave?”

“The message was strange, too. It fits in with all the other strangeness. It was ‘Third time’s the charm.’”

Annette and I looked at each other. Well, this was not entirely unexpected. We spent some time with more detailed questions and discovered that the Twin Towers had been told to clean out their lockers at a specific time, and that their instructions came from someone a couple of rows over in the locker room, so they couldn’t see him. And that the voice, a deep raspy baritone without identifiable accent, definitely suggested a “him.” They had been told only the address, not whose house it was. They were supposed to have done the job the previous night, but they had stayed too late at a Christmas party and were too “out of it” to do it then. The mysterious voice tried to persuade them that this was all a harmless prank, but they were dubious. Nonetheless, they owed their coach a favor, and so they went along with it.

“So you were doing a favor for your coach, who was doing a favor for the AD, who was doing a favor for Mr. Mystery Man. Where’d you get the paint?”

Kolochek had also found his voice. “The mystery guy left it for us in the locker room. Uh, you can keep it.” He had set it on the end table next to him.

“Aside from your owing your coach a favor, do you have any idea why he asked you?”

It was Washington’s turn again. “Well, maybe because about everyone else has headed home for Christmas and nobody’s around. We were gonna leave tonight. I’m spending the holidays with Dink’s family back in Kansas this year.”

“Ah, Christmas in Kansas. Well, I hope you’re OK to put off the trip until tomorrow morning. I don’t think it would be wise for you guys to start driving tonight, not after that Jim Beam. OK?” I noticed that Kolochek had started to nod off. “Look. Why don’t you stagger home and leave in the morning, OK? And when you get back from break, come by my office and I’ll fill you in on what’s going on. Assuming that we figure it out. I’d like to see you guys have another great year on the field next fall. A repeat championship would be great.”

\* \* \*

After they left, wobbling off in the direction of the campus, with profuse thanks and promises to come and see me after break, we collapsed together in laughter. “Well, nobody ever said that defensive linemen have to be rocket scientists. Who do you suppose our mystery man is?”

She had been thinking about that. “We can see if there are any prints on the paint can. And if we start with possibilities from your list, it looks like Linda Harmon is eliminated. Which leaves either Black or Martin, or someone from their staffs. Who would the athletic director be doing a favor for?”

“We can ask him next week, of course. Unless he’s off on a recruiting junket. He seems to like to recruit in South Florida or Hawaii this time of year, even though almost all of our players come from here or neighboring states. But I think I can get us a hint.” I reached for the phone and punched the buttons from memory.

“Hello, this is Dean Harold Weathers from the university. I wonder if I might speak briefly with Alice? Thank you, and Merry Christmas, Mr. Swan.” I winked at Annette. “Merry Christmas, Alice. I won’t keep you. And thanks for filling me in on your interview with the police. I’m glad that Francis isn’t involved. I hope that you weren’t too disturbed by their suspicions.”

I listened for a while.

“Well, I’m relieved, too, and I’m glad you didn’t take it personally. Linda Harmon seems not to have your level of self-confidence. Alice, I wonder if you could fill me in on some politics that I’m behind on. I recall that Provost Martin was consolidating power a while back and trying to get the athletic department back into his empire. But last I heard, the AD was still reporting to the president. Do you know if anything’s changed?” Annette was making the “OK” sign with her thumb and forefinger. “So he’s now reporting to the provost, eh? Well, that’s very interesting. I’ll have some gossip for you on Tuesday. You have a nice weekend, and convey my best holiday wishes to everyone...Thanks. Good night, Alice.”

“Good work, for a mere dean. Maybe we can put you on retainer. What’s your fee?”

“I’ll collect it later. One more thing. Remember they said that their mystery voice didn’t have an accent? Ever heard President Black speak? Way south, like, Texas and with marbles in his mouth. So that pretty much points the finger, doesn’t it?”

“And Martin doesn’t have an alibi for the night of the killing, either, although he seemed to assume that he wasn’t a viable suspect when my guys questioned him.”

“Typical of him. Also, did I mention that Stiller seduced Martin’s daughter, when she was barely 18? Can you say ‘motive?’ Anyway, there’s probably not much more we can do tonight, or this weekend. Right now, I’m thinking we should dig out the boxes of decorations and figure out what to do with that tree.”

“I brought some of mine, but they’re still in the car. Think we can mix and match?”

“I guess we’ll have to flip to decide on whose angel to put on top. Want to follow me up into the attic? It’s dark and spooky up there, but I can hold your hand...”

“Yeah, and dusty, too, I’ll bet. I’ll get mine and you get yours. I’ve got better things to keep me occupied than sneezing all night.”

\* \* \*

It took longer than I expected to decorate our tree. Unlike her cooking style of just throwing everything together and seeing how it comes out, she took great care with the placement of each light, garland, and ornament. But I have to admit, when it was finally finished, it looked very nice, almost professional.

Balanced, well lit, and quite Christmasy. Who would have believed that the lop-sided, last-minute fir tree we managed to find could turn out to be such a delightful addition to the holiday? And best of all, she didn't like tinsel either.

\* \* \*

**...And a Happy New Year!**

## **Nine**

Even though the official Christmas Holiday for government workers, including City of Durango employees like me, was on Monday, I went down to police headquarters to try to catch up on my paperwork. Those two mini-vacations with Hal had not been a problem from the perspective of my leave time—I had more saved up than I would ever be able to use, and the Miami one had been involuntary, anyway—but I was in the middle of a high-visibility investigation that was beginning to demand my personal attention. My team of detectives had interviewed all the potential suspects on Hal's list, and the results from the lab, the coroner's office, and fingerprint analysis were all assembled. As the senior officer in the investigations unit, I was ultimately responsible for the success or failure of the case, and it was time to put all the pieces together and see what picture emerged.

Christmas with Hal had been quiet, relaxing, and deliciously romantic. I continue to marvel at how I was so lucky to find him. Even without my growing feelings for him, I would have been concerned for his safety, given the two attacks and third attempt at harassment; but since I was finding myself falling in love with the guy, I was becoming flat-out worried. Although he'd not said anything Friday evening, I knew that he had been surprised at how quickly I'd drawn my weapon on those two football players; for that matter, so had I. But the last thing my psyche needed now was for something bad to happen to him.

Ever since my divorce, I had lived for my career, for police work, and a combination of factors had resulted in my promotion to lieutenant well ahead of the normal curve for such things. I think the factors mostly had to do with the long hours I put in—everyone else had a real life to live—and the department's affirmative action program. The official paperwork talked about dedication and experience, along with oblique comments about intelligence and intuition. Whatever the reason, I was the first woman to be in charge of the department's investigations unit, and lately there were rumors about my being in line for a captaincy soon. But this workaholic approach had left my personal life in a total shambles, and what dates I managed were usually unmitigated disasters. I was aware that the relationship with Hal had happened too quickly, but it felt so good that I just couldn't resist. Neither, it seemed, could he. Besides, I wasn't getting any younger, and he was a catch to hold on to, even if he thought of himself as an old geezer. At 52, he wasn't, of course, and at this stage of my life the 15 years' difference wasn't really an issue, although there were bound to be more age-related differences of opinion like the one that came up yesterday.

For some reason the Sunday paper, usually devoted to end-of-the-year retrospective stories between Christmas and New Year's, also featured an article in the "investigative reporting" mode concerning recreational drug use in Durango and the Four Corners region. Because, inevitably, Frémont State students received a significant amount of attention in the article, Hal read it carefully, and he seemed take some of it personally. It definitely pushed his buttons.

It was interesting that he just assumed that I would agree with his comment that all drug dealers should be taken out and shot. He must have equated my career in law enforcement with a reactionary attitude toward drugs, and he had been surprised and more than a little offended by my relatively laid-back approach to the whole thing. When I suggested that the lessons of the prohibition era were being ignored by government at all levels, he clearly had to work to control himself.

“You’re saying that drugs should be legalized, like alcohol?”

“Well, that’s one of the problems. Some drugs, alcohol, nicotine, caffeine, and some others that are also pretty strong, already are legal and have all sorts of different controls and rules that depend on their action and potency. And some others, marijuana, cocaine, and so on, are all lumped together as illegal without regard for their potency. Society encourages alcohol and nicotine use through advertising, but tries to make it taboo to use pot. Kids see this, rightly, as hypocritical, and the adult world loses its credibility as a result. So the kids go ahead and try the stuff. Since we lump marijuana together with the more dangerous chemicals, including that stuff that you found on the floor of that classroom, why, naturally, they try anything and everything. It seems to me that we’d have an easier time controlling the hard drugs if we eased off on pot.”

“But pot leads to cocaine and other things.”

“Oh, come on Hal, you’re a scientist. You know that statistical connections don’t necessarily imply cause and effect. You could as easily argue that cigarette smoking leads to pot, or that coffee leads to cigarette smoking, or that cocoa leads to coffee, and so on and so forth, and pretty soon you’d have a direct set of linkages between mother’s milk and heroin. We both know that kids like to experiment with new experiences when they’re in college, and getting your mind altered is just part of that. Surely you did, and I know I did. You turned out OK, seems to me. Besides, you know the clichés as well as I do. Pot smokers don’t drive aggressively like drunks, they tend to go too slow and get picked up for that. And they don’t get into fights, they order pizzas. I have a lot of trouble getting worried about that kind of behavior.”

“Well, you’re right about alcohol being a bigger problem than marijuana, but that doesn’t make it justifiable to legalize marijuana.”

“No, but we tried making alcohol illegal and look what it got us. Al Capone and his pals. I just think that our society spends way too much money and people power dealing with marijuana. I bet that the vast majority of recreational drug users would be quite happy if pot were legal and wouldn’t have any motivation to use cocaine or anything else. And we in law enforcement could concentrate on the important stuff, like this Stiller murder, or the issue of these designer drugs that can kill people if they’re not designed right.”

Hal stopped looking mad and looked depressed instead. “The problem that I have is that drugs and alcohol make people stupid, and I’m in the business of trying to make them smart. I know what you mean about college kids experimenting, and, yes, I did, too. I spent my senior year of college in a marijuana fog and thought it was quite natural to go around stoned all the time. Looking back, it was pretty much of a wasted year. I hate to see kids today making that same mistake.”

“Well, you graduated, didn’t you, and got into grad school, too, no? And now you’re a college dean, for heaven’s sake, the epitome of academic success. Making mistakes is how people grow up. Like it or not, kids are going to do stupid things for fun, including things that make them stupid. I think we adults have the responsibility to make it possible for them to do that in as safe a way as possible. It seems to me that colleges and universities have a long tradition of tolerating a lot of student hijinks for just this reason. Compared to the real world, campuses are good places for such foolishness.”

“Maybe that’s why I’m sensitive to the issue. There’s so much of it in the world I spend most of my time in.” He had suddenly broken into a ear-to-ear grin. “To think. Here I am, a single guy with a good income and so on. I could have waited for a bimbo. But, noooo. I had to pick a smart one who wins all the arguments. Maybe some of that senior-year stupidity has stuck with me.” He had to duck the pillow I threw.

“I guess I shouldn’t remind you that you only think you picked me, when it was really the other way around, no?” And then it was my turn to duck.

\* \* \*

But daydreaming about my love life wasn’t why I’d come in to the office on a holiday. My first order of business was to read completely through the files that had been assembled by the investigative team. I had started this on Friday, but catching up on phone calls and correspondence had killed most of the day.

The little adventure with the football players on Friday evening had pointed clearly toward Provost John Martin as being involved with the case somehow. I hadn’t said anything to Hal, but my detectives had pretty much cleared all the junior staff people at the university who had his cellular phone number. It seemed unlikely that Martin was the murderer of Ralph Stiller, but he couldn’t be eliminated. I had about decided that the murderer was one of the out-of-town thugs—either the unfortunate Johnny Stogle or one of the two equally unfortunate occupants of the brown sedan. Probably one of the latter, as both of them had much more extensive and violent criminal backgrounds than Stogle.

My working scenario—modified from the one I had described to Hal in that late-night e-mail—was that Stiller was somehow involved with the drug crowd, possibly as a designer drug consultant, with compensation in the form of cocaine. There had been a summit meeting to discuss chemical formulations the night before his body was found, with Stiller, the murderer, the drug ringleader, and possibly Martin present. It was possible that the ringleader was also the murderer, but I didn’t think so. The question now was how to use the physical evidence and results of the interviews to develop a case on which to make an arrest.

And how to keep Hal alive and well in the meantime.

The handwriting expert had decided that most of the chemical symbols in the sequence of equations had been written by Stiller, but some of the molecules, including the elemental symbols, had been modified by a second person. And it appeared that a third person had made other modifications to the numbers, both the subscripts defining the molecules and the stoichiometric coefficients. I suspected that person number two was Martin and person number three was either the murderer or the ringleader, assuming they were different.

As the crime scene technician mentioned, he’d had a very difficult situation to deal with because of the students and then the paramedics and campus police. However, several bits and pieces of physical evidence had been discovered. Interestingly, Stiller’s lab had been clean except for expected fingerprints. But the classroom had contained several clues. The dusting of ashes revealed that one of the participants had sat in the second row of seats, on the end away from the part of the white-board used for the equations, and smoked a cigar in flagrant violation of the various “No Smoking by Order of Fire Marshal” signs in the room. Yet no one had mentioned any residual smell. This implied that the meeting had begun well before the students had arrived for the 9 o’clock class. But the time of death had been fixed at between 5 and 7 that morning. So it was a long meeting.

But Stiller hadn’t planned on a long meeting, because there were no class notes nor, as Hal had pointed out, was there a white-board eraser on his person or in his lab. So he’d planned to be finished with the meeting in time to return to his office to prepare for class. This deduction was supported by

notes, an eraser, and a supply of new white-board markers—of all colors—found in Stiller’s office. Because there was no cocaine or other stimulant found in Stiller’s office or lab, it seemed probable that he’d planned to be finished with the meeting in time to take a nap before class, or perhaps even return home to sleep. But if the meeting had started so early, why had they assembled in the lecture hall in the first place, instead of some private location?

Of even greater significance were the fingerprints found on the arm of the chair where the cigar-smoker had sat. There were several sets, some no doubt belonging to students, but the computers had matched several prints with those of one Salazar Kelly, a colorful figure in our local underworld. My colleagues among Durango’s finest had never been able to convict him of specific criminal activity, but he had been arrested several times for a variety of suspicious circumstances. And he had a significant record from his days in Albuquerque. I suspected he was the ringleader, and possibly the killer. However, his prints were not on the white-board or the markers, so he wasn’t person number three. Unless he put gloves on in between smoking the cigar in that seat and messing with the equations. Which was possible, because I’d learned about cigar aficionados and their rituals on one of my disaster dates: they liked to roll their cigars between their fingers while smoking them, and gloves were not part of the ceremony. I contemplated arresting Kelly as an accessory at least, but I wanted to identify the other players first.

Even with them identified, however, it was going to be difficult to obtain a murder conviction unless one could be induced to testify against the others. And this was my real dilemma. If one of the others present at the meeting was one of the people on Hal’s list, he (or possibly she, I remembered) would be the obvious candidate to testify. But the physical evidence for an arrest of one of them was just not there. And Martin’s lack of an alibi for that night wasn’t good enough to get an arrest warrant for someone of his stature. What’s-her-name, the chemistry department chairman, or chair or whatever, Linda Harmon, didn’t have an alibi either. And, according to Hal, she was putting up a real fuss about being questioned again.

And why had they been on campus for this meeting anyhow? Maybe Hal would have an idea.

\* \* \*

I called his number at work, where he’d said he’d be, and got, “Hello, this is voice mail for...,” so I hung up and tried his home number. “You have reached 724...,” so I hung up to think. Where could he be? I resisted the urge to call his cellular phone, and called his work number again instead.

After his greeting I left a message, “Hi, Hal, I’m going to leave this message for you at your house, too. I’d like to talk with you about a question that’s popped up about our investigation. Call me at work, OK? Talk to you later, bye.”

I left the same message on his home phone and tried not to worry. So maybe he went to the grocery store, or had a meeting on campus. No, it was a holiday there, too. I smiled at the thought of handcuffing him to me, so I’d know where he was and wouldn’t have to worry. Although I had played it cool with Hal, I had enough professional experience to know that an organization that tries twice is very likely to try a third time. And that was the substance of the Twin Towers’ aborted message.

Back to the various reports related to the case. The State Patrol had sent over their complete report on the Berthoud Pass accident, and it made for interesting reading. One of the two occupants of the brown sedan had died of a broken neck; he had not been wearing a seat belt. The other had been suffocated, presumably by the air bag that deployed when the car crashed into the rocks after going over the edge. This information was, literally, pieced together from the remains of the explosion. The fact that

the car had been nearly buried in snow at the time of the explosion had helped contain the debris and control the fire as well, although the debris situation was muddled up by the snow-slide.

The driver, the one who had suffocated, was identified as Big Mike Turner, a mob hit man from the west coast. He had a reputation for experience with a variety of methods of killing people and had done time for attacking a rival gang member with a knife. I dug further into the background material and found that the knife was a stiletto. So he's the probable murderer, I thought. None of the firearms in the car had serial numbers. And, as Hal had noticed, it was, or had been, a rental car, from the Avis franchise at the Durango – La Plata County Airport. This tidied up some aspects of the investigation, but there were still too many questions for me to take the case to the district attorney. Or even Captain Jankowski.

\* \* \*

After lunch, my phone rang, and I felt much better to hear his voice. But just for a second.

“Hi, Annette. This is Hal. I'm told to tell you that I'm OK. And I really am. A little uncomfortable, but OK. There's someone here who wants to talk to you.” And a different voice came on the line.

“Listen good, lady. You want your smart-ass boyfriend here to stay OK and you'll do what we say. Hear?”

“I'm listening. Carefully.” I stretched my telephone cord fully out walking over to the office window, tapped on the glass to get attention and made the hand signs necessary to get a telephone trace going.

“We'll keep him alive and healthy as long as you cooperate. You're going to drop the murder case. Of that prof. The killer is dead anyway. There's no reason to bother with it any more. You keep investigating it and your boyfriend here is going to start losing body parts. We'll mail 'em to you. Got any preference for what part you want first?”

The telephone signal had been intermittently fuzzy, and I realized that the call was probably being made from a car phone. So the trace would be only marginally helpful, but I needed to try to keep him on the line anyway. And it would help me get more out of the conversation if he were somewhat off balance. I decided to gamble.

“Well, Mr. Kelly, I had about concluded the killer was dead myself. But there are still some loose ends to clear up before the department and the DA will let me drop the case. Can we talk about this?”

“What's this ‘Kelly’ crap? And it won't do you any good to try to keep me talking, because this is an untraceable call. What loose ends?”

“Right now the only thing I've got on you is violating fire regulations by smoking in that classroom. You were probably a witness to the murder, but I can't prove that. And you probably supplied Stiller with his cocaine, but I can't prove that either. So, if there's proof that the killer really was Big Mike, you're pretty much off the hook and the investigation will be dropped. Of course, if you detain Mr. Weathers much longer, this thing will involve kidnaping, and we'll have to bring in the FBI. I'm afraid that they would just insist. And you don't want to deal with them, do you? I mean, so far you're clear, if there's evidence pointing to Big Mike.”

“You call in the FBI and boyfriend here loses a real important body part. Very painful. What kind of evidence you need?”

One of the officers out in the main room walked over to my window and held up a piece of paper that said “Got it!” with a seven-digit number. My heart sank as I recognized it as the number of Hal’s cellular phone. I waved the officer into my office.

“It’s not a matter of choice, with the FBI. They automatically get involved with kidnaping. And all calls here are taped and monitored, so the news is out. If you don’t release him real soon, you’re going to have the Feds on your tail. Why don’t you let him out right now, where you are, and tell us where in a couple of minutes when you’ve driven someplace else? That’ll keep the FBI out of your hair. And so far, it doesn’t seem to bother you very much to have just my department in your hair.”

He paused long enough for me to know that he was taking the bait.

I continued, “And you know that if you harm Mr. Weathers in any way, it will just make the FBI more determined. Do you really want to deal with that? But what you don’t know is that if you harm Mr. Weathers in any way, it’ll become personal with me. And I know how to find you, Sal, believe me. You hurt Mr. Weathers and you’ll be begging me to hand you over to the FBI instead of what’ll happen to you, Sal.”

The use of the name infuriated him, but it also seemed to scare him enough to keep him talking. “Look. You’ll get Weathers back in one piece if the investigation is dropped. What evidence do you need?”

It occurred to me that if this conversation went on long enough, it might be possible to track the route of the car they were in by the various cellular repeater towers receiving the signal. I walked back over to my desk and scribbled a note to that effect and handed it to the officer, while stalling for time to think.

“OK, Sal, look. I think we can work this out, as long as Mr. Weathers stays healthy. I just want you to know how important that is. And I don’t know exactly what to tell you about the evidence because I don’t know what’s possible from your end. It has to be verifiable and, well, the truth. We can’t frame Big Mike posthumously. What about the murder weapon, the stiletto, with his prints on it? Or maybe some of his clothes with some of Stiller’s blood, or hair, or something? And, Sal, think about this. If you’re going to work with me on this, you really don’t need Mr. Weathers. Why don’t you let him go? Right now. Tell you what. You keep his phone so we can go on talking.”

“You know too much for your own good, lady. I’ll call you back in a while, so stay available. And Weathers stays healthy. For now.”

And he disconnected.

\* \* \*

## Ten

I hung up my phone and tried to stop shaking, then sat down and took several deep breaths, considering my next move. I couldn’t go anywhere, of course, in case Sal called back. Could there be any progress on the cellular trace? I got up and stuck my head out my office door.

“Bill? Any luck on their location or route or anything? I didn’t give you much time, I know, he just disconnected on me.”

“The trace initiated the process, so we know he was up on the north end of town, headed south. But that’s about all. If he stayed in one place for a while, we could probably get a triangulation, as long as it was in town. But he was moving.”

“He said he’d call back, so let’s be ready to jump when he does, OK?”

I went back to my desk and sat down again. Damn, damn, damn. Maybe Kelly will decide that the FBI just isn’t worth the risk. But if he hurts Hal, I’ll skin him alive. With a dull knife, the son of a bitch.

It was two hours later when my finally phone rang. I had enforced concentration on myself, but it was hard to keep my mind from wandering back to Hal’s situation. Still, I was able to read carefully the transcripts of the most recent conversations with the university people on Hal’s list. And my suspicions began to waver between Martin and Harmon. Were all academics this snotty?

“Trieri, investigations.”

“Hi, Annette. I’m still fine. Your last conversation with my friends here certainly stirred up a hornet’s nest. But I’m fine, really. I…” He was cut off.

I signaled frantically to the squad room to start the trace again.

“Your boyfriend is starting to really piss me off, lady. But he’s still in one piece. Listen. We’re going to let him out pretty soon, and I’ll let you know where after a while. Or he’ll probably call you first. So, no FBI, OK? And I’m gonna look into what evidence I can get to prove that Big Mike stabbed the prof. I’ll get back to you.” And he disconnected again, this time too soon for the trace to be effective, I was sure.

But they were going to let Hal go! I could have wept, but there was too much to think about. Like, who was involved in this? Kelly obviously had had to discuss the situation with someone before making the decision to let Hal go. But whom? And this meant that Kelly wasn’t the big cheese after all. Or maybe he was just a slow thinker.

Twenty minutes later, the phone rang again, and I initiated the trace right away, and picked it up. “Trieri, investigations.”

“Hiya. Well, my new friends let me off downtown on Main Avenue, by the Strater. They told me to come into Diamond Belle’s here and wait to do anything for the time it took to have a beer. Except that they don’t know I don’t drink, so I just called you right away. They were headed north on Main, but I’m sure they’re changing direction a lot.” I was so glad to hear him talk that I just let him rattle on.

“Are you still OK? Got all your body parts?”

“Sure. From what I gather, they mostly wanted you off the case, and whatever you were saying about evidence with Stetson Man seemed to do the trick.”

“Stetson Man?”

“I didn’t get properly introduced to them, although they seemed to know me. So I had to invent names for them. They weren’t wearing disguises, though, so I can give you folks great descriptions. Stetson Man, Baldy, and Flat Nose. A really distinguished bunch. Should I call a cab, or walk home, or what?”

My other line was ringing.

“Hold on for a minute, OK? My other line’s ringing and it might be, um, Stetson Man and his buddies. And I’ll send a squad car over for you.”

I pushed the button for the other line.

“OK, lady, we let him out, safe and sound, at the Diamond Belle Saloon on Main, in the Strater. And we’re long gone, so don’t bother looking around. I’m taking you at your word here, that we won’t have any trouble about our little, uh, car ride and visit with your boyfriend. OK?”

“Like I said, Sal, the only evidence I’ve got right now has you smoking in violation of the fire marshal’s rules, and I’m not going to bother busting you for that. And what about the evidence? Are you going to call me later, or what?”

“You’ll be hearing from me. And, listen. I didn’t know anything about this until after it happened and Big Mike told me about it. I left before. So I wasn’t a witness or nothing. Got it?”

“I’ve got no reason not to believe you, Sal.” Beyond your sleazy character. “Give me a call whenever you want.”

And this time I had the pleasure of hanging up on him. After getting a car sent to pick up Hal, I went back to the phone.

“Hal, are you still there? I can’t tell you how relieved I am to hear you’re in one piece. You had me really, really worried, lover.”

“Yeah, well, me too, some. It was weird. They grabbed me on my way home when I was walking down Eighth Avenue and shoved me into this big car. It was all fairly civilized, except for the threats to you about my body parts. I hope he was talking about fingers, or toes. Whatever you said seemed to make him real mad, but also thoughtful. Who are these guys, anyway?”

“I assume it was a local hood called Sal Kelly, and some of his pals. We found his prints in the lecture hall, so he was in on Stiller’s last conference. But he says that he didn’t kill Stiller, and now I think I’ve got him working on proving that one of his torpedoes did it, one of the guys killed in the brown sedan on Berthoud Pass. Politics and crime both make for strange bedfellows, it seems.”

“Well, as soon as your guys pick me up, all I want to do is to be your bedfellow, OK? I think I could use a hug again.”

“All night long,” I replied.

\* \* \*

Amy Hodges stuck her head in my door. “Hi. Got a minute? I just heard something about a kidnaping, and Randy’s going to be salivating for information. What can you tell me?”

Hodges’ background in journalism made her sympathetic to reporters’ needs, and her job as spokesperson for the department kept her own journalistic curiosity satisfied, mostly. I knew that the trick with Amy was to provide her with enough information to allow her to do her job but to avoid sensitive areas if possible.

“Well, now, I wouldn’t call it a ‘kidnaping,’ exactly because there was no ransom involved and it’s all over anyway. What happened is that someone went for a semi-involuntary ride around town with some shady characters for a couple of hours and then got let out at a different spot from where he’d been picked up. Sort of a long, round-about ride to a bar with some new acquaintances. Nobody’s any the worse for the wear, and there won’t be any charges filed, I’m sure. There’s no story in it.”

“Except that it’s a slow news day and Randy’s always looking for something, particularly since there’s been so little information coming out about the campus murder for the past couple of weeks. Anything more on that I can give him?”

“Hmm.” Better to toss them a bone if possible, if only to distract them from today’s events. “Tell them that we have developed a list of suspects, but that the murder case is complicated by the shooting I was involved in and by that accident up on Berthoud Pass a week before Christmas. Tell them that we have reason to believe that one or more of our potential suspects may have perished and that things are proceeding slowly because of that. Of course, if the primary suspect turns out to be one of the deceased, we won’t be prosecuting. It might be a good idea for him to prepare his readers for that possibility.”

“So one of the dead guys killed that professor? Any motive, or anything?”

“Be sure and emphasize that we have reason to think that one of them may have been involved in the killing, but no proof. And it appears that drugs were involved.”

Hodges grinned. “Somehow it ‘appears’ that you’re not telling me everything. As usual. Anything I should know that they shouldn’t?”

“I think I’ve told you everything that’s relevant. Remember, we haven’t cleared the case, and we don’t know for sure who did the killing.”

My phone rang, and I was rescued. It was Hal’s ride.

“Lieutenant Trieri, this is Officer Donlan in unit 37. We were sent to Diamond Belle’s to pick up a party for you, and he’s trying to get us to take him to his home instead of bringing him in. He said to call you for confirmation.”

I tried not to laugh. Maybe I should tell them to take Hal to the drunk tank. Or, better yet, to the city limits with instructions not to come back. Like my idea of handcuffing him to me, this would at least keep him out of trouble. But, with the reporters hanging around the station, sending him home really did seem like a good idea.

“Thanks, Donlan. You can take him home. And tell him to please stay there and to call me right away, OK?”

Since Hal’s house was just up the hill from downtown, it didn’t take long for the phone to ring again, with Hal on the line.

“Hi again. The guys in blue told me to call you. I’m home.”

“Good. I have to work for a couple more hours, so stay put, please. I’ll bring something to cook and we can have a quiet evening rehashing the day’s adventure. You’ll be glad to hear that I managed, at least I think I managed, to keep this out of the papers.”

“Oh, no. I don’t get to enhance my celebrity victim status with yet another tale of run-ins with the underworld? Geez, you’re taking all the fun out of this.”

“Well, I bet I could arrange for a TV news crew to come by and film you at home, if you really want.”

“I’ll be hiding under the bed. And how about something comforting for dinner, like macaroni and cheese?”

“Sure. I’ll make you the yuppie version, fettuccini Alfredo. With three varieties of Romano. See you about 6:30.”

We really were getting domesticated. I wondered if he needed paper towels or dishwasher soap.

\* \* \*

Kelly hadn't denied what I had hinted to him, and he had seemed amenable to the plan to find evidence implicating the late Mr. Turner in the murder. Of course, he could be lying through his teeth, trying to protect himself by pinning the blame on a person beyond the reach of the law, but solid evidence implicating Turner would have to be seriously considered regardless of Kelly's lack of credibility.

I was pleased that my working scenario was generally supported by the conversation with Kelly, but I was also careful to continue, and nurture, my skepticism. It appeared that I might have to modify my hypothesis so that someone other than Kelly made the final changes to the equations. But there was really no solid evidence placing anyone other than Kelly and Stiller in the classroom, beyond the probability of a third person based on the handwriting analysis. And the question of this third person's identity was becoming more and more compelling.

Most relevant was the fact that it appeared as if it could be someone from the university. I knew enough about university/real-world relationships to know that this issue had bombshell potential. If the public—that is, the university trustees and the state legislature as well as the John Q. Public family—were to find that a university official was involved in drug trafficking, stuff would really hit the fan. The public entrusted these folks with their youngsters at a particularly vulnerable stage in their development. The last thing that Frémont State needed, and, by extension, the last thing Durango needed, was a scandal that might jeopardize the school's future.

Further, this university person was responsible for at least the phone threat and the first attack on Hal, and knowledge of this at the university would not bode well for internal relations. There must be something in those transcripts that would help differentiate between Martin and Harmon. Or at least lead to new questions that could be used in follow-up interviews. I turned back to the files.

Before I took off for Winter Park with Hal, I spent the week formulating strategy with my investigative team. We decided to interview each person on Hal's list using the same set of questions, in the same order, or at least try to. We all suspected that controlling the conversation with the university president, the provost, and possibly one or two of the others might be difficult. I had read all of the files before, but now I decided to read them in parallel, question by question, to see how the answers compared.

In order to set the stage for the important questions, the detectives had to explain to the interviewees the threatening call to Hal's cellular phone and its apparent relationship to the car bomb and shoot-out later that day. And the fact that their interview was based on their being one of the few individuals who knew the cellular phone number. So the beginning questions, the simpler ones designed to put everyone at ease, revolved around who else might know the number, people that Hal wouldn't know knew. But even this raised Martin's hackles:

I have no idea what you're talking about. I don't know that telephone number, although I expect that my secretary has it somewhere in case I should need it. And if I don't know it, I couldn't tell anyone, could I? Or are you suggesting that it was I who made the threatening call? Obviously, I did not plant the bomb. I'm afraid this is all a waste of my valuable time.

Harmon, on the other hand, was still cooperative at this point:

I can't recall that number, but Dean Weathers might have given it to me in case there was an emergency of some kind. My secretary probably has it, if he did. And I suppose

that she could have passed it to someone else. I'm not sure I even was aware that he carried a cellular phone around, now that I think about it. Must be a nuisance.

Everyone had been reassured that everyone else on Hal's list was being questioned, too, and that this was all routine, for self-consistency, and so on. Martin had not been mollified.

The real objective of the interviews was to discuss alibis for the night of the killing, without making any of the interviewees feel so threatened that they stopped talking and demanded a lawyer. But even the most gentle of approaches to this issue could not disguise the fact that those being questioned were under some suspicion. Everyone had been told that the alibi questions were related to eliminating people from further consideration of everything associated with the investigation, and this bait was so attractive to most of the interviewees that they jumped at it. Besides, most of them had alibis. It had been Sunday night, and they were at home with family. However, Martin was coldly outraged, or at least pretended to be:

It's becoming clear that you suspect me of being involved with the murder somehow. These questions have nothing to do with telephone numbers. And they are highly intrusive. I am not answerable to you, or anyone else, for that matter, for how I spent my Sunday evening. It is outrageous that you would suspect me, the Provost and Executive Vice President of Frémont State University, of being involved in this sordid matter. You've wasted enough of my time. And any further questions will be passed to me only through my attorney. This interview is ended. The door is behind you. Good day.

If Martin had at least kept his cool, Harmon had lost hers:

You want to know what?! What kind of crap are you trying to pull here, anyway? You're asking me for an alibi, for Christ sakes! That means that I'm a suspect in Ralph's murder. Listen, assholes, that guy was the heart and soul of my department and no one is more upset at his killing than I am. Get the hell out of my office!

In between the opening and closing questions, both Martin and Harmon had progressed toward their respective levels of outrage without providing information that gave me any hints to help differentiate them. I began to hope that they'd both wind up being involved. They both deserved to be brought down a notch or two, that was for sure.

\* \* \*

It was almost 7:00 by the time I got to Hal's place, with dinner ingredients. I had needed to check out two stores to find the right kinds of pasta and cheese, and a cheese that I bought in the first store was on sale at the second, so naturally I had to go back to the first and exchange the expensive cheese for something on sale. Which had taken a while to find. I was glad that Hal had not been with me.

It wasn't clear who was happier to see whom. He got his hug, a long, tight one that neither of us wanted to let go of, and we headed for the kitchen to make dinner.

"I took you at your word and got macaroni and cheese, sort of."

“Oh, Lord, not the stuff in the box. Please, at least tell me that it’s the frozen stuff. The gluey kind.”

“No, dummy, like I said on the phone, it’s the yuppie kind. You boil some water and I’ll grate this cheese. I hope you’ve got butter.” Since there were no sauces or other complicated things to assemble, we were entirely compatible, although out of the corner of my eye I saw Hal wince when I made the salad dressing. But he seemed to like it.

Our dinner conversation finally turned to the case, and Hal had some news. “I had the strange experience today of seeing that stuffed-shirted boss of mine grovel. He was on campus today, too, and he looked me up this morning, before all the excitement.”

“You mean Martin? I’m still trying to decide between him and Harmon for candidacy as the university connection in our case. What happened? It’s hard to picture him groveling.”

“I’m not sure he actually wanted me to tell you this, so it’s off the record. I guess he thought by telling me, it would allow me to persuade you to take the heat off him. Remember that he doesn’t have an alibi for the night of the murder? Well, it seems that his wife was out of town—and I suppose this could be verified—visiting her sick mother back east. So he decided he wanted a night out, a night out with some excitement, so he went to Sizzles. Seems he had been involved in a theater group back in his student days, and he learned how to use makeup and false facial hair for parts. So he figure he could go there disguised and watch the flesh without being recognized. He stayed until closing, he said, around two in the morning. So he claims to have an alibi although one that’ll be hard to prove. He volunteered to get made up again and go back, to see if he could get anyone to recognize him with that look and verify that he’d been there.”

“Sizzles?! You’ve got a dirty old man for a provost, my friend. Does he grope the students, too? God Almighty. That place makes Fannie’s look like church. We’ve got an undercover vice team that’s occupied almost full-time keeping tabs on the questionable activities there. I think we even busted them a while back for having real, actual, honest-to-God live sex on stage. What a sleazebag.”

“Yeah. But don’t let the humor in this escape you. You said you’ve read the interview transcripts, and I bet that you have a pretty good idea of what a pompous ass he can be. Maybe this is an example of karma, somehow. Anyway, this may eliminate him.”

“Not entirely, but it promotes Harmon to the head of the class, as it were. But what about the Twin Towers incident? We had him connected through that, since the AD reports to him now.”

“Don’t know. But the campus grapevine may have some information pertinent to that, and the vintner just happens to work for me. I’ll see what I can find out tomorrow. Now, my dear, I don’t think I’ve properly thanked you for extricating me from that little car ride today. And you look all tensed up. Did you know that one of my many talents is relaxation massage?”

Even then, so early in our relationship, the guy really knew how to make me melt.

\* \* \*

## Eleven

The next morning, I left Hal’s place early, so that I could make a run through my house, pick up changes of clothes and leave off dirty ones, rescue the newspaper, water my plants, and a host of other things. This two-household life was getting to be a real drag.

I began mulling over the question of actually moving in with him. If so, should I sell my house? Property values had appreciated tremendously since my divorce, so I'd be able to make a nice profit if I sold it now. Or I could rent it. But renting to college students was always iffy. They generally made lousy tenants, with no respect for property, and thought nothing of putting their fists through walls and other such things. And the guys were even worse. Maybe Hal could use his connections to get it rented to visiting faculty, or something like that. At least grownups would keep the bathroom clean.

All this presupposed that Hal would have me as a house-mate. What if he wasn't ready? And this also presupposed that I was ready. Was I? Hmm. At least he put the toilet seat down. Guys that considerate are really hard to find.

Except, we'd met only three weeks ago. Love at first sight I could believe in. But moving in together? Maybe we could work out an alternate visitation deal, so I could be home sometimes. But his place was so much nicer, more comfortable and cozy, and bigger. And in a nicer neighborhood.

Anyway, he ought to ask me. How could I ask him if I could just up and move in to his house with him? "Hal, how about if I pack up my stuff and move it over here?" "Hal, I want to share my life with you even more than I have been, and besides I can never remember which clothes are where?" "Hal, don't you think it's cute how nice our cars look together in your garage?" Or maybe a little white lie: "Hal, my parents are coming for a long visit and I figured I could move in here and just give them my place. I'll tell them I'm staying with a girlfriend." Except then he'd want to meet them. Well, hell.

\* \* \*

At about 3:30 that afternoon, my telephone rang, and the front desk informed me that a courier had delivered a package for me, in one of those padded 9x12 envelopes. No return address.

"Has Roscoe had a look at it?" Although this was standard procedure, I was feeling extra cautious.

Roscoe, our department's bomb-sniffing beagle, had been rescued from likely euthanasia at the animal shelter by the bomb squad about 12 years earlier, when he was just a pup. He'd been trained in the art of discovering explosives and other nasty things, and had enjoyed a long and distinguished career. He was now semi-retired and lived at the station in royal splendor, gratefully and eagerly accepting the treats that just about everyone brought him.

"We're running it down to him now." In his semi-retirement, suspicious packages went to Roscoe, rather than the other way 'round, in no small part because of these treats. Combined with his habit of getting up only for his daily constitutional, the treats had led to Roscoe's carrying the weight of about two normal beagles, large ones. His belly dragged on the ground when he did manage to walk about. But his nose still worked fine.

Eventually the package found its way to me, and I put on latex gloves to examine it carefully. It was obvious that the sender was striving for anonymity. Inside, I found a stiletto in a plastic bag, Hal's cellular phone, and a note, written, apparently, using a word processor and printed anonymously on a laser printer. "So, crooks use computers, too," I mumbled to myself. It seemed to be from Kelly, or whomever I'd been talking to in the car yesterday.

Like you suggested, we looked into the matter of the knife used to kill that professor. We found this at Big Mike's place. We picked it up with a tissue and put it in the plastic bag without touching it, except for the very end of the handle. I'll call you later to make sure you got it OK. Your boyfriend's new friends.

I held the bag up to the light to look at the knife, and it seemed that there was residue of something at the base of the blade, where it was joined to the handle. If that turned out to be Stiller's blood, and if there were Turner's prints on the handle, the murder would be solved, notwithstanding some unanswered questions.

I had already researched the matter of how I might reach Kelly, if the need arose, and so I now dialed his number. No point in waiting for him to call me.

A different voice from yesterday answered with a "Yeah."

"Good afternoon. I'm calling for Sal Kelly. This is Lieutenant Trieri from the Durango police department. I'd like to continue our conversation of yesterday."

"Wrong number, lady."

"Now, now. I know he's at this number, and if you're there, he's there. Please tell him that I got his package, and that I'd like to thank him and ask an important question that will help keep him off the hook. Can you remember all that?" I heard the sound of the receiver being set on a table top, and waited patiently for several minutes. There was the sound of a conversation in the background, but I couldn't make it out.

"Hello?" Finally someone had picked the receiver back up, and it was the same voice from yesterday's car episode.

"Hi, Sal. I got your package, and it looks like we'll be able to get something off the knife. If there's blood on it that matches the professor's, and if there are Big Mike's prints on it, I think the murder investigation will be closed."

"How come you keep calling me Sal? You don't know who I am."

"We got your prints from the seat in the lecture hall, Sal. You must have taken your gloves off to smoke that cigar. We know you were there. Wouldn't our conversations be a lot easier if you just admit I know what I'm talking about? Now listen. I need one more thing from you. Turner's address. If you found the knife there, there may be more evidence that will strengthen our case. I don't think we'll be giving you a good citizenship medal or anything, but helping us will take the heat off you, like I was saying yesterday."

"So even though you know—er, even though you think I was there, I'm not a suspect."

"Well, that depends on what the lab guys find on the knife. I mean, if there's the professor's blood and *your* fingerprints, you'll be in big trouble. You were smart not to pick it up with your fingers. And if something comes up that puts you in the room when the murder happened, and we know what time that was, you'll be an accessory. You see, Sal, despite your less-than-upstanding reputation, I'm assuming that you're telling the truth for once and really didn't know about this until Mike told you. I figure Stiller was helping you with new and interesting chemicals and you really didn't want to lose him. So you left that meeting—all that chemistry talk was probably too boring for you to stay awake—and something happened and Stiller got dead."

"Lady, I got no idea whatsoever what you're talking about. But you won't find my prints on that knife. Or on the phone either."

"I hope you didn't wipe the knife off, Sal. We need Big Mike's prints on it, or we're still not going to be satisfied. Can I always reach you at this number, if I need to talk to you?"

"You sure are a wise-ass, lady. Does your boyfriend get it from you?"

“Actually it’s sort of mutual. You should hear us at home. Oh. One more thing. It would be very helpful to us if you’d tell us who else was at that meeting. You, for a while, the professor, Big Mike, and who else?” I decided to gamble again. “It’ll help your cause to tell me her name.”

“Ha! Don’t push it, lady. You think you know everything, don’t you?” And he hung up.

Rats. He might be a small-time hood, but he was no dope. He’d not given me any help at all by that response. But at least there was some progress. And we could find Turner’s address anyhow.

I reassembled the package and sent it down to the lab. It would be interesting to see whose fingerprints were to be found.

\* \* \*

That evening, over a dinner built around sautéed prawns over linguini, Hal was full of news from the campus grapevine. “When the Twin Towers get back from Kansas, you’ll have to have another conversation with them about their meeting in the locker room with the mystery man. Maybe it was the AD, with his voice disguised. Alice tells me that he and Linda Harmon are an ‘item,’ as she put it.”

He laughed. “I told her I didn’t know exactly what that meant and asked her, for calibration purposes, what about you and me, and she looked over her glasses in that school teacher way of hers and said, ‘Oh, you’ve gone far beyond mere “item” status, Dean Weathers.’ I hope I didn’t turn too red.”

“So the AD could have been doing a favor for his squeeze. Is he back from his recruiting trip yet? We’ll have to question him as soon as we can.”

“No, and neither is the coach, who might know something. I think the AD is in Florida and coach went to Nebraska. Guess who’ll come up with more recruits. Also, remember I told you about that nasty e-mail from Linda, about my ‘stepping aside,’ as she put it, as dean for a while? Well, I’ve obviously got the provost on my side now, so he’s not going to let her force that to happen. But the interesting thing is that neither will the other department chairs. It seems they don’t trust her. I guess that deans can’t know everything about what’s going on with the rank and file. It was more or less her turn to do a rotation as chemistry chair, but I hear it was controversial within the department, and it was Stiller who was her champion. I’ll defer to your expert judgement, but it’s looking to me as if this is all starting to come together.”

“But we still don’t have any solid evidence pointing to her. I’m working on your friends in the car, but they’re not talking. They seem to think that they’re home free now that the murderer has been identified. Although that’s still on hold pending results from the lab. I have an idea, although I don’t know if it will work. From the interview transcripts, Harmon seems pretty volatile. She blew up at the detectives when she figured out they were asking about alibis. Martin just got coldly distant, and more arrogant, at that point in the questioning. Maybe we can turn up the heat and get her to blow her cool again, and admit somehow that she was in that classroom. And that she supplied Kelly with your cellular phone number. And so on.”

“You’ve suggested that Sal is a sort of ringleader in all this but not the mastermind. What’s her involvement, beyond this stuff? Could she be the mastermind?” He looked off into space.

“Mistressmind? Aha! Another job for the feckless campus gender-issue sensitivity committee!”

“Oh, Lord. You and your political correctness. One thing I’ve thought about, and I talked with the captain about it, too, is the bigger issues involved with these designer drugs and their relationships to the cocaine and pot scene around here. He and the DA’s office think they’re all interlinked. Durango and the surrounding region are just too small a market to have more than one syndicate running drugs, even counting Cortez and Farmington. I’ve been concentrating on the murder and the attempts on you, the

bomb and so on, but there's this bigger matter to consider. If we could tie everything together and bring down Sal and his guys, we'd be doing the community a real favor."

"Not to mention getting you your captain's stripes, my pretty."

"Oh, yeah. Just what I need, even more of a desk job than I've got now. You keep feeding me like this and I'll turn out like Roscoe."

But I was flattered. And, of course, I had to explain about the department's favorite pooch.

"His belly drags on the floor? Um, if it's all the same to you, I like you the way you are. You want to use my ski machine?"

\* \* \*

Making the rounds the next morning, first to my place and then to work, I was reminded once again of the dual household problem. What had started out as a humorous nuisance and grown into a real drag was obviously going to mature into a royal pain.

But that wasn't reason enough to make this big a change. And how would it work anyway? His house was big enough, but there would need to be some changes. I had discovered that his summer hobby was fly-fishing, and that half of his den had been converted to a fly-tying studio with gadgets galore and lots of dead animal parts lying around. With an old blender that he explained was for the purpose of chopping up rabbit and muskrat fur, with other stuff, to make something called "blended dubbing." Yuck.

After dinner, I had been reading, gotten absorbed, and not noticed that he had disappeared until I reached the end of a chapter. I went looking for him, wandering around in his not-entirely-familiar house in the dark, and discovered him in the den, hunched over an extremely cluttered table, with his reading glasses on, working at something clamped in a funny-looking vise. He must have heard me walk in, because he didn't jump when I kissed him on the back of the neck and asked what in the world he was doing.

"Just stocking up for the summer. I try to tie a half-dozen or so flies each evening. I'm not very fast, so that's about all I can do in a hour." By then I had seen him wrap thread around a tiny fishhook in the vise and lash on a little piece of fur of some kind at one end and some minuscule feathers toward the other. Then he twirled some fur—what turned out to be the blended dubbing—onto the thread and wrapped it onto the hook, making a fat little bug body.

"Does that thing have a name?" To my surprise, it was beginning to look something like a little insect.

"This is a local variation of a sort of generic mayfly called a pale morning dun. As opposed to a pale evening dun. These colors are a little darker than the classic PMD, but it works around here." He had begun winding a larger feather about the end of the hook near the eye, and something resembling a creme-colored collar appeared. "I go through about a two dozen of these in three different sizes—I mean about six dozen flies altogether—each summer, so I've actually gotten so I can tie the little suckers without too many mistakes. There." He held it up with a pair of tweezers, and it really did resemble a mayfly.

What kind of weird guy had I fallen in love with, anyway?

In any case, I was going to need some space for my computer somewhere. And my other stuff, too. At least the big closet in his bedroom was still about half empty. And his kitchen was sure a lot nicer than mine. But he was so anal about his cooking. Geez, he'd even measured the minced basil into a

tablespoon by packing it down carefully, and selected just-right “medium cloves” of garlic to dice. It had made me slightly crazy to sit and watch this foolishness. But the shrimp had turned out to be delicious. Just how was I going to get a discussion of combining households started without scaring him off?

Maybe I could talk him into staying over at my place tonight, to let him get a taste of this commuting baloney.

\* \* \*

My agenda for the day included a meeting with the assistant district attorney, to discuss getting warrants to tap Harmon’s phones, to search her home, and, with the university’s cooperation, to search her office. To the extent that a search could be approved by the provost, it would be a snap, I figured. But persuading a judge to issue warrants on what we had could be a close call. In the afternoon, I was slated to visit the campus and discuss illegal chemical substances with the chemistry lab guy, Gil Taylor.

First, it would be helpful to get the provost’s cooperation for the warrant. I was aware that the university was, technically, state property and that jurisdictions were a little fuzzy on campus. I called Martin’s office.

“Hello. This is Lieutenant Annette Trieri at the police department. I wonder if I might speak with Provost Martin, please.” There was a delay.

“Hello Lieutenant Trieri. What can I do for you?”

“May I speak confidentially?” I waited for confirmation. “You may be interested to know that I’ve done some checking, entirely informally, you understand, and I’ve found that an Edith Martin flew from here to Newark on December fourth, via Denver. Also, one of the bouncers at a local nightclub recalls clearly a middle-aged gentleman wearing what appeared to be false whiskers and a toupée in his establishment until closing the night of December fifth. I appreciate your cooperation with our investigation of recent events, and I want you to know that I consider you to be a resource in helping us with the university-related aspects of the investigation. And that is the only role that I consider you to have in this investigation. Am I coming through clearly?”

“I believe that I understand exactly what you’re saying, Lieutenant, and I appreciate your candor. And discretion.”

“You should also understand that, as a citizen, a taxpayer, and a staunch supporter of Frémont State, I’m not entirely pleased with your choice of entertainment. But, from an official perspective, I consider the matter closed.”

I wondered how he would react to this criticism.

“Lieutenant, I am aware of both my position and my reputation on campus, the good and the bad of each, but I have never been one to try to duck responsibility for my mistakes.” He sighed. “I’d never been to a place like that, and, for some reason I can’t explain, I was overcome with curiosity that weekend. Maybe it was a kind of mid-life crisis, the kind that motivates some men my age to purchase red sports cars. In any case, I can’t believe I actually went there. You may be sure that I’ll never do it again.”

“Well, now you know the origin of that old saw about curiosity and cats. And let me suggest that if you do get curious again, try Fannie’s instead. That way, you’ll have far less chance of being present during a vice raid.” I could hear him gasp. “Anyway, like I said, I consider the matter closed. I’m calling because I’m assuming that you, as chief academic officer at Frémont State, are interested in having the matter of the circumstances of Professor Stiller’s murder explained as completely as possible.”

“Absolutely. And I can offer you the full power of my office for assistance, should you need it. I’ve heard the rumors about drugs, and I want this cleared up. The legislature is going to start working on our budget soon, and the last thing we need is for this to mushroom into a scandal.”

“I believe that my detectives mentioned that you were questioned because you were one of several individuals at the university on a list of names compiled by Dean Weathers. People who he believed knew his cellular phone number. All but one of those individuals has now been accounted for on the night of the murder. I wonder if I might enlist your cooperation in investigating further that remaining individual?”

“As I said, you have the full power of my office at your disposal. And, insofar as the campus is not fully within the jurisdiction of your department, that could be very helpful, I should think. In addition, there are special rules related to matters on campus that have been put in place over the years by the state legislature, things such as what’s public and what’s not, and so on. These rules are quite different from the rest of the world. For example, we have been told that our e-mail is in the public domain, should someone seek to read it, just as paper correspondence is. And offices, laboratories, and the like are also public property, except for certain personal possessions. I have been told by university counsel that I have the authority to enter and search any room on campus, as long as I do not break locks placed in authorized places, such as lockers and desk or file drawers labeled ‘personal.’ Also, private vehicles parked on campus require search warrants to enter. My understanding is that I have access to everything else, at will. I’ve been somewhat overwhelmed by the responsibility of this, and it’s affected my behavior. I think it’s made me standoffish.”

My heavens, the man’s human after all, I thought. “Provost Martin, it sounds as if you’re just the person I need to work with to solve this little mystery. We believe that we’ve figured out who did the actual killing. But we’d like to cast as wide a net as possible and round up everyone involved before we go public with that. You see, we believe that Professor Stiller was involved with a gang of drug pushers who were working on new chemicals to sell to the students. They’re called ‘designer drugs,’ perhaps you’ve heard the term. We know who the small fry are in the gang involved, but there is one more key person at the university that we believe to be involved. And it may be that there is evidence on campus implicating this person.”

“May I ask whom you suspect?”

“I discovered that you used to be on the chemistry faculty, before you joined the administration. Is that correct?”

“I still am on the chemistry faculty, although I don’t teach any more. I do have a graduate student. And I have the dubious honor of serving on the department’s space assignment committee, my one commitment to departmental service. Why?”

“Our prime suspect in this matter, not the killing but the connection of the drug pushers to the campus, is the chemistry department chair, Professor Linda Harmon.”

His silence spoke volumes.

\* \* \*

## Twelve

The meeting with the assistant district attorney went better than I had expected it to. I patiently and carefully laid out the entire story, including both facts from physical evidence and testimony as well as my inferences from various sources of information. He was persuaded that we could get warrants from Judge Sandose, one of the more conservative local jurists who had a particularly strong aversion to drug activity.

And the DA confirmed what the provost had told me about jurisdiction on campus. University officials had free reign there, with the exception of the locations the provost had noted as well as other private places such as residence halls and apartments.

After lunch I went through the rigors of finding parking on campus, a task simplified by the Christmas break calendar, but nonetheless a challenge, and made my way to Gil Taylor's laboratory in the chemistry building.

"Mr. Taylor?" I had found the door labeled "Analytical Chemistry Facility" open.

"Yeah, back here," came a voice from somewhere behind, and apparently under, a bank of exotic looking equipment. "Just a sec. I need to connect this one thing and then I'll crawl out of here."

I looked around as he finished up. The lab was full of things that I couldn't identify. It was not at all like our lab in the police department, which had three systems for analysis of blood samples and drugs, each self-contained and free standing. Everything here was hooked together with electrical cables and plastic tubes. There were at least four computer screens, in addition to read-out panels for the instruments. And all sorts of warning labels. I was a little surprised that such a professional report had emerged from a place like this.

Toward the back of the laboratory, a lanky figure began to emerge from the jumble of equipment as it unfolded itself into an upright position.

"Ugh. Well, I think I got it connected. I've found that the only way to get things hooked up the way I need them to be is to do it myself. Bet you'd never have guessed, though." He grinned and stuck out his hand. "You must be Lieutenant Trieri. I'm Gil Taylor. Glad to meet you."

"Glad to meet you, Mr. Taylor. Down at headquarters, we were all very impressed with that report you did for Dean Weathers, on the substance found in the lecture hall near Professor Stiller's lab. In fact, my guys are interested in putting you on some kind of retainer for future sample analysis. It seems that your equipment found some things that ours missed."

"Well, I don't mean to sound smug or anything, but I'm not surprised. This equipment, even though it looks like a pile of junk, is really state-of-the-art, and I keep it carefully tuned up. The faculty and students here couldn't function with less. And, with all due respect, I bet your lab is so busy that your guys don't have the time or energy to tweak the equipment like I do. I'd be glad to be a resource for you. I do have to charge for samples, though, unless you can get the dean or someone in the university to subsidize it."

"We'll be glad to pay for sample analysis. What I'd like to talk about is that report you did, along with some other information from the case."

I pulled out the print-outs of the pictures of the equations that Hal had given me. "Hal, that is, Dean Weathers, told me that you couldn't put a name to the chemical you found but that it looked similar to that drug called Ecstasy. These equations were found on the white board in the lecture hall. They seem to have been written by more than one person, and perhaps they were changed to confuse things. But do you suppose there's any relationship between any of the chemicals in these equations and that substance you identified?"

“Hmm. Hard to say. Looks like this is the product of someone’s imagination, or, like you said, someone changed things to cover his tracks. See, some of these molecules just couldn’t exist, or else if they did, they wouldn’t be stable.”

“Hal said that Professor Harmon had pointed out that the equations weren’t, I hope I get this right, stoichiometrically balanced.”

“That’s true, too. But I’m referring not to the stoichiometry but to these molecules.” He pointed to the equations. “There are just not the right numbers of these various atoms present to have a stable molecule. I suppose that I could fiddle with these atomic coefficients until I got a molecule like the ones found by the mass spec. But I still wouldn’t know what to call it. And I still wouldn’t know what physiological effect it would have if you ate, or snorted or smoked, some. I suppose I shouldn’t say this, since you’re a cop, but, as I told Hal, I used up all of that stuff he gave me in the mass spec and didn’t have any left over to try on myself.”

“Would you have tried it if you’d had some left over?”

“Well, maybe, twenty years ago. Things were wilder and crazier for me then. I guess now I wouldn’t. That’s the trouble with growing up.” He laughed, and I joined in.

“There’s another thing that I’ve been wondering about, Mr. Taylor. We’ve about decided that there was some sort of meeting going on in that lecture hall the night of Professor Stiller’s murder, and these equations were a part of the discussion. But we can’t figure out why they’d have a meeting here, on campus. It just doesn’t make sense to me. We know that one of the people there was the murderer, who would never come to campus except perhaps to try to pick up girls, and another was a local two-bit hood. Any idea why they’d be here? On a Sunday night?”

“Certainly not for the lecture hall. Even though white boards aren’t widely available, the markers work fine on glass. So any window would work to illustrate things on. So if you’re talking about only a few people, about the only thing around here that’s unique is the labs. Maybe they were really here to see something in Stiller’s lab, and they needed to discuss stuff with a white-board so they went into the lecture hall. None of the labs has white-boards or windows, or anything like that. I think his lab is, or was, just down the hall from that lecture room.”

“We hadn’t thought of that. Thanks. And I think one of our lab guys will be calling you about sending over some samples. Nice meeting you.”

\* \* \*

I’d resisted the urge to ask him if Harmon also had her own laboratory, and where it might be. But Provost Martin had said he was on a space assignment committee, so he’d probably know. Stiller’s laboratory had been searched along with his office, of course, but nothing unusual had been found. If Harmon’s lab were also in the vicinity of the classroom, that could explain a lot.

With the help of a campus map, I found my way over to the provost’s office, only to discover that he was in a meeting until 4:00. I told the secretary to let him know that I’d return, and walked over to Hal’s office. Alice looked up and smiled warmly as I entered.

“Hello, Alice. Nice to see you again. I’m waiting for a meeting with the provost and thought I’d stop by and say hi to your boss. Is he in?”

“Nice to see you again, Lieutenant. He’s on the phone, but I don’t think it will be much longer. I hope your holiday weekend was relaxing.”

I was just about to answer when Hal stuck his head out his door. “Alice...oh, hi Annette. What’re you doing here? Want to come in? Alice, the faculty senate wants me at their next meeting, the second Tuesday in January at 3:00. I told them I’d be there.”

He closed the door behind me, grabbed me in a bear hug and kissed me hard. “What a nice surprise to see you here. Mind if I tousele you up a bit?” He dove for my neck, and I got the giggles.

“I have a meeting with your boss at 4:00, so think about how touselled you want me to look.” I could tell he was not really as disappointed as he pretended to be. “I came onto campus to meet with Gil Taylor and Provost Martin, but I had some time and thought I’d stop by to see my tax dollars at work. Is this how you greet all your visitors? Or am I special?”

“Ooo. Fishing for compliments are we? You know you’re special. So special, in fact, that I’m going to give you a break and come stay with you tonight at your place. And pick up dinner on my way over. Chinese OK? What’s the meeting with Martin about?”

“Chinese? Hmm. Get chicken and snow peas and some soup. And I’m going to have him take me into Linda Harmon’s lab and office, if she’s not around. Gil pointed out something interesting. The only reason for that drug summit to have been on campus is the labs. And we didn’t find anything interesting in Stiller’s lab. Want to tag along?”

\* \* \*

We were back in the provost’s office by 4:00 and found him waiting. He was more than willing to conduct a tour of Linda Harmon’s space holdings. She was away on a vacation between the holiday weekends, anyway, so the timing was perfect. And it turned out that her laboratory was next to Stiller’s, just down the hall from the lecture room. It seemed like a better place to start than her office, so we headed in that direction.

Martin let us in with a master key. “I don’t usually have a key like this, but after our conversation this morning, I got one from facilities. It’s supposed to open any door on campus. Only the campus police and the local fire house have them.”

He turned on a light, and now we found ourselves in a typical research laboratory, with a fume hood, chemical-proof benches, sinks, and several enclosed chambers with thermometers on the sides. The chambers held little flat glass dishes with strange blotches in them, and there was an accumulation of apparently dirty glassware in one of the sinks. Hal intentionally bumped the mouse of the computer, and the screen displayed a request for a password. The drawers to the desk were locked.

“Well,” I said, “I don’t know exactly what to look for, and I’m not sure that I want to poke around too much. It would be better if no one knew we had come in here, and, besides, there’s no reason to accidentally mess up her experiments. Too bad about the password. Do you know of any way to get around it?”

Hal followed the power cord to a wall outlet. “Well, we could cycle the power and see what happens. Sometimes these passwords are just built into a screen saver program and restarting the computer foils them. And there’s no UPS here, so she’ll probably just assume that there was a power glitch, when she comes back. This isn’t something I’m really comfortable with, you know. But, since we’re already in here... What do you think, John?”

Martin was looking at the contents of a chemical supply cabinet, at several shelves of brown bottles and jars with esoteric labels. “I have some responsibility here to make sure that we’re not snooping just to satisfy idle curiosity. We do need some probable cause to think that Linda’s a suspect. Maybe not

‘probable cause’ in the legal sense, but some reason nonetheless. However, I may have found it here. Go ahead and cycle the power, or whatever, Hal.”

He did, and while waiting for the computer to think its way through its startup programs, he walked over to the supply cabinet. “What’s here?”

“Well, Linda is a biochemist. I’ve forgotten what it is exactly that she’s working on, what’s growing in those incubation chambers over there. But you would expect that biochemists would have on hand a relatively limited and specific suite of chemicals for experimental purposes. I mean, if something unusual comes up, they can go to chemical stores downstairs and get what they need, fresh and in the right quantity. But what we have here is a remarkable collection, especially for a biochemist. I bet, with the right recipe, I could whip up a really potent batch of methamphetamine with this stuff. And Lord knows what else. Wonder if there are any interesting recipes in that computer?”

I found a telephone and dialed the DA’s office. Maybe they hadn’t been to see the judge yet.

\* \* \*

“‘Love comes your way.’ A very nice sentiment, indeed. And I guess that I won’t be too picky about verb tense in fortune cookies and I’ll just assume the it’s meant to fit the circumstances.”

We had worked our way through egg rolls, hot and sour soup, the chicken and snow peas that I’d requested, along with some fried rice (he got the shrimp kind), and he had cracked open his American-style Chinese dessert.

“What’s yours say?”

I broke mine in half and pulled out the little slip of paper. “‘Business fortune rises.’”

I wondered to myself if that meant I was about to become a landlord, or what. “I like yours better.”

I got up, walked around him and kissed him on the cheek, and started clearing up the boxes and other debris.

After Martin’s discovery in Harmon’s chemistry laboratory, Hal had been motivated to try to hack into her computer, so when a simple restart didn’t work—the computer eventually came up with the same patient request for a password as before—he tried a couple of other tricks and finally called Alice. He caught her just as she was getting ready to leave and asked her to stop by the laboratory on her way to her parking lot with a diskette he kept in his desk. The computer obediently started using the software on the diskette, and he suddenly had complete access to the contents of Harmon’s computer’s hard disk.

“Passwords,” Hal remarked, “are only as good as the computer they’re installed on.” With the encouragement of his boss, and with me as a witness, Hal assumed the role of computer detective and used the computer’s software and his knowledge of the campus network to copy the entire contents of Harmon’s hard disk to another location, where he could examine it at his leisure. And I could now see, with dinner over, that the leisure clock was running.

“Does your computer have access to the campus network? I mean, you’ve got a modem and all, don’t you? You sent me those messages late at night from here a couple of weeks ago, right? I think I can find what we’re looking for on Linda’s disk pretty easily, if it’s there.”

It would be interesting to see if he really knew his computers. “It’s in the spare bedroom, across from mine, and already turned on. Fire up the communications program, but you’ll have to get the modem to dial whatever number you use to get to the campus manually. I’ll clean up here and come in and watch over your shoulder in a minute.”

I spent about fifteen minutes cleaning up and starting a load of laundry, and walked into my study in the spare bedroom. Yep, he knew his computers. He had not only figured out how to get to the campus using a point-to-point internet protocol connection, but he was sifting through the contents of Harmon's hard disk already, and had, apparently, found several items of interest that he had flagged. My printer had also spat several pages of information.

"Have a look at those pages in the printer. I think they'll be of interest. The first one looks like some kind of ledger, from a spreadsheet program in Linda's files. You, sweet thing, have a wonderful little computer here, with all the right utilities. I approve."

I resisted the urge to be offended by his paternalism, because he seemed to know his stuff. And I had seen his machines, all three of them. The least of them, his laptop, was actually more powerful than my desktop at work, which was a generation newer than my own home computer here. At least he approved of my taste in software.

The spreadsheet appeared to be a receivables account statement associated with Harmon's bank. There were a number of entries corresponding to the deposits of her university paychecks, and several others from the university apparently related to travel and other reimbursements. Of greater interest were two entries, each in five figures, with the cryptic notation "GD Enterprises."

"Any idea what this 'GD Enterprises' is? She's doing quite well by them, it would appear."

"No idea. The university allows, even encourages, faculty to do outside consulting, though, so they could be perfectly legit. But that's a lot of money for the time period of this particular ledger. Have a look at the other ones."

These were a series of text files that had been printed in a generic format, which destroyed their appearance so that they were somewhat obscure. I finally decided that I was looking at chemical recipes, just what Provost Martin had referred to. The molecular descriptions had their subscripts raised, so that water was abbreviated H<sub>2</sub>O. That one was obvious, but the others were beyond me. Nonetheless, this was what we were looking for.

"Do you suppose that Gil Taylor would be able to decipher these?"

"Well, as much as I like and trust Gil, I think it might be a good idea for you to get someone inside your department to do that. This could be very sensitive stuff. I think that I can print this out at work using a word processor that will preserve the formatting, so the chemicals will be easier to read. I'll do that tomorrow, in a big font, and fax it over to you, OK?"

"I'll need to ask the DA what all this means, in terms of evidence. I'm not sure that having information stored on a computer can constitute an offense. At least not these recipes. The bank stuff could be evidence of something, but we don't know what. Are you finding anything else? Correspondence with, say, Kelly talking about how they're going to make big bucks together selling drugs to school kids would be pretty useful, for example. And I want to double check to make sure that this will be admissible. I'm worried about how we got it. And do you suppose that Linda will know that someone has messed with her computer?"

"If she notices anything, she'll probably think that there was a power surge that caused her computer to restart. I left it in exactly the same condition that it put itself in when I cycled the power the first time. It doesn't have any way to keep track of what it's been doing lately, like some other computers do, so there's no record of my activity. And I don't know anything about admissibility of all this, but our messing with her machine is not what I consider to be an example of how I like to conduct myself ethically. I wouldn't have done it without both you and John watching. Hmm. What's this?"

He had burrowed several levels down in a filesystem related to one of the software packages on Harmon's disk and opened a subdirectory that appeared to contain a number of small files, which looked to be letters. I watched as he used one of my utility programs to browse through these files, and saw that some were letters to Stiller discussing the cost of chemicals, travel to the west coast and Mexico, and airline schedules. He punched a key and my printer started humming.

I was working my way through the correspondence when I heard him say, "Oh, ho, what do we have here? Looks like Linda's address book."

The printer hummed again.

\* \* \*

Two hours later, the stack of paper had grown dramatically, and a pattern was emerging. It appeared that much of the correspondence with Stiller concerned cost-cutting measures related to raw materials for making some un-named chemical substances. Harmon had been advocating certain suppliers, and it appeared that Stiller had expressed concern about their quality. Too bad that his responses weren't available, so that we could see both sides of the conversation.

The address book included a number of curious entries. Hal had checked off all the university people he knew, which eliminated most of it, but there were addresses in Mexico, Los Angeles, and San Diego that appeared to be, at the least, out of what might be considered Harmon's normal circle of professional colleagues.

I was getting tired and beginning to lose concentration, but I had also seen enough to become convinced that Harmon was the missing puzzle piece.

"It looks to me as if Harmon and Stiller were in the middle of a disagreement about the possible down-side of using inferior raw materials for making whatever they were making. Now, suppose they were making drugs to sell locally. This could put dangerous, not just wild-and-crazy, but dangerous, stuff out on the streets. She seems to be trying to persuade Stiller not to worry about that. But why would this stuff be in her computer? Why wouldn't she just talk to him about it? They worked in the same building all day, and their labs were next to each other."

"Do you suppose she could have been documenting the argument for someone else's benefit? What if she wanted Stiller off the project, and she needed to persuade Mr. Big, or whoever, maybe even Sal, that Stiller was detrimental to their enterprise? She could have sent copies of all this stuff to whoever that was, along with Stiller's side of the correspondence. Or here's another possibility. I don't know if you noticed, but this isn't formatted by a word processor, it's just text. It was in the 'out' subdirectory of an e-mail program, so these were probably outgoing e-mail messages to Ralph that she didn't know were saved. I haven't really been reading this stuff. What you're saying is that Linda has been trying to save the drug folks money on raw materials and trying to persuade Stiller to go along with it?"

"That's what it looks like. Your chemistry department chair is not only part of the manufacture and distribution of illegal drugs, but she's a cheapskate about it. Maybe we can figure out if one of the people in her address book is Mr. Big. I noticed that Kelly is in it. That's pretty damning right there. Are there any other subdirectories in that e-mail system?"

"There's one called 'trash,' but it's empty. The program was probably configured to automatically delete the trash when the computer shut down. Except that 'delete' doesn't really wipe things clean. We could go back tomorrow with another utility I've got at work and see if we could undelete the trash. Maybe there would be some of Stiller's responses there. If she left the system running for this vacation she's on, she's probably not turned it off all semester. So there may be lots of stuff there."

“Maybe we can get the provost to let us into her office one more time, tomorrow, with a warrant.”

“He was pretty pissed at what he found in that chemical cabinet, so I don’t think that will be a problem. Had enough for tonight?”

Enough of this, at least, I thought.

\* \* \*

## Thirteen

When I woke up the next morning, I was glad to find myself in my own bed. Hal was in the shower already, and I smiled to myself when I realized that he would be the one to have to deal with the dual household problem today. That must be why he’d gotten up early.

As if to validate my amusement, he came out of the bathroom grumping about having to go home to shave. Seems he’d forgotten his razor. “You can use mine, Hal. It’s in the shower, there.”

“You mean that pink thing with the funny handle? You want me to slice my nose off, or something? Besides, when’s the last time you put a new blade in?”

I was trying very hard not to laugh out loud. “Well, maybe you could grow a moustache. I think that might make you look sexy. Not a beard, or one of those van Dykes that are so popular just now, but a moustache.”

“Meaning that I don’t look sexy now, huh? You have any idea how much a moustache could tickle your more sensitive spots?” He knelt by my side of the bed and was beginning to grope around under the covers with his hand.

I giggled and squirmed away to his side of the bed, but misjudged my position and flopped onto the floor. “Ow. Now look what you’ve done. I’ll probably have a big bruise on my bottom, you brute.”

“How pleasantly alliterative. I can kiss it and make it all better...”

“Don’t you wish. No time for that now, you old goat. Go make coffee while I shower.”

I took my time getting to work, luxuriating in being at home in the morning without an extra commute for the first time in a while. When I finally got to the station, I found that Hal had been hard at work already, and an e-mail message was waiting.

*Annette: I'll get some special, therapeutic massage oil and rub your bruise to help it heal. And, anyway, here's some good news to take your mind off it: I've moved all of the stuff we found yesterday to my computer here, and I'm planning to delete everything that's irrelevant (we really don't need a copy of her operating system or word-processor executable, for example) and look through what's left some more. I'll let you know what I find, and I'll call you before I fax anything over. And I checked and found that the server we had it stashed on last night didn't have a back-up, so there's no record of all this. Eat this message, OK? xxH.*

I called the assistant district attorney to discuss the warrants he'd promised to try to get and discovered that Judge Sandose had issued the telephone tap warrants and had also provided warrants for Harmon's on-campus possessions as well as her home. There was a chance that these could be successfully challenged in court, given the judge's prejudices, but they were valid warrants that could be executed. The assistant district attorney also wanted to discuss the search of the laboratory.

"So you went into this lab with the provost. He's a university official, so that's OK, like we discussed yesterday. And, with him, you found questionable chemicals in an unlocked cabinet and called us. That's OK, too, and it helped get the warrants. And you found a computer, but it was protected by a password. And a locked desk."

"Right. And, based what we discussed yesterday, we didn't try to get into the desk. We can use the warrant to do that."

"Right. But this computer. You say you tried various ways to defeat the password and finally succeeded. And you're now in possession of new information that appears to implicate this person in illegal drug activity, including manufacture and distribution?"

"Right. We haven't looked at all of it, yet, but that's the pattern that's emerging. And there's an address book with names that could lead to the group that controls all the local distribution and then some."

"I have to do some research, but I'm worried. Ask yourself this: How is defeating a computer password different from breaking a lock on a desk drawer? That university official may have had authority to enter the lab and look in unlocked cabinets, but I don't know about this computer. You may have information in your hands that was obtained in an improper, and possibly illegal, manner. At this stage, I don't think you should even look at it any more, and certainly don't act on any of it."

"But the provost instructed us to crack that computer."

"Oh. Well, is he a lawyer?"

"Uh, no, he's a chemist. But he said he had discussed his authority in these things with the university lawyers."

"That helps, but without knowing what they'd have said about this specific matter, I don't have a lot of confidence in what you got from that computer. I can't promise that any of your information will be admissible in court. But with the warrants, you can do everything over again. Make sure that wherever you copy the information to, it's got a time and date stamp, to compare with the warrants. And I'll simply forget that I heard you mention that you cracked that computer last night, OK?"

\* \* \*

I was too disgusted to want to talk to Alice, so I called the direct-line number Hal had given me, and he answered right away.

"Hiya, lover."

"Hey, you sound down. What's going on?"

"Remember last night I said I was worried about admissibility? Well, I was right. It looks like none of the information we got from Harmon's computer is available to us. We now have a warrant for it, so we have to go through the entire exercise again. The assistant DA was very worried about our cracking that password yesterday, and he wants time and date stamps on everything we copy today, so that they'll be consistent with the warrant. And I guess that this means that you should erase all other copies of what we got last night."

“That’s no big deal, either doing it all over again or erasing our tracks from last night. Remember what my e-mail said about the server? So, don’t worry. You meet me at the lab, and I’ll get the provost and we can start over. At least I know exactly what to do the first time, now. And I can undelete the trash and see what e-mail she’s received and tried to erase recently.”

I had warrants and time on my side, so I marshaled my forces. Conscripting a couple of my detectives, I paid a visit to the campus police and found them eager to cooperate. We were a contingent of a half-dozen officers and detectives that descended on the chemistry department and began a search of Harmon’s faculty office. I ascertained from the secretary in the department office that Harmon was due to return to Durango from her vacation in Nassau on Friday afternoon, so there was time to do the search right. After getting the search of the office started, I went to meet Hal and the provost at the laboratory.

I met them coming down the hall and showed them the warrants. Provost Martin was somewhat perplexed by the need for a second search.

“It was my understanding that my authority in these matters allowed our search yesterday in all of its aspects. The computer is university property, and I don’t know that Professor Harmon had specific permission to lock it with a password. So there is really no analogy to a locked desk. Rather, it seems to me that this is like someone putting an unauthorized lock on a locker in the gym, or something. We cut those off all the time. So what’s wrong with Hal’s activities of yesterday? This is critical to me, because I need to know what my limitations are.”

“Well, Provost Martin, I’m not sure that I can give you a clear answer. All I know is that the assistant DA was not pleased with our sleuthing yesterday. When I pointed out that it was under your instruction, all he did was to ask if you have a criminal law background. And he wasn’t satisfied that you had talked with the university lawyers. I guess that the bottom line for me is that I want this investigation to hold up in court, so there’s really no reason not to do it again.”

“Yes, but I’m supposed to be in charge on this campus, according to state law and various other legalities, and I want to do things right, too. So I need to know why there is a problem with this. What’s different about it from my locker analogy?”

Hal interceded. “John, with all due respect, I think that the problem here is that you’re trying to apply scientific logic to legal matters. That’s not going to work. If I understand the situation correctly, the information that we got yesterday out of that computer over there simply doesn’t exist, in legal terms. I mean, you know it’s there, I know it’s there, Annette knows it’s there, but the legal system denies its existence. Legally, there is simply no information. On the other hand, when I go over to that computer in a minute and get that same information now that Annette has a warrant, it will exist, in the sense that the legal system will admit to it. I’m having a lot of trouble understanding this, because it doesn’t make sense to me, either. I mean, information is information. Regardless of when it’s obtained or what paper you have in your hand when you obtain it. But the legal system isn’t scientific. It’s...ah...well, it’s the legal system.”

“Does this mean that the activities that I authorized yesterday were illegal? That you and I could be prosecuted for your sleuthing?”

“I don’t know that either, Provost Martin. When I talked with the assistant DA today, he told me that he was going to forget that I mentioned breaking that password, so it won’t happen. But I don’t know if it could happen.”

“Well, I need to find out, so I know what boundaries I’m subject to. I thought everything was done according to my authority and responsibilities as outlined by the university counsel. I think I’ll call them.” He reached for the telephone.

Hal walked over to the computer in question, and bumped the mouse to make sure that the computer was in the state that he expected. “Uh-oh. No password box. But it’s on, look at the lights.”

This immediately got my attention. “What’s this?”

Hal cycled the power and watched the computer check its circuits and announce to the world “boot disk not found.”

“Double uh-oh.” he said. “Now, why was the screen off?” He pushed the “reset” button and studied the screen as it changed, then suddenly pushed a couple of keys in combination. “Oh, it’s got a CMOS screen blanker. How strange. And this much of the system sees the disk.”

He inserted his diskette in the drive and hit the “reset” button again, and watched as the system came up as it had yesterday. But when he looked for directories on the hard disk, there were none to be found. No files, no directories, nothing. He started the undelete utility to see if that would find anything. Same result.

He looked up at me. “Well, my dear Lieutenant, it looks like someone came in here last night and formatted the hard drive on this system. All the little ones and zeros are gone to the great bit bucket in the sky. So we’ll never know whether there was interesting mail to Linda that we could have undeleted. And, officially at least, I guess you’ll never know about all the stuff that we found yesterday. Information that doesn’t legally exist.”

\* \* \*

Seated at the window table of the Main Street Grill, I was glumly watching the few pedestrians on Main Avenue hurry by. The rains of two weeks earlier had given way to the snow of Christmas Eve, and winter had been continuous since then. It was beginning to snow again, light flurries of tiny snowflakes. Hal and I had ordered lunch and he had immediately disappeared into the men’s room. How he managed to persuade me to have lunch at such a busy time surprised me. But, he was right. There was little I could do now, except wait for my people to do their work.

Following the morning’s discovery in Harmon’s laboratory, I took the approach that someone was willfully destroying evidence related to the Stiller killing and to the local drug scene, and I pulled out all the stops. Phone calls initiated immediate searches by separate teams of all of Linda Harmon’s property. And, since I couldn’t be in more than one place at a time, and since I had to eat anyway, I let Hal bring me here.

After finding the re-formatted disk, we looked around the laboratory and discovered that the glassware had been washed. It was unclear if any of the chemicals in the supply cabinet were missing. We were just finishing up in Harmon’s lab when in walked a graduate student, surprised at finding anyone there. She, too, had heard that Harmon wasn’t due back in town until Friday and had come in to check on her experiments. It seemed that one of the incubators held some bacteria she was growing for her dissertation. And it turned out that the poor thing had also been using Harmon’s computer for her notes and dissertation draft, and she was devastated to find that someone had destroyed several semesters of her work. Hal had not been as upset as I would have expected, however, and I needed to question him about that. He was coming back, and there was no time like the present.

“Hal, do you remember our phone conversation this morning? I said that it would be a good idea to erase everything that we found last night, and you said it would be no problem. What’s the status of that?”

He was unable to meet my gaze. “Well, as far as the Durango police department is concerned, that information doesn’t exist. Except, I guess, for those pages we printed at your place last night, if you haven’t destroyed them.”

“Something tells me that you’re not being entirely, or fully, truthful here.”

“What I just said is true, isn’t it? I mean, that information is not legally in the public domain because it was destroyed before it could be obtained under a warrant, right?”

“Hal, look in my eyes and tell me if you erased that stuff off your computer.”

He sighed. “You’re putting me in a tough spot here. I have responsibilities to the university, to you as my...my ‘significant other,’ or whatever it’s called, and to you as an officer of the law. So, uh, maybe I better plead the Fifth Amendment.”

He sighed again. “Look. I sure don’t want to get into a fight with you over this. You’re far more important to me than this Stiller-Harmon-drug case thing. But I know it’s important to you. And as a university official, I have to protect the university’s interests here. For example, that graduate student who walked into the lab this morning. And there are other possibilities. So, as far as you’re concerned, when you’re wearing your Lieutenant’s hat, and as far as your department is concerned, that information is gone, OK?”

His eyes were pleading for understanding. I smiled, and took his hand.

“I’m glad you’re going to be able to bail out that poor student. And tell her as soon as you can, OK?” It was my turn to sigh. “And I guess that it may turn out that the provost is right, that the computer is university property and her unauthorized password was like an unauthorized lock, begging to be broken. So it’s probably a good idea to have the information unofficially squirreled away somewhere. But I sure can’t do anything with it for now. And that includes the address book. Damn.”

“Have you thought about who might have done it? Re-formatted the disk, I mean.”

“How hard is that to do? Is it as easy as I think it is?”

“Sure. I could have done it yesterday afternoon with a single command. Well, two or maybe three. I’ve forgotten how many dummy-savers there are in the ‘format’ utility that ask you if you really, really want to do this. But all you have to do is to boot the computer from a diskette and tell the format utility to do its stuff. You might not even need the diskette, depending on the version of the operating system installed on the hard disk. Her hard drive was big enough that it probably took that computer about an hour for it to actually do the re-formatting. Oh. I forgot to say anything this morning, but the re-formatting happened today at about 7 am. That much got written on the re-formatted disk. So someone came in early and did it.”

“All we know about Harmon’s schedule is that she told people she’d be back from Nassau tomorrow. She could have come in last night. I can check the airlines on that. Got your phone on you? Oh, no you don’t. I forgot. We’ve still got it downtown.” I walked back to the public telephones.

By the time I returned, it seemed that Hal had remembered what day it was. “While I’m thinking of it, I want to talk about tomorrow. It’s New Year’s Eve, after all. Um, I know it’s a little late to ask for a date for such an important occasion, and you may be booked already, but I’d sure like to spend it together. I feel a little foolish that I’d forgotten about it. But things have been, you know, hectic.”

“It is, isn’t it? I mean New Year’s Eve. And hectic, too. Listen, buster...”

“I love it when you talk rough like that, you sentimental fool, you.”

“Did you know that I thought about handcuffing you to me, the day you got kidnapped, before you called? I called you to leave you those messages, and you weren’t at your office where you said you’d

be, and you weren't at home, and I started to worry. For good reason, it turned out. You bet I'm a sentimental fool, for you at least. Now, where was I...Oh, yes. Listen buster. If you think I'm going anywhere tomorrow night with anybody but you, you've got another think coming. As far as I'm concerned, we can go to McDonald's, just as long as we're together. But I bet you had a better idea than McDonald's."

"Well, two, actually. One, we could rent a couple of romantic movies and sit at home and snuggle. When was the last time you saw *Casablanca*? And, two, I could spend some time this afternoon trying to get tickets to one of the big to-dos downtown. I think I could pull some strings and make that work. There's a pretty interesting looking New Year's Eve dinner-dance at the Strater, with a special room rate and dinner at Henry's. I don't really know if you like that sort of thing, but it could be fun."

"How about both, assuming you can get tickets. I'm not normally much for dinner and dancing, but I think it would be good for both of us. And we could spend the night on neutral turf. We've got a long weekend coming up, and Friday's only the beginning. We can always watch *Casablanca* on Saturday or Sunday. Unless, of course, you're going to be glued to all the football on TV."

"Nope. Speaking of football, though, look who just walked by. Our friends from Christmas Eve, back from Kansas."

He jumped up and dashed out the door, and soon came back with the Twin Towers in tow, both looking a little sheepish at being hauled into such a non-sports-bar kind of place. Hal got them seated around the little table and ordered them each a beer, so they began to look less uncomfortable. Free beer was a no-brainer for them.

"Listen guys, I don't want to bring up painful memories, but I need to ask you a question about your little escapade at my house. And, don't worry, I'm not mad or anything. I've just been wondering about the mystery man who talked to you in the locker room. You said it was a man's voice, kind of deep, but you didn't say if you recognized it or what it sounded like."

Kolochek seemed to be the spokesman today. "I thought it sounded sort of familiar but I couldn't place it, you know? And it had a kind of funny quality."

"Kind of like this?" Hal had changed his voice to be a little raspy, and deeper than normal.

Washington spoke up. "Yeah. Like he wasn't talking normally. You got any ideas about who it might have been?"

"I think maybe it was the AD, playing a little trick on me. I looked at that paint can, and, I don't know if you noticed or not, but it's washable paint. I mean, it washes off real easily. I got him with an especially wicked practical joke last fall, and he sort of owes me one. And he flubbed a couple of tries to get me back earlier last semester. So I bet he was just using you guys to get me back. Even we old farts fool around, if you can believe it."

They looked at each other.

"You mean it was all a practical joke? We were worried that it was something sinister, with that gun and all, uh, with all due respect, ma'am." Washington was still leery of Annette.

"You just caught us, or we caught you, I guess, at a bad time. That's all over, and we can laugh about it now. And, listen, don't tell the AD, OK? Or, if he asks, tell him everything went just like he planned it. Then you'll not get crosswise with him. Oh, good. Here comes our lunch. Listen, you guys work hard this semester and keep your grades up for next fall."

They took the hint and chugged the remainder of their beers, gratefully departing for more familiar territory.

“You little devil, you. Misleading those poor, innocent boys that way. But it sounds as if it was Harmon’s boyfriend that put them up to the paint job. One more piece of the puzzle.”

The pay phone rang, and the waitress who answered asked if there were a Lieutenant Trieri present. The place was small enough that I could see Hal listening to my half of the conversation.

“Tampa? OK, thanks. I’ll be out most of the afternoon, by the way, checking out these various searches.”

“Well,” I said as I sat back down at our table, “One L. Harmon flew in late last night from Tampa, via Denver. So she really didn’t go to Nassau. What’s in Tampa?”

“Probably the AD, recruiting. And she’s back in town. But something’s probably scared her, or else she wouldn’t have done that to her computer. Wonder if any of your guys have run into her anywhere. And who warned her.”

“I think I may know. I goofed and let slip to Sal that we were interested in a ‘her’ at the drug summit meeting. It’s time we picked up your new friend, Stetson Man. He needs to answer some questions. I wonder how much mileage I can get out of his fire code violation.”

\* \* \*

## Fourteen

My afternoon was full of details. I reminded Hal to get in touch with the graduate student to reassure her about her dissertation work, and we agreed to meet at my place at 8:00. His afternoon was full, too; he had said something about a probable meeting with the provost and the university lawyers concerning the Harmon situation. He’d promised to bring a pizza for dinner, one of those barbecued chicken and onion jobs that I had introduced him to, so long ago, it seemed.

I spent over an hour, sitting in my car in the university parking lot, on the car phone. The department kept promising hand-held cellular phones for senior officers like me, but the budget still hadn’t allowed it. The search team had found little of interest at Harmon’s home. It appeared that someone had been there before them, which fit the pattern of the laboratory. The clothes closets were almost emptied, and there was no sign of a car. It looked as if she’d flown the coop.

So all we had to go on was what we had found in Harmon’s laboratory yesterday, not including, of course, the information from the computer. That left the chemicals in the cabinet. The provost had been surprised that Harmon, a biochemist, would have those chemicals, and other chemists could probably be found to verify this. But that still didn’t constitute a criminal offense.

But, wait. Martin had been looking at the labels on those jars and bottles. What was really in them? If Harmon were involved in manufacturing contraband, could she be hiding something in mis-labeled chemical jars? I decided to call Gil Taylor. In my meeting with him yesterday, I had been impressed with his candor, and I was motivated to trust him. Hal had suggested using police department technicians to examine the recipes from Harmon’s computer, but I had the impression that this was as much to protect Gil as anything else. And Hal seemed to trust him.

“Hi, Mr. Taylor. Annette Trieri here again. Got a minute?”

“Ah, Lieutenant Trieri. Your people move fast. I have a meeting with your lab techs later this afternoon.”

“We may have more for you than they know about. I’m wondering how you find out what’s in chemical supply jars. I mean, I know you look at the label, but what if someone intentionally mislabeled things? Could your equipment find that out easily? I’m talking lots and lots of jars here, and some bottles of liquids, too.”

“Well, that would be a pretty stupid thing to do in the first place, and it violates a basic rule of lab procedure. Especially since it could be really, really dangerous. But the answer, in general, is ‘yes,’ except for the ‘easily’ part. In some cases, it could be trivial, depending on what you’re looking to do. I mean, if you want to verify that a chemical is mislabeled, it could involve a simple test, like trying to dissolve it in water. For example, suppose the label says that it’s something that will dissolve and what’s in the jar won’t. Or vice versa. That would answer that part of the problem. Finding out what’s actually in a mislabeled jar is more complicated, of course. Mostly, we just throw such things away, although it’s a lot harder to do that now, with the new environmental regulations and safety procedures. Most chemical supplies are pretty simple compounds, easy to identify. But if something else gets put into a jar, who knows what it could be?”

“And, like the water test, I suppose that color, texture, and smell could also be clues, in certain cases.”

“Sure. We’ll make a chemist out of you yet, Lieutenant. What’s this all about?”

“I’m calling from my car, which is parked out here by your building. Could you meet me at Professor Harmon’s lab in a couple of minutes?”

“Oh. The rumors have been flying thick and fast all day. I’ll meet you there.”

\* \* \*

Taylor’s reaction to the chemical supplies that Harmon had on hand was even more astonished than Martin’s had been. He was not nearly as cautious. “Hell, there’s no way she’d need half this stuff. Ether, for heaven’s sake, in such large quantities? What’s she going to do, anesthetize those bacteria over there and take their tonsils out?”

“I’m glad to hear you say this, because it provides me with an independent verification of what I’d heard already. But the question is, what if some of this stuff is mislabeled. Would it be hard to find out?”

“What you mean is, how can we find out if one of these containers has cocaine or some kind of exotic happy dust in it? Aside from just sampling everything, I suppose. And that could be a big gamble. This stuff here, for example, would put you down in about 5 seconds if you ingested as little as a few milligrams.”

He was holding up a jar, conspicuously labeled with a skull-and-crossbones.

“You mentioned texture and color as tests. They’ll work on some of these. But the smell test, while it would work, too, could get you in big trouble.”

He pointed to another jar with a skull-and-crossbones, a chemical formula, and a complicated description including the word “cyanide” on the label.

“Do you need all these verified? It would take me a week, at least. And some of them would be quite a challenge.”

“I mostly wanted to know if it could be done. We can lock this stuff up in case we need to go to the trouble in the future. Um, on the phone, you mentioned ‘rumors.’ Mind repeating them?”

“Well, I went over to the department office to pick up my mail, and the place was abuzz. Some of your guys were going through Linda’s office, and I heard that another team was upstairs in her faculty office. She looks to be in some trouble.”

“Any idea what the speculation is?”

“I’ll tell you if you’ll tell me.” He laughed. “Naturally, everybody figures it’s related to the Stiller killing. He and she were buddies, and even more, a while back. I heard that he had a temper tantrum in a faculty meeting and that’s why she got her turn as chair. Otherwise, the rest of the faculty wouldn’t have elected her. I haven’t heard anyone talking about her being the killer, but everyone figures she was in on it, somehow.”

“That’s the general picture. She may even have been present when he was killed, although that’s unclear. What would you say about these chemicals here being used to make illegal drugs? How about their relationships to these equations?” I pulled out the printouts once again.

“Ah. Now we’re talking.” He studied the sheet and then the jars in the cabinet.

“Well, look. This stuff,” he picked up a jar, “could be this term in this equation, if this one subscript is changed. And this term could easily be modified to be this other stuff.”

He pointed to a bottle containing a clear liquid. “These people were making some weird shit, let me tell you.”

“I’ll make sure this room is sealed and get you access. How about doing an inventory of all this stuff and seeing just how many of these chemicals could be easily matched with these equations? I’ll make arrangements with...um, with somebody, not the department chair, maybe Hal, to reimburse your time. And we may want to have some of these things tested to verify the contents. OK?”

“This is a good time for me, between semesters. I don’t have a lot of samples backlogged, and I’ve been trying to catch up on paperwork, which is my least favorite thing in the world to do. So I’ll be happy to work on this for you. I’m sure that Hal can figure out the accounting, somehow. He’ll probably just have Alice do it anyway.”

\* \* \*

I pulled a couple of police seals out of my bag, and placed them on the outside of the door to the lab. Along with the yellow crime scene tape, they made it obvious to casual passers-by to keep out. Then I found my way to the department office, where my team was just finishing up their search of Harmon’s office.

“Hi, Jack. Find anything interesting? Ron’s team, at her house, said it looks like she may have left town.”

“Nothing much. Except, in one of the bottom desk drawers, there were these, along with a bunch of other cast-off stuff. Looks like an old pair of disposable lab gloves. All stained.”

I pulled a similar set of gloves from my bag and put them on, spread the set from Harmon’s office out on a table top, and then carefully turned them right side out. “Looks like some kind of green dye. On the thumb, index, and middle fingers, with a little along the outside edge of the hand. Or hands. They’re both stained. There won’t be prints on these, will there?”

“Maybe, where you grab them to pull them on, but probably not. I suppose that these are pretty standard equipment around here.”

“Yeah, I saw some down in the lab I was just in. Say. Why don’t you go down there, it’s Harmon’s lab, by that classroom you guys checked out a couple of weeks ago. It’s all sealed up, so you can’t miss it. See if these gloves are the same size as the box in there, and if you can identify them as having come from that box. OK?”

I stripped off my gloves and went looking for the secretary. A little sign on her desk said “Gladys Smithers.”

“Gladys? Hi. I’m afraid I’m the one behind all this commotion today, and I want to apologize. But it’s been important to us, because we found some new leads related to Professor Stiller’s death. Could you tell me the name of the graduate student who had her experiment going in Professor Harmon’s laboratory?”

Gladys seemed happy that someone from the police department was finally talking to her, instead of just shooing her out of the rooms they were searching. “It’s been a little disruptive, but nothing much is going on now anyway. Umm, I think you must be asking about Holly Irving. She was using incubators in there, I think. She wasn’t really one of Professor Harmon’s students, though. She’s working with Professor Styles. I can get her telephone number, if it would help.”

“Yes, thank you, it would. And how about your chemical supply room. How does that work?”

“Well, each faculty member receives a small budget for supplies, with the amount depending on what course they’re teaching. And, of course, if one of them needs supplies for research that’s supported by a grant, well, they just buy stuff.”

“So, the storeroom, in effect, sells chemicals. And that means that they have records of who buys what, and so on. Whom does the store room person report to?”

“Well, I don’t know, now. He used to report to Professor Harmon, but, with all this, I don’t expect that will continue. The other faculty wouldn’t stand for it.”

“You may be right. And one more question: do you happen to know if Professor Harmon is right-handed, or left-handed?”

“Oh, that’s something we all know about. She likes to show off. She’s ambidextrous. She can write with either hand. She’s a little better with her left, though. That’s what she signs her name with.”

\* \* \*

When I was finished with the chemistry department, I headed outside to my car to make more phone calls. I found that the snow that had begun to fall at lunch was coming down much faster, and my car was covered with about an inch of light, fluffy flakes. I dug out the brush from the back and cleared the windows before getting in. Then I called Hal.

“Hal? Annette. Do you know what the weather’s going to do? It’s gotten colder since lunch and now it’s snowing hard.”

“Um, well, let’s see. I may be an administrator now, but at one time I was a crack weather forecaster. And from what I see out the window, I’d say it’s likely to snow some more. For a while longer. It is almost January, you know. This kind of thing happens in this part of the world.”

“Thank you Mister Science Person. Geez. What I mean is, what’s the forecast? Like, for tomorrow and the weekend?”

“Oh. Well, now for that I have to consult my magic crystal ball. Or, in this modern day and age, my magic computer display. Let me see what I can find on the ’net.” I heard typing noises. “And, by the

way, I was able to get tickets and a room for tomorrow night. A deluxe suite, no less. So even if we get snowed in, we'll have a sitting room with a couch. Cool, huh? Now what do I see here. The good folks at the Weather Channel web site are saying that there's a big, wet winter storm moving in from Nevada on a trajectory that will bring it here from the southwest. It's going to hook up with a cold front moving down from Canada right over the Four Corners. So, my lovely, unless we were going skiing again, and we were already there, the weather for the next couple of days is going to suck. That's a technical term used by us professionals. Don't try it at home."

"So this snow is just the beginning?"

"Yep. And it's much worse right now farther west. And south, looks like. Their travel report says that I-70 is closed between Green River and Salina, Utah and that travel between Grand Junction and Green River is being discouraged because of heavy snowfall and high winds. US 550 south of Farmington is also closed, and 160 west of Cortez is, too. Flagstaff seems to be shut down completely. What the TV weather guys love to call 'blizzard conditions.' I'd suggest you ditch that big cruiser-mobile that the city makes you drive around in and go back to your Subaru for the next few days. You'll do a lot better in it. Hmm. Based on what they're saying for the forecast cities around this part of the world, it looks like we can expect somewhere between a foot and 18 inches of snow. Want to go cross-country skiing in my back yard this weekend? And what news from the crime scene?"

I had mentioned that I was going to spend some time in the chemistry building.

"I'll bring you up to date this evening. Don't forget that pizza. And stop at home and get your shaving stuff, OK? I don't want to hear you gripe about my razor again tomorrow." I surprised myself by calling his place "home." A Freudian slip?

"Will do. I need more clothes, too. Any other requests? Salad? Wine, beer, cocktails? Coffee, tea, me?"

"Definitely you. Maybe some salad, too. I'll probably get home earlier than I'd thought, with this weather. Bye."

At least the car was starting to warm up. What do you suppose they pay super-cops in Tucson? Now to deal with the matter of Mr. Salazar Kelly. I called the station and got the machinery started to have an arrest warrant for Kelly issued, based on his involvement in the killing and the drug dealing. Finding and bringing him in wouldn't be the hard part, it would be keeping him in custody that would require some clever tactics. His lawyer, Arthur Stepwood, Esq., was familiar to the department, and, in the past, Kelly had never stayed in custody for more than about six hours.

Maybe this weather would help. Stepwood was a well-known defense expert, who charged several hundred dollars per hour and managed to keep just about all of his waking hours fully billed to various slippery characters in the area. His income allowed him to live in a trophy house in the mountains north of town, up toward Purgatory. And the roads were going to deteriorate quickly with this snow. If Kelly could be brought in around 10:00 tonight, he might not be able to see Stepwood to get released until noon tomorrow. That way, after he spent a night getting softened up, I could spend the morning chatting with him. He owed me some explanations. Or else I was just going to have to throw the book at him for violating the fire marshal's orders.

Well, I thought, Dad always taught me that when you're playing poker, you play a lousy hand just like you play a good hand, right up to the point when you fold.

\* \* \*

I spent the rest of the afternoon, until well after dark, back at the station working on reports. It looked to me as if the entire package was complete, except for the identity of the people up at the next level, Kelly's bosses. I had to keep putting Harmon's address list out of my mind, even though I knew it was sitting in a pile of paper in my study, next to my computer. The first order of business tonight would be to get rid of all that stuff. And, if by some miracle it was all declared admissible, Hal always had the copy that I wasn't supposed to know about when I was being a cop. Damn, this was confusing.

And where do you suppose, I wondered, that Professor and Chair of Chemistry Linda Harmon had got off to? Her car was missing, so she's probably somewhere out yonder, in the storm. And, even though I wasn't supposed to know it, I knew that most of the non-university addresses in Harmon's book were on the west coast. The fastest way to the coast was southwest to Flagstaff and then over on I-40, but that was now closed and it would also be pretty obvious. So would going south to Gallup. Another possibility would be north to I-70 and west through Utah, or maybe west to Cortez, then northwest through Moab to I-70. That way, Harmon would wind up stuck in Green River tonight. Suppose she finished with her computer at 7:00 this morning, like Hal said, and then took an hour going to her house and emptying her closets. That would put her at Green River by...let's see...about 3:00, three hours ago. Going the other ways would put her in Flagstaff or so, assuming she got through. Wonder when they closed the roads.

I called the police in Flagstaff and Green River and gave them the information about Harmon's car taken from the registration records and filled them in on the situation. They assured me that no one would be leaving either location this evening and that they could easily check parking lots. Harmon, it appeared, would not stand a chance. Thank you Mr. Weather Man. Oh, God, now he's got me making bad puns. And calling his place home. Trieri, you're a goner.

\* \* \*

Hal arrived about 7:45, carrying, to my glee, a rather large overnight bag, a garment bag, and a bag of groceries. My very own transient, I thought. He had to make a second trip to his car to get the pizza.

I looked at the pizza and noticed something was wrong. "Hey, this thing's raw. It was cooked last time we had it."

"Well, the pizza place is on the other side of town from here and my place, so I went there first. I figured that since it was going to get cold anyway, we might as well just cook it ourselves. I even brought a pizza stone. Put the stone in the cold oven and turn it on to 400. We'll let it get good and heated up and then cook this thing for about 15 minutes. Or maybe more, depending on your oven. We can put a salad together in the meantime. How was your day?"

"I'll know tomorrow. If it was good, we'll have both Linda Harmon and Sal Kelly in custody. If not, they'll be somewhere else." I filled him in on Harmon's possible travel plans.

"Assuming she didn't head east. But I guess that's improbable. So, you've got her on a charge of destroying potential evidence?"

"And maybe we have some evidence of her in that summit meeting. And, if so, I think we have solved the problem of the third person's handwriting. Kelly, remember, had left, at least according to him." I told him about the lab gloves and Harmon's ambidexterity.

"This implies that Linda was in the lab when Ralph was killed. Do you suppose that she could have been mad enough at him for insisting on good-quality raw materials that she had him killed? Oh, wait. You're not supposed to know about that. Well, take it as a hypothetical question. Assume,

hypothetically, that they were arguing about raw materials. Aw, hell. This gets too complicated. But you know what I mean.”

“The word I’ve been hearing is that they were buddies, so that’s hard to imagine. Gil even told me that they’d been seeing each other at one point. But maybe they had a falling out, romance-wise, and she had some left over grudges.”

“Maybe they were still business buddies. He helped get her elected chair, for business purposes. I can ask around in the chemistry department. Anyway, she’s taken care of, assuming that the police over in Utah or Arizona find her. What about my friend Sal?”

“We should have him by later tonight. I got a warrant for his arrest based on being an accessory, and I also got the assistant DA to give me some leeway in questioning him. But all I’ve really got to hold him for is that fire code violation. And I rather expect that bail will be somewhat low for that one, pocket change for Kelly. What I’m hoping is that his lawyer won’t be able to get in to see him until tomorrow sometime. Because of the snow. I’m going to spend the morning in conversation with him, to try to get him to sell everyone else out, including his bosses. If I can get any names out of him at all, we can proceed from there to the next level.”

Hal sat and stared at me for a while, with a puzzled look on his face. “You know, this is all hard to believe. I’ve fallen in love with a brilliant police detective. I can’t tell you how amazed I am about how you put all this together. And in such a short time. It’s been completely opaque to me, except for a couple of things that sort of jumped up and bit me. And you pointed those out anyway.”

“Well, this is my job. And they say I’m good at it. Don’t you know your way around a committee meeting?”

“Yeah. I’m real good at figuring out how many parking places to allocate to the math department, and other stuff like that. But this is real. Important. It involves a murder and possibly stopping the sale of a whole suite of illegal drugs to the kids in our town.”

“I’ll be happy if it just puts a crimp in it. Especially this designer drug stuff and the harder things, cocaine and so on.”

The stove beeped, and Hal got busy with the pizza. While his back was turned, I threw together some salad dressing.

\* \* \*

## Fifteen

Sal Kelly was not a happy camper when I met him in an interview room the next morning. His night in the public accommodations offered by the police department was not up to his usual standards, and he was clearly feeling out of sorts. His sunglasses—with coke-bottle corrective lenses—were on straight, but otherwise his usual dandified self was, well, ruffled. His pony-tail was frazzled, and he needed a shave and a clean shirt. Half of his Zapata-style moustache was sticking out at a funny angle. I had checked the inventory of his belongings and found that he had been brought in wearing several gold chains, and, with his shirt half unbuttoned, he looked practically naked without them, I decided. And without his cowboy hat, his bald spot was showing.

I anticipated his state of mind and brought a large cup of frou-frou coffee—a triple mocha, with whipped cream—from one of the new coffee shops that had sprung up in town, along with a scone. My

offerings were of marginal help. At least Arthur Stepwood was nowhere to be found. Hal's prediction of lots of snow had been right. It was hard enough getting around town, and Stepwood was no doubt snowed in up in the mountains.

"So this is what I get for being cooperative and solving your murder for you, huh? Just see if I ever do that again, lady."

"Sal, Sal. Calm down. And at least it's warm, have you looked out the window lately? Oh, that's right, you didn't have a window. Anyway, you probably won't be here for very long. Arthur will get himself plowed out and be here any time, I bet. And I'm sorry about the accommodations, but we really, really needed to talk with you. We were worried that you'd skip town like your friend did yesterday. And it's too bad that you told her about our interest in her. It gave her time to destroy critical evidence that would have implicated her and probably helped to clear you."

"I don't know what you're talking about. You got nothing on me, so let me out of here."

"Well, at the least we need to have a bail hearing on our possible charge of the fire code violation, so you'll have to stay for a while. But there's more. Remember Big Mike's knife? You said you picked it up with a tissue. Did you know that fingerprints can bleed through tissues, if your fingers are oily enough? What did you have for lunch that day? Pizza?"

"Are you telling me that you found my prints on that stiletto? Shit. Even if you did, they're only on the end, and Mike's prints are probably all over the rest of it. That's not gonna convict me of anything."

"Maybe not. But your prints along with Professor Stiller's blood, combined with your rap sheet and reputation, will give Judge Sandose the ammunition he needs to deny bail, or to set it so high that even you'll have trouble with it."

"I wanna talk to my lawyer."

"That's fine. But it'll be a while before he gets here, so why don't we just continue our conversation? This is being videotaped, as I'm sure you know, so nothing's going to happen that will violate your rights. Look. I'll be frank. We're very grateful to you for having sent us Mike's knife. And, whatever happens, that will come out in your favor. So I'm not looking to take you down for the professor's murder unless there's no alternative. And we probably can't prove your involvement with the local narcotics trade, although we can place you in that lecture hall where some very heavy-duty stuff was discussed. To tell you the truth, if we come out of all this with less coke and...well, whatever that new stuff is called, 'happy dust,' or 'Ecstasy' as one person said, on the streets, I'll be pretty pleased, and the DA's office will be ecstatic, no pun intended. Besides, we like having you around, Sal. If you're here in Durango and the street drug supply increases again, we'll know the first place to look. And I'm willing to forget about the fire code violation and overlook whatever prints of yours are on the knife, if you'll just answer some questions. Need more coffee?"

"How can I answer any questions without implicating myself in this drug stuff?"

"I talked with the DA's office, and we can offer you immunity with respect to the events of December. But only if you cooperate now. Before Arthur gets here. I don't need him mucking this up. And time's flying, Sal."

"OK, but I'm going to reserve the right to not talk about anything that seems to put me at risk."

"Not good enough. If you get immunity, you talk. Otherwise, I can use whatever you say, and what's recorded by the camera behind that mirror, against you. That's the rules, Sal. And remember, we have your prints from the desk in that lecture hall already. Prints on the knife can make you look real bad, here."

“So you’re saying that you’ve got my fingerprints on that knife, along with the prof’s blood?”

“Sal, I’m making an offer of immunity for the events related to the murder of Professor Stiller. Take it or leave it. And I’m going to be the one asking the questions. Now. I’m going to get myself some more coffee while you think about it. Want some?”

He was looking morose as I walked out. I went around the corner to the observing room, where the video camera was set up behind the one-way glass, and said “Keep rolling, guys. I want to see what he looks like when he’s sweating. I’ll be back in about ten minutes.”

Back at my desk, I found e-mail from Hal.

*Happy New Year’s Eve! I just got back from the meeting we were finally able to arrange with the university lawyers, and I have interesting news. Give me a call when you get a chance. It’s complicated. xxH.*

I called Alice this time. “Good morning, Alice. Hal wanted me to call him. I imagine that the university is just humming with gossip about yesterday’s events?”

“Good morning, Lieutenant Trieri. Yes, there is some talk about your peoples’ searches. My goodness, there hasn’t been anything like this on campus since I’ve been here, and that’s been a long time indeed. It’s so unfortunate that it involves such a scandal. I’ll put you right through.”

“Hal? Hi. And I’m looking forward to a Happy New Year’s Eve tonight, for sure. I’ve got Sal Kelly in a little room contemplating his future and have to get back. But you said you have some news from the lawyers.”

“I’ll pick you up at five, and we can get our room in time to freshen up for dinner, OK? Yeah, the lawyers were interesting. I’m sure that you know how cautious they can be. Well, university lawyers are doubly cautious. They were afraid to say anything, until John leaned on them. The crux of the matter is whether the password on Linda’s computer, and, by extension, on my computer or any other computer at the university, constitutes a ‘lock’ that is somehow implicitly authorized. I know I’m going to get John’s written authorization for my password now. The question they kept asking was whether Linda should have been reasonably able to expect privacy with respect to the information on her computer. If so, the password is authorized. But, even then, it’s not clear whether or not John, or I, as his delegated official for this kind of thing, have the legal right to crack the password like I did. There’s also the question of whether it was OK for me to do what I did to crack it. It was so easy that it could be interpreted that she had not intended for it to be completely private. And, if that student used the computer, she must have known the password. Maybe she even set it up for Linda. So then, the privacy issue becomes even more fuzzy. I finally asked them what about the data I copied off her disk, and they really started to waffle. Their bottom line was that it’s good to have a copy because the original was destroyed. But they’re going to have to research whether anybody, beyond the student, can use it for anything. Maybe your assistant DA should call them.” He gave me the number and, with a final tease about the coming evening, rang off.

\* \* \*

Sal’s temperament was only slightly improved. It seemed that he had decided to cooperate, if I once again guaranteed immunity from prosecution. After some haggling about immunity with respect to precisely what events, real or imagined, we settled in to get my questions answered.

“Sal, even though I’ve guaranteed you immunity, I’m going to set up a hypothetical situation for the night that Professor Stiller was killed, just to make you feel better about talking on camera. You have told me that both you and Mike Turner, now deceased, were in the lecture hall in the chemistry building at the university with other people. Let’s assume, for purposes of discussion, that both you and Big Mike were there for remedial tutoring in chemistry, because you didn’t do too well at it in school. That way, whatever the real purpose of the meeting was, your role is innocent. Now, I need you to tell me who else was there and the time periods involved.”

“Yeah, that’s right. Me and Big Mike were there to learn about chemistry. It’s always been a fascination of mine, chemistry, you know? And Mike, he just loved thinking about those little atoms and all. Let’s see. We drove together in my car, not the limo, but the other one, and got there about midnight. And we first went to a laboratory near the classroom, for a...uh, for a demonstration, an experiment, that’s what it was.”

“Right. And who else was there?”

“The two profs that were gonna tutor us, the woman, Linda Harmon and the dead guy, Stiller.”

“And you have said that you left before the others.”

“Yeah, about 3:00. Uh...Big Mike needed more help than me, so I left before him.”

“Were there other occasions on which you and these two professors met? And I’m talking about any kind of meeting, for tutoring or anything.”

“We’ve been meeting for a while, maybe six or seven times. Uh, I’m kind of slow with science, you know? So they were working real hard to teach me about chemistry.”

“OK, good. What I want to know is, in these various meetings, what was your impression of the relationship between the two professors. Did they get along OK?”

“No, they were always arguing. There also seemed to be some kind of old anger between them, an old fight that never got settled, like. Umm...but mostly what they argued about was that he wanted to teach us different things from what she wanted to teach us. And they argued about it.”

“Were these arguments heated? More like fights? Or were they just friendly discussions?”

“They got real mad at each other a lot. Shouting. Name-calling. It was kind of surprising to me. I thought that profs were, well, mild-mannered.”

“Now. On the night of December fifth, or the early morning of the sixth, you and Mike were there for a tutoring session. But it was very late, and chemistry is not the most exciting subject in the world. Did you or Mike get sleepy? And did either of you have anything to help you stay awake? Like, coffee, or caffeine pills, or anything else?”

“Well, like I said, I left before Mike because I was ahead of him, but I was also getting sleepy and wanted to go home and go to bed. But, yeah, I know what you’re asking. Big Mike took some kind of thing to keep himself awake. Some kind of white powder. But not coke, because I asked him. I never want my guys to do coke. But Professor Harmon had some of this other stuff, that she said would help him stay awake. Mike made some lines on the table and snorted it. It made him sneeze and it went all over.”

“What about Professor Stiller. The coroner found cocaine in his nose and in his bloodstream.”

“I don’t know about that. Maybe he had some and did it after I left.”

“And you have no idea what the powder that Mike ingested was, or what its effect on him would be?”

“None whatsoever.”

The door opened abruptly, and in strode Arthur Stepwood, Esq., in high moral outrage. He raised himself onto his tip-toes, making him all of about 5'2", and announced “You are holding my client under highly improper circumstances, and I demand his immediate release!”

This pronouncement, while legally proper and even appropriate, was perhaps not as credible as it might have been coming from someone else. Stepwood, who, at his best, resembled a leprechaun—stature, red hair, and all—was bundled up in about a thousand dollars of goose down and Gore-Tex, a sort of short, wintertime version of the Michelin Man. He looked as if he'd bounce if dropped.

So I was rather less than perturbed. Somehow I managed to keep a straight face and talk to him. “Hi there, Arthur. We were just finishing up. And you'll be glad to hear that your client has been most cooperative and has immunity for the events for which he was brought in for questioning. So you can have him. Tell me. How much are you going to charge the poor guy for your little moment of glory there?”

Stepwood escorted his client out of the station, but not before I made it clear that the immunity I'd promised was for a specific time window, and that if Kelly so much as spat on the sidewalk in the future, my department would come down on him like a load of bricks. Stepwood made noises about harassment of his client, a pillar of the community and benefactor of widows and orphans, but I wasn't having any of it.

“Arthur, you pick the worst clients. Sal here gets lots of points for cooperating with us this time, but that's not going to make us cut him any slack in the future. And if you think we're harassing him, you're free to press your claim in the courts. I'm sure that a jury would love to contemplate all of the testimony about Sal's character that we would be able to get into the record.”

I went back to my desk and called Hal again, this time on his private line. “Hi, lover. Sal spilled. I think everything's a wrap on this one, except for where Harmon is, of course.”

“You didn't hear anything from the cops in Green River or Flag?”

“They called and said that her car, the one registered here, isn't anywhere in their towns. But that could mean a number of things. She went some other way, she beat the roadblock, whatever.”

“What about Sal's bosses, the Mr. Bigs?”

“Well, I don't know if you noticed, but somehow it slipped my mind about destroying the printout of Harmon's address book that I have at my place. And now I have on tape that Sal cooperated with us in return for immunity. There's no reason for anyone to know whether or not I've had additional conversations with Sal that aren't on tape. So maybe he's told me about his bosses, at least their names and where they live. I think that the narcotics units in San Diego and LA are going to be very interested in what he might have told me. And that could interrupt Sal's supply lines and clean up things around here for a while. And, at the very least, we're not going to be seeing any new designer drugs here. At least not locally made ones.”

“I was saying last night how impressed I am with your abilities. And now that goes double. I'm sure glad that we're on the same side.”

\* \* \*

I was in front of the big mirror over the sink, applying just a touch of makeup. We had checked into our deluxe suite at the Strater so that we could have time to dress for dinner, and Hal was watching the 6 pm

news on one of the Denver stations. He was always wanting to see the latest pictures from the weather radar and satellites.

“Hey, Annette, quick. Come in here and look at this.” I stuck my head around the corner so I could see the TV. A miserable-looking talking head filled the screen.

“...and has trapped an unknown number of vehicles in the avalanche snow shed about five miles south of Ouray. It is not known how soon it will be possible to rescue them. Even though highway crews closed US 550 between Ouray and Silverton several hours ago, there are reports of a number of vehicles that left Silverton still unaccounted for. The large number of avalanches on Red Mountain Pass is being termed ‘the worst avalanche cluster in recent memory’ by one experienced snow-plow driver. This is Wendy Franchôn reporting. Now back to you in the studio.” The camera pulled back to show the unfortunate reporter leaning into the heavy, blowing snow, with the highway closure gate in the background.

\* \* \*

Later, we danced.

It was closing on midnight, although more slowly than I remembered from years past. We had been dancing off and on, mostly the slower numbers, at the sides of the ballroom, in the dark corners, to stay out of the crowd, which had been getting rowdier and rowdier as the evening wore on. Up to Henry’s usual standards, the dinner had actually been quite good for this sort of thing, not hurried, and with several choices. I had the lobster, and remembered Miami. But the after-dinner coffee was wearing off, and the several glasses of champagne were beginning to catch up with me.

I leaned back and looked at him. “I haven’t danced like this in ages, and I forgot how much fun it is. I was a little worried, because I’m really not very good. But this is wonderful.”

“I’m not so hot myself, but I think we’re well matched. At least I haven’t tromped on your feet. Yet.” He smiled. “Say. I don’t know how you feel, but I’m not all that keen on staying around for what’s bound to happen at midnight. You know. Confetti, noise, singing, kisses from strangers. What say we slip out of here and go upstairs before all that?”

“Sounds like a plan to me. A good one. But let’s finish this dance first.” I snuggled back into his arms.

A few minutes later, it was his turn to lean back. “You know, I’ve been thinking. This two house business is a real pain, and I can see it’s just going to get worse. I can’t remember where my clothes are half the time. What do you think about doing something to fix that? I know we’ve only been seeing each other for a little while, but I feel like I’ve known you for...well, for a long, long time. And, hey, did you notice how comfortable our cars look together in my garage?”

\* \* \*

## **Interlude**

### **Commencement: Spring Thaw**

## Sixteen

The audience members who claimed to have perfect pitch were about equally divided as to whether Lillian Hoecht's shriek was a true high C or merely a slightly sharp B natural. Lillian was in the middle of her voice recital, the final hurdle to her qualifying for a master's of fine arts in music (performance), when the unseasonably warm late May heat in the recital hall finally got to her. About half way through her depressingly demanding program of Mahler's famous song cycle, having killed a number of *kinder* and catching her breath between *lieder*, she decided to open a window. It was the neatly severed arm, bruised and quite the worse for the wear, cradled in the branches of the lilac bush outside, that elicited the questionable shriek.

Fortunately, the lilac was in full bloom, and the richly sweet aroma of the blossoms masked whatever odor may have been associated with the arm. Hal was grateful for this, for he had a keen sense of smell. He was sitting in the first row on the end by the windows, trying with mixed success to stay awake in spite of the heat and the effects of a long week of end-of-semester meetings, when Lillian's scream jarred him fully awake and he jumped up to catch her in mid-swoon. It was fortunate that he kept in shape, despite his mostly desk job, because Lillian was well on her way to becoming a diva in terms of size as well as voice. Even so, as she slumped into his arms, her weight surprised him, and she got lowered to the floor rather more abruptly than Hal would have liked. Her ample bottom thumped onto the wood floor, shaking the old building.

He was the only non-music faculty member on Lillian's committee, service that he chose as a way of ingratiating himself to the music department so that he could also serve on committees for piano and string players, whose music he truly enjoyed. As Dean of Natural Sciences, he pretty much had his choice of committees in his own college, but he still had dues to pay in the College of Fine Arts.

Having caught Lillian, it was only natural that he would look out the window and be surprised by the appendage in the bush.

Before he could stop himself, he remarked "Well, I should think that the owner would have missed that by now. Assuming he's still alive. Perhaps someone would be good enough to call the police. 911 would be the fastest."

By then, other members of the audience had swept in to help and had seen the hand as well, and they were somewhat put off by Hal's casual attitude. Comes from living with a cop, he told himself.

In the time it took to get Lillian revived and calmed down, a process involving a wet handkerchief and reassurances from her committee chair that this would in no way hurt her chances of being awarded her degree, the telephone calls had been routed properly and there came a tweedling noise from Hal's pocket.

He extracted the phone and flipped it open, a gesture that he had finally mastered. "This is Dean Weathers."

"Hal? What in the world is going on over there? I remember you told me this morning that you were going to a recital today, and now I hear from the 911 operator that someone called in to report a human hand in a bush outside the music building."

Someone besides Hal had also decided that a severed hand implied a dead body and routed the 911 call to Annette's investigations unit.

"A lilac bush, one of the darker purple ones. Really spectacular, or would be, without the extra limb, pun intended. It looks not to be too new. The hand, I mean. Maybe you ought to send someone over to look at it *in situ*." Even though they had lived together for only a few months, she was already

learning his experimental jargon. “It’s a left hand and part of the arm, and it’s dressed. As in clothed, I mean. Red and green plaid flannel, looks like, part of a shirt sleeve.”

“The strangest things happen on your campus, my friend. I’ll call Lester and be over as soon as I can get there.”

\* \* \*

Across campus, in his basement office in the Student Union building behind a door labeled

SCARAB  
Students and Citizens for Animal Rights and Biodiversity  
*“To Protect and Preserve Mother Earth  
and All of Her Children”*,

Whitby Bradford was on the telephone with a reporter for the *Durango Herald*, trying to elicit a promise of coverage for an end-of-semester event he was involved with.

Bradford was SCARAB’s single permanent staff member. He had not been enrolled as a full-time student for the better part of ten years, and in addition to trying to keep interest high in the organization and to recruiting new SCARAB members, he also had to find students each year to assume the roles of the various SCARAB officers in order for it continue to qualify for funding from the student fees collected at the beginning of each semester. Between his modestly paid position as the SCARAB field coordinator, the small trust fund left to him by his grandmother, and the profit he made on his illicit activities, he managed to eke out enough of an income to be able to ski nearly 100 days each year and to spend another 100 or so in the summer backpacking in the high San Juan Mountains. He split the remaining time among smoking dope, seducing as many members of the female student population—the younger the better—as possible, and trying to raise the public’s consciousness about how humanity mistreated critters in general, and cute, furry ones in particular.

Each spring, he tried to end the school year with a protest of sufficient flamboyance to generate publicity and help sustain interest in the group’s activities throughout the summer term. Then, in the late summer when the academic year began again, he could use newspaper headlines and photographs from the protest in his recruiting campaign for the new students. First-year students from urban areas were particularly vulnerable to this tactic.

“Look, Randy. All we need is for you to write an article on our protest of the contest. I can provide you with quotes and background information, and I’ll get some pictures you can run, so neither you nor anyone else has to actually go up to Nucla to be there to cover the thing.”

For some time SCARAB had been planning a pilgrimage northwest to Nucla to protest the spring prairie dog shooting contest there, and this year they were publicly threatening to place themselves in harm’s way by standing between the shooters and their quarry. (The contest entrants who were willing to talk about it allowed as to how they really didn’t need the bigger targets that the protesters would present, because of their fine marksmanship and all, but they’d be glad to shoot at the protesters as well as at the rodents.) The fact that Bradford had not been able to enlist any Frémont State students so far was irrelevant, because he knew that other SCARAB chapters would be able to. But the local publicity was important, so he needed the *Herald*’s cooperation.

“That’s what you told me last year, Whit. And the pictures you provided were obviously from somebody’s file, not of the Nucla contest, and my editor scorched my butt. Besides, what’s going to be new this year? You folks threatened pretty much the same thing last year and nothing came of it. This doesn’t look like news to me. It looks like you’re just trying for more free publicity. Give me something that’s news for once, and I’ll cover it personally.”

Randy Fredericks, who covered outdoor and environmental issues in addition to the crime beat, was still young and eager, but he was quickly learning how to be cynical, in good part because he had to deal with Bradford and others like him.

“Well, don’t say I didn’t give you the first shot. I hear that the Denver TV stations are all going to be there. And all the other regional papers, too. If you’re not going to cover it, the *Herald* will look pretty lame.”

“Whit, you’ve got to remember two things. What’s news to the folks in the Denver area isn’t necessarily news here. And I’ve heard all this before. You’ve about used up your credibility even with me. If I tell my editor that I’m going to cover something of yours, he always, and I mean always, finds something more important for me to cover, like watching them install new filters at the sewage treatment plant. If there really is a story, I’ll watch it on TV and write it from there and the wires. Got to go. ’Bye.” And he hung up before Bradford could start talking again.

Bradford slammed his telephone down in frustration and stared at the maps on the wall. He had pasted together all the topographic maps of the upper parts of the Los Piños River and Vallecito Creek watersheds and used a fluorescent highlighter pen to mark the various trails he’d personally hiked. It always made him feel better, and calmer, to contemplate the yellow spider’s web of his back-country experience.

\* \* \*

The last time that Annette had been on campus was the previous winter during the holiday season. With lilacs everywhere and all of the trees beginning to leaf out, the campus in May was a completely different place from the wintertime. Students were swarming over the open quadrangle in the middle of the campus, throwing Frisbees and balls to each other and to dogs. She happened to arrive between classes, and the foot and bicycle traffic made the place seem like those films she’d seen of the streets of Beijing in rush hour.

She’d called the campus police and arranged for them to meet her on the campus outskirts and to use their radio controllers to get her through the maze of parking gates into the central area. But there was still walking to be done. Lester St. Clare, the coroner, carried with him a large plastic bag, not a body bag with a zipper but more of a trash bag with a twist-tie.

“A parts bag,” he explained.

When they got to the music building, they found that the campus police had cordoned off the now-notorious bush. There was a crowd gathered around, straining to see whatever they could. Students inside the recital hall had the best view and, predictably, were making less-than-tasteful jokes about the hand, its battered appearance, and its shirt sleeve. Most of the jokes centered on possible supermarket tabloid headlines and how they would manage to work space aliens into the story.

Hal had used his influence with the campus police and was waiting inside the cordoned-off area for her.

She walked up to him and smiled. “Dean Weathers. How is it that you manage to be present at all of the crime scenes on the campus? A coincidence? I don’t think so. The detective manual says never to believe in coincidences, you know. Find any clues this time?”

“Ugh. This one’s all yours. I’m just an earth scientist, not a mortician. Body parts are, well, not my cup of tea.”

Their time together had shown her that he was, in fact, a connoisseur of body parts, at least hers, but Annette resisted the urge to ask him if he meant *all* body parts, or just selected loose ones in lilac bushes. She had far more experience with this sort of thing than he and recognized his obvious discomfort.

“Who found it, and how?”

“An unfortunate music student who was in the middle of her master’s recital. She opened a window and almost fainted. I saw it second. It was, and is, I guess, just sitting there in a branch of this lilac bush. Around on the side by those windows.”

Lester had wormed his way between the bushes and his voice now filtered through the shower of purple blossoms. “Lieutenant, here it is. A hand, just like they were saying, and part of the arm. Severed, um, about half way to the elbow. I don’t want to comment further until I can examine it in my lab. But you might want to have a look before I remove it.”

She pushed through the lush foliage and flowers, almost overwhelmed by the scent, and made her way to where Lester was peering at the wayward hand. It was straddling two rather slim branches, lying palm up and at a slight tilt as if waiting for someone to take the lilac petals it was offering; and it had knocked loose some of the lilac blooms so that there was a dusting of purple petals on the ground below. Kind of picturesque, actually, Annette thought. She examined the branches above and found several that were broken.

“It looks as if it fell out of the sky and finally came to rest on these branches. But they’re pretty small, so it couldn’t have fallen too far, otherwise it would be on the ground. Could it have fallen off the roof?”

Hal’s voice came from the other side of the wall of purple. “The eaves of this roof stick out so that the edge is right above you, and the pitch is pretty steep. Maybe it fell onto the roof and slid off into the bush. There’s no gutter up there. Want me to get facilities over here with a cherry-picker so you can look at the roof? It looks too steep to climb on safely, at least without special equipment.”

“I’m not climbing anywhere, thank you, but it ought to be looked at. I’ll get one of my guys over here to check it out. Lester, you can bag this thing up and take it in. Let me know if you can figure out how it got cut off, OK? See if there’s enough blood left to do a test. And have someone run the prints through the computer. I know you don’t want to comment now, but look at these puncture marks, here around the wrist. There’s some kind of pattern here. See if you can figure that out, OK?”

She took several Polaroid snapshots of the arm and its position in the bush and seemed ready to leave. “OK, people, show’s over. Back to class.”

The students in the room above were especially disappointed. Perhaps they were hoping that some other curiosity would slide off the roof for their amusement.

She wriggled back through the branches and found Hal waiting. “Want to go for lunch?”

He looked uncomfortable. “Uh, I’m not really so hungry right now, not that your company wouldn’t be nice. Maybe if we walk home together I’ll forget this and work up an appetite. Can Lester there drive your car back with his, ah, package? I can take you downtown later.”

\* \* \*

That afternoon, Professor Lewis Wilbanks was holding the last class meeting prior to his final exam. He always obliged the students by using these last classes to review the important material that would appear on the final, and he also tried to take advantage of this last occasion to slip in as much propaganda as possible. This particular course, Wildlife and Forest Management in Sub-Alpine Ecosystems, provided the perfect opportunity for advocating his favorite cause, what he liked to call “natural” watershed management. The course was also closely related to his research specialty, so he was able to teach it without referring to his notes.

Wilbanks had recently organized the Durango chapter of the Freestone River Alliance, which advocated letting rivers flow without control structures, dams, or diversion projects. There were certain difficulties with this approach in the western U.S., but Durango was prone to neither excessive flash flooding nor catastrophic drought, at least not as much as other parts of the Colorado Plateau, so it was usually relatively easy to persuade his students of the validity of the Alliance’s position. This “natural” approach to water management had the advantage of being emotionally attractive, particularly to the environmentally inclined students at Frémont State.

However, he had been having quite the time of it with the forestry students in this particular course. They already knew that techniques of wildlife and forest management, in any ecosystem, depend critically on the desired goals. And, unless a significant fraction of the local population were to be deported back to the coasts, any practical set of goals had to include civilization in the mix. Recent growth in the Durango area had begun to bring to the forefront water management issues even more than they had been historically. Wilbanks’ students were keenly aware of this from their other courses, especially those in the business school. Even so, he had had some success with advocating the “natural” approach in the sub-alpine zone under consideration in this course, because relatively few people lived up there and because most of it was un-dammed anyway and things seemed to work.

Wilbanks was more impatient than usual for this school year to end, and he was almost there. Unlike many of his colleagues, he managed to live year-round on his nine-month academic salary, so his summers were free for other pursuits. And over the next couple of months, he had a number of projects to finish up, all involving field work high up in the Vallecito Creek watershed. Although his summer work was not funded, he brought to it the same scientific rigor that had earned him his degree and formidable academic reputation. He was eagerly looking forward to his summer in the high San Juans so he could make progress on his pet project on behalf of the Alliance, for which he used his scientific research as a cover.

\* \* \*

The next evening Annette came home to find Hal hard at work in the kitchen making chicken cacciatore for dinner. He had one of the cookbooks from his library out and a row of little bowls on the counter, each with its carefully measured ingredients. Roma tomatoes chopped just so, some minced garlic (from precisely the correctly sized cloves, she was certain), a thinly sliced green pepper, and a measuring cup with diced herbs, another with chicken stock, and yet another with red wine.

He was carefully measuring flour into a larger bowl, no doubt in which to dredge the chicken before browning for exactly 5 minutes in 2 tablespoons—no less, no more—of virgin olive oil heated to precisely 375 degrees. She loved to eat his cooking, but it drove her up the wall to be in the kitchen with him, particularly when he was cooking something she had grown up eating and could make in her sleep. Without measurements.

He had discovered that she had been avoiding Italian cuisine for most of her adult life, as a reaction to her childhood. But she was really quite fond of it, so he had been putting the Italian section of his cookbook library to good use for the past few months. And she loved every meal, except when he was cooking it. She escaped to the living room.

After a while, it was time for the dish to simmer in a covered pot in the oven (at exactly 325 degrees), and he came into the living room, wiping his hands on an apron.

“Any results from the coroner’s office on that hand we found yesterday?”

He had found that it always took them more than a day to do anything and was hoping for something today. Having been in on its discovery, he sort of considered it his hand. Not that he really needed another left hand.

“Not really. The computer didn’t find any fingerprint matches and there’s nothing noteworthy otherwise. Lester thinks that it had been outside all winter, because of some freeze damage. Not really frostbite; more like freezer burn.”

“No idea of how it could have got there?”

“Oh, yeah. Lester had a look at the puncture marks I noticed yesterday and decided, because of their pattern, that they were from the talons of a large bird, like an eagle. So we figure that a hungry eagle found it somewhere and picked it up to take home for dinner. They’re opportunists and will eat just about anything they find, including carrion. It was probably just too heavy for the eagle to lug all the way home and it got dropped, coincidentally on the roof of the music building. Or maybe the eagle was being hassled by some smaller birds in town and dropped it. One of my detectives got up there today and found some evidence that that’s what happened, it dropped onto the roof and slid off. Anyway, we’ve got it in cold storage. Every now and then we can check the fingerprint database and see if there’s a new match. Otherwise, we’ve got to wait for someone, presumably missing his left hand, to come by and claim it.”

“What does Lester think about how it got removed? It looked pretty clean.”

“Almost surgically so. But Lester thinks it was done with a clean slicing chop from a very heavy, sharp knife of some kind, or an extremely sharp axe. It’s a clean slice right through both bones with no splintering. Not accidental. Or so he says.”

“So, last fall, some poor bastard gets his arm lopped off and stashed in a snowbank, where an eagle finds it this spring during the melt. And makes off with it for dinner, only to drop it on our music building?”

“Lester suggested the strong possibility that the guy was dead when the arm came off, either that or completely sedated. If not, he’d have probably fainted from the shock. That’s about all we know now. Say, the smell from the kitchen is wonderful. How much longer to dinner? I want to read the paper.”

She was in the middle of the *Herald’s* regional section when she almost jumped out of her chair. “So that’s what happened to her!”

She pushed the paper Hal’s way, and he read

### **Avalanche Victim Identified**

*Ouray* (AP)—The Colorado State Patrol has identified yet another victim of the New Year’s avalanche cluster on Red Mountain Pass. The body of Professor Linda Harmon,

who was a faculty member at Frémont State University in Durango, was discovered in her car at the bottom of the Bear Creek avalanche chute, about 4 miles south of Ouray. The car was spotted Thursday by Mr. and Mrs. Herman Frondberg, of Great Falls, North Dakota, who had stopped to take photographs of the scenery along that portion of US 550. Mr. Frondberg related seeing a glint of sunlight off a chrome bumper, which had just begun to protrude through the melting pile of avalanche debris in the Uncompahgre Gorge. It took highway crews all of Thursday and Friday to dig the car out of the debris.

Professor Harmon, who was reported missing shortly before the end of December, was apparently headed north on US 550 during the New Year's blizzard, and was swept off the highway by one of the many avalanches that occurred. A number of cars were trapped in the snow shed for several hours by the same storm. Indications are that Professor Harmon survived the avalanche itself and succumbed to asphyxiation after depleting the oxygen inside her buried car.

Professor Harmon was chairperson of the Chemistry Department at Frémont State before her death. She is survived by her parents, Mr. and Mrs. Alphonse Harmon of New York, and a brother, Alphonse, Jr.

“So one mystery gets solved just as another pops up, eh? The hand, I mean. At least there's no mention of your suspicions about her involvement in the Stiller killing.”

“It was more than suspicion, we had pretty solid proof. But there's no reason to bring it up now. Wonder what else will turn up this spring?”

\* \* \*

Spring had come early and had progressed almost into summer in Durango. From up on the campus, the view over the valley was dominated by a pointillist impression of green and chartreuse pastels interspersed with the pinks of fruit tree blossoms and the purples of the ubiquitous lilacs. Lawns were green and most had already required two mowings. Through town, the Animas River was running nearly full, and it was opaquely muddy.

But up in the mountains, the seasons regressed into earlier and earlier spring. Up at Prof. Lewis Wilbanks' house by Chapman Lake, about 500 feet above town, the snow was long gone and hikers were told to watch carefully for ticks, which can carry Rocky Mountain Spotted Fever. Wilbanks had made sure that warning signs were prominent, as he valued his privacy. And this year, he didn't want anyone interrupting his special preparations.

What was locally called the “Mud Season” was in full swing beginning about 1000 feet above Durango, and the hardy souls that lived up there changed their shoes a lot. In the hamlet of Vallecito, on the western shore of Vallecito Lake, there was no snow left and the water level was still low, so outdoors activity was limited by the mud to watching for the first dandelion blossoms and guessing whether there would be another hard freeze. In a converted garage, Ty Bortle was trying to cook the books of TreeLine Outfitters, his nominal source of income.

Bortle's great-great-grandfather had founded the town of Bortleville as a mining camp up on the Los Piños River more than a century ago, but its legacy was now limited to providing homes for pike, trout, and kokanee salmon at the bottom of Vallecito Lake. The Bortle family had moved to the construction camp, which became the village, when the dam was built, and Ty was the last of the lineage, his parents having moved to a retirement home in sunny Florida.

TreeLine Outfitters specialized in big-game hunting during the fall, mule deer and elk, with an occasional bighorn sheep license, and Bortle began his fiscal year in July when deposits for the upcoming hunting season became due. The fishing season did not start until about then as well, so he was using this season of transition to invent creative ways to minimize his annual contribution to the federal treasury. He didn't care about dandelions, just clients, preferably from back east with lots of cash.

Around the other side of the lake, up the valley at the Los Piños Ranch, Jack Hardin was gearing up for the summer season, which would begin as soon as the mud firmed up enough for guests to negotiate his access road. Even the small bulldozer he used to maintain his road had trouble with the springtime goo every year, and this year was so bad that he'd just given up and parked his truck up by the county road. He used one of the horses to get from the ranch to the pickup when he needed to go into town, and getting the kids to the school bus was quite the adventure. The summer crew hadn't arrived yet, so it was just his family that was "mudded in." They seldom got snowed in, even during the worst of winter weather, because of the industrial-grade snow blower that was part of the ranch's suite of equipment. But there was simply nothing to be done about the mud, except gripe and wait. At least he had the summer season to look forward to. His ranch, a fly-fishing and dude ranch operation above Vallecito Lake, was always sold out, or nearly so, all summer from late May through early October, and there were many repeat visitors.

Higher yet, toward tree line, the seasonal slop gave way to the frozen ground and the ice of late winter. Snow squalls were common up there. Even so, on the south-facing slopes, the snow cover was beginning to disappear, and little rivulets of the spring thaw were making their way down toward the streams in the bottoms of the valleys. In the meadows, snow lilies were peeking through the edges of the more exposed areas.

In one of these, a small clearing amid a stand of tall spruce on the southern flank of Middle Mountain, the sun had heated a pile of rocks to the point that the snow had almost completely melted. The rocks had attracted the attention of a number of magpies, as well as two bald eagles, which were sitting high in a tree at the edge of the clearing watching carefully. Less reserved, the magpies were poking and tearing at objects between the rocks. The eagles were focused on one especially large crevice, in which could be seen an object that contrasted markedly with the white snow, dark gray rocks, and green shoots of the snow lilies. Their interest was riveted on a splash of red. Red, outlined by green squares.

## **Part II**

### **Summer Term: Vacation**

#### **Seventeen**

Annette couldn't understand how in the world anyone would need more than one fishing pole. But then, this was a guy who dyed pieces of elk hide different colors so the hair would match the wing colors of certain bugs and who thought nothing of paying \$60 or \$70 for a piece of chicken skin with the feathers still on it.

It was two months later to the day, and Hal and Annette were in his car, headed into the high country for a week at the Los Piños Ranch to relax, which he defined as “fly-fish” and she defined as “lie around like a slug.” The back seat of the car was folded forward, and entire area from just behind the front seats to the rear of the car was crammed full of duffel bags, suitcases, bags of books, and other gear.

Including ten fly rods.

He had explained the nuances of different fly rods to her, but she kept coming back to the central point: the fish didn’t care what the fisher was holding, just what it thought it could eat. And fish knew they could eat worms, so why not give up on all this foolishness, get rid of all the dead animal parts he kept around to tie flies with, and just go catch fish. He further explained that it wasn’t the catching, but rather it was the fishing that he liked. And she smiled and said that now she understood: standing all day in ice water trying not to get hooks stuck in your ears was good for the soul.

Hal had been spending about a week each summer at the Ranch for over a decade and had become good friends with Jack Hardin and his wife Pam and the kids. One of the few local residents ever to stay there—the Ranch was rather expensive and catered mostly to east-coast fly-fishers and families with too much money to know how to spend it wisely—Hal considered the cost an investment in good will. In addition to the week each summer, he made the 45 mile drive up from town on weekends frequently to fish on the Ranch’s private water and, occasionally, have dinner.

As a scientist, he sometimes got asked to talk with the guests about the environment and related issues, and he was an on-again, off-again fixture at the place. He knew he could have asked for and received a discount for his week-long stays, but since he was displacing full-rate guests, that didn’t seem fair. Besides, by paying the full rate, he didn’t feel guilty about acting like any of the other guests. Maybe he didn’t drink as much as they did, and maybe his questions weren’t as stupid, but he sure could take up lots of staff time with all sorts of long conversations and make full use of all the toys the ranch offered.

The Los Piños Ranch was well past Vallecito Lake on the boundary of the Weminuche Wilderness, and getting there required driving around the north end of the lake and then some, back south to the inflow of the Los Piños River and then upstream a way. Above the Ranch were only hiking trails, streams, and mountains. In addition to the Ranch’s private water, there were literally tens of miles of streams that saw perhaps one or two people per year. So, up there, the fish were hungry, dumb, eager, and very, very feisty.

Hal was sincerely hoping that Annette would like the Ranch. Their relationship was barely seven months old, and they were still learning about each other. At least she had expressed interest in the horses. And he secretly hoped that one of the guides could get her interested in fly-fishing. It would be worth a shot.

\* \* \*

Basically a child of high civilization, Annette was excited and a bit leery of the coming week. She had very little experience with the high mountains, beyond riding up them in the winter on a ski lift—she especially liked closed, heated gondolas—and then sliding down them at high speed using plastic and metal equipment.

She liked horses and had taken equitation lessons as a child, using English saddles and so on. But these were mountain horses, with western tack, used to wandering around in the high Rockies. Hal had assured her that her childhood riding lessons would put her in the “expert” category relative to both himself and all the other guests, but she was enough of a perfectionist to worry. Her intention was

mostly to sit around, admire the scenery, and read the several best-sellers she'd brought. The Ranch had no TV nor very much in the way of telephones, and she had intentionally not brought a computer. And if Hal wanted to spend all day every day standing in ice water, that was up to him. At least he had convinced her that the food would be outstanding. She was contemplating how to get enough exercise to justify eating a lot.

She wasn't paying too much attention to the drive at first, as it wound up Florida Road. She used the time to repeat the mantra of its local pronunciation, stressing the Spanish "i"—Flor-ee-da—rather than watching the scenery, having been up that way on several occasions to visit friends with houses in the various subdivisions up in the foothills. But before long they came to unfamiliar territory, and she began to pay more attention. Gradually the subdivisions gave way to ranches, and, when they turned onto the Vallecito Lake Road, to more and more tourist accommodations.

After climbing the grade beside the dam, the highway wound around the west edge of the artificial lake, and it was obvious that a very scenic section of the valley had been drowned in favor of water resource management. Summer cabins, resorts, and lodges began to proliferate. Ahead, beyond the north end of the lake, she could see the valley winding upward, toward more and more rugged country and eventually tree-line, with year-round snow fields and the crags and cliffs that give the Rocky Mountains their reputation.

"Where up there are we going to, anyway? As far as tree-line?"

"No, but it's quite a way yet. We go around the north end of the lake, back south, and then up that valley over there." He gestured toward scenery to their right that she hadn't noticed yet.

"It looks pretty isolated up there."

"Well, there's this kind of development all the way around the lake to the river, just about, as well as more up the road from the north inlet. It's mostly summer activity, though, and things tend to close down in the winter, after the hunting season. Jack's ranch is isolated enough to make you feel as if you're away from it all. What it is, is quiet, especially at night. And you'll be astounded at the stars. I think there's a full moon this week, so they'll be washed out by moonlight, but you'll still be astounded. I expect that Jack will have a late night ride up the side of the valley. The view in the moonlight is exquisite."

"Riding a horse through the trees at night? Uphill, and back down? Are these people crazy?"

"The horses do it at least once a week all summer, with the greenest of greenhorns sitting on them. Hell, they probably do it in their sleep. You'll see. It's great."

She tried not to be too skeptical.

\* \* \*

Whitby Bradford and friend had made an early start and, by the time that Annette and Hal arrived at the Ranch, they were already about eight miles up the Middle Mountain trail. Jennifer Mason, Bradford's friend, was going first so that she could set the pace and so that Bradford could watch her hindquarters and fantasize.

The pendulum motion of her blonde ponytail above the top of her backpack made a perfect counterpoint to the rhythm of her strides, and the alternating bunching and relaxing of her gluteus muscles under the tight shorts below the bottom of her pack enriched his fantasies in rewarding ways. He'd promised her a restful week of nature watching and camping under the stars and himself a daily

dose of hot sex. So far, things looked hopeful, because she had gushed with enthusiasm about the scenery and solitude on their drive up from Durango.

Bradford's plan was to walk far enough today to tire Jennifer out and then break down her reluctance to sleep with him by offering a massage when they reached the campsite. He'd chosen the first part of their walk with this in mind, including the unnecessary uphill stretch from the Los Piños River road toward the Tuckerville site, even though the place gave him the willies.

The plan for the first day was to head for a secluded grotto near a waterfall in upper Hell Canyon. It was universally accepted that good back country etiquette required camping at least 100 feet away from all water, to avoid contaminating it, but Bradford planned to bend the rules in favor of the romantic advantages of camping next to the stream. Between the stars, the sound of the white water, and the marijuana he'd brought along, he was confident that Jennifer's inhibitions would vanish.

He was carrying most of the shared equipment—the tent, the cooking gear, and his zip-together sleeping bags that may as well have had notches carved into the zipper handles for the use they'd had. He didn't know that she had brought her own, separate, sleeping bag along with a rain fly that she could turn into a makeshift tent if he got too forward. She had met him at the prairie dog protest in May and was well aware of his intentions.

Maybe she was only 19, but she had long ago become unimpressed with older guys' senses of self-importance and with their libidos. And, because to her "older" meant up to about 35 (older than that was getting too close to her father's age to hardly even count as a "guy" any more), Bradford was teetering dangerously on the edge of being forever classified as a platonic friend rather than as a potential lover, although he seemed unaware of this. Probably due to his horny ego.

This was Bradford's fourth week-long trip into the high country this summer, and the first into the Los Piños drainage. The horrible experience the previous fall had made him shy away from the Middle Mountain trail, but it led to such spectacular country that he knew that he couldn't avoid it forever. But now that Tuckerville was behind them, he was feeling better. And Jennifer, fresh, young, virginal (he thought; he wasn't sure, but he could hope) seemed to be just the sort of companion to dispel the demons. Maybe she'd want to take a shower in the waterfall, and he could wash her back. And other places. Yum.

\* \* \*

Hal and Annette had arrived and checked in, and were settling in to their cozy little cabin. Annette was pleasantly surprised by the place, with its large, comfortable bed, plenty of blankets, small writing table, and dresser. The bathroom, by any standard at this altitude, was luxurious (especially the huge, fluffy towels, she thought), and the cabin had a covered porch with rocking chairs on it looking over a little lake, another water resource project but one that obviously had not caused such a huge portion of the valley to be lost. There were numerous sets of rings dimpling the surface of the lake, and she noticed Hal's hand twitching.

They were just down the hill from the main lodge, where there was a dining room along with a large commons area with leather couches and a fireplace. Upon checking in, they'd been informed of a pre-dinner orientation at 5:30. It had been years since Hal had been to one of these, so he planned to attend instead of immediately going out to fish, as was his habit. It took them until just after five to get the car unpacked and the gear stowed, so they walked up to the lodge a bit early.

Jack Hardin was building a fire in the huge fireplace, using scrap lumber for kindling to get the four-foot logs started. He hadn't been around when they had checked in, so he was enthusiastic with his greeting.

“Hal, great to see you again. Where’ve you been all summer? We’ve got to spend an afternoon up on Lake Creek this year, at a new spot I found. And this must be the friend you mentioned. I’m Jack Hardin, head wrangler, plumber, carpenter, electrician, story-teller, and all-around do-everything person here. Glad to meet you.” He stuck out a calloused hand in Annette’s direction.

“I’m Annette Trieri, Jack. And I’m delighted to meet you. Hal’s told me a lot about you and your place here. It’s wonderful. I’d never have thought such a level of civilization could exist way up here.”

“I’m glad you like it so far. And wait until dinner. We’ve got a new chef this year, trained in France with experience at a four-star restaurant in Aspen. He got fed up with the snootiness up there and decided to try us instead. Aspen’s loss is our gain in a big way. Can I get you anything? Glass of wine? Cocktail?”

She accepted the offer of a glass of wine, and he headed off toward what seemed to be the kitchen.

“Back in a flash.”

Other people began wandering in, and it was interesting to Annette to compare their clothes with hers. She’d lived in Durango for long enough to have fallen into the Colorado-mountain-town mode of casual dress, with jeans, flannel shirts, hiking boots, all faded and generally dinged up. After giving it some thought, she had decided, in deference to the horses, to show off a new pair of Nocona western riding boots, but she was still dressed like a local. The other guests looked as if they had just stepped out of the L.L. Bean or Orvis catalogues, new everything, in the latest outdoorsy fashions. So, she thought, in addition to the cost of staying here and the airfare and car rental to get here, these folks all have new wardrobes. Hal’s right, they do have too much money.

Pretty soon, Jack came back with Annette’s wine and a couple of opened bottles in his other hand. He began introductions and playing host. A woman who looked, somehow, more at home than the others came over to them, and Hal greeted her with a hug.

“Pam, it’s good to see you. Let me introduce you to Annette Trieri. I’ve told her that this will be the most relaxing week she’s ever had, as long as she can keep herself from falling prey to your horse program. Then she’ll be in need of one of your masseuses.”

“Glad to meet you, Annette. Hal’s been coming here for years, and the last couple of years it’s been alone. I can’t say how glad I am to see that he’s not this time. And I think you’ll have a very relaxing time here. Do you fish?”

“Uh, no, but I think I’m going to get some exposure here. I just never had the opportunity. I’ve been giving Hal a lot of grief about all his mountains of fishing stuff at home, but mostly it’s just teasing. And he’s brought about a dozen fly rods, so I expect he could afford to lend me one.”

At Annette’s use of “home,” Pam shot Hal a meaningful look and Annette knew she’d like her. And this is the first time anybody’s said anything about massage. This place could turn out to be just fine.

\* \* \*

Bradford’s first hint of trouble came when he seemed to be more tired than Jennifer upon reaching their secluded camp site, and when she insisted that they make camp far away from the stream—too far to hear the waterfall very well—so they wouldn’t contaminate the water. And, she confided, so she could have more privacy in the morning to shower.

Given his year-round outdoors activity, he had thought that he would be able to walk her legs off, but she was full of energy and he was feeling, well, old. Maybe he shouldn’t have insisted on carrying most of the water and food, along with the other equipment. He knew that she was an aerobics

instructor—that was the basis for her exceptional hindquarters—but his ego had prevented him from thinking that she might just be in better shape for walking than he.

And the second hint of trouble was more than just a hint. When she opened her backpack and pulled out her own sleeping bag, it was not clear which fell faster, his spirits or his incipient erection.

Maybe he could salvage matters. “Jen, you know that it gets well below freezing at this altitude. Is that sleeping bag going to be warm enough? I’ve got a heavier one here I thought you’d like.”

“Oh, mine will be fine, I’m sure. I’ve also got a set of fleece long-johns if it gets really cold. I went camping in the back country last winter, up in the Needles on a ski trip, and it was warm as toast. I guess over there, around that set of boulders, would be a good place for a latrine, huh?” And with that she pulled a little shovel and a roll of paper out of her pack and wandered off.

Bradford busied himself morosely with the task of getting the campsite prepared for dinner and setting up the tent. Naturally she’d chosen a place for the tent with too many rocks to plant the stakes easily. And the wrong kind of rocks to build a fire ring easily. And no convenient trees from which he could hang the food easily. This was beginning to look worse and worse. He walked back to the stream, not a particularly easy walk, to fetch some water to begin reconstituting their freeze-dried dinners (macaroni and cheese tonight, with chunky applesauce and tea) and decided to try to cheer himself up with a few good hits off a joint.

Maybe his expectations were too high. It was the first night, after all. Strange, though. This place had never failed him before, with the lovely waterfall and the view down the valley. Maybe if he turned on the charm, she’d loosen up. And put out. He was going to be in no mood for a nocturnal visit by the local ground squirrels, though. If they showed up like the did the last time he was here with, what was her name?, the one with the big... well, he’d just have to strangle the little buggers. Wonder what squirrel chunks taste like in macaroni and cheese.

\* \* \*

Back in Durango, Lewis Wilbanks was taking inventory of his equipment. He’d been up to the high country twice already this summer, on scouting expeditions, and he was now getting ready for his operational trip on behalf of the Alliance.

The Freestone River Alliance, founded by individuals with a variety of interests but little patience for the political process, was a radical offshoot of several other environmental advocacy groups. Trout Unlimited agreed with their basic premise of maintenance of minimum stream flows as a tool for enhancing trout habitat. The Sierra Club disapproved of drowning wild areas for reservoirs and had recently even come out in favor of draining Lake Powell to let the Colorado River flow freely through the Glen Canyon once again. The Audubon Society, the Wilderness Society, and the Nature Conservancy were all vocally in favor of wildlife preservation and habitat restoration and improvement just about anywhere and everywhere.

However, none of these organizations was particularly in favor of the Freestone River Alliance’s main—if unpublicized—goal, to breach all dams wherever and whenever possible, and all other water management structures, too, using whatever tools were required, even explosives. Since the Alliance had never managed actually to do this, they had not had to face the ethical consequences of such actions, the effects of prolonged drought on cities, or the inevitable flash flood. Rather, they talked bravely about “karma” and other morally justifiable retribution. And they certainly didn’t talk about this goal openly. Instead, they advocated publicly all the goals of the organizations they’d broken away from. But the membership, to an individual, lived well above even the most conservatively estimated of flood plains.

Although the Alliance had vague plans to effect their goal of destroying dams, it was mostly talk. Wilbanks, however, had more concrete plans for some of the other water control structures high up in the Vallecito Creek drainage. He was a believer in starting at the beginning, and he had decided to get the Alliance's campaign to eliminate dams and other control structures off to the proverbial bang (he always grinned to himself whenever he thought of it this way).

His plan was to attack the Rock Creek diversion, a ditch/aqueduct/tunnel system put in place by the Civilian Conservation Corps in the '30s to supply water from the upper part of the Vallecito Creek drainage to the other side of the Continental Divide, into West Ute Creek in the upper Rio Grande system, for use by agricultural interests in the San Luis Valley. Not that the Alliance would take credit for this act of sabotage, but it could editorialize about the benefits of the strategy of returning nature to nature while superficially condemning the tactics of destruction.

His ecosystems research project had provided cover for him to spend some time in the vicinity of the various components of the diversion, and he had an elaborate plan formulated that would destroy its infrastructure completely. It could be rebuilt, of course, but the cost would likely be prohibitive and the environmental groups would put up such a stink about the wilderness designation that reconstruction would never fly. Wilbanks planned no less than four coordinated explosions, two within the tunnel, one at the head-gate that channeled water out of Rock Creek into the ditch, and one on the supporting structure of a trestle-borne aqueduct that carried the ditch across a side valley just before the diverted streamflow entered the tunnel.

He had managed to acquire a large amount of plastique, with radio-controlled detonators, and had received a crash course in how to deploy it to maximum effect. One advantage of the radical nature of the Freestone River Alliance was its connections to paramilitary fringe groups and both their connections for supplies and their expertise.

The explosions in the tunnel would be the most problematic. He had discovered that the flow through the tunnel was historically low in late July and early August, so it would be possible to wade through it. His plan was to spend a night (it would be dark anyway, so why not at night?) wading about two-thirds of the way through the tunnel to set a charge in place on the ceiling and then to set a second charge about one-third of the way through on his way back. Then he would use a radio signal to detonate both charges at the same time. That same signal would also set off charges on the trestle and at the head gates, and the diversion structures would come tumbling down.

Wading through the tunnel would mean several hours spent crouched over, carrying a load, but he'd trained for just this purpose for several months now. He was troubled by this necessity, as he was mildly claustrophobic, but he couldn't think of any alternatives. The possibility of floating the charges through on something like those little kids' swimming pool inflatable rafts that they had at the K-Mart had occurred to him, but he couldn't figure out how to be far enough away by the time they'd need to be detonated. The other end of the tunnel, the northeastern portal, was nearly as remote as the southwestern end, and he didn't want to spend the extra time trekking over to it. So he was stuck with carrying two charges and detonators for about two miles and then one back for a mile. He didn't want to plant the upstream one first because he was afraid of bumping his head on it on his way out.

The fact that the charges in the tunnel wouldn't be completely tamped was something of a concern, so he had decided to triple the suggested amount of explosive. He'd also remembered that car radio reception faded in highway tunnels, so he had also gone to some trouble to make sure that an extra transmitter/receiver was available, to be placed at the mouth of the tunnel as a repeater so that the detonation signal would reach both charges. And perhaps the fact that these charges wouldn't be tamped would be partially compensated by the fact that the shock waves of the explosive fronts would meet about in the center of the tunnel. At least they would if his calculations were right.

Naturally, he planned to be nowhere near either of the ends of the tunnel at the time of the explosion, and he assumed that no one else would be there either. If there were, they would witness what would effectively be the test firing of one of the largest caliber cannons ever devised, for the tunnel was 60" in diameter. If not for the logistical problems, it would have been interesting to devise a five-foot projectile and test his cannon's range, he thought.

In addition to the plastique and detonators, he had a miner's helmet and light, with extra batteries, a heavy-duty bolt cutter to take off the padlock from the southwest portal grate, a replacement padlock to make things look undisturbed, hip boots with felt-soled wading shoes and cleats, and a pedometer.

He also had to remember to preserve his cover as a researcher, so his inventory included notebooks, a portable computer with solar panels to recharge the batteries, a global positioning system receiver to keep precise track of the location of his research, and various instruments he used to measure the sizes of trees and shrubs, as well as instruments to measure soil properties and two shovels to dig samples. All in addition to standard camping equipment.

He made sure that his research equipment was just bulky enough to justify renting a pack horse, which he would need to carry the explosives in any case. He'd been cultivating a relationship with that guy up at the Los Piños Ranch for some time just for this purpose. That way, he wouldn't have to trailer a horse up from town.

\* \* \*

Jack's orientation lecture at the Ranch dealt mostly with meal schedules, the timing of various events, and the times for additional orientation lectures related to fishing protocols and the horses. By then, several staff people, college students, had begun circulating with trays of hors d'oeuvres that turned out to be mushrooms stuffed with crabmeat and shrimp. Baked, apparently, because they weren't oily, but not dried out either. This, Annette thought, will be just fine indeed.

Hal had wandered over to talk with a weathered-looking young guy by the fireplace, so Annette, not feeling up to dealing with the L.L. Beanies just yet, headed that way. She overheard something about cutts and brookies this year being particularly hungry up on Vallecito Creek before they noticed her.

"Annette, this is Chuck Williams, the head fishing guide. Chuck, Annette Trieri. She hasn't fly-fished, but I have hopes for her. At least she's not been contaminated by warm-water fishing back east, like so many of the other folks that come here."

"Glad to meet you, Annette. Hal is a regular around here, although why we haven't seen him until now this year is something of a mystery to me. Run-off has been down for at least three weeks. You must be keeping him busy down in town."

"He's been talking about this trip for weeks. Tying flies like there was no tomorrow. Maybe, just maybe, one of the days this week he'll take off to fish somewhere all day and I can sneak off with you to learn what this fly-fishing stuff is all about."

A slow smile spread across Williams' sunburned face, causing crinkles around his eyes. "Ma'am, I can say from the bottom of my heart, from the soles of my shoes, that you're welcome to sneak off with me, any where, any time, any place. And I think that you'll be surprised by the grace and beauty of fly-fishing. Not catching fish, mind you, just the act of fly-fishing. There's an artistry to it. You don't have to get all obsessive about it like Hal and me to appreciate that."

"That's the first thing I've heard that makes it sound really appealing. I used to dance, modern dance. 'Grace and beauty' apply to that for me. I'd like to learn about how they apply to fly rods."

“I’ll make room on my calendar for you. I owe Hal a favor anyway, but even more than that, I’d feel privileged to introduce you to it from an artistic perspective. Worrying about actual fish can wait. Besides, it’ll be a helluva lot more fun and interesting than shepherding around these flatlanders. Not that I mind them, they pay the bills. But I get tired of listening to bass-fishing stories. The other guys can handle them.”

A bell rang, and dinner was served.

## **Eighteen**

“In order to understand horses, it helps to keep in mind where they’ve come from, before they were domesticated.”

By the corral the next morning, Jack was just getting wound up into one of his twice-weekly horse orientations for new guests.

“Used to be, they, or their ancestors, lived on the plains in herds and all they had to worry about was not getting eaten, finding enough food, and making more horses. To avoid getting eaten they evolved a fantastic sense of smell and the ability to run fast. What used to eat them were critters that smelled like carnivores and jumped on their backs. Think about it. If your main fear was getting eaten and some other critter that smelled like a meat-eater jumped on your back, it’d make you nervous, right? Especially if you couldn’t see your back very well, like horses can’t.”

Hal and Annette watched the crowd of 20 or so L.L. Beanies shift from foot to foot, wondering where this was going. They didn’t realize that it had already got there.

“So,” Jack continued, “Wasn’t that bacon and sausage that we had for breakfast good? And what do you suppose that makes you smell like to a horse? My point is, of course, that horses and humans are not natural allies. So horses need to be acclimatized to people, all horses, or else they think we’re going to try to eat them. We smell like carnivores, and we get on their backs.”

Annette had enough experience with horses to be able to listen to this with only half her attention, so she took the opportunity to use the other half to re-examine her fellow guests in the light of day. Dinner the previous evening had been wonderful, food-wise, and a little strange, people-wise. It was served family style, at big tables, so everyone got a chance to visit with each other and meet new friends. Or at least that was the intent. Annette and Hal had agreed to try out some other new friends for dinner this evening.

“Anyhow, all of our horses are very well trained, and we are quite experienced with matching them up with you, in terms of temperament, both yours and the horses’, and your ability. They haul people like you around all summer, and they know their jobs very well. I do have to say, however, that there’s one thing that you need to keep in mind. And this will be brought home to you when you read the release form that our insurance company requires us to have you sign before you can ride. What you need to keep in mind is, if you spend very much time on a horse, sooner or later you’re likely to find yourself going very fast in a direction that you hadn’t planned on and probably don’t want to be going in. And there’s a possibility that you’ll fall off, even if you’re not going fast. That’s just horses. If this is too scary for you, now is the time to back out. I’m not trying to scare you folks off, because riding horses in these mountains is likely going to be one of the highlights of your vacation, this or any other

vacation, for that matter. We go places where you just won't have any other chance to go. But there is a risk. Now, does anyone have any questions?"

Someone asked about breaking the horses and how they were trained, and Jack launched into an explanation of his approach, which didn't involve "breaking" them, but rather the more enlightened and less stressful approach of positive reinforcement, communication, and patience. He then proceeded to demonstrate to them using his own horse, Matador, a 14-hand palomino stallion, by pressing gently, but steadily, on his flank. Matador at first leaned toward Jack, and then swung his huge head around to look at Jack, as if to verify that there was some point to this foolishness, chuffed in exasperation at being disturbed, and slowly moved sideways, chomping grass all the while. Jack used this demonstration as a launching point to explain how best to handle the horses on the trail.

Instead of fishing, Hal came along for the morning ride, which was down the valley toward the big lake and designed mainly to get the new guests familiar with doing what Jack had been talking about. The wranglers paid close attention to the human/horse matches that they had made, with plans to correct mismatches for future rides.

And Hal had been right. Annette's childhood lessons put her way ahead of the other guests. This became apparent when the group arrived at a large meadow, and the wranglers encouraged everyone to wander around, get a feel for the horses, and get them running if they wanted to. While everyone else was jouncing unrhythmically, hats flying in all directions, she fell right into a groove with her horse. Just like riding a bicycle again, she thought. As the group was reassembling for the ride back through the forest to the corral, she was flattered when one of the wranglers complimented her on her ability.

"Thanks. I rode when I was a kid. And was lots more flexible. I'm not sure how my knee joints are going to like this."

She hoped that the rest of the week would give her a chance to get in shape for the long ride planned for Friday, a 10-hour excursion up a ridge above the valley, with views of the high San Juans that Jack promised would make their week.

\* \* \*

Ty Bortle was glad to have been called by Chuck Williams, because he was in a lull just now. Maintaining a steady flow of clients during the fishing season was more difficult than his hunting season business, for two reasons. First, the business tended to be day-by-day, rather than week-by-week, and it wasn't often that clients wanted to spend more than a single day with Bortle. He had convinced himself that this was because of the expense and because of the vast array of alternatives available to them. He guided only on and in the watersheds above Vallecito Lake, and a single day up there was enough for most folks who were traveling through the area.

He wasn't ready to admit that lack of return business could have anything to do with his personality or style. They all caught lots of trout, didn't they? Second, he had trouble making contact with clients in the first place, because the contacts were mostly to be made during the day when he was out guiding and what potential client wanted to talk to an answering machine?

The clients sent his way from the Los Piños Ranch tended to be a tad green for Bortle's taste, but they were better than nothing. In some ways they were easier than his usual clientele because they generally didn't demand to be carted too deep into the wilderness, and they were usually pleased with relatively fewer, and smaller, fish than more experienced trout fishers. What was most galling was that they were just too civilized for him. Who the hell cared if he spit big gobs of tobacco juice in the creek, for God's sake? The fish just probably ate it eventually, anyway, or the bugs.

Today, he had the dubious pleasure of providing not only a guide service but also fly-casting lessons. Bill and Marie Hinkle were from Atlanta by way of Chicago, and they had no experience whatsoever with fishing. It didn't help at all that Chuck Williams had suggested that Ty take them to an easily waded stretch of Vallecito Creek that also happened to be nearly enclosed by willows. Ty was going to spend most of the day extracting flies from the bushes, he could just tell. On the other hand, maybe he could get them excited about fly-fishing and sell them some equipment at a huge mark-up. That, plus a good tip, would make for a worthwhile day. And Marie's ass would be fun to watch all day, as a bonus.

\* \* \*

At dinner that night, Hal and Annette sat at the same table as Jack and had a chance to watch his interactions with the other guests. He was a master raconteur and very adept at reading people to see just what kind of stories they would like and how much they liked to listen as opposed to talking themselves. One of the guests got him started on what he did during the off season.

"Well, lately we've decided to just close down between about Thanksgiving and Easter. We used to stay open year 'round, but then my accountant pointed out that we could save about \$50,000 a year, net, if we closed and didn't have to pay this big staff all winter. I tried to figure out how to make that work by staying closed for twelve months a year so I could take naps all the time, but the numbers just wouldn't cooperate."

He grinned and everyone laughed politely.

"A long time ago, before I wised up, we'd cater to folks like you during the summer and early fall, fly-fishers and families, and then, later in the fall, we'd play host to groups who'd come up for the big game hunting seasons. Then one year, I had a sort of epiphany, came on like one of those cartoon light bulbs over my head. It occurred to me that getting up at 4 am to saddle horses in the cold and snow and mud so that some guys could ride out and try to shoot elk was just not all that much fun. And every now and then, one of them would get lucky and accidentally shoot one. He'd come back here, about ten at night, all excited, wanting me to go find it and bring it in. So I'd be riding out in the middle of the night go find some guy's damn elk, dress it out and bring it here, get back all bloody by about two in the morning and then have to start all over again two hours later." He shook his head.

"Changing our fall marketing strategy turned out to be a no-brainer. Now what we do, after the snow sets in and nobody wants to fish, is to contract out to groups who want to come up here for conferences. We've even got a bunch of Hare Krishnas from somewhere in Ohio, I think Dayton, who come here for a week every year in November to chant and pray for the elk and deer. They bring their own cook—they don't eat stuff like this," he held up a chunk of beef Wellington on his fork, "and so all I have to do is to put up with the chanting. There's still plenty of hunters up around here, of course. I don't know if the Krishnas have had any effect on their success, though."

No one seemed to have questions, so he changed the subject.

"So what do you all have planned for tomorrow?"

The Ranch had more than enough things to do, and it required some coordination for Jack to arrange for the right number of wranglers to go off in the various directions people wanted to go and for the fishing guides to be matched up with clients. Besides, this gave his guests a chance to talk about themselves and him a chance to make whatever suggestions he could to make their stay better.

Hal was deep in conversation with another fisher, so Annette mentioned to Jack, and thereby the table in general, that she'd decided she ought to try fly-casting, just to see what it was all about. This

started a long discussion of the merits of various kinds of fish and ways to catch them, with just about everyone encouraging her to go for it.

Later, more privately, Jack took her aside and added his own quiet encouragement. "I was glad to hear you say you're going to try fly-casting, Annette. I suppose you know that Hal used to come up here with his wife Carol, and I think one of the saddest things for him since she died has been that he doesn't have anyone to go out fishing with. Even though it's a pretty solitary thing to do, company makes it a lot more enjoyable."

\* \* \*

Bradford's camping trip was going from bad to worse, at least as far as getting Jennifer to cooperate was concerned. Every time last night when he'd tried to snuggle, a rather sterile snuggle because of the two layers of sleeping bag between them, she'd shoved him back to his side of the tent without, it seemed, waking up. This lady was strong. Nor did she want to linger in the tent with him in the morning; rather, at first light, she had crawled out the door, put on her jeans (over her long-johns) and announced that she was going to climb to the ridge top to watch the sun rise. She was gone before he could get his act together even to get out of his sleeping bag.

He'd eventually arisen and started water heating for coffee and breakfast, starting the day in a worse mood than he'd ended it the day before. Because she wasn't around, he fired up the joint he'd started yesterday and got royally stoned before the coffee was ready.

And then this afternoon, she'd taken a shower in the waterfall, and he couldn't resist the urge to watch her using his compact binoculars. It made him feel sleazy, but not sleazy enough to stop, because it did have its rewards. Until, that is, she must have seen a glint of sunlight reflecting off of a lens or something and began staring right at him.

Later, she'd not mentioned the incident specifically, but she seemed even more distant than before. And now she was preparing to sleep outside, under the stars next to the little campfire they'd made. His various warnings about wandering critters and the cold seemed not to have the least impact on her decision. This was looking like the start of a long, frustrating backpacking trip.

\* \* \*

It was Wednesday before Lewis Wilbanks was able to leave town for his trip to Rock Creek. He had discovered a loose radiator hose in his old International Scout, the vehicle that he used for trips to the high country, and he decided to have additional maintenance work done while it was being repaired.

That shot Monday. And on Tuesday, he got roped into an event at the university by his department chair. Most of the faculty were off campus during the summer, and when visitors came to campus, those who were around were involuntary volunteers.

So on Tuesday, he'd spent several hours with a delegation of Chinese foresters, explaining through the interpreter how forestry management was done in the Rockies. And why. And why some more. There had been no end to the questions. He'd wanted to scream at them that their techniques would obviously have to be different, given the much larger population density in China and if they didn't stop breeding like lice things would only get worse. But that didn't seem just the right thing to say, somehow. He had a bad opinion of China anyway, because of the huge Three Gorges Dam project that they were in the middle of constructing. It would be the largest hydroelectric and water management project in world history, and it made his Freestone-honed sensibilities ache.

But on Wednesday, he was finally ready to go. He had food for two weeks, all his research tools, and the explosives, carefully packed and padded. He made the familiar drive up to the Los Piños Ranch on automatic pilot while he thought of all the details of his plan, looking once again for weak spots. But he couldn't find any.

At the Ranch, he loaded up the pack horse and saddled another, to ride. He usually walked on these trips, but he'd decided to pamper himself this time. Besides, a horse would provide a faster mode of egress should something go wrong.

Jack was somewhat curious about his riding this time, but he made the excuse that he'd twisted an ankle and didn't want to chance walking. All the patient years of cultivating Jack Hardin's trust paid off, and he was finally alone in the forest with his two horses and his cargo of lethal supplies.

It would take about a day and a half of steady riding to reach his destination at Rock Creek, but he'd planned to take it easy, to stop and gather some research data along the way. That would legitimize the trip by providing him fodder for research notes, from which he could prove that his purpose for being here was science. Not that he was expecting trouble, but it paid to be prepared.

\* \* \*

By Wednesday evening, Whitby Bradford had just about given up on the idea of bedding Jennifer and was beginning to ponder how to end the trip early, so he could get back to town and look up an old girlfriend in the hope of obtaining some sexual relief. Jennifer had parried his every attempt at romance with a finesse and skill he would never have imagined in someone so young and innocent. And she had also, he was convinced, begun to tease him with her body.

Take today, for example. The route for their trip was planned to come out of Hell Canyon onto the Lake Creek trail, then up past Emerald Lake and over the Divide briefly to Twin Lakes, then down the Rincón la Osa to the trail along the Los Piños and back to the trailhead. They were now just below tree line, having crossed the alpine tundra for most of the day today. The weather was uncommonly hot, and she had decided to walk in one of her aerobics leotard thingies, which was really little more than the bottom of a thong bathing suit. So, if he had had wild fantasies watching her gluteus muscles work under her tight jeans before, watching them work with no covering at all produced near delirium, especially after two and a half days of being around her day and night.

And every now and then, she'd stop on the trail in front of him, and bend over to look at some flowers or lichens or something. He knew better than to try to take advantage of her, because he knew how strong she was and because she had casually mentioned something about her karate lessons. But his dreams tonight would be more agonizing than ever. They always seemed to stop just as he was getting his hands on her.

To make matters worse, she had shown him a side of herself that he didn't know how to deal with: her intellect. He had been waxing ecstatic about the possibility of reintroducing the grizzly bear into the Rincón la Osa valley—what more appropriate place could there be?—when she had innocently asked about his strategy for dealing with a griz should they encounter one on the trail. Was he carrying a gun? His evasive response about the natural fear of humans that would keep bear away from the trail only made her laugh. It seems she had experience hiking in Banff and knew better than to listen to his idealism. As much as he admired feminism in principle, he was beginning to hanker for someone with fewer brains. Who would have thought that an aerobics instructor would have the better of him?

\* \* \*

On Friday, the long excursion on horseback was everything that had been promised. Including, Annette was noticing, a very long time on a horse. She had ridden at just about every opportunity all week to get used to it again, but she could have used at least another week before this ride to get her knees ready.

On one of those rides, Wednesday evening about dark, Jack had taken them up the side of the valley, straight up through an aspen grove across the county road up to where the trail intersected one of the jeep roads. They watched the full moon rise over the mountains and light the valley below them. And as Hal had predicted, it was indeed exquisite.

By then, she had come to trust to her horse's skill in the woods, but the ride down had still been, well, interesting. Today's ride had used the same trail, and it was much less intimidating in daylight. They had ridden far up the Middle Mountain ridge between the Los Piños and Vallecito Creek to look at the view of the Needle Mountains to the west, and it felt good to be on the way back to the Ranch. Maybe she could even get in an hour or two of fishing before dark.

Chuck Williams had turned out to be the perfect tutor for her. He emphasized the rhythmic aspects of fly-casting, first in the meadow behind the lodge and then on a section of relatively still water on the river. He maintained several sections of the river near the lodge as prime trout habitat, and it was unclear who was more surprised when, during one of her practice casts, a 20-inch rainbow took her size 16 elk-hair caddis fly in a splashy jump.

Hal had furnished her with a relatively light outfit, he'd said something about four-weight, and Chuck coached Annette carefully through the process of playing the big fish and bringing it in to his net. He showed her how to handle it gently and she had held it in the slow current until it revived and swam elegantly off. She was enchanted.

Even though she had enjoyed playing down the experience for Hal, who was plainly jealous of the fish and amazed that she'd do so well on her first try, this was all it took for her to become hooked more thoroughly than the fish she'd caught. She'd spent the rest of the week alternating between the horses and the fishing, and had even come to see why Hal had brought more than one fly rod, although ten still seemed over the top to her.

Now the excursion party was resting in the late afternoon in an aspen grove, having climbed to the ridge above and spent about an hour marveling at the spectacular views on both sides. From up there, Vallecito Lake, which had taken them the better part of a half hour to drive around, was just a puddle. The horses were munching contentedly at the grass and clover between the trees where they'd stopped, and one of the wranglers, Ben, was retrieving one of the L.L. Beanies, who had experienced the situation that Jack had described, of going very fast in an unwanted direction on horseback.

"Must have been spooked by that horse-eating stump over there," was Ben's explanation when the horse suddenly bolted, with the terrified guest hanging on for dear life.

Annette had taken advantage of the chance for a pit stop, along with most of the rest of the party. "Boys left, girls right" had divided the group appropriately, and people had wandered off in their respective directions to find bushes of sufficient opacity to fulfill their modesty requirements.

As Annette was re-entering the grove where the horses were grazing, she heard a scream behind her, from the direction toward which one of the more modest ladies had gone. She turned and dashed back into the forest, downhill through the spruce trees. She could hear others following her.

She knew she was headed in the right direction, but she was glad to hear the second scream to get a better fix. About a hundred yards down the slope, she ran into a very frightened L.L. Beanie, who was barely able to explain her fear and seemed to think that Annette already knew something about it.

“I was down in a clearing just below, you know?, and I was, well, you know, when I looked down and there’s this bone. A big one. Sort of right by where I was, you know, getting ready to, well, you know. And then I looked a little over to my left and there was a skull. Like a human skull, you know?”

By then some of the others had caught up to them and Annette took charge. One of the wranglers came puffing up—he was used to being on a horse and running was not his forte—looking very worried, so Annette put him to work on getting everyone calmed down and back to the meadow. She had to enforce this order on one of the men, a retired military officer, apparently, by using her shield to pull rank. Then she carefully approached the clearing.

It was small, surrounded by tall spruce trees, and it had a jumble of rocks in the middle. Annette immediately noticed that the frightened woman had dropped her roll of paper and walked over the spot, being careful of where she stepped because of both the bones and, well, you know. She picked up the paper and scanned the ground.

There was the bone, and there, about 15 feet away was indeed a human skull, both with flesh in an advanced state of deterioration attached. The skull also had some hair left and Annette nearly began to think of it as a head. She continued scanning the area and eventually began quartering it to search for additional items. She heard someone coming through the woods above, and Ben appeared at the edge of the clearing.

“Ben, don’t go any further, please. I don’t want more people than necessary tromping around here. It looks like we have the remains of a human body to deal with. Did they tell you that I’m with the Durango police in real life?”

“Yeah, that colonel, or whatever he calls himself, told me. You seem to have put him in his place real good. And don’t tell anyone, but that’s OK with me. I see a skull over there, is that what you’re talking about?”

“And there are other bones, too. I’m not enough of an anatomist to be able to identify them, though.”

“So what do you want us to do?”

