"Well, without going into too much in the way of technical details, we're going to use a new, proprietary network connection to the fast internet node that's over in Boulder. We'll get there through the Moffatt Tunnel, we've already made arrangements with the railroad. And, since you brought it up, we'll have enough bandwidth to lease some to local internet providers, so there will be improved broadband available up here for everyone. We've talked about providing it to the school district for free, and some others, too. One of these days I'm going to talk with the county information management people, for example."

Alva Hathaway was still shaking her head. "I'm sorry, Mr. Weathers, but this is just all too good to be true for me to quite trust it. There's got to be a hitch somewhere, some kind of fly in the ointment."

Hal shrugged. "Well, ma'am, I'm not asking for your trust or anything. I'm just announcing our intentions."

A fourth person behind the table, quite likely a commissioner but his sign was missing so it wasn't entirely clear, cleared his throat and spoke up in a gravelly mumble.

"Ya got good sense, Alva. All these so-called climate studies done by computer are a complete load of horse pucky. Buncha environmentalists trying to generate global heating propaganda so they can ruin our economy, kill off jobs, make us all drive those crappy little Jap electric cars. Fella, I tell you we got no use for this stuff here in Grand County, and you can take your new organization somewhere else, as far as I'm concerned." He looked around as if he needed a spittoon.

The room was silent, apparently awaiting a response from Hal, and he took advantage of the silence to let a little tension build by shuffling his notes again.

"I'm afraid you have me at an advantage, sir, because your name plate seems to be missing." Hal gave the crusty old fellow a little smile and stared at him expectantly.

"Doesn't matter who I am, because I represent the views of lots of folks here. I could be anybody. Just call me Joe Citizen."

"Well, Mr. Citizen," Hal seemed unfazed, "Your view of our future activities may be representative of many people in Grand County, but that just means we have some public education to do. You see, climate simulation using computers isn't about proving anything in particular, it's about understanding how Earth's climate works. The big issue just now is how regional climate works, that is, how the global climate influences the climate in particular regions. And I'd say that Grand County, with its ski areas and other weather-dependent tourism, not to mention agriculture, is a place that folks might just be interested in that sort of thing, or they should be. I mean, even if the odds of significant global warming are quite small, wouldn't it be nice to have some idea of what could happen here anyway? Just in case? And if we're creating a couple hundred or so well-paying jobs in the process and not costing the county or its municipalities anything, what's the problem? It seems to me that professional career positions like we'll be filling are preferable in the local economy to entry-level, minimum wage, service jobs."

Alva Hathaway responded for Mr. Citizen, who was looking sullen. "He's right, Simon, it's no skin off our nose as long as they don't ask for any tax breaks or anything. And the jobs will help. Mr. Weathers, this is Commissioner Simon Murcheson, by the way."

Hal smiled his best college-dean smile. “It turns out that another task of mine while I’m here is to assess educational needs on behalf of the Colorado Commission on Higher Education. I must say, they do seem to exist, those educational needs.”

As Hal turned to sit down, the stare from Simon Murcheson could have burned a hole in his back.

\* \* \*

“No wonder that development went under. Whoever would want to buy into a place with a name like ‘Mount Epworth Arms’?” Hal was studying architectural drawings that he had unrolled on the dining table.

“That your new building?” I was munching on toast, looking over his shoulder. “And what’s wrong with ‘Mount Epworth Arms’? Sounds distinguished. Mt. Epworth must be one of the peaks over there on the Front Range, no?”

“To me, ‘Mount Epworth Arms’ sounds like the name of a falling-apart, pre-art-deco apartment building on Collins Avenue in Miami Beach, full of geezers trying to remember to take their memory pills and heart meds. Not an upscale vacation condo in Winter Park. Anyway, yes, it’s my new building. Except I don’t need so many two-bedroom, two-bathroom apartments with kitchens. These plans are going to be changed a lot.”

“But at least all these bedrooms are on the outside, with views and balconies. Make each one an office, and you’ll have lots of happy employees. Much better than cubicles. And I’ve never been in an office building that had enough bathrooms, especially women’s bathrooms. Be generous, OK?”

“Absolutely. At least I think I see how this can work. I’ll have to get a recommendation from Chuck on an architect. He bought the thing, so maybe he’ll have some ideas.” He took a sip of his coffee.