“I think that the best thing would be for you to take the others back to the Ranch and let me continue to look around here. When you get back, see if you can find Hal, Hal Weathers, the guy I came with, or Jack, and tell them. Ask one of them to call down to Durango and talk to the La Plata county coroner, Lester St. Clare, and see how soon he can get up here. OK?”

“I’m not supposed to leave you here alone.”

“What the rule really is, is that you’re not supposed to leave me here alone with my horse, I heard the deal when Jack gave his orientation. So lead my horse back with the others, and then have Jack come back with it to get me. I’ll be OK in the meantime. Really. It’s not like there’s anyone else up here. And Jack, or someone, should be able to make it back before dark, no?”

He was dubious but had no other ideas. He had rescued the runaway horse and rider and wanted to get everyone back to the lodge, safe and sound. And she seemed like she knew what she was about, unlike most of the other guests he had to deal with. He promised to leave her knapsack so she would have some water and agreed to her plan.

She walked back with him up to the meadow where the others were waiting, all mounted and ready to go, and retrieved her knapsack and the yellow rain slicker tied onto her horse. This she draped over a branch of a tree where she had entered the woods. After everyone had said their goodbyes, she returned to the clearing.

On the way, she broke off a number of dead branches from the lower parts of the spruce trees. In the clearing, she stuck these in the ground next to the various bones she'd found. Finally, she was sitting on a large boulder in the center of the clearing, near the pile of rocks. To her eyes, the pile looked as if it had been bulldozed down the hill for a number of yards, from a spot up the hillside where the trees were especially sparse.

The clearing, she realized, had a large teardrop shape, with the pointed end at that sparse place in the woods. As if there was a tendency for avalanches to happen. So the rock pile could be the result of a snow slide. This wasn't a huge avalanche chute, or the trees above would be snapped off, but it was rather steep and could have seen smaller slides. In that case, perhaps the remains were those of someone who had been caught in the slide and perished, maybe an unlucky back-country skier. Animals would have scattered the remains. The pile of rocks suddenly became more interesting to her.

It didn't take long for her to notice the red coloring, and she realized that it was cloth, like flannel or wool. It was some time, however, before she connected it to the mystery left hand that had been found last spring. It was the pattern that finally made the connection in her mind. Red outlined with green squares.

And it took only a little longer for her to realize that her snowslide tragedy was really something else altogether. Neither snowslides nor hungry scavengers, after all, slice through bones with surgical precision.

\* \* \*

## Nineteen

"I think that those people are too isolated up there, and it's making them crazy. Not Jack and his family, but the summer help."

They were back in the car, headed home, and Annette was reviewing her week in paradise, Rocky Mountain version.

"I guess I didn't tell you the topper, though. It was Wednesday, when you went off with Chuck to somewhere and I did a lunch ride with Josie, Sandy, and some of the other folks. Led by the inestimable Ben the Wrangler."

"Wasn't he the guy that found me and Jack yesterday afternoon and had us come up and get you?"

"Yeah. Nice guy, but weird. Not someone you want to talk politics with. We went up the side of the valley to Coyote Basin, by that little spring, for lunch, a really nice ride. A lot more rugged than even the night ride, but beautiful. When we got there and he'd staked the horses and so on, he went over to the spring to wash his face. And to do that, he took off his hat and set it down, upside down. Josie noticed that it was lined with what looked like aluminum foil, so she asked, and he told her all about it. Yes it was aluminum foil. And I've read about this, but I thought it was satire, or a joke. But he actually believes that there are secret agents from the United Nations or something, he was a little vague, guys that fly around in black helicopters, really quiet ones that you can't hear, with special equipment that detects brain waves. So he keeps the foil in his hat so they can't read his thoughts. I refrained from asking him why they'd even want to. He admitted that the foil in his hat made wearing it hot, but he says it's worth the heat so the agents won't keep a file of his thoughts. It was wonderfully amusing to see how quickly Josie changed the subject."

“You should have asked him if the reflections make his thoughts echo.”

“Huh? Hey, wait. Is this another Mr. Science Person thing?”

“Think about it. Suppose he’s right, that the government, or the UN, has some kind of instrument that they fly around in a helicopter reading thoughts with. I mean, look at it from Ben’s perspective. The government has all sorts of other kinds of exotic instruments that they fly on planes and satellites and measure stuff with. I’ve used some of them for my own research. So maybe there’s a Brainwave Remote Sensing System, called B-R-S-S, pronounced ‘bris,’ like the Jewish circumcision ceremony, top secret and so on. OK?”

“Where is this ridiculous line of thought going? Bris?”

“Well, maybe it’s called something else. Like, ah, mmm, oh, something simpler, like the Brainwave Scanner, B-S. Anyway, suppose it exists. Now, there are two ways it could work, unless there’s some kind of new, unheard of technology involved. Either it’s an active remote sensor, like radar, which sends out a signal and measures what bounces back, or it’s a passive remote sensor, like satellite pictures, or photography, or your eyeball. Except that it sees brain waves instead of sunlight. Now, I don’t know what ‘brain waves’ really are, but they’re probably some kind of electromagnetic radiation, so you can’t use active remote sensing to see them. Light waves don’t interact, so you can’t measure light from one source with light from another, no matter if it’s sunlight or radio waves or brain waves. So this secret instrument has got to be a passive system. You with me so far?”

“Ahh, well, I will stipulate that this makes sense, but that doesn’t mean that I agree or anything.”

“Well, of course. But remember, we’re tackling this from Ben’s perspective, or at least his perspective if he actually thought this through. Never mind that the government or the UN couldn’t possibly be interested in him, or that flying helicopters around would be a stupid way to spy on him. Anyway, he wears aluminum foil in his hat to block his brain waves from getting out through his hat to this B-S instrument he’s so worried about. Now, if the foil blocks his brain waves, it must do that by reflecting them. Or I suppose it could absorb them, and maybe that’s why it makes his hat so hot. But it would probably reflect them, just like foil reflects almost everything else. So that means that all his brain waves are bouncing around inside his hat, and therefore inside his head. You’d think he’d hear echoes.”

She giggled. “Thank you Mr. Science Person for another enlightening lesson. But wouldn’t the echoes just make him confused? Oh…”

“Exactly! It’s self-explanatory and self-consistent, and truly beautiful. I’ll have to write a paper for the *Journal of Irreproducible Results* on this. I can always use another journal publication on my vita. Let’s see if I can get this right. Somebody told Ben about the black helicopters and he got a little confused. So he decided to put foil in his hat to block the helicopters from reading his thoughts. And the foil causes brain-wave reflections and the echoes make him more confused, and now he’s a true believer. Conversely, if the foil weren’t there, he wouldn’t be confused, and he wouldn’t care about where his brain waves go. But it is, and he is, and he’s stuck forever in this vicious positive feedback loop. We should go steal his hat to save him from himself. But then he’d probably just think that the black helicopter guys stole it and get confused all over again and have a relapse. Poor lad.”

Her giggling had progressed to a mild hysteria, and she was making little chirping noises while trying to get her breath, so he continued. “Maybe we could make a skull cap out of heavy-duty foil, but put a lot of pin-holes in it, and send it to him. The holes would keep the reflections from being so bad, so he wouldn’t be confused, or at least not as much. All we’d have to do would be to persuade him that the brain waves leaking out through the pin-holes would be scrambled by interference patterns so the black helicopter guys couldn’t read them. And maybe he’d wear it, be less confused, figure out that the whole thing is silly, and be cured. Voila! Another triumph for science!”

\* \* \*

Hal drove in silence for a while, to let her regain her composure. Finally, his curiosity about her discovery in the clearing got the best of him. “So, now that I’ve solved Ben’s problem, how are you going to solve that little mystery you uncovered yesterday?”

They had discussed it, of course, but she was reluctant to get more involved. The coroner had arrived first thing that morning and Ben took them on horseback up to the site. They returned with a bag about noon, another one of the “parts bags,” a bigger one this time. The previous evening in the woods, she had carefully marked the placement of the skull with several sticks and had brought it back with her when Hal and Jack had returned with her horse. If the victim were to be identified, dental records would probably be the best hope, and therefore the skull was the most important piece of the remains. She had proposed keeping it refrigerated overnight, but Henri, the Ranch’s new French chef, was not about to let that happen in *his* kitchen, so they left it carefully wrapped outside, where the nighttime temperature was probably lower than the refrigerator anyway. Today’s trip recovered the rest of the remains, and they were on their way with the skull back to Lester St. Clare’s lab.

“Back in May, when we found that hand, Lester said something about its having been freezer burned, that it had probably been outside most of the winter. So the first step will be to check out missing persons reports from last fall. At first I thought that a cross-country skier had been caught in a snow-slide. But it may have been earlier, back in hunting season last fall, and not an accident. The clean work on getting that hand off argues for something like that. So if the hand and the remains can be matched up with a missing persons report, we’ll know where to start looking for suspects. I’m assuming they’ll treat this like a murder, like I told you last night.”

“Sorry this had to happen and spoil your vacation.”

“It hasn’t, really. We were going to come home today anyhow, sorry to say, and yesterday we were finished with the ride except for the last few miles. And I expect you noticed that the discovery didn’t upset my dinner like it did that woman who first found the remains.”

“Poor thing. I bet that she’ll never be able to pee in the woods again, ever.”

“Or at least she’ll look around very, very carefully, first. The worst for me was being the celebrity when we finally got back. All I wanted to do was get cleaned up and eat, and everybody wanted me to talk and tell the story and answer questions. What I really wanted was a massage. Being on that horse all day was rougher than I thought. And you did an admirable job of smoothing out my kinks. And at least we got back in time to have dinner. I wonder how many of those other folks will go back to the Ranch again.”

“Jack says that he has about 40% repeat customers, which is pretty good in that business, especially as the variety of stuff to do is limited. It’s one thing to go there for a week to fish and ride horses; it’s another to do it again and again. You’ve got to be a pretty hard-core fisher, like me, to want that.”

“Well, I’ll be more than happy to go back there whenever you want to. Jack and Pam are just delightful people. And I don’t think I’ll become a hard-core fly-fisher, but I sure enjoyed myself. Who’d have thunk it? I guess now I know why I see those guys fishing on the river through town all the time. I’ve never seen them catching anything, though. Are there any fish in there?”

“Sure. Lots. Trout, whitefish. But they’re not as naïve as the fish up where we were. That day we went way up the river, uh, Thursday I guess, and caught a cutthroat every five minutes for 3 hours is not something that happens just anywhere. Anyway, if you’re going to look into missing persons reports for last fall, during hunting season, it sounds like you’ve got a hypothesis.”

“Well, I don’t know that it’s going to be me doing the investigation. Not my jurisdiction, after all. Anyway, Lester said that the hand we have was probably taken off with a big, sharp knife. So it sounds like this guy either died or was killed, and the other guys he was with didn’t want to bury him whole, so they took his body apart. Maybe they thought that the pieces would be carried off by animals and there’d never be a body found. And just that almost happened, and probably would have by next year, if that lady hadn’t walked off so far and stumbled upon the bones. And of course the hand on the music building roof was a real coincidence.”

“Yeah? I thought you coppers didn’t believe in coincidences.”

“Well, now there’s something to think about. You were at the scene of the discovery of the hand, after all. And I have no idea of where you were last fall, but I do know that you go up to the Ranch a lot. And, say, didn’t I find you at the scene of the campus murder last Christmas? Coincidence? I don’t think so. I’d better take you somewhere I can question you carefully, pal. I might even have to get a little rough, if you don’t play your cards right.”

“Ooo... Promise? I can hardly wait.”

\* \* \*

When they finally got back to town, Annette insisted on going to the morgue first, so she could check to be sure that the coroner had made it back with all of the remains, and then to the sheriff’s office so that she could find out about the missing persons requests.

Lester St. Clare was, as usual, in his laboratory, in the cold room, and they found him unpacking his latest treasures. He had unwrapped the skull and laid it at one end of an examining table. Other pieces were being put into place as he identified them. It was a grisly display, especially the two medium sized bones that were cut cleanly off.

“Ah, Lieutenant. Enjoying your return to civilization? I think you’ll be interested in something here.”

He picked up the skull and turned it sideways. “Notice anything?”

She was not the expert that he was, but something did seem amiss. There appeared to be some damage to the cheek bone on the right side, just above the upper right wisdom tooth. She said so.

“Very observant. Now, because this has been exposed to the weather and the critters for so long, I don’t know how much we’ll be able to really find here, but I think you’re right. I don’t expect you noticed this yesterday?”

“No, it was getting on toward dark, and I was tired. When we got it back to the Ranch, we just wrapped it up. What do you think of the damage?”

“Well, it could be just environmental damage, but it could also be the result of an intentional blow to the face, and possibly fatal. I’ll have to look at this damage with a microscope to see if there are any further indications.”

“You’re positive that this is the same body the arm came off?”

“Not one hundred percent until we get DNA corroboration. But,” he pointed to the two half bones, “these are the proximal halves of the left radius and ulna that match the arm in the freezer. So I’d say it’s 99.9%. It’s curious that the body was so completely dismembered, though.”

“I’m guessing that it was to get the bones apart so they’d scatter due to natural causes more easily. It was sure in a strange place, though. Hard to get to, even by that jeep road, I’m told.”

“I remember the ride in, believe me. And the natural scattering theory would be my guess, too. Now it’s your job to find out who.”

“Oh, no. I may have found this guy, but it was in the county, and I’m Durango, remember? And this also means that we can give you guys the hand to go with your, repeat, *your* bones. What a deal.”

Even if she didn’t want to get too involved, Annette couldn’t resist making a second stop at the missing persons desk at the police station to get the database query started, where she was told to expect a long list by Monday. Given the fact that, each fall, hunters came from all over the country for a chance to shoot an elk in the Rockies, the search would have to be nationwide. And it would have to cover a period of at least 3 months, to be comprehensive. And lots of people disappear.

But the dental records, combined with approximate age information that St. Clare would be able to provide, would be a good start. And since almost no one went hunting without the help of an outfitter, especially way up there, the potential players in the tragedy would become well defined rather quickly. Or at least so Annette hoped.

\* \* \*

If Hal and Annette felt ambivalent to be returning to civilization, Whitby Bradford was overjoyed. Jennifer had driven him about as far as he could go without losing it altogether. This trip would require serious forgetting. The worst of it was that she had stopped treating him as if he were a man, or at least as if he were a sexually active one.

She had begun ignoring him while dressing and undressing, in front of him no less, and, yesterday, she had stripped down during a brief thunderstorm to shower in the rain, with him standing right there. He would have followed suit, but he was too embarrassed by his reaction to her nudity to do so. And she’d just sort of ignored him while rinsing off in the cold rainfall. This was just not fair.

But he couldn’t let this little setback taint his love of the back country experience. There would be other opportunities with other college girls, after all. He decided he would have to restock his food supply and set out again as soon as possible for the high country, like getting back on the horse after you fall off, to make sure that this miserable week was forgotten right away. Meditation, and medication via some serious dope smoking, that’s what he needed, and a week alone in the wilderness.

He didn’t know it, but Jennifer was also ready for another week in the woods, with someone else this time. When she’d spotted Whit peeping at her in the waterfall on Monday, something changed in her head completely. It was as if there had been a part of her that was considering making love with him but was still undecided.

After the peeping incident, that vanished, and he became just another person, de-sexed, platonic, and too old for her anyhow. She did enjoy teasing him, but that was just her nature. Mostly, she enjoyed the fact that he continued to insist on carrying most of the heavy gear, so that she had an easy time of it. In any case, she’d remember this route for the future, and use it with a boyfriend someday. That spot with the waterfall was indeed romantic, even if it hadn’t worked on her for Whit. Poor horny bastard.

\* \* \*

While the two couples were on their way back to Durango that Saturday, Lewis Wilbanks was finally arriving at the camp site he’d picked out in the Rock Creek valley. He had taken three days to make the trip by using a round-about route that included several side-valley trips, planned in advance to look as if he were making a series of scientific measurements and also to throw off any possible followers, at least

any that he could conceive of. The extra distance involved was trivial because of the horses, and he actually enjoyed the chance to watch the scenery for once. And he'd built up an impressive list of measurements in his notebook, carefully including their precise positions from his GPS receiver to prove where he'd been.

Richard Hardin was having trouble understanding what the professor was up to. He'd been tracking the pair of horses for several days now, partly out of curiosity and partly to make sure that nothing bad happened to his favorite horse, Brownie, who was being used as a pack animal. At least the professor knew how to load a pack properly, and Brownie didn't look to be suffering. Tracking the horses was easy for Richard, and sneaking up to where the professor made camp was also not too hard, although the horses tended to get edgy if he got too close.

Richard, Jack Hardin's younger brother, was a sort of dark secret of the Los Piños Ranch. A farm accident involving a head injury years ago had left him partially disabled, mentally, and he'd had several bad encounters with the law as a result. It was not that he was a bad person, or a criminal, but he was "simple" as they used to call it, and he had an unfortunate tendency to get into trouble as a result of having more curiosity than good judgement.

Because his body was fully abled, hormonal urges were particularly troublesome, as women were not at all attracted to his unkempt appearance and the wild look in his dark brown eyes. With Jack's tacit approval, Richard had become sort of partly hermit, partly barn hand around the Ranch. He was forbidden from interacting with the guests and summer staff, except the wranglers, and he generally kept to himself.

Fortunately, he loved the mountains and spent most of the summer season in the wilderness, subsisting on the fish that he was so adept at catching, the occasional poached fawn, and other supplies provided by Jack. He spent the winters in the Ranch's barn, with the horses, so he was good friends with them.

Even though his intellectual capacity was at about the second-grade level, he knew the valleys and ridges in the Vallecito Creek and Los Piños watersheds like he knew the barn he spent the winter in. He enjoyed spying on backpackers and had learned their habits well enough to anticipate where they would stop for the night and, by how much they were carrying, how long they would be out.

Watching Jennifer shower at the waterfall—unlike Bradford, Richard had not been discovered by her—had been this summer's highlight, so far.

But this professor puzzled him. Richard had seen the scientific activity before, and even had Jack explain it to him last winter. Measuring trees, bushes, and the soil was easy to understand. But why would the professor need two horses this year? Last year he'd walked, just like the two earlier trips this summer, and once had taken a single horse. Why did he keep going back to the same place on Rock Creek? And what was that extra stuff that Brownie was carrying this time?

\* \* \*

Ty Bortle usually spent Saturdays in town, stocking up on supplies and getting drunk. He'd been banned from the Jack Creek Saloon in Vallecito, so he had to drive all the way into Bayfield or Durango for his binges. Anyway, the prices for food were better down there than at the Vallecito General Store. Maybe the rich summer cabin folks could afford the stuff there, but he was a working stiff who had to watch his budget.

Unfortunately, this particular Saturday was different, because he had had a lousy week, guide-wise. The day on Vallecito Creek with the Hinkles was a disaster, pure and simple. They had both, *both*, fallen

in the river and got their waders filled with water. Marie had even started to float away before Ty could get to her. At least he'd copped a nice feel when he'd grabbed her. Then what's-his-name, Bill, had got a hook stuck deep into his thumb, a barbed one at that. Ty knew well the trick of extracting hooks using a piece of strong leader material and a quick jerk, but Marie wouldn't let him. So he'd just cut the line off and let Bill spend the rest of the day, until they could get back to the Ranch, with a parachute Adams dry fly, size 14, sticking out of the thumb on his casting hand. Serve him right if it gets infected.

Although Ty was disappointed, at some level he understood why there was no tip for him that day. What really pissed him off was that the Hinkles must have blamed him for everything and told the other guests, because that was the only work he'd had all week.

So not only did he not have enough money to go into town and get drunk, he was also going to run short of food. The only solution was to make a quick trip into the wilderness and poach a deer or maybe a young elk. He knew where to go, and all he'd have to do would be to get up and back without being seen. It would have to be done with his hunting bow, of course, because there were too many backpackers and day hikers up there to get away with the noise of a rifle. But he had acquired, from a client, a hunting bow that collapsed into a nice, unremarkable package. He could take his fly rod and some fishing equipment and pretend to be scouting new places to take clients. Because he never walked anywhere, no one would be surprised when he rode off trailing a pack horse. And they wouldn't notice when the pack horse came back carrying more than it carried out.

Bortle gave it some thought, and finally settled on trying for an elk from the herd that he knew summered near the headwaters of Vallecito Creek. There was a lake at the base of a horseshoe shaped cirque surrounded by meadow and, a little higher on the hillsides, forest for cover. The elk had shelter, water, a variety of food sources, and several escape routes both up the cirque and down the valley in the event of emergencies. Few backpackers went there, because it was just too far into the wilderness and not on a marked trail. He'd start first thing tomorrow. But tonight he had a bottle of Wild Turkey around somewhere that was begging for his attention.

\* \* \*

## Twenty

On Monday, Annette came home with a long mailing tube under her arm. When she walked into the house, her nose was assaulted by the combination of turmeric, cumin, coriander, and ginger that could only mean two things: Hal was in the kitchen with the counter tops covered with just about every little bowl in the house full of carefully measured stuff, and the house would smell like curry for the next week or so. He'd been threatening to make a chicken curry for some time, she remembered. She was looking forward to the results but decided to stay out of the kitchen.

Instead, she went into the dining room, cleared off the table, and expanded it to its dinner party configuration, with all the leaves. Then she took several U.S. Geological Survey 7.5-minute series topographic maps out of the mailing tube and unrolled them onto the table, folding and matching the edges, and holding them down with various salt shakers and pepper grinders from the sideboard. When she was finished, she had a large-scale, high-resolution view of the vicinity of the site where the remains had been discovered the week before.

Hal came out of the kitchen, wiping his hands on his apron. "Oh, hi. Didn't hear you come in. Wow. What's this?"

“Quad maps of the area above Vallecito Lake, centered on where we found the remains last Friday. I want to get an idea of the terrain to go with what I remember from last week. What’s for dinner? Want me to thaw out some ground round for ’burgers?” She batted her eyelashes innocently.

He stuck his lower lip out and tried to pout, but he knew it looked ridiculous and gave it up at once. “Hmmp. If you can’t tell what I’m making, you must have the world’s worst cold. Maybe I’ll add more cayenne to yours. So, I thought this was in the county and not your worry.”

“Well, we found the hand last spring, and Lester thinks that it belongs to the remains I found, so the sheriff’s office has decided to defer to my ownership, or expertise, or something. The sheriff called my chief and he put me on it.”

“Oh. Well, I bet you didn’t know that I’ve got all these same quad maps upstairs in the attic. Although yours look like newer editions. I’ve also got a couple of large-scale LANDSAT images, too, and a SPOT image I bought. About the same scale as the maps, I think. I’m a map person and like to look at where I go fishing. And you know I go fishing up there a lot. I’ll dig them out after dinner. And if you really want a good look at this area, I can use my clout with the geography department to get access to their geographic information system. It has all this information, maps and pictures, overlaid, and you can zoom in, rotate it, and even make 3-D views.”

“The county has a GIS system, too, but I bet that the college’s is better. Just like the chemistry facility. You’re a very useful friend to have, you know that?”

“And I thought you loved me for my body. What a let-down. You want to help me with dinner?”

“Ohhh, you know that’ll just make me crazy...”

“I know, but I’m trying to reform. Really. I did measure the spices carefully, because I didn’t want to screw up the curry. But I looked at the recipe again and it seems like we could just put in whatever amounts of whatever seems good. It’s all got to simmer for a while anyway. So you can chop stuff up and I can throw it in and let it cook. Honest. I’m not going to measure anything. And, well, I like having you in the kitchen with me. And then we can study these maps after dinner.”

Annette was having trouble believing what she was hearing, but it sounded good. So she followed him into the kitchen and was amazed to find no little bowls or measuring cups. Just a pile of ingredients on the cutting board, and a chicken waiting to be cut up. “Does this mean that you’ll do OK with my just throwing stuff together?” She could hardly believe what was happening.

“Everything you’ve made for me has been so good, how could I object? And I’ll have to continue to measure some things, like the proportions for béchamel sauce, but I think it’ll be liberating to just cook, instead of making it into a chemistry experiment. Besides, you’ve eased off your shopping compulsiveness a lot, so I owe you one.”

She didn’t know whether to be gratified at his vow to change or offended at his cheap shot at her shopping habits. Hey, she saved money that way, didn’t she? But cooking together could actually be fun, so it would be worth ignoring the cheap shot and giving his vow a trial run.

And it was fun. He attacked the chicken, she attacked the vegetables and fruit, and they wound up with a curry that exceeded all expectations. They ate it in the breakfast nook, because of the maps on the dining table, but it still tasted heavenly.

\* \* \*

By dinnertime on Monday, Ty Bortle had made it as far as the confluence of Rock Creek, what was left of it below the diversion, with the main stem of the Vallecito Creek. A late start on Sunday—his

hangovers were a lot worse than they used to be—had put him behind his tentative schedule, but that was OK. He'd trailered his horses up to the end of the county road at the campground above the lake and got on the trail by late morning, but even riding deep into dusk he would need a few more hours to get up to the cirque and the elk herd he was going to stalk. At least there were plenty of trout in the creek to provide dinner.

But he wasn't alone up here. That was smoke he was smelling. Now who the hell would be way up here on a Monday evening? Well, if he could smell the smoke here, maybe they were close by and not up by the lake. Campers up there would really cramp his style with the elk.

About a mile up Rock Creek, Lewis Wilbanks was responsible for the smoke that Bortle was smelling. Wilbanks had caught several trout and was roasting them for dinner. He'd spent the past two days reconnoitering the spots he planned to locate his explosives and continuing with his measurements for cover. Tomorrow he would begin to set up the bombs and be ready to do the tunnel slog tomorrow night. Then, on Wednesday he could leave by continuing up to tree line and across the ridge opposite the tunnel and coming down the next valley to the south. He could detonate the charges from up on the ridge, and, by Wednesday night, he would be a long way away from the scene of his sabotage.

Up on the side of the valley, Richard Hardin was also eating dinner, watching both Wilbanks and Bortle, and wondering what this was all about. Two guys, each alone, each with two horses? He should be so lucky. Richard was not using a fire, as he'd learned to like trout raw. When he had told his brother about this, Jack had laughed and taught him a new word, soo-she. If people in that other country, um, Japan, could eat raw fish, from the ocean yet, so could Richard, from the much cleaner streams of the high Rockies. What Richard really liked was the different tastes of the fish from the different parts of the streams. Jack said it was because of the different things that they ate, and from the different kinds of trout, too. But none of them tasted like grasshoppers, so Richard didn't quite understand it.

He had been watching carefully over the past couple of days as the professor re-examined the diversion structures and took his measurements. Richard was in no hurry to go anywhere, nor did he make plans very much, so he was waiting for the professor to do something different. His knowledge of backpacker behavior was being expanded by watching the professor. He knew that a man with two horses could stay in the forest longer than one with only a backpack, and he could cover more ground, too, but he didn't know how much. So his curiosity kept him watching.

But now there was this other guy, who looked familiar. One of the guides at Jack's lodge, one he'd met. But Richard wasn't good enough with names to remember. What was he doing up here? And how long could he stay out with his two horses? And how could Richard watch them both, if they went different ways? This sort of puzzle was enough to give Richard a headache.

Back down the valley, Whitby Bradford had settled in for the evening at a campsite under some cliffs well off the trail to contemplate his situation. He was alone, but compared to the last time he was up in the woods, that was a blessing. He had plenty of food and, having just eaten, was contentedly puffing on a joint under the stars in a place he truly loved. The lovely Jennifer was fading quickly into the fuzziness.

He had put in a long half day, trying to get himself into the kind of walking condition that she had been in and trying to forget her at the same time. Another day and he'd be nearing the end of the valley and would have to decide where to go next. Tomorrow night would put him at the mouth of Rock Creek, and he could wait for a decision until then. For now, life was peaceful and generally good.

\* \* \*

After filling themselves with chicken curry and getting the kitchen cleaned up and the house aired out, as much as possible at least, Hal and Annette gathered magnifiers, Hal's photographs, and a small tool for estimating map distances and tackled the dining room table. Their first task was to locate as precisely as possible the clearing where the remains had been.

"I asked Jack, and he thought it was about three miles up the Middle Mountain trail. So let's use this little gizmo to see about where that is."

She was fiddling with the scale on the little device, which had a wheel on one end and a gauge. She set the wheel at the Ranch and began rolling it up the trail, watching the gauge carefully. When it got to the three-mile mark, she stopped and drew a light pencil circle at the spot.

"This white area straddling the trail must be the meadow where we stopped and tethered the horses. And here's the little stream we passed just below that meadow. So that puts the clearing right about here."

She drew another light circle just downhill of the meadow, in a green area on the map. The clearing was, apparently, too small to be shown in white.

"And look at this. It's not clear where it is, jurisdiction-wise. Even the county line here is labeled 'indefinite.' So not only am I out of my Durango jurisdiction, this might not even be La Plata county. I guess we should bring in the Hinsdale sheriff."

"So the only way to get there is up from the Ranch the way that you guys went or in from higher up on the ridge, from the Middle Mountain Road here to Tuckerville, or down this other trail." Hal was tracing his finger along the trail above the meadow. "Do you remember where it goes?"

"We rode well past this meadow, I remember, and then kept going on up the ridge here. Then we went up to somewhere up here, way up the ridge, and wandered through the forest over to somewhere up here."

She was pointing to a small peak labeled "Table Mountain."

"And then back, through a different part of the forest but finally down this same trail. Like I said, I want to get a better feel for the area, having been there and all. And now that there's this investigation. Can we find all this on the photos?"

It was fairly easy to match up the landmarks on the satellite photographs with those on the quad maps, and before long they had identified the meadow and convinced themselves that they could see the clearing as well.

"These shots are several years old, now, and there may be newer ones, especially with all the declassification of the spy satellites and the commercialization of the imagery that's going on. I'll check with the GIS people on campus to see if they have anything newer, and with better resolution."

Hal also had some other ideas about better imagery, but they would cost money, so he didn't mention them. The police department's budget was, like all such departments, chronically stretched.

"Any luck with the missing persons database search?"

"More than you want to hear about. The FBI has something over a hundred thousand missing people in their files. It seems like zillions of people are reported missing each month—most are found, but not reported. I'm hoping that by tomorrow a follow-up query will eliminate those that have been solved or withdrawn. Then we can cull the results of that for the physical characteristics that Lester's been able to deduce. Which are: white male, early 30s, about 5-8, thin, probably about 140 pounds, fair complexion, probably very light brown hair, good health, type O positive blood. You'd think someone would have reported him missing, like his wife or girlfriend or something. I'm hoping that there won't

be too many matches, or else I'll be spending a lot of time on the telephone. Not my favorite thing to be doing this time of year."

\* \* \*

The next morning about ten, Hal was yanked out of his concentration on formulating a particularly delicate memo to his department chairs, concerning balancing diversity considerations when recruiting faculty during the upcoming academic year with fairness and political sensitivities, by a call from Alice.

"Dean Weathers, there are some gentlemen from the government here asking to talk with you. They said they were with the Bureau of Alcohol, Tobacco, and Firearms."

He was surprised, but relieved to have something less divisive to think about, and went out to meet them. Field Agents McCauley and Deutsch appeared, at first glance, to be striving for a sort of Mutt-and-Jeff version of the "good-cop/bad-cop" image. They were both dressed in the standard government-issue, cheap gray suit, white shirt, and four-in-hand tie (one red, one blue, Hal noticed), with dark brogans. McCauley was the taller of the two by about a foot, and had kind, tired eyes; Deutsch, although short and round, had the look of a ferret. Hal led them into his office, got them seated and offered coffee, which was politely declined.

McCauley was the spokesman. "Mr. Weathers, I believe that the Department of Natural Resources is in your College of Natural Sciences? And that Lewis M. Wilbanks is a faculty member in that department?"

Hal was nodding, so he continued. "We're interested in any information that you can give us about Mr. Wilbanks' whereabouts and his activities on and off campus."

Hal had risen and moved to his desk, where he'd turned to his computer keyboard and begun typing, all the while glancing over at McCauley to encourage him to continue talking.

"It says here in the university database that he's an associate professor, has been for three years, and has been with the university for 10 years. He teaches and does research, but it's unfunded. Which means he doesn't have any grants. His research specialty is high-altitude ecosystems with emphasis on coniferous forests. Is there anything else I can tell you? Why are you interested in him?"

McCauley tried not to look too devious. "We have come upon some information about Mr. Wilbanks. I can't tell you the source, but we consider it to be unimpeachable. We have agents placed within various paramilitary groups around the country, and one has told us that Wilbanks took delivery of a fairly large amount of military explosive, the stuff commonly called 'plastique.' And some radio-controlled detonators. This is extremely dangerous material to have on the street or in the hands of anyone outside the military, and, naturally, we're concerned."

Hal was still unclear on the purpose of their visit. "I'm not sure why you're here, beyond getting the information I just read for you. What do you want to do, exactly?"

Deutsch seized the opportunity. "What do you think? To get the stuff back, of course. And to find out what he was going to use it for. And stop him. Do you know anything about his political affiliations? Any involvement with the patriot movement, or anything like that?"

Hal was not going to be offended by this unpleasant person, but he was going to be careful.

"There are about 125 faculty members in my college, so I don't know each of them personally. Wilbanks teaches resources management, I believe, and does his research up in the high country in the spruce forest ecosystems near tree line. I really don't know anything about his personal life. I think I met

his wife, once, years ago, and since then I believe they've parted ways. If he has children, I expect they're grown and on their own by now."

"We're going to need his personnel records."

"I can arrange for you to look around in his office and lab, but getting into anything locked or into his personnel records will require a warrant. We had a case here on campus last winter that clarified all the privacy rules very nicely, so I have a clear idea of what I can and can't do. One thing I can get you now is a copy of his latest FAR." Hal turned back to his keyboard and began typing.

"FAR? And we'll get whatever warrants we have to. And if you're trying to cover anything up, we'll get one for you, too."

Deutsch seemed intent on cultivating his bad-cop image, but Hal was a professional at dealing with unpleasant personalities. Some of his faculty members made this guy look like Pollyanna.

"Faculty Activities Report. Each year, faculty members fill out a form that details all the stuff they've been doing, including teaching, research, and service. We decided a couple of years ago that these would be public documents. Lots of times, their listings under 'service' include community activities. Maybe that will help." Hal's printer began humming. "Have you thought of just calling him and talking about this?"

"Right. And tip him off so he could dump the stuff somewhere. Good thinking."

What a truly unpleasant person. But Hal was not going to rise to the bait. His experience with this sort of personality was simply too broad. And, besides, there could be a real problem here, especially if Wilbanks had some of the stuff on campus.

"Would you like to look around in his office now? I can get the campus police over there with a master key."

\* \* \*

It took only until mid-morning for Ty Bortle to reach the lake, where he found, to his relief, no other people. He'd stuck to the trail up to the diversion structure and then followed the creek through the woods. Whoever had made the fire last night was nowhere to be seen, although there were some signs of someone's presence recently just above the structure. Horse tracks, mostly, and evidence of someone walking along the ditch between the stream and the aqueduct. Must be people from the water board checking for obstructions, Bortle thought.

Richard Hardin was delighted when the guy whose name he couldn't remember continued up to the place that the professor was camped, because it meant that Richard would be able to keep track of both men. But then he continued on past, and Richard was disappointed. Meanwhile, he noticed that the professor had hurriedly packed up his campsite and looked to be ready to move on. But he didn't.

Instead, when the other guy was coming up the trail, the professor had moved his horses away from the creek, into the woods. So the other guy didn't see him. And now, the professor was climbing on that bridge that carried the water into the tunnel, where he had been looking around for the past couple of days. And he was fiddling with something, something from the bags that Brownie had been carrying. Richard would have to climb up there later on and see what it was. This was all very strange.

And now Richard would have to decide which of these guys to follow. It would depend on where the professor went next with Brownie. He knew that the other guy had gone on up to the lake, where the elk stayed all summer.

\* \* \*

Wilbanks' office was pretty typical, Hal thought. Cluttered, full of books, manuscripts, reprints. Bookshelves with class notes organized by course in loose-leaf binders. Several-year-old computer, turned off. File cabinets, unlocked. Desk piled up with stacks of paper, somewhat shuffled looking. Hal had found out that Wilbanks didn't have laboratory or other research space, because his research wasn't sponsored. He managed to publish several papers each year and had to apply to the college for funds to support the page charges.

"We'll have to look at all of this to see if there are any records of his shipments." McCauley looked somewhat dismayed and intimidated by the amount of paper.

Despite Deutsch's unpleasantness, Hal wanted to be helpful. "Chances are that a lot of the stuff on the desk is more or less chronological. Memos and so on that he just puts on top of a pile. I bet there's a department pile, a college pile, a university pile. You can stop looking at those when you get down to a certain date, sometime before your informant's information, I'd think. Look at this like an archeological dig, and don't go deeper than the time you're interested in. The department told me he'd planned an extended field trip, so he shouldn't be back here for a couple of weeks. You've got time. Although I'll be amazed if there are any records here of what you're interested in. I think you ought to get a warrant and look over his house."

"That's in progress, but we wanted to get started here. Looks like nothing's locked, so we have access to anything here, is that right?"

"That's my understanding. I'm sure he'd appreciate it if nothing was disturbed, however."

"Well, we really aren't ready for him to know we're doing this, so we'll be careful to leave things as we've found them. Although I can't imagine he'd notice if a tornado went through here, it's such a mess."

Hal chuckled. "You guys know your criminals, but I know faculty. He'd notice, for sure. I bet he could find any single piece of paper you asked for, if it's here. I'll be back in my office, if you need me."

\* \* \*

When he returned to his office, Hal noticed that Alice was hanging around in a mode that he'd learned to recognize as her signal that she wanted to talk. The trick was to pretend not to notice this, strike up a casual conversation, and see if she would open up. He chose the most obvious topic of the day.

"You know, it seems like we're having an unusual amount of police activity around campus lately. The investigation of Ralph's death last winter; that hand in the lilac bush last May, and now the ATF. Maybe I should just get deputized, or something."

"It certainly lends an air of excitement, and mystery, to our normally quiet existence, doesn't it, Dean Weathers? I hope that the federal agents were not investigating yet another death?"

"No, they just got a tip on one of the faculty members, something about explosives. It may have to do with an earth science research project, mining or something."

Like all faculty members, Hal was protective of his colleagues, even with Alice.

"Do you know if the ATF is involved with missing persons searches?"

"Ahh...well, the FBI gets involved if there is a kidnapping, I know that. Annette told me she used the threat of calling in the FBI to get me out of one of the situations that arose in connection with the investigation of Ralph's death, that car ride I told you about. I think that regular missing persons

searches are handled by the local authorities, at first at least. The ATF probably doesn't ever get involved. Why?"

"Well, it's probably nothing, really, but Leonard and I haven't heard from Francis since before last Thanksgiving, and we're wondering where he could be. He's been out of touch before, of course, but not for this long. We did notify the local police, but they have no information. I guess this isn't surprising."

Something was nagging at the edge of Hal's consciousness. "Um, when did you notify the police?"

"In February. Back in mid-November, he told us that he would be in Mexico for Thanksgiving and Christmas, and he called us from Cozumel on Thanksgiving. Which is why I told the police and you that he had an iron-clad alibi for the night of Professor Stiller's death, if you remember. But when we didn't hear from him again by February, we started asking questions. And we still haven't heard anything, and it is becoming more and more disturbing. I thought maybe the ATF agents would have some advice, perhaps."

"So on Thanksgiving, he called and said he was in Cozumel?"

"Yes, and we were surprised, because the connection was so clear. We'd thought that telephone calls from Mexico would be, you know, full of static, or something. He's never been out of touch for so long, and I'm getting worried. Probably just a mother's reaction to nothing."

Maybe, thought Hal. Maybe not. He made a mental note to mention this conversation to Annette.

To Alice he said, "I think that these guys are specialists in explosives, so they probably don't know much about missing persons."

Maybe that would get Alice's mind off the subject.

\* \* \*

The professor and Brownie didn't seem to be going anywhere, at least not just yet, and it was starting to get dark. Just as Richard was thinking about slipping down to the creek to catch a trout for dinner, he saw coming up the trail another guy, on foot. The guy he'd seen with that pretty girl last week. What was he doing here? And now how was Richard going to get his dinner? Maybe, by staying high on the hillside, he could skirt around both of these guys and go find the other guy up by the lake. He'd have food, a hot dinner, probably. What was his name, anyway?

While Bradford made camp near the spot where Bortle had camped last night, Wilbanks was preparing for a long night of tunnel work. He fed and watered the horses and tied them closely to a picket line so they wouldn't stray or get tangled, and put on his gear, including a backpack with the explosives and detonators. He turned on his miner's helmet light and walked off toward the tunnel.

The grate over the southwest portal of the Rock Creek diversion tunnel was made of welded steel reinforcing bars, the heavy kind used in highway construction. There were three pieces, two semi-circles with a rectangle for a door in between, each piece consisting of four-inch squares. Small animals could therefore get in and out of the tunnel, but bigger critters, including humans, were blocked. The door had crude hinges and was padlocked.

Wilbanks used his bolt cutters to break the lock off, opened the door, went inside and, after some thought, locked it behind him with his own padlock. He pocketed the key very carefully and securely. He turned and looked down the gentle slope of the tunnel, into the darkness. His light seemed quite feeble, and, despite the spiked, felt-soled boots, the bottom seemed slippery. It was going to be a long, long walk, about four miles altogether, crouched over, yet. He set his pedometer on zero and started off.

An hour and a half later, his back was aching and his pedometer read two miles. He was where he wanted to be, if not how he wanted to feel. He'd noticed that there were convenient hand-holds in the concrete of the tunnel about every ten feet or so, to keep people who slip from being washed clean through, he supposed. He used some line he'd brought to fasten himself to the wall with a carabiner, and went to work.

The plastique was easily shaped and gooey enough that he had no trouble sticking it to the ceiling of the tunnel. He found a seam in the concrete that made the adhesion even stronger, and, satisfied with his effort, he inserted the detonator cap and clipped the radio receiver to the carabiner on the hand-hold. Having checked everything twice, he held his breath and flipped the "on" switch on the receiver.

When nothing happened, he let his breath out in relief and packed up for the long slog back up the tunnel. He had a mile up the slippery slope to go before planting the remaining charge. After that, he would place the repeater near the mouth of the tunnel, near enough to pick up and relay the radio signal, but far enough in to be hard to see, let himself out and re-lock the door behind himself, and, blessedly, sleep. And rest his back. His aching back.

\* \* \*

## Twenty-One

The next morning, Ty Bortle was astonished to find another person asleep by the remains of his campfire. He was also more than a little chagrined to realize that someone had been able to sneak up on him after dark. Even the horses had not raised an alarm.

But then he understood. It was Richard Hardin, curled up in his dirty sleeping bag. Bortle knew Richard to be a master outdoorsman, despite being something of a half-wit, to Bortle's way of thinking. At least he was a friendly, non-threatening half-wit. Richard must have been a light sleeper, because as soon as Bortle stirred, he woke up and looked around. When he saw Bortle he gave a sort of half smile and said, "Hi, I'm hungry. What's your name? I forgot."

Bortle told him and also told him that they'd have to catch their breakfast. Why didn't Richard do that while he stirred up a fire? Richard bounded off toward the stream. Bortle realized that this meeting was actually in his favor, because Richard would be quite helpful in the elk hunt to come later in the day, not to mention in catching trout.

Down the Rock Creek valley, Wilbanks was sleeping late, and Bradford, farther down at the Vallecito Creek confluence, was getting his morning started slowly. He'd put in a long, hard day yesterday and was planning to take it easy today. He was sitting on an outcropping with his legs folded into a yoga posture, meditating to the rising sun, and still trying to get the image of the naked Jennifer out of his consciousness. Later, he'd make tea and decide whether to explore the side valley (he couldn't remember when he'd been up it before) or to go on up the main stem of Vallecito Creek.

Up near the diversion, Wilbanks finally woke up about 9:00. He reviewed the day's plan carefully and realized that he was, if anything, ahead of schedule. He had to finish packing his camp and load the horses, turn on the receivers on the detonators for the charges at the head gates and the aqueduct, and get the hell out of there. He should be nearing the ridge top just after noon, which would give him plenty of day left to get across to the next valley after setting off the explosions. He crawled out of his sleeping bag and spent some time trying to stretch out his back while the water boiled. Next time, he'd figure out a better way than slogging four miles through a five-foot tunnel.

\* \* \*

McCauley and Deutsch, the BATF agents, had returned for a second day of examining Wilbanks' office, having sent another search team to execute the warrants on his house. They had found nothing obvious the day before, but they wanted to look more closely at the various notebooks they'd found. The textbooks and the other paperwork, in the files and on the desk, were unremarkable, but the binders of class notes had been put together by Wilbanks based on his research for use in teaching, and they could contain information relevant to the search. If nothing else, they could help with the psychological profile that they were building of Wilbanks.

If Hal could have seen them working on Wilbanks' files, he would hardly have recognized them except for their appearance. The "good-cop/bad-cop" tactics were abandoned completely in favor of razor-sharp professionalism. They were both speed readers and, although they were not specialists in resource management by any means, their backgrounds were sufficiently broad that they had no problems with the undergraduate class notes that they were examining. So they were leafing through the notebooks with surprising speed and efficiency. Moreover, they had worked together enough to be tuned into each other's body language, so when Deutsch stopped reading and stared out the window, McCauley knew something was up, and asked what.

"Are you running into as much stuff about water control structures and dams and so on as I am? It made sense in one of these notebooks, ah, let's see...this one that says 'Water Resources Management,' but it's also spread all over these other ones I've been reading. Ones about plants and trees and such."

"Now that you mention it, I am. It's sort of been on the edge of my mind, you know? And one of these things goes into a lot of detail about one particular place. Let's see if I can find it here...yeah, here are drawings of some kind of aqueduct and tunnel, right in the middle of a discussion of how much sunlight and minerals stands of spruce need to grow optimally. Strange."

"Remember that file of newspaper clippings we found yesterday, for the Freestone River Alliance? That fits with this obsession with this control structure stuff. I wonder what they're finding at his house." They went back to their reading.

\* \* \*

Hidden among brush and rocks at the bottom of the wooded slope in which the elk herd had bedded down, Bortle was more and more impressed with Richard Hardin and with the elk hunting team the two of them made. Richard had circled widely around and above the patch of trees on the hillside and was slowly and carefully herding the elk down the hill toward Bortle. So far Richard had managed to do this in a remote-control version of the demonstration that Jack Hardin had used with Matador for the new guests: slowly, steadily, gently. The elk didn't panic or run off; nor did they make a stand and try to run Richard off—even though the larger bulls could have stomped Richard into mincemeat if they'd wanted to.

Before he'd disappeared into the uphill side of the woods, Bortle had watched Richard meander slowly down the hillside toward the herd, stopping frequently and seemingly paying little attention to the big animals. Then he'd move closer. The elk would become just uncomfortable enough to stand up and move a few yards down the hill, toward where Bortle was waiting, but not uncomfortable enough to be startled into bolting. After about two hours of slow and careful herding, Richard's tactics were about to pay off.

As the elk began to become visible at the downhill side of the patch of trees, Bortle began looking for just the right target. A yearling cow, with enough meat to make the exercise worthwhile but not too big and tough, would be perfect. And he needed a good shot as well, because neither he nor Richard wanted to chase after a wounded elk until it bled to death.

Just as he had spotted his target and lined up a very promising shot, the ground suddenly shook and there was the sound of thunder. No, not thunder, but something else, like an avalanche or something. The elk, used to thunder, would have ignored that interruption of their rest, but the shaking ground was something that they didn't like at all. The entire herd was off and running at once, up the valley toward the lake and the cirque. Bortle stood and tried to line up a shot, but knew that he'd just waste an arrow. Richard emerged from the trees at a run as well, but the elk were outpacing him easily. He finally walked up to Bortle, panting, and asked "What was that? Not thunder, I don't think. Don't see any clouds anyway."

Bortle didn't have a good answer. All he knew was that he was getting damned tired of eating trout.

If it sounded like thunder, weird thunder, at a distance, from closer up it was another matter. Even from his position across the valley up on the ridge top, it was impressive, and Wilbanks had trouble controlling the horses for a few minutes. He couldn't see the entrance to the tunnel—it was just around a shoulder of the ridge—but he could see the head gate and the aqueduct, and both disappeared in, first, an impressive flash, and, second, a cloud of dust and debris.

It made him feel like he was in that famous picture of the eruption of Mt. St. Helens in Oregon several years back. Even though he was at least a straight-line mile away, he could feel the strength of the blast as the shock waves hit him. He waited long enough for the dust to clear sufficiently that he could see that the head gate and the aqueduct were completely destroyed, and then he broke the horses into a trot over the ridge.

\* \* \*

From up close, it was tremendously impressive, although Bradford wasn't going to be telling anyone about it. He had decided to explore the little side valley that his weatherproof hiking map told him was Rock Creek, and he had become fascinated with the diversion structure. He had probably been here at some point previously, but he didn't remember the place at all. And SCARAB would be very interested in this man-made structure and its obviously detrimental effect on the local ecosystem and its biodiversity.

No telling how many species of darters or some other little fish might have been lost from the stream, and before the project it looked like this valley must have once supported a solid population of nearly extinct boreal toads, he could just feel it. As he examined the mouth of the tunnel and the grate protecting it, he was pondering how effective a protest would be. This was a pretty remote place, but that made it all the more attractive to speak of it as "pristine," or potentially so, if this concrete and steel monstrosity weren't here. Strange how new the padlock looked.

If he had had time to think about it, his bad luck with Jennifer of the week before would have seemed like winning the lottery compared to this week's bad luck. He was peering in the mouth of the tunnel when he noticed a little red light wink. Immediately, there was a brilliant flash of white light that filled the tunnel, nearly blinding him.

Because it would take the shock wave a few seconds to reach him, he could have dived to one side of the portal, if only he'd known what was about to happen, and quite possibly survived. But his vision was his immediate concern, so, when the shock wave reached him, he was standing outside the grate,

rubbing his eyes. The force of the explosion blasted loose the grate, and Bradford's life ended rather like that of a bumble-bee swatted by a badminton racket.

If Wilbanks had been in a position to observe what happened next, he would have been gratified to see this accidental, and highly inefficient, projectile fly several hundred yards across the valley before crashing onto a scree slope. The eagles would once again have available for their supper the extremely rare and tasty delicacy of dead *homo sapiens*, although this one was not dismembered with the surgical precision of the previous one. Not that they were picky.

They would, however, have to work for their supper, because the human encrusted grate was only the first projectile to be launched from the mouth of the tunnel. Wilbanks' plan had worked to perfection. The two initial explosions had produced shock waves going in both directions, and the grates at the two ends of the tunnel were blown off, one with Bradford's body attached.

The explosions also collapsed the tunnel locally at both spots where the charges had been planted. When the two shock waves propagating toward the center of the tunnel met and rebounded, the debris from the collapsed sections was blown out each end of the tunnel with nearly as much force as the initial explosions. The ditch just below the northeast portal wound up covered with rocks, dirt, and concrete, and the scree slope on which Bradford's body had come to rest was covered with another layer of loose rocks and other debris. But, as with the dead human of earlier in the spring, enough of Bradford's body was visible that the ravens, at least, would have something to peck at.

With the tunnel and aqueduct destroyed, none of the Rock Creek water would be flowing over toward the Rio Grande, as it had previously. But it would be some time before any of it would make it down to the Vallecito Creek, either, because the new pond created by the explosion at the head gate would take some time to fill. Eventually, however, fill it would, and water would once again flow down the little valley without man-made controls. If you didn't count the artificial pond, of course. The Freestone River Alliance's first courageous act of returning nature to nature had to be considered a resounding success. Although, if he had been able, Whitby Bradford might have registered a dissenting opinion.

\* \* \*

Lewis Wilbanks made it without incident over to the next valley, down to and below tree line, and once again began making careful measurements to continue his scientific cover. It took some time for his hands to stop shaking, but eventually the excitement dissipated.

What he didn't know was that both Bortle and Richard Hardin had seen him trotting away over the ridge just after the explosion, and, to make matters worse, that Richard's sharp eyes had spotted Brownie. He mentioned to Bortle that that must be the professor who rented horses from his brother Jack. They had no reason to connect Wilbanks to the weird thunder at that point, however, and they let the matter pass without further speculation.

But they were curious, and so they took Bortle's horses and rode down the valley, where they found the new pond, still filling, and the debris from the explosion. Richard was amazed that all of the structures that had been there only yesterday were now gone, and Bortle was impressed with whoever's firepower. Richard mentioned that he'd seen the professor climbing on the water bridge—Bortle knew what he meant at once—and the connection with Wilbanks was made.

As they looked around, the strategy for the explosion was more and more obvious: destroy the diversion structure as completely as possible. The ditch had already run dry, and, when the pond was filled, Rock Creek would no longer be diverted, nor would it be in the future without a prohibitive investment, economic and political, in new construction. There did not appear to be anything they could

do, so, after Richard collected several trout that were flopping around in the dry ditch, they rode back up to the camp by the lake to have trout for lunch. Bortle was so tired of fish that he was almost ready to try it raw, like Richard. Almost.

Bortle knew that it wouldn't be too long before the damage was discovered, and he did not want to be accused of it. So the best strategy would probably be to hang around until the sheriff, or whoever, arrived and to tell him about having seen Wilbanks. At least Richard could corroborate this. And that made it fortunate, except for the perspective of his stomach, that they had not got an elk.

With this strategy in mind, he decided to pack up and relocate down the valley to the site of the explosion, and pretend to be looking for victims when the sheriff arrived. His campfire ring here by the lake would provide testimony that he was indeed here last night. At least Richard was masterful when it came to catching fish. Sushi, huh. Well, maybe some vinegar and salt would help.

\* \* \*

## Twenty-Two

Annette and Hal had planned to visit the Ranch to discuss matters with Jack on Saturday, but it took them until Sunday to get organized for the trip, and then they decided to stay over Sunday night. Jack had a vacant cabin, so it was just too tempting not to. They were about half way there when there came a tweedling noise from the back of the car.

“Aw, rats. That sounds like mine.”

Annette had finally managed to persuade the department to get her a cellular phone, and she had discovered the truth of the axiom “be careful of what you wish for, because you may get it.” She unbuckled, turned around in her seat, and rummaged around for her day pack in the back.

“Trieri, investigations.”

She listened for quite a while and finally said “We're almost there anyway, so we'll meet them at the campground.”

Then she folded the phone up and stuck it back in her pack.

“That was the sheriff's office. Seems they've brought a body out of the mountains and have it up at the campground at the end of the road on Vallecito Creek. I guess they think there may be some connection with our mystery hand and so on, and I told them we would meet them there. Know where it is?”

“Sure. I park there all the time when I want to fish up in Vallecito Creek. Do they know who it is?”

“A backpacker who apparently got killed in an explosion at a irrigation structure way up at the top of the valley. They found some ID on the body, and it's a Whitby Bradford of Durango. There's some business cards for something called SCARAB in his wallet as well, with a university address.”

“SCARAB? Oh, yeah. I don't remember what it stands for, exactly, but it's some kind of environmental group on campus. Don't know this Bradford person, though.”

“They also found a nice little stash of marijuana on him, a personal smoking amount, they said.”

“What's this about an explosion?”

“Not precisely sure, but it sounded like someone, maybe Bradford, blew up a water diversion tunnel. If it was him, it would fit with his environmental group connection, I suppose.”

“Hmm. I don’t recall that SCARAB has a particularly militant reputation. Seems like they’re mostly concerned with animal rights, or something like that. On the other hand, I can just see a stoned guy screwing up with explosives and accidentally killing himself.”

Annette fumbled in her pack and pulled out several folded topographic maps. Because they had duplicate copies, Hal had volunteered his older ones to be folded and carried into the field, so they were well-equipped. She started following Vallecito Creek north from the reservoir.

After several maps, she found what she was looking for.

“Here it is. Rock Creek. Just on this side of the Continental Divide, way up there. Oh, great. The diversion is in San Juan County. Another jurisdictional problem. Well, let me call the sheriff in Silverton.”

\* \* \*

They had turned north onto the lake road, and by the time she was finished with the San Juan County sheriff’s office, they were almost to Vallecito.

“Well, it sure is good for my self-esteem that all these folks want me to take charge of their dead bodies.”

Hal reached over and patted her leg. “My sweetie, the famous collector of stiffs.”

“Yeah, well, at least we know the identity of this one. And I guess I can’t blame either the San Juan guys or the Hinsdale guys for deferring to us, because they really don’t have a way in to these locations from where they are, except by pack horse. Or helicopter, which they don’t have. So I guess we’ll be a little late for checking in at Jack’s place.” She pulled out her phone again.

When they arrived at the campground a few minutes later, they found two La Plata County deputy sheriffs and Lester St. Clare, waiting by an ambulance, with another scruffy-looking character standing by. St. Clare had taken charge.

“Hiya, Annette. Dean Weathers. Got a strange one this time. At least we’ve got an ID.” He walked over to a gurney and peeled back a blanket covering the body. “It’s pretty much of a mess, so brace yourself.”

Hal chose to stand discreetly back.

“Oh, Lord. What happened?” Even Annette was finding it hard to take.

“Well, Bortle there found the body, and he said it was stuck to a re-bar grate, probably the one that had covered the end of the tunnel that got blown up. At least it makes the cause of death easy to figure out. Bortle says he knows who set off the explosion, too.”

Annette walked over to where Bortle was standing, trying to look inconspicuous.

“Mr. Bortle? Don’t I remember you from the Los Piños Ranch?”

“Maybe. I do some guiding for them, sometimes.”

“I’m Lieutenant Annette Trieri, Durango police investigations. All the local sheriffs have asked me in to investigate this thing. Lester tells me you found the body and know something about what happened.”

“Well, I was up at the lake above the diversion tunnel, doing some fishing, when I heard the explosion. And I saw someone ride off over the ridge across the valley. Richard said it was some professor from the university who was packing with one of Jack Hardin’s horses.”

“Richard?”

“Richard Hardin, Jack’s brother. He was with me up there. Keeps a low profile, so you might not have met him if you were at the ranch. Anyway, we went down the valley to the tunnel and looked around for a couple of days and finally found Bradford, there.”

“You know him? Or knew him?”

“Uh, well, uh, not exactly. I checked his wallet for ID, you know?” Bortle was fervently wishing two things, that he really hadn’t known Bradford, especially under the circumstances that he had known him, and that he hadn’t swiped all the cash from Bradford’s wallet. At least he had left the dope alone.

“Where can I find Richard Hardin?”

Hal had overheard much of this conversation, so he interjected himself at this point. “Annette? Um, I need to tell you about Richard. He’s not likely to be too helpful, unless you approach him the right way. He’ll probably be back at the Ranch, or else up in the woods somewhere. The best thing would be to get together with Jack to talk with him. He’s had a head injury and isn’t as responsive to strangers as most folks, especially official ones like you. It’s a long story, but basically he’s an OK guy, just shy and, well, slow.”

“I’d like to get him to corroborate what Bortle here is saying, and it might be necessary to get him to testify in court eventually.”

“I doubt that court would work, although maybe something could be worked out. But I bet I know who this university person is. I had a visit from the ATF last week.”

Annette smiled. “What? You’ve been seeing other law enforcement people behind my back? I don’t know if I should be jealous or not.”

“They were asking about one of our faculty members, whom they suspect of having received a shipment of high explosives. And his specialty is high-altitude ecosystems. And he’s currently checked out into the field for research up in the San Juans. I can ask Jack if he rented horses at the Ranch, and that would tie it up, I’d think.”

Annette got enough information from Bortle to be able to find him again, and she and Hal climbed back into the car to continue on to the Ranch. Bortle had already unsaddled his horses and put them in the trailer, so he also headed down the road.

On his way back to his place in Vallecito, Bortle found himself finally able to relax and actually think about the implications of all this. From the time that he and Richard had heard the explosion, he was quite concerned that he’d be a suspect, and then when they’d found Bradford’s body, his concern became a real worry. He had decided, rightly, that he would be less of a suspect if he packed the body out and called the sheriff’s office himself, then when the deputies had insisted that he stay around for questions by the Durango detective, his worry mounted. But the lady detective seemed to believe him, and it was pure luck that she had shown up with that guy from the university who knew Richard and who seemed to know who the guy on the horses was. So maybe he was off the hook.

But then he remembered the conversation with Bradford last fall at the Horse Gulch Saloon. He’d been drunk, but not drunk enough to forget what Bradford had been worried about. And now he was the only one left who knew about last Thanksgiving’s little adventure. Except Sal, of course. Could Sal have engineered Bradford’s death, somehow? Or was it another accident, like Mike and Freddy? And was

that an accident, after all? Bortle decided that the best way to stay healthy would be to remain on the best possible terms with Sal Kelly. At least he didn't owe Sal any money.

On their way around the lake to the Ranch, Hal and Annette were discussing Richard Hardin.

"It's kind of a sensitive area, because Jack is trying to run a hospitable place for his guests and to deal with a problem family member at the same time. Basically, he keeps Richard out of public view, just to prevent having to deal with potential problems. Richard's got more curiosity than good sense. Jack told me that the last time they had Richard tested, he came in at the intellectual level of about a seven-year old. I've been around the Ranch enough that I've come to know him, and I think he thinks of me as a kind of father figure. I gave him a four-piece pack rod a couple of years ago, and he carries it with him everywhere. He's a remarkable outdoorsman but kind of a social misfit. Not that he's dangerous, or anything, but he's just not presentable in public. So Jack tries his best but it's a strange situation."

"Do you think we'll be able to get him to talk to me about what he saw up at Rock Creek?"

"If Jack and I both introduce you to him and lead into the issue without being too demanding, he just might. I think the trick will be to appeal to his curiosity. We'll just have to see."

\* \* \*

When they arrived at the Ranch, they checked in and immediately arranged to meet with Jack and Richard after supper. Jack mentioned that Richard was a little upset that one of his favorite horses was not back from a pack trip, but maybe they could use that as a starting point for a discussion. After dinner they all went out to the horse barn to find him.

"Richard, Hal Weathers is here to see you, with a new friend." Richard's head appeared in the door to the loft, and he turned around to climb down.

"Richard, this is my friend Annette. How's that fly rod I gave you holding up, anyway?"

Annette felt slightly uncomfortable under Richard's appraising gaze, but he didn't seem predatory, just curious, as Hal had mentioned. "I use it all the time. It keeps me fed up in the mountains, so it works, I guess. I love it. Hi Annette. I think I saw you here a couple of weeks ago."

She smiled as friendly a smile as she could manage, given that she now knew she had been under secret scrutiny during her visit. "I'm sorry I didn't meet you then, Richard. I hear that you're the horses' best friend around here. I had a great time riding Blackjack during my week here. He's a magnificent horse, isn't he?"

"He's my favorite, after Brownie. Brownie hasn't come back yet. You ride a lot better than most of the people that come here, I saw."

Annette saw Jack, who was standing slightly behind Richard, nodding encouragingly, so she decided to keep the conversation on track. "Brownie. I guess I don't remember him. Where is he, anyway?"

"That professor who comes up here to measure stuff in the high mountains took him out on a pack trip last week and hasn't come back yet. I saw them a few days ago way up at Rock Creek, when I was with Ty Bortle."

"Oh, yeah, Ty Bortle. We were just talking with him this afternoon. He had come out on his horses with an accident victim. He mentioned that you were with him. What happened, anyway?"

“We were up there elk hunting when there was this big rumbling noise, like thunder only not thunder, and it scared the elk. So we went to look and found that somebody blew up the water tunnel up there. And a couple of days later we found a body. A guy who had been killed by the explosion, it looked like.”

“Did Ty do anything when you found the body?”

“Yeah, he said ‘Hello Bradford,’ and then he took his wallet and took the money out of it. I asked him if he knew the guy and he said not really. Then he decided that we should pack the body out and call the sheriff. So we did. It was hard to get the body loose from the rocks and that metal thing it was stuck to. Messy.”

“I’ll bet. I saw it a little while ago. You and Ty did a real good thing by bringing the body down out of the mountains. But you said you saw Brownie?”

“Yeah, just after the rumbling noise, the explosion. That professor was going with him and Streak, who he was riding, Brownie was the pack horse, south, up over the ridge toward Roell Creek. At least it looked like the professor knew how to load a pack, so Brownie was doing OK.”

“Gee, you must have good eyes to see that.”

“Um, well, I was checking up on them before that, so that’s when I saw about the pack loads.”

“So Hal says you’re a first-class outdoorsman. You must know your way around up there, huh?”

“Aww, well, I just spend a lot of time up there and I’ve learned a lot. How to catch fish anywhere and how to find deer and elk when I want to. How to track. Stuff like that. It’s easy. I could show you how to do it.”

Annette grinned. “Well, I sure wish you had been around when I found those bones last week. Did you hear about that?”

“Oh, yeah, I did. A skull and everything, up by where Tuckerville used to be. I didn’t know they were there, but I don’t go up there a lot. That’s pretty strange. I find deer and elk bones all the time, but not people bones.”

“You know, I just learned to fly-fish when I was up here last week, and I’m still learning. But one thing I’m trying to figure out is what other people think about it. Maybe you can tell me something. It seems like there are two ways to do it, with dry flies on the surface or with streamers, nymphs, and other underwater flies. Which do you like?”

Richard’s face lit up beneath the beard. “Dry flies are a lot more fun, because you get to see the fish eat it. But if you’re hungry, nymphs work a lot better. They’re also easier to make. So I like both.”

Annette grinned again and decided she’d be able to talk with Richard as needed in the future. “Thanks, Richard. Maybe we can talk again some time. See you later.”

They walked back to the lodge, and Hal and Jack both expressed their admiration for her handling of a potentially touchy situation.

“Well,” she said, “I think it was good for you guys to introduce me, and you noticed, I’m sure, that there was no talk of police, or anything like that. But it’s interesting that Richard saw Bortle raid Bradford’s wallet.”

“Bortle lives kind of on the edge sometimes, with cash flow problems, so the cash was probably just too tempting. But it sounds like Bortle knew Bradford.” Jack had been listening carefully.

“Yeah,” Hal had noticed it, too. “But I heard Bortle deny knowing who Bradford was until he looked in the wallet.”

“Um-hmm. Me, too. I think there’s more to the business with Ty Bortle than he’s admitting to. But it looks like he’s not responsible for the explosion or Bradford’s death. And I don’t think that ‘attempted poaching’ is enough to get a warrant for an arrest.”

Jack had noticed that admission from Richard, too. “Um, Annette, one thing you should realize is that lots of folks who live up here year-round take the occasional critter, a deer or an elk, out of season for food. Nobody thinks of it as that big a deal, because it’s always for food, very business-like. Not the sporting approach to hunting at all. And, believe me, there are plenty of deer and elk about for this not to have an impact. Of course, if Bortle or anyone else does it routinely or with clients or anything like that, they’ll get turned in by people like me.”

“I didn’t figure on doing anything about it, Jack. There’s something that’s more interesting, though. Why do you suppose Bortle left Bradford’s stash alone? He strikes me as the type of person who would enjoy a good high...”

Jack snorted, interrupting her. “He certainly likes a good alcohol high, I can tell you that!”

“Right. So why didn’t he take Bradford’s pot? You wouldn’t suppose he’s got plenty of his own?”

“Well, you know, I’ve been wondering where my summer staff people get theirs. I always figured that they drove down to the university—no offense, Hal. Maybe we should check in to this.”

\* \* \*

Later, Hal and Annette had a chance to review the day’s events in their cabin. The deductions about Bortle were especially interesting, because of the potential for a drug connection.

“At least those ATF guys that were looking for Wilbanks’ explosives cache will be finally satisfied. I expect that they will want him arrested on federal charges when he finally brings the horses in. And it sounds like he’s responsible for that other guy’s death, Bradford.”

“That should be easy enough, unless he decides to disappear into the wilderness forever.”

“No chance of that. It’s big and empty up there, but not that big and empty. Hell, we could send Richard after him. Richard wants his horse back. Oh. Shit. I forgot to tell you.”

“Huh?”

“Well, the day the ATF guys showed up last week, Alice wanted to know if they dealt with missing persons. Seems her son Francis hasn’t been heard from, by her at least, since about Thanksgiving, when he called home, supposedly from Mexico, um, Cozumel, I think. They filed a missing persons report in February, but nothing’s turned up.”

“You’re not suggesting a connection to our arm and bones, are you?”

“Well, Thanksgiving is the right timing, and he wouldn’t have turned up in your database search because he wasn’t reported missing then. And you were suspicious of him back last winter during the Stiller investigation.”

“But he had an alibi.”

“Yeah, he called Alice from Mexico. But it could have been from across town. Alice is a gem, but she’s also his mother and unlikely to be completely objective.”

“OK. It should be easy to find her report and do the first-layer comparison with the characteristics that Lester gave us. But what does that have to do with Wilbanks and Bortle?”

“I was just reminded of it by thinking about the ATF guys, Mutt and Jeff.” He grinned. “Besides, to a layman like me, all murders look alike, so I get confused easily.”

“Right. Well, I guess I ought to call the ATF guys tomorrow. If they were looking for explosives in connection with Wilbanks, they’re going to have to take a long ride on a horse to find traces.”

“What do you bet they get a helicopter?”

\* \* \*

## Twenty-Three

The nightmare had happened so many times that it was becoming familiar and predictable. Bortle almost knew when he would wake up, trembling and drenched in sweat.

They were holding Frank down but he was screaming and wiggling uncontrollably. Sal finally whacked Frank on the jaw just in front of the ear with the pistol and knocked him out. But Frank’s arm jerked, and Big Mike accidentally chopped right through the middle of Frank’s forearm instead of his wrist. Bortle, who was holding Frank’s left leg, always woke up when Frank’s blood squirted out and splashed everyone. Except this time, he didn’t wake up, and Mike had picked up the severed forearm by the hand and, for some reason, was banging on the hood of the snow-cat with it. At least everything else was normal. Stogle and Freddie were staring at the procedure in fascination, and Bradford was puking in the bushes.

But why didn’t the banging stop when he woke up? Oh. It was somebody pounding on the metal garage door. Bortle looked at the clock: 10:15 am. Well, at least he wasn’t too hung over. “Hang on, there! I just woke up. Who is it?”

“Tyrus Bortle? This is the La Plata county sheriff, and we have a warrant to search the premises. Open immediately or we’ll break the door in!” Bortle was too asleep to understand anything else except that somebody was using his full name, which *never* happened, and threatening the imminent destruction of his door, so he stumbled over and opened it before remembering the horrible implications of a search of the place.

It took only about 20 minutes for the search team to find where Bortle hid his merchandise. There was no way that he could reasonably claim it to be a personal stash either: a dozen half-ounce bags of marijuana buds and another dozen small clear envelopes of white powder. He knew he was a dead duck. Well, maybe he could cop a plea. He talked the sheriff into his one phone call before leaving, and made arrangements with Jack to have his horses taken care of. He’d be using a public defender, anyway, so he wouldn’t need to call a lawyer.

\* \* \*

Annette thought of Monday as a productive day of setting things up and Tuesday as the payoff day. Actually, it had started Sunday night, with her conversation with Hal and another one between Jack and his chef, Henri. Henri, it seemed, was plugged in to just about everything that went on at the Ranch, at least in the vicinity of his kitchen, and he knew who was selling pot to the help. He even indulged occasionally himself, and appreciated the high quality. Too bad to wipe out a source of good smoke, but there it was.

Monday morning, Jack had introduced Henri to Annette, and she quickly had what she needed to get a warrant for Bortle's place. Then, after a couple of hours of tempting the trout with a variety of dry flies, she and Hal headed back to town, and she promptly had Alice Swan's missing persons report sent over to Lester for comparison with the remains.

The payoff was that Ty Bortle was now in the county jail, eagerly, she was sure, anticipating a conversation with her, and that Lester had made a first-order match between the mystery arm and bones with Francis Swan. She was now going to have to talk with Alice and see if she could get dental records. Or better yet, his military record, for a fingerprint match. She could get that without talking to Alice, so she could be sure. The talk with Alice was going to be the hard part. She decided to tackle Bortle first.

On her way over to the county jail, she marveled at how she had become involved in all this. She had heard that, before her arrival in Durango, the city police and the county sheriff's office were hardly speaking to each other, and that law enforcement in neighboring counties actually ridiculed the Durango police force. She had spent considerable time and energy mending fences with the La Plata sheriff's office, and they had come to respect her enough to turn important cases over to her at the slightest excuse, and the other counties soon followed suit. The Bradford murder, with both Bortle's and Richard's testimony, seemed pretty straightforward, so it was hard to see why they wouldn't handle that themselves to be able to take credit. But it was clear that they thought of her, as did the San Juan and Hinsdale sheriffs' offices, as the lead investigator of the region. So she was just going to have to try to live up to the reputation.

When she arrived at the jail, she found that Bortle had exercised his constitutionally guaranteed prerogatives and talked with a public defender, Mimi Olive. She had contacted, at Bortle's request, none other than Arthur Stepwood, Esq., who had agreed to take on Bortle's case pro bono. Arrgh!

To Annette, this made it obvious that Bortle was selling Sal Kelly's drugs, but proving that would be another matter altogether. Normally, she could try to persuade Bortle to cooperate and implicate Sal, but Stepwood would undoubtedly not allow this. Kelly would be paying the bills, after all. Could she get a judge to declare Stepwood ineligible for the pro bono work on the basis of a probable conflict of interest? Hmm. Meanwhile, Stepwood was not here and she ought to talk with Bortle even if the public defender was to be present.

She and Mimi made their way into the interview room, where Bortle was waiting with a deputy.

"Mr. Bortle. Sorry to see you under these circumstances. Before we begin, I'd like to thank you once again for bringing the body out of the wilderness area, and I want to let you know that we have corroborated your story about the explosion and the person you saw riding off. You're here for a completely different reason, because we have information that you were selling small amounts of contraband to certain people. We used that information to obtain a search warrant, and, well, you know what we found. Is all this clear?"

Mimi Olive spoke up. "Ty, if you don't understand something, speak up. But don't volunteer any information, OK?"

"I understand everything, but you won't be getting Richard to testify against me, I promise."

Mimi gasped, but before she could say anything, Annette jumped in "Now, Mr. Bortle, I'm sure that you know that witness tampering is a very serious thing..."

Mimi interrupted "Ty, don't say anything more, please."

But Bortle didn't seem concerned. "I'm not going to tamper with anything. I just know, and you should, too, if you talked to Richard, that he'd never be a credible witness in court."

“Oh. Well, you’re probably right, but I’m not thinking of using his testimony anyway. It corroborates your story, and we won’t be needing that in court. Now, it seems to me that you have an opportunity here to make things easy on yourself. I’m not empowered to make deals, but I’d like to tell you what I plan to do. I’m going to talk with the DA’s office about a plea bargain in return for your cooperation.”

“Ms. Trieri, I am here only to monitor this conversation. As you know, Mr. Bortle will be represented by Arthur Stepwood. Any discussions of a possible plea bargain will need to wait until he arrives.”

“I know. I just wanted to let Mr. Bortle here know what to expect. Can we talk outside for a moment?”

Annette appreciated that the public defender’s office was dedicated to providing the best possible representation to the indigent, but that they also knew when their cases were weak. And Bortle’s case was absolutely hopeless. The advantage here was that Mimi was genuinely interested in doing the best possible thing for Bortle, whereas Stepwood would not be. Mimi, Annette decided, should know this, so she filled her in on Stepwood’s possible conflict of interest.

Mimi reacted as Annette had hoped, but she still had limited options because of Bortle’s request to talk with Stepwood. Because Stepwood had agreed to take the case at no cost, the request had to be honored. Yet Mimi, having been assigned to Bortle’s case, had already seen the wisdom of a plea bargain as a way to minimize Bortle’s legal exposure. So she and Annette agreed to work together in Bortle’s interest, despite their inherently adversarial relationship.

Back in her car, Annette called Hal’s office to pass along the information from the coroner’s office and to discuss strategy. She bypassed Alice by using Hal’s direct number.

“Weathers, natural sciences.”

“I think it’s so cute that you answer your phone that way.”

“Hi, lover. I learned from an expert, you know.”

“I found out something about our remains from Lester. It matches the information that Alice provided in her missing persons report.”

“Ah, shit. Is this a firm match?”

“Not yet. I remembered that he was in the service, so I’m going to get fingerprints from his record to compare with the left hand. If they match, that’ll be firm. It’s not time to tell Alice yet, but I thought we ought to talk strategy.”

“You mean if there is a firm match? Hmm. I know. You tell her.”

“Thanks a lot. I hope you’re joking, buddy.”

“Yeah, of course. But you do have to be in on it, you know. She needs your authority if she’s going to believe it.”

“Well, that’s probably true. I have to say that my reaction was exactly the same as yours. ‘You tell her.’ Damn. So we get together and do it jointly. And of course we need her husband in on it. What’s his name?”

“Leonard. I don’t know him all that well, but it would probably be best. Where should we do this?”

“Not your office, or the station. Their home, I guess. How do we invite ourselves over there?”

“Yeah. They’ll think we want to talk about getting married, or something. Say. Maybe they go to church somewhere and we could enlist their minister, or whatever.”

“Good idea. Any idea of how to find that out?”

“Hey, you’re the detective here. But I have access to her performance evaluations, and maybe she’s got something in there about church committee work, or something. I’ll look it up, OK?”

“OK. And remember, it’s not firm yet, so don’t let anything slip. You don’t want her thinking the worst and have it not true, right?”

“You bet. Want to have lunch?”

“Too busy. I’ll bring home dinner, though. Ciao.”

\* \* \*

She was headed back downtown toward her office, to make the calls to get Francis Swan’s fingerprints from his service records, when her phone tweedled.

“Trieri, investigations.”

“This is Agent Will McCauley, ATF. Your office put us onto the possible location of a Lewis Wilbanks. We’d been looking for him in connection with some explosive devices.”

“Oh, yes. Find him?”

“I thought you’d like to know that he’s in custody. He finally came out of the mountains and we apprehended him when he returned his rental horses.”

“Any trouble?”

“Well, it depends on what you mean by ‘trouble.’ We did have a bit of excitement. We happened to be there when he rode in, and I made the mistake of announcing myself to him before he dismounted. So he dropped the reins of his pack horse and tried to bolt. But the horse he was riding must have really, really wanted to go back in the barn, or something, so he didn’t get a very fast start. And then this young guy, somebody said his name was Richard, dashed out of nowhere and tackled Wilbanks out of his saddle, and started yelling at him about never, never whipping his horses. It was a good thing we were right there to rescue Wilbanks, or he’d have been in for a real beating, looked like. Anyway, we got him.”

“You know about our possible manslaughter charge?”

“I heard something about it. What’s the status?”

“The DA’s office is thinking murder two, because it was probably accidental that the dead guy was there. But they’re probably going to charge him. If you take him to the county jail, they’ll process him in.”

“That’s where we’re headed. And we’re going to fly up to the site of the explosion and take some samples, to see if we can get a chemical match.”

“You mean you’re not going up on horseback? Aww. That means that I lose a bet.”

“Better you lose a bet than I have to sit on a horse for two days. Talk to you later, Lieutenant.”

\* \* \*

She was just pulling into the police department parking lot downtown when her telephone once again demanded her attention. Now I know why Hal dislikes his so much, she thought.

“Trieri, investigations.”

“Lieutenant Trieri, this is Mimi Olive. I’m still down at the jail. Arthur finally got here, Arthur Stepwood. And he’s announced plans to make bail for Mr. Bortle. Kind of strange for a pro bono case, don’t you think?”

“Normally, but I’m sure it’s not his money. Remember what I told you about his other client? What was his reasoning? And when is this likely to happen?”

“He made an impassioned little speech about how he knew and trusted Mr. Bortle because of their friendship developed during hunting trips together and how he couldn’t bear to see an individual who is used to the open vistas of the outdoors locked up, blah, blah, blah. There’s a bail hearing scheduled for tomorrow, with Judge Sandose.”

“I’ll call the DA and fill him on what I can, but I’m sure that Stepwood will come up with whatever bail is set. If Kelly wants Bortle out, he’ll get him out.”

“The strange thing is, I’m not sure that Bortle wants out. He didn’t object, exactly, but he didn’t look too happy either.”

“I’ll bet he’s nervous about fatal accidents. They can happen to anyone, you know.”

“Huh?”

“Mimi, I don’t know if you’ve ever been involved in something that Sal Kelly has his fingers into, but he’s probably not the kind of client you usually have assigned. I’m certain that he would arrange for something to happen to Bortle if he thought Bortle posed a danger to himself. I know that we have vastly different points of view about human nature, but trust me on this one. So it wouldn’t surprise me if Bortle would rather stay in custody, especially if he’s already thought about cooperating with us.”

“Well, if his bail is paid, out he goes.”

“Let me know, OK? I’d like to be able to keep an eye on him.”

\* \* \*

That evening, Annette took home Atlantic salmon steaks, available in Durango thanks to the wonders of modern delivery services. Expensive, but worth it, the way that Hal cooked them. He had pruned the several apple trees in the yard the previous spring and rented a small chipper to deal with the branches. The apple wood chips, soaked and laid on the coals in the grill, produced restaurant-quality grilled smoked salmon.

“How’s Alice?” They were sitting on the deck while the fish cooked.

“Seems normal. She’s not one to express her emotions too much, and I don’t think she has any idea that we’re on to something related to Francis. I did manage to find out that she and Leonard attend the First Presbyterian Church and that she’s active on a couple of committees. I called the pastor, Donald Terwilliger, and discussed this all with him. He’s more than willing to get together with us to talk with Alice and Leonard, if the match checks out. And he thinks the best approach would be to just show up at their house some evening, uninvited. That way, they wouldn’t worry in advance.”

“Did you ask him about how much we should be ready to tell them? We don’t know what actually happened, just the result.”

“Well, he asked what happened, assuming that the remains were Francis’, and so on, and all I could tell him was those results, and he still had questions. So I expect that the Swans will, too. So the more we know, the better. But I expect that we should tell them sooner rather than later, even if we don’t know everything. The pastor thought so, too. I’m afraid that we may have trouble dodging the issue of the dismemberment, unless we flat out lie.”

“Especially because we’re going to have to mention the relatively intact arm that we have for fingerprints. The rest of the remains are in completely different condition, so they’ll want to know how that happened, and so on. This is going to be a real bitch of a conversation, I can tell. Too bad we can’t just say that we found the remains and it looks like a hunting accident, or something easy.”

“Alice is no dummy, and Leonard probably isn’t, either, so I imagine that the truth will be the best, even if it is tough. I wonder if they’ll insist on seeing the remains.”

“Oh, no. We’ve got to try to avoid that. Maybe we can get the pastor to help dissuade them. Did you tell him about the condition of what we found up in the mountains?”

“Yes, and I imagine that he’ll be a help. You’re right. This is going to be a real bitch. Ugh. Well, anyway, what other things are happening?”

She told him about Bortle’s arrest for dope dealing and the jeopardy he could be in if his bail were paid.

“So you think there’s some connection between him and my old friend Sal? Does that imply a connection to Ralph’s murder last winter?”

“I’ve been wondering about that, and I’m not sure. I’m told that the search team found some white powder at Bortle’s place, and that could be coke or some of that other stuff, so that could be a connection. But I bet that Bortle is just one of several people that deal for Sal. We’ve known that there are several dealers in the area, just not who. At least that’s one thing about Francis that we don’t have to talk to the Swans about. We suspected him, but that’s not worth talking about. Unless Sal had him killed. Oh, geez. I never thought of that before.”

“Well, that’s just speculation, and we don’t need to repeat it to them. Maybe the sooner we talk with them, the better. If we don’t know what really happened, we won’t be able to tell them the grim details. The dismemberment will be bad enough.”

“Yep. And another thing happened today. Your Professor Wilbanks showed up back at Jack’s place to return his horses. At least Richard will be happy to have Brownie back. The ATF guys nabbed him, and we’ll probably hit him with a manslaughter charge.”

“Helluva way to implement faculty cuts. Two dead chemistry professors and a natural resources professor out on a felony charge. Wonder what else is going to happen?”

“Well, I’m sorry about your dead professors, but I’m not sorry about having met you in the bargain. How’s the salmon coming?”

\* \* \*

It all came together late the next afternoon, if not the way that Annette would have expected. On top of everything else, Bortle's surprising and cathartic confession left her drained and ready for a stiff drink or two. Or three. Compared to all this, maybe the talk with the Swans wouldn't be so tough, after all.

Fortunately, Hal was already home and puttering around in the kitchen, cutting up stuff to cook with shrimp for a pasta topping, it looked like.

"Hi, gorgeous. You look wrung out. Tough day?"

"Wait'll you hear. I want to work out and take a hot shower, then I'll have a glass of wine and tell you all about it. At least we seem to have closure on this whole matter of Stiller, Harmon, Bradford, Bortle, and Sal and his bunch."

"Holy smoke. Sounds like a Big Wine kind of day. I'll open a cabernet for you so it can breathe. Hmm. That means I'll have to spice up this shrimp to stand up to the wine..."

Later, she launched in to the tale. "Probably the most satisfying thing all day was when I overheard Sal Kelly tell Arthur Stepwood, Esq., the little twerp, to quote go fuck yourself end quote. The look on Arthur's face was priceless. That was when Sal kicked Arthur out of the limo down on 160 by the mall. I was following them and had the window open, so I heard it all." She laughed and took a large drink of her wine.

"Um, I presume that you'll back up and fill me in on what happened before that?"

"You mean I can't just tell all this in random order? You're no fun at all. Well, let's see. Where to start? Bortle's bail hearing was first thing this morning, and Mimi Olive, the public defender assigned to Bortle, called me when she found out the time. When I got there, Stepwood had just posted the \$100,000 that Judge Sandose set, to everyone's surprise, and he and Bortle were ready to walk. They got into Sal's limo out in the parking lot, and drove off, so I followed. A mile down the road, they stopped and Stepwood exited the limo rather abruptly, and, it appeared, involuntarily. I didn't see Sal, but I did hear his voice."

"So now Bortle and Sal were alone in the limo? Except for the driver, of course. Looks like your suspicions were right on."

"Yep. But now the question was, where would they go and would there be some kind of attempted 'accident.' Sal seems to have a quick trigger. It didn't take much provocation for him to arrange to have the bomb planted in your car, remember?"

"We know that it was Sal behind that?"

"No proof, but it's pretty obvious. Anyway, after they dumped Stepwood out, they did a U-turn and headed back toward Bayfield, so I kept after them. I wasn't trying to be inconspicuous, and Sal's driver probably had me pegged from the start. But at Bayfield, they turned north, and I got on the phone to the sheriff's office to see if anyone was up that way. It seemed likely that Sal was going to take Bortle back to Vallecito. I couldn't imagine that Sal would arrange for an 'accident' that would happen when he was around. He'd want a good alibi, and all. So I got a deputy sheriff to stake out Bortle's place and backed off. Sure enough, Sal let Bortle out at his place, and I got the deputy to stall Bortle long enough for me to get there. On my way up there, Sal's limo passed me, going dangerously fast back down the hill at about the dam.

"When I got to Bortle's place, he was pretty mad, but then I told him that I was worried about bombs and related the story of your car. He got calmed down some at that. Then we figured out how to get into his place without using the obvious doors or windows, just in case something was wired. Seems Bortle has a 'secret' entrance that he uses when he forgets his keys, behind a metal cabinet around the

back. So we got in, and, lo and behold, the main door was indeed wired. Bortle would have been hamburger if I hadn't called the deputy and had him stall for time. So now I had a new friend."

"Sal has this penchant for blowing things up, doesn't he? You'd think he would be more creative."

"Oh, he is. Just wait. We decided that the phone was OK to use, and I called down to the sheriff's office to get Sal picked up, even though things were pretty circumstantial. But I was figuring that Bortle would give me some solid evidence I could use to hold Sal, and I also figured that Stepwood might be a little slow to get Sal out of jail, given his recent treatment. Turns out I was right on both counts, but I didn't know how right about the evidence. After I got off the phone, the first thing that Bortle said was 'What can I tell you about Kelly to get myself out of the jam I'm in?' So I made it clear that I only wanted the truth, and then we had a nice conversation, which I got on tape, about how Bortle, as well as Bradford and Francis Swan, whom these guys knew as Frank, had been Sal's street dealers. Bradford had the campus, Frank had the rest of the town, including the other schools, and Bortle had the summer tourist areas, like around the lake and so on. Both Bortle and Bradford bought from Frank, it seems. He also talked about Sal's dealers down in Farmington and over in Cortez. Then I made some comment about how Bradford and Frank were dead, and Bortle got the shakes, literally. I assumed that it was because of his experience with Bradford's body, but I was wrong."

"Surely Bradford's death was accidental, unless Wilbanks is mixed up with Sal somehow?"

"Yep, and Bortle also thinks so. But what he got the shakes about was Frank. Seems he was there. And he told me all about it, thank you very much. Christ." She took another long drink of her wine.

"After he told me about it, he said that maybe now his nightmares would stop, since he'd talked about it. To make a long and very gory story short, Sal decided to make an example of Frank. It seems that Frank was pulling some fast ones by stepping on Sal's coke without telling Sal before it got sold on the street and by marking up the stuff when he moved it between Sal and the other two. On the pretext of a hunting trip, Sal took his local guys, including Bortle and Bradford, up to Tuckerville in a snow cat last November, up the jeep road. When they got there, he made a little speech about loyalty and so on and how one of them, Frank, had been disloyal, and Frank was going to have to pay for his disloyalty. So Bortle got to hold a leg while Big Mike—remember Big Mike, he of the cutlery skills?—got poised to chop off Frank's left hand. Frank yelled and struggled so much that Sal finally cold-cocked him, but he did it just as Big Mike was chopping and the arm jerked, so he hit it in mid forearm instead of at the wrist. Apparently, they couldn't get the bleeding stopped and Frank bled to death while unconscious, so Mike dismembered him and they sort of scattered the pieces about. All this was up where we found the remains." She took yet another big gulp of wine.

"Anyway, Bortle's agreed to testify to all this, and we've got Sal locked up on murder one and a variety of drug charges. Even though it's going to be Bortle's word against Sal's, I think that the bomb in Bortle's place will sway a jury toward him. Especially as Bortle was selling dope only to the summer folks, not school children and so on."

"So Sal's in jail and everything's pretty sewn up?"

"Pretty much. Stepwood is going to be investigated for not reporting the conflict of interest when he volunteered to represent Bortle pro bono, so he won't be representing Sal this time."

"What about Wilbanks?"

"He's not mixed up in the drug stuff, as far as I can tell, but he's up to his ears with the federal explosives charge. And no doubt the water providers will want civil damages. And then there's the manslaughter charge. I think you may need to find someone else to teach his courses this fall."

By now, she had had enough wine that she was relaxing, especially because she was past the worst part of her narrative.

“Bortle seemed to feel a lot better after telling me all about it, and I feel better telling you. Uh, sorry.”

“No sweat. I’m a dean, remember? Internecine warfare among the faculty on campus can make this look pretty tame. You haven’t seen anything until you’ve seen an angry professor verbally dismember an administrator. Anyway, I’m glad it’s over. We still have to talk with Alice and Leonard, but we can skip the details. They’ll find out about what happened at Sal’s trial, but by then they’ll be used to the idea that Frank’s dead. I think we should talk with them as soon as possible. Then we deserve a real vacation. Somewhere that they can’t find you, like they did this time. You think you would like to try fishing in Montana? I’ve still got time before the semester starts.”

She smiled. “How about skiing in New Zealand instead? If you think you can keep up with me, that is...”

# Classical Villainy: A Four Corners Mystery

## Prologue

Forty years after the controversial death of the minor religious figure known as Jesus of Nazareth, turmoil ruled the dusty Roman colony on the eastern shore of the great sea now known as the Mediterranean. Rumors concerning so-called miracles and reports of strange events after his death simply would not go away, and it was enough to drive Roman officialdom to distraction. Not lions, not gladiators were enough to quell the fervor of the individuals who called themselves “Christians.” At least the lions and gladiators provided the masses some entertainment—although not nearly enough to compensate for the nuisance that these new religious fanatics were making of themselves.

But on the other side of the world, in the southwestern part of a continent unknown to the Romans, a semi-nomadic basket-making culture was comfortably unaware of all this turmoil. Even if someone had told them Jesus’ message of love and faith, they were too busy surviving to pay much attention. Yet, amid the daily tasks of gathering seeds and roots, and hunting game, there was room for ceremony, especially for revered elders whose time on Earth had ended.

When the elderly shaman of one band of Basketmakers breathed her last, a particularly elaborate ceremony was in order. So it was that, in a natural cave high on the face of a cliff above an unnamed river, great effort was expended to inter the leader’s cremated remains in a specially woven, waterproofed ceremonial basket, with a careful selection of her most prized possessions. After the appropriate incantations and blessings, the workers, suspended by woven ropes from the top of the cliff, began the laborious process of sealing the mouth of the cave. Even though it was small and nearly hidden from any viewpoint from across the river or above, the care with which they went about the task of closing the cave occupied them for several days. Finally, the cave’s opening was filled and carefully plastered over with mud, which was then stained and scored to match the natural rock as much as could be managed. The resting place was hidden.

After completing the ceremonial rituals, the band gathered their possessions and moved down river, into the wide, lush valley toward the warmer region where they would spend the winter.

They were not the only band of Basketmakers to make this seasonal trek, however, and it was not too long after the ceremonies that they were set upon and annihilated by another, more warlike, band. The secret of the revered leader’s resting place died with the last member of the group.

And nineteen centuries passed...

## One

As the 75-year-old steam engine of the Durango & Silverton Narrow Gauge Railroad chuffed ’round the blind curve at its usual sedate pace, the distance to the young woman lying on the tracks ahead dwindled at an alarming rate.

Even on this early morning run—the “San Juan Express”—the engine was pulling a full load, and it seemed grateful for the slight downgrade after the steep climb into the Rockwood Station and the need to get started after the stop there. Much to the relief of the crew and passengers who knew how uncomfortable it would be otherwise, the south wind wafted the coal smoke and steam ahead of the engine. It also obscured the track, and the combination of the smoke with the blind curve almost resulted in a messy accident, despite the train’s cautious crawl along the High Line.

Fortunately, engineer Leadfoot Johnson spotted the girl between wisps of smoke and released the emergency brakes, stopping the engine and its caravan of coaches just in time. The passengers, especially those wandering the aisles and standing in the open cars, were tossed about randomly, spilling many a drink, and the conductors had a time of it getting people calmed down.

Hal Weathers, seated in the open car’s side-facing bench, had been looking out over the Animas Gorge when the brakes grabbed. Annette Trieri, who had been standing to his right leaning on the railing beside him, wound up sprawled in his lap after losing her balance. Even though they had been living together for nearly eighteen months, he still found this experience most enjoyable, and he winked at her surprised green eyes and then kissed her. Under normal circumstances, both would have been embarrassed to do this in public, but everyone else on the train was preoccupied with their own predicaments—spilled coffee and Bloody Marys, kids with bumps—and no one noticed.

As soon as the train stopped, Leadfoot jumped down to the roadbed, followed by fireman Ernie Pulaski, and walked up to the front of the engine while Ernie ran ahead.

“Jesus Christ! Look at that! Sure is a good thing you got ’er stopped.”

Ernie knelt and began fumbling with a wrist to find a pulse, but the girl, being dressed only in the briefest of undergarments, was causing him no little distraction.

“And it looks like she’s dead, too. A shame, pretty thing.”

Leadfoot, anticipating lots and lots of questions from railroad management as well as from county law enforcement, put a stop to Ernie’s activity at once.

“You ever seen her, Ernie? And, look, if she’s dead, you’d better leave her alone until we can get some careful pictures of everything. We can borrow a camera from somebody. Then we can load her in the baggage car and get moving again. You go get Willie and find a camera, and I’ll get on the radio.”

Besides the inevitable questions, Leadfoot was also concerned that the next train would be along in only about 45 minutes, and then another after that. Summer along the D&SNGRR line was a busy time indeed.

Willie Monroe was doing his conductorly best to get folks calmed down, and he was pretty much succeeding when Ernie showed up. Hal and Annette happened to overhear the conversation, and, at the words “dead body,” Annette immediately pulled out her shield and asserted her authority over the situation. Hal tagged along with his camera, trying to stay out of the way. By the time they got forward to the engine, Leadfoot had relayed the news to the station back in Durango and started a flurry of activity there. Annette’s pronouncement of her affiliation with the Durango police department got his attention, and he relayed the information about her authority back to the station, managing to ease their concerns a bit.

They walked up to the body, lying just five feet ahead of the cowcatcher, and found Hal at work snapping off pictures from a variety of angles. Having read Arthur Conan Doyle as a boy, he paid close attention to the position of the body, and he took careful pictures of the ground surrounding the scene. He was also keenly aware of the narrow ledge they were on, with sheer cliffs above and below.

Eventually they decided they had enough information—Hal had changed film twice—and wrapped the body in a blanket, then loaded it aboard to get underway once more. Leadfoot arranged by radio for the train to be met in Silverton by the San Juan County sheriff, and the train huffed and puffed, starting down the gentle grade again.

Rather than return to the passenger car, Hal and Annette took advantage of being VIPs and rode in the engine with Ernie and Leadfoot, trying to stay out of the way in the cramped space and trying not to touch anything. Every surface, even the hand-holds, seemed coated with a layer of soot.

“Well, riding up here isn’t something that just anyone gets to do, you know. Your first train ride is going to be hard to top.”

Hal, having discovered that Annette had not managed this particular tourist experience in her several years in Durango, had insisted that they take a day off to make the trip. She wasn’t paying attention to the honor of riding in the engine, however, but was staring off into space, clearly fixated on the implications of their sad discovery. Her professional thought processes had kicked in, and she was not going to miss the opportunity to ask questions.

“Mr. Johnson, am I correct in thinking that the place back there where you stopped is not particularly easy to get to, except by these train tracks?” She had to shout over the noise of the little steam engine.

Leadfoot let fly with a long stream of tobacco juice out the side window.

“You bet. I was thinking something like that myself. This part of the gorge is almost impossible to climb in or out of. Somebody must have come by here on the tracks, all right. And it was between about eight yesterday evening and now, because that poor girl sure as shootin’ wasn’t there when I came back down from Silverton on the last run yesterday evening. Funny that one of the guys in the tenders didn’t see her, though.”

Annette had a sufficiently puzzled expression that he continued.

“We have guys on little self-propelled tenders run the tracks in the morning before this first trip with the train, to check for rocks and whatever else might have happened overnight. Something must have waylaid this morning’s run. Or she fell there after the tender went by.”

Annette resumed staring out the window, but was oblivious to the spectacular scenery.

About two minutes later she shouted “You don’t always stop the train that quickly, no?”

Johnson looked over at her, shaking his head. “No indeed. That was about as quick as it gets on this old outfit. Good thing we were goin’ slow. I might have been able to be more gentle except for the smoke. Hell, I almost didn’t see her and stop a’tall, with the smoke blowing up valley. But that blind curve is bad enough on its own.”

She looked over at Hal and raised her eyebrows.

He nodded. “Wind’s usually up-valley this time of day in the summer, from early morning heating of the mountains. The air rises and gets replaced by the up-valley flow.”

Annette went back to thinking.

“And, just to be sure, neither of you recognized her?”

She looked pointedly at Ernie, shoveling madly away. The gentle downgrade to the high-bridge crossing of the Animas Gorge had given way to another climb, and the boiler’s appetite for coal had increased.

“Oh, she was way out of my league,” Ernie said between shovelful. “Those undies she was wearing, now, I’ve never seen anything like ’em, on a real person, that is. Looked like they cost more than I make in a week. Uh, with all due respect, ma’am.”

He looked embarrassed. Annette stared at him and slowly broke into a mischievous-looking grin.

“Why, Ernie. I don’t think I would have pegged you as a connoisseur of women’s underwear.”

He turned as red as the hot coals under the boiler. “Uh, well, uh, I just meant that, well...”

She broke in to try to help him out. “Don’t worry about it. And you’re right, I noticed it too. It looked like some kind of French designer stuff to me, and I can tell you for sure that you don’t find anything like that for sale around here anywhere.”

Hal tried not to seem too interested in the implications of this statement.

\* \* \*

That evening, back in Durango at the Narrow Gauge Saloon, on College Drive by the tracks, Leadfoot and Ernie enjoyed minor celebrity status. By tradition, they had to stand their conductor and brakemen to a round, for having jostled all the passengers so much, but they were the recipients of many more rounds than they paid for because everyone was interested in hearing the story. They both had agreed to Annette’s request to keep to the basics and to leave out many of the details of what they’d seen, and, as their rapt audience asked more and more questions, they became increasingly adept at mumbling noncommittal answers into their beers.

Despite its location just across the street from the General Palmer Hotel, the Narrow Gauge was too traditional a saloon to appeal to the tourist crowd, and the locals preferred it that way, dark and smoky, with only country music on the juke box. Its proximity to the depot made it a favorite with the railroad workers, and the usuals were a tight-knit bunch. Strangers, however, were not unheard of, this being an area of town crawling with tourists at all hours, and the locals had learned to tolerate their eccentricities and ignore them.

At the far end of the bar, sitting with his face in the shadow of the four-inch brim of a new-looking, hand-made O’Farrell Roper with an expensive concha band, one such individual had just put away a cellular phone and was ordering another iced tea. Smitty the bartender hadn’t asked questions when the previous such orders had been specified to arrive in an old-fashioned glass; he really didn’t care and it increased his margin anyway. He’d been at the other end of the bar, listening to Leadfoot and Ernie, so he hadn’t been aware of the phone conversation. Even though he was adept at deciphering telephone conversations from the single side he eavesdropped on, this one would have seemed unusually difficult. Mostly, the guy in the hat had spent his time listening. But then, there was the comment that “they’re saying that she was lying there dead on the tracks.”

\* \* \*

The next morning, sitting on the deck with a second cup of coffee, Hal read all about it in the paper. He liked to savor summer mornings at home, both because the campus was quiet enough between terms that he didn’t feel compelled to go in early—he was 54 years old and a Dean who had earned some perks, for crying out loud—and because summer mornings in southwestern Colorado are made to be savored.

This summer, especially, the mornings had been the best part of the day, because it was hotter than normal. And drier. The July rains had not materialized, and it was now late August. There had already been several wildfires in the National Forests and Bureau of Land Management lands surrounding

Durango, including a severe one that started from a campfire in Sheephead Basin, up in the Hermosa Creek drainage.

Hal was amused to see that the little conspiracy that Annette had concocted with the train crew to provide only the fuzziest of details to the reporter for the *Herald* had worked.

### **Unidentified Body Found on Tracks**

*By Randall Fredericks*

*Herald Staff Writer*

*Silverton* — Tuesday morning, the crew of the north-bound D&SNGRR San Juan Express, the early morning run, discovered the partially-clothed body of a white female on the tracks on the High Line section, just south of the High Bridge over the Animas Gorge. Engineer Lawrence “Leadfoot” Johnson spotted the body on the tracks in time to get the fully-loaded train stopped using the emergency brakes. Although several passengers were shaken up by the abrupt stop, none was injured. Lieutenant Annette Trieri, who heads the Investigations Unit of the Durango Police Department, was a passenger on the train, and became involved in investigating the incident. It appears that the victim, who remains unidentified, may have been sunbathing on the rocks above the tracks and slipped, falling to her death. An autopsy will be performed later today by the La Plata County coroner’s office. (*Continued on p. A-5*)

Hal wondered just how long this fabrication would hold up. He had not objected to the conspiracy, even though he, as well as the train crew, knew that it was absurd to think that anyone would be sunbathing above the tracks at that point, especially in fancy French underwear, given the inaccessibility of the location. But Annette had told them that she was only trying to stall in the hope that more information, specifically the identity of the victim, would surface before the reporter discovered the ruse. Or, better yet, that a more juicy story would come along and distract him.

He and Annette had spent some time with the San Juan County sheriff yesterday after arriving in Silverton, and, with the help of the crew and a detailed map, they had persuaded him that the jurisdiction was La Plata County’s. He tried to hide it, but they could tell he was relieved. So they had made arrangements for the body to be transported by hearse back to Durango and, finally, had rented a car for themselves with a vow to take the train again sometime so they could really be tourists. Hey, they hadn’t even had a chance to eat the tourist food and browse the tee-shirt shops in Silverton.

\* \* \*

Up at the campus, Hal found his administrative assistant, Alice Swan, already at work as usual. Although she was nearing retirement, she never seemed to change or to run out of energy. Her hair had whitened noticeably since last year, due partly, Hal thought, to the shock she’d had when he and Annette had been forced to tell her about the death of her son. That tragic news came at the end of an eight-month case that brought Hal and Annette together and cleaned up the main drug traffic in Durango. Alice had taken the news badly, as would be expected. But in the office she was as efficient as ever, and she relished the fact that Hal came in late during the summer, giving her a head start on the day’s business.

“Well, Dean Weathers, I see that you’ve managed to get yourself involved in yet another police matter.”

Hal had not, to his discomfiture, managed to keep his name out of the article in the *Herald*. “I certainly hope that there won’t be any of the unpleasantness of last year, bombs or anything. Provost Martin’s office called, and he would like to speak with you, probably about your involvement in this.”

She always managed to sound as if she were on the bare edge of scolding him, and it pushed his buttons so perfectly that he always felt guilty, whether it was appropriate or not. He’d recognized months ago that her references to “the unpleasantness of last year,” a phrase she trotted out at just about every opportunity, were a subtle form of retribution that he had decided to bear in silence. That “unpleasantness” had cost her a son and the sanity of her husband, while he had gained a lover and, to both his and Annette’s surprise, a new fishing buddy in the form of Don Terwilliger, the pastor at Alice’s church. Don had helped Hal and Annette break the bad news to Alice and her husband Leonard, and the topic of trout fishing had come up by accident. Don’s flexible schedule (Sundays excepted) made him the perfect fishing companion.

“Why don’t you get his office on the phone for me, Alice? Thanks.”

And he escaped into his own office and closed the door.

\* \* \*

He was working his way through the morning’s e-mail when the phone rang, and the nasal voice of Martin’s secretary told him that the provost was waiting to take his call. This bullshit of secretarial telephone protocol was something he’d never get used to, he thought.

He paused for the appropriate three seconds and said “John? Alice tells me you called earlier.”

“Good morning, Hal. It’s difficult for me, but I’ll try to resist making any wisecracks about your latest adventure. And I promise not to become involved in this one.”

Martin had begun last year’s adventure as a murder suspect and ended up assisting in the investigation. Hal suspected that Martin had become a closet detective.

“What I really called about was the concert this Saturday. I have box-seat tickets, but Edith came up with a last minute conflict and we can’t go. I was so looking forward to the Beethoven. Anyway, I thought you might like them. They’re good seats.”

“We went to see the Takács Quartet, down here from Boulder, on Monday. And one formal concert a week is about all I can handle, much as I enjoy the music. But I can probably find a taker, if you don’t want them to go to waste. What’s the program?”

“Beethoven’s Violin Concerto is the highlight, with that young violinist from Paris, Steffanie Boudreau, soloing. And there are a couple of other things, of course, let me think...”

But Hal had tuned him out. Ever since playing amateur police photographer yesterday, he’d had a nagging sensation that he’d seen the victim somewhere, but it was too vague to talk to anyone about. As soon as he could, he escaped the phone call gracefully and hurried outside to find one of the public kiosks onto which every imaginable kind of poster was taped, including notices for the Animas Music Festival, which the university sponsored each summer.

And there she was, recognizable despite the poor reproduction on the poster. Her version of the Beethoven wasn’t going to be heard after all. He fished his phone out of his pocket and punched up Annette’s number at work.

“Hello, you have reached voice mail for...” Hal took the phone from his ear and stared at it in disgust for as long as he knew the message took.

It beeped and he recorded. “Hi, kiddo. Listen, I think I figured out who our French underwear lady is, from the posters around the campus for the AMFest. The violin soloist for this weekend, Steffanie Boudreau. Hope this is helpful. See you this evening.”

He put the phone away and tried to remember what his schedule for the rest of the morning was like. Oh, yeah. The provost’s budget committee. What fun.

\* \* \*

It was a couple of hours before Annette got the message, and she smiled when she heard Hal’s news. She had spent the morning discussing just this angle with the sheriff, based on a hunch mentioned by a classical music lover at the morgue who had also recognized the musician from the posters around town. Annette’s stellar reputation as an investigator had been enhanced by the episode last year that had so upset Alice, and the sheriff’s office was only too happy to turn to her when homicides—and this was being treated as a homicide—got puzzling.

Although the body had been found out in the county, the music festival was in the city limits, on the campus, and so it was possible that the murder had happened on Annette’s turf and, besides, everyone knew that she had connections at the university, and on and on. The sheriff had apparently spent all night making a list of reasons why this should be Annette’s case.

After spending an hour or so surfing the internet, she wandered down the hall and stuck her head in Walter Jankowski’s office.

“Captain? Got a minute? The sheriff thinks he’s in over his head again and wants my help.”

“You mean on that ‘sunbathing accident’ you found on the train tracks yesterday?” His sarcasm was evident.

“Yeah, well, at least we’ve figured out who it is. We think. And it’s going to blow wide open, I bet. It’s not often that an international celebrity, even an obscure one, is killed in this part of the world. And get this: the British press has her tied in to their Royal Family.” This got his attention.

“Huh? I know that you conned the paper, but what’s this all about?”

She told him about the suspected identity of the victim, including the tidbit she’d run across during her internet search. It seemed that British paparazzi had pictures of Steffanie Boudreau dancing with Prince William of England, heir to the throne. Unfortunately, one of the pictures showed him with what appeared an especially devilish leer. (Actually, it was a look of amused surprise. Steffanie had just stepped on his left foot.) No matter that the dance had been a public benefit for the London Symphony Orchestra, and attended by hundreds. The picture first adorned the cover of a London tabloid and was quickly picked up by the largest selling U.S. supermarket weekly, the *National Gazette*, which trumpeted “Playboy Prince Plays Symphony Babe’s Tune” in the headline.

“So, whether we like it or not, we’ve got a body that is probably going to be identified as the Royal Girlfriend, or something like that. Untrue, of course, but truth isn’t the issue here.”

Jankowski leaned back in his chair, put his feet up on his desk, and stared at the ceiling.

“I’m thinking, first and foremost, spin control. We don’t want to look like a bunch of rubes here. This is going to get picked up on the international wires, for sure. How do you think we should handle it?”

“Well, how about this? We’ve worked pretty well with *Herald* police-beat reporter, Randy Fredericks, before. What if we get Randy back in here and tell him everything we have so far and admit that we conned him yesterday to buy time, so we could get a head start on things? He can write the story

with a copyright, for the wires, and get some national and international by-lines. I think he'll play ball with us, given that kind of exposure for himself. And, even if he's a pain like all reporters, he's pretty much a straight arrow. He's always been discreet when we needed him to be. Amy can be in on it, too, so she'll know to give him first crack at things."

Jankowski was intrigued by this strategy, as he usually was with Annette's ideas, but he was also thinking about what was going to happen to their little community. Chances were pretty good that there would be a media feeding frenzy as soon as the story hit the wires, with TV news trucks from at least four networks and a host of reporters, both electronic and print.

Of course, it would be a bonanza for the hotels and restaurants, not that they really needed any more business during the height of the tourist season. But conspiring with the local newspaper reporter for him to have first crack at local information put out through Amy Hodges, the department's media spokesperson, would make the home folks happy and provide a modicum of control of the situation. He'd have to shoulder the media focus as much as possible, so that Annette could be relatively anonymous and have the freedom to do her job.

"Annette, do you have any idea what's going to happen around here? Remember the stories about what happened up in Boulder, when that little girl got killed several Christmases ago? And we've got an international music star, one linked to the future King of England and All Those Other Places, found dead in her underwear, assuming that's what Randy meant by 'partially-clothed,' for heaven's sake."

"Yep. It'll probably get crazy. I guess this isn't a good time to go on vacation or anything like that, huh? But we can still get Randy and Amy in here for spin control on the bogus story we put out yesterday."

"Yeah, I agree with that approach. First, though, is there anything else about this I should know? I haven't read a report or talked with the sheriff's office about particulars, so I don't know anything beyond the rumors. And your bogus story in the paper."

"Well, we did get lots of pictures before moving the body. The coroner's office will be doing an autopsy today, so maybe we'll have information for Randy in time for his deadline this evening."

"So somebody carted the dead body of this sort-of-famous musician, dressed only in her underwear, several miles up, or down, I guess, the Silverton tracks and set it there to wait for a train to come along? This is crazy."

"Well, we don't know where she was killed, but it appears that the location on the tracks may have been chosen with the idea that the engineer wouldn't see the body in time to stop the train. It was on a blind curve. So maybe they were looking to have the body mangled."

"Why in the world would anyone want to do that? Jesus! Could it be like the thing with Frank Swan? Making an example out of somebody?"

"No clue, yet at least, why anyone would want to make an example of this violinist. And, even if that was the strategy, the killer picked a pretty stupid way to go about it."

"Well, maybe if we find the who, the why will emerge. And maybe the autopsy will help. There were no obvious signs of the cause of death?"

"Nope. She could have had a head wound hidden by her hair, but nothing obvious. I didn't examine her too carefully, though, because we needed to get her off the tracks and get the train moving because of the passengers and the next train coming along. I'll attend the autopsy and keep you informed. Then we can get Amy and Randy in here later this afternoon. Thanks, Captain."

\* \* \*

“Jacques, I can see that you’re dashing off somewhere, but it’s absolutely essential that I talk with you for a minute.” The budget committee, after two hours of wrangling over how to divvy up a shrinking financial pie, was breaking for lunch, and Hal had hurried to intercept Jacques Ament, Frémont State University’s distinguished Dean of Fine Arts.

Just three years ago, they had managed to lure him away from the Paris Conservatory, with a juicy package that included funding from the local business community, to revitalize the Animas Music Festival. He had accomplished miracles, even if the repertoire tended to lean heavily toward Debussy, Ravel, and Saint-Saëns. Ament had spent several minutes of casual conversation at the beginning of the meeting waxing eloquent about the weekend soloist, who turned out to be an ex-student of his, and had mentioned that they were having lunch.

“Hal, I’m so sorry, but I’m already late and I don’t want to keep Steffanie waiting. Please, can’t this wait?”

“No, I’m afraid not. Did you read the paper this morning?”

“Yes, and I saw that you got your name in it yet again. Tell me. Does this notoriety help you with fund raising?” Ament’s Gallic sense of humor was well known on campus.

“I’m afraid I have some bad news, or at least potentially bad news. I had a good look at that unfortunate person we found on the tracks yesterday, and it looked to me a lot like the pictures of Steffanie on the posters for the festival. I’m sorry to be so blunt, but you really do need to know this. I don’t know if it’s been confirmed that it’s her, but it seems like it might be.”

Ament had stopped walking and was staring at Hal in shock. He put his hand out to lean on the wall and almost didn’t judge the distance correctly. Hal steadied him and steered him toward a chair at the conference table, and the other committee members, sensing that something was wrong, gathered around.

“But this is not possible! She arrived in town only Monday evening! How could she have managed to get way up there in the wilderness yesterday? My God! What will we do for the concerts this weekend?”

“I’ll get in touch with the scheduling people and tell them about the problem. And, remember, I don’t know if it really was her. But the pictures sure look like that body we found. I’ll call the police and see if they have an identification yet. Where were you supposed to meet her? We can go there and pray that she’s waiting.”

Hal was concerned for Ament’s health, because he had turned a deathly shade of gray and was breathing in a shallow, irregular pattern that was frightening.

But Ament shook his head, took a deep breath, and stood up, nodding.

“Yes. Let’s go. She’s staying at the General Palmer, and I was going to meet her in the lobby at noon. Five minutes ago.”

They hurried out to Ament’s car. Even though it was a short trip, Ament had ample time to demonstrate his Parisian driving skills, and Hal got on his phone as a way to distract himself. Annette answered on the first ring.

“Trieri, investigations.”

“Hi. Did you get my message?”

“Yes, and it’s nice to have an independent agreement with hunches because it makes them more likely to be true.”

“Does this mean that you have confirmation?”

“Not yet, because we don’t have any idea of where to look for her passport or ID or anything with a picture. If it is her, that is. I’m going to the autopsy this afternoon, though, and at least we should be able to find out the cause of death.”

“I’m headed to the General Palmer with someone who’s supposed to meet her for lunch. Apparently she was staying there. And he can ID the body, if it’s necessary. Why don’t you meet us in the lobby? We’re just about there, but it’ll take a minute to park.”

“I’ll be right there.”

\* \* \*

Because it always takes more than a minute to park in downtown Durango at noon in the summer, Annette was waiting for them in the lobby of the General Palmer Hotel even though she’d walked the five blocks down from the police station. After introductions, it took only a minute to discover that the violinist was not in her room, and Annette immediately asked to see the hotel manager, using her shield to move things along. They sat with the Teddy Bears on the Victorian wing chairs in the lobby while he was fetched, and Ament fidgeted in worry.

Presently they were approached by a tall, thin, middle-aged man with a name tag reading “Phillip Westerman, Manager,” who inquired about their needs.

“Mr., ah, Westerman, I’m Lieutenant Annette Trieri of the Durango Police Investigations Unit, and these gentlemen are academic officers at Frémont State University, Dean Harold Weathers and Dean Jacques Ament. I believe that one of the performers at this summer’s AMFest is registered here, a Ms. Steffanie Boudreau?”

“Ah, yes. Ms. Boudreau checked in Monday, I believe. We’re honored to have her as our guest. I’m personally looking forward to her concert on Sunday afternoon.” He raised his eyebrows instead of asking the obvious question.

“We have reason to believe that it was her body that was found on the Silverton tracks yesterday, perhaps you read about it in the *Herald*?”

Hotel managers are trained to be imperturbable, and Westerman did a fair job under the circumstances. His face whitened slightly and his narrow mustache twitched only a bit, so Annette continued.

“We are attempting to make a positive identification, and we are in need of Ms. Boudreau’s passport. Did she check it with your front desk? And it would help if we could see her room.”

Westerman blinked, paused, and blinked again, clearly evaluating the situation. Annette instantly understood.

“Mr. Westerman, I’m certain that you and the General Palmer want to cooperate with our investigation fully, but I also understand that you feel the need to protect the privacy of your guests. Dean Ament was Ms. Boudreau’s music teacher in Paris, and he was, I’m told, to meet her here for lunch. We’ve already discovered that she is not in her room. I’m absolutely certain that I could easily get a warrant to enter and examine her room if I need to. But we would like to avoid delay if possible. It’s especially important to us to make a positive identification so that we can have some control over the publicity that this tragedy is sure to generate. Of course, if you feel that we need to obtain the warrant,

I'll take the time to do so, but we will lose control of how you and, indeed, the General Palmer, will fare in that publicity..."

Westerman undoubtedly knew blackmail when he encountered it, but he also knew when he was out of his depth.

"Come with me," he said, as he turned to walk to the front desk.

\* \* \*

It was nearly seven when Annette finally got home and found chicken breasts marinating in a fragrant mystery sauce in the kitchen and Hal on the deck going over a pile of bureaucratic-looking reports. There was a stack of new charcoal in the starter can on the grill ready and waiting to be lit. He looked up as she came out the patio door.

"How'd it go? Want a drink?" He got up to light the charcoal.

"Broken neck. Recent sexual activity, vaginal and anal, no signs of force. Blood tests will take a few days. And the fingerprints match the passport we got from what's-his-name, Westerman. And, yes, I would. Some kind of wine to go with that chicken, I guess. I'm going to shower. Christ, I hate my job sometimes."

He stopped fiddling with the grill to give her a therapeutic hug.

"There's no rush with dinner, if you want to work out first."

He leaned back and kissed her on the tip of her nose.

"Good idea. Thanks. I'll be down in about a half hour. What's the marinade?"

"My attempt at something French. I spent all afternoon with Jacques and got inspired. I'm going to make some couscous to go with it, and a big salad."

After he had heard the ski machine whooshing for 15 minutes or so—it sounded to him as if her pace was faster than usual—he put the chicken on to begin grilling and went into the kitchen to work on the salad and couscous. Just about the time he finished the salad, she came in drying her hair and found a glass of Chablis waiting.

"Want to talk about it more now?"

"I guess I would if I thought there were something more to talk about. But I'm pretty stumped. An internationally famous musician comes to town, immediately jumps in the sack with someone and has more than standard sexual experience, apparently consensual, then gets her neck broken and winds up dead on the railroad tracks in a very remote location. All within about twelve hours. Maybe I can get a transfer to parking enforcement."

Hal smiled and hugged her yet again. "Well, if meter maid uniforms were still in style, I might support that idea. You'd be as cute as a button. But they're not, so I guess I'll just have to tell you what I found out from Jacques."

This time it was her turn to lean back, not to kiss his nose but rather looking as if she might bite it—a look he recognized at once as her official "better tell me what you know right now, buster!" look.

"It seems that our unfortunate soloist had a dinner date Monday evening after she arrived. With Luigi Franconi, the guest conductor that Jacques brought in for the AMFest this year. And today, Franconi's nowhere to be found. But strangest of all, in light of your information from the autopsy, is something else Jacques told me: Franconi's gay."

\* \* \*

## Two

It worked as Annette had predicted. Randy Fredericks' story in Thursday morning's *Herald* was separately copyrighted, even though its content was still minimal. Luigi Franconi's absence was noted merely as his being "unavailable for comment," and some of the more gruesome details of the autopsy were omitted, having been withheld pending further investigation. Amy Hodges did an admirable song and dance around this issue at the press conference, helped partly by the fact that she hadn't seen the omitted material either. Randy was miffed at having been misled the day before, but his private briefing before the press conference had more than made up for the misdirection.

Hal and Annette's conversation at dinner the previous evening had included a discussion of her strategy for dealing with Randy's situation and how the city planned to handle the inevitable media crush once Randy's story got out. They also spent considerable time on the issue of how Hal knew that Franconi was missing.

After the meeting at the General Palmer and a visit to Steffanie Boudreau's room, he and Jacques Ament returned to campus. Ament tried for two hours to contact Franconi, who needed to hear the news at least so that he could plan for a substitute (violinist or piece of music, Ament was not sure) for the weekend. During the course of the varied attempts to find Franconi, the information about his dinner date with Boudreau emerged. Ament had arranged the date as a way for them to meet and to discuss their approach to the concerto before rehearsals began—not, he had reassured Hal, as anything romantic, given Franconi's orientation.

Eventually, Ament and Hal persuaded the manager of the campus apartment that Franconi had been given for the summer to let them examine the place and found nothing remarkable beyond the fact that Franconi wasn't there. Nor was he or his car to be found anywhere on campus. However, because there were no concerts Tuesday, Wednesday, or Thursday, he could simply be off on a brief out-of-town jaunt. The concertmaster always led the Wednesday rehearsals anyway, and this time the only thing unusual was the absence of the coming weekend's soloist. Even this wasn't too much of a concern, because it seemed that the concertmaster was willing (and even eager) to play the Beethoven concerto, if necessary.

Annette absorbed this information with a variety of questions, including several about the extent to which Hal knew about Franconi's sexual orientation. It was important, she pointed out, because if he were bisexual, he could have been Boudreau's last partner. Otherwise, a third person (at least) was indicated. Hal had only Ament's comment about the dinner date to go by, so Annette was going to have to question Ament, and orchestra members, further about this sensitive topic.

\* \* \*

Sitting on his deck in the morning sunshine, Hal finally realized that he was using this musical mystery as an excuse not to work on the reports he'd brought home. He had persuaded himself over time that his interest in Annette's career was mostly a case of "the grass is greener" syndrome, because he knew that he really wasn't cut out for police work. Despite the many similarities between criminal investigations and scientific research, and despite his preparation for the fuzzy nature of human events by the uncertainties inherent in the earth sciences, he knew that he wouldn't be satisfied with the outcome of

police work, which often depends more on evidentiary rules and seemingly arbitrary court decisions than on the truth. So he sighed and picked up the reports to haul up to the campus.

When he got up the hill, it took him a minute to figure out why there was so much activity for mid-August. Ah, yes. New student orientation was to start tomorrow, and some people always insist on arriving a day early. Scores of young people (they seem to get younger and younger each year, he noted yet again) were wandering around, trying to look as sophisticated and unimpressed as possible, many accompanied by parents who were trying not to look worried. He stitched a welcoming smile on his face and prepared himself for the expected barrage of questions about where's this or that building.

When he reached his office, Alice greeted him with congratulations about having been left out of the morning paper this time, along with several telephone messages. His relationship with Annette had matured to the point that most people on campus who knew him well knew about her also, and they always wanted to find out what he had heard about the latest police activity. But the messages this time were more impressive than usual: one from Provost Martin (expected), one from Gladys Pearl, chair of the music department (unexpected, but not unreasonable), one from Ament (expected), one from President Black's office (?), one from the facilities management people (must be about something else altogether), and one from the public relations office (what the hell do they want?). In a fit of rebellion, Hal decided to call the facilities people back first.

\* \* \*

Having briefed both Amy Hodges and Randy Fredericks before the press conference the previous afternoon, Annette knew that today it would all hit the fan. Randy had been certain that he could get a story out on the wires before anyone else and had become most cooperative when Annette agreed to postpone the news conference to give him time to do just that. Amy would have to be the one in the police department to field questions, and she had received permission from Captain Jankowski to hold a daily press conference to provide updates on the case.

Nonetheless, when she got to her office, Annette found a stack of at least a dozen messages, all marked "URGENT," all from media people she'd never heard of. Well, she figured, any reporter worth his or her press card would be able to find out who was in charge of the investigative division. Although it didn't make her feel particularly good, she passed the messages to Amy with the notation that they could be considered low priority.

Annette's first job for the morning was a visit to Lester St. Clare, the coroner. Doubling as the medical examiner, he was a first-rate forensic pathologist, and she had been impressed with his professional handling of the autopsy. She found him, as usual, in his laboratory.

"Morning, Lester. Randy has his story about our musician on the wires, so are you ready for the bomb to go off?"

"I didn't see my name in the *Herald* story this morning, so maybe I'll be Mr. Invisible."

"Wishful thinking. They'll find you. And watch out. You'd better brief your staff. Some of these folks are beyond sleazy. There's no doubt that you and your staff will be offered bribes of significant amounts—the high five figures wouldn't surprise me—for the complete autopsy report. And I'm certain that our keeping parts of it under wraps will be challenged in court, not that you have to worry about that."

"I thought of the problem of the bribes, so I typed up my dictation myself, and I'm keeping the original in a secret place. Here's a copy for you, the only copy I've made."

He handed her a sheaf of paper.

“What a pain it is, transcribing. I’ll be sure to enunciate better in the future, you can bet on it. I don’t suppose you’ve made any progress since yesterday afternoon?”

“In fact, I have, a little at least.”

She relayed the information about Franconi and checked to make sure that St. Clare planned two separate DNA tests on the two semen samples. She also handed him an envelope and requested a DNA test on its contents.

She hadn’t really been annoyed with Hal the previous evening about his meter maid wisecrack, but he had made up for it anyway with a small present. It took some coaxing to get the full story, but she finally discovered that he’d already thought about the possibility of a sexual angle to the case. On an impulse, he took advantage of the afternoon visit to Franconi’s apartment to nab a hair sample from the hairbrush on the dresser. He knew it was not entirely ethical to have done this, and he also knew that it wasn’t even close to being “evidence” in the sense of admissibility. But he figured that Annette could dispose of it if she wanted to. And, hey, it might come in handy.

And indeed it would. If the DNA tests matched, Franconi would be identified as Boudreau’s partner (or at least one of them) the evening of her death, even if the information couldn’t be used in court. This would give them a place to start. Assuming he turned up.

\* \* \*

Meanwhile, the object of all this attention was headed back to town, cruising along on Highway 160 eastbound through Mancos. He had the top down on his white Chrysler Sebring convertible and a puzzled look on his face. His *a capella* rendition of *Non piu andrai*—the aria in *Le Nozze di Figaro* in which Figaro extols to the unhappy Cherubino the virtues of a military career—had crashed to a halt while he tried to remember the second half of the libretto. As a conductor, Luigi had no problems with music, but words escaped him on occasion.

Disheveled, badly in need of a shave, and smelling rather fishy, he was about as happy as he could remember. Except for the missing phrases about the moustache.

When his old mentor Jacques Ament had called him last fall to ask him to be the guest conductor of something called the Animas Music Festival, Luigi had wished fervently for the courage to say “no,” but he just couldn’t summon it up. He owed Ament too many favors to decline. Yet, spending a summer in some godforsaken place called Durango, Colorado, USA, was not something he could imagine himself doing. And when he finally located the place in an atlas, he nearly called Jacques back to cancel, favors or no. The arrival of an information package, including a number of maps, had helped only a little. Sure the scenery looked spectacular, but so was it in Switzerland, just up the road. Unfortunately, he was committed, and he made the necessary plans to follow through.

So, back in early June, he flew to Denver and rented a car for the summer, one that he’d fallen in love with despite its inability to measure up to his Porsche Carrera. Then he followed a route to Durango suggested by Jacques. Not the most direct way, it included six mountain passes through the heart of the ski country. He stopped overnight in a pleasant little town called Buena Vista (which, strangely, the locals called “Byoona” Vista), and then headed west through Montrose and the San Juan mountains to Durango the next day. Switzerland, he’d decided, was indeed spectacular, but so was this, and it was much bigger. And so empty.

After arriving in Durango, he’d settled in and looked around for something new to do with his spare time, and someone suggested that he take up fly-fishing. This seemed logical somehow—as a conductor, he was used to waving his arms around in rhythmic motions—and so, carrying an unlimited-ceiling

American Express Platinum card, he visited a shop on Main Avenue with the clever name of Duranglers. He remembered the great American film star Humphrey Bogart once saying in one of those sentimental old war movies something about the beginning of a beautiful friendship. Such was Luigi's first visit to Duranglers.

For weeks his new friends there had been suggesting that he spend time fishing tail-waters, the sections of rivers below dams, especially the San Juan River below the Navajo Reservoir south of Durango, and the Dolores River below the McPhee Reservoir north of Cortez. He had finally made time this week to do both in a two-day trip, staying overnight at a rather seedy motel in Farmington after spending a reasonably productive day Tuesday on the San Juan, along with dozens of other fishers and their guides. The San Juan, a destination fishery, gets crowded.

Wednesday morning, he had left early and, needing every detail of the carefully drawn map he'd been given, found his way to the obscure dirt road along the lower Dolores. He spent the day there with mixed success at a variety of spots on the river, and he was packing up to leave about supper time when a pickup truck pulled into the parking area. The colorful fellow who got out (he had learned not to think automatically of all locals as "cowboys") recognized Luigi's license plate as a rental car, and he mentioned that, unless Luigi really had to, this was not the time to be leaving. Something called a "spinner fall" was about to happen, and the fishing would become truly remarkable.

The Duranglers folks had equipped him with a variety of flies, including, he remembered, something they'd called "BWO spinners," little olive-colored dry flies with splayed-out greyish wings designed to mimic the dying mayflies that fall to the water's surface. So Luigi stayed and had the most amazing experience of his short fly-fishing career, catching a large trout on almost each cast. He lost count at two dozen, and it was only because he was used to waving his arms for long periods of time that he had the strength to continue until the phenomenon stopped.

By then it was dark, and he thanked his colorful new friend by offering some Jack Daniels bourbon, another American product that he'd developed a taste for. By the time it was gone, he was beyond driving, so he spent the night asleep in his car.

And now he was on his way back to town, singing Mozart (the words had finally popped into his head) at the top of his lungs, blissfully ignorant of the firestorm awaiting him in Durango.

\* \* \*

The facilities people wanted to know whom to contact about the technical requirements of installing a new digital video projector in one of the natural sciences classrooms, and Hal felt that he had actually accomplished something useful after returning their call.

As he had suspected, the other calls were oriented toward finding out the latest gossip about the death of Steffanie Boudreau. Even President Black, whose Texas accent was in high gear in an attempt to charm Hal into revealing confidences, really only wanted cocktail party ammunition.

Hal decided to begin an e-mail alias list so that he could simply send out a daily update to everyone who expressed interest in the case. He would conspire with Annette about what information to put out each day, making sure not to pre-empt Randy Fredericks' deal. He told Alice to inquire of all incoming callers if they were asking about the case and to simply add their names to the alias. Once Alice understood what was going on, she asked that her name be added to the list, which was about the most effective way that Hal knew to spread information around campus generally.

Feeling rather smug about this clever idea, Hal called Annette to make sure that he wasn't going to step on any official toes. He could tell from the various clicking noises that her office phone had been forwarded to her cellular phone.

"Trieri, investigations."

"Have the tabloids arrived yet? I can't wait to see how they try to outdo each other."

"I'm lying low, so I don't know what all's going on. I gave your hair sample, I mean the sample of Franconi's hair, to Lester for a DNA test, by the way. Thanks. What's up?"

"Ahhh, first, remember that these cellular phone calls can be monitored pretty easily."

"Not this new one I got. It's digital and virtually impossible to listen in on."

"Oh. You mean you're actually ahead of me in technology for once? There goes my self-esteem. But, look. Maybe yours can't be monitored, but mine still can. And therefore if I can hear you so can listeners-in. Hmm?"

He could hear a grunt of frustration on the other end.

"Anyway, I wanted to ask you about an idea I've had. I'm getting hounded by folks up here to give them juicy details on this Boudreau case, and I'm tired of saying the same thing over and over on the phone. So I thought I'd send out e-mail once a day, like Amy's press conferences only just to a select list here on campus. That way, they'll all stop bothering me. I hope. I thought I'd send only innocuous information, of course."

"Um. My immediate reaction is not so positive here. Is this really necessary?"

"Well, I'm just trying to make my life easier, that's all. And, you know me, I'm not beyond using this as a tool to be helpful to you. With mis-information, I mean. You know, actually making gossip work in your favor."

"Let me think about how it might work and we can talk about it tonight, OK? Do you need to do something before tomorrow?"

"Not really. I'll take names for the list today. Pasta tonight?"

"Yum. What with?"

"I'll see what looks good in the seafood case. Oh, I thought of another thing. Jacques told me that Franconi is scheduled to conduct a rehearsal this afternoon, starting at two. Do you want me to check to see if he shows?"

"I'll go one better and be there myself. I want to talk to him soonest. Where?"

"The concert hall, where we went Monday evening. I'm sure your badge will get you in..."

"Hal, please, call it a 'shield.' Boy Scouts are the ones with 'badges.'"

"Huh? Oh, yeah. Sorry. Anyway, I'll meet you there just before two if I don't have any conflicts. Keep a low profile. Those TV people are out there, just waiting for you to stick your head up."

"Don't be surprised if I show up tonight in a wig. Ciao."

Hal thought it over and decided that it wouldn't be a tragedy if his e-mail scheme didn't fly with Annette. He could just tell everyone that it wasn't being allowed and save himself the work involved. And it would be quite interesting to see if Maestro Franconi would turn up at the rehearsal.

\* \* \*

Luigi had fly-fished only for a few weeks, and, like any enthusiastic novice, he enjoyed talking about it at every opportunity. He had had one such opportunity with Hal at a festival reception a couple of weeks back, so when he saw Hal on the front steps of the concert hall, he couldn't contain himself.

"Dean Weathers! I hope you remember me! I'm Luigi Franconi, and I recall a most informative conversation about fly-fishing we had at a party recently. I just have to tell you about what happened to me last night!"

And he launched into a rhapsodic monologue about his experience in the spinner fall on the Dolores.

Hal was completely taken aback, this being about the last thing he expected under the circumstances. Normally, he would have loved such a conversation, even if it was mostly one-sided, because other peoples' fishing experiences, particularly beginners', fascinated him. And, from the sound of it, this was an experience that few people were ever lucky enough to have in a lifetime of fly-fishing. Hal managed to smile and to nod at the appropriate intervals, all the while thinking furiously about how he should handle the situation.

Fortunately, Annette came to the rescue. She walked up behind Franconi and listened long enough to deduce who he was, from his accent, and what the conversation was about. She mouthed "Does he know?" at Hal, who shrugged and shook his head "No" gently. Franconi noticed that Hal was looking over his shoulder and turned without breaking stride.

"...and it was finally too dark to tie on another fly, so we stopped. It seemed that the spinners had stopped, too, which was most fortunate. Ah, hello, Ms. Trieri! How nice to see you again! I was just telling your husband here about a most marvelous experience I had last evening on the Dolores River. I'm happy to say that the river did not live up to its name. 'Sad' it was not! Except perhaps for the fact that my arm is so sore today that I don't know if I'll be able to conduct our rehearsal for the concerto this weekend. Which reminds me, I'm late, I'll have to run. Nice seeing you both again!"

And he started to run up the steps to the auditorium.

Annette turned on her command voice, but only up to medium.

"Mr. Franconi! Wait! I need to ask you something!"

She, and Hal, walked up the steps to where he had stopped. Annette's command voice never ceased to amaze Hal, who had experienced it turned up to high early in their relationship, quite possibly saving his life.

"Mr. Franconi, I understand that you had dinner with Steffanie Boudreau on Monday evening?"

"Yes, Jacques arranged it. I picked her up at the airport in the afternoon, took her to her hotel downtown, and waited for her to check in. We then walked up the street to Ariano's and had an early supper. Why do you ask?"

"Are you aware that she was found dead the next morning, under most unusual circumstances?"

Annette was watching him very carefully for any kind of reaction.

React he did, first with an extraordinary look of astonishment, then by very carefully sitting down on the steps. He shook his head several times, as if to clear it, and finally looked up at Annette.

"Excuse me, but I am confused. Why are you asking me about this? I had the idea that you are Dean Weathers' wife, but there must be more that I don't know."

"Dean Weathers and I are not married. I'm the head of the investigations unit of the Durango police. And as far as we know now, you were the last person to see Ms. Boudreau alive."

Annette wondered if the implications of this statement would be lost on a non-native speaker of English.

“Well, the last I saw of her was when she got her key from the desk clerk at the hotel, the General Palmer, and we said good night. So the desk clerk saw her at the same time I did. I think it was about 7:00. But how could this have happened? And what did happen?”

“That’s what we need to find out, Mr. Franconi. Perhaps we could schedule a time for an interview after your rehearsal?”

“I’m not sure that I can tell you much more than I have.”

“Even so, I’d like to go over things slowly and in detail.”

“Come with me. I’ll cancel the rehearsal and we can talk now.”

Hal spoke up for the first time, “There was an article in the paper this morning, so I’m sure that the orchestra members know about the death. And, of course, she wasn’t at rehearsal yesterday. Jacques told me that the concertmaster took the solo part in the Beethoven concerto yesterday.”

“I’m not surprised. He’s quite adequate, although not in Steffanie’s league. And ‘the show must go on,’ after all. I suppose we can dedicate the weekend performances to her memory. What am I going to say to these people?”

And he sank into thought as he opened the auditorium door.

\* \* \*

Hal was in the middle of concocting a sauce in which to braise the bay scallops he’d found at City Market when Annette finally got home. He planned to serve them over spinach fettuccine, and getting the flavors right was always a challenge with scallops.

Under Annette’s tutelage, he had almost completely abandoned his compulsive habit of following recipes to the letter for everything and now enjoyed free-form cooking. Sometimes the results were a bit of an adventure, but he was usually quite successful.

“Well,” Annette had kissed him on the cheek and was looking over his shoulder at the stove, “either Franconi’s as good an actor as he’s supposed to be a conductor, or he’s completely innocent of anything to do with Boudreau’s death.”

“The DNA test will exonerate him, I suppose, if the hair doesn’t match anything. What do you think about tarragon, mainly, with just a hint of this Cajun spice stuff to give it some zip and counteract some of the sweetness?”

“Uh, those are scallops, right? What’s the stock?”

“That shrimp stock from boiling the shells last time, with some vermouth, remember? It’s pretty subtle, as stock goes.”

“OK, but how about a hefty squeeze of lemon?”

“Voila! Just what I was looking for but couldn’t think of! So where do you go from here?”

Annette opened the refrigerator, took out a bottle of chardonnay, and poured herself a glass.

“I yanked on Franconi’s chain by asking him, as discreetly as I could manage, about whether he and Boudreau had been involved, sexually. He took the question pretty much in stride and said, basically, that she wasn’t his type, without much further elaboration. And his story checks with what we heard

from the Monday evening desk clerk at the hotel. The clerk also told us that she didn't go out through the lobby again before midnight, when he went off shift. And the graveyard-shift clerk didn't see her at all. Franconi told me that she mentioned something about a late date—that was why they were having an early dinner—but he doesn't know who the date was with. To tell you the truth, my dear, I don't know where I go now, especially if the DNA test clears Franconi. Say, that's beginning to smell good. Is it time to boil water yet?"

"Sure. What about working backwards, from when the train stopped? Didn't the engineer, Leadfoot what's-his-name, say something about a tender run that didn't happen before our train trip? And, suppose the body was placed on the tracks just before our train came by. How long would it have taken someone to get her to that spot? I mean, how late could she have left the hotel and got there? Suppose the sex happened in her hotel room. It seems like it would still have taken some time to get from downtown to that place on the tracks, even if she was killed at the site. And if she was killed somewhere else, it would take still more time, wouldn't it? And how do you suppose they got her there? Seems like up or down the tracks would be the only way."

"Hey, I'm only the *sous-chef* around here, I don't know this stuff. We did find out that the guy who was supposed to make the tender run on Tuesday morning has disappeared. And there is one other thing I've thought of. What's the main difference between the Silverton and normal trains?"

"Uh, steam engines?"

"Wrong, Mr. Science Person. The track width, I mean gauge. It's a narrow-gauge railroad. Suppose you got a full-sized pickup truck with those off-road tires. Couldn't you just drive up the tracks, straddling the rails? I mean, it might be bumpy on the ties, but wouldn't that work?"

"And if the tires were the big, off-road kind, they could just force them up and over the rails if they wanted to turn around or if they had to deal with a switching mechanism, or anything like that. So what you have is a scenario in which she leaves the hotel for this late date by the back door sometime after 7:00; gets in a vehicle of some kind and is driven up the tracks past Rockwood, and gets dead somehow along the way; and is then placed on, or maybe just falls onto, the tracks. Say, maybe we're being too suspicious here. What if she was just out joyriding with her lover and fell? Any indications from the autopsy that could help? Bruises, or anything? And where's the nearest place to where we found the body that someone could get a vehicle onto the tracks? And, say, do you suppose that there are any places where there might be tire tracks? Like, where there's mud seeping up through the ties, or something?"

"I thought you scientists had all the answers, not all the questions. Anyway, it sounds like a ride on one of those tenders that Leadfoot mentioned could be instructive. Or maybe the railroad company has something more comfortable."

Just then, the phone rang, and Hal reached over the counter and picked it up.

"Hello...Can I ask who's calling please?...That's nice, but I'm sure you'll understand when I point out that she has many 'close, personal friends,' all of whom never hesitate to introduce themselves to me by name." He winked at Annette while listening with a bemused smile. "I see. I'll find out if she's available."

He covered the receiver with his hand, and tried to keep a straight face. "A gentleman caller for you, a close personal friend, he says, name of Lance Riggins. Should I be jealous?"

She looked disgusted. "Never heard of him. Any guesses?"

"Five to one it's a media person of some ilk."

“No takers here. Let’s have it.” And he handed her the phone and went back to cooking, losing track of the conversation as she walked into the other room.

About two minutes later, she returned, and set the phone on the counter. “Well, it’s started. My close, personal friend Lance Riggins is with the *National Gazette* and has information for me, if only I’ll answer some of his questions. Arrgh!”

“Let’s see. The *National Gazette*. I have trouble keeping all these things straight, given that I only look at the covers in the supermarket check-out line. Was that the one with the picture of Jesus’ face in a cloud last week?”

She took a large gulp of her wine. “Is there some way to turn all the phones off during dinner?”

\* \* \*

Later, they made a point of watching the local 10:00 pm news program and were treated to stock videotape of the D&SNGRR engines and helicopter footage of the Animas Gorge, as well as satellite vans, multiple sets of TV lights and cameras, and a horde of reporters shouting questions at a nervous-looking Amy Hodges. All in all, Amy did quite well, averaging about a 50% “no comment” rate and maintaining a professional cool throughout.

“So, which of those guys is your friend Lance?”

Hal was feeling pucky. She poked him hard in the ribs.

“Probably none on camera. The TV people are usually pretty good at keeping print reporters out of the frame, seems like. But if you see someone who looks like a slimeball, that’ll be him. I guess I didn’t mention that he asked me out, for professional reasons, of course.”

“Uh, just what kind of professional does he think you are? Ouch!”

\* \* \*

### Three

Lance Riggins always managed to be near the front of the pack at press conferences, so he had, in fact, been in one of the TV shots on the News at Ten. That had all happened earlier in the afternoon, and he was now nursing a third margarita, rocks, at the Narrow Gauge Saloon, taking stock of the situation and trying to think of a way to get the proverbial scoop.

That his little ruse hadn’t worked on the police investigator bothered him not in the least. In contrast to his colleagues, he had only a single story per week to write, and his next deadline was still three days away, so he wasn’t too worried. Moreover, he had a research staff to do the background work on the dead violinist’s biography and other information. He hoped that they would come up with something juicy, so that whatever he managed to write could be cast into appropriately lurid headlines.

His single idea so far had been to call back to the *Gazette*’s office in Atlantic City to request that they send out, as soon as they could manage it, a model who resembled the victim as closely as possible (except, he’d instructed, find one who’d look way voluptuous in bra and panties), so he could stage a photograph. It could be run without a caption, and readers would automatically assume that it was real, even though there would be a subtle and indirect disclaimer buried in the text of the story. It should be

easy to get a model willing to be made up appropriately and to lie down on the tracks in underwear, dirt and splinters or no. The persuasiveness of money, and all.

But ideas based on fact were harder, because the facts were so few. That police department spokeswoman, Amy what's-her-name, hadn't responded to his leading questions, so all he had—all anybody had, really—was a dead body found on the tourist train tracks. And he'd not been able actually to take the train ride to see the location, because it was booked all summer well in advance and he'd arrived in town only a few days ago.

He noticed a familiar figure entering the bar and tried to hide under his big hat.

“Well, if it isn't the Lanster. Sitting all alone in the haze. How come you're not hard at work on the Big Story?”

The voice of Eddie Walker informed Lance that his attempt at hiding had failed, and he knew there would be no graceful escape.

“Come on over here to a table. And I'll buy you another drink. I hate sitting on bar stools. What's that in front of you, a marg?”

Walker's personal aspect ratio was about as close to 1:1 as a person could be and still walk, and he had enough bad experiences with under-designed bar stools to make him prefer a chair. Or two, if they were available. He worked for one of the networks—Lance could never remember which one—as an investigator and sometime cameraman, being too unphotogenic to appear on camera. But he was good at investigating, and Lance knew he could profit by buddying up to Walker, as unpleasant as it might be. At the very least, he knew that his chances of picking up any of the local single women would be nil with Eddie around, so he might as well pump him for information.

“So, Eddie, what have you guys found out lately? Any new news?”

Walker and several other broadcast news investigators were kept busy feeding the bottomless appetite of the television audience, and they occasionally came up with something of interest to Lance's readers. And because the *Gazette* was published only weekly, the TV people didn't consider it competition.

“Naw. Just a dead French woman. Who plays violin. Lying on the railroad tracks in her underwear. Died of a broken neck. Maybe sustained during a fall from the rocks above the tracks, maybe not. Just arrived in town the day before. Was supposed to play a concert on Saturday. How she got to the location is up for grabs. But you know all this too, huh?”

As out of shape as Walker was, it would be several days, if ever, before he would adapt to Durango's elevation and be able to speak in complete sentences. Despite deep breaths between clauses in this small speech, he was panting for air.

“What I don't know is why we're all here. Talk about the sticks. Jesus!”

“You know what we need, Eddie, is to get a train ride up to the location, somehow. Have you looked into a charter, or anything? I know you got helicopter footage, but we really need to stop and walk around. And it didn't look like anyone was going to land a chopper anywhere near there.”

“That damned train is all booked up for weeks. We tried, but we can't get them to add cars. Or extra trains or anything. Cops must have them under their thumb, or something. Say, I've been meaning to ask you. Where'd you get that hat, anyway? Makes you look like a skinny John Wayne.”

Lance grinned. “Local color, figured it'd help me blend in. There's a custom shop just around the corner. It cost a bundle, but that's the beauty of expense accounts. And it keeps the sun off.”

Lance was sensitive about getting any more freckles on his bald spot.

“Maybe we can figure out another way to get up there. I checked out the train, too, and it looks like it runs only during the daytime. So the tracks are just sitting there all night, with no traffic. I’ve seen pickups with train wheels on them—maybe we could borrow one.”

“Right. And be sitting ducks for getting arrested. When they find it missing. But maybe you’re onto something, there. Maybe we could just rent a jeep and drive up the tracks. Not on the rails but on the ties. Of course, we need to know where the body was found pretty closely if we’re to find it in the dark.” The last, longer, sentence had Eddie gasping.

“Now there’s an idea. You leave finding the body to me. See if you can rent something big and comfortable, like one of those Grand Cherokees, or something. It’ll ride better and there will be plenty of room for you and for your camera, or whatever you want to bring.”

Neither of them had reason to pay attention to the figure at the next table under the O’Farrell Roper—a black version of Lance’s new hat—with the concha band, doing a lot of listening to the cellular phone he held to his ear.

\* \* \*

Of all the questions posed by Hal the previous evening, the one that stuck with Annette was the one about whether or not all this could really have been an accident. She had concocted the sunbather-falling-off-the-rocks story to stall for time, but she had ignored the possibility that it could really have been an accident because of the position of the body on the tracks: it looked too carefully arranged to have accidentally fallen into place, and there were none of the bruises or abrasions that would be expected from a fall onto such a rough surface, at least a fall from the cliff above. She had spent at least an hour in the middle of the night mulling the possibility over, and she finally decided it should be thoroughly examined.

Lester St. Clare was always in his lab in the coroner’s office by 7:30, so Annette had no trouble finding him the next morning. She brought with her some of the pictures taken by Hal at the scene.

“Morning, Lester. Do I smell coffee hiding behind the formaldehyde?”

“That’s not formaldehyde, that’s whatever the cleaning people use in here every night. Probably stronger. Do you take sugar or anything?”

“Black’s fine. Lester, I want to talk about the possibility that the Boudreau death may have been an accident. I brought you some of the pictures we took.”

“Oh, yeah. They weren’t ready when we did the autopsy the other day, were they? Accident? Well, I can only deal in probabilities, but I’d have to say that the probability of an accident is pretty low. The way her neck was broken, for example. And no bruises.”

“My initial assumption was homicide because of the way the body was lying on the tracks. Here, look at this.”

She plopped down an eight by ten print of the late Steffanie Boudreau in front of him.

“It just doesn’t seem like she could have fallen in this position. But I want to get your opinion.”

“Hmm. I’d say that this confirms my earlier statement. You have to ask yourself, how could her neck have been broken the way it was and how could she have ended up in this position with no bruises or abrasions and have it be an accident?”

“I understand about the bruises but not about the neck.”

“Oh. Well, her neck was broken with some kind of twisting motion. Not a forward-backward, or side-to-side, snapping motion, like whiplash from a rear-end car accident, say. More like one of those martial arts moves, like in those action movies where somebody grabs a victim from behind and twists their head one way and their shoulders the other.”

“So, with no bruising and the way the neck was broken, you’d say it was a ‘pretty low probability’, I think that’s what you said, that it was an accident. What about with this photo?”

“Extremely low. I think somebody killed her and put her body there in that position deliberately. Whether or not that somebody had the sex with her, I can’t say. It couldn’t have been too long between the sex, the time of death, and the railroad tracks, though. At least the two DNA tests on the semen samples will tell us if there was more than one person involved. Oh, by the way, you were right. The pressure’s on for us to sell the autopsy. Highest bid so far is fifty grand. One of my people got approached. I’m glad I have the original stashed away.”

“Yeah, and I got a call from a supermarket tabloid reporter last night. Wanted to take me out for a drink so we could exchange information. Hang in there, Lester.”

\* \* \*

The number of worried-looking parents tagging after bored-looking teenagers was higher than yesterday, and New Student Orientation Weekend was officially underway. Hal had been able to avoid getting on the schedule for the upcoming Saturday and Sunday activities, but he would have to make up for this luxury with double duty today. He picked up a copy of the weekend edition of the *Frémont Free Press*, the “Welcome Back!” issue, on his way across campus. What he saw on the front page made him walk faster.

The *Free Press* had begun as an official student paper handled by the journalism school, but it had run into political trouble with the trustees back in the early seventies (when it was also known as the “Freak Press”) and they had abolished its funding. Now it was an independent, campus-oriented tri-weekly paper that tried to maintain high journalistic standards but tended toward inflammatory rhetoric.

What had increased Hal’s pace was the 72-point headline announcing “Campus Visitor Murdered” with a sub-head that asked if anyone could feel safe. Just what all these new students’ parents need to see, he thought. And just what I need to have happen on the day when I get to be the Official Campus Spokesperson and meet with all of them.

When he got to his office, he set the paper in front of Alice and asked her to get the campus public affairs office on the phone.

“The provost already called about this. He said he knows you’re occupied with the orientation weekend today, but he needs you to meet with him and the other deans over lunch. That’s between your orientation sessions, so I gave him a tentative ‘yes’. It’s to be in his office, twelve to one. Should I have some lunch sent over for you? I know your schedule will be tight.”

“Thanks, but I’ll grab brunch before my eleven-o’clock session. And I still need to talk to the public affairs office. I’m sure they’ll be busy, but it can’t wait.”

He knew that Alice would be able to break through the lines of defense that public affairs would undoubtedly have in place.

It took her only five minutes. The smooth voice on the line, which Hal recognized as that of Reginald Meeker, the director of the office, immediately began trying to put the conversation off to some other time, but Hal wasn’t having it.

“Look, Reg, I won’t take much of your time. I’ve got sessions with visiting parents here for the orientation weekend at nine, eleven, one, and three, and it’s probably a good idea if I tell them what you’re telling people, so we don’t get our signals crossed, OK? Now, what’s the position on the *Free Press* headline? And I’m in a hurry, too.”

“We’ve been saying that there is no indication that this has anything to do with the university, that it’s highly unusual for Durango, let alone the campus, and that no one needs to worry. I’ll fax you the official statement. I think it’s gone out on the campus-wide e-mail distribution, too.”

“OK. And thanks. Are you going to the noon meeting in Martin’s office?”

“Haven’t heard about it.”

“I’ll let you know what happens. Thanks again.”

Meeker was a combination of a glad-handing used-car salesman and oily lawyer, and Hal couldn’t stand him. But there was no use making extra enemies. He just had time to think about what he was going to say to the first group of new students and their parents.

\* \* \*

If it’s not an accident, it’s a homicide, and I need to move this investigation along, Annette thought. Maestro Franconi’s a nice guy, but he’s still the last person whom we know to have seen her alive. Time for a follow-up interview.

But first, there was a gantlet to run. The parking places across from the police station had been taken over by the media, and anyone entering or exiting the building came under intense scrutiny. They also had the back door staked out. Let’s see, she thought, today’s Friday, we discovered the body Tuesday morning (time of death Monday night); I bet they’re looking for something to close out their news week with a splash. Not that I have anything to give them.

Fortunately, Captain Jankowski had been able to keep the media spotlight on himself, so his line investigators were still not widely recognized, at least by the reporters from out of town. So she strolled casually past the assembled cameras without incident.

But Randy Fredericks, being a local, knew her, and he hurried to catch her after she had reached the parking lot. At least he had the good sense not to shout her name so that the others could hear.

“Morning, Lieutenant. They’re getting pretty desperate over there. And there’s talk of getting a court order for the release of the autopsy. Words like ‘stonewalling’ are going to start showing up in stories pretty soon, like, today probably.”

“Everyone wants instant gratification, no? Well, they’ll have to use whatever words they want, because we’ve got nothing to give them, really. Tell you what, though. If they’re going after the autopsy, we may as well begin to let some of the details out, the ones that we’ve been sitting on. I’m deep background, only, though. OK?”

“Whatever you tell me, I’ll have to ask Amy at the press conference, for confirmation.”

“Then you’ll lose your exclusive, unless you wait ’til tomorrow to ask her.”

“Oh. Right. Nothing’s ever easy, is it?”

“Your deadline for tomorrow morning’s *Herald* is this evening, right? I’ll call you about dinner time. I want to talk to Amy and my Captain about this first. But you’ll hear from me, OK? This way, you won’t have anything concrete to ask Amy today, but you’ll still have the exclusive. And please don’t tell any of those vultures over there who I am.”

“How am I going to get confirmation for tomorrow’s story?”

“I’ll think of something and let you know. Got to run, I’ll call you later.”

She got in her car and immediately called Walter Jankowski to let him have time to think about her newest strategy. Maybe if they called it a “sexual assault,” they could rattle some cages and break loose more information.

\* \* \*

Hal had decided to occupy the moral high ground in the student/parents meetings, and the tactic worked well enough in the 9:00 and 11:00 meetings that his confidence level was high for the afternoon. By introducing the *Free Press* as a useful community and campus resource, and by providing a chatty overview of its colorful history, he was able to criticize the offending headline without being defensive. Like all newspapers, he reminded the concerned parents, they need to do what they can to bolster their circulation to keep advertising rates up, and one way to do that was with headlines.

He emphasized that there was no connection of this tragedy to the campus, beyond the musician’s arrangement to appear at the concert. And he trotted out the campus crime statistics that the Feds required them to publicize—for once, they would actually be worth the effort it took to compile. The ones on campus involving students showed the expected petty theft (bicycles, mostly) and one assault that had really been in the category of fisticuffs (a disagreement, lubricated by beer, over the merits of various professional football teams). He really didn’t have to work too hard to prove that Frémont State was a safe place for people to send their kids.

His high confidence level would be helpful for the 1:00 meeting, because he needed to have it go smoothly after the meeting with the provost and the other deans. The main topic of that discussion had been the *Free Press* article, and Hal’s handling of it in the student/parents meetings had won him praise, helping his confidence further.

But Provost John Martin was one of those rare administrators who disliked meetings, so he used what ones he held to cover as much ground as possible. And, in the discussion of the substance of the *Free Press* article, he had mentioned that he had been on the airplane from Denver with Steffanie Boudreau on Monday afternoon and had been introduced to her by none other than Reginald Meeker who, it turned out, was seated with her. And Meeker was known as something of a womanizer. Martin had been returning from a meeting with National Science Foundation advisors in Washington, but he didn’t know where Meeker had been before boarding the Denver-Durango flight.

While the university could manage the little bumps in the road like the one the *Free Press* headline presented, having the university’s director of public affairs involved in the murder of an international celebrity was a little too much. Even though Meeker reported to the president’s office, Martin was concerned. And Hal would have to put this out of his mind until he saw Annette later, so he could concentrate on putting forward a happy face to the worried parents this afternoon. The best way to do that would be to call her and let her know, so he fished his cellular phone out of his jacket pocket. Several clicks later the multiple forwards found her.

“Trieri, investigations.”

“Hi. I’m dashing about between meetings, but I had to let you in on something I heard over lunch.”

“I’m dashing about, too, trying to avoid all the media vultures in town. What’s up?”

“Have you checked out who may have been on the airplane that Steffanie Boudreau flew in on Monday afternoon? If it wasn’t Franconi who killed her, it may have been someone who met her on that

flight and arranged for a late date. Turns out that John Martin was on it, and he saw Reg Meeker sitting with her.”

“Who?”

“Reginald Meeker, our director of public affairs. It wasn’t clandestine, because Meeker introduced John to her. John said he doesn’t know if they were traveling together before Denver.”

“Hmm. Looks like I should take a little drive out to the airport. Anything else interesting?”

“I’m up to my eyeballs in worried parents. The headline writer at the *Free Press* stuck it to us good, and on orientation weekend, yet.”

She chuckled. “I saw it. And if the local papers treat us this way, what do you think the others will do? I’ll be home about six. Should I bring food?”

“Good idea. I’ve got four meetings with groups of parents, two down, two to go, so I’ll be ready to just sit and stare at the wall. See ya later.”

\* \* \*

She brought home a container of ready-to-boil ravioli with sweet Italian sausage and ricotta filling, dumped them into a casserole dish, covered them with a thinned-down, home-made tomato sauce she had thawed for the occasion, sealed the dish with foil under the lid, and stuck it in the oven. In an hour, she’d make a salad and, presto, they’d have a minimum-effort dinner.

Hal was on the deck, not staring at the wall but watching the clouds gathering west of town, with an opened manuscript in his lap. Reviewing a journal submission, she guessed. She kissed the top of his head, took his glass in for a refill of soda water, and returned with it and a glass of wine for herself.

“So, did you get all those nervous parents calmed down?”

“Yeah, I think they’ll be OK to leave their kids with us now. The campus is really a pretty safe place, and it’s easy to persuade people of it. Find anything out at the airport?”

“Just what you told me. I didn’t have the clout to ask for a search for his complete itinerary. The airline agent in charge is new and doesn’t know me, so I have to go through channels. But I did manage to find out that Meeker changed his seat in Denver and wound up sitting next to our dead musician. You got the phone out here?” He pulled out the house phone from a pile of papers next to his briefcase and handed it to her, and she took a piece of paper from her shirt pocket.

“You might find my half of this conversation interesting,” Annette was grinning as she punched in numbers. “Hello, Randy? I hope you recognize my voice because I’d rather remain officially anonymous for this call. Are you on a reasonably secure phone? ...I guess that’ll have to do. OK, here’s some new information for you. There is evidence, which we haven’t released yet, in the autopsy report that suggests that Steffanie Boudreau was sexually assaulted on the night of her death...What? ...No, the cause of death was the broken neck, but it wasn’t an accidental break, it was definitely intentional, so it wasn’t part of some weird sexual game, it was murder. ...Yes, I figured out what to do. Right after I hang up, which I’ll do in a minute, wait exactly five minutes and then call the county coroner’s office, the number in the phone book. Look it up during the five-minute wait. Announce yourself and listen. You’ll be talking to someone who won’t identify himself—if it’s not a him it’s the wrong person—but who will verify what I’ve told you. Then it’s up to you to write it into something printable. ‘Bye.’”

And she switched the phone off.

Hal was watching, shaking his head. “Oh, what a tangled web we weave.”

“No kidding. It’s all planned, of course, and cleared with Jankowski. Lester’s at his office waiting for the call. Amy’s ready for the stuff to hit the fan at tomorrow’s press conference. And Randy gets another juicy scoop. All in a day’s work.”

“And I bet this makes Mouthpiece Meeker sweat bullets. You going to question him?”

“Tomorrow, after he has plenty of time to read the paper.”

\* \* \*

As arranged, Eddie Walker picked up Lance Riggins at 11:30 that evening in a forest green Chevy Suburban, big enough to ride the tracks comfortably and to carry all of Walker and his assorted TV equipment.

“OK, Lance, I hope you know how to find where we need to go. And why don’t you drive? I may want to tape some of the scenery. I’ve got a low-light camera here, and the moon’s pretty big anyway.”

“I spent the afternoon at the library and the courthouse looking at maps, and I bought this Colorado atlas, supposedly with all the roads there are on it. The train tracks, too. From what I can gather, they found the body just this side of where the train crosses to the east side of the river, north of a place called ‘Rockwood.’ I couldn’t tell what to expect in the valley, like whether we’ll be able to turn this thing around or not. It looks like the tracks hug the cliff, though.”

“So, how far is it on the tracks, anyway?”

“If we get on the tracks at this Rockwood place, a couple of miles, I guess. I don’t know how fast we’ll be able to go, but I can’t imagine that it’ll take too much more than about fifteen minutes to get there, once we get off the main highway. And about the same to get back, assuming we don’t have to go too far to get turned around.”

Keeping carefully below the speed limit, Lance steered the huge vehicle up North Main Avenue and out of town toward Silverton. The nearly full moon lit the Animas Valley with a conspiratorial glow, and Walker was experimenting with various camera settings to be ready for the real thing later. It took about 20 minutes to get to the turnoff to Rockwood, and Lance pulled over to the shoulder to let several late-night travelers recede into the distance. He did not want the Chevy to be seen turning onto the side road.

When there was no traffic, Lance turned down the hill toward Rockwood, using only the parking lights and creeping along slowly. After descending the steep, curvy grade, they came upon several houses, a small, commercial-looking building, and assorted pieces of railroad equipment. They discovered that the road was parallel to the train tracks. At a driveway that crossed the tracks, Lance switched off the parking lights and turned right and then quickly left, straddling the rails.

Experimenting with gears and speeds showed him that he could actually make pretty good time, and he put this to good use to get clear of the built up area and away into the wilderness. Steering was a little strange, because the tracks tended to correct errors, kind of like an amusement park ride. As a test, Lance slowed to a crawl and turned the wheel sharply, to see if the vehicle might be trapped on the tracks, but its big tires easily clambered over the rails. With his confidence restored, Lance reset the trip odometer and settled in for the short drive to the bridge.

They almost missed it in the dark, because they still had the headlights off, but the D&SNGRR folks had kindly put up a sign announcing the Animas River crossing. Lance stopped and backed the Suburban several hundred yards up the tracks, using them as a guide. He parked on a nearly flat section, just before backing around a curve, where the tracks still banked slightly toward the rock wall on his

left. The rail-bed was nestled onto a rock shelf against an irregular, sheer cliff, and he had to find a niche in the wall so that he could open his door. As he squeezed his way out, he heard a yell from Walker.

“Holy shit! There’s just air here! And the sound of a waterfall or something. How the hell am I going to get out?”

Lance shut the door and shuffled sideways between the vehicle and the cliff to get around to the back, and shined his flashlight over the edge that Walker’s door was hanging above.

“I don’t think you’ll be able to get out the way I did, and there’s not much room here, either. Man, I didn’t know how close to the edge I’ve been driving this thing. Probably just as well I didn’t, especially that backing up. I’m glad I’ve got the tracks to guide me along. You stay there, and I’ll look around some. Maybe you can get some video shots from where you are.”

“You want the camera lights?”

“I don’t think so. They would only make weird shadows.” He started walking the tracks, up the slight grade back toward Rockwood, scanning back and forth with the flashlight. He really didn’t know what he expected to find, but looking carefully for something, anything, seemed like the thing to do. At least this would give him a feel for things, so that he could provide a more authentic, and lurid, description of the scene for his upcoming article. He looked back and saw Walker standing in the door, aiming a camera out over the gorge and panning upstream, slightly downhill from where he’d walked to. Well, he thought, the tracks look just like railroad tracks. The cliff is sure impressive though, both up and down.

About a quarter mile later, he got bored and turned around to walk back to the Suburban. Walker was still standing in the door, aiming the camera up toward him, so he waved. Then he started to enjoy the evening. The moonlight cast shadows in the gorge, and the stars were brighter, and far more numerous, than he remembered. Sounds were drowned out by the white water in the gorge below. A gentle up-valley breeze at his back carried the smell of pine and railroad tracks. And something else, slightly acrid, and smoky.

When he was about halfway back to the Chevy, he noticed that Walker had lowered the camera and was staring at him, or maybe past him. Suddenly, Walker waved his free arm, and Lance heard him shout over the noise of the river. Something about “...behind you.”

He glanced over his shoulder, and his peripheral vision worked just well enough to cause the hair on the back of his neck to stand up. He turned, and had barely enough time to recognize what was lumbering down the tracks toward him as an eight-foot-tall snowplow blade, its leading edge about six inches from the rock wall. Then a bank of six high-powered driving lights blazed on from the roof of the cab, nearly blinding him. Behind him, he heard that Walker had begun leaning on the horn of the Suburban. But the plow kept coming.

Lance began running instinctively, at the same time thinking that it wouldn’t help to run. Then he remembered the niche in the rock wall where he had stopped to open his door, and he began watching the cliff face on his left. The lights on the snowplow made shadows of each irregularity in the wall, and, when he spotted a large one, he stopped and flattened himself against the wall next to a vertical ledge about a foot wide. That, plus the six inches or so of clearance that he’d seen might just do the trick.

He took several deep breaths, exhaled completely, and tried to make himself one with the wall, facing it, head turned toward the Chevy, arms stretched high, butt tucked in. And he felt the ground vibrate and the slipstream buffet him as the snowplow roared by a few seconds later, its empty dump-truck bed yawning at him. It seemed to be picking up speed. Only after he was safe did it occur to him what was about to happen.

Chevy Suburbans are very large vehicles with a curb weight of close to three tons (even without an Eddie Walker inside). But a mountain snowplow is designed to move large amounts of material, and the blade on this one was angled for maximum leverage, toward the right. So, with a screeching of torn metal and a shower of sparks, it rear-ended the Suburban and had no trouble tipping it over into the Animas Gorge. Lance's eyes adjusted to the moonlight as he watched in horror while the rented Chevy with Walker inside managed two and a half slow motion mid-air rolls before bouncing off a large boulder into the river, nose first. The current quickly tipped it upside down, and it floated a few yards before becoming jammed on some rocks, creating a new, artificial patch of white water. The snowplow had disappeared up the valley around another curve, and Lance was left standing alone on the tracks, gasping for breath, cold sweat chilling him to the marrow.

He recalled from the drive up to the bridge that there would be no place for the truck to turn to come back to get him at least to that point, so he had some time to save himself if it should. He began to run up the slight grade, back toward Rockwood.

## Four

His and her bedside telephones, on separate lines, had seemed like a techno-extravagance to Hal until the first time she got a middle-of-the night call. By now, whenever it happened he would wake up, listen to her answer her phone on her side of the bed, and happily roll over and go back to sleep. Unless her end of the conversation was weird, he was usually asleep within a few seconds. This one kept him wide awake.

"This is Annette Trieri...Oh, hi Jackson. Geez, it's Saturday morning. What time is it?...You've got who down there? Where have I heard that name?...Oh, yeah, one of those tabloid reporters. So why are you calling me? Don't tell me he wants another date...He was where? And what happened?...A snowplow? Who was in the truck?...A TV guy? Off the tracks into the gorge? So what am I supposed to do about it in the middle of the night?...OK, I'll get there as soon as I can."

It was about then that Hal decided that he should get up and make coffee.

\* \* \*

The eastern sky was just beginning to glow pink behind the mountains by the time that Annette got to the police station. Hal's coffee was a godsend: her first cup had helped her get dressed and her second cup was almost empty as she walked up to the front desk.

"I'm here, Jackson, barely. Now what"

"Well, Lieutenant, we've got him sitting outside your office, drinking coffee. He's still pretty shook up. He's also exhausted."

Annette stopped at the departmental coffee pot for a refill, and she grimaced at the difference between Hal's Kona blend, freshly ground that morning, and the early-morning police station sludge. In a chair outside her office, with his head in his hands, sat a forlorn looking figure. She could see his scalp through the thinning dirty blonde hair atop his head, but otherwise he looked young and fit. A tad over six feet, under 180 pounds, probably, her trained eye told her.

“Mr. Riggins? I’m Lieutenant Annette Trieri. We spoke on the telephone the day before yesterday. I understand you’ve had an exciting night.”

When he heard his name, Lance looked up blearily, blinked his brown eyes, and worked to gather his energy for a conversation. He hadn’t realized how tired he was until he’d been seated to wait for her. The drive down from Rockwood in the stolen pickup—he was thinking of it as “borrowed”—had used up the last of his energy, and he had been able to make it to Durango only because of how scared he was.

“‘Exciting’ understates it, Lieutenant. I don’t know how much longer I’ll be able to stay awake, but I’d like to give you an outline of what happened.”

“I understand that you were trespassing on the Durango and Silverton’s property and got into some trouble.”

“Yeah, well, normally I’d try to lie my way out of something like this, but this one time I’ll be straight, honest.” And he proceeded to fill her in on his adventure.

“You must be in some kind of shape to have run all the way up that section of track, no?”

“I run marathons, so it wasn’t out of my ability range. And I’ve been here for several days, so I’m almost acclimated to the altitude. And I was pumped with adrenalin, that’s for sure.”

“To be clear, you had no glimpse of the driver of the snowplow?”

“Nope. Those lights came on and my eyes had been pretty well adjusted to the dark. I was blinded. I did get a look at the back end of the truck, and it seemed like a highway department one, maybe state, maybe county. It was sure big.”

“So. Are you going to write this up for publication?”

“Hmm. I hadn’t even thought of that. Yet. I guess I’m too exhausted. Yeah, I guess I’ll have to. Since Eddie and I were up there investigating the Boudreau death, I’ll probably tie them together. Say, what about Eddie? I can’t imagine he survived that crash into the river. Is anyone looking for him?”

“The desk sergeant told me that there would be a search party out with first light, which is about now. Why don’t you go back to your hotel and get some rest? And, look, I’m sorry about being nasty to you on the phone the other night. But you were being just too sleazy, OK? Here’s a tip: the best way for you to get information about this whole thing is to be real nice, and I mean that in the most positive way, to Randy Fredericks, who writes for the local paper. We’re feeding him information. This morning’s paper will say that the Boudreau death was a homicide with a sexual assault.”

Lance managed to look grateful through his weariness. “Thanks, Lieutenant. And I’ll take your advice. Let me know if you find anything about Eddie, OK? I kind of feel responsible for him.”

\* \* \*

As Annette was watching Lance make a tired exit, thinking that she really shouldn’t feel sorry for him, she was handed a note. She glanced at her watch and fished her phone out to call home.

“Hi, I’m glad I caught you before you left for campus. And I can’t thank you enough for getting up with me to make that coffee.”

“Summer mornings are beautiful around here anyway. What news from the front line?”

“You won’t believe it. Lance Riggins—that reporter for the National Gazette who called me the other night, remember?—he got a rental car and drove up the Silverton tracks last night. Just like you

and I discussed doing. He went with a cameraman for Fox News. I don't know what they thought they were going to accomplish, but they just had to see where we found the body Tuesday. And while they were up there, up on the High Line section, a highway snowplow, for God's sake, came roaring down the tracks from Rockwood and plowed the car off into the gorge, with the camera guy in it. Riggins was walking the tracks and managed not to get hit, luckily for him. Then he ran back to Rockwood, found a pickup with the keys in it and drove back here."

"He ran the High Line section, in the middle of the night? Whew. I guess I have to have more respect for someone who can do that."

"Anyway, I just got a note that says the sheriff wants me to go with him and some railroad people on a flatcar with a crane to find the car and, presumably, the body. My front desk must have called his office. So I have no idea where I'll be when today, except I'll be up there for most of the day, probably."

"I'll make something for dinner that'll keep, so don't worry. And, hey, come home first and put on some outdoor clothes. You looked like a million on the way out this morning, even if you were half asleep. You don't want to ride up there with a work crew and get that dress all greased up."

"Oh. Right. They can wait for me to get changed, I'm sure. I'll be right home. See ya, unless you have to leave right away."

"I'll probably stay home today. And I bet you haven't eaten anything, so I'll whip up something for you to take with you. I sure do make a good wife, if I don't say so myself. Or maybe a Mom."

"Yes, Mom. I'll be right there."

Annette put the phone away, started a mental list of the calls she'd have to make to rearrange her day, and headed for the door.

\* \* \*

Even though there were three performances scheduled for the weekend, Saturday evening and both matinee and evening concerts on Sunday, Luigi had insisted on a Saturday morning rehearsal. The concertmaster's ego and ambition notwithstanding, his ability to pull off the Beethoven concerto was just not quite up to Luigi's standard.

It wasn't that Leonard Schwab didn't know the music, or that he wasn't a top-notch violinist. Juilliard graduates aren't second rate. It was just that his interpretation didn't quite harmonize with Luigi's. Schwab was from Manhattan; Luigi was from Como. They had both grown up steeped in classical music, but New York versions of the great works are quite different from northern Italian versions. What galled Schwab was that he knew, no question about it, that that little pompous ass Franconi would have let Steffanie interpret the Beethoven her way. Except for her little accident. And it didn't help a bit that Luigi kept calling him "Lennie." After all the trouble he'd gone to, Schwab was afraid that his big chance to shine in public was going to be tarnished.

But there was nothing he could do about it, because Luigi, as conductor, was clearly in charge. So he went along with Luigi's interpretation, knowing that he could have the last laugh at the final performance on Sunday. Besides, he'd been up most of the night and was too tired to fight about it.

"Thank you! That was much more crisp. Now, let's try the final half of the last movement just once more, and this time make it sing. Then we can all rest before tonight." Luigi was quite the perfectionist.

\* \* \*

Hal had decided to avoid the campus, having done his part for orientation yesterday, so he was at home when Annette called about mid-morning.

“Hi. I thought I’d check in and let you know what’s going on, since I’m standing around waiting anyway.”

Earlier, she had hurried home to change into hiking boots, jeans, and a windbreaker, and Hal had packed her a lunch and other amenities in a day pack.

“Hurry up and wait, that’s the way it always is.”

“Well, what you don’t know is that I’m waiting by myself. We had to drive up to Silverton, because that’s where their crane was. Then, we were chugging down the tracks a little way below Needleton, when I spotted what turned out to be a state snowplow in a thick patch of woods on the edge of a meadow. As near as I can tell from the map you packed for me—and thank you very much again for all the stuff in the pack—it’s just above the inlet of Cascade Creek, before the gorge closes in again. There’s green paint on the blade of the plow.”

“So you jumped off the train to look at this thing, or what?”

“I made them stop and let me off. I really won’t be needed down there where the car’s in the river anyway. And I put in a call to the office to send out an investigation team, to look for fingerprints and get a sample of the paint. They should be here before too long.”

“So the bad guy pulled the snowplow off the tracks, drove across a meadow to try to hide the plow in the woods. Then where’d he go? Isn’t that still pretty isolated? And, for that matter, I’m surprised that your phone works way up there, in the valley and all.”

“According to the map, this is pretty close to the ski area and you know that the skiers have to have their cell phones, so I must be hitting a tower around here somewhere. And the map says there’s a pack trail here that goes up to the highway, so the perp could have hiked out of the gorge here. It doesn’t look like more than a couple of miles up to the highway...uh, although there’s quite an elevation gain, about 1500 feet. But it’s no big deal, really. And there was a full moon last night.”

“Um, so have you got your service revolver? It makes me nervous that you’re up there all by yourself.”

“Yeah, well, you know that I’m not Ms. Outdoorswoman, and I’m not too comfortable myself. For one thing, the mosquitos are driving me nuts. There must be a pond around here somewhere. And every time I hear the wind move the bushes around, I can’t help but think of bigger critters. I’ve got my gun, but I sure as hell hope I don’t have to shoot any bears with it.”

“I’m more worried about unfriendly humans than bears. You don’t actually know that the bad guy, or guys, really walked out of there. Listen, don’t use your battery up, OK? I want you home for dinner.”

“Yes, Mom. I’ll be careful. And I’ve got the phone plugged into the cigarette lighter in the truck, so I’m using its battery. Here comes a railroad company pickup now, the kind that rides the tracks. That must be my guys coming down from Silverton. I’ll be home before you know it.”

\* \* \*

Reginald Meeker finally dragged himself out of bed at 1:00, still feeling woozy from too much tequila the night before. If only he’d not started drinking so late. At least it was Saturday, and he didn’t have to put on his happy face for the university—the way he felt, all those parents and new students would probably just make him throw up.

He forced himself to drink a large glass of V-8, with a splash of Worcestershire sauce to make it into a sort of hybrid Virgin Mary, and then went out to the deck for some t'ai chi. He knew that the only way to get over the hangover hump was with some serious exercise, and t'ai chi was a useful warm-up for his karate routine. That, followed by a three- or four-mile run, would work miracles. Assuming he could get through it all without passing out.

Although he was able to will his body through the intricate, slow dance movements, his mind would not behave. He returned again and again to yesterday's crisis at the university. The *Free Press* story had kept his telephone ringing all day with a mix of calls from worried parents and bloodthirsty reporters. It surely didn't help matters that the international tabloid press had the town staked out.

But there was really no news beyond the discovery of the body and speculation. The fact that the autopsy report was being kept secret was not at all surprising, especially given what he knew they would have found. But even that should not surprise experienced reporters—although they would exploit it for their stories, certainly.

At least his position at the university seemed secure. Weathers, he had heard, had done an admirable job in the orientation presentations yesterday, and today's presenters would take the same approach. And the press release Meeker had written had been approved by both the provost and the president without a single change, a minor coup under the circumstances.

Clearly, the only thing to do was to sit tight and wait. And see if this hellacious hangover would go away.

\* \* \*

On the campus, the Saturday orientation sessions were in full swing, with Provost John Martin at the podium. He was following Hal's lead of yesterday and trying to maintain his position on the high moral ground, against a tide of worry (from, naturally, parents), accusations (from the campus rabble rousing crowd), and leading questions related to the sexual angle of the murder (from the tabloid reporters, who had discovered the sessions). Martin was doing his best to keep his temper in the face of outrageous behavior by the last two of these groups, but it was tough going for someone used to being in charge and control.

"Provost Martin," a well-dressed, middle-age woman holding a notebook had jumped up, "How is the university handling this situation compared to how it usually handles sexual assaults?" Martin recognized the woman from her previous questions in the same "have you stopped beating your wife?" mode. He wondered how red his face had turned by this time.

"I hate to disappoint you, but Frémont State University has no experience in 'handling,' as you put it, sexual assaults, because we haven't had any, ever. And this one isn't a university matter, as far as we're concerned. There is simply no evidence that it occurred on our campus. As I've said repeatedly, it's in the hands of the police. And, as I have also discussed, the campus is probably the safest place around for miles."

Just as the reporter was opening her mouth to ask a follow-up question, up from the front row jumped an individual of dubious gender, wearing a tee shirt that boldly proclaimed "Dyke Power: Womyn Loving Womyn!!" Martin had to restrain himself from simply walking off the stage, for he knew what was coming.

"You lying chauvinist pig! What about that gang-rape at the fraternity house last year?" Martin forced himself to take a deep breath and count slowly to five.

“Professor Glendon, you know well that the investigation of that incident by the Durango police showed it not to be an assault at all. And you also know well that we have closed and disbanded that particular fraternity chapter despite this finding, as a way of clearly signaling that we simply do not tolerate any improper behavior by any of our student groups.” He forced a smile. “And I had thought that my attendance at your sensitivity training sessions last spring had cleansed me of the ‘chauvinist pig’ title. My mistake and apologies.”

There was a titter of amusement from the audience at this last, and Martin sensed that they were on his side. He broadened his smile.

“Ladies and gentlemen, let me take this opportunity to introduce Professor Madge Glendon, who chairs our women’s studies program. She and I have worked closely to ensure the safety of our female student population here at Frémont State University, and I consider her to be a valuable advisor. Her demeanor also points out an important aspect of the academic environment that we strive to maintain here: open, frank, and free discussion of even the most sensitive of issues. We believe that this environment is an important component of the extraordinary education that we offer to our students. Now, perhaps we could have a few questions from the parents?”

Martin hadn’t been selected to become provost by accident, and his skill at deflecting attacks such as this one was the envy of his faculty. Glendon sat down and was now looking worried, for she knew that Martin had a long and precise memory. There would be no favors for her, or her program, this academic year.

\* \* \*

Because she was not stuck with the salvage operation, Annette was able to get back to town by mid-afternoon. Although most of her plans for the day were canceled, she was intent on questioning Reginald Meeker about his meeting with Boudreau on the airplane, so she called him as soon as she could, from her cell phone on the way home. Her timing couldn’t have been better.

Meeker was finally eating and reading the morning paper, his exercise having done wonders for his stomach, and his attention was riveted on Randy Fredericks’ copyrighted story when the phone rang.

“Yeah.”

“Mr. Meeker? This is Lieutenant Annette Trieri, Durango Police Investigations.”

Fortunately, Meeker’s mouth was empty, or he’d have choked.

“Mr. Meeker? Are you there?”

“Ahem. Excuse me, Lieutenant, I’m afraid I had a mouthful of toast. Now. What can I do for you?”

“I’m investigating the death of Steffanie Boudreau, the violinist who was found dead on the Silverton tracks. I’m sure you’ve read about it. I understand that you rode with her on the flight down from Denver, and I’d like to get together and talk with you. We’re needing to exploit every possible source of information if we’re to make headway on this case.”

“I’m afraid that there’s not much I can tell you about it. We did sit together and chat, but it was mostly light conversation, mostly about the area. She had never been to Colorado before, let alone our little corner of the state, and she was intensely curious about it. So I basically gave her a verbal tour. But I can’t imagine that you’d be interested in that.”

“I’m interested in everything, Mr. Meeker. When would be a good time for you?”

“Well, I’m afraid that my weekend is pretty full. How about Monday morning? Say, around 9:00?”

“At your office? That will be fine. I’ll see you then. Oh, by the way. Because of your position at the university, I’m sure you’re trying to keep up with this thing, especially given the *Free Press* article yesterday. You should know that we’ve decided to use Randy Fredericks, of the *Herald*, as our conduit for leaking information, so be sure to read his stuff first. Did you see today’s paper?”

“I was just reading it. I got rather a late start today. I guess that this development isn’t too surprising, but it adds to the mystery.” *I got rather a late start today!* What the hell did I say that for? He felt dizzy.

“And this is pretty tame, all things considered. More will be coming out in the next few days, you can be sure. Well, see you Monday. Have a nice weekend, Mr. Meeker.”

He felt little beads of sweat breaking out on his forehead.

\* \* \*

It wasn’t two minutes later when Annette’s cellular phone tweedled—an annoying noise that never failed to startle her, but the price she had to pay for having calls forwarded to wherever she was.

“Trieri, investigations.”

“Hello? Ah, my name is Joe Weisicki, I work for the Durango & Silverton. I have a note from my boss to call you.”

Annette’s mind shifted gears rapidly, seeking a connection between the name and a reason for his call. Oh, yes! The missing railroad tender operator! Then she had to shift her Subaru’s gears even more rapidly, to zip around a tourist Winnebago, backing out of a side street. Summertime Durango striking again.

“Yes, thanks very much for calling me. Have you been out of town?”

“What’s this all about? Why should I answer police questions about my personal life?”

Annette winced at the thought that this character would play these little games and decided to nip his bad attitude in the bud.

“Just trying to get calibrated, Mr., um, Weisicki, was it? If you’ve been out of town, you have a solid explanation for why you’ve not called me before today, and you also may not know of recent events around here. Otherwise, I’ll have to assume that you’re hiding something from us, something that may be related to a murder. And since you called the station, where all incoming calls are traced automatically, we know where to pick you up. Do you want to do this hard or easy?”

Annette’s free and easy approach to the truth in these situations was one of the reasons that she was so successful in her job.

“What? ‘Accessory to murder?’ What murder? Look, lady, I just got back into town from a little vacation and I’m catching up on things and I got this note from my boss, who’s already mad at me for something else I don’t understand. I don’t need trouble from you, too. What’s going on here?”

“So you were out of town. Good. Now we’re getting somewhere. I have an idea of what your boss is upset about, and if you can help me out, I think I can help you out with him. How about meeting me at the police station downtown so we can have an informal chat? I’ll fill you in. I think you’ll understand why you’re on something of the hot seat, but I also think I can get it cooled down. How soon can you get downtown?”

“I’m already downtown, at the Narrow Gauge. I’ll walk up to the station right now and meet you there.”

“OK, I’ll be there in about five minutes. Just ask at the front desk for me and they’ll sit you down if I’m not there yet. It seems that traffic is a bit of an adventure just now.”

By feel she pushed the “End” button and speed dialed the front desk to warn them and to see if this fine example of citizenship had a record.

\* \* \*

When Annette finally got home, just before 8:00 that evening, the realization that she had put in a fourteen-hour shift, on a Saturday no less, hit her as the garage door was closing behind her. She had been quite proud of the fact that, with her promotion to lieutenant, she was no longer really working “shifts,” or getting overtime, for that matter. But fourteen hours on a Saturday was absurd. Not to mention exhausting.

She eased herself out of the car, collected her gear, and let herself into an apparently empty house. No pots merrily bubbling on the stove, no Hal watching television. But there was Pat Metheny’s soaring guitar, off in the distance, upstairs, so Hal must be tying flies, she thought. As she hauled herself up the staircase, she realized how tired she was.

Hal was hunched over his fly-tying desk, working on a tiny bit of fluff rigged in what looked like a miniature torture device. He had heard the stairs creak, no doubt, so he didn’t jump when she kissed the back of his neck.

“Welcome home, all in one piece, I hope? Give me a minute and I’ll welcome you properly. If I get up right now, this thing’ll fly apart and I’ll have to start over.”

“What is all this? I thought I’d seen everything, but this is all new.” She yawned so hard her jaw cracked.

“Remember those parachute patterns, with the little white wing sticking straight up above the horizontal hackle winding? This is how you make ’em, with a parachute hanger. It’s something of a pain, but I’m running low. Someone, it seems, has found them to be quite effective, and she hasn’t learned to tie flies yet.”

Annette thought it best to change the subject.

“Um, I seem to remember something about dinner? I hope?”

“Absolutely. All set, well almost. I didn’t know when you’d get in, so I made something this afternoon. I can finish it up while you have a hot shower. What time is it? Was your long day well spent?”

“About eight. And, yeah, it really was. Although these fourteen-hour days aren’t what I like to plan for. As you know. What’s to eat? I’m ravenous. If I can stay awake.”

“A pasta salad with cold smoked salmon and various goodies. There! Now isn’t this little thing cute?” And he stood up, turned around, and enveloped her in a bear hug. She snuggled in close.

“No fair going to sleep yet. You’ve got to eat and fill me in on your adventures. Last I heard you were sitting in a snowplow in the woods. Hope that didn’t last all day.” All he got was a muffled “mrrph” in response.

\* \* \*

It had taken only a little cajoling to get her into the shower, and it turned out that much of the exhaustion was merely low blood sugar, for she perked up with the food and provided a running commentary on her day's activities between mouthfuls. She was finishing up her third helping of the pasta (and Hal was watching tomorrow's lunch disappear) when she got to her interview with Weisicki.

"It turns out that the tender operators, as well as the company, take their jobs quite seriously. They make the first run up the tracks each day, in all kinds of weather and in bad light in the spring and fall, and it's their responsibility to make sure the tracks are clear and to spot potential rock falls as well. So my new friend Joe was appalled that no one had made the run Tuesday. He fully expected that it would be covered. Can I have a little more Chablis?" Hal poured.

"But it was his run to make, right? So wouldn't it be his responsibility to get a replacement?"

"He says that they told him it was taken care of, 'they' being someone he couldn't really identify. It seems that he got a call on Monday morning, after his run, that he'd won an employee bonus award for five nights up at Peaceful Pines Resort, but he had to take them right away, starting that evening. So that's where he was all week. It's something way out of his price range, and he's always wanted to go there, riding by it every day and so on, so he didn't want to lose the opportunity. And in the scramble to get ready and take the last train up there Monday, he just believed what 'they' told him on the phone. We'll try to check into who made the reservation and paid for his stay, and so on, but that's where things stand now. I did call and got a verification that he was indeed up there. It looks as if someone went to a lot of trouble, and expense, to get him out of the way for the Tuesday morning tender run. What's five days up there cost, anyway? Three grand?"

"Maybe two-and-a-half, double occupancy. Unless you get a lot of massages and extra stuff. It's about the most expensive resort around these parts. That's why I like to go up to Jack Hardin's place—it's less than half that. But I'm pretty sure that Peaceful Pines has only weekly accommodations, so I don't know how they could have wangled a five-day stay."

"The thing about this is, of course, all the trouble of getting reservations at Peaceful Pines and paying for them just to get old Joe out of the way for a morning suggests clearly that whoever killed Steffanie planned things way far in advance. This was not a crime of opportunity. They made it happen."

"Unless there's more going on than just the murder. But I don't know what that could be, aside from that episode last night with the plow. Did Riggins say anything about who could have overheard him making plans? I mean, it's highly unlikely that whoever did that was just out for a casual joy ride. Too coincidental, even for me. Um, I've got dessert for you, if you want some. Although I can't see how you could, after all that pasta."

She had finally wiped her plate completely clean with the last piece of French bread.

"What is it?"

"Just some of that raspberry sorbet. And cookies."

"Yum. Nice and light. What is it, a pint box? Tell you what. Just get a couple of spoons and forget the bowl. I'll share." And there goes my afternoon snack, Hal thought.

\* \* \*

At 9:10 Monday morning, Annette was sitting in the anteroom of the public relations office at the university, sipping the coffee that Reginald Meeker's secretary had kindly offered. Quite good coffee, actually.

She had spent most of Sunday in her rest-and-relaxation mode, lying around doing nothing. Hal had tried to get her to go fishing with him, to try out some of his new creations, but she hadn't had the energy. Now, while she was waiting for the tardy Mr. Meeker, she was pondering his comments on the phone, about getting a late start on Saturday. And he'd said something about "eating toast." A mid-afternoon breakfast? What was he doing Friday evening?

The hallway door flew open, and in burst the object of her patience, full of apologetic explanations about his late arrival. Smarmy apologetic explanations, she thought. Are all PR people this way? After coffee refills and a word to the secretary that they weren't to be disturbed except for the president (of the university, Annette decided), they were finally sitting in his office. He had chosen a side table for their conversation, hoping, Annette decided, to keep matters informal and as cordial as possible.

She noticed that Meeker's office furniture was significantly newer, and far more expensive, than the furniture in Hal's office. PR flacks get better furniture than deans, eh? Our tax dollars at work. Maybe I'll make him earn his pay today.

"Well, once again, Lieutenant, I'm most sorry that I was late. I'm afraid that someone in my position, you know, just has these little things come up."

"I understand completely, Mr. Meeker. In an organization like this, there are any number of matters that need to be attended to, some of which, I'm sure, make this murder investigation pale by comparison."

She stitched a smile on her best poker face while watching him sit up straight in surprise.

"Now, Mr. Meeker, as we discussed on Saturday, I'm interested in your conversation with Ms. Boudreau on the flight from Denver. Do you mind if I tape this?"

She had placed a portable recorder on the table and now pushed the record button. He looked stricken.

"Could you please go over as much of that conversation as you remember with me? There may have been something she said, or some reaction she had to something you said, that could be very helpful in reconstructing her remaining hours of life. It appears that you were one of the last people to see her alive, after all."

She noticed that a shine of sweat had appeared on Meeker's ample forehead, despite the brisk air conditioning.

"Ah, as I mentioned, she was full of questions about Colorado, and the mountains, and cowboys, and so on, and I did my best to be a travel guide for her. It was really a most unremarkable conversation. And, really, it's a pretty short flight. We didn't have much time, what with the beverage service and looking out the window and all."

"Interesting. My information, from the airline, has Ms. Boudreau sitting in an aisle seat." She smiled, cordially, she hoped.

"Ah, yes, that's probably their information. But, you see, I insisted that she and I exchange seats, so she could see the view. Is it warm in here?"

He took a silk handkerchief from his jacket pocket and blotted his forehead. Annette, meanwhile, made a note to ask John Martin if he recalled the seating arrangements on the airplane.

“Anyway,” he was beginning to ramble nervously, to Annette’s pleasure, “we talked about the names of the mountains, I know only some, of course, and other features like the San Luis Valley. I was able to point out the ski area up at Wolf Creek Pass. And she asked about outdoor opportunities here in Durango. She was quite interested in exploring the area, by car and on foot. From what I saw in the paper last week, it looks as if the exploration took a tragic turn.”

He smiled weakly. Annette wrote deliberately in her notebook, summarizing his statement and including some lines from a Shakespearean sonnet she remembered, to kill extra time. It worked—he rambled on.

“I can’t imagine who would do such a thing, and how it could have been planned so elaborately. I mean, that’s what it looks like. And then there was that story in yesterday’s paper, about the car in the river. Do you suppose the two things are connected?”

“Did she say anything during your conversation about her plans for the evening, that would be last Monday evening? We’re trying to reconstruct the time line.”

“She did mention that she would be staying at the GP and she was having dinner with the conductor, um, Franconi, is that right? I presume you’ve questioned him. After the story on Saturday, about the sexual assault, I would think that he would be a real suspect. Seems like a womanizer, if I ever saw one.”

They obviously don’t hire PR people as judges of character, Annette thought.

“One thing that would help me, Mr. Meeker, is to understand how it was that you were on her flight from Denver. Did you arrange for this in advance, or were you there for some other reason?”

“Oh, it was entirely coincidental. I was in Denver for discussions with some of our state legislators—not really lobbying, you know, just keeping in touch. I have a log book of all my professional contacts, being a public employee, you know. And so I can show who I was meeting and where. Then I just happened to be on the same flight back here as Miss Boudreau.”

He was trying very hard to document the coincidence, she thought. She slowly picked up her coffee cup and took a sip, watching him follow her moves with his own cup.

“Since you mentioned the incident with the car in the river, Mr. Meeker, I’m curious about something. I recall that you seem to have been eating breakfast when we spoke on Saturday, about 2:30 in the afternoon, I believe. May I infer from this that you were out late Friday evening?”

He choked on a mouthful of coffee, dribbling some down the front of his designer silk tie. She waited patiently while he recomposed himself.

“Oh, dear, I’m so sorry. Went down the wrong way. I’m sorry. What were you asking?” He glanced at the tape recorder.

“Was Friday night a late night for you?”

“Well, I’m afraid that I don’t really see what this has to do with my conversation with Miss Boudreau. But, since you ask, yes, I was out, in a combination of social and professional activities, rather late Friday. Public relations can be an all-day and even all-night job, sometimes.”

“Professionally? Oh, good. Then you won’t mind providing me with the names of your contacts. They must be part of that log book of your professional activities, no?”

It was fortunate that he didn’t get caught with another mouthful of coffee. Really, she thought, this is not someone who should get involved in high-stakes card games.

\* \* \*

Luigi was still steamed, so it was just as well that he didn't have to conduct on Mondays, which were reserved as Chamber Night at the AMFest.

Last week, the world-renowned Takács String Quartet had created a sensation with the final two Bartók quartets, completing the cycle they had begun three weeks earlier. This week the AMFest Chamber Consort, a subset of the orchestra Luigi had conducted over the weekend, was returning to more classical themes by playing Haydn symphonies. Led by the concertmaster, Luigi's favorite violinist, Lennie. Who had absolutely butchered the Beethoven Concerto last night with an inexcusably heavy, overbearing interpretation.

Despite Luigi's best efforts, Lennie had managed to turn the opening *Allegro* into a sort of weird march (even the slower, lyrical section) and the following *Larghetto* movement into a dirge. And Luigi couldn't bear to even think about the *Rondo*.

At least Saturday night and Sunday afternoon had gone according to plan. Lennie could actually play pretty well when he chose to. If only poor Steffanie hadn't died, she would have been splendid with the Beethoven. And her Stradivarius was far more well suited to the *Violin Concerto in D* than that Japanese contraption that Lennie played.

It was times like this that Luigi really missed Dieter, who was always able to provide a calming influence. Having heard rumors about the intolerance levels of the cowboys in the American Southwest, they had decided that Dieter should not accompany Luigi to Durango. Luigi had since come to think of Durango as a relatively enlightened place, but it was probably better that they had not taken any chances, especially given Dieter's tendency to flout his nipple rings.

Maybe he could call. Let's see. 11:00 am in Durango, Rocky Mountain Daylight Time, would be 1700 UCT, or 7:00 pm in Rome, eight hours later. Or is it the other way around, eight hours earlier, which would make it 3:00 am? This sort of calculation never failed to remind Luigi why he was an artist, not a rocket scientist.

But what a tragedy it was, this business with Steffanie. Most everyone seemed to think Luigi an eligible bachelor, he knew, so the police were bound to suspect him. Maybe Dieter should have come along, after all. But, no, then fly-fishing would be out of the question, because Dieter would consider it barbaric. Perhaps he should explain his orientation to that policewoman, Ms. Trieri, the dean's, uh, partner, she seemed sympathetic. The less reason they had to suspect him, the better, after all.

\* \* \*

On the campus, it was time for another kind of orientation, phase two. The parent/student phase had been completed over the weekend, and now the parents were supposed to be departing, leaving their offspring to tackle early class registration by themselves. And, for most of them, to take their first independent steps toward adulthood, much to the delight of said offspring. Hal, having done his part with the orientation lectures during phase one, had only the registration week hassles to deal with.

As he walked up to the campus, he reminded himself to enjoy the relative peace and quiet, because, starting on Wednesday, the rest of the student body would begin arriving. The dorms would be overflowing, the bookstore would have lines around the block, and traffic, already a tourist-infested nightmare made worse by the out-of-town media crowd, would probably become gridlocked all over town. And the campus would fill up with students and their dogs.

The only up side to this would be the warm weather, with the attendant fashion, or lack of it, among the young women. Thank heavens for halter tops, he thought, and other such perks of academic employment.

When he came across a copy of the *Free Press*, he braced himself for the worst and was glad he did. A 72-point headline screamed

### **AMFest Violinist Raped and Murdered**

This was followed by a summary of Randy Frederick's *Herald* articles from over the weekend. He also noticed a tease for an editorial that dealt, apparently, with the lack of police response. Better read that when I'm feeling calm, he thought.

Alice, as usual, was already in the office, reviewing one last time the fall semester class schedules for the various natural sciences departments in Hal's college. He was only too happy to have her handle this chore, which included coordinating classrooms and laboratories as well as double-checking on the faculty course assignments made by the various department chairs. His role would be to mediate disputes, always in favor of Alice's side, of course. As he walked in, she intercepted his trajectory toward his office.

"Good morning Dean Weathers. I was glad to see that you weren't part of the newspaper stories about the newest tragedy over the weekend. The provost has scheduled a meeting at noon, over lunch, to discuss matters, particularly the latest headlines and the editorial. I haven't read it yet, but I understand that he's most upset. And Mr. Meeker, from the public relations office, just called. He seemed upset also. I hope you're feeling better than all these other people?"

"Couldn't be better, Alice, given that the summer's winding down. Were you able to schedule my class on Tuesdays and Thursdays this semester? Let's see, this time it's earth sciences for journalists, isn't it? Yes, that works just fine with two long lectures per week, so I hope it can be late morning, starting, say, at 10:00? And maybe in that classroom with the new digital projector I talked to facilities about last week? I could take my portable computer and show real-time weather and earthquake data."

He knew she already had this covered, but he had to act as if he had some modicum of control. He was, after all, The Dean, and supposedly In Charge.

"All set, Dean Weathers. Tuesdays and Thursdays, 10:00-11:20, NATS 205, although I'm told that the projector won't be installed for a few weeks yet."

"Great, and thanks for your efforts, Alice. Guess I should read this editorial that's got everyone so het up."

And he eased into his office, leaving the door open.

Actually, he knew he wouldn't have to read the entire editorial, only the paragraph headers. They, in the *Free Press* attempts at style, would summarize the salient points.

The first paragraph, "Musician Murdered," would no doubt re-hash what little was known about the incident. "Students Scared" would, predictably, provide a campus perspective, and "Women Worried" would spin this perspective into the feminist angle that the *Free Press* was notorious for. "Police Paralyzed" would then begin the editorial rant, and, ah, here's what's got John upset, "Administration Impotent," which would rail against the university's response (or, in the newspaper's opinion, lack thereof) to the situation.

Well, Hal chuckled to himself, John's getting to the age when a headline like this could just hit a little close to home. Especially given that battle-axe he's married to. Maybe he'll get calmed down in time for that noon meeting he called.

As Hal was getting settled in to work on the weekend's e-mail, his interoffice phone line buzzed. Even though his door was open and she was sitting just outside it, Alice was careful about protocol.

"I'm sorry to disturb you, Dean Weathers, but Mr. Meeker is calling, again. I'm afraid that I mentioned that I expected you soon, when he called a little while ago. I can tell him that you're not available and that you'll call back, if you'd like."

"Thanks, but I'll take it, Alice. Don't worry about Reg. He's usually all puffed up about himself, but he's basically harmless."

And he pushed the flashing button on the phone set.

"This is Hal Weathers."

"Hal, this is Reg Meeker. I'm worried about how the campus is looking with respect to this murder investigation, and I have to say, your girlfriend isn't helping things a bit. This morning she grilled me and even taped the conversation. It was sounding like she suspects me of something."

"Well, what could that be, Reg? If I know her, her approach would be to let you decide whether the shoe fits and whether to put it on. Have you got a solid alibi for last Monday night, and for Friday? If so, surely you've got nothing to worry about."

"My whereabouts isn't the issue. The university's image is. And she's not helping a bit. Can't you get her under control?"

"Oh, come on, Reg. I'm sure the university will survive, even if you turn out to be the murderer."

Hal thought he heard something like a hiccup on the other end of the line.

"And the people who were most worried, the parents of the new students, left over the weekend, after we got 'em calmed down last week. Anyway, I'll mention to Annette that you're concerned and that you want me to get her under control. That'll be good for a laugh or two."

"I'm afraid that you're not taking this nearly seriously enough. I'll have to speak to the provost about this. Good day."

And the phone went dead. Hal burst out laughing as he stared at the receiver. If only the rest of the day could be this amusing, he thought.

\* \* \*

Just as the dormitories were filling up, so were the apartments in the student slum, to the north of, and down the bluff from, the campus. To maximize their profits, landlords required student leases to begin at the start of orientation, even though most of the students in the apartments were juniors and seniors, disdaining the events meant for first-year students. But, because their leases started, they began arriving by the car load. An extra week of parties before classes start never hurt anyone. At least anyone that age.

In one such apartment, which had actually been occupied for most of the summer, a black O'Farrell Roper, with a concha band, hung on a peg on the back of the door. Like many of the student apartments, this one came unfurnished, but the occupant had obviously been too busy to pay much attention to decorating. There was a cheap set of dining furniture, already beginning to show wear and tear, and one overstuffed chair, clearly obtained from a second- (or maybe third-) hand store. Through the bedroom door could be seen a mattress, on the floor, with sheets unmade and in need of washing. And, in a

corner, there was a vinyl-covered particle-board desk, on which sat, incongruously, a laboratory-quality LCD video monitor and several professional-quality audio components. Next to the desk was a high-end computer workstation, cooling fans humming their content. The other electronic equipment in the room also contrasted with the stark furnishings. Strangest of all was the gadget connected to the telephone jack, a beige box with several rows of winking red lights. The computer and the telephone were plugged into it. The owner of this eclectic collection was speaking into that telephone.

“That’s right. Everything I’ve been telling you is confirmed. Those cell phone calls from the bar were even better than I thought they would be. The sensitivity of the microphone was perfect for recording all of the background conversation. And when I enhanced the tapes, it worked just like we planned.”

The voice on the other end was intelligible to only the apartment’s occupant, thanks to the scrambling capability of the beige box.

“And the police still haven’t figured out anything, is that correct? All this confusion can work for us as well as screw things up for us. It’s your job to make it work for us as much as possible, as I’m sure you know. Your little indiscretion with the girl is what got the police involved, remember.”

“You don’t have to remind me. And I’ve been taking that approach for a couple of days already. I think things will work out fine. Ah, shit. Hold on a minute, will ya?”

A high-decibel version of an old Jimi Hendrix tune—it turned out to be his cover of Dylan’s “All Along the Watchtower”—had started up from the apartment across the alley, and the window needed to be closed if the conversation were to continue.

“Damn kids. I need to get this thing wrapped up as soon as possible. School’s starting up, and the place is crawling with students. Between them and the media people and the tourists, I’m going crazy.”

“Yes, well, if you can stick to the original time line, you’ll be out of there in a week or so. But I expect that things are going to slip a little, given recent events. And there’s no hint about the merchandise, hmm?”

“Nope. But I’ve got a couple of ideas to follow up. I’ll keep you posted. Same time Wednesday morning?”

“I’ll be waiting. Remember to keep a low profile.”

\* \* \*

Lance Riggins had been only about a third awake Saturday morning at the police station, but he remembered Annette’s advice clearly. So, after several hours of badly needed sleep, he had tracked down Randy Fredericks on Saturday evening and, despite Randy’s better judgement, struck a deal to work together with him. This was fortunate for Lance, because his weekly deadline was today, and he needed to impress the folks back in Atlantic City.

Randy wouldn’t have cooperated except for the deep pockets of the *National Gazette* and its huge circulation. Lance had agreed to include both their names on the by-line, and that promised Randy a readership unheard of by Durango standards. And the \$10,000 weekly bonus helped calm Randy’s reluctance about working with Lance. Lance could pretty much recycle Randy’s weekly output, punching up the juicy stuff, of course, and add the information available only to Randy on Monday, so that the Tuesday *Herald* and the *Gazette* would share the latest details. What a deal. Now he could go back to what he was good at, sitting at the bar drinking margaritas. And trying to figure out who dumped Eddie and the rental car into the river.

Eddie was dead, of course. Lance had found that out Saturday afternoon. Not that he really cared that much, but whoever did it was also out to get Lance, so he had self-preservation as a motivating factor in trying to figure out who it was. Unless Eddie had told someone, and Lance doubted that, the only people who could have known about their plan to drive up the tracks Friday night would have had to overhear his conversation with Eddie at that bar on College Avenue. Unless someone had been watching the tracks and radioed to someone with the truck. But the eavesdropping made more sense. So maybe the thing to do would be to hang out at that bar and see if he recognized anyone from the other night. Lance, being a professional journalist, at least in his own eyes, was supposed to be a trained observer, and he should be able to spot people he saw then.

But what next? Suppose he recognized someone. Confront them? Maybe not. Lance was good at running, not confronting. Well, the *Gazette* had provided him with an expense account, so maybe he should hire a private detective to check out whoever he recognized. This is newspaper business, after all. That foxy lady detective could recommend someone. He dug in his pockets for the card Annette had given him.

\* \* \*

What was most puzzling to Annette, and also to the other professionals concerned with the case, was why Steffanie Boudreau's killer, or killers, would have gone to all the trouble of dumping her body on the railroad tracks, especially in such a remote location. Because no one could understand it, Captain Jankowski had convened a Monday afternoon brainstorming session to tackle the issue. Annette was sitting at a conference table with the coroner, Jankowski, and Sgt. Fred Winders, Annette's second in charge, to discuss the issue. It was supposed to be Annette's case, but she recognized the need for help.

"It seems to me that we should question everything, including where we started this whole investigation. Did someone really place the body there, intentionally, I mean?"

"We talked about some of this last week, Annette. There weren't the sorts of contusions that you'd expect if it just fell." Lester St. Clare was quite confident in his findings.

"I know, and the positioning of the arms and legs wasn't natural, like from a fall, either. But we were thinking about a big fall, like off the cliff above, as in that story I made up for the newspaper. How about a little fall, like off the back of a pickup truck, or something like that?" Having evidence that trucks can indeed drive the tracks, Annette had new angles to explore.

"Is this before or after she died?" Jankowski was careful about his understanding of time lines.

"Right. Even though the injury that killed her looked intentional, maybe it could have happened, in some weird way, in a fall." Annette was determined to question every detail. "We're looking at this as a sexual assault and homicide, but maybe it was really just a romp in the hay and an accident."

St. Clare had his chair tilted back, and he was staring at the ceiling, hands folded under his chin, concentrating. He looked far more rumped than usual.

"Suppose that's right, Annette. She gets laid, double, and then goes for a joy ride in the back of a pickup, or something like that. Her boyfriend is driving and she's in the back, enjoying the wind in her hair. And all over her body, because all she's wearing is her underwear. Or maybe it's a motorcycle. A bit bumpy, but possible. She loses her grip, or balance, or whatever, and falls to the road bed. She lands somehow, on her hair, I guess, so that the blow of hitting the ties is cushioned, but it twists her neck and breaks it, killing her. And her body comes to rest in that strange position we have in these pictures here. With no other bruises, or scratches, or injuries of any kind."

He pointed to the pile of eight-by-tens made from Hal's pictures, spread out on the conference table.

“Right. And the boyfriend doesn’t know she’s fallen, so he doesn’t stop. When he can’t find her, wherever he winds up looking for her, he’s too scared to go back and look, and he’s been lying low ever since.” Annette was trying to encourage this alternative line of reasoning.

“OK, but then he comes out of hiding to steal the snowplow and dump that reporter into the drink on Friday? That seems a little strange.”

“But we’re assuming that the two are connected. Maybe they aren’t.”

Jankowski had been studying the photographs carefully.

“Look here, Annette, this roadbed where she’s lying isn’t exactly a bluegrass lawn. It’s rocky, the ties are all roughed up, and there’s no way she could have fallen, even from just standing still, and not have received some kind of scrapes and bruises. You were there. What do you remember about the surface?”

Annette looked depressed.

“You’re right, of course. I’m questioning everything, but some things are just too true to bother with. That roadbed would have caused some marks on the body, whether it was dead first or not, if there was any kind of significant fall. But, look, let’s be as methodical about this as we can. Is there some kind of accident that we can imagine that would have put her there in the condition in these pictures? I mean, what if she was up there with someone, goofing around? Maybe, just lying down, pretending to be the classical damsel in distress on the railroad tracks? If she was on a hot date, that sort of thing could happen, no? She was in that wild-and-crazy age group that we’ve got so much of at the university here.”

“Yeah, but how did she end up dead?” Jankowski had achieved the level of Captain by being ever practical.

“Oh. Well, there is that complication. I guess what we need is the results from the blood work to see if there’s alcohol or drugs involved. And the DNA tests on the semen samples.”

St. Clare had been staring at the ceiling again.

“You know, that’s worth thinking about. How she might have got dead in that goofing around scenario, I mean. Let’s hold that thought pending the blood and DNA results. I presume that you’ll still be interested in finding out who her date, or dates, were? And, of course, there’s still the snowplow murder.”

“And whether they’re connected somehow.”

\* \* \*

Back at her desk, Annette was making notes of the meeting when the telephone on her desk buzzed, and the operator informed her that a Lance Riggins was calling.

“Mr. Riggins, what can I do for you? I hope you’re all rested up?” Hearing background noises, she wondered where he was.

“Afternoon, lieutenant. Yes, I slept most of yesterday, in addition to Saturday. Now I’m trying to figure it all out. What I don’t understand is who could have known we were going up there. Eddie and I had one conversation about it, here in the Narrow Gauge on Thursday evening.”

So that’s where he is, she thought.

“Well, someone could have listened in on that conversation. But you must have thought of that.”

“But there really wasn’t anyone sitting near us. Did you read the report on Eddie?”

“Just this morning. Why?”

“Well, you now know that he was really obese, and people tended to give him lots of room, even in a bar. So, even though the place was pretty full, we had elbow room. And it was noisy, like now only more, and it’s hard to believe that someone could have eavesdropped.”

“We just had a meeting about all this, and we’re trying to question everything, including all of our previous assumptions. Have you thought that this may have just been an accident? Maybe there were just some teenagers out for joy ride and you got in the way.”

“I hadn’t thought of that. Do things like that, I mean kids swiping a snowplow, happen often around here? Or things like people driving down the tracks?”

“No idea, but I’ll check with the railroad. Or, better yet, maybe you can. If you’re in a bar this time of the afternoon, it sounds like you need something constructive to keep you occupied. Do me a favor and let me know, OK?”

Lance said goodbye and hung up, wondering how he’d managed to lose control of the conversation so quickly. He hadn’t even asked about private detectives.

\* \* \*

Having worked a long day on Saturday, Annette was determined to leave early, and so it was about 3:00 that afternoon, when she was just getting into her car to leave, that her cell phone tweedled.

“Trieri, investigations.”

“Hi, Annette, it’s Lester. We got the Boudreau blood work results.”

“And?”

“Our demure violinist was a serious party person. Given her age group, I guess that’s not too surprising, though. Anyway, we’ve got alcohol, marijuana, cocaine, and just a trace of PCP.”

“All within 12 hours of her arrival here? Whoever she met up with was certainly well supplied. Well, hell. I thought we had this stuff under control, after we got my friend Sal off the streets last year.”

“I’ve been thinking of that discussion we had earlier this afternoon, about the possibility that this whole thing was some kind of accident, from wild-and-crazy goofing around. This combination of chemicals raises the possibility a notch or two.”

“How so?”

“Well, chances are that she did the coke fairly early on, because I didn’t find any residual in her nose, and she had no needle tracks on her. Could have been smoked, like crack, but that would probably have been early, too, because smoking crack is hard to do in a vehicle. Too much paraphernalia. So then they were out driving around, up the tracks and so on, and drinking and smoking dope. And the dope was probably laced with a little angel dust. This combination could have induced a convulsion, especially if she’d been sitting for a long time and then lay down. All the chemicals in the blood going to the brain, you know. An oxygen-starved brain, at that, since she just arrived here from sea level.”

“And the convulsion could have broken her neck?”

“Possibly. I’m going to do a follow-up on the autopsy and see whether there are any indications I missed before that could support this.”

“You? Miss something? Come on, Lester, I didn’t think that was possible.”

“Well, I’m thinking of splinters in the back of her head, hidden by hair. I did look for bruises and contusions, but I didn’t go through her scalp with a fine-toothed comb. Uh. Sorry. Accidental pun, really. And I want to have another look at her elbows. But don’t think that this will solve anything. After all, you still have to find out how she got up there, and who fed her the chemicals. And we have that snowplow thing to think about, too.”

“Of course, but this changes the entire complexion of the investigation. Let me know, OK?”

“I’ll call you tomorrow.”

\* \* \*

## Six

Hal was asleep, in the middle of a wonderfully frustrating dream. He was standing in waist-deep water, braced against a mild current just below an elegant little waterfall, and trout bigger than his thigh were porpoising everywhere, some close enough to touch. Their prey, giant golden stoneflies, filled the air, flapping around his face and covering the surface of the stream.

But no matter what he did, he always discovered that his stonefly imitation wound up in the middle of a huge, intractable wind knot in the tippet of his fly line. Try as he might, he couldn’t get the knot untangled, and each time he tied on a new length of tippet and tried to make a cast, it instantly transformed itself into yet another knot, worse than the previous one. Then he noticed Annette standing on the bank, shouting at him through cupped hands. What was she saying? What about the violin?

As he slowly emerged from the water, he realized that Annette was wide awake, sitting up beside him in bed, looking rather fetching in the dim light filtering through the window, it occurred to him, and talking to—herself? the wall? Hal?—about a missing violin. So that part of the dream was real. He’d rather it had been the trout.

“Oh, you’re awake. What an absolute dolt I am. Steffanie Boudreau was a concert violinist, no? Well, where’s her instrument? Don’t world-class soloists usually have world-class instruments? Where’s hers?” She was clearly not going back to sleep any time soon.

“Um, what time is it? Four-thirty? Ahh, surely it’s not going anywhere between now and morning, you know?” But she had leaned over, kissed him on the cheek, and was getting out of bed.

“Maybe I can find some kind of violin listing on the internet, with who plays what on the international scene. There’s no network traffic this time of day anyway, so things should be fast.”

And she was gone, before he could even shake the water out of his consciousness.

Two hours later, when he awoke to the squawks of a magpie argument, or maybe it was a courtship, out on the deck, he realized that she was still missing. He found her sipping coffee over the Tuesday *Durango Herald*.

“I seem to remember something about a violin that got you out of bed earlier. Any luck?”

“Morning, sleepyhead. Yes, some. I found a listing of musicians and their instruments, but I couldn’t really find out much about Boudreau’s violin. It was a Strad, though.”

“A Stradivarius? Really? Aren’t those astronomically expensive?”

“Depends on its pedigree, on which Stradivari brother made it and its paper trail. Some are more expensive than others, it appears, but high six or seven figures is a ballpark. So, yes, they’re not for everyone. The question is, where’s hers? I’ve decided not to call the General Palmer until later this morning, when the day shift gets there, but it’s got me chewing my nails.”

“The hotel? Is her stuff still there?”

“No, we inventoried her room early last week, and her stuff finally got packed up for storage Friday. But I sure don’t remember anything about a violin. Maybe she had the GP put it in their safe, or something like that. I wonder why no one’s said anything about it. Like Meeker. He was sitting with her on the plane, and I bet she didn’t check it with luggage. Or put it in the overhead. If I had a million dollar fiddle, I’d buy it an extra seat and make sure it had a couple of pillows. And a blanket.”

“But, last night you were talking like you’d figured it all out. The accident scenario, where she died of a convulsion from a drug overdose and all. How does this missing violin, if it’s really missing, fit in?”

She smiled knowingly.

“Remember now, I’ve been up and thinking about this for a couple of hours already. That’s one of the first things that occurred to me, too. And, of course, there are several alternatives.” She began ticking items off on the fingers of her left hand.

“First, maybe the violin’s not really missing. Second, if it is missing, maybe there’s no connection, but it just got stolen after she died. Third, maybe the drug overdose was not so accidental, and whoever’s responsible for it took the violin, either when they went out together or later. Fourth, maybe the drug overdose was accidental, but it still wound up in the hands of whoever was with her.”

“You’ve been up for a couple of hours and a couple of quarts of coffee, sounds like. But, look, something like a Stradivarius isn’t going to be all that useful to a thief. It’s not like you can take it to the local pawn shop, or something. They’re collectors’ items, and collectors usually want legitimacy, don’t they?”

“Not always, although this is a little different from things like paintings or other art work. Unless someone’s into collecting musical instruments and never playing them in public. But you’re right, this is the thing that’s been puzzling me, too. Maybe the perps don’t know what they’ve got their hands on.”

“Or maybe it’s sitting in the safe down at the General Palmer. But you’ll need to wait ’til nine or so to find that out.”

“Hmmp. And here I was going to drag you back to bed and ravish you. But if you’re going to give me grief, I’m just going take a shower and go to work.” And she stuck her tongue out at him and headed for the shower before he could recover. Maybe he could go back to that dream and actually catch a fish this time. At least she hadn’t drunk all the coffee.

\* \* \*

Annette waited patiently until 9:00 to call the General Palmer, hoping that the day shift would be on duty and alert. She succeeded, using her Voice of Authority, in getting Phillip Westerman to the telephone.

“Mr. Westerman, I’m sure you remember me from last week, when we had just found that Ms. Boudreau’s body had been left on the Silverton tracks. I’d like to thank you for your cooperation.”

“As I said, Lieutenant, the General Palmer tries to balance the privacy of its guests with its civic duties. And I’m still not over the shock of having such a tragedy strike one of our guests, especially her.”

“We continue to discover things that add to the confusion, I’m afraid. I’d like to ask you about something I just thought of this morning, in fact. I feel rather foolish in not having thought of it before. You have a copy of the inventory that we made of her possessions, I believe?”

“I recall it, yes. It’s filed away by now. Should I get it?”

“Not unless you want to—I have my copy here. I’m puzzled that there’s no violin on it. There’s sheet music, but no violin. I’m sure she must have had one, being a concert soloist and all. Did she check one into your safe?”

“No violin on the inventory? How strange. Let me check the records.” Annette heard the tapping of a computer keyboard. “Ah, yes. According to this, she checked several items with us. My apologies for not thinking of this when your people packed her belongings. It appears that she has a safe deposit box, probably with cash or jewelry in it, and a larger item in the safe. Presumably that’s the violin. It will take me a minute to look. Can I call you back?”

“I’ll hold, thanks.” Annette scanned down the inventory list, and found the key to the box Westerman had mentioned. At least they would be able to see what valuables Boudreau had thought important enough to check.

It actually took Westerman five minutes.

“Lieutenant? I’m back. With bad news unfortunately. The larger item I mentioned is missing. I looked in the paper records we keep and found a notation that she took it out of the safe at 8:30 last Monday evening, a week ago. All we have is ‘Item 31-G,’ though. I’ll have to ask the clerk who was on duty if he remembers what it was. I also dug out our copy of the inventory, and here’s her key to the box, at least.”

“So if it was her violin, she took it with her. You might be interested to know it’s worth a huge amount of money, at least on the legitimate market. It’s a Stradivarius.”

“Oh, dear. I’ll call the clerk right now, even if I have to wake him up. I certainly hope that everything is by the book on our end.”

“I’m sure you don’t have anything to worry about, Mr. Westerman. And I’ll be right over with her safe deposit box key. I want to see what she put in there.”

\* \* \*

The man in the black O’Farrell Roper with the concha band was on his way south up Main Avenue when he spotted Annette crossing the street, headed toward the General Palmer. Unlike the hoard of reporters, he had been able to spend several weeks becoming familiar with the local authorities, so he recognized her easily.

Torn between his need to remain anonymous and his desire to find out what Annette was doing, he hesitated for a moment in front of the old building before curiosity finally won out. He went in just in time to see Annette disappear behind the front desk with someone who looked to be the hotel manager. The clerk at the desk look up as he walked in—so much for complete anonymity.

“May I help you, sir?”

“Ah, well, I’m wondering about your room rates. And availability. What an elegant lobby you have here.”

Improvising, he hoped the conversation would not take too long, as he wanted desperately not to be seen close up by Annette.

Back in the vault, Annette was in the middle of the ritual she had experienced at her bank. Westerman had inserted his master key into one slot, and she had inserted the key she'd retrieved from the evidence room in the other, and the little door marked "31" opened, revealing a metal box. Westerman slid this out and set it on the table behind them.

"Um, normally, Lieutenant, I'd leave the guest in private to retrieve his or her belongings, but I hope it's allowable for me to remain for this?"

He was obviously as interested in the contents as Annette.

"I insist, Mr. Westerman. You'll make a good witness. Let's see what we've got."

And, after pulling on a pair of latex gloves, she opened the lid.

Inside was a variety of objects, some more recognizable than others. Annette went for one of the more obscure ones and picked up a white cardboard tube. Westerman looked somewhat uncomfortable.

"Is that what I think it is? And why..."

"Looks like a tampon tube to me. But five will get you ten that it's got some kind of contraband in it."

Annette put the tube in a plastic bag she had pulled from her pocket.

"I'll wait and open this in the lab. You wouldn't want the floor of your nice clean safe to get all dusted with, say, cocaine, now would you?" she asked.

Westerman pointed to a little booklet.

"Is that a passport? I thought you found hers in her room."

"We found a French passport in her room, yes. But this is Canadian. Maybe she had dual citizenship. But look. Here's her picture, but the name is Sylvie Benton. Address in Montreal. And here's a bunch of Sylvie Benton credit cards, golds and platinums. SB. I guess that would be to cover monograms and so on. There's more to our dead violinist than meets the eye, I think."

"Maybe Boudreau is her stage name, or something innocent like that. And that looks like travelers' checks."

"Yep. Let's see. \$100s. Way more than a dozen, maybe two. This lady traveled in style. And the rest is jewelry. String of pearls. What looks like an emerald broach. Three diamond studs in a little box."

"Three?"

"Two ears and a nose. I bet you didn't know she had her right nostril pierced."

"She was in that age group, I guess." Westerman sniffed. "I never could understand how they put up with the annoyance. I guess I'm just an old fogey."

"Yeah. Well, I've seen worse, ones that you really don't want to hear about. That looks like all of it. How about a signature? Then we can make a copy for your records. I'll have someone come by to pick up all this stuff later."

Annette had been making notes of the contents of the box, and she had initialed them, leaving a space for Westerman to do the same. Westerman shut the box and slid it back into place, using both keys to lock it up.

"Once again, I'm sorry I didn't think of this last week, lieutenant. And, as I said a few minutes ago, the clerk on duty last Monday told me that he retrieved what looked to be a violin case for Ms. Boudreau, or Benton, I guess. I wish we could be more helpful about that, but it's gone."

“So there’s a million-dollar plus fiddle floating around Durango somewhere. Great.” She chuckled. “Maybe we should put a lost-and-found ad in the paper. Well, thanks for all your help, Mr. Westerman. And, listen. I’ve often thought that one of the disadvantages of living in Durango is that I don’t have the excuse to come and stay here. Maybe I’ll talk Hal into getting his house painted so we can make the excuse.”

“It would be our pleasure to have you stay with us, Lieutenant. Let us know when, and we’ll reserve you a suite.”

\* \* \*

“Do you mean to tell me that Steffanie may have been killed for her instrument?” Jacques Ament was incredulous. They were sitting on the side chairs in his cluttered office in the music building.

“Not necessarily, Dean Ament. All I’m saying is that it’s missing, that she apparently took it with her wherever she went after having dinner with Luigi Franconi last Monday evening. We found her body the next morning, but the violin is still missing. She may or may not have been murdered, regardless of what you’ve read in the newspaper. And the violin may or may not be connected to all this. I’m wondering what you might know about it. If it’s readily identifiable, for example.”

“Of course, she has several instruments, and I don’t know which one she brought with her here. I remember when she got the Stradivarius, though, because she called me. She was so excited. She even played it for me over the telephone, from Paris.” He smiled with the memory. “I have to say, it lost something in the transmission.”

“This is important information, that she may not have brought the Strad with her. Is there some way we can find out?”

Ament had winced, a small gesture, but noticeable, at Annette’s use of the contraction for the famous violin maker, and she made a mental note to reform her usage.

“I can call her agent in Paris. I believe that this was a special trip for her engagement here, rather than a concert tour, so it may be that she brought one of her lesser instruments. I recall that she mentioned to me her concern about the climate here, the low humidity especially.”

“We do know that she checked her violin into the hotel safe, for a short time. But I suppose that all of her violins are rather valuable, no?”

“Actually, I don’t even know how many she has. When she was a student, she had a rather ordinary instrument, but now, well...?” He trailed off with a typically Gallic shrug. “But I would think that she would bring a reasonably good instrument for this concert, if only to impress her old teacher. Perhaps this is conceit, but I think it is probably true. Even if she did not bring the Stradivarius. I will call her agent and leave a message. Will that help?”

“Most certainly, Dean Ament. Thank you so much.”

It will serve the jerks right if they have an inferior violin after all their trouble, Annette thought.

Because she was on the campus, she went looking to see if Hal wanted to have lunch. Alice was, in her usual efficient manner, holding down the fort.

“Oh, I’m so sorry, Ms. Trieri, but Dean Weathers is at yet another luncheon meeting with the provost. They’re probably discussing strategy again, to deal with the publicity about this terrible tragedy and so on.”

Annette had worked hard to get Alice to address her more informally, with mixed success. In person, in Hal's office, Alice seemed incapable of informality, though.

"Well, please tell him that he missed his second chance today. He'll know what I mean. See you soon, Alice."

\* \* \*

From Hal's office, Annette wandered over to the chemistry building, a place familiar to her from an earlier case. She took her time, enjoying the hustle and bustle of the campus on the day before registration. And marveling at how young the students looked.

Inside the chemistry building, she found the door to the analytical laboratory open, but saw no one inside.

"Hello? Anyone home?"

She knew from experience that Gil Taylor could be anywhere in the helter-skelter of equipment.

A head appeared over the top of an equipment rack, rather as if it were a jack-in-the-box instead of a bank of computers.

"Right here. Oh, hey. Annette Trieri. Long time no see. How are things down at the station? Pretty crazy, I bet, with all the media types in town, huh?"

Gil eased himself out from between the rack and the wall behind it, looking taller and skinnier than ever. His wizardry with chemical analyses had earned him enduring respect, and a standing-order contract, from the Durango police department.

"Don't get me started. That's why I'm here, partly. The less time I spend downtown, the less chance that I'll get recognized and staked out. This, I can tell you, is a real lesson in how to hate the media. Anyway, I've got a sample for you. How are your toys?"

"Ready and willing. Any hints?"

"I don't even know what color it is. Haven't opened it yet." She pulled out the tampon tube from the hotel safe deposit box.

"Oh, cool, the old trick from the *Monkey Wrench Gang*." Gil looked tickled.

"Huh? Oh, yeah, that Ed Abbey book. I remember. What's her name, Bonnie. But this is from that dead musician that's been in the papers. She's French. Or maybe Canadian. Surely this is just a common subterfuge, not something that Abbey invented."

"Sure. But it's still neat to see it in action. You haven't opened it? Here, come over here and use this."

He walked over to a fume hood, squirted a clear liquid that promptly evaporated onto a stainless steel tray, and polished the tray with a Kimwipe. Then he turned around and set the tray on a table, after pushing aside a clutter of tools. She put her latex gloves back on, held the tube over the tray, and gently pulled the telescoping halves apart.

And out plopped four little hand-rolled cigarettes, in two different colors of paper.

"Man, whoever rolled these puppies was really a pro. Ah...not that I'm an expert or anything you understand, Lieutenant." Gil's grin was shameless.

“Yeah, yeah. I’ve heard it all before. And don’t even think of smoking these. We found PCP in the owner’s blood. You might find yourself in deeper than you want to be.”

Taylor chuckled, “I gave all that stuff up years ago, I’ve told you that. Strangest thing. I just discovered that I didn’t like the feeling of the marijuana high any more. Anyway, what should I do with these? Check for PCP? If I’m allowed to empty one out, I could tell you if it’s pot or not just by the smell, I bet.”

“Maybe the different colors mean different things. How about doing a little exploratory surgery on one of each color and seeing what’s in there? A check for PCP would be good, but maybe a check for cocaine would be also. Looks like there’s enough material to do both, no?”

“Sure. Want to help in part one? Go ahead and put two of ’em away. I’ll get another tray cleaned off.”

And he rummaged around and came up with a second stainless steel tray, which got the same cleaning treatment as the first. Then he rummaged around some more and produced a scalpel, which got carefully wiped before he used it to slit open the blue joint. He spilled out the contents and scooped up a sample of the vegetable matter with the scalpel. The sample got placed in the center of a microscope slide, which he carefully transported across the room to a stereo microscope that was almost hidden by a pile of computer cable.

“Hmm. Have a look.”

He had fiddled with the microscope, looked in critically, and was now inviting Annette see for herself. As she did, he returned to the rest of the contents of the blue joint, picked up and crushed a pinch in his gloved fingers, and smelled it gingerly.

“Of course, you can’t tell by looking, but it sure smells like pot. See the crystals, though? There’s something else in this stuff, for sure.”

Through the microscope, Annette could easily see what he was talking about, translucent white grains of some kind of powder mixed in with the flat chunks of a brownish-gold material.

“Now for door number two,” Gil said as he slit open the red joint.

The same procedure produced the same result, with a twist. After looking carefully at the second sample under the microscope, Gil carefully arranged both samples on a single slide, in separate little piles.

“Have a look at this.”

H offered the instrument to Annette after studying the side-by-side sample carefully. She saw that both piles contained white grains, but there were differences. The vegetable matter was not the same color, the second sample being more brownish green, she decided, and the powder was somehow different. She mentioned this to Gil.

“Yep. That’s my observation, too.” He was taking notes, and looked up with a smile. “I love it when I get a second opinion that agrees with mine. I’d say it’s two different strains of ganja with two different spikes of whatever the powder is. One’s probably PCP, from what you said. Chances are the other’s cocaine or heroin.”

“Cocaine, most likely, but we’ll see. We also found coke in her blood. And the pot, of course. And alcohol.”

“Yeah, well, smoking makes you thirsty, dry throat and all that. Damn, I’m sure glad I’m all grown up. But this isn’t what killed her, according to what’s in the papers.”

“Maybe, maybe not. I’m told that the combination of all this junk could have put her into convulsion, and the official cause of death was a broken neck. So who knows? Anyway, you won’t have any problems with the analysis, huh? So I can take these other two joints back and log them in?”

“No problem. And I’ll bring in whatever’s left over, scout’s honor.”

\* \* \*

Annette was feeling a little better. Maybe all the drugs found in Boudreau’s blood were not really local after all. Looking at her watch, she saw that it was 1:30, and she decided to see if Hal was out of his lunch meeting yet.

“Hello, Alice, I’m back. I thought Hal might be, too.”

“As a matter of fact, he just walked in. And he’s not on the phone, so he’s probably just working on e-mail. Go right in.”

Annette smiled and carefully, quietly, opened Hal’s door. He must have felt a draft, or the light changed, though, because he looked up.

“Oho! Is this my third chance? Why don’t you just close the door behind you, and I’ll clear these journals off the couch, and...”

“Not on your life, buddy boy. I’ve been here too many times when Alice just waltzes in without knocking. Besides, I’m saving it up for tonight. The longer we wait, the more special things I’ll think up. I was really thinking about lunch—but I hear from Alice that you’ve eaten. Want to go out for dinner? My treat.”

“Celebrating something?”

“A little progress, maybe. Gil Taylor and I just cut apart some joints that our dead violinist had stashed in the GP hotel safe, joints spiked with some kind of crystal substance. So maybe she brought her drugs with her, and I don’t have to be concerned about what’s floating around the streets here.”

“Or maybe she found someone to buy them from here.”

“Killjoy. Hmm. But probably not, because she wasn’t here very long. I mean, she checked in to the hotel, put some stuff in the hotel safe, including, probably, her violin, went out to dinner with the conductor, then took out the violin later in the evening, before going out again. So, unless she got the dope from Luigi, she brought it with her.” She stared off into space.

“Anyway, I found out that the missing violin may or may not be a Stradivarius, from Dean Ament. It seems she had more than one and that she was worried about the dry air here and how it might affect the Stradivarius. So at least that lowers the stakes a little. And finding the dope makes me feel better, somehow. Gil’s going to figure out what the crystal stuff is.”

“Hey, great. Our college can always use the income. Where are you going to take me for dinner?”

“Straighten up and fly right, wise guy, or it’s to the cafeteria over at the student union.”

“Ah, yes, and it’s Tuesday. Let’s see. Must be meatloaf night. Maybe we’ll get there for the beginning-of-semester food fight. Man, those were the days...”

“OK, OK, I’ll give it some thought. How about Chinese?”

\* \* \*

The man with the black O'Farrell Roper had connected to his internet service provider and was downloading several e-mail messages. Snoops on the network would have been frustrated to try to read them, however, because the messages were complete gibberish until they passed through the beige box that acted as the scrambling device between his telephone and computer, on one side, and the outside world, on the other.

One advantage of this system was that incoming messages that were not scrambled by the sender got descrambled anyway, into a gibberish of their own, so he had an automatic method to filter out spam, the e-mail equivalent of those annoying telephone solicitations that always happen during dinner. This time, it turned out that all but one of the incoming messages fell into that category, so he deleted them immediately. The remaining message was genuine, and disturbing.

*To: LaCoste  
From: RH  
Ref: Timing  
Cc: File*

*While I recognize that the public news sources are not entirely trustworthy, I am concerned by media reports of the fallout from the operation you are managing. I require that, within 48 hours of the time of this message, you provide details of activities to date and their results. In particular, progress toward acquiring the merchandise needs to be explained clearly. RH*

The 48 hours, according to the time stamp on the message, had started earlier that day, so he really had only 40 hours left. LaCoste used the "reply" feature to send a confirmation that he would provide the information demanded, because he knew that he had no choice. But that didn't mean he had to like it. As soon as the e-mail was sent, he disconnected the computer link and picked up the telephone. The beige box would do its work here, also.

"Dick? Tony. Listen, did you get a copy of the mail I just read? Uh, the one about 'timing.' What the hell's going on?"

"Easy, pal. Yeah, I got it, too, via a blind copy. He doesn't seem to want you to know that I got it. But he wants us to be talking, so I don't completely understand things, either. Anyway, it looks like you shouldn't have too much trouble with the report he wants. And all he's had to go on has been the papers, which are full of crap, as we both know."

"You're right, but it pisses me off to have that desk-bound bean counter breathing down my neck. We're still ahead of the original schedule and way under budget. Plus we got him that nifty, unexpected bonus. So what's his beef? He should know better than to believe what he reads in the papers. Idiot."

"Yeah, yeah. But he knows we're working up in the valley, and even the Santa Fe paper is probably full of stories about Steffanie. And he probably knows you met her on one of your trips to Europe for him. He seems to know just about everything that goes on, after all. And I bet he's also worried that he hasn't seen anything at all about the stuff. Which is to our advantage, of course. Listen. You probably already told him that you'd provide the report he wants. I'll send a response to the copy I got, letting him know that things are in good shape. Maybe that'll satisfy his curiosity."

"Maybe that'll help. And I'll tell him everything we've found, even though it's preliminary. Those pictures should impress him, at least."

“Yeah. I’m going to drive down with them and the case tonight. That should calm him down. And I’ll reassure him about how we’re clean with respect to Steffanie. I’ll call you tomorrow and let you know how it goes.”

“Right. And I’ll put some heat on the boys. It’s time they gave us something more tangible. Talk to you tomorrow.”

\* \* \*

“On belay! Three, two, one, go!”

And Reginald Meeker began taking up slack as he watched Leonard Schwab’s progress up the wall of the climbing gym. He was almost holding his breath in anticipation of a mistake as Schwab came to a series of especially difficult moves about two-thirds of the way to the bell at the top, yet he was still surprised when he saw Schwab’s left foot slip and heard his yell “Falling…”

They had enough experience at this that his response was automatic: Meeker sat back onto the loop of climbing rope around his backside, caught the strain easily, and slowly eased Schwab back to the floor. The automatic response was fortunate for Schwab, because, had Meeker thought about it, he just might have let go the belay line. But he needed to cover his resentment.

“Man, you were up that lower section in no time. Without that slip, you’d have beat my time by at least five seconds.” Schwab was still getting his breath, but managed to grunt agreement.

“Whew. Well, now we need a tiebreaker. If you’re gonna win, I don’t want it to be because I slipped. Let’s try number six over there.”

“Sure, pick the one that’s mostly hands oriented. We both know your fingers are stronger than mine. Hmmp. How about number three, that looks more balanced.”

Schwab eyed Meeker’s preferred route appraisingly. “It looks like they changed it since last week. It was too easy then, maybe it’s better this time. OK, let’s try it. I sure wish they’d let us set one up to resemble that cliff face of ours, though. That would really be interesting.”

He unclipped the carabiner from his climbing harness and walked with Meeker over to the new route.

“Yeah, but there’s no need to race up that thing. Still, you’re right. The extra practice would be really helpful out there. Especially when we’ve got to start hauling the stuff out.”

Meeker clipped the carabiner from the number three route’s belay line on his harness.

“OK, I’m set.”

Schwab wrapped the tag end of the line around his backside. “On belay. Three, two, one, go!”

And Meeker began his spider-like crawl up the climbing wall.

\* \* \*

## Seven

Four Corners Archaeology, LLC, occupied the top floor of an elegantly restored double adobe just off Canyon Road in Santa Fe, above the Southwest Cultures Gallery. Although the separate entrances of the

two establishments presented to the world their separate identities, in reality they were connected by a back staircase, as well as by ownership and mission, the clandestine acquisition and sale to collectors of ancient Native American artifacts.

The gallery on the ground floor was filled with contemporary reproductions of baskets, pots, and religious icons discovered by amateurs and professionals at sites on both private and public lands spread throughout the Four Corners region. The originals resided in environmentally controlled, high-security vaults upstairs. Although the reproductions were as faithful as technology would allow, the price difference between the items for sale on the two floors was startling. A \$100 ground-floor bear fetish was priced upstairs at \$9,000. A \$500 water vessel downstairs fetched \$26,000 one floor up. Of course, the ground-floor items could be sold over and over: the basement contained boxes of inventory. And the top floor antiquities were considerably older, as in the cases of the 15th century obsidian bear and the 17th century clay pot. Nowhere did “what the market will bear” apply more precisely than at Four Corners Archaeology.

Early Wednesday afternoon, Raimer Holtzmann was staring out his second-floor window at the street below, one of those narrow, winding Santa Fe streets that fills up with the summer tourist crowd to the point of pedestrian gridlock. The worry lines on his craggy face were deeper than ever.

By contrast, galleries and restaurants on the other side of the street enjoyed a carefree, continuous stream of people in high spirits flowing in and out, shopping bags bulging. He knew that his gallery below was part of this stream. Even if only one in fifty customers bought a reproduction, the costs of running the gallery, as well as the offices upstairs, would be covered easily. The occasional sale of an original was almost all profit. But he was still worried.

Holtzmann’s office, comfortably air conditioned against the August heat of the New Mexico high desert, was furnished in the Santa Fe style, with over-priced, under-built, faux antique furniture, Navajo rugs, and several of his most prized originals displayed around the room in *nichos*, little shelves formed into the adobe walls. Incongruously, there was an expensive Italian leather couch and armchair on two sides of a massive coffee table, made from a slab of sandstone on which several 900-year-old petroglyphs were etched.

He had also spent a small fortune on unobtrusive security for the office, including both the door and the bullet-proof windows, and another, somewhat larger, fortune on electronic equipment hidden in a rustic, artificially weather-beaten armoire and behind paintings. The office was bug-proof, via full-spectrum scanners and a subtle RF/HF white noise, and search-proof, because all of the computers were programmed to wipe and over-write with random characters the sensitive information contained on their disks, should anyone tamper with them in any way. And there was nothing on paper that could possibly implicate him in anything.

Despite its name, the actual work done at Four Corners Archaeology consisted of paperwork—highly specialized paperwork, to be sure, for each original artifact required extensive counterfeit documentation in order that its subsequent sale and resale could be conducted with a veneer of legality. One of the reasons that Holtzmann was so successful as a purveyor of antiquities was his ability to concoct and produce such documentation. Nothing in his inventory conveyed even a hint that it had been unearthed after 1979, when the Archaeological Resources Protection Act put real teeth into the original 1906 Antiquities Act, making the acquisition and sale of such artifacts a prohibitively expensive Federal offense.

It was the documentation for the two sets of new items that had Holtzmann worried, for somewhat different reasons. As a general rule, the going rate for original Native American artifacts was proportional to their age (more like the square of their age, actually), and these new items were therefore going to be the most valuable he’d ever had brought to him.

But creating the documentation was a special problem, one that had to be solved before he could even think of displaying them. They weren't going to be especially marketable, but he wanted to show them off in his office, to one-up his competition. And because it was widely known that a large Basketmaker site had been discovered only last year, he had a problem. The last batch of legal Basketmaker artifacts had been discovered on private land in the 1930s, and they were all accounted for. His new items, of course, were not from last year's dig—it had been handled scientifically by archaeologists from Frémont State University. So he needed documentation before the new inventory could be displayed, to avoid potentially embarrassing questions.

His first order of business, however, was actually to recover the new inventory. He'd been told about it, and he'd even seen pictures that morning, but he had yet to get his hands on it. From the pictures, the items appeared clearly to be Basketmaker culture artifacts. This stimulated no small amount of curiosity in him, as these would be by far the oldest items to cross his desk. Would they feel different? How delicate would they be? How could he calculate the worth of objects over 1500 years old? And how enviously green would the competition turn when they saw his new display?

And then there was that damned violin.

\* \* \*

That morning, 160 miles due northwest, Hal had been on-call for the possible emergencies that arise during fall registration, but because things usually went smoothly, he was able to use the time to catch up on his reading. The technical literature in his areas of interest had grown nearly exponentially over the past decade. It seemed that new journals were appearing almost each month, and established journals were printing more and more pages. And electronic publications were beginning to proliferate, so he necessarily had to be increasingly selective about what he read carefully. Thank heavens for abstracts.

Also that morning, Annette had finally been forced to confront the media. Actually, it was Lance Riggins' fault, and once again he was *persona non grata* for her. He'd been in the crowd of reporters and technicians camped out in front of the police station and, displaying an unusual lack of discretion even for him, had shouted her name when he'd spotted her exiting via a side door. Like a swarm of hungry house flies, the assembly had converged on her before she could escape, and she'd had to endure a very uncomfortable half hour of rude interrogation. Her repeated attempts to deflect questions by declining to comment on an ongoing investigation seemed only to make the swarm buzz louder. The assembled eyes of the TV cameras staring at her made her keenly aware that it would not do to lose her temper, but it was a struggle. She had finally been rescued by the arrival of Jankowski, who had the day's press release. She'd escaped, leaving him to the questioning.

Just down the hill, tourists were milling around the D&SNGRR station, awaiting their departure times or hoping to take advantage of someone else's last-minute cancellation. The notoriety of the events of last week had only increased demand for tickets, but, admirably, the railroad company carried on as if nothing in particular had happened—although they had become even more vigilant on the early-morning tender runs.

But this vigilance extended only to their roadbed, and they generally ignored the surrounding terrain unless it posed a potential danger to the trains. About a mile north of the Rockwood station, it was the cliff below the tracks that could have benefitted from some of that extra vigilance. Several months before, a large eye-bolt had been drilled and cemented into the rock in a spot not visible from the tracks. And now, two climbing ropes ran through the eye, the tension on them suggesting that they were in use.

About 100 feet down the face of the cliff, Reginald Meeker had clamped off his Jumar Ascender and was leaning back, feet planted squarely on the rock. Just on the other side of a fireplace-sized

opening, Leonard Schwab had assumed a similar position and was fumbling with the zippers on a large duffel bag. Meeker looked between his legs down the perfectly vertical cliff face.

“Do you suppose we’ll ever find another place like this to climb? Sometimes I think it’s a shame that we got distracted by this cave. I almost wish I hadn’t put my foot through the entrance that time I was rappelling down.”

“Yeah, well, just remember how much money Holtzmann has and how much he wants that stuff in there. If you hadn’t broken through this stack of rocks we’d never be able to get our hands on that. It’ll give us the money so we can climb wherever we want.”

“I know, I know. I keep telling myself that. But this face is just too perfect. Vertical. Not rotten rock, like so much of the rest of this canyon. Nicely spaced holds, natural holds in real rock, not those fake things they bolt on the climbing wall in the gym. Routes from 5-8 to 5-13. Plenty of cracks to stick protection in. Even pretty good access, although I’m beginning to wonder if those people at Rockwood aren’t getting suspicious. And there’s no way we can come back here after this trip.”

Schwab had finished opening the duffel bag’s various zippers and now thrust the bag into the little cave.

“We could just seal it up again, and leave things be. Yeah, right. Fat chance.”

“LaCoste wouldn’t let us. Even though he doesn’t know where it is, exactly. At least I don’t think he does, does he?”

Schwab began maneuvering to sit, facing outwards, in the mouth of the cave, with his legs dangling.

“I don’t know what he knows. For sure he knows the general area. But he certainly acts like he doesn’t know exactly where this is, but... I didn’t show him, and if you didn’t, I can’t imagine that he would have found it. He’s not exactly the type to spend enough time across the river with binoculars to have spotted it.” Having loosened the clamp on his Ascender, he began scooching backwards into the cave. He had to duck his head.

“I sure didn’t tell him, either. Be careful with that stuff, now. The less we break, the more we’ll get for it.”

“Right. And if you hear a train, holler. I know this thing has been here since ever, but I still get nervous.” Schwab’s voice began to echo a little as he worked his way back into the cave.

\* \* \*

Annette was halfway to the airport when her cell phone tweedled.

“Trieri, investigations.”

“Hi, Annette. It’s Lester. Listen, I just got a fax with the DNA results on those semen samples and the hair.”

“In only a week? Geez, I thought these things take months.”

“Well, I FedEx’d the samples to them last week, and then called in a favor. And they were impressed by the high visibility of the whole thing, famous victim and all—seems it made the papers even back in Virginia. So they expedited it for me.”

“So, what’s bottom line?”

“Two different guys, no match to the hair.”

“So Luigi’s in the clear. Good. I kind of like him. So now all we have to do is to get samples from everyone else in Durango and try to find matches.”

“Yeah, except, one, that’s not legal and, two, your budget couldn’t afford to go wild-goose hunting that way. You need a better plan.”

“Well, legal has never been that much of a problem, but the cost sure is. I guess I’ll just have to figure this one out the old-fashioned way. Thanks for getting this done so fast. It really helps, because Luigi was sort of my prime suspect. Now I can concentrate on something else. Don’t know what though. I’ll stop by for a copy of the report later. See ya, Lester.”

“I’ll be here. See ya.”

She thumbed the “End” button and then the speed-dial button for the station. It was answered on the second ring.

“Donovan? This is Trieri. Listen, I need you, or someone, to look up a phone number at the university faculty apartments. For Luigi Franconi, the AMFest conductor.”

“Don’t have to, Lieutenant. There’s a message for you from him, with a number. Looks like the university’s exchange. Got a pen?”

“No, I’m in the car. Tell you what. I’ll disconnect, you dial him and then transfer it to my desk. It’ll get forwarded to me here, at least if things work as advertised. If he doesn’t answer, I’ll just pick up the message when I get back. OK?”

“Uh, if you say so, Lieutenant.” Donovan, more of a traditionalist than a high-tech individual, sounded skeptical. “I’ll put the message in your mailbox anyway, OK?”

“Thanks. And don’t worry, it’ll work, at least if Franconi’s in. ’Bye.” And she disconnected.

It took about two minutes, just enough time for her to find a convenient place to pull off the road safely so she wouldn’t have to talk and drive at the same time during this conversation. Because she already had the phone in her hand, she was able to interrupt the first tweedle.

“Trieri, investigations. Is that you, Mr. Franconi?”

“Yes, Lieutenant. Thank you for returning my call. I’d like to see if we can get together for a discussion of your murder case. There’s something I need to tell you about it.”

Given the information provided by St. Clare about the DNA samples, this was not what Annette had expected to hear. But maybe he knew something, even if he wasn’t really a suspect. At least they could have an informal conversation, now.

“I’m certainly interested in anything that has to do with this case, Mr. Franconi. Perhaps we could meet for lunch, if a late lunch is OK with you. I’m on my way to the airport for a short meeting, but I should be back in town by one or so.”

“Please, call me Luigi. And a late lunch would be perfect for me. It’s such a beautiful day. What if I pick up some food and meet you, say, in that little park across from the fish hatchery, by the river?”

Well, she thought with a smile, at least he’s not going to hit on me.

“A lovely idea, Luigi. Perhaps just a little after one?”

“Excellent. I’ll see you there.”

She disconnected and pulled back onto the highway, toward the airport. The folks at the airline were going to have to cough up more information this time. Passenger privacy wasn’t a good enough excuse when murder was involved.

\* \* \*

It was about a quarter after one when Annette pulled into a parking space at Rotary Park, by the bend in the river just north of downtown, across from the Colorado Division of Wildlife's trout rearing unit. The drive back to town from the airport had given her time to cool down a bit.

Uncooperative bureaucrats, whether in government or the private sector, always managed to raise her blood pressure. Not that this was unproductive—it also made her all the more determined to get the information she needed. In this case, it was a mistake for “Mr. Robert Townsend, Manager,” as his little airline nametag had informed her, to have balked at providing her information. A call from her cellular phone to the station asking for information on his record had made him most uncomfortable, quite effectively breaking down his reluctance. She now knew that Reginald Meeker had been somewhat less than candid about his recent travel schedule.

Luigi wasn't in any of the obvious places, such as the picnic tables, so she wandered across the pedestrian bridge over to the hatchery. There he was, leaning on a railing, peering into a concrete trough teeming with 14-inch trout, tossing them pellets of trout chow, or whatever that stuff in the vending machine was. A day pack with the end of a baguette sticking out the top was draped over his left shoulder. She walked up beside him.

“Hal tells me that these hatchery trout just don't compare with the wild ones, but I don't really understand what he's talking about.”

“Oh, hello, Lieutenant. Yes, I've heard that also, from the fellows at Duranglers. Something about strength and fighting spirit. ‘Wildness,’ whatever that means. And I'm told that these hatchery fish have one of their fins notched, so you can tell the difference, but I forget the details. Are you hungry? They sure seem to be.”

He tossed in the remaining handful of pellets he'd purchased, and the water boiled with fish, the sunlight flashing on the red and gold stripes down their sides.

“Well, watching these fish go after those hatchery food pellets isn't the most appetizing thing I can think of, but, yes, I am. And I see you've found the Swiss bakery. There are some tables across the bridge, by the river.”

“I think I've found all of the places to purchase good food in this town, few as they are. You Americans don't seem to care much about what you eat. Ah, no offense, you know, but it's very different in Europe. Anyway, I didn't want to get into a food argument. I wanted to talk to you about poor Steffanie.”

“We're making slow progress. Slower than I'd like, unfortunately.”

“Well, maybe I can help a little. The last time we talked, I didn't really know what you were looking for. The stories since then in the paper have helped me to understand what you were probing for. So maybe I can be more helpful. I really do want to see justice done.”

“And, last time we talked, I was not able to be entirely candid with you, Luigi. Perhaps we can do better this time. If it will help you, I can tell you that you're not a suspect in all this.”

“But I was before, eh? No, no, it's OK, really. It only makes sense that I would be, having taken her to dinner that night and so on. But something has changed your mind, it seems.”

“Yes, and it's in the way of physical evidence, so it's quite solid. I'm afraid that I can't be more specific. But one thing you mentioned last time is that you knew Ms. Boudreau reasonably well. Some of the new information makes me want to revisit that part of our conversation. Will that be acceptable?”

“As I said, we have been doing concerts together for some years. She was a European child prodigy and began appearing in public when she was 10, about 10 years ago. I think our first concert together was about 6 years ago.”

“She was a European prodigy? Do you know if she had any connections to Canada?”

“Oh, yes. She was born in Montreal. But I think she came over to Paris in her early years and now has, or, um, had, French citizenship.”

“Did you ever have any knowledge of her life style? Her friends, social habits, and so on?”

“Well, I do know that she sort of went wild when she finally stopped living with her parents and being managed by her father. As with most child prodigies, she had led an extremely sheltered childhood, with her entire existence focused on her music. She really didn’t have a normal childhood, or adolescence, either. So as soon as she could, about three years ago, I think, she broke loose. Lots of alcohol. Some drugs. Lots of boys and sex. She even confided in me that she had two abortions. But she always managed to continue to perform, and she even got better during this time. Her interpretations became more, oh, fluid and, what should I say, true to the composer’s intentions for the music.”

While talking, they had crossed back to Rotary Park, over the new pedestrian bridge, which, built to modern standards, made the old narrow-gauge railroad bridge next to it look flimsy. By now they had reached the picnic tables, and he was unloading an interesting combination of foods from his day pack. The baguette, a wedge of some kind of cheese, a slice of paté with little specks (truffles? Yum, she thought), grapes in both colors, and a liter of San Pellegrino sparkling water appeared on the table in turn. He poured a glassful for her, in a stemmed wine glass he plucked from a side pocket of the pack.

“My, my. You, sir, do a first-class picnic. This looks wonderful. Ah, she confided in you?”

“Yes, well, you see, I wasn’t threatening to her, in the sense of being a potential sex partner, nor am I old enough that she thought of me like she thought of her father. So I was a good confidante. You know, it’s so sad, really. She was really a remarkable violinist, and she had at least 50 more years of music to contribute, if other performers are any indication. And, for her age, she was positioned better than anyone in a long time. She even had a Stradivarius violin, for goodness’ sake.”

He wondered if Annette would follow up with questions on his comment about not being a potential sex partner.

“Yes, I’ve heard that too, from Jacques Ament. Do you know if she brought it on this trip?”

“Oh, yes. She told me how excited she was to be able to play it here in Colorado at dinner last Monday. She said she was going to run out and buy a humidifier for her hotel room so that it wouldn’t dry out.”

“You may be interested to hear that it’s missing.”

“What?! Do you mean to say that someone’s stolen it?”

“We don’t really know. She had checked it into the hotel safe when she arrived, but she retrieved it just after your dinner with her. You told me she had mentioned a late date. Did she say anything about it that could be helpful?”

“No, not really. She did seem distracted, and in a bit of a hurry, though. It must have been that she was looking ahead to it. She said it was with someone she had met in Europe, that’s all.” He looked away, into space. “You know, she did say something else that puzzled me at the time. Something about the mountain air and how sound carries so well. And the almost-full moon. As if she was looking ahead to some kind of outdoors activity that night. At the time, I thought she was just excited to be in a new place. Compared to her usual travels, Durango is pretty exotic.” He smiled. “For me, too.”

“No cowboys in Italy, eh? So Steffanie was distracted, but she didn’t mention anything about whom she might have been going out with later, beyond that it was someone she’d met in Europe?”

“Just those cryptic remarks.” He grinned. “And the only cowboys we have in Italy are in those spaghetti western movies, or in the gay bars.”

Surely she would pick up on this hint. But she seemed oblivious. Instead of giving him an easy opening to tell her why he couldn’t be a suspect, she steered the conversation to his origins in Italy and where her family had come from, generations ago. Whatever her evidence was, he thought, it must be quite solid. It felt good not to be a suspect any longer. He ate with more gusto than he’d planned.

\* \* \*

Lance knew that he’d blown it with Annette the minute he’d shouted at her that morning. He simply hadn’t realized that she wasn’t known to his colleagues. Oh, well. She was attached, anyway, to some geezer up at the college, he’d learned.

Now, he was sitting in the Narrow Gauge Saloon, his big hat pulled down low on his forehead, nursing a Jim Beam and waiting for the arrival of Randy Fredericks. He had a check for Randy, and, he assumed, Randy would be providing him with more insider tidbits. Meanwhile, he could read the latest issue of the *National Gazette*, with his lead story splashed all over the cover. That model he’d had sent in from the agency worked out just fine. There she was, lying on the tracks, arms akimbo, the nipples of her up-thrust breasts just visible through the filmy bra, full, red lips slightly parted. Under a banner headline reading “Railroad Villain Slays French Beauty” and over smaller ones that smirked “Sex Scandal Rocks Rockies” and “Prince William Said to be Devastated.” It gave him goosebumps.

“So this is what I’m making all that money for, huh? Now I know what a whore feels like.”

Randy had arrived, overflowing, it seemed, with guilty conscience. Lance looked up from under the wide brim of his O’Farrell Roper.

“Exactamento, my friend. And don’t worry, just lie back, relax, and try to enjoy it. It won’t get you any Pulitzers, but it will keep your bank account fat. Just keep repeating over and over ‘10 G’s a week...10 Gs’ a week...10 G’s a week.’ That’ll make it all better, believe me. See, here’s the first check.” He had taken a bank draft from his shirt pocket. “What new goodies do you have for me today?”

“Well, I saw you at the briefing this morning, after you set the pack loose on Lieutenant Trieri. You screwed up big time there, my friend. She’s one enemy that you don’t want to have, believe me. Anyway, you got this morning’s press release. This afternoon, I got an off-the-record verification that they’re looking for two people. Seems that there is evidence pointing to more than one killer, or at least a killer and an accomplice. And there’s an unconfirmed rumor floating around. Something about a million-dollar robbery. I don’t quite see the connection to the murder, however, and no one’s saying what’s missing that’s worth a mil.”

Lance was busily taking notes.

And, as usual, no one paid attention to the cell phone at the ear under the brim of the other O’Farrell Roper, the black one with the concha band.

\* \* \*

Just as Hal was getting ready to head home, after a long day of waiting for fall registration emergencies that never happened, one did. Perhaps “emergency” overstates the circumstances of a full course with a

waiting list of seniors needing it to graduate, but they certainly thought of it that way and that's what Hal was there to deal with.

One of seniors who'd been put on the waiting list apparently felt that the answer to his problem was publicity, and so he had called the *Free Press*, who had called the dean for a comment. The reporter, Jennifer Mason, was obviously fishing, because she seemed intent on linking this course overbooking—a pretty standard practice, actually—with the AMFest Murder, as they were now calling it. Quite a stretch, even for the *Free Press*, Hal thought. He was working to break the tenuous link by focusing only on the registration glitch.

“No, I hadn't heard about the waiting list, but it's not at all uncommon. It's surprising how many students sign up for senior-level courses to try to finish up and then drop them in a week or two. Either they decide that the course is too hard to take just now, or they decide that they don't really, really have to graduate this year. And, as I'm sure you can understand, we like be as efficient as possible and keep the classes full, so having the waiting list is one way to do that. I wish this student who called you had talked with me. I'm sure I could have eased his concerns. Or hers.”

“Why shouldn't people assume that an organization that lets its distinguished visitors be murdered is also incompetent in other ways, too?”

Man, oh man, Hal thought. Does our journalism department teach this stuff?

“Jenny, I'm afraid that I simply can't agree at all with the premise of your question. You're assuming things that are simply not true. And, really, whatever you think about this waiting list, it's nothing new or different compared to other fall registrations. Or spring ones, for that matter. If you'd give me the name of the student who contacted you, or even only the course in question, I'm sure I could put everyone's worries to rest.”

“We never divulge sources. You should know that it's unethical. What about the cutbacks in the women's studies program?”

Now for something completely different, he realized.

“Of course, budgets have nothing to do with the rate at which courses fill up. But women's studies isn't in my college, I'm afraid, Jenny. So I really don't know anything about this. I can tell you that at the last budget meeting, nothing of the sort was discussed, and I believe that it would have been. This must be one of those false rumors that gets spread around now and then.”

“So women are being raped and murdered on campus and now women's studies is being cut. What does this say to women in high schools all over Colorado who may be thinking of Frémont State as their next educational step?”

Unless they believe your headlines, it doesn't say anything, he thought.

“Jenny, that's not true, and you know it. As I said, I don't know anything about women's studies. And, based on my visits to high schools, I'm positive that our reputation is quite good, and improving, among all students. We're certainly one of the best buys in the inter-mountain west. Our applications and admissions are proof that women think of Frémont State as a place where they can learn and grow in safety and security. Even if they do have to be patient with the occasional waiting list. Now, Jenny, as I mentioned at first, I'm recording this conversation, just like I bet you are. So please be sure to quote me accurately, OK?”

“Is that some sort of threat? You may be a college dean, but you don't control freedom of the press!”

“Jenny, all I’m interested in is not being misrepresented as the result of some sort of misunderstanding or misread notes. I’m glad you’re taping this, because that makes it easier to get things right. Please do. Now, I’m afraid I have another commitment. It was nice talking with you.”

Happily, she did not try to prolong the conversation. How do people with teenagers keep their sanity? he wondered.

\* \* \*

That evening, they cooked together while discussing the day’s events. A soufflé with crab meat, sharp cheddar, shallots, and a jolt of fresh nutmeg grated on the top. They took turns whipping the egg whites.

Annette’s lunch had motivated her to go by the Old Town Bake Shop and pick up a baguette for supper, and this seemed like the perfect complement. Hal had found a reasonably dry Mosel Valley Kabinett for her, and she felt guilty that she hadn’t picked up something special for him. But he was addicted to iced tea in the summer anyway.

“So, Luigi kept dropping hints, and I think he wanted to ‘out’ himself to me, but I just ignored them. With the DNA results, we don’t really need to know that women aren’t to his taste, so his orientation is irrelevant. But the comments about her being distracted during their dinner are quite relevant. Someone had made a date with her, someone she’d met in Europe, so it wasn’t just a spur-of-the-moment decision to go out later. That fits with someone making the reservation at Peaceful Pines Resort to get Weisicki out of the way. And, I have to say, the information from the airline about Meeker doesn’t make him look especially good. Hmm. Should I be telling you all this?”

“Meeker works at the university, sure, but he’s not a friend of mine, or anything. And if he’s in on it, he needs catching. I’ll help however I can. Incidentally, I tried calling him this afternoon, to let him know that I got grilled by a *Free Press* reporter, about registration. But his secretary said he’d taken the day off to go rock climbing. Something, apparently, he does as a serious hobby.”

“And something one doesn’t do alone, no? And we’re looking for two people in this, now. Wonder who he climbs with?”

The timer buzzed, and they had to scramble to dress the salad before the soufflé fell.

\* \* \*

## Eight

At 8:00 sharp the next morning, Annette called the university’s public relations office. Might as well turn up the heat on old Reg first thing, she thought. But he wasn’t in, and Margaret, his secretary, didn’t expect him until 9:00 or so, she wasn’t sure of precisely when.

“And, I’m sorry, but sometimes things come up and he doesn’t get in all day. Like when he has to dash off to Denver to meet with legislators, or something. So I’m afraid I really can’t be very helpful.”

She offered to page him, or have him call back, but Annette talked her out of the various options, playing down the importance of her call. She wanted the element of surprise.

But she wouldn’t be finding him this day, because Meeker was meeting with Leonard Schwab for breakfast, to discuss strategy. They had decided on the student union cafeteria, not for the quality of the

food, but for the cover, and Meeker was waiting outside the main entrance. Fall registration week always turned the place into a zoo, and faculty and staff generally avoided it. Later, the two of them were going to meet Tony LaCoste to discuss how to transfer the artifacts that they had so carefully packed into the duffle bag yesterday.

Meeker had been turning the situation over in his mind almost all night. The problem they had was not so much the transfer of the artifacts as it was the payment they were to receive. No price had been set, nor could it be until there was some sort of appraisal. But only Raimer Holtzmann could do that, and he steadfastly refused to meet Meeker and Schwab, at least according to LaCoste. And neither he nor Schwab trusted either LaCoste or Holtzmann. They certainly didn't want to just turn the duffle bag over to LaCoste and hope he would come back some day with an appropriate amount of cash. And what would be appropriate, anyway? His thoughts were interrupted by Schwab's arrival.

"Morning, Len. Hope you got more sleep than I did. I feel like shit."

"Hi, Reg. Me, too. Do they have anything resembling good coffee here?"

"Actually, they do. The food's not so great, but the coffee's quite acceptable. There's even an espresso cart with various concoctions. But it's the big vats of coffee that are the high-octane stuff, if you need a caffeine fix. We can get some with breakfast, if you want to eat."

"Yeah, food would be good. Thinking all night works up an appetite, somehow."

They entered the din of the dining room, now certain that their conversation would be well disguised by the hundreds of excited students.

After patiently negotiating the food and cashier's lines, they managed to find a table well in the back of the room, away from the windows. They sat down and began to examine the breakfasts the cafeteria provided. Meeker had opted for a Denver omelette, with the standard sides of hash-browns and toast. Looking at it critically, he estimated that it ran to about 1500 calories, grease included.

Schwab's breakfast burrito, a large flour tortilla wrapped around scrambled eggs, chorizo sausage, cheese, and hash-browns, smothered in some kind of green chile stuff, was even bigger, probably closer to 2000 calories. College students demand their money's worth and tend to be hungry.

Well, they had both put in a long, strenuous day yesterday, and they needed to fuel up.

Although their plan to disguise their meeting in the public, but noisy and chaotic, environment of the cafeteria was basically sound, they hadn't known that it was during registration week that the Natural Sciences Dean always met with the leadership of the various science clubs for breakfast. So, when Hal walked up behind Meeker to say hello, and to let him know about the *Free Press* grilling he'd endured the day before, the advantage was his. Meeker didn't exactly choke, but it appeared that he worked hard not to.

"Morning, Reg. I called you yesterday afternoon, but Margaret said you were out rock climbing." Seeing Meeker's face turn red and his eyes bulge out, he turned to Schwab.

"Good morning. I don't believe we've met. I'm Hal Weathers, Dean of the College of Natural Sciences."

He stuck out his right hand toward Schwab.

"I'm sorry to interrupt your breakfast, but I'm here for a meeting with some students and recognized Reg, here. I'm impressed with your courage to brave the environment in this place this week. And the food."

He smiled in encouragement, and there was little Schwab could do except to be polite in response.

“Ah, yes, good morning. I’m, ah, Leonard Schwab, a friend of Reg’s. He, ah, suggested we eat here because, ah, it’s so close to his office. I’m, ah, the concertmaster for the AMFest orchestra.”

“Oh, yes, I heard that you had to fill in at the last minute over the weekend, for the Beethoven Concerto. I’m sorry I missed it. How did it go?”

“Pretty well, all things considered. I’m sure that the audience was a little disappointed, given all the build-up for the guest soloist, and all. But I think my interpretation was well received.”

By now, Meeker’s demeanor had begun to return to normal, so Hal quickly filled him in on the *Free Press* interview.

“Anyway, Reg, maybe you should call Jenny and butter her up a little. I didn’t give her anything damaging, I’m sure, and I’ve got my recording of the conversation as a back-up. And give me a call if other questions come up. Listen, I’ve got to get back to the students I’m meeting with. Nice to meet you, Leonard. I hope to see you this weekend, at the final performance.”

Schwab, who had a mouthful of burrito at this point, did his best to nod and smile. Except the green chile was hot enough that the smile was somewhat surprised and pained. He waved good-bye with his fork, looking comical.

Meeker was staring at his plate, breathing deeply. Finally he looked up, fear and confusion in his eyes.

“Holy shit. I hope that it’s not as bad as I think. Of all the people to meet here. You know his lady is the cop who’s investigating Steffanie’s death? She interrogated me the other day, and I didn’t feel very good about how I handled it. And now he’s seen us together. And he knows I went climbing yesterday. At least you didn’t say anything about climbing. What if he asks me why I’m having breakfast with you?”

“Hey, slow down. It’ll be OK. You’re in PR, and the AMFest is a big deal for the university. It’s natural that you’d meet some of the musicians. His reason to talk to you, that interview thing, makes sense to me. He sees you here and wants to tell you about it. Perfectly natural. Calm down. Jesus, this stuff is burning holes in my mouth.”

“I sure hope you’re right. And if it’s too hot, go get some milk. It helps, really. Some kind of chemical thing. I’ll try to get my appetite back.”

Schwab left, heading for the dairy case in something of a hurry.

By the time he got back, working on his second carton of milk, Meeker had begun to attack his omelette.

“You’re right, the milk helps. Weird. And this chile is really pretty good, when you get past the heat. So. What are we going to do with our little stash of stuff? How do we handle this, anyway?”

“Exactly what I was chewing on all night. I wish we knew exactly what we have. At least how old it really is. It feels like we have a suitcase full of cocaine and need to sell it to the cartel without getting killed in the process, but we don’t know their rules. Or like trying to arrange a fool-proof way to get a kidnapping ransom so you don’t get caught. Or something like that.”

“If this guy Holtzmann won’t meet with us, and if he’s the one to decide on the price, what can we do? Hire someone to act for us? But then Holtzmann would have to meet him, which probably won’t fly, either.”

“Well, here’s one approach I’ve been mulling over. How about if we give LaCoste something to show Holtzmann. Not the whole inventory, just one thing. Like, maybe that stick with the notch at the end. Holtzmann can decide if it’s authentic, maybe even test its age. Wonder how he’ll do that?”

Anyway, since it is authentic and obviously very old, he'll get all excited and want more. Then we'll be in a stronger position to insist on meeting him with the rest of the stuff. The basket is clearly the centerpiece of this find, so we can hold that back. Maybe not even take it to him until we're satisfied with his offer for the package."

"What about having someone we trust hold on to the basket, with a letter explaining everything, to be opened if something happens to us. We wouldn't have to explain about the basket, or even show it to them. We could just keep it wrapped up."

"Good idea." Meeker couldn't help but laugh. "Good idea, but listen to us. What hocus-pocus. Like a cheap TV cop show. And we have no real idea of how much money were talking here. I'd like to think in terms of six, or even seven, figures. But I bet that Holtzman offers five or less. For the artifacts, I mean. That violin is something else, at least if what you said about it is true."

"Oh, that's true, all right. It's a Stradivarius. You have no idea, not the remotest conception, how difficult it was for me to give that thing up. Damn. And it's worth at least a million, at least on the legitimate market. I don't really know about the black market. But it should still be worth a lot. Six figures, easy. You know, of course, that the best way to handle the artifacts would be to get a second opinion, from one of Holtzmann's competitors. Especially because we can't be sure that he'll be honest about the age, or whatever else he finds out."

"You're right. But who would that be? We ran into the Holtzmann connection by accident, by just sort of stumbling across LaCoste up at the Pines."

"Maybe somebody at the university would have an estimate. Didn't I hear that someone in the anthropology department, or something like that, handled that other big Basketmaker dig last year? Maybe they'd know something, either about value or about other dealers."

"You're talking about Ben Hartford. Maybe that's a place to start. What we need to do is to invent a story I can tell him to get the information without raising his suspicions. Maybe I can tell him that the university is being approached about a magazine story, or maybe TV, Discovery Channel or something, about that dig. And before he gets interviewed, I'm putting together a basic information package. The writer wants a human interest angle beyond the archaeology, something about collectors, how much stuff is worth, and so on."

"Reg, this is obviously why the university pays you those big bucks. Go for it."

Schwab finally was able to flash a genuine smile. The milk had done its work.

\* \* \*

When Hal returned to his office, after eating a bagel in the cafeteria while explaining to the science club officers why the college's subsidy of their operations would have to be cut back yet again, he immediately called Annette. To his astonishment, she was actually in her office.

"Trieri, investigations"

"This is your university snitch calling. Guess what I found out this morning."

"Ah, geez. The Ivory Tower connection strikes again. Let's see. The white mice escaped from the biology lab and havoc reigns on campus, right?"

There was a pause.

"Here I was going to give you the tip of the day, and this is what I get? Let me guess, instead. You've been hobnobbing with the reporters again and you're all bent out of shape, right?"

“Something like that. And you know I’m not really giving you grief in any serious way. What’s up?”

“Well, I had a meeting in the student union cafeteria this morning and saw Reg Meeker having breakfast there. With someone called Leonard Schwab, who said he’s the concertmaster for the AMFest. Might be innocent, because Reg is public relations and AMFest is a big deal up here. But last night you and I were talking about someone who could be Reg’s climbing buddy.”

“Hmm. Meeker’s secretary claimed he might not be in all day, she really didn’t know. So he gave her some sort of vague story about his activities today. Surely, he’d tell her if he was interviewing an AMFest musician for breakfast. Leonard Schwab, eh? Let me check into this. Anything else? I’ve got a meeting starting.”

“I’ll pick up something for dinner. Any requests?”

“Comfort food. With the DNA results in, the heat’s on to solve the Boudreau thing, and we’ve also been reminded that the snowplow incident also needs attention. Maybe I can clone myself.”

“Comfort food it is. And, listen, one of you is plenty for me to love. You’ll figure this all out, I’m sure. ’Bye.”

Because it was the last day of registration, Hal needed to be available for other matters arising, like the pseudo-emergency of yesterday, so he settled in to more reading. The technical debate concerning the sensitivity of Earth’s climate to greenhouse gases had become more and more rancorous over the past several years, and he was trying steadfastly to remain objective. But the weight of the evidence was settling more and more heavily on the side of global warming. The questions remaining had begun to focus increasingly on how much warmer it would become, and how long this would take. He was burrowing into the latest report of the Intergovernmental Panel on Climate Change when his intercom line buzzed. Alice was summoning him.

“Yes, Alice?”

“Dean Weathers, there’s a Mr. Franconi here asking for you.”

“Luigi? Well, I’m honored. Be right out.”

Hal had never been able to adapt to the normal procedure of awaiting guests in his office. Unless, of course, they were in some kind of trouble, when that particular power play was quite useful. He opened his door and walked out to meet Luigi.

“To what do I owe this honor, Luigi? Good to see you again.”

“Ah, Dean Weathers. I’m sorry to interrupt your day, but I’m glad you are available. This won’t take long.”

“Oh, don’t worry a bit. I’ve got all day. I’m trapped here by the registration process. I’ve got to be available in case some emergency comes up. You’ve met Alice, I take it?”

“Indeed, and I am charmed.”

He turned to her, and she blushed, to Hal’s surprise.

“Thank you for your help, Mrs. Swan. I look forward to seeing you and your husband this weekend.”

What in the world is this about? Hal wondered. Luigi turned back to Hal.

“I’m dispensing tickets to our weekend *finalé*, and I thought you and Ms. Trieri might be interested. I’ve already persuaded Mrs. Swan to join us.”

“Why, how delightful. We’ll make every effort. Annette’s pretty busy, but I think I should be able to get her to take a couple of hours for a concert. What’s on the program?”

“Well, I’m not sure yet. I know, it’s Thursday and we should be rehearsing. And the publicity people are going crazy. They want to print their programs. But, well, the orchestra has been playing together so well, I’m confident of their abilities. My concertmaster seems distracted just now, but we’ll come up with something appropriate for the closing concert. Maybe I’ll have the publicity people say that it’s a special *finalé* surprise program.”

“Your concertmaster. Let’s see, that would be Leonard Schwab, right? I met him this morning, in the student union cafeteria. He was having breakfast with our director of public relations.”

“He was? Hmm, he told me he would be out of town again today. Well, anyway, we won’t be playing anything that really needs him. He had his chance for the spotlight last weekend.”

“Don’t tell me he’s taken up fly-fishing, too. You musicians are going to get all of our trout.”

“No, no. He’s a rock climber. Violinists have strong hands anyway, but I can’t understand how he can justify putting his hands at risk that way. But it’s his career. Such as it is. And you don’t have to worry about me. I catch a few, but I think most of your trout are having lots of fun down there laughing their little heads off at me. Between all the flies I’m losing and the leaders I get tied in knots, they must find it quite amusing.”

“That’s why addicts like me take up tying flies. They’re cheaper that way, at least if you count the time spent as fun. Have you been out since last week? I’ve heard that the Animas Gorge is starting to heat up, an ongoing caddis hatch.”

Hal, knowing Alice’s boredom with his hobby, steered Luigi into his office, and shut the door.

\* \* \*

Tony LaCoste’s refusal to introduce Meeker and Schwab to Raimer Holtzmann was not his own idea. Four Corners Archaeology was designed in a careful series of layers, to insulate Holtzmann from just about everything—LaCoste seldom saw him, if the truth be known.

But LaCoste was not about to advertise this, because part of his role was to persuade the amateurs, Meeker and Schwab in this case, that he and Holtzmann were the best of pals. To this end, his afternoon meeting with the pair of rock climbers was designed to impress them using a pre-arranged telephone call.

LaCoste intentionally arrived early at their meeting place, the park benches in Bradshaw Circle, outside the D&SNGRR station at the south end of Main Avenue. Oblivious to the gaily blooming flower beds, he positioned himself to be able to see anyone approaching, and used his cellular phone to call his intermediary to Holtzmann.

“Dick? Tony here. I’m in place, and they should be here in a few minutes. I don’t really know what to expect—like I told you, they wanted a meeting in public. Maybe they’re getting nervous. Ah, I see them down the block. No big parcels, though. Give me, oh, five minutes, then call. OK?”

After letting his accomplice know what to expect, he disconnected and put the phone in his pocket, just as Meeker and Schwab walked up.

“Gentlemen. I hope this is public enough for you?”

There were tourists meandering around in droves, as LaCoste had expected.

“I notice you’re not carrying anything bigger than a breadbox. I was hoping you’d have something for me.”

“All in due time.” Meeker had lost the coin toss and was spokesman. “We want to clarify the exchange procedure first. There are some details we haven’t discussed yet.”

Schwab was looking around carefully at the tourists, as if to try to spot anyone watching their conversation.

“‘Exchange procedure?’ What details? Look, guys. Here’s where we are, in plain, simple English: You found some items of interest to my boss. He may want to buy them from you. But first, he’s got to see them. Then he’ll decide how much they’re worth to him and whether to make you an offer. This all seems pretty straight-forward to me. What’s the problem?”

LaCoste was used to dealing with amateur jitters, and he had found that the best approach was to seem disinterested.

“We’re not comfortable with just turning everything over to you. You’ve already got that violin. What about payment for that? If we pass everything along, how can we be sure that we’ll ever see you again? And how can we be sure that Holtzmann will offer us a fair price? Anyway, we’re not ready. We need to have some independent tests done, age determination and so on.”

Meeker was breathing a little too hard, a sign that he was nervous. LaCoste noticed little beads of sweat on Meeker’s broad forehead.

“Listen, guys, I don’t know why you’re getting cold feet now. I thought we had everything worked out. We only got the violin yesterday, and it has to be appraised, and so on. As for the other stuff, Raimer has seen the photographs, and he’s quite interested in your find. He’s been trying to add things like this to his collection for years. He’s not going to re-sell them—the market for stuff this old is practically non-existent anyway. And as to their exact age, well, that will take an expert. How are you planning to get the stuff dated?”

“Radiocarbon dating, probably. Expert analysis, that sort of thing.”

Meeker was becoming defensive, something that LaCoste knew was to his advantage.

“You know that radiocarbon dating is destructive? How much are you willing to sacrifice, anyway? Each piece has considerable value, you know. And if you actually show the items to anyone, you’re running a big, big risk. Any expert will know it’s an undocumented find and probably turn you in.”

Any second, now, LaCoste thought. And on cue, his phone tweedled inside his pocket.

“Excuse me, fellas.” He flipped the phone open expertly. “Yes? Oh, hello, Raimer...They’re with me now...No, they didn’t bring anything, apparently...I’m not sure, but I don’t think they trust us...I know, I know—maybe they have another buyer lined up.”

During this monologue, LaCoste was carefully gauging Meeker’s and Schwab’s reactions and body language. They were trying to look cool, but not really succeeding very well.

“No idea who...yeah, I know there’s no one else with your expertise west of the Mississippi. To make matters worse, they’re talking radiocarbon dating...Hey, I don’t know. Maybe they’ve got some extra pieces and they think they can sacrifice a few grams of wood, or something...Well, of course. If all of the original burial artifacts aren’t intact, the whole thing could be worthless...No I don’t know if they know that.”

LaCoste could tell that the pair of amateurs was becoming increasingly nervous.

“OK, I’ll let them know. One thing they’d probably like is some security, or some assurance that we won’t just disappear with their inventory. Also, they want payment for the fiddle...Well, I know they know about Four Corners, and I reminded them that we got the violin only yesterday...OK, I’ll handle it, don’t worry...Yeah, that other find we heard about is probably better anyway, at least if you compare the pictures. Maybe we should just go with that one...OK, I’ll call later.”

Meeker had taken out a handkerchief and wiped his face, and Schwab was fidgeting annoyingly by now. LaCoste knew he had them where he wanted them.

“So. Listen. Raimer is getting impatient. You’ve been promising us this extraordinary new Basketmaker find for weeks now, and all we have is pictures. How do we know you didn’t take them at some museum somewhere? It’s time to put up or shut up, guys. Raimer has another find to examine, and it actually looks more promising than yours. He’s willing to consider yours first, because you came forward first. He’s a fair and honest guy. But he’s also only just so patient. Now what do you want to do? I’ve got another appointment to get to.”

Meeker, although nervous, had somehow shifted gears, LaCoste could tell. But he couldn’t quite understand what had happened. Schwab also noticed something, because he was staring at Meeker with the hint of a smile.

“OK, Tony. I’m going to call your bluff. I don’t know who you think you’re dealing with here, but we weren’t born yesterday. The last time someone tried that approach with me was at a used car lot. It didn’t work then, and it’s not going to work now. Nothing is going to happen until the matter of the Stradivarius is completely resolved. Then we can discuss the artifacts, the exchange procedure, and all of the things we’re concerned about. You know how to reach us. Come on, Len, let’s get away from here.”

During this, Schwab’s smile had frozen, and he was now looking scared.

“OK, guys. But it’s you who don’t know who you’re dealing with. You should ask around about what happened to the guys that blundered into the site up Lightner Creek a couple of years back. They tried to double-cross Raimer. Check into it, before you call me again.”

“We won’t be calling you. You need to call us, when the payment for the violin is ready. And don’t forget that we know its value.”

After a brief stare-down, LaCoste broke into a smile.

“Oh. I almost forgot. I’ve heard something interesting from the investigation. They’re now calling it ‘murder.’ And they’re looking for a pair of suspects.”

The color drained from Schwab’s face and Meeker’s mouth actually fell open.

Amateurs.

\* \* \*

Comfort food, to Hal, was simple but reasonably elegant. He decided on *fettucine alá Alfredo*, made the original way. The first time, months ago, that he had prepared something he called “Alfredo” sauce, and linked the term to wide, flat pasta ribbons, Annette had lectured him unmercifully about how restaurants in the U.S. had corrupted the original dish beyond recognition. Pasta swimming in parmesan-flavored white glop was simply not what the dish was supposed to be all about.

So, when Annette arrived home, looking worn out and slightly grumpy, she found a large pile of finely grated pecorino Romano next to a small dish with about a half-stick of unsalted butter softening at room temperature. The large stock pot was full of water that had, apparently, been brought to a boil and

was now waiting for its next task. A package of fresh fettuccine was sitting on the counter next to the stove.

Hal must have heard the garage door close, because he came up behind her while she was inspecting the water in the stock pot and kissed her on the neck.

“Glass of Chablis? Or do you want to work out?”

“I’m too frustrated to work out. Chablis it is. Should I make a salad?”

“All ready to go. You can figure out dressing while the pasta boils. And how about a variation? I want to try something a little different with the pasta.”

“Not the goopy white sauce again, I hope. The grated cheese has me salivating for the real thing. My favorite comfort food.”

“No goopy white sauce, I promise. But how about some garlic?”

“Garlic? Hmm. Not too non-traditional. How?”

“I can melt the butter in a measuring cup in the microwave with some pressed garlic in it, then pour the result on the pasta and toss it a little before the cheese goes on. Just like the original, only with garlic. OK?”

“Looks like you’ve got plates heating up. So, I say ‘go.’ I’m going to wash my face and see how much of work I can rinse down the drain.”

Later, as she was using the Italian bread to wipe the last molecules of cheese and garlic-flavored butter from her plate, Hal chanced to mention his encounter with the conductor earlier that morning.

“I expect that you really don’t want to re-live the day, but I ought to fill you in on another conversation I had up on campus.”

“You mean after you bumped into Meeker at the cafeteria? Schwab has no record, by the way, beyond the usual minor traffic things.”

“But he is a rock climber. Luigi came by with tickets for the final performance at AMFest this weekend, and we got to talking. I hope you can manage a Sunday matinee, by the way.”

“Absolutely. I need a break, badly. I’ll probably have to work on Saturday, but Sunday I’m resting. How does Luigi know this?”

“Good question. I didn’t ask, because I didn’t want to raise any suspicions. But he mentioned it and then wondered at the sensibility of a violinist putting his hands at risk that way, so it sounded merely conversational. He was surprised to hear that I’d run into Schwab on campus, because he thought Schwab was going to be out of town today. Apparently, Schwab was out of town yesterday as well. So was Reg.”

“Busy boys, eh? Wonder what they’ve been doing?”

\* \* \*

Right now, they were still arguing, although, due to the effects of a large amount of margarita mix and tequila, not entirely coherently.

“What are we going to do about the investigation? They’ll catch up to us sooner or later.”

“How? Everything’s clean, no prints anywhere, at least none of ours. Nobody saw us with her. The violin’s out of state. It was LaCoste’s fault anyway, and his pal, Dick What’sHisName, if push comes to shove and the cops need a second suspect.”

“How could we have just let that jerk have Steffanie’s Stradivarius? I still don’t believe we did that. Now it’s gone forever, and we’ll probably never get anything for it.”

“Oh, come on. You could never have played it in public. That little serenade the other night was your big chance. You know that. And we talked about it over the weekend. We had to give LaCoste something to keep him interested. And we know Holtzmann really wants that Indian stuff way more than he wants the fiddle.”

“Fiddle! How can you call it that? This is a 300-year old work of art! And if it’s not treated right, it’ll fall apart. Serve Holtzmann right if it does. I just wish that I’d had more time to play it, just for myself. Exquisite.”

“But it’s too easily identified to be good for anything, right? You said that yourself. Those artifacts, though, are pretty anonymous. They’re Holtzmann’s specialty, and he’ll know just what to do with them. Hey! I know. Maybe we could get the Strad back, instead of cash. You probably have a better idea about what to do with it than Holtzmann does anyway. And then you’d get a chance to play it again. Maybe I should call LaCoste.”

“What was all that about Lightner Creek he was talking about?”

“Yeah, I heard that, too. Lightner Creek is the canyon running west from town, along the highway. I don’t remember anything about a Basketmaker site there. But, then, I got interested in this stuff only recently.” He giggled. “Bet you never thought you’d be robbing ancient burial sites when you came out here to play in the symphony.”

Schwab found Meeker’s giggles infectious.

“No way. I came out here for the rock climbing, mainly. This podunk music festival made a good excuse and pays the bills. But there’s nothing like the climbing here back in New York State.”

“So what happens when we get the money? LaCoste was trying to scare us, I know, but I don’t think he’d double-cross us. He couldn’t find anything for Holtzmann to buy if he got a reputation for that.”

“If we get as much money as we should, I’m going to retire to someplace warm and sunny. With girls who don’t wear shirts.” His giggles broke into a real laugh. “And if we get the Stradivarius back, I’ll serenade them with it. What’re you going to do?”

“Hmm. I like the ‘girls that don’t wear shirts’ part. Maybe I’ll buy a topless bar somewhere. California. California girls. With no shirts. ‘I wish they all could be California girls.’”

“I hope you don’t think that you’re carrying that tune. My musical sensibilities are incensed.”

“Nonsense!”

“Yeah, well that’s my two cents’ worth.”

“Oh, Mr. Sensitive.”

“No, I’m insensate.”

Things went downhill from there.

\* \* \*

## Nine

Friday morning, Annette was beginning an assault on the week's paperwork to free herself up for another attempt to crack Reginald Meeker's prevarications, when, just after 8:00, her desk phone rang.

"Trieri, investigations."

"Lieutenant Trieri? Ah, I don't know if you remember me, it's Larry Johnson—you know, Leadfoot? From the train last week."

"Mr. Johnson, good morning. Certainly I remember you. And thank you for your discretion the evening of that accident. We were able to let the information trickle out at our own pace, thanks to you."

"Well, uh, sure." He chuckled softly. "Have to say, though, I'd never make a good spy, or anything like that. Didn't take too many beers for me to get loosened up, and I had some trouble keeping a lid on it. Ernie, too."

"I'm glad you did. And thank Ernie for me. Now, what can I do for you today?"

"Well, I've been meaning to tell you since Tuesday, but I keep forgetting. And, besides, I had a chance to ask around since then, so I've got even more for you, now."

"Tell me what, Mr. Johnson?"

"I'm not sure we can identify them, you understand, but it all fits together."

"Uh, Mr. Johnson, what fits together? Could you start at the beginning, please?"

"Huh? Well, sure. I guess that would be Tuesday. But really it all started a week ago Tuesday when we almost ran over that poor young lady's body up there. When you were with us."

"Mr. Johnson. Please. I'm lost. What started?"

"I started watching the tracks lots more carefully, that's what. Not that I didn't pay attention before, you understand. I mean, if I hadn't been paying attention, we'd have run right over her. But since then, I've been looking even closer. See, in all the excitement when we found her body, I forgot that I saw something just before I saw the body. Turns out they were ropes."

"Ropes?"

"Climbing ropes. And I'm sorry I didn't tell you about this last Tuesday, I mean a week and a half ago, but I just plain forgot. Just before that blind curve, I thought I saw something strange farther up ahead, hanging down the cliff. But it was too far ahead to really see. And then there was her body and things got real busy, if you'll remember. But then Wednesday, when I was thinking about it, I remembered those things hanging down the cliff. So I started carrying field glasses with me. The small kind, for hiking, you know? But I didn't see anything until on Tuesday. Of this week. I saw something hanging down the cliff again and looked at it with the glasses. And, sure enough, it was a couple of climbing ropes, one purple and one red. Hanging down into the gorge below the roadbed on that section of the High Line where we found the body. Maybe a hundred, two hundred yards north of where we found the body. And about a quarter mile this side of where that car got dumped into the river last Friday. I looked for what the ropes were attached to when we passed the spot they were hanging from, but I couldn't tell anything. It was just because of the curves on the High Line that I happened to see the ropes hanging down."

Annette was beginning to think he'd never wind down. But now she understood what he was talking about, at least.

"Now I understand, I think. But you said you'd had time since Tuesday to 'ask around,' or something like that."

"Yep, and sure enough, there's been a couple of fellows up at Rockwood, hanging around until after the morning trains go past, about once a week all summer. All equipped with ropes and climbing gear. Helmets and everything. I asked Willie about it. He doesn't know their names, but he'd know 'em if he saw 'em. He said he's seen them up there, at Rockwood, lots of times."

"But you think you saw the ropes on the early run a week ago Tuesday? Meaning they got up there before the morning trains, no?"

"Yep, I thought about that, and I guess they must have walked in early. Our schedule is pretty solid, and people know what it is. So they could have made it with no problem. Or maybe they were up there all night. Now, three days ago, when I saw the ropes, I had the late morning run, so they must have got in there between trains somehow, or gone in real early again. Anyway, I thought you'd like to know. Sorry I didn't remember last week."

"Me, too. Well, maybe not. You've followed up nicely, with the binoculars and the questions. Saved me some work, and, believe me, I appreciate that. I'll talk to Ernie and Willie, and the conductors on the other runs, too. I'd also like to go up there and look around."

"Well, I've got the 9:45 run today, and you can ride up with me, if you want. You could get off at Peaceful Pines, just across the High Bridge. You'd have about five hours to hang out there and look around, before we come by on the way back down. I can pick you up then."

"9:45, eh? What time do you need me there?"

"Well, you can ride up front again, so how about 9:30?"

"Hmm. I'll have to hustle, but I'll see you then."

\* \* \*

Before she had time even to begin to digest all of this new information, or plan for the day, her phone rang again.

"Trieri, investigations."

"Lieutenant Trieri? This is Sergeant Luis Montoya, Santa Fe Police Department. We got copied on this regional alert from your office, to be looking for a violin you're reporting stolen, a Stradivarius. Is it really worth millions?"

"Quite possibly, we don't really know. But we've got this music festival happening up here, and a guest soloist, a violinist, got herself killed. And she owned this expensive antique violin. Which is now missing. Can I hope that you've got something for me?"

"Maybe. Santa Fe is a big fine arts center, as you probably know, and so we try to stay on top of stolen collectibles. We've got informants placed in various galleries and so on. And one of them reported that discreet inquiries are being made about the black market value of a Stradivarius violin. He seemed to think that it involves someone local, not somebody from out of town. He's going to keep tuned in for more. But I thought you might like to know now. Seems like two stolen Stradivariuses in this part of the country is too much of a coincidence."

Annette smiled, resisting the urge to say "Stradivari."

“It sure is. Would you be offended if I came down and interviewed your informant?”

“We can do that. This isn’t someone deep undercover, or anything. See, the arts community is on our side. They don’t want lots of hot stuff floating around, either. When do you have in mind?”

“Well, this is Friday, and I have to take a train ride today. What if I come down Sunday evening and we can talk to your guy on Monday? Maybe he’ll hear more over the weekend.”

“Sounds fine. Should I find you a place to stay?”

“Um, well, I don’t know Santa Fe at all, so maybe that would help. I’m not real fond of hotels, though. Are there alternatives?”

“Sure. I’ll reserve you a condo.”

“A condo? How will that look on my expense report?”

“No problem. It’ll show up as a hotel booking. Lots of rich folks have second homes here, condos they rent out through agencies that have hotel names. So it’s just like home, for the price of a nice hotel. I’ll get you one downtown, so you can walk over and see us Monday morning. My office is at the downtown substation, near where all the galleries are. Downtown Santa Fe is about the size of downtown Durango, or at least that’s what I remember from the last time I was up there, and you really don’t need to drive. Or want to, this time of year. I’ll call back with the information later today.”

After getting his telephone number and office location, she thanked him for his trouble and hung up. It never rains but it pours, she thought. Two breaks in one morning. Better tell the Captain.

She walked down the hall to see if Jankowski was available, and found his door open. He was staring out the window, obviously deep in thought. She knocked gently, and he looked up.

“Oh. Hi, Annette. What are we going to put on the press release today? I’m running out of ways to say ‘no new information’ creatively. Have you got anything?”

“Well, I actually do, but it’s too soon to put it out to them, probably.”

She filled him in on the two new leads in the investigation.

“Climbing ropes, down into the gorge, huh? On the morning you found the body, and then again this past Tuesday? What’s that all about?”

“The fact that the engineer saw them on the day we found the body is significant because it means that the climbers were probably up there when the body got put on the tracks, or at least close. So they might know something, or even be involved.”

“So you’re going up there?”

“Yeah, and I’ve got to get cracking. I need to go home and change into outdoors clothes. I swear. This job is going to make a mountaineer out of me yet. I should be back by about dinnertime.”

“Call me at home when you get back, OK?”

“Will do. And then Sunday, I’m going down to Santa Fe. What’s the best way to get there?”

“So the violin’s in Santa Fe, huh? Um, probably fly to Albuquerque and then drive up. Rent a car. It’s about a four-hour drive from here, so flying will be faster, even with the airports. I’ll get someone to make reservations for you today. You need a place to stay?”

“Montoya’s getting me a condo. Pretty snazzy, eh? He said it won’t cost more than a hotel.”

“You priced hotels in Santa Fe lately? But that’s probably a good idea. What’s your plan for today?”

“Ride up there, look around. I’ll check in with the Peaceful Pines folks and see if I can find out who made the reservations for that tender operator. Something I needed to do anyway. I’m hoping I can find out something about why there were people climbing on that cliff. Maybe the Peaceful Pines staff will know something about them, too.”

“All right. But watch for that rope, and if it’s there, I want you to have backup available before doing anything. Clear?”

“Yes, sir. Crystal clear. I’ll call you when I get back.”

\* \* \*

Three hours later, she was peering through binoculars at the cliff below the railroad tracks several hundred yards ahead of the train, her gaze directed by engineer Leadfoot Johnson. She felt rather like the family dog out for a ride in the car, head out the window, watching the world go by. At least her tongue wasn’t hanging out. But it felt like her ears were flapping.

“Well, this is about where the ropes were hanging down from. But they’re not there today,” Leadfoot said, over the noise of the engine. Annette felt reassured, because there would have been no chance for a timely backup if the ropes had been in place.

“Yeah, I sure didn’t see any ropes. But it looks like I can see the cliff face from down there, on the other side of the river, if I can get over there.”

“No sweat. Just walk down the other side from Peaceful Pines. I bet there’s even a trail. It’s about a mile, or maybe a mile and a quarter down the other side.”

“What about walking back across the bridge and down the tracks to see if there’s anything here? It looks like that little tree back there would make a good landmark, you think?”

Leadfoot looked sideways at her, skepticism apparent.

“Well, got a watch?”

“Sure, why?”

“If you walk back down the tracks, keep a close eye on the time. You’ll have about two hours or so before the first train comes back down from Silverton. Unless you want to jump into the river. Could be done, I suppose, but I wouldn’t recommend it. It’s about four hundred feet down.”

“It should be about a mile and a half each way, right? Say, an hour of walking, max, leaving plenty of time to look around.” She smiled encouragingly, but he still looked skeptical. “And there’s plenty of places to get off the tracks along through here—it’s not all like those cliffs back there.”

“Yeah, but you probably wouldn’t want to get caught here,” Leadfoot said sardonically, as they began the crossing of the High Bridge.

Shortly after that, Leadfoot began easing off the steam for the stop at Peaceful Pines. Because the grade was still fairly steep, as train tracks go, the brakes would not be necessary, given his experience with coasting to a stop. At the station, actually just a shelter from the elements, Annette climbed down and turned to wave at Leadfoot and Ernie, his fireman. She noticed several people retrieving backpacks and other gear from the freight car at the back of the train, day hikers, backpackers, and others using the train as their transportation to the wilderness. And there were several people with real luggage being met by resort staff. Hal, she saw, was already standing off to the side, beginning to rig his fly rod.

She had called his office to let him know her plans for the day, and he’d surprised her by asking if she wanted company. With registration over, it seemed that he was no longer required to be on hand for

emergencies, real or imagined, and he wanted to take a day to get his breath before the semester began in earnest. She had been delighted to accept this offer, and used her clout to get him on the already full train—he didn't qualify as "backup" from the department's perspective, but she was going to be feeling a lot better to have company up there in the woods. Even if Hal's intentions were mainly to stand in the river casting imitation caddis flies. He'd chosen to ride in one of the passenger cars with the other back-country aspirants, and she, with a final wave to Leadfoot and Ernie, walked back to where he was busily putting his fishing gear together.

"Can't wait, huh? Bet this train just wouldn't go fast enough." He grinned a response.

"What I have to do," she continued, "is to walk down the tracks and look carefully at the top of the cliff, back there by a tree I spotted, about a mile and a half down. I'll try to find a landmark on the other side, so I can walk down there later and look across. There must be something about the cliff that motivated those climbers to come all the way up here with their gear."

"Do you suppose it was our friends, Reg and Lennie?"

"Don't know yet. But I'm going to figure out how to get the conductors to have a look at them, to see. I presume I'll see you in the river somewhere around here, after I get back?"

"I imagine that there will be plenty to keep me occupied around here. Looks like good water."

"Good. But I better hustle. Leadfoot told me I have a little under two hours before a train comes along. I want to be back here with you by then."

"I'd like that, too. I really don't want you caught up on that shelf with a train coming along. Are you all oiled up with sunscreen, or can I get a kiss?" He pushed his hat back on his head to get it out of the way of her face.

"Yes!" she replied, with a big, greasy smooch.

Then she walked off, back in the direction of the High Bridge, as the engine took several deep breaths and made panting noises to get started up toward Silverton. After about a minute, she looked back and saw the little train receding up the river. Hal was walking briskly, even though encumbered by chest waders and his assorted gear, up the tracks to a place where the river looked accessible.

She knew she had plenty of time, as long as she walked quickly, so she headed back down the tracks. It wasn't too long before Lance Riggins' story popped into her head. Just down the tracks from here, after all, was where it happened. Broad daylight notwithstanding, the mere thought of the snowplow hurtling down the tracks caused her to look over her shoulder frequently. It didn't help when she encountered a little warning sign put up by the railroad company:

**Attention!**

Persons proceeding beyond this point  
do so at their own risk and are liable  
for prosecution as trespassers!

It was the "at their own risk" part that got her thinking.

At the pace she set for herself, it took only about a half hour for her pedometer to read 1.5 miles, and then she recognized the little tree she'd picked out as her landmark for the spot identified by Leadfoot. She stopped and looked around carefully, but there was nothing particularly unique about the area, just more railroad tracks like everywhere else along the grade. She took the few steps over to the

edge, looked down, and stepped back quickly. Four hundred feet, eh? she thought. Well, if this shelf can hold trains, it can hold me.

Then she began working her way along the cliff edge, walking very carefully and examining the ground in some detail. There was nothing especially noteworthy until a few yards past the little tree, where there were numerous footprints around the top of a vertical crack in the cliff face below. Feeling rather like Sherlock Holmes, she took out a small tape and carefully measured their dimensions, and took several pictures of them. Then she walked gingerly to the edge so she could see down the crack.

There it was, a large eye-bolt. That must have been what the climbers used for their ropes. She looked across the river for landmarks, but there was nothing she could get a good fix on. Then, inspired, she gathered several large rocks and made a little cairn, right on the edge of the cliff. Feeling much better, she struck out up the tracks for the bridge and a visit to Peaceful Pines. All in plenty of time, she noticed on her watch.

\* \* \*

Hal, meanwhile, had followed her progress back across the High Bridge and down the tracks until she disappeared around a curve, and then set about his business for the day.

The air was filled with little moth-like bugs wearing two sets of wings and no tails, tan caddis flies, equivalent to about a size 16, or maybe 18, Hal saw. Trout were rising sporadically, in the pools behind boulders and in the riffles over gravel banks as well. He tied on an elk-hair caddis, with a dark tan dubbed body wrapped with gold wire for ribs, and started casting into one of the larger pools.

It took only three casts before a medium-sized fish snatched the fly, and then promptly spat it out. Hal wasn't expecting anything to happen this soon and felt foolish for missing the strike.

All right, he thought, now I'm ready. Let's see you get away with that again. And he continued casting to the same pool. After four more casts, another, somewhat smaller, trout slurped the imitation, and this time Hal was ready. Two minutes later, he carefully released a 14" rainbow trout, with no notch in its dorsal fin, meaning it was a wild one. With the first fish of the day taken care of, he settled into a rhythm and forgot about time.

It seemed like only a few minutes before Annette appeared in his peripheral vision.

"Doing any good?" she shouted above the noise of the white water.

All he could do was grin and nod. He reeled in his line and carefully sloshed his way over by the bank where she was standing.

"I want to walk down the river on this side and see what that cliff face looks like through these," she waved her small binoculars, "and we ought to get going. We have to get back up here to the train stop after that. It'll be time to catch Leadfoot's train on the way back to town."

"You had a chance to talk to the people at Peaceful Pines? Has it been that long already?" He was amazed to think that several hours had passed.

"Time flies when you're having fun, no?"

They set off down the river along a narrow hiking trail made, no doubt, by years of Peaceful Pines guests.

"So what did you find up there, anyway?"

“A big eye-bolt at the edge of the cliff, cemented into a crack. Probably won’t be able to see it from this side. Can’t see it from the tracks, either, unless you know where to look. I noticed a bunch of footprints, they gave it away.”

Twenty minutes later, she stopped and began scanning the cliff on the opposite side of the river through her binoculars.

“There’s the cairn I built where the eye-bolt is. And there are several little ribbon thingies over there on that wall, below the cairn. And, say, there’s an opening, like a little cave. About half-way up. Hard to see because of the angle of the face. See it?” She was pointing, and handed him the binoculars.

“Those ribbons look like climbing nuts, protection against falls. You jam them into cracks and tie pieces of nylon webbing on them—that’s what you’re seeing—to clip a rope onto. Sometimes they’re too hard to get out, so climbers just leave them. And there’s the cave. Maybe that’s what they were interested in. Wonder how they found it?”

“No idea. But if the conductors identify our friends, and if their shoe sizes match those footprints, we’ll just ask them. Ready to go?”

“With fishing like this, I’m ready to go back into the river. But it’s a long walk home, I guess. And I’m getting hungry.”

He led the way up the trail along the river, toward the Peaceful Pines train stop.

\* \* \*

They sat together for the run back down to Durango on Leadfoot’s return trip to town, and she filled him in on her visit at the Resort.

“Peaceful Pines looks like the kind of place I’d pay big bucks to stay at, I’ll say that much. Although a lot of the cost is for the golf, I bet. Anyway, it’s quite the place. And it was so strange when I asked for the manager. Do you remember the manager at the General Palmer, Phillip Westerman?”

“Yeah, that skinny guy who was not comfortable with our looking in the room the day after we found the body. Last week.”

“Right. Anyway, I’m sitting there waiting, and, so help me, up he walks and says ‘Can I help you, ma’am?’ like he’s never seen me. And I just saw him again last Tuesday, when we went through the safe deposit box. So I said ‘Nice to see you again, but I’m surprised to see you up here, Mr. Westerman,’ and he gets this confused look. But then a sort of recognition happens and he explains that he and Phillip Westerman, who works at the General Palmer down in Durango, are twins, and his name is Richard. We had a good laugh, and then got down to business. He was most helpful. The death, followed by the incident with the snowplow, are things they want cleared up as soon as possible. He’s going to find out how the reservation for Weisicki was made and let me know. Then I got a first-class tour of the place.”

“Weisicki? Oh, yeah, the tender operator who missed his Tuesday morning run a week ago. Well, if you want to stay up there, we could save our pennies up and do it. Probably have to wait until next summer, though to get a reservation. Did he, or anybody, know anything about the climbers on the cliff face?”

“Nope. He was very interested in that, though. Funny that no one would have noticed it, but those folks are busy with the guests, and they don’t get downstream by that cliff very much. And the guests don’t seem to stray far from the golf course.”

“All the more reason for us to think about coming here. It sure costs a lot, though.”

“And I think the people, I mean the regulars, up at the Los Piños Ranch are more our kind of folks. Anyway, we don’t have to decide now. Are we there yet? I’m getting hungry, too.”

“Almost, I expect. Let’s go home, get cleaned up, and go find someone to cook and serve us food. Lots of it.”

“Good idea. Especially because there’s something I didn’t have a chance to tell you. Sunday afternoon, I’m going down to Santa Fe.”

“Santa Fe? Not fair! The semester’s just starting, so I can’t come. And talk about food... Anyway, for how long? What for?”

“The Stradivarius may have turned up down there. And I think only for one night, but you never know. Captain J. said I should fly to Albuquerque and rent a car. Does that make sense to you?”

“Well, I’d drive, but it *is* about four hours. And flying to Albuquerque and driving back up to Santa Fe is probably only about two, or two and a half, if you count airport fooling around. The airport there is only a little bigger than ours, so things are quick on both ends. Oh, wait. I remember reading something last spring about air service, Rio Grande Air, or something like that, between here and Santa Fe. That would be ideal, if you can handle one of those little bitty planes.”

“What’s ‘little bitty’ mean? And are there cars at the Santa Fe airport? For that matter, is there a Santa Fe airport?”

“An airport, sure. Lots of people with lots of money have second homes there and fly in and out in their private planes. Some jets, I bet. We can look up the cars and what kind of planes they have when we get home. Where are you staying?”

“My contact in the SF police department suggested a condo, close to his office, I guess. I don’t really need one, I mean, I won’t be cooking or anything, but it sounds fun, and I’m not real big on hotels. Maybe I can scout it out as a place for us to stay on a vacation down there some day. Hint, hint. Anyway, that’s why eating out tonight is a good idea. A celebration tonight and tomorrow we can cook at home and snuggle. Say, this our first time apart in...well, since I moved in with you, no?”

“Yeah. I’m not sure I like the idea. But I guess we’re grownups and can deal with it. Hmm. This sure tells me something about my feelings for you, you know?”

“Good or bad?”

“Good all the way. Just something I hadn’t thought of before. Something to think about.”

She giggled and punched his shoulder.

“Well, ‘you just keep thinking, Butch. That’s what you’re good at.’ Remember that?”

“Riding on this train, how could I not remember that? Besides, the way I’ve seen you handle a gun, you know, you could be Sundance. Maybe we should rob this train, like they did. Naw, not enough return on investment. Let’s hit one of the banks in town. Then you can go to Santa Fe, and buy yourself some of that expensive jewelry they have down there. Or some Big Expensive Art. A Remington. Painting, I mean.”

“Well, even if it’s only for one night, I’m going to miss you, Butch. I mean, Hal. Suppose these other people would be embarrassed if we make out?”

“Who cares?”

\* \* \*

Although Friday afternoons usually meant extra business at the Southwest Cultures Gallery, and sometimes upstairs at Four Corners Archaeology, LLC as well, this one was slow. Raimer Holtzmann knew that this lack of customer interest would extend through the weekend, so he went home early. This involved no little fiddling with the electronic equipment, but he was sufficiently security conscious that it had become habit. Much of the fiddling could have been automated, but that would lead to security holes that he simply could not tolerate.

This weekend would be slow, just like the past week, due to a hangover from last weekend's orgy of selling at the Santa Fe Indian Market downtown, so Holtzmann knew he would be better off thinking of other things. Like unloading that stupid violin. He was well aware of its intrinsic value, but he was also skeptical of its black market salability. Who would dare invest in something of such notoriety, especially undocumented?

So he closed up early, sent his staff home—with pay, for he recognized the value of high morale in his trusted employees—and headed home, the long way, so he could avoid the downtown streets. Even without a special event, they were always hopelessly clogged this time of year. He worked his way east and north through the foothills, and finally over to Bishop's Lodge Road. From there, it was easy to get to his house on Mansion Ridge on the north side above the Governor's place, with the view of downtown and the Ortiz Mountains to the south.

He made it almost home before remembering he'd promised to pick up the dry-cleaning. Back downtown. Tiffani would be petulant, and he would sleep alone tonight. For a twenty-two year old, she could be quite the independent thinker, he grumped to himself. If it weren't for her magnificent body, and her enthusiasm in bed, well, there were lots of young women interested in men with his income, age be damned. Aach. Maybe he should just go back down to Sandoval Street and get her dresses.

As he turned left onto Bishop's Lodge instead of right, his car phone purred. It, too, was connected to one of those beige boxes, a very special one.

"Ja?"

"It's me. We've got new information, on two fronts. Can you talk?"

"Just a minute. Let me get out of traffic." He turned onto Murales, and pulled into one of the Fort Marcy ball field parking areas. "OK, what do you have for me?"

"First, the Durango police are getting closer and closer to Meeker and Schwab. Schwab is busy rehearsing for this weekend's concerts, the final ones of the festival. So he's not going to be doing anything for us until Monday. Meeker could, but he won't without Schwab's concurrence. If we don't get our hands on the new inventory this weekend, the police may get them and then it."

"A tragedy. About the inventory, I mean. What do you recommend?"

"A little incentive for Schwab, in the form of a visit with Dino. This will put pressure on Meeker, and I think he'll come through."

Holtzmann thought for a minute.

"Good. Make it so."

Using Captain Picard's famous command never failed to boost his ego.

"And the other thing?"

"The violin. Immediate disposal will come at a price. Word is that in Europe, collectors will pay almost market value, even without proper documentation. Here, there will be a huge discount. All the more reason to put pressure on Meeker to deliver the artifacts, in my opinion, rather than wait to be able to pay him for the violin. Unless you want us to try to persuade him that the black market values it way

below the legitimate price and just front that money to him. You could then make a huge profit if we sell it in Europe.”

Violins, or anything else European, were not Holtzmann’s cup of tea. But profit was, profit from Europe or anywhere else, and he could see the sense in this.

“Let’s wait and see if Schwab’s visit with Dino puts enough pressure on Meeker to make this part moot. We will still owe Meeker something for the violin, of course, but we don’t need to hurry. Remember, we’ve only had it for a couple of days.”

“Right. We’ll make the thing with Schwab happen as soon as possible, don’t worry. OK?”

“Excellent.” The prospect of additional profit—not to mention not having to sleep alone—had softened the pain of having to trek back into town for Tiffani’s dry-cleaning.

\* \* \*

## Ten

They arranged it for Saturday morning, as a hint that there was no time to waste. Walking from his apartment up to the campus for rehearsal, Leonard Schwab suddenly found himself hustled into a passing car, before he knew what was happening.

One second he was walking up the hill on Eighth Avenue, the next he was sitting in the back seat of a dark sedan—a limo-sized one, he realized—facing Tony LaCoste, who was seated with his back to the driver. That individual was a Very Large Person, with, apparently, no neck, whom Schwab had not seen before. Before Schwab could object or argue, LaCoste shushed him with a shake of his head and a wave of the gun, complete with silencer, he held pointed at Schwab. There was a short staring contest, won by LaCoste, who then used the gun to tip his black hat back on his head.

“Don’t spoil things by whining, Len. I just don’t want to hear it. What I do want, is for you to pick up that phone there,” he waved the gun toward a car phone hanging next to the seat Schwab was in, “and call your colleague Reg Meeker. Tell him what’s happening, and I’ll disconnect you when I think you’ve said enough. If you cooperate, I won’t have Dino break any of your fingers. Otherwise...well...say, Dino?”

He turned slightly to address the Very Large Person.

The driver reached up and adjusted the rear-view mirror so that Schwab could see his face, which was dominated by a single dark eyebrow, and then made a sort of grunting noise.

“Dino, how are you at breaking fingers? One by one, slowly, I mean?” LaCoste continued.

Schwab heard another grunting noise, but what bothered him most was the look in Dino’s two black eyes, under that distracting eyebrow. Not anticipation, exactly, or glee. Hunger? Passion? Whatever it was, Schwab suddenly felt his palms sweating. He reached for the phone and began punching buttons.

“Hello, Reg? Ah, listen, I need to fill you in on what’s happening to me. LaCoste picked me up on my way up to rehearsal...I’m in his car. He says if I cooperate, he won’t break my fingers...I think he’s serious, but I really don’t know what he wants yet...Sure, I’ll ask.”

But he didn’t have to, because LaCoste had taken the receiver from him.

“Hi there, Reg, how’s it hanging? What I want is the Basketmaker inventory. Now. No more stalling. OK? I think we both know that Lennie here isn’t the world’s greatest violinist, but he’s pretty good and he’s a friend of yours, isn’t he? He’d be pretty bad off with broken fingers, don’t you think?”

He smiled pleasantly at Schwab, who was trying hard to keep his breakfast down. His morning coffee had turned potentially acidic in his stomach.

“You sure you want your friend here to know that?”

He put his hand over the mouthpiece, and said to Schwab, “Sorry, Len, but he thinks I’m bluffing. Want to talk to him again? And what would you like first? Thumb? Pinkie? What? And which hand?”

Schwab grabbed the phone, his hand slippery with sweat.

“Christ, Reg, he’s serious. He’s got a guy here, a big guy, I mean, who looks like he’d enjoy breaking things. C’mon, we’ve got to tell him. If you don’t, I will.”

He realized in panic that Dino had parked the car—where, he couldn’t tell, because of the tinted windows—and was waiting patiently for something to do next. He heard the sound of cracking knuckles from the front seat. Then, hearing something reassuring on the phone, he handed it back to LaCoste.

“Good choice...You’ve got it *where?* Amateurs! You have any idea how delicate this stuff is? Let me tell you, it better be in good shape, or I’m going on a bone-breaking spree, and not just with Lennie here. We’ll pick you up, and you better have the stuff, in an hour, outside the gym. Be there.”

And he disconnected, looking disgusted. Schwab heaved a sigh of relief.

“Don’t get too complacent yet, pal. I can’t believe you idiots would stash 1500-year old artifacts in a gym locker. The humidity, for one thing. If anything’s damaged, you’re both toast, and Dino will have you for breakfast. Won’t you, Dino?”

There was yet another grunt from the front seat. Schwab decided the expression he was seeing in the mirror was hunger.

\* \* \*

Annette’s trip to Santa Fe, plus the Sunday afternoon concert, meant that she had to tie up as many loose ends as possible as soon as possible. Neither Schwab nor Meeker was answering her calls, however, so she decided to work on the snowplow incident.

This meant telephone calls to the Colorado Department of Transportation, owner of the vehicle, and its local yards. An adventure in dealing with the bureaucracy. It took only a short time for her to realize that there was simply nothing that she could accomplish on a Saturday. No one was answering any of the CDOT’s phones. Two lines of investigation, two strikes. Rather than tempt a strikeout, she decided to go for a walk. Lance Riggins would probably be camped outside with the other reporters, and maybe she could make progress on the snowplow incident with another conversation with him.

The on-street parking on both sides of Tenth Street near police headquarters was now the exclusive domain of news crew RVs and satellite vans, many with generators growling noisily. Annette watched as a pre-teenaged boy went solemnly from parking meter to parking meter, feeding each a dose of change. Capitalism in action. At least some of the national news largesse was filtering its way into the local economy.

But there was no throng. Apparently the strategy of holding regular press conferences had trained the reporters quite effectively. Besides, it was hot, even though it was only about 10:30 in the morning, and why would they want to stand around in the sun when they could be inside their air-conditioned

cocoons, watching CNN? Finding Riggins wouldn't be as easy as Annette had assumed. Then she remembered the bar, from that phone call earlier in the week. Tuesday? No, probably Monday. Days were slipping by and she wasn't making the kind of progress on any of this that was really needed. The Narrow Gauge Saloon, on College, it was. She headed west.

The sign in the window proclaimed that the saloon opened daily at 10:00, so Annette expected it to be empty. But there was Lance Riggins, sitting at a table with a view of the street, pecking madly away at a laptop computer. He must have a deadline soon, she thought. She was relieved to see that he was drinking only coffee.

"Mr. Riggins. Good morning. Got a deadline coming up?"

"Huh? Oh, hello, Lieutenant. Want to sit down? Yeah, even weekly papers have deadlines. Mine's Monday, but I'm trying to get a head start. Don't have a lot to write about, though, unless you've got new news..."

The hint was obvious, but Annette ignored it, sitting down and waving for coffee instead.

"I thought this week you'd probably write about your little adventure up the canyon. Unless you've brought in another of those models for more pictures. How are things working out with Randy? I noticed his name on your byline last issue."

"Can I infer from this comment that you've actually read my stuff? Why, I'm honored!"

"Just the usual supermarket check-out line browsing, don't get all excited. The byline was on the front page, along with that ridiculous picture. You know she didn't look at all like that model, don't you?"

"You mean the violinist? Of course. But our readers don't, and they probably don't care. The hair color was close enough, wasn't it? And there were the other, er, distractions the picture offered, after all."

"Yeah, 'distractions' that didn't look at all like her, either. According to the autopsy, Steffanie's body didn't contain any silicone at all, and certainly not in the quantities that model must have. Can I ask you a question? How do you manage to do what you do and maintain any self-respect?"

She thought he might be at least a little embarrassed, but he just grinned.

"I had to deal with that a long time ago. But you might like to know that your local guy, Randy, is chewing on that one now. I'll bet you anything that he'll figure out how to deal with it, though, just like I did. Large amounts of money are quite useful for assisting self-rationalization. I've also got the advantage that I'm writing the Great American Novel in my spare time. I'm about half way through. Makes me feel like a real writer, not just the hack that you think of me as. So, did you come looking for me, or do you just wander in here every Saturday morning?"

"I thought I might find you here. And if you're writing about that car-in-the-river incident, that's a good place to begin, or continue, a conversation. Maybe you'll hear something new, or think of something new, if we talk about it some more. But you've got to promise to share new stuff with Randy. I don't know what all you know about it, though, so maybe this will all be old stuff."

"Is this on the record or off?"

"Hmm. Thanks for asking. How about if I'm a 'highly placed source' in the department? No names."

"Perfect. Better than a direct quote, for our readers. But I thought we'd covered all the ground of that snowplow thing last weekend."

“Maybe, maybe not. You know that we found the plow?”

“What!? Where? That’s just what I need to polish off this story. Can I get a picture of it?”

“Come on, you don’t need a picture of that one, just find another one. There’s a CDOT yard down on the south side of town. The real one was in the woods up in the canyon, a few miles above your little adventure. No prints or anything else to identify who did it. Green paint on the blade, though, that matches the Chevy. Now then, it’s your turn. You told me that the only place that you discussed your plan to drive up the tracks was in here, with Eddie, um, Eddie...Eddie Walker, was that it?”

“Yeah. Poor Eddie. He was something of a loser, but really quite competent and even sort of likeable in a way. We talked about the plan in here. Like I said, it was late, um, a week ago Thursday, at night. The place was pretty full, and noisy. So I don’t see how anyone could have been paying much attention to us.”

“If this is where you talked about it, that’s what must have happened, though, no? Let’s go over things in as much detail as you can remember. Maybe something will emerge that you’ve not really given much thought to.”

She took out a notebook and a pen.

\* \* \*

Hal had called John Martin and set up a Saturday lunch meeting, because he was worried. It was looking more and more as if the university’s PR director could be involved in the murder, and the last thing that the university needed was the publicity that this would generate. Martin had said he’d be in his office, working on whatever provosts work on at the beginnings of semesters, Hal supposed, so he decided just to bring lunch with him. A pizza, and some non-alcoholic beer.

As he was walking across the campus at about 11:30, hands full of lunch, he was surprised to see a stretch limo, black-looking, windows tinted, in front of the student gym. And there was Reg Meeker, in a very animated conversation with someone in a black cowboy hat. What in the world? But the pizza was getting cold.

Martin was working on a spreadsheet that filled his huge computer screen, piles of paper scattered about his desk and typing table. And floor. So provosts really do real work, Hal thought. Martin looked up, apparently sniffing pizza aroma. Even on a Saturday, he was dressed in his provost’s costume, tie and all.

“Ah, Hal. Just in time. I’m disgusted with this budget stuff and hungry. Hmm. I wonder if that’ll be big enough.” He grinned and licked his lips.

They made small talk, about the budget, mostly, and demolished the pizza. Finally, Martin’s curiosity got the best of him.

“So, what’s this meeting really about? Is everything under control for this semester?”

“Academic-wise, yes. But maybe not PR-wise.”

And Hal filled Martin in about Annette’s suspicions and the various bits and pieces of information connecting Meeker to the Boudreau murder, including the curiosity of the limo just before lunch. It took about a half hour, with Martin’s questions, and by the end Martin was looking rather acidic.

“Hal, you’re a great dean, but a lousy menu planner. First a greasy pizza, now this. Got any Maalox? Better yet, got any suggestions about what to do?”

“I’d recommend confronting him, but Annette may not be ready for that. We don’t want to spoil whatever she has in mind for an arrest, if it goes that far. I wonder what he was doing with that guy in the hat. A limo like that on campus isn’t usual, that’s for sure. One thing we could do would be to find a good picture of him, one that really looks like him, to show around down at the railroad station. And maybe we could get lucky and find a picture of the AMFest concertmaster, Schwab, I think. Maybe in a concert program or something.”

“At least we should prepare some kind of statement for when he does get arrested, assuming that happens. About how we’re cooperating fully, opening our files, all that sort of thing. Do you really think he was involved in the murder and the, um, sexual activity?”

“I really don’t know him well enough to judge his character in that regard. But look, his office falls under your legal jurisdiction, doesn’t it? Do you suppose we could get in there and find something that would allow a DNA sequence? I don’t know that it would be admissible, but at least it would be legal to take one from furniture or whatever else there might be in there that we could get one from. Then we could either eliminate him or not. I’m told he works out at the gym. Maybe there’s some sweaty clothes, or something, although I don’t know if they’d work for what we need.”

“Who would know? Are any of the cellular biology faculty around today, do you suppose? Or should we get Annette over here?”

“Well, I already got her one DNA sample on the sly, of hair from the AMFest conductor. It eliminated him and Annette was most pleased. So let’s just wander over there and see what we can find. Got your super-master key?”

\* \* \*

It had been a busy week in the La Plata County Coroner’s office, and Lester St. Clare had been up to his elbows in his work—literally, for a good part of the week, due to a multi-fatality car accident Tuesday night up the valley that had required three autopsies, and figuratively, because of the stack of paperwork.

He had re-examined Steffanie Boudreau’s body on Tuesday, but, with the accident victims occupying most of the rest of the week, he hadn’t had the chance to follow up on his new findings. Saturday morning he spent on the telephone with trusted colleagues around the country, and Saturday afternoon he called Annette.

She was sitting in her car with her cell phone in her hand, just about to call Hal, when it tweedled, making her jump.

“Trieri, investigations.”

“Hi Annette, it’s Lester. Sorry it’s taken me so long to get back to you. I got tied up with that car accident.”

“Yeah, I’m not surprised. That’s the worst one we’ve had in a long time. Anything weird?”

“Not really. Alcohol in the driver’s blood, I found out yesterday. Passengers not wearing seat belts and bounced around to death with head and internal injuries. One ejected, as you probably saw in the paper. Looks just like the first guess, going too fast for that curve. What I can’t figure out is why it was that particular curve. The ones farther up the valley, like at Cascade Creek, are so much more dangerous. And then it would have been a San Juan County problem, not mine. But I’m calling about the violinist. I had a closer look at her scalp and her elbows, like we talked about.”

“Right. To look for evidence of a convulsion, or something like that.”

“Yep. And it’s equivocal. Maybe, maybe not. Cause of death is solid, crushed spinal cord from the broken neck, but homicide may not necessarily follow. It’s a tough call. Could be some kind of convulsive motion. A possibility, a fair one, I’d say. Reinforces our speculations from her blood work. Makes for the possibility that she died accidentally, at least in the sense that a drug-overdose-related convulsion can be called accidental.”

“But there’s still the placement of the body, what she was doing up there in the first place with no clothes on, all that stuff. She sure didn’t get there all by herself.”

“Right. So there are accomplices in the drug activity, or worse. Your initial exam was quite thorough, under the conditions, but if she was convulsing it would change some of the time line, at least potentially. You’d expect rigor sooner with all the activity in the muscles. So death was probably later than we estimated. In any case, it may not be as straight-forward a murder case as we were thinking. And I don’t know what got into me about the karate move breaking her neck. I suppose that’s still a possibility, but maybe not. I guess I’ve got to stop watching Jean-Claude Van Damme movies.”

“Don’t be too hard on yourself. And besides, you just said it’s equivocal.”

She told him about finding the joints in Boudreau’s hotel safe deposit box, their composition, and the missing violin.

“So, we’re looking at a strange combination of things, now. And there may be more, too complicated to fill you in about just yet.”

“A Stradivarius? Floating around the black market here? That’s a new one. I can’t imagine that any of the local music stores would touch it.”

“It may be down in Santa Fe. I’m going down tomorrow, to interview an undercover source in the arts community on Monday. What I’m really interested in is who took it down there. That should connect with her death. So I’ll keep in touch. Thanks for the extra work, Lester.”

“Hey, I feel dumb for having missed this the first time through. I’ll dig out my report and change it. At least that hasn’t leaked to the papers yet. See ya, Annette.”

She sat staring out at the trees on the other side of the parking lot, contemplating her next move in the light of St. Clare’s new information. This made it unlikely that first-degree murder was involved, probably more like murder two or some kind of accident.

But the missing violin was a wild card. Could she have been killed for it? Or did she die from the drugs, somehow, and then her companions, who could be the two climbers, just walk off with it? More than ever, Annette needed to identify the climbers, and the way to do that was to find pictures of the suspects. Surely the university would have one of Meeker. If one of the train conductors could pick him out of a group of photographs as someone who had been hanging around with climbing equipment at Rockwood, she ought to be able to get a search warrant for his home.

A DNA match would certainly be nice, she thought.

\* \* \*

Earlier in the week, Luigi had been upset about Schwab’s performance of the Beethoven Concerto; now he was outraged about Schwab’s absence at the most important rehearsal of the season. Never again would they appear on the same stage, not under any circumstances. To devise a program, one designed as a surprise for a final set of weekend concerts, without the concertmaster was, well, just unthinkable.

Luigi had waited a polite, if impatient, hour, and then he’d promoted the second chair to concertmaster, much to her delight. They settled on a program of music inspired by the west, including

pieces by Copeland, Grofé, and, just for fun, some Elmer Bernstein movie themes. Almost a pops concert, guaranteed to be a crowd pleaser, especially because all summer they'd limited their programs to more serious pieces. Fortunately, this music was easy enough that the orchestra—after a summer of playing together—could sight-read it almost perfectly.

The object of Luigi's outrage was still sitting in the back seat of the stretch limo, next to Reg Meeker now, trying not to wet his pants. They were cruising into Chama, New Mexico, on their way south from Pagosa Springs, and still had about two hours to Santa Fe. Schwab didn't think he could hold out that long, and he kept thinking back to the pot of coffee he'd drunk before leaving his apartment that morning. Tony LaCoste was still sitting across from them, with that superior smirk on his face. The space between their feet on the floor was filled with a duffle bag, apparently full of something strangely shaped, lying next to it a peculiar looking stick.

They had turned off the highway onto a gravel side street, and the limo slowed, finally coming to a stop. They heard Dino growl something about a detour and now a traffic jam. Schwab realized his chance.

"Look, Tony, either I'm getting out right here to take a leak, or I'm gonna just do it on the carpet here. Unlock the damned door!"

LaCoste laughed, and flipped the door-lock switch.

"Hurry back, Lennie. You run off, and I'll shoot Reg and then send Dino after you. Hey, Dino! Pull over for a second." The big car eased to the right, then stopped again.

Schwab opened the door and leapt out. He was momentarily blinded by the bright sunlight—those windows were seriously tinted, he thought—and then he recognized the form of a large clump of lilac bushes just off the road. He sprinted that way.

Rosa Jaramillo was sweeping her back porch, trying to ignore the noises from around front. It was just so annoying, the crush of tourists during summer weekends. Between the arrival of the Cumbres and Toltec tourist train and the various and sundry garage and sidewalk sales, normally peaceful Chama clogged up on Saturdays. The honking horns and motorcycle motors of the traffic jam ripped the usual quiet, and the vehicle exhaust mixed with the coal smoke from the train to fog up the cool mountain air. It was only in the last few of her 85 years that it had become intolerable. Before that it was sort of charming, and it certainly had helped the local economy. But now, well, she had probably lived long enough anyway. Maybe she should take her grandson's offer, and move to that nice retirement home down in Española. The winters were warmer there, too.

She swept the grass clippings and dust off the end of the porch, and, glancing around the side of her little house, noticed a man, a *gringo* no less!, peeing on her lilac bushes. Well! This was too much by half again! And she tottered off the porch, waving her broom and exercising her astonishingly vile Spanish vocabulary, Northern New Mexico version.

Schwab had experienced that moment of bliss as he was able to let go, and was nearly finished with his business when he heard an old, old voice screaming in an unknown language. Spanish, that was it. He looked over his shoulder just in time to be whacked on the back by a dusty broom. He nearly fell over into his own puddle, but then he managed to sort himself out, adjust his clothes, and make a dash for the limo. At least the old crone wasn't going to be able to run like he could.

But when he reached the car, the door was locked, and when he pounded on it, the window opened on Tony LaCoste's Cheshire Cat grin.

"All finished, Len? Ready to roll? Come on back in. Maybe we can get through this traffic." But the time this took allowed Rosa to hobble across her front yard, and as Dino was pulling back into traffic,

she delivered the limo a number of death blows with her broom, or so she saw them. Although these were ignored by the occupants of the limo, they afforded the rest of the prisoners of the traffic jam considerable amusement.

Rosa, however, was anything but amused. She stomped back into her little house and immediately called her grand-nephew Diego at the sheriff's office, before she forgot the license plate number of that huge, dark car she'd whacked with her broom.

\* \* \*

Annette finally reached Hal at home. It seemed he had turned off his cellular phone for the afternoon, but he answered the house phone, his number.

"Hi, found you at last."

"Huh? Oh, I had my phone off. I was off on a, ah, secret errand. What's up?"

"Secret errand? Guess I'll have to bribe it out of you later. What's up is that I need a recent photograph of Reginald Meeker. Any ideas?"

"How about the Frémont State web site? I bet that the PR office page has a picture of him. His ego wouldn't let it be otherwise. Let me call it up and see. How's your day going?"

She could hear the sound of a computer keyboard in the background.

"Fair to middling. I interviewed my good friend Lance Riggins again, about the snowplow incident. There are some curious aspects of that whole thing that I think I almost understand, but not quite. There's still a missing piece of that particular puzzle. And Lester called me about his follow-up look at Boudreau's body. He's now equivocating about whether there's really a homicide or not. Since I've got to wait for your computer, what's this 'secret errand?'"

"Aww, I was going to surprise you later. Some of Reg Meeker's hair. A rare commodity, actually. He just doesn't have that much available. John Martin and I made a visit to his office, and Reg has a private bathroom with various grooming gadgets. Including a hairbrush. It was great. I almost got John to promise me a private bathroom, and he's definitely upset that he doesn't have one for himself. It seems that our PR director's budget has been on a kind of loose leash for some time. That, I bet, will change. Now, here we go. Let's see. Yep, as I thought. A rather professional-looking picture of the great man himself. Appropriately casual and friendly, yet elegant."

"What's he wearing?"

"Preppy. Polo shirt, casual slacks, it looks like. He's outside, leaning on a tree, with what looks like the humanities building in the background. Very picturesque. Waist up shot."

"Great. I'll pick up some similar pictures at the station and take them down to the train depot first thing in the morning, to see if any of the conductors can pick him out. Can you print out a four-by-five size color version?"

"Hey, I'm Mr. Computer Wizard, remember? It'll be ready and waiting when you get home. And I've got the hair in a baggie."

"You do good work. I must be a pretty good teacher."

"Indeed you are. Any dinner requests?"

"Um, how about something homey? It looks like restaurant food for me for the next couple of nights."

“Hmm. It’s hot. How about tuna salad, or something else cool like that? I’ll work on it. We can eat on the deck after it cools off.”

“OK, but no pickles though. And I’ll stop and get some fruit for breakfast. Ciao.” She pushed the End button.

A hair sample! And, because the provost had authority to be in any office on campus, a reasonably legal one. Now, if she could get that picture identified, she’d be in business.

\* \* \*

The Saturday night concert was a smash, just as Luigi had thought it would be. The orchestra played together with the intuitive familiarity of an experienced jazz ensemble, so much so that he began to feel superfluous.

That, of course, was just the challenge he needed to exert himself and change the tempo from what they’d rehearsed, so in the middle of the *Grand Canyon Suite* the donkeys suddenly galloped like thoroughbreds.

And Leonard Schwab wasn’t missed at all. In fact, his substitute handled first-chair leadership so well that Luigi gave her a long flowery introduction during the curtain calls at the end of the evening. He referred to the missing concertmaster only briefly, as being “indisposed.”

But that was not precisely the case.

After negotiating the rural traffic jam up in Chama, the remainder of the limo ride to Santa Fe had been unremarkable for Meeker and Schwab. If, that is, watching Tony LaCoste becoming increasingly drunk while continuing to wave the silenced automatic around randomly could be called “unremarkable.”

Because of the dark tinting of the windows, they had little choice but to watch LaCoste, despite the spectacular scenery of northern New Mexico, scenery that inspired some of Georgia O’Keeffe’s best work. It wasn’t until they stopped in the driveway of a huge stucco house with an amazing view of what turned out to be Santa Fe and mountains to the south that they were able to figure out where they were.

Dino showed them into the foyer, where they were surprised to learn that they were to be guests of Raimer Holtzmann for the night. Holtzmann was not in town this evening, but there was a Sunday afternoon meeting scheduled to examine the contents of the duffle bag. They were both overwhelmed by Holtzmann’s accommodations, which turned out to be a guest house just down the hill from the main mansion. Dinner was catered, and superb, the wines and liquor were all first-class, and the guest house itself was far more elegant, not to mention bigger, than Meeker’s home in Durango, which he thought of as something of a showcase.

It was not until Schwab decided to go outside for a stroll late in the evening that they discovered not all was as it seemed.

The doors were locked and unresponsive to their attempts to unlock them. The windows opened, but they were barred, not with the usual burglar-proof ornamental wrought iron on hinges, but with steel, set in concrete well back from the window openings. The “guest house” was really a jail, and Meeker and Schwab were the prisoners.

So “indisposed” was actually something of an understatement on Luigi’s part.

\* \* \*

## Eleven

Even though Annette was apprehensive about flying in Rio Grande Air's little single-engine Cessna, she was looking forward to the trip to Santa Fe. Hal had emphasized that the scenery would be far better from this airplane than it usually is from high-flying jets, and, besides, she needed the time to catch her breath. As she settled into her seat, it dawned on her that she had been on the go continuously since 6:00 that morning. And it was Sunday! At least she'd get to Santa Fe and check in to her room by late afternoon. Then she could relax.

As the engine started, and wound louder and louder, she remembered that Hal had handed her a pair of foam earplugs when he dropped her off at the terminal. She fumbled in her bag and dug them out, then jammed them into her ears. The engine faded from a loud growl to a quiet purr, soft enough so that she could think.

If the morning had been busy, at least it had been successfully busy, mostly. Down at the D&SNGRR station, conductor Willie Monroe had picked out Reginald Meeker's picture from a dozen others as being one of the two climbers that had been hanging around Rockwood about once a week all summer

Armed with this information, she had intercepted Judge Sandose as he was leaving 9:00 Mass at St. Columba's, to talk to him about a warrant. Considerable persuasion was needed, but she had enough circumstantial evidence involving a possible murder and multi-million dollar robbery to obtain a search warrant for multiple entries to Reginald Meeker's residence and any other personal properties that might emerge from the investigation. Meeker was to receive his first visit from a forensics search team in about—she glanced at her watch—fifteen minutes.

Then she had interrupted Lester St. Clare's brunch ritual of bagels with the *Sunday New York Times*, locally printed from a satellite feed, and delivered Hal's baggie full of what was very probably Meeker's hair. Lester had promised to ship it out FedEx for DNA analysis first thing in the morning.

Finally, after a romantic lunch with Hal, on the way to the airport she'd managed to slip in a quick visit to the Narrow Gauge Saloon, where Lance Riggins was still pecking away at his laptop. The issue of who could have overheard the conversations between Riggins and Walker in the crowded, noisy bar was bothering her more than ever. But Riggins was tapped out.

It had been disappointing, both to her and to Hal, that she was missing the matinee concert they'd planned to attend, but more to him. The review of Saturday evening's program in the *Herald* made it something of a relief to her not to have to attend, her tastes running more to Baroque music—Bach, Vivaldi—than to the ambling donkeys of the *Grand Canyon Suite*.

While she was thinking about all this, the little airplane had been jockeying around the taxiways for several minutes. After a final turn, the purring of the engine deepened, and she was pressed back into her seat. She decided to stop being so analytical and just watch the scenery. The airplane rotated and climbed, and almost immediately began a left turn during its ascent. Sitting port-side, Annette had a lovely view up the San Juan River Valley to the east. Eventually they leveled off, and her view shifted to the San Juan Mountains to the north. She knew at once that Hal was right: small airplanes were the way to watch the scenery in this part of the world.

\* \* \*

Two hours later, she was unpacking her overnight bag and groceries. The flight had been beautiful, but bumpy from the afternoon convection and thankfully brief. She was charmed by the intimate little airport at Santa Fe, and surprised at how close it was to the city. On the way into town, along the strip development of Cerrillos Road, she had found a grocery store and stopped to pick up breakfast for tomorrow and a chilled split of wine for the evening.

Her accommodations consisted of a small, one bedroom condominium on East Alameda, a few blocks up the Santa Fe River—a fanciful name for such a small creek, she thought—from downtown. The clerk at the rental agency had mentioned that it was a second home used only one or two weekends a year by its owners, available for rent the rest of the time. He had suggested the short walk downtown to a place called the Plaza Restaurant for dinner, if she didn't want to cook.

She opened the Riesling, was delighted to find real wine glasses, and poured two fingers. Then she called her search team's leader, Sgt. Fred Winders back in Durango.

“Hi, Fred, I'm here in Santa Fe. How'd it go?”

“Still at it, Lieutenant. We've found a closet full of climbing and other sports gear, including some boots that look like a match to those footprints you found up the river. And a purple climbing rope. There's also a computer, so I put in a call to Wiz. We're going through a filing cabinet now.”

Wiz, short for The Wizard, was their polite nickname for the department's resident computer genius. She was also known as The Geek, when people were upset with her.

“Any sign of Meeker himself?”

“Nope. Garage is empty. He must be out for the day, or at least all afternoon. Oh. Thanks, Jack. Annette? Jack just handed me a sheet of paper he found in the filing cabinet. Looks like a map, or more of a drawing, of a funny shaped room with stuff in it. Very peculiar.”

“What stuff?”

“A long thing, labeled 'stick,' something labeled 'basket.' A cairn, it looks like. Notations, numbers that look like measurements, or something. Is there a way I can fax it to you?”

“Take it back to the station and scan it in, then e-mail it to me. I'll call in later. Have Jack and the guys be on the lookout for photographs. I think I know what that drawing is. There's a cave in the cliff that they were climbing, up the river just below the High Bridge. How about giving Lester St. Clare a call for me? Tell him what you've got and see if he can get his latest analysis expedited. Also, see if you can find a hairbrush, or a comb, with some hairs to give to him as a second sample. He's going to ship out a sample for DNA analysis tomorrow and it would help to get an answer yesterday.”

“Will do. Where can I call you? Wiz might find something you'd like to hear about.”

She read him the condo's telephone number. “And, listen, I'm going to call Judge Sandose and see if we can get a warrant for the other guy's place. Except I don't know where it is. But you can find out from the AMFest office. There's a concert tonight, and you should be able to call the ticket office and get information about whom to call for the address. I'm talking about the orchestra's first violin player, the concertmaster, name of Schwab, Leonard Schwab. If you have any trouble, call me and I'll fix it with the university. What we need is a hair sample from his place, too, tonight, if we can get one, so it can get sent out tomorrow also. And a search for the same kind of stuff you're finding there, climbing gear. So don't turn your phone off for a while, I may need to get back to you.”

“Uh, it's Sunday, Lieutenant. I'm not sure how much success I'm going to have.”

“Well, yes, you may be right. But give it a shot. We may just be able to bag both of them.”

\* \* \*

Both of them, at this particular time, were miserable.

Holtzmann's "guest house" was far more posh than either was used to, but they still didn't sleep much. After a late breakfast, which neither ate, Dino had shown up to inform them that they would be meeting with Holtzmann later in the afternoon, then he'd left them to contemplate their cold French toast and bacon, with sides of scrambled eggs with chiles and chorizo. Later, he'd herded them into the back of the limo, and locked them in.

After a short drive, full of twists and turns, he opened the door and they were escorted up an exterior flight of stairs into the back of a two-story adobe building, in some unknown part of Santa Fe, apparently. Holtzmann was sitting in a large, elegantly understated office, behind a huge, intimidating desk. The duffle bag, with the stick lying beside it, was sitting in the middle of a large coffee table made out of a sandstone slab. They were ignored for a full five minutes, while Holtzmann wrote in a notebook. Finally he looked up at them.

"Gentlemen. Good afternoon. I trust you rested comfortably. I apologize if you found the accommodations restrictive, but the neighborhood has coyotes, which can be dangerous if you wander outside. Now. I'm sure you know the reason you're here is to be present when I examine the various items you have found. Mr. LaCoste, unfortunately, is under the weather today, but his presence isn't really necessary. Would either of you like coffee, or anything else? Fine. Then let me ask if you know anything about the prehistoric Native Americans?"

Meeker cleared his throat, trying to remain calm but also trying to be as offended and assertive as he thought he could be without causing trouble.

"Perhaps we should formally introduce ourselves first. I'm Reginald Meeker and this is Leonard Schwab. I guess we should assume that you're Raimer Holtzmann. And you should know that your little sham about coyotes is so transparent that you should be embarrassed. If this is Santa Fe, then we've been kidnapped and transported across a state line, which is a Federal crime. This whole thing is simply outrageous."

Meeker was himself a little embarrassed at how high his voice had risen, in both volume and pitch, by the end of this speech.

"Mr. Meeker, please. You're unhurt, rested and well fed, at least you've had the opportunity. I'm sure you understand my need for, ah, discretion and relative secrecy. I was hoping that we could complete all of our business today, not only about the contents of the bag sitting there but also about that violin. Surely that's what you want also?"

Up to this point, Schwab had been able to keep his temper largely because of his fear of the chauffeur, but Dino had left the room some time ago.

"Look, Holtzmann, if we're unhurt it's because we were smart enough not to argue with that gorilla that drives your limousine or with LaCoste and that gun he likes to wave around. And Reg is right, this was kidnapping all the way. As far as I'm concerned, we're talking a huge premium on the price for this stuff not to press charges. And I want the violin back, now."

"Ah, yes. The musician. Mr. Schwab. Perhaps you don't understand the situation. You can call it whatever you want, kidnapping or a chauffeured ride in the country, in rather high style, I believe. But who knows where you are? Surely you realize that I hold all the cards. Do you really think you can dictate terms to me, under the circumstances? Shall I call in Mr. Papandreou, whom you probably know as 'Dino?'"

He opened a drawer and pulled out a telephone.

“No, no, put the phone away. We know, or I know at least, that you hold all the cards.” Meeker had his voice back under control, and was looking daggers at Schwab.

“But that doesn’t mean that we’re expendable. By now Len here has been missed at a concert,” he looked at his watch, “two, in fact, and I’m scheduled for a number of meetings tomorrow. You don’t need the hassle of dealing with our disappearance. And all we want is a fair shake for the artifacts, and the violin back.”

“I’m afraid you don’t quite understand, Mr. Meeker. There will be no ‘hassle’ for me, I mean none whatsoever, about your disappearance, whether you reappear or not. No one knows where you are, and you’re certainly not in Colorado any more. Things are different here in New Mexico. And here in Santa Fe, as you deduced correctly, by the way, I’m a respected businessman who sells high quality reproductions of Native American artifacts to tourists. I’m quite successful, so much so that I’m up for president of the Chamber of Commerce next year. My only incentive for your safety is my reputation among amateur pot-hunters and their ilk. And that does indeed mean something to me, so I’m planning on treating you far better than you deserve to be treated.” He folded his hands on top of the big desk.

“Now, then. First, the violin. It’s to be shipped to Europe, hidden in a crate of reproductions, for sale to the highest bidder. I have seven very interested parties lined up, and they will want to see the thing before submitting a bid. You, of course, will receive a share of the proceeds, after expenses and my fee. These, I’m afraid, will run to at least 90% of the selling price.

“Second, these Basketmaker artifacts, which, as you may know, are quite dear to my heart. They won’t be for resale, because I want them for myself. As I asked before, does either of you know anything about the prehistoric Native Americans? No? Well, from your first descriptions of your find, and then from those pictures you sent down, it was clear to me that you’d found a very nice example of early Basketmaker culture. This is the name we give to the semi-nomadic tribes that predate the cliff-dwellers we call, somewhat mistakenly according to some, the Anasazi. Basketmaker culture dates from about the time of Christ to about 800 AD. If you don’t know about them, then I doubt you know what you’ve got here. This interesting piece, for example?”

He had risen and rounded the desk to pick up the stick from the table top.

“We figured it for some kind of walking stick, or staff.”

Schwab was pouting, but at least a little responsive. Meeker seemed shocked into silence, possibly by the evaporation of most of his share of the violin’s proceeds.

“As I thought, total ignorance. No, my friend, this is an *atlatl*, a throwing stick used to gain extra leverage when throwing spears. Note the notch here at the end, and the windings at about the balance point. And, I must say, this appears to be far older than others I’ve seen. It seems that you may have stumbled on a truly ancient site.”

He unzipped the duffle bag and reverently removed a large object. He set it on the sandstone slab, and it rattled softly.

“And, oh my, a burial basket. Old indeed. Note the primitive windings of the grass braid. I’m surprised that it’s survived your barbaric treatment of it. Fortunately for you, it did, with only a minor flat spot here on the side. Must be from the humidity in that gymnasium locker, I believe, that LaCoste told me of?” He shook his head in distaste.

“You fools. Your treatment of this and your lack of appreciation for what you’ve found tells me that you don’t deserve anything for it. Consider it a donation to my good taste and to my collection.

“In fact, this is so disgusting that I just want to be done with it. I’ve heard that the Stradivarius will fetch between one and a half and two million dollars in Europe. I’ll be generous and offer you \$200,000,

now, in cash, for everything. Take it or leave it. Mr. Papandreou and I will remove these items to an environmentally controlled room while you think the offer over.”

He reached for the telephone.

\* \* \*

The final Sunday matinee concert of the AMFest was fun, Hal thought, although, truth be known, somewhat pedestrian. What a shame that the really serious 20th-century composers were always neglected in favor of the crowd pleasers. Orchestral square-dancing music, indeed. And those movie themes, well, maybe even “fun” was too kind. Hal was old enough to remember the Marlboro Man commercials and that music always reminded him of a good smoke, which he hadn’t had in 30 years.

But Alice had enjoyed it. It seemed that Luigi had been handing out sequential tickets the other day, and they wound up seated next to each other. Because each was alone, Hal had gallantly taken her out for an early supper after the concert and had been mildly astonished when she had suggested a pizza joint on the north side of town.

Now, back at home, the house seemed hugely empty. He had been on a couple of short, one-day business trips in the past few months, but Annette had always been there, ever since she had moved in with him just over a year and a half ago. He’d forgotten how big his house was for one person. Time for some fly-tying therapy.

Two hours later, he had four little piles of flies, elk-hair caddis in four different colors of tan and olive, about two dozen altogether, and was thinking of changing patterns when the telephone rang. He stretched and picked up the portable hand set, turning it on with anticipation. As he hoped, it was Annette.

“You should have warned me, my friend. This Santa Fe chile isn’t at all what I’m used to up there. The locals here must not have taste buds left. And when I asked, they told me that theirs wasn’t even that hot!”

But she wasn’t sure if he heard her through his laughter. He finally calmed down a little.

“I’m sorry, but I just forgot. It’s been a while since I was there. Where’d you go?”

“The guy at the rental office suggested the Plaza Restaurant, a few blocks from here. I probably should have had the meat loaf, but I figured I ought to try something more local. So I had some enchiladas. The waitress probably figured me for a tourist, because I hadn’t a clue when she asked ‘red or green?’ I tried some of both, but they were so hot I really couldn’t taste much difference. I should have paid attention to that warning on the menu. Something about ‘We can’t be responsible for chile that’s too hot.’ Thank goodness for beer.”

“The Plaza has a steady local clientele, but it’s also a tourist place so they’re used to the blank responses to the ‘red or green’ question. Both is called ‘Christmas,’ if you want to sound like a local. If I remember, the Plaza has about medium chile, by Santa Fe standards.”

“*Medium!!* I don’t even want to think about hot. Christmas?”

“You know, red and green together. How was your flight?”

“Bumpy, but beautiful, like you said it would be. And Santa Fe is a strange town. Bigger than home, but not really that big. And like you said, the streets are impossible. I got lost twice trying to find the rental office and then this place. I mentioned it to the rental guy and he said something about 400 years of history all on top of itself in the street names.”

“If I remember right, the 400 years of history has produced some simmering resentments as well as street-name confusion. But it’s still a pretty interesting town. So what’s your plan?”

“I’m meeting the informant tomorrow and I hope to get home tomorrow evening. I’ll call you from the Santa Fe airport before I leave.”

“And I’ll meet you at the airport here. This house is empty without you.”

“And I need you here to be a tour guide and protect me from the food. And for other things.”

“Yeah, well, I don’t want to think about that right now. Any progress on the searches and so on?”

“Done and done, found enough to bring our two climbers in for serious questioning and maybe arrest them. Well, Meeker, at least, and I’m betting on the other guy, too. The DNA tests will be critical. But we can’t find him, I mean Meeker. He’s not home and no one’s seen him.”

“Well, I think I mentioned that I saw Meeker yesterday, about noon. On campus, talking to some guy I didn’t recognize, standing by a huge limo. It was strange. And, say, now that you mention it, Schwab wasn’t at the concert this afternoon. I didn’t think about it at the time, but the first chair violin player was a woman. Not Schwab.”

“Hmm. Any description of the guy Meeker was talking to yesterday?”

“It was pretty far away for that. But he had a big hat on, looked like one of those O’Farrells you see around town. Black. With some kind of band that glinted in the sunlight, I remember.”

“And the limo?”

“Big. Black, or very dark blue. Maybe one of those Lincolns, you know, the big stretched version of the Lincoln Town Car. Boxy. Not real new, but shiny, well kept. Definitely too far away to see a license.”

“OK, well, I’ll call the station and see if they have anything on stretch limos in the region. Couldn’t be too many of them. And you said a black cowboy hat? What rings a bell about that? Oh, I know. My close, personal friend Lance Riggins has one of those, a grey one. But he said he’d seen another just like it, only black, on a guy in the Narrow Gauge Saloon. With a band that he described as being made out of silver coins. Sounds like conchas. They’d glint in the sunlight, I guess. Said that the guy was always on the phone, a cellular phone.”

“Well, there are lots of black cowboy hats in town, but concha bands aren’t all that common. Suppose there’s a connection?”

“Lance and I have been trying to figure out who could have overheard him and the guy who got killed in the snowplow business planning their little escapade.”

“Hmm. Here’s a little-known true fact I read somewhere: cellular phone microphones are extremely sensitive and can be used to record all sorts of things, if the transmission is taped and processed appropriately. Maybe that’s what happened.”

“Huh? Oh. Uh, let’s see if I get this: Black Hat is connected with Meeker and Schwab somehow and, via the cell phone, overhears Lance and Eddie planning the trip up the canyon. So he worries they might find something and plans the snowplow attack. He’s also connected with the limo and, somehow, Meeker and Schwab’s disappearance. Hmm. Well, nothing there classifies as evidence, but maybe things are starting to come together. Maybe I’ll make more progress tomorrow, with the informant.”

The conversation drifted into more personal subjects.

As she was getting ready for bed, the condo's phone rang. Winders had finally made it home, too late for Sunday supper with his kids, so he wasn't in the best of moods, but he knew what was expected of him. Annette treated him gently.

"Hi, Fred. Sorry it's been such a long day. Any news?"

"We worked out the location for the other search and got a warrant. We found a red rope and more boots that may be a match. And got a hair sample. And delivered it to St. Clare, at his house."

"Outstanding! You deserve tomorrow off. Go fishing or something. Uh, one more thing, though. Could you call in an APB tonight? A regional one, for information. See if there have been any sightings of a dark limousine, maybe an older model Lincoln, the stretched kind. Black or dark blue. Give them my number here. I think we're closing in."

"One more call I can manage. Then I'm off duty, OK? Uh, but how 'regional' do you mean, exactly?"

"Oh, say a 200 mile radius of Durango, or so. That'll get it here, and up to about Grand Junction. And then you're definitely off duty. And, like I said, take tomorrow off. Thanks, Fred."

She poured herself the last of the Riesling and curled up with her laptop computer to summarize the day's developments.

When Schwab and Meeker turned up, they would have to be brought in for questioning, of course. But there was really nothing they could be held for—a competent lawyer would have them free in no time. However, their presence near where Boudreau's body was found did need discussing, and the Feds would probably want to talk with them about their activities in the cave.

The connection between Lance Riggins, the black-hat guy, and the limo that Hal had seen had promise, but it was pretty tenuous to base any action on. But maybe black-hat's cellular phone explained how Riggins' and Walker's plan to drive up the railroad tracks was overheard. He clearly needed identifying.

But what was his connection to the climbers? If there was none, then she'd be nowhere. If there was one, then things would move ahead.

But even if there was a connection, what was motivating all this? Stealing that violin didn't call for leaving Boudreau's body in such a public place. Annette decided that the violin must have been a crime of opportunity: Boudreau died, somehow, and her violin was there for the taking. But, again, what was she doing on the tracks, up in the gorge? The DNA tests would tell if the climbers were her sex partners, and Annette felt sure she could get them to confess if presented with such damning evidence. But why were those guys climbing up there? What was in that cave, anyway? Fred Winders was going to e-mail a drawing that included notations about a stick and a basket. What could that be? And was one of them driving the snowplow, or was it the black-hat guy? Or somebody else?

She typed up a set of notes based on the premise that black hat and the climbers were somehow connected, and then made herself a list of questions, those that needed to be resolved to build a case and others that she classified as personal curiosity, such as why Boudreau would have gotten involved so quickly with these guys.

And why she would have taken a million-dollar fiddle into the woods in the middle of the night. Maybe she was wild and crazy, and a serious party animal, but Meeker and Schwab weren't exactly in her peer group. Annette's final question, in the "make the case" column, was "Motivation?"

\* \* \*

If the two rock climbers had been thinking clearly, they wouldn't have been surprised that Holtzmann lied to them. For one thing, he had no intention of sending the violin to Europe in a crate of reproductions. He did indeed plan to sell it in Europe, but only detailed pictures were going there first. The potential buyers would simply have to make do. Just the hint of its availability had made the Stradivarius the object of a number of urgent inquiries, including two outright offers, so Holtzmann was confident that the pictures would be sufficient.

After leaving Schwab and Meeker to consider their options, limited though they were, Holtzmann had gone home to watch a pre-season NFL game on ESPN. Ever since immigrating years before, he had become enamored of American football and considered himself a strategist of considerable skill. European football—soccer—was so slow and effete by comparison, he thought.