After the long day on Thursday that culminated in Hal’s appearance before the county commission, we slept in Friday morning and had breakfast together at home for the first time since Monday. And it was truly beginning to feel like home—both of our cars were in their customary places in the garage, our computers and other electronic gadgets were hooked up and humming away, and our knick-knacks were scattered about, lending an air of familiarity to the place.

With Hal’s new offices still in the form of steel superstructure, he was working from home, spreading out his stuff onto whatever surfaces seemed appropriate for the task. The dining table was the only thing large enough for the plans.

I was due at the sheriff’s office at eleven, but first I planned a call to Denver, to my boss, Rod Andersen, the CBI Director. We had agreed that weekly phone updates, plus monthly written reports along with whatever other updates seemed appropriate, would suffice to document my work with Grand County law enforcement, and I wanted to make this first call in privacy, from home. I had nothing but good things to say about Sheriff Fran Schmidt and his department, but it seemed better to make the call from somewhere other than the sheriff’s own telephone system.

I got through to Rod’s administrative assistant, Sandy McStain, at exactly 9:30, right on time.

“Morning Sandy. It’s Annette. I’m calling for my weekly chat with Rod.”

“And he’s waiting to talk to you. We saw a report yesterday about the three homicides up there.” I heard clicks that told me she was pushing buttons.

“Annette? Good morning! How are things on the other side of those beautiful mountains I’m staring at?”

“You sound ready and raring to go this morning, Rod. And things here are all in a tizzy. Grand County has three homicides all at once, and the sheriff is understaffed. But, listen, you should know that all three happened before I got here. They were discovered after we arrived, but all three deaths happened before.” He laughed, and I knew my message got through—Don’t blame me, boss!

“That’s understood at this end, but I expect there are some people up there who don’t quite understand it. The CBI jinx strikes, and all that. Oh, well. Listen, I saw in the update you sent that there are indications that the three are related somehow.”

“Two seem to be. We should have blood results today from two bodies that have needle marks. The other one may also be related, but that’s circumstantial just now. The third victim, the woman who was killed on the ski run, she was deeply involved in the water-rights issues that one of the others was writing about.” When I said it that way, the connection sounded tenuous even to me.

“Right. And the other victim was a local developer who had connections to water issues as well. Seems he was a mixed success, though. One of his projects fell through in a big way, and lots of small investors got stiffed. So there are people with a motive for wanting him dead. One of my staff here told me about it—he lost his deposit on a condo up there.” Rod was more informed than I had thought.

“Rod? Do you happen to know the name of the project? I’ve only heard of the Tobias Summers projects that succeeded.”

“He didn’t say, but hold on, I’ll get Sandy to ask him.” And he put me on hold for a minute. “OK, she’s got to track him down, but we’ll find out shortly. Anyway, how’s the department there doing? You said it’s in a tizzy.”

“Yeah, they’re understaffed for this. For example, the day we found the second victim, the one made to look like a suicide, Sheriff Schmidt told me that he had all of his available people on the scene except for two, who were on patrol in the western part of the county.”

“‘Western’ meaning…”

“Oh, well, they seem to think of themselves here as two large units, with the county seat, Hot Sulphur Springs, in the middle. The east county is where the action and money are just now, because it includes the ski areas and,” I counted in my head, “let’s see, five of the eight municipalities, or something like that, including Grand Lake. The west county is lower geographically and in terms of population, but it’s still a big area. So, anyway, he had almost all of his people at the scene where one of the under-sheriffs and I found the victim. If any other emergencies had come up, they would have been in trouble.”

“And they can’t just hire more people because of budget issues, I bet.”

“Right. So I’m working on efficiency improvement. On top of that there are some strange things that keep popping up because this is a pretty small community up here. For example, the sheriff used to date the female victim, and she, the victim, was also close friends with the sheriff’s wife. And the sheriff and one of the deputy DAs have trouble getting along, because of an ancient relationship gone bad. I’ve seen a little of this sort of thing in Durango, which isn’t the world’s biggest population center, after all. But here, it seems more prevalent.”

“Is it getting in the way of their work?”

“I wouldn’t say that, but it’s weird to run into it. All-in-all, with these three homicides I’ve been spending most of my time at the sheriff’s department and haven’t touched base with the municipalities yet. Oh, but I did meet the medical examiner.”

“During one of the autopsies?”

“Right. A real character. Comes across like a drugged-out ex-hippy, but underneath I think he’s sharp. We’ll see how he interprets the blood-test results today.”

“According to the reports, one of the men died from a stroke and the other from sleeping pills and alcohol, a suicide.”

“That’s what we’re saying publicly, and that’s certainly what they were both set up to look like. But the needle marks inside their noses are too suspicious to ignore. And there are other factors, too. That’s why the blood tests are so important. Even if McMurphy—he’s the apparent suicide—even if he did die from Seconal like we’re supposed to think, it could have been intravenous. And I suspect any number of substances injected into the brain could induce a stroke.”

“Interesting. Well, you’re right, Annette, the blood tests will be critical...oh, thanks Sandy. Hmm. Annette? Sandy just handed me a note. Says here that the name of the development that my guy lost his shirt on was something called the Mount Epworth Arms. Yeesh. Who’d want to live in a place with a name like that?”

\* \* \*

## Nine

“That is extremely bizarre.” I was looking at Hal, who responded with one of those quizzical expressions he adopts when things don’t make sense.

“Uh, what should I say? ‘Yes, dear?’” He cocked his head sideways with the question.

“The failed condo development that Chuck Shure bought for your institute, for MPARC, was one of Tobias Summers’ projects. Possibly the only failed one, although I’ll want to verify that.”

There was a long pause before he reacted. “Really? You’re right, that *is* bizarre. What Chuck told me was that the sale finalized last week, but he didn’t say who the seller was. Those plans I was looking at earlier are dated five years ago, though. It would be astonishing if the thing hadn’t passed through several hands—these failures almost always do.”

“I’ll call Chuck and find out who. I’m not going to obsess over this, but it’s a little too coincidental for me to be comfortable with.” Coincidences and I are not the best of friends.

“You want his private number?” Hal reached for his cell phone. “I’ve got it programmed in here.”

“It’s in mine, too, ever since that case of mine he got involved in.”

I walked into the other room to make the call. Hal was working on something on his computer with accompaniment by a Grateful Dead concert CD. Turned up.

“Yes?”

“Chuck? It’s Annette Trieri. How are things in the corporate world?”

“Annette! Hey, it’s good to hear from you. I was asking Hal about you on...on Wednesday, I guess it was. I assume he got home all right?”

“Oh, sure. And last evening, he made a short presentation on MPARC to the county commission. He’s going to call you about an architect to redesign that building you bought, or that frame of a building, actually.”

I heard laughter. “Right, I think he was a little unnerved by that. But, hey, I need some fun, too. Thanks for the heads up—I’ll put him onto my personal architect. He’ll know what to do with that thing.”

“Chuck, that building is what I called about, actually. Would you happen to know who the seller was? Maybe you could refer me to whoever closed the deal for you.”

“Don’t need to, because it was me. Enough money was involved that it got kicked upstairs to my office. So I went up to Denver last week to do the closing. The official seller was an outfit called TMS Holdings, Inc. The paperwork was as complicated as anything I’ve seen, because it included the notes owed to various investors, people who bought into the thing before it went belly up.”

I thought for a minute. “Does this mean that those people are going to get paid off? I know of somebody who lost his shirt, or so I’m told.”

“I’m going to have to deal with them one-by-one, and there are a couple dozen. But, yes, generally that’s my plan. They will get an offer of their money back plus reasonable interest. If they don’t agree with my idea of ‘reasonable,’ then I’ll have to play hardball.” He laughed quietly in a way that almost seemed menacing.

“Can I ask what the price was?”

“My total outlay was just under five million, and I figure I’ll have to come up with another two hundred thousand or so in interest. Naturally, this money comes from the earnings of the endowment for MPARC, so it really wasn’t my outlay. But you see what I mean.”

“So the seller walked out with a check, or a deposit receipt or something, for, what, four, four and a half million?”

“Three point two. The principal owed the investors is in escrow, and there was the broker’s commission. The broker, that son-of-a-bitch, made a bundle for very little work, I’ll tell you.”