Meanwhile, Dino had collected the climbers and taken them back to their gold-plated jail cell in Holtzmann's guest house, with the information that Holtzmann was expecting a decision on his offer of \$200,000 by morning. He also mentioned that no distractions were going to be allowed, and that Schwab and Meeker would have to make do with breakfast leftovers. Fortunately for them, the guest house had a kitchen, so they could heat the cold food up again.

"I vote we take it and be glad it's over," Meeker was chewing a bite of re-toasted but rather rubbery French toast. "Maybe it's not as much as we fantasized about, but it's still 100 big ones each."

"It's not the money, it's the principle of the thing, for me at least. Damn, this chile makes that stuff I had at the student union seem like pea soup." Schwab had attacked the re-heated eggs. "Even if I give up on getting the violin back, I can't help but think we're getting taken to the cleaners. Just because this guy has muscle at his beck-and-call, he thinks he can take advantage of us."

"You're right, but what can we do? If he gives us cash, we can get a cab to the airport and get back to Durango tomorrow, and be done with all this."

"Yeah, but I don't have to like it."

\* \* \*

Dionysus Papandreou—he resented his nickname, but had long ago learned to live with it—was supremely confident in the security measures of Holtzmann's guest house, so he went home to his town house, down the hill in Valle del Sol.

His job with Holtzmann as chauffeur and Very Large Person paid well, but he knew its career potential was severely limited. Still, it gave him plenty of time to sit and wait, and he occupied his hours by feeding a voracious reading habit. This had let him finish the Great Books Program at nearby St. John's College at the top of his class, and more recently it had allowed him to absorb with ease the extensive reading list of the graduate program in philosophy at the University of New Mexico.

Now, in his dissertation research, he had progressed beyond the required list and was at a particularly obscure juncture of Heraclitus' fragmentary writings. He was curled up with his cat, Guppie, his single eyebrow scrunched in concentration, trying to figure it out. He wanted to be sure he understood the difference between serious philosophizing and Heraclitus' well-known goofing around. But if he had it right, it could be just the capstone he needed to finish his dissertation and find a real job.

This driving people around and playing the heavy was getting old.

He was hoping that the two guys from Durango wouldn't need a ride home tomorrow. He felt just too conspicuous in that big limo, driving around the little mountain town. But he had promised himself to ride up there some day on his mint-condition 1990 Harley-Davidson Fat Boy, to look around some

more. The campus had charmed him during his brief visit on Saturday, and, who knew?, when he got his Ph.D., maybe they'd need a new philosophy professor.

\* \* \*

## Twelve

Hal could hear that something was happening in his office as soon as he got to the top of the stairs. Some Mondays, he thought, behave just like Mondays. As he walked down the hall, he realized what he was hearing was both sides of a rather contentious conversation. Alice was winning, barely, and managing to keep her calm demeanor somehow. As he reached the entry to his suite, he saw through the open door a very attractive young woman being lectured by his administrative assistant.

"I'm terribly sorry, Ms. Mason, but Dean Weathers is simply not available at just any time. I would be happy to set up an appointment with him for you, but it is not acceptable for you to just barge in. Today is the first day of the fall semester and we're quite busy with any number of issues. Students who can't find their classrooms. Faculty members who can't find their classrooms. Typographical errors in schedules that refer to classrooms that do not exist. This is just a terribly bad day for us, and Dean Weathers can't be expected to be available on a moment's notice. If you'll tell me what it is you're concerned about, I can see if he has a few moments later this morning, but he needs to know the situation in order to be able to judge priorities."

The young woman was finally able to get a few words in as Alice stopped to breathe.

"So my concerns are not a high priority for him, is that what you're saying? I will have you know that I am both a student here and a reporter for the *Free Press*! And I need to talk with him about a problem in his college. Right now!"

"Everyone's concerns are a priority, but not all can be the highest. When he comes in, his first priority will be dealing with one of those non-existent classroom problems I mentioned, one that involves at least two dozen people. Surely you'll understand that that problem needs immediate attention."

Alice knew how to lie with the best and could clearly hold her own with the reporter, but Hal decided it was time for an entrance. He cleared his throat as he walked through the door.

"Alice...Oh, hello. Excuse me. Alice, I ran into Jack Wubbles coming across campus, and he told me he was on his way to find a classroom for the earth sciences intro class. So if they call, it's taken care of. I think."

He turned slightly away from the reporter and winked at Alice, who tried not to smile too broadly. Then he turned back to the young woman.

"I'm so sorry to interrupt. Perhaps I can be of assistance?"

"Oh. Yes. I'm Jennifer Mason, we talked on the phone last week? I'm trying to follow up on the problem we discussed, the student who needs to graduate but can't get into a course he needs?"

"Ah, yes, Ms. Mason. Jenny. How nice to meet you in person. Would you like to come in and talk? May I get you some coffee, or tea?"

Killing them with kindness almost never failed.

“Oh, well, I’m sure you’re awfully busy and I’d hate to be a bother.”

She smiled and blinked her blue eyes slowly, directly at Hal, somehow managing to dilate them as she did so. He almost succumbed. She obviously knew the effect she could have on men, he thought.

“Oh, it’s no bother, I need a cup of coffee anyway. Here, follow me and I’ll see what kinds of tea we have.” And he led her toward the little kitchenette.

A few minutes later they were sitting in his office, she on the couch and he on a side chair across from her. He had decided that the power play of putting his desk between them would be counterproductive.

“Now, what can I do for you today, Jenny?”

“Well today is the first day of classes and I was wondering how many students will not be able to graduate because of scheduling problems?”

“Too soon to tell. After our last conversation, I did a little research and found out that, in my college, only about 10% of the courses are oversubscribed, and the longest waiting list was four people for a course limited to 24 students, about a 16% over-booking. The rest of the oversubscribed courses have shorter waiting lists. And, last year, counting both spring and fall, there was a total of three students who didn’t eventually get into the classes they needed to graduate. I need to be candid about this figure: I worked with several of my departments to develop creative solutions to these graduation problems by finding substitute courses in several cases. Does this help?”

“So you’re saying you don’t know yet if the student who contacted me, or other students in similar situations, will be able to graduate?”

“Like I said, it’s just too soon. We’ll know more in about a week, and all of these things are usually resolved within two weeks. But we always work very hard to make it possible for people who are qualified to graduate on schedule. I can provide more details of last year’s experience if you’d like. I’m not comfortable with giving names, because of privacy issues, but I can talk more about the courses we substituted and so on. And, if you can tell me more about the specific case you’re concerned about, I may be able to help with that right now.”

She sighed, and stared briefly through the window at the leaves of the maple tree outside rippling in the breeze .

“Oh, maybe I should just come clean. It’s me. I really, really want to try to graduate this year. I had a terrible experience last summer, I mean a year ago, a friend of mine got killed up in the mountains, and I’d like to move on with my life and find a new place to live. But I really need to graduate this year to do that. I’ve got 24 more credits to go, and I can make it if I get the right courses this fall and next spring. And I guess this thing about the musician who got killed has me upset on top of everything else.”

“Let’s take one thing at a time, Jenny. Who got killed in the mountains? I don’t remember anything that might have involved you.”

“A friend. We went backpacking together. He wasn’t a boyfriend, I didn’t really like him all that much, I guess, but when he got killed it really shook me. Whit Bradford. There was an explosion way up in the San Juans, up by the Continental Divide. Somebody blew up an irrigation structure and Whit was too close. And I don’t know why, but to me it somehow relates to this musician, Steffanie Boudreau. I had an appointment to interview her the day after she arrived, but then she got killed the night before. And I did a lot of research on her and sort of feel like I got to know her. I was doing a music minor, piano, and so I sort of identified with her, like a fantasy. I even got to talk with her on Monday night. And then she got killed...”

She descended into sobs while Hal was trying sort out the various implications of these connections to his experience. She talked with Boudreau on the fatal Monday night? A serious interview about this was in order. But she also knew that drug dealer who got dead up Vallecito Creek? Too strange. Was she with him when it happened?

He got up to fetch her a tissue, and then thought better of it and found her a clean linen handkerchief from the stash in his desk. He gave it to her and then went for a refill of her tea and to call Annette from Alice's phone. But she didn't answer, so he was on his own.

"Jenny, you have had a remarkable set of experiences recently, horrible ones. Sometimes it helps to talk about things like this. And I think you could find that talking with me would be very good for you, because you might find that you have something to contribute to solving these two deaths. I know a bit about both of them."

"Huh?" She looked up, her blue eyes shot with red, tears running down her cheeks. "I could help? How?"

"Can I ask some questions?" She nodded. "Well, first, were you with this Whit Bradford when the explosion happened?"

"Oh, no, we were backpacking up there, actually east of there, a week earlier. He was hitting on me, or trying to, and I wasn't, um, cooperating. It was actually kind of pathetic. I think he must have gone back up there without me to get over his disappointment, or something. Do you know anything about it?"

"Well, I live with a lady, Annette Trieri, who's a police investigator, and this was one of her cases. If I remember right, this was officially ruled to be an accident. The guy who set off the explosion was a professor, in one of the departments in my college, no less. He was prosecuted for manslaughter, accidental homicide, along with a bunch of Federal explosives charges. He's in prison now. I seem to remember that Bradford worked for an environmental organization here on campus, and his office had a big hiking map on the wall, with places he'd been up there. So there wasn't anything mysterious about it. He was just in the wrong place at the wrong time. The explosion wasn't for him, it was for that tunnel. But what you just said explains something about why he might have been up there. I'll let Annette know about this.

"But, you know, if you talked with Steffanie Boudreau before she died, that's potentially really important, because Annette hasn't figured that one out at all. She's getting closer, but it's a real puzzler. She'll want to know everything you can remember about that conversation."

"Well, there isn't very much to say. I called her to set up a time for our interview the next day. That was the arrangement, I mean, she had agreed to the interview before coming to town and said to call her when she got in to set up a time. So I called her. Twice, actually, once about 6:00, but she was out, and then again about 7:30."

"What did you talk about?"

"What time I should meet her, and where. And I tried to make conversation, but she seemed distracted. Or maybe drunk? I couldn't really tell, with her accent, but she might have been a little tipsy."

"What time did you decide on?"

"Oh, well, I wanted to meet her for breakfast, but she laughed and said she'd probably not be up until noon. So I suggested we meet for lunch. And she laughed again and said as long as there was good, strong coffee, that's all she'd want. So I made a comment about jet lag and she laughed again—all the

laughing was another thing that made me think she was drunk—and said, no, she had a late date. To go out and play her violin in the canyon. She was excited about it.”

Hal tried to keep his voice calm.

“Did she say who she was going out with?”

“Yeah, but I didn’t recognize the name, and it sounded like some kind of nickname anyway. It was not like she really said it clearly, because of being drunk and her accent. And she said it, like, ‘I’m going out with so-and-so later to play up in the mountains.’ So I asked, ‘do you mean play your violin, or something else?’, and she said, yes, to play her violin up in the canyon, with the echo and the river. So I wished her the best and said I’d see her tomorrow, I mean Tuesday.”

Hal could tell she was becoming more and more upset as she related the conversation, so he leaned back, took a sip of his coffee, wincing at how cold it had become, and smiled at her.

“Well, Jenny, I’m sure you know how important it is to talk with Annette about this when she gets back. You might just be able to help her solve it.”

“Gets back?”

“She’s in Santa Fe now, talking with the police down there about this very case, or at least a part of it.”

He was about to go on, but then remembered that Jennifer was a reporter as well as a student. So he changed gears instead.

“When she gets back, we’ll have you over to our house and you can talk with her about all this. I’m sure it’ll help. And, I bet, the more you talk about it, the better the chance that you’ll remember that name. I’d try out a couple of possibilities, but I think it’s better for Annette to do it. I don’t want to influence you.”

“Do you think that this guy killed her?”

“Well, I don’t quite know everything that Annette knows, but I know a lot more than has been in the papers.” And he grinned and wiggled a finger at her. “And don’t you dare think about trying to write a story about what I know. There’s a deal at the police department with all those reporters who are in town to put stuff out at the daily news conference. Anyway, it’s more complicated than just this one guy. But if she knew for sure who that is, she’d be able to make great strides, I think. And I bet anything that helps Annette solve this death would make you feel a lot better about things. Maybe even enough to consider sticking around. Durango is a pretty nice place, after all.”

She sniffed, and blew her nose on the handkerchief.

“You’re probably right. One thing that’s bothered me has been feeling so helpless. When is she coming back?”

“This afternoon, as far as I know. I’ll call her this morning. Want to go out to the airport with me to pick her up? I think you’ll like her. Well, I’m biased.”

And he made his smile as friendly a smile as he knew how.

“Well, I have a class at 2:00, one that I actually got into.”

“It will be later than that. But that’s the other thing that’s bothering you, isn’t it? What class, or classes, are you having trouble getting into? Maybe I can figure out something.”

“Uh, yours, actually. Earth Science for Journalists.”

It was her turn to smile, in an embarrassed sort of way.

\* \* \*

Monday morning had dawned bright and clear in Santa Fe, and Annette wished she had brought workout clothes. A run along the Santa Fe River, even though it didn't have any water in it, would be a good way to start a new week, she thought. She made a half-pot of coffee with the fresh-ground beans she'd bought, ate her yogurt with a granola bar, and toasted a bagel. Thirsty beyond her usual experience, she drank a full quart of fresh orange juice. The dry, desert air was having its effect on her system.

After packing up to check out, she decided it was such a nice day that she'd walk downtown. Instead of following Alameda down the river, she cut across Delgado Street to Palace Avenue, and turned left toward the Plaza.

At the downtown police substation on Washington Street, she found Sergeant Luis Montoya pecking away at a computer terminal, a pile of overnight reports accumulating in a nearby printer. They introduced themselves and he offered coffee, showing her around the station on the way to the pot. Then they wandered back to his cubicle. His first action was to shuffle through the pile of paper in the printer and hand her one of the reports. She recognized the description of the limousine she had telephoned in the previous evening.

"Chama. Chama. I know the name but don't quite place it."

Outside of Durango and its immediate vicinity, her knowledge of regional geography was incomplete.

"It's due north, almost in Colorado. Between here and Pagosa Springs. I called up there earlier this morning, because I know the deputy who filed the report, Diego Jaramillo. Met him at a regional law enforcement conference last year. He thinks the whole thing is hilarious. Seems his Aunt Rosa, or great aunt, I guess, phoned in a complaint of a guy peeing on her lilac bush, and then he got in this limo and drove off. She may be old, but she's sharp and she got the license. It's registered to a local businessman, Raimer Holtzmann. He runs a gallery up on Canyon Road."

"Did she report anything about who else was in the car?"

"Diego says she told him that the windows were too dark to see into. But one of the windows was rolled down briefly, and she saw a guy with a black cowboy hat. That's all."

"What does this guy Holtzmann sell in his gallery?"

"Interesting you should ask, because it connects to the report I called you about originally. My informant tells me that the inquiries about the violin came from a direction that makes him suspect that Holtzmann was behind it. But what his gallery sells is Indian artifacts. Fake ones, but very high quality fake ones. Reproductions. So what he'd be doing with a violin is beyond all of us down here."

Annette could almost feel the synapses clicking in her head, as things fell into place.

"I'm not sure I know either, but there may be a connection between this Stradivarius and an Indian artifact site up north of Durango. We don't have all the details yet, but it looks possible. So it's not as off the wall as it might seem."

"Holtzmann has something of a shady reputation, at least in my book. It's actually kind of fascinating. He sells these reproductions of artifacts, and they're top-notch. Some of them, like the stone carvings, fetishes and so on, are so good the only way to tell them from an original is by chemical analysis to see where the stone came from. Others, like the pottery, are a little easier to date, but the copies are still good. Thing is, he mostly copies originals that aren't catalogued. Every time he's been questioned about the originals, he's produced them along with appropriate documentation, but nobody

knows where the originals come from, or at least the right people don't know. I'm not the expert on this, but Gunther is. Our informant. He should be along any time now, except he's usually late for everything. But I don't understand how there could be a connection between this and the violin."

By the time that Annette was finishing the story of how the musician's body was found in the vicinity of the climbers' little cave in the cliff wall, a new visitor arrived, waltzing in unannounced except for a well-modulated contralto greeting.

"Darling Luis, it's been far, far too long. We've just *got* to get together more often."

"Oh. Morning, Gunther. This is Lieutenant Annette Trieri, Durango, Colorado police investigations. Like I said on the phone, she's interested in these rumors of the Stradivarius that you mentioned last week. What's new?"

Annette was well-trained and experienced, so, as Gunther was giving her the once-over, she was able to take in stride the fact that he was wearing a long, very full broomstick skirt with Indian designs in bright colors, red patent-leather cowboy boots that matched one of the colors in the skirt, a purple silk shirt that matched another of those colors, a fringed yellow leather vest with lots of Indian beading on the fringe, enough makeup to equip an opera diva, and more jewelry than she had in her entire personal inventory. She had to admit, though, she liked his hair, especially the leather thong with the big silver concho—it matched the ones on his belt—holding his pony-tail in place. Although the black dye job was a tad obvious.

"Charmed, I'm sure, my dear. Durango? Such a quaint little mountain town. When I was younger I used to ski up there quite a lot, but I expect it's changed in recent decades, like everywhere else."

"Well, I haven't lived there long enough to really remember what folks think of as the 'old days,' although I've still seen some growth. It's probably not as quaint as you remember it. The traffic has pretty much destroyed that image."

"Here also, my dear. It's sad. Now—what's your interest in this business of a Stradivarius? What a juicy story it must be. We certainly don't have much like this going on here. Our concerns are mostly related to things like fake Georgia O'Keeffes and other paintings and sculpture."

He (Annette had to force herself to think using that pronoun) listened intently as she sketched only the barest outline of the circumstances. She was impressed that he didn't ask for more details. A well-trained informant, apparently.

"That fits in with what I've heard. One of our local arts agents, a kind of slippery character who works for someone even more slippery, was asking discreet questions about potential interest in an undocumented Stradivarius. He usually confines his interest to Native American artifacts. Has something of a reputation as a pot-hunter, or at least someone who buys from pot-hunters. He acts as a middle-man between people who dig stuff up and his boss, Ramier Holtzmann, who owns a gallery and another outfit up on Canyon Road. He also travels to Europe a lot, lining up buyers. Name is Tony LaCoste. He spends a lot of time out of town, and some of the questions were by phone. But he actually talked with me about it in person. He wanted to know if there might be interest and how much the thing might be worth. But he was very careful not to admit to having a Stradivarius—everything was completely hypothetical, if you know what I mean."

"As in 'what do you suppose a Stradivarius would be worth if one were floating around and who would be interested?', only lots more subtle, right?"

"Precisely, my dear, but, yes, not nearly so directly. I told him I'd look into it. And I have and it's bad news, at least for whoever's selling. No one around here is very interested, at least without documentation."

Annette looked at Montoya and felt her eyes relax at the sight of his simple, gray suit.

“Sergeant, do you suppose we could consider setting up a sting operation of some kind? Just to get this thing back? I think I know someone who would gladly pose as a buyer.” She actually had two possibilities in mind, Franconi and Ament. Because both were musicians of some reputation, either would be a credible buyer.

“Hmm. Now there’s an idea, especially if your buyer isn’t local. A local buyer wouldn’t work, I think. What about it, Gunther?”

A long, deep red, index fingernail was tapped thoughtfully against a perfectly white front tooth while half-inch eyelashes fluttered in the direction of the ceiling.

“How exciting! But, Luis, we need to think beyond this to the future. I’d be worried about blowing my cover if I got involved and things went wrong somehow.”

“Not if you’re just a matchmaker, putting together seller and buyer. Or seller’s agent, if LaCoste is the contact. For a fee, of course. You don’t have to pretend to know anything about violins or be involved in the actual transaction. We can set up the buyer with an escort, who would be carrying the cash. As well as a shield.”

They spent the next hour discussing various aspects of the idea, and developed a plan that would begin with Gunther contacting LaCoste with the good news that two possible buyers had expressed interest and perhaps could be persuaded to bid against each other. It was a good thing that Gunther’s makeup was waterproof, because as his excitement level increased so did his perspiration rate.

\* \* \*

About a mile north on Washington Street, several blocks after it metamorphosed into Bishop’s Lodge Road, and just west on Mansion Ridge, Meeker and Schwab were trying to contain their glee, at least until they were alone. Dino had arrived with brunch from the French Pastry Shop in the La Fonda Hotel and news that he could return in the afternoon with a suitcase full of cash, if that was their decision. They caved in.

Dino finally left, and they attacked the food to celebrate their impending wealth.

“Damn, Reg, maybe this is going to work after all! If he comes through with the cash, then all we have to do is figure out how to get home with it safely. And that should be pretty easy, I guess.”

Meeker had to talk through a mouthful of quiche.

“Right, but first things first. And we have to be sure that he and Holtzmann don’t know our plans. So maybe we can get the cash and have Dino drop us off downtown, where he won’t know our next step.”

“Do you know anything about options? Like, what’s downtown? I don’t know anything about Santa Fe. Is there an airport around here?”

“If we get downtown, we should be able to disappear into the crowd of tourists and then pick a big hotel to stage our next move. We can either rent a car or get a taxi to the airport. Or maybe get a shuttle or a rental car to the Albuquerque airport, where there are more flights and options. I want to get back to Durango as soon as we can, but maybe a detour through Denver would be a good idea. They’ll expect us to head straight home.”

Schwab poured another cup of coffee, broke open a second croissant, and reached for the raspberry preserves.

“If we rent a car, we’re in control. But if we fly back, we’ll be at airports with crowds of people, which has a safety margin, seems like. And, of course, we have to figure out what to do with all that cash after we get home. Banks have to report transactions over \$10,000, or something like that, so we can’t just put it in a checking account. Or accounts.”

“Right. But back to getting home. If we go through an airport, we’ve got to put the bag with the cash through a security x-ray machine. Or, worse, check the bag. And either of those is pretty scary. Neither of us has pockets big enough to carry all that cash, even if it’s in \$100 bills.”

“Hand me that piece of quiche, would you? How big a stack of bills are we talking about? Uh, \$200,000 in \$100 bills is 2,000 of them, I guess. How big a stack? Any idea?”

“Hmm. Well, at work, when I refill the copier, it’s from reams of paper, 500 sheets. They’re about two inches thick, or so. So I guess we’re talking an eight-inch stack of \$100 bills, if they’re compressed. Or a 40-inch stack of \$20 bills. Ouch.”

“What’s today, Monday? How about this? We could take enough off the top to get home with and put the rest in a safe deposit box in a bank here in Santa Fe. Then we could come back in a couple of weeks, by car, you know, pick a day at random, and get the money out. Then drive home a different way. I guess there are driving choices.”

“Now there’s an idea. I’m certain that there’s a bank downtown. We could get a box, put all but ten Gs or so in it and then fly back to Durango later today. If there’s a late afternoon flight. Damn, I wish there was a phone in here.”

\* \* \*

To get her bearings, Annette left the police substation and turned toward the Plaza. There was the Plaza Restaurant across the way, where she had eaten dinner last night, burning out a significant number of taste buds on the “medium” chile. So San Francisco Street is over there, she thought.

She stopped to buy a lovely Navajo bracelet, silver with little, tasteful flecks of turquoise, from one of the licensed vendors under the *portal* of the Palace of the Governors, and crossed the little park in the middle of the Plaza to San Francisco. Then she headed east, up the street toward the Cathedral. Montoya had recommended this stroll to her, since she was headed in this general direction anyway, because of the grandeur and historical significance of the buildings. About half-way up the block, she heard the familiar tweedling noise from her bag.

“Trieri, investigations.”

“Found you! I wondered if this trick would work. You’re in a different area code and everything.”

“Hal! I wish you were here. I’m playing tourist and need a guide.”

“Maybe I can help from up here. Where are you?”

“On San Francisco, looking up the block at the Cathedral. Everyone here talks about it as if it’s some kind of special shrine, or something. But it just looks like a big church, kind of squat and ugly, actually, as cathedrals go.”

“Compared to the other churches around there, it’s quite the thing, though. And the story behind it is interesting. I’ll dig out that Willa Cather book, *Death Comes for the Archbishop*, for you when you get back.” He proceeded to outline the story for her. “And it looks squat because they never finished the spires. Every now and then, someone comes up with a plan to finish them, but it’s never happened. Anyway, you can read it for yourself. What’s your schedule today?”

“I’m on my way back to pick up my car and head for the airport. I should make the afternoon flight easily. How’s your day?”

“First day of classes. It’s always a bit of an adventure, because students seem to call my office when they can’t find their classrooms. Oh, for the days before cellular phones.”

“But then we wouldn’t be talking just now.”

“Well, right. And I guess that’s the compensation for those student calls. Anyway, Alice handles them for me, and better than I could. Have you found anything out you can talk about?”

“Everything I need except real evidence. The limo is identified and we’re going to run a sting operation for the Stradivarius. I met the most outrageous individual, by the way. I’ll have to find out where he gets his clothes and pick up an outfit for you.”

She couldn’t help but break out in giggles.

“Huh? Oh. I bet you met some local Santa Fe color. Well, just remember that turquoise doesn’t go with my eyes. Listen, I’ve got to go, but I’ll see you late this afternoon at the airport, OK? I’ll bring a surprise, one you’ll like.”

“OK indeed. A surprise, huh? No hints? Well, I’ll savor the anticipation. And we’ve got to come here together some day. The place I stayed last night would be perfect for the two of us.”

She put away her phone and stared at the Cathedral. In fact, she had read *Death Comes for the Archbishop*, years before, in college. So this was the famous Cathedral, eh? Well, compared to all the other one- and two-story adobe buildings, it was pretty impressive, she had to admit. But as cathedrals go, it was missing something. Compared to the ones in Italy, it was, well, dumpy. It needs those spires, she thought.

She was so absorbed in the structure that, when she turned right at the end of the block onto Cathedral Place, she didn’t notice the deep blue Lincoln limousine that also turned right several car lengths behind her. It was about half way across toward Alameda, when there were no pedestrians or traffic, that she was startled by the black velvet sack that was dropped over her head. The dark, and the fact that she was spun around twice, disoriented and confused her, and she didn’t have time to react before she was bundled into what felt like the back seat of a large car.

\* \* \*

## Thirteen

The office door closed, with a solid thunk followed by a sequence of metallic clicks, and Annette exhaled gratefully and relaxed her tensed muscles. Maybe, just maybe, she would be able to get loose now, assuming that Holtzmann and his goon didn’t return too soon. She set about working the cords loose by twisting her wrists and generally squirming around.

Because all she could do was sit and wriggle, she also had her first opportunity to look around the room. Holtzmann’s office was obviously designed to impress and intimidate. By sitting behind the massive desk in front of the large window, his head would be backlit by the sun, and his face would be very hard to read. The surface of the desk, a single slab of some kind of dark hardwood at least four inches thick, was empty—no desktop gadgets, paper, or even a telephone. Nothing so convenient, she

gripped to herself, as a letter opener. But she had seen Holtzmann open a drawer and put her service revolver into it, so there was hope, if only she could get loose.

Because she had tensed her wrist and arm muscles, she now had a significant amount of play in the cords around her hands, and the wriggling was beginning to work the play she'd gained when she had exhaled out toward her arms. After about fifteen minutes of this, she could feel the cords chafing her wrists, and she knew that there would be huge, painful blisters to contend with. But she could also feel her hands beginning to come loose. Strange, how easy it seemed.

And then the sequence of metallic clicks from the door interrupted her efforts. She tried to make herself as big as possible, to take up the slack in the cords, and froze. In walked Holtzmann.

With barely a glance at her, he crossed the room to a large R.C. Gorman painting on the wall to the right of the desk, and, feeling behind the left side of the frame, made something click. The painting swung on hinges away from the wall, revealing a high-tech-looking safe.

Because Holtzmann had his back to her, Annette carefully explored the play in the cords around her hands, trying to gauge if she could get loose in time to ambush Holtzmann. Although she didn't usually go for hand-to-hand combat, she was mad enough, and sufficiently pumped up with adrenalin, that she knew the advantage would be hers, if only she could get loose in time. She felt a loop of cord fall off her fingers, then another. And Holtzmann, who had been absorbed in the combination of the safe, turned to look at her.

"You know, Lieutenant, New Mexico is quite different from Colorado. People disappear here quite regularly. So much so that the local authorities hardly require any compensation to look the other way. We were just discussing where to dispose of you. Perhaps you'd like to have some say in the matter?"

His smile was malicious as turned back to the safe.

"We thought that you might like to choose your resting place, either in the mountains or in the desert. What is your pleasure?"

He was busy removing packets of bills, tossing them onto the desk behind him. Annette felt another loop of cord slip loose, and her hands were no longer bound together. The right one, however, was still tangled in the remaining cord.

"Do you really believe that this will work the way you want it to? I mean, in this day and age, it's a little silly to believe that you can simply spirit me away into nothingness, don't you think?"

She knew that she needed to stall for time, but she didn't want to antagonize him any more than necessary. The less adrenalin in his system the better.

He looked over his shoulder and smiled—and she froze—and then went back to emptying the safe.

"Well, I think that 'silly' is probably not quite accurate, but, you're right, it is a gamble. But then, so is life. I don't mean to be too much of a philosopher, but I've learned that just about anything worth doing involves some kind of risk. Hmm, now what's this?"

He had stopped tossing bills onto the desk and was examining what looked to Annette like a legal document of some kind. She now had both her hands free. But how could she get her feet loose, with him standing there? Surely he'd see the motion required to do that. So, with her back straight and shoulders squared to take up as much of the slack as possible, she tried to relax.

Holtzmann finished with the document and, looking thoughtful, folded it carefully. Then he checked his watch and walked right behind Annette's chair, over to the desk. But he was too absorbed in thought to notice the loose cord on her wrists or on the floor. Sitting behind the desk, he opened a drawer and lifted out a telephone receiver.

“Hello? Manager, please....Dick? Ah, good, I hoped you’d be on duty. Listen: I’m going through some papers down here, I ran across that option agreement we worked out. The one with the Resort, remember? I’d almost forgotten it. It expires next month.”

He was looking out the window and listening to the telephone, so Annette brought her hands in front of her and wrapped the cord in coils about her right wrist. Now at least it wouldn’t be hanging loose if he looked. She put her hands behind her back again as Holtzmann turned to stare across the room, lost in the conversation.

“I think a renewal is the only practical thing to do. That is, if it’s worth the cost. Even if the place burned down tomorrow, I doubt that they’d sell within a month. The real question is whether we should seek an extension. What’s up there?”

Annette tried to look as bored as she could. Without looking so bored that it would be obvious to him. But pretending not to listen.

“So they cleaned it out? Then the question is whether there are other sites on the property. But I remember that we walked the area thoroughly and didn’t find any indications.”

She settled her attention on another painting, on the wall across from the Gorman hiding the safe. Could that be an O’Keeffe? Goodness, this guy was rolling in extra cash.

“Yes, that’s true. They got lucky, after all. Well, look. It’s going to expire and we might as well let it. Based on the other valleys, we might as well concentrate on areas farther south. That site above Hermosa, for example. Besides, with all the fuss associated with LaCoste’s little adventure with the musician, I’ll be glad to be done with the place.”

If not an O’Keeffe, it was surely a close imitation. The shading on the wall of the barn was very distinctive.

“Right. I’ll file this away and not worry about it. And we’re going to be cleaning up some—ah—odds and ends in the next day or so. I’ll be in touch.”

He was now looking directly at Annette. She wondered if she were the “odd” or the “end.” He replaced the receiver in the drawer and stared at her thoughtfully.

“Well, Lieutenant, have you decided? On your resting place, I mean.”

“To tell the truth, I’m partial to the mountains up in Colorado.”

“I expect we can arrange that. I’ll just finish up here and send Mr. Papandreou to fetch you shortly.”

And he returned to the safe, emptying it and placing the bundles of cash from the table into a duffle bag.

\* \* \*

By the time the door began its clicking again, Annette was ready. She had finished untying her feet and then re-wrapping them to make it look innocent. In the interim, she had retrieved her revolver and was now sitting on it, having no better place to hide it within reach. It was lumpy.

The door opened and in walked the Very Large Person she had experienced earlier. But he looked quite different now that Holtzmann wasn’t with him. He put a finger to his lips in the universal “Shhh” gesture and walked over to the O’Keeffe painting. What in the world?

He slid the painting to one side—it was on some type of rail, she saw—revealing a tape recorder in a niche. Pressing a button that paused the transport, he turned to her.

“Listen, please,” he whispered. “I’ve got only a few seconds before I need to turn this back on. Any more than that and he’ll suspect something if he ever reviews the tape. And I’ve got to try to stay on his good side. I’m going to untie you and take you down to the car. You need to make struggling sounds and so on. When we get outside, I’ll fall down and get dirty, and you can take off. I’ll tell him that you surprised me and got away. Something credible, I don’t know. Understand?”

“Why are you doing this?”

“Lady, I’m just the chauffeur around here. He uses me for intimidation because of my size, but really I’m just a graduate student. OK? That’s why I didn’t tie you up too tight. I don’t want to get involved in anything like disappearing a police officer. You know?”

“Well, neither do I. Especially if I’m the officer. So turn that thing back on and let’s do it.” She gave him her most flirtatious grin.

He turned back to the tape machine, reactivated the transport, and slid the painting into place. By the time he returned his attention to her, she was standing up, with her revolver pointed at him, smiling even wider. His look of surprise included a single eyebrow that arched all the way across his massive forehead.

“Get your hands off me, you gorilla. And if you touch me there again you’re toast!” She managed to put anxiety, rather than the laughter she was feeling, into her voice, and she pointed toward the door. He shook his head in disbelief, obviously trying not to laugh, and turned toward the door.

“Ow! You kick me again and I’ll just knock you out and carry you down, dammit!” He shuffled his feet noisily and indicated she should, too.

The charade continued until they made it down to the car, parked in the alley behind the adobe building. Dino began rubbing his right eye furiously, and then sat down in the dirt and scootched around.

“Down the hill in the alley, first left over to Canyon, then right, and it’s about three blocks to the Paseo de Peralta. Go right to the first light, then left to downtown. You know where the police station is down there, right?”

“I was there earlier today. But if we’re where I think we are, I can go back to the condo I was staying, on East Alameda, and get my car and stuff. Where’s my bag?”

“Front seat. Now get out of here! He’ll be coming up from the cellar any second.”

She opened the passenger door of the limo, grabbed her shoulder bag, and put her revolver into it.

“Mr., ah, Papandreou, was it? Thank you! I don’t forget things such as this, believe me. And if you have information that you think could help me, call the Durango Police Department, investigations division, OK? Good luck!” And she hurried down the alley.

When Holtzmann emerged from the basement door with a duffle bag a few minutes later, it was to find his chauffeur looking anything but intimidating, groaning, sitting in the dirt rubbing his left eye and holding his crotch, covered in dust. And the woman was nowhere to be seen.

“Dino! What are you doing? Where’s that cop?!”

“Unnnnh.” And he pitched over onto his side, lying in the dirt.

It took about five minutes for Dino to become coherent and to be able to relate his tale.

“I had to untie her from that chair to get her down here. And nobody has ever given me trouble before. But look, she bit me!” And he showed his patron a set of fresh teeth marks on his right forearm. “And then she poked me in the eye, hard.” His left eye was appropriately red and its tears had made tracks in the dirt on his cheek. “And she must know judo or something, because the next thing I knew, I

was on the ground. And then she kicked me in the balls!” And, still holding his crotch, he groaned again most pitifully. “Where is she, anyway?”

“How do I know, you idiot? We can’t let her escape, she knows far too much. Get in the car. She’ll probably run back downtown to the police. No! Not that car, my car. She won’t recognize it or report it.” And they piled into Holtzmann’s Mercedes and roared off down the alley.

\* \* \*

Meanwhile, Annette was making her way downhill and right, toward where she remembered the “river” should be. Ah! Here was Delgado Street, an old friend. While walking, she used the last-call-recall function on her cell phone to call Montoya at the Santa Fe Police Department. It was answered by the front desk, and she identified herself and asked for Montoya.

Just then it dawned on her that one of the few ways that she could think of for Holtzmann and Papandreou to have known where to grab her was Montoya, or perhaps someone else at the station who could have overheard their conversation. So she realized that now they might direct her captors toward her once again.

“Lieutenant? What did you think of our Cathedral?” The familiar voice had no hint of surprise, beyond what she would normally have expected.

“Quite impressive indeed. But I need to tell you about something else that happened.” And she proceeded to relate to him her abduction and escape. “Can I come by and make a formal statement? I’m almost there, I think, walking down Canyon Road.”

“Well it’s still quite a way. Can I have a car pick you up?”

“Actually, I’d rather keep moving. I’m sure they’re after me. I heard some things that they don’t want known, I’m positive.”

“OK, well, when you get to the Paseo, turn right, then cross the river and turn left down Alameda. Then I think you’ll know where you are.”

“Oh, yes, I see it now. I’ll be by shortly.” She actually had just turned right, east, the other direction up Alameda, and saw the entrance to the complex where her car was parked. Her pace increased. If she could get in her car before anyone spotted her, she’d feel safe. Plus, with the map, she could probably find the long way ’round to the airport and wait there incognito. Montoya would just have to deal with being stood up.

The long way ’round turned out to be more convoluted than she would have imagined, but it worked. Up past St. John’s College, across to Old Pecos Trail, south on the interstate for three exits, and then back up 599 to Airport Road, she was finally there. After checking her car in, she found a Rio Grande Air agent.

“Listen.” She showed him her shield. “I need to wait for my flight without anyone seeing me. And it would help if I could be first on your plane, so I could sit in the back and hide behind a newspaper. Can I wait in the back of your office here? It’s official police business.” Even though she was two hours early and the wait would be tedious, she knew that she’d not feel safe anywhere else.

Between typing up a report of both her experience in the morning and the afternoon’s adventure, calling in to retrieve her telephone messages, and calling Captain Jankowski to report the abduction—he was not amused—the time went quickly. The airline could not have been more cooperative, and, by the time the other passengers began boarding, she was sitting in the back row, port side, scrunched down in the window seat reading a newspaper.

When she took a second to steal a glance at the other passengers, she was astonished to recognize the bald spot and wide forehead of Reginald Meeker sitting in the seat in front of her. He was turned sideways, talking with a man sitting across the aisle, someone she didn't recognize.

"Made it! I was worried there for a while, but that's the beauty of this podunk airport. It's so small you can get from the car to the plane in no time. I sure hope you tipped that cab driver a lot."

"I just gave him a \$100 bill and ran. It wouldn't have been so tight if those bozos at the bank hadn't been so long with the boxes."

"Or if Dino had showed up sooner. He sure seemed pleased with himself. But he looked like hell. Wonder what happened."

Annette used her last-call-recall button again, and seconds later, Jankowski was back on the line. She knew she had to be cryptic, and that she had to avoid Meeker's recognizing her voice. She chose breathy bimbo.

"Walt? Hi again. Listen, I just wanted to, like, confirm that you and the guys were going to meet me at the airport, like we discussed? It looks like we're leaving on time, and we should be there in about an hour. Huh? Sure, bring everybody. I just love being greeted by several cars full of big, strong hunks. Listen, I've got to go, they're telling us to turn off electrical equipment. 'Bye.'" She never called him "Walt," so she was sure he would understand something strange was happening. And he was just too smart to ignore the two references to bringing people to the airport. At least she could hope so. Now, all she could do was wait.

"Man, I'll sure be glad to get into some fresh clothes. Three days is too long." It was Meeker's friend who started on this new topic.

"Yeah, especially considering that this isn't what I'd plan to wear to travel in. That son of a bitch. Well, anyway, I guess we should just get over it and move on. When do you think we should drive back down here?"

"Let's see. It's Monday, right? I'm due to head back east in two weeks, so there's plenty of time. How about Friday? I bet that Santa Fe is busy on weekends, and the sign at the bank said it's open Saturdays. If we come down Friday afternoon, stay somewhere on the outskirts, and pick up the cash Saturday when they open, we can be back in Durango by early afternoon, probably. And we can blend in with the Saturday crowd and Holtzmann won't see us."

Once again, Annette's synapses clicked into place. So Papandreou's first name was Dino, eh? How appropriate. And Hal had been right, the limo had picked up these two guys on the campus. And brought them to Santa Fe via Chama. Wonder which was the lilac-bush culprit?

And they want to come back next weekend and get cash from a bank, from "boxes." Safe deposit boxes? Cash Holtzmann must have given them for something. The Stradivarius? Something from that little cave? Well, if Jankowski came through, there would be plenty of muscle at the Durango-La Plata County Airport to haul these two in for questions, and then she'd have the chance to ask them.

Compared to the real-life drama playing out in front of her, the newspaper was just too boring.

\* \* \*

Hal, with Jennifer Mason in tow, was waiting inside the terminal for Annette's arrival when he recognized a familiar face.

"Captain, uh, Jankowski, I think? I don't know if you'll remember me. Hal Weathers. Your guys didn't let my car, or me, get blown up a while back."

“And, as I remember, you persuaded my star detective to settle down. All I need to know now is when you’re going to make an honest woman out of her.” Jankowski was smiling so widely that Hal couldn’t begin to be offended.

“Hey, I keep asking. But what’re you doing here? And, if I may say, there aren’t usually this many people hanging around waiting for these flights to arrive, especially not ones who have the official look these guys do.”

“I wish I knew. I got this strange call from Annette. Like she couldn’t talk, but really, really wanted me to meet her here with backup. So here we are.”

“Well, I’m here to pick her up, too. Talked to her earlier today, very late this morning, I think, and everything was fine. She was walking back from the police station to her car. Looking at the Cathedral. I wonder what’s up.” He smiled. “At least we’ll have plenty of cars for all her luggage.”

Jennifer cleared her throat, and Hal looked startled.

“Oh, I’m sorry. Jennifer, this is Captain Jankowski of the Durango PD. Captain, this is Jennifer Mason, one of my students and also a reporter for the *Free Press*. I bet she would just love to know what this is all about. But there’s more: she came along with me to talk with Annette. Seems she talked with Steffanie Boudreau on the evening of her death. I promise you won’t be disappointed.”

Jankowski’s eyes were big, round disks; but then there was a disturbance as the doors opened and in walked Reginald Meeker and Leonard Schwab, looking frightened, followed by Annette, who was obviously herding them toward the waiting crowd.

“Walt, old buddy, you got my message!” Her wink said it all. “Hi fellas! Good to see you all here. Why don’t you take these two fine gentlemen downtown for questioning? I’ll be down shortly.” She turned to Hal and wrapped her arms around him. “I can’t tell you how glad I am to see you, pal. The stories I could tell.”

He was surprised at the strength of her grasp. Geez, she’d been gone only one night. And there are all these people standing around watching...

“Um, well, I’m sure glad to see you, too. And, er, I brought a surprise.”

He kissed her, pulled back slightly, and reached for Jennifer.

“Kinda young for you, isn’t she?”

Annette’s eyes were twinkling, which only increased as Hal’s face turned red.

“She’s one of my students. And a *Free Press* reporter. With information for you about the night Boudreau was killed.”

It was Annette’s turn to look surprised.

“‘It never rains but it pours.’ Can we talk on the way back to town? Oh, wait. I need to go in with the Captain and brief him. And then I’ve got to deal with the Two Stooges, there. And damn, I’m hungry. Missed lunch. What’s on for dinner? I could eat a moose.”

If Hal was disappointed, he hid it.

“OK, first things first. You go back into town with your friend Walt there and do whatever you need to do. I’ll put dinner together and Jenny’s invited. I promise you an interesting conversation, OK?”

“OK indeed. And do me a favor. No red chile. Or green. OK?”

“Well, I usually marinate my moose in red chile, you know, that famous moose adovada recipe with cranberry salsa. But maybe I can find something that you can handle. Like salmon. Can you get a ride home?”

“You bet. I’ll try to be there by 7:00.”

\* \* \*

“Wow. That was sure amazing. All of it. Hectic, confusing, everything. I’m seeing a very different side of you, Dean Weathers.”

They were in his supercharged Audi A4, headed back to town, and he was trying hard not to drive like a teenager. What he wouldn’t have given to be this girl’s age, driving her around in this car.

“Living with a cop has changed my life, that’s for sure. But I’m used to her scheduling. She’s very career oriented, and, besides, she has an important job. Did you know that the big case that Bradford’s death was sort of a part of resulted in putting the main drug distributors around here out of commission?”

“I read about that in the *Herald*. It was before I started working for the *Free Press*. I knew Whit smoked grass, but I didn’t know he was involved with that dealer, or that he was a dealer.”

“Are you thinking about a career in journalism? Is that why you want to get into my course?”

“I’m thinking about it. But I haven’t decided yet. So far, I’m trying to treat it as a part-time job. I used to be an aerobics instructor, but that isn’t so trendy now, and, besides, I got tired of jumping around without enough clothes on in front of a bunch of people. The guys in my classes were pretty gross, even if I worked them extra hard.”

The image in Hal’s mind of Jennifer in an aerobics outfit was most pleasing. He knew he needed to be extra careful.

“Well, it’s been my experience that college-age guys often have more hormones than tact. Hmm. I guess that can apply to guys any age, for that matter. But don’t worry. You tried your charms on me back in my office and I resisted, and I’ll continue to resist. Hey, my girlfriend carries a gun, for heaven’s sake, and she’s a crack shot.” He chuckled.

And she blushed. “Oh. You caught me doing the eye thing. I noticed it at the time. I try not to do it, but it’s an old habit. It’s hard to break old habits that work. You have no idea of how many C’s I’ve turned to B’s that way. Combined with a little pouting.”

“Let me guess. You finally decided that you wanted to earn what you get with your mind rather than with your body, right? And that’s part of taking this reporter job instead of having the other one.”

“Pretty much. How do you know all this stuff? By being a Dean?”

“No, by being around people your age all the time and by having a keen memory about myself at your age. Would you believe that I used to smoke grass, too, almost continuously, my senior year? This was back when it was hard to get, and supposedly a lot weaker, I’m told. It was the thing to do, so I did it. So. This stuff you know from your conversation with Steffanie Boudreau. I think you ought to talk with Annette about writing an undergraduate thesis on this case. You know, sort of trade your information for her help. Not to write stories for the *Free Press*, but to write it up as a case history. As a project, you could do a two-semester thesis, and I bet you could get six credit hours, maybe eight, for it. And that would help with the graduation thing, huh? Also, it would help you figure out whether you really want to have a career in journalism. And if you do, this would get you the job of your choice.”

“How could I arrange that?”

“I can talk to the journalism department chair—even though she’s in a different college, I can still be persuasive—and suggest it. You’re in a unique position with the information you have, and you’re interested in the case. And a big writing assignment like this is the best way to learn to write. I know it will sound intimidating, but I’m talking about a 25,000-word paper, or something like that. Not a whole book, but a start on one. And, like we discussed earlier, you’ll get into my class, for sure. If I don’t say so myself, my class is the perfect way to learn about crime reporting. Amy Hodges, the police department press liaison, told me so herself.”

She was looking him over. “You know? I think I can understand what Annette sees in you.”

It was his turn to blush.

\* \* \*

The salmon was ready to grill, Jennifer’s salad was ready for the oil and vinegar, and, because it was close to 8:00, Hal had put out crackers and cheese. Annette would be ravenous, he knew, and would eat whatever she could find in the refrigerator, even raw moose *adovada*, if there was no alternative.

She walked through the door just past the hour, looking tired and hungry, saw the crackers, and grabbed a handful.

“Am I ever glad to get home. I need a quick shower while you make dinner. And I’ll eat yours if you don’t make enough, I’m so hungry.” And she headed upstairs.

At the table, she wolfed down half a salmon steak and then was ready to slow down and talk.

“So we’ve got the Two Stooges in custody, and, Jennifer, I understand that you have some interesting information for me?”

Jennifer looked at Hal, but he wasn’t helping. She was on her own. So she mentioned the telephone call that Annette would be so interested in. But instead of giving details, she took a deep breath and plunged in.

“Ms. Trieri, I don’t want to sound like I’m trying to bargain, but I would like to propose something. Dean Weathers actually suggested it.”

Hal was suddenly very busy trying to wiggle a salmon bone loose from his steak.

“I’m a journalism major, and I’d like to try to do an undergraduate thesis on the story of this case. Not for real-time publication in newspapers, but more of an archival piece. I did a lot of research on Steffanie Boudreau in preparation for the interview that never happened, and I kind of identified with her somehow. So what do you think? I mean, I’ll tell you everything I know, but I’d like to do this story, too.”

Annette popped another big bite into her mouth and looked thoughtful while she chewed.

“You know, what would be a good story would be the media coverage of this thing. I mean, sure, the case itself is interesting, but that will be reported over and over. If you’re going to do something really original, you could do a kind of investigative report on all the reporters, especially the tabloid ones, that showed up looking for juicy stories. See what I mean? That would even be the kind of scholarly thing that’s required for a thesis. I’ve got no problem with providing you with whatever information you’d need, as long as it doesn’t get to any of the other reporters in town. Besides,” she grinned, “One of the tabloid reporters thinks he’s my close personal friend, and boy would he make a

perfect case study. Hmm. As long as your defenses are up. I bet he wouldn't hesitate to hit on you before you could blink."

"What a cool idea! Dean Weathers suggested a thesis, but I wasn't thinking of a real topic beyond something to do with this murder. And it is a murder, isn't it?"

"Well, that's something we haven't really figured out yet, believe it or not. But you can see for yourself in the coroner's report. Which you'll have to read, blood and guts and all. That's part of being a journalist. So what do you have for me, anyway?"

"Dean Weathers and I talked about this telephone conversation I had with Steffanie Boudreau the night she died. I needed to set up the time for her interview the next day, Tuesday. I can go through it as closely as I remember it when you've got a tape recorder or something, but probably the most interesting to you would be when she talked about having a date Monday night, to go up into the canyon to play her violin."

Annette looked surprised and sat up straight.

"She mentioned something like a 'date with somebody' but I didn't really catch the name. She had this strong French accent and I think she was drunk. But," she looked at Hal, "I've been thinking about it and it sounded like a 'date with homm-ie.' You know, the French word for 'man,' only with an 'i-e' sound on the end. It doesn't make much sense to me."

"Not 'ami,' the French word for 'lover'?"

"Maybe, but it seemed like too much accent on the first syllable, and too broad an 'a'."

Hal was looking thoughtful.

"You know what? Along with all the other possibilities, that could be a diminutive, affectionate nickname for my colleague, Dean Jacques Ament."

\* \* \*

## Fourteen

By 9:30 the next morning, Annette was ready to begin her interviews. She had been thinking hard about which of her captive climbers to talk with first, and she finally settled on the one she didn't know, Schwab. He was essentially a tourist, or, more accurately, a summer visitor, and therefore he was more vulnerable. She could use what information she got from him in the subsequent interview with her pal Reg Meeker.

Jennifer's information could not have come at a better time, although it would have been nice to have a more positive identification of Boudreau's last date. The discussion over dinner had continued until about all the possibilities were exhausted. Annette had pointed out that Schwab could go by "Lennie" and, because he was also a musician, a date would be logical. Maybe they knew each other from other concerts. But "Lennie" was just too far from what Jennifer had heard for her to think it very possible. At the same time, it was most probably the name of someone she'd heard, rather than a generic reference. Which left two possibilities, someone completely unknown or someone highly improbable, the Dean of the College of Fine Arts at Frémont State University.

Annette was wondering what mood her two interviewees would be in today, bad or worse. They had, of course, been kept in separate accommodations. And the reason that Annette had been so late

getting home the evening before was related to these accommodations. She had scoured the local city parks for two of her favorite homeless guys, Jimbo and Lucky, so that her climbers would have roommates. Couldn't let them sleep alone, after all. And both Jimbo and Lucky were gratified to be able to sleep indoors, for the nights were getting chilly as fall approached. They also appreciated the several packs of cigarettes that Annette promised them for acting as spies on the two climbers.

Jimbo, put in the holding cell with Meeker, was a down-on-his-luck biker who had lived in his leathers for about the past three years running. Very fragrant. A large fellow, about 6'5" and 350 pounds, he was also quite the conversationalist. Annette introduced him to Meeker with the comment that she knew that they would grow close during their night together. Meeker had not been amused.

Lucky, a wiry little man, bald, stubble-faced, and missing an eye, fancied himself an evangelist of the fire-and-brimstone school. When he heard Schwab's name, he deduced, incorrectly, that Schwab was Jewish and immediately set out on a mission of conversion. Annette figured this would last all night.

Both Jimbo and Lucky had played these roles before, and they were quite good at remembering conversations. Meeker would probably be too afraid of Jimbo's potential friendship not to discuss why he was in jail, and Schwab would gladly discuss his predicament as a respite from religious browbeating. So Annette had them just where she wanted them.

Carrying her notebook, two cups of coffee and a bag containing a muffin, she walked into the interview room containing Schwab. She had heard he had not touched his breakfast.

"Good morning, Mr. Schwab. I trust you slept well. As you may guess, we need to talk. Of course, you needn't talk with me if you don't want to. You have the right to an attorney. And everything is being video recorded, behind that mirror there." She pointed over her shoulder at the wall behind her.

"You know this, but I want to make clear the fact that you're here for questioning—you have not been charged with anything. Yet. You may not be. We have, ah," she looked at her watch, "about six hours to charge you or release you. What we do will depend on how this interview goes. You may stop answering my questions at any time, or, for that matter, not start. You may request an attorney at any time, either your own or one appointed to assist you."

She took the muffin out of the bag and set it in the middle of the metal table where Schwab was seated.

"These actions, of course, will cause delays. If all goes well, we just might have you out of here in a couple of hours. Otherwise, well, we couldn't find you over the weekend when we were looking for you and we're not keen to have that happen again. And I'm certain that we can get a warrant for your arrest. But the main reason for that is to question you, which we can do right now. Am I making sense?"

Schwab had been staring at the muffin, sipping at the coffee Annette had handed him. His appetite must have returned, she thought. She sat down across the table from him, reached across for the muffin, and unwrapped it. He looked as if he might begin drooling.

"Um, yes, I believe you are. Although why you would want to question me is something I don't understand."

She broke the muffin in half and set the two pieces down, amid a cascade of crumbs. His eyes dilated as the aroma of blueberry-cinnamon reached his nose.

"I'm sure you will shortly. OK, first question: where were you two weeks ago last night?"

"Aahhmmm, let's see. Mondays are chamber concerts, and two weeks ago I wasn't involved. So I must have been out somewhere. Let me think. Probably the bar scene. As you know, I'm from out of

town and don't have family here. So on nights off I tend to socialize in the pathetic ways I can." He smiled thinly.

"What bar? Or bars?"

"Well, I'm not sure I can say. I do this about twice a week and they all start to blur together."

"You are the first chair violin, the concertmaster, for the large orchestra of the AMFest, is that correct?"

"Yes I am. Or was, I guess the Festival is over and the ensembles have disbanded."

"Of course, you knew that Ms. Steffanie Boudreau was to have been the guest violin soloist for the concerts two weekends ago?"

"Oh, yes, indeed. I had never met her and was excited to have the opportunity to play with her. Um, in the concert I mean." He blushed slightly. "It's just tragic, what happened to her. She was so young and had so much potential. I can't tell you how much I admired her talent and artistry."

His eyes had not left the muffin the entire time.

"Would you like some of this muffin?"

He grabbed a piece and ate it in one bite.

"How much money did you and Mr. Meeker deposit in Santa Fe yesterday, and what was its source?"

Half-chewed muffin globs spewed across the room, fortunately, Annette thought, not at her. Schwab broke out in a coughing fit. Annette waited patiently.

"I don't know what you mean. Reg and I were in Santa Fe to see the museums and art galleries. I've been wanting to go all summer but never had the opportunity before."

"How is it that you and Mr. Meeker have become friends?"

"He works in public relations at the university, and we ran into each other at an introductory reception for the Festival last June. Talking, we discovered..." Annette could see that he was thinking carefully about what to say next. "...We discovered that we have various interests in common. Southwest history and art, for example, which is why we finally went down to Santa Fe for the day yesterday."

"Where were you on Saturday and Sunday?"

Neither climber had been told about the search warrants that had been executed.

"Why, I was around here. Doing various things, in and out of my apartment. Then we went down to Santa Fe late Sunday afternoon."

He was beginning to sweat from his forehead, and he was rubbing his palms on his pant legs.

"Why were you absent from this weekend's concerts?"

"Oh, that. I injured my left hand last week. Had to bow out."

"Mr. Schwab, was there any professional jealousy between you and Ms. Boudreau?"

"Oh, heavens no. She was way out of my league. I was feeling honored to have the opportunity to play on the same stage with her. Until that tragic accident."

"Mr. Schwab, it's been reported in the newspapers over the weekend that it was not an accident. Big headlines all over the place. Surely if you were around town you would have seen that. This suggests to

me that you just lied about your whereabouts this weekend. Can you show me the injury that prevented you from playing, please?"

The sweat was now trickling, and his breathing was revealing the stress he felt.

"Oh, well, it's a muscle strain, here in my wrist and hand." He held out his left hand toward her. "Please don't touch it, it's tender."

"Mr. Schwab, are you a rock climber, a technical climber who uses climbing ropes and other equipment?"

He looked startled that this should come up, and blinked rapidly. Finally he managed a sickly smile.

"Well, I'm not sure that 'climber' is accurate. I'm just learning. I took it up this summer as an outdoors diversion. Something to do in my spare time, you know?"

"I see, along with the bar scene. Mr. Schwab, have you ever climbed a cliff face above the Animas River between Rockwood and the High Bridge?"

He almost fell out of his chair.

"Um, well, er, I climb with friends, of course, you never climb alone. And they've taken me all sorts of places. It could be that I've been somewhere like that. I couldn't say for sure."

Annette sat back in her chair and turned slightly sideways, toward the wall. She stared thoughtfully for nearly a minute. Schwab couldn't stand it.

"Rockwood does sound somewhat familiar. It's on the narrow-gauge line, right? Up the river a long ways. I remember a couple of trips up there, to different climbing places above the river. So maybe I was where you're talking about, once."

She let the silence drag on, and finally heaved a deep sigh.

"Leonard, Leonard, Leonard. I had hoped that you would be forthcoming and truthful, and that we could release you without further delay. But if you're going to be untruthful with me, well, I'm afraid that won't be possible. Do you know a lawyer? I think you'll be wanting one."

"Wait, no, really, I want to help. I haven't done anything. Please, I'm telling the truth. How can I make you understand?"

"You can tell me what you, Reg Meeker, and Steffanie Boudreau were doing on the railroad tracks in the Animas Gorge, between Rockwood and the High Bridge, very early in the morning two weeks ago today, that's how. Honestly and truthfully, with no prevaricating. I believe I'll give you a little while to think about it."

She left, wondering whether the rest of the muffin would still be sitting there when she returned. She sort of thought it would be.

\* \* \*

Out in the lobby, Annette called her office to get telephone messages and put into motion the extraction of Reginald Meeker from his night-long conversation with the loquacious Jimbo. Schwab had lied almost continually, so she expected Meeker to do the same. And she knew his attitude would be quite different. More combative, less pliant. It made her tired just to think about it. Time for a restorative phone call.

"Good morning Alice, how's the day treating you? Well, I hope?"

“Good morning, Annette.”

At least Alice was able to be informal over the phone.

“Much better than yesterday, although still a bevy of lost souls to deal with. The first day of classes is always the worst. Let me put you through.” There was a short pause.

“What news from the world of bright lights and rubber hoses?” Hal could be positively primitive when he tried.

“Lies, all lies. From Lennie and probably from Reggie, too, I’ll have to see. Two Stooges, indeed. How are you doing today? Going to bring another babe home?”

“Aww, now, c’mon. She’s just a kid. Who needed a shoulder to cry on. And I didn’t even think about thinking bad thoughts.”

“Oh? None? Zero? I don’t know how much more untruth I can stand today.”

“Well, OK, just one or two little bitty ones.” He laughed. “The hardest part was in my car. First, I kept think of how driving fast makes you horny. Then, I kept thinking of how much fun it would have been to have had a car like mine when I was 22. With a girl like that in the passenger seat. Whew. Now you know why I felt so frisky last night. Well, that and the fact that you were home with me after having been gone.”

“Hmm. OK, you get points for honesty. But I’ll have to think about diplomacy points. Anyway, I’ll just assume it had to do with the tip about the phone conversation she had for me.”

“Well, truthfully, that’s why she came to the airport. I’d originally just invited her over for supper, and I was thinking of this week sometime. But it seemed like the sooner you heard about it the better. So what’s happening with those guys in Santa Fe?”

“We’re having a discussion after lunch about what to do. Problem is, there may well be a leak within the Santa Fe PD, and I need to factor that in. Holtzmann is toast, of course, but it may take a while. And that guy Dino, his chauffeur, is a good guy, in my book. I should send him some flowers, or something.”

“Aha! Now I’ve got something I can tease you about!”

“Aw, not really. First, he’s not all that attractive, just big. And second, he saved my hide, like I told you last night. He said something about being a graduate student, so he’d probably like to meet you.”

“Well, I’d like to do a long weekend with you down there, feed you some real chile and so on, but not until this Holtzmann character is put away. Daylight abductions are more than my delicate academic constitution can stand. How about spaghetti for dinner? Red sauce, garlic bread, the works?”

“I’ll eat a light lunch. Six-ish? I deserve an early evening.”

“See you then. ’Bye, lover.”

Frisky, indeed, she thought. He damn near wore me out. I thought these fifty-plus guys were supposed to be slowing down.

\* \* \*

On her way back to the interview room, Annette stopped to check in the recording booth.

“Everything going smoothly, Bill?” On the other side of the one-way mirror, Schwab was sitting forward, with his face in his hands.

“Got it all. He’s been about like that since you left.”

“I’ll go in quietly and see if he’s going to be more cooperative. You know, these amateur liars get tiresome. Give me a career criminal any day. At least they present a challenge.”

She left and walked around to the door to the interview room. Opening it as quietly as she could, she slipped in. The remaining half muffin was still sitting on the table where she had left it.

“Well, Mr. Schwab? What will it be? I hope you understand that I do this a lot, interview suspects, I mean. It’s my job, and, if I don’t say so myself, I’m good at it. The sheriff’s departments from the counties in the area routinely call me in to help them. So this business of trying to lie your way out of an already bad situation is only making things worse, and in several ways. First, it antagonizes me. Second, it will make the rest of the investigative team even more suspicious of you than they are now. Third, it’s dumb from your legal perspective, because it gives me yet another reason, and legal excuse, to hold you. If you’re innocent of criminal activity, your best approach with me would be simply to come clean. It may put you in an embarrassing position, or something else uncomfortable like that, but those things are always better than prison, believe me. Especially on a first-degree felony conviction. Now, let me refresh your memory about my last question:

“What were you, Reg Meeker, and Steffanie Boudreau doing on the railroad tracks in the Animas Gorge, between Rockwood and the High Bridge, very early in the morning two weeks ago today?”

He finally looked up at her, and it was apparent that he’d been crying.

“We didn’t kill her, OK? In fact, the last time I saw her, she was fine. Higher than a kite, but fine.”

“She just walked off? What direction? Alone?”

“Toward the train stop. With LaCoste, Tony LaCoste. Works for Holtzmann, he’s the guy who took us down to Santa Fe.”

“So you didn’t fly down, but you flew back yesterday?”

“Right.”

“And you left Boudreau, alive but intoxicated, in the hands of one Tony LaCoste up in the canyon. On the railroad tracks?”

“Actually, it was at the Peaceful Pines stop, at that little not-quite station they’ve got there.”

“Do you know the cause of her intoxication?”

“I’m not sure, but probably marijuana and alcohol. Although she sure seemed to have a lot of energy. I do know she smoked some marijuana, I saw her. And she smelled like liquor.”

He was close enough to her to smell her breath? Annette made a mental note.

“You said ‘we didn’t kill her.’ ‘We’ who?”

Schwab hesitated, evaluating how far he should go, evidently.

“Reg and I. I don’t know what went on with LaCoste.”

“So you and Reginald Meeker were at the Peaceful Pines station, or way stop. What were you doing up there?”

“Why am I being questioned? Is this a fishing expedition, or are you interested in a specific crime of some kind?”

His spine was re-stiffening, it seemed.

“Mr. Schwab, I’m looking for cooperation and information. If you’ll answer my questions, then that cooperation will be rewarded. I mentioned that we can get an arrest warrant for you. If I execute such a warrant, you’ll know precisely what it is that you’re being arrested for. If you cooperate fully, however, I may not get one. Would you like to tell me what the two of you were doing up there? Or should I move on to other matters and keep in mind your lack of cooperation?”

“Climbing. We were rock climbing. I was telling the truth about our climbing up in the canyon. Although I’m not really just a beginner.”

“You were climbing at night?”

“No, we got a late start that day and were spending the night up there, waiting to walk out in the morning.”

“Walk out?”

“Walk the tracks back to Rockwood, where we left a car.”

“I recall from a conversation with Mr. Meeker last week that he flew in from Denver that Monday, which means he didn’t arrive here until afternoon. When did you get up there?”

“I’m not supposed to talk about that. That was one of the rules.”

“Whose rules are these?”

“Well, I’m not supposed to talk about that either.”

“But, because you’re being so cooperative, I’m sure you will, given the alternative, no?”

\* \* \*

Grumpy. That’s how Reginald Meeker looked, grumpy, she thought. In which case, Schwab was Dopey and they were the Two Dwarfs and not the Two Stooges. Well, here comes the Wicked Witch. She carried coffee for two into the interview room containing Meeker. No muffin, this time.

“Mr. Meeker. How are we this morning? And how is our new friend, the gentle Jimbo? He was gentle with you, wasn’t he?”

“Your department will be hearing from my attorney, Lieutenant, you may be sure. This is harassment, pure and simple, and harassment that placed me in no little danger.”

“Well, that’s not what the judge thought when he gave us the warrants to search your house.”

That should steal his thunder, she thought. Meeker blinked several times, clearly re-evaluating his strategy.

“Now, Mr. Meeker. Let’s not play games. First, let me explain the situation and the ground rules.”

And, as she had with Schwab, she pointed out the video camera behind the mirror and outlined the options facing Meeker.

“My interview with Mr. Schwab earlier this morning was most revealing. I hope to corroborate some of his comments here and to gain a better understanding of your role in Ms. Boudreau’s last hours.”

She had not mentioned the DNA testing that was in progress, nor that she had recognized one of the keys he had in his pockets on being arrested yesterday as a safe deposit box key. It was a near match to the one that Schwab had been carrying.

“And, of course, to understand your interaction with Mr. Holtzmann over the weekend.”

During this exposition, she had watched Meeker becoming progressively redder, and now she was expecting an explosion. But he held himself in check.

“Well, I don’t know what Leonard may have told you, but I can assure you what I am about to say will be the entire truth of the matter. I have nothing to hide. I’ve tried to impress this upon you in our previous interviews. My life is an open book. In fact a lot of it’s written down in that log book I told you about.”

“Then you won’t mind telling me how much Holtzmann paid for your artifacts.”

He looked startled.

“The artifacts that you found up in the gorge, in that cave on the wall. I’d like to double check Schwab’s numbers.”

“Ah, well, Len is the one who handles the financial transactions, so I really don’t know exact figures. About much of anything. But I’m afraid you’re confused. We were involved in a transaction with Holtzmann, but it wasn’t artifacts.”

Don’t tell me, she thought, that he’s going to come clean about the violin.

“Of course, it’s possible that Mr. Schwab wasn’t entirely candid with me. What’s your story?”

“It’s well-known that Holtzmann deals in artifacts, as well as reproductions. He’s always looking for sources of clay that he can use in his reproductions of ancient pots. These sources, of course, are scattered about in various places, and the river gorge is a productive place for deposits. We found some clay that we thought might be of interest to him and took him samples. He liked what he saw, so we sold him the information. Not clay, because he will have to figure out how to pay the rightful owner for it. Just the information. He paid us a finder’s fee. Len took care of the financial transaction, like I said.”

Now, that’s truly creative, she thought. I wonder what else I can get him to make up?

“And, because you’re a rock climber, it’s only natural that you’d be in the canyon anyway, is that correct?”

“Exactly! I knew you’d understand. We’ve been climbing up and down the canyon all summer, and in one spot we found an especially good-looking clay deposit. So we took Holtzmann a sample.”

“Why were you in the canyon all night on Monday, two weeks ago last night?”

He looked more than a little scared at this change of direction.

“Um, let’s see, two weeks ago, let me think. I guess I don’t recall being there all night. What makes you think that?”

“This was the day you flew in from Denver with Ms. Boudreau. Perhaps you got a late start and dark just caught up with you. Anyway, I’m more interested in something else. Where Ms. Boudreau may have obtained her narcotics and what time you, and she, got up the canyon.”

“Well, I don’t know about drugs or what time she got there, but we, I mean Len and I, got there about supper time. We did a little climbing and then walked the tracks down to the Peaceful Pines stop.”

“If she didn’t go up with you, then she must have gone up with someone else. How was it that you and she met up?”

“Well, we... Wait. Who says we met up? Len and I were up there, sure, but we were camping out. Because we were climbing and dark caught up with us. That’s all.”

His broad forehead was bathed in sweat.

“Hmm. I’m not sure that I can quote you precisely, but we could always play back the tape. Something about having nothing to hide and telling me the complete truth. Was this a lie also, or did you actually intend to lie all along?”

“I...no...I...we, we were up the canyon climbing. And, if the newspapers are reporting things correctly, it was in the vicinity of where Steffanie’s body was found, up on the High Line. There was someone else up there, I mean at the Peaceful Pines stop, I heard a commotion. But I was trying to sleep. I had a long day, flying in from Denver and then going climbing, and all. So I really didn’t see anything.”

“Mr. Meeker, do you think I’m stupid? This is really quite insulting. Surely you must know that the reason that you and Mr. Schwab were kept apart last night, and the reason you’re being questioned separately, is so that we can compare your stories. Now, you and Mr. Schwab appear to be good friends. Despite this, it could be that he’s lying to implicate you. Or you could be lying. There is no potential for a simple misunderstanding here, given that the stories the two of you are telling are so different. And, I must say, that his has much more of the ring of truth to it than yours. Clay samples indeed.”

Annette began gathering her things as if to leave.

“OK, OK. We weren’t really camping, we were sleeping on the benches at the Peaceful Pines stop. We, we didn’t want to walk out in the dark, so we were waiting there. And I was, in fact, asleep, or almost, when I heard violin music, echoing in the canyon. Loud enough to be heard clearly over the noise of the white water. Beautiful. Len was blown away. And, then, here comes Steffanie, walking down the path from Peaceful Pines, playing away. She said she was meeting someone. She was stoned. Len recognized her right away. They talked for a while, she let him play her violin a little, and a guy came down from the Resort and they walked away together. Then we waited all night. That’s it, really.”

“Now, think carefully about this, Mr. Meeker. Did you recognize the guy who came up from the Resort for her?”

It was almost possible to see the gears turning in the primitive calculator in his head, evaluating how much Annette really knew and what he should say.

“No. At least not at the time. Now I know his name is Tony LaCoste. He works for Holtzmann, and he gave us a ride down to Santa Fe with the clay samples.”

The strange mixture of truth and fiction was beginning to become so confusing as to be funny. Annette wondered when he would get confused about it himself.

“Did you wait at the Peaceful Pines stop all night, until the first train came in the next morning?”

“No, we walked back to Rockwood at first light.”

Annette thought about this, trying to put everything together.

“Did you see anything strange on that walk?”

She realized that St. Clare’s new time of death for Boudreau would have been just about dawn.

“No, we walked back to our ropes, pulled them up, and went back to Rockwood. Nothing strange or unusual.”

Annette sighed and began gathering her things again.

“Mr. Meeker. Reginald. Please. I have unsolicited testimony from someone not involved in all this that those ropes were hanging there when the first Silverton train went by at about 9:00 that morning. I’m sorry, but I’m really, really tired of these lies. Do you have a lawyer?”

“Oh, wait! Maybe we forgot the ropes that morning. We went there more than once, I don’t remember exactly. But there wasn’t anything strange, really.”

“Mr. Meeker, I walked that section of track myself. How is it that you wound up at the Peaceful Pines stop, across the High Bridge from where you were climbing? Why didn’t you walk out the night before?”

“Ahhh, it was just easier to walk over to Peaceful Pines. That’s all. Really.” He was beginning to sound as he didn’t even believe himself.

“You’re lying. I’m tired of this. Good day, Mr. Meeker.”

She walked out.

\* \* \*

Well, she thought, on her way back to her office, that was interesting. Despite the lies, there is a coherent story emerging.

Climbers walk in late in the afternoon and, for some reason, wind up sleeping at the Peaceful Pines stop. Boudreau is up at Peaceful Pines, getting there who knows how, and goes for a late-night stroll to play in the canyon. LaCoste is there, for some reason.

She either is killed or dies of a drug overdose, and her body gets left on the tracks, *sans* clothes. Of course, whoever put her body on the tracks has to haul it right by where the climbers are sleeping, and they can’t have missed it on their walk out. Unless the climbers are really sleeping at the Resort and don’t leave until after our train picks up the body. I’d sure sleep at the Resort, and sleep late.

But if Boudreau was at the Resort, then I wasn’t getting a straight story from that guy up there, Westerman, Richard Westerman. And there was that conversation yesterday between Holtzman and someone named “Dick,” who was some kind of manager, about a “resort.” Perhaps a more formal investigation would be in order.

Back at her desk, she called the La Plata County sheriff’s office to discuss a warrant for Peaceful Pines and to see if someone from their jurisdiction would like to accompany her up there. But they had taken off for lunch, so she had to leave a message. Maybe the people at the Resort would just cooperate, especially if she talked with someone besides Westerman. Like the owner. He, or she, surely wouldn’t want the potentially bad publicity that a formal search of their records could bring. She picked up the telephone again.

“Good morning, Peaceful Pines Resort.”

“Good morning. I wonder if I could speak with the manager, please?”

“This is the front desk, may I help you?”

“This is Lieutenant Trieri, investigations division of the Durango Police Department. I’d like to speak to the manager on duty, please.”

“Oh. I’m sorry. Well, I’d like to help, but we’re between managers just now. Would the owner be OK?”

“Thank you, even better.”

There was a pause and finally a woman’s voice came on the line.

“Lieutenant Trieri, I believe he said? This is Anne Beldon. My husband and I own the Resort. How can I help you?”

“I’m leading the investigation of the death of the woman whose body was found on the Silverton tracks a couple of weeks ago. I’m sure you recall it.”

“Oh, most certainly. It was so close to here and all.”

“Initially, we had no reason to think that the Resort was a part of this, but we now have some evidence that the victim, her name was Steffanie Boudreau, may have been there the night before her body was found. I wonder if it might be possible for me to come up and look through your registration records to see if any of the individuals we are investigating may have been registered.”

“Oh, dear. I certainly hope not. But I suppose it makes some sense, given our location. Feel free to come up any time, and I’ll put our records at your disposal. I’ll help as much as I can, but I’m rather busy just now.”

Annette was relieved that cooperation seemed to be the order of the day and decided to lighten up a bit.

“I can see how you might be, with the size of your place. I had a tour last week, and it’s beautiful. Although, I have to say, if I were the owner, I’d hire good help and do my best to just sit and enjoy the scenery and fresh air.”

There was a chuckle from the other end of the line.

“That’s my plan, but you know Robert Burns’ comment about plans, no matter how well laid. The person that I usually have do all this work up and quit on me yesterday. Not even the usual notice. With Labor Day Weekend coming up. And to think that I trusted that letter of reference from his brother.”

“Hmm. My tour was with your manager, a Mr. Westerman. And he has a brother, I believe, who works down here at the General Palmer.”

“That’s Phillip. He wrote the letter. Richard, my guy, is the one who left. They’re twins. I should have known better. Live and learn. Anyway, come on up when you get the chance and I’ll help out as much as I can.”

\* \* \*

## **Fifteen**

So Richard Westerman had disappeared, and he was connected with Holtzmann and therefore this guy LaCoste, who was at the Peaceful Pines Resort the night that Boudreau died. And her violin wound up in the hands of Holtzmann, along with whatever stuff the Two Dwarfs, Grumpy and Dopey, had run across. Clay samples, or whatever. But it sounded from that telephone conversation in Holtzmann’s office yesterday as if Richard and Holtzmann work the artifact trade together, so he’s probably not left the area.

But why would the Two Dwarfs avoid telling the truth about their role in all this? Surely it would be easy for them to play the innocent amateurs who get in over their heads with this gang of professional pot-hunters.

At least Westerman’s involvement provides a lead into that snowplow incident, she thought.

She dove into the paperwork associated with arresting Meeker. Probably the best thing to do would be to start small, she thought. Obstructing a police investigation, or something like that. Then the telephone rang.

“Trieri, investigations.”

“Annette? This is Wilbur, over at the sheriff’s office. You left a message for me to call.”

Wilbur Jamison, the La Plata County Sheriff, had evidently come back from lunch. After two hours, Annette noticed from her watch.

“Thanks for calling back, Wilbur. I called about the Boudreau investigation, you know, that body we found on the Silverton tracks a couple of weeks ago? I need to go up to Peaceful Pines Resort and poke around. It’s your county, and I thought I ought to let you know in case you want to come along.”

With cooperation at the Resort, a search warrant wouldn’t be necessary, so inviting him was for protocol reasons rather than jurisdiction.

“You need me to get a search warrant?”

“No, I talked with the owner this morning, and she’s most cooperative.”

“Anne? She’s a peach. And I bet she’d like this thing cleaned up as soon as possible, so she’ll surely cooperate. Is the Resort involved somehow? I guess that body was pretty close by.”

“Hard to say. The victim may have been staying there, or gone there for a nightcap, or something. What I can’t figure is, how did she get up there? We know she had an early dinner here in Durango, but that lasted until seven. How do you get up there at night?”

“Good question. All the regular guests come in on the train. But, say! They have an emergency vehicle, a station wagon fitted out to ride the rails. Few years back, I remember one of their guests had a heart attack, and the weather was too bad to get a helicopter in. So they invested in this car. After the trains are done for the day, they pretty much have the tracks to themselves, and if there’s an emergency, they just run it up to Rockwood and get on the road. Maybe somebody fetched her in that thing.”

And maybe, Annette thought, somebody used it to go get the snowplow as well.

\* \* \*

She found Lance Riggins at his favorite watering hole, reading his latest literary masterpiece, this one including a front-page picture of an “artist’s rendition” of a menacing-looking snowplow tipping a large SUV over a cliff, with a terrified passenger’s face staring out a window. Strangely, it was a mirror image of the actual event, like a photograph printed backwards. Couldn’t they do anything right?

“Mr. Riggins, good afternoon. I see you’ve succeeded in meeting yet another deadline.”

“Ah, Lieutenant Trieri. Indeed I have. And I did it by writing in the first person, no less. None of the usual ‘this reporter blah, blah’ sort of verbiage. How wonderful to be in the middle of a story. And to have an editor who’s afraid to touch my stuff.”

“I know I keep coming in and asking questions, but questions keep coming up. So can you handle a few more?”

“So far, I don’t feel like I’ve been very helpful. Although,” he smirked, “the questions have been helpful to me in thinking about angles for stories. So ask away.”

She smiled. “This case is taking more twists and turns than I would have expected, even given its bizarre beginning. I remember that you ‘borrowed’ a vehicle, a pickup truck, I think it was, to get back down here from Rockwood the night of your little adventure, is that right?”

“Uh, well, yes. And I made sure it got back to its owner, remember? With a couple \$100 bills for the guy’s trouble. Even though he didn’t know it had been borrowed. But I got a release signed by him, so I’m clean, I think.”

“Of course, that’s not the issue. But it’s occurred to me that you must have started looking for cars, trucks, whatever, with keys in them the first thing, when you finally got up to Rockwood, right?”

“Right. And it took a while to find the one I borrowed. I sort of figured it would be easy, but even up there people don’t seem to leave keys in the ignition very much. Bet they lock their front doors, too. The end of the innocence. Say, wasn’t that a song?” He grinned, trying to flirt.

Annette ignored the ploy. “Meaning that you’d have started looking at the first vehicles you came to, in the rail yard there. It would be very helpful to me if you could try to remember each one you looked at. This could be important in finding whoever put your car, and your friend, into the river.”

“Wow. I don’t know. I wasn’t paying attention to the vehicles, I was looking for keys. And there wasn’t anything, at least that I saw, until I got into that subdivision up the hill. What am I supposed to have seen that you want me to remember?”

Annette looked thoughtful. “I’m not certain. I thought maybe you would have seen something unusual that I could use to make a connection.”

She smiled, and continued. “A long shot, but that’s about where I am, working long shots. So, now we’re two weeks into the investigation, the AMFest is over, and you’re still here. Any idea of how long you’re going to stick with it? No offense, I mean, but surely your readers will lose interest. Their attention span can’t be too long.”

“I beg your pardon!” He was grinning even more widely. “Do I understand you to be casting aspersions on the highly educated and critical readership of the *National Gazette*? Why, I’ll have you know that our surveys indicate an average educational level of at least third grade! You can’t get rid of me that easily, Lieutenant. Besides, I’m kind of getting to like it around here, and I’ve got this novel to finish. It’s not the big city, but it’s quite civilized, for the wild, wild west, and the scenery is pretty. And so are the girls. Whew!”

She ignored this even more completely than the attempts at flirting.

“Any idea of next week’s story? Maybe I can help.”

Help keep you away from places I don’t want you going, she thought.

“No, I need a rest day or two. Think I’ll go over to Mesa Verde National Park tomorrow, pick up some local history. To provide local color for my Pulitzer-prize level writing.”

“Well, watch out for rattlesnakes. Wouldn’t want one of them to get hurt biting you.”

She left him looking confused.

\* \* \*

“So, we finally booked them on obstruction charges, for now. That’ll stick for a couple of days, until a bail hearing, and then we can re-evaluate.”

Annette was sopping up the last of the basil-and-tomato sauce with a piece of garlic toast.

“I expect another night or two in cells with Jimbo and Lucky will get them to re-think their strategy of not cooperating. There are still too many holes and inconsistencies in their stories. We’ll start using the inconsistencies against them, one against the other. They’ll cave in eventually.”

“But you didn’t have any luck with Riggins on the snowplow thing?”

“Didn’t really expect to. More salad?”

He passed his plate.

“But you had to try. Presumably, whoever was driving the plow and left it in the woods walked out, up that trail. And got picked up by someone. It’s a long walk back to town, in either direction.”

“Yeah, and that’s why Riggins didn’t see the station wagon with the railroad wheels anywhere. Anyway, I’m going up to Peaceful Pines tomorrow morning, to check out their records. I’ll be back on one of the early downhill trains.”

“I’d love another shot at the river, but I’ve got meetings. I worry about your going up there alone.”

“I would, too, except Westerman has disappeared. Based on the conversation I overheard, I think Holtzmann and company have lost interest in that area. He said something about Hermosa. So it should be OK, really. He seems to be the threat to me, but we’ll put him away, too, sooner or later.”

The telephone rang, and they looked at each other. Their policy was generally to ignore dinner-time phone calls, given the high probability that it would be a random solicitation of some kind. But they were finished, so she answered it.

“Lieutenant Trieri? This is Sergeant Jim Stevens down at headquarters. We’ve got a call for you from a Mr. Papandreou, long distance. He insists that you’ll want to speak to him, but I didn’t want to give him your home number. Want me to put him through?”

“Yes, please. Thanks, Stevens.” There was a pause, and she heard a click or two.

“Lieutenant Trieri? This is Dionysus Papandreou, Dino, from Santa Fe? You said to call you with information.”

“Indeed I did, Mr. Papandreou. I trust that you didn’t get into trouble with your boss yesterday?”

“Well, a little.” She could hear a deep rumbling, which she decided was suppressed laughter.

“I did a pretty good acting job, though, and now he thinks you’re one tough cookie. To beat me up, I mean.”

The very thought of her beating Dino up made Annette laugh as well.

“Anyway, I thought you might like to know that I’m driving Holtzmann up to Cortez tomorrow, for a meeting with two of his guys, Tony LaCoste and Dick Westerman. I’m not sure what they’re up to, but it sounds like they’re moving on, to new acquisitions.”

“Do you know where the meeting will be?”

“No, he doesn’t tell me things like that until we get there. It’s a lunch meeting, so it’ll be at some restaurant in Cortez. And I don’t think I’ll be able to call you. Can’t use the phone in the limo, that’s for sure. But we will be taking the limo. Maybe someone can spot it. He wants to leave early, about 7:30, so we should be through Durango about 11:00 or 11:30 or so.”

“Mr. Papandreou, this is most helpful. You mentioned that you’re a graduate student. What’s your schedule for finishing your degree? And what’s the degree?”

“Uh, well, I’m supposed to be finishing my Ph.D. dissertation in philosophy this fall. From UNM. Why?”

“Philosophy, hmm? Well, I happen to have connections up here at Frémont State. I’ll put in a word for you. Too bad it’s not earth sciences of some kind, though. Be sure to call me if there’s anything else. And thanks for your help.”

Hal couldn’t help overhearing.

“Connections at Frémont State? In philosophy? You seeing Davie Gersowitz on the side?”

“Davie Gersowitz?”

“The philosophy chair. An unreconstructed deconstructionist, or something like that. Also, about 95 years old, around five feet tall, no teeth. Sharp as a tack, though. I bet he’d go for you.”

“Um. No, I was just asking about his major field, in case he...95 years old? Don’t your faculty ever retire?”

“Well, maybe only 80 or so. And we can’t make ’em, anymore. Used to be, 65 was the retirement age. Now, when they get tenure, they can work as long as they want. We’re putting in place rules about new tenure decisions, and the pension program is decidedly biased in favor of retirement at 60. But Davie is one of those people who was grandfathered in. Literally, in his case. Or maybe great-grandfathered. Anyway, what’s it about?”

“Papandreou, the guy who saved my bacon down in Santa Fe. He called to tell me that Holtzmann has a meeting with his henchpersons—see, you’re teaching me political correctness—over in Cortez tomorrow. And he, I mean Papandreou, is getting his Ph.D. in philosophy this fall, so I told him I’d put in a good word with you. I don’t know how much of a philosopher he is, but I guarantee he’d be able to maintain discipline in the classroom. So I did my part. And if Davie needs a new faculty member next year, maybe you could pass along the good word, no?”

“Absolutely. Those philosophy classes are one place where chaos runs amuck. A little discipline would be a good thing. Philosophically speaking.” He winked; she giggled and pretended to pout.

“OK, OK, I’ll mention it, but everyone’s very insistent these days on open faculty searches. Lots of heartfelt words about ‘hiring only the very best...’ and so on. And, of course, for diversity reasons. So if there’s an opening, he can apply. And, I suppose, you could send in an unsolicited letter about his ethical standards and so on. That would help, actually. Ethics is a big deal in philosophy.” He munched the last of his salad.

“As opposed to natural sciences?”

“Oh, sure. Twist the knife. Just because we had two chemistry professors in trouble with the law. And a natural resources professor. Say, maybe I should hire this guy to maintain discipline in my college.”

She had forgotten that teasing about these incidents was still too close to home, so she decided to load the dishwasher herself to make up for it.

\* \* \*

Wednesday morning was busy, and to complicate matters the weather finally decided to make an attempt at the monsoon. It looked as if there would be severe thunderstorms all over the region by afternoon.

Annette made arrangements to have the main highway intersection south of downtown watched around 11:00, so that the progress of Holtzmann toward Cortez could be monitored. She also called the Cortez police department and the southwest regional office of the Colorado Bureau of Investigation to set up a tail when Holtzmann arrived there. Then she knocked on her captain's door.

"Come in."

He had his feet up on his desk and was watching television. Yesterday's performance by Reginald Meeker, it turned out.

"Morning, Captain. Oh, look, the award winning performance, best supporting actor in a comedy role, or something like that."

"You'd think that he'd know better. Here's a guy who's pretty young, really—maybe in his early 30s?—and he's got this great job, and he gets entangled in something like this. And then he thinks he can lie his way out of it."

"Well, I think today's the day we can break this case open."

She told him about the meeting in Cortez and her preparations.

"I think that even with the lies, we have enough information to bring in LaCoste, at least, maybe Westerman for questioning. And the CBI is going to talk to the FBI about arresting Holtzmann for grabbing me, although I'm asking them to go slow on that one. There's also the possibility that they'll be interested in him for violations of the Antiquities Act, or its follow-on."

Jankowski looked thoughtful. "There are still some gaps in our story, though. Like who was really the victim's last date. And what went on at Peaceful Pines that wound up with her getting dead. And where her clothes went. And who drove the snowplow a few nights later."

He thought for a moment. "It's hard to believe that this guy Holtzmann would have the gall to drive through here, though, if he tried to grab you just the other day. He should know that we'd be after him. And if there's a leak at the Santa Fe PD, he'd know that we know about the limo. What could he be thinking?"

"He seems to believe himself above the law, at least in northern New Mexico. He mentioned 'compensation' of law enforcement personnel to look the other way at times. Maybe he has the idea that his reach extends to here."

"Maybe it does, and we don't know about it." He looked even more thoughtful. "But, look, we have to remember where this started, with the dead violinist. And then a dead TV guy in a car dumped in the river. Holtzmann may be connected to those deaths, somehow, but there's no indication that he was directly involved."

"Lester seems to think that complications of a drug overdose, a combination of things, could have killed Boudreau. You know, caused a convulsion that broke her neck. And I think that LaCoste and Westerman, working together, are responsible for the snowplow incident. Can't say who was driving it, but probably LaCoste. Westerman worked at Peaceful Pines and would have had access to that station wagon of theirs."

"Huh?"

Annette filled him in on the specially equipped vehicle.

"So." Jankowski pursed his lips in concentration. "LaCoste overhears Riggins and Walker planning their escapade, there in the Narrow Gauge Saloon, and then he and Westerman retaliate with this snowplow thing?"

“Yeah. Westerman drives them down here to town, LaCoste steals the plow, drives up to Rockwood and gets on the tracks, then wipes out the Suburban and Walker. Then he meets Westerman in the station wagon up on the road, by the ski area. Or, I suppose, Westerman could have just followed him down from Rockwood, um, except then Riggins would have seen him, unless he waited a long time. Well, whatever, it was all in a good night’s work. Except they didn’t get Riggins, too, like they planned. Wonder why they haven’t tried again.”

“Maybe they figured he’d be too scared to make more trouble.”

“Have you seen this week’s *National Gazette*? Riggins’ front-page story is about this whole episode. Asks lots of ‘whodunit’ questions. Accuses us of incompetence and stonewalling.”

“Aw, gee, my subscription must have run out. Haven’t been to the supermarket today. But maybe the story will protect Riggins. It would bring the heat down, meaning us, to have something happen to him now. Anyway that’s all plausible. Now, what about the chain of events leading up to Boudreau’s death?”

“According to the girl’s story, Jennifer Mason, the *Free Press* reporter who called Boudreau that Monday night, Boudreau said she was going up the canyon with someone named ‘Hommie,’ or something like that. And both of the Two Dwarfs said they saw her up by Peaceful Pines, with LaCoste. But there’s the gap between the phone call and then. And I can’t connect LaCoste with this ‘Hommie’ person. So there’s still something missing. And, of course, we still don’t know the circumstances of her death quite well enough, at least not well enough to satisfy me.”

“Me, either. Or the DA, I’m certain. I’m going to have to think this through. There’s got to be something in all this that we can feed to the press, through Amy. Something that will help our cause.”

“And something that will give them a juicy bone to chew on. Hmm. How about the DNA tests? Tell them that we’re doing DNA tests on ‘bodily fluids’ associated with a ‘sexual assault’ and also about the search warrants we executed. Not on who, just that we did. Then we can make sure that some papers ‘accidentally’ get in to the cells where Schwab and Meeker are. That will scare the crap out of them, and maybe they’ll cooperate. That could help fill in missing pieces. And the ‘bodily fluids’ stuff will give the media people plenty of headline material.”

A slow smile spread across Jankowski’s face.

“Annette, you’re diabolical. The other thing it will do is to scare whoever else may have had sex with Boudreau, and presumably he’s one of the missing parts of all this. The ‘Hommie’ person.”

\* \* \*

About a quarter past 11:00, Annette’s phone rang.

“Trieri, investigations.”

“Lieutenant? This is Fred Winders. I’m sitting in an unmarked watching the 160-550 intersection, the one by downtown.”

“Fred! Good morning! Hope you had a couple of good days off. How’s the weather out there?”

“Looks like rain. Listen, that limo you’re looking for just cruised by. Or at least a limo of that description. Signaled his left turn like a good boy and everything. Headed west on 160.”

“Excellent! You’re finished there, so come on back. Or go to lunch or something. Thanks for the help.”

Her next call was to the university, Hal’s direct line.

“Weathers, science.”

“Hi, glad I caught you. Got lunch plans?”

“I was just getting organized for an executive meeting with the other deans and the provost. Wish I could cancel and have lunch with you, but this is a biggie. One topic will be Meeker, no doubt.”

“Rats. Well, got a couple of minutes? I need advice.”

“For you, I’ve got plenty of time. What’s up?”

“Well, we want to get the violin, the Stradivarius, back. I talked with Montoya down in Santa Fe about setting up a sting, finding a false buyer for it and meeting with Holtzmann to get it back. Of course, there’s a leak down there, I think, and it could be Montoya, although I kind of doubt it. But if it is, it means that the sting would be blown from the start. But I kind of think it was someone else. Anyway, what I want advice on is Jacques Ament. I had thought of him as a possible buyer. But you mentioned that he could be the person that Boudreau met with that Monday night. And, because she was with LaCoste later, maybe Ament and LaCoste know each other.” She paused, expectantly.

“Uh, I’m not sure what you’re asking.”

“Well, what do you think? I mean, if they know each other the sting won’t work, using Ament.”

“I’m sorry, but what I think is that I have no clue. Really. When I told Ament that Boudreau was dead, he reacted pretty strongly, but she was his student, after all. If they were out together the night before, or I guess it would have been two nights before at that point, that could explain the reaction, too. If he already knew she was dead, well, then he’s a pretty good actor, I guess. Can’t you just use someone else for the sting?”

“I thought of Luigi, too. But I wanted to use them both, to set up an ostensible bidding war. It would make Holtzmann more likely to want to get involved.”

“But first you’ve got to settle the thing with the leak in Santa Fe. And that’ll take time. By then, maybe you’ll know about Ament and LaCoste. Could be that Ament and Boudreau went out but he’s still not really a part of anything sinister. Uh, sorry I’m striking out with advice, here.”

“Do you know Ament well enough to know if he’d cooperate with us? He didn’t volunteer that they’d been out the night of her death.”

“But did you ask him?”

“Well, no. But I did talk with him about the Stradivarius, and he didn’t know about it, or pretended not to. So if he was out with her, he was lying.”

“Maybe that’s where to start. He seems like an honest guy to me. And I’d think he would want the murder solved.”

“Unless he did it.”

“But you said that the Twin Midgets, or whatever you’re calling them, saw her alive in the middle of the night, up at Peaceful Pines. With LaCoste.”

“Two Dwarfs. Dopey and Grumpy. Will Ament be at this meeting you’ve got soon?”

“Most likely. He’s one of the club. Want me to set up a meeting with him for you?”

“Could you do it without his knowing it’s for me? I mean, do you deans get together to talk about things? Like, somewhere that I could just ‘accidentally’ show up?”

“My sweetie, the sneak. Let me talk with him after this meeting that’s coming up...” There was a pause, “...and that I’m going to be late to. OK? Got to go. I’ll call you after lunch.”

“Ciao.” As she hung up the phone, she noticed her message light blinking. Maybe, she thought, I should just get a telephone implanted surgically.

The message was from Montoya, who sounded hurt. Well, she had promised to come by his office to file a complaint about the abduction. Um, almost 48 hours ago. She’d have to be extra nice. Better get some fortification first. She headed for the vending machine.

Munching on a candy bar—the machine was out of her favorite, PayDay, so she settled for a Mounds—she returned the call from Santa Fe and was put right through.

“Luis? Listen, I’m sorry and I’ll explain. But I’d rather do it on another telephone. Can you call me from a pay phone in the hotel next door? What was it, the Anasazi? I promise the explanation will be worth it.”

There was a pause, long enough to begin to become uncomfortable. The voice that finally replied was distant.

“I was just on my way out to lunch anyway, so I’ll call you back in a few minutes. You’ll be there?”

“Absolutely. And I’ll not take any other calls. Promise.”

It took ten minutes, and Annette decided he was probably using a different telephone from the one she had suggested. Good idea, actually, she thought.

“Luis? Thank you so much. And I’m sorry. But there’s a problem.” She filled him on her suspicions about his department. “Anyway, I’m afraid to talk to you on your department phone because of this.”

“But the leak could be me, have you thought of that?”

“That’s why I didn’t call you. I’ve been thinking about it. You’re the one who sent me up San Francisco Street to the Cathedral, where I was grabbed. But. You know about the limo, and Holtzmann brought the thing by here today, on the way to Cortez. If the leak’s you, surely you would have told him that his limo is on our radar screen and he wouldn’t have brought it. Also, you told me about Holtzmann; I didn’t tell you. If you were working for him, you wouldn’t have done that. So I’m thinking it must be someone else, an eavesdropper or something. Someone listening in on your phone. Hence this stuff about using a different phone.”

There was another pause, shorter, and the voice that finally came back was friendlier this time.

“You know, this could explain some other things I’ve been wondering about. I appreciate your candor. And trust. I guess we should think of another way to get after that violin, in case our conversation about the sting idea was overheard.”

“I’m worried about that, too. We could take the chance, of course, and just make sure there’s plenty of backup in case he knows in advance and tries something. I’m also worried about Gunther. I guess I have this thing about protecting outrageous weirdness.”

“They picked you up on Cathedral Place, right, that street that the east end of San Francisco tees into?”

“Right. You suggested I walk back that way.”

“Yes, and that was when I was walking you out, through the hall and lobby, if I remember. But I’ve talked to Gunther on my phone about stuff involving Holtzmann before, and Gunther’s still healthy. Well, if he can be called healthy.”

“Hmm. Sounds like maybe we could take the risk and do the sting. With lots of care. I’ve got a glitch on my end, though, and I’ll have to go with only one bidder. At least if Holtzmann wants to meet them.” She explained about the problem with Ament.

“Let me have a talk with him and then we can see where we are, OK, Luis? Maybe we can make this work after all.”

“OK by me. I’ve got to deal with this problem in my station house anyway. Stay in touch?”

“For sure. And when we get this all settled, I’ll come back and take you and your wife out to dinner.”

\* \* \*

Annette spent the rest of the afternoon typing up notes of the conversation, the interviews, and on other sundry paperwork. At about 5:30, Jankowski stuck his head in her door.

“They got to Cortez and had lunch at a restaurant called the Warsaw Inn. CBI had a guy there with a microphone and a recorder, across the room. They’re going to send us a copy of the tape. But, from what they say, it doesn’t sound like much. All of the conversation was about acquiring something called the McGurney collection. Purchase cost, shipping precautions, insurance, resale, blah, blah, blah. CBI is wondering why they went to the trouble.”

“Sounds like they were made and Holtzmann staged the conversation for their benefit. Unless there’s something about this collection that required Holtzmann and company to have lunch in Cortez. Any sign of their return?”

“No, the limo went south from Cortez, then west on 160. Presumably past the Four Corners and then either back around toward Santa Fe or on down to Flag. Out of Colorado, so CBI gave up.”

“Maybe I’ll hear from my source, the chauffeur, and find out what happened.”

“Hope so. We’re going to have trouble getting CBI interested in Holtzmann again, without something new.”

“What happened to Westerman and LaCoste?”

“I didn’t ask, but there was only one CBI guy, and he followed the limo down to the 160 turnoff. So they’re loose, out there somewhere.”

“I thought the Montezuma sheriff, or the Cortez PD, or somebody, was involved, too.”

“Only in the spotting phase. When Holtzmann and company settled in to lunch, all the locals went off to lunch themselves, leaving things to the CBI guy and his microphone.”

“Well, hell. Any other good news?”

“Actually, yes. Amy put out the word on the DNA tests and the ‘bodily fluids’ business that we talked about. She got hit with all sorts of questions not fit for family newspapers. But all she did was to repeat the basics. I expect they’ll draw the conclusions we want them to.”

“And we make sure that our two guests see the paper tomorrow, then I’ll have another chat with them. There’s a bail hearing coming up, though, so we may lose them tomorrow afternoon. And we’ve got to do something about Holtzmann. What’s next there?”

“How are your drafting skills?”

“Huh? Oh.”

They were sufficiently familiar with each other's thought patterns that they were able to say in perfect unison, "Back to the drawing board."

\* \* \*

## Sixteen

Even before Annette got into the office Thursday morning, she was feeling overwhelmed. Then, when she checked her voice mail, she decided she'd have to cancel the visit to Peaceful Pines. Superwoman could do only so much in one day.

The voice mail was the first order of business. It was from D-NAlysis, in Arlington, Virginia.

"This is Lieutenant Annette Trieri of the Durango, Colorado police department. I'm returning a call from Sarah Bishop earlier this morning."

"Good morning Lieutenant. This is Sarah. I have results from the hair samples you wanted expedited. We started on them first thing Tuesday and they're in this morning."

"Wonderful! I appreciate your efforts. We have a murder investigation hanging in the balance. What did you find?"

"Well, let's see. You had previously sent us three samples, two semen samples and a hair sample. No matches among them. The two new hair samples are two from different people, both different from the other hair sample as well. What I have is that one of the new hair samples matches one of the semen samples." She rattled off some long identification codes. "There are no other matches. Does this make sense?"

Annette had found the file with the information she needed to interpret this and was making the necessary notes.

"Yes, it does. Thanks very much. You'll be sending a written report?"

"Of course. And a bill, naturally. Thanks for your business."

"And thanks for your help getting this done so fast."

So, she thought, a match between the vaginal sample and Reg Meeker. He was doing more than just sleeping and listening to violin music up there at the Peaceful Pines train stop. Hal would need to be informed, so he could let university officialdom know that there was trouble brewing, but she could do that when she met with him and Ament later in the morning. Jankowski would need to know as well. And she needed to call Peaceful Pines.

Through the window of her partition, she noticed one of the vice squad undercover officers with his feet up on his desk, reading the morning paper.

Out of the blue, a verse from an old Dire Straits song popped into her head, "That ain't workin', that's the way you do it..."

Well, she thought, time to go install another microwave oven.

After leaving messages at Peaceful Pines and in Jankowski's office, she headed up to the campus, ready to confront the parking problem. Hal had provided her with a magnetic card for the various parking lot gates, at least, so she wouldn't have to walk too far. Even with an umbrella, it looked as if

she was going to get wet. Ten minutes later, having parked illegally in a loading zone, she walked into his anteroom, shaking water off her umbrella.

“Good morning, Alice. How are you at fixing parking tickets?”

“Good morning, Ms. Trieri. Um, I would have thought you’d be in a better position to do that than I.”

“Not up here on campus. Anyway, maybe I’ll get lucky and they won’t notice my car until I’m finished here.”

“Don’t count on it. It’s the beginning of the semester, and there’s a whole new batch of student parking monitors out there, each one eagerly trying to write the most tickets. They seem to think of it as a contest. You’d have better luck during finals week.” She nodded toward Hal’s office. “Dean Weathers is expecting you.”

Hal was surfing the Web, looking at satellite loops of the weather. Over his shoulder, she could see the Four Corners states covered by a huge swirl of white, with streamers of cloud flowing up the screen from old Mexico. He turned as she put a hand on his back.

“Do you know how nice it is to see you in the middle of the work day like this? It really brightens things up for me.” He turned, smiling.

“I wish it were under less stressful circumstances though. I don’t know how this discussion with your colleague, Dean Ament, I mean, is going to go.” She told him about the results of the DNA test. “What this means is that we’re still missing a partner for Boudreau. It could be LaCoste, or Dick Westerman, I guess. But Ament has to be on the short list, too. And that conversation I had with him about the violin, where he may have lied, bothers me.”

“I’ve been thinking about him. His reaction to my telling him that Boudreau was probably dead was pretty strong. But it could have been interpreted in a couple of ways, including concern for himself. I’d swear that he didn’t know she was dead when I told him, though.”

“Do you suppose they could have been, uh, involved?”

“He’s a real charmer. Very French. Romantic. I don’t know of any reputation for going after students, unlike some of our faculty. But he was her mentor in France. Maybe now that she’d grown up, old, latent attractions popped up. Uh, so to speak.” His eyes twinkled with mischief.

“Oh, please. But, look, since the Two Dwarfs saw Boudreau with LaCoste later, Ament probably didn’t kill her. And it’s really none of our business if they were getting it on. She was an adult, after all. What we really need to know is whether he’s the person she went out with in the first place, and their itinerary, and so on. Oh, and there’s something else I need to find out. Is there an expert on Indian artifacts on campus. Anthropology department, maybe?”

“A and A—anthropology and archaeology. You need to talk with Professor Benjamin V. Hartford, our local reference for all things Native American. He’s particularly good at pre-European cultures. He’s not mine, though. A and A is in the humanities and social sciences college. Want me to call him for you?”

“Good idea. And I’ve got a tip for him. We might as well have that little cave up in the cliff face examined by an expert.”

\* \* \*

Lance Riggins' day at Mesa Verde had been wet. The monsoon threat of Wednesday morning had congealed into a massive thunderstorm over the park's plateau in the afternoon, and the rain was like a wide-area waterfall. Except, that is, for the brief periods when it turned solid, into the styrofoam-like pellets that a park ranger had told him was called "graupel." Lance got soaked.

Sitting in the Narrow Gauge Saloon, at the table he'd come to think of as his own, staring out the window at today's rain, he reflected on the parts of the park he'd managed to see despite the weather. How, he wondered, could he work in some of this local color and history into his story for next week's edition?

Randy Frederick's familiar stooped posture intruded into his peripheral vision, dripping water from its hooded rain jacket.

"Hey, Randy. Have a seat. Let me buy you a coffee. Unless you'd like something stronger?"

"Not this early. But coffee would be good, warm me up. This feels like a cold, fall rain. Strange that it's raining so early in the day. Got my check?"

Lance fumbled in his briefcase and came up with an envelope.

"Spend it wisely. I don't know how many more there will be. I talked with my editor this morning, and he's getting antsy. Unless the case breaks, he may pull me off. There's some new dirt out in Malibu just begging to be dug up."

He watched Randy stash the envelope carefully in an inside jacket pocket.

"See the *Herald* this morning yet? Or are you too busy re-reading your own stuff?"

"Hey, c'mon, there's no reason for that. This is just a job. And, yeah, I saw it. 'Bodily fluids' indeed. What's that mean? Saliva? Blood?"

"Semen. And, of course, the hair samples. My source told me that what they're trying to do is to scare up some new information. I hear they've got a couple of guys in jail, on obstruction charges."

"Who?"

"Not sure, but I think I can find out today. But what's really interesting is that they told me, not for print, but they told me that there were two separate semen samples sent to that DNA lab. Uh, fore and aft, as it were."

"Huh? You mean she got it both ways?"

"That's what they said. And they also said that it isn't clear that it was rape, like that headline in the *Free Press* was calling it, the way they originally thought."

"So, this is like 'Nympho Violinist Killed During Orgy,' or something?"

"Well, something. And there's a connection to drugs, too. They found pot in her bloodstream, and some other stuff."

"Randy, I think I'll hang around for another week. Which means another paycheck for you. Let's find out who those guys in jail are."

\* \* \*

Randy's story in the *Herald* had left out his off-the-record information—he was still too young and honest to break promises—but what was in the story had its desired effect on the taller of the Two Dwarfs. After three nights of close quarters with the fragrant and *very* friendly Jimbo, Meeker's nausea

had finally abated. Then he read the story about the DNA tests and put it together with the information given him about the search warrants, and his breakfast came right back up.

“Don’t like their oatmeal, huh?”

Jimbo was trying to be sympathetic, through a cloud of cigarette smoke, as Meeker was hugging the stainless steel commode.

“Well, I’ll tell you, it’s a helluva a lot more tasty than what you find dumpster diving. I’ll tell you what. One time I was so hungry that I found this dead rat, and...”

His soliloquy was interrupted by loud and quite pitiful retching.

A few cells down the row, Leonard Schwab and the one-eyed Lucky were immersed in Chapter 57 or so of an ongoing liturgical discussion that was now examining the theological implications of computerized music, and so Schwab hadn’t read the entire paper yet. He had learned early on that Lucky’s side of the discussion tended to consist of long, rambling monologues that were impossible to follow, so all he had to do was to listen with half of his attention to the last few sentences or so. Then he could respond with only the briefest references to what Lucky had said and spin the discussion to his own interests.

But the “DNA Testing in AMFest Murder” headline grabbed his entire attention, and Lucky faded into a background drone. Schwab didn’t even notice when Lucky finally ran down. He finally looked up to see the one bloodshot eye staring his way.

“Huh? Oh, sorry, there’s this article I had to read. Hey, listen, man, do you know how to get hold of the cops to talk to them? Just yell? Or what?”

“Yeah, man, y’know? Like in the movies, huh, with the tin cup on the bars, clanka, clanka, clanka? But we got no cup. What I’d do is wait for one of them guards to walk by and just talk to him.”

“But I need to do this right away.”

Schwab turned to the bars and began hollering “Guard! Guard!”, repeating himself every few seconds. Finally he attracted the wanted attention, sort of. The guard on duty wasn’t the one Schwab would have hoped for. But any port in a storm.

“Officer, listen. I need to talk with that detective, the lady, um, Trieri, I think, right away. OK?”

The guard, whom Schwab had come to think of as a shaved-head version of Dino the chauffeur, looked even more bored than usual. Head nodding to his internal music, he blinked several times, slowly, and finally wandered back to his station without saying anything.

“Now what in hell do you suppose that means?”

Although Schwab’s question was rhetorical, Lucky was not tuned in to such subtleties.

“Big Freddie’s always like that. He’ll probably put in a call to the cops, though. But don’t hold your breath. They’ll get here when they get here. So, listen, did you ever play that Beatles album backwards and hear the devil worship stuff?”

\* \* \*

Jacques Ament was obviously uncomfortable, but just as obviously he knew he was in a delicate situation that wouldn’t allow him to storm out in a rage. So he was walking a fine line, keeping a firm grip on his temper while letting Annette, and Hal as well, know in no uncertain terms what he thought of Annette’s questioning.

“I must say, Lieutenant, that I resent the implications of your questions. My personal life is not something that I choose to talk about with just anyone. With all due respect, I believe your questions to be intrusive.”

“No doubt. And I apologize once again for the small subterfuge that we arranged for me to be able to talk with you. But it’s very important to our investigation to understand everything we can about Steffanie Boudreau’s activities on the evening before she died. Surely you want us to succeed in this.”

“I do indeed, but I also wish to maintain my privacy. I can assure you that I have nothing to add to what I told you previously.”

Clearing his throat gently, Hal broke into the conversation. “I believe that I need to leave the two of you to sort this out. Jacques, remember that Annette here is a professional, and she hears all sorts of things as a matter of routine. She’s the soul of discretion, and she only remembers things that are relevant to the investigation she’s in the middle of, like this one. But she does need to hear everything so that she can sort out for herself what’s relevant.”

He got up to leave, winking at Annette when he was out of Ament’s vision. She carefully maintained a straight face.

As he was walking out the door, he heard Annette beginning once again to outline exactly what questions she needed to ask. In the anteroom, on Alice’s waiting couch, he found John Martin, looking fidgety. He could hear fiddling noises in the kitchenette, probably Alice making Martin a cup of fresh coffee.

“Well, John, good morning. This is a surprise. What can I do for you?”

“Fill me in. Alice says that Jacques is in there with Annette. I’m worried enough about how Meeker’s arrest is going to play, but now one of our deans?”

“Right. I’ve thought about it, too. But I don’t think it will be a problem. Assuming he’s cooperative. That’s why I bowed out, so he could talk to her confidentially. He and the violinist, Boudreau, may have been, um, involved in things he’d rather not have me, or you, for that matter, hear about. Thing is, there’s testimony that Boudreau was alive after midnight, and what Annette’s trying to do is to figure out who was where before midnight. I don’t think Jacques is going to be implicated in the death. In fact, we may be able to spin this to our advantage, you know, how he was with her in the evening to look after her safety and all.”

“Hmm. I think we’d better go slowly on that one, because she’s dead, after all. Do you know any more about Meeker?”

“Big trouble. There’s a DNA match showing that he had sex with Boudreau. Annette found out the test results this morning. No other matches, though.”

“Well, shit. That fool does have a reputation for following his dick around.”

He was so mad that Alice’s presence just around the corner didn’t faze him in the least.

“But that doesn’t mean he killed her. And she was an adult, able to make her own choices.”

“But it’s surely going to come out, and that’s not going to be good for the campus. What do you think we should do?”

“Nothing, for now. They won’t release those test results, I’m sure, at least not until they’re needed for a trial. If it gets that far. I bet Annette will use the information to get Meeker to crack. She says he’s not been very cooperative. I assume he’s on some kind of administrative leave, at least until he makes bail, or whatever.”

“You’re probably right. I guess I should get out of here. If Jacques comes out and sees me, he’ll be even more upset than he already is. Anything else I should know about?”

“Maybe a more positive note. Annette’s talking about bringing in Ben Hartford to look into the artifacts angle on this.”

Hal explained the connection to Santa Fe and the cave they had seen in the cliff face below the High Line.

“Ben knows all about this stuff, and his help would be a positive contribution by the university. And maybe there’s another collection for the museum.”

Frémont State’s historical museum had inherited several artifacts from a previous dig of Hartford’s.

“Hmm. Good plan. I hope it works for us. I’ll be off. Thanks for the information. Keep me informed.”

The provost strode purposefully out the door. Five seconds later, in walked Alice, with a cup of coffee and a tea napkin. Seeing only Hal, she looked puzzled.

“Why, thanks, Alice. A fresh cup of coffee. Just what I needed. Now, how are the class schedules working out? Have you heard anything about add/drop rates? I need to work another student into my course.”

\* \* \*

The Kayenta, Arizona, Holiday Inn wasn’t up to Raimer Holtzmann’s usual standards, but, he thought, it was not bad for somewhere so isolated. He had needed to bribe the desk clerk to get rooms for himself and for Dino, as the place was completely booked with end-of-summer tourists driving to and from Monument Valley. But even so, it wasn’t that expensive, and the meeting with his connection for access to Keet Seel artifacts justified the cost and inconvenience. His collection of original artifacts would be nicely enhanced by the new goodies carefully packed in the limo.

For its original career, the big car had been modified to conceal two bales of marijuana between the back seat and the trunk, and the hidden compartment now served Holtzmann well for his other purpose, one that didn’t involve strange odors.

Now, comfortably settled in the rich leather seat just in front of the compartment, Holtzman reached over and flipped a switch.

“Dino, let’s head back up toward Durango, up through Aztec. I’m going to call that B and B in Durango, where we stayed last spring, and see if I can get a room there tonight.”

“Right, boss. But don’t you think this car’s going to attract more attention? Even in all this rain?”

“No, because I’m going to rent something else in Aztec and you’re going to head back to Santa Fe. Unpack the new items this afternoon and then park this thing in town somewhere where it will be seen. It’s Labor Day weekend coming up, so take some time off. Maybe by Tuesday things will calm down.”

“How are you getting back?”

“I’ll fly from Durango. And get a cab from the Santa Fe airport. If you lie low all weekend, like you usually do, all that attention we attracted yesterday will fade.”

He reached over and picked up a telephone handset, the one connected to one of those beige scrambler boxes. The connection took a while to synchronize but finally went through.

“Dick? Find Tony and tell him I’m staying in Durango tonight. Don’t know where yet. But I won’t have the limo and I’ll have my regular phone, so we’ll have to be careful. I’ll call you later with a dinner location, so we can discuss plans without being overheard, like yesterday.”

“How did it go today?”

“Excellent. Nine new items, earliest somewhere in the tenth century, looks like. Dino’s going to take them home. I’m going to rent a car to come up there.”

“Good idea. The car, I mean. They spotted the limo yesterday, for sure.”

“Yeah, but it worked out fine. By the time they figure out that the McGurney collection isn’t what we’re after, it’ll be too late for them to do anything. I’ll call you later on the open line. As, ah...”

He looked about at the Farmington, New Mexico, strip rolling by. Liquor stores. Fast-food joints. A hamburger chain.

“...Ronald. Ronald, um...” A pizza place. “...Domino. I’m going to try to get a room at that B and B up by Trimble Hot Springs, so let’s see if we can have dinner on the north end of town somewhere. I’ll call later.”

He felt the car swinging to the left, northeast toward Aztec. Domino, Ronald Domino. He’d have to remember that somehow.

\* \* \*

“Urgent,” it said. Well, all messages from people in jail tend toward urgency, Annette thought, so why should I feel guilty about having eaten lunch first?

She had returned from a lunch date with Hal and Provost John Martin, at Skinny’s Grill. Although not the same from a sentimental perspective as its previous incarnation, the Main Street Grill, it still offered marvelous food, eclectic servers, and amusing conversation. How wonderfully panicked bureaucrats can be when their little worlds are disturbed.

Annette liked and respected John Martin, but she also recognized his tendency toward an imperial bearing and attitude. Hal seemed aware of this also and never failed to tweak Martin’s pompous nature at every opportunity. When Martin hadn’t see the humor in their nickname for Reginald Meeker, Hal, with yet another mischievous twinkle in his eye, had suggested calling Martin “Doc” so that he could join Grumpy and Dopey in the Dwarf Club. He had then salvaged things by launching into a discussion of the Southwest Monsoon and how it was behaving rather strangely, allowing her the opportunity to escape gracefully.

And, speaking of Dopey, here was a message from him, imploring Annette to contact him as soon as she could possibly manage it. Must be, she thought, that the hapless Lucky had finally persuaded Schwab to recant his sins and confess. Or so she could hope.

\* \* \*

“So, anyway, because it was in the paper, I thought I could establish my credibility with you by telling you in advance about the results of those DNA tests.” It was 20 minutes later and she was sitting in an interview room at the jail listening to Leonard Schwab explain his urgent message. She cocked her head to one side and raised her eyebrows in a question; Schwab rushed on.

“You’re having DNA tests done on samples from my place and from Reg’s place, and you probably have samples from the body of the violinist, Steffanie Boudreau. If you sampled what I think you

sampled, you'll find evidence that Reg had sex with her, but not me. Uh, wait. That didn't come out right. Reg and I don't have sex. I mean, I didn't have sex with Boudreau. But someone else did, I think, that guy Tony LaCoste, who took us to Santa Fe last weekend. What happened was, Reg and I were up at Peaceful Pines..."

"Excuse me. Do you mean actually at the resort or just at the train stop?"

"At the resort. We drove up to Rockwood late Monday afternoon, walked in on the tracks and did a little climbing. Then we walked across the High Bridge and went to the bar at the Resort. Later, in walked Steffanie. Alone. I didn't expect to see her there, although, of course I knew she was going to be in town. So I introduced myself, being the concertmaster and all, and I introduced Reg. He seemed to know her, though, and they picked up a conversation from earlier, I guess. And after a while they disappeared together. Then they came back to the bar, and LaCoste showed up."

"How do you know she and Meeker had sex?"

"He told me later. Bragging about it, sort of, or maybe just being honest. He said her ferocity in bed took him by surprise. And that she was sky-high from smoking a joint."

"What happened with LaCoste?"

"She must have met him somewhere before, too, because they greeted each other like old friends, close old friends, and then they took off together."

"And..."

"And that's about it. We stayed at the Resort, in a room that the manager got for us."

"You didn't camp out or sleep at the train stop?"

"No way. I'm too much of a city boy for that sort of thing."

"Do you want to tell me what was in the cave in the cliff face yet?"

"Huh?" She just stared at him, so he finally went on. "Uh, well, uh, that doesn't have anything to do with Steffanie's death."

"I'll be the judge of that. But because LaCoste took you to Santa Fe, and LaCoste disappeared with her, and LaCoste works for one Raimer Holtzmann, a black-market purveyor of Indian artifacts, and Holtzmann is rumored to have a black-market Stradivarius violin available, which is probably Boudreau's, and you and Meeker probably visited him in Santa Fe, and the two of you had on your persons safe deposit box keys from the same bank, which is probably in Santa Fe, when you were brought in on Monday," she paused and took a breath, "my judgement is that it might well have something to do with her death and that you're still in this up to your eyebrows even if you didn't have sex with her."

She took another, deeper breath.

Schwab had listened to this litany with increasing agitation and seemed to be in shock by its end. Annette got up to leave.

"Do you have a lawyer yet?"

She meant the question to be rhetorical, a parting shot, but her phone tweedled giving her the perfect excuse to let Schwab contemplate his future alone.

"Trieri, investigations," she flipped it open and was walking down the hall.

"Lieutenant? Let me patch Jim Milner through."

“Milner?”

“Deputy with the sheriff’s department, a new guy. Maybe you didn’t meet him yet. Here he is.”

“This is Annette Trieri, Durango investigations.”

“Lieutenant? Jim Milner here. I was doing radar shots of westbound traffic down the hill just east of the 550/160 intersection on the south end of town, you know where I mean? Anyway, this big, blue Lincoln limo, with a New Mexico plate, comes down the hill on 550, stops at the intersection and heads east on 160. I remembered the APB you had out and I’m following it. He’s legal and everything, but I could still stop him if you want.”

“Where are you now?”

“Coming up to the light at 172. Oh. He’s signaling a right. To the airport, maybe?”

“How about just following him, discreetly. I’m at the jail and I’ll see if I can catch up. Don’t stop him, OK? I’d like to find out where he’s going.”

\* \* \*

Some frantic, fancy driving in the rain on her part turned out to be unnecessary. She stayed in touch with Milner and discovered that the limo had pulled up at the Hertz outlet at the airport. When she arrived, the limo was pulling away, followed at some distance by a blue Ford Explorer. Dino was driving the limo, and she gave him a small wave as they passed each other. Then she immediately pulled into a parking lot turnout so that the other driver wouldn’t see her, and, when the Explorer went by she saw in her mirror the distinctive profile of Raimer Holtzmann.

After thanking Milner for his tip and putting her phone away, she took off in pursuit. This was quite simple, actually, because both vehicles were carefully driving just below the speed limit, and she caught up in only a couple of blocks. At the intersection with US 160, Dino turned east and Holtzmann turned west, toward town.

Maintaining enough distance that her non-descript unmarked sedan would blend into traffic, she followed Holtzmann’s Explorer into and through downtown, all the way north on Main Avenue, and around the curve flanking Animas City Mountain past the northern city limits onto the highway toward Silverton. The rain was noticeably more intense the farther north she went.

About four more miles up the road, Holtzmann turned left, into the little cluster of buildings at Trimble across from the new golf course subdivision, and Annette’s phone tweedled. She pulled off the highway just past the Trimble turn-off, and flipped her phone open.

“Trieri, investigations.”

“This is Dino Papandreou, Lieutenant. I’m calling from a pay phone out in Bayfield.”

“What in the world are you guys doing up here?”

“Well, Holtzmann wants to stay up in Trimble tonight at this B&B that he likes, and I’ve got to drive back to Santa Fe and unpack some new artifacts stashed in the limo. Um, I’m telling you this so I won’t get busted for having them, OK? But I’ve got to take them back, or he’ll get wise to our agreement. We were going to rent him a car down in Aztec, but there weren’t any available. So he just had me come on up here so he could get one at the airport. Even though I told him we could be spotted. Did you wave at him, too?”

“No chance. I pulled off and I don’t think he saw me, so I followed him up here to Trimble. He pulled onto the side road and I’m sitting here by the highway wondering what to do next. Don’t worry about the artifacts, though. Just make a list of what’s there and keep it for future reference.”

Despite not liking to talk and drive at the same time, she pulled out onto the highway.

“OK. And, listen, we spotted your tail yesterday, and I think they figured out about the guy in the restaurant. So their conversation was faked. I heard Holtzmann tell Westerman today something about the McGurney collection comment being bogus.”

Annette checked her mirror carefully and slowed to make a U turn to face southbound, winding up on the muddy shoulder.

“Thanks, Dino. That’ll help us avoid getting sidetracked. Do you know why Holtzmann’s up here?”

“To have dinner with LaCoste and Westerman, and make plans. For what I don’t know. And I don’t know exactly where, either, but probably somewhere on North Main. He likes barbeque, so maybe that’ll help you figure it out.”

“We’ll keep an eye out. And, listen, if you do get popped for those artifacts, have them call me. I won’t be able to get them to let you keep the stuff, but I’ll be able to get you off the hook, OK?”

“Will do. And thanks, Lieutenant.”

She punched the End button and sat staring out at the rain. Strange, she thought, how much rain we’re getting this late in the season. Across the road and the subdivision beyond, the Animas River was muddy, and a foot higher than normal for the end of August.

## Seventeen

It turned out to be Sweeney’s for dinner, and Fred Winders was delighted. He seldom went there, except for extra special occasions too few and far between, and to have his dinner paid for, and his wife’s, too, was one of those perks that didn’t come along often enough. It would make up for the long hours last weekend.

Oh, they had to scramble to find a babysitter at the last minute, and he felt nervous about using Penny for cover. But the quality of the meal would justify the hassle, and there was really no danger. All he had to do was to persuade Sweeney’s host, a young woman with a little badge reading “Bobbi,” to seat him reasonably close to the table with Holtzmann and the two other guys. He took a chair with his back to them, so the microphone under the back of his jacket collar would have maximum exposure to their conversation.

Penny, to tell the truth, was tickled at the idea of helping with the case, especially because it meant dinner at one of Durango’s nicer restaurants. The notion that they wouldn’t be able to have much of a conversation was somewhat foreign to her, but she understood that they needed to let the tape pick up as much of Holtzmann & Company’s discussion as possible. The microphone under the collar of Fred’s sport coat would do the work, if only she could manage to keep quiet. His reminder that every word of their conversation would be listened to, over and over, by any number of other people, helped. Just like so many other old married couples, she thought, we’ll just sit here quietly and eat. At least she was facing the windows. Even with the rain outside, the view over the Animas Valley was lovely.

They also had to pace themselves, to eat slowly and sparingly so that they could stay at the restaurant as long as their subjects, or at least try to. But those guys were so slow. They talked and talked—Fred even put in a new tape at one point, fumbling in the inside pocket of his jacket, hoping no one would notice—and she got fuller and fuller. Cocktail. Appetizer. Soup. Salad. Entrée. Dessert. Coffee.

They were working, slowly, on their second after-dinner drinks, another Grand Marnier for her and a Drambuie this time for him, when, finally, Holtzmann rose to leave, followed by his two associates. She felt drunk. And stuffed.

“Well, darlin’, all in the line of duty, hmm?” Fred was obviously going to be calling a cab to get home.

\* \* \*

For weeks, the Earth’s great weather engine had been energizing the Southwest Monsoon. Although it was running late this year, due to a strong El Niño event in the Tropical Pacific Ocean the previous winter, its strength seemed geared to make up for its tardiness. Throughout July, the huge Bermuda High over the Atlantic Ocean had been building, and around it, under the clockwise surface flow sweeping across the warm waters of the Caribbean Sea and the Gulf of Mexico, more and more water evaporated from the ocean. As the trade winds came onshore in Mexico and ran up the hot, eastern slopes of the Sierra Madre, they turned north, carrying their humidity into Texas and New Mexico.

Up the valley of the Rio Grande, and diverted to the east and west by the north-south ranges of the New Mexican mountains, the water-laden winds spread across northern New Mexico and into southern Colorado. The deep winter snowpack had finally melted and the high alpine meadows were heating up from the summer sun. Some of the moisture was wrung out of the air as it encountered the highlands of the Jemez Mountains and the Sangré de Cristo range near Santa Fe—arroyos were carved deeper, the Rio ran deep and muddy, and Cochiti Reservoir began to fill for the first time in decades.

But much of the water that had evaporated from the Atlantic and its warm, coastal seas remained with the northward flowing air until it ran up against the east-west ranging San Juan Mountains, the largest and highest massif in the Rockies. As the air lifted to cross the barrier, it cooled, and the water condensed. In condensing, it released the latent heat acquired when it evaporated, and the heat accelerated the lifting motion. Convection deepened. Small cloud droplets coalesced into larger and larger raindrops and began to fall. Normally confined to the afternoon and early evening hours, thunderstorms lasted well into the night and even early morning. After being some two months late, the Southwest Monsoon seemed to be trying to make up for lost time.

\* \* \*

Cecilia Livesay, sitting at her workstation at the National Weather Service office up in Grand Junction, was becoming more and more sleepy, but that didn’t keep her from being worried. She’d been up most of the night, watching a display from the new weather radar that Channel 14 had put up amidst the radio towers on Smelter Mountain south of Durango.

It was fairly short-range, and it didn’t have the Doppler capability of the new Weather Service NEXRAD systems, but it filled in a radar “hole” over the San Juans. Because it was so far away and blocked by the high peaks around Telluride, her—or, more properly, the Grand Junction office’s—NEXRAD system could see only the tops of the clouds over the Animas Valley. That wasn’t very helpful for rainfall estimates. Not many people lived where the NEXRAD system couldn’t see, but the

folks with cable in Silverton and the Purgatory area were loyal Channel 14 viewers. The radar's main value was in the advertising mileage that the "Station That Cares About You" got out of the thing.

That rain cell over the headwaters of Hermosa Creek had been dumping an inch or more per hour for the better part of six hours, over an area of at least four square miles. So there was going to be something like 1300 new acre feet of water to contend with. Nearly half a billion gallons.

What had Cecilia most worried was the fire. In late July, lightning had ignited a wildfire up there—the Sheephead Fire, she remembered it was called—before the rains. The forest needed thinning, but this fire had crowned out. It had burned over about 8000 acres, much of it so hot that the ground was sterilized and nothing had sprouted since—a stand-replacement fire, in forestry jargon. In some places, the topsoil melted, and the ground was hydrophobic. The water from this rain wouldn't soak in.

What this all added up to was that Hermosa Creek was going to be running at least 100 times its normal flow—even the spring floods would pale by comparison. And now, it would run not with just water or even muddy water, but with an ash-, rock-, and tree-laden soup, with the occasional deer or elk thrown in for variety. If the debris built up in one of the narrow, winding canyon sections and then let go all at once, there would be a wall of the stuff descending on the subdivisions along the highway in the valley below. Where her parents lived.

\* \* \*

Holtzmann slept in. He'd awakened about dawn, and, seeing it was raining again, or still, gone right back to sleep. He didn't have anything scheduled until late morning, anyway, and the feather bed wouldn't let go of him.

But then the telephone rang, yanking him out of a sound sleep. The only people who knew he was here were his Colorado collectors, plus Dino, so it must be important, he thought. He rolled over and grabbed the receiver.

"Hello? Holtz..., er, uh, Ronald Domino here."

"This is Dick. We've got trouble. The creek's rising, and the rain isn't stopping."

"So? Are you afraid of melting, or something?"

"Hey, I'm not kidding around. It's potentially serious out here. You have to remember, the site that Wilton kid showed us is only a little above the previous high water mark we identified. And the creek makes for enough of an access problem, even when it's normal. And you probably don't know about the fire last month."

"Fire?"

"Up high in the drainage, the Sheepshead Fire, or something like that. If it's raining up there anything at all like it is down here, we could be in for a mother of a flood. If the water gets high enough, it'll wash away that boulder we're using to hide the entrance to the alcove, you know?"

There was a long pause, as Holtzmann absorbed this distressing information. It would have been bad enough anyway, but to hear it so early in the morning, before a cup of coffee...

"So what's to be done?"

"I've got LaCoste on the way over here, and if you hustle, maybe we can get the stuff out before it's inaccessible. But it's going to be an adventure. Otherwise, all we can do is to wait and hope that the creek stays low enough not to be a problem."

“I’ll be there as soon as I can manage.” He’d have to skip the sumptuous breakfast offered by the hosts at the B&B, to say nothing of a nice soak in the Hot Springs. But the latest collection would be worth these minor inconveniences. If they could get it out fast enough.

\* \* \*

Annette was at her desk pushing paper around when she got the call about 8:30, from Deputy Milner. Holtzmann was outside the city limits, and now the Sheriff’s Department was holding up its end of the investigation.

“Trieri, investigations.”

“Lieutenant? This is Deputy Jim Milner again. I’ve been watching that suspect of yours, the one I spotted yesterday in the limo heading toward the airport? He stayed the night at the B&B up by the Trimble Hot Springs, and now he’s in his car getting ready to pull out.”

“Uh, hold on, and I’ll forward this to my cellular phone so we can talk while I head for my car.”

She pushed buttons and her other phone tweedled.

“Ok, let’s talk. Any idea of which way he’s headed?”

She was on her way out the door of the station, into the rain by the time he answered.

“He’s turning north on the highway. I’ll follow him and keep you posted, unless you run out of towers.” She could hear the deep rumble of the Police Interceptor V-8 in his patrol car winding through its gears, then almost immediately throttling back.

“Looks like he’s turning west up the Hermosa Creek Valley.”

By this time she had reached her car and shut the rain out. As she roared out of the parking lot, lights and siren broadcasting her hurry, she followed Milner’s narrative of Holtzmann’s westward progress up the Forest Service road toward the Hermosa Creek trailhead. Milner described how the road climbed the side of the valley, winding in and out of side stream channels, and eventually turned from blacktop to gravel. By then it was several hundred feet above the creek.

Finally, Holtzmann turned off the road into the new parking lot and, when Milner arrived, was disappearing on foot through the scrub oak down the hillside toward the creek, some 600 feet below.

“I saw where he went down, it was just a little back toward the east. Probably going to follow that last little draw down to the creek. Lieutenant, it’s raining like a sonofabitch, and I don’t mind telling you that I’d rather not go after him, at least not by myself without better clothes. And shoes, especially.”

“Why don’t you wait until I get there and we can talk about it. I don’t know the area, so I can’t visualize what to do. Try to stay dry, OK? By the way, how’s the road?”

“Fine. The paved part is in good shape, and the gravel is graded. Wet, but not muddy. Just stay on the gravel—I don’t think I’d try the shoulders or anything. They look kind of soft. And there are ditches running pretty full. I couldn’t tell how deep they are. Up here at the parking lot, there are only two other cars, so I’ll be obvious.”

His directions were precise, and, as promised, the road was in fine shape. The parking area, on the other hand, was slippery. The new gravel mixture hadn’t weathered, and the clay mixed in the sand and rocks was floating to the top and creating a slimy goo. She slithered to a stop on the left end of a row of four vehicles, next to Milner and at the opposite end from what she recognized as Holtzmann’s rented Explorer.

Milner, somewhat gallantly, she thought, got out in the rain to sit in her car, and they sat with the motor running and the defroster blowing away the fog from the windshield. They were facing down the hill, looking out over the creek far below. The view was actually quite spectacular, gambel oak thickets mixed with ponderosa pine just down the hill in front of them, with the light-green pattern of aspen groves spreading into the distance across the far side of the valley. But they were too distracted by their errand to appreciate it.

“He walked off down the hill and over that way,” Milner was pointing to the left, across her steering wheel, “and probably went through that gap in the oak thicket there.”

“Well, I’m not dressed to follow him down there either. With the rain and the water on those leaves, it would be like swimming. And I sure resonate with your comment about shoes. But I bet I know what he’s up to. Trouble is, I sure don’t want to drown in the process of proving it.”

“What’s he up to?”

“Probably looting an archaeological site. He’s a collector, a pot-hunter. The other car probably belongs to his flunkies, the ones he had dinner with last night.” She saw something in her peripheral vision and looked up into her rear-view mirror. “Now what in the world is that?”

Milner swivelled his head around and peered out the back window.

“Looks like a Hummer. Yeah, that’s it. Not your usual suburbia Hummer, either. This looks like an industrial strength one. What’s he doing pulling up behind us?”

In Annette’s mirror, she caught a brief glimpse of a black cowboy hat behind the Hummer’s steering wheel, just before the entire view was taken up with the huge front end of the wide, boxy vehicle. She felt a firm bump.

“What...? Oh, shit.” She felt her car moving forward, despite its having the front wheels locked by the transmission in “Park.” Involuntarily, she stepped on the brake, but the car kept moving. The parking lot was indeed slippery, at least to the tires on her sedan. The oversized, off-road mud tires on the all-wheel drive Hummer hardly seemed to notice.

“Lieutenant, I’d say we should get the hell out of your car. How about unlocking the doors?”

Annette realized, with a sinking sensation, that they’d been sitting long enough that the auto-locking feature had done its work. She fumbled for the master switch, placed awkwardly on the arm rest on her door.

But she didn’t find it in time. As the Hummer kept pushing, and as the hill became steeper and steeper, her sedan began to drift slightly sideways, and, with a crunch, it was pushed across a tree stump, crumpling the frame under her door. The deformed door frame jammed the auto-locking mechanism somehow, and they were trapped.

The tree stump wasn’t finished with its work, however. It was the remnants of a 200-year old ponderosa, logged years before along with the other old-growth trees on the side of the valley. But this stump was still well preserved, because of the usually dry climate, and it stubbornly held its position against the weight of the car. So, after it crumpled the door frame, it caught, and the car tipped on its side. And continued tipping.

Annette still had her seat belt on—a heavy-duty harness belt installed in all Durango police cruisers—so she was held firmly in place. But Milner hadn’t buckled up, so, first, he slid across the seat, landing on Annette, then he landed on his head as the car tipped upside down. As the car began to roll, he slammed into the right-side door and began bouncing about the interior, grabbing frantically for a hand hold.

The rolling car picked up speed, and the thought of snowplows ran across Annette's mind. Then something smacked into her head and everything went black.

\* \* \*

The detour up to the Durango airport on Thursday had put Dino behind schedule, so he didn't get back to Santa Fe until quite late, too late for him to feel comfortable about unloading the new batch of artifacts. The Santa Fe police would naturally wonder what someone was doing, unloading packages wrapped in newspaper in an alley behind a gallery at 10:00 pm. So he put it off until morning.

And, Friday morning, he had a meeting with his dissertation committee down on the main UNM campus. So he left early, cruising on his Fat Boy down the Turquoise Trail, the back way to Albuquerque, through Madrid, Golden, Cedar Crest, and Tijeras. He wanted to have time to think and to put his head in the right place for the philosophical issues his committee would want to discuss.

By the time he returned to Santa Fe, just past lunch time, Annette's colleagues in Durango had dissected the tapes from the evening before at Sweeney's and listened with glee to several damning comments about such things as "pots in the hidden compartment of the limo," "a new batch that includes several old fetishes," and "that damned violin." Jankowski immediately called Montoya in Santa Fe.

So when Dino finally pulled the limo up to the back entrance of the Southwest Cultures Gallery, he was startled to have an official-looking Hispanic guy, holding a shield in one hand and a gun in another, walk up to him, even before he could get out of the car.

"Dionysus Papandreou? I'm told you're on our side, but please don't move until we make sure. OK? What can you tell me about someone named Annette Trieri?"

Dino heaved a sigh of relief and launched into a monologue about his connection to her.

"...so anyway, I think I persuaded Holtzmann that she actually beat me up. And, to tell the truth, I'm not sure she couldn't have. She seems like a tigress. Anyway, he was pissed, but he hasn't acted strangely toward me, or anything."

Montoya had listened to the tale of Annette's abduction and subsequent escape with, first, incredulity and then considerable amusement. It matched with what Annette had told him previously, but the details he hadn't heard made the story worth hearing again. And Dino, having spent the morning waxing eloquent with his dissertation committee, was warmed up to play story-teller to the max.

"So what's in the secret compartment, anyway?" Dino had finally run down.

"You know about that? Well, let me show you. Uh, I'll keep my hands visible, scout's honor, except for this. I've got to reach under the dash, here. I'll do it slow, OK?" He carefully reached in under the dash and fumbled around, and there was a distinct click from the back of the limo. Then he pushed a button to the left of the steering column and the trunk popped open with a pneumatic "foosh." He opened the door and got out.

The opened trunk revealed an opened panel inside the trunk, and several newspaper-wrapped bundles were visible in a compartment behind the back seat. Dino tried, with only marginal success, to look innocent.

"So, what are you supposed to be doing with this stuff, Mr. Papandreou?"

"Uh, taking it upstairs to a vault. Environmentally controlled and all that. The boss will unwrap everything when he gets back."

“We’ll see about that. I’m here because of a phone call from Durango, from your friend Annette’s boss, name of Captain Jankowski. I’m told I should ask you about a violin.”

“It’s in the vault upstairs, at least it was the last time I was up there. Um, I’m afraid to touch it, even in the case. Nothing else Holtzmann has is even close to its value. And it looks so fragile. And little. It’s only a little bigger than my hand. Why didn’t she call herself?”

“He said she’s out on a tail, after your boss. They’re somewhere up in the foothills, I guess.”

“Well, I hope she’s careful. He’s a snake. And those other two characters are, well, vipers.”

\* \* \*

After Annette’s car began rolling on its own. LaCoste jammed on the Hummer’s brakes, and it stopped with the smallest of skids. He watched while the tumbling police car disappeared into a scrub oak thicket, and then backed carefully up the hillside to the parking lot.

There was the other car, a county sheriff’s patrol car, to do something about. And Annette’s car had left no small amount of damage, having been shoved through the underbrush and then through the oak. LaCoste set the parking brake and clambered out of the Hummer.

And then he could hear the quiet idling of the sheriff’s car. How convenient, he thought.

A quick reconnaissance of the hillside, rain or no rain, was in order, so he began to hike down the hill, to the right of the path of Annette’s car. He discovered that the farther right he angled, the steeper it got, and there were patches between the oak thickets that would accommodate the car. And, eventually, he found that the oak petered out, giving way to bare rock as the hillside became increasingly steep.

After climbing back up the hill, he considered the alternatives. Obviously, something needed to be done with the car. And, just as obviously, it would be a terrible waste to leave its contents intact. So, true to his packrat nature, he relieved the patrol car of its useful contents—a shotgun, the police-band radio, and, from the trunk, a first-aid kit. He also poured himself a cup of coffee from Milner’s thermos and sat in the Hummer and drank it. Then he got back in behind the wheel of the patrol car, put the transmission in low, and carefully began to negotiate his way down the hill via a reasonably clear path he’d found.

When he could feel the car beginning to lose its footing, as the hillside became too steep for the brakes to hold it, he angled it slightly toward the clearest path, set the parking brake, and turned off the ignition, leaving the transmission in neutral. Then he got out, planted his feet as firmly as he could, and reached back in to release the parking brake.

The car didn’t hesitate, and it almost took his arm with it as it began its final, unguided, trip into the creek valley. It trundled down the hillside, and, with a series of satisfying scrunching noises, disappeared into the scrub. Eventually there was a solid crash, and then silence.

LaCoste carefully climbed back up toward the parking lot. As he passed through the oaks, he repaired the damage from the car as much as possible, and he kicked and scraped the ground as well, to try to cover the tracks.

It took him somewhat longer to repair the damage caused by Annette’s car, for his Hummer had pushed it through some fairly large oak scrub. He pushed and pulled, straightening the broken branches as best he could. It was fortunate that he’d thought to wear a waterproof jacket, because by the time he was finished, he was dripping. Then he tried to cover with gravel the big tracks made by the Hummer. At last, after a long, critical look at the scene from various angles, he was satisfied that it didn’t look too suspicious. Finally, he retrieved a large backpack from the back of the Hummer, finished the last of

Milner's coffee, and walked into the oak thicket, toward the creek down the fledgling trail that he and his associates had been developing.

\* \* \*

The sun was out in Durango, and the sidewalks had dried up. There was still rumbling in the distance, though, and everyone could see that it was still raining buckets up the valley. Jennifer Mason was walking around downtown, window shopping, enjoying the sunshine and its warmth, using it as an excuse to avoid her next move.

She had decided to follow Annette's advice, and the next move that she was so carefully avoiding was to the Narrow Gauge Saloon to meet with Lance Riggins. The notion of reporting on the reporters as a thesis project, although intimidating, was also fascinating. Jennifer knew it would take some doing to persuade her faculty advisor and the journalism department to let her take on a thesis project of this nature, but her confidence level was bolstered by Hal's friendship. She knew he would go to bat for her, if necessary, and not use it to take advantage of her the way that so many men did. His openness and candor was refreshing, and she trusted him.

And the project was interesting because she had been both attracted to and repelled by the story she'd read in the *National Gazette*. The personal angle of the story about the snowplow incident was quite effective, she recognized. But its continued references to the Boudreau death was worse than disgusting, given the tone. Forewarned, she knew, would make her forearmed, and forewarned she was. Annette had pulled no punches in her description of Riggins. Standing at College and Main, at last Jennifer made up her mind, and turned west down College.

And there he was, sitting in the dim light of the Narrow Gauge, pecking at a laptop computer with a half-filled beer mug beside his right hand. She recognized Annette's description of his grey hat.

But this didn't fit. Here was a mid-30s-ish guy, rather handsome, in shape. Where was Annette coming from, anyway? Could this be the same person she'd been so cynical about?

Feeling much better, she walked out of the bright sunshine into the Saloon's gloom and up to Riggins' table.

"Mr. Riggins?" She could tell she was doing that thing with her eyes.

It worked.

\* \* \*

Annette woke up, dangling upside down from her seat belt, left cheek smooshed against her side window, with an amazing, an overwhelming, headache. "Agony," she decided, wasn't appropriate, but she couldn't think of what was. When she finally opened her eyes, she couldn't see clearly from the right one, and everything was green. The car had come to rest upside down, which really meant it was lying mostly on its left side on the steep hillside. Outside her window were oak leaves, smashed flat.

She turned her head, ever so carefully, but she couldn't find Milner. The roof below her was crumpled, the windshield was shattered, and his window was missing. Maybe he fell out, she thought. But then, as she turned her head farther, she saw a foot from the corner of her good eye. Turning her head more, still ever carefully, she watched the foot turn to a leg, to a thigh, to a torso; and then she gasped and began to retch as it turned to a bloody pulp.

What killed Milner probably saved Annette. The car had come to rest on the hillside only because of another tree stump, this one somewhat taller than the first but no less sturdy. The car had rolled on top

of it, and it had punched through the rear window, catching the car in mid-roll. But Milner, rattling around inside the car as it rolled, wound up with his head and chest in the wrong place when the stump punched through.

She passed out again.

\* \* \*

Upon reading Riggins' first story, the one from the week before, Jennifer was even more ambivalent about him, both attracted and repelled. He had the story, complete with pictures, on his laptop, which was helpful as she had missed it in the supermarket. Somehow she just knew that neither the university nor the public library would have the *Gazette* archived. The picture of the scantily clothed body—only after prompting from her did Riggins explain it was a model—and the lurid tone made Jennifer shudder. But there was something else there, something almost titillating, that kept her reading.

As she read, she was analyzing the writing with part of her mind. She had no real experience with tabloids, beyond the usual supermarket cover-browsing for amusement, so this was a new experience. If this keeps me reading, she thought, it must be quite compelling for people with less education. Maybe that's why these things sell so much.

Yet another part of her mind noticed that Lance had positioned himself strategically behind her, looking over her left shoulder, arm resting on the table beside her. As he pointed out features in the picture and the article on the screen of the laptop, he leaned into her, his chin resting almost on her shoulder, his arm brushing hers. She glanced up, and saw their reflection in the mirror over the bar. How interesting, she thought. He's really focused on this story, at least that's what it looks like. She could feel his breath. Not unpleasant, actually. She would have expected something beery, but that was somehow missing, or not noticeable.

Maybe my flirting worked too well, she thought. On the other hand, he *is* rather attractive, and it's been a long time.

\* \* \*

Milner's patrol car was airborne for only a short flight, near the very bottom of the valley, where the hillside turned to crumbly cliff. What launched the car was the increasing roughness, little steps, boulders, cracks in the rock face, and the last of these caught the right-side front tire long enough to impart, in flight-school terminology, both rotation and yaw on the patrol car as it left the ground. Its short flight ended when it crashed into the creek, landing on its left side, wedged against a large rock. It settled uncomfortably into place as the water began to pool behind it.

Up on the hillside, water was also pooling behind Annette's inverted car, although she wasn't aware of this. The force on the car from the pressure of the water was subtle, but it kept changing, especially as dirt and gravel washed from under the places supporting the car. As a result, it shifted little by little to accommodate the force and to try to regain its equilibrium. As it shifted, it began to pivot slightly around the stump that had crushed Milner, and it also began to slip on the slick oak leaves and branches under it.

Below, open space beckoned.

\* \* \*

## Eighteen

When Luigi Franconi returned to Durango on Thursday, he'd found the rain depressing, so Friday's sunshine was all the more welcome. He'd become accustomed to bright sun for the past several days, during his end-of-season fishing trip down to Arizona. His Duranglers friends had suggested Lee's Ferry, on the Colorado River just below the Glen Canyon Dam, as a destination, and he had spent three days in sunny, hot Marble Canyon on a boat with a guide, casting to large trout. And then, on his drive back through Tuba City and Kayenta, he had kept the top down.

So the rain was a big change for him. On Friday, he was making the rounds on campus, wishing the best for the future to the various friends he'd made over the summer, in preparation for his departure on Saturday. He had to drive back up to Denver, say goodbye to his trusty Chrysler Sebring (which, truth be told, would be the best thing his sunburn could have happen) and prepare for the flight to Zürich on Sunday.

When the sun finally came out, he was on his way to Hal's office from a farewell meeting with Jacques Ament, and the warmth brought a smile to his face. It also brought out the demonstrators, as well as the gawkers who wanted to watch them, including, in this case, not a few hecklers.

Because he was paying more attention to the sunshine and the mental list he'd made of whom to visit, Luigi wasn't paying much attention to his immediate surroundings. Consequently, when he crossed the quadrangle to the natural sciences building, he blundered through the group of women who were parading around in a circle in front of the administration building.

The student protesters were surprisingly nice. Some tried to hand him flyers—the headlines used the word “rape” a lot, he finally noticed—which he politely declined. But after a half-dozen rather genteel interactions with students, he found himself confronted by a different sort of creature. After some thought, he decided on “she” as an appropriate pronoun.

And she was not at all nice. First, she stepped directly in his path—all of the students had been polite enough to approach with flanking maneuvers—so that he had to stop in his tracks. Second, she shoved a protest sign in front of his nose, much too close for him to read, so he tried to step back so it would come into focus. Third, she interpreted this backwards step by Luigi as a sign of weakness, or at least that was his best guess, because she snarled and began to scream in his face.

“And how many women have you raped lately, huh?”

Of course, the mere notion of such a thing was so foreign to Luigi's very being that he couldn't help but look surprised and somewhat amused.

Bad response. The woman wearing the “Dyke Power” etc., etc., tee shirt (he couldn't read the whole message because it was obscured by her protest sign) thought he was laughing at her. So she whapped him with the sign.

By itself, the sign, a reasonably stout cardboard affair with strident black lettering, wouldn't have been a problem for Luigi to get whapped with. But in organizing the protest, Madge Glendon and her co-conspirators had attached their signs to four-foot sections of one-by-two furring strips, pine boards they had bought at Boker Lumber. And when she whapped him, her sign rotated so that the thing came his direction furring-strip first.

Moreover, Madge was strong.

As Luigi sank to a sitting position on the sidewalk, bleeding from a cut on his forehead, one of the student protesters screamed and the others gathered around. Suddenly, he was surrounded by a dozen or

so college girls, most of whom smelled pretty good, his mind registered, who were doting on his predicament. Madge had disappeared.

It didn't take very long before people began emerging from the administration building to check out the commotion. A demonstration was one thing, pretty much a dime a dozen in front of the admin building; but screams and a knot of people surrounding someone on the ground was another. Luigi couldn't help but enjoy the attention, but then he heard a siren in the distance. Getting closer.

So he was struggling to his feet, blotting his forehead with a handkerchief someone had handed him, when John Martin strode purposefully up. Martin didn't recognize any of the students, but he had a pretty good idea of the instigator behind the protest. His first concern, though, was the victim, or, more specifically, the potential for a lawsuit by the victim. When he recognized the poor fellow as the AMFest guest conductor, he was aghast.

"Oh, Maestro Franconi, I'm so sorry. I hope you're not badly injured."

Martin was actually risking wrinkles in his Armani suit by kneeling to help Franconi up. But his action was highly effective, because his use of "Maestro" got the students' attention, and his solicitous treatment of Luigi got them scared.

"Well, I'll probably have a headache, but I don't think I'm what you'd call 'injured'. I'm afraid that you have me at a disadvantage."

"I'm sorry. I'm John Martin, the university's provost. I think that this little demonstration was aimed at me."

"How nice to meet you, Provost Martin. I wish the circumstances were better. I expect you know a friend of mine, Dean Hal Weathers. I was just on my way to see him when I managed to interrupt these, um, demonstrators. Perhaps we could retire to his office before that ambulance, or whatever that siren is, arrives. I'm really fine and I don't want to be sidetracked by anything unnecessary. I have a rather ambitious schedule over the next day or two."

This request surprised Martin, but he had little choice except to honor it. He turned on his Official Glare, picked out one of the student demonstrators who had the courage to stick around and told her, in no uncertain terms, to send the paramedics to Hal's office when they arrived.

\* \* \*

Alice was taking notes about what to do with Hal's mail, not something that she really needed to do, but she knew it made him feel better. Everything he was telling her was what she would have done anyway. Except sometimes, very occasionally, he surprised her.

"Now, here's an invitation to a semi-arid lands conference. Next spring. In Boulder, at the National Center for Atmospheric Research. Hmm. The fifth in an ongoing series."

"You know," he looked up pensively, "We should probably try to get them to come here for one of the future conferences, if this is really an ongoing series. So maybe I should go to this one. When's commencement next spring, Alice?"

Just as she was about to tell him, in walked John Martin and, to her surprise and delight, Luigi Franconi. Except that Luigi was holding a bloody handkerchief to his forehead. She dashed into the kitchenette for the First-Aid kit.

"Luigi! What in the world happened to you?"

Hal ushered the injured conductor to a seat on the couch and, for lack of anything better to do, helped him put his feet up. Martin, apparently feeling that Luigi was too weak to speak, butted in.

“Madge Glendon’s storm troopers got to him, poor fellow. I hope he’s not too severely injured.”

“Figures. What’s got her knickers in a twist this time?”

“What? Excuse me, but what did you say?” Luigi, surprised, was still learning about American slang.

“Huh? Oh, I mean, ‘what’s she upset about this time?’”

“Thank you, Hal. ‘Knickers in a twist.’ I’ll remember that. How would I say that in Italian...” Luigi looked off into space.

“I don’t know. She thinks I’ve cut back the women’s studies funding, probably. I didn’t, but I may now.” Martin was clearly disgusted with the whole thing.

Alice came back with the First-Aid kit and elbowed her way past Martin and Hal without hesitation. And they didn’t even think about resisting, as both knew her too well. She began fussing about over Luigi’s cut. It turned out not to be too bad, just a forehead bleeder.

She had everything under control and patched up when the two paramedics walked in. Sensibly, they had decided that if the victim had walked away, they didn’t need their gurney. But they were still carrying an array of stuff, two big valises each. Luigi tried to look healthy.

“Uh, we were directed up here. Who’s hurt?” This from the one carrying what looked like a portable defibrillator machine.

“No one here.” Luigi was also trying to sound healthy.

The telephone rang, and Alice looked annoyed. Leaving her patient, she picked it up.

“Natural sciences, Dean Weathers’ office.” She listened for a moment, perplexed.

“Dean Weathers, it’s Ms. Trieri. She sounds...strange.”

\* \* \*

Annette had come to once again, and she immediately noticed that her headache was becoming localized. Worse, but localized behind her right eye. She was dangling from the seat belt more than ever, not at all pressed against her window, now. Somewhere in her mind, this registered as motion by the inverted car.

She turned her head, again carefully, and the foot was still there, although shifted a little. And there, next to it, resting on the roof of the car by the roof pillar on the right side, was her cellular phone.

The car moved, with a little jerk.

Well, Trieri, she thought, this is not a good situation you’re in, not at all. She tried to reach over to the phone with her right hand, but came up about four inches short. She also noticed that it hurt like crazy to move her right shoulder. Not as much as her head, but enough that she wasn’t going to be moving it again.

The car moved again, with another little jerk.

OK, she thought, I’ve got to get that phone, and to do that I’ve got to get unbuckled. And to do that, I’ve got to relieve the tension on this seat belt, which I can do by pushing on the roof with my left hand.

Then I can pop the seat belt loose with my right hand, assuming I can get up the courage to move my right arm again. Then I can land on my head. Yuck, right in that puddle of vomit. Great.

The jerk of the car moving was a little bigger this time.

Five minutes later, she was wriggling through the missing passenger side window, phone clutched firmly in her good left hand. Thinking, Trieri, why didn't you just opt for being a mother and going through twelve hours of the agony of labor instead of getting yourself into a fix like this?

She finally cleared the window, which was now only about four inches from the hillside due to the car's rotation around the stump that had mashed Milner. She hardly noticed the rain. Still holding the phone, she wrapped her left arm around the base of a two-inch scrub oak and tried to get a foothold on the bushes below her.

Relieved of her weight, the car shifted even more, rotating away from her. Then it rolled slightly, un-impaled itself from the ponderosa stump, and slid down the hill, leaving her by herself, hanging onto the oak for dear life.

Wonderful, she thought. Now what I need is for a bear to come along. She began fumbling with the phone, left-handed.

\* \* \*

Hal took the telephone from Alice.

"Annette? Alice says you sound strange. You OK?"

"I meant to call the station, but I must have hit a wrong button. But you're even better. No. I'm not OK. But maybe I'll get lucky and things won't get worse."

"Where are you? What can I do?"

"On a hillside above Hermosa Creek, with a broken shoulder and something wrong with my head and trying not to fall off the world. Help?"

"Where above Hermosa Creek? And your signal is breaking up."

"Oh. Crap. The battery. I forgot. Below the trailhead parking lot. Follow the broken bushes."

"OK, I'll be there sooner than you think. I'll try to call if we can't find you, OK? Hang in there. I love you." And he hung up the phone.

"Annette's in trouble and needs medical help." He pointed to the two paramedics. "You and you are coming with me and you'd better persuade me not to drive. But whoever drives better not fool around. Now."

The paramedics looked at each other, shrugged, and picked up their assorted stuff. Hal was out the door already, so they followed. Luigi jumped off the couch and took off after them, and, with only the slightest hesitation, Martin followed.

On their way down the stairs, Hal was instructing the paramedics.

"Offhand, I don't know which is faster, north on this side of the river, on County Road 250, or across on 32nd Street and up the main highway. But I bet you know and that's the way we go. To Hermosa, then up the Forest Service road to the trailhead."

"But that's not our jurisdiction."

“You want to argue, pal, and I’ll just take your damned ambulance and do it myself. Now let’s move!”

Martin had caught up with them and was surprised by Hal’s tone. Hal’s always been so mild mannered, he thought.

At the ambulance, Hal got in the front, with the taller of the two paramedics, and the others climbed in the back. Off they went, holding on. Martin was trying to explain the situation to the paramedic in the back with himself and Luigi, but the ride was a distraction.

This was largely because, up front, Hal continued to use his newly found Voice of Authority with the driver. He also did a credible job of spotting at intersections, helping the driver make good time. As a result, they were on the highway north out of town—the driver had decided that would be faster—in only five minutes. Then there were no more traffic lights, and Hal had less to do with himself. So he fished out his cell phone and called 911.

“I’m calling to report an officer down. Durango Police Lieutenant Annette Trieri. I’m in an ambulance headed her way, so the best thing you can do is to connect me with the police station downtown. Captain Walter Jankowski.”

“Is this an emergency, sir?”

“I said ‘officer down’ didn’t I? Doesn’t that constitute an emergency to you?”

“Can you give me your name and address, sir?”

He held the phone away from his face. “Do you guys have any special codes or anything you use to get through to these people? She’s playing unbelievable bureaucratic games with me.”

“Who is it?”

“A 911 operator.”

“Oh. Tell her Gerry Slocomb says do it. Maybe that’ll help.”

Hal spoke the magic words into the mouthpiece and was delighted when they worked. A few seconds later Walter Jankowski was on the line.

“Walter? Hal Weathers. Annette’s hurt. I’m on my way with an ambulance crew. It’s a long story. Point is, you need to know and also you may be able to help. Sounds like she’s out in the woods, near the Hermosa Creek trailhead. Have you guys got any mountaineering search-and-rescue resources?”

“Well, the county sheriff’s a better bet, but I’ll get in touch with them and get someone up there. She blew out of here this morning without much in the way of information, but the desk sergeant told me she said something about a sheriff’s deputy and that pot-hunter she’s on the trail of. Hang on, let me make a quick call and I’ll get back to you.”

Hal waited impatiently for what seemed like an eternity.

“I’m back. The sheriff has units on the way. What’s your number? I’ll call you back when I get in my car.”

Hal told him and then had to wait some more, another eternity.

While he was waiting, the ambulance turned left off the highway, then back right onto the Forest Service road and around its first left curve, and Hal decided to risk Annette’s battery.

“Hello?” Her voice was distressingly weak.

“Hi, lover, it’s me. Just a quick call to tell you we’re coming up the Forest Service road, we should be there in just a couple.”

“Good to hear your voice. Look for ...Hummer ...push ...hillside ...Holtzmann ...” And her voice faded completely. Hal sat and stared at his phone. He pushed the “End” button, and it tweedled almost immediately.

It was Jankowski. “Hal? Your phone’s been busy.”

“Yeah, I called Annette to tell her we’re on the way up to the trailhead. But her battery died. Where are you?”

“Stuck in traffic at Park Avenue, but not for long. I should be there in, oh, fifteen minutes, max, once I clear this intersection. And the sheriff’s guys should be there sooner.”

In the back of the ambulance, the ride was challenging. Because the passengers had no idea of what to expect in the way of the next curve, each maneuver was a surprise. Liugi was reminded of a childhood pastime, riding roller-coasters with his eyes closed. And the vehicle was not designed for the S-curve meanderings of the road up the mountainside, so they couldn’t tell if they were going to tip over or not. At last, they could feel that the pavement had turned to gravel, and the ride eased as the driver began skidding around the curves.

Finally, they felt the big vehicle sliding to a stop, and stop it finally did, with a minor bump. They gathered themselves and opened the door.

They had left Durango in sunshine and warmth, and they emerged into rain and gloom. The bump, they discovered, was from the ambulance sliding into the back bumper of a large vehicle, which turned out to be a tricked-out Hummer, sitting in a muddy parking lot looking over a green valley.

Hal was nowhere in sight, but Gerry Slocomb, the ambulance driver, pointed at the bushes down the hill.

“He went that way.”

\* \* \*

One by one, the number of vehicles in the parking lot increased, clustered around the Hummer and its companion vehicles. Searchers worked their way down the hillside, in the direction Hal had gone.

Far below in the valley, the flow around the cars in the creek had reached critical proportions. What had begun overnight high in the watershed as small rivulets, many running off the burned-over soil in Sheephead Basin, gradually merged and grew into new streams. When they merged into the existing channels, they quickly overwhelmed the channels’ capacities and began to carve their own new stream beds, picking up sediment in the process. As the myriad new and old streamlets merged into the main channel of Hermosa Creek, the flow in that watercourse spilled over its banks, drowning meadows and uprooting trees.

Then it encountered the narrows, usually a gorge of strong flow, now a virtual cataract. And about halfway down was a car.

Milner’s patrol car had acted as a new dam for several hours, but then the pressure of the water had begun to move it downstream. It rolled and spun, catching on rocks and tree roots, but always breaking loose again, until it encountered the other car, the one with Milner’s body still inside it. It had filled with water, and was solidly anchored to the stream bed. The two cars, wedged together, made quite an effective dam, some two hundred yards upstream from Holtzmann’s new site.

Tony LaCoste, having considerable outdoors experience, realized the danger of the rising water when he first arrived at the creek. In their several trips to the site, they had been careful to use different approaches, but all of the usual crossings were now under water. LaCoste walked upstream to a point opposite the alcove with the new batch of artifacts, and set his backpack on the ground. It didn't take long for Holtzmann and Westerman, on the other bank, to notice him.

LaCoste took several large nylon stuff sacks, each with a drawstring, out of his pack, and proceeded to nest them inside each other. When they were all nested, he looked about for a baseball-sized rock. When he found one, he held it up for Holtzmann and Westerman to see and then put it in the bottom of the sacks. Then he tightened the drawstring on the outer sack, whirled it about like an old-fashioned sling, and let it fly toward Westerman. At first it looked as if Westerman might try to catch it, but then he must have remembered the size of the rock. Over the noise of the creek, LaCoste shouted for Westerman and Holtzmann to load up the sacks and get up to higher ground.

LaCoste then began looking around for an appropriate tree. It had to be tall and sturdy enough, but not too big. He didn't want to have to work any harder than necessary. And it couldn't be leaning in the wrong direction. As he wandered down the bank of the creek, he stopped, removed a hatchet from his pack, and cut a one-inch oak branch that was straighter than most. This he trimmed to a length of four feet. Then, using his sheath knife, he whittled notches in the ends of the oak branch.

By then he had spotted a candidate tree, a ponderosa pine about eighteen inches in diameter and close to sixty feet tall, he estimated. It was standing on a shelf about ten feet above the creek, set back some fifteen feet from the bank. He fished around in his pack and came up with a small stuff sack, and removed a three-foot chainsaw chain.

This was different from a normal version of such a chain in two respects. It was disconnected; that is, it had ends, in this case, with one-inch steel rings on each. And it also had cutting teeth facing both directions. He leaned on the oak branch, bending it so he could slip the two rings on the ends of the chain onto the notches in the branch. Then he set to work with his makeshift saw. It would be something of a job, but he'd done such things before.

LaCoste had finished his first cuts—he was careful to keep the teeth on the saw chain quite sharp—and was about a third of the way into the final cut when he spied Holtzmann and Westerman across the creek. It was now running deeper than ever, and he wondered if he'd picked a tree high enough up the bank. The worry made him work harder, and he was sweating despite the cool air and rain.

He could tell that he was four or five strokes away from felling the tree, when he looked up and saw Holtzmann and Westerman standing just where it would fall. Why is it, he thought, that I always wind up working with losers? He waved them away and returned to the saw.

A few strokes later, he heard the telltale snapping noises, and he stood back. The ponderosa teetered slightly, and then fell majestically into the position that LaCoste had planned for it. Damn, he thought, I'm good. Then he sat down to rest and watch the show. He was wondering if one of his two colleagues would have the sense to come across to get the hatchet or the saw. It would sure be easier for them to carry the four sacks full of artifacts across the makeshift bridge if there weren't so many obstructing branches on the other end.

Neither did. Instead, they stood on the bank, arguing with each other. Westerman must have lost, because he tied the drawstrings of his two sacks together and hung them around the back of his neck. And then he struggled to mount the tree, climbing through the branches and trying not to get tangled up.

When he reached the clear part of the trunk, Westerman simply walked across, with the creek running about three feet below him. He hopped down beside LaCoste, set the sacks on the ground

carefully, rolled his eyes dramatically, and looked back at the tree, where Holtzmann was making his way through the branches on the fallen ponderosa.

It soon became clear why Holtzmann had not wanted to carry any of the sacks himself. He simply didn't have enough self-confidence crossing the tree to carry anything. Unlike Westerman, when he reached the clear part of the trunk, Holtzmann crossed sitting down, scootching his way across.

As Holtzmann was over the middle of the creek, past the branches, his feet were nearly touching the water. It's really rising fast, LaCoste thought. Eventually, Holtzmann reached the near bank and slipped to the ground. He pointed to LaCoste, and shouted and panted for breath.

"The other sacks. Go get them while there's time. Quickly!"

"Me? Let him do it. I cut down the damned tree."

"I did my trip, pal. You go." Westerman was not moving.

"Quickly! Now!" Holtzmann was practically breathing fire. So LaCoste shrugged and ran across the ponderosa, made his way through the branches, and retrieved the other set of full stuff sacks. Then he began to make his way back across.

When he was about mid-stream, with the water nearly up to the tree trunk, there was a loud crashing noise, followed by the snaps of trees and a roar of water.

Down the stream came a car, upside down, carried on a wave at about the height of LaCoste's head. Westerman grabbed the sacks he had placed on the ground, and he and Holtzmann scrambled up the side of the valley as fast as they could manage, grabbing oaks and pulling themselves up. They could hear the water rising behind them. When it seemed to stop rising, they stopped climbing, and turned to see what had happened.

LaCoste was nowhere to be seen, nor were the sacks he was carrying, nor the felled ponderosa.

There was too much noise to talk, and they were too tired anyway. Slowly and methodically they started up the hill, Westerman carrying the two sacks. Each had made the trek several times before, and they knew the difficulty involved. It was a long, steep slog.

\* \* \*

Jennifer Mason was examining her options. Riggins had excused himself for a visit to the Men's Room, and she, having spent enough time with him to have descended to his level of journalism, felt herself on the horns of a dilemma. A horny dilemma, she giggled to herself.

They had spent the better part of the morning together, sitting in the Narrow Gauge discussing his writing assignments. He was still nursing the same mug of beer he had when she came in earlier. It must be warm and flat by now, she thought. Eventually, they had ordered lunch. Now, mid-afternoon, things were progressing in the expected order. She had set the stage by doing that thing with her eyes, and he responded appropriately. Then she had flirted in subtle ways, and he flirted back, but not by coming on strong. Just what she needed to keep her interest up. Their discussion of journalism proved to each that they had something in common, although she liked to think that her perspective was on a somewhat higher plane than his.

But then he started talking about his novel, and she gained a new level of respect for him. Lots of people she knew talked about writing a novel, but almost no one actually did it. He was, and proved it by showing her the draft on his laptop computer.

And he still smelled good, even after about five hours of sitting together. She knew that the next step would be a dinner invitation and its implications for later in the evening. It was Friday, after all.

And here he was. Show time.

“Jennifer, I’m having a great time, so I hate to do this. I’d much rather ask you out to dinner. But I made arrangements to do an interview later today. And I’ve got another deadline on Monday. If I blow off the interview, I won’t get what I need for my story.”

She was astounded. This was supposed to be her line. A line she had just about decided not to use. Damn! Now the most she could hope for was a graceful recovery.

“Oh, how disappointing. Dinner would have been lovely, but I understand. Really. I should have contacted you in advance, instead of just showing up here this morning. But I’m still trying to get a handle on the project I described, so is there some way we can continue this, like, tomorrow?”

“I’d like that a lot. But I’m still not clear on this project. You were, um, sort of cryptic about it. Maybe you didn’t quite trust me when you explained it earlier. Hell, maybe you don’t trust me now, for all I know. But I still don’t understand the project.”

“Oh. Well, you’re right. I wasn’t telling all. See, what I want to do is to write a research paper, for credit, so I can graduate. At first I had the idea of writing the story behind the story of Steffanie Boudreau’s death. Not the whodunit story, but the background and all that. I was going to interview her so I did a lot of research on her. But then, the police detective, Annette Trieri, suggested that I do a sort of investigative report on the media coverage of this whole thing. See, here in Durango, we’ve never seen anything like this, all these TV vans and people from out of town. And then I read your story about the snowplow and got interested in your involvement. Does this make sense?”

Riggins smiled, most engagingly, she thought.

“I think so. And I bet another reason you picked me is because I write for a supermarket tabloid and therefore would make a pretty good story for your project. The lurid headline angle, and all that.”

Well, at least he’s honest. Now how am I going to finesse this?

“Um, sort of. Annette suggested you, also.”

“Did she tell you that I tried to hit on her? That was before I knew she was hooked up with that guy from the university.”

“Well, actually, she warned me about you, pretty strongly.”

“Thought she would. Well, she’s right. I travel a lot and I’ve become accustomed to picking up women whenever I get the chance. Also, I’m thirty-six. I put you about twenty-one.”

She blushed.

“Um, I guess that ‘almost twenty-two’ wouldn’t make a lot of difference, would it?”

Might as well treat honesty with honesty, she decided. How strange. I’m so used to being in control of situations like this. And this is so out of control. She looked up to see him smiling his friendliest smile.

“Oh, I didn’t mean to say it was an issue, or a problem or anything like that. It’s not, for me at least. How about dinner tomorrow? If we start early, we’ll have plenty of time to talk about your project. And if that goes well, maybe we can go dancing, or something.”

She smiled back. This, she thought, is more familiar territory.

\* \* \*

## Nineteen

The paramedics were working to get Annette stabilized for the ride to the hospital, and the various police and sheriff's people were standing in a little knot talking among themselves. It still wasn't clear what had happened, because two cars were missing. At least the rain was letting up.

Milner had maintained contact with the sheriff's department, so they knew his car was supposed to be somewhere in the vicinity. And Annette's car wasn't around either. She wasn't talking yet, so speculation was rampant.

Hal was sitting, alone, in Jankowski's car, with the heater on full blast, trying to warm up and get some energy back. Ever since his first conversation with Annette, ages ago, back in his office, he'd been running on high-octane adrenalin and now it was wearing off.

The few words he'd heard from her when her battery died had been just enough to send him running straight down the hill from the Hummer, when the ambulance had arrived at the trailhead parking lot. After he'd burst through the first oak thicket, it was pretty easy to pick up the path of the car, and he had followed it down the hill, careless of the increasing slope. Finally, after taking a bad fall, he slowed down and took it easier. At just about the point where the hill was becoming too steep to walk comfortably, he'd found her, curled up in a ball, left arm around a small oak, passed out.

He used his belt to fasten her securely to the oak, then kissed her and covered her with his jacket, and headed back up the hill for help. After that, it was a matter of letting the professionals handle things. He'd extracted a solemn promise from Gerry Slocomb and his partner, whose name turned out to be Al Witherspoon, to fetch him if she woke up. In return, he promised to stay out of the way. At last he was finally getting warm. He went looking for Martin and Luigi and found them sitting in one of the sheriff's department cars. Martin rolled down his window.

"Hal! Glad you're OK. They say Annette will be fine. Did it stop raining? Good."

And he opened the door. Luigi got out the other side.

"Hal, I'm so glad Annette will be OK. I'm leaving tomorrow, and I'd hate to leave not knowing."

"Yeah. Well, thank you both. Of course, I'll feel a lot better when I can talk to her. And she sure looks banged up. I hope those guys know their stuff, when it comes to diagnosis."

Annette had a badly bruised, possibly fractured, right cheek and maybe a slight concussion. And her right shoulder was separated. Because she was unconscious, Witherspoon had popped it back into place before they had brought her up the hillside. Less potential for more damage that way, he had said.

"So," Hal continued, "Do these other guys have any ideas about what happened?"

"The last thing they told me was that they think both cars, I mean Annette's and the sheriff's deputy's, are down in the creek. There's another sort of track over there to the right."

Martin pointed vaguely. "I think what they're talking about now is who owns these three other vehicles, the Hummer especially."

"Do you suppose," said Luigi calmly, "that it could be those gentlemen?"

He was looking the down the hill and to the left, where two bedraggled individuals, one carrying nylon sacks full of something, were emerging from an oak thicket, looking soggy and exhausted.

“Oh, Captain!”

This time, Luigi was somewhat less calm, and he was elegantly waving an arm toward the thicket, as if giving the second violins their cue.

\* \* \*

Hal was waiting in her hospital room when she woke up. The x-rays had shown no fractures, although she was going to have a shiner to beat all shiners, and only the least of concussions. The shoulder would have to be immobilized for some time, and corrective surgery might be needed down the road. Mostly, the problem was hypothermia. Annette had spent quite a while lying, injured, in the rain and cold on the side of the mountain, after all.

He was just beginning to doze off when she made a little noise, took a deeper breath than all the others, and opened her left eye. The right one was both swollen shut and bandaged over.

He jumped up, knelt by the bed, and took her left hand. Like her eye, her right hand wasn't available just now.

“Ssshhh, don't move or anything. You're fine, and I'm here.”

“Move? Are you nuts?” Her voice was sleepy, but she was lucid despite the painkillers. “Is this the hospital?”

“Yep, back in town. You said ‘help’ and you got it. Warm enough?”

“Yeah, finally. It was so cold. And my head doesn't hurt any more. Umm. Well at least not as much. Is my eye OK?”

“Swollen shut and bandaged. But no permanent damage. And your shoulder was just separated, and that's all fixed. They think it'll heal up just fine. There are other little things, what they called ‘contusions and abrasions,’ but you'll be just fine.”

“I must look like hell.”

“Yes, but you never, ever, looked better to me.”

“What a mess. Did anything good happen back there?”

“Hmm. I don't know what you mean by ‘good,’ but Richard Westerman and Raimer Holtzmann are in custody for pot-hunting. At least. On the other hand, there are two cars in the creek and a missing deputy sheriff. And LaCoste's nowhere to be found.”

“Milner. Deputy Milner. Nice guy. Very dead. He was in my car when it went into the creek. Already dead. I'm sorry for his family.” A tear trickled down her left cheek.

“LaCoste is missing, huh? The son-of-a-bitch. He was in that Hummer that pushed us down the hillside. Well, I hope he's dead somewhere.” A hint of a malicious smile appeared.

“Now, calm down. There's plenty of time for that stuff when you get out of here. You need to rest. Doctor's orders.”

“What doctor? You?”

She must be feeling reasonably well, he thought, if she's teasing again. He was immensely relieved.

“Hey? You must be feeling pretty good. So let me suggest something. Walter keeps teasing me about making an honest woman out of you. I keep teasing back about why don't you make an honest

man out of me. So what about this: why don't we make honest people out of each other and get married? After you get your arm and eye back, I mean."

This time, it was a different flavor of tear trickling down her left cheek.

\* \* \*

The 75-year-old steam engine of the Durango & Silverton Narrow Gauge Railroad chuffed its way up the tracks on the last leg of its 43-mile trip into Silverton. It was working harder than usual because it was pulling an extra car, the *Nomad*, a restored and refurbished private coach. The D&SNGRR had added it especially for Hal and Annette to make the trip. The railroad had promised that the trip would be uneventful, and it was. Spectacular, to be sure, but blessedly uneventful, at least compared to their first trip.

There was an amusing moment, however, just about where they had found the body on the High Line section back in August. They were on their way forward to the concession car, Annette being careful with her balance because her right arm was still in a sling. Her right eye, even after a month, was still a little purple, but at least she could see again.

Entering one of the coaches, they ran across a tourist sales pitch by one of the concessionaires. She was selling video tapes of the train and the most recent edition of the book *Cinders & Smoke*, which contained a detailed, mile-by-mile description of the trip—and this edition had been further updated with a "special story of how the mystery of the tragedy of the famous violinist Steffanie Boudreau was solved by the internationally famous writer Lance Riggins."

On hearing this, both Hal and Annette burst into uncontrollable laughter, to the mystification of the passengers and the annoyance of the concessionaire. They had to excuse themselves elaborately just to continue their walk.

Mostly, they enjoyed the scenery. They had waited patiently for the peak of the fall aspen season to make this trip, and the Animas Gorge and the remote valley into Silverton were a wonder to behold. An early snow had dusted the high peaks, and the yellows and golds of the aspen, mixed in with the deep greens of the conifers, all set against the new snow and the deep blue of the sky, made for a truly remarkable experience.

In the concession car, they ran into Conductor Willie Monroe, who was taking a break before the Silverton station. Annette was glad for this, because she had never had a chance to thank him for helping out with the identification of Schwab and Meeker.

"So what's going to happen to those guys, anyway?"

There were certain details of the case that hadn't made the papers yet, and Willie was as curious as anybody.

"Well, you know about the Antiquities Act stuff, the artifacts we caught two of them with, right?" Willie nodded knowingly.

"The guy from Santa Fe who was behind it all, Holtzmann, was one of the guys caught red-handed, along with one of his flunkies. His other flunky, LaCoste, died in that flood. They found his body lodged on the railroad bridge over Hermosa Creek, incidentally, mangled, his mouth full of mud and ash.

"As for the other two, well, they're clearly amateurs, and we plan to get them to sing. All we really have on them in the way of criminal activity is the antiquities charge, although they were involved in separating the violin from its owner in some way also. But they want to get on with their lives, so

they're going to deal. This will give the Feds another antiquities charge to lay on Holtzmann and maybe Westerman."

"But who killed the girl?"

"Westerman told us that it was LaCoste, but he was fuzzy on the details. It seems that she and LaCoste walked down the train tracks, back to the High Line from Peaceful Pines, and only he came back. Apparently they had met in Europe and were lovers there. LaCoste told Westerman that they were 'fooling around,' which probably means something sexual, and that the girl died. So either he killed her or she may have died from a combination of drugs, the thin air, maybe some jet lag, and the excitement of sex and just being out in the gorge. There's some evidence that she may have had a convulsion and broken her neck. Or LaCoste broke it. He left her there, on the tracks, and they got rid of her clothes in a dumpster at Peaceful Pines. And Westerman also told us that LaCoste was driving the snowplow. Since he's dead, LaCoste, I mean, there's really no way to prove this. But it makes sense and some of it's corroborated by the chauffeur. LaCoste was the hands-on guy who did Holtzmann's dirty work."