“Chuck, I’m asking all these questions because the person who started the Mount Epworth Arms development is a homicide victim up here. To have that building resurface this way has got me curious.”

“Tobias Summers a homicide victim? Was it in the paper? I haven’t seen anything. When?”

“You know Tobias Summers?”

“Well, yeah. He was the seller. TMS Holdings is Tobias and Mandy Summers or something like that. He has this group of companies to wheel and deal with, to move properties among. Or he had them. He was at the closing on Wednesday. I shook hands with him. Damn. Now he’s dead?”

“Right. Killed, although it was set up to look accidental. You say he walked out of your closing with over three million dollars? In what form? Not cash, surely.”

“No, no, it was a special cashier’s check that was only for deposit. It would have to be deposited and verified. That’s what he and the closer specified, so that’s what I brought. Hmm. And I remember that it was made out to him personally, not to TMS Holdings. I didn’t think much of it at the time, but now it seems a little strange.”

“And this was Wednesday a week ago, right? What time of day?”

“Right, nine days ago, and it was about one-thirty that afternoon when we were finished. It took place at an outfit called Western States Title, and I was with one of my lawyers and an accountant. Summers was alone. He left, the rest of us, including the Western States closer, talked for a few minutes, and then my guys and I came back here to the Springs. That’s how I got the plans I gave to Hal two days ago, at the closing.”

“His wife, Mandy, saw him that Wednesday morning, so you’re the last person we know who saw him alive. We think he was abducted while he was in Denver and then brought up here and killed in this setup to make it look accidental.”

“Let me guess. There’s no sign of that three point two million dollar check, right?”

“This conversation is the first I’ve heard of it. And it adds a whole new dimension to this investigation. We need to find out if it’s been deposited and, if so, where and by whom. Chuck, I’d like to have one of our sheriff’s people drive down to interview you, if that’s OK. It’ll be about what you’ve told me with additional questions about how Summers looked and acted. Will that work for you?”

“How about if I come up there? I’ve got this new building, such as it is, to look at and my institute director to talk to. Know any good places to stay?”

I thought quickly. I knew Charles Shure well enough to invite him to stay in our guest room, the guest room of the guest house. But if he was driven up by a chauffeur, then what? And I really didn’t know the local hotels very well—besides which, it was ski season and they might be sold out for the weekend.

“I don’t know the local places at all. We’ve got a guest room, but it may not be up to your usual standards. We’re staying in the guest house of one of Hal’s friends, Winston Fredrickson.”

“Win? Well, small world. Ten to one says he’s not there, am I right?”

I tried to mask my surprise. “We’ve been here not quite a week, but we haven’t seen him.”

“Tell you what. I’ll call him and tell him I need to stay at his house. Then I’ll be just up the road and I won’t bother you. And I can zip over to see the sheriff and get interviewed. What’s today, Friday? Maybe I can get up there tomorrow and stay over Saturday night, then ski on Sunday. I’ll keep in touch. Oh, and I’ll have my accounting group follow up on that check.”

“OK, sure, Chuck, keep in touch.”

I felt as if my head was spinning around when I went back to find Hal in his study.

\* \* \*

“Hi, sweetie. You look dazed and confused. Can I help? Coffee, tea, something stronger?” Hal knows me well enough to diagnose head-spinning, even if it’s only the virtual kind. I sat down in a chair across from his desk.

“I think I need to think for a minute. Chuck Shure bought the Mount Epworth Arms directly from Tobias Summers, shook his hand in the process, last week, a week ago Wednesday, the day Summers’ wife last saw him. Chuck is going to try to come up here tomorrow to talk with the sheriff about it, and, because he seems to know Win, he’s going to stay up at the main house. Or so he said. Oh, and there’s a three point two million dollar check missing, drawn from an MPARC account, I think.”

Hal’s expression started out surprised, then morphed to thoughtful and matter-of-fact.

“Hmm. Lots of information to process there, no wonder you look dazed and confused. I guess it’s not surprising that rich guys know each other, Chuck and Win, I mean. And I truly am astonished that Summers still owned the building, but if he did, it makes sense that he’d be at the closing. The missing check changes the complexion of your investigation, doesn’t it?”

Putting the new information in those simple categories helped me considerably.