"Damn." Willie seemed pleased to hear it tied up so neatly. "This summer on the Silverton was pretty different, I'll say. We've had some strange things happen, like the time back in '87 when the truck loaded with potatoes crashed into Engine 473. But, with the girl on the tracks, that snowplow business, and then the flood that almost washed out the bridge back at Hermosa, where they found that body, this was really something new."

\* \* \*

They took coffee back to their private car and snuggled together to watch the sweeping aspen vistas as the valley opened up into Silverton.

"So," she leaned into him, "I was all doped up and hurting, but I remember clearly in the hospital that you mentioned the 'M' word."

"Um, you mean 'murder,' like the one you just solved?" He tried to look innocent, and she poked him in the ribs.

"No, 'marriage,' and don't pretend you don't know what I mean. Thing is, you haven't mentioned it since."

"Well, I don't want to put any pressure on you, so I thought I'd let you bring it up before I did again."

"So now I have. I've been wondering if you mentioned it then because you were worried about me, or something like that."

"Worried? Me? Well, maybe a little. When you get the chance, you'll have to ask John Martin about my behavior after that first phone call you made, when you were hanging on to that little tree. I think I surprised him some. But I wasn't suggesting marriage just out of sympathy. I've been thinking about it for a while."

"About a family, too?"

"Mostly just you. But I've got an open mind."

"Well, the thought of getting married again doesn't tie my stomach up in knots any more. Maybe I'm ready."

"Now that's a positive sign. Although, you know, it would help if I had something better to say to people that ask than, 'She married me because I don't tie her stomach up in knots.'"

She poked him again.

“I can probably think of something even more positive. But it spoils my plans for up here in Silverton.”

“Huh?”

“If we’re getting married, it wouldn’t do to get myself one of those ‘I’m with Stupid’ tee shirts, would it?”

He poked her back, very gently.

# Nuclear Family: [Not] A Four Corners Mystery

## Part I: Hot Lead

lead (lēd) *n.* **1.** *Symbol Pb* A soft, malleable, ductile, bluish-white, dense metallic element, extracted chiefly from galena and used in ... radiation shielding ... **3.** Bullets from or for firearms; shot.

*The American Heritage Dictionary of the English Language,  
Fourth Edition*

### One

If I were a betting man, which I'm not, most of the time at least, I'd bet my bankroll on stupidity as the first and foremost reason that bad guys get caught, or dead.

For sure that was the case with the poor dumb schmuck sitting slumped in the corner of the kitchen, his blood smeared down the wall where he'd slid to the floor. The cockroaches, I thought, will feast tonight.

Thing is, he had a chance not to get dead, if only he'd been just a little smart. "Don't move," I told him, with emphasis.

Especially, I was thinking, don't move that gun hand in my direction. He could have just dropped the thing on the floor and stood still. Then he'd probably still be alive.

But, no, he was one of the stupid ones. Maybe he thought I was so old that my reflexes weren't up to par. Or maybe he thought I was distracted by the luscious pair of tits that jiggled into the room just then, attached to the naked blonde.

Distracting as she was, in my peripheral vision I could see his gun hand rising toward me, and I twitched my left index finger, three times. The recoil of the borrowed Glock 9mm lifted my aim with the second and third shots, so the first one got him in the belly, the second in the heart, right through his sternum, and the third in the neck. He sprang leaks all over the kitchen, big leaks from front and back, making a real mess as he slid down to the floor.

His shot, which coincided almost exactly with my second one, missed wide and low, and I knew the hole in the baseboard would be helpful to me in establishing my claim of self-defense.

The blonde screamed and pranced back into the other room, jiggling at all quarters. I heard a door slam and then another, what sounded like those lightweight interior doors. Maybe, I thought, she has some clothes in there somewhere.

Just to be safe, I kicked the dead guy's gun across the room and felt for a pulse. None. So I went exploring.

The next room was a combined living and dining room, and it had a closed door in its left wall, the kind that doesn't lock. Behind that was a bedroom, and clothes and a shoulder bag lay on the bed.

Another closed door, the kind that does lock, suggested to me that the blonde had decided to hide in the bathroom.

Her shoulder bag held, among assorted female things, a box of condoms—two dozen or so, a high-quality brand—and I decided she was probably a hooker.

“Blondie? Hey, Blondie! Unless you’ve got a gun in there with you, you can come out safely and get dressed. I’m going to call the cops, and you have time to get out of here, if you want.”

No answer.

“Look, I shot him in self-defense, OK? And I’m not going to do anything bad to you, so come on out. You don’t want the cops to find you in there, do you?”

There were fumbling noises with the handle, and it turned. The door eased open a crack, and a wide blue eye peeked out, looking scared.

“Close your eyes?” The voice was timid.

“Of course.”

But that was a lie—I didn’t trust her enough to let her wander around without being watched. Besides, I fancied myself as something of a connoisseur of women’s bodies, and I wasn’t going to miss the chance to do a little ogling. Hooker or not, the glimpse I’d had before had interested me. Apparently a natural blonde, she had a most intriguing bikini wax job, for one thing.

So she jiggled out of the bathroom and over to the bed, where she wriggled into her clothes, providing me with quite a show. In the middle of the jiggling and wriggling, she noticed that my eyes were open.

This was her turf, and her confidence returned. “Hey! You said you’d close your eyes.”

But she was smiling, so I smiled back. “What? And miss all this? Look, you’re going to want to get out of here, I expect, but I need a couple of answers first, OK? Like, what’s the guy’s name? And what’s yours and where can I find you if I need to talk to you some more?”

“Why should I tell you anything?”

“Because I’m going to let you leave if you do. Otherwise, you can tell the cops, and they’ll also want to know about your job and so on.”

I think it was the “so on” part that persuaded her to talk to me. I was pretty sure she didn’t want to owe the cops anything.

“He told me his name is—was—Nassir Al-Ayas. But I didn’t ask for ID. And I’m Dolly.” She really did resemble the famous Dolly a little, at least with the hair and the melons. She rummaged in her bag. “Here’s a card. They’ll know when it’s OK to page me.”

“Hmm. All right, thanks. And what did our friend Nassir want? Full ride? Or what?”

She looked startled at first, but recovered and took it in stride. “Naw, just a blow job. But he wanted me naked, so he could tell I’m a woman, he said. He seemed paranoid about getting a blow job from a guy in drag. Musta happened to him before. Who the hell are you, anyway?”

By then she was dressed, if you want to call it that—her outfit seemed designed to elicit a different description.

“Better you shouldn’t know, but thanks for the answers. Now you ought to get out of here.” As I opened my cell phone, she scampered out, her haunches swaying in a rhythm I hadn’t seen before.

I had several calls to make, and because I had the notion that the local gendarmes might find a way to retrieve my cell phone records, I called them first, via 911—not that I had an emergency to deal with, mind you, but it seemed politic to let them know I was aware of the seriousness of the situation. The operator stopped sounding bored when I told her that I was with a dead body, dead because of me, and that I would provide the weapon to the investigating officer. She tried to make me stay on the line with her, but after giving her the address I disconnected.

As I made other calls, all to numbers that would be meaningless in the cell phone records, I searched the apartment. Mr. Al-Ayas, it seemed, was not your typical American consumer, for he had very little in the way of possessions. There was the obligatory computer and television, along with minimal furniture, but the usual glut of consumer products and cheap plastic crap and the like was missing.

It took the length of the telephone calls for me to find what I was after, a sheaf of papers hidden in a recently constructed compartment in the floor, covered by a prayer rug in the living half of the combination room. I folded the papers, took off the latex gloves I'd been wearing ever since knocking on the kitchen door, and used the papers to stuff the gloves deep into my inside jacket pocket.

Then there was a pounding on the door to the kitchen, the one I'd come in through. I pulled my credentials out of the right side pocket of my jacket and held them up for the world to see as I opened the door.

It's not that patrol cops are stupid, at least not in the way that crooks are, but I've found that they tend to lack imagination. True to form, the two uniforms on the porch stuck to the routine all the way. I suppose they were nervous, not unreasonable in light of what I'd told the 911 operator and all the blood in the kitchen, but I was a little surprised that the credentials I showed them didn't impress them more. It's not every day that guys like that would have U.S. Treasury Department Secret Service identification stuck under their noses. Even though mine wasn't genuine, it looked good enough to pass muster with them, I was sure. But ID or no, the questions started when they came in the door and kept on until the real crime scene investigators finally showed up.

And they, being investigators with very different points of view from the uniforms, had their own questions, somewhat more sophisticated ones.

I got through it all by telling the truth, mostly. The CSI guys found evidence of Dolly's presence—blonde hair in the bathroom—but I managed to persuade them that she must have left before I arrived. It helped, I'm sure, that she didn't go far into the kitchen after the shooting, so she hadn't stepped in the blood. And, as the slug in the baseboard proved, it was true that I'd fired in self-defense—that plus my bogus Secret Service shield got me off the hook.

Still, it took better than three hours before they let me go, and then they insisted on getting contact information from me. Not that it would do them any good—I hadn't been at the hotel whose key I showed them for days.

Then, finally, I was back on the street. Night-time, full moon, Coconut Grove on Saturday night in late spring. Gorgeous. Jasmine, I think, was blooming, and its sweet fragrance hung in the still air. An insect symphony was in full voice, punctuated by the occasional bark of a dog chasing squirrels in its dreams, or something. The foliage was thick enough that the few remaining lights in the houses hardly reached the street, so I felt as if I had the whole town to myself.

I'd arrived in a cab, which had dropped me off two blocks away, but it was so nice out that I decided to walk the mile or so back to my hotel. Traffic on the side streets was nonexistent, and by staying on them I managed to avoid being seen. Along the way, I took apart the components of the bogus ID by tearing up the picture and crumpling the foil shield and dropping it into a storm drain. My

fake moustache got plucked to pieces and scattered in the grass, and the drug-store glasses went into a trash bin. The temporary black hair coloring I'd washed in earlier would vanish as soon as I got back to my room at the Grand Bay Hotel. At that point the guy the cops had talked to would, in effect, cease to exist.

And the Glock that the police had taken for ballistics testing had someone else's fingerprints on it, someone who was currently in solitary confinement at Quantico. They'd find his prints in the NCIC database, but his alibi was pretty solid, all things considered. From there, the case would wither and die, destined to languish in a cold case file forever.

Except for Dolly. She'd seen me, the fake me, and, worse, she had talked with me. But the chance of her being identified, I decided, was nil, so I put her out of my mind.

Back in my room, after a shower that put my hair back to its normal brownish-gray, I unfolded the papers that I'd found in Al-Ayas' hiding place. As I'd been told, they were listings of locations and amounts of Special Nuclear Materials—plutonium, enriched uranium, and other more exotic radio-nuclides, all weapons-grade material. According to my sources, this was the only such listing that existed, for this inventory data was normally kept in separate places. Los Alamos knew what Los Alamos had, Oak Ridge knew what Oak Ridge had, and so on, but no one really knew everything—except for whoever had assembled Al-Ayas' list. And because the list appeared to have been printed on a word processor, it probably existed on a computer somewhere.

That computer somewhere was the real worry.

\* \* \*

Just because someone, or some group, knew the details of all of the nation's Special Nuclear Materials inventories, that didn't spell disaster in and of itself. All of the locations were heavily guarded with several levels of protection, and stealing any of it would be a major undertaking even for a well-organized military team—and as far as we could tell, we were dealing with poorly organized civilians.

But SNM is nasty stuff, and it wouldn't do to have even a little of it floating around in bad-guy neverland. Maybe they wouldn't be able to assemble a real nuclear weapon—one of those "Improvised Nuclear Devices" that the government was so worried about—but some of that material in a regular bomb could contaminate a large area with radioactivity. And given the paranoia of the general population about radiation—just using the word "radiation" in connection with sunlight could cause panicked telephone calls—the social disruption caused by one of those dirty bombs would be significant.

The potential for this kind of disruption, not to mention death and destruction, was what got the government, and ultimately me, involved in the whole thing. Someone at one of the SNM locations had reported observing an unknown person making copies of classified documents. The person had the right kind of security credentials to be in that particular area, but he wasn't one of the regular staff there and his using the copier raised questions. Because he'd gone through a recording gate to get to the area, his identity was recovered, and then his activities at all such classified sites were reconstructed. It turned out that he had visited all of the nation's repositories of SNM within recent weeks, so the existence of the master list was inferred.

His name was Wetherby Stephens, and he was the unfortunate fellow in solitary confinement at Quantico awaiting his day in court, the fellow whose fingerprints the Miami police would undoubtedly find on the Glock and then track down in the NCIC database.

I got involved when his telephone records showed an unusual number of calls to Miami and his Visa credit card charges showed a payment to Federal Express. FedEx was most cooperative and looked in their files, which showed that he'd paid for an overnight shipment to the Grove.

And at the time I lived near there, sort of, at least compared to the people in Washington.

I had planned that my retirement would be complete, and I'd even given out fake forwarding addresses to the people and organizations I didn't want to hear from. But some of those people and organizations were in the business of finding folks who don't want to be found, so I expect they didn't have to work very hard to find me—probably they didn't even break into a sweat. Looking back on it, I guess I might as well just have put up a big sign on my mailbox up in Boca Raton: Hamish Angus MacQuarrie, Clandestine Operations Specialist.

At least they sent someone I knew from the old days, instead of sending a youngster or just making a phone call.

It was about noon on a Saturday in early April, with that perfect not-too-hot weather we have in Boca that time of year, and I had the Florida Marlins on the TV—they were playing an early-season game in New York and getting whumped by the Mets. I was working on yet another bookcase, about the only thing I'd mastered in my newly acquired avocation of woodworking, when a nondescript sedan eased into the driveway. Through the stand of bamboo outside the front door, I could see a guy get out and walk toward the porch, a guy I couldn't help but recognize. Partly it was his cheap suit, partly it was the memories.

*It's my first time inside the headquarters building of the ultra-secret National Security Agency, and, despite my years of CIA experience both in the field and at Langley, I'm intimidated. Security is tighter than I've ever experienced, and the quiet, business-like efficiency makes me question whether my casual approach to just about everything will ever fit in.*

*I'm past the first security check and walking up to the second, wondering if they'll let me pass, when I'm approached by a tall, gaunt man about five years my junior. Bags under his eyes and thinning hair give him an air of an undertaker. He's wearing a cheap blue suit with an ID badge that says "Petersen" clipped to the coat pocket, a white shirt, and a tie of some nondescript dark color I can't identify.*

*"MacQuarrie? Uh, Hamish A. MacQuarrie?" He's reading from a note card in his left hand.*

*"Pleased to meet you, Mr. Petersen. Please, call me 'Mac'." I hold out my right hand to shake, but he ignores it.*

*"Come this way, please. You can't get through the next check without our in-house ID." He leads me to a door in the side of the foyer, a door I hadn't noticed because it's disguised as a large mirror.*

*"I'm Bill Petersen, and I'll be checking you in. We've got a drug test and a polygraph to get through, and I'm hung over. Let's see if we can make this as easy as possible, OK?" He almost manages a crooked smile.*

*Three hours later, having peed into a cup, twice, and after I answer a series of questions designed both to put me off guard and to keep the machine calibrated—we carefully concoct a couple of lies for me to tell every now and then—Petersen decides I really am who my CIA ID says I am. He finally relieves me of my CIA credentials, carrying them to the shredder as if they're last week's fish that washed up on the beach.*

*“Now,” he looks at me in triumph, “you work for the country’s real spooks, not those spook wannabes over at Langley.”*

“Well, Mac. How are ya? You’re looking pretty fit for an old retired geezer.”

Petersen and I had always traded friendly insults after that first day at the NSA, so I guess I should have been ready for it.

“And you look like hell, Bill. You ought to retire, too, save your health while some’s left. What brings you way down here? And where are you working these days, anyway?”

I wasn’t sure I really wanted to know.

“Right to business, eh? Well, you were always a no-nonsense kind of guy. I’m with a new inter-agency task force. Ultra-secret, can’t even tell you the name, standing outside, at least. Want a consulting job? I haven’t told you the name of the task force, so you can still say ‘no’.”

His smile, crooked as ever, looked hopeful and a little evil at the same time.

“Come in and tell me about it, I guess. But I need to warn you, my clearance expired. What’s this secret name, anyway?”

I led the way toward the kitchen. Bill, I knew, would need coffee.

“Yep, it did. But it’s been miraculously renewed, and upgraded. You’ve been keeping your nose clean, so it was easy. I’m now with the Strategic Alliance Investigating Nuclear Terrorism. Top priority, unlimited budget. Do I smell coffee?” He actually made sniffing noises.

“A miracle, huh? Right. What did you say, ‘Strategic Alliance Investigating Nuclear Terrorism’? SAINT? You marching in yet?”

He shot a sour look at me.

“OK, sorry. Bad joke. Anyway, there are no recording devices here and the people next door seem deaf as stumps. Unless someone’s targeting me, and I don’t know why that would be, we’re clear. What’s the problem?”

I twisted open a Beck’s Light and took a sip, then poured him some coffee—the last of the morning’s brew, good and thick at that point.

He told me about the unauthorized copying of the SNM lists and how the guy was watched and finally arrested, then about the connection to Coconut Grove. They even had an address, from the FedEx records. Bill had scouted the place and found it to be an apartment over an old garage in the northeast end of the Grove, not quite up to SW 17th Avenue.

“So what do you need me for? This sounds like a job you could handle, or even somebody local. Go there, get the list, be done with it. Why come all the way here to find me?”

I was trying to be genuinely puzzled rather than resentful.

“Three things. First, we didn’t find anything about this at Wetherby Stephens’ office back in Washington, or at his home or anywhere. No documents or computer records or anything. We think he must have sent his only copy of the various lists to this guy down in Coconut Grove. But so far, Stephens isn’t talking.”

He took a sip of the black goop in the cup he was holding, but didn’t even grimace.

“Second, the Miami guy’s a Saudi, here on a diplomatic visa, just moved into this apartment a couple of months ago. His landlord’s Lebanese, runs a grocery nearby. We did a quick search of the place, black, but didn’t find anything. But he’s been spending time at the university, at this public computer lab they have there. He’s probably put the whole thing into a computer file, and God only knows where he’s been sending it. We did a computer search of everything at the lab and didn’t find anything, though, even on email archives, so he’s been careful. Finally, he sent a big envelope via regular mail to an address up here in Palm Beach County. We intercepted it, and it contained Stephens’ originals, it looks like. But that just means whatever the Saudi guy was doing on the computer is the more important. We now know that Stephens had a complete inventory of all of our SNM, down to room numbers and security protocols.”

“Here in Palm Beach County? What address?”

“A box at one of those package-and-mail franchises. We’re watching it.”

He tried to disguise his evasiveness by drinking the rest of the coffee in a big gulp, which did elicit a wince.

I took a swig of beer to buy time to think. “Tell me about the computer lab. Do the machines have removable media, CDs or anything?”

“DVD burners on all of ’em. And the keyboards have USB ports you can plug those little flash-drive gizmos into. There are two dozen machines, Macintoshes, on the university-wide network, which is connected to the whole-world internet. And there are email programs, but, like I said, we didn’t find anything from those. People can also use a regular web browser like Firefox to get and send mail, though, and then they can wipe the history of what they’ve done. There’s even a custom software program on the computers that asks users if they want to wipe their histories. Also, there are printers in the lab, a couple that all the computers share. And a scanner.”

He ended this litany with an exaggerated shrug.

“So your Saudi goes there, to that computer lab, scans Stephens’ lists and gets them into a single document, then saves a copy on a CD or one of those flash drives, maybe prints a copy. Maybe emails it around some. That what you’re thinking?” I still wasn’t clear on why he’d come to me.

“Right. Something like that, some or all of it. We’ve observed him hanging out with a bunch of people down in Coconut Grove, at a coffeehouse on Grand Avenue near the intersection with Commodore, a bunch of guys who all speak Arabic with each other. He may have passed something to one of them. There were too many for us to follow them all. At the time, it was just me and two other guys working this, I mean.” He looked embarrassed.

“So maybe one of them, or more than one, I guess, has this master list on a computer CD or on paper or something. And maybe your original guy has copies, too, huh? You obviously need names for that group at the coffee house.”

I was beginning to see why he’d come to me. I was born in Massachusetts, but my father got a job with the State Department when I was two—in Saudi Arabia. I grew up speaking and writing Arabic and English interchangeably, and, as my father’s assignments moved him around the various embassies in southwest Asia, I learned other languages as well. Later, various three-letter agencies in Washington put this ability to good use throughout my career with the federal government. It also helped my career that, for reasons of genes or food or vitamins or whatever, I never grew to American basketball-player size. By topping out around 5-11—and a wiry 5-11 at that—I was able to fit into crowds in the places the agencies wanted to send me with only a bit of hair color to disguise the Scottish red tinge I sported in my younger days.

Those agencies also taught me an array of other skills, too, most of which really don't have any place in civilized society. Some of those skills, though, came in pretty handy during my second career, the one with the New York Police Department, where I spent a decade undercover working drugs and other fun stuff in the city's middle-eastern community.

After considering it, I took Bill's consulting job—demanding and getting an absurdly high daily fee, plus expenses.

My first step was to become a regular at the coffee house, eavesdropping on the conversations and then discreetly following people home. Between me and Bill's team, we had them all tracked within three days.

Then, a week after Bill came to see me, I paid a visit to the apartment where I ran into Mr. Al-Ayas and Dolly. That was not the intent—I was hoping to have the place to myself so I could take my time and do a thorough search. But he was home, the poor, stupid schmuck. And now he was dead.

\* \* \*

## Two

My cover story for the visit of the bogus Secret Service agent to the apartment in Coconut Grove was that a credible threat to the President had been traced to Al-Ayas. I'd relayed that to the Miami police along with an admonition that they should keep it confidential, because other components of the same investigation were ongoing.

But when I went down to breakfast at the Grand Bay on Sunday morning, the shooting was all over the front page of the *Miami Herald*, along with a description of the Secret Service agent involved—the one no one would ever see again—and, in a sidebar, an overview of how the Secret Service investigates threats to the President. To add insult to injury, they got that part all wrong.

The story seemed guaranteed to drive the coffee-house crowd underground, and we still didn't know if we had found all of the copies of the SNM inventory. It made me glad that I was billing by the hour.

I ate breakfast and checked out, putting the charges on one of the agency credit cards that Bill Petersen had given me. The room rate was triple what the government allowed, and the breakfast used up an entire day's meal per diem, but that was going to be someone else's problem to deal with. Another identity change was in order, just as soon as I turned in the rental car I was using.

But instead of heading back to the airport, where I'd picked it up, I drove out to Key Biscayne, to a Hertz franchise at a hotel on the beach. The drop-off fee didn't bother me in the least, because Bill would be getting it. Then I walked down the beach four hotels, to one that had an Alamo franchise, and got another car using a second agency card and the driver's license that went with it.

If only it were so easy to play chameleon in real life, I thought.

I had a lunch meeting scheduled with Petersen, after which I was planning to take the Alamo car back to the airport and pick up my own wheels from the parking garage—and pay with cash. But the shooting and its story in the paper had changed things. Maybe, I thought, I'll find out the changes at lunch.

What I found out, though, was that I was back to being retired.

“Washington closed the whole investigation down, at least SAINT’s part of it. I’m out. They think that the copies of the list we recovered are all we’re ever going to find, and the best we can do is improve security at the sites where the SNM is stored.”

Petersen took another huge bite of his fried snapper sandwich. We had met at the outdoors Raw Bar at Monte Trainer’s in the Grove—I was still full from the big breakfast I’d had, but he seemed famished.

To get a word in, I took advantage of the fact that he had to chew.

“What about the conspiracy angle? This wasn’t just one person who got Wetherby Stephens to put that list together, it was a group. An organized group. Aren’t your bosses the least interested in that? I mean, the group, their funding, all that stuff? And what about the money angle?”

I knew well the limited imaginations of the Washington bureaucrats, but there was a clear national security angle to this. National security was something they usually took seriously.

Petersen swallowed and took a swig of beer, then belched under his breath.

“It’s being handed over to the FBI on the theory that it needs to be treated like a law enforcement matter now, not a nuclear issue. The CIA people are all over the foreign connections, especially the ones involving that guy Al-Ayas you shot. But that leaves SAINT on the sidelines. So I’m going home to Washington later this afternoon, and you can go back to building bookcases. Buy yourself some new tools or something when you get our check.”

“But...”

I was going to protest, but I realized that I didn’t want to. My week back in the saddle had been a return to familiar habits—stressful habits developed to minimize the risks associated with dangerous activities. The business of switching hotels and rental cars, not to mention identities, was the least of it.

What I wanted was to be retired again.

Maybe, I thought, I can teach myself to build something else, end tables or something. It suddenly occurred to me that end tables were just short, wide bookcases without backs. I could do that!

After lunch, I drove out to the airport and turned in the Alamo car, then fetched my own car from the parking garage. After paying the ransom, I caught the Dolphin Expressway back east and then headed north on I-95, toward home.

At the time, I thought that was the end of it, and my thoughts turned to other things. Bill’s wisecrack about buying new tools was rattling around in my head.

But old habits die hard. It was just in my nature to vary my speed and change lanes in random patterns while watching my rearview mirror, and about the time I got to Broward County I determined I had a tail. I tested that conclusion by taking the first exit into Fort Lauderdale and jumping a red light to get back on I-95 right away. When the green SUV I’d been watching did, too, I knew I wasn’t just being paranoid. And I felt that familiar surge of elation at having made him.

*It’s my first solo field operation, and paranoia is the least of my worries. Of far greater importance is remembering my field-craft, all the little things that I need to do as a “natural” part of myself while I’m following the detailed script that is supposed to control the timing and outcome of the whole thing.*

*But it’s Beirut, and in Beirut things never happen as planned. Given traffic and other uncertainties, timing is impossible to control, even though I’m on foot.*

*I’m supposed to meet a contact on the campus of the American University, and he’s to swap briefcases with me. By doing this during the mad rush between classes, we are unlikely to be seen, but*

*that means it has to happen within a ten-minute window, both of us arriving from opposite directions through the crowd of students, bumping into each other, dropping and picking up the wrong briefcases, and continuing on our separate ways.*

*It's hot, no surprise there, but I'm sweating more from the tension—fear, even—than from the heat. This is because I've picked up a tail.*

*She had started following me about a block after I left the embassy, and has managed to stick with me despite some false turns, double-backs, and other tricks I'd been taught for such circumstances. I don't think she knows I know that she's following me, but, then, maybe she does and she's just rubbing my nose in it. In any case, I can't shake her and my appointment on the campus is fast approaching.*

*Finally, I manage to hop aboard a bus just as its doors are closing. It's headed the wrong way—away from the university—but that's fine because it will help cover my tracks. I see her out the window running, trying to flag the bus down, looking around for a taxi or something, then, just before I lose sight of her, heading into a phone booth.*

*I get off at the next stop, before, I hope, her phone call can put anyone else onto me, and catch a taxi, instructing the driver to hurry to the university but to take the long way around. He looks at me as if I'm an idiot, but I'm so elated about losing my first real tail that I don't really care.*

I had taken my family sedan to the Miami airport—I'd never, ever want to leave my Cobra parked there—but I thought that it might be up to the task of turning the tables on my follower. To all outward appearances a five-year-old, somewhat battered Honda Accord, it had some go-fast goodies—I had replaced its stock motor with a racing-tuned V6 and drive-train from an Acura NSX and doctored the suspension to match. And whoever was in that green SUV didn't even have the smarts to avoid being spotted on a simple, straight-line tail, so he would be unlikely to know some of the tricks I knew.

It didn't take much. I took my home exit—Palmetto Park Road in Boca—and then used my car's power and quick steering to gain enough ground to double back in a mini-mall parking lot. Next thing, we were both west-bound on Palmetto Park, only I was following him. Because there are dozens of white Honda Accords on the road, I don't think he had a clue—and his behavior behind the wheel showed it. He was speeding and weaving in and out of traffic, trying to catch someone who, he thought, had sped away.

By the time we passed over the turnpike, he had slowed down and was talking into a cell phone. I could imagine the conversation: Sorry, boss, I lost him. Yeah, I know I'm an incompetent fuck-head, boss, but what can I say? I got stuck in traffic.

When we got to 441, he turned south, and I followed. After a few blocks, across from the entrance to my subdivision, he turned into the 7-Eleven and parked. I kept on south, watching in my mirror, but he just sat. Staking out my neighborhood, I guessed. Maybe that's what his boss told him to do next. Well, I thought, he can sit there and sip Slurpees until next year. I can use the back gate entrance.

I made a quick U-turn and pulled into a gas station across the street, parking where I had a view of the green SUV, and called Bill Petersen on my cell phone.

“Bill, I thought you said this whole thing was over. But I had a tail from Miami. What's that about?”

He got relevant information and told me to sit tight and watch the fun. Sure enough, about ten minutes later, the green SUV was suddenly surrounded by Palm Beach County Sheriff's patrol cars, lights blazing, officers crouched behind doors with weapons deployed. A few minutes later, my cell phone played its little tune.

“Mac? Anything happening?”

Bill always did have a knack for understatement.

\* \* \*

Glades View Village was one of those developments just like all the other ones in that part of Palm Beach County—houses crammed together, fancy-looking but cheap houses, all built on fill dredged from the algae-filled canals that provided “scenic views” touted by the developers, water hazards for the golf courses, and homes for alligators with a taste for poodles. Unlike some other subdivisions, though, this one was limited to folks aged 55 and up, and it had various restrictive covenants about what colors you could paint your house, what sorts of pets were allowed (small poodles were OK), how long guests could stay—and how many were allowed at one time—and on and on. I picked it because I found the right house at a not-too-outrageous price, and I really didn’t care about all the restrictions.

Sadie and Jerome Wizenbaum, refugees from Manhattan’s lower east side, lived just to the south of me. They were an ancient couple who seemed to get along despite nearly continual shouting matches over various and sundry health issues. It started in the morning with the functioning of their lower intestines and what sorts of fiber they should eat that day to compensate for problems that had solidified overnight and ended in the evening with urinary-tract issues. In between they yelled about skin lesions and sunscreen, joint and muscle stiffness, and, once in a while, erectile dysfunction. It was the high-volume nature of their interactions that had persuaded me of their deafness.

I knew about all this because, unlike most Glades View residents, I tended to keep my windows open and my air conditioning off, and they did, too. I don’t know why they did, but my excuse was that I had converted my living room into a wood shop. Despite my use of the whole-house vacuum system for sawdust control, enough of the stuff remained airborne that it seemed futile to use the A/C. The filters just couldn’t handle it. So I spent my time sweating and, in between power-tool noises, listening to the Wizenbaums.

On the my north was Mitzi Greenberg, a widow who, being somewhere in her middle eighties, had quite sensibly decided that she was a little too old for me. But she was convinced that her daughter Stella, who lived with her, was just my type. Mitzi was considering moving into one of the assisted care units at the Village medical facility, and she, typically, was trying to arrange Stella’s future.

I knew that zero-lot-line subdivision living worked better when neighbors were on good terms, so, to be polite, I’d taken Stella to lunch—once.

In my mind, Stella was also too old for me, nearly sixty, but the miracles of plastic surgery and, probably, Botox made her look to be a well-upholstered sixty. And she must have had an exercise fetish, because she was athletic to boot, despite being somewhat top-heavy—on the way to the diner, she kept bumping into me with those twin torpedoes she followed around everywhere.

My jobs with the Washington spook shops and then with the NYPD had made me a good listener, which helped me get through that lunch. Stella liked to talk, mostly about herself, but also about her three failed marriages, or, more precisely, about her three ex-husband bags of shit, as she put it. I stitched a gentle smile on my face, ate slowly, and listened while she expounded.

It caught me by surprise a little when she rhapsodized about the virtues of oral sex, in a voice loud enough to cause heads to turn, but mostly I was able to keep my equilibrium. It was clear to me from the start that she and I weren’t going anywhere—although I have to admit, with no little embarrassment, that I wondered for a few minutes there about her sexual proclivities and what it would be like if she took out her dentures.

Like most such developments, Glades View Village was ruled with an iron fist by a homeowners' association, the elected board of which held powers unknown in the real world. Want to paint your house? They got to pick the color, one that would blend in with the colors of the nearby houses. Need a new roof? You got to pick from red barrel tile, rust barrel tile, or pink barrel tile, but your choice had to be ratified by the board or, more often, by the board chair, who was empowered to act for the group on such matters. Tired of your landscaping? Submit a new design to the board before pruning a twig, or get taken to court.

Naturally, the position of board chair was a coveted role, one that involved considerable politicking every year during the campaign. Retired guys with Napoleonic complexes, as well as too much money and too much time on their hands, were always challenged, unsuccessfully, by community organizers, usually women, who advocated the consensus approach to decision making.

The current board chair, Antonio "Big Tony" Fallucci, was a retired car salesman from Boston who had mastered the art of divide and conquer. He kept the transplanted New Yorkers and Washingtonians at each other's throats, diverting the attention of both groups from the fact that he was a genuine, dyed in the wool, New England asshole.

He and I had an interesting confrontation when I first moved in. One of the things that had attracted me to my house was its three-car garage, and I decided to use the third bay as storage for lumber and other wood-working supplies. Just after the truck from Home Depot unloaded its cargo, a short, wide, cigar-smoking fellow appeared on my front porch and demanded to know what was going on. When I allowed that I wasn't sure that I really needed to explain myself to him, he puffed up visibly and announced his name and title—and then proceeded to lecture me on his responsibilities in the neighborhood. It gave me time to consider how to respond.

*I'm in New York City, coming out the door of a lottery office after having picked up a minor prize I've won, stuffing the check into my pocket. A wiry little guy holding a black book that turns out to be a Bible approaches. And he wants money, a donation. Apparently, he lurks outside the lottery office and pounces on unsuspecting winners, hoping to catch people who feel a little guilty about their good fortune.*

*But I don't feel guilty at all, and when I demur at the opportunity to donate to his church, he becomes offended and blocks my path. After being subjected to a short, whiney harangue, I let myself be manipulated into a response.*

*"So, you're telling me that God wants me to give money to you? Don't you think you're in, um, something of a conflict-of-interest position here? Don't you think that God would tell me this herself, if that's what she really wanted? Or maybe you have some kind of exclusive communications channel?" Even though I'm pushing his buttons intentionally, I'm also trying to be polite. But the whole thing is getting annoying.*

*He manages to draw himself up an inch or two and look thoroughly offended. His head is tilted back slightly, and he's literally looking down his nose at me. He raises his right hand and points his boney index finger skyward.*

*"For your blasphemy, I call on God Almighty to curse you, to curse you and your family for seven generations! His wrath will descend on you and you will beg His mercy!"*

*Somehow, he's made his voice sound deeper, more commanding. It still has some of that whiney intonation, but it carries more effectively. I tilt my head to the side and try to look puzzled.*

*“Really? And you believe this is the Christian way to do things? Call on God to lay her wrath on people who don’t give you what you want? This sounds like some kind of religious extortion to me, I have to say.”*

*“You WILL be cursed, your family WILL suffer!”*

*“Well, OK. Tell you what. You go ahead and call on your God. Meantime, I’ll use some of this money I just won to call on the Gemanicci brothers, to have them pay you and your family a visit some night. Late.”*

*I don’t know where the name “Gemanicci” comes from; it just pops into my head. But it has the effect I intend—it brings him up short.*

*“Geman ...Geman-who? Who are they?” His voice reverts completely, back to thin and whiney, but now it has a slight squeak.*

*“Oh, I’m sure they’ll introduce themselves. Their Sicilian Momma brought them up to be very polite.”*

*His face goes pale and he’s trembling slightly, so I decide that’s enough.*

*“You be sure to have a nice day, now.” I turn and walk away without looking back.*

Big Tony Fallucci’s lecture had the same effect on me, but I decided not to resurrect the fictional Gemanicci brothers for the occasion. Didn’t want to offend his ethnic heritage, after all. So, when he paused for a breath, I tried another approach.

“You know, Mr. Fallucci, when I moved here, I went over the covenants with a fine-toothed comb. And I didn’t see anything about having the homeowners’ association board micromanage my hobbies. I’m pretty sure I’m on solid ground here, because I learned to read legal documents extremely carefully in one of my jobs, years ago. Kept myself out of trouble with the law that way. That was important to me, because I was doing wet work for the CIA at the time. It had certain, you know, legal exposures.”

I smiled; he blanched. And he never bothered me again.

\* \* \*

### **Three**

Bill Petersen looked peeved when I finally answered the door. It was Monday afternoon, and I’d been sanding, wearing my noise-canceling headphones, and I couldn’t hear the doorbell.

“Christ, Mac, I’ve been ringing that bell for at least ten minutes!”

“Yeah, sorry. I keep meaning to hook up a blinking light to the bell, but I’ve just never got around to it. Want a beer or something?”

I led him past the mess in the living room to the kitchen, through a dust-proof door—mostly dust-proof, at least—I’d installed.

“I can’t stay, got a plane to catch. But I thought you’d like the scoop on the guy who was tailing you yesterday.”

He took the beer I handed him and sat down.

“Yeah, I would. I saw him having his little run-in with the Palm Beach sheriff yesterday. What happened after that?”

“They took him up to West Palm for questioning. Turns out he’s a PI out of Miami, hired by someone he declined to name, at least as far as the sheriff’s guys were concerned. But I paid him a visit last night, after he finally got home. He was most cooperative, after a little persuading. Told me he got a retainer in cash to keep track of you. No name, just a phone number. Supposed to tail you home and call in your address. But he lost you, he said.”

“Yeah, I gave him the slip, then followed him to that 7-Eleven where he got picked up. Right across from the subdivision entrance, so at least he knew that much.”

“No, I think it was coincidence. He ... ah ... he stuck by his story under some duress, said he didn’t know anything about where you live, except that it’s probably out here west of Boca Raton somewhere.” He took a pull on his beer.

“So you must have got the phone number he was to call in my address to.”

“Oh yeah. But I checked it out, and it’s one of those use-up-the-minutes-and-throw-it-away cell phones. No real information.”

“Did you give it a call, that phone? Maybe we could locate the thing, pay its owner a little visit.”

I didn’t like the idea that someone was trying to find out where I lived.

“Well, like I said, I’ve got a plane to catch. But I did manage to find a connection down here to do the locating.” He smiled and pulled a slip of paper out of his jacket pocket. “It’s probably in Miami, so you want to be down there for the first call. And you need to figure out how to make two calls at the same time—I guess you’ll need two phones—one to call our unknown friend and one to call this number simultaneously. You make a call, get a rough fix, zero in and make the second call. With that, plus your natural charm, you should be able to find whoever it is. Be nice, OK?”

He drained his glass and stood up. “Gotta run. Thanks for the beer, Mac. Take care of yourself.”

I considered going back to sanding bookcases, but the little problem of someone who was trying to hunt me down nagged at me too much. So I cleaned up, dressed for an evening’s work, and equipped myself from my cache of handy-dandy covert ops tools.

One of the first things I did when I bought my house was to turn the center bedroom into a study, and I converted its closet into special-use storage. The double bi-fold doors got transformed into half wall, half hung door, and the space behind the wall half became my weapons and clandestine gear cache. I put a waterproof, fireproof vault for all my goodies in there. The hung-door half I lined with cedar planks to make a moth-proof closet for my clothes, and the planking did a fine job of disguising the hidden door providing access to the vault.

Before heading to Miami, I stopped for a light supper at a sushi place in downtown Boca. Some time back, sushi became so popular that you can find it almost anywhere, but it takes training and skill to choose the best quality fish and to prepare it properly. Among the early settlers of Boca Raton was a contingent of Japanese farmers, and their legacy included local landmarks such as Yamato Road, the Morikami Museum, and several truly superb sushi restaurants in the traditional Japanese mode. Like any restaurant, they welcomed tourists, but I discovered that they catered especially to the locals who appreciated raw fish the old way.

By eight Monday evening, filled full of omega-3 and -6 based proteins, I was about forty miles south, on Coral Way just east of the Gables, parked off the street in a nearly empty lot by a big department store. There was a pay phone on the corner of the building—the last of a dying breed—and I

planned to use it to call the suspect cell phone. I called the number that Bill had given me using my own cell phone.

“Hello? Mac?” The voice seemed vaguely familiar, an accent from the past, not ancient history, but from another time.

“Uh, yeah, I’m sorry, but ...”

“Mac, it’s me, Joe, Joe Fila. Howzit hangin’ these days, anyway?”

It took me a few seconds to overcome a minor bout of speechlessness. “Joe? No shit! You’re the last person I expected at this number.”

Joe had been my partner when I was a detective with the NYPD. When I took a bullet. His voice transported me back in spite of myself, swamping me with unwanted memories. They made my right shoulder twinge with indelible pain.

*What surprises me most about getting shot is how little it hurts. At first. Later, shortly later, I change my mind—“hurt” doesn’t begin to describe it. Then I pass out.*

*When I wake up, I’m on my left side in a bed, and a cloud of people hover about, chattering away, poking and pulling at me. Then I faint again.*

*The next time I wake up, I’m on my back, and all is quiet except for a dissonant hum. The machines, I discover, are talking to themselves as they monitor me. With nothing better to do, I try to remember just how I wound up in the fix I’m in. I figure that sooner or later someone, probably someone sporting a shield, will be around to ask.*

*Sure enough, just as I’m getting my recollections of the whole thing put back together, a young guy wearing a slime green blazer that reeks of smoke shows up. With questions. I don’t recognize him—but, then, we detectives always avoid the Internal Affairs pukes if at all possible.*

*“Maybe it’ll help you to know that you got both of them, kill shots. And this is going to be pro-forma, because one of those weasels killed my partner a couple of years ago, when I was still on the street.” I decide his expression is a sort of grim smile.*

*He leans over close enough that I’m nearly choked by the cigarettes on his breath, but the comment makes me feel better about him. Or maybe it’s just the painkillers. It dawns on me that I seem to feel better about pretty much everything. My right shoulder is completely numb, and that helps, too.*

*“Fila told me that the two of you went there for a drug buy, is that right?” He has the obligatory little notebook in hand, pencil poised, so I nod.*

*“But he said he was around the corner of the building, so he only heard what went down. Shouting, then shots. One from an unfamiliar gun, two from yours, then a short full-automatic burst. That sound right to you?”*

*I nod again. Joe, I remember, had ducked around the corner of the building to whisper into his mike for more backup, and the perps had gone all to pieces. The seller had grabbed a handgun hidden in the pile of boxes he was standing next to and put the slug through my right shoulder. I’d managed to get off two rounds—being left-handed has its virtues—and the bodyguard with the Mach 10 had fallen with his finger pulling the trigger.*

*I remember standing there, trying to look at my shoulder, wondering why it didn’t hurt. Then, about the time that Joe turned up, it did—a wave of agony paralyzing my entire right side before I collapsed. Now it’s not only numb but also completely immobilized, I discover. I can’t even shrug.*

*“OK, well, that’s good enough for me, and I’ll make sure it’s also good enough for IA. Too bad it took your getting hurt to get those two off the street, but that’s the good news, at least. Anything I can do for you?”*

*I discover that my voice isn’t quite working, so I cough a couple of times. “Joe’s OK, right? He around?”*

*“Right behind me. I’ll send him in.” And he leaves, little tendrils of cigarette fumes trailing behind him.*

And now that I remembered, Joe’s voice on the phone sounded just like it had in the hall that night, outside my hospital room.

“Well, it’s good to hear your voice again, pal. So you’re in the track ’em down business these days, huh?” I wasn’t sure I wanted to know too much about what he was doing, but some small talk seemed appropriate.

He laughed. “Yeah, well, the love affair between me and the NYPD ended shortly after you went on disability. You always were good at keeping me in line, and without you around I kept getting in all sorts of trouble. Besides, it’s cold up there. I took an early retirement they were offering, went back to school, and set myself up as a high-tech computer-crime consultant down here. Gotta love those topless beaches, eh, Mac?”

“Indeed I do, although I seldom get to the beach these days. So what’s the deal with this cell phone number? Are you really able to track its location?”

“You just have to know the right people, Mac. And this character has been using the phone, so I’ve got a pretty good fix on it already—I don’t think you’ll need to make calls to him. Based on signal strength, I triangulated the place where most of his calls are going, and I bet that’s where he lives.”

He gave me an address in the south part of Coral Gables, the very high-rent district. Unlike my cheek-by-jowl subdivision, with lots barely twice the size of the houses’ footprints, that stretch of Old Cutler Highway was lined with estates, some occupying several acres of manicured grounds. Whoever was after me had plenty of money. And it’s never a good thing to have very rich people after you.

“Thanks, Joe. Listen, do me a favor, OK? If you ever figure out my address, keep it quiet. I’m trying to maintain a very low profile down here—too much bad history for my whereabouts to be public knowledge.”

“No prob, Mac. And let’s get together for a drink. Give me a call when you’re down this way with extra time.”

\* \* \*

I didn’t know when I might have the extra time to have a drink with Joe—it would undoubtedly turn into several drinks and I’d need a cab home—but the next day I made time to check out the address he’d supplied me with.

Because most of the big estates down there by Matheson Hammock Park have gates and security systems, not to mention very large and hairy guys with suspicious dispositions acting as guards in some cases, I decided I would need a good excuse to hang around in the vicinity of the house I was interested in. I’d also need to make my activities as innocent as possible, due to the possibility of video systems scanning the area.

As much as I hated to do it, I decided I was going to have to sacrifice a tire.

I could have arranged for another sort of car trouble—a coolant leak because of a loose radiator hose, perhaps—but I had the notion that there might be inquisitive onlookers. Sitting by the side of the road with the hood up would show the world my Accord's secrets, something I wanted to avoid.

But a flat tire would immobilize the car for a short time—as long as it took for AAA to arrive, at least—and also provide compelling visual evidence of my plight. Fortunately, I had spare wheels, left over from my snow-tire days up north, that I could get a cheap used tire mounted on.

Tuesday morning, I dressed for the occasion as a passenger on a pleasure boat—Topsider boat shoes with no socks, a baggy white shirt and jeans—and put an empty ice chest in the trunk, along with an overnight bag and a rain slicker. I also removed the combination jack handle and lug-nut wrench from the little tool kit in the Accord's trunk and left it in my garage. Then I stopped by Boca Tire just as they opened and talked them out of a used tire, and had them mount it and put it on the car. They were skeptical, but I'm a persuasive fellow when I need to be. An extra \$50 bill for the technician helped, too.

After battling the Tuesday morning rush-hour traffic south into Miami, I made my first pass by the estate, southbound, at around eight-thirty. That gave me a chance to pinpoint the address and scope out the security, even if only briefly. And I was right: there was a serious gate, closed, with a bevy of cameras scanning back and forth. The entire ensemble was protecting a couple hundred yards of frontage behind a seven-foot stone wall on the east side of the road. Assuming the property ran down to one of the big canals off the bay and that it had an appropriate residence on it, I was dealing with at least \$30 million worth of real estate.

I drove on south, down to the little marina at the bridge over Snapper Creek Canal, and got out to stretch. I also took the opportunity to check out the boats—the 35-foot sport-fisherman called the *Morning After(noon)* would suit my purpose quite well, I thought. And I stuck the micro-charge I'd prepared onto my right rear tire, the used one I'd bought, on the inside under the car.

On the way back north, I slowed slightly at the estate, pushed the button on the radio controller, heard and felt the tire go, and steered the foundering car onto the little acceleration lane just past the estate's gate, a stretch of custom-built pavement to let those folks' Mercedes to come up to speed, no doubt. Then I got out to look at the damage.

“God-damned piece-of-shit frog tires! Fuck!!”

I was squatting down, poking at the Michelin logo on the dead right rear. I didn't know whether the cameras came with sound or not, but I thought the possibility worth a little acting. I did know that one of them, then two, had stopped scanning and were staring fixedly at me.

To continue the charade, I opened the trunk, found the tools, and had a second little temper tantrum when I couldn't find the jack handle. Then I opened passenger door and rummaged around in the glove compartment. When I found the card, I dug out my cell phone and called AAA to come and help. After that was arranged, I pretended to make another call, just about the time I saw the gate opening.

“... yeah, Fred, had a flat. Fucking cheap-shit tires. I knew I shoulda never gone to that discount place. Anyway, I called triple-A, and they said it'd be about a half hour ... Oh. You got beer? Well, good, that'll save me some time. I was headed up to South Miami to fill up the cooler.”

Two muscle-bound individuals in shorts and tank tops, with flip-flops on their feet, were hovering around me, hairy arms folded across their ample pectorals. I held up an index finger and nodded at them.

“... What's that? Oh, yeah, I got a license yesterday, so we should be able to leave as soon as I get there. See ya.” And I folded the cell phone and put it in a pocket.

“There’s no stopping permitted here. See the sign?”

Very Large Guy Number One actually knew how to talk—with his voice, unlike that more famous gorilla who uses only her hands.

“Sorry.” I tried to act apologetic and annoyed at the same time.

“Got a flat, see?” And I pointed to the offending tire. “I called triple-A, and they’ll be here in a little while, they said.”

“Watcher bidness ’round here anyways?”

It seemed that Very Large Guy Number Two, the one with the high-tech knee brace, was still learning.

“What’s my ...? Well, I was driving down a public highway and I had a flat tire, so I pulled off onto the shoulder, on the public right-of-way, I believe, to wait for help to get it fixed. And I think that’s really all I need to say to you two gentlemen.”

I kept a small smile on my face during this short speech.

They each took a step toward me, closing what had been a reasonably polite amount of personal space down to a threatening crowd. I made a point of looking scared and took a step back.

“Hey, now, calm down. I was on my way up to South Miami for a beer run. I’m going out fishing with a friend of mine who has a boat down at the Snapper Creek Marina, the *Morning After(noon)*, you know it?” I made little parentheses arcs with my hands. “I got there before he did, found the empty cooler on the dock, and decided to get more beer. Right?”

*It’s sometimes hard for me to know when the truth is necessary. My friends don’t seem to have this problem, but, then, I’m the only person in the frat house who grew up in Saudi Arabia. It’s not that lies don’t come easily to them, but they have a better intuition about when the truth is really needed and when it’s not.*

*This dilemma is churning around in my head as I wait for my appointment with the UCLA Dean of Students. A bunch of us Zekes were caught staggering around the campus last night, drunk and disorderly by any definition, and we’re being accused of vandalizing a rock wall with spray-painted graffiti. Because I’m under-age, I’m in more trouble than the others. That, I’m thinking, is why my appointment with the Dean is the last one. She’ll want me to rat out my friends.*

*But the truth is, I wasn’t drunk. Yeah, I’d had a beer, and that put me technically in the guilty column, but I wasn’t drunk and I wasn’t the one with the spray paint, either. The one who sprayed the wall was Toby Vandenberg, one of the biggest horse’s asses in the house. Not only that, but I have proof: I saw where he tossed the spray can and I’d picked it up for safekeeping earlier this morning. No doubt his fingerprints are all over it.*

*But Toby’s also the quarterback of the Zeke intramural squad, and we need him for the big game next weekend with SAE. An obvious time for a lie.*

*But it’s not that simple, because, first, I don’t know what the other guys will have told the Dean and, second, this isn’t Toby’s only indiscretion in recent days. He also tried hard to hit on my girlfriend, to the point of being abusive. Because I’m a pledge, though, I really can’t do anything about it.*

*Except now’s my chance with the Dean. What, I think, would she like to hear? Would she like an excuse to throw the book at Toby? If I tell her the truth, what’s in it for me?*

*My thoughts are interrupted by the voice of the Dean's secretary. "The Dean will see you now, Mr. MacQuarrie."*

*My upbringing was decidedly limited in the female department, and I'm continually amazed and astounded by American women of all ages. Dean Susan Standerfield, a late-thirties California blonde who wears miniskirts and keeps herself fit, about knocks me over. I have trouble not staring at her legs as she walks across the office to greet me.*

*"Mr. MacQuarrie, I believe." The handshake is more formal than friendly. "We have something to discuss, don't we, Mr. MacQuarrie? Please sit here, in front of the desk."*

*She rounds the desk and sits with her back to the window, her legs, fortunately for me, hidden. The sunlight makes it hard for me to read her face.*

*"Now, Mr. MacQuarrie, perhaps it would interest you to know that your four fraternity brothers all have told me consistent stories about last night, about how you, as the only pledge among them, were trying to impress them with your ability to drink and with your bravado with that spray paint can. Would you like to comment?"*

*The truth, and my proof of it, suddenly come into clear focus for me.*

A radio that Very Large Guy Number 1 had on his belt crackled, and he held it to his ear, the cauliflower one.

"Yeah, boss? OK ... yeah ... OK. C'mon, Rafe, it's cool."

And they both turned and walked back toward the gate. So there *was* sound along with the pictures, I thought.

"Uh, OK, nice meeting you guys!" I called after them.

VLG 1 turned. "Don't you go wandering off. We're watching."

He pointed at the cameras.

"OK, thanks, I'll be right here!"

I waved, and they went in through the gate, which closed behind them with motors whining and then a solid clank.

Because I really had called AAA, and because I really did need them to get my tire changed, all I could do was wait. So I sat down in the passenger seat and took out the miniature camera I'd brought to document security device placement and as much of the gate mechanism as I could see. By yawning and stretching, I managed to get several shots, and the process also allowed me to examine details I'd missed before.

How I'd missed it, I don't really know, but what jumped out at me then was the plaque mortared into the wall next to the gate.

"*Consulate of the Kingdom of Saudi Arabia*", it said, with Arabic lettering saying the same thing plus a "Praise Allah" admonition. That told me all I needed to know.

\* \* \*

The guy that AAA Florida sent put on my spare quickly and efficiently. Examining the dead tire, he stuck his finger in the hole that my little explosive charge had made and pronounced it unrepairable. He thought a minute and recommended that I contact the manufacturer, though, as he thought the blow-out to be clear evidence of a defect that should be covered by their warranty. I had reason to think otherwise but decided not to bring that up.

On the drive back home I considered my situation. Someone living in the mansion of the Saudi Arabian consul had put a tail on me, shortly after I'd killed one of their citizens. I had a feeling that my self-defense excuse wasn't really something that would matter to them.

Consequently, I not only had some very rich people after me, but they were very rich people with diplomatic immunity. Bad, bad, bad.

On the other hand, the reason they were after me had to do with espionage—the theft of highly classified information and its distribution to a group of foreigners—foreigners who might well be part of the government's terrorist watch list.

While the consulate crowd could claim their diplomatic immunity, the immunity wouldn't keep them from being booted out of the country should they be connected to espionage. And if they were sent packing, my little problem would go away.

So, I thought, the way for me to deal with the whole thing would be to demonstrate a connection between Nassir Al-Ayas and people in the consulate. This would implicate the consul's staff, or maybe family, in the theft of the Special Nuclear Materials information.

Of course, the value of that information lay only in its use in an attempt to steal some of the material itself—and such an act would go far beyond mere espionage. Moreover, because the whole thing so far involved a group of people—Wetherby Stephens, Nassir Al-Ayas, and the coffee-house crowd—it involved a conspiracy by definition. Pulling my consulate nemesis into it would seal the deal—he'd be on the next plane home before he knew what was happening.

I just needed to make that connection.

I'd heard that the Kingdom was encountering unexpected turbulence since King Fahd had died some time back. He'd been infirm for years, with the one of his brothers or son or somebody doing the Acting King role, but the real king's death had let loose a power struggle behind the scenes. It occurred to me that this involvement of the consulate with the SNM espionage could be the first step toward less friendly relations between the U.S. and the Kingdom.

Or it could be merely the action of a single, unauthorized individual. If that were the case, making the connection would put that person in serious hot water—and hot water to the Saudis often involved such punishments as beheading.

*That* would solve my problem for sure.

Making the connection would require understanding who all the players were, and a biography of Nassir Al-Ayas would be most useful in that regard. And a list of the Saudi occupants of the consulate compound would also help. It's time, I thought, to start calling in favors from people who still work in Washington.

Although much of my federal career had involved assignments overseas, mostly in that part of the world now called Southwest Asia, I was almost always covered by posing as a State Department employee, one of the ubiquitous "cultural liaisons" that embassies seem to overflow with. Because real State Department employees tend to move around and often wind up enmeshed in the stateside

bureaucracy in some Washington office, there were plenty of people whom I could call for information. It was simply a matter of finding out who worked where at the present time.

Back at home in Boca, I started with the easiest approach—the internet. Federal agencies all had web sites, some more obscure than others, of course, but they often listed employees and their locations, or at least their mail codes. The mail codes needed translating, but I'd worked with State long enough that I knew what many of them meant.

I had two particular individuals in mind, Tom van Ostern and Caspar Spoot. Both were typical State Department career types—old, entrenched, eastern seaboard families, top prep schools, Ivy League colleges—and both seemed to suffer from the sort of inbreeding that lends such people the common sense of lichen.

On assignment in Saudi Arabia, Tom and Caspar had let themselves be bribed by one of the minor Saudi Princes into taking him to a western nightclub, where, as might be expected, the wrong people saw them and informed the religious police. The Prince had promptly disappeared—word on the street was that his voice had changed, up a register, and his new job involved the role of eunuch for his brother's harem.

The religious police were of the persuasion that setting examples was a good way to keep their charges on the straight and narrow, and sacrificing a minor prince now and then reminded the Royal Family of their own responsibility to set a good example for the peons.

Van Ostern and Spoot found themselves in a Riyadh jail awaiting a public punishment, probably to involve a protracted flogging, as diplomatic immunity goes only so far over there. Rescuing them and smuggling them out of the country, while not blowing my own cover, was one of my more challenging assignments. They were both now somewhere in Washington, with scar-free backs, unless they'd managed to do something else similarly stupid in the years since.

It turned out that van Ostern had, more or less. I couldn't find him in the State Department listings anywhere, but a Google search turned up an old newspaper article with the tidbit that he'd driven his Lexus off a bridge one night. It was suggested that the accident may have had something to do with his 0.34 blood alcohol content.

Caspar Spoot, on the other hand, had avoided such disasters, apparently, because he was listed by State as having a mail code putting him in the Southwest Asia section office in Washington. There was also a phone number, so I called it. Even though it was lunchtime on most of the East Coast, I had the idea that Spoot took his two hours later in the afternoon. He always acted like the aristocracy he derived from.

*The desert sun isn't just hot, it's a searing weight pressing down from the sky. We westerners do the best we can, but we never truly adapt to it. Success is declared in terms of being able to tolerate it for short periods.*

*Still, there are people who manage to appear above it all. Caspar Spoot, rogue scion of a wealthy Bangor Maine family, looks as if he has been sitting comfortably in the air conditioned billiards room of the yacht club instead of standing under the sun of the Arabian Peninsula.*

*I, on the other hand, must look like hell. I feel wilted, like yesterday's violets.*

*"Caspar, if I'm going to pull this off, I'm going to need your cooperation."*

*“Mr. MacQuirk, or whatever your name is, I do not care in the least whether you are able to ‘pull this off,’ as you put it. I have clear orders from my section leader at the embassy not to associate with you CIA types.”*

*“Call me ‘Mac’, OK? And let me explain to you what I saw the other day, over there in the public square.”*

*I proceed to tell him, using as much graphic detail as I can conjure up, of the lashing I’d seen, the one in which the guilty party had his back shredded by the steel-tipped cat-o’-nine-tails. After that, I’m quick to point out, he also had his right hand lopped off. I think what gets to Spoot is my description of the flies swarming on the cuts on the guy’s back while he was being strapped down to have his hand removed. Or maybe it’s my description of the way he was screaming.*

*I’m talking with Spoot only because of the clout exerted by the US Embassy. He and his compatriot are due for their own turns at the whipping post the next day, even though their diplomatic immunity is being violated. But for some inscrutable reason, the Saudis have decided to let them discuss their situations with Embassy personnel.*

*Because I’m going to rescue them, I’m that personnel. And I’m frazzled while Spoot is cool as a Maine brook trout. How he manages, I don’t know.*

“State Depahtment, Spoot heah.” He still wore his Bangor accent proudly.

“Caspar, it’s been a long time. This is Mac MacQuarrie calling.”

I put a gentle but slightly menacing edge onto my voice, just to let him know it was serious. He got the message—there was a long pause, and then he said exactly the right thing.

“Why, Mac. Haven’t heard from you for a long, long time. What can I do for you?”

I filled him in on the background of my little problem and explained how I needed various identities and biographies. He asked me to spell Al-Ayas’ name.

“Let me do a quick look for you right now, Mac.” There was the clicking of a computer keyboard in the background. “OK, got him. Nassir Al-Ayas, the one who came into the country on a diplomatic visa a couple of months ago. Hmm. Looks as if he’s suspected of being connected with the Saudi secret police, their version of the FBI and CIA combined. Apparently a bastard son of the old king, so there’s a connection to the Royal Family. Says here that he died. Last Saturday night, shot by a Secret Service agent who’s disappeared. What’s that about?”

“You don’t want to know, Caspar, trust me. And, tell you what. Do the research on the consulate down in Miami and put it all together in a computer file. I’ll get back to you with an email address to send it to. What you just told me has me a little nervous about doing this over an unsecured phone like this one. Understand?”

“Well, not completely, but probably well enough.” He sounded more nervous than I felt.

“And that’s probably fine. Listen. When you research the consulate, see if there are any family or professional connections between anyone there and Al-Ayas, OK? And, if it’ll make you feel any better, all this is part of an official investigation.”

I had a long history of never worrying about stretching the truth.

“Official? I’d heard you retired years ago, Mac. Went to work with the NYPD or something.”

“I did, and I got shot in the shoulder in the line of duty and was put on a disability retirement. So I’ve got a titanium right shoulder joint and a small New York pension to go with my small federal

pension. Small plus small adds up to, well, still small. So I'm doing some consulting. That's the official part. I'll give you contact information in email, so if you're ever down my way we can get together and I'll tell you all about it, OK?"

I had no intention of doing this, but I wanted him comfortable with the whole thing.

"Sounds fishy, but, then, everything you used to be involved with was fishy. I'll get right on this. Give me until tomorrow."

"I'll call late tomorrow morning. And thanks, Caspar. This will be a big help."

Big help indeed. If the Saudi secret police were part of the SNM espionage, the whole thing was going to be way over my head pretty quickly. I had to find out who in the FBI was handling it.

\* \* \*

I also had another source of information I needed to tap into, one that might be able to provide more details of interest about the late Mr. Al-Ayas. Dolly. I'd kept her business card against just such a possibility.

I hunted around and finally found it in a shirt pocket in the dirty laundry basket. She worked for an outfit that called itself "Sun and Sand Escorts," with offices in Miami Beach and West Palm Beach. I picked the Miami Beach number.

It turned out that the name Dolly was sufficient for them to recognize who I meant—I filed away a mental note to have each girl adopt a unique first name, if I ever ran an escort service—and that they wanted a credit card number to use for a payment guarantee even though I said I'd be paying in cash. I gave them the number from one of Bill's cards, the same one that I'd maxed out for cash at an ATM before Bill told me I was back to being retired, and they said that Dolly would be calling me soon to make arrangements to meet me.

While I waited, I tried not to think about what she might be doing that was taking her so long.

She finally called back about three, and, from the yawns, I decided she must have been asleep all day. The escort world works at night, I remembered.

"Thanks for calling, Dolly. I'm the guy you met last Saturday night in that apartment in Coconut Grove, Nassir's place, remember?"

There was a long pause and then another yawn. "Oh, yeah. Moustache, black hair, glasses. Yeah. So, you liked what you saw and want some, or what?"

"Of course I liked what I saw, you know that. But I just want to talk. I'll pay for your time, but it's just talk, really. And I, uh, shaved my moustache and my hair's not so dark now. You'll see. Where can I meet you for a drink?"

"Mister, if you knew how many guys tell me they just want to talk and then they can't keep their hands off me, well, you'd know just how dumb that sounds. But, hey, I'm game. Like I tell everyone, it's \$200 an hour just to talk, anything else is more, OK? And if you've got a car, you can pick me up and we can go wherever you want."

She suggested that she meet me at an intersection in North Miami Beach, and the vision of picking up a hooker on a street corner reminded me of what she'd been wearing when I last saw her.

"Oh, Dolly? Can I ask a favor? We'll probably go to a quiet lounge I know for a drink, and I think they'd appreciate it if you, well, covered up a little, you know? It's the kind of place that grandmothers go to, and we really don't need to draw attention to ourselves because of the way you're dressed, OK?"

There was a pause and then a quiet laugh. “Whatever turns you on, honey, sure. See you soon.”

By the time I got myself organized and ready to go, it was time for the afternoon traffic, and it took me over an hour to get to the Collins Avenue intersection where I was to meet Dolly. But she was there, easy to pick out among the other girls standing around because of her socially acceptable garb—she would have fit in among the staff at just about any conservative law office, while the others wore skirts cut up to their crotches and shirts opened down to their navels. And she even had her hair toned down—I realized that the other time, she’d been wearing a wig, and her own hair, blonde as ever, was cut nearly as short as mine.

I waved as I pulled over to the curb, and she saw me easily because I was in the Cobra.

“Well, it sure took you long enough to get here, honey. The clock started a half-hour ago.” She looked slightly miffed.

“Sorry, Dolly, really, I’m sorry. It’s the traffic. And your clock is fine with me.” I tried to look guilty. “So, I didn’t introduce myself before, and I’m betting that you’re not really Dolly on your drivers license. Want to trade real names?”

With a roar from the race-tuned V-8, I pulled into traffic, and her eyes got big as the little car shot forward. “Can’t. It’s against the rules. They told us it’s for our own protection.”

She was clinging to the hand-holds I’d put on the center console and on her door, so I eased off the throttle a little. I looked over to see if she was OK, and it hit me like a run-away cement truck: she looked just like Joanie, all grown up.

*Top-down under the warm California sun, the patched-up Triumph TR-6 purrs north on the coastal highway toward Big Sur, almost driving itself it handles so well. This is a good thing, because I’m completely distracted by the sweet young thing sitting beside me.*

*“Oh, thanks so much for stopping to pick me up, mister, thanks so much. I didn’t think I’d ever get a ride, you know? My name’s Moonglow, what’s yours? I’m headed for Monterey, up the coast, you know? There’s a concert there I don’t want to miss. Want some acid? It’s pretty pure—I tried some yesterday and it was real mellow, no bad vibes at all. Not like that other stuff that Jimmie scored, it had too much speed in it and it was a real bummer, a rough trip for sure, you know? Anyway, where are you headed?” She finally stops to take a breath.*

*I laugh. “No, thanks, I don’t like to drive while I’m tripping, especially not on a road like this. But thanks for asking. ‘Moonglow’? I bet that’s not what your parents call you. I’m Mac. I’m in college down at UCLA, and I’m headed for that concert up in Monterey, too. Got tickets? I’ve got extras.”*

*“Oh, man, far out, that’s great. How much? I was gonna have to score some somehow, but this is great!” She giggles and squirms around, tossing her long hair in the wind.*

*It takes me about two minutes more to decide I’m in love, but I’m too shy to say anything. Besides, she’s talking non-stop.*

*By the time we get to Big Sur, I’ve heard her life story—somewhere in there it slips out that her parents call her “Joanie”—and have even managed to slide some of my own background into the few pauses. We stop in Carmel for supper, and she trades me a little bag of Acapulco Gold for my extra concert tickets. Then I get a sisterly kiss on the cheek just before she jumps on the back of a Harley Davidson, behind a guy I know better than to mess with, and zooms off forever.*

It took that memory a minute to fade and for the current reality to come back into focus.

“Oh. Well, fake names sound like a reasonable approach, most of the time. But this is different. Like I said, even though you don’t believe me, all I want to do is talk. And it has some legal issues behind it, so real names seems like a good idea. I’ll start. I’m Hamish MacQuarrie, but everyone calls me Mac. I used to be a New York City cop, and before that I worked for the Feds in Washington and overseas. What’s going on is, your Saturday-night john, Nassir Al-Ayas, he was involved in a terrorist operation to steal some plutonium and other nasty stuff that you can make nuclear bombs out of. I’m working with the Feds to investigate it, and I need your help. That’s why your real name is important—believe it or not, your real name will keep you *out* of trouble in this situation.”

I let her think about it as I worked my way north and west toward the interstate.

“Why should I care? And, for that matter, why should I even believe you?” A glance at her told me that she was staring at me with eyes squinted, mouth pursed—one very suspicious lady.

“Didn’t I treat you right on Saturday? Because I’m not a Fed or a cop any more, I was able to let you go when they would have kept you around for questioning, maybe even arrested you as an accomplice. Right? And I came to find you myself instead of giving that business card to the Feds, right? I’m not saying you owe me or that I expect anything, but it seems like you could cut me some slack in the trust department. Thing is, this is a huge deal to everyone. We don’t want these jerkweeds to actually steal any plutonium, after all—it could be used for a terrorist attack worse than nine-eleven. And you just might have some information that would help us get the rest of these guys, even if you think you don’t.” I turned toward her and smiled. “Besides, I have *such* an honest face.”

There was a long pause.

“Winslow, Samantha Winslow. But don’t you *dare* ask me for my birthday.” She was staring straight ahead.

I smiled more. “Gotta say, I like ‘Samantha’ better than ‘Dolly,’ by a lot. And I like your hair better this way, too. But don’t you dare ask *me* about the clothes, even though they were my idea.”

That got me a giggle, and she began to relax.

I took her to the Seaside Lounge, a beach-side bar at one of the big hotels up in Hollywood, between Miami and Fort Lauderdale, trying my best not to show off with my hot car. The hotel was one of those stupidly pretentious places that had only valet parking, but I liked it because the bar was cantilevered out over the beach almost to the water line, it was quiet enough to hear the waves, and the staff dressed like adults instead of teenie-bopper beach bunnies.

Also, I have a key-lock switch under the dash in the Cobra that puts the car into “valet mode,” which limits the rpms and the gas flow, and locks out the top two gears. So even though it’s a restored ’66 Shelby racer, in valet mode the car drives like a golf cart, a really noisy golf cart. And I’ve been to the Seaside enough that the valet guys knew this, so I trusted them.

We found a table right on the rail over the surf—the tide was in—and ordered drinks, a Myers Rum with soda for me and a Tom Collins for her. That took some doing—she started with a request for lemonade, and I had to run through the “just want to talk” routine again. Even though it was true and even though I put as much sincerity into it as I could muster up, she remained skeptical, so I decided to put my money where my mouth was. I took a fat money clip from a pocket and started counting out \$100 bills.

“Seems like we’re an hour into this, and I’m happy to talk all night. Let’s say, oh, ten hours?” I pushed the pile of bills across the table toward her.

She looked at it for a few seconds, then smiled. “That’s a lot of talking, honey. But it’s your show.”

I'd been watching her face and missed how she did it, but the bills disappeared somehow, as if by magic.

"Just remember, though, anything else is extra, OK?" Her attempt to look coy was not what you'd call successful.

\* \* \*

## Five

I didn't wind up getting my full ten hours' worth of time talking with Sam, as I started calling her after just a few minutes, but that was fine. To my way of thinking, it was quality time that we spent together, and that was what I'd had in mind all along.

I think she was surprised that I didn't come on to her—that it was really true that all I wanted to do was talk. But her acting skills were good enough that she didn't let on.

We talked about nearly everything two people could talk about—ourselves, including some things we had in common and some we didn't (who would think that a hooker would be such an avid golfer?), what we thought of South Florida compared to other places we'd been, where those places fit into the scheme of the Universe, and, finally, our shared experience of the previous Saturday night.

I expect that it was fresher in my memory than in hers—I'd been focused on the fallout from it ever since, and she'd probably had other things to deal with, guys with bulges in their pants and so on. Even so, she remembered details with surprising clarity, adding to my mental portfolio of the incident.

In return, I told her everything I knew about the background of the whole thing, more about the SNM than I'd alluded to previously and various aspects of the government's interest in it. I probably went too far, in terms of revealing classified national security information, but it seemed to me that the probability of a Miami Beach hooker's being a spy was somewhat lower than that of a South Florida politician's being honest—meaning that she qualified for a top-secret clearance.

My candor probably helped matters, too, as she let me take her home to her place in Bal Harbor, north of Miami Beach, when we finally left the lounge at about 2 am, instead of having me drop her off on the corner where I picked her up. The fact that she was beginning to trust me seemed like a positive sign.

At the time, I wasn't sure why that was important to me, but it felt good enough that I savored it all the way home.

All the way, that is, until I got close enough to see the flashing lights. The red and blue and yellow ones.

As I drove down my street, I came to realize that the lights were about where my house was, or, as I noticed as I got closer, where it was supposed to be. My house, instead of a pile of smoking rubble.

Oddly, the first thing I thought about was those bookcases I'd almost finished. All that measuring and sawing and rabbeting and fitting and sanding now turned into matchsticks.

Even more oddly, the thought of it all made me burst into laughter, and that was how the fire chief first met me, the guy whose house got blown to bits laughing about it. He must have thought I was completely nuts—and he treated me that way for the next couple of hours, asking only the simplest of questions using two-syllable words and short sentences.

I was undoubtedly in a state of shock at some level, but my brain was in overdrive. It seemed obvious that the people with whom Al-Ayas was connected had discovered my address somehow, and it was just dumb luck that I hadn't been home. My arms cache—the vault in the closet—had probably survived, though, and I was going to have to figure out how to get at it without raising official suspicions. And, after the implications of the whole thing had crystallized for me, I was keenly aware that my world now consisted of the clothes on my back, the contents of my pockets and that vault, and my Cobra.

At least, I thought, I'll still be able to get around fast.

The rest of that night and the next couple of days were a blur. I managed to eat and sleep, a little, and I accomplished two important things: I found a new place to live, for a while at least, and I got my vault out of the rubble. I also recall dealing with reams of paperwork, for the sheriff's office and for the insurance companies.

The official explanation for the explosion was a gas leak, and the arson investigator's report showed no indications of accelerants or other suspicious circumstances. They found a battered propane tank, empty, in the canal behind the house to verify the verdict. The insurance company that underwrote my homeowner's policy—and I was carrying full replacement value insurance—had an adjuster there the next morning, and my car insurance would replace the Accord, although not its go-fast extras.

Because the insurance companies had fat checks for me, one handed to me, another in the mail, I wasn't going to argue with the explanation—despite the fact that I had never had propane in the house, nor was there a tank left from previous owners. My best guess was that someone with it in for me had snaked a gas line into my attic crawl space and turned on the valve on the tank they'd brought. What set it off—the spark or whatever—was anyone's guess, but Glades View Village was prone to power surges, so it was probably something electrical.

It didn't take me long to decide not to rebuild. Given the price of land in the Village, I thought I would just sell the empty lot, lump the proceeds with the insurance checks, and move into a townhouse somewhere closer to the coast—and take up a new hobby, something less dusty.

Most of it was easy, all things considered, but retrieving the vault required a bit of grunt work and stealth. I rented a heavy-duty mover's dolly and a pickup truck with one of those lift gates, and, early Wednesday morning, nearly 24 hours after the house exploded, I ignored the police tape and dug the vault out of the rubble. The streetlight helped, and the neighbors did, too, by ignoring my activity. The next morning, I ran the entire rig through a car wash, then dropped the vault off at the place I was renting at one of those extended-stay hotels. I had picked one that had a private ground-floor entrance to my suite and easy access to the interstate.

The hardest part of recovering from losing nearly everything was rebuilding my personal inventory—that is, doing the shopping. Some of it was sort of fun, like the electronics. A new computer and printer and digital camera got me up to date, and, because like a good boy I had computer backups in my vault, that part of my life was easy.

But some of the most trivial things turned into a chore. Underwear, for example. For years, I'd been buying the same old thing, replacing what wore out. But now I was able to start from scratch, meaning I had to sort through all the choices. God help me, there was even men's thong underwear in bright colors and animal-skin prints to choose from. At least the whole episode didn't take place just after Thanksgiving, when the rest of civilization is on its annual holiday shopping spree. I don't think I would have survived.

The problem was that, unlike your average American consumer, I never was able to get into shopping as recreation. To me, shopping classified as a necessary evil, unavoidable if you want to put

your hands on what you're buying—otherwise, the internet works just fine. But in the case of underwear, I'd probably have wound up with leopard-skin thongs if I hadn't been at the store to actually look over the choices in person. Then I'd not only have started from scratch, I'd still be scratching.

*I'm surprised to discover that living light has its virtues, that possessions can possess you as much as the other way around.*

*Not that the discovery is voluntary, mind you. I'm living light because I had to make a quick exit from my hotel in Damascus, quick, quiet, and complete. The Syrian secret police figured out my reason for being there. They seem upset that I was trying to plant electronic surveillance equipment in their headquarters. Go figure.*

*All I have to do is to make it to the embassy, but that could be dicey because the word is out: assist the American spy in any way and you and your family will die horribly.*

*But because I've done my homework, I'm in pretty fair shape. My series of safe houses hasn't been compromised, at least not that I can tell, so I'm able to move across town from house to house, on foot, at night. And, because I'm living light, I can carry what's left of my stuff easily.*

*But a change of underwear sure would be nice.*

*This last safe house is just down the street from the embassy, positioned so that I can watch the front gate from an upstairs window. The Syrians know that I'm likely to be headed for that gate, so they have it staked out, openly, blatantly, guys standing around, smoking cigarettes and looking sinister.*

*Although most of the embassy staff is unaware of my predicament, my agency contact knows what's going on, and we're setting up a clandestine entrance for me over night. It involves my sneaking around on rooftops, uncovering an air-gun powered zip line that's been left for me, shooting the line over the embassy wall from the roof across the street, and sliding home down the wire.*

*Not, I assure you, the way I like to spend my evenings. But, because all I have to carry is the briefcase with the super-secret gear in it, I should be able to bring everything sensitive inside to safety.*

*Living light indeed has its virtues.*

By Thursday evening, I was beginning to feel a little more like normal. I'd been out to dinner at my favorite sushi place—my suite had a kitchen, but I wasn't cooking at that point—and returned to settle in by watching something mindless on TV, when the phone rang, the suite's land-line phone.

"Got your life back together yet, Mac?" Bill Petersen's voice was gravelly, as if he had a cold. "Sorry about what happened."

I decided on the spot not to worry about how he'd found me.

"You're sorry. Hell, Bill, you're the one got me into this mess, and then fired me from working on it. Christ!"

I tried not to whine, but I'm not sure I succeeded.

"Yeah, well, that wasn't my idea. But, anyway, you're not fired any more. The SAINTs are back on the case and so are you, at least if you want back in."

I didn't quite know what to say, so I thought for a minute.

"My consulting rate's gone way up."

“OK.”

“Way up, OK? What’s the deal? Why are you back in?”

I was a little surprised that he hadn’t asked how much I was raising my rate.

“You don’t know? Haven’t you been reading the papers?” He sounded surprised.

“Nope. Too busy. What’d I miss?”

“What’d I miss?” he asks. Lord Almighty. What you missed, my friend, is that five SNM storage locations were attacked. It looks like the attacks on Los Alamos, Pantex, Oak Ridge, and Hanford were diversions. The real target was the Indian River Lab. They killed a couple dozen of the lab’s security personnel and technical staff and made off with a nice little stash of enriched uranium, plutonium 239, and some other nasty isotopes. Enough to make a nuke, although we’re betting they just want to make some dirty bombs.”

“Jesus H. Christ! Who’s ‘they’?”

“No idea, although they sent all the networks videos of their success. Al-Jazeera is playing it, but no one else is. It’s predictably grainy and as anonymous as anything I’ve ever seen. They say their next step is a coordinated attack on our business centers. That made the stock market crash, and people in New York and Los Angeles and other places are panicking. Things here in Washington have gotten a little crazy. You want back in or not?”

I suddenly understood why he hadn’t asked about my consulting rate.

\* \* \*

It didn’t surprise me that Petersen had discovered my new living arrangements, but it did surprise me that all of the information I requested arrived by courier less than an hour after the phone call. I was glad to see that the package also included three new sets of identification with more credit cards, passports, and driver’s licenses.

In the meantime, I’d fired up the new computer I’d bought and used the hotel’s free internet connection to do some catching up. As might be expected, the public information about the attacks was more than a little hysterical—even the *New York Times* was sounding panicky. The local papers—Palm Beach, Fort Lauderdale, and Miami—all focused on the Florida connection, but much of their information was sketchy, speculative, and just plain wrong.

Most likely this was because of the obscurity of the Indian River Isotope Laboratory. Unlike the big DOE facilities, IRIL was small and specialized, a couple of compact reactors and some laboratory buildings on a small site on the bank of an estuary on the east coast. And they did a thorough job of avoiding publicity. The only thing Google had on it was a old puff-piece from the *Miami Herald* about IRIL’s role in manufacturing certain medical isotopes. It seemed probable that most of Florida’s citizens didn’t know of its existence until the story about the successful radioisotope heist broke. Because virtually all of the work at IRIL was top secret, DOE kept the facts about the heist under wraps, and the papers had no real information to report on. So they made lots up.

But I knew that IRIL’s job was to develop more efficient techniques for producing radioisotopes for DOE nuclear weapons programs. And while their work was largely experimental, they succeeded in making isotopes in substantial quantities—which had obviously been the target of the attack.

The courier’s package included a review of what had been discovered by the first-response investigating unit from SAINT, of which Bill Petersen was the leader. To the best of their information, a team of between 6 and 10 well-armed attackers had slipped into the facility via the estuary and, during a

shift change for the security staff, gained access to the SNM by shooting as many people as they needed to. This all happened at about 3 am Wednesday, more or less at the same time my house was blowing up. I couldn't help but wonder if my house was another of the diversions, like the attacks at the other DOE facilities.

The entry by water was interesting, a possibility that I knew something about. Years before, back when I was with the NSA, I'd been part of a security audit of IRIL, and we had uncovered significant vulnerabilities associated with the lab's location on the west bank of the Indian River Lagoon, the estuary just north of Fort Pierce. They needed the water for cooling their equipment, despite its salinity, so the location wasn't something they could change. But it was hard to secure, and they also had to deal with environmental considerations—big, cute, fat, slobbery environmental considerations.

The manatees that liked to congregate at the warm-water outflow from the lab drove the IRIL security people crazy. An under-water security fence was instrumented against intruders, but the manatees liked to rub against it, probably to scratch themselves. This set off alarms, so the staff naturally kept the intrusion detection systems disabled when there were manatees around, during the several winter months when the water in the estuary cooled enough to make the big critters uncomfortable. Although the guards used visual surveillance of the area, via underwater cameras and lights, the water was murky and people in diving suits could look like a manatee on the video monitors. And because the guards on duty who might have made this mistake were all dead, it wasn't possible to question them about it.

*It's a cliché, but it's true: dead men tell no tales. I've had this little homily pressed onto my psyche in preparation for my upcoming operation. And the nature of the thing is such that we surely don't need any tales told.*

*My Farsi isn't nearly as good as my Arabic, but it works well enough in Tehran, where the variety of accents gets me by. In the countryside, it's less easy to pass as a native, though, so I'm glad this little caper is to take place in the big city.*

*The problem of the American hostages has occupied the U.S. government for months. Hawks want to nuke Tehran; doves want to continue to negotiate, and by these definitions the President is a dove. But the real peacenik doves have no idea about what he's doing behind the scenes.*

*And except for my little part in it all, I really don't know, either; I just assume there's more than my operation.*

*I mean, there better be. There's no guarantee that I'll succeed, and even if I do, I'm not exactly clear on what bugging the headquarters of the national television station will buy us. All we really have to do is to watch the broadcasts to know it's Ayatollah time all the time.*

*Under the guise of foreign investment in Iran's religious government, I'm working on remodeling a downtown Tehran building for use as offices in a religious import-export business. It's purely coincidence that the building happens to be next to the television headquarters. And remodeling to modernize the old structure involves lots of drilling into whatever the thing's made out of—brick, maybe, or more likely some local version of adobe. In the process of doing this, one of the workmen will be offered a huge bonus to drill completely through our wall and nearly all the way through the one next door, too. That will let me put the gadgets in there so we can hear what's going on behind the scenes in Iranian TV-land.*

*And as much as I hate to have to do it, that particular workman is going to have to disappear. He'll come to work one day and never go home. Poor sap.*

Although the total amount of missing material weighed only about 50 pounds altogether, transporting it would have been complicated. The stuff would have fit easily into a briefcase, its being so dense and all, but that would have been a very stupid thing to do with it, as it would have likely produced critical or near-critical mass, depending on the uranium isotope mix involved. So what was missing was the SNM stored in its “pigs,” as those radiation-proof lead bottles are called. According to the lab’s inventory, there were a dozen of these pigs missing, each bright orange with a red top, about the size of a basketball, each weighing more than 80 pounds. The attackers were therefore carting a half ton of heavy metal around, and they obviously didn’t leave the way they’d come. Those pigs made pretty good boat anchors, after all.

Also missing from the lab was a van specially designed and shielded to transport the awkward containers, and a search by regional law-enforcement agencies had discovered it submerged in an abandoned gravel pit at the end of a canal between Wellington and Loxahatchee, west of West Palm Beach and some 60 miles south of Fort Pierce. The van’s contents included eight empty pigs, which almost literally glowed in the dark, they were so hot. The perps had, apparently, consolidated the SNM into four of the containers—not the smartest thing in the world to do, but expedient, at least in terms of moving the stuff.

Which stuff seemed headed my way.

After the dead bodies were identified and initial contacts with the rest of the IRIL personnel were completed, the roster was still short a few people. This made the members of Petersen’s investigating team, a suspicious group to begin with, even more so. To them, it looked as if the assault had help from the inside.

Over the subsequent day and a half, the list of AWOL personnel dwindled. Willie Finckel, a janitor, had left town without telling anyone in order to visit a sick grandmother in Dixie county, up in Florida’s armpit. The grandmother, 90 years old and the matriarch of a large, extended family, complained of gout and Willie knew how to concoct her favorite folk remedy. Richard C. Withers, IRIL’s assistant vice president for personnel, and Dawn Munroe, his administrative assistant, were found in bed together at the Morning Glow motel, across the Indian River Lagoon out on Hutchinson Island. It turned out that Withers’ cell phone had GPS capabilities that he didn’t know about. Although the report was a bit vague, it appeared that Mrs. Withers was not amused.

Still missing were Hoagland L. Forth, known to all as Hoagie, Lawrence Sutton, and Ali Temekis. Forth and Sutton were mass-spectrometry technicians who worked in quality-assurance laboratories, and Temekis was a supervisor in inventory control. Considerable effort, in the form of a nation-wide manhunt, was being expended to find them.

I read through the report twice, thought about it, and decided to call Bill Petersen back.

“It’s Mac, Bill. So you’re in charge of dealing with this shit storm? Who did you piss off, anyway?”

“It’s because of the history—I had point on the SAINT investigation before, so they handed it back to me now.” He laughed his gravelly laugh. “Same reason I called you back in, basically. You got the package, right?”

“Yep. And I have to say, they did just what I would have done. I don’t know if you remember, but I was part of that security audit the agency did at IRIL. We pointed out the weakness of the waterside security—oh, what was it?—20 years ago, I guess. Except we didn’t know about turning off the sensors because of the manatees. That makes it even worse. We’d probably have closed the place down if we knew about that.”

“Yeah, but that’s the water under the dam, or over the bridge, or whatever.” He sounded tired. “There will be a follow-up investigation, of course, and probably some management heads will roll. But our problem is the stuff that’s floating around out there. DOE’s called in their NEST folks from all over, so at least we’ll have help.”

The Nuclear Emergency Support Teams that DOE employed were scientists, not law officers, so it wasn’t clear to me how much help they could be. But maybe, I thought, they could be helpful with some of the technical details. I decided not to raise any concerns about it.

“You’re right about that, Bill. If they’re going to do a dirty bomb attack, that’s the kind of thing that won’t take much prep time.”

Hell, I was thinking, all you have to do is stick some powdered SNM into a stick of dynamite. Or don’t even bother with the powder part—just use whatever lumps you’ve already got.

\* \* \*

## Six

Even though the SAINTs were supposed to be more secret than Top Secret, their existence had been reported by all of the news media outlets, at universally low accuracy levels. No doubt there would eventually be an investigation into who leaked the information, but the urgency of the isotope hunt put that on the back burner.

My role in the investigation, though, was still under the media radar, and Bill and I agreed that it would be a good thing to keep it that way. He hinted that there might be other people doing consulting as well, but he wouldn’t give me any details. Nor would he provide me with any kind of official credentials such as that fake Secret Service ID I’d had before. Too risky, he said.

But he did give me a 24/7 telephone number to call to get me out of legal trouble, in case my nosing around got me arrested or something. And he agreed with my suggestion that I snoop around the Saudi consulate as my initial assignment.

The first thing I did was to rent another car, a Chevy Malibu, white for anonymity and with a few dings and scratches for authenticity. The Cobra went into storage in a garage I found for rent. It was just too distinctive to be useful for what I had to do.

Although I had a small stash of masquerade supplies left in my vault, I needed to visit a theater supply store for more fake hair and some makeup. After that, I had to hunt around for a while before I found a sporting goods store with the right-sized kayak, and even then I had to paint it black myself, flat black with mottled flat gray and dark brown-green overspray, an attempt at nighttime camouflage colors.

And last, but hardly least, I stocked up on ammunition for my various weapons.

Bill had told me that there were shoot to kill orders out for the perps—illegal orders, probably, but ones backed with the promise of a Presidential pardon. The White House was really, really keen to avoid any dirty bomb explosions, he said.

Thus equipped, I was ready to go isotope hunting.

My previous experience in a kayak had been out west, on vacations to the mountains, so the water was cold. But the current had been fast, with rocks and rapids and even a few waterfalls.

What this meant was that the warm water with waves but no current on Biscayne Bay was something of a new experience for me. I learned quickly not to let myself get broadside to the waves, which meant I had a lot farther to paddle, and it was hot work. But I surprised myself by doing fairly well.

*Mac, old pal, you've done it to yourself this time. Talk about biting off more than you can chew!*

*I'm half-way up the rock face and three-quarters the way to the time limit, panting, arms and legs quivering with exhaustion. Shouts of "Keep going, the rest is lots easier" and "Don't quit now, you're almost there" and "Don't look down" echo up from below. The fact that it's a free climb—no ropes—nags at me, creating a psychological barrier that makes me want to hug the rock, melt into it.*

*But I've got to make it to the top in the time limit if I'm to pass this wilderness survival course I signed up for. Why, I ask myself again, did I think this was a good idea?*

*But the little voice that's nagging me about no ropes reminds me that even if I don't make the time limit, I still have to get myself off the rock somehow. And that even if the top half weren't easier than the bottom half, going up is always easier than going down, at least going down under control.*

*So I reach for the next handhold and step up once more—but my climbing boot slips off the little nub of rock and I slide back to my previous hold, scraping my fingertips raw. I hear someone say "Oh shit!" in the distance.*

*But it turns out that the little slip is just what I need. The adrenalin that it produces gets me going, rejuvenates my tired muscles, and I start upward, slowly at first and then, gaining confidence and momentum, faster. Whoever said it has it right—the top part is easier.*

*And I place my right hand, fingertips bleeding, onto the top of the rock just as the bell sounds. I'm not sure who is more surprised, the instructor or me.*

I'd lashed the kayak onto the top of the rented Malibu and taken it plus a duffle bag full of goodies down to the Matheson Hammock marina, where I parked in the overnight lot. Well after dark, when no one was around, I put out to sea in the kayak, across the bay, headed east into the wind. After paddling for about a half hour, I turned and stroked in the other direction, almost. By angling just to the right of the wind slightly, I managed to avoid tipping over in the waves while still making headway toward the canals I needed to find. It took three such tacks before I managed to find what I was looking for.

Despite the best efforts of well-organized environmental advocacy groups, the mainland coastline of Biscayne Bay was nearly all high-end real estate developments. Like my dredge-and-fill land in Glades View Village, land for houses had been created by destroying the natural wetlands in favor of subdivisions. But along the Bay, the dredged part was canals full of seawater, generally deep enough for pleasure craft. One of those canals, I knew from satellite pictures and nautical charts, reached inland enough to be the water access for the Saudi consulate's estate.

It was convenient that the canal entrance I was looking for off the Bay was marked with stakes—helpful for residents full of beer on their way home from a day in the sun, and helpful for night-time visitors in kayaks, too. By the time I reached the quiet waters of the sheltered canal, it was after midnight, so I had the water all to myself.

Kayaks are interesting little watercraft. You sit on the bottom, sealed in by a spray skirt, a sort of neoprene collar around your waist, so sinking is pretty much impossible. But tipping over is easy, and that possibility had made me extra cautious out in the waves. I'd had lessons on my vacations out west,

where they'd showed me the self-righting maneuver called an Eskimo roll—a quick flick of the paddle could put you upright, should you turn over. Experts used this trick for recreation, but for me it was more of a desperation maneuver.

Still, the outing improved my confidence, and by the time I was gliding through the canals toward the dock of the consulate, I was feeling quite accomplished. Tired and looking ahead to a set of sore shoulders in the morning, especially my titanium one, but accomplished.

With the mottled black kayak and black spray skirt, black clothes and hat, and my face all smudged, I was as invisible as it was possible to be. But that didn't mean I was not going to be seen, because the high-tech gizmos available to paranoid rich people were far more capable than mere eyes. Infrared motion sensors, in particular, were something I was worried about.

In the calm waters of the canal, I didn't really need the spray skirt, so I undid it and pulled out from between my legs several useful gadgets. The small night-vision headset went on my head, turning the world green to my eyes but lighting things up nicely. Now, I knew, I would be able to see any IR sensors that the consulate had deployed. I also booted up the portable decay counter I'd brought, a high-tech version of the old Geiger counter. This one was designed to be small and clandestine, so it recorded the energy of the decay particles—alpha, beta, and gamma radiation—for later analysis and indicated detection counts with only a small blinking LED. After I turned it on, I put it back in its waterproof bag and velcroed it to the top of the kayak where I could see it. Then I re-fastened the spray skirt, put the diving mask with the miniature SCUBA rebreather I'd brought onto my left arm for safe-keeping, and went to work.

My goal was as complete a sampling of the vicinity of the consulate's docks as I could manage—without, of course, being discovered. The SAINTs had sampled the stolen van with a counter like the one I had and were able to identify traces of radioactivity on it as well as in the pigs the bad guys had left behind. But the front entrance of the consulate had come up clean on several drive-by sampling runs. The docks seemed like an obvious possibility.

As I paddled gently toward the docks, I worked at translating the eerie green glow of the night scope into terms I could comprehend. It was a high-contrast, black and green world out there, and nothing looked at all familiar. Gradually, though, the form of the pilings and decking of the docks took shape, and there was a boathouse. Bright green spots, almost blinding in their brightness, on several of the pilings validated my concern about IR motion sensors. I knew, however, that their sensitivity must have been turned down, because otherwise they would pick up birds, jumping fish, even waves. So I thought I might be able to avoid detection if I took things slow and easy.

With the right end of my two-bladed paddle, I sculled my way slowly and carefully along the docks toward the consulate's boat house, watching the detector in its clear bag on the prow of the kayak. There was the occasional blink of the LED, but I'd been told to expect some background detections. Anything real, they had said, would light the thing up like a hyperactive turn signal.

It took until the boat house door for anything to happen, and even then it was not dramatic. But there was a clear indication of radioactivity all around the doorway, and when I eased under the dock to the side entrance, the detector began to get excited. I decided to park there for a while to let the counts in the detector's recording accumulate as a way to improve the analysis to come.

With nothing better to do, I took off the night scope and tried to enjoy the evening. Under the dock, it was reassuringly dark, and the night sounds were soothing in some way I couldn't fully understand—the gentle lapping of water on the pilings and the seawall, insects and the occasional bird noise. A couple of times, a fish must have jumped, because there was a slap and a splash. A car went by on Old Cutler out front of the residence once, sounding far away, and somewhere out on the bay a powerboat of some kind was thrumming up the Intracoastal Waterway.

It was so peaceful that I almost dozed off. To keep myself awake, something that seemed like a good idea at the time, I did a little housekeeping, putting the night scope back by my feet and refastening the spray skirt.

And then all hell broke loose.

I still don't know what I did—maybe it was those motion sensors, or maybe I made some unnatural noise that their microphones picked up. But whatever it was, they were on to me. Lights blazed, and almost immediately there were dogs barking and people shouting, headed my way from the residence. I could see the lights reflected off the water of the canal, and there were stripes on the water around me from overhead lights shining between the planks of the dock overhead.

By the time the thundering hoard of dogs and guards reached the boat house end of the dock, I had pulled my way, piling by piling, to the other end of the structure and had only a couple dozen yards of water to cross to the darkness and safety of the canal, but it was brightly lit water. I was hoping they would search the boat house and give up, but as soon as I saw flashlights probing under the dock, I knew I wasn't going to be so lucky. With no better alternatives, I slipped on the dive mask, put the rebreather in my mouth, and, as quietly as I could, rolled the kayak upside down.

\* \* \*

If I had thought about it ahead of time, I suppose it would have made perfect sense to me that the canal would be deep enough for boats out there beside the dock but not necessarily under it. But since I hadn't thought about it, the face-full of mud that I encountered was something of a shock. I could feel with my hands, though, that the bottom was sloping, so I pushed myself sideways to deeper water.

Having hit bottom, I'd stirred up the murk, and visibility was nil. I could see a dim glow from the water lit by the dock lights, somewhere up ahead of me and over to my left. That was enough to get me oriented.

And I could also hear the activity overhead. The footsteps, both human and canine, were amplified and coming my way, it sounded like.

Slipping off the spray skirt and sliding out of the kayak, I felt less confined and more able to manage the situation. The dive knife I'd strapped to my left leg easily cut a gash in the bottom of the kayak, and all I could do was hope that the air escaping through the hole wouldn't make too much noise. The entire thing was submerged in less than 15 seconds. I pulled the decay counter loose from its velcro and shoved off a piling toward the channel, hugging the bottom.

Once out of the cloud of murk I'd stirred up, the water was a little better, but tidal flow and algae kept the canal from ever becoming crystal clear, probably, because visibility was still limited to a couple of feet. That, I hoped, would prevent the guys on the dock from seeing me gliding along the bottom.

If only, I was thinking, I'd thought to bring dive fins.

As it was, I had a long, lonely swim ahead of me, and it was at least two hours before I got back to the car. Only the first few hundred yards were under water, for which I was glad because that miniature rebreather wasn't designed for lengthy service.

That two hours gave me plenty of time to keep thinking about dive fins—although now and then there would be a splash somewhere that made me wonder about alligators.

*I keep reminding myself to think rationally, keep thinking, do the intellectual bit. After all, I tell myself, any number of primeval things out there can stimulate old, old memories in our reptilian brain, memories that produce irrational responses. And rationality is what you need most just now. So think!*

*Darkness, for example. People evolved with eyes that work well during the daytime, unlike some big cats and other night creatures. So darkness is scary.*

*And abrupt noises, like a sudden clap of thunder. Now, I ask myself, what would make that so fundamentally frightening to us? Were our various ancestor species all threatened by things that made loud noises? Good question, I say to myself—keep thinking about it.*

*Just don't, I remind myself, think about that other scary thing, the one that already made you wet your pants, not that it's important, given the temperature of the tropical ocean and your immersion in it. As I crest yet another wave, I look around for any sign of anything, but see only more wave tops. And the setting sun.*

*Holy crap! The thought intrudes without regard for all of my best efforts at intellectualizing the situation.*

#### *CAN SHARKS SEE AT NIGHT?*

*Because I had managed to don a life vest before the boat sank, I'm able to float without wasted motions, and I'm careful not to kick my legs—don't want to look like bait, after all.*

*At each wave crest, I continue to look around, hoping to see other survivors, seeing only more waves. And the setting sun.*

*And I'm reminded again of how a couple of the guys got hit by the 50mm rounds that we were strafed with, how they were dead before the boat sank.*

#### *NOW THERE'S BLOOD IN THE WATER!*

*But, I remind myself, they're not here or you'd see them, and the blood is wherever they are, not here. So keep thinking about other things.*

*Like how you know just who was in that airplane, who was behind the whole thing. And how they don't expect you to survive, let alone come after them. And keep thinking good thoughts about that locator beacon you pitched over the side before the boat sank.*

*Just keep thinking.*

Eventually, I made it back to the car, cold and tired, but with the decay counter intact. I had one of those adrenalin-rush moments when I couldn't find the car keys on the first try, but that was just because I'd put them in the other pocket.

On the drive back north, I had an hour to think about the nature of covert operations and my role in them.

That adrenalin my system had generated over the car keys was the last of the evening's several doses, and I decided I didn't like it any more. Used to be, 20 or so years earlier, I'd thrived on the stuff like some folks thrive on Starbucks' triple shots. My vacations back then involved adrenalin-generating activities ranging from rock climbing to extreme skiing, and, of course, whitewater kayaking. But having become accustomed to a retirement in which my most exciting activity was trying to get my bookcases not to wobble had changed things.

Mac, I thought, you've turned into a retirement-village couch potato.

That thought was reinforced by how tired I felt.

But I still had work to do that night. When I got back to the hotel, I went through the process of uploading the data from the decay counter to the computer site that Bill Petersen had told me about—it involved nothing more complicated than getting pictures off a digital camera, which was a good thing, because I was having trouble staying awake.

At last, I was able to hit the sack, after first turning everything off, my cell phone, the room's phone—I unplugged it—my computer, everything, and then turning the TV on to an empty channel for white noise to mask the rumble of the trains.

I slept until noon. I remember a dream at some point about a school of little fish and how I had to escape them by swimming through a culvert that got smaller and smaller until I got stuck and they started nibbling on my toes. Then the mud in the culvert smothered me and everything went fuzzy and black.

When I woke up, I was sore all over, and my right shoulder was so stiff I could hardly move it. But at least my toes were intact.

I turned all of my equipment back on while waiting for the coffee to brew, and I found voice mail on the phones and email on the computer. Bill Petersen was working hard to contact me. He had results from the decay counter, and I needed to call him right away.

“Where the hell have you been, Mac? I’ve been trying to get in touch since six this morning.”

“Bite me, Bill. I’ve been asleep. I got in about four after swimming a couple of miles in the ocean for that data I sent you. You could at least thank me first.”

With no coffee in me, I wasn't ready for criticism.

“Yeah, well, we need you at a meeting. While you were out for your swim, one of our guys turned up full of holes. Someone put a clip from an Uzi into him. Things are heating up.” He sounded grim.

“So what about that data I sent you? Do we storm the consulate, or what?”

“Data? Oh, yeah, that file you sent. Nothing. Or, rather, just the same we got out front.”

“Huh? Wait a minute! You told me you didn't find anything out front. And that counter was going nuts last night by the boat house.”

“Yeah, with iodine counts, iodine-131. I don't know what those guys at the Saudi consulate were doing with that stuff, but it isn't something we're particularly worried about. Maybe a private doctor is treating somebody for a thyroid problem, or something. We got hits from it by the front gate, too. It's not the SNM, though. They're clean as far as we're concerned.”

His dismissive tone pissed me off, but at some level I understood.

“You going to make it to this meeting or not?”

I'm not sure what I'd been hoping for, maybe that the decay counter results would show that the SNM was in the boat house and we'd sent in the Marines or something. That would take care of my little problem with whoever blew up my house. But instead there was already a shooting war going on somewhere, or at least that was what it sounded like.

“Right, yeah, I'll be there. Where? Should I expect action?”

“Not yet, this is just planning. Federal Building in Miami, at two. We've got to figure out how to take down an encampment out west of town without making too much of a ruckus.”

“Is that where your guy got shot up?”

“Yep. It’s about 40 miles west, out in the ’Glades, on one of those little islands out there. Our guy was actually just scouting, sitting by the highway with binoculars. Whoever is out there seems to value their privacy in a big way.” Petersen heaved a sigh. “Trouble is, Mac, we don’t know if this is related to our SNM case or if it’s something else. We don’t even know who’s out there.”

Maybe he didn’t, but I thought I might. It was a badly kept local secret in South Florida that what used to be hunting camps in the Everglades had become havens for the international drug cartels. And people who smuggle cocaine could also smuggle other stuff, stuff that glows in the dark.

\* \* \*

## Seven

That Saturday afternoon, I learned I hated meetings in downtown Miami. Well, actually, I knew I hated all kinds of meetings, but those where you have to fight traffic and then pay exorbitant parking rates trumped everything else. Especially on a Saturday. Especially when the other people at the meeting treat you like some kind of slime mold.

But to be fair, the slime mold part worked in my favor, because it let me sit in the back and listen without having to say anything. And I expect the reason for that treatment was that I was the only one at the meeting who didn’t get paychecks directly from Uncle Sam. Federal employees can be a clannish bunch, particularly in crisis situations. I know. I used to be one.

And the death of a Federal agent was, in their eyes, a crisis situation. It turned out that the poor fellow who had been shot full of holes out in the Everglades had been working for the DEA and was, at the time of the shooting, on loan to Bill Petersen’s SAINT operation. Bill held forth at some length about what was known about it.

“Jim Lund was one of us, people, and he drew that assignment the way you all drew yours. What I mean is, it could have been any of you out there last night. Now, I know that we’re all from different agencies and sometimes we compete with each other. But on this case, we’re all working together for the same thing, and the first thing is to find out who put Jim Lund down. Right?”

Even though I’m sure the question was rhetorical, there was a general mumble of assent from the crowd. Petersen nodded with them and continued.

“Jim’s assignment last night was to watch, from long distance, a little island out in the Everglades about 40 miles west of Chrome Avenue, the edge of the developed area. He drove out the Tamiami Trail and parked at a pull-off that fishermen use to access the canal there. This morning, his relief found him dead. He and his car were shot full of holes on the canal side of the car. A boat, or maybe airboat, drive-by shooting, like. The car was closed up, with the motor running and the A/C on—we figure he kept it like that on account of the mosquitoes and the heat. Yeah? In the back.” Petersen pointed at a raised hand.

“Air-boats are noisy as hell, and even a power-boat isn’t real quiet. How come Lund didn’t hear it coming?”

“We found a heavy-metal CD in the car’s player. Lund was out there in the middle of nowhere, with only through traffic going by, no one around. So we figure he was trying to keep himself awake with the CD. And he was watching the island using a night scope, so he wouldn’t have necessarily seen a boat on the canal. What?”

Petersen was looking at someone near the front and listened to a question I couldn't hear.

“Hammock?”

He looked up at the crowd. “OK. I'm told that those little islands out there in the Everglades are called hammocks. Whatever. And he asked if we had any aerial or satellite recon of it. Well, we tried a fly-over with a small plane and got shot at, so something's going on out there. And as you all know, the use of NRO satellite assets over the continental US is strictly prohibited by law. The President, though, was persuaded to issue an Executive Order in this case, so we've managed to get some pictures. And they show a couple of cabins—what someone described as a hunting camp—and, in one of the infrared bands, some kind of operation that's apparently under a camouflage net. Maybe drug processing, maybe something with our SNM, although the particle counters didn't see anything unusual. There are also several airboats pulled up on the side of the island—I mean, hammock—near the cabins.”

Petersen waved at a guy standing over to my left, and the lights went down. A projector on a little platform on the back wall behind me came to life, and the front wall was filled with the image Petersen had described, in full color and exquisite detail. In the upper left corner, an arrow labeled “N” pointed up, and there was a block of text including obvious latitude-longitude notations.

“Here's the visual. Cabins over here, green metal roofs, shiny enough that they're not too old. Satellite dish. Shed, probably with a generator, see the little stack? No outhouses that we can find, which implies some kind of indoor plumbing—so these aren't just old-timer shacks. Half dozen good-sized airboats here. Looks like a fish-cleaning table or something like that over here. The rest looks like trees and underbrush, but pay attention to this area down here in the next picture. It's infrared.”

Petersen waved his hand generally over the lower right quadrant of the image as it changed to a gray-shade blur with several white spots.

“Something is going on down here that you can't see on the visible image—that's what tells us that there's a net over this area. Something's generating heat. Notice the little shed is also hot.”

He pointed at the little whitish rectangle and then two large, darker ones.

“And that you can still see the cabins because the roofs are cooler than the surrounding vegetation. That might be from the fact that they're metal, or it might be from air conditioning, in which case these are not your average, low-budget hunting cabins.”

*I've got satellite imagery on the brain. I thought I knew enough about it to do what I need to do, but it's changed. No more of the old ways, with huge lenses and film canisters spat out by the satellites and picked up in mid-air by the Air Force. It's all digital now, and there's lots of new stuff to learn, unless you want to go the way of the dinosaurs, Mac, old pal.*

*And not only is it all digital now, it's multi-spectral and hyper-spectral, and here, I'm thinking, am I, spectral-phobic. Used to be, you could capture pictures of whatever light or other kind of radiation your film was sensitive to. That meant visible and infrared, and some particle signatures, too. But now, there are photo-detectors for just about any wavelength imaginable. Some such images don't show much, but you never know, you need to look at them anyway.*

*The analysts call each picture a “data cube”, a three-dimensional image. Two dimensions are the usual horizontal ones, call them north-south and east-west. The other dimension is wavelength, the colors of the data at a particular place, a spot on the horizontal grid. And the numbers in the data cube are the intensities of the colors at that place (all, of course, at that particular time, for there's another data cube coming along in just another millisecond. Ready?).*

*But handling the data cubes, the analysts tell me, is what the computers are for. Big computers, super ones. The computers will handle the data. Your job, Mac, should you decide to accept it, is to help the computers make sense of it, turn that data into information, knowledge. You'll work with us and ask questions, we'll translate those questions so the computers can understand them, and we'll get answers that way. Got it. Ready? Go!*

*I decide, on the spot, that I don't want to accept it, that what I'm ready for is the NYPD position I've been offered.*

“So who owns them, anyway, those cabins?” The voice came from about the middle of the crowd.

“Good question. It's on the Miccosukee Reservation, with a 99-year lease currently held by something called Western Investment and Import, which is owned by something called Liberation Twenty Group. Because it's Saturday, that's as far as we've been able to get. So far, though, there are no real names, just these shadow companies.”

Petersen picked up a little remote controller and pushed a button. The gray blur faded back to the colored details.

“Anyway, it looks as if there could be as many as a thirty or even forty people out there, with these big airboats you see here. And if they're keeping any kind of lookout, there's no way to mount a surprise attack, because, as was pointed out, airboats are noisy. We can't really just go in with an air strike, either, because we don't have enough solid evidence to justify it. Although, I have to say, I was in the small plane that got shot at, so as far as I'm concerned we do. But others higher up feel differently. So what we're going to do is put you all on attack helicopters, a dozen of them, and we'll surround the hammock, hover, and demand surrender. If we get shot at, we'll shoot back with more firepower than they ever imagined. Whatever happens, we'll get you on the ground and see what we see. That's going to involve some interesting logistics, because, as you can tell from this image, there really isn't much in the way of a landing area anywhere. But everyone who goes in this way will be a sworn law enforcement officer, that's why you all were recruited for this mission.”

Petersen stopped, looking for questions, it seemed, and I wondered how I was supposed to fit into this description. I hadn't been sworn to anything, just hired as a consultant.

“OK, everyone, you'll find big envelopes on a table in the hall with your names on them. That's your orders. Omega Team, Mac, stay in here with me, please. Let's move, people.”

And he clapped his hands a few times for emphasis.

I sat in my chair in the back of the room, by the door, watching them file out, catching the occasional sneer tossed in my direction, and wondering what the hell the “Omega Team” was.

By process of elimination, I quickly decided it was composed of the six ramrod-straight fitness freaks who weren't leaving. So I headed to the front to introduce myself.

“Hey, guys, I'm Mac MacQuarrie, and I have no idea whatsoever of what's going on here. Do any of you?”

I tried to put as much friendly into it as I could, quite a trick given the intimidating nature of the group.

“Mr. MacQuarrie! Happy to meet you. Hell, sir, I'm *honored* to meet you. I've read a lot about you.”

The oldest guy in the bunch—early thirties, probably—had stepped forward, right hand stuck out.

“I’m Commander Ross Bierkens, we’ll all get introduced after the briefing.”

As far as I knew, the only way for him to have read about me was for him to have had access to highly classified archival files at either the CIA or the NSA. Unless he was reading things in the NYPD archives, which seemed unlikely. In any case, his comment couldn’t have surprised me more if he’d told me he was my long-lost son.

\* \* \*

“OK, Gentlemen, This is...”

But Bill Petersen was interrupted by Commander Bierkens.

“Excuse me, Mr. Petersen, but I’ve briefed my men on Mr. MacQuarrie’s background and accomplishments. And I believe you owe us an explanation of our presence here. We, and Mr. MacQuarrie, apparently, are the only people who are still in the dark.” Bierkens didn’t look at all happy.

“Easy, Commander, that’s just what I’m getting to. Part of our problem is that new information is arriving in real time, and we need to plan on the fly. But the short version is that we want your team, along with Mac, to move onto that island—or hammock or whatever the hell you call it—on an airboat, using the noise of the helicopter squadron as cover.”

Petersen did a fair job of standing up to Bierkens’ ire, but he was obviously a little intimidated.

“And be in the field of all that unimaginable firepower you mentioned, should the occupants of the island decide to take a shot at you? No, thanks. I won’t put my men in that kind of harm’s way.”

Bierkens was the picture of square-jawed resolution.

“At ease, Commander.” Petersen’s patience was wearing thin. “If you study your orders, you’ll find that I’m in charge of this operation. The same orders, and they originated at the White House—right?—those orders authorize you as military personnel to undertake a mission on US soil. By Presidential Directive. So I’m in charge, and I’m not without military experience. I’m just as concerned about your team as you are, be reassured.”

He gestured again at the satellite image on the wall.

“We’ll send you in to this area where the airboats are, so that you can secure them against their use by whoever’s there. The two helicopters in this quadrant will have ‘no fire’ orders, the ones across here will keep their fire low to avoid crossfire, and all the others will be required to avoid the airboats as targets—they’ll all be made aware of your presence there, right? And if we shoot back, it’ll be with M134 Miniguns, not rockets, so there won’t be shrapnel for you to worry about. If the occupants do surrender, you’ll be able to move in quickly and secure them as prisoners and begin a survey of the cabins and whatever’s under that net, or whatever it is.”

“Yes sir. Sorry, sir. If you’ve read my dossier, you’ve seen that I have experience with several questionable operations run by civilian agencies.”

Bierkens’ expression was not nearly as contrite as his words.

I watched this with mixed feelings, because I’ve been in the middle of such tugs-of-war on various occasions. Military people, in my experience, can suffer from a serious lack of imagination. On the other hand, civilian agency people seem particularly adept at running operations that define the military expression “cluster-fuck.”

*The afternoon waning, our infiltration team needs desperately to make contact with the local operative, a CIA recruit whose day job is raising melons. We've spent 50 hours working our way from the drop zone through the marshes to this point, and the recruit is supposed to get us into Baghdad somehow—probably in his melon truck, we've decided. But he's not at the rendezvous point at the right time, or at any time for the next several hours.*

*Just as dusk is turning to real night, we hear a truck coming down the road toward our position on the edge of the marsh, and we fade back into the water and the cat-tails, waiting. As it comes closer, we exchange worried whispers through our encrypted headsets—this sounds like a half-track, not a truck! What's a melon farmer doing with something like that? What's our plan for escape?*

*But then there's the melon farmer's voice, calling "Muskie, Muskie, are you here? Where are you?"*

*"Muskie" is me, my code name for the operation, as far as melon-boy is concerned. We wait.*

*Without warning, the rendezvous spot at the edge of the marsh is lit up by spotlights from the vehicle. The farmer is at the center of the blazing circle of light, looking bewildered. We're all certain that there is no possibility that he doesn't know about the vehicle—in fact, we're sure he arrived on it.*

*Then there's a twinkling at the position of the truck, and the sound of automatic weapons fire rolls across the landscape as the vegetation around the rendezvous is shredded, and melon-boy is, too.*

*By then we're well back into the marsh, safe for the time being, but now facing a two-day reverse slog back to the drop zone, low on food and water purification chemicals. And there's no certainty that we'll be picked up at the drop zone, either—what if it's been compromised as well?*

*I'm the lone CIA officer on the team, and I'm the one who takes the heat all the way back, even though I have no idea what went wrong and even though I had nothing to do with recruiting the melon farmer. Taking the heat just comes with being part of the civilian agency that set the whole thing up.*

"Right. Understood." Petersen stared hard at the commander.

"This time, it will work out fine. We'll go in at sunrise tomorrow. The airboats are on the east side of the, uh, hammock, and that will give you the advantage of the sun at your back." And he stalked out.

"I think he's watched *Top Gun* too many times, Commander. 'Sun at your back,' what's he thinking?"

A team member with Senior Chief rating stripes looked disgusted.

"Yeah, well, at least we'll be picturesque, you know, the airboat, the sunrise. Maybe some birds, too." Commander Bierkens grinned, and his men chuckled.

I was introduced around and found that the group knew quite a bit about me already—as Bierkens had said, he'd briefed them. So even though I was a civilian, and an old geezer civilian, by their standards, I was accepted onto the team with something like celebrity status.

My job, I learned, was to be the technical advisor, the radiation counter guy. If the SNM was on the hammock somewhere, I was supposed to find it while the team secured the airboat fleet, protected me, and took prisoners as appropriate.

I was confident of their part of the whole thing—SEAL Team Six, the Navy's ultra-secret counter-terrorism unit, always knew its job and did it well, in my experience. I was somewhat less sure of my own part.

I needed to return home to equip myself, and the Omega Team needed gear, too, so we made arrangements for them to pick me up in a helicopter at the Boca Raton Airport, by the university, well before dawn. Then we'd fly out to a rendezvous point in the 'Glades to board the airboat.

On my way out, I bumped into Bill Petersen in the hallway.

"Your Omega Team isn't real happy, Bill. You'd have done better to let them in on the planning. They know their stuff."

All-in-all, it's generally my preference to have my protectors be as happy as possible.

"Too many cooks ...', Mac. We need to go in as soon as we can, and tomorrow morning's it. And we need those airboats on that island secured, that's what they've got to do. We'll make sure no one on our side shoots at you, I promise." He looked annoyed. "Listen. There's something else I need to talk with you about. Let's go to my office."

He led me to a small, nearly empty office down the hall. It was obviously borrowed for the duration, because it contained only a desk, covered by paper and photographs, and two chairs. We sat.

"Remember when this all started, Mac? I mentioned to you, I think, that Nassir What's-His-Name, the guy you shot, he sent an envelope to a post-office box up in Palm Beach County. We intercepted the envelope and were watching the box, right?"

"Yep, you said something about that. I wondered what it was about."

"Because we got the envelope and then we got taken off the case, all this was before the attacks and the missing SNM, the watch on the mailbox got dropped and the whole thing sort of got lost in the shuffle. But now it's obviously of interest again."

He was poking through the piles of papers on his desk, looking for something.

"You said it was at one of those commercial pack-and-ship places, the kind that also has mailboxes for rent, right?"

"Right. On some street called Palmetto Park Road, ah, here it is." He pushed a sheet of paper my way. "Here's the address of the mailbox place, and that's who rents the box, that Winfrew Hanley person. His street address is real, it's in a development called "Exclusiva at Boca" just southwest of the mailbox place on the other side of I-95. One of those golf and tennis communities with a guarded gate and everything."

"And?"

I thought I knew what was coming, but I wanted him to say it.

"And because you live up there, I'd like you to check it out. We haven't had a chance to, what with the attacks and planning this assault on the island. I don't mean a B-and-E job or anything like that, just drive-by scouting trip. See what the house looks like and so on. Here's a satellite picture of it."

He showed me an overhead shot of the development, largish houses with more land than is usual in that part of Boca Raton, each with either a fairway or lake frontage, some with both. The house in question had a three-car garage, and what looked like a BMW 7-series sedan in the driveway next to another strange looking vehicle that I decided must be a golf cart. There was a pool and a hot tub out back, and a hedge on three sides with an embedded fence. The fourth side, the lake, appeared to be unprotected but probably was not.

"Well, I don't know what I can find out today, Bill. It's Saturday afternoon, getting a bit late. That hedge probably blocks the view of the house from the street, and it's undoubtedly got an alarm system of some kind. And that's the kind of development that you don't just park on the street and wait for

something to happen, because what'll happen is that the private security guards will give you the bum's rush. And there's no telling what it takes to get in through the gate in the first place."

"You're right, but I'm sure you can figure out how to get in there and take pictures of the hedge and the gate to this house. And maybe you'll get lucky and see the owner. Catch him leaving to go out to dinner, or something. I'll get as much information about him as is available and send it to your email."

Petersen seemed sanguine that I'd succeed, but I was thinking this was going to be just another civilian agency cluster-fuck.

\* \* \*

## **Eight**

By the time I got back to Boca, it was nearly five, and I knew I would have to hustle to find out anything about Winfrew Hanley that evening. On my way home—I was beginning to think of my hotel as home, so help me—I drove by the Exclusiva-at-Boca entrance to see what I could see.

Like so many of the high-end communities in that part of Palm Beach County, the developer had put the cost of a good-sized house into a grand entrance façade, in this case a faux castle and drawbridge setup that took advantage of the street-side canal to make the place appear to have a moat. I was sure that the drawbridge didn't really function, but there was a guard gate protected from the weather by the castle entrance. Several large signs warned about security and patrols, apparently to scare off would-be burglars.

There were three traffic lanes, all with lift gates, mini-versions of those standard railroad-crossing gates, one lane outbound and two inbound, a residents' lane and a visitors' lane next to the guard station. I spotted what I'd hoped to find next to the residents' lane—a bar-code scanner.

Because I had my new digital camera in the car—I've learned that you'll never know when you'll need a camera, so having it in the car is always a good idea—I was prepared for what I had to do. I waited for a likely-looking resident to emerge, in this case a soccer mom, harried looking, probably on the way to the grocery for some last-minute items. Probably milk, by the looks of the kiddies in the van, I thought. Following her was trivial.

Sure enough, she headed for the Publix by the big mall, parking and herding her brood toward the store entrance. As innocently as possible, I meandered over to her van and shot three pictures of the big bar-code label on the rear passenger window, using various camera settings. I also measured its size (four spread fingers square) and position on her window (the bottom of the label was a hand-width above my navel).

A while later, with still about an hour of daylight left, I was parked so that the Exclusiva gate guard couldn't see me, waiting for something good to happen. A pizza delivery car was my first bet, but party guests might also be a possibility. I wanted the guard to be occupied with checking credentials.

A bar-code label, in the right position and of the right size, was stuck to my rear passenger-side window, courtesy of the printer I had at home and some cellophane tape from the hotel's business office.

While I waited, I occupied myself by reading the email that Bill Petersen had sent me, background information about Winfrew Hanley: 65 inches tall and 225 pounds or so, late twenties, single, unemployed although he took golf seriously enough almost to qualify as a professional. A black and white head shot showed a pudgy, baby-faced young man of generic northern European heritage. He and

his twin brother Josiah were the only heirs to their father's Ohio department store fortune, and, for his part, Winfrew seemed intent on blowing his share by his thirtieth birthday. Besides golf, no organized social, religious, or political activities of any kind.

As I was pondering this information, I got lucky. Two non-resident vehicles showed up together, one a delivery of dinner from a local Italian restaurant, Cannoli Kitchen, and the other a sedan full of teenagers. I eased through the residents' lane past the bar-code scanner, gave the preoccupied guard a casual wave, and watched as the gate opened automatically for me. The whole thing was disappointingly simple, really. All their supposed security, and I got in with almost no work at all.

But it fit the pattern. I learned early in my career that security measures are more often psychological than real.

*Someday, airport security might actually work. And it's certainly true that its effectiveness has continually increased since the first hit-or-miss metal detectors were installed. But carry-on weapons are trivial to sneak past the bored, minimum-wage airport employees at the passenger checks, although I don't think I'd want to try an M-16. Even the heightened awareness of risk from the Achille Lauro hijacking, where that Palestinian slimeball shot the guy in the wheelchair and dumped him overboard while his wife watched, hasn't placed true security at a higher priority level than passenger convenience, at least not in the U.S.*

*Rather than get too fancy, I've elected to carry on a ceramic sheath knife, invisible to the metal detectors, strapped to my left calf. In every other respect I'm cleaner than the proverbial whistle, so getting stopped for a pat-down is highly unlikely. I've heard that overseas there are passengers selected at random for pat-downs, but that hasn't happened for U.S. domestic flights, so I'm safe.*

*The red-eye flight from Los Angeles to New York arrives at 6 am New York time and makes a quick stop in Chicago in between. Because there's another flight two hours later, a direct flight, this one is nearly empty. How the airlines can make money this way is beyond me, but it suits my purposes perfectly.*

*As soon as we take off and reach cruising altitude, my target moves to an empty row, wedges himself into a window seat, and buckles his seatbelt over the blanket he's covered himself with. Soon he's asleep. I'm expecting this, and, assuming he's operating true to form, also expecting that he's taken his usual light sleeping pill.*

*His name is Boris Memchenkov, although he's traveling under a passport that tells the world he is Benjamin Morris, and he works for the Soviet KGB as an assassin. My job is to make sure that he is put out of commission permanently. Hence the ceramic knife that I've spirited through airport security.*

*After they turn out the lights, I'll move to his row, reach over, and slide the knife between his third and fourth ribs, giving it some back-and-forth wiggles as I do so. As soon as I pull out the knife, I'll put a heavy-duty adhesive plaster over the wound before I cover it back up with the blanket, and disembark in Chicago. By the time his death is discovered, the plane will be sitting at La Guardia Airport and I'll have disappeared.*

*So much for security on domestic flights.*

As developments in Boca Raton go, Exclusiva at Boca was pretty much like the others at its price point—ostentatious houses, all bearing uncanny resemblances to each other, many of their yards hidden by tall hedges or privacy fences and gates, with no cars parked on the street. But the driveways, the ones

that could be seen, were full of luxury cars and the occasional Hummer, as if the occupants used their garages for storage of something other than cars.

Every now and then there was an elaborate cross-walk with huge warning signs about a golf-cart crossing and how carts had right-of-way. Elsewhere there were speed limit reminders and the occasional speed bump for emphasis. It all struck me as rather tacky.

Adjusting for location, which meant a 25% or so premium, the cost of houses in Exclusiva at Boca was probably twice what it was in Glades View Village, at least, but I couldn't help but think that the Village seemed nicer. Big Tony and all the other homeowners presidents made sure that nobody put up front-yard fences or hedges, so there was more of a feeling of openness along the streets. Obtrusive signage was minimal, and there were no speed bumps. It all made me feel smug.

I had no trouble finding Winfrew Hanley's house, where I stopped briefly in three places to get a series of photographs, including a close-up of the gate. If ever there was a good example of "casing the joint", this was it, but the much touted Exclusiva security was nowhere to be seen. I almost got out to check on the brand of lock on the gate, but the security cameras made me think twice.

Satisfied, I cruised around the neighborhood a little more, and I waved again to the guard on my way out the automatic exit gate. With some hesitation, he waved back. I guess he was a little uncertain of my identity, which was my plan all along.

I stopped to pick up a pizza and headed back to the hotel.

Back at home, between bites, I downloaded the new pictures and emailed them, along with the ones of the bar-code label, to Bill Petersen with commentary about Exclusiva access. I also told him that I was too old to do a clandestine breaking and entering job in a house with so much security, so he should get someone else.

Then it was time to pack for the next morning's adventure.

Because I was to be accompanied by a half-dozen heavily armed SEALs, I decided to go light, with only my Sig Sauer 9mm and three full magazines. With the camera and the decay counter, into which I put a fresh battery, I was set.

And it was only 8 pm.

Now what? I wondered. It occurred to me that what I'd been doing before in such situations was working on bookcases, or, sometimes, tackling some home-improvement project or other, like putting up more storage shelves in the garage. Puttering. That's what I needed, was a way to do some puttering. Accomplish some minor thing while passing the time.

Except to do that would require something more permanent than a hotel room to putter in.

So, even though it was less than a week since my house had blown up, I decided it was time to do some house-hunting. The internet being what is, and Realtors being what they are—marketing junkies, among other things—I knew I'd be able to get a good start right at home on a Saturday night.

I began with two-bedroom, two-car garage townhouses with access to the Intracoastal Waterway. And even though I had steeled myself, the sticker shock sent me reeling. I needed a Plan B.

Fortunately, all that had taken long enough that I could sleep on it.

\* \* \*

Alarm clocks at 4 am are not my thing. At least I was living only about ten minutes from the Boca Raton airport, so I hadn't needed to set it earlier. As it was, I managed to brew some strong coffee while I took

a quick shower, and I pulled into the executive parking lot at 4:30. A familiar thwocking noise, inbound, greeted me, and a camouflaged SEALs transport helicopter touched down a hundred yards away, missing the parked Mercedes and Jaguars by a barely comfortable margin.

Two minutes later, we were flitting southwest through the darkness, rows of seats about half-filled with painted-up commandos, all except me armed to the teeth, ready for action. We were wearing huge, noise-cancelling headphones over our earpiece communications links, but the chatter was nil. Everyone was focused on the mission ahead.

It was about 5:15 when we landed at what turned out to be a high-school athletic field loaned to our operation by the Miccosukee Nation. It was their land that we were going to invade, but their leadership had been briefed on the problem, and they, offended at the possibility that they were being used for something so nefarious, were cooperating to the fullest. A deputy from their law enforcement agency was going to pilot our airboat.

Jimmie Nightfisher, our pilot, allowed as to how it would be about a half hour by airboat to the hammock and, depending on their alertness and hearing, the occupants there could hear us coming for at least half that time. This meant that the helicopter squadron needed to be inbound for twenty minutes or so to cover us.

Which also meant that the occupants of the hammock would have those twenty minutes to mount whatever defense they could manage.

After spending several minutes on the radio, Commander Bierkens gathered his team for a briefing.

“Here’s the story, guys. Mr. Jimmie Nightfisher here—he retired as a Army Special Forces Lieutenant, by the way, so be nice to him—he is going to pilot us in. The plan is to arrive just after the helicopters, after they’ve lit the place up and announced surrender terms. With all the lights and the noise, we should be covered, and we can slip into the airboat landing undetected. We think. And, if it works, we’ll be able to round up the people surrendering, right?” He shook head as if dubious that the plan would work. “Lieutenant Nightfisher will get us on the ground and then back off to await a withdrawal signal from me, if we need one. He’ll have a radio, too. Let’s saddle up.”

The first half of the airboat ride was in that pre-dawn grayness that lends a mysterious air to everything you see. Because we first had to navigate waterways in a cypress swamp, the effect was both beautiful and spooky. Moss hanging from the trees and the twisting channel made it impossible to see far, and the close-in silhouettes of the tall trees sliding by made it feel like a fun-house ride.

Then the surroundings opened up into a field of sawgrass, a field that stretched as far as the eye could see, and we headed toward a dark mass on the horizon. As it came closer, it resolved into more trees, a clump of forest surrounded by more sawgrass.

*The road, if you can call it that, is a kidney crusher, but the view out the back of the covered military truck is unbelievable. Afghanistan’s mountains present some of the best scenery I’ve seen anywhere in the world. And even though the circumstances make it a little difficult to appreciate it, I try.*

*Seven Afghans and I are being transported to the nearest Soviet military base for questioning and, later, execution. We had been working our way along an old trading route via camel caravan when the Russians ambushed us. They killed at least two dozen men, women, and children and captured the eight of us survivors.*

*So far, I’ve not been found out. Between the deep tan I’ve developed from the high-altitude sun and the fact that I’ve neither bathed nor shaved for weeks, I look pretty much like a native, although the Afgans still think my Scottish nose looks funny. But the Russians don’t know any better.*

*So I'm watching the scenery and sorting out my few options. Our hands are bound behind our backs, and we're managing to hold onto straps behind us on the rough bench seats. A pair of Russian soldiers carrying AK-47s with big banana clips hold on to the back of the canvas top, framing the mountains nicely. It will be winter soon, and the snows are already coming into the high country. It reminds me of the high Rockies in Colorado, way up there.*

*Suddenly, the jeep with the machine gun that's been following us explodes and flips over, and the two Russian soldiers fall off the back of the truck, each shot in the back. There's another explosion from the front of the truck and it stops with a lurch. About the time we're standing up to untie each other, a turbaned figure on a horse appears at the rear of the truck, providing a romantic-looking foreground for the mountain backdrop.*

*My Pashto is still limited, but I can catch his meaning: "Anybody need a better ride?"*

Our comm links had several channels, and, with nothing better to do, I fiddled with mine. The Omega Team defined the word "taciturn," so I quickly decided conversation with them would be unproductive. Nightfisher was focused on keeping the airboat off rock outcroppings, by some kind of instinct, I think, and I didn't want to distract him. Running aground amidst all those alligators wasn't what I wanted to happen.

So I fiddled, and eventually I found the channel on the comm link that was being used by Bill Petersen's helicopter squadron. They had borrowed attack helicopters from a local National Guard base—maybe "conscripted" would be a better term—and the SAINT pilots were somewhat less than fully experienced in these particular craft, it sounded like.

With twelve of them, they need identifying information, and they'd used colors. But twelve colors required some creativity, so the spectrum was fully parceled out, parceled out in ways that were probably not entirely satisfactory.

I'm just glad I didn't have to ride on—let alone pilot—the "Puce" bird. Mauve, maybe, but not Puce.

Both Jimmie Nightfisher and Ross Bierkens, I discovered, were on this same master channel, so I was able to anticipate our landing within a few seconds of its happening. Nightfisher gave Petersen an estimated on-ground countdown, and Petersen directed the helicopter squadron to approach on the same schedule.

With this warning, unlike the other Omega Team members, I wasn't too surprised when the hammock lit up like mid-day and we ran up on a little beach. The sun was just coming over the horizon, at our backs. And it was rather picturesque, just as Bierkens had predicted.

Even through the noise-canceling headphones, I could hear the thunder of the assembled helicopters, and then an even louder voice over the top of it all.

"Attention in the cabins! United States Federal Marshalls order you to surrender immediately. We are here with overwhelming force. Exit the cabins immediately with your hands on your heads, and lie down on the ground with your arms extended. I repeat, surrender immediately or face overwhelming, deadly force. Exit the cabins peaceably at once."

The front doors of both cabins were facing the beach with the airboat fleet and, to Petersen's credit, our landing spot was kept in the shadows, out of the spotlights on the helicopters. As a result, we had a great view.

A great view of nothing much, at that point, so the high-decibel command for surrender was repeated.

And the front door of the left-hand cabin opened a crack. A white tee-shirt poked out and flapped. It sure looked like surrender to me, and to the Voice in the Sky as well, it appeared.

“White surrender flag noted. We will hold fire. Now exit the cabins with your hands on your heads, then lie down on the ground. At once. Do it!”

The door opened farther, and out came a middle-aged man wearing shorts, boxer shorts in a comedic Mickey Mouse print. He was about 70 inches tall and heavy, maybe 250 pounds, with quite a gut. And hairy, like a small bear. He squinted against the bright lights and made his way into the yard, where he lay down.

But before anything else could happen, he jumped up, frantically brushing himself off. I heard on the comm link a chuckled comment of “fire ants” from Nightfisher, and a “hold fire” order from Petersen. Then the Voice in the Sky thundered forth again.

“OK, we appreciate the situation. You may stand, but keep your hands on your heads, and stand still. Here is a demonstration of our firepower, so you’ll know what you’re facing.”

And a two second burst from a Minigun—a couple hundred rounds—turned the fish-cleaning table 25 yards to our right into matchsticks.

Ross Bierkens’ voice on the comm link was irate.

“Goddammit, Petersen, you son of a bitch! You get any closer to us with that and we’ll take all of you out with our rockets!”

I looked around and saw that the Omega Team had their weapons deployed and sighted on the nearest helicopters. Those big lights, two per helicopter, made inviting targets. Just shoot between them—that’s the location of the pilot, I thought.

Before Petersen could say anything, I butted in. “Sorry to interrupt, gentlemen, but it appears that our captives have chosen discretion over valor. Cover me, Commander, and I’ll see if any of them glow in the dark.”

I was referring to the dozen or so men who had made quick exits from the cabins. All were standing quite still, hands on heads, and all of them, save one who was completely naked and looking quite scared from his shriveled-upness, were dressed in boxer shorts and some briefs. None, though, made as much of a fashion statement as the Mickey Mouse guy. On that basis, I decided to question him first.

I walked carefully out of the shadows, which were fading fast in the dawn, into the brightly lit area, and the assembled men gasped. I took that as a compliment about my carefully applied camo makeup. The Mickey Mouse guy was still smarting from the ants, I could tell, but he was gamely standing as still as he could manage, hands on head.

“Nasty critters, those ants, huh? You got a name?”

I tried to make my inflection half way between polite and rough.

“Hiram, Hiram Milliken, uh, sir. What the hell’s going on, anyway?”

He was obviously scared but also quite annoyed.

I scanned around with the decay counter and didn’t get as much as a wink from its LED.

“That, I think, is what we need to ask you, Mr. Milliken. But, first, is there anyone else in the cabins? You saw what kind of firepower we’ve got, and there are eleven other helicopters with those things.”

Milliken looked around and appeared to be making a head count. “No, we’re all out here, uh, sir. And what’s going on is that we’re having a poker party, that’s what.”

“Hiram, what about the girls?”

A tall, skinny guy in tighty whities nearby managed a stage whisper.

“Oh, yeah. All the men are out of the cabins, is what I meant. There are about a half dozen girls locked in a bedroom in the left one. I didn’t think they counted.”

Milliken didn’t look the least embarrassed.

“‘Locked in a bedroom?’ What the hell’s that about? Commander? I’m going in the left-hand cabin to do a scan and to release some women in there, I think. If you don’t hear from me within one minute, you’re free to do whatever.”

I heard on my headset the double click meaning “go for it.”

Inside, there was a big room with three round card tables holding piles of chips in front of chairs. Despite the air conditioning, the place was quite warm and smelled of beer and cigars. On one side was a small kitchen area badly in need of housekeeping, and on the other was a closed door secured by a throw-bolt. The decay counter was quiet.

I pulled the bolt back and knocked. “Ladies? Are you decent?”

I couldn’t think of anything else to say as I shoved the door open and stepped back. When nothing happened, I carefully stepped into the room.

Inside were seven women, mostly young, in various states of undress, an understandable state of affairs as the room was stifling. My appearance elicited a few squeals of surprise, but for the most part they took me in stride.

A busty brunette sitting on the bed was the first to speak.

“Who the hell are you? And are you going to get us out of here?”

I didn’t know quite what to say, so I looked around at the others. All looked scared, except for one face I couldn’t see. In the corner, there was a shock of blonde hair that looked sort of familiar, but the head was bowed.

“Well, I guess so, get you out of here, I mean. Sorry about my appearance, but I’m one of the good guys, really.”

I stepped toward the bowed head in the corner. “Are you all right over here, miss?”

As I approached, she looked up at me, eyes puffy, makeup smeared, a bruise on her left cheekbone. I was surprised, but somehow not that surprised.

“Aw, *crap!* Geez, Sam, are you sure you don’t want to find another line of work?”

\* \* \*

“She’s what?”

Both Petersen and Bierkens had the same response at the same time, when I announced on the comm link that one of the women was a friend of mine and would be staying with me.

I gave all of the women a chance to get cleaned up and dressed as much as they could manage, and then led them out to the yard. Sam was clinging to me like a kudzu vine on a telephone pole, so I decided she needed the company and let her. Besides, it felt good.

“She’s a friend of mine, long story. Don’t worry about it. But she’ll stick with me—it’ll be OK.”

My tone let them know not to argue.

On my way through the yard, I pulled out my Sig Sauer and gently disengaged Sam.

“You just stand still for one minute, OK? I’ll be right back, I promise.”

I walked over to where Hiram Milliken was standing with his hands on his head, trying not to move despite a few remaining fire ants on his legs.

“So you had these women locked in that bedroom, huh? What the hell is that about, anyway?”

I was holding the handgun to his neck, so I had his attention.

“Hey, c’mon, take it easy, willya? They’re just whores. We’re paying them. Jesus.”

I dropped to one knee, holding the Sig Sauer low to the ground, then brought it up between his legs as fast and hard as I could. The barrel connected perfectly, and he doubled up in agony, his hands leaving his head in favor of other more painful spots. For good measure, I chopped the back of his neck with the butt of the handgun grip, and he collapsed to the ground, stunned. I turned him over with my foot as I watched the fire ants crawling over him.

“Bill?” I had the comm link open as I re-joined Sam. “I think the Commander and I can handle this situation. Maybe you can drop a couple of real Federal Marshals, or FBI agents, you know, somebody with arresting authority. And then your fleet can return to base. I don’t think there’s anything for you to worry about here.”

“What do you think you’re doing, anyway, Mac?” Petersen was not happy. “What was that about? And don’t go ordering me around, got it?”

“Bill? Remember that fiasco in Jerusalem? You sure you don’t want to take my advice and get those airships out of here?”

*As secretive intelligence agencies go, the Israeli Mossad is universally acknowledged as one of the best. They’re so good, in fact, that their most stalwart ally doesn’t trust them, and as a result Uncle Sam has Israel on his list of “special” countries, along with Iran, Iraq, North Korea, Cuba, and Libya.*

*I should be feeling special, I think, because the Mossad has chosen me to be the liaison between their PLO infiltration efforts and U.S. intelligence. And maybe I do feel special, at least if the word’s being used in the way it’s used in, say, “Special Olympics.”*

*That’s certainly how I’m being treated. Even though my Arabic is better than anybody else’s, I’m left out of the information loop on most everything. And when they do pass information my way, it’s done with such condescension that I almost feel as if I should pay them for it.*

*But their reticence is actually helpful, because it gives me the excuse I need to keep them in the dark about some of our activities. In particular, the operation that Bill Petersen is running has certain sensitivities that the Mossad shouldn't know about.*

*It's especially important that they don't know about it just now, because it's quickly falling apart. Not only is there the potential for considerable embarrassment for Uncle Sam, there is some actual danger for Bill's field personnel.*

*So on the one hand, I'm working with the Mossad to place several sleepers into the PLO, while Bill's operation is working to uncover connections to arms dealers that the PLO is using. The thing is, one of the Mossad sleepers is easing his way into the good graces of the PLO by working with one of their arms dealers. If Bill's operation uncovers him, the Mossad will be worse than merely unhappy. And, as we have discovered the hard way, it's not a good idea to have the Mossad unhappy with you, at least while you're in Israeli territory.*

*It's fortunate that one of the things that the Mossad does deign to tell me is the identity of the arms-dealer sleeper. I'm able to pass this along, discreetly, to Bill Petersen, with the suggestion that he and his people lay off this particular individual. Petersen, skeptical as ever, requires some persuading, but eventually he agrees. And when three of his field people are picked up for questioning, I'm able to persuade the Mossad to return the favor, saving Bill's entire operation.*

*He learns to trust me after that, with the occasional reminder.*

The comm link was silent, at least on the channel I was using. But something happened, because the helicopter noises changed and the bright lights switched off, leaving us in the gathering dawn. Ten of the birds peeled away and headed back east, into the sun, while two went into hover mode by the airboats and two men in jumpsuits slid down lines to the ground. Then those two helicopters left as well.

The newcomers were FBI agents assigned to the SAINT operation but, by some stroke of luck, they both had left their attitudes back in town.

"You're MacQuarrie?" The taller of the two stuck his right hand out in my direction. "I'm Special Agent Will Perry, and this is Special Agent Thomas Spellman. We're both out of the Miami office. We're supposed to arrest people, I guess, assuming there's some reason to. Got any ideas?"

I grinned. "Nice to meet you both. Please call me Mac. Now, let's see. Hmm. Well, that guy on the ground there told me that what's been going on is a poker party. But this is Miccosukee land, and they've legalized gambling, so that's probably not a good reason. Seems like they were keeping these women locked in a bedroom, which might classify as some kind of kidnapping, I guess. But I don't know if it would stand up. I have the feeling the women wouldn't want to press charges."

Sam snuggled close to me and whispered in my ear, making me grin some more.

"Say, I know. She just told me that there's a stash of Cuban cigars in there. Maybe you can bust these guys for that."

"Ah, hell, let's just smoke 'em." Thomas Spellman swatted at a mosquito. "Maybe they'd help keep these bugs away."

"Now there's an idea. I bet my guys would appreciate a good smoke."

Ross Bierkens had joined the conversation, so I introduced everyone. Then I looked around and discovered that his men had vanished.

"They went to check out the camouflaged area over there." Bierkens gestured over his shoulder.

Sam whispered in my ear again. I didn't want to discourage this, as the snuggling was most pleasing, but it didn't seem right that she was talking through me.

"Go ahead and tell 'em, Sam. Guys, this is Samantha Winslow. Not at all happy with the living arrangements here, so she's leaving with me." I couldn't help but smile even more.

She cleared her throat. "I heard that guy Hiram say there's a still back there. They're making moonshine, I guess."

Sam's voice was a little shaky, but it obviously gave her confidence to be taken seriously.

The FBI duo looked at each other and managed to say, in unison, "A still?" And they both burst into laughter. Will Perry got control of himself first.

"So this big-fucking-deal SAINT operation—such a big deal that it commandeered a dozen attack helicopters and sent in a squad of SEALs—winds up busting a bunch of guys in their underwear for having Cuban cigars and a still?" He lost it again for a minute, laughing merrily.

"I'm sorry, Mac, but my report is going to read like a Monte Python script. Except for your part. From what I heard on the radio, you get all the credit for keeping this from turning into a huge disaster all the way around. A *still*. Jesus."

We were all laughing when one of Commander Bierkens' men came running up with confirmation of the still.

"It's pretty good stuff, too, Commander. A little early in the morning for me, though, sir."

And then he was laughing, too.

\* \* \*

It wasn't until one that afternoon that Sam and I got back to my hotel. The first thing she did was to jump in the shower.

Rather than arrest the assembled group right away for their Cuban cigars and their moonshine, the FBI agents had decided to obtain an educated opinion, and Jimmie Nightfisher was summoned. He informed us that the still was certainly illegal by Miccosukee law, whatever the Federal law was, but that an arrest would probably be more trouble than it would be worth, given various political machinations that would come into play. His advice was to break the thing up and let it go at that.

The Cuban cigars were dispersed among the SEALs, and Jimmie took a dozen to reward the crew he planned to call in to destroy the moonshine operation. The FBI agents also lit up a couple, and the evidence of the heinous crime of possessing smuggled cigars was destroyed.

Jimmie gave one of the SEALs a quick airboat lesson, and we borrowed one of the hammock's fleet to haul the girls out to where we started. On the way back, Sam tossed her Dolly wig into a gator hole, and we watched an eight-footer attack it, which spooked the other girls. Finally, once on land, Commander Bierkens called in his transport helicopter, and we all took it back into town.

I knew I'd have to be in contact with Bill Peterson at some point, but I made the decision to take the rest of Sunday off, SNM be damned. For one thing, I was tired, and, for another, I needed to have a long conversation with Sam and take her home.

Although I hadn't been using the kitchen in my rental suite for cooking, I had stocked up on food, mostly breakfast supplies. For some odd reason, it felt good to me to be using the kitchen for the first time to make a late brunch for Sam and me.

*It's my first dinner date at home, my first time cooking for my new girlfriend in my first off-campus apartment. An evening, I'm hoping, of even more firsts later on.*

*I've decided to make the latest in-crowd dish, a vegetarian rice pilaf with Basmati rice and assorted vegetables, the more exotic the better. To that end, I've scoured the local groceries for new and different peppers, special onions, pine nuts, and even some dates. A big jug of a very drinkable white wine is chilled and ready, and the pilaf is in the oven.*

*She arrives right on time—I'm a sucker for women who are on time—dressed casually and smelling faintly of patchouli oil. I pour glasses of the wine and suggest an appetite stimulant in the form of a before-dinner joint. Some of the Acapulco Gold I scored in exchange for the Monterey concert tickets is left, and what better occasion for it?*

*We smoke and listen to a couple of album sides, the mood becomes the very definition of mellow. I even remember to turn the oven down so the pilaf doesn't dry out.*

*Finally, we decide we're ready to eat, and I retrieve the pilaf and pour more wine. She comments on how wonderful it smells, and I explain how it's healthy to boot, being vegetarian and all. We sit and dig in.*

*I watch to see how she likes it, but the expression on her face after her first bite isn't what I'd been hoping for. It looks pained, politely pained at first and then openly so when her eyes begin to water. I decide I better taste the stuff and put a big forkful in my mouth.*

*Then I understand her expression, empathize with it, feel it all over my own face all the way to the watering eyes. It makes the local heart-burn joint's four-alarm chili seem like Gerber's strained peas, it's so hot. Whatever buzz I have going from the joint is immediately subsumed by the endorphin rush induced by the capsaicin in the pilaf.*

*Because we're on a date, after all, we're both too polite to spit, so we swallow as quickly as we can and gulp wine, refill the glasses and gulp some more. When we're finally able to talk, she asks me to show her what I put in the stuff. I have more of everything, so I do.*

*As politely as possible, trying hard not to laugh, she suggests that next time I not use habañero chiles. It's the first time I've received cooking tips from a girlfriend. So it's a night of firsts, just not the one I was hoping for.*

She came out of the bathroom wrapped up in my terrycloth robe, toweling her short hair dry. I started to say something, but she held up her hand.

“Wait, Mac. I've got to say something first. When I first heard your voice back there, asking if we were decent, I was so happy I almost burst. But I was also really embarrassed, you know? I still am, some, that you found me in that situation. I have to say, it's not at all the way my assignments usually wind up. Not at all. And when you helped me out of there and I was hanging on to you, well, I've not felt anything that good in a long, long time. So I need to thank you, offer you my thanks any way you'd like it. Know what I mean?”

And she dropped my robe at her feet.

I stared at her for a little while, taking it all in, enjoying every second. I couldn't help but wonder if that wax job had been painful.

“I think I do, and that’s very sweet of you. Too sweet for words, really. But, tell you what. How about a rain check? I don’t know about you, but I’m starving. Why don’t you put that robe back on and have some breakfast, or lunch or whatever, with me?”

It was interesting. She had been wearing an odd expression, sort of distant, I guess, but also with a come hither look about it. And she didn’t look particularly disappointed when I turned her down. As soon as I mentioned food, though, her eyes lit up.

“Breakfast sounds great. Outstanding. I thought I smelled something good.”

I made her an omelet to order, with toast and orange juice and coffee, and took the one I’d made for myself out of the oven, where I was keeping it warm.

We ate for a while in silence, both famished and both, I think, a little shy about initiating a conversation under the circumstances. But I couldn’t let the opportunity get away.

“I hope it’s OK that I introduced you to all those guys by your real name. I’ve come to think of you that way, instead of as Dolly.”

She reached over and patted my hand. “I’m Dolly only to clients, Mac. And you’re not, and neither were they.”

“Good. You know, I was sort of trying to be funny, but I was also serious when I asked you whether you might want to find another line of work.”

She squirmed around in her chair a little, and I knew I’d struck a nerve.

“Of course I would, Mac, you think I haven’t considered it? But there are two things. One is the money. I make good money doing what I’m doing. You’d be surprised at how much I’m able to save for the future. I don’t know of any other job I could have that would let me do that. And the other thing is the service, the company. I, uh, sort of have this contract, where I agreed to work only for them, doing what I do. An exclusive contract. You know?”

I took a while to answer so that she wouldn’t think I was being argumentative.

“I understand about the money, but I don’t understand about the contract. I mean, and please don’t be offended, if Sun and Sand has you under an exclusive contract to prostitute only for them, well, that’s unenforceable, it’s an illegal contract. And if it’s just an escort contract, well, all you have to do is not be an escort for anyone else, surely. I mean, you could get a job as a model or something, couldn’t you?”

“You don’t understand my world, Mac. And I don’t want you to get sucked into it, OK? But the contract doesn’t have anything to do with whether it’s legal or not. It’s about whether it’s enforced by Sun and Sand. And I’ve seen what happens when girls try to break their contracts. It isn’t pleasant.”

It was my turn to reach across the table and pat her hand. And then I held it and smiled.

“Too late, pretty much—I’m already sucked in. And I think I know exactly what you’re saying. What you don’t know is that I’ve dealt with situations like this before. It’s really quite easy to handle. All that’s needed is for me to get you out of your contract. No sweat.”

“Mac, I don’t think you know what you’re saying. You don’t know these guys. How are you going to get me out of my contract?”

“Hey, don’t worry, it’ll be easy. I mean, you saw me out there in the ’Glades, right? It’s not like I’m without connections or experience.”

I smiled some more. “Like a famous movie star said in a famous movie, ‘I’ll make them an offer they can’t refuse.’”

Fourth Edition*

### Ten

I almost skipped the Monday morning briefing that Bill Petersen had called down in Miami, but then I decided I needed to make a trip to South Beach anyway so I might as well go. Once again, I got to deal with traffic and exorbitant parking fees. This time, though, the SAINT crew didn't treat me like slime mold. In fact, to Petersen's consternation, they applauded as I walked into the meeting room. The two FBI agents, Perry and Spellman, had spread the word about how we handled the mop-up at the hammock, I guess.

As I found a chair, I couldn't help but notice that Commander Bierkens and his SEALs were conspicuously absent.

"OK, let's settle down. I want to make this as short as possible."

Petersen looked as if he hadn't slept much.

"I think you probably all know the fallout from yesterday's operation. Obviously, we were operating from bad intel. One thing, though, seems resolved: a detailed search of that hammock found an arms cache that included an Uzi, recently fired. We're checking ballistics against the slugs found in Jim Lund's car and body. Those guys who were out there playing poker have some questions to answer."

A voice from the middle of the crowd broke in.

"Does that mean you're *still* holding them?"

The room dissolved into laughter.

"Ha-ha. Very funny. Look, keep a lid on it, OK? We've got work to do."

Petersen's sense of humor was on holiday, it seemed.

"It all may seem like a big joke, but it turns out that the Miccosukees are grateful for what happened. They've been having trouble with moonshine getting into their communities in recent months. This ought to shut it down. So it wasn't all a complete wash-out, OK?"

He shuffled some papers he was holding.

"Now, as you all know, our number one priority is to find and recover the SNM stolen from the DOE lab up in Fort Pierce, IRIL. Our overall mission is to take charge of the operational side of this, but there is also a huge infrastructure that's been put together in a hurry to handle the intel side. So it's inevitable that we'll be getting some bogus information. That's what happens when you take tips from the public, which is what's going on. We need all the help we can get, and information, 99% of it

irrelevant or just plain stupid, is pouring in. What we have to do now is to sort through the one percent that could be real, follow up on those few tips that might pan out. Right?”

He looked around the room for nods of agreement, but about all he got were blank stares. I decided to rescue him by raising my hand.

“Bill? Do I remember hearing something about a coast-to-coast highway shipping interdiction across the Florida peninsula from, uh, I guess it was about Melbourne to Tampa?”

“Right, Mac. That got put in place immediately after the IRIL assault. There’s no way that the stuff could have gone north by land. Even moving it north by air would have been a neat trick, because all air traffic was monitored closely, still is, in fact.”

“So,” I continued, “that means that the SNM is still in central or south Florida, or it’s been moved offshore by boat somehow, right? What I’m getting at is this: The DOE NEST people have been doing all sorts of airborne scanning for radiation signatures, using ultra-sensitive equipment, and so far they haven’t found anything, right? So it seems likely that the stuff may have been moved offshore. Shouldn’t we concentrate on tips about boats, or something like that?”

“Good idea, Mac. Sounds like you just volunteered. I’ll get you a list.”

Peterson looked so smug I could have socked him.

*My exit interview with the Deputy CIA Director—I’ll never be allowed to say Deputy Director in charge of what—is going badly. My decision to move laterally to the NSA is based mainly on what I see ahead in the way of career opportunities rather than on anything negative at the Company, as we field guys call it, but the DD isn’t buying that. He wants to know what’s wrong. I guess he’s a fix-it sort of guy, and to fix something you’ve got to know what’s broken.*

*“Sir, I’d like to think I’ve given the Company fifteen good years, and I believe it’s fair to say that my successes far outnumber my failures, in terms of the operations I’ve been involved in. What I’m doing is, essentially, looking for new territory to explore.”*

*“I bet it was that last tour in Kuwait that soured you on us, wasn’t it? Well, you’re right—your successes are your trademark, and even that Kuwait business turned out to be a positive, didn’t it? What about if we guarantee you stateside assignments? Would that motivate you to stay with us?”*

*He’s looking pathetically hopeful.*

*“Oh, c’mon, sir, that wouldn’t do at all. First, we both know that stateside isn’t where my talents are. And, second, you have limited slots to fill, and wasting one on someone who isn’t available for overseas operations would be, well, a waste. Really, I’m not disillusioned at all, I’m just restless and looking for new opportunities.”*

*“You’re right, Mac, as usual. Your talents aren’t stateside at all. But what do you think you’ll be doing over at Brand X intelligence agency, huh? You’ll be stuck stateside 90% of the time, and those fine talents will go to waste.”*

*He grins, sits back in his chair, and lets an expression of self-satisfied smugness creep over his face. Perhaps more than anything else, that validates the change, in my mind.*

True to his word, Petersen kept the meeting short so that we could all go off to sort through possible leads based on tips phoned and emailed by the public. I hadn’t been paying attention to television, but apparently a major public relations campaign was underway, soliciting information and offering big

rewards. The list Petersen promised me would show up in my email by noon, he told me, so I was able to head over to Miami Beach earlier than I thought.

On the way, I thought over what Sam and I had talked about. She provided me with sketchy information about some of her recent assignments, and I thought I'd make use of one in which she had been a nude cocktail waitress at a private party on Star Island, at the home of one of the wealthiest South Florida liquor distributors.

She had also filled me in on her rate schedule a little more—the \$200 per hour she'd quoted me for talking was really quite a bargain. Normally, Sun and Sand charged her clients a \$1250 minimum with an additional \$500 per hour for anything over the first two hours. The 24-hour rate, she said, was \$10,000. I had suspected that Sam's Dolly persona wasn't your garden-variety street-corner hooker, but I had no idea.

I tried to get her to tell me how much of that she was allowed to keep, but she wasn't saying. She did confide that she was taking some time off, though, so that her bruise could heal. She thought that her bosses would not object too strongly, as it would coincide with her regular monthly "down week" when she wasn't available for full services anyway.

It took me a while to figure that one out, but eventually it dawned on me.

Sun and Sand Escorts, LLC, occupied an office suite on the ninth floor of a restored Art Deco building on South Beach. The suite was conservatively decorated, and the receptionist seemed to be working hard to show people how affectedly gay he was. Dapper, with a neatly trimmed moustache and goatee, the slight young man named Lance, according to his desk sign, reminded me vaguely of someone, but I couldn't place him.

I'd seen "Nikolay Kirov, CEO" on the door, so I asked Lance if I could see him.

"Well, of course Mr. Kirov is a *very* busy man, you know. Do you have an appointment?"

Lance had mastered the art of eyelash fluttering.

"I understand completely, I'm overextended myself. But I was in the neighborhood and thought I'd stop by on the possibility that he might have just a minute. I have a business proposition for him. Perhaps you could pass him my card?"

And I handed Lance a business card I'd printed up the night before, one that presented me as Randolph Hunt, producer of Major Motion Pictures. I wasn't sure how the boss would react, but Lance was impressed, at least.

"Oh, I will, Mr. Hunt. Motion pictures? *I've* always thought I have star quality, if the role were right. I hope you'll keep me in mind."

The eyelashes went off again as he stood up. After a brief sashay, he knocked on, then entered, a door toward the back of the reception area. It took a minute, then he returned with news that my fake card had also impressed the head honcho, Nikolay Kirov.

"Mr. Kirov has only a minute before a *huge* conference call, but he'd be glad to speak with you."

Lance had sneaked a quick look at a wall clock, so I did, too. Somehow I doubted that a *huge* conference call would be scheduled for 11:39, but who was I to ask questions?

Kirov's office was what I expected: chrome and glass furniture with leather seating, double French doors leading to a balcony with a nice view of the ocean. Little in the way of evidence that actual business was done there.

"Ah, Mr. Hunt. How good of you to visit us at Sun and Sand. What can I do for you?"

He had a trace of a Russian accent, and the proffered hand was meaty but soft.

“I’m sorry to barge in like this, Mr. Kirov, I know you must be busy. But I’m leaving town later today and I’m on South Beach for a lunch appointment, so I thought I’d drop in. It’s good of you to see me.”

I was trying to avoid too much of a used-car-salesman approach, but I did need to do a sales job.

“You see, I’m working on a new project, a major motion picture aimed at the young-adult art-film set. We’re aiming for a fairly hard ‘R’ rating, but it will be a serious film, entertainment with a message, and we’re negotiating with some major stars for the lead roles. And the reason I’m here is that I was at a party the other day over on Star Island, where I ran into one of your people, a woman who I think would fit into a supporting role we’re struggling to fill. We need a real beauty, not too young but with a spectacular body. Someone who can exude the right amount of innocence but who won’t be uncomfortable in nude scenes.”

Kirov’s nod showed his polite interest, but I could see something more in his eyes. Greed, maybe. He stayed quiet, so I continued.

“Anyway, there was a waitress at this party who caught my attention. Right age, amazing body—she wasn’t dressed, it was, um, an exuberant party—beautiful with a hint of innocence. Just what I had in mind. So I talked with her and she said she works for you and I’d need to work out something with you to free her from other obligations. She called herself Dolly.”

“Ah, yes, Dolly. My goodness, you’re interested in her? She’s pushing forty, you know. Perhaps you’d be interested in someone younger.”

My genuine surprise worked in my favor by making it unnecessary for me to put on too much of an act.

“*Forty?* That’s hard to believe, but it’s *perfect*.”

I hoped I didn’t sound too much like Lance.

“You see, this role, in most movies, would go to a younger actor, a young woman hungry enough to want to do the nude scenes in the script. It’s hard to find actors the right age—and we really do need someone in the thirty-five to forty-five range—who are willing to do that kind of thing. Well, unless it’s a porn film, but this is definitely not. It’s art. *Film*, you know? Anyway, what sort of business arrangement might be possible for me to acquire Dolly’s services for our production?”

I’m sure that it was my imagination, but it seemed like his eyes were doing that spinning thing that slot machines do, and they came up dollar signs.

\* \* \*

Haggling has never been my forte. That’s odd, I know, for someone who grew up in Southwest Asia, but there it is. I don’t like it, and I’m not good at it.

And I think Nikolay Kirov sensed that and tried to use it to his advantage. His opening offer was her full-day rate for as long as the “production” needed her. Rather than address that directly, though, I raised another issue.

“One of the things I’ve discovered in the film production business, Mr. Kirov, is that the public is very unpredictable. And while I’m concerned about my art, the backers of my films—the studios and the private investors—they are always interested in the bottom line. In order to make that work out over the long run, and I’ve been very successful at it, if I don’t say so myself, I always keep my future options

open. In this case, that means that I'd like to have an option for additional films with Dolly in them, in case that fickle public takes a liking to her. In short, I'd like to get her under contract rather than just hire her by the day."

He sat bolt upright, and his expression hardened, so I held up my hand.

"Now, I know this may seem to be a radical proposition, but I'm certain that, as a businessman, you can see the merit of the idea if we can work out an appropriate arrangement. All this comes down to how much it would cost for me to buy out Dolly's contract with you, right?"

The dollar signs were back, I could see.

"Well, you know, Dolly is one of our company's best assets. She makes huge amounts of money for us. That's why we're able to command ten grand a day for her, yes? So I don't see how any amount of money could compensate us. In short, as you say, she's not for sale."

Right. Even though she's pushing forty, I thought.

I looked at my watch.

"Oh, damn. I'm afraid that I'm taking up too much of your time for a quick drop-in visit like this, and I have another appointment coming up. Here's what I'd like to do. You say that Dolly's not for sale, but, really Mr. Kirov, as a businessman you know that anything is for sale if the price is right. Could you think about this for a few days? And by all means, think creatively. You have my card, and I'll be back in touch later in the week. I hope we can discuss this more at that time. As I've tried to make clear, I believe that Dolly is precisely the right person for this part I'm trying to cast. I have a lot of experience with this sort of thing, and I've learned to trust my gut. Dolly's it. Really."

I managed as graceful an exit as I could, avoiding Lance's attempts to suck up to me in the process and wondering again where I had seen him before. Then I hit the road for home and what I'd begun to think of as the "boat list."

It was waiting in my email in-box when I arrived. I'd stopped at a Too Jay's deli on the way to pick up lunch and dinner, so I was set to get to work without interruptions.

The list, though, was a mess. I suppose I should have expected that, given its real-time nature, but I didn't see how I could do anything with such a rat's nest of tangled, disorganized information.

It took me some fooling around, but by mid-afternoon I had the thing imported into a database program that allowed me to sort it by the tipsters' names and other information. Because that other information included occupation, I chose that for my first sort. I was looking for people who might be most credible.

That's how I found Annette Trieri's name. She had told the phone operator that she worked in "law enforcement," and that was one of the keywords I was looking for in my sorting process. The operator had been savvy enough to ask for elaboration, and Ms. Trieri had provided the information that, as Chief of Detectives, she held the rank of Lieutenant in the Durango, Colorado, Police Department.

As credibility goes, that ranked pretty high on my list.

And that was a good thing, because Ms. Trieri's tip was a bit odd. She had called ship-to-shore from a cruise ship, the *Earth Explorer*, with the suggestion that our missing SNM might just be on board. The ship's contact number was included, so I put in a return call to her. Because such things take time, I worked on other possible credible tips while waiting for the call-back.

Various marina owners and operators had claimed knowledge of boats that the SNM had left Florida on, and a wide variety of "captains" of various pleasure and other craft had reported suspicious

sightings, but there really was nothing that looked especially enticing. We would have to follow up on the marina owners' tips, certainly, and that meant lots of legwork for someone, or some group.

I was working on a geographical sorting of the marinas, to help the field people, when my suite's phone rang.

"Mac MacQuarrie here."

"Um, my name is Annette Trieri, and I was paged to this phone."

"Right. Ms. Trieri, I've called you because you phoned in a tip to us about that Special Nuclear Material that was stolen. I'm working with the government task force on the problem, and I'd like to talk with you about it."

There was a long pause. "Well, Mr. MacQuarrie, I'm sorry to be suspicious, but how do I know you're who you say you are?"

If her job title had provided her with credibility in my eyes, this question sealed it. "Good point. You don't, of course. Let's see. Would it work for you to call the tip line back and have the call routed to me? I'm not absolutely certain I can pull that off quickly, because there's quite a bureaucracy involved. But I can sure give it a try."

"I think that would work fine. How long do you need?"

"Hell if I know, Ms. Trieri, I'm making this up as I go along. But try the tip line in fifteen minutes, OK? I hope to be talking with you soon."

By scrambling and getting Bill Petersen to scramble, too, we made it work. I don't know exactly what strings he pulled, but my phone rang again exactly sixteen minutes later.

"Mac MacQuarrie here."

"Impressive work, Mr. MacQuarrie. I guess that speaks to how seriously the government bureaucracy is taking this thing, no?"

The humor in her voice painted a beautiful picture of her in my mind.

*Being on foot and in danger in the United Arab Emirates is not how I've planned my trip. But at least the UAE is a high-tech sort of place, so I'm able to call for help while I'm on the run.*

*"United States Embassy, how can I help you?"*

*"Extension 1413 please."*

*Several clicks later, a very pleasant female voice says "Field Services."*

*"MacQuarrie here. I'm sorry to have to make this call, but I was made and I've got people after me. I need a pickup as soon as possible, sooner"*

*"Understood, Mac."*

*That she knows my nickname doesn't surprise me, even though I have no idea who she is. Everyone calls me that.*

*"Can you stay on the line while I set this up? It will help us locate you."*

*"I can and I will. Whom do I have the pleasure of?"*

*"Sally McBride. A fellow Scot. Hold, please."*

*Background music comes on the line, and I take a quick left into an alley, only to find it dead-ends a half block in. I dodge behind a dumpster, hoping my pursuers will miss seeing me.*

*“Mac? I’ve got a car headed your way and it has active tracking. So if you keep moving, they’ll be able to follow you. What’s your immediate situation?”*

*Her voice, calm and collected, is soothing. I think I’m falling in love with her.*

*“Not good.” I’m whispering. “Can’t talk now.”*

*The four goons on my tail have slid to a halt at the mouth of the alley and are playing the “which way did he go” game. Even though the noise of the city would probably mask my voice, I’m not taking any chances.*

*“Well, if you can’t talk, it must not be too good. But, listen, Mac, just hang in there. Our guys are on their way and will be there soon. Your location isn’t too far from here, so it should be quick. Breathe easy, OK?”*

*Who cares what she looks like? As far as I’m concerned, this woman is beautiful. Maybe I should propose.*

*“It is something of a big deal, ma’am. Now, could you repeat the story you first told the operator, please?”*

*“I will, but you’ve got to try not to call me ‘ma’am.’ It makes me feel like a grandma, which I’m not. Please, call me Annette. Now, let’s see. I’ll try to be as clear as possible, but be sure to interrupt me with questions. First, I think it will help if I provide background. The tip, of course, is that I think, or more specifically my husband thinks, that your Special Nuclear Material may be on board the *Earth Explorer*, the cruise ship we’re on, currently headed for the Panama Canal. But the background will be helpful.*

*“My husband, Hal Weathers, is a Dean and Professor of Earth Science at Frémont State University in Durango, Colorado. He was invited by a colleague in Florida to spend ten days aboard the *Earth Explorer* as guest scientist, giving several lectures to passengers and acting as a scientific host. Apart from airfare, his cruise is his compensation, and I got to come for free, too. This is standard operating procedure for the *EE*, as we all call it. They cruise back and forth between Miami and San Diego through the Panama Canal, and, on the way, they operate as a scientific research vessel, taking data from the ocean, temperatures and such, as well as entertaining passengers with science, as it were. There’s the usual gambling and food, too, but the *EE* does these scientific theme cruises. Am I making sense?”*

*“Perfectly, but I don’t see the connection with the SNM yet.”*

*“No, you wouldn’t. But here it is. As the guest scientist, Hal gets the run of the ship, the public areas as well as the crew areas and the scientific laboratories. Now, he and I are always early to everything we do, it’s a sort of compulsion with us, so we boarded early, while loading was still going on. Hal was wandering around in the scientific laboratories, and he told me he saw two lead canisters being loaded—he called them ‘pigs,’ said he heard the term at Los Alamos after I had to ask what he meant. They had radioactivity symbols on them, and they were orange with red tops. A little pig, he said, would be understandable, because some of the oceanographic measurements might need isotopes for calibration, but there were two, and they were big, the size of watermelons or so, he said.”*

*Bingo! I thought. The IRIL pigs were orange with red tops, unique in the DOE universe.*

*“Um, Ms. Trieri, why did you call this in and not your husband?”*

“Well, we talked about it. He thought it would be taken more seriously if it came from me. We figured that the tip line would be getting zillions of calls, and credibility would be what would get attention. My job title is, well, supposed to be impressive that way. And I guess it worked, no?”

\* \* \*

## Eleven

During the conversation, I'd been on the computer searching a screening database Petersen had provided me access to. I learned that Annette Trieri was indeed affiliated with the Durango, Colorado PD and, before that, with the PD in the City of Chicago. She had a BS in political science from Northwestern University and had taken several advanced training courses from the FBI at Quantico and other locations. All-in-all, she was on the “A” list, credibility-wise.

But it was her husband who had purportedly seen the pigs.

“Ms. Trieri, you said your husband's name is Hal Weathers?”

Different last names were common among married couples, especially professional people, so that didn't faze me. But I hadn't found a “Hal Weathers” in the database.

“Yes, that's what he likes people to call him. It's really ‘Harold’, though, if you're trying to do a computer search for him.”

Smart woman, I thought.

“You mentioned Los Alamos. Has he worked there?”

The database yielded to Harold Weathers immediately, with a long entry.

“Not as an employee, but as a summer visitor. This was before we met, though, and I'm not clear on details. Would you like to speak with him?”

It dawned on me that she was staying one step ahead of me with everything, starting with the verification of my first call to her. I didn't know quite how to feel about that.

“I would, if he's available.”

“Hello, this is Hal Weathers.”

She's still one step ahead, I thought. Let's see how he does.

“Mr. Weathers, thank you for being available, and thanks for this tip. I'm Mac MacQuarrie, and I'm with the federal task force investigating the Indian River Lab incident and trying to track down the missing SNM. I understand you may have seen a couple of the pigs?”

“Well, I think so. Not up close and personal, mind you, but I think so. They were a funny color, though, orange with red tops. The ones I've seen at Los Alamos were different.”

Not many people knew that the different DOE sites used different colors for their pigs, and his confusion was a point in his favor.

“It looks to me as if we'll need to get someone on that ship as soon as possible. May I ask a few questions?”

“Of course. I'd be surprised if you didn't” He sounded expectant.

“Your wife said you’ve worked at Los Alamos, as a summer visitor.”

“On four different occasions. They have summer programs for faculty, and Durango is just a couple of hours, well, maybe four, up the road. I worked with their environmental scientists on several problems, including that big radioactive waste sequestration project out in Nevada, Yucca Mountain, back before the project got cancelled. That’s where I ran across their isotope management procedures and learned what pigs look like.”

“Did you have a security clearance for the work at Los Alamos?”

“Still do, a DOE Q. It’s active because I serve on various committees and panels, for LANL as well as for DOE, that need it.”

His pronunciation “lanol” threw me for a minute, but then I remembered that the place is Los Alamos National Laboratory and, like all government operations, acronym happy.

“I’d like to hear your own description of exactly what you saw, the pigs, I mean. She said you saw them being loaded on board.”

“Right. Well, we boarded pretty early in the process, ahead of all the passengers, and after getting settled in our stateroom I went wandering off to see the scientific laboratories and so on. They were still loading supplies, stowing them away, and making ready for departure. I had walked through a door—er, I mean, a hatch—to a big lab and was standing at the top of a stairway platform, so I had a view of the entire room, or cabin or whatever it’s called on a ship. At the other end, maybe thirty feet away, a guy came through a big double-wide hatch with one of those powered hand-trucks, loaded up with all sorts of boxes of stuff. He sort of jumped when he saw me, but then smiled and waved, so I waved back. He opened another hatch, to what’s a storage locker, and started unloading boxes from the hand truck into it. I watched, and at the bottom of the pile were the pigs. Initially, they had been hidden by the boxes. About the time I saw them, the hatch I’d come through opened, almost squishing me, and I had to duck out of the way of one of the on-board scientists. We introduced ourselves and started a conversation, and by the time I looked again the pigs had disappeared.”

“Do you think they went into that same locker?”

“I’m not sure. The hand truck was also gone, so they could have been taken somewhere else. Also, I’ve looked in that locker, out of curiosity, and didn’t see them. Now, they could be there, behind and under some of the boxes in there, I didn’t rummage around. I wouldn’t have blinked at one pig, although I guess I would have expected a small one, not those big boys. But two of the big ones seemed quite strange, I’ll tell you. Particularly in light of the IRIL incident.”

“Any ideas about how I could get on that ship, Mr. Weathers? What kind of cruise is it? What’s your itinerary, do you know?”

“Well, this is a couples’ cruise, kind of strange, I’ll tell you. In addition to the usual scientific complement, we have psychologists on board who are giving “how to have a better relationship” talks and so on. There seems to be an emphasis on hot sex. But I’m strictly with the oceanographic component so I really don’t know much about it. Anyway, we left Miami on Friday evening, stopped at Nassau in the Bahamas on Saturday, San Juan Puerto Rico on Sunday—San Juan’s pretty dead on Sunday, by the way—and now we’re underway to the Panama Canal. We do a transit tomorrow morning and spend a bit of time at the other end, in Panama City. Then it’s off across the eastern Pacific, up the coast of Mexico to San Diego. There’s a stop in Puerto Vallarta, but I forget which day that is.”

“And you’re giving lectures or something, while the other scientists measure things?”

“Right, I have a lecture on climate change this evening. Competing with the casino, not to mention another lecture that has something to do with the *Kama Sutra*, puts me at something of a disadvantage, I

guess. Anyway, the scientific crew, ten people including three Ph.D. scientists, are measuring water properties and variability of phytoplankton distributions. I think on some of the passages they dump minerals into the ocean to see how the phytoplankton respond, then measure the same water mass on the passage back. I get to explain what they're doing to any passengers who are interested in the process. Guest scientist and tour guide, that's me." He laughed.

"Good luck with the lecture. Did you recognize the guy with the hand truck, the one with the pigs, as one of the scientific crew?"

"No, I haven't seen him since Friday. I guess he was just part of the loading crew. Are they called stevedores? All this nautical jargon gets me confused."

"I never picked it up, either. Tell you what, Mr. Weathers. I'll probably be seeing you in Panama City." I thanked him and disconnected.

Then I sat and thought. His database entry verified what he'd told me, and, because of the security clearance, it also provided him with at least as much credibility as Annette Trieri. More, if you counted the experience with the Los Alamos pigs.

My problem now was getting on board that cruise ship without attracting too much attention. A "couples' cruise", eh? Well, I thought, I guess I'll have to find me a better half.

I called Bill Petersen with the news. It wasn't 100% certain that we'd found the missing SNM, but it looked promising. The fact that it was on its way to San Diego, though, was not.

"Hell, Mac, I say we get the Navy after them, out in the Pacific somewhere."

"Slow down, Bill, willya? Weathers said he's not seen that crew member since the day the stuff was loaded, so this may be only a clever way to get the stuff transported. What we really need is to find out who picks it up, right? We can't do that if we send in the Navy. What we need is for me to get on that ship in Panama, get the credentials to go where Weathers is able to go, which is everywhere, it sounds like, and find the stuff. We can substitute empty pigs for the ones with the SNM, or, better yet, just move the material to other pigs and put tracers on the empty ones. Then we'll know where they go when someone grabs them, right?"

"Right, unless the ship itself is turned into a bomb or something. A nuclear detonation in San Diego harbor would not make the President happy."

"If that's the case, then I'll be able to find and disarm it. Did you ever read the report on my little adventure in Paris?"

*In the movies, it always comes down to the last five seconds on the timer, which is displaying its countdown prominently, usually in some kind of distorted time frame—sometimes the timer is slow and sometimes it's fast, depending, I guess, on what the director is trying to accomplish. But during those five seconds, there's a tension-filled choice for the hero between the red wire and the black wire. Or maybe white.*

*In real life, at least this time, all the wires are green and there's no visible timer. I decide early in the process that if there's a beeping noise of any kind, I'm just grabbing a handful of wires and ripping.*

*What they teach you in bomb class is to trace the wires to figure out what they do, keeping in mind that there will probably be dummy ones put in to confuse the issue. The real ones, though, connect among the power source, usually a battery, the timer, and the detonator. Sometimes there's an extra one, to a capacitor of some kind, to act as the back-up power should some meddling fool disconnect the*

*battery first. That wire usually bypasses the timer, is what they teach, so that if you disconnect the battery first, it will go bang.*

*I'm thinking about all this amid the chaos of a Parisian street scene, people milling about, jabbering in French I don't understand, those wee-wah police sirens in the distance, getting closer, the non-displayed timer counting down, in my head at least. The guy with the bomb is unconscious, thanks to me, but the bomb is still thinking, as a blinking diode tells me. That, I've decided, is the timer, the little black cube with the LED.*

*The bomb itself is what looks like C4, plastic explosive, with detonators embedded in it and all sorts of nails embedded in it, too. It will be nasty if it goes off, especially if I'm still holding it. I can't just pull the detonators out, because the bomb-class teacher wouldn't approve and because the C4 and detonators are encased in some kind of clear acrylic. I could break off the wires, but what looks like the capacitor is encased in there, too. Nice trick, I'm thinking.*

*And the bomb-school teacher is right—there are at least five wires that seem to have no real function. I decide to ignore them and choose one of the three leading to the timer cube, whose light seems to have sped up. Oops. Three wires, running into three sides of the cube. Hmm. I pick the middle one, take a breath, and yank.*

*The LED stops blinking, and the crowd around me sighs and jabbars. It's nice to hear them, even if I can't understand what they're saying.*

“Yeah, yeah, you must have told me a hundred times. And for the hundred-first, I still say you got lucky. But, you know, I guess it wouldn't matter so much if you blew yourself and the ship and all those passengers up way out in the middle of the ocean, would it? Except it would be a shame about the ship and the other passengers. OK, let's get you on that cruise ship. What do I need to do?”

I thanked him for his concern about my welfare and suggested that he use some juice to contact the cruise line, or better yet the *Earth Explorer's* captain, and find out if there would be any empty staterooms available at Panama City. A call from the President to the captain, I suggested, might just produce results.

Finding a better half was my own problem, but I had a notion of where to start.

\* \* \*

“A cruise ship?” she asked, surprised. “You want to take me on a cruise ship? Isn't this a bit elaborate for a first date?”

“Second date. And like the first one, when we went to the Seaside Lounge, it's actually business related, so I'm not sure it really counts as a 'date.' Anyway, you said you were taking some time off, so why not do it right, a real vacation?”

I reached her that evening at the home number she'd given me. I explained the situation and warned her that the sleeping arrangements might be pretty friendly, but she wasn't saying “no” so far.

“But I don't want to be on a ship with a bomb. No offense, Mac, but, c'mon. This sounds dangerous.”

“I don't think there are any bombs involved, just that radioactive stuff I told you about last week, encased in lead. And you won't be getting anywhere near it, I promise. You can work on your tan, and I'll buy you a dress or something in Puerto Vallarta, OK?”

“Well, I don’t see how I can turn down an opportunity like this.” There was a giggle. “You going to want to collect on your rain check?”

“Oh, I think I’ll let that be a surprise. But don’t think I’ve forgotten. The sight of you still has me hot, believe me—it’s one of those things I’ve got a photographic memory for and, man, is that photograph ever sharp. Right now, though, I’ve got to save the country from whoever swiped that material. And you can help by coming along, providing me with cover.”

An image of Groucho Marx popped into my head, tapping his cigar, and saying something like “and who wouldn’t want to be covered by you?” But I kept that to myself.

“Well, how do we get there? What do we do?”

“I don’t know details yet, but I will soon. We’ll probably fly to Panama City tomorrow morning and board there. I hope your passport is current. I’ll be back in touch when I know a schedule.”

“I’ll start packing.”

I was thinking about packing myself, when the phone rang.

“Mac MacQuarrie here.”

“Mr. MacQuarrie, this is Norris Swendson, master of the *Earth Explorer*. The President of the United States asked me to call you at this number.”

The voice sounded a little in awe of what it had said to me.

I always like it when Bill Petersen takes my advice, and I like it even more when the advice works.

“Thank you for calling, Captain Swendson. I assume that the President filled you in on the situation, or the possible situation?”

“He did, and I must say, I’m appalled. I’ll do anything I can to help you people out. I’ll put you in one of our best staterooms—I checked, and there’s an outside one on the third deck available, a double suite. And you’ll have credentials to access the entire ship. Do you have any indication of where the material might be?”

He sounded as if he wanted to find the SNM and toss it overboard.

“Your guest scientist, Professor Weathers, was the person who thinks he saw it, and he’ll know. But let me suggest that you simply conduct normal operations until I arrive. It may be that your ship is only being used to transport the material, and we don’t want to show our hand too soon. Can I board in Panama City?”

“Absolutely. And I’ll keep this information to myself, although I think I’ll have a chat with Dr. Weathers.”

“Fine. And what we’ll do is to bring replacement containers on board, empty ones, and transfer the material into them. Then in San Diego we’ll watch the unloading carefully and see what happens to the empty originals.”

“Mr. MacQuarrie, I want that material off my ship as soon as humanly possible.”

“Understood, Captain. We’ll off-load it in Puerto Vallarta, quietly. Or maybe before, if we can manage it. I guarantee that the government wants that stuff back as badly as you want to get rid of it. I hope that the President was able to convey the urgency of this to you.”

I always figure that, whenever possible, not-so-subtle reminders help with establishing pecking order. He was the master of the ship, but I wanted him on my side instead of wrapped up in his own bureaucracy.

*Of all the things that can go wrong with an overseas operation, the ones that always cause me the most trouble are those associated with petty bureaucrats. In Tehran, it's getting a building permit for new plumbing.*

*"To obtain the permit you need, fill out this plumbing form and return it to me." Even with my still-limited Farsi, the greasy little man's first instruction seems simple enough. But the form isn't. I have a question.*

*"Excuse me, but the form for the plumbing permit wants to know whether I'm replacing existing plumbing or adding to existing plumbing. This building I am remodeling has no plumbing at all, so what I need to do is to install new plumbing."*

*"You want to install new plumbing? Oh, yes, well then, you need a new building permit for construction. You can't build a new building without that." He smiles serenely.*

*"No, perhaps I wasn't clear. It's an old building, not new construction. But there's no old plumbing, I need to add new plumbing. To the old building."*

*"Ah, I see. You want to add to existing plumbing. You check this box here." His look tells me that I'm incredibly stupid.*

*"But if I do that, then I need to provide you with information about my most recent plumbing inspection. I don't have that information because there was no recent inspection, because there is no existing plumbing."*

*"Ah, well, that means you first need a plumbing inspection. That's a different department, on the third floor." He points to the door and waves his hand upward in dismissal.*

*"But there's no plumbing to inspect!"*

*"Then you should get some. You will never receive an occupancy permit for an office building if there is no plumbing. We are a modern city, and we require plumbing in all office buildings." He clearly thinks of me as a cretin from an uncivilized village somewhere, one with sewage running in the gutters.*

*"That's why I'm here, to get a permit to install plumbing."*

*"Oh, well, then, why didn't you say so? Here, fill out this plumbing form and return it to me. There is an empty desk right there."*

*"The President honored me with his phone call, Mr. MacQuarrie, and I assured him that he will have my fullest cooperation."*

*His icy tone sounded offended that I might be implying otherwise, which was just what I had hoped for.*

*"I'm sure the President appreciates that, and I'll let him know. And I certainly do, too. I'll get started on this immediately after I board in Panama City, Captain. We'll find this stuff if it's on your ship, and we'll get it off as soon as we possibly can."*

*I think I made him feel reassured, but sometimes it's hard to tell with people like that.*

*Almost as soon as I disconnected, the phone rang, the first of nearly continuous calls until it was time for me to leave, as it turned out. There were also three courier deliveries, and just about breakfast time the next morning Sam turned up, courtesy of a limousine ride from her place in Bal Harbor.*

I had the limo driver wait so he could take us over to the Boca Raton airport. One of those many phone calls had informed me that the Secretary of the Navy was going to send his executive jet to take us down to Panama City.

Sam was still unclear on the concept of a high-priority operation with direct White House involvement.

“Mac? What’s going on, anyway? I mean, these Secret Service agents showed up at my place, scared the hell out of me. I barely had time to get my suitcase—and thanks for that other phone call telling me to get packed and ready, by the way—and they shoved me in this limousine. I haven’t even had breakfast yet. Not even coffee.”

I smiled, trying to offer encouragement and sympathy.

“Breakfast and coffee, really good coffee, on the plane, I think. I hope. What’s going on is that you and I are the single highest priority of the U.S. Government just now, and we’re getting the Treatment. The only trouble is, we’ve got to go along with it. Got your passport? I don’t think we’ll need it until we get to San Diego, or maybe if we want to get off the ship and sight-see in Puerto Vallarta, but in San Diego you’ll need it to get back into the country, probably.”

“Yeah, I’ve got it, but don’t I need a visa or something?”

“Nope. I’ve got everything we need. Lots of government bureaucrats had their beauty sleep interrupted for us last night. Ready?”

I hauled my luggage out to the limo and the driver put it in the back with her single case.

\* \* \*

## Twelve

“I thought cruise ships were big. I mean, way bigger than that.” Sam sounded disappointed. “All the ones I’ve seen in Miami, and Fort Lauderdale, too, are lots bigger.”

To tell the truth, I was surprised as well. The *Earth Explorer* did seem small by normal cruise ship standards. I couldn’t figure out how they could fit the usual array of amenities on board—theaters, shopping malls, casinos, bowling alleys, swimming pools with wave machines, even golf courses, not to mention the dozens of restaurants and bars most cruise ships contained.

Breakfast on the flight down from Boca was even better than I’d expected—the Secretary’s jet came with its very own executive chef, who offered to fix us whatever we wanted. Sam had French toast with Vermont maple syrup and Iowa corn-fed bacon, and I had a Denver omelet, a huge one, and a couple of slices of Virginia ham with English muffins and Montana home fries. Naturally, being dutiful citizens of the Sunshine State, we both had fresh-squeezed Florida orange juice, and, as I’d hoped, the coffee, Jamaica Blue Mountain, was outstanding. Breakfast by geography test was just wonderful.

That breakfast took us most of the flight down to Panama City, and we arrived feeling comfortably well fed, only to be stuffed into an embassy car and whisked to the port. The Treatment didn’t include time for sightseeing, it seemed. They even phoned ahead, for the ship’s officers were waiting to greet us at the dock.

Sam, at least, had the good sense to voice her opinion about the ship’s size before we stepped out of the car.

“Mr. MacQuarrie? I’m Norris Swendson. And these are my senior officers ... gentlemen? Gentlemen, please!”

But Swendson had lost control. As soon as the officers saw Sam step out of the car, she had their undivided attention—and she even had all her clothes on. But I can’t say I blamed them. I’d been so busy with remembering all my equipment that I hadn’t paid much attention back at my place, but then, after breakfast, she’d walked to the back of the plane, to the head, and it about took my breath away. She was wearing some kind of white ensemble, not exactly pajamas and not exactly a pants suit, something flowing and diaphanous yet snug in exactly the right places. It was both the perfect cruise ship outfit and the perfect guy magnet.

Once Swendson figured out what was going on, he gave up and escorted me up onto the ship.

“My apologies, Mr. MacQuarrie. There’s no excuse for that behavior, and I’ll be addressing it later. With as much bathing attire as we have on board, you’d think they would be used to seeing an attractive woman. Although, I must say, she is, shall I say, quite eye-catching. Your wife?”

“No, just a friend whom I asked to accompany me, for cover. Professor Weathers told me that this was some kind of couples cruise.”

This produced a deep sigh. “Yes, I’m afraid so. We run about three of these so-called couples cruises a year. Of all our theme cruises, I find these the most embarrassing. But speaking of Dr. Weathers, I thought I would introduce you to him right away. He and I have both avoided a detailed search for your, um, quarry, but we’re anxious to get started. One thing we did accomplish was to eliminate the locker in which Dr. Weathers thought the material may have been placed during loading in Miami. It isn’t there.”

“Although it could have been moved since it was loaded. Anyway, I have some equipment that will help us with the search.”

I couldn’t help but notice the concern on his face when I suggested the material may have been moved, suspicious ex-spook that I am.

“In fact, Captain, I think it would be a good idea if we went straight to the stateroom you have for us. As much as I’d like to meet Professor Weathers, it’s probably better if we don’t do anything that would raise anyone’s suspicions. Normal VIP passengers you meet on the dock go right to a stateroom, don’t they?”

He looked worried. “Well, yes, that’s true. Do you really think there is someone on board who’s involved in this ... this materials theft?”

“No idea. But I’d rather not take chances. We want to get these guys, after all. Say, is there a map of this ship available, or something?”

Swendson had been leading me through the ship, first on a lower deck, outside along a rail and then inside, through a series of passageways and up several sets of steps, all of which were labeled with some kind of letter-and-number code as ladders. I was thoroughly lost and becoming more and more aware of how confined everything seemed.

*My various government employers, beginning with the Defense Department, have never been shy about putting me in harm’s way. This latest bunch, the people in civilian clothes with offices in Langley Virginia, are no exception.*

*I have to give them credit, though—they’re big on training, specifically designed training that focuses on what particular harm you might be in the way of this time. And another thing they’re big on*

is psychology. They just love to give their people tests and follow-up interviews with shrinks. Some of the tests involve more than just pencil and paper.

*That's how they find out I have what they diagnose as "mild claustrophobia." I suppose I could have just told them that, had they asked the right questions, those shrinks. But they must have seen something from one of the paper-and-pencil tests, because next thing I know I'm being put into little boxes, smaller and smaller ones.*

*I manage just fine until the box about the size of a small compact car trunk, lights out, the one with scratching and scabbling noises, like rats or something, on the ceiling or roof or top. Before it starts, they tell me what is happening, what they are doing. They want to see what I can tolerate, and I'm not really trapped, I can break out of any of the box any time I want to, they say.*

*And I'm gritting my teeth in this trunk-sized box, sweating, telling myself that the noises aren't real, just recordings, when there's a distinct gnawing sound from a corner of the box by my feet, and then a draft of air, as if the rats are on their way in.*

*That, says my subconscious, is enough of that. And they're right: the box is easy to break out of.*

*Well, like I said, they're big on training, so I have the dubious pleasure of attending who knows how many hours of instruction and brainwashing and practice on how to cope with small, tight spots. And it actually works. I'm pretty immune to those panic attacks now—except when rats are involved.*

"There's a map in each cabin, and I have a special one for you that shows the whole ship, not just the passenger spaces. Here we are."

He came to a stop at a door labeled "Executive Suite."

He showed me in and pointed out the various amenities. It appeared that the suite was three regular cabins with connecting doors, set up with the bedrooms on the sides and a small sitting room in the middle. I picked the bedroom on the right and threw the case I was carrying on the bed, which looked queen sized. I couldn't help but think that the perks we were getting would be easy to get used to.

Among other things, the case held my computer and two decay counters, more sophisticated ones than I'd used on my midnight swim—these would read out specific isotopes from the energies they detected. About the time I got one organized to use, the rest of my luggage arrived, along with Sam and her bevy of escorts, all of them falling all over themselves to be extra nice to her.

Swendson shook his head in disgust and frustration, then turned to me.

"I'll find Professor Weathers, Mr. MacQuarrie. Excuse me."

He turned to the fawning group of officers. "Gentlemen! *Gentlemen!!* Come with me, please. Now."

They seemed to understand that his tone of voice meant something serious was up and followed him out.

"Got some new friends, do you?"

I thought Sam deserved a little teasing.

"Too bad I'm not working, Mac. I'd have a full dance card, that's for sure." She winked at me. "Two bedrooms? I guess we're really VIPs, huh? Looks like I'm on the left. For a while at least."

Normally, a comment like that would have commanded my attention for the rest of the day, but I had work to do.

With the decay counter ready to go, I still had to organize the location transponders we planned to affix to the IRIL pigs and test them for readiness. And there was the inevitable and inescapable paperwork. Fortunately, just as I was working myself up to that, there came a knock on the cabin door. It was Swendson and another man, middle-aged, professorial-looking, an inch or two taller than I.

“Mr. MacQuarrie, this is Professor Harold Weathers.”

Swendson started in on the introductions, but I interrupted.

“Please call me Mac, Professor. And I’m glad to meet you.”

I stuck out my right hand, and he shook it with a firm grip.

“Will do, if you’ll call me Hal, Mac. And it looks as if your other boxes have arrived. I was standing at the rail and saw several crates coming on board. They looked heavy.”

“The pigs we’re going to off-load the SNM in, probably. And I’m going to stick one of these doohickies to the stolen ones when they’re empty, so we can track ’em.”

I held up a transponder I had in my left hand.

Weathers was about my age, only his hair wasn’t gray yet. He appeared to be starting a beard, and it showed some salt-and-pepper.

He peered closely at the transponder. “Radio frequency?”

“No, but I can’t tell you what it is, sorry. It blips at thirty-second intervals, each has a different code so we can track them individually.”

He scratched at his not-quite beard. “Hmm. OK. I was wondering because it seems like the metal of the ship would interfere with transmissions.”

I nodded. “Right. That’s why it’s not RF.”

Sam walked out of her bedroom. “Mac, do you know ... Oh, hello, sorry to interrupt.”

“Sam, this is Professor Harold Weathers, but he’ll want you to call him Hal, I expect. Hal, Samantha Winslow, my traveling companion.”

“How nice to meet you, Samantha.”

With her, Weathers shook hands using the two-handed politician’s grip.

“I’ll have to introduce you to Annette, my wife. I’m semi-official on this cruise, and she’s just a passenger, kind of a bored one. Maybe the two of you can keep each other company while Mac and I go exploring. She’s used to a little more excitement than she’s getting—that’s what happens when you work for the Durango PD, I guess.”

He was smiling, trying to be pleasant. Sam, though, looked startled.

\* \* \*

Swendson needed to get the ship underway, but he was insistent that we begin a search as soon as the *Earth Explorer* was at sea. So, after sending Sam off to find an officer to flirt with and to give her a tour, we beat Swendson to the punch by beginning our own exploration of the *Explorer* while he was busy being captain.

Weathers took me first to the laboratory area where he had seen the stevedore unloading the pigs and the other supplies. It was good to have him as a guide, because the crew passageways were even more confusing than the public areas I’d been in earlier. Unlike the public areas, which were designed to

impress the passengers, the behind-the-scenes areas of the ship were cramped, in need of new paint, and dirtier than I would have thought.

Several decks lower than our cabin and well aft, Weathers led me into a large laboratory full of scientific equipment of various kinds. Two people in white lab coats looked up as we came in, but, seeing Weathers, went back to fiddling with a stainless steel instrument package they had taken apart.

“The lockers where I thought the pigs might have initially been stowed are behind those doors over there.” Weathers pointed across the room and headed that way.

He opened the double doors to the storage area while I opened the decay-counter case. Inside the locker were boxes, stacked four high, all with labels describing their contents in various cryptic ways. I recognized the brands of two computer manufacturers and another scientific instrument company, but most of the labels were meaningless to me.

But the signal on the counter display wasn't. “Hal? Check this out. Either those pigs were in here or there's other radioactive material around somewhere.”

He stood behind me and looked over my shoulder. “I'm not familiar with that gizmo you've got, but it looks like it's saying that the signal is way above any reasonable background.”

And it was, well above background on several different energy levels at that, meaning there was, or had been, a complex mixture of decaying isotopes at work.

“But Captain Swendson said you didn't find the pigs in here, right?”

“Right. He and I supervised a small work party while they emptied this locker enough to do a complete inventory. No pigs.”

Weathers stepped back and leaned against one of the lab benches, looking thoughtful.

“And we didn't see anything on any of the boxes indicating any other isotopes. They're supposed to be clearly labeled, and there's no reason to think they wouldn't be.”

“So these counts are probably from contamination left behind when the pigs were stashed temporarily in here. Meaning there's material on the outsides of the containers. Great.” I shook my head. “This is what happens when amateurs handle this stuff. I wonder how badly they've contaminated themselves. And if they even know it.”

“Does that mean what I think it means? We've got a radionuclide contamination incident going here?” Weathers looked worried.

I flipped some switches on the decay counter and studied the display.

“Well, the levels aren't dangerous, and these are mostly alphas anyway. The energies are consistent with our missing SNM, though. This area will have to be decontaminated eventually, but for now all we need to do is to keep people away from it.”

“So it looks like all we have to do is to survey the ship with that gadget, and we'll find the stuff, right? Along with whatever other contamination there is, I guess.” Now he looked hopeful.

“And I have another one in my cabin, so we can split up and cover the ship twice as quickly.” I smiled. “Of course, we need to be as clandestine as we can be, so we don't give things away, right? I mean, someone moved them from here, meaning we've got a conspirator on board. And we don't need him to know we're onto this thing.”

*Covert operations as a way of life leads to strange and wonderful ways of doing things. Avoiding routine becomes the routine. Misdirection is the direction. Prevarication is sincerity.*

*I've been operating this way for so long now I'm not sure what it was like before. Had I ever presented my honest-to-goodness Hamish A. MacQuarrie passport when checking into a hotel? Did I always walk blocks out of my way, doubling back, going in circles, before showing up somewhere for an appointment?*

*At least this Zürich assignment is in the summer and the weather is good, with spectacular mountains reaching up to deep blue skies and flowers everywhere all over the city. I'm wearing comfortable walking shoes and playing the extraordinarily curious tourist, exploring everywhere, asking typically dumb questions, pretending to be suitably impressed with the history and the culture.*

*In reality, I'm making the rounds of a series of blind drops we've set up so that our contacts in the various delegations attending the OPEC Conference on Banking in the New Millennium can keep us apprised of their secret strategies. Although the turn of the century is still a decade away, the amounts of money are so vast and the banks involved change so slowly that the conference is quite timely, all things considered.*

*And it's also quite fruitful for us, given the information that's being passed through my network of drops. I'm still wondering if anything will be done with the information that Iraq will invade Kuwait sometime soon. Anything we do, of course, would tell the world that we know and thereby give up our source of information, so it's possible that the people upstairs will just sit on the information.*

*After all, war is just war. Covert is a way of life.*

“Maybe,” Weathers scratched at the stubble on his chin again, “we should involve Captain Swendson. He needs to know about this contamination, no matter how small it is, and he might just have an idea we could use as cover for our surveys. I mean, you're right—we need to do this quietly. Do you suppose the excuse of an air quality survey would fly? Maybe we could tell everyone we're making sure that there are no harmful chemicals in the air handling system, or something like that.”

I looked at him for a minute. “Hal, I like the way you think. And here's a twist that could improve on that a little. There have been several cruise ships in the news recently, they came back to port with loads of sick passengers from something called a ‘norovirus.’ I think it's associated with food handling, but maybe not, I don't remember. Quite virulent, but not truly life-threatening. Mostly just nasty with the usual digestive-system upsets. Anyway, we could survey the ship for signs of that easily enough. Thing is, the crew know all about these norovirus episodes, and an official check in their sections of the ship wouldn't faze them in the least. So our on-board conspirator wouldn't be worried by it, assuming he's crew. And the passengers will be oblivious.”

He nodded. “And we can make like your decay counter is some kind of bio-sensing device. We could even go around wiping surfaces with tissue, then holding the tissue to the counter. That could improve our chances of finding the SNM, I bet.”

I hadn't thought of that. “Right! Exactly. Let's go find Swendson.”

\* \* \*

Over the course of the next day and a half, Hal Weathers and I discovered just how big the *Earth Explorer* really was. She may not have looked impressive to Sam and me at the dock in Panama City, but that just showed how little we knew about ships.

Weathers and I had no trouble persuading Captain Swendson to support our ruse, and the good captain even came up with some useful suggestions to improve it. He loaned us genuine ship's medical scrubs from the sick bay to wear and announced our supposed task to the entire crew, using made-up credentials for me and Weathers' real scientific credentials as a basis for our work. That we were doing it after putting to sea from Panama, Swendson asserted, had to do with a tip he received about another ship with an outbreak apparently acquired from that tropical port city.

Although we spent most of our time and energy on the survey, we made sure to take time for meals and so on as well. Weathers, I think, wanted to be seen publicly with his wife so that the ship's officers wouldn't think of her as single and available, and I wanted to spend as much time with Sam as I could for my own reasons.

Because she and I had been put into that VIP stateroom, it made sense for us to have dinner at the Captain's Table the first night. Weathers, as the guest scientist for the cruise, was a permanent fixture at that table, so dinner provided the opportunity for introductions to be completed. I was glad to meet the person who had phoned in the SNM tip, but Sam, having heard about Annette Trieri's background in law enforcement, wasn't exactly thrilled about the whole thing. Annette, though, defused the tension easily.

"Samantha, I'm so glad to meet you, because I need to thank you for this afternoon." Annette looked around the table and smiled. "I was lounging by one of the pools trying to read and get some sun, and there was a gaggle of ship's officers clustered around this elegant lady, so preoccupied by her that they left me alone, just the way I wanted it. I've spent five days now being interrupted by their attempts to 'help' me in some way or other. It's been getting tiresome. Samantha came to my rescue this afternoon."

"Both of you, please call me 'Sam,' like Mac does. And I don't quite understand it. I was all the way dressed. You'd think they would have been distracted by those bikinis in the pool." Sam laughed and shrugged. "At least I learned all about the ship—except there were so many facts and figures I can't remember half of them."

Weathers was staring off into space. "Y'know, it would have helped me this afternoon to have someone along when I was doing that survey."

I didn't know where he was going with this, but it concerned me. "Ah, maybe we shouldn't ..."

But he shook his head and winked at me. "Annette, if you and Sam are bored, maybe you could help us out, come along and take notes and so on. I kept getting slowed down by not having four hands."

As a result, I wound up spending most of Wednesday wandering around the *Earth Explorer* in the company of Annette Trieri, pretending to check the ship out for evidence of noroviruses while actually staying on the lookout for radionuclides. She and I covered the upper three decks, while Weathers and Sam took the lower three. We arranged to meet for coffee breaks and lunch as a way to report on progress.

It was one of those scavenger hunts where you make just enough headway to keep yourself interested. We turned up traces all over the place, indicating that whoever had handled the pigs was contaminated enough to spread bits of the stuff around. By late Wednesday afternoon we had a map of our findings, which pointed to a crew cabin on the second deck and traced a route from one of the loading gangways to the storage locker where Weathers had seen the pigs initially.

*How the Russian thermonuclear warhead wound up in the hands of the rag-tag band of Kurdish rebels was something we'll probably never know. Maybe they managed to steal it somehow, or maybe a disaffected Russian nuclear scientist sold it to them. But however they got it, it's my job to coordinate and lead the effort to get it away from them.*

*I'm hoping that the big aluminum suitcase full of \$100 bills—well over 10,000 of them—will do the trick. Assuming, of course, we can find the person in charge. That's the trouble with rag-tag rebel bands, their tendency toward anarchy.*

*It takes two weeks of careful inquiries, serious negotiating, and more bribery than I'm comfortable with, but eventually I'm ushered into the presence of someone who appears to be in charge. My translator is a nervous wreck, and I'm getting sick and tired of toting that damned suitcase around.*

*"He says that he doesn't know what you are talking about, and he wants to know what's in the suitcase."*

*The translator's whisper is an indication of how scared he is.*

*I force myself to remember a favorite old joke, so that I can make my smile reasonably sincere.*

*"Tell him that what's in the suitcase is for someone who knows what I'm talking about. And that the contents self-destruct unless it's opened properly, and only I know how to find out how to open it properly."*

*That much is true: I need to make a confirming telephone call to obtain the combination to the lock on the suitcase, and if the lock is forced, the contents will be vaporized.*

*My host considers my response, then holds forth in an obscure dialect for a while.*

*"He says that he misunderstood, and that he does, in fact, know of a piece of Russian equipment that is in their possession. He also said that his people have been disassembling it to see how it is supposed to work."*

*There's surprise in the translator's voice this time.*

*"Tell him that if he shows me what I need to see, the contents of the suitcase are his."*

*I'm wondering just how far along the disassembly has proceeded and how many people are doomed to a horrible death as a result. And how to tell him of this nasty news.*

*It doesn't matter if it's Russian Special Nuclear Material or American—it'll kill you just as horribly dead either way.*

We met with Captain Swendson and his First Mate to discuss our map. The First Mate took a look and consulted a list of names.

"That cabin houses Engineer Third Class Willoughby Trimble, Captain. This is his first cruise with us, he replaced that guy we fired for drinking, remember?"

Swendson nodded. "I do. And who else is in there?"

"He's alone on this leg, Captain. His bunkmate disembarked in San Juan, that broken clavicle from the Nassau passage. I still don't understand how that happened."

"Captain, you don't suppose this fool has the material in his cabin, do you?"

The map suggested just that to me, no matter how hard it was to believe.

Swendson looked at the map, at me, at the others, and shook his head.

“And I’d thought I’d seen everything stupid under the sun. Just what I need, a glow-in-the-dark engineer.”

\* \* \*

Trimble, it turned out, had a 12-hour duty shift that began at 2000 hours that evening. While on shift, he would be supervised and unable to return to his cabin, so that gave us a window of time during which we could investigate it and take whatever steps seemed appropriate.

But although we had the pigs on board to put the SNM into, should it indeed be in Trimble’s cabin, we really didn’t have the equipment to do a transfer safely. Nor did we have personnel. I could have helped someone with the right training, but I didn’t want to involve civilians in the task, given its risk levels.

What I did have was friends in high places, deep ones, too. It took me a single call to Washington, via the encrypted satellite phone I’d brought along, to determine that the *USS Jimmy Carter*, a Seawolf-class nuclear attack submarine, was on station 1500 meters off our port side, and that Commander Bierken’s team of Navy SEALs, augmented with three nuclear tech specialists, had arrived the previous night. Those phone calls I’d been occupied with the night before we left for Panama City had covered a lot of contingencies.

At 2100 hours on Wednesday evening, Captain Swendson had his helmsman head the *Earth Explorer* into the wind dead ahead slow while all available crew used searchlights to scan upwind for the source of a rescue beacon that was identified as belonging to the *SeaFairer*, a 49-foot Morgan sloop out of Acapulco reported to be missing and foundered. At least that’s what Captain Swendson told everyone. A surprising number of passengers joined the crew at the forward rails to peer into the darkness.

Meanwhile, the SEAL team came aboard at the stern loading hatch of the *EE*, having been put off the *Jimmy Carter* with their duffels of equipment in two Zodiac rubber boats. Within an hour, while the *EE* crew was still on searchlight detail, the SNM was swapped into the replacement pigs and off-loaded into the Zodiacs, the original pigs, now with tracking devices attached, and the cabin they were in were decontaminated, and half the SEALs were headed back to the submarine with the SNM. The others, including Bierkens, were to remain aboard the *EE* to decontaminate the other places we’d noted on our decay-counter map. And to be part of whatever operation in San Diego might be needed when we arrived.

There was still the matter of the glow-in-the-dark engineer, but that meant watching and waiting, mostly.

I missed the fun, because we thought it best that the four of us who had spent the day on the “norovirus” survey continue play our roles. This meant attending the lecture on “Climate Change and You” that Professor Harold Weathers, Ph.D., presented at 9:00 pm and the following reception in the Silver Ballroom and Salon, at which Captain Swendson spent a lot of time nervously checking his watch.

I guess I should qualify it when I say that I missed the fun—what I meant was that I missed the fun with the SEALs. After the reception and a nightcap with Hal Weathers and Annette Trieri, Sam and I retired to our fancy suite, and she decided that her own bed was too big and empty. So she tiptoed into my room to share mine.

And all I'm going to say about that is that I'm glad I had been keeping myself in good physical condition. It was even more important to me that night than it was on the night of the kayak trip and midnight swim.

I was up and at 'em early the next morning, energized and feeling as good as I have in years. The twinges in my titanium shoulder from its workout the previous evening seemed trivial.

Captain Swendson, though, looked worn out—satisfied but tired. And when I heard his report, I was satisfied, too, for the time being.

“The ship is as clean as you could expect, Mr. MacQuarrie. The SEAL team decontaminated everything except Trimble himself and the clothes he's wearing, and we've had a counter in proximity to him with no dangerous readings.”

I sipped the coffee a steward had brought. “What do you suppose Trimble would do if you told him that he's getting a new bunkmate?”

“I've wondered that myself.” Swendson looked thoughtful. “His first bunkmate broke his clavicle, as I think you heard. But we couldn't figure out how it happened, and he didn't remember. We put it down to some kind of weird accident. But I'm wondering if perhaps Trimble didn't have a hand in it as a way to get that cabin to himself.”

“Well,” I said, “I guess there's no real point in yanking his chain. We don't really want to raise his suspicions. We've got the remaining SEALs on board to watch him all the way to San Diego, so I don't think he'll be causing us any trouble.”

“And what's your plan, Mr. MacQuarrie?”

“Well, with your permission, Captain, Ms. Winslow and I will remain your passengers for the duration and do what we can to enjoy ourselves. I need to be in San Diego when Trimble, or whoever, offloads those empty pigs, and this seems like a good way to get there.” I smiled.

“You're most welcome to be my guests. And after what you accomplished here, you'll be welcome for a return cruise as well.”

And, so help me, he saluted.

I managed to escape with most of my dignity intact and went looking for Sam. With all of the previous evening's exercise, I was ready for a serious breakfast.

But when I returned to our suite, all I found was a note saying “Off to yoga class—back by 8. S.” I suppose I could have joined her at yoga class, but turning myself into a human pretzel that early in the day just didn't seem appealing. So I tackled the paperwork I'd never finished from Tuesday.

It was right at eight sharp that she returned, wearing a leotard and a healthy glow. When she took my hand and led me into the bedroom, with some comment about “I've got to show you this position I just learned,” well, I decided breakfast could wait just a little longer.

*How in the world I ever wound up as a lifter-catcher with the Chinese acrobat troupe is something that still puzzles me. My memory of the events leading up to our performance in Kabul is fuzzy, even as I'm on stage and small, lithe women are flying into my arms.*

*They make it look so easy, mid-air acrobatics, contortions that make rubber bands seem brittle, balancing on dangerously precarious stacks of chairs. The Russian soldiers stationed in Kabul eat these performances up, partly, I guess, because of the skills and thrills and partly because of the skin-tight, revealing costumes.*

*Even though they make it look easy, it's not. I've been with them long enough to know that their abilities come from endless practice, practice overseen by virtual slave-drivers. And underneath those costumes are bruises that would scare a football player. These people work at their art.*

*Of all the oddball situations I've ever found myself in, this one takes the cake. And try as I might, I just can't remember certain critical bits and pieces that get me to where I am. I've about decided the only explanation involves drugs. Afghanistan, after all, is full of them, opiates and cannabis derivatives galore, just about any level of potency you'd like. Maybe someone slipped an opium-hashish mixture into me somehow, shanghaied me into this acrobat troupe, and taught me how to catch the girls without hurting them. At least, I'm thinking, it's Kabul and maybe I can sneak off and find the embassy.*

*Meanwhile—ooofff—here comes another one, the really ugly one with acne scars and bad breath. But after her is the cute one, she even has tits, and she always smiles at me. She also has this interesting ability to do the upside-down splits in mid-air, arching her back and bending her legs so that she's almost inside out. That, I'm thinking, could be a most interesting talent under the right circumstances, circumstances involving an hour or two of privacy and no costume.*

*And she's on her way, and—ooofff—I catch her just so, just like I'm supposed to and won't get yelled at for, the way that involves my arm across her breasts. What's new is the stroke, gentle but determined, she gives my crotch. Hmm ...*

*Well, I hope that look of surprise doesn't make my made-up eyes look too round, too western. I sure don't want these Russian soldiers to figure out I'm not really Chinese.*

As a result of all the delays, we didn't get to breakfast until about nine, and by then I would have eaten boiled shoes. But the buffet was still in action, and the good professor and his wife were there to join us. It seemed that Annette had been in the same yoga class with Sam and, for some obscure reason, they were also delayed in getting to breakfast.

We all made a trip past the buffet tables and settled in.

“Well, folks, here's to a successful mission, the first phase at least.”

I help up my Mimosa cocktail for a toast and touched the other glasses.

“Does this mean you'll be disembarking at Puerto Vallarta?” Annette had that sleepy, contented look of a woman who had finally figured out how to relax. Kind of like Sam, now that I noticed.

“Are you kidding? I think it's critical that I'm around for phase two, when we get to San Diego. And Sam needs to be there, too. Right?” And I smiled and looked into her blue eyes.

“I wouldn't have it any other way,” she said, looking straight back at me.

\* \* \*

## Fourteen

As I had promised, I bought Sam a nice dress in Puerto Vallarta, and she had plenty of time to work on her tan before we arrived in San Diego. Hal Weathers resumed his original role as the cruise scientist, giving more lectures and generally making himself a resource for passengers with questions. And

Annette Trieri spent more time with Sam than I would have thought possible, given their disparate backgrounds.

I was finally able to catch up on my long-overdue paperwork. Fortunately, the new developments in my relationship with Sam provided frequent diversions, so it wasn't really all-work, no-play. In fact, it was nearly the opposite. She seemed to find sex for pleasure rather than for work to be something she enjoyed enough to keep doing over and over—and under, and beside, and every other which way.

And there were other diversions, too. On Saturday, the last leg into San Diego, Annette and Sam marched into our suite and sat down on either side of me. I was on a ship-to-shore call at the time, so they just sat and stared at me.

Now, Annette has a couple of years on Sam, and she's not so well constructed, at least not in the sense of *Playboy* standards, but she still rates extremely high on the babe scale. So I was sitting there, talking on the phone, flanked by two lovelies who were obviously waiting for something. Rather than keep them waiting, I hurried the phone call to a quick end. But even after I disconnected, they sat and stared.

It didn't take long for this to make me nervous.

"Ah, hi?"

I looked back and forth between them.

"Right. See, Mac, the thing is, Sam says you've talked about getting her out of her current arrangement, that sort of contract she's bound to that Sun and Sand outfit by, or whatever it's called. And she's worried that you'll wind up getting yourself hurt in the deal. So, how about let's go over your plan and I'll critique it for you."

Annette had her head cocked a little sideways.

"Not, you understand, in any official way from my position in law enforcement, but rather from the perspective of my experience with stupid crook tricks."

Sam reached over and put her hands on my arm. It felt good.

"I don't want you to get hurt, sweetie."

Annette smiled. "You understand that I'd be delighted for Sam to be clear of that unfortunate arrangement, of course. It's just how to get from here to there that's concerning me. Concerning both of us, actually."

"That's why I've been telling you I'm not ready to retire, sweetie."

Sam looked both worried and embarrassed at the same time, somehow.

"I really don't want you to get hurt by these guys. I've seen them in action, believe me."

I cleared my throat. "Yes, well, there's also the issue of your getting hurt. I could see them coming after you if they thought you were trying to get away from them. That's why I haven't done anything except ask a couple of questions."

"You *what*?" Sam looked scared. "Last time anyone asked questions about one of their girls, he ended up dead and she ended up with razor scars all over her body."

So, to calm her down, I had to tell about my posing as the famous Hollywood movie producer and so on. It really didn't help, though, because Sam was sure that Nikolay Kirov, or one of his goons, would check out my story. And when they found out that there was no such movie producer named Randolph Hunt, they'd come after her and me both.

“OK, look. Really, it’ll be fine. We can easily protect you, and if they come after me, well, they don’t know what they’re dealing with, do they?”

I tried to be reassuring, but both Sam and Annette were giving me the silent treatment along with that skeptical look that women are so good at.

*My first interaction with Dean Susan Standerfield, the one in which my frat brothers had tried to set me up, has me confident that she’s now my friend and ally. After all, thanks to me she’s been able to find the real graffiti culprit and to shut down a source of illegal undergraduate alcohol to boot.*

*So, sitting outside her office awaiting my second appointment with her, I’m not the least worried. I have a good explanation for why the campus police found me outside the Tri-Delta house, hiding in the bushes. Or at least I will by the time she calls me into her office.*

*Since my first appointment with her, mini-skirt fashion has receded upward by another inch or so, and those movie-star legs of hers are just stunning. Plus, it’s a cool day, as Southern California goes, so she’s wearing a sweater, a V-neck. The sensibilities imbued by my puritanical upbringing in the Middle East are knocked for a loop, making my head swim. To make matters worse, she sits in a side chair this time, and crosses her legs. My blood pressure is so high I hear a buzzing noise in my head.*

*“Well, Mr. MacQuarrie, we meet again. I hope you realize that multiple appointments in this office are not something that most students here strive for.”*

*The tone is bemused, but distant.*

*“Ah, well, no, ma’am, I expect not. But I hope you remember the situation last time, how I was being set up and how I helped you get to the bottom of it all.”*

*I smile what I believe to be a rakish, movie-star smile.*

*“I do indeed, Mr. MacQuarrie, and that’s why you’re not already suspended. Lurking in the bushes outside sororities is not something we tolerate around here. Not at all, not for any reason. Although I expect that you have a reason?”*

*She tilts her head slightly to her right and arches her eyebrows.*

*“I know it looked bad, ma’am, to those police officers. But, honest, I wasn’t ‘lurking.’ I was looking for something, for a book. Ah, well, you see, I had been visiting one of the Tri-Deltas, a girl I had a study date with. But, well, we had this argument, see, and she threw my Middle English lit book out the window. So I was looking around for it. There. In those bushes. Honest.”*

*This time my smile probably classifies as “feeble.”*

*Her look tells me that my story doesn’t pass the giggle test, that, even though she will never be able to refute it, she’ll never believe it, either. And her expression reminds me of how my biology professor looked when she was examining the dead frog I’d carved up—mangled, really—in her lab section.*

Finally, Annette broke the silence.

“So, Sam told you how they operate. But you haven’t told us your plan. Just how do you plan to get her out of this, hmm?”

“Well, you know, I didn’t have a chance to get that far. This cruise ship thing came up, and I got distracted. But it was going to involve another visit to Sun and Sand by Randolph Hunt and more discussion of a cash contract buy-out. And then, when Kirov refused to be reasonable, a little more

direct persuasion. These things have to be played by feel, though, you know? You can't script them too closely."

I realized how lame that sounded, but I didn't know what else to say.

Annette looked at Sam. "Well, you've got to give him a lot of points for trying to be the romantic hero, no? Lots of points."

Sam nodded and patted my arm. It felt good, but also condescending.

"Mac, my friend, I've had a few days with the ship's internet service to check some things out. And your background is indeed pretty impressive, so I think I can understand your self-confidence." Annette smiled and shook her head. "But there's such a thing as too much self-confidence. And it turns out that this Nikolay Kirov character is the son-in-law of the head of the North American branch of the Russian mafia. These are not people you want to take on by yourself, believe me."

All I could do was shrug.

She smiled more broadly. "If I might make a suggestion, though ..."

\* \* \*

We met for dinner Sunday evening, for dinner and good-byes, at Anthony's, a venerable San Diego seafood standby, on the bay across the street from our hotel. That hotel was a Holiday Inn, but not your typical backwoods version. Sitting across the street from Anthony's as well as the cruise-ship port and a couple of picturesque antique clipper ships open to tourists, its upper-floor west-side rooms had balconies overlooking the entire central harbor and providing views of remarkable sunsets behind Coronado Island. We almost just stayed put and ordered room service. But Hal and Annette were headed back to Colorado in the morning and I had discovered that I was expected back in Southeast Florida post-haste, so Sam and I were not staying around, either. We all wanted a farewell dinner together.

Anthony's had a big, open dining room tending toward noisy, but that was what we needed to cover the topic of the conversation. I owed Hal and Annette a debrief on where things stood, as he quickly made clear.

"A toast to what I think we can call 'victory.'"

Hal raised his glass of iced tea as soon as our various drinks arrived.

"At least, assuming everything worked out according to plan today, right? Did you ever find out anything about this guy Trimble?"

"Oh, yeah. I had plenty of time to check him out completely. And now he has one of my tracking devices embedded in his personal belongings, along with the two on the empty pigs."

I stopped to take a long sip of my rum and tonic.

"Seems that he was born in central Mississippi, made it through elementary and high school without incident or distinction, and then he signed up for a hitch in the Navy. Stayed just long enough to qualify for college tuition benefits and didn't make it beyond the basic seaman rating, but he kept his nose clean. After an honorable discharge, he moved to South Florida, to an apartment complex in Weston, way out by the Everglades on the far west edge of the Fort Lauderdale metropolitan area, and enrolled in Florida International University down in west Miami. He racked up some 73 credit hours toward an undeclared major before dropping out. Because he has no criminal or other records, and because his background check for Naval service involved only his juvenile years, there's no real information available about hobbies or interests outside his work. We do know that he attends some oddball church down there, but

so does half the population in general, there's so many oddball churches in South Florida. His work records include construction, landscaping, which probably means yard maintenance, car sales, and most recently working as crew on the *Earth Explorer*, a position no doubt gained because of his experience in the Navy. All-in-all, a life-long dossier of a very average Joe, undistinguished in any way and unsuccessful as well."

Annette looked puzzled. "How and why he would be involved in an activity as high-level and risky as this SNM theft, then?"

I shrugged. "A complete mystery. But I expect we'll find out when he gets picked up. He seems like the type to cave in to interrogation."

"So where is he now?"

Hal had been too busy with the ship's arrival to pay attention to our quarry that afternoon.

Right about then, the server arrived with our appetizers, a big plate of deep-fried calamari with two lively sauces, and a sushi sampler. I tucked a couple of bites away before resuming my narrative.

"When the ship docked, I went up on deck and fired up the software on my tracking computer to make sure everything was working, and then we caught a lift to the hotel and settled in. Nothing much happened until after lunch, and then the computer beeped. The screen showed a detailed map with a blinking triangle—us—across from the port and three circles of different colors next to the shoreline. Little by little one of the circles, the blue one, which was Trimble, began to move away from the others, toward the shore. He was walking down the dock. I grabbed a pair of binoculars to verify his progress from our balcony, and there he was, a duffle bag slung over one shoulder and a small briefcase in his other hand. A hundred yards back, two of the FBI suits I'd noticed earlier were on his tail. It concerned me a little when I saw Trimble catch a cab at the end of the dock, but I needn't have worried. Those two FBI agents did just fine, getting a cab of their own, following Trimble to Lindberg Field, and then discovering that he was boarding a flight to Fort Lauderdale and getting last minute seats themselves. I got a phone call about all this just before we came over here to dinner."

I stuck my appetizer fork into another big piece of the calamari.

"So his part of this conspiracy, then, was simply to look after the pigs during the cruise."

Hal was working on the eel from the sushi sampler.

"Right. And as soon as he's arrested in Fort Lauderdale, or wherever, he'll be finding out that his life expectancy is now considerably truncated, thanks to the sloppiness of the materials handling by his counterparts in Florida. Poor schmuck."

I looked around for the server. My glass was empty.

"OK, well, what about those pigs? Where'd they get off to?"

Annette had finished her part of the sushi and was sitting back, blinking away tears from the wasabi.

I had to smile, not at her but at myself. Most of my afternoon had consisted of a gold-plated stake-out to keep track of those pigs.

*Despite shelves full of spy novels that convey other impressions, espionage work always involves lots of waiting around, waiting and, usually, watching. Editors, I'm certain, don't want realistic spy novels, because they wouldn't fall into the "thriller" genre; rather, they would be boring, boring, boring. Stories about guys sitting around drinking coffee and smoking cigarettes just don't grab your average reader.*

*All that waiting around, of course, provides ample opportunities for thinking about things, and my thoughts on this occasion have turned to the thrilling life of a spy, as least if those shelves full of novels have any credibility. The reality of my situation, though, is flushing that credibility down the toilet.*

*I'm sitting in a cab, disguised as its driver, on a street in what passes for suburban Athens. The light on top is off, so no one will be bothering me for a ride while I wait for the deputy ambassador from Saudi Arabia to finish up his tryst two houses down the block. He arrived in a limousine, which departed after he got out, and I'm expecting its return any time now. I mean, how long could it take for this turkey to get off, anyway?*

*I'm on this detail because we suspect the deputy ambassador of treason against his kingdom, something that, if we can prove it to his government's satisfaction, will result in the separation of his head from his shoulders in a most primitive fashion. And this would be quite fine with us, because he's demonstrated on any number of occasions that he would just love to see the United States of America adopt fundamentalist Islamic principles as its official state religion. Worse, he's provided financial support for organizations that are actively and violently working toward that goal.*

*Today, though, he's not meeting with his favorite terrorists but with a lonely Greek socialite he was introduced to at an embassy reception last week. Her husband, a prominent member of the international banking community, is out of the country on a business trip, and she's taking advantage of his absence to learn about sexual techniques from the desert.*

*And I sure wish he'd hurry up and get it over with. I've been drinking coffee all morning and desperately have to take a leak. Talk about the tension of espionage—I'm feeling it.*

“It was about five this afternoon when the pigs finally started to move, well after Trimble caught his flight to Florida. In fact, the computer map had zoomed back, showing his blinking blue circle over Texas, when it beeped again. I zoomed the map in here and watched the symbols for the pigs, from their tracking gadgets, as they eased down the dock right on top of each other, mimicking the earlier motion of Trimble's own tracking device. With the binoculars, I could see that they had to be in a van with an OceanParts logo on the side, because it was the only thing moving down there. I got on the phone and discovered that both the FBI and SEAL teams were on top of things, something was confirmed by the slow creep of the FBI sedan I'd seen earlier toward the street, and the four athletic-looking men on foot. It took only about ten minutes, and the two circles on the screen were headed north on I-5. I watched for a little while, and they kept on north, toward Los Angeles. I have to assume that by now the FBI has them located along with the west coast conspirators.”

My second drink arrived just in time.

“Sounds like it's a wrap to me.”

Hal smiled with satisfaction, and Annette was nodding. Sam, sitting beside me, patted my knee.

“Well, yes, this part of it. But that phone call I got this afternoon was a good-news, bad-news sort of call. The good news, like I said, was that the FBI guys were on the flight with Trimble.”

I paused for dramatic effect by taking a sip of my rum and tonic and poking around the plate for more calamari.

Sam gave in first.

“Well, so, what's the bad news? C'mon, don't play with us!” This time she smacked my knee.

I smiled. “Something I should have figured out, I suppose. It turns out that only about half the missing SNM was recovered from those two pigs on board the *Earth Explorer*. I should have known,

because if all of it had been stuffed into just those two containers, it would probably have gone critical. And there were four pigs still missing after they found that missing van down by West Palm Beach. Duh, silly me. Anyway, the rest is still probably back in Florida. And that, my dear, is why we're getting a red-eye home tonight."

\* \* \*

### Part III: Just Hot

hot (hŏt) adj. ... 1.a. Having or giving off heat; capable of burning. b. Being at a high temperature. ... 5a. Marked by intensity of emotion; ardent or fiery

*The American Heritage Dictionary of the English Language,  
Fourth Edition*

### Fifteen

The red-eye back to Miami was not quite as elegant as our flight down to Panama had been, but that was only because we had eaten and they didn't need to cook for us this time. After the dinner with Hal and Annette, Sam and I packed up our things, got a cab out to the Naval Air Station on Coronado Island, and found another executive jet awaiting us. This one was made up as a sleeper, with separate cabins for the two of us. We used one for the luggage. The opportunity to become members of the Mile-High Club was just too good to pass up.

We arrived back at the Boca Raton airport at about 6:30 Monday morning, and a Navy officer handed me a fat envelope as I deplaned. It could wait, I decided, until we got "home."

Back at my hotel, Sam unpacked, took one look at the situation, and made a decision.

"Mac, I'm going to have to get more of my things from my place. This stuff worked for the cruise, but it won't for real life."

She was standing in one of those hand-on-hip positions that I knew, instinctively I guess, wouldn't consider any discussion. On the other hand, having just started life over except for a car and some spook toys, I knew it could be done. Besides, I was willing to bet that she would actually enjoy shopping.

"You don't think those Surf 'n Suck boys are there waiting for you to show up?"

She looked disgusted. "Sun and Sand. Geez."

"Whatever. But, look, you're the one who's scared of them. You've got to know they're looking for you by now, right?"

She nodded. "I can't just abandon everything in my apartment, though. I mean, I've got my *really* important stuff locked away in storage, but there are clothes and all sorts of things I'd hate to lose."

"Well, do you remember what Annette suggested?" She nodded again. "Let's make a plan instead of just running down there, OK? Maybe we can solve the problem once and for all."

Annette's suggestion had been quite sensible, if not something I would have expected to hear from a law enforcement officer. No doubt, she said, that Sam's co-workers would be grateful for having been

rescued from the hunting camp in the Everglades, and they'd probably be even more grateful if they were relieved of their contractual responsibilities to Sun and Sand. Conversely, it seemed obvious to Annette, from what Sam had told her, that Ross Bierkens and his men were offended by the treatment of the girls at the hunting camp and that their enmity extended to Sun and Sand as well. Perhaps, she suggested, the Omega Team would be interested in some off-duty head-knocking in return for whatever creative gratitude the girls might be able to conjure up.

Sam, of course, was out of the picture, having shown her gratitude to me in all sorts of creative ways, but it seemed like the other girls just might be available. Lining them up would be Sam's job—I had to work on Commander Bierkens and his team. I was hoping that none of them was married.

But it was still too early to begin telephone calls, and besides, we were both starving. And there were numerous devilish details to be worked out. So I tackled putting together a credible breakfast—not as good or as geographically diversified as the one on the first Navy plane ride, but still pretty good—while we discussed tactics.

*For sheerchutzpah, I can't think of a more outrageous assignment than my current one as a short-order cook in a greasy-spoon breakfast-and-lunch joint in Berlin. First, my German isn't all that accomplished—that's OK, the handlers said, people will just think you're a rube from Bavaria. Second, I really don't know how to cook American breakfasts, let alone German ones—but that's OK, too, they said, just fry up some bratwurst with scrambled eggs and serve it with toast.*

*Of course, when I show up for work, the boss doesn't like my German and he wants me to cook what's on the menu, only with small portions, to save money. On the excuse that I don't want to ruin his joint's fine reputation, I get him to show me how to cook what. Fortunately, for both me and the customers, it's all pretty easy.*

*I'm on this job because the deputy political liaison from the Iraqi embassy just down the street has developed a taste for German breakfasts, including the very politically incorrect, by his standards, pork sausages we serve. Mr. Aziz would lose both his job and possibly his life if this new taste were found out, so three or four times a week he comes in alone, reads the newspaper and eats breakfast, and leaves by the back door.*

*Mr. Aziz is not only the deputy political liaison, he's also the prime operative in the transfer of large sums of cash from Middle Eastern banks to various organizations that Uncle Sam considers to be full of terrorist nasties. So Mr. Aziz has to be decommissioned.*

*A couple of weeks back, he ingested the first half of a binary poison at an embassy party. We had managed to ensure that the stuffed dates he so loves were all dosed with part one. Although many of the other guests also ate those dates, they are perfectly safe. As will be Mr. Aziz, until he ingests the second part—and that's what I'm doing as a short-order cook, dosing his breakfast.*

*And here is his order—potato pancakes and sausage, with a side of scrambled eggs with ketchup. Five minutes later, it's all ready, with a cute swirl of ketchup on top of the eggs, ketchup with the required four drops of part two. Good night, Mr. Aziz. Have a nice heart attack.*

“I still don't see how you're going to pull this off, Mac. Nikolay has lots of muscle at his beck and call.”

Sam was shoveling in large bites of an omelet.

“Exactly. And you can provide a list of that muscle, so we can get the SEALs to take care of them. The Commander and I, meantime, can play a visit to Nikolay, and he’ll get a choice of learning to fly off his balcony or leaving town permanently. Right? Then the guys and girls can have a big party. Or whatever.”

“But, sweetie, you remember what Annette said, that Nikolay has family connections to the Russian mafia, right?”

I smiled and nodded. “Right. But that part will be just fine. See, first, my years as a New York cop included plenty of interactions with the real Mafia, the guys from Sicily. And it so happens they owe me some favors. And, second, it turns out that Miami is still an open city, turf where no one is supposed to be operating. Good old Nikolay is breaking some very old and venerable gentlemen’s agreements, agreements that are taken very seriously. So all it will take is the right word to Nikolay’s connections and all will be well.”

“Does all this mean I can get my stuff from my apartment?”

She was polishing off the last piece of toast.

“In fact, I think what we can do is to make a trip down there later today, if the Omega Team is available. They can shadow us, and if any of Nikolay’s muscle shows up, the fun will begin. Meantime, if there’s something you really need, why don’t we just go shopping. I mean, hey, this is Boca Raton, after all. There must be some stores here you could find what you want in.”

She perked right up. “Say, you know, that’s right! I think there’s a Bloomingdales in a mall somewhere around here. And a Nieman Marcus. But I thought you didn’t want me to go out alone.”

“I don’t. But that’s OK, I’ll come along and exercise some of these neglected credit cards that Bill Petersen gave me. And I have lots of work to do, so I can sit and read while you pick stuff out, and then I can critique it when you try it on. OK?”

I got up and started to clear the dishes.

“No, wait. I’ll do that. You cooked. If we’re going to set up housekeeping, we need to share the chores.”

Well, she’d already won my mind and body, now she was going to win my heart.

\* \* \*

After my house blew up—or, more accurately, was blown up—I managed to rebuild my wardrobe without going into the Town Center Mall. Shortly after moving into that house, I’d made the mistake of visiting the place to pick up some tools from Sears. It’s possible to use the Sears entrance and avoid the rest of it, but I was new to town, and curious.

I don’t know whether it was the matrons with drum-tight cheeks that yanked their mouths into perpetual smiles, the teenagers wearing iPods and pants around their knees, or the thirty-something tennis babes with their boobs hanging out, but it didn’t take long for me to decide that it was just not my sort of place.

And that didn’t even consider the stores. That curiosity I mentioned motivated me to take a walk around, and the only stores I found of interest were the Sears I’d started in, a Radio Shack right next door, and a store that sold Sony electronics a few yards away. The other two hundred or so just didn’t float my boat.

All of this is by way of saying that I didn't pretend to be able to guide Sam around when we went there. But, then, she didn't need a guide in that kind of place. Like a pre-programmed cruise missile, she targeted the best stores and hit them with nary a detour. I was just along as a companion and, as I discovered later, a pack horse.

But I took a shoulder bag with my laptop computer and that fat envelope they'd handed me at the airport, so I had plenty to keep me amused, if that's the right word.

The sportswear department at Bloomingdales had nice easy chairs for guys like me—and I mean that literally. Several of those chairs were occupied by gentlemen of my vintage and older, all of whom were attending to females of the trophy-wife variety. Some of them, the men, were reading the *Wall Street Journal*, checking their stocks, I supposed, to see if they could afford the clothes they were going to be buying shortly. Others were intermittently looking terribly bored or making polite comments about whatever their trophy had just tried on.

I settled in and opened that envelope. Inside were a single sheet of paper and other envelopes with Top Secret markings. Great, I thought, warn me why don't you? But opening those envelopes without taking them out of the plain one meant that no one would know what I was reading, so I plunged in.

The loose sheet of paper was a note to me from Bill Petersen saying that the envelopes were official copies of my reports to date that I needed to initial for validation purposes. When I finished that exciting task, I was supposed to call him.

I was halfway through checking my report about the kayak trip to the consulate's dock when I heard Sam's voice.

"Mac? Isn't this just *darling*?"

I looked up, and she was standing in front of a mirror, so I could see both her back and, in the mirror, her front. She was wearing one of those tennis-babe outfits and tugging at various spots to get the fit right. Like the other babes wandering the mall, her boobs were on display. The outfit's top, stretched to its limits, was held together by one strategically positioned button, clearly the weak link in the whole thing.

"Um, Sam? Is that supposed to be a functional tennis outfit? I mean, don't you think, maybe, it's a size too small or something? That button in the front there looks like it's under a lot of strain. Is it going to work if you're really playing tennis?"

I kept my voice low, but in my peripheral vision I noticed a couple of heads turn. Those other guys were suddenly not so bored.

"You think so?"

She hopped up and down a few times, and I enjoyed the way her backside flexed. The guys in the other chairs were enjoying the view in the mirror, I decided, because I heard the rustling of a couple of *Wall Street Journals* falling to the floor.

But Sam was oblivious—given her background, she was not at all body-conscious. She tugged at a couple of places near her shoulders, then hopped more vigorously. And that poor button just couldn't take it anymore. Off it popped, bouncing off the mirror with a distinct click, the ricochet then whizzing past my head. And, bloop, out she fell from the tennis top, both of her.

"Well, shit!"

She stared at herself in frustration.

If Sam wasn't body-conscious, the same cannot be said for the guys in the room. I was hearing gasps and coughs from the chairs around me, so I turned to look. With the exception of one poor fellow

whose red face indicated that he was having serious problems with either his heart or his breathing, all of the men were suddenly quite interested in the ceiling tiles.

“You’re right, Mac. This won’t do at all. We’re taking up tennis, you know, so this has to be functional.”

And she walked off toward the changing rooms, her short skirt swaying suggestively while I pondered the business of taking up tennis.

The fellow with the red face had begun wheezing, and he reached into a shirt pocket and extracted a bottle of pills, popped one, and suddenly looked much better. I went back to my reading.

Several reports and four outfits later, I had initialed everything and was ready to call Petersen. Any conversation with him, I knew, would have to be cryptic, but I wanted him to know I was on the job. I put on my Bluetooth earpiece and punched up his number on the encrypted cell phone he’d given me.

*For the first time, I’m thinking about retirement. The notion takes me by surprise, because retiring is just something that never occurred to me before. But this latest version of a field satcom unit has provoked memories of all of the various communications arrangements I’ve used in the field. And it makes me feel old.*

*Originally, of course, there wasn’t much of anything. Even short-wave radio transmission required bulky equipment, and people on their own in enemy territory couldn’t manage it. Reception was possible, with the new-fangled transistor receivers, but one-way communication isn’t really communication.*

*Communications satellites made two-way communication possible, but the first units were also prohibitively bulky, for most field agents, at least. On three occasions, I was sent behind the Iron Curtain in a specially prepared car, so I was able to take advantage of the satellites. But sometimes you need to call home and the car is somewhere else.*

*Then satellite phones, first generation, and cell phones came along, and matters improved. But encryption on the early units was nonexistent, meaning anyone, particularly the bad guys, could listen in. Digital technology helped with that, of course, and eventually true encryption made private communication possible. Yet cell phone coverage isn’t always available, especially in places of interest to my agency.*

*And now I’m sitting on the balcony of my hotel room in Bahrain, talking into the microphone of my wireless headset that’s linked to the card-deck-sized unit on the cocktail table. Its satellite link makes the voice in my ear sound as clear as if Bill were sitting next to me, except that there is this annoying delay to deal with.*

*And when I think about how many times technology such as this could have made my job so much easier, how many colleagues’ lives could have been saved, I just feel old.*

*That offer from the NYPD is looking better all the time.*

“Mac, thanks for calling in. You get those reports?” Petersen sounded tired.

“Yeah, and they’re all fine. I’ll pass the initialed ones along next time I see you. But, look, this is all stuff I already know. Are there any new developments? Oh. And, listen. You can talk away, but be aware that my answers may be a little vague. I’m in public.”

“‘In public?’ You shouldn’t even be calling this number, then. Christ, Mac. You always were a loose cannon.”

“You gave me this phone, so you know its capabilities, Bill. Quit worrying. I’ll not be talking much. What’s new on your end?”

I didn’t say it, but I was thinking “and you always were a shithead.”

“OK, well, there’s nothing new on the Saudi Consulate business. Our listeners didn’t pick up any hints that your little expedition was compromised or anything like that. They must have written things off to a false alarm or something like that. And, of course, there were no radionuclides of concern, as you remember.” He paused, and I heard papers shuffling.

“There’s nothing more from the Everglades business either, and, hey, no jokes, OK? Those rednecks out there were just making moonshine and getting laid. And killing the odd Federal agent, of course. We got one to spill, used that to persuade others, and now there’s solid testimony about who shot Jim Lund, so that one’s a wrap.” There was more shuffling. “Any questions so far?”

“Well, you know, originally we had a pretty solid Middle Eastern connection, that group in Coconut Grove, right? I guess that’s still hanging out there, but we can probably eliminate a connection to the consulate.”

I wondered if that would be too specific for public consumption in his view.

“Hmm. Let’s not go farther with that just now, OK? We can talk it over in person. There’s still some connection, just not what we thought.” More shuffling. “Now, the last thing you looked into was that mansion in Boca Raton, the place belonging to Winfrew Hanley, right? The guy whose rental mailbox the original SNM list was sent to. That bears more investigation. We cruised the neighborhood like you did and made some flyovers with detectors and picked up a little extra in the way of decays. Not definitive, but for sure more than background. That’s where we’re going to focus some energy next, and I’m hoping you can help with that.”

“Any sign of Mr. Hanley?”

I remembered that the last I’d heard he had become invisible.

“None. But I’m getting to that. First, though, your friend Willoughby Trimble. He arrived at Fort Lauderdale last night, and we tailed him to his place out in Weston. The only thing that’s happened is that he made a telephone call and left a message at a number we have. It’s a land line, with the handset and answering machine located in a cheap storefront on Commercial Boulevard in Fort Lauderdale. Obviously just the equivalent of a blind mail drop. That line is now tapped, and early this morning it got a call to retrieve messages, from one of those throw-away cell phones. The connection time was too short to get a precise fix on its position, but it’s somewhere in south Boca Raton.” I heard him take a breath.

“Which brings me to Mr. Hanley. We’ve been watching his house. In fact, we rented a house in the neighborhood just across the lake from his, and we’ve got our guys on the gate guard shifts. And we’ve got NRO on the job. The President has approved lifting some of the usual restrictions about domestic surveillance. Nobody’s seen Winfrew Hanley, but his brother has been around some.” More shuffling papers.

“I thought they were twins. How can you tell?” I remembered the dossier Bill had given me.

“They are, but Josiah is skinny and Winfrew is fat. Anyway, that’s it. What we’re going to need next is another covert visit with a decay counter. By water.” He laughed. “Maybe you can find out for us if those ‘Beware of Alligators’ signs around the lake mean anything.”

At least, I thought, I've still got that bar code for the Exclusiva at Boca gate on my car. But I wasn't at all interested in alligators.

"Up yours, Bill."

Sometimes my eloquence just flows.

\* \* \*

## Sixteen

By the time we finished shopping, it was too late to pay a visit to Sam's apartment with the Omega Team as backup. But I did manage to get in touch with Ross Bierkens. He was amused by the whole idea of bringing down Sun and Sand, and he said he'd ask for volunteers from his team.

"But I don't know about the 'gratitude' business, Mac. That sounds a little like pandering to me."

I could hear the disapproval in his voice.

"We weren't thinking of anything formal, maybe just an informal get-together at a nightclub or something, so that the girls could say thank you. If it's at a public location, well, whatever happens later on in private is their own business, right? I mean, everyone is a consenting adult."

That seemed to satisfy him, and he rang off to make some calls.

Sam, for her part, had been chatting merrily on her cell phone all day. I don't know quite how she managed to try on so many clothes and use a cell phone at the same time, but by mid-afternoon she told me she had several of her co-workers lined up for a celebration party with the Omega Team. The girls, she said, would be delighted to be meet the guys and express their gratitude for having been rescued both from the rednecks and from Kirov. This reminded me of something I needed to ask Sam, but it would have to wait. Victoria's Secret was pretty busy at the time, and that conversation needed to be private.

We detoured through Exclusiva at Boca on our way home from mall. I wanted to verify that the bar code still worked and to check out the house that Petersen had rented.

I recognized the guard in the Exclusiva gate house as one of the people from Petersen's pre-Everglades meeting and gave him a wave as the gate rose for me. As I remembered from my previous visit, the place was a rat-maze of streets, so it took us a while to find the house in question. But that gave us a chance to look the neighborhood over. In the process, Sam's curiosity finally got the better of her.

"Mac, what are we doing here, anyway? Yeah, you said you wanted to check something out, but it looks like you're checking out the whole development. You looking to buy a house or something?"

She had been staring with wide eyes at what opulence was visible. It occurred to me that I could have a little fun with that line of thought.

"Well, you said something about setting up housekeeping earlier, and the hotel isn't really appropriate for that. See anything you like here?"

"I can't see crap, what with all these fences and hedges, and neither can you. Besides, there aren't any for sale signs." She sniffed. "Anyway, this kind of plastic paradise isn't for me. If I've gotta live in the city, I want it to be *city*, an apartment in a high-rise with a bus stop, stuff like that."

I laughed. “Don’t worry. I’m trying to find a house that the Feds rented for this ongoing investigation of the SNM. Remember I said that some is still missing?”

“Yeah. You guys think it could be *here*?”

“Who knows? But we need to check out everything.”

I remembered the deferred conversation.

“Say, there’s something I’ve been meaning to ask you. It concerns your old job, so please don’t get upset, OK? But it’s possibly important. Remember I said I talked with Nikolay? Well, he told me what your daily rate was. And it seems like Sun and Sand is generally a high-class operation, in terms of pricing, at least. So what in the world were you and the rest of the girls doing out at that hunting camp in the ‘Glades? Those rednecks couldn’t afford you, surely.”

I was hoping she wouldn’t get mad, and, to my relief, she didn’t.

“No way. That was a bunch of low-life white trash if I ever saw it. In fact, when they locked us all in that little bedroom, we were talking about just that, trying to figure it out. I mean, that was fifty large a day worth of talent locked in there. But one of the girls, Tawney, she said she’d been on a date with that Hiram guy before, and that Nikolay had comped it. A freebie. So something’s going on between that bunch of moonshiners and Nikolay, I guess.”

I thought for a minute. “Ah. Well, in a way, that’s even better. It means that the real mob will be even more pissed off at Nikolay and will be willing to put even more pressure on Nikolay’s connections to cut him loose. And I think that Ross and I can use this information to help the cause.”

*One of my first lessons in spookdom is that the criminal underworld is your friend, or can be, at least. You have to be careful, because some organized crime outfits are surprisingly patriotic, and if they think you’re a “bad” spy, well, watch out. But almost all organized crime has it in for certain aspects of the active government, and it’s pretty easy to play that one to good effect. You just have to be careful that they don’t play you and, ultimately, turn you in. It helps if you can team up with them against rival gangs.*

*And there’s some level of organized crime almost everywhere, even in totalitarian countries—indeed, sometimes those are the most organized of criminals.*

*That’s certainly the case in Libya for this assignment. The Kadhafi regime classifies as totalitarian, and the criminals are even more organized than the ones in New Jersey.*

*My instructions are to contact a basket-seller named Abdul, who has a stall on the southern fringe of the main bazaar in Tripoli. It’s easy to play tourist, strolling randomly about and examining the merchandise, introducing myself and asking for Abdul. But there are lots of basket-sellers, and when the first one is Abdul, I’m surprised. And when the second, third, and fourth ones are also Abduls, I get suspicious, and the picture finally comes into focus. Tell the dumb tourist what he wants to hear and sell him something. So I’ve got to have a strategy.*

*Which of the basket-sellers, I ask myself, looks different? It stands to reason that the one I’m looking for isn’t just your run-of-the-mill merchant. I wander, smile and nod, occasionally pick up a basket. And everywhere, I’m immediately accosted by the merchant, jabbering at me in the oddly accented Arabic they use, telling me how his baskets are the best and least expensive and what would I offer for that one?*

*But at one stall, the merchant ignores me. I pick up a half dozen different baskets, look them over, thump them, even, and he still ignores me. He couldn't care less if he sells anything. And I notice that, unlike the other stalls, this one has no second, silent partner who seems to be watching for shoplifters.*

*Bingo. No one shoplifts from this guy, because they know that if they do, they're toast.*

*"Excuse me, Abdul, I wonder if I might have a word." He looks up and smiles.*

I noticed a name sign on a lamp post.

"Hey, does that say 'Nichols'? Yeah. This is the house."

There was a gate across the driveway, with one of those keypad-speaker boxes, so I pulled in beside it and pushed a button.

"Si?"

The voice was tinny, and I wasn't expecting Spanish.

"Mac MacQuarrie. Bill Petersen sent me."

That seemed to work, because the gate began to open.

Past the gate, a driveway—pavers, laid in an interesting pattern—led to a faux Italian villa, a surprisingly common, if ridiculous, architecture in this part of Florida. The ten-foot high, double front door was open, and two large men with that distinctive Federal Agent look stood on the porch, their right hands reaching across their chests inside their jackets. I suspected they wanted to be sure that I really was who I had said I was. But I was, and I recognized them from Petersen's briefing, as I had the gate guard, so all was well.

I leaned over toward Sam. "Do us a favor and sit tight until I open your door, OK? Those guys look nervous." She patted my hand.

I parked in front of the house with the porch on the right of the car and got out. The two Feds hadn't moved a muscle.

"Mac MacQuarrie, guys. At ease. I'm here to check out the situation, and I've got a friend."

They still didn't move.

I walked around the car, opened Sam's door, and smiled at her.

"They're still nervous, so don't pull a gun or anything."

She smiled back and winked. Uh-oh, I thought.

For reasons unclear, but quite possibly because she's a big flirt, Sam had decided to wear home one of her Victoria's Secret purchases, a resort outfit consisting of a teeny-tiny bikini and an almost socially acceptable, matching silk cover-up of the sarong family with blue and pink orchids all over it. How we made it out of the mall to the car without being arrested is something I'm still pondering. Maybe it was because of how comical I looked, carrying all those boxes and bags.

She turned slightly in the car seat and thrust her right leg out, and the sarong fell away. The agents were left looking at a sandal-clad foot attached to a bare leg that went well beyond all the way up. Out came the other leg, this one covered with silken orchids, and she stood up, adjusted the sarong, and looked around innocently.

"Is this our new home, sweetie?"

And she lowered her dark glasses and winked again.

I smiled at her. “Maybe. Let’s go in and check it out.”

\* \* \*

After that performance, the agents could hardly detain us, although I bet they were hoping for an excuse to frisk Sam. Trouble was, there was no place she could be hiding a weapon that they couldn’t already see. So they let us into the house.

As I passed them on the porch, one said, “All the way down the hall, in the rear sun room. And thanks for the show, ma’am.”

Smartass, I thought.

Inside, the air conditioning was doing a credible job of keeping the temperature in the low seventies—meaning it felt cold compared to outside—and the lights were low. We took our time, admiring the various rooms we passed. It wasn’t exactly clear what their purposes were, but they were very nice rooms, assuming your tastes tended toward chrome and mirrors and commanding accent colors as decorating staples.

The last room on the left was the kitchen, and that I could relate to—a wonderful, professionally appointed kitchen. But the sliding doors to the sun room were right there, and the half dozen guys in white shirts and ties suggested to me that visiting hour was over and business called.

Sam and I stepped down into the sun room, and six heads turned our way.

One of them announced, “MacQuarrie? Glad you’re here. But, hey, who’s this? Christ, you can’t bring just anyone back here, what the hell do you think this is, anyway?”

I guessed he was talking about Sam.

“Oh, sorry. My mistake.”

And I took Sam’s elbow and turned both of us back toward the hallway we’d just come down.

“Time to go, kiddo.”

The various shouts and imprecations I heard as we walked back toward the front door suggested that our departure was not quite what they had intended, but that really didn’t matter. I’d retired from spook stuff to get away from all that foolishness, and I just wasn’t motivated to put up with it again.

As I wheeled the car around toward the gate across the driveway, I saw in the mirror the two agents on the porch raising their left hands and talking into their sleeves, and then they started out after us. But the gate had an automatic exit switch of some kind, because it opened as I approached it. We were back on the street before they caught us.

Our drive around the neighborhood earlier had oriented me, so I knew the way out. As I suspected, at the gate house the exit lane was blocked by one of the guards, who was waving at us to stop. Instead, I veered over to the guest entrance lane, used the sidewalk to dodge around the tip of the little arm that was supposed to constitute a gate, and stopped to wait for traffic so I could turn south on Military Trail. At the stop sign, I tossed the encrypted cell phone that Petersen had given me into the canal, a nice left-handed hook shot over the top of the car.

“I don’t think they really wanted you to leave, sweetie.”

Sam was looking back to see if they were following us.

“Maybe not, but they need to learn some manners before I’m going to have anything to do with them. Besides, we saw what we needed to see. Or least I did. What did you think of the place, present occupants excepted?”

I signaled to make another right, this one onto 18th Street.

“Well, you know, like the neighborhood, it’s really not my style. I mean, with all due respect, it’s nicer than where we are now. But I bet we could do lots better, easily. I guess your interest is really about the location, though. Something about that SNM, I bet, huh?”

“Yep. Don’t know if you noticed the house just across the lake, but it has some suspicious circumstances associated with it. That’s why those agents are there, watching it. I think Petersen wants me to swim across the lake and take a look around over there.” I shrugged.

“Why you? Can’t those guys swim?”

I looked over at her for long enough that I could feel the car starting to drift, and there was an irate honking noise from the left lane.

Out of the mouths of babes and innocents... Well, in this case, a babe.

“That, my dear, is the million-dollar question, and it’s one I want an answer to. Let’s go home.”

Back at the hotel, I had the dubious pleasure of playing pack horse again, between the car and our suite, but then the real pleasure of watching a fashion show as Sam tried on all her new clothes, including the functional tennis outfit. Not even the real Dolly would be popping loose from that sucker. Then she put that resort ensemble on again, and I got to help her take it off. That, and its inevitable follow-on, lasted until dinnertime.

By then the land-line phone had rung a half-dozen times, probably, I thought, Bill Petersen. Instead of calling him, though, I used the phone to order a couple of pizzas and salads from Sal’s, a local family-style Italian place.

*Sometimes, I’ve learned, letting your handler stew a little is better than an immediate response to his concerns. He doesn’t really need blow-by-blow updates of every little thing, he just thinks he does. I guess that being a worrier is one of the qualifications for the job.*

*The increasingly tenuous Soviet economy has resulted in a new spirit of entrepreneurship among Russian scientists with skills to market. This spirit matches up well with the needs of the rich states of the Middle East, whose leaders would dearly love to claim membership in the international nuclear weapons club. Because those scientists and engineers can often smuggle materials and parts along with their own knowledge, it is a match made in heaven, or maybe paradise, depending on your philosophy about such places.*

*I’ve been set up as a middle-man, ostensibly to play match-maker between enterprising Russian scientists and Iraqi military personnel in charge of their floundering nuclear program. Of course, what I’m really supposed to do is to persuade the scientists that Uncle Sam will make them a better offer than Saddam’s guys ever will. But I have to be patient about playing that card, because I need the good will of the Iraqis for it all to work.*

*And while it’s easy for me to be patient, my agency contact is having trouble. He wants reports hourly, almost, every time I’m in discussions with a new scientist or when I meet with one of the generals.*

*At last, I’m talking with a Russian whose talents we don’t really care about—the Iraqis can have him. The match-maker is actually going to make a match!*

*The negotiations are delicate and require all of my skills as a translator and diplomat, and they stretch over several days. I'm simply too busy to call home. When it's all over and I finally do call in, I get chewed out royally. But the success trumps everything. And he's much more polite, and patient, the next time.*

After dinner the phone rang yet again, and this time I decided I'd answer it.

"Christ, Mac! I've been trying to get hold of you for hours. What happened? Did you turn off that cell phone?"

Bill Petersen's voice was exasperated and a little worried.

"Cell phone? Oh, yeah. Sorry, but I seem to have misplaced it. Its battery died this afternoon, so I can't find it by calling it, either. Sorry." I really wasn't, of course, not at all. "Say, Bill, I've been thinking about something we need to get to the bottom of. And it's probably connected to the SNM thing, too. Who do you suppose blew up my house, anyway?"

That was probably the last thing he wanted to talk about it, and bringing it up put him off stride.

"Your house? Well, I just assumed that it was the same guys who were on your case about shooting that Al-Ayed guy, you know, the ones that had that PI follow you. But, look, that's going to have to wait. We need to get into the Hanley house, across the lake from here, have a look around. And, say, what happened, anyway? When I got here the guys told me that you just took off."

Now he sounded just a little mad.

"I saw all I needed to see, including eight very capable-looking guys who no doubt could get you whatever you need from across the lake. And you're right. It was probably connected with the Al-Ayed shooting. That means there's some connection to the Saudi consulate, even though I didn't find the SNM there. And, remember, Al-Ayed was the guy who mailed the SNM list to Hanley's mail box. So it's all connected. I think we should concentrate on that angle." I paused, but he didn't respond. "And, say, isn't it about time I saw a check or something? I've been on this job for a good two weeks now, and we had a financial arrangement. Doesn't Uncle Sam pay his bills?"

Now he was so off stride that he was practically tripping himself.

"Uh, I'll have that looked into. And maybe there's a connection between your house and the SNM, but you're the only one who's seeing it. What I want is for you to get in Hanley's house with a decay counter and see what's over there. We've got to move this thing along. The pressure from Washington is getting unbearable.

Unbearable for you, maybe, I thought. I'm doing just fine.

"Don't tell me that none of those eight brawny guys can swim. What's the younger generation coming to, anyway? Can't you folks do better with recruiting than that?" This time I didn't wait for a response. "But, look, Bill. If you're in such a hurry, you'd better get one of them some swimmy floats or something, because I can't possibly do it tomorrow. I'm booked up. People who pay their bills on time are the ones who get my attention first, and I'm afraid you're a tad behind on your payments. Tell you what. I'll call you when I'm free. Same number as always?"

"Holy crap, Mac! What are you trying to pull here?"

"Listen, you stupid son-of-a-bitch. *I'm* the one who took the tip about the SNM on that cruise ship, and I'm the one who found it, made arrangements to get it back to the Navy, and set things up to catch that Trimble guy. I've done half your job for you, and now you want me to do the other half, without being paid, yet. Meanwhile, my house got blown to smithereens and I lost everything, you've just

admitted it's connected to this case, and you don't seem to give a shit. I'm not lifting a finger for you until you get the bill paid. And, say, the price just doubled. I don't seem to be able to trust you, so if you want anything else from me, make sure that double what you owe me shows up in that Swiss account you seem to know about. Got it?"

I managed not to get too worked up during this little speech, even though it released a lot of pent-up frustration.

There was a pause, and his voice came back silky smooth, oily, even.

"Well, Mac, I think the situation now is that you need me more than I need you. I mean, for one thing, you're right—the guys at the house are quite capable. And for sure they can swim, all of them. So I'll just move ahead without you. When you get hungry, you'll come crawling back, I'm sure."

"Fine with me, Bill. Don't forget, though, that I know various people in Washington, and that stiffing me won't bode well for your ability in the future to enlist help from outside your own very small circle. Your credit rating, so to speak, will tank. Think about it. And I'll give you a call Wednesday, after I take care of some other business tomorrow."

And I hung up before he could say anything else.

Sam was staring at me with wide eyes. "Gee, sweetie, I don't recall hearing you get so worked up before. Didn't know you had it in you."

I smiled and gave her a big hug. "Some people bring out the worst in me. If you're around, you may see more tomorrow, when Ross and I meet with Nikolay."

\* \* \*

## Seventeen

Tuesday morning, about ten, Sam and I drove down to Miami Beach to pay a visit to her apartment. After our shopping trip, she needed less of her stuff than she had before, clothes at least, but she still need to pick up some things. And we thought we just might pick up some of Kirov's goons as well.

On that chance, Ross Bierkens and six members of the Omega Team met us a block from the apartment, arriving in an anonymous, windowless van of the sort you see all over the Miami area. We decided that Sam and I would go up to her apartment—I would probably be reprising my role as pack horse, I thought—and that Ross and company would provide backup in case we were accosted.

The team, dressed in baggy paramedic scrubs with lots of pockets, had brought all sorts of useful equipment, so when Sam and I went up the elevator, I was wearing a miniature transceiver that provided an automated communications link to everyone else—so if we got jumped, help was only a holler away. Ross and two of the guys came up with us, while the other four covered the building's entrances.

That building was a glass and stucco affair on the Intracoastal Waterway. Sam had a tenth floor, west side unit with, no doubt, spectacular sunsets, six doors away from the elevator lobby.

As she took out her key, I stopped her.

"Just a sec. Let me have a look."

I squatted and examined the lock plate. A new-looking scratch in the brass had caught my eye.

“Do you remember this scratch?”

“No. Geez. Who did that? That sucks.”

She inserted the key and turned it, unlocking the door with a solid click.

As the door opened, a cloud of stale cigarette smoke mixed with rancid sweat puffed out into the hall.

I said quietly, “Company, Ross.”

Sam walked into the apartment, into her kitchen, and I followed. The door closed behind me, and I heard a footstep.

“So, she finally returns. With a john, even.”

The voice was deep and had a trace of a Russian accent.

“Don’t turn around, just keep walking. Don’t even think about doing anything heroic. Go sit on the couch, both of you.”

In the living room, the shades were drawn, so I didn’t have a chance to enjoy the view I knew was out there. A burly individual sat in an easy chair across from the couch, and as we turned and sat, I saw that the guy from the kitchen was equally well put together. He stayed on his feet, standing near the kitchen door.

“At least two, unlocked,” I said quietly and as casually as I could.

“Quiet, you. We’ll get to you in a minute. First, I have to welcome Dolly home from wherever she was. Which is an interesting question. Where were you, anyway, Dolly? We’ve all been worried. Nikolay especially.”

The goon in the easy chair also spoke with a slight Russian accent.

Sam was doing a good job of keeping her cool, under the circumstances.

“Serge, you asshole. Break into my place, stink it up with your smoke and BO. But I guess it’s about what I should expect from you.”

Serge’s eyebrows lifted almost to his hairline.

“My, my. I think we’ll need a training session. Has this, er, gentleman been having a bad influence on you? Georgi, take Mr. WhatHisName into the bedroom and teach him some lessons in courtesy, will you?”

“Call me Mac, gentlemen. And I should point out that Ms. Winslow’s assessment of your character seems quite accurate. I didn’t have to teach her anything, she came up with that all on her own. And I should also say that I’m afraid you’re quite out of your depth with all this. It seems unfair not to let you know that, even if you’re not likely to believe me.”

As I wound down, through the kitchen I saw the door to the hall open with no sound. Ross Bierkens and two of his men slipped through.

Serge and Georgi found my comments quite amusing, and Georgi was laughing and shaking his head as he walked over to where I was sitting.

As he reached out to grab my collar, I simultaneously kicked upward as hard as I could, connecting between his legs, and grabbed his index finger and bent it backwards until it snapped. But he was a tougher fellow than I would have ever thought—these actions produced only a grunting noise, and, fire

in his eyes, he reached for me with his other hand. I grabbed the thumb of that hand and rolled sideways, away from Sam, dragging him with me. To my relief, as I hit the floor the cavalry arrived.

There was a solid *thwock*, and Georgi went limp, bounced off the couch, and landed on the floor. Bierkens was standing there holding a leather blackjack. I'd noticed that Serge had started to stand up, but then he sat back down abruptly and now had his hands raised.

"You people have no idea of the trouble you have made for yourselves. For the sake of your families, I hope you all have last wills and testaments in good order," he said.

"Two under control, all clear," Bierkens said quietly, and then louder, "OK, Mac, this looks good. Now what?"

"Well, Ross, I think we should find out a little more about these gentlemen by searching them and wherever they live. And Sam can gather whatever things she wants."

She stood. "First, though, I'm opening all the windows so this place can air out. Mac, I think these guys share an apartment with the other two, down on South Beach. And they'll be there, asleep, probably, until noon at least. They trade shifts in pairs."

"Interesting. Perhaps we can find out the address. Maybe someone has a driver's license. And those two, with Serge and Georgi here, are the four lieutenants you mentioned?" I looked at her.

"Right. These four, along with Nikolay, are really the only ones we need to worry about. Everyone else is a flunky who only takes orders. And you probably won't find any licenses. As far as I know, these guys are here on tourist visas, probably expired by now."

She walked through a door to a bedroom, and I heard a sliding door open.

I looked at Bierkens. "Gee, Ross. Maybe we could get the INS interested in these guys. Expired visas, working illegally in a very questionable industry. Sounds like they're ripe for deportation."

"That would solve one problem, wouldn't it?" He smiled.

Birken's two men had Serge lying face-down on the carpet, arms and legs spread wide, and Georgi was trussed securely with industrial sized zip-ties and unconscious besides. A little pile of personal possessions from the two goons was growing on the coffee table.

"Add carrying concealed weapons to the list."

I remarked as a Saturday night special of unknown vintage was added to the pile. I noticed that one of the men was examining a wallet.

"Any sign of an address?"

"No, sir. And she was right."

He had unfolded a tattered sheet of paper.

"This is an B-2 tourist visa, expired two years ago."

"Mac, if you'll excuse us for a minute, I think we may be able to persuade Serge here to provide us with an address for the apartment." Bierkens' expression was grim.

I walked into the bedroom and closed the door. With the slider to the balcony and another window open, the breeze had cleared the air nicely. Sam was making a pile of clothes on the bed, and a small valise was half filled with bathroom gear.

She looked up. "What's going on?"

"I don't think we really want to know."

*Field agents live and die by information, information that sometimes resides only in the head of one individual. If that individual chooses to keep that information to himself, it's sometimes necessary to persuade him otherwise. Your life can depend on it.*

*That persuasion can range from a simple, polite question to medieval-style torture, and every situation has its own requirements, time being an important one. How quickly is the information needed?*

*Of course, there are rules and regulations about this. Further, people who enjoy inflicting pain, either physical or psychological, are unlikely to last long in the covert operations business.*

*And there is also a large body of information about the effectiveness of the various forms of persuasion—in particular, it's common knowledge that actual torture is often counter-productive, producing answers that are what the victim believes the questioners want to hear, rather than the truth.*

*All of these considerations are running through my head as I try to decide how to approach my current problem. All I need to know is, in essence, "which way did he go?" That information resides in the head of the unfortunate individual who is staring, cross-eyed, at the handgun pressed to the tip of his nose. The thing is, I need to know this information, very, very quickly.*

*So, first, I use his belt to tie his hands around a convenient tree. Then I ask, reasonably politely, "which way did he go?" But I add words to the effect that, "if I don't find evidence that your answer is truthful, I'll come right back and shoot you in the kneecap."*

*The wide-eyed answer, "that way, that way" is accompanied by an appropriate shake of the head, so I head off in that direction. Sure enough, I find footprints within about fifty meters.*

*I don't know if my bosses would approve of my technique, whether they would call that "torture." But sometimes it's just a matter of whatever works.*

A short time later, there was a soft knock on the door, and Bierkens stuck his head in.

"Got it. We're ready for phase two."

I still didn't want to know.

"OK. What are we going to do with Serge and Georgi?"

"Heart attack rescue. Two of 'em. Georgi's on the way down to the van now. We found the back elevator, so it will be done quietly." Bierkens smiled. "I gave this whole thing some thought, you see."

"I'm glad we're on the same side, Ross."

\* \* \*

Bierkens' "phase two" was the apprehension of the other two goons who shared the apartment on South Beach with Serge and Georgi. Given the address, it was a no-brainer, and Bierkens sent off four of his team in the van to do the honors. The other two, Bierkens, and I took my car to pay a visit to Nikolay Kirov at the Sun and Sand offices. We left Sam at her place—she was wanting to get the mess cleaned up and the whole apartment aired out fully.

I persuaded Bierkens and his men to let me go into the Sun and Sand suite first, alone. For one thing, I wanted to get Lance out of the way—as a harmless innocent, he didn't deserve to be in the

middle of what was going down. For another, it would help everyone for me to reconnoiter the situation, and, with the headset, I could relay whatever I found, as I had at Sam's. At least that was the plan.

Lance recognized me instantly. I guess that's part of a front-desk job, to remember faces.

"Oh, Mr. Hunt! How wonderful to see you again! I hope everything is going well for you?"

His simpering—including an annoying amount of eyelash fluttering—was almost too much for me to take.

"Lance, something's going to happen here that you don't want to be part of, believe me. Don't you have an appointment about now to get your beard trimmed, or something?"

I tried to keep my voice low and calm, but I think my nerves were showing a bit.

"But Mr. Hunt, I can't just leave my desk. We get important phone calls here."

In his confusion, Lance forgot to simper or flutter, and a tinge of suspicion crept into his voice.

I pressed the comm link into my ear. "Ross, our boy needs some motivation."

Then, to Lance, I said, "You really don't want to be here for what's going to happen, Lance. Trust me on this."

Bierkens and his two men opened the door and walked in, and Lance got the message instantly.

"Oh, why Mr. Hunt, you're right! I completely forgot. I need a trim. Bye y'all."

And he was out the door in an instant.

"Any idea about who else is here?"

Bierkens was eyeing the closed door to Nikolay's office. I shook my head.

"Hmm. Well, let's see if we can find out."

Bierkens reached into an inner pocket and pulled out a wire with a suction cup on the end. He stuck the cup on Kirov's door and made a rubbing motion, upwards, on the comm link in his right ear.

"Did you see what I just did, Mac, with the link? That'll switch you to channel 2."

I tried the same motion, and suddenly I was in the middle of a conversation, listening to a voice I didn't recognize.

"...and it was my brother, Allah save him, who obtained the list of materials sites and passed it directly to the family. So we have been instrumental in providing them with both information and financial resources through your operation. Your involvement has therefore been crucial, not only for the financial arrangements but also through those nuclear engineers you recommended for the project. But then it all started to fall apart. Nassir had his weaknesses, and your woman was there when he was murdered. Then she turned up on that cruise ship the family was using. You should know that we expect you to control your people."

The voice had a trace of an accent, partly British and partly something else. And it sounded angry. Not loud and shouting angry, but worse, calm and quiet angry.

"Now, look, Mr. Al-Ayas, I know very little about this. Our schedulers got a call from a gentleman who was looking for some social companionship for an evening. We always contract such activities to independent escorts who have maintained our high standards of conduct and service. The woman we call 'Dolly' is one of our best, and she handled that request. After that job, she took some well-earned time off. Nothing out of the ordinary for us. I'm very sorry about your brother, but there's nothing at all that I know about it. And the financial arrangements for the family, as you know, were always handled with

extreme discretion, using us only as a pass-through. Every cent was accounted for, and our commission was quite small, as these things go.”

This voice belonged to Nikolay Kirov, and the smoothness he showed me had an overlay of nerves. But he got control of that as he continued.

“Now, there’s nothing I can do about the tragedy—a tragedy that I’m very, very sorry about—that befell your brother. But I’ll tell you what. I have some other contacts who can look into what happened on the cruise ship. I can’t believe that Dolly had anything to do with spoiling the family’s plans, but we can find out. OK? As for the financing, there’s no money trail for anyone to follow, we made sure of that. And I think those engineers I found for you prove my dedication to the project.”

*As creative uses for radionuclides go, the Russians seem to have a corner on the market. Oh, U.S. scientists know all of the tricks and continually invent new ones, but they are far more reserved, civilized, even, in what they propose.*

*In making better offers on behalf of Uncle Sam, with the goal of keeping out-of-work Russian engineers gainfully employed, I am running into all sorts of weird ideas, ideas that go far beyond the black world of nuclear weapons.*

*And some of the scientists are even knowledgeable about the sensitivities of the U.S. public to radioactivity. Thus it is that the design for the nuclear space heater includes careful shielding, and it is the lead shielding that heats up, keeping your toes warm. There are some details to be worked out, however, including the fool-proof, easy-to-use control system. Personally, I wonder about the consumer product safety labels, but I keep that concern to myself.*

*The designer of the nuclear motorcycle, however, has no such sensitivities, and he has put the power source under the seat. In this way, the decay particles from the small plutonium fuel package will provide a heat source for the miniature steam turbine—and for keeping your nether regions warm. Also for helping with family planning, assuming you want a very small family, or children with more than the usual complement of fingers and toes.*

*And the biomedical uses are legion. The well-known application of iodine-131 to irradiate tumors of the thyroid seems to have stimulated their imaginations, all with the best of intentions, of course, but... As I interview them for possible jobs in the U.S., I hear about how all sorts of radioactive substances could be built into all sorts of exotic, injectable agents to attack all sorts of tumors. Trouble is, there seems to be no way to test many of these ideas except on humans. Any volunteers?*

*And even as I am astonished, and worried, by these applications, it is the military ones that are the most frightening. Miniature nuclear bombs, miniature thermonuclear bombs, dirty bombs of various levels of strength and contamination, aerosol spray weapons, radioactive projectiles; all of these ideas and worse spin out of the heads of the Russian engineers I am interviewing.*

*And what is truly terrifying is that if Uncle Sam can’t find jobs for them, they’ll go to work in Baghdad or Tehran or Damascus or Tripoli.*

Bierkens and I looked at each other in astonishment. I mouthed “family?” and looked as puzzled as I could, and he shrugged and shook his head.

The strange accent returned in our ears. “Your help with finding the expertise needed for the project is most appreciated, and I don’t need to remind you that you have been handsomely compensated. It is this other business, the apparent coincidences involving your Dolly, that is my concern just now. I have

word that there is trouble on the west coast end of the project, that it may not be possible to complete it. She was on the ship. It appears that she is an agent of some kind.”

There was a faint rustling noise, and Kirov’s voice sounded panicked. “Mr. Al-Ayas, there’s certainly no need for that. I assure you that Dolly had nothing to do with anything except providing social services for our clients. Now, there was that other fellow, the one whose house you had destroyed. He’s the one who killed your brother, isn’t he?”

“Yes, but it’s obvious that your Dolly tipped him off. And then you must have tipped him off, too, because he somehow escaped the trap we planned when we destroyed his house. And even the engineers you found for us don’t make up for that.”

There were three *thwup* noises.

Bierkens jerked alert and made hand signals, and his two men positioned themselves on either side of Kirov’s office door, weapons at the ready. He motioned to me to follow away from the line of the door, so that we would not be the first people that Al-Ayas saw as he came out of Kirov’s office.

Shortly, the handle turned and the door opened. Out walked a trim, well-dressed man with a goatee and mustache, holding a semi-automatic pistol with his left hand as he unscrewed a suppressor from it with his right. Bierkens’ men had no trouble subduing him, not that he was happy about it.

“You must release me at once! As an official of the Kingdom of Saudi Arabia in this country as part of its delegation, I have diplomatic immunity!”

“Diplomatic immunity, hmm? Good thing we’re not from the government.”

I thought for a couple of seconds. “But I guess it won’t matter if this Beretta with your prints on it stays in the office with Kirov, then, will it? In fact, maybe you have a business card we can leave. You can’t provide too many clues for the city cops, after all. I know, I was one.”

Al-Ayas only glared at me.

Biekens understood my strategy instantly. “Bravo, Charlie, let’s run the gurney plan, like at the other place. We’ll have to wait for the van.”

His two men emptied Al-Ayas’ pockets and, with a hypodermic, sedated him into unconsciousness, then trussed him up like a turkey on Thanksgiving. I worked hard to resist the urge to kick his ribs in as retribution for my house.

To distract myself, I walked into Kirov’s office, holding the Beretta via a pencil through its trigger guard, to survey the damage. The only sign of anything out of the ordinary was Kirov himself, slumped forward with his head on his desk. The three exit wounds in his dark blazer just on the left side of his spine were hard to spot, so the bleeding must have been onto his lap. It appeared that the slugs were lodged in the padding of the back of his executive desk chair.

I left the Beretta on the chair where Al-Ayas had probably been sitting.

Fifteen minutes later, the van arrived. We used the time to find that, indeed, Al-Ayas did have a business card that we could leave with the Beretta and the body and, for good measure, to put some of his fingerprints on a water glass we found in Kirov’s office.

While we waited, Bierkens’ man Bravo kept busy cracking a safe that he found in the inside wall of Kirov’s office, and Charlie tackled Kirov’s computer, one of those miniature desktop units. By the time the gurney showed up, the safe, which had held considerable cash and several computer CDs, was empty and re-locked, and the computer was unplugged, with Al-Ayas’ using it for an uncomfortable pillow on the gurney. Charlie made sure there were no traces of it left in the office.

Then Bierkens and his men, who were tending the gurney with Al-Ayas on it, headed for the elevator.

The last thing I did before following them was to use Lance's desk phone to call 911. They were quite insistent on getting my name and so on, but I just talked about the body and the gun and hung up.

On the way down, I wondered how the van was going to hold everyone. But it turned out that five of the occupants—four Russians and a Saudi—didn't need seats. They were more like sacks of potatoes instead, all piled in the back. The van with the pile and Bierkens' men headed off in one direction, and Ross and I took my car in another, to pick up Sam.

Bierkens was staring out the passenger window at the buildings flowing by.

"So, Mac, originally we planned to lean on these guys, the Russians, I mean, maybe knock them around a little, then let them go somewhere way out west in the 'Glades. But I'm thinking that Kirov's death may change things."

I had been thinking about what to do with Al-Ayas, but this comment made me realize that we had more than that to be concerned with.

"Yeah, maybe it does. I wonder if there's any way we could get the INS interested in them. Leave them on a boat out in the Gulf Stream for the Coast Guard to find, maybe, without any documentation at all. Or, better yet, all their documentation and so on except those expired visas. And their passports."

He looked over at me. "Good idea. And easy to manage. Now, what about that Arab?"

"Well, you heard what I heard, but it's just the two of us. And he'll be able to pull some diplomatic clout out of his ass, I bet." I shrugged.

"Except channel two is always recorded, so anyone can hear that conversation. It implicates him directly in the SNM hijacking." His smile was serene.

I was surprised, but pleased.

"As much as I hate to say it, I expect we ought to bring Bill Petersen in on this. Maybe he can find out who this 'family' is, that Al-Ayas was talking about. It sounds like they're running the operation."

"I've got to admire your restraint, Mac. If that joker really was responsible for blowing up your house, well, I'm sort of surprised you didn't offer him a little payback." He laughed.

I laughed, too. "Your guys are too efficient, Ross. He was out before I could get to him. Otherwise, he'd be sporting several broken bones."

\* \* \*

## **Eighteen**

As it turned out, both Bierkens and I wound up playing pack horse to get the stuff that Sam wanted from her apartment. The car was crammed full, both the trunk and most of the back seat, leaving only a little spot for her to sit.

After we got settled in and headed for Boca Raton, she wanted to hear all about it. I let Bierkens tell it and watched her reactions in the rear-view mirror. It was a story she liked to hear.

“So you got all four of the lieutenants? Where are they? I want to kick each of them in the balls before you put them in that boat. How about Nikolay? That scum.”

She was practically bouncing with excitement.

“Interesting you should ask. It seems he was in a meeting when we got to his office.”

Bierkens was having too much fun with the story-telling.

“We managed to eavesdrop on some of it, but we missed a lot, I guess. One thing that confused me. Did you ever have a client named Nassir Al-Ayas?”

I heard a gasp from the back seat and looked up to see Sam staring back at me, wide-eyed. I nodded but kept my mouth shut.

“Well, sort of. I mean, he wanted a date, and so one got set up. But, uh, we were interrupted, sort of.” She shook her head. “I mean, well...”

“Don’t worry, Sam, I’m just trying to put pieces together. See, the guy meeting with Kirov was named Al-Ayas, too, Nassir’s brother.”

Bierkens turned in the passenger seat to try to see Sam.

“And he, I mean the brother, he seems to think that you set Nassir up to be killed and, further, that Kirov was in on it. So, to make a long story short, he shot Kirov dead. He, the brother, also thinks that you were on that cruise ship as some kind of secret agent. Fun, huh?”

“Well, not really, not if he’s coming after me. I could always handle Nikolay. I don’t know about this Al-Ayas brother.” She sounded worried.

“Not to worry.” Bierkens’ smile widened. “We’ve got him, too, all signed, sealed, and delivered with the others.”

“What are you going to do with him?”

“Good question. We’re not sure. He claims to be an employee of the Saudi Arabian consulate here in Miami, which gives him diplomatic immunity. Not that he can go around shooting people, that’ll get him kicked out of the country pretty quickly. But if we turn him over to the cops, well, they won’t be able to hold him for long.” Bierkens shrugged. “What do *you* think we should do with him? Oh, and we also heard him say that he was responsible for getting Mac’s house blown up.”

There was a long pause, and I could practically see the gears turning behind Sam’s blue eyes.

“So, if this brother thinks I was on the cruise ship as some kind of secret agent, that implies that he’s mixed up in the nuclear material thing, right?” She watched Bierkens’ head nod. “It seems like you guys might want to know just how he’s mixed up in it, what he’s doing. So I’d say that you ought to find out what he knows.”

“You think he’ll tell us?”

“Well, you found out Serge’s address from *him*, didn’t you?”

The ensuing strategy discussion occupied them all the way to our hotel in Boca, with Bierkens’ playing the bemused innocent and Sam’s proposing increasingly vicious interrogation methods. By the time we got there, I was doubly glad that they were both on my side.

*Although I've been trained to adapt to the unsophisticated—even barbaric—cultural practices in the countries I spend time in, I still get surprised. And many times it's the women who surprise me the most.*

*I've managed to make my escape from the Chinese acrobat troupe just after our final Kabul performance, at a small Russian outpost in the outskirts of the city. In the hustle and bustle of packing to leave, I slip away into the night, dodging through alleys and unlit streets back toward the center of town, where the embassy lies.*

*Even though the Red Army's presence is spread throughout the city and its environs, in places it's spread quite thinly. In an older part of the edge of the city—and "older" means centuries in this case—I find myself closing in on that distinctive ululating that people in this part of the world make when they're having fun or grieving or expressing any number of other emotions. I turn a corner into yet another dark alley, and there they are.*

*It's a small mob of Afghan women, and they have cornered a young Russian soldier. He's obviously drunk, bewildered, and more than a little scared. And weaponless.*

*The women, all covered from the tops of their heads to the bottoms of their feet by chadris, keep their distance as he strikes out with his fists, ineffectively. They have long sticks, poles, really, to poke at him as if he were a wandering goat. And when he grabs one stick as it jabs at him, another causes him to lose his grip.*

*The sticks, I see, are pointed, more like spears.*

*The ululating increases in volume and pitch as the women close in. Soon, the pokes are more like stabs, and, after an especially vicious one in his right thigh, the soldier goes down. I hear him pleading as the women close in for the kill, and then there's a scream of agony.*

*I'm glad to use the commotion to slip back into the shadows and make my way toward the Embassy.*

After playing pack horse once again, during which we did a fair job of filling up the little living room of my executive suite, Bierkens got on the phone. His end of the conversation was cryptic, sometimes nearly in code, but I got the gist of it.

When he finished, he looked at Sam and me. "OK, we're all set. The thing with the boat is going to take some arranging, but my guys will take care of it. They'll find a tub of some kind down in the Keys, and one of them will head out east in it, with passengers. The others will meet him there in one of our boats, pick him up, and leave the four Russians to bake in the sun a while until they wake up. We'll make sure there's almost no fuel and disable the radio and so on, so the thing will drift until the Coast Guard spots them on radar."

"Won't they see the rendezvous on radar, too?"

Sam was staying on top of this one, I could tell.

"Probably, and they'll think it's some kind of drug thing, so they'll go investigate. That helps our plan. Our guys, meanwhile, will be in uniform on a training exercise, with all the appropriate paperwork and no contraband. So they'll be covered." Bierkens smiled.

"And it sounded like they're bringing Al-Ayas here, right?"

I'd been thinking about next steps.

"Yeah." Bierkens looked at his watch. "ETA in forty-five minutes or so."

“OK. Hmm. No disrespect here, Ross, quite the opposite, really. But I think you should leave with your guys, the ones who are delivering Al-Ayas to us. Today started with your doing me a favor, helping me lean on a bunch of pimps, but it’s changed. In real life, you’re official military, and I don’t think you need the headache of dealing with any fallout from our kidnapping this diplomat. Or what’s going to happen to him next. It could be that the SAINT operation will need you and your guys again, in which case you’ll be back in an official capacity. I’d certainly welcome that, and I’ll recommend it if it’s OK with you. But I think you ought to disappear from this phase of things.” I took a breath and held it.

He’d begun nodding about half-way through my little speech.

“Makes sense. And, yeah, we’d be happy to be part of whatever goes down with that SNM. Well, except actually handling it.” He smiled. “For that, you need *real* experts.”

While we awaited the arrival of the august Special Assistant Deputy Political Liaison to the Consul of Saudi Arabia, which is what Assim Al-Ayas’ business card had printed on it, Bierkens and I set up a call to Bill Petersen. Sam got busy with unpacking.

“Bill? It’s Mac, and before you say a word, listen to this.”

I nodded, and Bierkens pushed a button on the little gizmo he’d hooked to the phone. The conversation between Al-Ayas and Kirov played all the way through.

“I’ll have a copy of that for you the next time I see you. Comments?”

I wondered how Petersen would react. He was in full analytic mode.

“Interesting. I guess that was Nassir Al-Ayas’ brother, who works at the Saudi consulate and got your house blown up. And is obviously connected to our missing SNM somehow. Who’s the other guy? And it sounded like he got whacked, right?”

“Right. He ran Sun and Sand Escorts, which is now out of business. The good news is that I’ve got this Al-Ayas brother, name of Assim. The bad news is that he’s hollering that he has diplomatic immunity. That doesn’t matter to me, because I’m not official. But you are. Got any idea of how to proceed?”

There was a long pause, and I heard some background conversation.

“Play that tape again, will you? I’ll record it, and we’ll see what the White House has to say about Mr. Al-Ayas.”

\* \* \*

Wednesday morning, Sam and I awoke in the California-king bed in the master suite of the Exclusiva at Boca mansion that Petersen and his boys had taken over. She and I were back in their good graces, to the point that everyone was calling her “ma’am” and me “sir.” That kind of treatment just made me feel old, but I think that she rather liked the respect it implied.

The previous evening had been a whirlwind of activity, not the least of which was getting Sam re-packed to move from our hotel to the Exclusiva house. The pack horse thing was beginning to feel familiar to me.

That the SAINT’s SNM operation still commanded considerable attention in Washington became evident to me about ten minutes after Al-Ayas had arrived—and Bierkens had left—when the phone in the hotel suite rang.

The voice was smooth, pleasantly modulated, and consummately professional.

“Mr. MacQuarrie? This is the White House. Will you please hold for the President of the United States?”

If I hadn't already been standing, I'm not sure but what this would have made me stand up. I could only imagine Norris Swendson's reaction when this call had come through to him on the *Earth Explorer*.

It took five seconds or so, and the familiar politician's voice came on the line.

“Mr. MacQuarrie?”

“Mr. President.”

“Mac—I hope it's OK for me to call you 'Mac' because everyone around here does and that's who I think of you as—Mac, the first thing I want to do is to express, on behalf of the American people, our sincere gratitude. I've got your service file here in front of me, and I have to say that's impressive enough. But what you've been able to do for us with respect to this current special materials business is truly exceptional. I'm sure you know that we won't be having any public expressions of our gratitude, it's just not appropriate in cases such as this, but I want you to know that you have our highest commendation.”

He paused for a breath, and I jumped in with what I knew to be the correct response. “I am honored to be able to be of service, Mr. President.”

“Now, Mac, as you know, the west coast part of this incident is under control, thanks largely to your efforts, and we've managed to recover about half of the stolen material. This leaves, of course, the other half along with the ringleaders and so on. No doubt they're tipped off about the west coast business by now, so it's going to be dicey. But I understand that you've made a major breakthrough in that regard as well. And there are some issues with respect to that breakthrough that I have to make decisions about. What sort of exceptions to authorize and so on. I'm sure you're aware that the national discussion of how to obtain information from adversaries has been heated in the past few years, and that policy has changed—changed for the better, to my way of thinking—as a result. Still, in an emergency such as this there is room for some, um, flexibility. Now, as I understand matters, you are holding the key to this, or at least as much of a key as we have available. And this situation is sufficiently dire that I think we need to make use of this key to unlock as many doors as possible. Therefore, and this is the other reason I've called you, therefore I have authorized a Special Presidential Directive, a classified one, for the SAINT team operation to use this flexibility to obtain the information they need to bring this situation under control. Further, I have directed the SAINT operation to integrate you into its highest levels of planning and implementation—by which I mean that you have leadership authority. Not as the SAINT's director, but as a consultant at the highest level. Parenthetically, let me note that this highest level is above Mr. Petersen. You will be getting another phone call about this shortly.”

He paused again, so I jumped right in. “Mr. President, I understand fully, and I'll be honored to provide whatever service I can. And I also understand your directive, I believe. I'll leave that to the experts.”

“Thank you, Mac. Godspeed. Let's get these guys. And have a good day today.”

He disconnected, and I sat down.

Sam was looking at me with big, round eyes.

“That was the President? Of the U.S.? Wow. You must rate, Mac. Except, I have to say, I've figured out that he's just another politician underneath all that smooth charisma and everything.”

“You’re right, darlin’. He’s just another politician, for sure. But, hey, he’s *our* politician. And he sure beats the last one, don’t you think?”

*My interactions with foreign governments are teaching me just how comfortable it is to be a U.S. citizen. Sure, there’s a huge, cumbersome bureaucracy in Washington. Sure, it’s inevitable that the head of our government takes on some trappings of royalty on top of the role of chief executive officer. Sure, there is lots of secretive activity, not all of which is something to be proud of.*

*But there is still a sense of egalitarianism, of citizens in service of their country, all the way to the top that’s just absent in most other countries. Elsewhere, the guy at the top acts like King for Life, and often is, at least in the countries I’m most familiar with, the sandy ones in Southwest Asia.*

*There, unless you’re a member of the King’s Court, you don’t want to be in a conversation with Him, because the only reason that would happen is if you’ve come to His attention. And you won’t have come to His attention unless it’s in a bad sort of way.*

*This lesson is hammered home for me as I play fly on the wall—with the help of a strategically placed electronic bug—in the main office of the would-be king of a small, oil-rich country. It appears that an accountant in the government’s treasury department has come to the despot’s attention, not for the usual sort of malfeasance or embezzling that accountants are prone to, but simply for being too competent.*

*“My sincere apologies, Majesty, but the numbers just do not add up,” says a frightened voice.*

*“I did not command your presence here for you to tell me this. What I want to know is what I asked before. Can we afford ten new F-18s, or must we really limit ourselves to only five?”*

*This voice is imperious and impatient.*

*“Majesty, please understand. Purchasing such a thing as an F-18 is only the beginning of the cost. There is also maintenance and upkeep, very specialized and very expensive, and training, and parts. And, of course, weapons systems, unless you wish these airplanes to be used only for passengers, one passenger at a time, assuming that we are buying the two-seat version.”*

*The voice is still frightened, but a little more sure of itself this time.*

*A deadly calm pervades the other voice.*

*“I am afraid that I have neither the time nor the patience for such insolence. Colonel, I believe you know the appropriate procedure.”*

*“Majesty,” the voice is clearly terrified, “Please, Majesty, I ...”*

*It is cut off abruptly, and the ensuing discussion concerns a replacement accountant.*

*My report on the matter includes a suggestion to the effect that we should not sell these people so much as a can opener, not to mention F/A-18D Super Hornets.*

As a result of the phone call from the President, I received another phone call, from “Henry,” Bill Petersen’s boss, whose real identity I can’t talk about, asking me to serve as his chief advisor on the SNM matter and to work in the field with Petersen and the other SAINTs. Shortly thereafter we had a visit from Petersen himself and two of his boys. They got Assim Al-Ayas out of the suite’s extra bathroom, where he’d been locked in and tied to the commode, bundled him up, and took him away.

And, when we woke up Wednesday morning in that huge bed, I remember thinking that I probably had a much better night than Al-Ayas did.

I got up, showered and shaved, kissed Sam and suggested that she play with the massage jets in the bathtub, and went looking for breakfast. Petersen was back, he and the boys were still set up in the sun room, and there was a new chef in the kitchen.

“May I make you some breakfast, sir? Coffee?” This was my first “sir” of the day, and it took me by surprise. I’d had several the previous evening, and it was getting old fast.

He poured me coffee and took my request for a ham-and-cheese omelet, with toast and hash-browns—I think he was disappointed that I didn’t want something truly fancy—and I took my mug into the sun room.

“Morning, Mac.”

Bill Petersen acted as if we were, always had been, and always would be the best of buddies.

“I think we may get a handle on this thing, thanks to your Mr. Al-Ayas. He’s been most cooperative, at least once he figured out that we were not going to let him hide behind that immunity thing. He had a tough night, so he’s resting up in the other room.”

“I don’t think I want to know details, Bill, but I bet that whatever’s been going on has been tame compared to what he could expect at home. What have you got?”

I took a sip of the coffee and was surprised by how good it was.

“He confirmed what he said in the conversation with Kirov, for one thing. He’s been channeling money to the group that’s actually running the operation from a bank account in Grand Cayman. He says he doesn’t know who set it up, and we’re starting to believe him. And he says that none of what he’s been doing is part of official Saudi politics. In fact, he’s begging us not to tell them about this or to send him back. I think he wants to keep his head attached to his shoulders.” Petersen smiled. “So now we’re back to the surveillance mode. Nate? Let Mac have a look, will you?”

A tall, thin African-American man arose from a chair that was set behind a tripod supporting a huge set of binoculars, which were aimed at the house across the lake.

“They zoom, sir. And these arms on the tripod let you pan around,” he said.

My second “sir” of the day. Time to put a stop, I thought.

“Thanks,” I raised my voice, “and, say, everyone? Could you please call me ‘Mac’? This ‘sir’ stuff just confuses the hell out of me. OK? Thanks.”

I sat down behind the binoculars and started fiddling. I zoomed the view back to take in the entire scene—the edge of the lake, really a big pond, a small dock, an immaculate lawn running up to a rock wall behind which was a fenced-off pool area, and finally the house. Unlike the our fake Italian villa, the house across the pond was modern South Florida tacky, with interlinked boxes of stucco, glass, and steel. Very rectilinear, but at least it wasn’t pink. There wasn’t a sign of life, and all of the windows were completely covered.

“Nate, it looks as if you have a fascinating job, watching this thing. It’s way too much excitement for me. I don’t know how you keep your heart-rate under control.” I yawned and stood up.

Nate looked embarrassed. “Yeah, well, we take turns. You know, share the wealth and all.”

“I’ve got an idea. Maybe I can talk Sam to sitting by the pool in that outfit she had on a couple of days ago when we were here. That ought to get a rise out of them, you’d think. Maybe they’d open one

of the window shades, or something.” I grinned. “Except I don’t know if you guys could stand the distraction.”

He grinned back. “C’mon, Mac, we’re professionals here. We can handle it, I think. We’d certainly like the opportunity to try.”

There was a murmur of laughter from the rest of the room. I decided to change the subject before I got myself in trouble by committing Sam to something she really didn’t want to do.

“So, you’re watching the place. Got any sound?” I looked around.

“We do, Mac.” Bill Petersen responded. “Shelby, over there in the corner, is recording from lasers on all the windows. And we want to get someone over there tonight with a decay counter and more surveillance. I wasn’t kidding, before.”

“I could tell.”

I gestured at the “Beware of Alligators” sign on the lawn down by the lake.

“And I wasn’t kidding either. I really don’t want to do any more swimming. But, say. That house has a dock. So does this one. I see lots of docks, all around the lake. Where’s the boats?”

“We wondered that, too. So we got a copy of the homeowners’ rules. Big, long, legalistic document that says something to the effect of ‘no boats on our lake’ and ‘you must have a well-maintained dock’ and ‘no fishing.’ It’s the biggest load of crap I’ve ever seen. Makes me glad to just be renting.” He laughed at his own joke.

“So, is Shelby hearing anything?”

He shook his head. “Nothing of interest. Doors opening and closing. Activity that sounds like work in the kitchen. We’ve seen people coming and going through the front gate—a couple of cars, golf carts, pedestrians—but nothing really out of the ordinary. So something’s going on in there. Maybe it’s in the basement.”

“Basement?” I laughed. “Bill, this is South Florida, man. The water table is about three feet down, somewhere about the surface of the lake. Nobody has basements.”

“Yeah, I know.” He looked smug. “But take a close look at that house. See how high it’s sitting up? We got its plans from the county, they keep such things for tax purposes and inspections and so on. Damned if that house doesn’t have a full basement. What we’ve gotta do is to find out what’s down *in* that basement.”

We were interrupted by a collective gasp from the other guys in the room, accompanied by Sam’s voice from behind me.

“Mac? The chef says your breakfast is ready. And I’m going to swim a few laps before I order mine. I need some exercise.”

And she strode purposefully through the sun room to the door to the pool, wearing a sensible, almost modest two-piece swim suit and a large towel over her shoulder. Still, all eyes in the room, as well as the chef’s, peeking around the corner, followed her every step with red-blooded interest.

So much, I thought, for professionalism.

\* \* \*

## Nineteen

“Say, Bill?”

Having eaten, I was thinking about the basement business and all of its implications—I get philosophical on a full stomach.

“Out there we’ve got a lake with no boats but with alligators, right? How do you suppose those ’gators get in there, anyway? Do they walk over from the next subdivision?”

“They probably swim. Isn’t this lake connected to that big canal out front, the one with the fake drawbridge over it?” He looked puzzled.

“Yeah, OK, well, how do they get there? What’s that canal connected to?”

I didn’t really know the answer, but I had my suspicions.

“I think I see what you’re getting at, Mac. All the lakes and canals are connected, at least the major ones. Ultimately they’re designed to connect the Everglades to the ocean, right? And the ’gators live in the ’Glades, so they can pretty much get anywhere.” He shrugged. “But what does this have to do with anything?”

I kept my expression blank. “I’m just curious. Got a map, or a good-quality satellite picture? I want to see where that canal out by the street goes.”

There was hustle and bustle, and presently a pool-table-sized satellite image of Exclusiva at Boca and its surroundings in exquisite detail was projected on the wall of what seemed to be the living room, or one of them. I poked around the gadgetry in the sun room and came up with a laser sight attached to a Ruger .45 automatic.

“OK, this is about where we are.”

I steadied the pistol with both hands so that I could shine the laser on our lake, while being careful not to touch the trigger.

“And, like you said, it’s linked to the canal here.”

“And the canal,” I swept the laser southward, then eastward, “joins this bigger canal, which empties in the ocean, which is over there. Looks like this satellite shot captured some boats on these bigger canals.”

“What’s your point, Mac?” Bill was getting impatient.

“Well, except maybe for a couple of dinky water-control structures, maybe between the lake and the canal, or between the canal along Military here and this bigger canal where the boats are, houses around this lake have water access to the ocean. If the water’s deep enough, they have underwater access, right?”

I looked at him, hoping he’d draw the obvious conclusion. But he’d walked right up to the wall and was peering at the projection closely.

“It looks to me like there’s a dam here, where the Military canal joins this bigger one.”

“With the boat traffic there, they could just meet somebody and hoist stuff over that dam, seems like.”

I was still wanting him to see the obvious.

“So, you’re telling me that the people in that house over there have some kind of mini-sub that they roll across the lawn into the lake and then ferry things like our SNM to someone in a boat on the big canal? Wouldn’t just be easier for them to use a car or a truck?” He wasn’t getting it.

“Think about it, Bill. Cars and trucks in and out have to pass through that gate, which would be a deterrent to anything of the nature we think these yahoos are doing. Surely they would want a more clandestine way to move stuff around. Right?”

Sometimes, I thought, you just have to spoon-feed these agency guys.

*Espionage, covert operations, surveillance, whatever you call it, there’s always an element of detective work involved. An analytical, even mathematical, mind is indispensable. But the ability to make intuitive connections among seemingly disparate facts and inferences—to be a good detective—is even more important. That ability is what separates successful field agents from the failures—and the live ones from the dead, sometimes.*

*But for reasons I’ll never understand, it’s the analytical minds, especially the organized analytical minds, who wind up in the supervisory offices in Washington. And because intuition is often linked to imagination—and the lack of the two go together as well—those offices are just chock full of unimaginative number-crunchers.*

*All of which is no help to me as I, on the verge of wrapping up a complex and dangerous operation, am requesting extra time and flexibility to do the kind of job that needs doing. To make matters even more difficult, the telecom link I’m forced to use is flakey—there is both the inevitable satellite delay and some weird kind of drop-out thing. I can only hope that my arguments sound persuasive on the other end. But based on the response I’m hearing, it’s hard to be optimistic.*

*“...ciate your conc... ..ort your eff... ..ever, we must foll... ..tain respect for ... To repeat, foll... Out.”*

*Well, I think, that sure clarifies the situation for me. It must be that they want me to follow the original plan, the carefully crafted, detailed and time-sensitive plan that has gone all to hell due to unexpected issues that have arisen. Issues that are best handled with intuition and imagination.*

*In the end, I do it my way, everything works out fine, and I even get a commendation for “field innovation” while my unimaginative, number-crunching supervisor smiles in approval. Go figure.*

“You mean to tell me that you really *do* think they have some kind of mini-sub that they’re using to move the SNM around? What have you been smoking lately, Mac?”

Petersen was laughing at the absurdity of it all.

“Yeah, it does sound nuts, doesn’t it? Still, it would be pretty easy to put a hydrophone in the lake and monitor it along with those windows, wouldn’t it? I mean, I’m just the advisor here, but that’s my advice.” I tried to remain polite.

“What we really need to do is to get into that basement,” Petersen grouched.

“Right. And hydrophone data just might be the ticket to a search warrant. With no boats or other activity on the lake, anything you pick up would provide evidence of underwater activity. And with the information we already have about that house, it might be persuasive to a judge. Hell, Bill, put two hydrophones in, spaced along the bank. Then you could use the time differences in the signals to triangulate the source. If it’s over by that house, you’ve got them.”

I had no idea whether he had a clue about what I was proposing, but it would work, I knew. I'd done it in the field on a couple of occasions.

"This could take weeks, and we don't have that kind of time."

He had progressed from grousing to grumping.

"OK, well, you keep Nate watching the grass grow through those big glasses and Shelby listening for kitchen noises with those lasers. I'm going to call some people I know at the Naval Research Lab." I remembered I'd "lost" my cell phone. "Is there a secure line around somewhere?"

"OK, OK, we'll put in a couple of hydrophones. But we better hear more than frogs mating. Oh, and I got you another encrypted cell phone. Don't lose this one, OK? It's in the sun room, Shelby has it."

The grousing and grumping had been replaced by petulance. He was having a fine morning, so far.

"Mac? There you are."

Sam, her hair dripping wet, was wrapped in her towel, but I bet she still turned the heads of all those professionals out there in the sun room.

"Nice pool out there, you ought to try it. Listen. I'm going to get some breakfast, the chef offered crepes, yum, and then I need to go back to the hotel for a couple of things. How about I just take the car?"

She was scrubbing at her hair with a corner of the towel.

I thought about it. "Seems fine with me. Say, I didn't even think to ask if you have a car of your own. Did we leave your car behind down in Miami Beach? Geez, I'm sorry."

She shrugged. "Not a problem, really. We can go back and pick it up one of these days. It's in the garage down there, so it's out of the sun and not getting bird poop on it."

Petersen was obviously not attuned to such domesticity.

"Oh, for Christ's sake. Why don't you take her to get it now, Mac? That'll get you both out of my hair. And we can get some phones in the water in the meantime."

He stalked off, and Sam and I looked at each other and laughed.

After she polished off a big order of crepes, a sort of purple mix of blueberry and strawberry ones, we organized ourselves to take Petersen's advice. I got my new phone, she got dressed, and we did a quick critical assessment of our personal inventories at the house. Her inventory took longer than mine.

It turned out that we both needed to fine-tune what we had brought, so after some repacking and more pack-horsing by me, we finally set out to retrieve her car. It had occurred to me that using her car would let me turn in the rental car I'd been driving, and it would also provide us with a change of cars, something any good covert operative does every now and then.

It was a lovely early-May Wednesday, and rush hour was winding down by the time we left, so we decided to take it easy and cruise down US-1, Federal Highway. It's one long strip between about Jupiter, north of West Palm Beach, and Homestead, almost to the Keys, that's easy, mindless, and offers the occasional tidbit of Floridania. But it's also slow, so that what would normally have taken us just under an hour on the interstate, the dreaded I-95, took us over two.

On the way, I mentioned to Sam my thought of turning in the Malibu I'd rented. There didn't seem to be any reason we really needed two cars just now, and when the SNM thing was all over with, I could get my Cobra out of storage anyway. She thought it was a fine idea.

But then, in her parking garage, when she pointed and said “over there,” I wondered what I’d gotten myself into. For reasons beyond my understanding, Sam drove one of those new VW Beetles, a convertible, and at least it was the turbo-charged model. But it was—and I almost reneged on my notion of turning in the Malibu over this—a reasonable facsimile of Mary Kay pink. I guess I could have lived with pink on the outside. Maybe. But the pink leather of the interior was almost too much. We nearly had our first big fight.

Sam, though, is no dummy. Rather than rise to the challenge of a fight, she was calm, collected, and even understanding.

“Lighten up, Mac. I didn’t pick the color, because I got the thing for free. A client, an older gentleman, gave it to me, he told me it was his wife’s. She sold cosmetics and won it as a sort of prize or something, but then she died of cancer. So it wasn’t my idea. And it’s just a color, Mac. It isn’t a statement, or at least you don’t have to take it to be one. I mean, it *certainly* doesn’t diminish you in my eyes.”

She said that in just the right tone of voice, and accompanied it with an anatomically strategic squeeze.

“Besides, the seats fold back into very nice little beds,” she continued.

That did the trick, although I’m still embarrassed to be seen in the thing.

So we transferred our gear into her pink-mobile and set out to find the nearest Avis franchise. Once there, I turned in the Malibu, after an argument about a drop-off fee I didn’t feel like paying, and then turned north for home. I have to admit, on a day as beautiful as that, the convertible was a nice touch, pink or not.

But the pinkness was on my mind. She was driving, so I was completely absorbed in what sort of explanation I was going to conjure up for Petersen and the boys, when my new cell phone rang—and “rang” is the right term, because I had not had time to reprogram it with my preferences.

“MacQuarrie here.”

“Mac, it’s Henry.”

I recognized the voice of Bill Petersen’s boss, the guy I had been appointed chief advisor to, and he sounded worried.

“I’m relieved to hear your voice. We got an alert that the house the SAINTs are using has gone up in smoke. Boca Fire and Rescue responded with four trucks. I haven’t been able to contact anybody there, except Von Rogers, who’s on gate guard duty just now. Where in the world are you?”

I filled him in on the errand we were running.

“Hmm. Well, let me suggest that you head back to your hotel and let things calm down a little. We’ve got the FBI on the scene by now, and they will handle the investigation. All of the data Bill and the guys collected is already archived up here.”

Henry meant “up here in Washington,” the center of the universe as far as he was concerned.

“I don’t think there’s anything you can do there. Lie low until you hear from me, OK?”

He didn’t have to suggest it twice.

\* \* \*

We made it back to the hotel just before one, and I turned on the TV to catch the tail-end of a local noon-news program, just in time to hear the “Breaking News!” rehash. It concerned a catastrophic house fire in a ritzy Boca Raton subdivision that could involve fatalities.

This was followed by the closing “Top Story of the Day!” report about a small boat full of Russian drug smugglers that the Coast Guard had apprehended about five miles off Fort Lauderdale. The smugglers were badly dehydrated and sunburned, apparently.

And, finally, they provided us with the end-of-show “News Update!” about progress—actually a serious lack thereof, with aspersions cast in the direction of the tight-lipped police detectives—in the investigation of the murder of respected Miami Beach businessman Nikolay Kirov. No connection between Kirov and the purported drug smugglers was implied or inferred.

It was sort of a news trifecta for us. Maybe, I thought, we should head for the track this afternoon.

Sam was aghast that the house-fire report was about the house we’d just spent the night in.

“You mean that nice place, well, sort of nice, not really my style, you know, you mean it burned down? My God! And what about Bill and Nate and all of the other guys?”

“All I know is what I heard on that phone call I got in the car. The guy who called me couldn’t get hold of any of them except the one who was in the guard house, by the canal. And he didn’t know anything, I guess.” I shrugged. “I don’t know if you noticed, but that house was really well equipped with a big-time security system and even a sprinkler system, in some of the rooms, at least. So the fire seems pretty suspicious.”

“So you think somebody set the fire intentionally?” Her blue eyes were huge.

“Henry, he’s the guy I talked to on the phone, Henry said the FBI is investigating it, so we’ll know eventually. But if somebody did, well, they’re good. The front of that house was sealed off from the street, with the gate and that big wall and hedge, and cameras watching everywhere.”

“Geez, I didn’t notice.” Her nose wrinkled and her chin quivered a little. “All dead? That’s terrible.”

I pulled her into a gentle hug. “Well, we don’t know for sure, but, yeah, maybe.”

A picture of the property had formed in my mind.

“And there are privacy fences and hedges along the sides of the lot, too, separating the house from those next door, on both sides. All the way down to the lake.”

“Huh?” She was on a different wavelength.

“Oh, sorry. I was just thinking out loud. If someone torched that house, they were a serious bunch, not just your garden-variety arsonists.”

Suddenly those hydrophones seemed more important than ever to me.

“Do you think they’ll come after us?” Now she sounded scared.

“Well, I suppose they might if they could. But I doubt they could find us—we have a different car now. It’s distinctive, though, so we have to keep it away from that subdivision. I guess I’ll have to rent something else, another white jelly-bean car.”

*Anonymous. Nondescript. Invisible. My entire existence in dangerous neighborhoods depends on maintaining these characteristics. It comes naturally to me on the streets of New York, because I learned the lesson over and over on the streets of various foreign capitals. In New York, on drug unit duty,*

*though, it's even more important, because I can't claim the defense of being an ignorant foreigner if I'm found out accidentally.*

*That makes it particularly vexing that the NYPD powers that be—meaning anyone from the Commissioner of Police to the guy who runs the motor pool—have provided my partner and me with an deep-orange, tricked-out (and very loud) Camero Z-28. It's not as if we're trying to be like the guys in Miami Vice. No, we want to blend in. But wherever we park the thing, it draws crowds of kids and teenagers, as well as snickers from the players we're out to bring down. They hear us coming from so far away that by the time we pull up, their main activity seems to be selling votive candles for the Little Sisters of the Poor.*

*Finally, we decide to try a different strategy in a different neighborhood. We make ourselves over as über-pimps, with clothes, hair, and what's now called bling to match the car. Our schtick is that we have a stable of girls that we can sell to the local street pimps for an appropriate piece of the action and for information about where to find the really good stuff. In a way, it is like the guys in Miami Vice, only with about one percent of their class. They drove Ferraris, we drive a Z-28 with crappy mufflers.*

*And somewhat to my surprise, it actually works. The girls we deliver turn out to be undercover vice-squad detectives, and our schtick puts them in the heat of the action. And we get all sorts of tips about where to buy quantities of coke and heroin, uncut.*

*Nothing in New York is forever, but we milk the reverse-invisibility strategy for as long as we can. There's nothing like having fun in your line of work.*

I scratched my head. "I wonder how long it will take the people in Washington to assemble a new operations team."

She pulled back from our hug. "Christ, Mac. You sure a different sort of person. I mean, here all those guys, friends of yours, almost, here they're all dead, and maybe we have people after us, and you're analyzing and speculating and not even worried."

I looked in her eyes for a few seconds and then led her over to the couch. We sat, and I patted her hand.

"See, there's a lot you don't know about me, about my background. I have years of experience with strange and dangerous and fluid situations. Lots of experience. One thing I learned to do a long time ago is to think about the present, the immediate future, and the longer term future, in that order. The more fluid and unknown a situation is, and dangerous, maybe, the more important that order is."

I stopped to make sure she was following this.

"So, our present situation is secure, no real worries. The immediate future, like, later today, that also seems fine. We can't be sure about either of these conclusions, of course, because the bad guys could burst through that door any second. But probably not. That leaves the longer future, tomorrow and beyond. And the way you handle that is to analyze it. So I'm analyzing. Thinking about Bill and the guys won't help them, and they'd want me to help us instead, believe me. Worrying won't help us, though, so I'm doing other things, like analyzing." I shrugged. "That's just me."

She leaned her head on my shoulder.

"Well, I just hope that if I get killed, you'll feel at least a little bad about it. You don't seem to care about Bill and the guys at all."

"I do care, just not in a sentimental kind of way. They were colleagues, not really friends. You, however, are in a different class altogether. Sentimental for sure. But the thing is, the only way you'll

get killed by these yo-yos is if they kill me first.” I squeezed her hand. “Another thing about me is that I don’t like to sit around waiting for things to happen. I like to be doing something. And what I need to do right now is find some way to get some juice with certain offices in the Palm Beach County government.”

She went into the bedroom to take inventory again, with the goal of figuring out what she’d lost in the fire, and I called Henry.

“Hey, Mac. Are you safe and sound? You’re the only person left with any real knowledge of the whole SNM business. We got verification from the FBI team that except for Von all of the SAINTs perished in the fire, along with another unidentified person.”

Henry sounded tired, and it was still early afternoon.

“There was a chef there this morning.”

“No, he’s been identified. He was on the team.”

“Oh. I know who it was, probably.”

I told him about Assim Al-Ayas.

He sounded relieved. “Of course. I forgot all about him. And that actually solves a little problem we created for ourselves, or maybe you created it—the kidnapping of a diplomat. I’m glad you did it, you understand. We just hadn’t figured out what to do with him.”

“Well, I just hope that whatever information Bill managed to get out of him was recorded and archived. We don’t need to reinvent wheels at this stage.” I paused to change the subject. “Henry, the reason I called is that I need a little technical help from within the government offices of Palm Beach County, and I don’t even know where to start. See, the thing is, I’ve been thinking about that house that burned, and the only way I can see for anyone to have gained access to it to torch it would have been from out of that lake. The rest is fenced off and has solid security.”

“OK, that sounds like a possibility.”

His response was measured, thoughtful.

“And the county here will have all sorts of information about that place squirreled away in their records. Now, in principle, those are all public records, because of Florida’s Sunshine Law. But they’re not easy to find, and the county isn’t likely to be very helpful. I guess that’s a good thing, because I wouldn’t want just any Tom, Dick, or Harry having access to all the details of my house. What I need, I guess, is for someone who is sufficiently persuasive to get the county administrator to enlist one of their know-it-all computer weenies to help me find everything there is to find about that house across the lake that Bill and his guys had under surveillance.”

“I thought Bill had those records.”

His interest was clearly piqued.

“Some. But there are the original plans, permits for modifications, permits for landscaping and all sorts of stuff he didn’t have. That’s what I need. Everything. And it’s just not possible to find it unless you know the ins and outs of their computers.”

I felt a little dumb, saying it that way. But I also knew I could spend weeks wandering the labyrinth of the county’s computers without finding everything I might need, if I found anything at all.

“I think we should be able to arrange something of that nature.” He laughed. “One of my biggest headaches in this operation has been finding things for the President to do. He desperately wants this

whole thing to be cleared up, and he's clamoring to help. And the one thing he can do is call people and ask favors—in a situation like this, political parties don't matter a bit.”

“Did Bill talk to you about hydrophones?”

“Hydrophones? No, not that I remember. What's that about?”

Henry was typing and talking at the same time, as I could hear clicking in the background.

“Well, I'm thinking that there may be something going on underwater in that lake. That's about the only thing that Bill and his guys weren't monitoring, and what they were monitoring was coming up with nothing. What we really need is justification for a search warrant for that house, right? It must be that Al-Ayas' information wasn't quite good enough to get us one. But suspicious underwater activity, combined with the other information, just might. Like Bill said, just this morning, I guess, we need to get into the basement of that house.”

I wondered how much of this he had heard before.

“Maybe you're right. Everything we have is incomplete. Al-Ayas mentioned several things, all of which reinforced our previous suspicions of that place. The hint of enhanced radioactivity is suggestive, but not compelling. The activity in and out is also curious, but that happens lots of places. Frankly, right now it's our best lead, God help us, but nothing's good enough for us to break the door in. This is America, after all. I'm guessing that the fact we disrupted their west coast plans, thanks to your involvement, has put them off stride, and they're sitting tight for now. But if we don't clear this up, sooner or later there's going to be a really nasty bang somewhere.” He paused. “Well, crap, I'm just rambling here, Mac. Sorry. I guess I'm pretty upset and worried.”

“I'm worried, too, Henry. Maybe I can find something in the county's files that will tell us more about that house. And maybe the FBI guys can toss some hydrophones in that lake for us.”

I didn't want him to lose sight of those things.

“Message received, Mac.” He chuckled. “Somebody in Palm Beach County government is going to be getting an exciting telephone call pretty soon.”

\* \* \*

## Twenty

I heard a wail from the bedroom. “My orchids! Ohhhhhh! My silk orchids got burned up!”

I ran to the rescue.

“You mean that bikini and cover-up combination thing? Aww, that *is* too bad. It was beautiful on you. Off you, too, for that matter.” I leered, but she just pouted. “Look, we can easily get another one, right? It's just over at the mall.”

“I just hate it when that happens!” More pouting.

“C'mon, don't worry about it. Make a list, starting with that. We'll go back and get replacements. Anyway, even if you looked great in it, it really didn't look that comfortable.

Ever the practical one, I also didn't want her to get arrested for wearing it.

“Hmmp!”

My phone buzzed—I'd reset the ringer options—rescuing me.

“Mac MacQuarrie here.”

“Mr. MacQuarrie? This is Laurel Washington, I'm the Palm Beach County administrator. I just received a most interesting telephone call from Washington DC. Took me by complete surprise. Anyway, I want to be sure I understand what you need before I assign someone to help you.”

She sounded official, to be sure, but potentially helpful as well.

“I got one of those calls earlier today. Surprised the hell out of me, too. But it's just an indication of how important what I'm working on is. I'm interested in every possible bit of information available about a house in the Exclusiva at Boca subdivision.”

Intuition flashed, and on impulse I rattled off the street addresses of the house across the lake and the two on either side of it, then repeated the numbers when she asked.

“I'm pretty sure I could find some of the information you folks have stashed away in your computer files, but I need everything you've got. And time is of the essence here.”

“Does this have anything to do with that terrible house fire?” Now her official side was taking over.

“These are different houses, on a different street. And I don't know if they're connected to the fire or not. I've heard that the FBI is coordinating the fire investigation, though. It seems the federal government is taking a keen interest in Exclusiva at Boca just now.”

I was trying to walk the thin line between too much and too little information.

“Mr. MacQuarrie, I'd appreciate it if you didn't jive me.”

She sounded annoyed, and I knew that I'd slipped over to the “too little” side of the line.

“I am responsible for the running of this county, and that includes law enforcement and protecting the public. The Department of Homeland Security has done a background check on me and has provided me with a security clearance. You can tell me anything.”

In my world, DHS security clearances rated at about the level of graduate degrees based on “life experience” from on-line “universities.” And that assessment was verified by the mere fact that she would be discussing her clearance over an open phone—mine was encrypted, but hers wasn't. I'd not heard the confirming beeps.

But I needed her cooperation. I decided on a bad-guy / good-guy approach. She needed a slap on the wrist.

“I certainly can't tell you just anything over this phone. And you should know that. Even the DHS briefing, which is pretty crappy by my standards, covers that.” I paused for effect. “I *can* say that there's a strong possibility that the two are linked somehow, and that somehow is what I'm trying to find out. I can't really say much more, but I expect that there's a single word that will help you understand a lot. That word is IRIL. That's why you got the phone call from the person you did.”

There was a gasp and a squeaking noise. I decided she had sat down on a chair that needed lubricating.

“You mean to tell me that stuff is in that neighborhood?”

She was breathing hard, and I had visions of her calling out HazMat teams and who knows who else.

“No, I do not mean that, Ms. Washington. Please take a deep breath and calm down. If it were, we would know it, because it can be easily detected if it’s not stored properly. And that neighborhood has no such storage capability.”

“How do you know? Isn’t that why you want all those plans and so on about those houses?”

Now she was back on the attack. And she had me. That’s not why I wanted the plans, but it was an even better reason for wanting them than the reason I’d been using. I decided on more good-guy.

“Actually, that’s not why I wanted them, but now that you mention it, that’s worth checking out as well. Meaning that it’s even more important that I get the plans. Oh, and, Ms. Washington, there’s something that you may not know. Half of the stuff we’re talking about has been recovered without incident. But the other half is still dangerous, and I can’t imagine that anyone would want to keep it in their house, even if it’s been suitably modified to provide shielded storage space. But the plans will tell us what we need to know. And if we do find the stuff there, you can bet that there will be a recovery team sent in from that lab, a team that knows exactly what it’s doing and how to do it safely.”

I held my breath, hoping that my comments, and the information, would mollify her.

I decided that she had been the subject of those all-too-typical “we’re from the federal government, and we’re here to help” experiences.

*It surprises me how often people just don’t want help, not from their neighbors, not from their local government, and certainly not from Uncle Sam. They want to do it themselves, even if they have no resources, skills, or manpower.*

*Now, giveaways of technology are another thing. Whether it’s western consumer goods or military gadgetry, it’ll get snapped up at a speed inversely proportional to the wealth of the people doing the snapping.*

*But not good, old-fashioned, person-to-person help.*

*What I’m supposed to be doing, here in the refugee camps of southern Lebanon, is developing the sort of rapport with the refugees that will let me help them develop democracy on small scales. The idea is that the small scale democracies—clans, groups of tents, city blocks, whatever—will gel into the sort of large-scale democracy that Uncle Sam so values.*

*But whenever I suggest to someone a discussion with his fellow refugees about some issue—where the latrines might best be positioned, for example, or how to construct a more secure pen for the goats—as a prelude to developing a consensus, I am rebuffed. One response is “my way or the highway,” and if his compatriots don’t like it, they can go do anatomically impossible things to themselves; in other cases, the individual has been told by someone in authority, some nebulous person I’m never able to identify, what to do, and he dares not argue.*

*By the end of my six-month assignment, I’ve managed to organize a single meeting that involves voting on something. In an overwhelming landslide, they elect me to be their representative to the larger group whose duty it is to collect camel dung for the cooking fires.*

*It turns out to be harder work than you might think.*

“OK, Mr. MacQuarrie, I’ll tell you what. I’m going to assign this to my most knowledgeable computer guy. A real nerd, although I’d appreciate it if you don’t tell him I said so. He knows our systems inside and out, and he knows how to run searches that find anything. I’ll give him these addresses I wrote down, and he’ll get back to you today sometime, or maybe first thing tomorrow.”

She paused, and her voice was different when she started up again, back to the no-arguing-with-me-now mode.

“But I want you to know, I expect to be kept informed of any threats to the health and safety of the citizens of Palm Beach County. Is that clear?”

“The good health and safety of the people of Palm Beach County, as well as the rest of the United States, is exactly what we’re trying our best to ensure, Ms. Washington. And thank you for your cooperation. I’ll make sure that word of your helpfulness gets back to that certain individual in Washington.” I let out my breath and disconnected.

No sooner had I regained my equilibrium—I had a high-school teacher, eons ago, whose voice Laurel Washington’s reminded me of, and I was a bit discombobbled—than my phone buzzed again.

“Mac MacQuarrie here.”

I heard a series of beeps and boops indicating a secure call.

“Mac, it’s Will Perry, FBI. I’m the lucky guy who got the SAINT’s fire investigation dumped in his lap.”

He seemed resigned to his fate. Still, the sensibility he’d shown me out at that camp in the Everglades made me glad it was him and not some prima donna.

“Sorry to hear it, Will, although I’m glad it’s someone I can trust. What’s up?”

“Well, I got a call from Washington, from my Director, no less. He told me that this entire operation is now being managed directly from the Oval Office, believe it or not. And he also told me that you’re the lead person for the entire deal here in South Florida.”

He said this in the sort of matter-of-fact way that you’d talk about getting your car’s oil changed, but it knocked me for a loop. First high-school flashbacks from Laurel Washington, now this. What *had* I been smoking?

“I knew that the highest levels were involved, but I’m surprised to hear that the Oval Office is managing things. They seem more like visionaries than managers.” I didn’t say anything about Henry. “And I expect that my role is temporary, until some other group, some group with a new leader, gets assigned down here. Is it true that the entire SAINT unit was wiped out? Do you have any indications of what caused the fire?”

“Everyone except Von Rogers died, and he’s gone into some sort of psychological shock. There’s also someone we can’t really identify. I’m told you provided information about him, and we’re going with that for now.” He paused to take a breath. “Now. The fire. I don’t know that I’ve seen such a professionally thorough job before. They used some kind of incendiary devices that just overwhelmed everything, including the sprinkler systems. We’ll figure out just what they were when the residue gets analyzed. But there must have been a dozen, tossed through windows and so on.”

“That sounds like a fair-size team of attackers.” I thought about the lake again.

“Yep, that’s what we think, too. And we agree with your comments about the lake. There’s a set of three hydrophones on the way, with analysis equipment.”

His remark impressed me with the efficiency of the communications links that Henry had enabled.

“Do yourselves a favor and see if you can get ’em in the water clandestinely. The people in the house across the lake are probably watching.”

The last thing we need, I thought, is yet another attack.

“And there’s something else that might be useful, not for the arson investigation, but for the bigger picture. I’m sure you’re going to interview all the neighbors. How about working into those interviews a general question about unusual construction activity? Either recently or in the past. Anything they can remember, anywhere in the neighborhood. We don’t need to raise suspicion, but what I really want to know about is activity at that house across the lake.”

I heard laughter. “Gee, Mac, if I didn’t know better, I’d say you have some concerns about that house across the lake. But don’t worry. We’re on it. Whoever pulled this stunt has to expect there to be an arson investigation. So we’re investigating the crap out of the place, and in the process we’re getting all sorts of other things accomplished. I guess you haven’t been here since the fire, huh?”

“I got a call about it earlier and stayed away. Why?”

Will Perry hesitated. “Well, from what I saw of the news reports and so on, it sounded as if I was going to find a pile of ashes when I got here. But that’s not the case. The place is burned out, for sure, a total write-off, but there’s structure still standing, and some rooms are nearly untouched. It’s pretty clear that the attackers knew exactly which rooms to focus their efforts on. Those rooms got the incendiaries, and the sprinklers must have saved the rest of the house. It’s as if they’d been watching the SAINTs for days and knew just which rooms they needed to hit.”

\* \* \*

Will Perry disconnected, and my phone started making weird noises. I poked at it for a minute, and, just about the time I figured out that the noises meant I had voice mail, there was a knock on the outside door.

Distracted by the phone’s complexity and still poking at it—how to get the noise to shut up and get at voice mail was the next puzzle—I wandered over to the door, unlocked it, and pushed it open. Only then did it occur to me what a stupid move that was, how vulnerable Sam and I were if one of the bad guys had found out our location.

But we got lucky—it was Ross Bierkens, and there was that nondescript white van sitting nearby in a parking space, engine idling. I put the phone in my pocket, which meant that every few seconds a sound like Tinker Bell with a sock in her mouth emerged from the front of my pants. I tried to ignore it.

“Hey, Mac. My CO sent me over, said he got a call from the White House. It seems there’s some concern for your welfare. What’s going on, anyway?”

He couldn’t help but look in the direction of the muffled tinkling, so I pulled out the phone and started poking at it again.

While I fumbled with the phone, I began to fill him in on the Exclusiva fire and its victims. Suddenly the little gadget let loose with a high-volume rendition of the famous finale from Rossini’s *William Tell Overture*, and, startled, I dropped it on the tile—at which point the back popped off and the battery skittered across the floor.

That shut it up. I decided to let it lie there for a while, to teach it a lesson.

“Feel free to step on it if you want to, Ross.” I shook my head in frustration. “Anyway, we’ve obviously made someone nervous enough to fight back. And I expect that means we’re getting close.”

“Maybe,” he looked thoughtful, “just maybe we could have a look around while the FBI team is sifting through the rubble, if they still are. That way, we’d blend in and not raise the suspicions of any watchers, at least not higher than they already are. I need civvies, though.”

I looked him up and down, estimating. “Well, Ross…”

But the land-line phone, the hotel's room extension, had started ringing. I picked it up and found myself listening to my White House contact, Henry. He was not happy.

"Mac? Did you get that voice mail yet? When are you going to download that file? You need to see it soonest."

Oops. I pointed and gestured at my cell phone's parts, and Ross finally understood. He assembled it and handed it my way.

"Sorry, Henry, I've been talking strategy with Commander Bierkens. What's in the file? How do I get it?"

"Mac, the cell phone's encrypted, right? For, you know, a reason?"

Henry sounded resigned to my stupidity.

"Be sure and check out time mark oh-nine-thirty and the following twenty minutes or so."

"Oh, right, sorry. Once more. I'll get right on it."

I hung up the house phone and started fiddling with the other one again.

It took all of about fifteen minutes for me to figure out how to retrieve the voice mail and then to use its message to find the web site I needed and to log into it. The high-speed internet at the hotel made reasonably short work of the large, encrypted file, and I used the password in the last part of the voice mail message to un-encrypt it.

It was a computer movie, streaming video recorded from one of the surveillance cameras that had been installed at the Exclusiva house, the only camera looking over the back yard to have survived the fire.

*Surveillance, whether by camera or by eyeball, can be invaluable, or it can be a big waste of time, energy, and money. Agency analysts, those legions of highly trained and specialized civil servants who often spend an entire career poring over satellite images without seeing anything of significance, think of the whole affair as a big game. But to those of us in the field, it can be a life-or-death proposition.*

*The miniature video camera I've left watching the back exit of the bookstore, the one that fronts on the street across from the government house in Lahore, is programmed to take a picture every five seconds, so the tape, when viewed as a movie, is jerky and, because its lighting is terrible, full of shadows.*

*But it has two frames at just the right time, the first showing someone leaving the store and taking care to close the door carefully. In the second frame, I'm facing the camera.*

*"Right time" in this case means two minutes after a sniper's bullet hits General Bassam Zirafi, the leader of the Muslim-extremist military faction that is about to overthrow the Pakistani government. He is standing on the steps of the government house, reprimanding an aide, when his head explodes. Because his day job is commanding the new military detachments that will oversee the Pakistani nuclear weapons program, he is something of a concern to Uncle Sam and his various friends both in the region and around the world. The folks next door in India are beside themselves with worry.*

*The question is, can the shooter be identified by the videotape? Or, more importantly, can he be mis-identified? It really wouldn't do at all for the his true identity to become known because, thanks to the recently renewed Executive Order prohibiting employees of the U.S. government from involvement in political assassinations, no matter how dangerous a potential target may be, it would cause something of a stir, were his identity to be publicized.*

*I'm using the best video equipment I can rustle up in this godforsaken place, including a brand-new computer enhancement system. The first frame isn't a problem, as there is nothing to identify the individual's nationality based on the back of his head. But the second ... does it not look like an American enough for a disclaimer to that effect to be credible? Does it look enough like someone of another nationality—pick one, I don't care which—for a statement of blame to fly?*

*It's time, I'm thinking, to call in the real analysts.*

I managed to skip forward in the video file to 0930, and then clicked the “Play” button. It showed a nicely framed shot of the back yard and the lake, the occasional bird flitting around making cheeping noises, and, I suppose, the grass growing, for about five minutes. Then there were small ripples, different ripples from those the wind was causing, along the edge of the lake right about where the lot-line hedges ended at the waterline. Nothing much followed, although it seemed as if there was a rustling in the hedges themselves—I couldn't tell whether it was the breeze or what.

Nine minutes later, at the 0944 mark, all hell broke loose. Several rocket propelled grenades came whooshing out of the hedges from different spots, the microphones saturated and shut off, and the picture jerked and wobbled. It took only a few seconds for dust and smoke to obscure the picture completely, and it finally went black. The power to the system must have failed.

Bierkens, who had watched the show over my shoulder, let out his breath.

“They came in from the lake and worked their way through the hedges. I bet when we check it out, we'll find the centers of the hedges have been cut to make pathways, like tunnels or something. This tells me that the whole thing was carefully planned and executed, and that means we're dealing with professionals.”

“That fits with what Will Perry told me—remember him? One of the FBI guys at that bust out in the 'Glades? It looks like they had the SAINT house under thorough surveillance for some time. Apparently, they knew just which rooms to fire those RPGs into.” I was staring at the blank screen.

“I don't want to speak badly of those guys who got killed, but I don't think they were taking the whole thing seriously enough. Or else they were just too removed from military discipline.” He shook his head sadly. “You seemed to know that guy Petersen pretty well, huh?”

“We went back a long way, lots of years.”

I had never really liked Bill Petersen, but losing a long-term colleague that way is still jarring

“You're right, though—what I saw at the house was a pretty casual bunch. I don't think they believed there was a threat from across that lake. And I saw what you saw—that attack came by water.”

“Right.” Bierkens was thinking. “But...well, I'm not a lawyer, but I'm thinking there isn't much in the way of real evidence implicating that house across the lake—meaning that I don't know if it's going to be possible to do a legal search yet. That Presidential Directive lets us work with law enforcement, not outside the law.”

“Yeah, you're probably right.”

Time, I thought, for a little creative covertness.

“Y'know, I think I'm beginning to develop a personal animosity toward that greasy little lake.”

\* \* \*

## Twenty-One

Well, I can't verify my comment about that lake's being greasy, but it was sure warm and wet, especially the warm part. Almost like bathwater. And, greasy or not, I still didn't like it.

Two of Bierkens' men and I had waited until dark to ease our way through the tunnels that someone had cut down the center of the west-side ficus hedge and slip into the lake. We made certain that Will Perry's FBI team had plenty of lights shining in all directions in the back yard, so that any night-vision equipment watching us would be overwhelmed.

It was dark, and based on its taste I'm positive that the water was muddy, but we found our way around under the surface quite nicely, thank you, with some nifty equipment that the SEAL team brought along. They wouldn't tell me much about it, beyond how the "ON" switch worked, and even if they had I probably wouldn't be able to write about it without getting hauled off to Leavenworth. Suffice it to say that my swim that night was a lot easier than the one behind the Saudi consulate had been.

Also, the fins they loaned me helped, a lot. I wished I'd had them in Biscayne Bay that other night.

We managed to get three hydrophones installed, bracketing the suspect house across the lake so that sound sources could be pinpointed. Our main purpose, though, was an up-close examination of the shoreline and lake bottom behind that house. I don't know what I was expecting—maybe some kind of underwater door to a tunnel to its basement, or something.

But we didn't find squat, except mud and more mud, with lots of algae and some kind of seaweed that kept grabbing at our feet. It reminded me of that dream with the nibbling fish. At least there were no alligators, despite all those warning signs.

It was after midnight when I finally got back to the suite, feeling desperately in need of a shower and some clean, crisp, dry sheets. I'd left Sam to go shopping to rebuild her burned up wardrobe, so it didn't surprise me to find the living room strewn with bags and boxes.

I was a little taken aback, though, to find her dressed only in some wonderfully filmy underwear, leaning over a ten-foot putt on the living room rug.

"Uh..." How, I thought, should I put this? "New hobby, sweetie? Clothes-optional golf? I thought you said we were taking up tennis."

Her stroke was smooth and sure, and the ball rattled into the water glass. She stood up with a smile of triumph.

"I did. But we need variety in our lives, so I'm going to make you take up golf, too. I went for a walk that day we stayed at the Exclusiva house, and their golf course got me all inspired. Nice contoured greens surrounded by lots of sand traps." Her smile turned seductive. "The clothes-optional thing is just for you, though. You like my new undies? Oooh, goodness. I see you do. Well, maybe I can help with that. But you obviously need a shower first. Maybe I can help with that, too. Where in the world have you been?"

What followed made me forget all about golf until the next morning. I was barefoot, on the way to the kitchen to make coffee, when I stepped on her golf ball in the middle of the rug. As I was massaging the ache in the arch of my right foot, I remembered her words from the night before.

"...their golf course got me all inspired. Nice contoured greens surrounded by lots of sand traps."

*Sometimes the answer is hovering about like an annoying mosquito, whining, mocking you, and you just can't grasp it. Other times, it's more subtle, and you don't even know it's out there hiding in the shadows until you blunder into it by accident.*

*Joe Fila and I need to find out who is whacking our snitches, and we need to find out quickly before we run out of them. Developing that group of informants had taken us a long time, and we can't afford to have to start over. Tooling around the city in our rumbling orange Camaro gives us plenty of time to discuss the problem.*

*"I just can't feel too bad about Jamal. I mean, yeah, we've been getting lots of information from him, but he was such a dirtbag."*

*Joe emphasizes his point by spitting out the open window.*

*His opinion of most of our snitches is similar, but in Jamal's case it's spot on.*

*"He was playing both sides, right? Not like the others."*

*I'm referring to the four other late informants.*

*"Yeah, and he was also the one I trusted least. Thing is, we can't tell who might have done him. I'm thinking it was probably the street guys, though. But I'm not sure which crowd."*

*The fingers of his left hand make drumming noises on the glass of the T-top.*

*The "street guys" are the local dealers' network, three separate networks, actually, consisting of gang members associated with the different neighborhoods in the turf we're working. The other side that Jamal was probably playing as well is the importers, a mixed bunch of Arabs, Afghans, and Syrians who are able to get along only because they make so much money together smuggling heroin from southwest Asia.*

*We're trying to bring down both sides at once, more or less. If we break up the smuggling ring, the dealers will just find other importers; if we bring down the dealers, the importers will find new ones. Get 'em all, that's our plan.*

*The dead informants had been providing us with information about the various components of the overall operation, so it's just not obvious who would be after them as a group. They were each pretty isolated from one another, and there was no reason for the smugglers to have gone after the south-side snitch, who knew only about the dealers down there. Even Jamal hadn't been involved in anything on the east end.*

*I grab the passenger-side window frame as Joe takes a corner faster than he needs to.*

*"The MOs on those hits all look alike, right? Same killer. It has to be someone who knows the big picture, then. But who's that? Even the Loot doesn't know very much."*

*We aren't filing full-disclosure reports with our Lieutenant's office and haven't been for months. The PD is full of leaks from top to bottom.*

*"Hell, I don't know. Probably somebody in the department, though. Wanna get some lunch?"*

*Joe is perpetually hungry and likes to eat at least three lunches while on shift.*

*"Where's that menu we got from the new Chinese place, anyway?"*

*I begin pawing through the pile of paper on the dashboard, rooting around for the list of offerings at Szechwan Heaven, making a pile of paper in my lap. Most of what's there consists of unpaid parking tickets. We get them by the boatload and just ignore them.*

*“Yeah, must be someone in the department has figured out where we spend our time. The pattern would have made it easy to find Jamal and the others.”*

*I find the menu and square up the pile of paper to jam it into the glove box, along with all the other paper in there, also mostly parking tickets—and a light bulb in my head turns on.*

*“Uh, say, Joe? You don’t think... Ah, what I mean is, look at all these tickets. They all have locations and the license plate number, and times and so on. You think maybe someone in parking enforcement is tracking us?”*

*“Holy crap!”*

*Joe can say a lot in very few words when he wants to.*

*And with that little epiphany, the rest is easy.*

Sand traps, I thought, and golf carts in practically every driveway.

Having been a homeowner with a cantankerous lawn sprinkler system, I had done my share of digging. I knew that below about six inches of turf and soil there was pure sand in this part of southeastern Florida. It would stand to reason, then, that those sand traps would be virtually bottomless, I thought.

Commander Ross Bierkens answered on the second ring, and I waited for the secure beep.

“Ross? Hey, sorry to call so early, It’s Mac.”

“Not a problem, Mac. I’m out on my morning five-mile run. What’s up?”

I couldn’t help but hate the fact that he wasn’t even breathing hard.

“Do four of the guys on your team play golf? We need to have a foursome play a round at that Exclusiva course. They should make a point of hitting every sand trap, and we can have them carry rad detectors. I want to know if there are any signals in any of those bunkers.”

There was a long pause, during which I pretended that Ross was trying to catch his breath.

“Sounds like you think the missing SNM might be buried out there somewhere.”

Nope. His voice was relaxed and smooth. No panting or huffing or anything. Geez.

“It’s occurred to me. And a good way to find out, and keep it quiet, is to have somebody play some golf, seems like.”

“I think I can get a foursome together. What’s the plan if we find something?”

He must have turned onto an arterial street, because suddenly there was traffic noise in the background.

“Keep it under surveillance and then pull the same switcheroo that we did on the ship, I guess. That’ll get the material off the street and give the FBI a way to get the perps, right?”

“Right. And, listen. While you guys were swimming last night, I had a long talk with Will Perry. They’ve got the forensics on the arson and murders under control. There are some test results they have to wait for, and they’ve got surveillance re-established using the undamaged part of the house. And they were all set to begin recording the hydrophone signals. So, they’re looking for what’s next. Maybe Perry could run checks on the golf course employees.”

And he could even talk paragraphs without breathing hard! Damn.

“Sounds like we’ve got a plan for the day, Ross. Let me know if you guys need any of this equipment I have.”

I finally heard him take a deep breath.

“You bet. And a plan it is. But after talking with Will last night about what went down at that house, what I’d really like to do is shoot somebody. We just need to find out who.”

My self-service foot massage had managed to erase the golf-ball ache, and I must have been inspired by Ross, for I had an urge to work out. The hotel, I remembered, had boasted about their exercise equipment, so I decided to check it out. After dressing quietly and managing not to wake Sam, I went looking for the Chamber of Pain, as I started to think of it. I left her a note with the excuse that I wanted to keep myself healthy so we could spend more years together.

An hour later, tired all over, I limped back into our suite to find Sam making us breakfast. As I came in through the door, she grabbed me in a big hug.

“I don’t think that anyone has ever left me such a sweet note! You sure know how to make a girl feel wanted.”

Her kiss made my exercise-induced lethargy fade.

“But your phone has been buzzing and buzzing, and then making chirping noises. I think someone must really want to talk with you.”

“I’ll call ’em as soon as I shower. And eat whatever smells so good.” I kissed the tip of her nose. “And it’s true, ya know. Even we old-geezer ex-spies know the value of good relationships. And I seem to have found a great one.”

I was tickled that it made her blush. God help me, this mushy stuff was feeling *real* good.

\* \* \*

The phone had voice mail from Henry directing me to my computer, and my email had a long message time-stamped a few minutes after the voice mail. The message was about the execution of a search warrant on Winfrew Hanley’s house in Exclusiva at Boca, that house I was obsessing about. The search was going to happen at 0830 with or without me. Third-class engineer Willoughby Trimble, after some persuasion, had cooperated with the FBI’s questioning about his role in the SNM caper, and he’d told all about that house.

That’ll teach me to go for a little workout, I thought.

By then, it was nearly nine, and I was missing all the fun. But there was still the SEAL golfers’ sand-trap scavenger hunt to keep me amused, so I was reassured that the day might still have possibilities.

I decided it would be politic to call Henry back.

“Looks like I missed the fun, Henry. Sorry. I went off to the exercise room without my phone.”

But I didn’t even try to sound contrite.

“Not a problem, Mac. You would have just been in the way anyway. Perry and company know the drill. I’ll let you know what they find.”

“This may turn out to be a good day all around, Henry.”

And I proceeded to sketch my idea about the sand traps. When I finished, there was one of those pregnant pauses you read about.

“Now, why didn’t we think of that sooner? Shit. It’s pretty obvious when you describe it that way.”

“Yeah, well, we haven’t found the stuff yet. So don’t go betting your mortgage.”

I had my fingers crossed, but it was still only a hunch.

“So, anyway, your email didn’t really say much. What did you learn from Trimble?”

“Huh? Oh, right. Well, it seems that Winfrew Hanley’s twin brother Josiah is the head of some kind of spooky religious-political cult, Trimble called it a ‘family.’ Josiah holds worship services, or something like that, and strategy sessions in the basement of Winfrew’s house. Trimble has never seen Winfrew, though. The religious angle wasn’t a priority for our people, so they didn’t get into details about it, but what Trimble said about the strategy session business was enough to get a warrant. Uh, wait one.”

There was a muffled side conversation on his end.

“OK. Sorry. So Trimble told us enough to get us a warrant, but he said he didn’t know where the rest of the SNM got off to. In fact, he was surprised that there was more than he had on the ship. I’ve got no idea of what Will Perry and his team are finding, but at least it’s progress. If the SNM is really in those sand traps, we’re miles ahead today.”

“Well, like I said, be patient. We’ll see. Anyway, what about the commandos who staged that raid on Bill Petersen’s operation? Did Trimble have anything to say about that?”

“He’s ex-Navy, of course, and he said he met several others in the cult with military backgrounds. Seems they have some sort of enforcement system for slackers, or something. So that could explain the commandos. Listen. I just got a note here with a progress report. Apparently that house is empty, at least as far as people are concerned.” There was disappointment in his voice. “They’ve found a weapons cache, though, in the basement. And a coffin, some kind of weird setup involving gas canisters and a freezer. But no hint of radioactivity.”

“A coffin?”

What, I thought is *that* about?

“That’s what it says. Nothing about what, or who, is in it.” Henry paused again. “I guess it could be lead-lined and have the pigs in it, though. I’ll let them know.”

“OK, well, thanks, Henry. Let’s keep each other informed about what’s going on today. Things are getting interesting.”

“Right. Finally. The President will be happy, at least.” He sounded relieved.

Even I, with my rogue field-agent’s history and unrepentant bad attitude about authority, knew the value of keeping the boss happy. Especially a boss with such a nice house.

*Stateside, between assignments, I find it a useful skill to be able to sleep with my eyes open, because it makes it so much easier for me to get through the various training seminars I’m required to attend. It seems that the latest set of guidelines from the Carter White House has sparked sensitivity to ethics and honorable behavior among the bureaucrats of the intelligence community, and they are bound and determined to pass this sensitivity along to those of us who do their dirty work out in the field.*

*So, even though we have always operated in the mode of justifying the means based on the ends, we now have the task of balancing the two, at least in these seminars.*

*The chirpy woman for this round is lecturing on the importance of our showing respect for other cultures. Every culture deserves respect, she asserts, and no culture is inherently better than another. Never mind, I'm thinking, that we're in the process of trying our best to subvert some of those other cultures for Uncle Sam's benefit. That's our job.*

*Because she has introduced herself as "Miz Sandra Jackson," I've pigeon-holed her with the Gloria Steinem crowd—and what Ms. Jackson lacks of Steinem's sense of style, she makes up for in stridency. Whenever she tries to emphasize a point, her voice rises to a level beyond shrill, a level that keeps waking me up. Very annoying.*

*So annoying, in fact, that I finally raise my hand when she pauses for a breath.*

*"Ms. Jackson? I'm afraid that I'm a little confused about all this. I've been assigned in countries where things are very different from here in the States. For example, in some of the places I've been assigned, women are treated like property, like farm animals. In fact, farm animals are treated better, mostly. In one place I know of, they routinely do surgery on little girls—rather primitive surgery at that, without anesthetic or much in the way of sterile instruments, just big knives—surgery in which they cut out the little girl's clitoris. Is this one of the cultural practices I'm supposed to respect and honor?"*

*The audience, my fellow field agents and a large number of office workers from the Company, lets out a collective sigh, and then the silence is broken only by a nervous throat-clearing from a very pale Ms. Jackson.*

*Shortly afterward, after the seminar ends prematurely and while we're all filing out, I get my share of smiles and nods of gratitude. But I find the Deputy Director waiting for me out in the hall. He pulls me aside.*

*"Mac, I just don't know what we're going to do with you."*

*He can't quite hide the grin lurking behind his stern expression.*

*"Yes sir."*

*I try to look contrite.*

*"Thing is, Mac, our official position has to be that we buy into these philosophies. It's White House policy. Of course, the real world is a bit messier than mere philosophy, isn't it?"*

*His wink gets the real message across: he's a happy boss.*

On my phone there was more voice mail that must have come in when I was talking with Henry. Perhaps, I thought, that was the new and different tweeping noise I had heard, some kind of call notification alert. That stupid phone had more features than I knew what to do with. At least I had figured out how to get the message, though.

"Mr. MacQuarrie? My boss, Palm Beach County Administrator Laurel Washington? She asked me to dig up some info from our real estate databases for you ASAP. I've got it. Please call me back and let me know how to get it to you, OK?"

The squeaky voice left a call-back number and said it belonged to Alvin White.

The files he had for me were huge, some having been scanned in from the original paper architects drawings, but eventually I got them downloaded. They were organized so nicely that it was easy to

eliminate the house on the east end of the three—no permits had ever been pulled for any additional work beyond the original construction.

But the other two, Winfrew Hanley's house in the middle and the one on its west side, had undergone layers of additions, remodeling, and reconstruction since being built. And the west-side house turned out to be the property of Josiah Hanley, with a purchase date shortly after Winfrew's purchase next door.

It made sense, in a way. Twin brothers, each made rich by the efforts of their father, retiring to Florida and buying houses next door to each other. Keeping family connections close, and all that.

But the more I pored through the various plans and permits for the two houses, the more curiosities emerged. I finally called Will Perry.

"Will? Mac here. Listen, I got the details of plans and permits from the county, for the Hanley house, right? And, on a hunch, I also got them for the house next door, to its left as you look across the lake. That greenish one, I think it is. And isn't it sitting up pretty high, too, like our favorite one there?"

"Yeah, greenish. I'm looking at it right now. And it is kind of high up. Find anything interesting?"

"How fast can you get over here?"

It didn't take him long at all—unsurprising, really, as it was only about four miles north and then a bit east for him, but he managed it faster than I had ever been able to. Sam started a new pot of coffee as we huddled around my computer screen.

"OK, Will, here's the original plan for Winfrew's house," I switched to a second open file, "and here's the one for the green house, which turns out to belong to his brother Josiah."

"Really? I wonder why Josiah was holding his meetings in Winfrew's house, then." He shook his head. "I don't understand this at all."

"Well, now look at this. It's a permit that Winfrew pulled to install a whole-house generating system, along with an underground propane tank for fuel. People have generators here in South Florida for power in case of a hurricane, right? And rich people sometimes put in these whole-house deals. They're automatic, and they let you run the air conditioning and everything."

We were looking at plans that included a significant excavation in Winfrew's side yard between the two houses.

"Turns out that Josiah did the same thing a couple of months later, same company, even, and his system is also between the two houses. In fact, if you compare them, the excavations are only a few feet apart."

"Um, OK, but ..." He sounded even more perplexed.

"But, wait, as they say: there's more." I switched to yet another drawing. "Here's another permit Winfrew pulled to put in a wine cellar in his basement, against the wall that the propane tank is buried outside of. And there's the exact same thing in Josiah's house. Yeah, they're twins, but this is something more, I'm thinking."

Will scratched his head. "Looks like that wine cellar in Winfrew's basement is where we found the freezer with the coffin in it. Oh, and maybe you haven't heard. The coffin contains the frozen body of Winfrew Hanley. It turns out the tanks were nitrogen, and they were used to flush the oxygen out of the coffin. We found pressure fittings that match up. So Hanley is nicely preserved for posterity. We're going to do an autopsy."

“How carefully did you guys look at the outside wall of that freezer?” For me, this was the payoff question.

“Hmm. Well, as I recall, it was shelves. Mostly empty, but ... now that I think of it, empty in the middle but full on the two sides. Looked like frozen food. We didn’t pay much attention, though, because of that coffin.” He looked surprised. “Are you thinking what I’m thinking?”

“Seems like another visit to that house might be in order, huh?”

\* \* \*

## Twenty-Two

It was getting on toward lunch time, so we decided to chow down in preparation for what looked like an afternoon of discovery. Sam wanted to go shopping—surprise, surprise—and I didn’t want to bother Will for rides around town, so the three of us made a little caravan to the Too Jay’s by the mall, where we tucked into those giant deli sandwiches they serve. Just as I was starting on the second half of mine, my phone buzzed.

“Mac MacQuarry.”

“Mac, it’s Ross. Eureka, as they say. Or maybe it’s ‘Bingo’ down here in Florida. The left bunker by the thirteenth green is full of hot sand. Hot with the right radiation signatures, even. And it’s just across the street from Hanley’s house, hidden from it by another of those big hedges they have everywhere.” Ross sounded triumphant.

“But all you’ve got is hot sand? No pigs?”

“They got the radiation signatures first, of course, and they’ve been using probes to look for anything buried. No luck so far, though.”

“Well, maybe they’ll find something. But, Ross, make sure that your activity is also screened from the green house to the ... ah, I guess it would be to the right of Hanley’s. Turns out it belongs to his brother the cult leader, the one who Trimble was working with. They could be watching from there, too.”

I heard some muffled instructions being relayed.

“We’re going to do some more searching in Winfrew Hanley’s house in a little while, so I’ll be over that way. See you soon.”

I decided not to call Henry with the news until it was confirmed, but my two lunch companions deserved to know.

“Looks like the SEALs found where the rest of the SNM is hidden, or was, at least. They’ve got the right readings. We’ll know more soon.” I smiled at Sam across the table.

Will Perry had a mouthful of corned beef, but not for long.

“I hope they’ve found it, all of it. Getting that stuff off the street is our very top priority in this thing. Now we can focus on finding whoever’s responsible.”

“It’s looking like Josiah Hanley, isn’t it?”

I don't usually like to state the obvious, but I wanted to make sure that I was on the same page that Will was.

He grinned. "He's certainly what we like to call a 'person of interest,' I'll say that. I'd very much like to talk with him. Also, there's this 'family' business we've all heard about by now."

"Does this mean we don't have to worry about that nuclear stuff getting spread around anymore?" Sam looked hopeful.

I reached over and patted her hand. "That's what we're hoping, darlin'. Why don't you find something elegant to go out to dinner in?"

"Well, that's a relief. And I think I will, if you two gentlemen will excuse me."

She slid out of the booth and headed for the door.

That served as a cue for Will and me, so we wolfed down the rest of our sandwiches and got the bill.

The driveway of the half-burned house in Exclusiva had become something of an RV parking lot. There were three FBI crime scene vans, plus another from Homeland Security, hogging so much space that cars were parked all over the lawn.

Based on having found Winfrew Hanley's body at his house, Will and colleagues had declared the place a potential crime scene and secured it, so our access was easy. We drove around the lake to the Hanley driveway, where an agent in jacket with "FBI" in big letters on the back let us in through the gate.

Although the house was very different on the outside from the one that had burned, the similarity of the interiors surprised me. While they differed in details—specific colors and so on—they both projected the same mood of sterile wealth. That really had not surprised me in the other house, as it was a rental. But someone had been living here in the Hanley house. As we walked through the upstairs rooms, I kept flashing back to the house that had burned, wondering why anyone would want to live in such a generic environment. Nice, yes, but no personality.

Down in the basement, it was much the same, if you overlooked the eccentricities. Not many residential basements, after all, consist of one large finished room with fifty or so chairs set up in rows facing a little speaker's platform. And the odd symbol on the banner behind the podium—an upside-down horseshoe with a vertical spike through it—didn't do anything to warm the place up.

Our interest, though, was in the middle room next to the stairs we'd just come down, the one flanked by a lavatory under the stairs on one side and a laundry room on the other. What was supposed to be a wine cellar, according to the permit for its construction, was obviously a large, walk-in freezer.

"We found a whole range of weapons there in the laundry, assault rifles, machine pistols, handguns, and even a couple of small RPG launchers. Plus ammo."

Will Perry was playing tour guide.

"No hint of the sort of incendiaries that were used on the other house, though. Surprised us."

"That must be the freezer." I gestured to the middle door.

"Yeah. Open it up, would you, Roger?"

He addressed the request to one of the two agents who had accompanied us.

Inside, of course, it was cold. There was an empty stainless steel table in the middle of the little room, and the far wall was lined with shelves, the middle third of which were empty.

“Thought you might like these, Will, Mr. MacQuarrie.”

Roger held out insulated gloves for us. I put them on and studied the shelves for a minute.

“Will, let’s move some of this stuff onto the table, OK?”

Glad for the gloves, I began transferring various packages from the middle ends of the full shelves to the table, and Will and Roger pitched in. After a little while, we had a pile of cartons of rock-hard steaks, lobsters, assorted potatoes and vegetables, and a surprising number of Popsicles on the table, and the empty space on the shelves was a couple of feet wider.

The back of the shelf unit was made of the smooth, white plastic that you would expect in the walls of a freezer unit, but the surface was scored by a series of vertical slots, which, on close examination, were obviously designed for the shelves to hook into and hang from. The shelves themselves consisted of several sets of three-foot units, spaced apart at various heights to accommodate different-sized packages.

The shelves of the originally empty three-foot section in the middle of the wall were all offset by an inch or two from the shelves immediately to their right. Some, though, lined up with the shelves on their left. There was a good three feet of empty floor between the shelves and the table.

Curious, I gave the left-hand corner of one of the empty shelves a little tug, then a harder one, and felt a magnetic seal let go. The middle section of the wall began to swing outward, toward me.

*The palace, recently renovated, is really a thousand years old behind the new spit and polish. Doorways between rooms are more like short tunnels through the four-foot thick interior walls, and the high, arched ceilings everywhere are lined with ventilation gratings. It’s a building that the word “Moorish” was invented for.*

*We’ve all been carefully briefed that our stay with the Sheikh is a high honor indeed, but one that we need to be extremely wary of. We can have no expectation of privacy anywhere, anytime, even in the wonderfully modern bathrooms. We need to remember to lock our briefcases before going to sleep. Conversations, even in code or obscure languages, are risky.*

*My role is to be a glorified bodyguard for the State Department’s Special Envoy, and to keep my ears and eyes open for the Company. Sensitivity levels are high because of the nature of the mission, negotiations about military aircraft purchases, and because the Special Envoy is Rita Vincent, recently divorced and not all the sort of submissive, female personality that the Sheikh is used to. At least, in deference to local custom, Ms. Vincent makes sure that her wardrobe, while stylish, is puritanical.*

*After lunch on the first day, our communications officer hands me a decoded message from home. It seems that an ultra-conservative faction has planned an attempt on the Special Envoy’s life. I’m instructed to stay with her all day and all night, not to let her out of my sight.*

*Because our relationship is at the “ma’am” and “Mr. MacQuarrie” stage, I view this as something of a challenge. When there is as much of a private moment as is possible in that palace, I show her the decoded message and ask her for an opinion.*

*“Well, Mr. MacQuarrie, regardless of this, you will not be accompanying me to the lavatory. That’s just not open for discussion. But there is a rather comfortable chair in my room, as I recall, and you’re welcome to spend the night in that.” Her tone is severe, her demeanor is prim, and I’m looking forward to a long, boring night. It occurs to me to wonder if she snores.*

*She maintains her tone and demeanor, overlain by a reserved friendliness for the Sheikh, throughout the afternoon discussion sessions and the sumptuous banquet. Finally, it’s time to retire, and*

*she becomes prim and severe become positively strait-laced. Fortunately, I have a briefcase full of reading material, and that chair really is quite comfortable.*

*Although I'm worried, my thorough inspection of her bathroom persuades me that she will be safe in there alone, and she informs me that her bath may take quite a while. I hear her locking the door and then testing it.*

*A half hour or so later, I'm in the middle of an analysis of new Soviet missile capabilities, when I hear the door unlocking. I don't look up.*

*The next thing I know, there is a lightly perfumed and quite naked Special Envoy sitting on my lap. In her mid-40s, she has a few years on me but is in her prime. The only word that fits the warm, soft body snuggled up against me is "lush."*

*"Mr. MacQuarrie, I understand that it's your job to take care of me. How do you propose to start?"*

*"Uh, well, ma'am, look. There are probably watchers everywhere. I spotted several hidden doorways, and these thick walls are probably riddled with hidden passageways. I expect that there are several people assigned to us even now." I can feel my body beneath her lap beginning to betray my professionalism.*

*"Well, then, Mr. MacQuarrie, don't you think they deserve a good show?"*

"No shit." Roger was amazed. "Do we know what's back there?"

He drew his handgun.

"What we really need is a flashlight."

Will opened the main freezer door and stuck his head out.

"Neil, we need a flashlight. Why don't you get that tool bag out of the back of my car?"

"Yessir, be right back."

As the junior agent on the detail, Neil seemed to be getting the short straw in the form of guarding our rear and doing errands. I shut the hidden door, Roger holstered his weapon, and we moved back out into the main room, where it was warmer.

"So, what in the world is that on the wall?"

Roger was pointing at the odd, pierced horseshoe symbol.

"We've been overhearing conversations about some kind of 'family.' Trimble mentioned it, too. I suppose it's like a gang sign, or something like that." Will shrugged. "I guess it could represent a dagger of some kind, or maybe a perverted cross. If we get lucky, we'll find someone to ask."

Neil returned lugging a canvas bag, and Will rummaged around and came up with a large flashlight and a smaller electronic gadget.

"Rad counter," he said.

Back in the freezer, just as I was about to pull open the hidden door again, I had a thought. "Will, how about hitting that light switch there, so it'll be dark when I pull this open. If there's anyone in there, we gave ourselves away before, when I cracked the door with the light on, but at least this will cover us this time. And stand off to the side, just in case."

But it wasn't needed. The door opened easily, pivoting smoothly on well-oiled hinges, and the flashlight showed a long, narrow room with two large propane tanks off to one side and a solid wall at

the far end. We found a light switch, which allowed a closer examination. And that examination revealed two dark orange bars of something stuck to the tops of the tanks, with wires leading off to what looked like a cell phone sitting on the far tank. I checked my phone for a signal and was surprised to find one, then swiped my finger on the closest orange bar and sniffed it. I recognized the explosive concoction that was favored by terrorist groups world-wide.

“Semtex, smells like. Well, all we can do is hope they don’t get itchy just this instant.”

I pulled the wire, which was attached to a detonator, out of the bar, walked down the room, and did the same to the other one. For good measure, I opened the back of the phone and took out its battery.

“There. This would have made one big hole in the ground, I bet. Any readings, Will? I don’t know why anyone would set off a dirty bomb in a residential neighborhood, but I doubt that these people are fully rational.”

“No, we’re clean here. I guess this was just designed to cover their tracks, or maybe for a diversion like the ones at the other labs just before the IRIL attack.”

Will turned and tossed the radiation counter to a surprised Roger, who just managed to catch it.

“If there’s another door down there, I think I’d like to go through it with some real firepower. Let’s bring in some backup. What with the Semtex, I don’t think I need to wait for another warrant to get into that house next door.”

We retreated to the Winfrew Hanley house, switching off lights and closing doors behind us. Will got on the phone to call in the cavalry. And my phone let loose with yet another new sound, something like a duet between an angry blue jay and a frightened prairie dog.

“What the hell?” I pulled it out and looked at the display.

It told me to press its special features button to access push-to-talk mode—without, of course, telling me what the special features button might be. Between the touch screen and the physical buttons, I had a dozen or so choices. I picked one at random, one I’d never used before.

The phone squawked again, surprising me so much that I almost dropped it, and displayed the same message. Three rounds of this later, I finally picked the right button, because the display said “Hold down to talk.”

I did so. “Hello?”

Instinctively, I guess, I let off the button.

“Mac?”

Sam’s voice was nervous, even more so than when I’d first met her, in that Coconut Grove apartment.

“Mac? I’m ...”

A different voice came on.

“What she’s trying to say, Randolph Hunt or whoever you are, is that she’s with me, and if you want to see her again we need to talk.”

Even without the simper, it was easy to recognize the voice.

\* \* \*

“Be glad to talk, Lance.”

All of my old high-alert mechanisms instantly kicked into overdrive, and I suddenly felt like I was buzzing all over.

“Are you on Sam’s phone? Can I call it instead of using this dumb walkie-talkie feature?”

“Suits me. Don’t be long, though.” And he disconnected.

“Will, I don’t know what the hell is going on, but I’ve got a little crisis to deal with, here. Is there a way you could trace the other end of the call I’m about to make?”

“Sure, it’s easy. What are the numbers involved?”

He had opened his phone and was paging through its call list.

I gave him my number and Sam’s, and speed-dialed hers. Lance answered on the first ring.

“She called you ‘Mac.’ I knew you weren’t who you said you were, of course. I guess that puts us on a level playing field.”

His meaning, I assumed, was that he wasn’t really “Lance,” either.

“Dolly here is just too easy to spot, what with that pink VW convertible of hers. And she’s going to be my ticket out of this situation.”

“Um, OK. You’re welcome to call me ‘Mac.’ Should I keep calling you ‘Lance?’”

I knew it was important to keep the conversation going for as long as possible.

He laughed. “Sure, Mac, whatever you’d like, pending formal introductions.”

This was not, I thought, the Lance I’d talked with before.

“Fine. Now. What’s this ‘situation’ that you need to get out of? I’m afraid that I’m completely clueless.”

More laughter. “You’re fun to talk to, Mac. And clueless for sure. What I need to do is to get on a chartered airplane headed for Venezuela. A plane big enough for me and a dozen other people. And luggage. Heavy luggage.”

“Well, that’s a nice outcome, I guess, but it’s not a situation. I mean, you could just do that, couldn’t you? Charter a plane yourself, whatever size you need? Unless it’s the money. Are you angling for cash or something?”

I listened for background noises while watching Will Perry setting up a laptop computer on the breakfast bar between the kitchen and dining room.

The general background on Lance’s end of the phone was that of a busy public place. An airport? It didn’t seem as if there had been time for him to grab Sam and get to either of the two big airports nearby, Fort Lauderdale or Palm Beach. Maybe it was the Boca Raton Airport, I thought. They have charters over there.

Yet more laughter, but subdued this time.

“No, no, what I need is protection from dudes like the ones you were hanging out with last time I saw you. The day that Nikolay got whacked. You hang out with people like that, you must have pull. So use some of that pull to get me and my friends on a CharterSouth plane to Venezuela. We’ll all head over to the Boca airport shortly. With Dolly. And you can have her back when I get on the plane.”

Either this guy is pretty stupid, I thought, or there’s something he’s not telling me. That sequence of events would hardly be foolproof, from his perspective.

I noticed Will giving me a thumbs-up sign and waving me to come his way. The laptop on the breakfast bar was showing a map with two blinking symbols and a crawl of text that I quickly recognized as the transcription of the conversation I was having. One of the blinking symbols, I saw, was in the Exclusiva subdivision just off Military Trail. Me, no doubt.

The other was in the middle of Sam's shopping destination, the Town Center Mall, a couple of miles north of us and a little west, and about a mile southwest of the Boca Raton Airport. Will scribbled a note that said "team on way."

"Well, Lance, I still don't quite understand all this, but I should be able to arrange something. They may have to fuel a plane, though, so it probably won't happen instantly."

I nodded at Will, who was making the "stretch-it-out" signal that TV directors use.

"Listen, if you're going to release Sss ... Dolly at the airport, why not just leave her wherever you are and take her car? Then she won't be in your way, and we can get you onto that plane faster. Right?"

He was back in the full laughter mode.

"What, you think I'm totally stupid? Dolly's going to be wearing a suicide vest, and I'm going to be holding a dead-man's switch, radio controlled. Its range will get me out of US airspace. I'm disconnecting for now, so you can call CharterSouth. Here's their number."

I repeated it, and Will wrote it down for me. The phone went dead.

"What's that all about?"

I took a couple of deep breaths to try to calm down.

"Well, Sam's been grabbed, by a guy I know as 'Lance.' He was Nikolay Kirov's receptionist, but he must really be someone else. That phone number you wrote down is for a charter airplane company he wants me to call, so he can get a flight to Venezuela. Him and a dozen of his closest friends, apparently. He's going to wire Sam with a bomb and hold a dead-man's switch until the plane is off and out of range."

Will's phone played a little tune, and he opened it, listened, and handed it to me.

"Mac? Good. Your phone was busy." Ross Bierkens sounded down. "All we've found out here is hot sand. No pigs, no material. Sorry."

"Well, crap. At least we know where they stashed it for a while, though. Thanks, Ross. And listen, I'm over at the Hanley house just now, and we've got a thing going that you and your guys might be able to help with."

Ross said he'd be right over, and I shut Will's phone and handed it back to him.

Will pointed at the text on his computer screen.

"Sounds like Ross hasn't found the SNM, huh? What do you suppose that Lance meant by 'heavy luggage'?"

\* \* \*

To this day, I'm still surprised at the amount of arranging that Will and Ross, who arrived a few minutes later, accomplished in the next half hour. With a fix on Sam's phone, we were able to track it even when it was disconnected, and we watched it sitting at the mall while we made a variety of other calls and finally got in Will's car. I updated Lance on things after fifteen minutes or so, giving him a carefully

edited version of the situation, and agreed to meet him at the CharterSouth access gate shortly thereafter. Then we watched Sam's phone making its way from the mall to the airport.

And, before I knew it, there we all were.

To Lance, "we" meant, I hoped with my heart of hearts, me, him, and Sam.

To me, it was more complicated. "We" meant the three of us, me standing a few steps opposite Lance and Sam, as well as a cadre of FBI people hidden in various locations around the half-empty parking lot, with several of Ross's SEALs positioned as snipers on nearby rooftops. I had an earbud radio that was picking up the mission's progress, and four of the cars in the lot had already been identified as being occupied, with, most likely, Lance's accomplices.

It took me only a minute to understand everything.

"Why Lance, you shaved!"

I couldn't contain my big grin, and it obviously confused him.

"Yeah, well, I figured that whoever killed Nikolay might come looking for me, so I thought it might help me be a little more anonymous." He seemed nervous.

Without his facial hair, Lance was the spitting image, minus a hundred pounds or so, of the picture of Winfrew Hanley I'd seen in the file Bill Petersen had given me so long ago, it seemed. The missing Josiah Hanley in the flesh.

He was holding, up high so I could see it well, some kind of push-button gadget in his right hand, and he had control of Sam with his left. She was wearing a fishing vest, its pockets bulging with things I didn't really want to think about, and around her right wrist was a locked handcuff—the other half of which, unlocked, Hanley was holding.

"Dolly tells me you're called Mac MacQuarrie. Not Randolph Hunt. Tsk, tsk." He shook his head. "But I guess it's OK in the end, because your conversation with Nikolay told me everything I needed to know to get where we are now. Is my airplane about ready?"

I looked around. "I thought you said you were traveling with company. And luggage. Should I get CharterSouth to send over a cart?"

I flipped open my cell phone and, per our plan, pressed and held the push-to-talk button.

"My friends will be here any minute, and they'll handle the luggage, thanks. It's pretty special."

It was his turn to grin.

"You can put your phone away."

Over his right shoulder, I noticed some motion among the parked cars, so I eased around to his left a few steps.

"I suppose that listening to Nikolay's conversations was just part of the scam you were pulling on him, eh, Hanley?"

I felt a tiny victory when I saw how that startled him.

"I imagine that you also did errands, such as runs to make bank deposits and so on. Pretty convenient. It explains some of what we heard him talking about with Assim Al-Ayas, the day Al-Alyas shot him. Like how your little group of terrorists was getting funded. Is the rest of the SNM in this luggage your friends are bringing?"

The question startled him even more, and I wondered if I'd pushed too far.

“I don’t know what you’re talking about. And I asked if my plane was ready.”

His pleasant demeanor had changed to one of viciousness, and his voice hissed. He pulled Sam over to the pickup truck he was standing near, then locked her to its driver-side mirror bracket with the handcuff.

He waved the push-button gadget in his right hand with menace. “Remember, I’ve got this, and she’s got that vest. There’s enough Semtex there to destroy everything within a hundred yards, and as soon as I get out of range, you can bet I won’t hesitate to detonate it. We can continue this conversation by telephone.”

And he walked off, around the truck and toward the CharterSouth building.

Sam was struggling to slide her right hand out of the cuff, but getting nowhere.

“Squat down, sweetie, so he won’t be able to see you, and get your left arm out of that vest.” I kept my voice low.

Her big blue eyes were pleading with me, so I smiled and winked at her. It took me all of five seconds to reach her, keeping as low as I could, then I sliced down the right side of the vest with my handy Swiss Army Knife, got it off her, and tossed it under the truck. After that, I ripped the mirror bracket free—whether it was just cheap and easily broken or I was pumped up with some kind of superhuman strength wasn’t quite clear at the time. Maybe both.

We were scurrying away, stooped down, when my phone buzzed.

“So what’s the deal with the plane, MacQuarrie?”

Hanley’s voice carried a new sense of urgency.

“I talked with the charter people a few minutes ago, and they said that it’ll be another few minutes.”

I tried to be as conversational as I could under the circumstances.

“Since we’ve got time, maybe you could satisfy my curiosity?”

“Can’t promise, but ask away.” He sounded suspicious. “Hey! Where’d you go?”

“We’re still here, behind that truck. Just don’t let go of that button, OK? Anyway, we found your brother, of course, and they’re doing an autopsy. But I’m wondering what happened to him. And when. I’m having trouble imagining you killed him. Twins are supposed to be close, and all.”

“Heart attack. Two months ago. He found out about my little adventures, had a fit, and keeled over. I was keeping him on ice until I had time to take him back to Ohio to the family plot. With our father and mother.”

He actually managed to sound saddened.

I heard a jet engine begin winding up just behind the CharterSouth building.

“Hey, maybe that’s your plane.”

“It better be. Hold on, I’ve got another call.”

He put me on hold for about ten seconds before coming back on, madder than ever.

“You stupid son-of-a-bitch! Do you really think that I don’t have a backup plan? Let’s see just how far away you managed to get.”

Even with the vest under the pickup truck and now behind the several cars we’d dodged around, the explosion knocked Sam and me flat. We were lucky not to have been crushed by one of the cars that were tossed about the parking lot.

As the last of the debris rained down and the smoke began to clear, I made sure that Sam wasn't injured and concentrated on getting my equilibrium re-established. And I wondered about Hanley's backup plan.

But I didn't have to wonder for long.

"Ah, here you are. And you survived, I see. Well, Brother Josiah will want to talk with you both, I expect. Come on! Stand up! Now! Do it!"

It was a new voice, and it belonged to a muscle-bound goon in a tee-shirt with that spiked horseshoe symbol on it. He was pointing a suppressed H&K automatic at us.

I began to help Sam up, when the goon grunted and slumped to the pavement, with a neat entry wound in the right side of his head, just above the ear. The SEALs, I realized, had also survived the explosion.

Using a voice that sounded a lot like Ross's, my earbud said, "Stay put, Mac, and stay low. We'll cover you."

My phone, I was surprised to find, was still in my hand, and it was still on. I cancelled the previous call and speed-dialed Ross. Then I picked up the H&K.

"We'll stay put, Ross, and I've got some real firepower now. How about you all concentrate on getting Hanley and whoever among his friends has that SNM?"

"Done and done, Mac. While you were talking with Hanley, we found the car with the material. It might as well have been glowing in the dark. And Will says that Hanley's in custody. They grabbed him without much trouble."

\* \* \*

Will Perry found Sam and me sitting on the ground, leaning against a Mercedes sedan with shattered windows. Sam had a skinned knee from our tumble onto the tarmac and a truck mirror dangling from her right wrist, and I had landed on my titanium shoulder, which made it ache, a sharp, throbbing ache unlike the other times when I'd over-exercised it. I was hoping that none of those parts in there had got bent.

"Mac, it looks like we've got everything under control. Best of all, the SNM is secure now."

He was all smiles as he kneeled down to unlock Sam's handcuff.

"You guys OK?"

"I'm getting too old for this kind of stuff, I'll tell you that. And Sam here doesn't need any of it. I think I'll go off the clock on this one."

Will nodded. "Not a bad idea. We've got some things to finish up here, though. Can we find you back at that suites place, up there on Yamato where you've been?"

"For now, I guess. We can get a cab, I expect. And if this really is a wrap, maybe we'll find someplace with a little more peace and quiet. Someplace with personality."

I thought for a minute.

"Sam, what do you think about Big Pine Key? You know, almost down to Key West. Ever been there? Seems like it would be nice to just go fishing."

She didn't have to say anything. The soft kiss on the cheek I got was all the answer I needed.

**A Four Corners Mystery**

# Excess Homicide: A Four Corners Mystery

## Prologue

When Joe Loughlin arrived at work on the Friday morning before the long Fourth of July weekend, it was definitely not written in his day planner that, at 10:10, he'd take a bullet for the President of the United States.

Hell, Joe hadn't even voted for the guy, and he had tried to plan his day to avoid all the hoopla and security weirdness that would accompany the Presidential visit. With the crowds of summertime tourists, the weekend of the Fourth in Boulder was going to be bad enough, but with the President there as well, Joe just wished he could be on vacation for the whole thing, somewhere up in the mountains.

Later, Joe would tell anyone who asked, including reporter after reporter after reporter, that it really wasn't that big a deal, he'd have done it for anyone. Well, just about anyone, maybe not that junior U.S. Senator of theirs, though, some politicians being better off out of their misery.

Joe was getting to that age when two mugs of coffee in the morning, followed by sitting for an hour in a meeting, caused far too much pressure in his bladder to be ignored. Crossing the lobby on his way to the Men's Room, he was surprised when the Secret Service detail swept in, pushing him gently to the side of the room, over by the couch, so that the President and his retinue could have the right of way.

Then Joe noticed something strange, something that shouldn't happen. A little door popped open on the solar telescope display, and he could see what looked like the business end of a rifle barrel peeking out. Just above the door was a lens of some sort, and that wasn't supposed to be there either. Later, the Secret Service people would explain that they were too unfamiliar with all the gadgetry in the displays to have been able to distinguish the lens from all the other stuff, and during their sweep they simply hadn't had the chance to disassemble any of the scientific equipment on the mezzanine to see what was inside.

But Joe's sharp eyes, honed by years of deer and elk hunting in the Rockies and quite familiar with the displays up there on the mezzanine, recognized the fore-sight of the rifle, probably a bolt-action .30-06, he thought. So he did what any red-blooded American citizen would do if they saw a gun pointed at the President. First, he froze in amazement as he felt his adrenalin level skyrocket, and, because he hadn't made it to the Men's Room, he tried hard not to wet his pants. Then he panicked, grabbing the Secret Service agent standing in front of him.

"Uh, hey! Look up there! That looks like a rifle pointed this way, hidden inside that box up there," he managed to stage whisper and point simultaneously.

Because the agent had grabbed Joe back, they had hold of each other, and when the agent screamed "GUN!!" and lunged for the President, Joe was just sort of dragged along. In the ensuing tangle of bodies, Joe was in the line of fire when the rifle went off. Or, more precisely, Joe's right buttock was in the line of fire.

"So, Mr. Loughlin, how does it feel to be shot in the butt for the President?" was the first question the first reporter asked him, and it was repeated, in various forms, until Joe became thoroughly sick of it. To tell the truth, it hurt like hell, but Joe managed to keep both his sense of humor and his dignity, mostly. After all, it was really only a flesh wound, passing through a considerable layer of fat and some

muscle, and then out again. His friends would never let him forget that the gunman had quite logically hit what was the biggest target in the room.

But the more immediate result of the rifle shot was a fusillade of semi-automatic weapons fire from the several Secret Service agents, leading to the complete destruction of the solar telescope display. The lobby of the National Center for Atmospheric Research would require a substantial amount of spackle, to patch all the holes in the plaster walls and ceiling, and a complete new coat of paint.

After the hubbub subsided, it was discovered that the rifle had been mounted inside the display with a miniature video camera sighted along the barrel. This, in turn, was connected to a gray box with a small antenna on the top, and there was a curious, home-made-looking triggering device on the rifle also hooked to the box. At least that was the reconstruction. The barrage of lead had pretty much destroyed the original set-up, and it appeared that the contents of the box had been wired to self-destruct if disturbed. Except, that is, for the bottom of the box and the message laminated to its outside:

Dear Mr. President:  
You've been SCREW'd!  
Hope you enjoyed it as much as we did!

But none of this information would be released by the Secret Service for some months, long after Joe's wound had healed, leaving small, Presidential, entrance and exit scars.

## **Part I: The Year Before**

### **One**

September Sunrise, southwestern Colorado – and New Mexico, Arizona, and Utah: the Four Corners.

A light dusting of early fall snow covered the chamisa and sage, still grayish-green from the warmth of summer, and it made the juniper bushes on the hillside across the way sparkle in the glow of the young sun. But the body that lay sprawled across the engraved brass monument marking the only spot in the U.S. where four states touch was still warm enough that the snow falling on it had melted.

It was the dark form against the white background that got Billie Sweetwater's attention. She had unlocked and opened the gate across the entrance road and was headed toward the visitor center's service entrance when she noticed it. As soon as she came close enough to recognize what it was—a young man, with long dark hair, lying face down in what looked like a pool of something dark—memories of the works of her favorite author, Tony Hillerman, put her on guard. Rather than track everything up, she headed for the phone.

She knew—once again, from Hillerman—that the FBI would eventually become involved in this, but she called 911 anyway, instead of looking up the number for the feds. The local call would bring in the Navajo Tribal Police first, and it would also spread the word throughout the close-knit, albeit scattered, Four Corners community that another tragedy had struck in *Diné'tah*, the land of her people.

Considering the travel distances involved, as well as the bureaucratic communications needed, it was surprising how quickly the investigation proceeded. By 2:30 that afternoon, a telephone was ringing in the Durango police department.

“Durango investigations. This is Winders.”

“This is Todd Sweeney, FBI. The CBI told me to talk with, um, an Annette Trieri. Is she in?”

“She’s out today. This is Sergeant Fred Winders, her second in charge.”

“Well, I got called in to investigate a murder down on the Navajo Reservation this morning, and, according to a driver’s license, the victim was a Durango resident, a Luke Begay. I thought I’d see if the name rings a bell with you folks.”

“Hmm. Not immediately with me. But let me have a look on our database. Let’s see.”

Fred was typing furiously at the keyboard of his new office computer.

“Luke Begay. Right. Nothing big. Arrested for civil disturbance, once. Apparently had to do with a demonstration for Native American rights. It says here that he was the chairman of American Indian Restoration. I’ve heard of that for some reason. Oh, I know. It’s a local advocacy group. Wants to ship all of us European types back to the coasts, or something like that, and let the tribes have all of their land back. Return nature to its true stewards. Stuff like that. Does this help?”

“Maybe it does. His body was found this morning, lying on top of the Four Corners Monument down here southwest of Cortez. Shot once in the back of the head, execution style. Looks like someone planned this carefully.”

\* \* \*

Sitting in front of a window in her suite in the Lodge looking out over the valley, Carla Fraser was wishing that she had already succeeded. The trouble with trying to become a travel writer, she thought, is having such lovely things to write about and no readers. She lowered her eyes to the screen of her laptop and reread her latest effort.

It’s early October, and through the window we’re watching the morning sun creep down the northeast face of McIntyre Peak. A mere bump by Rocky Mountain standards, the peak is distinguished by cliffs that expose a dozen or so strata of different colored rock near its summit. The colors of the rock are muted, however, because aspen dressed in all shades of green, gold, and even orange command the view. They spread in sweeping stripes, random patches, and single, startling trees over the mountain and in both directions along the side of the valley. As the sunlight hits them, they explode into brilliance against the deep green of the spruce and fir, under the crystal-blue of the sky. A patch of red—kinnikinnick?—on a high scree slope and the white of yesterday’s snow on the peak punctuate the scene.

Because our room is up on the hillside, we’re also looking out over the treetops in the valley. Perched nearby at eye level on the top of a ponderosa pine, a magpie watches to see if we might offer breakfast. A few yellow leaves still cling to the elm, willow, and ash along the river, but most have fallen, leaving behind gray and tan skeletons brightly lit by the sun, in stark contrast to the shadowed valley wall. They provide a hint of the winter to come, a hint reinforced by smoke curling lazily down the valley from the wood stove in a cabin across the way, and by the frost on the corners of our windows.

As the morning matures, the little settlement that calls itself Horca begins to come to life. Guys in insulated overalls are standing around in the parking lot of the restaurant, little puffs of breath evidence of their discussion. The occasional semi whizzes by on the highway. Pickup trucks towing horse trailers appear, converging at the restaurant for morning coffee and conversation.

These are the San Juan Mountains of extreme south-central Colorado, a few miles from the New Mexico border, where State Highway 17 from Antonito crosses the Conejos River before its winding climb up La Manga Pass to the south. From our window, we can see the road curving gently up the grade into the distance, disappearing into an aspen grove. We're about halfway between Antonito, to the east, and Chama, south over the pass. There is history here, and, because our Spanish-English dictionary tells us that one definition of "horca" is "gallows," it may be dramatic history.

From here, the Conejos Valley continues upward to the northwest. After about 25 miles, the gravel road along the river passes the settlement of Platoro before ascending the aptly named Stunner Pass on its way over to the Alamosa River Valley...

As she read, trying to decide if this was too much or not, Carla kept checking the scene outside to gauge her accuracy. When she looked to see if there was anyone left in the parking lot of the restaurant, out from under a Volvo station wagon crawled one of those men dressed in overalls. How curious, she thought.

Just then, she heard a huge yawn behind her, and turned to see Kevin finally emerging from the bedroom, mouth wide open, scratching his hairy belly. How romantic, she thought. Now he'll probably want to Do It again. Maybe I can divert his attention.

"I made some coffee, sweetie. Good morning!" She turned back to her laptop and the scenery. A couple had emerged from the restaurant and were climbing into the Volvo. They headed off south, in the direction of Chama.

As she was working on her last paragraphs, trying to make them sound somewhat less clinically directional, she noticed a flash over the top of her reading glasses, out the window. She looked up just in time to see a large puff of smoke, with pieces of flying debris, where the Volvo should have been. Three seconds later, the noise of the explosion rattled the windows.

\* \* \*

In the Four Corners states, hunting season, especially big-game hunting season, is a good time to stay out of the woods. And the mountains, and the desert—and anywhere else there might be, could even remotely possibly be, big-game in season. It's much better to stay indoors, behind eighteen inches of adobe, if possible.

It's not that the local citizens are irresponsible; quite the contrary. The danger is from the thousands of men—this is a guy thing, mostly—from neighboring states who have too much disposable income. With it, they purchase equipment by the ton, including large trucks and trailers to haul it, fancy firearms, and gallons and gallons of whiskey. Nothing like slugging down a pint or so of 86-proof spirits to improve one's ability to aim a high-powered rifle. Fortunately for the Four Corners states, many of these purchases are made locally, and the cash flow keeps many a small town in the back-country solvent. Locals who used to make a living from mining and logging are now able to survive as big-game guides. Some like it more than others.

Jake Colvin was one of the others, but he needed the money. His six weeks of guiding, run out of Cedaredge, Colorado, north of Delta on the road up the Grand Mesa, paid most of the bills for the year. He managed to defer the rest. But dealing with the people who hired him was almost not worth it.

Take that bunch from Oklahoma who came in for the second rifle season in November. Six guys in three extended-cab, dualie pickups, each crammed full and pulling a twenty-foot flatbed trailer loaded with two of those stupid little four-wheel-drive all-terrain travesties, a freezer, and several additional crates of junk. Including a Hell's Angels' convention worth of Wild Turkey, which they consumed while sitting around telling each other lies about their successes over the summer catching women and large-mouth bass. Jake wondered idly what activities coincided with which catch.

And why they needed all that stuff was a complete mystery. Hell, Jake supplied tents and cooking equipment, and he would have supplied horses if they hadn't brought those ridiculous ATV pollution machines.

He'd much rather have been able to make a living by teaching silviculture down at Mesa College in Grand Junction, but the curriculum had changed, as had the requirements. You had to have one of those fancy doctorates to get on the faculty there now. The generations of experience he'd absorbed from his father and grandfather as a kid, on those trips up to the Grand Mesa with the six-mule team to take out bridge-truss-sized trees, that didn't count for squat. And logging, what there was left of it, was all done with machines now. None of the old-fashioned, gentler techniques were economically competitive.

But the rifle seasons were behind him, and they'd been good. His new, higher rates hadn't raised any eyebrows, all the sports had filled their licenses, and the tips had been astonishing. Must have been a good year in the oil and gas industry. At long last, all those giant pickups had left town, along with the usual contingent of Lexus SUVs with California plates, and it was back to the locals and their battered mini-pickups and ancient Subaru. He and his family would be having a good Thanksgiving later in the month.

He was on his way down the hill toward Delta for groceries and a trip to the hardware store, enjoying the view of the Gunnison River valley, as always. The snow line, he noticed, had come almost all the way down to Orchard City last night. So absorbed was he in the scene that he wasn't paying attention to the blue pickup truck with the oversized tires and reinforced front bumper that was following him, much too close for comfort, if he'd noticed.

When he finally did notice it in his rearview mirror, it was too late. Only the barest of nudges from the big vehicle behind him was enough to send his compact Nissan pickup out of control, and it spun twice before crashing sideways into a telephone pole, driver's door first. Unfortunately for Jake, he'd never gotten around to fixing the broken seat belt. Now he never would.

\* \* \*

Arthur Powell, who had felt more like a traffic cop than a National Park Service ranger in his previous assignment at Rocky Mountain National Park in Colorado, was still fascinated with his new world. It was smaller, and for sure drier, but it was his, or at least he was in charge. He made a point of arriving early every day, despite living some 35 miles away in Blanding, so he could have it all to himself for a little while.

Natural Bridges National Monument in southern Utah is to Rocky Mountain National Park as the little town of Blanding, Utah is to Denver, and Arthur was still adjusting. He'd even stopped wearing his sidearm, although the possibility of rattlesnakes, even this time of year, motivated his employees to wear theirs.

The drive over from Blanding was a pleasure every morning, and the return trip in the evening was just as lovely. With the sun behind him each way gently lighting the piñon and juniper scrub, making the solitary little trees cast long, long shadows across the desert and giving the red rocks a stark relief that vanished during mid-day, he felt as if he were driving through a travelogue. Ever since daylight savings time had ended, just over a month ago, the mornings were the better drive, with everything looking so fresh.

Another adjustment was in the political differences, and he was still getting used to this as well. The switch from touchy-feely, warm-and-fuzzy, north-central Colorado to stolidly down-to-earth Republican southeastern Utah was startling, to say the least. But these people had great respect for the land, too, and it was ingrained. He often felt that the Colorado Front-Range outdoors crowd had learned their environmentalism at summer camp or from reading about it in those slick advocacy magazines.

Also, since just about everyone hereabouts hunted for food and almost always carried a rifle in their pickup truck, there was a certain amount of self-policing that was not present up in Colorado. He was especially glad that he wouldn't have to deal with those groups of right-wing extremists who seemed to think that poaching elk in the Park was a God-given right.

For one thing, the elk around here stayed up in the mountains, in the Abajos, or over in the Henrys on the other side of Lake Powell. For another, everyone around here was pretty right-wing already, so the definition of "extremist" was quite different. And they all went to church and kept each other pretty honest. He was looking forward to a true community Christmas this year. Even though his coffee-colored skin set him apart from the others (man, these Mormons are *white*, he couldn't help but think), he had been welcomed into the Blanding community and had more dinner invitations than he could handle. He'd already gained ten pounds as a result. They all seemed to think that his foods of choice were deep-fried everything.

Arthur finally pulled in to the short section of pavement leading from State Road 95 to the Monument and stopped to open the gate to the day-use area. The air was cool, a pleasant wintertime cool, and it smelled of juniper. There was a hint of piñon smoke from a campfire somewhere. He took a deep breath, and stretched grandly. Looking around his little domain, he couldn't help but feel lucky.

Because the muzzle velocity of a Remington .30-06 is much faster than the speed of sound, he didn't hear the rifle's report, and the hollow-point slug caught him squarely in the side of the head, just above the tip of his left ear. He dropped like a rock.

\* \* \*

Except for the ski area, Santa Fe in January would be nearly devoid of tourists, and that would have made Roger Colgate just about as happy as anything else in the whole world. Well, maybe not quite as happy as complete closure of the National Forests to all humans—assuming, of course, that he and his band of eco-preservationists could continue to have access. But close. The tourists just clogged up the narrow Santa Fe streets and made it necessary to make reservations for dinner. And even lunch.

This tourist problem was one of the reasons, not a public reason but a real motivating one, that he and his cohorts steadfastly opposed plans to expand the Santa Fe Ski Basin across its little valley to the next hillside. Roger and friends were all well-off enough, from trust funds and other annuities, that they could afford to take on the Forest Service in court, using the legal system to effectively strangle anybody's plans for anything. Rather than work at this themselves, Roger and friends hired lawyers, particularly young, hungry ones, from the huge contingent that needed such gratuitous work to pay off their mortgages in Santa Fe's up-scale foothills neighborhoods. They also donated large sums of tax-

deductible dollars to various fringe organizations to do the actual protesting when it was needed. That way, Roger's group was able to spend its time on more relaxing activities.

The main vehicle for the legal action was the Endangered Species Act. It was pretty easy, especially in this undeveloped part of the country, to find some critter, or, if need be, some plant, that would be "threatened" by whatever the Forest Service, or anyone else, wanted to do. And even if they couldn't find a threatened species, there were possibilities. One time when they couldn't find a suitable candidate, they had been successful at stopping a forest-fuels thinning project over in the Jemez Mountains by inventing a new species of mouse, the "Jemez Springs white-tailed deer mouse." A picture of the cute little guy, created on a computer as a composite of three actual species, was one of Roger's favorites. He kept a copy, framed, on his desk. And it was a good thing that it was just a computer mouse, because any real ones would have been exterminated by the catastrophic wildfire they'd had over in the Jemez last summer.

Roger was thinking about tourists, especially the problem with their taking up valuable restaurant space, because he was waiting for a table for lunch at Santacafé, on Washington across from the old Federal Courthouse. Even though it was January, the mid-day sun was warm, and he was enjoying it while leaning against a massive elm tree on the courthouse lawn. The south light, crisp and clean, for which Santa Fe is famous, filtered brightly through the bare branches over his head. Twenty minutes, the maitre d' had told him, so he'd decided to wait outside in the sunshine and read the latest issue of the *High Country News*.

When, he thought, were they going to admit to being pawns of the logging and mining industries and quit pretending to be environmentalists?

He heard a polite tap on a car horn, and looked up to see who it was. Stella! Lovely Stella. She was waving to him from her Mercedes SUV as it rounded the curve from Washington to Federal Place. He waved back and smiled. Just seeing her drive by was enough to warm him up, especially in the vicinity of his lap. He went back to reading.

Lies! That "experiment" up in Oregon, where they fenced off the riparian area next to the stream bed, was just a sham. His friends on the west coast had told him all about it. Just getting the cattle away from the streams wasn't enough. Eliminating grazing altogether was the only solution. Let the land be the land, without all these four-legged bulldozers ranging around!

Thinking about cattle got him thinking about lunch again, and a vision of the Santacafé's green-chile smothered New York luncheon steak, medium rare, east-coast medium rare, lingered in his mind. His mouth watered.

A second polite tap on a car horn made him look up again. Could Stella be back? Despite the sunshine, his lap could use all the warming it could get. But, no, he thought, this horn didn't sound quite like the first one.

It wasn't.

This time, the car, actually a windowless black van with a sliding side door that had opened, stopped. Roger squinted, trying to see into the dark interior. There was someone kneeling inside, but he couldn't quite see what was happening.

Then there was a little twanging noise. He felt a horrible, blinding pain in his neck, and his knees buckled. But he couldn't fall. Nor could he scream. As he tried to reach up to investigate what had happened, everything went black. Unseen, the *High Country News* fluttered to the ground.

It didn't take long for the police to arrive, and they found him, quite dead, impaled through the neck onto the elm with a crossbow bolt, rather like a spindly-legged beetle pinned to an entomologist's collection case.

\* \* \*

On the high plains of Northern New Mexico, west of Taos across the Rio Grande Gorge Bridge on U.S. Highway 64, it was easy to imagine that one had arrived on another planet. The houses there were built in quite a fanciful manner, supposedly self-contained and Earth-friendly, with curves, turrets, and angles that might be expected of a Star Wars movie set. Some were reminiscent of those sand dribble castles kids made at the beach; some looked like they were designed by Frank Lloyd Wright on LSD. And those were just the ones that could be seen from the highway. To come upon these dream-shapes rising out of the desert, especially after leaning over the railing of the Bridge watching the natural scenery of the Gorge, was quite disorienting.

Hidden in an arroyo out of view from the casual passerby was the house of Trenton Garcia, or SunMaster, as he insisted his acolytes call him. (He didn't have any real friends, so no one called him Trent.) SunMaster specialized in separating wealthy, insecure Taoseños and their friends from the coasts from their excess funds. He'd built his *ashram* in a location strategically chosen to enhance his ability to do this, due west of Wheeler Peak, the highest point—13,161 feet—in New Mexico. From SunMaster's place, sunrise on the equinoxes was just over the peak. And, on the solstices, it rose in almost equally impressive places, over another of the high Sangre de Cristo peaks to the north in June, signifying the "height" of summer, and over a dramatic saddle between two peaks to the south in December, signifying the "depth" of winter. As a result of these spiritual convergences, his clientele were *very* impressed with his powers.

Year 'round, his daily routine included rising before first light and running down to the very middle of the Rio Grande Gorge Bridge and back, some ten miles that he managed to do in about 50 minutes. Then, as the sun rose over the Sangres, he led a yoga class for whoever showed up with the requested "donation" of \$75. Naturally, when the sun rose over some special landmark, there was a special ceremony and the checkbooks came out yet again. It was surprising how many of those special landmarks he'd identified up there in the Sangres.

The daily ten-mile run and the yoga kept him in fine condition, and he led the yoga class wearing only a bikini brief and his famous suntan. This combination was useful in maintaining his credibility in the private afternoon sessions he held for his female clients. The attractive, well-endowed ones, that is. Tantric yoga is a specialty that needs to be taught in private.

On Saturdays, the morning yoga class was generally over-booked, and his sun room was crowded. When he didn't show up on time one day in February, a completely unprecedented occurrence, confusion reigned. Finally, one of the more experienced women—experienced in both the morning yoga classes and the afternoon Tantric sessions—took charge and tried to conduct the class. But her attempts just didn't measure up.

Later that morning, Helma Lundegaard, visiting New Mexico with her husband as a respite from February in Minnesota, was standing on the Gorge Bridge, gazing down at the river some 650 feet below, when she spotted an unusual flash of color. Borrowing the binoculars from Herman, she was able to see that the color was a flame-orange pair of running shorts. Worn by a someone sprawled on the rocks.

It took the rescue team four hours to haul up Trent's badly mangled body.

\* \* \*

Spring snow! Jodie Pacheco knew the skiing lasted only briefly after each March storm this far south, but she also knew how to make the most of it. The trick was to catch it several times within a few days of its falling, before it had time to go through too many of the day-night melt-freeze cycles. The first day would be worth paying the lift ticket prices up at the Arizona Snow Bowl in the San Francisco Peaks. But after that, it was much better in the ponderosa forest south of town, where a first tracks descent of the Mogollón Rim always pushed her abilities to the limit.

Mostly, the ponderosa forest was too dense to ski, at least at the speeds she liked. In order to float on the new snow, speed was necessary, and to keep up speed, only the most gentle telemark turns were possible. It helped a lot not to have to dodge too many trees.

But she knew her way around the forest, in large part because she had been involved in thinning it. Her work with the faculty at Northern Arizona University had put her in a position to take a lead in the volunteer brigade that had been assembled for the task. Although it was an experimental program, they had managed to take out the undergrowth and small trees over quite a large area, and it now made for wonderful back-country skiing—towering ponderosas about 50 feet apart, with no lower limbs sticking out as obstacles. Like a park.

The thinning program was controversial, to be sure, because removing the slash, the downed trees and brush, had been denounced as “logging” by several noisy groups. Even Jodie had second thoughts. But leaving the slash in place wouldn’t have reduced the fire danger significantly, and that was the whole point, after all. And it had also occurred to her that the piles of branches would probably not be covered with enough snow to be safe for skiing, either. So she pitched in with enthusiasm.

She and her three friends had arranged a complicated car shuttle to accomplish their run through the woods, leaving their cars in four places—at the top, at the bottom, and at two intermediate parking areas where they could ferry across flats. Why walk, even on touring skis, when you can ride? Besides, the chance to rest was worth taking advantage of.

They were on the last leg, a familiar chute that didn’t take long to get skied out after new snowfalls. Because back-country skiing is a popular thing to do among the young and fit in Flagstaff, tracks appeared almost as fast as snow fell. Jodie felt lucky that hers were the first tracks this time. She was able to stay well ahead of her companions because of the workouts she forced on herself—running, wall-sitting, weights, the Stairmaster. It was paying off.

She made the last of the series of turns that had started higher up with long, sweeping telemarks, which tested the stamina of her quads, and ended in the chute with short, choppy jump turns. Then she checked to a stop above the final, straight shot at the bottom of the chute. Looking back, she was tickled to see her smooth, convergent S-shaped tracks proclaiming her expertise. Pleased with herself, she set her skis straight downhill and flew out of the bottom of the chute. But she didn’t notice the piano wire stretched tightly across the opening, about shoulder-height off the snow surface, between two large ponderosa pines.

That’s where her companions found her head. The rest of her was another thirty yards down the slope, but it was easy to find because of the bright red stripe on the snow leading to it.

\* \* \*

North of Golden, Colorado State Road 93 winds over grass-covered hills and valleys at the base of the Front Range Foothills, and Stuart Pendleton was enjoying the handling and power of his new Porsche Boxster. He’d waited six months to get the color and options he wanted, and now he realized how well

worth the wait this car was. Even thoughts of his date in court, in which he was to defend a client against a defamation charge, couldn't distract him from the road.

Cruising over the crest of Davidson Mesa and down the two-mile grade to the South Boulder Creek crossing, he drank in the green of the springtime pastures. Ahead, the prominent Boulder landmarks were still limited to the National Center for Atmospheric Research, nestled on Table Mesa under the Flatirons, the university dormitories at Williams Village, and the stacks of the power plant out east. The downtown area and the red tile roofs of the university campus were hidden by the pastels of April in the Boulder Valley.

Stuart was sufficiently mesmerized by the view that he almost didn't notice the traffic overtaking him—it was the erratic patterns in the mirror picked up by his peripheral vision that finally got his attention.

A gray, customized van of indiscriminate vintage was gaining on him rapidly, weaving across the yellow line into the oncoming passing lane and back onto the right shoulder. Farther behind, just beginning the descent, a blue pickup truck with those oversized, off-road tires was also closing quickly. A passenger was leaning out the side window with what looked to be a pipe on his shoulder, trying to point it at the weaving van.

Hemmed in by an embankment on his right and the guard rail protecting the drop-off across the road, Stuart's choices were limited. He shifted down two gears to fourth and stomped the accelerator, and with a roar from the engine compartment behind him, his new car leapt forward down the grade. He was glad there was no traffic in front of him.

As he rounded the curve at the grade's half-way point, he saw dueling 18-wheel gravel trucks occupying both of the southbound lanes coming up the hill, a pack of frustrated Boulderites in Swedish sedans and SUVs queued up behind them. At least the uphill traffic was staying politely on its assigned side of the double yellow lines. Stuart wondered vaguely about the weaving van and whether it would negotiate passage of the two trucks.

He jumped the red light at the Eldorado Springs Drive intersection at just over 100. But despite the tension of the speed and whatever that thing was that was aimed generally in his direction from the blue pickup, he appreciated the irony of the "Welcome to Boulder – Please Drive Safely" sign as it zipped past.

It was not until the road straightened, metamorphosing into South Broadway, that he noticed the van was no longer in his mirror. It had not made it up the little curved hill from the bottom-land of the creek drainage. Stuart slowed to the speed limit, turned onto a side street at the first opportunity, parked, and tried, with deep breaths, to stop shaking. He picked up the car phone and punched 911.

"Hello? I'd like to report a very strange event on South Foothills Highway, south of Boulder, and there may well be some kind of medical emergency."

He related matters as well as he could, given his adrenaline level, and got put on hold while the operator called in the troops.

The 911 operator finally got back to him with silly follow-up questions, which Stuart tried politely to deflect. No, at 100 miles per hour, he wasn't able to read a backwards license plate in his mirror, being preoccupied with other matters. He couldn't tell if there had been gunshots. All he knew was that the van didn't come over the rise up South Broadway by Chambers Road. Yes, he'd be happy to await arrival of a police officer to answer more questions. He provided his car description and location, and settled back for a wait. Time to call the office, he decided.

By the time several sirens zoomed past, southbound on Broadway, and a police cruiser finally pulled up behind him on the side street, he had rearranged his schedule to accommodate the delays. In his mirror he saw the officer approaching, so he lowered his window, and readied his license, registration, and proof-of-insurance. He took a breath and put on his lawyer face.

“Mr. Pendleton? I understand you called in this incident?”

“Indeed I did. What happened back there?”

“Would you mind stepping out and sitting in my car? I’ll need to take notes.” Stuart gathered himself and got out, listening for the chirp of the alarm as he locked his car behind him, and followed the officer back to the cruiser.

“I’d like to get a statement first, so your information isn’t influenced by things you didn’t see.” Despite his mostly civil-court case load, Stuart knew enough about police procedure not to argue, and related the incident yet again.

“You said ‘over 100,’ did I hear that correctly?”

“Um, yes, well, I don’t like to incriminate myself, but I expect that it’s relevant for you to know my state of mind. Like running the light. Not my usual approach to driving, I assure you.”

“It’s fortunate that there wasn’t very much traffic. And I won’t be writing you up—you’re right, though, everything’s relevant. Now. What happened back there is that the gray van you described appears to have been hit with some kind of explosive device. It’s completely destroyed, off the road, on fire, with two dead people inside, a man and a woman. There’s no blue pickup truck anywhere around.”

“So it sounds like that thing I saw on the guy’s shoulder was some kind of rocket launcher, or bazooka, or something like that.”

“That’s my guess. It suggests that your decision to speed away was probably a good choice.”

“Well, considering that it was the only thing I could figure out to do, it sure was. Is there anything else I can help with?”

“Where can we reach you if more questions come up?”

Stuart gave him a business card, and they went their respective ways.

Neither was aware of the blue pickup truck off in the distance, at the pullout at the crest of Davidson Mesa, or of the two men dressed in camouflage fatigues using high-powered spotting scopes to inspect the scene far below.

\* \* \*

## Two

As the mid-May sun settled down behind Sugarloaf Mountain, Hal Weathers unpacked and mentally organized his schedule for the next two weeks.

Because Annette would be joining him tomorrow and staying for the duration of his conference, he had decided to splurge on a top-floor suite in the old part of the Hotel Boulderado, downtown. Not the official conference hotel, and definitely not on the approved travel list for Frémont State business trips, it was still worth the extra cost. He could either walk or take the shuttle bus up to the campus, and

Annette could have the car to drive up into the mountains to contemplate her navel while trying to figure out her future. She needed the time to think about whether to leave her position with the City of Durango Police Department and accept an offer to take over the satellite office that the Colorado Bureau of Investigation maintained in Durango.

As he was unpacking, he caught a glimpse of himself in the big mirror. How, he wondered, did I manage to get into this fancy hotel looking this scruffy? A week of fly-fishing solo with an empty tube of sunscreen and without shaving had given him the appearance of one of those guys who slept on the benches over in Central Park. Scratching the stubble, he examined it closely in the mirror to assess the gray and came up with a conservative estimate of 35% on his face. Fortunately, it was still only about 1% on top, a few flecks of salt amidst the full head of brown pepper, if you didn't count the temples. Those, he remembered, were supposed to make him look distinguished.

"I think," he said to the guy looking back at him through humorous brown eyes flecked with gold, "I'd better shave."

He got cleaned up and decided to call Annette. On his checking in, luck was smiling on him and he was given a west-side suite, so he was watching the evening sun over the foothills when her phone rang, twice.

"Trieri, investigations."

"Hey, darlin', I got here..."

"Hal! I want to talk, but I'm on the other line. Can you hold on for a couple of minutes?"

He didn't have time to answer before she switched back. He used the wait to continue organizing his schedule and to review his reasons for being in Boulder.

As Dean of Natural Sciences at Frémont State University and a faculty member of the Earth Sciences Department, Hal was always getting all sorts of invitations to this meeting or that conference, and he had learned that he could not possibly attend even a small fraction of them. So he was very selective, not only about the topic of the invitation but also about the location. Living in Durango meant that most of the standard vacation spots held little attraction for him.

Not that all was sweetness and light in the little southwestern Colorado mountain college town. Frémont State continued to struggle with its perennial budget woes, and Durango's continued growth was becoming more and more depressing. At least, for long-time residents like Hal, the growth meant his home's value continued to appreciate, but the university's budget problems didn't seem to have any such silver lining. If only, he thought, the Board of Trustees hadn't been swayed by the pie-in-the-sky ambition of that long-gone university president back in the '80s. Then the school wouldn't have morphed itself into a second-rate research university, and it would still be able to take pride in its identity as the premier undergraduate college in the State of Colorado system. As things stood, Hal was forever working hard to increase Frémont State's visibility in the scientific community, with a frustratingly low success rate. And that was one of the reasons he was in Boulder, to try yet again.

The invitation to the two-week-long symposium and workshop on the increasing sensitivity of arid- and semi-arid-land ecosystems to climate variations, to be sponsored by the National Center for Atmospheric Research and held at the University of Colorado, had intrigued him for two reasons. For one thing, he had in mind a plan to bring the next such symposium in the series to Frémont State, so he needed to attend this one. Holding high-visibility meetings would be one way to increase the reputation of the foundering school, and, as a dean, that was one of Hal's responsibilities.

For another thing, between semesters at the university, Boulder was actually quite a pleasant little city, and it was only a short drive from world-class trout streams along the Rocky Mountain Front

Range. The Cache la Poudre, the St. Vrain, and the South Platte were all calling out to him. Hal was sure that the conference, being two weeks long, could manage to stumble along without him for a day or two. If he got lucky, the freestone streams might not yet be flooded with runoff—spring seemed to be running a little late in these parts. But even if they were, the South Platte in Cheeseman Canyon and below would always be there, protected from runoff by the dam.

“Hal? Are you still there?”

“I’m here and you’re there, and I wish you were here or I was there.”

“Me too. How was the drive?”

“Nothing unusual. Pretty. Spectacular. You know. But on this end, yecch. The development down by Golden is way out of hand. Makes me glad we don’t live here. I did have a great time yesterday and the day before, though. The caddis hatch on the upper Arkansas was in full swing, just on schedule. And there was still a little snow on the banks of the Blue River, but the blue-winged olives were awake, and so were the trout trying to eat them.”

“And now you’ve got to go to work at that conference. Well, good luck getting your head into it. By the way, that phone call was the CBI again. They’re really turning up the heat. They sent me a package this afternoon and wanted to know if I got it.”

“A package? Candy? Flowers?”

“No such luck. A case file, or a set of case files. They have this idea that a bunch of homicides are somehow linked, and they think I’d be the perfect person to head up the investigation as my first CBI assignment.”

“A *bunch*? To me, that implies, oh, more than five. Wouldn’t you already know about something like that?”

“One of them, I do. And I recall hearing about a couple of the others. The Colorado ones. There are others in this package, too, a couple in New Mexico, one in Flagstaff, and one over in Utah. A bunch.”

“What do those have to do with the CBI?”

“They don’t, at least directly, but if they’re linked to the four Colorado ones, they do.”

“Four? When?”

“Over the past eight months. One down south of Cortez, at the Four Corners Monument. One up in Cedaredge. One west of Antonito, and one up in Boulder, last month, and both of those were doubles so it’s really six homicides.”

“So somebody’s been busy. Or several somebodies.”

“Quite. But there’s no indication of who. None. Completely clean crime scenes. So they’re appealing to my considerable ego and suggesting that I could solve the whole package, if only I signed up.”

“But you didn’t, at least yet, because you’re coming up here to think about it.”

“Yeah. That’s what I told them and that’s when they sent this package. Anyway, I’m on the early flight tomorrow, gets in about seven.”

“And I’ll be there to meet you. At the gate, if they’ll let me out to it—they seem to keep changing the rules. Otherwise, at the top of the stairs after you get off the train, OK?”

“If I remember right, that place is bigger than all creation, so I hope you can get to the gate. Then you can buy me breakfast. I don’t want to eat before getting on the plane, in case it’s bumpy.”

“I’ll find an ATM before I meet you.”

\* \* \*

In a glass office tower on the north end of Colorado Springs, in the midst of several other such glass towers that contained mostly religious non-profit groups, Charles Shure sat in a conference room with an unbelievable view. The Pikes Peak massif and the setting sun behind the Rampart Range dominated the scene, but the city of Colorado Springs, the U.S. Air Force Academy, and Cheyenne Mountain all provided variety, spread across the landscape in front of him. Lights were beginning to twinkle in the city.

UNELECO headquarters occupied the top three floors of the Christian Families Association, Inc. building—UNELECO owned it, truth be known—and the top floor consisted of the executive conference room and the offices of Shure and his senior staff.

Shure had the conference room, on the building’s southwest corner with two walls of glass to look through, to himself. He had chosen to use it to open and examine a curious package that had been delivered earlier in the afternoon. Lying on the massive conference table was a leather-covered book, apparently hand bound, and, printed on 40-pound parchment paper, a letter.

7 May

Dearest Charles,

My colleagues and I have followed your extraordinary career with the greatest interest, and we all agree that it is now time for you to be made aware of your proud heritage.

When your grandparents immigrated to the U.S. at the end of the Second World War, they, like so many other people displaced by the War, had to begin a new life with only the clothes on their backs. Through hard work and the perseverance that one would expect from solid Aryan stock, they built a business from scratch, a business that your father would use as a springboard for his career and that you have brought into the 21<sup>st</sup> Century as one of the powerhouse organizations of the new economy.

UNELECO has matured from its origins supplying electrical equipment for the post-war housing boom in Colorado Springs to a multi-national conglomerate that stands at the center of the digital communications world. It is now poised, through its various subsidiaries, to surpass all expectations for profitability. We are aware of this because we have been stockholders since the IPO fifteen years ago. You, my good Charles, have made us rich.

It is now time that we return the favor.

Of course, given your personal fortune, it is unnecessary for us to return the favor in financial terms. But we believe we can return it in another way, one that fits with your Aryan heritage, and one that will make your professional life far easier than it is now. We can help UNELECO.

First, we should explain about your heritage. Enclosed with this letter is the final volume of your Great-Uncle Heinrich von Scheuer’s laboratory notes. You may not know that your grandparents changed their name from von Scheuer to Shure upon emigrating from Germany. This was because the family name had become contaminated by the

slandorous lies told by the Jew traitors in Germany and Europe at the end of the War. Your Grand-Uncle Heinrich was one of the premier Aryan scientists working on the problem of how to eliminate the inferior gene pool that had been spreading like a plague across Europe for centuries. As we all know, this is a problem that haunts us even today, and, with the continuing flood of inferiors sneaking illegally into our country, it will continue to be a problem, given their insistence on breeding like cockroaches.

You may be interested to know that the first twenty-four volumes of these lab notes are now a part of the propaganda on display at the so-called Holocaust Museum, where the Jew power structure continues to spread its malicious lies. How this volume came into our hands is a long, convoluted story, one that we hope to have the opportunity to relate to you personally someday soon.

Now, to return your favor. We believe that we are now in a position to assist UNELECO in two ways.

The first is related to your Grand-Uncle Heinrich's work. We have made arrangements to liberate a copy of the rest of his laboratory notes from the so-called Holocaust Museum, and we believe, with this final volume, UNELECO's biotechnology division will be in a far more competitive position to develop new pharmaceuticals than it is now. Of course, it will also be in a perfect position to work toward cleansing the gene pool.

Second, we have already begun to assist UNELECO's natural resources divisions by paving the way toward simpler approaches to new acquisitions in both the minerals and forest products groups. It is too soon to be specific about this, but, as you will soon see, many of the legal obstacles that UNELECO has been encountering will no longer be troublesome.

We regret that, for now, we must remain incognito, but we look forward to the day when we can meet with you, toast your successes, and discuss our common heritage in more detail. In the meantime, you have our

Sincere regards,

The Aryan Rights Foundation

Charles Shure was aware that his grandparents had changed the family name, but the rest of the letter's information, and the book itself, were news to him. By the time he finished reading the letter, his hands were shaking badly, and he walked to the sideboard to make himself a stiff drink, a good six ounces of Glenlivet over ice. Then he sat in one of the leather chairs facing Pikes Peak to try to calm down.

With friends like these... He took a large gulp of the Glenlivet.

Who, he thought, could these people be? The last thing UNELECO needed was a bunch of racist crazies doing things to "help." The timber and mining divisions were facing the same legal problems as the rest of the industry, and negotiations for new resource acquisitions were in a very delicate stage right now. UNELECO's public image simply couldn't stand any more tarnish. What in the world was the "Aryan Rights Foundation?"

He cleared his throat and raised his voice slightly above a normal conversational level.

"Comm-access!"

“How can we help?” came a disembodied, metallic voice from the general direction of the ceiling.

“Susan Mackovich, voice, please.” He enunciated carefully and almost immediately heard a ringing.

“UNELECO, Susan Mackovich.” This voice also came from the ceiling, but it was natural, a real human.

“Susan, Chuck Shure. Glad you’re here late. I need help. I’m in the conference room upstairs. Could you come up, please? And please bring your CryptoCard.”

He was confident that Susan, computer wizard extraordinaire and head of UNELECO’s executive research group, would be able to find the answers he needed. With her CryptoCard and the conference room’s workstation, she would have access to just about any database she needed, anywhere, even from the Defense Department’s secure servers.

\* \* \*

The early flight from Durango was right on time, and, at 7:20 the next morning, Annette walked off the escalator from the underground train at the Denver International Airport and into Hal’s arms. He had been standing back from the little crowd gathered around, and, watching her come off the moving stairway and look around for him, he marveled yet again at how fortunate he was to have attracted someone as spectacular as she.

Even though he was some 15 years older and couldn’t, even on his best day, honestly consider himself a “catch,” she had found something appealing in him. She had come along at just the right time for him, when he had finally put behind him the pain and heartbreak of losing his first wife to cancer. Whatever it was that Annette found in him, he sure wasn’t going to argue.

After a long hug she handed him her briefcase and they headed up to the restaurant level, to Pour la France for breakfast.

“Well, Mrs. Weathers, what’s your fancy for breakfast?”

“I don’t know, Mr. Trieri, maybe Eggs Benedict?”

They had kept their separate last names after marrying in March, and there was no end to other people’s confusion. So they enjoyed the private joke now and then.

“This briefcase must imply that you checked a bag.”

“Um, two. I’m going to be here for a couple of weeks, you know.”

“I thought I brought all the stuff you’ll be needing up here when I packed the car.”

“But I’ve had time to think about it some more.”

“So just how big do you think my car is, anyway?”

“You didn’t have the back seats folded down before, so there’s plenty of room.”

She was right. Hal had used the ski sack to store his fly-rod tubes, but everything else had fit into the trunk, nice and neat. With Annette’s two new bags, he wasn’t sure that this strategy would work, however.

After a relaxed breakfast, they headed over to baggage claim and found Annette’s two bags patiently waiting to be picked up. Sometimes, Hal thought, things actually work the way they’re supposed to.

They carted her luggage out to Hal's new car and put her two bags on the back seat, on either side of the fly-rod tubes sticking through the back seat on top of the arm rest. Hal headed out of the airport and turned north on the new bypass, toward Boulder.

"So, if I know you, you stayed up half the night reading those files they sent you yesterday."

"Guilty as charged. I even brought them with me. It's fascinating stuff. The CBI is doing exactly the right thing in trying to recruit me. Giving me these files, getting my curiosity piqued."

"At least you've got that figured out. I mean, if you know what they're trying to do, at least you won't get suckered in."

"Yep. I'm paying close attention to that, believe me. The strange thing is, most of the cases aren't CBI's. One of the Colorado murders is actually the FBI's. CBI is helping with the two double homicides and the one in Cedaredge, which may be only a traffic accident."

"And there's nothing that is logically in the Durango jurisdiction?"

"Not really. The victim in the FBI case, the body found on the Navajo Reservation at the Four Corners Monument last September, was a Durango resident, one Luke Begay. No obvious reason anyone would want to kill him, at least not execution style."

"Does that give you an excuse to get involved without changing jobs?"

"I thought of that already. Walter says no. But he and I talked about a temporary leave, to go work with the CBI on this case. To see if I liked it enough to make the change and all. He doesn't want to lose me, but he doesn't want to stand in the way of a career move."

"And, by treating it this way, dealing with you honestly, he's going to treat you well enough that you'll have second thoughts about another job. Bosses that considerate are hard to find, and I bet he knows that."

"Right again. And he and I've had this conversation, so at least there aren't any hidden agendas at work on his part. I think I'm going to see if I can get the CBI to let me talk with the locals here in Boulder about their double last month. That'll give me a little better taste of what working with them would be like."

"Do they have any theories about how these things fit together? I mean, they must think they fit together somehow, if they've got 'em all in the same package."

"The only thing remotely similar about them is that the victims all have one kind of connection or another to some relatively extreme faction of the environmental movement. Either they were active in some organization, or they provided funding, or they had some official position. Like, the guy over in Utah was a National Park Service employee, at Natural Bridges."

"And the two double homicides as well?"

"Both were married couples with both partners active. The Boulder couple, um..." she rummaged in her briefcase, "the Mayers, they were the people behind the Boulder chapter of SCARAB."

"SCARAB. Ahh, Students and Citizens for Animal Rights and Biodiversity, right? The same organization as the one at the U? The one run by that guy that got killed up in the Weminuche a couple of years ago, right?"

"Yeah, that guy Jennifer went camping with. One of Sal Kelly's dealers. The Mayers were killed in their van, on the way into Boulder last month, by someone who chased them and, apparently, got them with a rocket launcher, or something like that. The other couple was killed by a car bomb, near where the road west of Antonito crosses the river."

“West of Antonito... Oh, at Horca? I’ve been fishing there a couple of times. What a beautiful place. How could a car bomb get them there?”

“A witness said that she saw some guy crawl out from under their car when they were in a restaurant. It blew up about a mile down the road from there. This was the Levines, Holly and Jack, from Denver. They were on their way to Santa Fe for a vacation, from what the CBI’s figured out.”

“An environmental connection?”

“Funders of various small, radical fringe groups, big bucks funders. Like the Old Stand Guardians people in Boulder, the Forest Rescuers in Santa Fe, groups like that. In addition to the Sierra Club and so on.”

“What about the Cedaredge guy?”

“Interesting. He was a big-game guide. Came from a logging family, people who did things the old way, before machines. Took big trees off Grand Mesa, not for lumber mills but for single beams. Mules, sledges, all that. Had a reputation as a tree-hugger. But he ran off the road in his truck. There were some indications that he may have had help, a push from behind. But nothing conclusive.”

“So someone’s going around knocking off Colorado environmentalists?”

“And their pals in New Mexico, Utah, and Arizona, or at least some of them.”

“Well, at least it sounds like there isn’t a Frémont State connection this time, like there usually seems to be. That’s a relief.”

\* \* \*

If you plop a rectangle the size of Wyoming squarely on top of the Four Corners, you cover a landscape that is the property, for the most part, of various governmental entities. The largest landowner is Uncle Sam, through his agents in the Bureau of Land Management, the Forest Service, and the National Park Service. Second on the list is the Navajo Nation, which controls almost all of the Arizona part of this landscape plus a significant amount of it in Utah and New Mexico. Other Native American Nations—two Ute tribes in Colorado and the various New Mexico Pueblos—follow in turn.

Individual landownership, at least in terms of large parcels, is far down the list. Yet there are some ranches, assembled by hook and crook over the last century or so, that include significant acreage. The profitability of these ranches benefits significantly from additional grazing leases on nearby federal lands.

One such ranch, located in southern San Miguel County about 30 miles due west of Telluride, was the centerpiece of Jarvis Schoenfield’s empire. His great-grandfather, Johann, had assembled the initial parcels during the late 1800s, using the Homestead Act and the less-than-perfect record keeping at the county seat, which at that time was way over in Silverton. When Grandfather Xavier linked the parcels into the X-S Ranch in the 1920s, the core of the Schoenfield empire took shape. Jarvis’ father and uncles had expanded the X-S holdings and diversified into mining in the Paradox Valley after World War II, when uranium became the object of federal attention. Because Jarvis had stuck with the ranch, he was able to watch from a distance as his uncles and cousins died from cancer, and eventually he became the sole proprietor of some 50,000 acres of hay fields, pasture, and timber, too many mining claims on federal land to count, and grazing rights all over the region.

Because much of the pasture was scattered in parcels of various sizes throughout the Paradox Valley and the surrounding plateaus, the sight of cattle with the X-S brand seared onto their flanks was familiar to residents of the communities of Nucla, Naturita, and Norwood. This familiarity worked to

Schoenfield's advantage at election time, and he was able to keep his seat in the Colorado State Senate as a result. His seniority there paid dividends for both his constituents and his fellow ranchers throughout the state, as well as for his variety of personal interests. His seniority also allowed him his choice of committee assignments, and he'd been Chairman of the Committee on Law Enforcement for years.

And the best thing of all was that everyone called him "Senator" all the time.

An operation the size of the X-S, which involved not only ranching but also timber and minerals extraction, required no small number of accountants and lawyers as well as ranch hands, lumberjacks, and miners. The corporate office, in a small building next to the First National Bank up in Norwood, was the employer of choice for the town. But the real seat of power for the X-S was at Raven's Roost, the ranch headquarters. Sprawled across the flattish top of North Mountain, about 15 miles south-southwest of Norwood, Raven's Roost consisted of a cluster of buildings—a small village, really—dominated by a huge, rambling log cabin, where Schoenfield lived with his domestic staff and personal assistants. But no wife.

For after trying three times without a hint of success to maintain a marital relationship, Schoenfield was finally and permanently single. His only regret was his failure to produce an heir. For a time, he blamed this on his wives, and he divorced the first two largely because of it. Wife number three, however, had the sort of personality that wouldn't put up with such badgering, and she had insisted on medical tests for both of them. She passed hers, and he failed his. He thought about adoption as an alternative, but he finally decided to work toward making the X-S a self-perpetuating, autonomous corporation, held closely by a select group of directors on behalf of a carefully crafted trust.

Wife number three, meanwhile, had died mysteriously on a hunting trip. It was only because of Schoenfield's considerable political clout, and financial resources, that the coroner had ruled the death an accident.

Sitting at his huge mahogany desk with his back to the bay window that looked out to the southeast toward Lone Cone Peak, Schoenfield contemplated the sheaf of paper with the laser-printed Colorado Bureau of Investigation logo lying on the leather writing pad in front of him.

He scanned the first page quickly, recognizing it to be a cover letter to the Governor signed with "best regards" by Roderick Andersen, the CBI Director. The remainder of the report took him two hours to read and digest. He was sufficiently engrossed that he paid no attention to the setting sun, which, due to the high cloud cover, lit Lone Cone with a deep red hue. When he was finished, he took a key from the ring on his belt, unlocked a drawer, and put the folder in, locking the drawer again afterwards. Then he picked up the telephone.

"Send Pickle and Mad Dog up here, willya?"

Whoever answered knew his voice, because that was all he said before hanging up. Then he set to examining a thick account book.

Ten minutes later, there was a knock on the heavy door to the office.

"Yeah? Come in."

The door opened, and in walked a curious pair, who were waved to two leather chairs facing the desk. The right chair was taken by a small, wiry man with a puckered expression permanently fixed on his face. The left chair, appropriately larger, was taken by a very big man, someone who, before he put on middle-age weight, had the build and size to play power forward in professional basketball. His calm expression was marked only by a wandering left eye, which appeared to be trying to track the random

flight of a housefly, or possibly a hummingbird. They waited patiently for a full five minutes before Schoenfield looked up.

“You asked us to come up, Senator?”

The smaller man was the spokesman.

“I just finished reading about your handiwork. Quite an interesting compilation, actually, what there is in the report. It leaves out several of the early operations, and it misses a couple of the more recent ones that looked like natural causes. Last time I met with Andersen, he didn’t refer to any of these, so I don’t think they’re onto them.”

“Ah, I hope there’s no suggestion of who was involved.”

“Nope, only the victims. You guys are good. Real good.”

Pickle beamed, and Mad Dog’s wandering eye almost focused on Schoenfield.

“And there’s no hints about the others?”

“Nope. They’re probably being treated as routine homicides, or accidents, and so Denver isn’t involved. And this seems to be confirmed by the work Timmy’s doing on their computers.”

Although almost everyone on his staff knew that Schoenfield was considered to be the CBI’s staunchest political patron, he always referred to them indirectly rather than by name, at least in this company. He continued.

“In fact, I’ve got a little bonus here for you both.”

He opened the top drawer and took out two envelopes. He pushed one toward each man across the desk.

“Make sure that this stays quiet, and there will be more of these envelopes. Now, then. Let’s talk about that little affair we’ve planned for July up in Boulder. How are things progressing?”

“We’ve got the equipment all ready. We’ve been extra careful, Senator. All the stuff has been brought in from out of state. The electronics were bought as individual parts from about a dozen suppliers. The rifle was smuggled in from Canada last year, and it’s only been used once, except for being sighted in. And we’ve figured out how to get access to the display. It’s being taken out to be fixed up, polished and all that, later this month. We’ll get at it then.”

“You said that the controller box will be rigged to melt itself?”

“Yep, that’s the way it will be set up. We figured it will get blasted, so it will have an internal flash heat source hooked to a motion-sensitive trigger. And even if it doesn’t get blasted, the recoil from the rifle will probably trigger it.”

The smaller man fidgeted in his chair, and his forehead wrinkled, accentuating his puckered expression.

“And we’ve been practicing with the video system. I have to tell you, Senator, I’m really doubtful that we’re going to have any chance at accuracy. With the thing fixed, we can’t really aim, so we just have to take a shot at whatever walks through the sights.”

“That’s OK, I keep telling you. The idea here is to make a big impression on this administration we’re stuck with. Taking advantage of the President’s visit to that research center in Boulder will embarrass them as well, maybe put them out of business and stop wasting our tax money on all that stupid global heating research. And it will register our dismay with this fool President’s choices for his cabinet. Diversity, hell. He’s picked so many token blacks and browns and other inferior types, not to

mention women, that we'd be better off without him. I mean, look at that Secretary of Interior. That's what she should be doing, being somebody's secretary. So we don't really have to hit him, just the event will have its effect. But if we do hit him, and especially if we get lucky and kill him, it'll play right into our hands, because this Vice-President is really a better choice."

"If you say so. Senator. We'll certainly do our best."

"And I know that really to be the best. Now. One more thing. How are you two at kidnapping?"

\* \* \*

### Three

The previous evening, while he was waiting for Susan Mackovich to come up to the conference room, Charles Shure had decided to examine the leather-bound volume that had arrived with the letter. He picked it up, turned it around, and felt a knot form in his stomach as a glimmer of recognition of the blue numbers on the book's spine settled into his consciousness.

Carefully, he opened the book, to a page that seemed stiffer than the rest. It turned out this was because the page had four photographs glued to it. Although old and black-and-white, they had obviously been taken by a professional, because the lighting and detail were exquisite. The six heads, sitting on the stumps of their necks severed neatly at about the Adam's apple, were lined up carefully on a table, and the four photographs showed them from the front, the back, and the two sides.

When Susan had arrived, she found him retching into the bar sink, the sour smell of used scotch permeating the air. It was the frontal angle that got him, the one with the staring eyes.

Looking back on it later, he decided that his reaction was appropriate, and that it was perfectly acceptable for her to see him this way. He had eventually shown her the volume, but not the letter, and her reaction was similar even though she knew what to expect. So if any gossip about the meeting got started, he'd be something of a hero.

After the two of them had recuperated from the shock of the contents of the book, Susan became all business, motivated to find out who was behind the whole thing, and her research instincts kicked in. Before too long, a dossier on the Aryan Rights Foundation was sitting beside the workstation's printer.

He was now back in the conference room, reviewing the dossier in preparation for a meeting with Susan and Jerry Perkins, head of UNELECO security. Although there was more information than he could absorb in one sitting, he could tell that it was shallow stuff, and quite anonymous. The Aryan Rights Foundation wasn't revealing any secrets, or even any names, on its web site. And it wasn't listed on any of the hate-group watchdog sites, strangely enough.

He'd been trying to figure out an appropriate strategy all day. Fortunately, he'd not shown Susan the letter, just the book. She had been so disturbed by it that she hadn't thought to ask why he connected something called the "Aryan Rights Foundation" with it. Good enough. But Perkins wouldn't be so easily distracted.

Shure strode back into his office, on the northwest corner of the top floor, and sat down at his computer. After thinking for a minute, he opened WordPerfect and typed into a new document the words "Courtesy of the Aryan Rights Foundation." Then he thought for another minute, reached down, opened the lid of his laser printer, and removed the toner cartridge. He turned it over and over in his hands, and then replaced it. Then he printed the brief document, and repeated the trick with the toner cartridge.

Back in the conference room, he folded the paper in half, unfolded it and made sure to get his fingerprints all over it, and refolded it several times and put it into the book. Now he was ready for Perkins, as well as for any after-the-fact questions that Susan might come up with.

The information that Susan had found on the Aryan Rights Foundation site, although shallow, painted a picture of a well-financed, clandestine hate group, one that was able to use clever arguments to make its points. Any way he looked at them, however, Shure found those arguments disturbing. The notion that some ethnicities were inherently superior to others grated on his sensibilities. As the CEO of a large, international conglomerate, he dealt with bright, motivated individuals from all over the world. To suggest, as did ARF, that northern Europeans were somehow inherently better than people from Asia was just silly. Yet he recognized the appeal of the arguments as well, particularly to those who felt threatened by people who look different or who maintain different cultural traditions.

And it was hard to disagree with the premise that humanity could only benefit from improvements in the gene pool. Of course, the definition of “improvements,” he thought, was the rub. And especially who was going to be doing the defining.

There was a soft knock on the conference room door, then Susan Mackovich and Jerry Perkins slipped into the room.

“Susan. Jerry. Thanks for coming. Jerry, did Susan tell you what this is about?”

“Just briefly, Mr. Shure. It sounds pretty strange, something I’d think of as the work of a crank, except for the picture Susan described.”

“My thinking exactly. The book’s over there on the table. If it’s genuine, this thing is pretty scary to me. There’s also the issue of its historical value. There’s a notation on the first page that suggests it’s part of a set. If the rest of the set’s somewhere, this could be an important part of it.” Shure had thought carefully about how to avoid any references to the ARF letter.

Perkins had begun looking at the book, and, on seeing the pictures that it fell open to, he reacted just as Shure and Susan Mackovich had the day before. Fortunately for the conference room’s carpet, he made it to the same bar sink the other two had. Susan picked up the page of paper that had fallen to the table.

“I didn’t see this yesterday. ‘Courtesy of the Aryan Rights Foundation.’ Why do you suppose these guys would send this to you, Mr. Shure?”

“I was so rattled I stuck it in my pocket yesterday. That question kept me awake most of the night. The only thing I can think of is that my grandparents immigrated here from Germany at the end of World War II. They never talked much about their life there, but maybe there’s a connection to this von Scheuer guy. Somehow this Aryan rights bunch got hold of it and decided I should have it. It makes my skin crawl just to think about it.”

Perkins re-entered the conversation, wiping his face on a towel.

“Mr. Shure, please accept my apology. I feel completely unprofessional. But that, that picture took me by complete surprise. Now I understand what Susan was telling me. And now I do have to take this more seriously than just a crank thing. If I may borrow this book, I’ll dust it for prints and have it analyzed for its paper and so on. We need to authenticate it. Um, is this cover made of what I think it is?”

“Probably. Check out the little blue numbers on the spine. You can have that tested, too, I expect. Susan, why don’t we have this whole thing scanned in and then, after it’s analyzed, we can just put the original away in a vault, an environmentally controlled one. Eventually, we should get an expert in these

things to look at it and advise us on what we should do with it. Meanwhile, let's keep this as quiet as we can. Jerry, do you think there's any special precautions I should take?"

"Can I persuade you not to drive yourself around? I'd like to ask you to use the armored car, with a driver and an extra person with him, if I could."

"And maybe you could set someone to watching my house for a while."

"Right. Do you have any overseas trips coming up? Or any others? Maybe it would be a good idea to stay close to home until we get a better handle on all this."

"Agreed." Shure grinned. "I was supposed to go to Moscow next week, but this is the perfect excuse to cancel. I'll set up teleconferences for whatever else I need to do."

\* \* \*

Never, ever, ever ever again will I complain about the traffic in Durango, Annette said to herself. She was sitting in Hal's new Audi S4, waiting, according to Hal's careful instructions, instructions she suspected were totally unnecessary, for the two turbines to wind down and cool before shutting it off. She had finally found the parking lot next to the CBI offices in downtown Denver and pulled in, despite the \$8 per half hour sign at the entrance. Even Durango, she thought, is getting so you have to pay for parking, but this is absurd.

It had been easy for her to make an appointment to see the CBI Director, but his schedule required an 8:30 meeting, so she had spent the previous 90 minutes negotiating the 35 miles from Boulder. The average speed of just over 20 miles per hour was misleading: most of the time had been spent sitting still, with the remainder spent at about 70, bumper to bumper—with lots of people weaving between lanes, attempting to "win" the daily "race."

Annette kept current with her various training courses, including defensive driving, and she was well experienced with various modes of traffic, including big-city traffic. Growing up and learning to drive in Chicago had seen to that. But the morning commute into Denver from Boulder was something she hadn't expected, couldn't even have imagined. It didn't help that she was driving Hal's new pride and joy. Although comfortable and powerful and a dream to drive, it still had no scratches, and she was certainly not interested in contributing the first one.

At least she'd been warned about the drive and had left Boulder with plenty of time. Her watch told her that she had fifteen minutes to get an elevator up to the nineteenth floor, to the CBI Director's office. She felt a mixed sense of elation and nerves. They, after all, were recruiting her, so this wasn't a job interview. But she still wanted to make the best possible impression.

Ten minutes later, Annette entered the door to the CBI suite. A receptionist, whose desk label said "Sandy McStain," looked up at her with just the right mixture of professionalism and warmth.

"Good morning. I'm Annette Trieri. I have an appointment with Director Andersen at 8:30. Ahh," she looked at her watch, "I guess I'm a couple of minutes early."

"He's expecting you. Would you like a cup of coffee? Help yourself, there's a fresh pot just over there. Take one of the clean mugs." Sandy pointed to an alcove at Annette's left.

"I'll let him know you're here." She pushed buttons on a telephone.

Annette found, to her relief, that there was a choice of regular or decaf—she picked the decaf, because she was still jangled by the traffic. As she was pouring, she heard footsteps behind her.

"Lieutenant Annette Trieri, I believe? I'm Roderick Andersen. I'm so glad you could come down."

Annette managed not to spill anything while she turned to shake his hand.

“I’m glad to be here. And, given the traffic, lucky. You don’t commute from Boulder, by any chance, do you?”

He tilted his head back and laughed.

“Don’t tell me you came down from the Peoples’ Republic at this time of day! My sympathies. No, I live just across town a ways, on South Ogden, by Washington Park. I take a bus, about 20 minutes including lots of stops.”

“I thought I was ready for big city traffic, but that was just ridiculous. If you really want me to come to work at CBI, your best approach will be to let me stay down in Durango. I guess I’m spoiled.”

“That you are. Summer music festivals right in town and winter skiing only 25 miles up the road. No, our intentions are strictly, shall I say, honorable. We want you for our office down there because of your relationships with the southwestern counties and with Durango. And, of course, because Bob Weldon is retiring. Let me get a cup of coffee here, and we can go into my office and talk about it.”

Two minutes later they were seated on the casual furniture in his office, looking west over downtown Denver, the western suburbs, and toward Mount Evans on the Front Range.

“As I said, I’m glad you could come down. And thanks for braving the traffic. I hope you’re here with good news for me.”

“Depends on what constitutes ‘good.’” She smiled. “I’m sure that you know how flattering it is to be sought after, and, to tell the truth, I’m at the point in my career where this would be a good move. I really don’t want to move up in the Durango PD, because the next thing will be too desk-oriented. What I think I’m good at is investigating, leading investigations. Field work, coordinating the people, putting the puzzle together, and all that. It’s certainly what I like to do.”

“And that’s exactly what we’re after. Someone who’s a leader. I’m sure you know that CBI isn’t a huge operation. We mostly function as intra-state coordinators of difficult investigations, providing assistance in investigating and in forensics to small law enforcement units, and we try hard to keep our bureaucracy to a minimum. Um, I don’t want to say anything bad about Bob, he’s a good friend of mine. But he’s run the field office in Durango in his own way for years now, and he’s retiring. I think that office may be in something of a rut, and I think that your hands-on approach is just what’s needed to get us out of that rut. If you decide to join us, what I’ll suggest is that you appoint Bob’s second-in-command as your chief-of-staff, to run the office side of things and to keep you available for investigations.”

“This second-in-command, is he, or she, also a candidate for the directorship? What’s it called, ‘Field Office Director’?”

“Right. And the second-in-command now is Derek Petersen. In the normal course of things, we’d advertise the position, and I’m sure that he’d apply and be a strong candidate. But there are two mitigating factors. First, he’s been the primary field investigator down there. Bob ran the office and Derek did the leg work. Derek needs administrative experience before he’ll be ready for the top job. I figure, with you in the top job, he could get the administrative experience as your chief-of-staff and then move to another division directorship when one opens up. And they do, reasonably often.

“Second, well, I want to be candid with you but I don’t want to offend you. So please don’t take this the wrong way. But we, that is, the CBI, are under pressure from the Governor’s office to diversify our staff. Especially at the top, we’re dominated by older, Anglo guys. So what I’m trying to do in recruiting you is to get myself some points with the Governor while adding the best investigator in the Four Corners to our staff. I got permission to go after you without the usual open search. My excuse to do this

is gender diversity, but I hope you believe me when I tell you that my real reason is your talents and capabilities and potential. Your work in Durango, and with the sheriffs of several of the counties down there, makes you perfect for our office. I've done a lot of homework on you, so I'm confident about this."

Annette was shaking her head.

"Well, I guess I'm not offended. It would be nice to be past all this stuff, but we're not, so I might as well take advantage of opportunities when they come along for whatever reason. I have to say, I'm suspicious that I got to be lieutenant for similar reasons, and I've been working hard to prove that I'm worthy of the position because of that."

She shifted in her chair and took a sip of coffee.

"My captain is being straight with me on this. He doesn't want me to leave, but he's not going to stand in my way. He's offered me a leave of absence to try this out. I think he's got a hidden agenda of improving the PD's relationship with the CBI, so this is a sort of perfect opportunity for him."

She smiled. "I like the idea of an experienced chief-of-staff, even if he's not an administrative expert. But I'll need to meet him and check out the chemistry before I can commit. I'm sure you understand that."

"Absolutely. And, if you're going to be up here for a few days, we may be able to arrange something. He'll be up this way later this week for meetings. We're working on what may be a serial killer."

"I bet that's the folder I got. Those environmentalists?"

"The same. Derek's dead-ended. He'll be up here to talk to the Boulder Sheriff and PD about what happened, so he could meet with you in Boulder. Then you wouldn't have to drive down here again." He grinned.

"I'll be in Boulder through next week. My husband's at a climate conference up in Boulder, and we're going to drive back together when it's over."

"I'll make sure that Derek sees you when he's up there." He looked at his watch. "I'm sorry my schedule's so tight, but I have a meeting with the Chairman of the Senate Committee on Law Enforcement. He and the Chief of the State Patrol are coming in for something or other about budgets."

"I'm glad to have had the chance to meet you. And, while I'm in town, I thought I'd go to the Denver Art Museum and do some shopping. Do you suppose that Ms. McStain would know how to direct me to the Cherry Creek Mall?"

"Would she! I think that's her second home. And I'll get you a pass to the museum. We do have various perks."

Just as Annette was about to leave, the main door to the office suite burst open and in walked a large, imposing figure with an air of authority; tall, immaculately dressed, gray hair coiffed like an anchor-man. Sandy McStain scrambled to her feet.

"Senator Schoenfield! How nice to see you again. Director Andersen is expecting you, sir."

"No doubt. Is Chief Wilkerson here yet?"

"No, sir, he called and said he's running a few minutes late. Something about traffic."

"Well, then we'll just have to start without him. Where's Rod?"

Andersen emerged from his office right about then, and Annette was startled by the change in him. With her, he had been confidently in charge, in a quiet sort of way. Now, he was the obsequious servant. Standing off to the side of all the commotion, she tried to be invisible, but she knew somehow that it wouldn't work.

“Senator! Thanks again so much for coming by. I'm certain that Chief Wilkerson will be here shortly.”

“Hope so. I don't have all day. I need to get back this afternoon.”

“Since we have a minute, I'd like to introduce you to someone, someone from your part of the state, actually.”

Andersen steered Schoenfield in Annette's direction.

“Senator, this is Lieutenant Annette Trieri, of the Durango Police Department. I'm hoping I can persuade her to replace Bob Weldon. Annette, Senator Jarvis Schoenfield.”

“Weldon? What's happening with him?”

Schoenfield obviously did not like being uninformed.

“He's retiring. I'm sure it was in last month's report. Lieutenant Trieri has been in charge of the Durango investigations unit for several years, and she has a solid history of working with law enforcement in the counties down your way.”

Schoenfield turned his gaze on Annette, giving her a leisurely once-over. At 5'9", she was used to being able to look most people in the eye, but Schoenfield was a good head taller. It made her uncomfortable to tilt her head back—she felt like a rabbit being watched by a mountain lion.

“Pleased to meet you, Lieutenant. Bob Weldon's an old friend on mine. You'll have big shoes to fill. Hmm. Trieri. Interesting name. Where's it from?”

At times like this, Annette was able to participate in the situation while simultaneously observing herself as if she were acting in a play. It happened all the time, and she had learned to be both actor and director. This time, her directorial instincts told her not to be intimidated.

“How nice to meet you as well, Senator. I've had various interactions with the southwest CBI office over the years, and I've developed great respect for Bob Weldon and his people. Ah, my family is back in Chicago, if that's what you're asking. Generations ago, it was in Europe, like yours, I imagine, maybe a little farther south.”

She met Schoenfield's intense stare without flinching, her green eyes focused like lasers on his. He was obviously not used to such behavior, for he turned away from her and changed the subject.

“Rod, I need to move along, so perhaps we should start.”

She was dismissed, just like that. He, she thought, is someone I'll have to be careful of.

\* \* \*

Anarchists are not the sort of people that I should be trying to organize. Why the hell did I ever talk myself into this?

Sitting in his north Durango apartment, Steve Rutherford was bemoaning his situation, trying to find a graceful, or even clumsy, way out. He had gathered together a group—no, that sounded too formal and organized; it was a bunch, a pile, a heap—of acquaintances from the area to discuss the formation of a new organization. Naturally, he'd picked the people he knew to be disenchanting with

other groups, even the underground fringe represented by the Mother Earth Defense League. And if they couldn't get along in the MEDL, they were definitely loners by nature. Talk about herding cats.

They had shown up largely because he had promised beer—and wine for Lolly. About the only thing they had accomplished in their three hours of wrangling and arguing and, finally, laughing was to come up with a name they could agree on. And even then, there was controversy. Steve thought that it had just the combination of whimsy and topical relevance that was needed, along with the potential for name recognition and a really cool logo, should they ever need one: Southwestern Colorado Radical Environmental Warriors. To be known, obviously, by the acronym.

David Wellington, who always took everything, including himself, far too seriously, thought the humor would distract people from the purpose of the organization. Aaron Felterson objected to the use of “warriors” in the title, arguing that it would give away their strategy. “Radical” was also a cause for concern, for similar reasons. Lolly Markham argued against “environmental,” reasoning that it was too restrictive. She thought “social” would be more appropriate. Even the “Southwestern Colorado” regional twist raised questions, but Steve pointed out that they needed to keep this group small and focused.

In the end it was the killer weed that Flip Chester always seemed to have some of that forged an agreement, or, more precisely stated, a reluctant truce. That and the distraction of Lolly's not wearing anything under her tee shirt. When she got agitated and waved her arms around, it looked like she had a couple of puppies squirming around in there, little dark noses poking against the fabric. Man, Steve thought, I'd sure like to get my hands on those puppies.

Lolly's point about the limitations of restricting SCREW to an environmental mission was well taken, but they did need some kind of focus. And the catalyst for getting together in the first place had an environmental basis, for sure. Too many of their friends and colleagues in the environmental movement, especially in the MEDL, were dying off, getting killed in suspicious circumstances.

Steve had wondered about it idly for several months, but it was the thing up in Boulder last month, where Bill and Jane Mayer got blown up in their van, that finally got his attention. He'd started a list, and he was surprised to see how long it was when he was finished. And he knew that at least half of the people on the list had been MEDL supporters. So he'd called around to friends and acquaintances within a couple of hours' driving time who weren't dead (yet? he wondered) to talk things over, and then to get together and try to get organized. A couple of them had been thinking along similar lines, so it was easy to arrange the meeting. The timing was a hassle, but it finally got put together.

They met in Steve's apartment, because his office at Frémont State was too cramped, and because he kind of suspected they'd end up smoking a joint, or two or three. Lolly, since she lived in town, arrived first, and he was proud of himself for not coming on to her, at least not too strongly, puppies or no puppies. Wellington had stopped in Pagosa Springs on his way over from Alamosa to pick up Felterson, and they wound up late. Reid Tompkins, who came in from Cortez, was always late for everything, as was Flip Chester, who had the excuse of being perpetually stoned.

“So, I talked with each of you a little about this meeting on the phone,” Steve started out when they had all assembled. “If I'm right, the cops aren't doing anything about these killings, and we're on our own. I think, with a little organization, we can accomplish a lot. Find out who's behind this and deal with them ourselves. In the process, we'll eliminate an enemy of Mother Earth. We need to wear a different hat to do this so that we don't bring any attention to MEDL.”

“You mean, violence?”

Lolly was either aghast or delighted, Steve couldn't tell.

“Isn’t it about time that someone stepped up and fought on the side of the Earth? She’s been raped and ripped open for generations. I think we owe her. MEDL doesn’t condone violence, but I think that may be what’s called for, in this case at least.”

“What’s this have to do with your list of dead people?”

Wellington was always practical.

“They were all, in one way or another, fighting within the system on Mother Earth’s behalf. And they got killed. Even Jake, who was a logger, was really a tree-hugger. And he got killed.”

“Didn’t he just crash his truck?”

“The police report had some suspicious stuff in it. It looks like someone gave him a shove and then he crashed. Meaning he was killed. Now it’s time someone avenged him and the others, too.”

Thus was the concept of the Warriors born, and eventually SCREW.

“Far out,” said Flip, through his personal fog.

\* \* \*

They used the tried-and-true road construction ploy, and it worked to perfection.

First, they invented an opportunity, irresistible to the target, to lure him onto a secondary road in a relatively remote area. In Shure’s case, the opportunity was to obtain a combined timber and mineral lease on private property, allowing extraction without most of the usual federal paperwork. They set up a phony meeting in Norwood for this purpose. Because the obvious itinerary for a high-roller like Shure was to the Telluride airport and then by car down the San Miguel River Valley toward Norwood, there were ample opportunities for the subsequent steps of the process. The “meeting” was supposedly a discussion between Shure and the “owner” of the property, and Shure rose to the bait like a hatchery trout to a stonefly.

Second, they isolated the target’s vehicle from other traffic. They managed this with the expedient of two semis, one in front to block Shure’s car and one behind to slow trailing traffic.

Third, they used a phony construction crew to route the target vehicle onto an isolated tertiary road. This was easy, given the lack of traffic between Placerville and Norwood, and, because the lead semi was routed as well, step four was expedited.

Fourth, they merely blockaded the target vehicle, front and rear, and extracted the individual of interest from it. To this end, the lead semi rolled to a stop, the back door rolled up, and the occupants of Shure’s rented car found themselves staring at a rocket launcher held by someone wearing a black hood, sitting casually on a stool. There must have been a black curtain behind him, because there was nothing to be seen in the interior of the semi-trailer. Shure’s driver immediately tried to reverse directions, but he discovered that a large farm implement—a combination hay rake and bailer, as it happened—was blocking the road behind them.

After that, it was simply a matter of negotiation.

Before Shure thought to telephone for help, someone was calling him. Surprised, because he thought his cell phone number was confidential, he pushed the Talk button.

“Yes?”

“Mr. Shure, my abject apologies for the inconvenience. First, let me reassure you and your driver that no one will be threatened in the least by this little delay. The, ah, device in the truck in front of you

is merely to get your attention. We know your driver is armed, and we simply want you to understand that we hold the upper hand. All we want is to talk with you for a few moments.”

“What is it you want?”

“If you’d walk past the truck in front of you, you’ll find a most comfortable van in which we can conduct business. I’m sure you know that these cellular telephones don’t offer much in the way of privacy. Your driver can remain seated. You can reassure him that you’ll return, completely healthy and even well-fed, if you’d like, in a short while. We will maneuver the van so he can see it, and it won’t be going anywhere.”

“How do I know that I’ll be safe?”

“You’ll have to trust me, I’m afraid. Given the situation, surely you can see there’s little choice.”

At this, the hooded person holding the rocket launcher waggled the tube. Shure realized that he must be listening to the conversation. Or maybe he was even conducting it, from under the hood.

“I’ll expect you in the van shortly.”

The phone went dead.

“I’m told I should get out and get in a van that’s ahead of this truck, Walt. What do you think?”

The driver, Walter Herrington, looked skeptical.

“I think I can’t go anywhere, Mr. Shure, what with the truck in front, that equipment behind us, and these ditches on either side. Besides, that thing on that guy’s shoulder is not something I feel like arguing with. But I don’t like you getting out. What’s the deal? What do they want?”

“He said, to conduct business. He also said I’d be safe.”

“They just moved a van into view up ahead. See it?”

Shure leaned to the left, and there was a black, windowless van, sitting on the road ahead of the semi.

“What if we call for help?”

Walt was clearly not comfortable with Shure’s leaving the car.

“He mentioned that cell phone calls are easily monitored, and I think that was a sort of warning. I guess I’ll just have to do this.”

“Well, be careful. I’ll sit tight, with my hands visible.”

Shure opened the left rear door, and got out onto the road. He felt an overwhelming urge to run for it, but the hooded person in the semi loomed. So he simply walked ahead to the van. As he passed the tractor of the semi, he noticed that the driver was also wearing a black hood, as was the person sitting behind the steering wheel of the black van. The side door slid open as Shure approached.

“Mr. Shure, please, come in.”

Shure saw a young man, curiously familiar, sitting in an easy chair in the van’s interior. A second chair, on the other side of a small side table, sat empty. Shure climbed aboard and sat.

“Mr. Shure, my name is William Campbell. I’m an attorney representing the interests of a group that I believe you’ve heard of, the Aryan Rights Foundation.”

“Have we met?”

“Yes sir, we have. Until recently I was employed in the legal office of UNELECO. I recall meeting you several years back when your company hired me right out of law school.”

“And you quit working for us and went to work for this Aryan Rights bunch? What could have possibly motivated you to do this?”

“Um, er, well, they made me an extremely attractive offer,” Campbell was writing on his legal pad while talking, “and it seemed to have, ah, career potential on a faster track than what a large office like UNELECO’s did.”

He tore off the paper and slid it across the table to Shure.

Shure read “They are listening. They blackmailed me.”

“I see. Well, I certainly wish you the best. Now, I was given to understand that I would be meeting with the owner of certain timber and mineral rights that I was planning to lease. Normally, this would be handled by the heads of the appropriate UNELECO divisions, but the owner’s representative was insistent on me. I now see why. But I don’t see why the need for this cloak and dagger stuff. Surely, we could be having this conversation at that address in, um, Norwood that we were given?”

Campbell reached for his piece of notepad paper and began writing.

“Well, um, the Sen... Ah, that is, my understanding is that the Aryan Rights Foundation wants complete secrecy in its dealings with you at this stage.”

He handed the paper back, and Shure read “Show of force—Intimidation.”

Campbell continued, “The purpose of this meeting is to follow up on the letter and the book that they sent you a few days ago. I was told to give you this computer CD.”

He handed Shure a standard CD jewel box.

“The CD contains images of the other volumes of your great-uncle’s laboratory notes. The other volumes were ‘borrowed’ and scanned electronically. My clients are certain that you’ll be able to read them.”

“I’m afraid that I simply don’t understand what this is all about. Why these people believe that I would be interested in all this is beyond me.”

“I’m told to tell you that this will be made clear soon. For now, it’s suggested that you return to your car and review the material on the CD at your earliest opportunity. That’s all there is for this meeting.”

Campbell looked both nervous and apologetic.

“I think not. Someone owes me an explanation, and you, having taken the position of the Aryan Rights Foundation, or whatever these people call themselves, the position of their lawyer, you are the one to start explaining. First of all, who are these people?”

“I’m truly sorry, Mr. Shure, but I’m simply not at liberty to tell you that.” Campbell was sweating heavily. “My clients aren’t ready for you to know more. They will insist on doing things their way, I’m afraid.”

He took the paper back from the table, folded it several times, and reached across and slid it into Shure’s jacket pocket.

“Now, Mr. Shure, as I said, I’m afraid this meeting is over. It would be best for both you and your driver if you were to return to your car.”

Defeated, but with some understanding that the notes Campbell had passed meant more than he yet understood, Shure exited the van and walked back to his car. Inside, he reassured his driver that he was perfectly fine, and they both watched as the semi-trailer door rolled down. The van ahead of it backed down the road to a pull-out, reversed its direction, and sped away.

Then the door of the semi-trailer rolled up a couple of feet, and a body was pushed out. It flopped onto the roadway, right in front of Shure's car. The truck began rolling, and roared off in a cloud of dust.

Shure and Walt Herrington leapt out of the car and approached the body, which was lying face down in the gravel, a pool of blood seeping out from under the left cheek. They turned it over, and Shure gasped as he recognized William Campbell, now with a small red hole between his eyebrows. A note, pinned to Campbell's tie, scribbled on the same paper as was in Shure's jacket pocket, read:

*We tolerate neither traitors nor incompetence.  
Consider this an example of our ongoing efforts to clean up the gene pool.*

## **Four**

Some charter members of SCREW were more action-oriented than others. One, who was completely inaction-oriented as well as not entirely trustworthy, was tolerated mainly for the controlled substances he could provide to enliven meetings. Another was too argumentative to include in tactical planning, so he was left out. A third had to work.

So SCREW's first operation was up to Steve Rutherford, Reid Tompkins, and Lolly Markham. They were the most appropriate conspirators for this one anyway, because they were the ones who had known Luke Begay best. A planning session, at Tompkins' house in Cortez, was in progress.

"So, the deal is, last September, Luke was found at the Four Corners Monument, shot in the back of the head, close range, with a soft-nosed .22 long-rifle slug. An execution. The only thing that anyone could have wanted him dead for was his politics. He didn't do dope, he didn't gamble, he didn't owe money. But he was into AIR in a big way. And he was working to get the forests back into Indian ownership."

Steve had done quite a bit of homework to piece this all together. Lolly had a far-away look in her eyes.

"We went out a few times. He was a good guy. Not militaristic or anything. Kind of shy. But really committed to ending commercial exploitation of the lands of his people. That's why he was so involved in the Mother Earth Defense League, and in American Indian Restoration."

"Yeah, and it went beyond the tribal thing with him. He was Navajo, but he was working hardest on a project that would have benefitted the Utes. The latest thing was to keep some big logging company out of the San Juan National Forest over east of Dove Creek, north of the McPhee Reservoir. They were getting a lease from the Forest Service, I think it's called the Glade Mountain lease, and Luke was claiming it was invalid because those were really Ute lands, that the feds had illegally stolen them. He used to come into my office to talk about the legal aspects."

Reid's day job in Cortez was with an environmental law firm.

“So,” Steve drew the obvious conclusion, “Someone from the logging company doesn’t like his advocacy and whacks him. Should we try to find out who, or should we go after the company?”

“There’s one more relevant thing. Jake Colvin was working the same issue, from a little different perspective. He didn’t care so much about the Utes, but he cared about the trees the logging company was going to destroy. So I think that he and Luke were actually working together. I remember seeing Jake at a MEDL meeting or two.”

“I didn’t know Jake, but I heard he was a big-game guide.”

“Yeah, I went out with him a few times, too. Before he got married. What a hunk.”

Lolly had that far-away look again.

“He guided because he couldn’t do logging any more, and he needed the money. He was an old-school guy, it was in his family. None of this mechanized clear-cutting stuff. One tree at a time, carefully. The big companies really pissed him off.”

“So maybe this company wanted to off both of them. How do we find out the name of the company? These killings were last fall.”

“Forest Fiber Products, Inc. I remember from the conversations with Luke. Let me look ’em up.”

Reid walked over to the desk and sat down. He was by far the most well-equipped of the three of them to deal with the modern world and his computer system was even turned on already.

A few minutes later, he found what he was looking for. FFPI was a wood products company whose local installation was a lumber mill and a wafer-board plant, both over in Monticello, Utah, about 25 miles northwest of Dove Creek. According to their web site, FFPI was a subsidiary of something called UNELECO.

The UNELECO web site, they discovered, was huge. And intimidating. To think that they were going to take on something of this magnitude was scary, especially to Reid. As a lawyer, he knew the power of a large corporation, with its regiment of highly paid legal counsel.

“This is a multi-billion-dollar international conglomerate. Jesus! How can we deal with something like that?”

“Hey, we’re environmental warriors, remember? We start with the real culprit, the logging company. We hit and run. We don’t get caught. They get SCREWed, pun intended. We can destroy their capability to carry out their destruction pretty easily, I’d think. And if we can find out where the executives live, we can get them personally. Really avenge Luke. And Jake.”

“Poor Jake. He was such a great guy. I really liked him. Let’s give ’em hell.” Lolly looked to be on the verge of tears. “But what do we do? Kill somebody?”

“Let’s drive over there and scope out the operation. If it’s a lumber mill like that one that was up in Olathe, I bet we could burn it down without too much trouble. Reid, why don’t you see if you can identify the plant’s managers? We can go after them individually.”

“How do we know they’re responsible?”

“Who else could it be? But, look, you’re right. I’ll do some more digging around. If it was this Forest Fiber bunch that’s responsible for both Luke and Jake, there will be a way to find out. I’ll ask around up at Cedaredge.”

“I miss Jake. He was so, so kind. And considerate. And, and strong.” Lolly was awash.

\* \* \*

The two vice presidents had been waiting for Shure's arrival at the Durango – La Plata County airport so long that they were becoming restless. Shure was late because his helicopter had detoured well to the south to get around turbulence over Wolf Creek Pass. UNELECO's Chief Executive Officer had a weak stomach, which was why he normally preferred his Gulfstream executive jet, but the hop from the roof of the UNELECO headquarters building to Durango was not worth the trouble of dealing with the Colorado Springs airport.

Even with the detour, Shure looked dyspeptic when Henry Abraham and Bill Morton boarded the Bell. It was being refueled for the next leg of their tour.

"Hank, Bill, glad to see you. Hope this wasn't too short notice. I want to talk where there's no chance of being overheard, and you know about the itinerary, right?"

"Tina said that you wanted a tour of our current operations, Mr. Shure. So I assume that you want to head northwest to that lease of ours north of McPhee Reservoir."

Henry Abraham was the UNELECO vice president in charge of Forest Fiber Products, Inc., the lumber and wafer-board division.

"And Gretchen told me the same thing, so I guess that means farther north to Bedrock."

Bill Morton was the UNELECO vice president for Mile-High Mining, Inc., UNELECO's division for all things underground.

"Right on both counts, plus another possible lease. We'll make a loop and come back down past Norwood, or just west of there."

The intercom crackled, and then said, "Whenever you're ready, Mr. Shure."

Shure pushed a button by his seat.

"All set back here." He released the button. "Better belt up, guys. It's bouncy up there today."

Morton and Abraham fumbled for their seat belts as they heard the rotor winding up. Even with the extra soundproofing in this executive model, the ride was going to be noisy. Shure settled in and looked closely at his underlings.

"I had a strange and frightening experience the other day I want to tell you about. Remember our conference call about that possible lease on Hamilton Mesa? The owner wanted to meet with me personally, remember? And we talked about the potential of the property and you did some background research, right?"

"Well, as I recall, the board feet were on Hamilton Mesa, but the tailings were farther northwest, on private mining claims." Abraham's interest in those trees was palpable.

"Yep. The story was that this guy had heard about our new reclamation process and wanted to get us involved in some of his old tailings. But we're not doing a flyover because I signed anything. I just want you guys to point out to me where the timber stands and these tailings are supposed to be." Shure paused and took a deep breath.

"See, what happened was that the so-called conference about the lease was really a setup."

And Shure related to them the conversation with William Campbell and his murder, carefully leaving out references to the Aryan Rights Foundation.

"So after we discovered that Campbell was dead, Walt and I got the hell out of there. I've been waiting for the other shoe to drop, and all I've seen was a story in the Grand Junction paper, 'Lawyer

found shot on country road' sort of thing. It looks like there's no ties to me or Walt or the car. But someone pulled a fast one on both of you to get to me."

"Jesus, Mr. Shure. I'm sorry." Morton was aghast. "I verified that the tailings are really there and that they're from an old uranium operation, so it seemed legit. It was kind of weird that they wanted to talk to you, yeah, but we have weird experiences with landowners all the time."

"Right. And there's lots of board feet up there, as we'll see when we fly by it. Someone went to a load of trouble to set this whole thing up. Why would anyone want to do this?"

"One of the notes that Campbell passed me, notes that got him killed, it seems, said it was a power play, to intimidate me. For what purpose, I'm not sure, but it worked. I've been wondering if either of you might have some ideas. Do we have competition that would do this sort of thing?"

Shure looked back and forth at his two vice presidents.

They speculated on this and other possible motives as the helicopter made a wide circle, west and then north over a new federal timber lease north of McPhee Reservoir, then north some more and farther west past the large uranium tailings piles at the Department of Energy complex near Bedrock, then finally east again to the private land-holdings. Shure restarted the lagged conversation.

"My understanding is that the private timber lease is somewhere down there, on the west and south sides of the mesa below us."

"Yes, it's supposed to be about below us now. North of that road."

Abraham had scouted the region by air when first informed of the opportunity and was now scanning the landscape below with binoculars.

"Lots of board feet down there, for sure, but the access will be a real challenge. It's rough terrain."

Several buildings, including a huge log cabin, came into view as the helicopter drifted farther south. Abraham continued playing travel guide.

"Mr. Shure, those buildings are the X-S Ranch, and as far as we can tell, their holdings include most of Hamilton Mesa."

"So this X-S Ranch is the owner of the rights, including the mining claims?"

It was Morton's turn.

"We haven't been able to verify that for certain, but it looks like it, Mr. Shure. The problem is that the X-S is a privately held corporation, owned by a trust with layers of lawyers shielding the people in control, and what they control. About all we've been able to find out is that the person who lives down there is a Colorado State Senator, Jarvis Schoenfield. The X-S used to belong to him and his father before him. Then this corporation was set up with the provision that he can live there. He probably controls it, but we haven't been able to prove that. Yet."

Shure pushed the microphone button by his seat.

"Henry, let's head back up toward Norwood, to the north and a little east. Follow the main highway east from town a ways."

He then turned to his two vice-presidents.

"I remember that we got stuck behind this semi on the hill that climbs out of the river valley up to the plateau here. Then there was this construction detour that had us turn left onto a gravel road. Let's see if we can spot where my little adventure went down."

He looked pensive, and, after a pause, continued.

“Jarvis Schoenfield. That’s a familiar name in Colorado political circles. I’ve met him a couple of times. He’s one of the most senior members of the Colorado Senate, a real operator. And it looks like he might be behind my little adventure the other day, huh?”

His vice-presidents were carefully non-committal as the helicopter began to skim along over a two-lane paved highway.

“Yeah, it was probably one of those county roads that head off south from the highway here. Not sure which one. Let’s find out who owns these pastures and hay fields to the south of the highway. If it’s the X-S crowd, I’ll be pretty satisfied that they’re behind this. Then we have to decide where to go with the information about the murder.”

Shure turned from looking out the window to his two vice presidents.

“Gentlemen, this has been a very interesting tour. I think for now we’re going to proceed with this leasing business as if nothing happened, if possible. And I’ll make arrangements to deal with Schoenfield as soon as you can confirm his control over these resources. I assume that you will be able to confirm this, one way or another?”

“Yes, Mr. Shure.”

They were almost in unison.

\* \* \*

After Hal’s conference in Boulder ended, they headed home the long way. The second night, they stayed in a bed and breakfast in the forest just north of the little town of Divide. Their plan was to spend three nights there, with two full days of fishing the South Platte in Cheeseman and Eleven Mile Canyons.

Hal had managed to play hooky from the arid lands conference for only one day, to fish the Cache la Poudre north of Fort Collins, and it had been something of a challenge as the runoff had finally started. So he planned the trip home to include stops on rivers protected by dams. After the South Platte, they were going to head north and west, through South Park, up the Arkansas Valley, and over Independence Pass to the Frying Pan above Basalt. After that, a short day’s drive would take them home through Delta and Ouray.

It was a second honeymoon of sorts. After their marriage in March, they had taken a cruise through the Panama Canal; the Boulder conference provided an excuse for another well-deserved break. Hal felt lucky that Annette liked fly-fishing well enough that he could plan an itinerary such as this, and Annette felt lucky to be traveling with someone who knew the back roads and the off-the-track places to stay in the Colorado high country.

Not that obscure inns and B&Bs were their only choices. The first night, they had stayed in the Honeymoon Cottage at the Grand Lake Lodge, after a drive over Trail Ridge Road. The late spring had delayed the snow melt, and the highest through road in the country had just opened by the Memorial Day Weekend target date. Snow banks twenty feet high on the sides of the road caused flatland tourists to stop and gawk, and Annette, who hadn’t been into Rocky Mountain National Park before, was awed by the scenery.

And she finally had a chance to see a yellow-bellied marmot, the foot-and-a-half long, high-altitude cousin of the woodchuck that had been adopted as the sports mascot at Frémont State. A particularly robust individual was sunning itself on some rocks near the Forest Canyon Overlook parking lot off Trail Ridge Road.

“That’s your mascot? No wonder you guys don’t win a lot of games.”

“Hey, we won the NCAA Division II national championship in football a couple of years ago! Don’t you remember our friends the defensive linemen? Besides, that guy’s probably a victim of tourists with Cheetos. He probably weighs twice what he should.”

“But it’s just a big rodent!”

“Um, well, yeah. See, what happened was that when the teaching college became Frémont State University years ago, they had a contest for the students, to select a new sports mascot. And this was back when students had a collective sense of humor, unlike today’s politically correct student body. And all of the real sports-like names were taken. Like, Adams State over in Alamosa is the Grizzlies, and so on. I don’t think the athletic department has ever been able to get used to the Golden Marmots. They tried ‘Mountain Marmots’ at first, but that provoked too much satire. The word play against ‘mounting marmots’ and the resulting mental image of marmot sex, along with not a few black-market tee shirts, were just impossible to deal with. So we’re the Golden Marmots, and proud of it.”

He struck an especially heroic pose, but the marmot on the rocks just belched and went to sleep.

On the west end of Trail Ridge Road, Annette was charmed by the Grand Lake Lodge, with its rustic accommodations and elegant dining room. They had after-dinner coffee on the front porch and watched the shadows lengthen on Grand Lake and Byers Peak.

After the relative hustle and bustle of Grand Lake Lodge, the small B&B in Divide was something of a relief. They drove into Woodland Park for supper, and settled in for an evening of reading and relaxing.

“I feel like I’ve been a paradigm of patience.” Hal finally broke a comfortable silence. “Hmm. ‘Paradigm of patience.’ I’ll have to remember that. Has a nice ring.”

Annette was giving him her cynical look.

“Anyway, I haven’t been bugging you about your future. But I am intensely curious, you know.”

“Me, too, actually. This is one of those hard choices between two good things. I’ve pretty much decided to take Walter up on his offer of a leave of absence to try out the CBI. I’m really curious about these serial murders, and I can probably work with Derek Petersen well enough to make progress on the case. But I really don’t know what I’ll want to do in the long run. Thing is, joining up with a state government organization is opening a door to getting entangled in bureaucracy. I’ve learned to work whatever bureaucracy there is in Durango pretty well. But I bet the state one is a lot tougher. And the Durango office is attached to the western district office up in Montrose, and I don’t know what autonomy I’ll have. So the bureaucracy thing is a little intimidating.”

“No doubt. That’s certainly been my experience, whenever I have to deal with the educational bureaucracy in Denver. The bigger it is and the more layers there are, the worse it is to navigate. So what have you found out about all these killings? Anything interesting?”

“I made the rounds with Derek, like I told you last week, and we interviewed all sorts of people. A lawyer from Lakewood who was on his way to Boulder when the van got blown up, all of the police and other official people involved. Everyone’s been cooperative. But there’s just not much to go on. Even the local SCARAB supporters don’t know anything. Of course, everyone who’s in that camp has some kind of conspiracy theory or other, but that’s no surprise. SCARAB is one of those groups that makes a lot of people mad, for sure. But not generally mad enough to do something like this.”

Hal looked thoughtful. “I seem to remember that the Frémont State chapter was hell-bent on protecting prairie dogs, or something like that.”

“Me, too, and I think they probably got that idea from the people in Boulder. Prairie dogs are almost a religious icon for them. But that sort of activism is more of a nuisance than a real threat. It shouldn’t motivate murder. At least I don’t see how.”

“What about all the other killings? Are they linked together?”

“Derek told me that the more he looks into it, the more they appear to be. Everyone on the list had some connection to everyone else via a fringe environmental group called the Mother Earth Defense League, MEDL. They were all involved in other things, too, but that was a common thread. Thing is, we can’t find out anything about this group. They’re not officially chartered in Colorado, or anywhere else, apparently. It seems to be more organized than the thing called ELF, the Earth Liberation Front—you know, the ones who claimed responsibility for burning down that restaurant at Vail and some other such things. But MEDL’s not organized enough to appear on very many radar screens. Anyway, it looks like some of the victims were bank-rolling these MEDL folks and some were actively involved with them. Um, you mentioned the other day that you were relieved that there wasn’t a connection with the U this time. Well, brace yourself. Derek thinks that the Durango victim, Luke Begay, was the League’s president and that he had an active chapter going, underground, at Frémont State.”

“Lovely.” Hal looked disgusted. “I’ll have to get together with John as soon as we get back, to fill him in. Here we go again.”

\* \* \*

Even though Durango is not very big, it must be big enough that I’m used to the city lights. Damn, Steve Rutherford thought, it’s *dark*.

They had waited for the new moon to carry out their raid. A couple of casual reconnaissance trips to the FFPI plant over in Monticello had persuaded them that it wouldn’t be too difficult, really—a few cans of gasoline strategically placed and cigarette “fuses” would create enough of a fire to set FFPI, or at least this particular plant, back on its heels for a long while.

He and Reid Tompkins, dressed all in black, with soot smeared on their faces in artistic patterns by Lolly, had spent the better part of an hour shuttling between the rented Chevy Blazer and various parts of the FFPI facility, carrying two-gallon cans of gasoline. After they placed the cans, they’d gone back to light the fuses, and sucking on ten cigarettes to get them burning had been more than Steve had bargained for—he was now feeling light-headed from the nicotine. He almost jumped out of his skin when he felt a hand on his shoulder.

“I think I may puke.”

Reid was having a similar reaction to his cigarettes, apparently.

“Let’s get out of here.”

They kept close to the buildings and stacks of lumber and made their way back to the car. Rounding the last corner, they stopped in horror, and shrank back out of sight. Lolly had moved the car when they had finished unloading the cans of gasoline, to the far side of the parking lot, near the lone street light.

And in the light they could read “San Juan County Sheriff” on the side of the white sedan parked just behind Lolly.

“Holy shit!”

At least Tompkins managed to keep his commentary to a stage whisper.

“We’re dead meat! We’ve got to get out of here before those cigarettes burn down.”

“Shhhh. Calm down. Lolly will handle this, she’s an expert at dealing with men. What do you bet that guy is so busy looking down the front of her blouse that he’s forgotten all about the rest of the universe. But why she parked under that light is a mystery.”

The individual leaning on Lolly’s car, bending over to talk into her window, did indeed seem focused on the conversation.

“We’ve got plenty of time. And he doesn’t have his emergency lights on, so he probably hasn’t called this in or anything.”

“But cops always call in license plates. Always.”

“That’s why I borrowed the plates from that other green Blazer back in town. Wait here.”

Three minutes later, Tompkins watched as the sheriff’s deputy stepped back from Lolly’s car and, from what Tompkins could tell, began talking into his shirt. Then the deputy tipped his hat to Lolly and walked back to his car, started the engine, turned all the lights on, including the emergency lights on the roof, and sped away into the night. Rutherford appeared at Tompkins’ elbow.

“He left? Perfect. Let’s get out of here.”

They sprinted for the car. On reaching it, Rutherford detoured to the power pole with the street light on it, for a last errand.

Two minutes later Rutherford was behind the wheel, carefully negotiating the back streets of Monticello via a different route from their initial approach to the mill. Except for the occasional street light at intersections with stop signs, it was as dark as before.

“What was that about, Lolly? The cop, I mean.” Tompkins was in the back seat, cleaning soot off his face with a baby wipe. Lolly was working on Rutherford’s face while he drove.

“He just wondered what I was doing there. Said he was on a routine patrol and asked if I was having car trouble. I told him I had a fight with my husband and needed to get away, to think. That we were on vacation and so on and got to arguing. I think it worked.”

“What did you do to make him leave, Steve?” Tompkins spoke up from the back.

“I used the cell phone to call in a traffic accident on the highway south of town. I said I was a passer-by and that there was someone hurt.”

“You know, of course, that all cell phone calls are logged and can be located to the nearest tower.”

“Yeah, and that’s why I lifted this cell phone to use. This afternoon. I’m glad the owner didn’t find it missing yet and deactivate it. I’m going to ditch it at the first opportunity. Which reminds me, we need to swap the plates back to the ones that came with this thing. So they match the registration in case we get stopped. Then we can get the borrowed ones back where they belong before morning.”

“You should take the battery out of that phone, now, just in case they try to query its location.” Tompkins heard a grunt of assent, fumbling noises, and a sharp “click.” “And you got the note posted, like we talked about, right?”

“Yep, on the power pole with the street light, where Lolly was parked. Speaking of which, why in the world did you park there, Lolly? Christ, we were trying not to get noticed.”

“Hey, ease up, Steve. I parked there because I thought it would be more suspicious in the dark. There sure weren’t any other cars parked around there. And I wanted to read.”

Rutherford looked in the mirror just in time to see Tompkins rolling his eyes.

They turned onto the highway back to Cortez, and Rutherford noticed something in the rear-view mirror. He watched for a few seconds and grinned.

“Houston, we have ignition, and liftoff.”

Tompkins swiveled around to stare out the back. Several bursts of flickering light illuminated a patch of night sky on the near horizon behind them. As he watched, they grew and merged, as the inferno gathered strength.

Back where Lolly had been parked, in the flickering light of the flames, now bright enough to outshine the streetlight, a notice was tacked to the power pole. It had a picture of a large lag bolt on it, and it read:

*Dear Forest Rapists:  
Guess what: you've been SCREW'd!  
We hope it was as good for you as it was for us!*

\* \* \*

## Five

Two mornings later, the story appeared in both the *Durango Herald* and the *Frémont Free Press*, and it was the talk of the campus. Hal was reading the *Free Press* version in his office when his boss, Provost John Martin, strode purposefully in.

“Morning Hal. I see you’re catching up on the sensationalized version of this little affair. We need to talk.”

Hal looked up, surprised. He had heard all about it from Annette the night before and read the *Herald’s* version earlier, at home. He was not surprised that the *Free Press* played up the environmental angle and sympathized with whoever was responsible for the fire at the FFPI mill in Monticello. But the *Free Press* was independent of the university, so Martin’s concern seemed odd.

“Uh, about what? This fire? What’s it have to do with us?”

“I just got off the telephone with George Jepperson.”

This made Hal’s expression even more surprised, as Jepperson was Frémont State’s head legal counsel.

“It seems that he received a call this morning from the legal office at Forest Fiber Products, Inc. They are asking for our cooperation in their internal investigation of the fire. Of course, the Utah State Police are on the case, but FFPI is doing some work on its own. They have the resources of their parent organization behind them.”

“Who’s that? I really don’t know anything about any of this stuff.”

“A multi-national conglomerate called UNELECO. Headquarters in Colorado Springs. Profits last year of about half a billion. A significant contributor to us, incidentally.”

“So we cooperate. That’s easy. But what’s the connection to us?”

Hal was partly playing dumb, hoping not to hear what he was afraid he was going to hear.

“They’ve concluded that there’s a new environmental sabotage group responsible for this. It has to do with a note that was left at the scene. And because we’re a hotbed for environmental groups, well, they think there may be a connection here. And, of course, the faculty with environmental leanings are in your college.”

“Well, now, I’m not so sure about that. We have the environmental science disciplines, yes. But most of the environmental radicals on campus are in other departments, in other colleges. The most technical person I know who classifies as an environmental ‘radical’ is in the math department, for example. The environmental science faculty know too much about the scientific side of all this stuff to be radicals. They’re all middle-of-the-roaders, as far as I know.”

“What about that SCARAB outfit?”

As provost, Martin was suspicious of student groups.

“Perfect example. They’re a bunch of animal rights people. The local coordinator is a research assistant in sociology. And there’s a more wild-and-crazy group I heard about from the grapevine, the Mother Earth Defense League, I think it’s called. The leaders of that group are students, mostly in the fine arts, as far as I could find out. I try to keep up with this stuff, and I’m confident that my faculty aren’t going around torching lumber mills.”

“OK, I’ll keep an open mind about faculty involvement. But I think we do need to cooperate with the FFPI investigation.”

Hal stared at a corner of the ceiling, thinking about the implications of working with a private company in their investigation of a criminal offense.

“‘Cooperate,’ I guess I can go along with, as long as we don’t violate anyone’s rights here. ‘Assist,’ though, isn’t something that I’m automatically comfortable with. Thing is, this is a criminal investigation at some level, and a private investigation could hamper the official one. Also, there’s always the possibility that FFPI could mount a sham investigation to cover something up. Maybe they burned the place down themselves for insurance, or something like that, for example.”

“That seems unlikely, given the company’s profitability. But I suppose that this branch could be in trouble. Surely, you’re not going to argue with the assertion that Frémont State is a hotbed of environmental activity?”

“No indeed. I will stipulate that this place is getting crazier and crazier in that regard. Want to hear the latest? I’ve got a TA who’s plugged into SCARAB. She tells me that they’re going to try to get the city council to outlaw the concept of pet ownership. So you won’t own your dog, or cat, or goldfish, you’ll just be their ‘companion,’ a companion with various responsibilities for their care and feeding. They even want to outlaw using the word ‘pet.’ It’s too demeaning, they say.”

“I heard about this happening up in Boulder, so I’m not surprised. Edith will be delighted. She’s big on the animal rights thing. I’m continually amazed at how you can be married to someone for decades and not really know them. But doesn’t this strengthen the argument that someone associated with Frémont State could be behind the fire-bombing?”

“In principle, but I know some things that you don’t. Let me make a phone call.”

Hal picked up the handset of his desk phone and poked a speed dial button.

“Trieri, investigations.”

“Hey, you’ve got to change that now.”

“Oh, hell. I keep forgetting. Let me start over: Trieri, CBI.”

“Much better. How’s your day?”

“So far, so good. The FFPI firebombing is leaking more and more onto our turf, though.”

“That’s what I’m calling about. John Martin is here. Let me turn on the speaker phone, OK?”

“I hate those things because my voice sounds funny, but OK.”

Hal pushed more buttons. “Annette? OK, like I said, John’s here. He’s under some pressure to cooperate with an internal investigation that FFPI’s running. They think, apparently, that Frémont State might somehow be connected to the fire-bombing. And, of course, there is a strong environmental advocacy community up here. I don’t know how closely you’re likely to be involved in this, but maybe we could all share information. I mean, is it OK for me to tell John the stuff we talked about yesterday? And maybe he’ll have information relevant to your involvement.”

“Hi, John. Normally, I’d have to be careful about this, because there’s always the possibility that the victim isn’t really a victim. But FFPI has been eliminated as a suspect. They’re very profitable, and they just signed onto a new timber lease that will feed several million new board feet into the Monticello mill, or would have. And that mill had no problems, union-wise, or safety-wise, or anything-wise. So their investigation will be considered a friendly one by the people in Utah and, to the extent we’re involved, by us. So whatever I tell you, you can tell them. But beyond that, this isn’t going to be for public consumption, OK?”

Annette was right: she sounded funny on the little speaker.

Martin cleared his throat. “Good to talk with you again Annette, and congratulations on your new assignment. I’ll be extremely discreet, you can be sure.”

“So, John—and, Annette, jump in here if I screw this up—the thing about the fire-bombing is, there’s a suspect, with a description, and unknown accomplices. A San Juan County Deputy Sheriff on routine patrol just before the fire questioned a woman, early thirties, long blond hair, buxom, in a green Chevrolet Blazer with Colorado plates, near the FFPI mill. She gave him a story about a domestic argument, getting away to think, and so on. He was interrupted to respond to a 911 call about a traffic accident, which turned out to be bogus. But he got the license plates, which, it turns out, were stolen from a green Blazer in Cortez. Or at least that’s the best guess. The Blazer they belong on hadn’t been moved for weeks, it even had a flat tire, and there are indications that its plates had been tampered with. Its owner has an ironclad alibi. And the phone that called in the fictitious accident was a cell phone, stolen at the public library in Cortez. It hasn’t been recovered. I guess the point is, all this suggests a more professional level of involvement than either students from here or even the pseudo-professionals in our environmental groups would be able to pull off.”

“And, John,” Annette spoke up, “we’ve heard that the reconstruction by the arson experts points to gas cans with relatively primitive fuses, but ones that can’t easily be traced. Cigarettes folded into packs of matches, which lit a plain black-powder fuse into the gas can. This is a well-known guerilla warfare tactic. But the trick is the fuses. They can only be acquired by people with the right connections. And your run-of-the-mill environmental radical group is unlikely to have those connections.”

“So we shouldn’t worry, I take it. But I believe it would be irresponsible of me not to remind our officially recognized groups, such as SCARAB, that any illegal activities on their part will place their status in jeopardy.” Martin was keenly aware of the university’s legal exposure.

“By all means, John, do that. Worded as strongly as you’d like, with reference to the Monticello thing. But so far, there’s no indication of a solid connection with anything at the U.”

Hal piped up, “Of course, the suspect could work here, and there are any number of other possibilities. But nothing with an official connection.”

“Guys? I’m going to have to go, got another meeting. We can talk more later if you need to, OK?” Annette disconnected.

“John, there’s one more thing you should know about. Probably not related to this fire-bombing, but you never know. Annette’s working a possible serial murder case that might possibly have a connection to us.”

And Hal related the tale of the dead environmental activists, their connection to MEDL, and the possibility of a campus chapter.

“But the only connection you know of to a campus chapter is the guy who got killed last September? If we haven’t heard anything about it since then, maybe it dried up and blew away.”

Martin had enough to worry about that he wasn’t going looking for trouble.

“We can always hope. And, of course, we can also keep our ears to the ground. I’ll let you know if I find anything out.”

\* \* \*

Steve Rutherford, enjoying a late lunch at home, was also engrossed in the papers, delighted at the coverage. Then the telephone rang.

“Yeah?”

“Steve? Reid. We’ve got big trouble, on two scores. First, they’ve got a solid description of Lolly. You know that rose tattoo she has on her right tit? Well, it was just like you thought. That deputy was looking down her blouse, and she was playing him for all she could get. So he saw it.”

Steve didn’t, in fact, know about the tattoo. He felt a flash of heat just thinking about it, and then another of jealousy when it occurred to him to wonder just how Tompkins did.

“So, we’ll just tell her she needs to keep her shirt buttoned up. What’s the other thing? And how did you find this stuff out? It’s not in the papers.”

“I had an early lunch with the courthouse crowd today, and they’re gossiping about all they’ve heard. The second thing is not good either. Sort of bad news and bad news. FFPI has announced that they’ll be able to ship the logs from the Glade Mountain lease up to Moab until they can get the Monticello plant rebuilt. Which they plan to do. They’re saying they can modernize it and improve their capabilities. So we may have actually helped them.”

“Well, crap. We certainly didn’t plan for that. But we can’t change what happened. It seems to me that we need to do some damage control. To protect Lolly. And to fill the others in on what’s happened, so that they aren’t surprised by this. If the papers print the contents of the note, Dave and Aaron, and probably even Flip, will recognize what’s happened. We ought to tell them first.”

“Good thinking. I’ll call Aaron and Dave if you’ll get hold of Lolly and Flip. And get Lolly to dye her hair.”

“But she had a wig on the other night. The cop saw blonde.”

“Yeah, but she didn’t have it on when we got together at my place. A third color will further confuse things. Maybe she can do some of that henna stuff, add some red highlights.”

Steve was less concerned and had begun to think of the future.

“So what are we going to do next? I mean, we’ve got to lie low for a while, but there’s a chance to gather momentum. What about a raid on the equipment they have up at the Glade Mountain lease?”

“What is it with you, man? Addicted to the rush of danger or something? Sheesh, we’ve got to do better than just to lie low. We’ve got to be invisible.”

“All right, all right. But when things quiet down, let’s talk about that equipment. OK?”

“Right. And, listen. Tell Lolly to keep her tits out of view, for Christ’s sake. That rose will bring her down in a flash.”

The mere reminder of Lolly’s chest made Rutherford’s face hot again.

\* \* \*

When Annette finally got home from her last day at the Durango PD, it was close to 10:30. She had spent most of the time since returning from her three weeks away catching up, and then she had a mountain of things to do to make a smooth transition to her CBI assignment. Her last day was exhausting.

By that time of night, she expected the house to be dark, or at least mostly dark, but it was lit up like a Christmas tree. The first thing she noticed was a smell of fireplace soot. The second thing was Hal.

He surprised her by coming down the stairs, carrying a long-handled landing net and wearing only thick gloves and what she was able to identify as his old fencing mask. She had run across it while cleaning up the attic a year ago, and he’d not been able to part with it, even after its 30-plus years of dust-gathering. Rather than let her get rid of it, he had put it on the mantle over the fireplace. A “conversation piece,” he called it.

The odd combination, not to mention the brevity, of this attire took her a multiple double-take to get over being speechless. By then he’d slipped past her toward the kitchen, muttering something like “bat.” She followed his naked backside through the dining room.

“Ummm, I’m sure there’s quite a logical explanation for this, but I couldn’t possibly think of what it is.”

He stopped and tilted his head back, apparently peering around the ceiling of the room through the screening of the mask.

“Bat, or bats. At least one, maybe more. I lost track of it, or them.”

And he was off into the kitchen. She followed.

“You mean the little flying mammals, not the ones in your belfry, I guess. I sure am glad I didn’t bring the folks home to meet the new hubby.”

By then he’d been confronted by himself in the full-length hall mirror. He struck a gallant pose, net held like a sword before him.

“I’d have to explain about our sex life, I guess. You know, how we dress up like this to spice things up.”

“Uh, I’m definitely not going there. Where’d they come from? The bats.”

“The chimney, I think. I heard noises in the fireplace and rattled the damper handle. Some soot fell out, so I opened the flue to let it out now, rather than be surprised by it next winter. And at least one bat zipped out into the living room.

“That was just about at dark. I couldn’t find it, so I finally went to bed. And ten minutes later, there was a bat flying around the bedroom. I could see him in the glow of the streetlights, making circles over

the bed. Remember those old Dracula movies? It was just like that. It's probably just trying to find a way out, so I thought I'd help."

"Somebody told me once, probably you, that bats navigate almost perfectly by their sonar, so what's with the mask?"

By now Hal had begun prowling the house, watching the ceilings carefully.

"It's psychological. If I can find the thing, I'll try to get it with the net, but I could scare it. I thought about my eyes."

"Um, it seems to me that you have other, ah, sensitive parts exposed. Did you think of that?"

"Yeah, but it's flying around the ceilings. Look, it's perched up there."

He was pointing to a dark corner of the hall ceiling. He handed her the net.

"Hold this. I'll go get a stool to stand on and see if I can grab it. If it takes off, see if you can get it in the net. Gently. I really don't want to hurt the little guy. They eat their weight in bugs every night, or something like that."

Two minutes later, Annette was trying to ignore her eye-level view of Hal's rear end and thinking about the benefits of tanning salons. He was standing on a kitchen stool closing in on the bat with his gloves. It must have been worn out, for it only chattered at him as he carefully trapped it with both hands.

"Got it!"

"Now what?"

"Open the front door, and I'll let him go."

"You're going outside like that?"

"Well, make it the back door."

Hal stuck both hands out the door and launched the bat into the night, and it flew off, presumably in search of big juicy bugs, they figured. Then they retired to cups of tea in the kitchen, after Hal substituted a robe for his gloves and fencing mask.

"So why would we have bats in the chimney? Is this something that happens?"

"Probably the time of year. I heard enough noise that there must have been a colony of mothers and babies in there. Nursery colonies like that get established in the late spring, and the house was quiet while we were gone. So they took a liking to the chimney. It's got that cap, so the rain stays out. I'll read up on how long it takes before the babies can fly and then do something to discourage them, like smoke or noise."

"I've heard something about rabies."

"Yeah, it happens, but it's pretty uncommon. Skunks are worse. I'm all in favor of bats over bugs, but a colony would wind up producing quite a stink. Especially if we don't get rid of them and all their poop accumulates in the chimney. The first fire next fall could be..."

"Ecch."

"Right. So, you had a long day. Did you eat dinner?"

"Got a pizza delivered. Yeah, trying to catch up after three weeks and getting ready to go on leave is a lot of stuff all at once."

"Anything happen while we were out of town?"

“Not really, at least not anything that Fred can’t handle. He seems like he’ll do OK acting for me while I’m at the CBI office. The only thing we have pending is one of those CBI killings, the Durango guy who got killed over at Four Corners.”

“When do you officially start?”

“Monday. Although I’ve sort of started already, given the amount of attention I’m giving to their list of dead people.”

“Did I see that CBI’s involved with that killing up by Norwood last month?”

“Oh, yeah, that’s another one they’ve been handed. The locals up there don’t have the resources, because it’s obviously some kind of execution. A soft-point .22 slug between the eyes; body left out in the country on a dirt road. There’s a witness who’s talking about a small convoy of vehicles headed in that direction early the same day—a van, a couple of semis, a passenger car of some kind. It’s not clear that it’s connected with my list, though, yet, at least. We’ll get the FBI to compare the ballistics with the slug from last fall, Luke Begay’s killing. They’re handling that case.”

“From what you’ve told me, his killing and some of the other ones on your list look like executions, too.”

“That bothers me, but it’s also an opening. But, listen, I’ve been at this stuff since eight this morning. How was your day?”

“This is the time of year I get to do faculty performance evaluations.”

“That says it all, I guess.”

“Pretty much. Let’s go to bed. I promise to protect you from bats, if there’s another one in the house.”

“Should I wear a garlic necklace?”

“Ooo. Sounds kinky. Can I wear my fencing mask?”

“I didn’t know I married such a romantic—he wants to keep a metal screen between us in bed.”

“Well, maybe just the gloves.”

\* \* \*

The meeting hall outside Montrose had seen better days, first as a Grange chapter and later as a supper club that tried to be too fancy for the local folks. After the new highway bypassed it and the tourists couldn’t find it any more, the place sat idle for years, slowly acquiring the sagging demeanor of abandoned buildings that eventually renders them picturesque and attractive to amateur photographers.

Still, its original construction had been solid enough that it was yet weather proof, and the power company was only too glad to have someone pay them to turn the electricity back on. And electricity was important, because the sophisticated public address system brought in for the occasion needed plenty of power.

Out in the long-unused parking lot, the several dozen muddy, battered pickups ticked peacefully as they cooled. The weeds, those not smashed flat under parked tires, were gradually recovering in the cool twilight.

But inside, things were heating up.

It was dark in there, except for two spotlights centered on one end of the spacious, open room. They illuminated a large banner on the wall that read “Resources For Humanity.” Behind a long folding table, also lit by the two spots, stood an imposing figure, tall, heavy-set, just beginning to work up a sweat. The sleeves of his white shirt were rolled up a couple of cuffs’ worth, and his tie was loose. He held a black book in his left hand, and was gesturing dramatically with his right. Wet stains were growing under his arms. His voice boomed from the huge PA speakers.

“Now, whatever you folks think about the Bible, you’ll have to agree that it’s one of the oldest and most widely-read books in history. Far as I know, it’s still on the perennial best-seller lists. And its philosophy provides the foundation for the beginnings of western civilization. You don’t have to be religious, or take it as the revealed word, to understand that. Of course, for those of us who do believe that it’s God’s revealed word, it’s all the more powerful.

“This isn’t a revival meeting, so don’t get the wrong idea. But I do want to take a minute to read you a little of it, *from its very first page*, from the Book of Genesis.”

He held up the book, and grinned.

“For those of you who pay attention to such things, what I’ve got here is the King James Version.”

Then he settled his reading glasses down on his nose, cleared his throat, and opened the book.

“Here’s what it says.”

So God created man in his own image, in the image of God created he him; male and female created he them.

And God blessed them, and God said unto them, “Be fruitful, and multiply, and replenish the earth, and subdue it; and have dominion over the fish of the sea, and over the fowl of the air, and over every living thing that moveth upon the earth.”

And God said, “Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed, to you it shall be for meat.

“And to every beast of the earth, and to every fowl of the air, and to every thing that creepeth upon the earth, wherein there is life, I have given every green herb for meat,” and it was so.

And God saw every thing that he had made, and, behold, it was very good. And the evening and the morning were the sixth day.

He closed the book and looked across the crowd. Although he couldn’t see them, out there in the dark on those rows of folding chairs he’d help set up, he knew the room was full.

“Now, like I said, this isn’t a revival meeting. But I think that these words bear some thought. And their meaning is pretty unmistakable, really. I mean, phrases like ‘subdue it,’ ‘have dominion,’ and ‘I have given’—this is God speaking, remember—these are pretty unambiguous. Their meaning is clear.

“And this is the real message of Resources For Humanity. The earth is ours, for us to use and prosper with. With all due respect for our Native American brothers who believe otherwise, it’s our heritage that the earth is here for our use and prosperity.

“Of course, there are lots of folks who seem to have some kind of inferiority complex, that they’re not good enough to take advantage of all the earth’s resources. Hell, there are some folks who think that

prairie dogs are more important than people, that coyotes, for crying out loud, should be protected. Coyotes! Is that what you folks think?"

There was a sort of derisive growl from the darkness.

"I didn't think so. This same bunch of insecure tree-huggers is not only rich enough that they don't have to do honest work, but to make matters worse, they're trying to eliminate honest work for people who do. Like you folks. Y'all heard about that fire they had over in Monticello, I bet. The one that destroyed the Forest Fiber plant?"

The growl was louder, and decidedly affirmative this time.

"Well, guess who? That was sabotage, pure and simple, by some new bunch of environmental crazies. Hey, maybe they're well-meaning, but they sure are misguided. Turns out they put at least a hundred folks out of work. Maybe more, if they have to shut down harvesting the timber because there's no place to send it."

He could hear the growling continue, but he wasn't ready for the big finish, just yet.

"I know, I know this is upsetting. I know it isn't fair. But that's what Resources For Humanity is all about. We're here to work to make it fair again.

"And I'll just bet y'all could use some good news, for once. Here's some now: we're not here to ask for your money! All we're here for is to ask for your support. Do we have that?"

Applause broke out, with a couple of cheers.

"Thank you. Thank you very much. I should tell you that I feel a little foolish standing up here with this microphone and these big speakers. Hope it's not too loud. But they're not here for me, really, they're here for a special guest, who's on the phone with a special message. I don't think he needs an introduction around these parts."

He chuckled, and fiddled with a box of switches on the table.

"I sure hope this works. It usually does, but once we somehow picked up one of those weird rap music radio stations. So-called 'music' by folks who have lots of rhythm but nothing else, no brains, no talent, nothing. Just a bunch of criminal bums, really. Yeesh." The audience joined his mirth. "Senator, you there?"

"I am, sir, I am indeed. And I'm honored to be able to talk with you folks a bit. I'm sorry I couldn't be with you tonight, but, as you know, I have responsibilities in Denver that I just can't get out of sometimes. If I'd been home, I'd be with you myself.

"Most of you folks know me, because you're in my district. There are probably some folks there from other districts, but, well, maybe you know me, too. I mention this because, like many of you, I'm a southwest Colorado native, third-generation native. Like so many of you, my great-grandparents came over from Europe over a hundred years ago and helped tame this wild land.

"And what's been happening lately is sad, truly sad. It makes me angry that it's happening to native Coloradans like you folks. What we have is outsiders moving here from far away, from New York, California, all sorts of places. Places where nobody appreciates our heritage. Places full of people who are concerned with 'lifestyles' rather than with good, honest work. People who are concerned with 'self-realization' and 'self-esteem' rather than with family and community. People who think that all cultures are equal, rather than people like us who know the value of our cultural heritage. And the worst of it is that these people are trying to take our world away from us. Eliminating our jobs. Preventing our use of our land. Imposing their foreign ways on us.

“Oh, I guess that ‘foreign’ isn’t completely accurate. These are Americans, mostly. But their ways sure seem foreign. And there are even some that *are* foreign. People who come to this country and think they can take over. Immigrants. Some legal, some illegal.

“Now, my great-grandparents were immigrants. But that was back when there was room for new folks. I don’t know about y’all, but I’m beginning to think that we’re full. No more room for new people, whether they’re foreigners from the coasts or from other countries.

“So that’s why I’m calling you now. To support Resources For Humanity and to urge you to do the same. I think that you’ve been told that you’re not going to be asked for money. At least you should have been told this. That’s because Resources For Humanity is being supported by a private foundation. What you can do, however, is to provide support for the ideas and agenda of Resources For Humanity.

“One more thing. I bet you’re concerned about that fire over in Monticello. Well, I am, too. And I’m going to use whatever powers I have to look into it. And to do something about it. Don’t know what, yet, but those who know me will tell you that when I say I’m going to do something, well, I do.

“So that’s the message. Support Resources For Humanity and their agenda to help hard-working, native Coloradans and to get rid of the environmental radical outside agitators. RFH is here to look out for you, and you can help by joining in.

“And, y’know?, I think there’s something more. Y’all can stand up to those agitators. In meetings, like city council meetings and county commissioner meetings, stuff like that. You don’t need to take their crap. You’re Real Americans. Stand up for your heritage! Thanks for listening.”

The speaker fiddled with more switches, and the room lights came up. As people in the audience were able to look around and see each other, they began to break out in handshakes and applause. Applause that went on for some time.

\* \* \*

## Six

About the time the meeting near Montrose was breaking up, Steve Rutherford’s phone rang. He almost didn’t answer it, being distracted.

He’d set his computer up to spend the better part of the afternoon and evening automatically downloading images from one of his favorite porn sites, triple-d-cup.com, and was now browsing through the various pictures, trying to find one that closely approximated his fantasy of Lolly with no clothes on. The models, however, all seemed lots younger than Lolly and, well, levitated somehow. As if they’d been photographed in a zero-gravity environment. Must be silicone, he thought.

But the phone, right next to the computer, kept annoying him with its distracting rings, and he finally gave in to it.

“Yeah.”

He noticed his breathing was not quite even.

“Steve? Dave Wellington. Listen, you need to know about something I ran across the night before last. A meeting, in an old barn at a ranch west of here, between Del Norte and South Fork. Heard about it from some contacts in the logging world in South Fork. Managed to sneak in without being

recognized. You there? All I hear is heavy breathing. Are you practicing to call little girls, or something?"

"Huh? Yeah, sure, I'm here."

And I wish she were here with me, Rutherford thought. Damn, look at those!

"OK, well, anyway, it was a meeting held by some wise-use group that I hadn't heard of before. Calls itself 'Resources For Humanity.' Most of the pitch was the same old same old. But this one had some subtle overtones of racism."

"Yeah? So? Most of these bozos are closet racists."

Oho! Definitely not a natural blonde, this one.

"Maybe, but not as much as I bet you think. At least over here in the Valley. But the speaker at this meeting last night was treading very close to racism. These wise-use people always talk about 'family heritage' and so on, how ranchers and loggers have been here since ever and all that stuff. But this included references to 'Native Coloradans' and other such code words for white folks. And also there was a religious angle, subtle but unmistakable."

"So it was worse than usual."

Holy hooters! Can those be natural? No way.

"Yep, but that's not why I called. The most disturbing thing was a phone call, or maybe it was just a taped message, from a Colorado state senator from out your way, Jarvis Schoenfield. He mentioned the little escapade over in Monticello and allowed as how he was going to use his powers to get whoever did it. And I looked him up and found that he's chairman of the Senate's Law Enforcement Committee. It oversees the State Patrol and the Colorado Bureau of Investigation. Hey! What the hell's going on over there? What's with the heavy breathing?"

"Uh, isometrics. I'm trying to get an early start on the ski season by doing isometrics for my quads. Sorry."

Rutherford realized that he was going to have to concentrate on the conversation.

"I've heard of this guy. Been in the state senate forever, almost never opposed for reelection. I think he lives up around Norwood somewhere."

"Something like that. Wasn't he behind the head-bashing at the last Nucla protest a couple of years ago?"

"Oh, yeah. Before my time in SCARAB, but I remember hearing about that. Got the state cops to beat up some of our protestors at the prairie dog shoot. But it backfired on him. The publicity was so bad that they quit having them, at least they quit publicizing them."

"Right. And now he's talking about how native Coloradans should assert their rights, stand up to what he calls the environmental radicals, and so on. And how he's going to get whoever did the Monticello raid. I sure wish you guys hadn't gone off half-cocked. I worry about Schoenfield's reach."

"Hmm. Well, we're going to lie low for a while. And I don't think that there's any way that any of us are going to be implicated. I mean, this is a Utah investigation, southeastern Utah, and they're not exactly rocket scientists over there. Buncha dumb Mormons."

"Yeah, well, just remember those dumb Mormons are as tenacious as bulldogs, and not real tolerant of the likes of you and SCARAB. Not to mention our new little enterprise. Gotta go. Later." He hung up.

Great, Rutherford thought. Something else to worry about. Well, whatever. Now, then. Let's go back and find the redhead with the feather boa. She looked a lot like Lolly. And she even had a tattoo.

He felt his face getting hot again.

\* \* \*

Even in summer there were meetings—administrative meetings, academic planning meetings, faculty development meetings, facilities improvement meetings, meetings to schedule yet more meetings. Try as he might, Hal simply couldn't avoid them, at least not all of them.

He managed to delegate many of them to junior faculty—always providing memos of appreciation for them to show their department chairs the proof of their service to the college—but some meetings just needed The Dean in attendance. Too many, if you asked Hal.

Alice Swan, Hal's administrative assistant, knew Hal's aversion to meetings well, and she was particularly adept at keeping his calendar under control. As she edged ever closer to retirement, Hal's sense of the impending loss grew ever keener. Now, with only a couple of years to go, he was beginning to feel panic over how he was going to survive without her. He was reminded of this problem by the annual taste of it that he had to confront when Alice took her vacation, a benefit she seemed to resent.

This year, she had decided to take two weeks in June to visit her grandchildren in Virginia, so Hal was suffering through a temporary replacement, a young woman who not only could not deal with calendar scheduling at Alice's level but who didn't really care. And she chewed gum. With her mouth open.

Crystal's inability to schedule meetings to Alice's standard was why Hal was now sitting in his third of the day, with another to follow. All the way across campus from where he now sat listening to a discussion of new grading standards for student athletes, meeting number four was going to be the really important one. And, somehow, he had to work in an informal get-together with Provost Martin, to bring him up to date on the implications for the campus of Annette's investigations. He would probably wind up being late, unless someone stepped in to negotiate a deal between the athletic department's representative, who was demanding a 2.1 minimum grade point average, and the chair of the department of English, who would settle on nothing lower than 2.25. As the senior academic officer present, Hal knew he would have to mediate this impasse.

"Time out, time out. Folks, let's calm down here. First, we're talking about a small difference, between just above a flat 'C' and just below a 'C+'. It seems to me that what we're doing is putting a lot of energy into arguing over pretty low standards. Like arguing over the difference between Walmart and K-Mart. How about raising our sights a little? What's wrong with a 'B' average, a 3.0?"

It looked as if Milt Grabowski, the athletic department's academic advisor, might explode, while Sadie Mickelstein, the chair of English, suddenly took on an uncanny resemblance to the Cheshire Cat.

"I know I haven't been at the earlier meetings," Hal continued, "and I'm sorry if this is ground you've covered. But why are we aiming so low here? Sadie?"

"Thank you, Dean Weathers. I've been advocating all along for something respectable, and a 'B' average would be more than respectable, I think. I've been unable to persuade my colleagues that this is appropriate."

She paused to take a breath and Grabowski jumped in.

"One reason is because we'd lose our ability to compete, in just about all of the varsity sports. Jesus, Hal, a 'B' average would eliminate almost two-thirds of our scholarship athletes. Even a 2.25 would

eliminate a significant number. I mean, you've got to remember that the NCAA rules for us mandate only a 2.0 for fourth-year students, and even lower before that."

Hal feigned surprise.

"Well, we certainly want to maintain our standards well above the NCAA minimum, don't we? And do you mean to tell me that you offer scholarships, university scholarships, to individuals with GPAs under 2.25? *Scholarships* for students who can't even maintain a 'C+'? My goodness. I seem to remember that we approved what I considered to be a questionable curriculum, the one we call 'university studies,' for people who are, ah, challenged by our more traditional curricula. And you're telling me that this isn't good enough? That we're offering scholarships to people who can't even maintain a 'C+' in university studies? We do have accreditation to worry about, you know."

Grabowski's red face had become more and more crimson, and he opened his mouth to respond. Then he took a breath in preparation for a speech. Then he stopped short, apparently thinking better of it. That was all Sadie Mickelstein needed.

"Thank you, Dean Weathers, for supporting my position. In the English department, we have developed special courses for the university studies program, and, I have to say, calling them 'remedial' is to use polite terminology. I believe that similar comments apply to such courses in other departments."

Hal knew that this was indeed the case in the earth sciences, but he also knew that he would be unable to maintain a hard line on this. The athletic department had substantial clout in the university president's office.

"Look, Milt. This is an advisory committee, and its job is to recommend, not implement. We have a responsibility to the university to uphold high academic standards, and, more than that, we have a responsibility to our student athletes to make sure that they are not shortchanged in their education. To let their grades slide too far is to cheat them—those NCAA rules, for example, are just pathetic. These kids bust their butts in practice, and they make the university lots of money in return by playing their hearts out. And they don't get paid for it, they just get NCAA rules stuffed down their throats. It's not as if a lot of Frémont State students go into professional sports, after all. Also, we need to let this committee save face. You may not realize how uncomfortable it makes faculty to think of a 'C' average as acceptable. But because the decision will be made in the president's office, we can recommend high with a clear conscience, and let them change it."

Grabowski, less red this time, went through the same process of starting to talk and stopping. Then he started up again.

"Probation at 2.5, but they keep playing above 2.0."

"2.5 in academic curricula, 2.75 in university studies."

Sadie Mickelstein is definitely not someone with whom I want to negotiate, Hal thought.

"I'll have to check with the AD."

Grabowski seemed beaten down. It's time, Hal thought, to be conciliatory.

"Milt, one thing that we can probably do is to help you with the tutoring program. I have a dynamite teaching assistant who can help with earth science courses. And I know a guy in chemistry who could help with that. If we start tutoring early, when it looks like someone might be dropping below a 2.5, or 2.75, maybe we can catch them before they go much lower. Then they can continue to play and also get off probation."

"I'll check with Charlie."

“Thanks. And I’ve got to run. Again, I’m sorry to have missed the previous meetings.” Right, Hal thought. “But I’m glad we’ve resolved this.”

And he stood, closing his notebook.

Now I get to sprint over to the student center, he remembered. Then I need to brief John Martin, if I can get in to see him. What fun.

\* \* \*

Maybe, Annette thought, just maybe I’ll get lucky twice in one day. Seems like I deserve it, at long last.

Her first bit of luck had been a phone call earlier. The FBI ballistics lab had called with the news that the slugs that had killed Luke Begay and William Campbell had come from the same gun. This physical evidence, combined with the similarity of the executions, provided the first real break in the portfolio of environmentalist killings. How Campbell fit into the whole thing was still not clear, but at least it appeared that the killings were related.

Lucky break number two would depend on a couple of things. First, Deedee would have to want to cooperate. And, of course, she’d have to be the creator of Lolly’s rose.

“We’re BAD!” hand-lettered in bright orange paint on the front window of Body Art by Deedee, a seedy store-front on North Main Avenue, announced Deedee’s attitude to the world. Annette was glad to have had her several years of experience investigating all sorts of unsavory matters for the Durango police department, because she had developed an underground network of people who owed her favors. Deedee was about to have her favor called in, bad attitude or no.

Inside, the walls were covered with flash, patterns for all sorts of skin-based self-expression, and the music was almost too loud for comfort. Some sort of heavy metal, distorted guitars accompanied by a screeching noise that Annette decided was supposed to be singing, was blasting from speakers on the ceiling, and it got louder deeper into the shop. Annette wandered toward the back and began to hear behind the “music” the buzzing noise that meant Deedee was at work on a client, who Annette soon saw was wearing headphones.

And what a client he was. Huge. Hairy, except for the shaved spot. And apparently scared out of his wits. Deedee, hunched over, working on something to do with the guy’s right shoulder, didn’t see her, so Annette watched in fascination. His eyes were clamped shut, his teeth were clenched, and he was sweating. She could see his massive hands clinging to the arms of the old barber chair. Looking over Deedee’s shoulder, Annette could make out a snake emerging from the pattern of blood as Deedee blotted it off.

Finally Deedee noticed Annette and held up one hand, fingers splayed. She mouthed “five” in a question, and Annette nodded and went back out to the front room to study the art work. It was a sort of gallery, she decided, of the comic-book school.

A few minutes later, the music moderated and Deedee appeared, stripping off her latex gloves. She promptly lit a cigarette.

“Find one you like yet?”

“Ha. I’m too chicken. I hope I’m not interrupting too much?” Annette wanted to start off as politely as possible.

“No, not hardly. Snake back there needed a break. The guy I mean. You’d think someone that big and mean-looking with a nickname like ‘Snake’ wouldn’t be bothered by a little prickling sensation. But

he's really wimped out, probably more chicken than you. Wanted drugs... ah... but of course we've got none here. So he's got those headphones cranked up so loud that he can't possibly hear what I'm doing. But he's still freaked. Glad I'm almost done."

"I've seen the finished product, but not the process. It's bloody."

"Yeah, but it's just capillaries. You want these things to take, you've got to go deep enough to hit them. It heals fast. Now, what can I do for you, Lieutenant?"

Annette decided not to bring Deedee up to date on her employment status.

"I'm hoping you can do me a favor, Deedee. We need to find a witness to something I'm looking into. We got a partial description of her, and she has a tattoo of a rose on her chest, just above her right breast."

"And?"

"And I was hoping you might have done it and be able to point me toward her. We really need her help."

"You know how many roses on tits I do? It seems to be a favorite these days."

Annette had been anticipating this response, so she had driven over to Monticello to interview the deputy sheriff personally. That had been strange indeed, because, as a law enforcement officer, he was trying to cooperate and, as a devout church-goer, he was trying to maintain his sense of modesty. Talking about body art on a woman's breast, and especially how he had been staring at it, was not easy for him.

"Yeah, I was afraid of that. I do have a somewhat better description. This is a blonde, in her 30s, busty. The rose is red, just a rosebud, on a long green stem. It's upside down and runs across and down, like this." Annette made a S-shaped stripe with her finger from near her right armpit down and across to her sternum. "And it didn't look like a new tattoo. It was faded and a little stretched-looking. Does that help?"

"Even if it did help, what makes you think I'd give out information about a client? People pay cash here, mostly, with good reason. They like anonymity."

"Deedee, we both know you're not exactly Chamber of Commerce material. But we also both know that you're a member of the local business community, and you need us. So when we need you, you ought to be there. Remember that little episode with the biker gang last year? And do you really need us to check into whether your supply of Xylocaine is legal?"

Deedee stared, first at Annette and then at a garish depiction of a bloody dagger with the inscription "Mother," while she smoked.

"So how many favors like this do I owe you?"

"I don't think of it as 'owing' so much as I think of it as a business relationship. You're the first person I refer people to when they ask me where they can find a good body-art shop. And I always put in a good word for you with the folks in vice."

Deedee stared some more.

"Well, like I said, I do lots of roses, but mostly recently. If you're looking for an older one with a long stem like you described there's only one I can think of. I did it about five years back, and gave a discount in return for getting her to agree to show it to girls who might be interested in one. Name's Billingsley, Louella Billingsley. But she's not a blonde."

Annette tried not to gloat. “Well, you said that was five years ago, and you know how things change. Thanks, Deedee. I won’t bother you again about this. And I won’t say anything about you to Ms. Billingsley.”

This, she thought as she walked back to her car, is what we need to get this thing moving along. Wonder where we’ll find Louella Billingsley?

\* \* \*

It had taken over a month to get the text translated and analyzed, one of the most distasteful months in Wendell Ellison’s career. Today, finally, was his big presentation up in the executive suite, and he could put this whole sorry episode behind him.

The Biotechnology Division was still on the second tier among UNELECO’s various ventures, so he knew he’d be going into the meeting with a slight handicap. But he also knew that Biotechnology had been selected by the CEO as one of the growth areas for the conglomerate’s future, and this would give him an edge.

And he needed all the edges he could get, because he was not going into the meeting with good news. There was nothing of scientific value, not a shred, in Heinrich von Scheuer’s volumes of laboratory notes.

He’d driven down from the UNELECO Biotechnology Laboratories in Boulder the evening before so he’d be fresh. Then he made a point of arriving at the corporate headquarters building early, so he could double-check the computer setup. He should have known, he told himself, that in the executive conference room it would be fine. More than fine, really, for they had only the newest and best up there.

So he was sitting near the front of the room in a side chair, trying to be inconspicuous while he enjoyed the view of Pikes Peak, as the assorted vice presidents and their minions began arriving for the 9:30 meeting. They studiously ignored him, an outsider in their *sanctum sanctorum*, a mere research scientist in their high-powered world of corporate executives.

He sat and watched the preening and the conversational cliques with interest. Even though he’d worn his best—and only, truth be known—suit for the occasion, with a new white shirt and conservative tie, he felt underdressed. The others also wore suits, of course, but they seemed to fit better, to look more elegant somehow. The difference between a tailored Armani and an off-the-rack from Foley’s, he figured.

Then there was a commotion at the double doors, and in swept Charles Shure, followed by several attendants. Wendell recognized him from corporate literature, and he looked as impressive in person as he did there. The various vice-presidents sort of gravitated his way, and, even though no voices were raised, Wendell could tell that there were urgent attempts at communications being made. What a world to operate in, he thought.

He was surprised, astounded to see Shure headed his way, shaking off the clinging vice-presidents, walking around the big table, right up to where he sat, right hand extended.

“Dr. Ellison? I’m Chuck Shure, we spoke on the phone last week. I want to thank you again for that confidential report you sent me and all the help you provided me over the phone so I could understand its nuances.”

Wendell had stumbled to his feet and noticed how well Shure shook hands. Not the dead fish approach, not the usual western knuckle crusher; just right.

“Ahh, well, of course I’m glad to help, Mr. Shure, and very glad to meet you in person.”

“And thank you for coming down from Boulder for this briefing. As I told you, there have been so many rumors about this whole thing that I want to get it out in public and behind us. Especially since there’s nothing of use to us. One thing I didn’t mention: I hope your presentation is a dumbed-down version of that report, dumbed *way* down. Some of these guys are not even up to my feeble level of being able to understand this stuff.”

“I planned to keep it simple. And pretty short, really. There’s really nothing much of interest. Um, have you considered my suggestion about donating the final volume to the museum?”

“Yes, and I’m going to announce it when I introduce you. And then there’s going to be a press conference this afternoon. I hope you can stay around for it?”

“Anything you’d like, Mr. Shure. I’ll think about what to say if someone asks me something.”

“Good idea. But right now, we need to get this show on the road. This assembly of suits is costing me over fifteen thousand an hour.” Shure’s pleasant, business-like expression morphed into an impish grin. “Watch this.”

He turned from Wendell and walked to the end of the conference table, stood for a short five seconds, and then snapped his fingers. The room immediately hushed, and, within another five seconds, everyone had taken a chair. Shure looked at Wendell and winked, and then turned to the assembled suits.

“Thank you for coming on such short notice. We’re here to gain closure on a strange episode that started in May, when I received a bizarre package. I know that there has been a considerable amount of rumor and speculation about this, and the purpose of this meeting is to present what we know, the facts, to you publicly. There will be a press conference about this later today, and you can feel free to pass the information along to the folks in your divisions as you feel appropriate.

“Now, I’m really not sure why I received this package, although I have a theory that I’ll explain in a minute. But what I do know is that, after it had passed our security tests, I unwrapped it to find a book. It turns out that this book is an historical artifact, and nothing more, and we will be donating it to the appropriate museum this afternoon. It was hand-written in German, so we had it translated, and we also had the book itself, the cover and the binding and so on, analyzed.

“What I received turns out to be Volume 25 of a set of laboratory notes of a Nazi prison camp doctor. One of our researchers, Dr. Wendell Ellison,” he gestured in Wendell’s general direction, “will present a brief review of its contents shortly. The book, which we have stored in an environmentally controlled vault, is bound in tanned human skin, apparently taken from prison camp inmates.”

There was a collective gasp from the others in the room, and a murmur of comment.

“As I said, this is an historical artifact, and we’ll be donating it to the Holocaust Museum in Washington at the press conference this afternoon. This is appropriate because they already have the first 24 volumes of the set of notes, not on display but in their archive.”

Shure paused and took a deep breath. He looked around the room slowly.

“As you can imagine, I’ve given a lot of thought to why this might have been sent to me. The only thing that I can think of is that my grandparents immigrated here from Germany after the war, and it appears that the Nazi prison camp doctor may have been my great-uncle, the brother of my grandfather Peter, who, as you know, was the founder of what’s become UNELECO. I didn’t know of this great-uncle until our research into this book. For obvious reasons, he wasn’t someone my grandparents were proud of. I certainly feel no connection to him. However, donating this volume to the Holocaust Museum, along with a small endowment to assist their educational efforts, will help to ensure that that reprehensible chapter of our society’s history is neither forgotten nor whitewashed over. Now, let’s hear from Dr. Ellison.”

Wendell, having heard most of this previously, was not nearly as shocked as the other occupants of the room, so he was ready.

“Can we have the lights, please? I think the most effective way to present this material to you is with pictures, some of which I’m certain you’ll find disturbing.”

And he turned on the computer projector as the room lights dimmed.

\* \* \*

## Seven

First things first, Annette decided, so she started with the phone book. She had enough experience at this sort of thing that she wasn’t too disappointed when she didn’t find a Louella Billingsley. But there was a Richard Billingsley Realty, with an address in Pagosa Springs. She crossed her fingers and picked up the phone. There was a clicking noise that she recognized as the call’s being forwarded.

“Hello? Rich Billingsley here.”

The signal was less than clear and she suspected a cell phone. Also, there was background noise, perhaps wind. She decided that someone in the business community would likely be cooperative and that she could be straight.

“Mr. Billingsley, my name is Annette Trieri. I’m with the Colorado Bureau of Investigation. I’m calling you with the hope that you may know a Louella Billingsley. I need to reach her.”

There was a long pause.

“Is she in some kind of trouble?”

“Not that I know of. We just need to talk with her.”

“Oh. Too bad. And unusual, really. That’s she’s not in trouble, I mean. Listen, I’m with a client, and it sounds like I’m almost out of cell range. Can we talk when I get back to town?”

“You do know her, then?”

“Oh, yes. But I’d rather talk about it when I’m back in my office, with a stiff drink and my feet up.”

They set a time later in the afternoon for a follow-up. A stiff drink? Why, she thought, would he need a stiff drink to talk about this?

There was a knock on her office door—a real door to a real office now, one of the perks of her new position. Derek Petersen stuck his head in.

“Ms. Trieri? You said you wanted to go over the budget estimates?”

“Come in, Derek. And look, man, you’ve *got* to call me Annette, around here at least. Really.”

He was still getting used to his new role as her combined second-in-command, chief-of-staff, and head expert on all things bureaucratic in the CBI. Somewhere in his middle forties, he was just beginning to acquire that mature look—thinning hair, a spare tire, and the slight squint that suggested he should have his eyes checked.

“Derek, I’m pretty much of a straight-forward person, and I’m not very good at maintaining hidden agendas. I want to accomplish two things around here in addition to all the stuff I mentioned in that little speech I gave last week.”

On her first day, she had held an all-hands meeting and outlined her vision for the organization.

“First, I want to parlay my good relationships with the counties around here into a coherent regional law enforcement system. That’s really what I meant when I was talking about a strengthened southwest CBI office. And, second, Director Andersen and I conspired to put you into a position that would provide you with the experience you need to take over one of the division offices someday soon. He said what you need is more administrative experience. I hope that putting you behind a desk hasn’t got you too upset with me.”

“Uh, no. I was surprised and a little disappointed at not getting promoted, but Rod, that is, Director Andersen, called me and gave me a pep talk. And your reputation preceded you. To tell the truth, I’m going to be happy not to be on the road so much. Laura, that’s my wife, could use me at home more. The kids are teenagers now, and she needs help. But I’m not sure I’m cut out for this administrative stuff. These budget estimates, for example, are, um, foreign territory for me. And no matter how hard I try, it’s hard to get interested in them.”

She smiled.

“Rule One: Delegate. You’re used to working in the field and being pretty much on your own. Rod told me that Bob Weldon had become entrenched as a micro-manager, so the entire staff here, including you, are probably used to that style. I don’t want to micro-manage you, and I think that you shouldn’t micro-manage the others. So let the accountant, what’s her name... ah, Cheryl, do her thing and get her in here when we talk about the estimates. These folks may take a while to adapt to bosses with a new approach, but most people like a loose leash.”

“Don’t forget that we’re all state employees, used to dealing with lots of rigid procedures and silly rules.”

“Yeah, but I bet everyone’s got ideas about how to make those rules work in our favor, or how to avoid them. And I see that as part of your job—assimilating all those tricks. And teaching them to me. Now, since Cheryl isn’t here, let’s talk about something more interesting. We have the ballistics connection between the killing up by Norwood in May and the other one, same execution style, same gun, down at the Four Corners monument last year. You’re the one with the field experience. What do you make of this?”

“Well, for one thing, the FBI is probably going to be a pain in the you-know-where. My experience with the local guys is that they need lessons in how to share information. They’re sort of a black hole—stuff goes in but nothing comes out.”

“That’s what happened, all right. Last year, the day it happened, they called the Durango PD to get an ID on the victim down at the monument, Luke Begay, his name was. We told them what we knew and then didn’t hear a word about it. My next smidgeon of information was in that assembled file I got from Rod’s office, the one with all the dead environmentalists in it. What about the other one? That’s the San Miguel sheriff, right?”

“Yeah, and he’s also a little problematic. See, one of his constituents, a big player, is a state senator who lives southwest of Norwood. Senator Jarvis Schoenfield. Chairman of the Committee on Law Enforcement. Controls our budget. And controls Jim Nettleman, the sheriff over there.”

“I met him, Schoenfield, I mean. Rod took me to see him last month, just after I signed on. First thing he asked was when we were going to make an arrest for that murder. He said he wanted to be kept informed about our progress. And that he expected progress.”

“This sounds in character. You were talking about micro-managing. He seems to think that because he holds sway over our budget he’s our real boss. And Rod has to go along with it, pretty much. Same thing is true for the State Patrol.”

“So, is it a problem?”

“Well, let’s just say that we ought to be cautious. He’s in something like his seventh term, really entrenched. Although, I have to say, with all the new folks moving into the vicinity of Telluride, his margins of victory have been less the last couple of times. But his power base includes some, how shall I say it, seriously right-wing groups. And he owns, or used to own, about half the county. Now I guess he’s set up his ranch as some kind of non-profit trust. Gets him out of property and other taxes. Anyway, you can bet that anything that Jim Nettleman knows, Schoenfield knows.”

“Yeah, but that’s not much, right?”

“Right. Victim’s ID, cause of death, and so on. That’s about it. The funny thing is that no one in the area knows the victim, or will admit to it. He was from Colorado Springs. What he was doing out Norwood way, dressed in a business suit, is a mystery to everybody. The indications are that he was killed pretty close to where his body was found, given the amount of blood at the scene. And there’s that witness report of the several vehicles. But that’s it so far.”

“What are the biggest unknowns?”

“I’d say just that, I mean what was a Colorado Springs lawyer doing in Norwood, and what’s the connection with Begay? If we can answer those questions, we’ll have a good start on the portfolio, I’d think.”

Annette nodded. “That’s my thinking. Y’know, Rod and I sort of set you up to get administrative experience so you can take over a division some day soon. But I hope you’ll be stay interested in case work, because I’ll need the advice, and someone to bounce ideas off of.”

“I’m hoping to. Stay involved, I mean. This administrative stuff may be necessary, but I don’t think it’s my cup of tea.”

“I know what you mean. Just remember Rule One. It’s what kept me sane at the PD.”

\* \* \*

The Right Reverend Dr. Michael Oswald was letting Schoenfield vent. His fancy titles and even his last name were not quite accurate, but being accurate was less important to him than making an impression. Jarvis Schoenfield, however, was not impressed.

“That ungrateful, Jew-loving son-of-a-bitch! Does he have any idea of how much trouble we went to to get him that book? Plus the copies of the other ones? And now he’s giving it to the Jew museum? And he has the gall to pull out some so-called ‘scientist’ to tell everyone that there’s nothing of value in the set. I think that scientist, what was his name? Ellison? I think he’s going down for this.”

“Now, Jarvis, calm down. You’ll burst an artery or something. C’mon, you knew this business of enlisting Shure was a gamble. And I still think it might have worked, if your guys hadn’t popped that lawyer, Campbell. I bet that’s what scared Shure off, and this is how he’s distancing himself from us.”

He let Schoenfield stomp around the porch for a while.

They were sitting on the veranda of the log cabin, looking out toward the southeast, watching the afternoon shadows lengthen on Lone Cone Peak, and Oswald couldn't help but think that Schoenfield had it too good. He was like a spoiled child, always wanting, and mostly getting, his own way. When he didn't get it, he had a tantrum. Like now.

"Look, Jarvis, let's just let go of this thing with UNELECO and move on. We don't really need them. And those meetings I've been holding around the region are going pretty well. We're going to wind up with a good-sized group of people interested in moving up to stage two. And the people who drop out aren't going to hurt us. I mean, I think the meeting over by South Fork last week was infiltrated, but even that's not a big deal. The message I'm laying on them is so bland that it doesn't matter who hears it. It's stage two where we have to be more careful. And the same thing's true with Shure. He really didn't hear enough to be a danger to us, right? Besides, Timmy's going to provide us with insider information about what Shure knows."

"The South Fork meeting was infiltrated? By who? I know that those meetings are for public consumption, but we need to make an example of this guy. If we're gonna get spied on, we're gonna send a message."

"I don't know who, but I'll find out and let you know. But, listen, Jarvis, we can't go around killing everyone. That report you got, along with Timmy's information, shows that the CBI is aware of what's going on, at some level at least, and we know the FBI's responsible for investigating that killing down on the Rez. We've got to be careful."

"I'll worry about the CBI, and the FBI's going nowhere. You worry about getting people enlisted. And Shure needs reminding to keep quiet about what he's heard. Another news conference, and he gets put on the hit list."

"Just as long as he's one of the 'natural causes' hits. He's too high-profile to have anything suspicious happen to him. And, Jarvis, I'd be careful about the others, too. People besides the CBI are going to start putting two and two together."

"Yeah, yeah. Where's that damned phone?"

He was fumbling in the pockets of his jacket and eventually fished out the handset of a cordless unit. He punched buttons.

"Pickle? Can you come over to the back porch? The Reverend and I have some stuff we need to talk over."

He put the phone away, in a different pocket.

"It doesn't really matter who puts what together, because I've got control of everything that counts. The CBI—hell, even if Weldon is leaving, there's this new girl Andersen's putting in his place. She'll be easy to keep under control. And I've got the State Patrol running scared over their budget. Jim Nettleman and his crew at the sheriff's office owe me too much to give us trouble. And, besides, Pickle's good, real good."

\* \* \*

Annette called right on time.

"Billingsley Realty, Rich speaking. How can I be helpful?"

"Well, if you've got your stiff drink and your feet up, you can tell me about Louella."

"Oh, yeah. Ms. ahh... Treery?"

“Trieri. Annette Trieri, Colorado Bureau of Investigation.”

“Right. Sorry. I was out in the woods showing a parcel to this guy from Texas who’s looking for a place for a summer house, and I didn’t have a way to write it down. So you want to talk with Lou? Is she in some kind of trouble?”

“As I told you, I don’t know. We need to talk with her about an investigation we’re doing. But we don’t know how to contact her.”

“Well, if you have her name as Louella Billingsley, that’s probably why. That was a long time ago. When we were married. I’m still paying for that mistake. If it weren’t for these rich folks from Texas wanting to buy land up here, I don’t know how I’d manage to pay her off.”

“So you were married to her and now aren’t?”

“Not by a long shot, thank God. Divorced four years ago.”

“Do you know how we might contact her?”

“Well, I have the dubious pleasure of sending her checks every quarter, and she cashes them. So they must be getting to the name and address I’m sending them to.”

“Which are?”

“Please tell me that she’s going to be in hot water.”

“Mr. Billingsley. I’m afraid we can’t promise to act as your personal avenger. All we want to do is to talk with her. If it will make you feel any better, I imagine that it will make her nervous to have us contact her. Most folks react that way, no matter what.”

Annette had always been good at manufacturing little stories when they helped her cause. She certainly wasn’t going to stop just because she changed jobs.

“Well, try to make her real nervous, OK? She’s not Louella Billingsley anymore, she’s Lolly Markham. Markham’s her family name and Lolly is because she never really liked Lou. I think I made her actually hate it. So that’s what I call her whenever I get the chance. Here’s a phone number.”

He rattled off a string of digits, which Annette wrote down.

“I assume this is a home number, Mr. Billingsley. Would you know if she’s employed?”

“Yeah, and that’s the best thing of all for me. She has to do something with her time besides sit around on her fat ass and spend my money. She’s got a job at Carman’s Western Art on Main Avenue.”

Annette thanked him and escaped. With relief. She turned to her computer.

What, she thought, is the name of the shortcut I made to the program that looks up drivers’ licenses? Oh, yeah.

And within a couple of minutes she was looking at a screen-sized image of the Colorado driver’s license of one Louella Markham, resident of Durango, required to wear corrective lenses to drive. Shoulder-length chestnut hair, if the picture could be trusted. Semi-attractive in a mid-thirties, used-hard sort of way. Not, from her face at least, thin.

Now, she thought, how do I do this? Copy the picture from that program to this other one, then send it as a fax over to the San Juan County, Utah, sheriff’s office. She used the mouse and a graphics utility program, and finally the computer confirmed that the fax was sent. After they had Deputy Clean-Cut look at it, she should have a positive ID of the person he chatted up, and ogled, just before the FFPI fire. They’d owe her one, and maybe she could get a look at the file on the Natural Bridges Monument killing.

She looked at the clock. 4:45. When do you suppose these state employees go home?

She wandered out of her office and down the hall toward the receptionist, Sally Brigman. On the way she noticed that Derek Petersen was still in his office, working on a formidable stack of paper. Cheryl Trudeau, the head of the business-office side of things, was also still in, peering at her computer screen at what looked like a small-print spreadsheet. Damn, Annette thought, I've got to find out where that woman gets her clothes. She has the best sense of style I've run across in a long time.

Sally, behind her receptionist's counter, was staring at a calendar on the wall and talking through pursed lips into her headset.

"I appreciate your sense of urgency, Ms. Williams, but I'm afraid that public calls are always routed through me and assigned accordingly. And none of them go directly to our Director. I'm afraid that your high opinion of your Mr. Shure is not enough to make an exception. May I route you, and him, to one of our investigators?"

She noticed Annette and rolled her eyes. Annette winked.

"Ms. Williams, I understand, but what I'm telling you is that I don't care who Mr. Shure is. We need to begin at the beginning and that's not with our Director... Well, if that's how you feel. Have a nice day."

She ground her teeth and shook her head.

"That's not the way I like to finish up the afternoon. And if she has the clout that she says, you may be getting a call from Director Andersen in Denver. Sorry."

"Don't worry about it, Sally. If it's that important, Rod will understand, and so will I. You did admirably. Keep up the good work. And, look, it's just about five. Take off. Have a nice evening."

Sally beamed. The idea of having a boss who wasn't a clock-watcher was a new experience. One she liked.

Annette strolled back to her office and was writing up the conversation with Billingsley when the phone rang.

"Annette? This is Rod Andersen. Sorry to bother you."

Annette noticed it was 5:10. Whoever this Williams person is, she does indeed have clout, she thought.

"What can I do for you, Director Andersen?"

"Ugh. Please, call me Rod, at least when we're not in front of the Governor. Or the press. Um, I just got a call that started with my Public Affairs person and then came to me. It's convoluted, but the bottom line is that Charles Shure wants to talk with you, about a case, it seems."

"Should I know this person?"

Annette was far more familiar with the criminal world than the business world.

"You don't? Oh. Well, I wouldn't have expected your front office people to, and they did a good job of protecting you, I guess. Charles Shure is the CEO of UNELECO, a big conglomerate based in Colorado Springs. One of the top three business people in Colorado, and in the top twenty between the Mississippi and the West Coast. What you would definitely call a Big Cheese, at least in the business world. I take his calls so that the Governor won't call me and tell me to."

"Oh. Never heard of him. But I did hear that the company, um, FFPI, whose plant got torched over in Utah last month is a UNELECO division. Suppose he wants to talk about that?"

Things were clicking into place in Annette's head.

"No idea. Could you call him? I've got a direct number. He's a workaholic, so he'll no doubt be in for a while."

"Be glad to. And, um, is there a list of people like this whose calls I should take? My receptionist would sure appreciate it. How should I handle this sort of thing?"

"I started my own list a long time ago and keep adding to it. Some are obvious, like the Gov, but others aren't. So just wing it. I don't think Shure is mad, or anything, I think he just wants to talk with you."

"I'll call him right back. Thanks, Dir... ah, Rod. Be talking with you."

I'll call him, she thought, but not this second. I don't care who he is, he's not jerking me around this much.

\* \* \*

It was just getting dark as David Wellington eased his old Mazda pickup along the road behind the mill on the edge of Creede. He was, he noticed, barely on time. The 65 miles from Alamosa included the main streets of several small towns—Monte Vista, Del Norte, South Fork—and the propensity of the local constabulary to seek community income from people who played fast and loose with speed limits was well known to the residents of the San Luis Valley. He felt clever that he'd made it in an hour. And relieved not to have been caught by one of the various radar traps between the towns.

But he was also still a little pissed. Why in the world he needed to hustle over here on such short notice was a complete mystery. But the message on his answering machine had been insistent that he get himself up to the lumber mill at Creede by dark. He'd recognized the voice, sort of, if you filtered out the sneezes and the allergy-induced nasal tone.

The voice had said to park on this road behind the mill, right by the third pile of logs. He was supposed to pull off the road next to the pile, which was set back off the road a little more than the others. He idled slowly up to the spot and stopped next to a fifteen-foot wall of huge logs. Damn, these were big trees, he thought. Some of those suckers must be five feet in diameter. Old growth timber. Just the sort of rape and pillage activity that he and his friends in SCREW were trying to put a stop to.

Except for the fact that his fellow SCREWers were so impulsive, they might be able to accomplish something good. But that raid on the Monticello plant was too much, too soon. The risk of getting caught was way out of line with the payoff. So what if they burned down a lumber mill? It would just get rebuilt, newer and better.

That bunch seemed to think it was all a big game. Rutherford wouldn't take anything seriously, and, besides, he was obviously infatuated with Lolly. At least he spent a lot of time staring at her chest. And she was just too scatterbrained to be trusted, or useful for much of anything, either. The other two, Felterson and Tompkins, had potential, but they were old-school anarchists, hard to control. And Flip Chester was a danger to all of them, with his ever-present stash of joints.

Well, he thought, better a SCREWer than a SCREWee.

But Rutherford was right about one thing. When you assembled that list of their dead friends, it looked pretty clear: someone was systematically eliminating people involved in MEDL. Wellington felt his heart rate increase slightly as he remembered the circumstances over in Horca. He hadn't talked to anyone about it, but he'd been there, having breakfast with Holly and Jack Levine. They were on their way to Santa Fe to talk strategy with Roger Colgate and his buddies—Roger was dead, too, Wellington

remembered—and he'd driven down early to meet them at Horca. They had discussed Wellington's idea to develop a new MEDL chapter at Adams State College in Alamosa. The students there tended to be more conservative than over in Durango, but there was still a strong environmental consciousness. And water issues in the San Luis Valley were one thing that got them involved in a flash. Whenever one of the big Front Range cities hatched another plan to grab San Luis Valley groundwater, the students at Adams State got hopping mad, some of them mad enough to take direct action.

He and the Levines had eaten a pleasant breakfast at that little restaurant at Horca—Rosalita's? Rosella's? Rosa's? He couldn't remember—and he'd left them lingering over a last cup of coffee. It wasn't for another day that he heard about the car bomb and their deaths.

Let's see, he thought. Holly and Jack. Roger. That arrogant bastard down by Taos, the one with all the money. The Mayers up in Boulder. And, of course, Luke Begay over in Durango and Jake Colvin up in Cedaredge. That Park Ranger over in Utah. And Jodie P. down in Flag. Damn.

He tried to shake off his gloomy mood, but the gathering darkness didn't help matters. Where, he wondered, is that jerk who left me the message? And, goddammit, I've got to take a leak. Well, there isn't anybody around, at least that I can see through these dirty windows.

He opened his door and got out, standing in the middle of the gravel road to look around in the gloom. Seeing no one, he walked around the car, to stand between it and the log pile for some privacy. At least he could get more comfortable. The smell of freshly-cut conifer reminded him of the back woods. He took a deep breath.

He unzipped and let fly at the logs on the base of the pile. Looking up, he noticed the stars coming out. Creede, he thought, doesn't have the light pollution of Alamosa. How beautiful. But that's strange. That top log looked like it moved.

He looked down and flexed his neck around in a circle to loosen it up and to clear his head. Then he looked up again just in time to see the top-most log on the pile, a four-footer, rolling off the top and falling down toward him. It did its job so well that he didn't see the next dozen or how effectively they flattened his truck.

\* \* \*

## **Eight**

“He's coming down here this week to give us a formal statement. I guess I should be impressed, although I'm cynical enough to think of it more as ass-covering.”

“Charles Shure himself, eh? Well, he *is* one of those hyper-busy corporate executives who values his time. Think this will help you move ahead on the portfolio?”

Annette and Hal were having a relaxed breakfast on the summer solstice, sharing bagels and the newspaper. Her new job had been playing havoc with their joint schedule, and they took every opportunity to spend time together.

“Well, we can't place this guy Campbell with the others in the environmental movement, but he was killed by the same gun as one of them. So, we'll see. On the other hand, that lead to the woman at the Monticello FFPI mill the night of the fire is getting interesting. I got a call-back last evening that the deputy sheriff over there places her at the scene just before the fire, based on her driver's license picture. A Durango citizen named Lolly Markham.”

“So now what?”

“We’ll pick her up for questioning and get one of the Utah investigators over here to be in on it. She was sitting behind the wheel of a car with stolen, or at least ‘borrowed’ Colorado license plates, and that’s enough of an excuse to ask her some pointed questions. And the cell phone someone used to get the deputy away from her was stolen, hasn’t been recovered. Stolen from the library in Cortez. So these are both Colorado crimes and belong to me. Meaning I can pick her up and question her, and we don’t have to fool around with extradition just yet. If it turns out she was connected with the firebombing somehow, well, we’ll share.”

“But Shure’s coming down to talk about the murder, not this?”

“That’s what he said on the phone. He has information about it, including something in writing and, he said, a videotape of a press conference that’s related somehow. So I don’t really know details. He did say that he can’t identify any of the players beyond the victim.”

“Interesting. When the FFPI thing went down, John and I called you the next day, remember? He was wanting us to cooperate with their internal investigation because they’re such big contributors to the U. But now there’s a second connection, not to the university, exactly, but to Shure and UNELECO.”

“From what I understand, their internal investigation focused mostly on whether it may have been worker sabotage, and they concluded that it was not. They’re assuming that there’s some new environmental radical group that’s responsible, probably called SCREW, based on that note.”

“Yeah, I remember you told me something about a clever note. I wonder if they’re connected with that other shadowy organization you mentioned. The Mother Earth Defense League. I’ve been poking around, carefully, and whatever connection there is at the U is so clandestine as to be invisible. The closest thing is the SCARAB chapter—Students and Citizens for Animal Rights and Biodiversity, remember?—and they’re mostly animal rights oriented. But their publicity talks about ‘opportunities’ for involvement at all levels, without being specific. I suppose they could be a front, or entry-way, or something, for a more radical group. Or groups.”

“Any way to find out?”

“Well, I probably can’t. Being a Dean means lots of people who might know don’t trust me for anything. But let me ask a couple of folks who do trust me. Maybe they can find something out. You remember Gil Taylor, right?”

“You bet. My friend with the chemistry lab that’s got all the fancy analytical equipment. Does analyses for the PD.”

“And just about everyone else on campus. Including, sometimes, students with concerns about purity of certain substances they manage to obtain. He’s worried about safety and does some screening for poisonous impurities.”

“So he’s plugged into the dope-smoking, enviro-hippie, tree-hugger crowd?”

“Uh, well, ‘plugged-in’ is probably overstating things. I think he just doesn’t want any of the kids to get their brains permanently fried by toxic stuff. After he analyzed those bogus designer drugs for you, and those joints that had PCP in them, he started to worry about what the kids are getting into. So he talked to me about quietly putting the word out that he’ll do discreet analyses. He’s being careful. For example, he’s not screening for purity, just toxic impurities.”

“Meaning he’s not telling folks if the coke they just bought is cut, unless it’s cut with bad stuff?”

“Right, and even then he’s not telling cut how much. Just if it’s dangerous. That is, dangerous in unsuspected ways, given that most of that stuff is dangerous in some sense even if it’s pure. Uh, he

talked all this over with me and I gave him a thumbs up. I figured the chemistry department owes the community a favor.”

“But you didn’t tell me.”

“Um, well, you remember that business of whose jurisdiction is where and how the campus is really outside the city’s purview? Well, I used that to rationalize that it’s none of the Durango PD’s business.” He was wearing a sickly grin.

“Right. But now I’m CBI and the campus, being state property, is my jurisdiction, no?”

“Oh. I hadn’t thought of that. Yet. But now you know, so it’s OK, eh? Please?”

“I think I’ll have to go have a chat with Gil.”

“Oh, crap. Now I’ve got him in trouble.”

“Gil? How could he be in trouble with me? He’s a friend of mine, and he’s been more than helpful on several occasions. I think I should just talk with him about this, that’s all. Because I know about it, he needs to know that I know, and all that.”

“Yeah, but he’ll be pissed that I told you.”

“I won’t tell him that, so don’t worry. I’ll let him think that I found out some other way. And, look, I view this as a sort of public service, kind of like handing out disposable syringes to help prevent the spread of AIDS. And I bet he’s got some kind of anonymous drop-off system set up, so he doesn’t know who’s giving him samples. So don’t worry.”

“I see a Machiavellian gleam lurking in your eyes. What sneaky thing are you planning?”

“Innocent li’l me? Well, I did have a thought. Perhaps I can talk Gil into helping with the serial murders, assuming that’s what they are.”

“By spying on the environmental community, you mean?”

“Well, maybe just by asking a few questions in the right places around campus. You know, places you can’t really go and get straight answers, Mr. Fancy-Dan Dean.”

“That’s why I love you so much. It’s that sass.”

\* \* \*

Gil Taylor will just have to wait until tomorrow to hear from me, Annette thought. With the Shure interview and tracking down Ms. Markham, I’m going to have a full day. Especially since that late start. And what a worthwhile late start it was—one of these days, I guess the honeymoon will be over, but I’m quite happy that it isn’t yet. Mmm-mmm. Thank you Dean Fancy-Dan.

She pulled into the parking lot at the downtown station of the Durango PD, and smiled to see Fred Winders’ car in her old spot. There was no real reason to expect trouble with Lolly Markham, but backup wouldn’t be a bad idea. And, Annette thought, I can get my pals from the PD involved. That would be both politic and fun.

Twenty minutes later, she strolled into Carman’s Western Art, which turned out to be a tourist-oriented gallery and high-end souvenir shop near the train depot downtown. She’d planned this earlier and dressed for the occasion, in jeans, her western riding boots, Indian jewelry, and a cheap straw cowboy hat, pushed back on her head. Although a bit pumped up for the occasion, as she always was on a bust, she made a point of playing the role of the bored shopper, looking for the perfect treasure to take back home to Toledo, for that special place on her knick-knack shelf.

“May I help you? All items are twenty per-cent off today.”

After another critical look at the statuette, Annette turned and, at a glance, took in the name tag reading “Sondra” and the disparity between this person and the driver’s license picture she’d seen.

“No, thank you.” Smile. “I’m waiting on my husband to finish up at the fishing store down the block. I thought maybe I’d browse around and see if I could find something for my mother back in Ohio. Thanks.” Back to the shelves.

She worked her way around the shop and finally came to the check-out counter. The person behind the cash register wasn’t Lolly either. Time for plan B.

“Excuse me, I’m looking for someone. A friend of mine said I should look up Lolly Markham here, to say hi. Is she here?”

The person with the name tag reading “Denise” looked surprised.

“Lolly? Sure. I think she’s in the back. I can get her.”

Annette smiled. “No rush. I’m looking for just the right thing for my mother back in Ohio, and I have plenty of time. Once my husband gets talking about fishing, there’s no stopping him.”

She went back to the displays and pulled out her cell phone.

“Fred? Listen, I’m here at the Western Art Gallery, and I’m just about finished. Are you going to be much longer?”

“Hey, Annette. All set?”

“Just about.”

“We’ll move in.”

In short order, Fred Winders wandered into the shop and worked his way toward the back, near the “Employees Only” door. He’d worked for Annette for years, and now he was acting in her old position at the PD, so he knew the drill: he studiously ignored her. Annette noticed another official-looking person standing outside the front door.

When Lolly came out from the back looking for Annette, the rest was easy.

With Lolly safely, although perhaps not comfortably and certainly not happily, in the detention center awaiting the arrival of the Utah investigators, Annette turned her attention to the day’s other appointment, the meeting with Charles Shure, CEO of UNELECO. And, according to the message that awaited her in her office, his attorney, his driver, one Walter Herrington, and *his* attorney. The southwest office of the CBI was about to experience a sort of corporate takeover, she supposed. She went looking for her chief-of-staff.

“Derek, can I tear you away from all that paperwork?”

They both recognized her question as rhetorical.

“Have you read the file on that killing up by Norwood last month?”

“For sure. I don’t have time to get out and investigate things, but I make time to read up on them. If I’m going to do the budget and all this other stuff, I need to know what’s going on.”

“Good thinking. I have two people, apparently, coming in to provide statements related to it. We should question them separately. Want to take one?”

“You bet. Got to keep the hinges oiled somehow. But I’m swamped. Which one will be quicker?”

“The driver, probably. We’ll start out together to see what they’re going to ask for. They called us to volunteer to come in and make a statement, so I doubt that they’re going to confess to murder. They probably know something that they think is relevant. Maybe they were part of that convoy of vehicles that’s in the report. But if they’re bringing lawyers, they’ll probably have a set of conditions they’ll want to discuss.”

“Like immunity, no doubt.”

“No doubt. But I expect that their only real vulnerability is waiting until now to talk with us. Leaving the body there instead of calling in the local sheriff immediately. So immunity could be a good deal from our perspective.”

“Assuming they have anything to contribute.”

“Right. We’ll see. And we can use all the help we can get with this one, especially because of its possible connection to the others I’m supposed to be clearing up. I’ll call you when they get here. We can all meet in the conference room, and then we can use a couple of the rooms across the street.”

The county detention center had video cameras ready to roll. Annette had called her old friends over there and arranged to use the facility. Never underestimate the value, she thought, of having a personal contact network.

\* \* \*

“So, after we compared notes,” Annette was talking around a mouthful of the lasagna that Hal had concocted for dinner, “we found that their stories are completely consistent. Aside from not reporting the killing right away, we have no reason to think of Shure or his driver as suspects. But the really interesting part is the rest of Shure’s story, the part that the driver, Herrington, didn’t know about. Or at least didn’t talk about.”

“Why they were there and so on?”

“Right. The connection with this racist group, the Aryan Rights Fund, or Foundation, I guess. Apparently, this was the second contact, the first being the package with the book that I mentioned.”

“But Shure was supposedly there to talk resource leases.”

“Yep, on private land associated with the X-S Ranch. Of course, most of the private land around Norwood is part of the X-S. But it’s hard to believe that there’s not a connection between this Aryan group and the X-S. I mean, why drag Shure all the way over to Norwood? They could have concocted potential leases closer to the Springs, like in the Wet Mountains or somewhere.”

“After we talked this morning, I did some internet sleuthing. That’s the nice thing about the campus this time of year. It’s quiet and there’s time for this sort of fooling around. I found out that one thing that Shure’s company has done is to develop a new method of reprocessing mine tailings waste, doing it profitably and, from an environmental perspective, safely, at least so they say. So maybe whoever set this up thought that all the tailings up by Uravan and Bedrock would be an extra added attraction to Shure.”

“Shure mentioned something like that. But they were originally supposed to have the meeting in Norwood, in an office at the X-S headquarters building, or the business office or whatever it is. I guess that they could have just picked that out of the phone book, but it looks like there’s a potential, one that’s too big to ignore, for a connection between the ranch and this Aryan group. Oops. I smell garlic bread burning.”

She jumped up to rescue it from the oven. Her voice continued from the kitchen.

“I looked up the ownership of the X-S and found out that it belongs to some non-profit trust called Resources For Humanity. Then I ran out of time.”

She returned, with a basket full of well-toasted and quite fragrant pieces of bread.

“I seem to recall something about the X-S, vaguely. There’s a reservoir south of Norwood that I fished one time, can’t remember the name. And there were no-trespassing signs all over the countryside, saying X-S Ranch and displaying a logo, or maybe a brand. A stylized ‘x’ with one leg curved to make a sort of ‘s.’ That was years ago.”

“Anyway, Resources For Humanity could be anything. Sounds like maybe one of those ‘feed the world’ foundations, but maybe not. It’s probably going to be hard to show a connection between them and the Aryan group, though. Shure said that the Aryans were very secretive, lots of hocus-pocus.”

“And this book he talked about was really from a Nazi prison camp?”

“Apparently. Shure’s people examined it thoroughly, and we have their report, quite solid-looking with all sorts of high-tech analyses. Get this: The book was bound with tanned human skin. Shure donated it to the Holocaust Museum in Washington. It turns out to be part of a set of lab notes on medical experiments on prisoners.”

“Why would they have sent it to Shure?”

“The letter they wrote talked about how the guy, the prison-camp doctor, who wrote the notes was Shure’s great-uncle. And it appears that they, the Aryan group, were trying to recruit Shure. He showed me this letter they wrote him. Pretty weird stuff.”

“And you said that the meeting in Norwood turned out to be more of the same. The lawyer who got killed gave him copies of the other volumes of lab notes?”

“Right. The discussion of leases didn’t come up. The lawyer, Campbell, passed notes to Shure talking about how the whole thing was supposed to be a show of force, to further intimidate Shure. Strange way to do recruiting, but this group seems strange all around.”

“Where to from here?”

“Shure’s going to contact us if this ARF group contacts him again, and we’ll figure something out. He doesn’t know how to contact them, though, so all we can do is wait. Meanwhile, tomorrow we’re going to try again on that woman who was at the Monticello fire. Lolly Markham.”

“Try again?”

“Today all she did was weep and demand her attorney. Who is in Cortez and couldn’t get here today. So tomorrow, it’ll be the Utah guys and me versus Ms. Markham and her lawyer. If the lawyer’s got any sense, he’ll work some kind of deal. The Utah deputy sheriff has her in the car with the stolen plates when the fire was actually being set, so she’s not one of the principals. Just a driver.”

“Why would she have a lawyer from Cortez? This town’s crawling with them. And she lives here, doesn’t she?”

“Yeah, and I don’t know why. Asked myself the same question. But, hey, we’re not going to screw this up on a technicality, and letting her choose her own representation is easy for us.”

She bit into another slice of the garlic toast.

\* \* \*

Across town, Steve Rutherford was once again becoming emotionally involved with his two-dimensional facsimile of Lolly, the one on the computer screen, when the phone rang with news of the real one. Bad news.

“Picked up? In custody? CBI? Jesus!”

“And she wants me there when they question her. I’m really worried about this one, Steve.”

Reid Tompkins seemed to be blaming Rutherford, for some reason.

“Well, that’s good, isn’t it? That way, you can keep her from giving the wrong answers.”

“Ha! What if she slips up and talks about ‘we this’ or ‘you that’? That’ll implicate me. She’s such a ditz. I don’t trust her not to slip up.”

“Can’t you talk with her first, alone, and sort of rehearse what she should and shouldn’t say?”

“Of course. And I will. But I’m worried that if she gets rattled she’ll blow it. And, look, I’m an officer of the court. I can’t afford to be implicated in this. I’d be disbarred!” Tomkins’ worry was palpable.

“Calm down. For one thing, you’re not really a criminal lawyer, right? Can’t you pass this one to someone who is? Then the potential for slip-ups would be less, wouldn’t it?”

“But she asked for me and I sure don’t want to piss her off. She’d have to tell another attorney what this whole thing is about, and he’d want to cut a deal. She’s not who they’re really looking for. That’s us. And if she’s pissed at me, or you, then she could just give us up.”

“So you go with her and get her to stick to the story she gave that cop originally. The fight with her husband and so on.”

“Right. And they’ll ask where this ‘husband’ was, what motel or whatever, and then we’re screwed.”

“Well, you can’t have it both ways. Either go represent her or don’t. I think it would be better for you to work with her than to try to avoid all this.”

“Yeah, really, so do I, I guess. But I also think we’re awfully close to completely busted. You need to lie low, really, really low. And the others, too. Why don’t you call them and warn them?”

“OK. But I can’t seem to get hold of Dave. I was trying last night and today, to talk about something else. You heard from him lately?”

“No, but he goes off camping a lot.”

“Yeah, I know. I’ll leave him a message to call me right away. And I’ll call Flip and Aaron tonight. Let me know if there’s anything I can do to help with Lolly.”

“Bail money, for one thing. Find some.” And Tompkins hung up.

Bail money, eh? Rutherford thought. Then Lolly would owe me a favor. A big favor. The least she can do is to let me see that tattoo.

Aaron Felterson wasn’t home, so Rutherford left an urgent, albeit cryptic, message. Flip Chester was home, sort of.

“Who? Oh, yeah, far out, man. ’S-happenin’? Want some more weed? I got a new stash, better than ever.”

“Flip, listen up. This is important. You remember the conversation we had about that fire over in Monticello?”

“Right on, man. You dudes really did a number on those lumber guys. Good deal.”

“Yeah, well, Lolly’s got herself picked up by the cops. CBI no less.”

“Bummer, man, major bummer. CBI? What’s that?”

“Colorado Bureau of Investigation. Not just the Durango fuzz or the sheriff. These are the heavies. Lolly’s got herself a real problem, and, hey: She’s gonna need bail money. Can you help out?”

“Whoa, man. Bread? Like, how much, man?”

“Don’t know yet. But you’ve always got a lot of cash, and this is a friend in trouble. It’ll only be a loan, until we get her out of this mess she’s in.”

“Yeah? How are you gonna do that, man?”

“Reid’s a lawyer, remember? It’ll be cool. So can you help with bail money? We’d help you.”

“Depends on how much. But I can help, some. Let me know.”

“I will. And, listen. We’ve all got to be careful just now, right?”

“Hey, man, I’m always careful. Gotta be, right? But you’re the one who’s gonna be in trouble for this one, not me.” He giggled. “But I’ll be careful. Extra careful.”

Maybe it was because he’d been talking with Flip, the perennial outlaw. Maybe it was because he couldn’t get Dave Wellington on the phone. Maybe it was because he didn’t entirely trust Reid Tompkins. Whatever it was, paranoia took over Rutherford’s thought processes.

The first thing he did was to turn off all the lights, room by room. The computer screen, grandly displaying a busty young woman wearing only a pink feather boa and a smile, lit the apartment with an eerie glow. Then he carefully, slowly, eased the living room curtain back to peek out at the street below.

Just the usual cars were sitting out there... except for that one. Across the street, facing his way. Jelly-bean shaped American sedan of some sort, generic features, some dark color or other. Was that a glow, a cigarette, from the front seat? Somebody in there watching? Oh, shit.

He stepped back from the window, glad he’d at least turned out the lights behind him. What now? Ignore it? Wait and see if the car goes away?

He settled on going for a walk to see if the car would follow him. At least he didn’t have the worries that Flip would, a stash of contraband. Oh, double-shit. There was that stuff in the kitchen, in a jar with the other jars of spices.

He walked, as calmly as he could under the circumstances, into the kitchen and, with the lights still off, fumbled in the spice cabinet. Trips back and forth to the light of the computer monitor to see labels made the process drag on and on. Finally he found the one labeled Roma Oregano. Then, staying near the wall, he crept into the bathroom, and emptied the jar into the toilet. From the glow of the computer screen in the living room, he could just make out that... it was floating! One flush, wait. Two flushes, wait. Three flushes... there, that should do it. He let out his breath. Then he crept back to the living room curtain, and gently drew it aside.

The car was still there... but here came a young girl, high-school age, it looked like. Bouncing out of the house that the sedan was sitting in front of. Leaning into the driver’s side window. Getting in the other side. Driving off.

Triple-shit! That was nearly a whole ounce, of that \$500 North Coast Hybrid from Flip, no less. Shit, shit, shit.

On the computer screen, the Lolly-look-alike, proud of her silicone adornments, just kept smiling.

\* \* \*

Conflicting schedules meant that the next day Hal couldn't get in to see Provost John Martin until 4:30, and by then Hal was meeting'd out. Earlier, he had acted as the facilitator—the latest fancy word for referee—in a meeting on a reorganization plan for the social sciences and humanities college.

The hang-up was sponsored research. As in the natural sciences in Hal's college, there was a variety of potential funding sources for research in psychology, anthropology and archaeology, and sociology. Not so in the humanities departments. The cultures of the two sides of the college were drifting apart, and they had a mandate from the provost to stop the drift by reorganizing. Reduce 'tribalism,' a term the anthropologists derided as racist. Increase a sense of 'community,' a term that the comparative theology faculty felt smug about. And it was Hal's job, as a favor to John Martin, to chair their meetings, keep order, and maintain whatever little momentum they were able to generate. It was an exhausting task.

"The sun's over the yardarm, Hal, in the Midwest, at least, and I'm going to celebrate."

Martin opened a panel in his bookcase, revealing a highly illegal cache of expensive liquor bottles. He reached for the Laphroaig.

"As I remember, you have soda and ice over here in the 'fridge. Want some to go with that?"

Hal was familiar with the provost's liberal interpretation of state laws about liquor on campus.

"Tonight, it's neat. Now, what brings you here at this hour? I thought you tried to go fishing on these long summer evenings."

"What's got me here instead of in the river is our patron in the state senate, Jarvis Schoenfield. We may have a problem. And I know you like plenty of warning about possible problems, especially ones of this magnitude."

Martin was staring through the amber liquid in his glass at the maple trees outside.

"And now for the bad news?"

"I'll have to tell Annette about this, of course, because I thought of it today. Last night, she told me that there's a connection between a murder in San Miguel County and the X-S Ranch. Charles Shure, the UNELECO CEO came down to provide a statement about his knowledge of it. He seems clean, but it appears that the X-S may be involved. And today, I finally remembered where I'd heard about it. From our connection to Schoenfield. The X-S is his place, isn't it?"

"Used to be. He still lives up there. What's the story?"

As Hal told him, Martin sank deeper into his chair, and finally got up for a refill on his Laphroaig.

"Actually, this isn't the end of the world. He's the ranking member of the Senate Committee on Education, but he's not the committee chair. There's some rule about being chair of only one committee at a time and he's chair of something else, law enforcement, I think. But you're right about his being our patron. We're his baby. Especially since we've been doing so well in football."

"So if this business with the X-S involves him, somehow, we may lose an important political ally."

Martin took another sip of the scotch.

"Yes, but I don't think it'll be the end of the world. I have a kind of bad feeling about him. Ever since we won the national championship three years ago, I've wondered about him. I remember he was congratulating me at some meeting or other, and then he launched into a monologue about how it was too bad we had to use all that imported talent and couldn't win with students from around here. The big,

strong ranch boys, he said. He also implied that we were somehow forced by political correctness, the diversity issue, to import all the non-local talent. So he was treading very, very close to issues of race, and it seemed like he was on the wrong side. It's bothered me ever since."

"I imagine you didn't come to the defense of our diversity program."

"Not hardly. You know that I don't like to go looking for trouble. But, anyway, if he takes a fall of some kind, I'm not going to panic. Hmm. I think I will make a point of finding out who's the second-ranking person on the education committee, however."

"So, if he doesn't own the X-S any longer, who does?"

"I'm not sure. He told me, kind of bragging, about how he set up a trust, gave the ranch over to it as a tax deduction, and has a deal to live there. He was talking like he ran the thing but that no one could really prove it. There's some kind of foundation that gets the income from the ranch. He didn't go into detail, and I probably wouldn't remember it anyway. But, look, like I said, I think he's chair of the law enforcement committee. Which would oversee the CBI. Seems like that would have some implications, to say the least. Does Annette know about this?"

"The foundation part. It's called Resources For Humanity. She didn't seem to know about Schoenfield last night, though. I'll fill her in."

Hal poured himself a touch more soda water.

"So she told you that Shure talked about some white power group, or something like that?"

"Aryan Rights Foundation, I think it was. It's been in contact with Shure, apparently trying to recruit him. And they seem to be behind the murder of that lawyer that Shure met up by Norwood."

"Which means that if the X-S is involved, Schoenfield is probably involved in this Aryan thing and maybe the murder. I think I'll have a chat with President Black and see if we can start to distance ourselves from him. Having a right-wing patron is one thing, but having a racist one, who's involved in a murder to boot, is another."

Martin was looking off into space, thinking, evaluating.

"Right. If that bunch I was just meeting with were to find out, there'd be hell to pay."

"Bunch?" Martin's eyebrows went up.

"The SS&H faculty. You asked me to facilitate their reorg, remember? These folks are the stewards of political correctness, even more than the arts faculty. They'd rather see the U go belly-up than to have a white power group's support."

"Well, for once I may just agree with them. But my job is to make sure that we can stay solvent without that support. Since you mentioned it, though, is that SS&H reorg making progress?"

"Oh, about what you'd expect. I think I have them convinced that combining their talents and leveraging resources is more likely to be productive than back-stabbing. But don't expect any major changes in the college's structure, like new departments or anything like that. They'll probably agree to form some kind of joint planning committee, though. Maybe that'll make things work."

"I'm grateful for your doing this, Hal. The acting dean has his hands full, and we need to get our house in order before we do a search for a new dean. My job will be to find the right candidate to put the final touches on what you're starting."

"And, right now, my job is to get home and put together dinner. Annette likes her new assignment, but she sure has a weird schedule."

“Which won’t get better if Schoenfield really is involved in all this stuff. Good luck, Hal.”

\* \* \*

Southeastern Utah, being big and mostly empty, breeds people who think nothing of a 200-mile drive for lunch. It was therefore not surprising that the investigators from the Utah State Patrol had decided to commute rather than to stay over in Durango. What was surprising was that Reid Tompkins, Esq., agreed to postpone until afternoon the joint interview involving Lolly Markham, himself, the CBI, and the Utah crew.

Normally, Lolly would not have stayed in custody for so long without being charged with something. Annette was prepared to do that, but her best shot at the moment was pilfering license plates. She was therefore pleased that Tompkins had asked for the afternoon session.

What she didn’t know was that Tompkins needed the extra time to prepare his client. And what *he* didn’t know was that his client wasn’t her usual pliable self.

“Lolly, we don’t have a lot of time, so we really need to put it to good use.”

She had been pacing about the private interview room and now stopped, leaned over the table toward him, and looked daggers his way.

“Up yours, Tompkins. I’m the one who’s been stuck in this rat hole. Get me out of here!”

“I can do that, and will. After they question you. And we need to be ready.”

“Ready for what? I think I’ll just tell them what happened!”

Tompkins took a minute to suppress the fear surging through his nervous system. Lolly, he saw, was staring at him defiantly. Definitely looking her age, and then some. Bedraggled and, well, puffy. He’d brought lunch, but she was apparently on a hunger strike. Not that losing a few pounds would hurt her.

“Lolly, there’s no reason to do that. You’re just as committed to what we’re all trying to accomplish as I am. And we have to stick with our story, or our whole effort will be ruined.”

He paused and summoned up a sincere expression.

“And you know that I’m still in love with you. I won’t let them hurt you.”

She had been staring out the window, arms crossed against her ample chest. Then the magic words had their effect, and her icy defiance began to melt.

He stood up, walked around the little table, and wrapped her in hug.

“It’ll be OK, I promise. Look, why don’t you eat something. I got all this stuff from the deli. And let’s talk about how to handle these people.”

“Reid, it was so lonely and cold here last night.” Sniff. “You feel so warm. Mmm. Oh, what’s happening here, you naughty boy? Do you want to warm me up? Hmm?”

She sank to her knees in front of him and began fumbling with his belt buckle.

“Here? Lolly, we don’t have any time for this right now.”

“Oh, c’mon, Reid, it never takes you much time.”

Maybe she was on the slippery slope toward middle age, but she still knew that playing the coquette would push his buttons. He stepped back, embarrassed by his reaction to her.

“Lolly, we’ve got to be ready when those CBI people come in. Look, I’ll take you to the Strater tonight, after we get you out of here, OK? Then we can take as long as we want. With champagne and oysters.”

He sat back down on the other side of the table.

“Getting older, baby? Need oysters these days?”

She licked her lips, showing more tongue than was really needed.

“Lolly! Get with it, OK? Now. Tell me again what they told you when they picked you up yesterday.”

Now she was pouting.

“Well, just that she was with the CBI and needed to question me. I asked what about and she wouldn’t say. We got down here, and I was scared, so I started asking for you. They told me they would provide a lawyer if I needed one, but I kept asking for you. And I asked what are we waiting for and they told me that you couldn’t get here right away. That’s all I know.”

“OK, well, here’s what I know. Remember when you were in the car over in Monticello, and that sheriff’s deputy was talking to you? He saw your tattoo, because I heard that there was a description of it being circulated. And I’m certain that before he got out to talk to you he called in the license plate number. That’s standard procedure. So they know about the stolen plates and probably found you through the tattoo somehow. I think that the thing to do is to stick with the story you told the deputy. About getting away to think after a fight with your husband.”

“Except I don’t have a husband.”

“Right. OK, so he becomes a boyfriend. You told the deputy that it was your husband because it’s Utah and you wanted to sound respectable, OK?”

“OK. And his name is ordinary, like, like, Robert Jones, OK? Uh, Bob. Right?”

She was beginning to get interested in creating the story.

“Sure. Now, they’re going to ask where you were staying, I mean, what motel. You had a fight and had to get away from him. So you left him somewhere. A motel. Has to be a motel because it was, what, three in the morning?”

“OK. What motel?”

“I checked, and there’s a Super 8. They’ll find out, probably, that there wasn’t a ‘Robert Jones’ registered, though. So tell them that you think that maybe he registered with a fake name. Because you’re not married and it’s Utah. That’s consistent with the boyfriend thing. And consistency is what we need.”

“What about the stolen license plates?”

“It was Bob’s car and you didn’t know they were stolen. Just that he lives in Cortez, you met him at a bar, pick your favorite one here in Durango, and you went away for a few days together. To Moab. To go camping. Got it?”

“Uh, I think so. New boyfriend, met him in a bar. Robert Jones, from Cortez. Went camping in Moab, in his car, that green Blazer. Stayed in the Super 8 in Monticello because it was too late and we were tired. He told me he was using a fake name, because it’s Utah, but didn’t tell me the name. Had an argument, about sex, why not?” She winked at him, and his body tingled. “Went for a drive to think, and the deputy stopped to talk to me. That’s all I know.”

“Great! Lolly, you sure do a good job of hiding your smarts sometimes. And, listen, if they ask you anything you have a concern about answering, don’t answer. Look at me. I’ll be right beside you, and I can guide you. This is what they expect anyway. I’ll whisper in your ear.”

“Blow in my ear and I’ll follow you anywhere, lover.”

The tingle returned, and he began wondering how much time they really had.

But then there were noises in the hallway, several people, with keys.

\* \* \*

## Nine

Although the Reverend was part of Schoenfield’s inner circle, he wasn’t privy to everything. The final planning meeting for the ambush in Boulder involved only the Senator and his operatives Pickle and Mad Dog.

“We’re all set, Senator. Equipment’s ready and in place, all tested and everything. But I have to keep telling you, I don’t think there’s much of a chance for accuracy with this set-up.”

“And like I keep telling you, Pickle, don’t sweat it. Just the event will send our message. Go over this one more time for me, willya? I need to hear the details again.”

“Well, Senator, like I’ve told you, this all started with an opportunity we heard about. There was this article in the paper about how the White House announced a visit by the President to NCAR, in Boulder. And how NCAR was going to get all fancied up for the visit, including refurbishing some of its educational displays. They have a bunch of old scientific instruments, and some newer displays, in their lobby, and school kids and the public just love it.”

Pickle squirmed in his leather chair, trying to get more comfortable.

“So,” he continued, “it seems that one of the displays is this old telescope, originally invented by one of the NCAR scientists to look at the Sun and to record something about it I don’t understand. Sunspots or something. This guy, the inventor, he’s retired now. But NCAR asks him to polish up this old telescope for the President’s visit. There was another newspaper story about this, in the *Denver Post*, one of those human interest things. So they pack it up and the guy works on it in his garage. When you expressed interest in making your statement, well, I figured this was an opportunity not to pass up. So we, ah, worked with this old guy to help him polish up his telescope. That’s how we got the equipment installed. The rifle is inside the telescope tube, mounted so that it can fire down into the main part of the lobby from the balcony it’s sitting on. It’s completely hidden, so no one will find it unless they completely disassemble the whole thing. The camera is also inside the tube, but the lens is on the outside. It looks just like it’s supposed to be part of the instrument.”

Schoenfield was staring at the ceiling, trying to find flaws.

“And so it’s in place and all you have to do is use the remote controller to turn it on and watch for the target. What’s the plan for your cover? The remote doesn’t have lots of range, I expect.”

“Pest control. We’ve got signs and uniforms to make the van look just like a pest control truck. It’ll need paint, too, but that’s easy. That way, we can park in the subdivision down the hill from the laboratory and be inconspicuous. That’s within the range of the transmitter. Then we wait, trigger the rifle when we see a chance, and drive away while there’s still confusion at the laboratory. Then we’ll

take the signs off the truck, probably down in the parking lot of that big shopping center at the base of the hill, change clothes, and head back here.”

“Right. And this old guy. The retired scientist who first invented this, this telescope instrument you got access to?”

“Well, he’s decided to take a long, long trip to a remote place. Left in a big hurry. No one knows his itinerary.”

Pickle didn’t succeed in looking innocent.

“Sounds solid. And you got that special message on the bottom of the controller box, right? It’ll be amusing, and it’ll confuse things further.”

“All set.”

“Great. Now. How are you coming with plans to deal with Mr. High-and-Mighty Charles Shure?”

Pickle looked uncomfortable, and Mad Dog’s eye wandered more randomly than ever.

“That’s going to be a tough one, Senator. See, he’s got this driver, the same one who was up this way last month, who’s really more of a body guard. And he’s using an armored car these days. You said you wanted an accident, and so we’ve been trying to fix some kind of traffic deal. But I don’t know.”

“Hmm. Let me think some more about it. I don’t guess there’s any real hurry. In fact, if we wait, he’ll become less and less concerned and maybe ease up on the security a bit. Stop using that armored car, drive himself, and so on. Or maybe we can think of another kind of accident. He must fly places. How about some kind of airplane accident?”

“He has a corporate jet and a helicopter. And he flies commercial a lot. I’m not sure I could get a commercial plane down, though. And, anyway, remember that all aircraft accidents are investigated by the feds, right? And, of course, airport security is a tough nut these days. Isn’t there some other way we could get back at this guy?”

Schoenfield, although autocratic, also knew when to listen to advice, especially from an expert such as this.

“Got something in mind, Pickle?”

“Well, do we really need a hit? I mean, couldn’t we get him through his company, or something like that? From what you’ve told me, his company is his life.”

“Yeah, well, I own stock in that company, and I sure don’t want to shoot myself in the foot.”

“So sell it. Divest. Then we could call Timmy and see if he has any ideas.”

A smile materialized on Schoenfield’s grim face, little by little becoming an intense, evil grin. His left eye twitched a little.

“Timmy. Sure. I hadn’t thought of him. He does good work, doesn’t he?”

\* \* \*

Mostly, Hal’s habit of coming in around mid-morning in the summer worked fine. He could get some work done in the peace and quiet of home, and nothing much was happening up on campus anyway.

On the other hand, sometimes there was.

He arrived at about 10:00 the next day, looking forward, for once, to the budget meeting he had scheduled with the provost at 11:00. He was going to be able to present John Martin with some good

news: his college was going to finish the fiscal year with a slight surplus. And there was nothing else on his schedule.

But then he walked into his office, into the ante-room, Alice's little domain. And there on the couch, nodding, presumably, to whatever was emanating from his headphones, was a young man, a student by his age. Coffee-colored skin, fairly well muscled, far too tall to fit comfortably on the couch—his knees were practically touching his chin—probably a student athlete. At least he should be, Hal thought. The basketball team could use all the help it could get.

“Morning Alice.”

“Good morning, Dean Weathers. This is Jamal Washington. Here to see you.” She raised her voice a few decibels. “Mr. Washington? MR. WASHINGTON?”

His eyes opened, and he smiled and began to unfold himself from the couch. The process went on for some time, and included his pushing a button on the gadget the earphones were plugged into and removing them from his head. Finally, he was standing, towering over Hal by about a foot.

“Mr. Washington, this is Dean Weathers. Dean Weathers, Mr. Washington tells me he was sent over here by the Athletic Director to discuss tutoring.”

Hal's synapses clicked into place. Feeling short, he extended a hand, in an upward direction, to the student.

“Nice to meet you, Mr. Washington. Come in to my office. I think I have a chair that will fit you better than this couch.”

They settled themselves—Hal's side chair was still far too small—and Hal guessed that the young man would be shy.

“So Charlie, I mean, the Athletic Director, sent you over to talk to me about tutoring, hmm?”

“Yes, sir. He wants my grades up so I'll be eligible to play this fall.”

“Play...”

“Play ball. Basketball. I've got a scholarship, but my grades are, um, too low.”

“What about you? Do you want your grades up? I mean, sure you do, so you can play. But what about besides that?”

“Well, my Momma would sure like that. And I guess I would, too. But the science course I signed up for looks pretty tough for me. And I don't know about the computer course.”

Hal smiled, a friendly smile, he hoped, and looked out the window.

“Jamal Washington. Now why does that name ring a bell? Do I remember your name from the all-state team?”

“Well, I was on the all-state team. On the Parade All-American Team, first team, too.”

“Right! That's right. And you took a scholarship to come here, huh? How come? I mean, you must have been recruited by the big-time schools, Duke and Arizona and so on.”

“My Momma, she wanted me to come here. My brother went here, and she was real impressed with the school.”

“Your brother...”

“Radford. He played football. He graduated a couple of years ago.”

“Radford Washington? Oh, yeah. Defensive lineman when we won the national championship. I met him a couple of times. A good guy. Big, but not as tall as you. Fast. And smart. He always seemed to know if a play was going to be a run or a pass. Sacked a lot of quarterbacks that way. Let’s see. He went to the Bears in the second round, right?”

Jamal was clearly impressed with Hal’s knowledge of Frémont State sports. “Yeah, but he busted up his knee in training camp. But, see, what impressed my Momma so much was that he got a job in the Bears’ front office, on account of his education here. So here I am. Also, it’s a lot closer to Denver than Duke and some of those other schools that offered me scholarships. And my Momma, she wasn’t going to let me go up to Boulder, no way.”

“I don’t remember you from last year’s team, so this is going to be your first year?”

“Well, I was here, red-shirted so I could get my grades up. Also so I could put on some weight. Coach, he says that I’ll get knocked around out there and I need to be stronger. So I’ve been trying to bulk up and get my balance improved, stuff like that. Anyway, I thought I was doing OK with my grades. But then some committee changed the rules.”

“Oh. Right. Well, it’s appropriate that you’re here, because that’s my fault. I was on that committee. We raised the requirements earlier this month. Sorry.”

“It’s OK. I just have to get ‘A’s—in that Intro to Natural Science course I’m going to take this summer and that computer course, and I should be OK to play. Before, ‘B’s would have been good enough.”

“Are you worried about the courses?”

“Well, they look hard, but no. Um, mostly, no. But I don’t know about an ‘A,’ especially in that science course. That’s, like, something different for me.”

Well, normally a ‘B’ in that course would be something to be proud of. We designed the course to be challenging.”

“What’s covered?”

“Just what it says, ‘Introduction to Natural Sciences.’ A little geography, geology, weather and climate and some oceanography, some ecology, and so on. It’s the first third of the elective sequence for the general majors, like that university studies program. Are you in that?”

“No, I’m in theater and dance. I figured the dance part would help my moves on the court. And I kind of like acting. What are the other electives?”

“Two other courses in the departments. You pick based on what you’re interested in, like a geology course and an ecology course.”

“You said weather, huh? Maybe I’ll take that one. People are always asking me ‘How’s the weather up there?’ and I need a snappy answer.”

“Hey, get interested in it, combine it with theater training, and become the world’s tallest TV weather guy. In the meantime tell them that it’s OK but that the contrails make you sneeze.”

“Say what? Uh, sir?”

“Contrails. You know, those stripes of clouds that are made by jets, condensation trails. Someone asks you how the weather is up there and you hit them with that one. A snappy answer that will shut them up. When it gets worn out, we can think up another one. The more absurd the better. Unless you like being asked that kind of thing.”

“Well, no, I really don’t. It makes me uncomfortable.”

“I don’t blame you. Hit ’em with something like that contrail answer, though, and I bet they stop asking.”

“Uh, I’ll think about it. But what about the weather guy thing?”

“Sure. You’re good looking, you speak well, especially for your age, and you said you like acting. Learn some weather stuff and get a job with a TV station. After your basketball career, I mean. But first we’ve got to get you to an ‘A’ this summer. Let me make a couple of phone calls and we’ll set you up with a tutor. And you can always come and see me if you need a second opinion, like another explanation for confusing things. Like the Coriolis force.”

“What’s that?”

“It’s what makes weather systems spin, you know, like you see on satellite loops on TV.”

“Coriolis? That some foreign word?”

“A guy’s name, who first figured it out. I think. Anyway, a famous weather guy from a hundred years ago, or more, I guess. Point is, the Coriolis force gets everyone confused the first time through. If you can’t understand it well enough to explain it to your teammates, come see me and I’ll help you with it.”

“Well, thanks. I don’t think the AD was expecting a dean to tutor me, though.”

“Probably not. But it’s summer and I have the time. Besides, it’ll make the basketball season that much more interesting for me. And we can also help you find a computer tutor, if you need one.”

“Cool. I appreciate it. I’m good with computer games but, uh, I kind of think that the course will cover other things. I’m sure I’ll need help.”

“That’s why we’re here. We’ll help and try to make this as interesting for you as we can.”

\* \* \*

“So, that’s her story and she’s sticking with it, huh?”

Derek Petersen was amused, in contrast to Annette’s disgust.

“Yep. It’s always remarkable to me that people believe they can conjure truth from fiction. And consider the contrast between Charles Shure and his driver the other day and this Markham person. The story they told left us satisfied, like dinner at a four-star restaurant. The story told by Markham and her lawyer was more like scrounging appetizers from a dumpster. And they expect us to believe it.”

“Has she identified this boyfriend?”

“That’s our next step. She’s shielding him, for now. The lawyer, this guy from Cortez, Tompkins, I think, was whispering in her ear the whole time. Actually, it was surprising. He seemed more nervous than she. I checked on him, and he’s not really a criminal attorney, just an environmental lawyer. Sues the Forest Service a lot, on behalf of advocacy groups. So why he’s representing her is another interesting question. She insisted on him.”

They were sitting in Derek’s cluttered office catching up on each other’s work load. As much as she was bored with it, Annette knew she needed to stay informed about her budget and other administrative matters, and she had quickly learned that Derek appreciated being kept up to date on the progress of investigations. As Annette was staring out the window trying to talk herself into a better mood, Sally Brigman walked in.

“Oh, here you are. I was just going to ask Mr. Petersen if he knew where you went. This fax just came in for you.”

She handed Annette a sheaf of papers.

“Thanks, Sally. Hmm. Five pages from the Mineral County Sheriff. You know him, Derek?”

“Sure. Ralph Wertlinger. Under-funded, under-paid, over-worked. Mineral County is one of the poor ones. Good guy, but stuck in a lousy situation.”

“Says here his guys found a corpse. No, some lumber mill guys found it and called Ralph’s guys. Let’s see. Looks like an accident, sort of. White male carrying the Colorado Driver’s License of one David Wellington, of Alamosa, crushed beneath a collapsed log pile. Along with his car. The body looks like the CDL picture, as much as they can tell through the damage and decomposition.”

“A lumber-mill accident? Not unusual, although they don’t happen nearly as often as they did in the old days.”

“Except that they have questions.”

Annette began ticking items off on her fingers.

“Like, what was the victim doing there? Why did the pile collapse? Why was he out of his car? Uh, he was found between the crushed car and the center of the pile. It says his pants were unzipped so they’re speculating he was taking a leak. And when did this happen? Looks like it was several days ago, but they don’t know exactly, yet.”

“They asking for help?”

“Not here.”

She had shuffled rapidly through the paper.

“They’re just letting us know what they have. A note here says that we’ll see it in the paper, but they wanted to inform us officially.”

“Protocol. You’ll find that some of the counties are better than others. Like I said, Ralph’s a good guy.”

“You’ve met him, then?”

“A couple of times. Talked on the phone a few times, too.”

“Maybe we could call him and you could introduce me. On the speaker.”

“I hate those things. But, yeah, that’s a good idea. Is there a number on that fax?”

She shuffled through the paper some more, and he dug around on his desktop, looking for the speaker phone. She found a number, and he found the phone.

“Sheriff’s office, Darla speakin’.”

“Darla, this is Derek Petersen, CBI over in Durango. We just got a fax from you folks. Is Ralph around?”

“Did you get all five pages? I never trust this thing.”

“All five, nice and clear.”

“Great. Here’s Ralph.”

“Derek! How are ya? I hear you got stuck behind a desk.”

“I did indeed. Think I’m already gaining weight. Ralph, I want to introduce you to Bob Weldon’s replacement, Annette Trieri. She’s here on a speaker phone.”

“Sheriff Wertlinger, nice to talk with you. I’m planning to get over your way as soon as I get the chance, so I can meet you personally. I’m sorry that I’ve been too busy getting my feet under me to make it over there yet.”

“I understand completely. Don’t think of it. Nice to talk with you as well, Ms. Trieri. We’ve heard a lot about you. Good things. I bet you’re calling about that fax we sent your way.”

“Indeed we are. I’m impressed with how complete it is, given that you just found the body this morning.”

“Well, superficially, it’s transparent. Guy’s hanging around a pile of logs that collapses and squishes him. And his car. Naturally, we’re looking beyond the superficial. And that’s not quite so transparent.”

“My thoughts also.”

“We found out a little more about him since this morning, assuming he was carrying his own driver’s license. He was an environmental activist from Alamosa. Worked at Adams State College, in the admissions office. I’m told he was trying to get a student group started, probably modeled on one of the groups over your way, at Frémont State.”

“Are there specific indications that this wasn’t an accident?”

“Well, that’s one of the things we’re looking into. Ya see, this happened some days ago, maybe a week. The guys at the mill finally figured out something was wrong by the smell. Nobody noticed it before because the log pile looked just like all the others.”

Annette looked at Derek Petersen, puzzled. “Huh?”

“Well, see, this pile of logs collapsed and squished this guy, but it collapsed into the same size and, uh, configuration as all the other ones, their usual stack of big logs. So that means it was different before it collapsed. So maybe someone set this up, by re-piling the logs in that pile in a way so that they’d collapse back into the original configuration. And then they pushed them over on this guy Wellington.”

Annette looked startled and sat down, carefully, in Derek Petersen’s side chair.

“Sheriff? One reason I was hired here was to tackle a case, or set of cases, that haven’t received much publicity. Over the past year or so there have been nine or ten suspicious deaths, some definitely murder, of people active in environmental issues. All here in the Four Corners region. A couple in New Mexico, one in Arizona, one in Utah. All with very clean crime scenes, and a couple possibly accidental. Your crushed guy sounds like he could be part of this pattern.”

“Well that sure puts a different light on things.”

“The other Colorado cases are all over the place. A double murder, a car bomb, west of Antonito; an execution—bullet in the back of the head—at the Four Corners Monument; a car accident over by Cedaredge; another double homicide up in Boulder. And, just last month, another execution over by Norwood, with the same gun as the Four Corners Monument one. One of the two in New Mexico could have been an accident, guy fell off the Taos bridge into the Rio Grande Gorge. The other one, and the ones in Arizona and Utah, were definitely homicides.”

“Ma’am, could I put you on hold for just a second? I want to call my guys over at the scene and tell them we’ve got a homicide on our hands, probably.”

They heard the clunk of the receiver's being set down and then a jumble of background noise, including mumbling sounds that could only have been instructions.

"Hello? You folks still there? Thanks for holding on."

"Would you like us to send a forensics team over? Uh, I don't mean to suggest you folks can't handle things, you understand. It just seems like we should offer."

Annette was treading carefully. Her relationships with the sheriffs of the counties around Durango were solid, but she hadn't dealt with Mineral County before. Getting off on the right foot seemed wise.

"Well, I don't know that it'd be worth the effort. I mean, thanks for the offer and all, but I don't think there's much here. We'll take the car to our garage and go over it carefully, and it'll be there if you want to have a look at it. So there's no hurry there. And the scene was pretty well disturbed by the time all the logs got moved off the body and the car. The guys from the mill are saying that it looks as if the logs were moved about a week ago, they were looking at cuts on the bark and so on. Which would fit with someone fixing that pile so it would collapse easily. That, I mean moving the logs, would require machines, but all of the mill's big machinery has been in use ever since. So there's not going to be anything there to find. We'll do an autopsy, of course, but I don't think anything remarkable will come from that. This guy Wellington was squished by the logs, pure and simple. And we're already working with the folks in Alamosa, looking for anything at his residence. Maybe there will be something in his files or in his mail, or something like that."

"Well, if there's anything we can do, please do call us in. I'm told it's our job to help and not to grab headlines or credit from you folks. And it seems like that's the way things have been done, according to the sheriffs I know from around here. It'll sure be the way I'm going to run things."

"Tell you what, Ms. Trieri. You take the headlines and I'll take the credit. If I get in the papers too much, nobody around here is going to vote for me no matter what. Anyway, we'll keep you up to date on what we find out. And we'll yell for help if we need it, you can be sure."

"Don't hesitate. Nice talking with you. I'll get over your way as soon as I can."

\* \* \*

Timothy Langer was frustrated, stage four in the evolution of his emotions. He was finding the process of trying to hack his way into the UNELECO servers to be an emotional roller-coaster.

At first he'd been surprised and amused that he couldn't work his way in via the usual back-door security holes. But they were all patched, some by means of algorithms he'd never heard of, never even dreamed of. Then he was outraged that the sophisticated tricks he knew of to gain access via the UNELECO web site didn't work—they always did, *always*. But UNELECO's web site, the interesting part, had some kind of triply circular firewall system, and getting through that required use of two separate one-time-only passwords. After that, when his personal bag of e-mail tricks failed him, he was simply in awe. Now, while waiting for a brute-force attack to have its inevitable success, he was getting frustrated. Bored from waiting and frustrated from failure.

Normally, he'd simply find something else to do while waiting, but he was under no little pressure. This particular client, unlike others, was not interested in excuses, no matter how valid they might be. He wanted results, yesterday. Because the brute-force attack simply could not be rushed, however, Timothy was forced to wait. And wait. And hope that his client wouldn't call to check on progress.

It made him feel better that it was only this first time through the firewalls that would require patience. Once inside, he would set up a hidden login account, probably piggy-backed onto an existing

administrative one, and in the future it would be trivial. But for now, patience was more than a virtue, it was mandatory. There was simply no choice.

With the waiting, he had time to think. It occurred to him that he really didn't have a plan once his attack succeeded. Of course, there would be the usual housekeeping to be done, associated with creating his hidden login and so on. But his instructions were simply to snoop around and see what kind of system UNELECO had and what its vulnerabilities might be. This, he realized, reflected merely the computational naïveté of his client, because he knew that he wouldn't be finding one system but rather a network of all sorts of systems, each with its own peculiarities and vulnerabilities. Once inside the UNELECO firewall, these vulnerabilities would be unprotected, Timothy figured, at least if his experience with other corporate and governmental local area networks was any indication.

Remembering his experience made him smile. The worst was that server at the state police headquarters. Of course, they were cops, not computer jocks, but, really, there was no excuse for that sloppy level of security. He'd had no trouble at all tapping into their files. This had made his client very happy indeed. On the other hand, the best security so far was at Microsoft. Maybe because they developed their own operating system, they knew how to keep it secure. Or maybe they were all just afraid of Uncle Bill. Others that should be solid really weren't, like at the CIA and some of the other three-letter agencies in Washington. But they were pretty good, he thought, and that would keep everyone out but experts like himself.

He wondered if the UNELECO network would include its classified servers as well as all of the other ones. He'd seen from their public web site that they did a lot of work for the military, and their job postings talked a lot about ability to get and maintain security clearances. Classified systems were always a little more challenging than open systems, so he was hoping he'd be able to find some to try to get into. He liked challenges.

He was startled from his reverie by the ringing telephone, his cell phone making tweedling noises.

"Hello? This is Tim."

"Timmy, my boy. How are things going? Making any progress?"

"Oh, hello, sir. So far, it's not the kind of progress I'd like, but it is progress. I found out what won't work. Now I'm trying what will, but it's a slow process."

Tim hoped his nervousness didn't come through in his voice.

"I thought you told me it would be finished by now."

"Ah, well, sir, I told you that I hoped it would be. But it turns out that these folks have quite solid computer security. And now all I can do is work my way in by brute force."

"What does that mean?"

"Well, I found the names of various accounts on their systems by looking carefully at the UNELECO web site. Now what I'm doing is trying to access one of those accounts by using passwords in sequence, the computer does it from passwords from in a dictionary, sort of. So it just takes time."

"What if they notice all the failed attempts?"

"This is always an issue, but what I'm doing is rotating among login names rather than using the same one all the time. And I set it up so that it will look to their computer as if these attempts are coming from different places, so they shouldn't notice anything strange. See, this kind of thing happens to big systems all the time."

"How long?"

“I really can’t say precisely. It’s never taken longer than three days with other systems, though. Uh, sir? One thing I thought of is that I really don’t know what to look for when I’m in there snooping around. Could you give me some guidance?”

“What I want you to do is to get established on the UNELECO network without arousing suspicion. Then we wait a few days to let dust settle and let you figure out what their network is like, what kinds of computers and all that. I remember when you set up your access on the state patrol and CBI system that it took you some time to figure out its layout. UNELECO’s is probably lots bigger and more complicated. So when you get in there, check out the layout, and then I’ll get back to you in a few days. But first you’ve got to get in. Is there some way to speed up the process?”

“Well, I could use a more powerful system than this one I have here at home.”

“Why aren’t you doing that already? You know I’m in a hurry. And you know how I dislike waiting.”

Langer shuddered at the implied threat.

“I could use one of the systems at the university, but that would increase the risk, some. And I know that you want this to be done carefully.”

“But you know I’m in a hurry. Why would it increase the risk? And how would it speed things up?”

“A more powerful computer, like a real workstation, could run lots of my scripts in parallel, try lots of logins simultaneously, sort of. But sometimes the systems people watch processes and someone could notice what I’m doing. That’s never happened to me, but it could.”

“Timmy, you know I’m in a hurry. Let’s pick up the pace, OK? After all, I’m paying you quite handsomely for this, aren’t I? And I’m also keeping quiet about our little secret, aren’t I?”

“Yes, sir, Senator, you are, on both counts. And I appreciate it, I really do. I’ll speed things up as much as I can, I promise.”

“You do that, Timmy. I’ll give you a call tomorrow to see how things are going.”

“Yes sir. I’ll give it everything I’ve got, to get into that system.”

There was the sound of a telephone receiver being clunked down on the other end, but Timothy was shaking too much to hear it.

\* \* \*

## Ten

The story finally appeared in the next morning’s papers. “Alamosa Resident Crushed at Creede Lumber Mill” led into the *Durango Herald’s* subdued treatment, in which the facts were reported along with remaining questions, and a brief biography of David Wellington served as an obituary. The *Frémont Free Press*, true to form, played up the industrial accident angle and declared Wellington to be a hero with its headline “Environmentalist Martyred at Mill.” The story talked of conspiracies spun by the logging industry, of Wellington’s valiant fight to preserve old-growth forests, and of the day in the future when trees would be accorded the same rights as people.

Steve Rutherford’s heart was with the *Free Press*, but his head was with the *Herald*. It was clear to him that there were unanswered questions, but surely, he thought, they would be the object of an

investigation, if not by the sheriff over in Creede then by the timber company. He knew some of the people who ran the mill there, including the owners of the mom-and-pop outfit calling itself Upper Rio Industries, and there was no way that they were part of a conspiracy. The *Free Press* was full of it. But, still, there were some strange inconsistencies.

If this weren't bad news enough, it appeared that his friends in SCREW had taken the name of their organization a little too literally. Tompkins had called, from Lolly's place, according to Rutherford's caller ID, at 7:00 this morning. He wanted them all to get together to discuss how to deal with Lolly's legal predicament. It seemed that the CBI was insisting that Lolly produce this boyfriend with whom she'd been staying in Monticello. Plan A, Tompkins said, was for Rutherford to play the part. On his drive over to Lolly's, Rutherford was working hard on formulating a Plan B. For one thing, he wasn't going to just play at being Lolly's boyfriend while Tompkins was actually enjoying being her boyfriend. For another, he had already thought through the down side: how would he explain to the CBI and the Utah cops about those license plates?

He pulled up in front of Lolly's small bungalow on the west bluff. The neighborhood had undergone a renaissance over the past couple of decades, with most of the small houses, originally built by the coal company for its workers, having been remodeled and upgraded to modern standards. Lolly had mentioned wanting to remodel her house but, obviously, this hadn't happened yet. It needed new siding and a roof, and window upgrades seemed in order. The yard was also neglected compared to the neighbors.

Rutherford gathered his thoughts as well as the newspapers. Tompkins hadn't mentioned anything about Wellington during the earlier phone call, and they all needed to discuss that one as well as how to play Lolly's story, so he'd brought reference material.

As he was getting out of the car, he heard a noise from the house and looked up to see Lolly hurrying down the walk toward him. Wearing, well, not much. A lightweight summer bathrobe over a nightie. Both pretty transparent. Damn, he thought, they *are* big.

"Bobby, baby, I thought you'd never get here! I'm so glad to see you!"

She waltzed around the car to where he was standing, threw her arms around him, and planted her mouth squarely on his. He felt her tongue insinuating itself between his teeth.

After a long time, at least what felt like a long time, during which she ground her body into his, she stepped back and batted her eyes at him.

"C'mon into the house, honey. Have I got a surprise for you."

She wagged her backside, which made the rest of her waggle in syncopation. Why, he wondered, was she talking so damned loud? Then she practically hauled him up the walk to the front door.

Once inside, it all changed.

"Whew!" She was out of breath, and blushing. "Steve, I'm sorry for that, but we thought we should put on a show for those cops out there. Maybe they got some good pictures. Excuse me, I've got to go put some clothes on."

And she dashed down the hall, her bottom in sublime motion beneath the filmy fabric, and closed a door behind her. Rutherford stood, dumbfounded, staring down the hall.

"I don't think it'll win any Academy Awards, but maybe it'll help."

Tompkins' voice from the living room behind him made Rutherford spin around, his anger rising as his erection fell.

“What the hell was that all about? I thought we were going to discuss this whole thing, but now you’ve got me up to my eyeballs in it. Goddammit! There’s no need to keep getting in deeper with this. All we have to do is stand on the story that we have. Putting me in jeopardy isn’t going to make things better!”

“Steve, Steve, calm down. The CBI wants this boyfriend for questioning. Lolly’s dead meat unless we produce him. It’s got to be you.”

“No it doesn’t. She can claim she doesn’t know him well enough. You gave them a name, right? A name she was supposed to say she thought was fake, right? Just stick with the damned story, man! Except now it’s too late.”

Tompkins tilted his head to the side and stared.

“Hmm. Maybe not. I think maybe we just increased our options. Thing is, they released Lolly on recognizance while they check out her story. Said they would probably want to talk with her again and that they wanted to find this boyfriend. We didn’t promise to produce him, though. Maybe we could stick with the story. It would make her out to be something of a slut, though. Going off for a weekend with a guy whose real name she doesn’t know. I mean, the story so far is that her boyfriend is ‘Bob Jones,’ who probably registered at the Super 8 with a fake name. But ‘Bob Jones’ could also be a fake name. We, I mean, Lolly, already told them that she’d met this guy only recently.”

“She called me ‘Bobby’ out there, man. If the cops were listening... hey, what cops? I didn’t see any cars out there with people in them. Who was that show for?”

“I was watching. Across the street and three cars down. They ducked when you drove by. But they were watching the performance. And it sounded to me like ‘Baby, baby,’ so our options are still open.”

“Well, let’s exercise those options. Better she should come across to the cops as a slut than have me questioned about the license plates and everything else. The more people we have trying to tell the same lie, the more likely we’re going to screw up.”

“Who’s a slut?”

Lolly emerged, wearing jeans and a tee shirt, both opaque, to Rutherford’s simultaneous disappointment and, because he really didn’t need the distraction, relief.

“Nobody, at least not here. What we were saying is that maybe we can avoid producing your boyfriend, this Bob Jones character, by just letting them think you are. What if ‘Bob Jones’ turns out to be a fake name, too? You don’t know where he lives, or his phone number. You just met him in a bar and then went off for a weekend in Moab with him.”

“I guess that would make me kind of a slut, wouldn’t it?”

“But who cares what they think, as long as this all fades away? It’s like this: They let you go, you stay around and act cooperative, and this Bob Jones character never calls or anything so you don’t know how to find him. He’s a jerk, love ’em and leave ’em, wham-bam thank you ma’am, all that. You’re pissed at him for not calling. But since he hasn’t, you can’t put the cops onto him. Does this make sense?”

Tompkins had bought into the story completely, to Rutherford’s relief.

“It sure makes sense to me. Lolly can kiss me any time she takes a notion to, but we’ve got to quit embellishing this story, or we’re dead.”

Rutherford was watching Lolly as he said this, and he was gratified to see her blush again. It made him tingle.

“Well, I guess so. I guess I really don’t care what the cops think of me. I mean, who are they to judge? So, I just sit tight and wait for them to call me?”

“Sure. Life goes on, things are normal, all that.”

“Right. And I’m not the boyfriend of the story no matter the little charade out there. Now. Did you guys hear about Dave?”

Rutherford plopped the newspapers on Lolly’s coffee table.

The plopping noise, transmitted cleanly through the single-pane picture window in Lolly’s living room and picked up by the ultra-sensitive directional microphone aimed at it, made the two undercover officers, one from Utah and one local, wince. In unison, they removed their headphones and griped, the Colorado officer with the more colorful language. Consequently, they missed the part of the conversation inside the house about Wellington’s connection to SCREW and whether the Creede sheriff would bring the others into his investigation.

But the tape machine didn’t miss anything.

\* \* \*

Even though it was something of an emergency meeting, it needed to be formal, very formal. Hal had therefore asked Alice to have Jamie McFarland wait for ten minutes and then to call him on the intercom. He disliked using such intimidating tactics, but sometimes they were for the best. He needed Jamie to be off balance for this one, even if the wait did make her a bit angry. When Alice finally buzzed him, he asked her to send Jamie in.

“Come in, Jamie, please sit down. Sorry to keep you waiting.”

Hal was sitting behind his desk, in the Power Seat, and the chair he indicated for Jamie was across from him. Annette sat off to one side of Hal, also in a position of superiority.

“No problem, Dean Weathers. What did you need to see me about?”

She didn’t appear to be overly nervous, Hal noted.

“A telephone call that found its way to me this morning. We have a problem with our systems.”

Jamie, the computer systems administrator for the natural sciences college, instantly went on alert.

“Why would someone call you about a systems problem?”

“The nature of the problem. The fact that the call got routed to me via Provost Martin’s office is a clue to its severity. Another clue is sitting here. Let me introduce Annette Trieri, Colorado Bureau of Investigation. She’s the director of the CBI’s southwest office here. The reason I asked you to come in is that we need your help. It seems that someone has been using our systems to try to hack into the computers of UNELECO, some of which are military classified systems. UNELECO has a whiz-bang computer security shop and they traced the attempts to our systems.”

Hal was holding back the bombshell for now.

“Uh, what’s UNELECO?”

“A conglomerate based in Colorado Springs. They got their start in electronics and they still do a lot of R&D work for the military. But they’re also involved in a lot of other things. For example, the outfit that ran that mill over in Utah that got burned down last month—remember?—that’s a UNELECO division, Forest Fiber Products. But this computer attack was on their corporate server network, which includes the military R&D. Their computer security people have been watching this hacker trying to

weasel his way in for some time. Initially, it was happening slowly, the attempts, I mean. Then last night, it picked up and that's when they were able to trace things back to our systems. Before, the attempts were routed through faked-up accounts on a variety of those freebie e-mail hosts floating around out there."

"Our systems, hmm? Well, I can do a process check and see what's been happening for the past couple of days. But I haven't noticed any unusual activity, not that I've been really watching for any."

Time for the bombshell, Hal thought.

"Well, Jamie, one thing that you should know is that this hacker has been using your login account for his attacks."

"What?! How can that be? I have a truly random password, and I change it all the time. And the system root password changes every time. And only I and Bill Brooks have the list. It's not Bill, I'm certain. And of course it's not me. I've got far better things to do. Maybe I have a hidden account on our systems, one that I don't know about."

"Hidden account? What's that?"

"Well, it's possible, if you get system access and know the right tricks, to set up an invisible user account that sort of piggy-backs on a real user. Everything that this piggy-backer does looks as if it's being done by the real user. So someone must be piggy-backing on me and trying to get into these UNELECO computers that way."

Annette cleared her throat gently.

"Ms. McFarland, because I don't know you at all, I'm a neutral observer in this. Dean Weathers, of course, knows you and is therefore biased. I'm sure that you can see that, from a neutral perspective, you'd be under some suspicion here?"

"Naturally. And the best way for me to deal with it, I assume, is to help you, and UNELECO, figure out just what's going on. I infer from what's been said that the hacking attempts have not been successful so far, is that right?"

"That's our inference, too, although I'm not sure that the UNELECO computer people would tell us if they were successful. Whatever the case, it would be nice to catch whoever's doing this. Using state property, that is, your computers, for this is potentially a felony."

"Especially if there's an attack on a military system. That could be a federal felony, I suppose. Normally, what I'd do in a case like this would be to rebuild my login, or the login of whoever's being piggy-backed on. That would wipe out the hidden account. But I guess we need to stick with this and figure out who it is and how they're getting access to our systems."

"Say, I bet it's via an incoming phone line. UNELECO told us that the attack was slow until last night. There could be a phone connection to those floating e-mail hosts. But a phone connection to our systems would allow lots of attempts to be created and run in parallel, right, Jamie?"

Hal was confident that Jamie wasn't behind the attack on UNELECO, and he wanted to enlist her help immediately.

"Could be. We've upgraded our modem pool to have caller ID automated and logged, so if that's the case, we should be able to find who's doing this pretty easily. But then what?"

Annette was ready for that one.

"You ID this person and we'll take it from there. I'll call Charles Shure, he's CEO of UNELECO, I know him from something else, and find out if they want to press charges or what. If you can provide

documentation from your system's logs of this person's activities, we have him, or her, for misuse of state property, at least. And if UNELECO wants their pound of flesh, well, we can get it for them as well. And if UNELECO's secure computers, the classified ones, are involved, well, the FBI may want a piece of this fool."

Jamie's indignance finally spilled over.

"Hey, *I* want a piece of this fool! I say we stick his head on a pike for all to see. If we make a big enough example of him, maybe others will take their hacking skills elsewhere."

"If it's a student, I have a better idea."

Hal knew an opportunity for free tutoring help when he saw one.

\* \* \*

Stage two was by invitation only. Because there would be fewer people attending, stage two meetings were to be held in central locations, and the first, the kick-off meeting, was held in a church basement in Cortez. Invitations had gone out to people in all four states, and a good turnout was expected despite the dominance of Indian Nations in the immediate vicinity. The church—the Temple of Jesus Our Savior—didn't really know the purpose of the "prayer meeting" that the Right Reverend Dr. Michael Oswald had organized, they just appreciated the color of his money.

Oswald checked off names from his invitation list as the men—and all were men—came in through the side door. Farmington and Aztec, New Mexico; Bluff, Blanding, and Monticello, Utah; and a variety of small towns near Cortez in Colorado was represented. Notable for its absence was Arizona, but the northeast corner of Arizona is the land of the *Diné*, and this meeting was not for Native Americans, nor anyone else of non-Aryan background.

After all of the names were checked off, Oswald closed the doors and strolled to the front of the big meeting room. He faced the crowd, a big smile on his face, and waited for the various conversations to subside.

"Evening, everyone. Glad to see y'all here, glad you were able to come. I expect that you've had a chance to look around the room, to check out the others here. I see that some of you know others—I hope that you have a chance to get to know the people you don't. And I hope you appreciate that you're among people you can trust. Every one of you got an invitation to be here, because we know you are with us. We're all starting out on the same page here, and the purpose of our little gathering is to turn some pages together and wind up at the end of the same story. This make sense?"

There was reluctant nodding, a murmuring of agreement in the audience.

"Great!

Oswald was familiar with how long it takes to get a group, especially a new group, worked up.

"Now," he continued, his voice warming to the oration, "Y'all were at one or the other of our first set of meetings, what we refer to as our 'stage-one' meetings. This is stage two. By invitation only. That's because we're going to discuss some things that require trust. If we don't trust each other, well, there's potential for trouble. So we've got to have agreement that what's said in here stays in this room, OK?"

Again, the murmuring, but this time a hand shot up, from near the back.

"Got a question? In the back, there? How about introducing yourself, OK?"

“Uh, yeah, I’m George Sm... Uh, George, from uh, Utah. What about people I trust, people who aren’t here that I’d like to bring in to this?”

“Right. Great question, actually, because we need more recruits. Let me make a suggestion and see what you think of it. Eventually, we want to bring as many people into this as we can. We’ll figure out how to do that as we go along. But now, at first, we need to develop trust among ourselves, and we need to keep this whole thing pretty close, so that it develops a strong foundation. I worry that if we start bringing in too many people too soon, we run the risk of weakening that foundation. So, is it OK to keep things within this group here for now? What do you think, George?”

Oswald was staring directly at the nervous individual standing in the second row from the back.

“Uh, sure, OK, sounds good.”

And he sat down abruptly, obviously relieved. To be under Oswald’s close scrutiny gave him the willies.

“Good. Thanks for the question. Now. You’ll recall that we have behind us the resources of an outfit called Resources For Humanity. This organization is privately funded, so there aren’t any of those stupid restrictions on it that the government has. And it, I mean Resources for Humanity, wants to return the use of the land to the people who live on it. Us. For us to use and prosper. For us to be able to raise our families the way we know is right. Right? Remember this?”

He knew they did, so he plunged ahead.

“So what we’re here for now is to decide how to make this happen. How to reach these goals. It’s pretty clear that what we need to do is to figure out how to get the roadblocks out of our way, the roadblocks that are preventing us from using the land to help us prosper. So. What does that mean? Well, we have to ask what those roadblocks are. Anybody got any ideas?”

Oswald was wondering just how long he’d have to wait to get someone from the audience to volunteer an answer. Not long, it turned out.

“The damned feds!”

The audience mumbled agreement with that sentiment.

“Yeah, the Forest Service.”

“And the EPA!”

“The tree-huggers!”

“Colorado Department of Wildlife!”

The noise level had increased enough for Oswald, so he held up his hands to calm things down.

“This is wonderful. You guys obviously know what I’m talking about. And how to get rid of roadblocks like those is a good question. Even the tree-huggers are pretty damned tenacious. Some of you probably remember the old days, when we used to just beat the snot out of them. Right, I think it was pretty funny, too. But that’s not so effective any more. First, the media gets hold of the story and blows it way out of proportion. Second, they get lawyers. And, of course, the feds and the state guys are even worse—some of them *are* lawyers, and the others are almost cops.

“I don’t know how many of you guys remember your high-school English classes, but I bet the name William Shakespeare rings a bell. If you do remember him, it’s probably because of Macbeth or Hamlet. But he wrote lots of other plays as well. And in one of them, there’s this line where one guy says to another guy ‘First, let’s kill all the lawyers.’ You’ve probably heard that used. What’s not so

well known is that he said this in the context of destabilizing an existing government so they could take it over. By getting rid of the lawyers, the government would be destabilized and ripe for the plucking.”

Oswald looked around the room to make sure everyone was following his logic.

“So what if we apply this strategy to our situation? Well, think of this. What’s driving a lot of the efforts of the feds and the state guys is the tree-huggers. They lobby, they hire lawyers, they elect soft-headed liberal politicians. So how do you suppose we could fix this?”

The voice from the third row was unequivocal.

“Kill all the tree-huggers!”

“You got it. And you know what? I’ve heard that there have been several of these tree-hugger types biting the dust lately. Not that I know anything much about it, mind you, heh, heh. But there sure have been a lot of them dying mysteriously lately. Like that guy over in Creede, got squashed at the lumber mill.”

The murmuring was both astonished and confirmatory.

“So, what’s the next step? Well, maybe we’re ready to take the feds on. Let’s talk a little about where things could go from here…”

## **Part II: The Days After**

### **Eleven**

The media, print and broadcast, but especially broadcast of course, had a field day. News stories on the Fourth of July weekend were normally about kids, fireworks, and picnics, but the adventure at NCAR provided fodder for real reporting. The only thing that could have been better would have been a *successful* assassination attempt, not that anyone at the networks would have admitted, at least publicly, to wanting *that*.

As it was, the interviews with Joe Loughlin and his wounded *gluteus maximus* played well enough to sell lots of advertising time, and the background footage of the picturesque NCAR laboratory and its herds of tame deer gave photographers plenty of opportunities to exercise their artistic talents.

Despite advice to the contrary, the President discussed the matter willingly, praising the response of his Secret Service detail and referring to his perceptions of the whole thing as its having reminded him of some kind of bad fraternity prank.

“I heard somebody shout ‘GUN’ and the next thing I knew I was at the bottom of a football scrum. Thank God that no one was killed. And Mr. Loughlin has my everlasting gratitude for his vigilance, and for being between me and that rifle. I’m glad he wasn’t hurt worse.”

The networks’ best footage was of the President shaking Joe Loughlin’s hand, smiles all around. It was a grand hospital photo-op that drove the medical staff crazy.

Naturally, NCAR management was mortified. How could such a thing happen on their turf? They announced that the laboratory would be closed for a week and sent everyone home with the admonition

that they be on-call for interviews with the Secret Service investigative team. The interviews started immediately with the security staff, even while the forensics team was going over the lobby centimeter by centimeter.

There were two important results from this initial investigation. First, they were able to dredge up video tapes from the security system of the two individuals who had delivered the solar telescope several weeks back, after its refurbishment. Unfortunately, the retired scientist whose job it had been to polish it up had disappeared. Second, they found the .30-06 slug that had sliced through Joe Loughlin's right hind cheek.

The FBI had also investigated the shooting of Arthur Powell at Natural Bridges Monument back in December. A junior G-man was assigned to hunt around the parking lot until he found the slug that had cut Arthur down, which slug then went into their database. So they found a ballistics match to Joe's slug within a few hours.

The forensics team also quickly deduced that the transmitter for the video camera could have had only a very limited range, and a canvassing of the Table Mesa neighborhood below the laboratory quickly uncovered the fact that a yellow and tan van with pest control company markings—Bug-Be-Dead—had been parked on Vassar Drive during the time frame of the assassination attempt.

Further questioning of residents uncovered a morning jogger who had seen the van—it was described as looking like some kind of box-elder beetle—and was able to place one of the individuals shown on the security tapes in it. Another resident, who had been shopping down the hill at the Table Mesa Shopping Center, had seen two guys removing some peel-off signs from a yellow and tan van. Unfortunately, no one had noticed a license plate number.

All this, of course, caused quite a lot of excitement, both in Washington and in Boulder. The investigative team decided to keep their findings as quiet as possible, and so the media weren't informed of the ballistics test results nor of the descriptions of the suspects. They were told merely that the assailant had escaped. All of the Boulder residents interviewed had been admonished to keep quiet about this, in order to avoid sabotage of the investigation, so all there was to report was a "massive manhunt" being conducted by the FBI and the Secret Service.

But what was really happening was nothing. After the initial flurry of success, the investigation stalled. The van and its well-described occupants had vanished. There was still more work, of course—the company that had made the magnetic signs would be found; the parts, and fragments of parts, from the rifle setup would be traced; Bug-Be-Dead, Inc., would come under serious scrutiny. But there was going to be no instant gratification here.

\* \* \*

In the law enforcement community, bad news travels fast, and Annette heard about the assassination attempt by noon on Friday. She called Rod Andersen in Denver, but all he could tell her was to be available if the feds asked for help. So, with question on question rattling around in her head, she rearranged her Friday schedule so she would be in her office if a call came in.

The rearrangement meant that she would not be serving the arrest warrant they had obtained for one Timothy Langer, 19, student at Frémont State University, full-time Durango resident and native of Placerville, a hamlet just down-river from Telluride.

UNELECO had been most willing to lodge a formal complaint against whomever was trying to hack into its systems, and Jamie McFarland's ire had motivated her to find that "whomever" within a

few hours of her embarrassing conversation with Dean Harold Weathers. As nice a guy as Hal thought himself to be, his being dean caused folks to think otherwise.

So early Friday afternoon, Annette was sitting in her office. Fidgeting. Tapping pencils, shuffling papers, staring out the window in annoyance at the fine day out there, and generally being impatient. When her telephone rang, she jumped about a foot in the air and landed with her hand on the receiver.

“Treiri, CBI.”

“Hey, did you hear about the doings up in Boulder? Damn, it sounds like a close one.”

“Hi, Hal.” She paused and drew a deep breath. “You know, I’m glad you called. I’ve been going nuts waiting for the other shoe to drop. I’m supposed to be on call if the feds need any help, but they’re not calling. And I’ve got a team out picking up our UNELECO hacker, a guy named Timothy Langer, and waiting for them is also tough. Maybe talking with you will calm me down. And, yeah, it did sound close. Apparently the President is fine, though, and the NCAR guy just got a flesh wound.”

“So Jamie came through, huh? Was it a student of ours?”

“Bingo.”

“Great.” Hal sounded disgusted. “Just what we need. Well, catching him on such a fast time scale will help us look better, I guess, given that we helped. Actually, I’m sort of glad it was a student, because I’d rather have students hacking into our computers than outsiders. Strange as it may sound. Keeps it all in the family, sort of. What’s going to happen?”

“We have an arrest warrant, kind of a vague one based on misuse of State of Colorado property, and my team is bringing him in for us to question. If he was just doing this, I mean trying to get into the UNELECO computers, on a lark, like lots of these computer hackers, then we’ll probably just put the Fear of God into him and let him know he’s on a probationary status with us. I presume you’ll want to discipline him as well?”

“Hmm. Well, I think I’ll follow your lead. We should probably send him up before our computer ethics committee, and they’ll give him a really hard time. It’s a peer-pressure sort of thing. Depending on how things go, I’ve also got another idea, sort of in the mode of community service. Want me to come down for your interrogation? I can be a real Mean Dean when I put my mind to it. And if I talk with Jamie first, she could probably put me in just the mood. She’s pretty pissed about this whole thing. Especially because this guy used her login.”

“You mean the old, never fail, ‘Good Cop, Bad Dean’ interrogation strategy? I suppose that might be effective, depending on this guy’s personality. They should be back in an hour or so if you want to come down.”

“Let me talk with Alice about my schedule. Actually, I need to talk with her about that thing in Boulder. Tell her that I’ve talked with you and found out that there’s no new information. Yet. For some reason, she thinks the world of this President. Maybe it has to do with his father, or something like that. Anyway, she’s been in a real tizzy.”

“Well, you can tell her that the manhunt is on, but there are no results yet.”

“OK, so after that I’ll head over your way. Since I’m going to be down on your side of town, maybe we can go out to dinner somewhere down there. Have you got anything else happening?”

“What I should be doing is going over a transcript of a meeting between Lolly Markham, her lawyer, and another guy who seems to be a friend of theirs. Guy named Steven Rutherford. Works in the sociology department at the U as a research assistant of some kind. Know of him?”

“Well, crap. Steve Rutherford is the coordinator, or something like that, for the local chapter of SCARAB. Remember Whitney Bradford, the guy who got killed in the Rock Creek Tunnel explosion? Rutherford took over for Bradford. So I have yet another FSU connection to weird things going on in your world.”

“Well, it gets weirder, a little at least. Remember that news item about the guy who got killed over in Creede at the timber mill there? Well, he was from Alamosa. And, as part of the post-mortem, the Alamosa County folks checked out his apartment, and found messages, three, they said, on his answering machine, from Rutherford. Rather urgent messages. ‘Call me as soon as you can, it’s really important’ sort of messages. So squished guy, David Wellington, was connected with Rutherford, and therefore Lolly Markham, somehow.”

“Squished guy? Is that some kind of medical terminology?”

Hal was laughing almost too hard to talk.

“Ah, well, I picked that up from the Mineral County Sheriff, Ralph Wertlinger. He said that’s what happened, that Wellington got squished, and who am I to dispute a first-hand account?”

Now she also was laughing. Must be the tension, she thought.

“Hmm. So Markham, Rutherford, and the squished guy could have been involved together in the FFPI mill arson in Monticello, is that what you’re thinking?”

“And I’m betting the lawyer is in on it, too. He’s not a defense lawyer. He seems like a friend of Lolly’s. But I’ve got this transcript I should read. We taped them talking the other day, and the surveillance team told me that there’s stuff there that bears on Markham’s story. So, uh, where did you want to take me to dinner? There’s not much in the way of quality food down this way, you know.”

“Not in town, unless you want to go back to Fanny’s Saloon for old times’ sake.”

“Right. For old time’s sake, or so you can ogle all those girls with no shirts?”

“OK, OK. How about a nice drive up to the lake? It’s Friday and we deserve a date.”

“I need to be available for this assassination thing, if someone needs me. But I can take a phone and be available that way. So it sounds fine, as long as you know a place to eat up there.”

“I’ll ask around. And I’ll see you in a couple of hours. Maybe between us we can get some information out of Mr. Langer.”

“I sure hope so. Just once, it would be nice to have someone in here who actually wants to tell me the truth.”

“Good cop, bad dean. Just remember that. See ya.”

\* \* \*

Pickle and Mad Dog had been listening to the radio, the all-news stations especially. The news, or, rather, the lack of it, was frustrating.

“What’s with these guys? Why isn’t there more news?” Pickle was the worrier of the two.

“Ya know, it’s strange that there’s not more information.” Mad Dog, wandering eye or no, was a keen observer. “It must be that the feds are keeping a tight lid on this.”

“Yeah. Good thing we did all that planning. Let me know when you want me to drive.”

After peeling the magnetic Bug-Be-Dead logos from the van, and discarding the stolen license plates that no one had seen, they had headed east to an automatic drive-through car wash at an Amoco station, where the day before they'd purchased a deluxe wash, wax, and dry. The van entered the wash bay sporting the insect-like, two-tone, yellow and tan color scheme of other Bug-Be-Dead vans. After a few minutes it emerged—out the back, where no one who saw it go in would be likely to see it again, they'd checked—black. While the wash was cycling, they'd changed clothes in the back of the van and stuffed the fake Bug-Be-Dead uniforms, along with sunglasses they'd had on and the radio controller, in a garbage bag for later disposal.

Then they headed farther east and then south toward Denver International Airport, Pickle driving and Mad Dog fussing with a battery-powered shaver, removing the moustache and goatee he'd been working on for the past six months. Both were wearing latex gloves, and had been since the beginning of the operation.

At DIA they drove into the far back reaches of the east parking garage, where they swapped vehicles. The now-black van was parked in the spot formerly occupied by a Jeep Grand Cherokee, bought used, for cash, which had been waiting for them for the past two days. It had twenty extra gallons of gasoline in cans in the back. This time, Mad Dog drove, and Pickle worked loose the shaggy moustache that was glued to his upper lip. His next step was to eliminate his sideburns with the shaver.

They headed west and then south, and, on reaching the end of Peña Boulevard, southwest on I-225. When they reached I-25, they turned north, back toward downtown, and then west on Hampden. This took them through the western suburbs toward the foothills, and, along the way, they found a dumpster behind a supermarket, into which went the fake uniforms, radio controller, sunglasses, latex gloves, and the shaver. By 12:30, they were on their way up US 285, in Turkey Creek Canyon, homeward bound. Through the foothills, South Park, and down the Arkansas Valley; over Monarch Pass and down the Gunnison Valley to Montrose; over Dallas Divide and up to Norwood, they'd be home to Raven's Roost for a late dinner, if all went well.

“So, what do you think? How's the Senator going to take it? I mean, the fact that we missed.”

Pickle always had something to worry about.

“Well, he said several times that he really didn't care if we hit the guy, that he just wanted to put a scare into him.”

“Right. ‘Send a message’ was what he cared about. Well, I guess we did that. What's the message? Any ideas?”

“Naw, hell, I can't figure out what the Senator's trying to accomplish with this. I understand that he's pissed about all those blacks and browns and women in cabinet positions. But, Jesus, how this little episode is going to send a message about that is beyond me.”

“Yeah, and what's this got to do with all those other jobs we've been doing? Things are getting too complicated. Simple jobs are so much better, ya know? Like that hit on the park ranger. Or the car accident we helped that guy up in Cedaredge have. All these complicated plans are just trouble waiting to happen. Sooner or later, someone's going to see something we don't want them to, and we're dead meat.”

“You got that right. Like the last time we were up in Boulder. Or that job down in Flag. I didn't think that one would even work at all.”

“Right. We got lucky on that one, estimating the height of the wire right and all. The others, though, and even that one, all worked because of good intelligence, good advance information. I'm sure glad we

had that relaxed schedule, so we didn't have to rush things. Like that guy down in Taos who we had to watch for a week before we figured out the thing with the bridge."

Pickle's pucker twisted into something resembling a grin.

"He sure hollered when you dumped him over the railing, didn't he?"

"I liked the one in Santa Fe. Man, you hit that guy perfectly. Stuck him to that tree like pin the tail on the donkey."

"I'm glad this is the end of it for a while. The Senator says we're supposed to head up to Idaho after we check in with him."

"Yeah, and we probably do need to lie low. But what's up there?"

"Well, I'm going fishing. But he said something about meeting up with a group up there, somewhere north of Coeur d'Alene. Start linking together, I guess. But I want to take some time off, go fishing."

"Time off sounds good. I'm behind on my poetry. Maybe northern Idaho will be inspirational. I want to start on an epic, maybe a series of sonnets. But first we've got to get home. Damn, this thing handles good. I'm going to have to watch the speed."

Pickle knew better than to say anything about poetry. With at least seven hours of driving left, he surely didn't want to get Mad Dog started.

\* \* \*

Timothy Langer turned out to be an innocent, terrified of what was happening to him and not hiding his terror, guileless in his responses to even the most leading questions. The "Good Cop, Bad Dean" strategy wasn't necessary, because he opened right up. It quickly became clear that he had no particular reason to pick UNELECO for his hacking attempts, so Annette asked the obvious question.

"Who put you up to this, Mr. Langer?"

His response was their first hint that someone had scared Langer more than the CBI or the Dean of the College of Natural Sciences could ever hope to. He shivered, sat up straighter, thought for a minute, and drew a deep breath.

"I have to take full responsibility for this. It doesn't matter who put me up to it, I'm the one responsible. There's no point discussing anyone else. I can't go there, period. I did the hacking, and I have to take whatever punishment is coming."

"Hmm. You sound like this is not negotiable. Is he paying you?"

"I just can't talk about this."

"Is he blackmailing you? You know, blackmail is in itself illegal. More illegal than what you did. We can help you with that. The best thing to do with blackmailers is to call their bluff."

"No comment."

"You know, when we got the arrest warrant, we also got all records for you, public ones and others, too. The sheriff over in San Miguel County, where you're from, was very helpful. Did something happen when you were working on the ranch one of those summers?"

This question disturbed Langer so much that Annette knew she was on to something.

"Ah, n-n-no, what ranch, anyway? I didn't work on any ranch. I grew up in town, in Placerville."

A major slip, Annette thought. Maybe I should gamble a little.

“You know, Mr. Langer, the reason we’re interested in who put you up to this thing is so that we can believe your story. There’s no reason for you to have attacked UNELECO on your own. Telling us will provide credibility, rather than implicating this other person. You’re right, it’s your fall to take; you did the hacking, and this isn’t going to get this other person into much trouble, really. It’s not really that big of a deal, hiring someone to do a job like this. Especially in this case, because the Senator’s already in a lot more trouble than this could ever cause.”

Bingo! Langer was shaking with terror, unable to speak.

“One thing you can tell us, Mr. Langer, is why the Senator would want to attack UNELECO. What’s he got against UNELECO, anyway?”

But he was incoherent. They decided that an extended break was in order, and Langer was taken back to a holding cell.

“What happened there? Where’d that question about ‘the senator’ come from? What senator?”

Hal didn’t get to observe Annette’s interviewing technique very often, and he was amazed.

“Senator Jarvis Schoenfield. Sort of intuition and sort of a gamble. I called Jim Nettleman, he’s the San Miguel Sheriff, about Langer, and he talked about a teen-age trouble-maker who had worked on ‘the ranch’ during summers in high school. You saw Langer’s response to that. And also my blackmail question got a rise out of him. I remembered that Shure had commented on something that Campbell, the dead lawyer, had almost said. A couple of times he almost said ‘The Senator’ but then caught himself. And Nettleman said ‘the ranch’ not ‘a ranch.’ Up that way, ‘*the* ranch’ is probably the X-S spread, which used to belong to Senator Jarvis Schoenfield. All this sort of came together in my head and I decided to gamble with a question. Obviously scared the hell out of the kid.”

“That’s for sure. I remember about Campbell and Shure’s sort-of kidnapping, but I didn’t know about the slip. But this is a connection that I don’t understand. It must be that Schoenfield was trying to get Shure to do something that he refused, so now Schoenfield is trying to make trouble for Shure’s company.”

“Shure talked about an organization called the Aryan Rights Foundation. Said he was getting mail from them, including that Nazi prison-camp diary. He went public with the book a few weeks back, and if Schoenfield was behind the recruitment, I can see that Shure could have made an enemy real fast with that stunt.”

Annette stared off into space, thinking.

“Right. And if that’s what’s going on, this hacking business is more than an illegal use of state property. It’s harassment at the least.”

Annette was nodding. “And if it’s connected to Campbell’s murder, well, it’s murder and possibly attempted murder. And remember that Campbell was killed with the same gun as Luke Begay, last September. Trouble is, this guy Langer is obviously more scared of Schoenfield than any scare either of us can put into him.”

“I think you’re right about that. I’ve never seen anyone so terrified. Do we need him for anything else?”

“Well, explicit confirmation of Schoenfield’s involvement would be nice. Hmm. I wonder if Langer has hacked into any other systems for Schoenfield. Maybe I should talk to my boss about this.”

“Probably wouldn’t hurt. Say, you said something earlier about a transcript about the FFPI firebombing. Read it yet?”

“Yeah, while I was waiting for Langer. Very curious. It proves that Lolly Markham is lying about her presence in Monticello, and it shows that her lawyer and this other guy, Rutherford, are in on the lie. We can’t use it officially, because it’ll fall under attorney-client privilege. But it’s information that we can use to guide us. And it also had some other stuff, about something called ‘SCREW,’ which would mesh with that cutesy note found at the scene of the fire. It’s not clear what it’s about, but it seems to involve those three and the dead guy over in Creede. And someone called Aaron Felterson over in Pagosa Springs, and a local pot-head whom I’ve known for years, Flip Chester. SCREW must be the name of some new organization. No idea what it could stand for.”

“So what are you going to do?”

“Continue to watch them, see what happens next. Of course, things are a little distracted right now, at least potentially, if the feds want help with the Boulder thing. And there’s the Schoenfield matter to clear up as well. No rest for the wicked. Speaking of which, I seem to recall something about dinner up by the lake. Anything wicked up there to eat? Like, a big steak maybe?”

“Oh, yeah. Big and rare, with a lake view. Ready to go?”

\* \* \*

The problem, Annette thought, with driving up to the foothills for dinner is that Hal remembers he needs to go fishing. And here I am, stuck in the middle of two investigations and a potential emergency.

Their dinner, at Virginia’s Steakhouse, with great steaks as well as the promised view of Lake Vallecito and the San Juan high country beyond, had been lovely. But Hal spent the drive up watching the Los Piños River, and Annette knew he’d be off trying out a new batch of trout flies today. So the next morning she worked off some of those beef calories on the ski machine and then headed in to the office. But the only thing to be done on a Saturday was paperwork, unless something happened.

Two hours later, something did, in the form of a telephone call.

“Trieri, CBI”

“Ms. Trieri? This is Todd Sweeney, from the Durango Field Office of the FBI. I bet you can’t guess what I’m doing today.”

Annette laughed. “Oh, let’s see. Mail fraud, I bet that’s it.”

He laughed back. “I’m calling about ballistics. You folks sent us a report on a .22 slug that killed a lawyer up in Norwood, remember? We found that it matched one found in the head of a Luke Begay, who was killed, execution-style, at the Four Corners Monument last September. I remember calling your office at the Durango PD about that case.”

“Right. Fred Winders told me. I was out of town that day. But that case has never been cleared, no?”

“No, indeed. Crime scene was completely clean, we couldn’t find any reason for someone to want to kill the guy. There was no indication of involvement with any of the usual stuff that gets you executed. Drugs, stuff like that. We found out that he was involved in some flaky organization at Frémont State, some kind of Indian rights group, but that wouldn’t get you shot in the head. At least I don’t think so. So the case just flat stalled out. Anyway, I’ve got an even stranger ballistics match for you. The .30-06 slug that hit that guy in the butt up in Boulder yesterday is a match with one that killed a National Park ranger over in Utah last December. I figured you’d be interested because of the other match in your area. And I thought maybe you’d made some progress on the other one, that lawyer.”

“Nothing firm. But the .30-06 match is really interesting. Let me think, that Parks guy was Arthur Powell, right? A black guy, I mean, an African-American guy, that the NPS had assigned to Natural Bridges. Talk about a fish out of water, a guy with his background in rural southeastern Utah. But what’s interesting is that he’s one of a portfolio of about eleven people in the region who have died in suspicious circumstances in the last year, all of them connected with some facet of the environmental movement. Begay’s organization, the flaky one, was called American Indian Rights, known as AIR. But he was also involved in an environmental group, the Mother Earth Defense League, appropriately known as MEDL. And Powell, of course, was a Park Service ranger. I have six other of these cases, and there are three in Arizona and New Mexico. All environmentalists. Campbell, the guy up by Norwood, is a little outside this box, but the ballistics on that .22 slug tie him in. And now this whole package is tied in with a Presidential assassination attempt? Wow. This is really too weird.”

“How are the others tied together?”

“Well we really don’t know they are, for sure. It’s a hunch. They’re all environmentalists. But other than that, it’s thin. For that matter, some might be accidental. For example, there was a guy up in Cedaredge who died in a car crash, but there’s an indication that he could have been pushed a little. And another guy, just a couple of weeks ago, who was crushed by a pile of logs at a timber mill. It was definitely supposed to look like an accident, but there are some strange things that haven’t been explained yet. Others were obviously murder, like a car bomb, a guy with a crossbow bolt in his throat in downtown Santa Fe, stuff like that. But the thing is, these folks all seem to have been tied in with this Mother Earth Defense League organization. It’s as if someone’s going around killing them off. And to have the incident yesterday tied in with this is, well, like I said, too weird.”

“Especially since the President isn’t exactly known as an environmentalist. Although he might like people to think that, they don’t. But you said the Norwood lawyer wasn’t either.”

“Actually, he was a Colorado Springs lawyer who just happened to get whacked up in Norwood. That’s one of the puzzles. To make things stranger, this lawyer, Campbell, was working for something called the Aryan Rights Foundation, some kind of white supremacy group, apparently. He used to work for a big company in the Springs, but this other group made him an offer too good to ignore. This ARF outfit is another shadow organization, espousing how white folks are naturally superior and all the usual crap, but not really existing in a formal sense that you can grab on to. It’s doubtful that they have anything to do with the environment, though. If they do, it’s probably like those wacko outfits up in Montana and Idaho, white supremacists and tax evaders and mountain men who don’t bathe.”

“Real solid citizens, those folks. I’m glad we haven’t had any confrontations around here like the ones up in Montana. I’ll work the Rez any day.”

“I’m kind of surprised you haven’t been under a lot of pressure from the Navajo government to make progress on Begay’s killing.”

“Well, we have, some. But he seems to have alienated a lot of his own people. He was working on stuff that would have benefitted the Utes, and those two groups are not exactly best of friends. And a lot of his people thought he’d sort of ‘turned white.’ He lived here in Durango, he worked on those Anglo-type environmental causes, all that stuff. Same thing for Powell, in a way. If he’d been a civil-rights activist, we’d be under incredible pressure to do something. But he was a park ranger, not something that African-Americans feel particularly close to, it seems.”

“Well, maybe we’ll eventually get somewhere. Thanks for the information about the ballistics from yesterday.”

“And there’s more that I didn’t get to. It’s not for public consumption, but we have solid descriptions of two suspects, from the security people at that lab in Boulder. And a description of a

vehicle. I'll fax you sketches. And one more thing, quite strange. It rings a bell with me, but I don't know where. Like I read a report about it but can't remember details. Anyway, the assassination attempt failed because they were using a remote control on the rifle, which was fixed on a tripod and couldn't really be aimed. They had a little TV camera sighted along the rifle and a transmitter with a radio controlled triggering device, and they could only shoot at what walked through the sights. All the electronics for this was in a box, a box that was rigged to melt down. But there was a message on the bottom of the box. And this isn't for public consumption either. It said 'Dear Mr. President: You've been screwed,' spelled capital S-C-R-E-W-apostrophe-little-d. Like SCREW is the name of something."

Annette was certain that he heard her gasp.

"Todd? What are you doing for lunch? We need to talk in person."

\* \* \*

## Twelve

Enthroned behind his huge desk, Jarvis Schoenfield, back to the room, feet up on the window sill, was staring out at the incredible view but not really seeing it. Instead, he was reviewing the debriefing with Pickle and Mad Dog, searching for vulnerabilities. He was thinking hard, tapping his fingers on the arm of his chair and jiggling the pointed tip of the cowboy boot on his right foot.

They had arrived, exhausted, about 9:00 the previous evening, and he had postponed their discussion until this morning, so that they would be fresh. Then, over a breakfast that ended up lasting all morning, they had discussed every detail of Friday's events, going over some of the details three and four times. Schoenfield repeatedly assured them that they should consider their mission accomplished, even though they had shot the wrong person. To tell the truth, he was just a little disappointed that they hadn't been successful, but, well, he'd said all along that the message was the more important thing.

Pickle, flushed with success, had the audacity to ask "What *was* the message, Senator," but even that act of insubordination had not been enough to dampen the high spirits of the meeting. He'd even passed them envelopes stuffed with bills, despite the indiscretion.

"Well, Pickle," the Senator had been feeling generous, and forgiving, "You've heard me gripe about how this new President of ours has loaded up his cabinet with people I don't exactly approve of. He seems to be trying to please everyone, all the special interest groups, instead of doing what's right, what he was elected to do. And then he goes and visits this think-tank where they spend our tax money on this global heating horseshit. So I wanted to let him know that not everyone approves of him, including people with spine, not just those limp-wristed Democrat liberals. And that we can express our disapproval even when he's in a federal research facility. That he's not safe anywhere. Think he got the message?"

"The last part for sure, but the Secret Service probably tells him that all the time. I don't know about the rest. We fired the rifle as soon as we saw all hell break loose. Some guy, maybe the guy we shot in the ass, because he sure wasn't a Secret Service guy, saw the rifle and pointed it out to an agent, who dove for the President. We fired, they fired, and the TV camera went out. Then we got the hell out of there."

"That was the right thing to do. I saw the son-of-a-bitch on TV last night, shaking that guy's hand, in the hospital. All smiles for the TV cameras and the public. But I bet he's pissing in his pants about

this whole thing. I think we've succeeded. We'll be able to get what we want—what we deserve—from him in the future.”

Schoenfield was confident that last night's conversation had dealt with Pickle's curiosity. Now, the question that was keeping Schoenfield from enjoying the view was whether the job had gone smoothly enough that he could keep his two operatives around for a little longer before sending them off to northern Idaho. That other job Timmy was supposed to be doing had unraveled completely—word was that Timmy had been picked up and was now in custody. Schoenfield needed advice, so he reached for the phone.

“Find the Reverend and send him up here, willya?”

It took about ten minutes, during which Schoenfield continued to stare at the scenery without seeing it. Even after the knock on the door, the command to enter, and the seating of the new guest in a chair with a view equal to his, Schoenfield continued to stare.

“God's country out there, sure is beautiful, isn't it Senator? Makes me feel blessed to live out here.”

Oswald was gazing with rapture at the scenery Schoenfield wasn't seeing.

“Come on, Mike, you know that crap doesn't work on me. What are we going to do about Timmy? He's in custody down in Durango. CBI's got him.”

“For what?”

“I don't know for sure, but the university caught him using its computers for that job on UNELECO I mentioned to you.

“The one that was Pickle's idea, yeah. But we both know that Timmy won't talk.”

“Not directly. But they'll question him over and over, and he's likely to slip up at some point. We've got to do something.”

“I don't think I want to hear where you're going with this.”

“You've got to. He's your responsibility, too.”

“He's my nephew, yeah, but you're the one controlling him.”

Oswald was looking increasingly nervous.

“Right. And my concern is that he's out of my control just now. If he is in custody, they'll need to charge him formally, then he gets the phone call, and so on. I presume he'll call you. If he does, I need to hear about it. And we need to find him the right lawyer. Obviously not you, you're too close to him.”

He stared at Oswald, and his left eye twitched.

“Seems like that fella Bill Campbell would have been perfect.”

“Don't razz me, Mike! And besides, Campbell was a corporate lawyer who didn't know criminal law. Anyway, we'll find someone, and we'll get Timmy out on bail. Then I need to get him back under control. I was thinking of keeping Pickle and Mad Dog around for a few days, before they make that run up to Idaho we discussed.”

“Oh, no, you're not going to send them after him, are you? Jarvis, Timmy's *family!*”

“Yeah, well, even family needs reminding of the state of things once in a while. I'm not going to have Timmy hit, just reminded, OK? So calm down. In fact, why don't you stay here and talk with Pickle and Mad Dog about this with me? Then you'll see we're not going to hurt the kid.”

He reached for the telephone.

“Send Pickle and Mad Dog up again, willya?” He turned back to Oswald. “So, how are the stage two meetings going?”

Oswald was now the one staring out the window, trying to compose himself. He shook his head and took a deep breath.

“Well. Every time we have a meeting, I get a couple of questions about letting other people into the circle, but so far I’ve been able to deflect them, to keep the circle unbroken. I’ve received lists from the first two meetings, in Cortez and in Alamosa. Got a total of two dozen names, of feds, of State of Colorado people, of tree-huggers, that we could do without. The next step will be to set up teams of new people to handle the hits, in a cell structure where no one knows about everything. Most of the hits, of course, will be set up as accidents. Like we’ve talked about, this needs to be done carefully, without anyone except us knowing everything. Pickle and Mad Dog just can’t handle all these new hits, and the new people are going to make mistakes, unlike our two pros. But we’ll set this whole thing up to look like a grass-roots revolt, so whoever gets caught won’t be linked to anyone else. The tactic of using someone from one cell to direct an operation in another cell will also keep the level of secrecy high.”

“I like it. You’re doing a great job. Can I have a look at those lists? Maybe I can help prioritize them. We’ve gotta be sure to avoid making such big splashes with the first ones that we scare off the others.”

“I’m planning to sit down with you and do just that, when we get the lists from the other three meetings. Sometime next week, probably.”

There was a knock on the door.

“Yeah, come in.”

Pickle and Mad Dog entered and sat in their usual two chairs.

“Wanted to see us, Senator?”

“Yep. I need you two to hang around for a few days. Not go up north right away. Got another job, an easy one.”

Schoenfield opened a drawer in his desk and took out a bottle of Jim Beam. He poured a generous three fingers into an old-fashioned glass and took a large gulp.

“Well, OK, Senator. But don’t you think we should make ourselves scarce, just in case they’ve got descriptions ready to circulate?”

“Yeah, I’ve been thinking about that. But you guys were wearing shades, you’ve both shaved. And now that you’ve had a chance to clean up completely, your hair is a different color from yesterday. I can’t see how you’re likely to be identified. Maybe if you were hanging around Boulder, but not out here. I think it’s pretty safe, as long as you don’t get busted or something like that.”

“If you say so, Senator. What’s the job?”

“Timmy Langer needs the Fear of God put into him. The Reverend and I are going to chat with you about just what this means.”

He smiled an evil smile and took another gulp.

\* \* \*

A workaholic like Charles Shure, Annette thought, would surely be in the office on Saturday. Let’s see if that number he gave me is really his own private line. She punched buttons on her desk phone.

“Shure here.”

“Mr. Shure? This is Annette Trieri, Colorado Bureau of Investigation.”

“Ms. Trieri. How nice to hear from you. What motivates you to call me on a Saturday?”

“The possibility of progress, not much, but a little. Have your computer security people briefed you on the hacking attempts that were directed your way?”

“Well, we get lots of those all the time. That’s why I have such good computer security people. What’s especially amusing are all the foreign operatives, what I mean by that is basically spies, who think they can find stuff on our web site and then get into our systems and find more. I usually don’t hear details, though.”

“This little episode has been going on over the past week or two, and your people traced it to Frémont State.”

“Oh, right. I did hear about that one.”

“We got the guy, dead to rights. He’s a student there, and he’s admitted to trying to break into your systems, although he won’t tell us why. Yet. We’re thinking the most appropriate thing is to twist his arm into telling us and then working a community-service deal. Lots of times these hackers can be turned away from the Dark Side, to use a hackneyed metaphor. But I thought I should talk it over with you.”

“My computer security people are almost all ex-hackers. Maybe I should offer him a job.”

“That’s part of what I want to talk with you about, indirectly. First, though, I wonder if you’d mind if I go over some of that statement about the incident up in Norwood. I want to verify my memory and the transcript.”

“Ahh, should I get my lawyer in on this?”

“You can, but there’s no need to. You’re not under any suspicion of anything. In fact, you’re about our most valuable witness to something that just seems to keep growing. I can’t tell you details, especially over the phone. I promise to someday, though. Anyway, I just want to check a couple of things.”

“Sounds OK with me. I still remember most of that weird affair.”

“Good. So it all started with that package containing the letter and the book. Then there was this so-called appointment to negotiate some resource leases, right?”

“Right. And they insisted on having the meeting over in Norwood, at a bank, the First National, as I remember.”

“And you flew to Telluride and drove to Norwood and were hijacked on the way. And met with this lawyer, who passed you notes and then, after the meeting, got dumped out of the truck in front of you with a bullet between his eyes.”

“Scared the hell out of both me and my driver. We got out of there as fast as we could.”

“I don’t blame you. Now, here’s what I’m interested in. You reported that this lawyer, Bill Campbell, said he was representing this Aryan Rights Foundation outfit. But you also reported that he slipped up in referring to who he was working for and started to say something else. But he caught himself.”

“Right. He said ‘The Sen...’ and then reverted to this Aryan Rights bunch. And, like I told you, we had done some background work related to these leases. It turns out that the board feet are on property

that's part of the X-S Ranch, and the tailings we were going to process are from mining claims owned by the X-S also. And, until fairly recently at least, the X-S Ranch was owned by Senator Jarvis Schoenfield, whom you know. It had been in his family for generations, until he turned it over to a private foundation. Since the incident, we've found out that the foundation is something called Resources For Humanity. This RFH is a non-profit that seems to fit in with the other so-called 'wise-use' organizations, but it's hard to be sure."

"Do you think what Campbell almost said was 'The Senator'?"

"Well it would sure all fit together, wouldn't it? Although there's a missing link, between Schoenfield and the Aryan Rights bunch."

"Say, something just occurred to me... but it's probably stupid. We have the Aryan Rights Foundation. A-R-F. And we have Resources For Humanity. R-H-F. A-R-F and R-F-H. If you say them, you know, like acronyms you can pronounce, you know, 'arf' and 'rfh,' they are pretty similar. At least they're both like noises dogs make. I wonder if they're linked and someone made the linguistic equivalent of a Freudian slip somewhere? Hmm, well, like I said, it's probably stupid."

"Hmm, indeed. You know, though, that it isn't trivial to come up with names for organizations. Most of the obvious ones are taken. A Freudian-like slip could be possible. But I guess I'd have to say that this probably wouldn't fly in court."

"You don't think so?" She was giggling. "Yes, Your Honor, we, the people, assert that these two organizations are really one and same because they both sound like doggie noises. Wow. I think I need a vacation."

"If you do get to that point, I mean, in court, please invite me for the day. I'd like to see that one. But, seriously, I'd think of it as more of a hint than a coincidence. Really. If you get enough hints like this one, something will come together eventually."

"As I said, there are some things that I can't talk about just yet. But here's one thing that I can. This student that was trying to hack into your computers. I suggested to him that he was put up to this by someone, and he got all high-and-mighty about how this was his doing and how he'd have to take whatever punishment there was. I pushed things a bit and eventually dropped the phrase 'The Senator' into the conversation. At that, he almost had a heart attack. It definitely pushed buttons with him. Point is, I sort of think that Senator Schoenfield may be behind the attack on your systems."

"I guess that wouldn't surprise me. If he is behind the ARF, then I probably made him quite angry by going public with that prison camp book. I'm pretty convinced, not in a way I could prove it in court, mind you, but convinced, that he's behind that hijacking episode. Which means he's behind the ARF. And, presumably, the RFH. Say, you know? The more those two things get used together, the more they do seem linked. You've got good intuition, madame."

"Well, thank you sir. And I promise that I'll invite you when we present that evidence in court. Anyway, thanks for verifying the solid information and for all the hints. They'll be quite helpful."

"If there's anything else I can do, let me know. I'd like to see this bastard's hide nailed to the barn. He's the person to go after, not this student."

"Oh, if this all comes together, nailing his hide to the barn will be the least of it. Thanks for your help."

\* \* \*

Shure isn't after him, and prosecuting him for illegal use of state property is a waste of time. Community service, Annette thought, is sounding more and more appropriate. And last night Hal was talking about how he needed to find a computer science tutor for some athlete whose grades are on the edge. Subtle, the man is not. But that could work. After all, it was the university's computers that were the property being misused.

Maybe I should pay Mr. Langer a conciliatory visit.

After polishing off the last of the week's paperwork, she headed over to the county detention facility, where the state contracted to have its needs for short-term incarcerations met. It took her longer to get through the socializing than anything else. She knew these folks well, from cases in years past. Eventually she was in an interview room, sitting across from Timothy Langer. She'd brought a bag full of Burger King lunch, having called ahead and ascertained that he'd not been eating. It was clear that the smells wafting from the bag were having their effect on Langer.

"Mr. Langer, this is not a social call, but neither is it meant to be as adversarial as our discussion yesterday. I heard you haven't been eating, so I brought this in case you get hungry. Hope you like burgers and fries."

"So, are you going to charge me formally, or what? Don't I get a phone call and all that?"

He was eyeing the bag carefully.

"I'd rather not do that, because it puts in motion a lot of paperwork that's hard to stop. What I'd like to do is to accomplish two things. Yesterday, you admitted that you've been trying to access the UNELECO computers without authorization, and you stated that it's your responsibility to take whatever punishment is appropriate. So, the first thing I'd like to do is to get that resolved. If we can reach an agreement about this, and that's part two, I think the appropriate payback is for you to tutor in computer sciences at FSU. And if you do that well, you know, take it seriously, be conscientious, and so on, it may just be that the UNELECO computer people would like to interview you about a job. I hear their compensation package is extraordinary."

"Why would they want to hire me?"

"The UNELECO CEO, a guy named Charles Shure, told me that a lot of his computer security people are ex-hackers. It was he who suggested that they might hire you." Stretching the truth was something Annette did often in these circumstances.

"OK, well, what's part two? This agreement you want."

"Yesterday, it was obvious that you don't want to talk about who put you up to this. The agreement is this: I'll stop asking about that, give up on it completely, if you'll provide me with information about other computer systems you've hacked into for this person. And for anyone else, as far as that goes. The idea here is that you go straight before you get in real trouble. And that we see if there's any hacking damage you might have done that can be reversed."

"You don't want to know who I'm working for?"

"What I want to know is what systems you've hacked into, besides the ones at the U and the attempts at the UNELECO ones. That's it. Well, I also want to know that you're committed to going straight, that you'll do as good a job as you can with the tutoring, and stuff like that. But we'll leave your employer, or benefactor, or blackmailer, or whatever out of it completely. And, of course, you won't be charged with anything."

"When can I go home?"

“Well, I think I’d like the list first, and some way to verify it. Give me that and it’ll start the process of my trusting you. Then we can take it from there. How’s that sound?”

“What’s in the bag?”

“Like I said, a burger—a double Whopper—and fries. And a Coke.”

He reached for the bag and dug in.

“So, how do I know I can trust you?”

She was surprised he could talk with his mouth so full.

“I won’t be charging you, like I said. Give me the list and you’re out of here. And I won’t ask about who put you up to this. I’ll also call off others who might. If someone does, then you can go back to hacking. Of course, we’ll catch you again, eventually. See, by giving me something tangible, this list, then I can start believing that you’ll keep your promise to go straight. On your side, I’m not making promises for the future, I’m doing things now. Like getting you out of here. I figured the food would be a nice gesture.”

“Got some paper, and a pencil or something?”

\* \* \*

The lengthening shadows on Lone Cone Peak held Schoenfield’s attention, not because they were different from other days, but because his mind was now at ease, at least relative to its earlier level of heightened concern. The half-bottle of Jim Beam he’d consumed since mid-afternoon also helped. Oswald was captivated by the scene, too, and this time he wasn’t even going to try pseudo-religious platitudes. But now it was his turn to be concerned, unlike before.

“Senator, I know you don’t like to be second-guessed. I hope you realize that the concerns I express here, in this room, are meant to help you in your decision-making.”

“Aw, hell, Mike, everyone’s got to have people to bounce ideas off of. And you help a lot.”

“Well, the stuff I talk about with you here stays here. In public, I back you one hundred per cent, all the time.”

“That’s the word I get.”

No harm in letting him know he’s being watched, Schoenfield thought.

“I appreciate that you told Pickle to go easy on Timmy. I agree, he does need reminding. But that’s the thing with computer hacking. It’s hard to stay ahead of everyone. I’m not surprised he got caught. After all, he’s only a kid.”

“He hasn’t called you yet, right? That’s my main concern now. If he was arrested, he should be making a phone call for help.”

“Well, he knows the drill. If he’s caught, he’s just a college student snooping around on the internet. Maybe they’re questioning him and that’s it. He didn’t tell you that he got into the UNELECO systems, right? He got caught in the process. He’s a student, so probably the university will have some process to deal with the transgression.”

“I sure hope that’s all.”

His left eye twitched, twice.

“Me, too. Senator, there’s something else I’d like to ask about. I don’t mean to offend you with this, but I’m just too curious to stay quiet. Did you have anything to do with that little affair up in Boulder yesterday? I noticed that Pickle and Mad Dog were gone all day and got back late.”

A wide grin spread itself across Schoenfield’s face, and he leaned back in his executive chair and put his feet up on his desk. Staring at the ceiling, he chuckled to himself.

“Well, now, Mike, what makes you think that I’d have something to do with an assassination attempt? I mean, it’s just flat unpatriotic. And you know me to be a true patriot.”

“I do. And I’ve also heard you rant and rave about this particular President. And I’ve heard you say good things about the Vice-President. With your two hit men gone, things just started to add up. Besides, that shit-eating grin you’re wearing tells it all.”

“Can’t fool you, Mike. That’s why I put you in charge of RFH, you’re good. Yeah, well, we didn’t expect to succeed, we just wanted to send a little message.”

He proceeded to fill Oswald in on the details of his antipathy toward Presidential politics.

“Forgive me, Senator, but that seems a little thin.”

“Yeah, well, it was good enough for Pickle.”

“And Mad Dog, too, no doubt. But you don’t really expect it to be good enough for me, do you?”

“No, I don’t, and never did. We kept you out of the loop, though, for two reasons. First, I figured you’d try, and try hard, to talk me out of it. Hell, even Pickle did. I just didn’t want to argue with you about it. Second, the fewer people who knew about it, the better. Especially you, because you’ve been doing those stage two meetings and knowing about this could have influenced your presentation, maybe even made you slip up. But now that it’s over with, and it looks like we did it cleanly, that’s not an issue.”

Schoenfield got up from behind his desk and began pacing about the room.

“And it’ll fit in with what we’re trying to accomplish. When these stage two guys find out—and we need to work out a plan for how they find out—when they find out that their leadership pulled something like this off, that’ll solidify our power base, don’t you think? And that’s only part of it. After Pickle and Mad Dog have their little conversation with Timmy, I’m sending them up to Idaho. Partly to get them away from here and whatever investigation is going on, but mostly to get them in touch with some groups I know up there, groups with the same agenda as ours, more or less. Groups that want to do the same thing, successfully, I mean take out the national politicians, and haven’t been able to.”

He stopped pacing and stared directly at Oswald, something that made the Reverend shiver.

“When they hear that it was us that did this Boulder thing, well, that’ll put us in a leadership position, won’t it? None of those other groups have pulled something like this off. They talk about it a lot, but that’s all it is, talk. But we’ve actually done something, so we’re going to come out of this as the leaders of the movement. And then we can exert some leadership and begin to consolidate all of the groups that think alike on these matters. You can start having RFH meetings up there, and getting to stage two will be easy. This will put us lots of steps closer to getting a critical mass together.”

“So far, we’ve been small and invisible. Don’t you think that consolidating all these groups will make us big, and potentially visible to the feds? Then we’d be in for trouble, for sure. Don’t you think so, Senator?” Oswald looked uncomfortable.

“I’m using the word ‘consolidate’ loosely. We’ve done a lot with very few people. If other groups take the same approach, just think of the impact. Hell, the tree-huggers do it. You’ve read about these people who call themselves the Earth Liberation Front, ELF. They claim there’s no central organization,

no one knows what the other people are doing. If those damned hippies can do this, so can we. We adopt their tactics and wipe them out in the process. Along with other such groups and certain people in the government who are in our way. Then we can get the land back to the landowner. Use it to prosper and all that other stuff you talk about.”

“You mean you actually listen to my message? Senator, I’m flattered.”

“Far as I’m concerned, you don’t go nearly far enough. But, I know, I know, you’ve got to go easy on the masses. I’m being patient, don’t worry. But eventually we’ve got to start getting the message across that we Aryans are the folks that run the show. The others can hang around to work for us, or go back to the cities on the coasts, to their ghettos. But the inter-mountain west is our turf.”

\* \* \*

The attempts by the feds to keep a lid on the investigation had worked for the Saturday papers, largely because of timing. Given the 36 hours between the Big News Event and the Sunday deadline, they had no such luck with the Sunday papers.

Of course, the networks had been providing as much coverage as they could justify to their advertising departments, but both Hal and Annette craved analysis, such as would be available. So Hal went out early and came back with bagels and accoutrements and an armload of Sunday papers, including the *Denver Post* and the *New York Times*. The *Durango Herald* had plenty of wire coverage, but Hal knew Annette would be starving, for news as well as for breakfast. Even if the stories were just repeats, this was a day for more pages than the *Herald* offered.

They settled themselves on the deck with the papers, the food, a toaster oven, plenty of coffee, and telephones, just in case someone called. It was like moving, a little.

“Did you plan to feed an army? Two bagels I can manage, but there are at least a dozen here.”

“Didn’t know what flavor you wanted,”

Hal was stringing an extension cord to a plug on the house, so that they could keep the coffee warm and toast the bagels.

“So I got lots of choices. Also, we might be having company.”

“Company?”

“Well, you told me yesterday that you were going to release Tim Langer after he gave you a list of the places he’d hacked into. And I want him as a tutor. So I may call him in a while and ask him over, and maybe the student I want him to help, too. Get them acquainted in a sort of social setting rather than the formality of my office. So pick your favorite flavor, and we can offer what’s left to them.”

“Poppy seed, two of ’em. Toasted, with butter and some of those raspberry preserves. That’ll do me. What are you going to have?”

“Sesame seed, with cream cheese and lox.”

“Oh, *very* Durango. I’m sure that will impress Tim. Probably the only thing they eat up in Placerville. Along with knishes and pirogues.”

“I’ll be done by then. Sure you don’t want some?”

“No, thanks. The preserves will do nicely.”

Annette rather liked raw fish, especially fixed the Japanese way, but not for breakfast.

“So, uh, was there anything interesting on the list Tim gave you? Can you tell me?”

“Well, it’s not for public consumption, but there were some familiar organizations. Most familiar is us, the CBI and the State Patrol. I promised Tim I wouldn’t push him to tell me who he’s been doing this for, but I’m really tempted on this one. And another organization, familiar because it’s in the news just now, NCAR, up in Boulder.”

“You think it’s Schoenfield?”

He fiddled with getting hot bagels out of the toaster oven.

“Probably. See, I don’t think that Tim was free-lancing, doing these hacking jobs for lots of people. I think he has one client and it’s Schoenfield. Tim’s reaction to the mere mention of Schoenfield, not even by name, just by title, suggests that Schoenfield has some hold on him. So I’m going to ease off. I already told my boss that we need to re-program the computer system, though. I don’t know if Tim was supplying Schoenfield with information, or if Schoenfield is computer literate enough to have his own secret login.”

“Would it be fair to ask Tim? Not who, just how?”

“Hmm. I’d have to be careful how I asked, but maybe I could.”

“Thing is, if Tim’s supplying the information and it suddenly stops, Schoenfield is going to be suspicious. The other way is to use this whole setup against him, pass him information that he could only find out via a clandestine link to the CBI system and then use it against him.”

“Boy, for a stodgy academic, you can be quite diabolical. Machiavellian, even.”

“Is there anything on your system that would be damaging if Schoenfield had it?”

“Well, there are reports on the Campbell investigation. And, say, the entire file of the environmentalist portfolio is there, too. Of course, all that would tell him, the Campbell file, too, is that we’re not making progress.”

“I assume you informed Andersen of this. I’d sure want to know.”

“I told him about the hacking but I’m holding back on my suspicions on Schoenfield. That’s a real bombshell, politically. It’s real touchy.”

She took a bite of raspberry-covered bagel.

“Well, if you trust him, you ought to tell him your suspicions. At least I think so. Like I said, I’d want to know. In a way, it’s a damage control thing.”

“Let’s talk with Tim first to see how the information was getting passed.”

“Sure. It’s your call, anyway. Are you finding anything new in those articles?”

“The *Times* got to the NCAR guards. Hmm. Says here that they remember the guys who delivered that telescope. Reporter must have suggested they blew it. But the security tape is in the hands of the feds, and the guards were told to keep quiet, they say. Well, actually, they’re saying that the feds want all communications to go through them. So the NCAR guys aren’t talking much to the *Times*, or anyone, it seems. There’s a comment in the story that the guards were unresponsive to questions about people’s right to know and ability to help find the suspects.”

She looked up and grinned.

“Here’s one you’ll like, from the *Post*. I guess they put a whole team of local reporters, people who know Boulder, on this. They went door-to-door in the neighborhood below the NCAR lab. Found a guy the feds missed, apparently, who seems to like to talk. He saw a yellow and tan van from a local pest

control company—he remembers a logo in the form of some kind of bug but can't remember the company name—this van was parked out in front of his house Friday morning between about 9:30 and 10:15. He remembers it because the guys in it never got out. He figured they were on a coffee break and he didn't want them in his yard, so he was watching them. And the *Post* people found out that NCAR contracts with a pest control company that has yellow and tan vans, outfit called 'Bug-Be-Dead.' Calls to them weren't returned."

"Interesting. I bet the *Post* reporters don't know how close they are. If the feds had let it be known that the rifle was radio controlled, people would be camped outside Bug-Be-Dead. But, you know, this could open the flood gates. Todd Sweeney, the local FBI guy, told me that his colleagues were trying to get all of the folks they interviewed to be absolutely silent about this, like the way the NCAR guards were behaving in this *Times* story. But now one guy has talked, and that'll probably get everybody talking, probably anonymously. I bet tomorrow's stories are even more interesting."

\* \* \*

### Thirteen

After an hour or so of torturous persuasion at one of their meetings, Steve Rutherford had finally convinced his fellow members of SCREW that they needed an outing, something to break the tension, get them outside, accomplish something goal-oriented.

He knew of a land-clearing operation, a new subdivision going in on the edge of the National Forest north of Pagosa Springs. The contractor had all sorts of heavy equipment sitting out there in the woods, there were survey stakes galore, and surely no one would be working on Sunday of the Fourth of July weekend. Time for some monkey-wrenching.

Reid Tompkins begged off with the excuse that he had real cases to catch up on—all the time he'd been spending on Lolly's legal situation had put him behind. The consummate diplomat, he didn't mention the amount of time he'd been spending on Lolly herself. But Flip Chester and Aaron Felterson were willing and ready, Flip giggling at the prospect of the fun they were about to have and Felterson righteously indignant at the thought of yet another subdivision of forty-acre ranchettes ripping up the landscape, disrupting elk migration routes, destroying habitat.

Preparations were pretty simple, really. Lolly made a picnic lunch for all of them and was proud to drive her new car. She had saved enough from her ex-husband's alimony checks for a down-payment on a Dodge Neon, the sporty edition, in purple. Felterson provided local information—maps, in particular, because this new subdivision was definitely off the beaten track. Flip provided his usual contribution, and Rutherford had made up another clever message, complete with pun, for the contractor to find. The three Durango residents drove to Pagosa Springs, getting higher and higher as Flip kept rolling joints. Down in town, they picked up Felterson and headed back west up the hill to the turnoff onto Piedra Road, the county road that provided access to a variety of subdivisions, including the new one, and to the eastern reaches of the Weminuche Wilderness.

It took a few miles, about to the end of the pavement, to persuade Felterson to lighten up and get high with the rest of them, but he finally caved in. Yes, everyone agreed that their work was important and that these subdivisions were the blight of southwestern Colorado. But, come on, they could still have fun, couldn't they? Geez.

A few more miles down the gravel road, about half-way through their second joint since Pagosa Springs (Rutherford had lost count of the ones since Durango), they came around a curve and over a little rise, into a huge meadow, pasture for about 500 head of cattle. And about halfway across the meadow, they found most of those cattle walking down the road. There were three fellows on horses—cowboys!—keeping track of strays and generally moving the cattle along.

“Steve,” Lolly was appalled, “You told me that the road was slippery because of mud, because it must have rained. I don’t think so. Look at that.” She was pointing toward one of the steers just ahead of the car, who was making his personal contribution to the road’s slick surface.

“Steve, this is my *new car*. And it’s going to be all covered in cow shit!” She was in tears, but she had the presence of mind to tap lightly on the horn. The cattle parted to let her pass.

Normally, Rutherford would have been appropriately solicitous about Lolly’s feelings, maybe even offered to wash her new car for her. He, however, was not normal, nor were the car’s other two occupants. As a result of their particular abnormality, their response to Lolly’s tears, and especially to the coating on her new car, was hysterical giggling. Uncontrolled, can’t-get-your-breath giggling, which soon evolved into rolling-around, pounding-on-the-seats belly laughter. And because Lolly was not normal either, it didn’t take too long for her to switch moods and join in. All the while, the two-tone purple and brown sports-edition Neon was easing its way toward the front of the herd and the open road beyond.

Meanwhile, Red Collins was having a great day. He had won the coin flip and was riding point, ahead of the herd as its guide and, most importantly, on the gravel road in its pre-slippery state. Much less fragrant up front. The weather was dandy, the cattle knew what was happening—this early July change of pasture meant new, sweet grass—so they were cooperating, and what better way to spend a Sunday than to be atop his bay mare Sweetheart riding in the high country? Besides, he had a date for the annual fireworks display later. His boss, Archuleta County Sheriff Ron Grange, had given him the evening off so he could go out with his fiancée. Maybe, he thought, Sweetheart here is only the first filly I’ll be atop today.

He wasn’t really paying attention, because the noise of the cattle, the warmth of the day, and his thoughts of the coming night had lulled him into reverie. But then there was this strange noise, a sort of toot-toot-tooting. He swiveled around in his saddle to see a little purple car, the sides streaked with brown, inching its way through the herd, almost on top on him. He edged Sweetheart over to the right side of the road.

As the car passed him, he automatically waved, and the occupants waved back. Then he caught the familiar whiff of burning contraband. At the same time, he saw that the people in the car were laughing hysterically. He pulled a cellular telephone out of his shirt pocket and hit a speed dial button.

“Hey there, Zelda. This here’s Red. Hey, I’m doing this cattle drive up Piedra Road, right now we’re right about at Ant Hill. And, listen, a car, a new Dodge Neon, purple underneath the cow shit, Colorado plates, just went by northbound, full of dope-smoking hippies. They’re so whacked out I don’t see how they can drive. Y’all got anybody up this way today? Ron’s up here? Aw, hey, that’s perfect. Let him know, will ya?”

\* \* \*

They decided to invite Tim Langer over first, ahead of Jamal, to have a chance to talk with him alone. He was initially reluctant, but Annette reminded him of their deal and promised food. Nothing like food to entice college students, except maybe beer, but Langer was only 19 and it was Sunday morning. Hal

and Annette were still absorbed in the papers when the doorbell rang. Annette stood up to get it, and shortly she returned with the reformed computer hacker in tow.

“Good morning, Tim. Want some breakfast?”

Hal wanted to start things out on the right foot.

“Uh, good morning, Dean Weathers. I am kind of hungry. Um, this sure looks, ah, domestic. Do you both live here?”

“Oh, you didn’t know? I guess we didn’t say anything the other day. We’re married. Domestic, huh? Yeah, you’re right. This is our Sunday-morning-after-the-assassination look, newspapers everywhere. What kind of bagel do you want? And should I toast it? And what on it? Welcome to the Eighth Street Deli.”

“I’ll try this one,” he was pointing to an “everything” bagel, covered with all sorts of different things. “And, uh, what’s that pink stuff on the plate there?”

“Lox. Smoked salmon.”

“Looks raw.”

“Almost. Not as raw as sushi. And not as smoked as the smoked salmon in those packages at the store, the Alaska kind. Want to try it?”

“Raw fish for breakfast? Um, can I just have it with butter, or cream cheese, is that what that is?”

“Fine with me. I’ll try the raw fish out on Jamal. He’s from Denver, maybe he’s had it before.”

“Tim, while he’s playing chef, burning your bagel,” there was a good-natured “Hey!” from Hal in the background, “I want to ask you something about the hacking you’ve been doing for the people on that list you made up yesterday.”

Langer was instantly on alert, eyes narrowed suspiciously.

“Don’t get upset, I’m not going to ask you who you were hacking for. I promised not to go there, and I’m not going to. But there’s something I didn’t think of yesterday, and it relates to how—not for whom, but how—you were doing this hacking. Did you go into these systems you compromised and find information and pass it to whoever it was, or did you get them access so they could find their information themselves? The reason that this is important is this: if you go straight, like we discussed, you won’t be passing information any more, and that could get you in hot water with whoever you were working for, right? And we’d like to avoid that.”

“Oh. You’re right. I didn’t think of that either, but that’s because I haven’t been passing the information. I’ve been setting up logins, the secret kind like I had on the FSU system. I don’t know what kind of information is of interest to, well, you know. And I don’t want to know, actually.”

“OK, thanks. Now, Jamie, the systems person who caught you once we knew someone was using the FSU systems without authorization, Jamie said that the secret login you were using was sort of piggy-backed onto something she called ‘root.’ Are the others like this?”

“Yeah, they’re all the same. See, I get in, there are different ways to do that, and run a script that sets this secret login up, then I turn it over to, uh, the others, and don’t go to that system again. Except I didn’t do that with the FSU system because I needed it for myself, as a fast host.”

“OK. I’m not a computer guru like you are, but I don’t need to know details. One thing I’m curious about, though, is how you get into these systems in the first place. You said there are different ways.”

“Several. And there’s a book that describes a couple, and other ways are discussed on hacker internet sites. Once you know the IP address of a computer, that’s like an internet phone number, then you try a couple of things that tell you what kind of computer it is. There’s a utility called ‘ping’ that works on most systems. Once you know that, you can see if the systems people there have plugged up known security holes for that kind of system. If not, you’re in. If so, well, then my next step is to find the web site of the organization and see if it has any security holes that are vulnerable. Most web sites of organizations have e-mail links to people there, and these links give you addresses. There are e-mail security holes on some systems that are worth trying. Finally, there’s the ‘brute force’ method, where you take e-mail names, assume that they’re login names—they usually are—and just try to guess passwords using a dictionary, a special dictionary. That takes a while, and it’s risky. The systems people for the system you’re working on see all these attempts from the same user and wonder. I imagine that’s how I got caught.”

“Excellent. Thank you. No more such questions. So you’ll know, the UNELECO people told us that they were watching your brute force attack, but they had discovered you before you started that and had been watching for a couple of days. They wouldn’t go into details. And it looks like our deli chef has got your bagel ready. Coffee?”

“That’d be great. Black. Hmm. Sounds like those UNELECO people are good. So, I have a question, Dean Weathers. Who’s this athlete you need me to tutor? And what’s his situation, grade-wise?”

“Basketball player named Jamal Washington, a real super-star, at least by Frémont State standards. Seems sharp. He’ll be a second-year student this fall, his first year they had him on ‘red-shirt’ status, meaning he was here but didn’t lose a year of eligibility. He’s taking two courses during the second summer term that starts in a couple of weeks, a survey course in natural sciences and an intro to computers course. He says he’s got to get ‘A’s in both, to maintain the GPA he needs to play. That’s my fault, partly, because I’m on this faculty committee that’s recommending raising the minimum standards. Hence my involvement.”

“What’s his major?”

“Theater and dance, interestingly enough. He said he likes the acting and wants to improve his coordination on the basketball court with the dance. I can just imagine him doing ballet lifts. His partner would get nose bleeds from the altitude. And, listen, both of you, don’t make any ‘tall’ jokes. He’s sensitive. And, as you’ll see, tall.”

“I didn’t take the intro course, so I’ll have to find out what’s covered. But it shouldn’t be too hard. Where’s he from—oh, you said Denver, didn’t you? What high school?”

“East High. Pretty good school, as inner-city big schools go. His brother, Radford, was here a couple of years back, and he graduated in four years with honors. So either it’s a smart family or a good high school, or both.”

The doorbell rang again, and this time Hal got up to do the honors.

\* \* \*

Lolly, the one person in the SCREW crew with first-hand experience, was able to say with authority that the Archuleta County lock-up was not up to the standards of the La Plata County lock-up, although the view out the little barred window was better. Neither Rutherford nor Felterson had any reason to be experienced with the legal system. And, despite his potential for such experience, by some miracle Flip Chester had managed to avoid it, even with his reputation in Durango’s police department.

It was not pleasant, for any of them, experience or not. How quickly a fun Sunday outing had degenerated.

The Neon had a reasonably good HEPA filter on its air conditioning system, and the stronger odors of the cattle herd began to seep into the car's interior about half-way through the teeming mass of bovines. The car's stoned occupants had quickly opened the windows, only to find the outdoor air to be even more fragrant. As they made it past the herd, waving gleefully to the cowboy leading it, they all stuck their heads out of the car, like dogs on a ride, for fresh air.

It took several miles for the car to begin to smell fresh—there was a lingering scent from the brown streaks—and just about the time they were breathing freely, their world ended.

“Oh shit, oh Jesus.”

Lolly, driving carefully in the fuzz of her cannabis-impaired senses, was the first to see the sheriff's SUV parked across the road ahead, lights flashing, uniformed officer standing impassively with his hand in the “STOP” gesture.

Rutherford, in the front seat with her, had less charitable thoughts. At least the car was aired out pretty well, he thought, and the cow shit should hide whatever other aromas there might be, especially incriminating ones. That, however, turned out not to be the case, because Sheriff Ron Grange, having been raised on a ranch, had no difficulty distinguishing between cattle fragrances—the sweet smell of money—and the odor of dope smoke.

At least he was nice about it, the sheriff. He had them sit on the ground, on a soft patch of grass, with red Indian paintbrush and columbines, plastic cuffs on but with their hands in front, while he searched the car. Flip, on seeing the SUV, had divested himself of his stash, so Lolly would be held responsible for the baggie of vegetable matter that Grange found wedged behind the rear-seat arm rest. Felterson had brought several rolled-up maps in a day-pack, and one of these had a circle drawn around an area in which Grange knew a new ranchette subdivision was being developed. There were several containers of strange substances in the trunk, including bottles of Karo syrup and cans of lapidary grit, and some long-handled bolt-cutters.

And in Rutherford's shirt pocket, he found a folded-up note that piqued his interest.

Sheriff Ron Grange, being a modern sort of sheriff, read everything he could from his neighboring sheriffs' offices and from the CBI, so he was well up to date on various ongoing investigations in the region. And, with what he was finding, he knew just what phone calls to make when he got back to town.

So, as the SCREW crew were adapting to their new accommodations, Grange was on the phone. Annette and Hal were cleaning up after their breakfast/brunch/lunch marathon when a telephone rang from under a pile of newspapers. Annette recognized it as hers and went digging for it.

“Trieri, CBI”

“Ms. Trieri, this is Ron Grange, over in Pagosa Springs. How's your Sunday, nice, I hope?”

“So far so good, Ron. How are things over your way?”

“Well, interesting, I guess you'd say. I'm calling because of that, actually. Got some folks in my detention facility who might just be connected with that fire over in Monticello at that lumber mill I heard you're investigating along with the Utah State Patrol folks.”

“No kidding? Well, that would certainly brighten my day. Who?”

“Four people, caught them with various strange substances, including marijuana, in suspicious circumstances. Let's see. Car owned by and driven by one Louella Markham, Durango address, said

she's 32 but her license suggests she's 38. Passenger number one is Steven Rutherford, 27, Durango. Passenger number two is Aaron Felterson, 29, Pagosa Springs. I know this guy. He's a local activist and general pain in the ass. Passenger number three is Phillip Chester, 39, Durango."

"I know passenger number three, he's a local pot-head. If you found some grass, it's his, 99% probability. He's pretty harmless, small-potatoes sort of guy. And I know Ms. Markham, too. She's out on a personal recognizance bond during pre-trial maneuvering. She was spotted near the mill in Monticello, but all we have her for is driving a car with stolen Colorado plates. And this guy Rutherford is connected with her somehow, maybe with the Monticello thing also. What strange substances, besides the pot?"

"Couple gallons of corn syrup. Some really fine sand, like lapidary grit. Maps, and Felterson had these, showing the location of a new subdivision—and they were on the road toward it. I figure they were going to mess up some construction equipment."

"You going to charge them?"

"Well, I'm not sure it's worth the hassle. The dope wasn't much, way under an ounce, and it was stuffed in her car behind the rear-seat arm-rest. I figure that one of the guys in the back seat, probably Chester, according to what you just said, put it there when I stopped them. Can't imagine Markham carrying it around in a new car, especially if she's out on recognizance just now."

"Unless it was left over from before her adventures with us. She's kind of an air-head."

"Maybe, but they were all higher than kites. One of my deputies smelled dope smoke when they drove by him up the road a piece. He called them in and I collared them. Anyway, I can book her for DUI and probably conjure up some kind of disturbing the peace thing for the others, if you want me to hold on to them."

"Did they make their calls?"

"Markham did, to a lawyer in Cortez, ah, some guy named Reid Tompkins, according to our version of caller ID. She got his answering machine, and boy, was she pissed."

"Did you do the roadside test on Markham?"

"Yeah, and she fell flat. I mean literally, during the one-foot part. Good thing the turf underfoot was soft. With that and the stash, I could cause her lots of headaches, but you know how these cases are."

"Yeah, not worth the hassle. But because she's out on recognizance just now, this is an excuse for me to see if I can get it revoked. I'll work that end, and we can figure out how to get her out of your hair. And I'll leave the others to you. I guess it would be pretty hard to get them on 'intent to sabotage' or something just for having that other stuff, though."

"Yeah, but there's one more thing. It's what made me think of the possible Monticello connection. Rutherford had this piece of paper in his pocket, folded up. Printed on it was 'Dear Developers: SCREW [and it's SCREW in capitals] you! Stay out of our forests!'"

"Oh. Well. That's interesting indeed. More interesting than I'm supposed to tell you, unless Todd Sweeney has talked with you."

"Sweeney? The FBI guy over your way?"

"Yeah. Well, hell, I'll just tell you anyway, but keep it secret, OK? You called me because you read about the SCREW note in Monticello, right?"

"Right. And because of the connection with sabotage."

“Well, the secret is that there was a SCREW note at the scene of that assassination attempt up in Boulder on Friday.”

“What? No shit? Uh, excuse the French. But, really? I mean, from what I’ve been reading, that was carefully done, the perps got clean away. I can tell you, there’s no way that this bunch could have pulled that one off. These people remind me of the Three Stooges and their girlfriend.”

“I’ve been thinking the same thing. The Boulder note is probably a misdirection. The feds know about the Monticello note, I talked with Sweeney about it. He agrees that they’re probably not connected, but they’re looking into it. I’ll mention this one to them as well. So, anyway, I’ll get Markham’s bond revoked and come pick her up. Anything else I can do?”

“Yeah. Figure out what to do with her car. It’s stinking up our holding lot. But that’s a long story.”

\* \* \*

Annette was right—after the interview on Sunday, the flood gates opened. Monday’s papers were full of “un-named source” interviews, sound bites, and hearsay about the mysterious Bug-Be-Dead van and its two occupants. Although less precise than the descriptions from the NCAR security tape, the public perception of the van’s occupants was taking form. The *Denver Post* reporter who summarized the variety of eye-witness reports described that form for his friends as “Those Las Vegas comics, Penn and the short guy Teller with a corn cob up his ass.” And the radius of their sighting was increasing—someone had seen the van drive into a car wash on the far east side of Boulder, over a mile from the shopping center where its occupants had been seen taking the signs off.

The car wash information was new to the Secret Service and FBI teams, and they were not amused to be scooped by the news media. The news media, of course, rubbed this in with gleeful abandon.

Pickle and Mad Dog, however, were too busy to read the Monday papers, for they had chosen Monday as the day to lean on Timothy Langer. They drove down from Norwood quite early and staked out an apartment building where he was supposed to be living.

About 9:30, Langer left the apartment building in the company of two other people, and they all climbed into a beat-up, older model Ford Bronco and headed off toward the campus. Langer was let off in front of a building with a sign that said “Streak Willoughby Athletic Dormitory,” and, before Pickle and Mad Dog could do anything, he disappeared inside. They debated what to do next, and finally settled on following him into the dorm. Langer would recognize them on sight, of course, but they would be careful.

After spending a half hour trying to find a parking place that wouldn’t get them towed—even on the Monday holiday, the public spots were mostly full—they walked back to the athletes’ dorm and strolled in through the open front door. They found themselves in a large lounge area, full of couches and easy chairs, study tables and bookcases. There was a television in a far back corner, tuned to the Cartoon Channel, from the looks of it. After their eyes adjusted to the relatively dim lighting, they recognized the back of Langer’s head, over in a corner in front of two open windows, sitting with a group of very dark-skinned young men. One had his leg in a cast, propped up, crutches leaning against his chair. Another, quite tall, was leaning over a table, paying close attention to Langer. The third, a tall, bulky fellow, was sitting in an easy chair, reading a newspaper, nodding off.

Following a brief consultation, Pickle walked toward the corner where the group was sitting, and Mad Dog held back, leaning casually against a column in the middle of the room.

For his part, Tim Langer was surprised at how fast everything was going. The Sunday meeting with Jamal—and man, this dude was *tall*—went better than he’d expected. For one thing, there was no

communications gap. Tim had sort of expected to have to get used to hearing ghetto slang, but that wasn't the case. In fact, Tim was finding himself speaking with more care than he usually did, so as not to sound like a dullard to Jamal. For another, Jamal seemed both interested in learning about the technical background behind the tool that he had learned to use in high school and adept at picking technical issues up quickly. So they had agreed to start on the tutoring first thing Monday, which turned out to be at 9:30, in the dorm where Jamal lived and generally hung out with his fellow athletes.

Tim was a little late, but no one really cared. Jamal was waiting for him in the main lounge, with two of his pals, Freeman Williams, the football team's star right tackle, and Abdul Moustafa, a running back who was recovering from getting his knee 'scoped. The poor guy had blown his medial collateral ligament during a springtime pickup game—a flag football game, to his embarrassment. Having read about these football stars in the paper, Tim was learning the pleasure of consorting with celebrity. Basketball season, he thought, will be a lot more interesting this year.

Just as he was finishing going over the outline for the Intro to Computers course—Tim had spent the evening before surfing the Web—he felt a tap on his shoulder and saw Jamal looking up at someone. Tim turned to find his nemesis Pickle standing behind him.

“Hey, Timmy, listen, I need to talk with you. Could you step outside? C'mon now.”

Pickle had taken hold of Tim's left shoulder.

“Excuse me.” Jamal's voice was silky smooth. “We're in the middle of something here, something that is really important to me. Something that we have an appointment for. We won't be much longer. Please take your hand off *my friend*.”

The very notion of a middle-aged guy, especially such an *ugly* one, grabbing Tim offended Jamal to the core.

“Hey, pal, I suggest you stay out of this, if you know what's good for you. Timmy and I have a little business to discuss.”

During this exchange, Tim had begun to tremble; this, combined with his pallor—white as snow, a remarkable contrast to the athletes he was sitting with—made it clear to Jamal that something was amiss. So he stood up. By the time he was finished, he was hovering a good 18” above the top of Pickle's head.

“Excuse me again, sir, but I'm not your pal, and I would appreciate it if you would take your hands off my friend.”

Then Pickle, whose head was tilted way back to see who was talking to him, heard a deep, sonorous rumbling from behind him.

“Don't think you're anybody's pal around here, buddy. You heard the man. Let the little dude go.”

Pickle turned, only to see another very tall individual standing staring down at him. This one, however, was much, much wider than the first one.

As if by magic, a knife appeared in Pickle's right hand.

“OK, fellas, back off. I can take care of the kid here and slice you both to ribbons before you can say jigaboo.”

He looked surprised, apparently realizing what he'd said just a fraction of a second too late to stop saying it.

“Before we can say *what?!?*”

Jamal and Freeman were almost in unison.

But Pickle didn't have a chance to answer. There was a sharp cracking noise, and Pickle squealed in agony as his right wrist broke from the blow by one of Abdul's aluminum crutches.

"Aw, it bent!" was Abdul's only comment, referring to his crutch, as Pickle's knife went skittering into the corner.

"Time for you to fly, friend."

The rumbling resumed briefly as Freeman grabbed Pickle by the shirt collar and the belt, picked him off his feet, swung him back and forward and let him sail out the open window.

In itself, this wouldn't have been catastrophic for Pickle, for this was the first floor and they had come up only a few steps from the ground at the entrance to the dorm. His wrist, of course, was broken, but he could have landed on the grass with little additional damage. However, outside the window was a robust hedge, green and healthy, thick and hearty, of carefully pruned hawthorne. The pruning administered by the grounds keepers over the decades seemed to have enraged the otherwise placid bush, because it had grown its thorns much longer than one would usually expect.

Pickle's first ever solo flying lesson ended with a landing in the hedge. He sank in a foot or so, felt himself being stuck as if he'd become a pin cushion, and wriggled so much that he became completely entangled. The pain of his wrist was a secondary problem now, and the wailing sounds he was making were easy to hear inside the dorm.

Back inside, Mad Dog had sprung into action, but he was just a tad late to save his friend from flying. He took out Freeman with a blind-side rabbit punch, and kicked the cast-encumbered Abdul off his chair. Then he was facing Jamal, who had come out from behind the table and was standing between Mad Dog and Tim, who had backed into the corner.

"Stand on the knife, Tim, but don't pick it up. Fingerprints. There's going to be police involved here, sometime."

Although calm, Jamal seemed ready for trouble. He was also fascinated by Mad Dog's wandering eye, which was doing double time in its random walk around the room.

"You, boy, are in bigger trouble than you know."

"Jigaboo? Boy? Man, what planet are you two guys from, anyway? Listen, whoever you are, you can sucker punch and kick people in leg casts, but you've got more than you can handle with me. The folks over there are calling the cops. We've got witnesses. Your friend isn't going anywhere without hedge clippers. You might as well just sit down and be quiet and await your destiny. It's inevitable. Unless you want to get hurt, white boy."

Jamal had taken just enough theater training in his first year at Frémont State to have access-on-demand eloquence.

With a growling noise, Mad Dog rushed the taller, lighter basketball player, but Jamal simply stepped aside and gave Mad Dog a kick in the pants, which helped accentuate his crash into the bookcase on the wall. Mad Dog turned, truly worthy of his name now, and began a slow, careful stalk.

But Jamal stood his ground, balanced on the balls of both feet. When Mad Dog was just under two meters away, it happened, almost too fast to see. Jamal jumped, executing a double pirouette with remarkable speed and even grace, and, on the second revolution, he thrust out his left leg a long, long way, landing a back heel kick with his Doc Martin boot squarely on the point of Mad Dog's jaw. There was a sort of crunch, and teeth flew from Mad Dog's mouth. He toppled into a heap on the floor, sliding under the study table.

“Holy Moroni!” Tim was the first to speak. “Jamal, what in the world was that move? I’ve never seen anything like it, even in the movies!”

“Well, I took karate at home, in high school. Now I’m taking ballet. I sort of improvised.”

The rumbling noise was back.

“Abdul, you OK? Good. Hey, guys, I was reading in the paper about how the President was almost assassinated by two men, a big one and a little one, and the little one had a funny, puckered mouth. What the hell, let’s call the FBI.”

“I’ve got a better idea.” Tim was smiling so wide his nose was stretched. “I know this lady who runs the CBI, the Colorado Bureau of Investigation, down here. She’ll know what to do.”

\* \* \*

## Fourteen

“He said what?”

“He said that he was going to send me two season passes for basketball. He claims that it’s because I started things in motion, I guess he means the tutoring, things that wound up with all the great publicity. He figures that all the home games will sell out, and probably away games, too, because we have this ballet-jumping, karate-kicking center playing for us. Of course, I think it’s all a way to get me to make sure Jamal’s grades are good enough. And we already have season tickets, even though we haven’t used them, so I’ll give the new ones away. Hmm. Unless they’re better than ours.”

Annette and Hal were once again in the middle of a long breakfast on the deck, home-made muffins this time, discussing Hal’s conversation with the Frémont State Athletic Director. His call was the most recent fallout from the “Rumble at the Streak,” as the *Frémont Free Press* called it.

From Hal’s perspective, the fallout was good news. The students had reacted appropriately, if exuberantly, to a clear threat, and the threat had been mitigated in the least damaging way possible. The university fared well in the press reports.

The fallout was also good news from Annette’s perspective. For one thing, the feds now owed her, big time, *biggest* time. She had turned over to them, with no fanfare or expectation of credit, their two main suspects in the assassination attempt. And she’d done it in relative secrecy. More importantly for Annette, having Pickle and Mad Dog off the streets had opened Timothy Langer up, and she now had a much clearer picture of Schoenfield’s activities than before. Tim was still afraid of Schoenfield, so he wasn’t going to be testifying. But Annette knew enough to develop strategy.

Although still afraid of Schoenfield, Tim considered the fallout to be good news, too. He had a new set of friends, his first ever, practically—friends with celebrity status on campus, no less. He had season tickets to both football and basketball. He wasn’t afraid of getting caught hacking any more. And girls were noticing him.

About the only people for whom the fallout was bad news were Anthony J. Mercer, also known as Pickle, and Morgan L. David, aka Mad Dog. Mercer’s wrist was in a cast, and some two hundred small puncture wounds, many as deep as two inches, had been tended to. David’s jaw was wired together, *sans* three molars, two uppers and a lower. From a medical perspective, the only good news for these two was

that David's eye had stopped wandering. He was delighted and would have talked Mercer's ear off, the one with the four little holes in it, if he could have talked more than just to say "Mrrph."

From a legal perspective, there was no good news at all for these two. Because the NCAR security guards had positively identified them as the two Bug-Be-Dead workers who had made a service call to the laboratory the morning of the assassination attempt, the feds were holding them without bail. And the ballistics match that showed their involvement in the assassination attempt implied their involvement in the murder of Arthur Powell at Natural Bridges Monument. Annette had her suspicions about other murders as well, and their incarceration on federal charges would give her time to sort all of those out.

And, to add insult to injury, Bug-Be-Dead, Inc. had announced that it was going to sue them for defamation.

"Does this mean that we're going to the basketball games this year? And can you pass the peanut butter?"

A basketball fan ever since playing on her college team, Annette had been wanting to go, but something always came up.

"Well, it makes a difference, knowing one of the players. You remember how we enjoyed football more after we met the Twin Towers, no matter the circumstances. And, hey, this basketball player could be a gas to watch, if he's on your team. I mean, anybody messes with him is asking for trouble, and the opposing players know it. This could be fun."

"I'm glad it all worked out so well. If I'm right, these two thugs are responsible for killing a lot of people, very well, I might add. The clean crime scenes, for example. They must have had brain lock to get themselves in the situation in the dorm."

"I bet they weren't thinking it would be an issue. I mean, it's a college dorm. They go in, find Tim, use their adult ways to intimidate the students, and spirit him out of there. They didn't figure in running into Jamal and his friends. The flying lesson was especially good. Who'd think those hawthorne hedges would be so useful? They were planted years ago, you know, when the old college needed a way to keep the boys out of the girls dorm."

"I didn't know. But I do remember college, so it isn't surprising. Anyway, that chapter seems to be closed. The issue now is nailing Schoenfield and there still isn't solid proof of much of anything. Even if Tim agreed to testify, he would get torn to shreds by a good defense lawyer. He's got some real animosity toward Schoenfield that he isn't talking about, but it would come out in court. His testimony wouldn't hold up."

"Is there evidence that Mercer and David work for Schoenfield?"

"Formally, they work for the X-S Ranch, Incorporated. The X-S is owned by the non-profit corporation Resources For Humanity. Its board, the public board, is a bunch of community leaders from around the region, but everyone recognizes that it's run by Schoenfield. But that's hearsay. So, if asked, Schoenfield will say that these two renegade X-S employees, whom he hardly knows, went off and did these Bad Things without his knowledge, oh dear, oh dear."

"But if Mercer and David testify against Schoenfield, and Tim does too..."

"There are possibilities there, but I don't think Mercer will. David's not talking just now. And getting Tim to testify is more than I'm willing to push for. What I really want to do is to get Schoenfield red-handed. Somehow. But I'm optimistic. Events, she said ominously, are in motion," she said, ominously, despite her grin.

“You were talking the other day about a computer sting. That’s probably the best part about getting Tim to stop worrying about whatever he was worried about.”

“Yep. I think he was worried about Mercer, as controlled by Schoenfield. He’ll talk about it eventually.”

“Well, I’m thinking that the U will come out of this in pretty good shape, unless our guy Steven Rutherford turns out to have killed somebody.”

“Probably not. I expect he was part of the Monticello arson, but that’s it. He’s not talking about that, but he’s talking about other stuff, being pretty cooperative. I think he’s pissed off that Mercer and David used that SCREW note up in Boulder. But he’s also worried, I think. The guy who got killed over in Creede, the squished guy—remember?—was a friend of his. Rutherford thinks he may be next on some hit list. There was talk between them of a sort of revival meeting for Resources For Humanity. Wellington, the squished guy, thought it was just a wise-use group thing, but he talked to Rutherford about racist overtones. So that’s another possible connection between RFH and Schoenfield’s outfit, at least I think it’s Schoenfield’s, the Aryan Rights Foundation.

“Anyway, we’ve managed to scare the bejesus out of those environmental people, and they’re actually starting to cooperate. I had a little chat with the lawyer, Tompkins, about the lay of the land, and he’s been pretty reasonable. I’m not sure about him, though. There’s more there than I’ve figured out.”

he popped a piece of muffin smothered in peanut butter and honey into her mouth.

“Anybody ever figure out what SCREW means?”

“I think Tompkins knows, and I’d bet the mortgage that Rutherford knows, but they’re not talking. Probably worried about incriminating themselves.”

“At least, if you’re right, with Mercer and David off the streets, Rutherford doesn’t have to worry about being next.”

“Yeah, but we don’t have to let him know that. I like keeping him off balance.”

\* \* \*

Both Hal and Tim Langer had ulterior motives in seeing that Jamal’s grades were up to par—good basketball games—so they were meeting often to keep on top of the situation. When Annette heard about this, she designated Hal as a sort of de facto probation officer for Langer. This merely gave Hal an excuse to discuss computer hacking issues with Langer, in particular, those related to Langer’s former client, as they had come to refer to Schoenfield. Annette’s ominous reference to events in motion had piqued Hal’s curiosity, so that afternoon he broached the subject with Langer during one of their meetings.

“It’s pretty clear to everyone that Mercer, I mean, Pickle, is just a fall guy, an operative, for whoever’s in charge of all that was going on.”

“Oh, yeah. He was an enforcer, and if his enforcement didn’t work, Mad Dog would take over. I can’t tell you what a relief it is not to have to worry about them.”

“They were looking for you, but why?”

“Probably because I wasn’t getting the job done, the job on UNELECO. Because I got caught by you guys.”

“Your name was kept out of the papers, I think. At least I didn’t see it. Do you suppose that you could still succeed at getting into UNELECO? I mean, tell your client that you’ve done what he wanted?”

“But I haven’t. And he knows I got caught, I think. At least he knew it if it was on the CBI computer, and it probably was.”

“Oh. You mean that he wouldn’t buy a story about how you were questioned and released and are being disciplined by the university. But then you went ahead and hacked into UNELECO anyway, just because you wanted to do a good job?”

“Uh, I don’t think he’d buy that, no.”

“Hmm. Well, I was thinking of helping Annette set up her sting.”

“What kind of sting?”

“As I understand it, the idea is to plant information somewhere that he can get to only if he has unauthorized access to where it’s planted. The information would be about something that the CBI thinks he’s done, something shady. It’s false information, of course, but designed to make him act on it, but only if he’s really involved in the shady stuff. Then they have him stung.”

“So what do you need UNELECO for?”

“With all due respect to the CBI people, I think UNELECO’s computer systems jocks are better, they could do a better job on the sting. Also, your client doesn’t know his way around on those systems so well. If the CBI makes changes to catch him, he might notice something fishy.”

“Right, he might. He’s not real sophisticated, though. If they want to make changes, a good way to do it would be to make it public, like it’s a normal part of systems upgrades, or something. Put out a flashy MOTD for all to see. Then, the changes to catch him wouldn’t be so suspicious to him.”

“Uh, MOTD?”

“Message of the day. It tells people, when they log in, what new stuff has happened on that system, that sort of thing.”

“Hmm. I know Annette got her boss to stop big changes on the CBI system, like—what did Jamie call it?—rebuilding the root login, I guess it was. That would apparently wipe out your secret login, right?”

“Yep. And, of course, he’d wonder why he couldn’t get in and probably try a lot and be real frustrated and mad, but that would be the end of it. Keeping that login alive is the first step toward getting him.”

“So what’s your position on this. Want to get him?”

“You bet. With him as well as Mad Dog and Pickle out of circulation, I’d be breathing a lot easier. I mean, as things are now, he could hire a couple of new thugs and I’d be back to where I was a week ago.”

“You have a unique combination here, you’re knowledgeable about this, and you’re motivated. And, since this is summer, you have time. Jamie knows what to do, I think, but she’s mostly upset with you, not your client. And I guess the UNELECO people are out of the picture. Annette is working the sting from her own angle. But the more angles we get going, the better.”

“So, if you don’t mind my asking, Dean Weathers, what’s your motivation in all this?”

“Oh, a couple of things. I want Annette to succeed, of course, but she’ll do that with or without me, I’m sure. But I also want to get who’s really behind all this, at least if he’s responsible for the portfolio.”

“Portfolio? Of what?”

“That’s right, you may not know. Well, over the past year or so, someone has been killing off people associated with the environmental preservation movement. Mostly, it’s been pretty radical environmentalists that have been killed, all with some connection or other to some shadowy group called the Mother Earth Defense League, MEDL. But not always. I forget how many, but it’s around a dozen. As much as I’m a centrist on these issues, it offends me that someone’s going around killing people. And everything we know, which is admittedly not much, points to Senator Schoenfield.”

“I heard my uncle give a speech once, where he talked about how the tree-huggers were preventing people from using their land, the resources God gave us, for their families. He’s a sort of bogus preacher, and he brings God into everything when he can.”

“Your uncle? Would I have heard of him?”

“Michael Oswald. He calls himself ‘reverend,’ but that’s just his ego. He’s really a lawyer. I heard he got disbarred for something or other. Now, he spends his time drumming up support for Resources For Humanity, the outfit that the Senator set up as the front for his ranch and for his other thing, the Aryan Rights Foundation. What a crock that one is.”

“Does Annette know about these connections?”

“Um, I think so. I don’t remember if I talked about them with her. But I think so.”

“Is it OK for me to tell her what you just said, in case she hasn’t heard it?”

“Uh, sure, but I’m still scared of going to court or anything.”

“She isn’t going in that direction at all. But better yet, why don’t you just give her a call? Volunteer to set the sting up for her. That would really rehabilitate you in her eyes.”

\* \* \*

Even though they all knew each other, they were supposed to pretend they didn’t. Instead, they were assigned numbers, and the operation began to sound like a parody of a bad spy novel, “Number One” this, “Number Two” that. But those were the rules.

To make matters even more ridiculous, they had to wear hoods, black ones that were intolerably hot during the day, when they were practicing. During the real thing, at night, the black hoods would help disguise their lily-white skin. But no one thought to suggest white hoods for daytime practice. Even tan and green camouflage ones would have been better than black.

Number Three, known to the rest of the world as Gerald McTeague, was sweating so much that he couldn’t see. He’d been using the hood to sop the sweat from his eyes, but it was saturated by now and so were his sleeves. But he needed to see, for his role in the operation was to be the signal relay. A flashlight was going to send him the “go” signal, and he would use a flashlight of his own to relay the “go” to Number Two, who in actuality was Gerald’s best friend Bob Roy, down the way. Bob Roy, er, Number Two, would cut a climbing rope with his razor sharp axe, which would let the rock go, pulling out the support under the main timber of the little bridge over Lime Creek above the Spar City site, which would collapse the bridge just in time for the Forest Service truck, on its rounds bedding the camp grounds down, to fall into the creek and be swept over the falls just below, killing the meddlesome rangerette with the big hooters in a way that would look like an accident. The flashlight that Gerald’s

sweaty eyes were supposed to see was to be triggered by the pickup's passing a certain tree just up the road from the bridge.

Of course, during this practice run, the pickup wasn't the rangerette, it was Number Five, the only one of them that no one knew, the ringleader. He was from Cortez. And, naturally, Number Two wasn't going to cut the rope, he was going to whack a log instead. In theory, it was easy, but with the sweat and the daylight, Gerald had his doubts about whether he was going to see the flashlight. At night, of course, it would be a snap. But Number Five insisted on practice, and he was a real taskmaster. Plus a real asshole.

The latter personality trait had come out during planning meetings. The distances involved, a few hundred yards, would allow the use of those cheap walkie-talkies, or even whistles, so why not use them?, Gerald had asked. We thought of that already, came the condescending answer: Because they use open radio bands and anyone can hear, and because we need to keep quiet. But if someone just said "Go," well, so what if it's overheard? Smarter people than you thought this up and this is the way it's going to be done, with flashlights, was the answer. If you don't want to do it the right way, then we'll find someone else and you can get yourself off the "A" list.

Was that it? Or was that a glint from a car window on the road? Shit, this is impossible. Just to cover his ass, Gerald turned and blinked his flashlight in the direction of Bob Roy, who must have seen it because there was the whacking noise, right on time. OK, great, exercise over, I'm getting out of this goddamned hood. Gerald stripped the dripping black cloth off.

"Number Three, you're out of uniform." The booming voice seemed uncannily close. "That'll be ten demerits. You also screwed up the operation with a false signal. That's about it for you, soldier. We don't tolerate mistakes or incompetence. You want to play with the real men, you've got to do it the right way, our way. Otherwise you might just as well head for Boulder and hang out with those limp-wristed faggots up there. Ten demerits for being out of uniform is a hundred push-ups. In uniform. Now! And screwing up the exercise means you clean out the latrine tonight! On the ground. Now!"

It didn't help that Number Five, whom Gerald had turned to stare at, was only about 5'1" tall, a little bantam rooster puffed up with self-importance. Well, he needed to play the game, and that meant getting past this test.

"My apologies, Number Five. I saw a blinking and thought it was the signal. It must have been sunlight off the window of a car. And I signaled Number Two, he responded, and I thought the exercise was over. These hoods are hot in this sun." He put his hood back on and started on his push-ups.

While he was busy humping the ground, Numbers Two and Four arrived from their appointed positions, seeking approval from the leader. Number One was on station near the bridge and had pretended not to hear the whacking noise. His job in the operation was to untie and retrieve the rope from the keystone rock, eliminating evidence that this all wasn't an accident. During the practice, however, he was sitting in the shade with his feet in the river, listening to the gurgling water and thinking about cold beer. His hood was wet, too, but with cool river water instead of sweat.

"Whoa. What's Ger... um, Number Three up to, Number Five? I saw his light and did my thing. We done now?" Bob Roy's drawl from under his sopping hood was unmistakable, no matter what Number he was pretending to be.

"He's being disciplined for being out of uniform. And he gave a false signal anyway. We've got to do this all again."

"Aw, hell, Number Five, it's too damned hot for this fooling around. We can pull this off just fine without any more practice. The main thing is to get that Rube Goldberg contraption set up right, so the

whole thing actually works when I cut the stupid rope. I don't see why we don't just blow the damned bridge anyway. I've got some TNT up at my mining claim."

"I've had just about enough of your questioning my authority, Number Two. That'll be ten demerits for you, too. On the ground. One hundred push-ups. Now!"

Because he didn't have Gerald's motivation, with a muttered "To hell with that. I'm out of here!" Bob Roy stripped off his hood and stalked off in the direction of the pickup, *his* pickup. He roared off in an indignant cloud of dust.

Gerald was up to fifty-two when he heard the truck go. Great, he thought, it'll be as long a walk for asshole Number Five as for the rest of us assholes.

\* \* \*

"Well, Tim," Annette was gazing out her window at the top of Smelter Mountain, "I appreciate your wanting to help. Really. In fact, you may be the best chance we have of pulling off a successful sting operation using computers. But, look, I promised not to require you to testify, and I want to keep that promise. You've been as helpful as you could have been, even telling me about Senator Schoenfield, but the more you get involved with this the greater the likelihood that we'll need you to testify."

Tim Langer squirmed in his chair, evaluating his next move. He knew she was right.

"What I'm afraid of is that I'll testify and he'll get off anyway and come after me."

"You've told me that he's behind all this stuff, at least as far as you can see, but you haven't told me what his hold on you is. Is it through your uncle somehow?"

"My uncle doesn't know, I don't think. He's kind of the Senator's front man, but he's always treated me like family." Tim squirmed some more. "See, when I was in high school, my uncle got me a job up at the Ranch, wrangling horses. I used to help out with the pack horses when the Senator went on hunting trips. And on this one trip his wife died. The county coroner ruled it an accident, but what happened is that she fell off her horse because the saddle wasn't tight enough, and she broke her neck. And I'm the one who saddled that horse. And the Senator knows all about it, so if he tells the coroner the case will get re-opened and I'll get accused of being responsible for her death, maybe even charged with manslaughter. At least that's what the Senator says. I know I saddled that horse perfectly well, so I really don't know how it could have happened. But it did and she's dead and the Senator's got me under his thumb."

"So if you don't do what he wants, he'll get you for her death? Surely it's just your word against his?"

"But who would believe me? On the other hand, people would believe him. He's a senior member of the Colorado State Senate, for God's sake."

"Hmm. Well, you're probably right, there's no point in poking at that particular hornet's nest. But, look, you told me you set up computer access for him to various sites, including the CBI one. And you were going to set one up for him on the UNELECO system, right? But you also said he was pretty unsophisticated when it comes to computers, right?"

"Right, on both counts."

"Hal said he talked a little with you about the sting idea. It seems to me we ought to be able to work something out, since you've done this work for the Senator already."

“I was thinking about a practical way to get to him. But what we could do to get started is just turn the tables on him. Hack into his system.”

“What? Oh. Of course. Well, Mr. Langer, you get a Gold Star. But how?”

“Well, he’s probably heard that Pickle and Mad Dog have been arrested, or he will. So he’ll be accessing the CBI system to try to find out why and what you people know about them, right? I could set up a script to detect when he’s logged into your system and then to access his system, do things like download his directory structure. The next time, we could start downloading his filesystems, the data files, to see what’s on there and what he knows. We could even write to his system, plant things to make him look bad.”

“Planting things isn’t what I want to do, because it could backfire. But, look, doesn’t hacking into a system take time? And he’s not permanently connected to the internet, right?”

“No, he uses dial-up access. But it won’t take time at all, so that’s not an issue. I guess I understand about not planting things on his system. But we could plant things on your system and wait until he finds them and downloads them, right? And then he’d be caught.”

“Right. And if those things motivated him to act in some way, to do something else illegal, well, then we’d really have him. But, look. I don’t understand why it won’t take a lot of time to hack into his system.”

“Well, because it won’t really be hacking. I’m his system administrator. I know the logins and passwords.”

Even without the hoods, it was still hot, but at least they were bare-headed. It helped to be able to see.

After Bob Roy had set them afoot, the remaining Numbers had grumbled and argued and grumbled some more about what to do next. Number Four’s cell phone wasn’t getting a signal, so they couldn’t call his wife to come and get them. There was little hope that hitch-hiking, this far up in the watershed, would be productive. Bob Roy was probably sitting in a bar, sipping a cold one, and he sure wasn’t going to reappear.

To make matters worse, at first Number Five had insisted that they continue to wear their hoods. The first priority was to keep their identities secret, he said. Finally, some not-so-gentle and persistent persuasion had succeeded in changing his mind. After all, if someone should see four people walking down the road in black hoods, well, wouldn’t that be just a tad suspicious?

The breeze was pleasant, and the babbling noises of Lime Creek, over to their right in the trees, was soothing as they walked along. If they got too thirsty, they could drink stream water, giardia or no, but at least they wouldn’t get dehydrated. Number One was complaining about being hungry, but he needed to lose some weight anyway.

Gerald figured it was at least ten, maybe twelve, miles back to Creede, and it would be well past dark by the time they arrived. They would all be hungry by then. But the time involved would also mean that things would be cooling off. He and his fellow Numbers could have used one of those summertime thunderstorms today.

Gerald was thinking that this Number business was about the dumbest thing he’d ever been involved in. Number One, real name Billy Henderson, rather liked the hocus-pocus involved, but that was no surprise. A rocket scientist Billy was not. Playing at being soldiers of fortune in the woods was a

welcome break from his real job, mucking the stable at the Three Rivers Dude Ranch. Even wearing a black hood in the hot sun would be an improvement over that.

And Number Four, Jonas Alberts, was unemployed, so anything to do was good news to him. The alternative, hanging out in what passed for downtown Creede hitting up the tourists for spare change, had a tendency to attract the sheriff's attention. Jonas had done that once too many times to want it to happen again.

So Gerald and Bob Roy were really the only reliable members of the team, aside from Number Five, whom none of them knew well enough to trust. They had all speculated on how this "exchange program," as the Reverend had called it, would work out. Now, Gerald thought, they were all probably wishing that Will Johnston had not been exchanged for whoever this jerk Number Five really was.

All the while, Number Five was continuing his authoritarian ways, enforcing a fast pace in single file, and silence. At least it was downhill. And, after Gerald straggled once too often, Number Five stopped leading and began following so that he could berate them from the rear. Gerald took pleasure in scuffing up as much dust as he could for Number Five to eat. Number Five responded to this by acting even more like a drill sergeant, so Gerald got to watch Number One's large behind marching in double time just ahead of him.

Then Number One stumbled, and Gerald hopped aside to avoid him. But Number Five didn't, resulting in a rear-end collision of the sort when a motorcycle runs into a dump truck. Number Five bounced into the ditch, and Number One lurched into Number Four, who toppled with him in a tangle. Gerald had to work hard not to laugh out loud. What a bunch of pathetic losers!

About that time, around a curve ahead, coming up the road their way was one of those powder-puff green Forest Service pickup trucks, driven by none other than Rangerette Adams, she of the hooters. It rolled to a stop next to the chaotic little parade.

"Hey there, fellas. Out for a hike, eh?"

She was obviously trying just to be pleasant, and they all had little choice except to be nice in return. But no one seemed inclined to respond, and Number Five was even trying to hide his face. Finally, to avoid letting Number Five make too much a fool of himself, Gerald decided to speak for the group.

"Ah, no, ma'am, we're on our way back into town. Car broke down up a ways. We'll get a tow truck and come back for it tomorrow."

"Hiking into town? Geez, it must be ten miles. Want a ride? I've got time to take you in."

Gerald didn't care what Number Five might think of this. He just didn't want to walk.

"You bet. I'll hop in, these guys can get in the back. C'mon fellas."

It appeared that steam was coming from Number Five's ears, but what could he do but climb in?

"Good work, Ginny, and just keep pretending you don't know me."

Gerald was buckling himself in as he muttered this under his breath.

Then, more loudly, "We all sure appreciate this, ma'am. My name's Gerry."

"And I'm Ranger Virginia Adams. Nice to meet you." She stuck her head out the window. "You guys all set? Hang on back there."

And she jockeyed the pickup around to head back down the hill.

As they rattled down the dusty road, Gerald kept up a running monologue, interspersed with appropriate comments of encouragement from the ranger. He rattled on and on, in a louder voice than he needed to, about how he and his friends had been fishing—catch and release only—and their car broke down, about the weather and how nice it was with no storms to worry about, about what beautiful country the upper Rio Grande Basin was, about what a tough job Forest Service rangers must have.

All the while, he was writing notes on the back of the top piece of paper on the clipboard he'd found on the seat between them.

## Fifteen

The only good thing about it was that, with Lolly stuck in jail because her bail had been revoked, Reid wouldn't be getting any. Everything else was bad; no, everything else was horrible. Steve Rutherford, released on a recognizance basis, could only go about his life as best he could and wait for the other shoe to drop.

It finally did when he received a summons from Dean Harold Weathers of the College of Natural Sciences—routed, for reasons of protocol, through the Dean of the College of Social Sciences and Humanities and then through Rutherford's boss, the Chair of Sociology—to appear in Weathers' office at 10:00 am on Tuesday to discuss the status of SCARAB as a student organization. It seemed that Weathers had responsibility for oversight of student groups with ties to programs in his college, and biodiversity was one such tie.

On Tuesday morning, Rutherford found his way to the natural sciences building—an unfamiliar location to him—and sat himself on the couch in Dean Weathers' waiting room. The little old white-haired receptionist was polite, if distantly cold, and she persisted in giving him what he could only interpret as the Evil Eye. Little did he know that Alice held SCARAB at least partly responsible for the death of her son. So his five-minute wait for Dean Weathers to finish a phone call was not at all comfortable.

Inside Hal's office, he and Annette were finishing a cup of coffee and discussing strategy, the five-minute wait for Rutherford having been calculated in advance.

“So you don't think we should even bring up the SCARAB business I concocted? Just hit him right off with MEDL and the portfolio?”

Hal had thought to sneak up on the real reason for the meeting by putting Rutherford off guard.

“Well, like we discussed, we can use the threat of scrutiny of SCARAB as a trade-off for him. If he doesn't want to cooperate on MEDL and so on, SCARAB gets audited, or whatever you folks do here at the U. If he cooperates, we don't even have to talk about it. Surely he'll be a little relieved if we don't even bring SCARAB up.”

“Probably. And I have this idea he should be pretty willing to cooperate. I mean, we have him tied to a Presidential assassination attempt, for heaven's sake. Wouldn't he want to get as far away from that as he can?”

Hal picked up his phone and buzzed Alice. “Hi, Alice, go ahead and send him in. Did you offer him coffee? ...No? ...Good. Neither will we. Thanks.”

There was a tap on the door, and it opened to admit a sheepish looking Steve Rutherford, dressed in his usual summertime sociology research assistant uniform of polo shirt and jeans. Hal and Annette were seated in their Power Seats, and Rutherford had little choice but to aim for the chair across the desk from Hal.

“Good morning, Dean Weathers. You wanted to see me?”

Despite not wanting to act it, Rutherford was intimidated, and it showed. Upon recognizing Annette, his intimidation level ratcheted upward several notches.

“Mr. Rutherford. I believe we met briefly at the student-group orientation meeting last fall. Do you know Ms. Annette Trieri of the Colorado Bureau of Investigation?”

“Yes, I do. Ah, may I ask why she’s here?”

“Of course. As you know, Frémont State University is a State of Colorado entity, and the Colorado Bureau of Investigation has ultimate jurisdiction over legal matters on state university campuses. So her presence is entirely appropriate when legal matters related to university organizations are being investigated. However, she has an additional reason for being present at this meeting as well.” Hal turned to Annette.

“Glad to see you’ve been keeping your nose clean lately, Steve. I want to talk about the Mother Earth Defense League.”

They watched as he looked surprised and sat up straighter.

“And I particularly want to talk about this list of people. How many of them did you know?”

She handed him a sheet of paper, which he took only after hesitating. He read it, blinked several times, and read it again.

“Ah, ahem, ah, I thought you wanted to talk with me about SCARAB, Dean Weathers.”

“He did, and does, maybe, but I’m first. Here’s the deal, Steve. So far the feds don’t know about the note you had in your pocket when Sheriff Grange picked you and Lolly and the others up over by Pagosa Springs.”

Annette had no problem lying to suspects when it suited her.

“They do know, of course, about a similar note found up in Boulder, in the debris of that assassination attempt on the President. What do you suppose they’d want to do with you if we told them about your note?”

She paused for rhetorical effect, and Rutherford shifted in his chair, trying to get comfortable. It didn’t appear to work.

“Now, I think that whoever was involved in the thing up in Boulder was just copy-cattng your Monticello note, as a misdirection, or maybe as a joke. But the feds won’t think that, at least not for a while. So what we’re here for is for you to persuade me not to talk to the feds about your note and for you to persuade Dean Weathers that we have more important things to talk about than the irregularities in the SCARAB bank account. And you can do that by talking to us about MEDL and that list of dead people.”

This time her pause was long enough that Rutherford felt he need to respond.

“They *are* all dead, aren’t they? I made a list a while back, too, and I was surprised at how many there are.”

“Friends of yours?”

“Mostly. Not all. Are you investigating their deaths?”

“That’s the general idea, and that’s why we want to talk with you about MEDL and them. Not because you’re a suspect, mind you. In fact, if you knew they’re dead and some were friends of yours, I think I now have a motive for your arson at the FFPI mill. So now you really do need to talk with us.”

“Why? Are you arresting me? And what do you mean, ‘my arson’?”