“It does indeed, but Chuck is going to have his accounting people trace it. Maybe we can find out who deposited it and where. I’m due for a meeting at eleven, got to run. What should I get for supper?”

“When will you be home?”

“Five, five-thirty, I guess.”

“How about we try out the Mexican restaurant in Winter Park. Carlos and Maria’s—I’ve heard good things about it. I need a chile fix.”

“You sure? This is pretty far north for your kind of chile. That stuff I had at the ski area would have disappointed you badly.”

“That’s why I didn’t have it. Ski area food is meant for the masses. But this place has been around for a long time, by local standards, and it has a great reputation. Maybe we’ll get lucky.”

I left for Hot Sulphur Springs amused by my husband’s never-ending quest for chile nirvana—and that he thought he might find it in Winter Park, Colorado, of all places.

Because I was running a little late, I decided to brave the back road that Fran Schmidt had used on Tuesday and found it neatly plowed and trivial to negotiate. I even managed a little controlled four-wheel drift on the sweeping curves down the west side into town—something that once had scared the daylights out of me was actually fun.

The 11:00 meeting was just convening when I arrived. Fran Schmidt had pulled his employees together to hear the blood-test report and to communicate as much information as possible about the three homicides his department was confronted with. As I sat down, it occurred to me that I might just need to announce what I’d learned about the Tobias Summers homicide that morning. But that would have to wait.

“Thanks for coming, everyone. I wanted to get you all together to let you know where things stand with our three homicides—and they’re homicides for sure now. Today is the right time to do this because the blood tests on a couple of the victims came in this morning. George?” Fran Schmidt was strangely nervous, I thought, considering he was, first, the boss and, second, basically a politician who gave speeches all the time while running for office.

“Yeah, thanks, man, far out. Well, folks, I’ll tell ya, we got some seriously weird sh... uh, stuff here, weirder than anything I’ve ever seen, that’s for sure, man.” George Neering was in fine form, playing to the crowd. He had his beard braided—possibly for the formality of the occasion, because it looked a little like a necktie. When he talked it bobbed up and down, kind of like neckties do on Adam’s apples sometimes.

“Anyway, see, I did autopsies on the three victims. The lady, Lannie Young, a lot of us knew her and it’s just a damned shame, really, well, she died from a broken neck, basically, caused by when she caught a tree limb on the chin. But it wasn’t an accident, man, because somebody pushed her, see? Norman found some forensic evidence yesterday, and Fran’s got some folks following that up, right, Fran?”

He looked toward the sheriff, who nodded.

“OK, so the other two victims, Tobias Summers, who’s someone a lot of us also know and I guess it’s not such a damned shame, although don’t quote me, right? And the other guy, the writer Mike McMurphy who no one knew very well because he kept to himself. Anyway, they both died in circumstances that sort of looked normal—a stroke in Summers’s case and suicide by sleeping pills and booze in McMurphy’s case. Except, man, that’s just what they were *made* to look like. But, see, I found needle marks inside their noses, in the same place, left nostril, way back up in there where whatever got

injected would go right to the brain, man. I'll tell ya, do not, *do not* try that at home, man. So the blood tests are to try and find out what they got injected with, see?" George looked around at the crowd, nodding his head to that internal rhythm he carried around.

"So, anyway, Summers' body was found with lots of empty booze bottles, right, Fran?" George got another nod. "But there was no booze in his system, blood alcohol content zero, or at least below detection limits. And there wasn't anything else unusual in his system, either. So I'm pretty stumped, man. But there was some cell damage up in there, up in his nose, so something got put in there. Maybe just a few milliliters of alcohol—that would induce a stroke and probably not be detected. Something, I don't know, man. Also, Summers had traces of some tranquilizers in his blood, suggesting that someone had him under their control for some time before they injected the coagulant. All this is consistent with what little we know, that he went to Denver on Wednesday before last and didn't resurface until he was dead. So that's what we know about Tobias Summers, man."

He looked around as if expecting questions, but the room was silent except for a few coughs.

"OK, well, that's Summers, man, now McMurphy. Remember, I said I found an almost identical needle mark, right? So the deal with McMurphy is that he supposedly sent Fran an email suicide note on Monday. It was a delayed email, and supposedly he took a load of reds—I mean, you know, downers—and booze a couple of days before Fran got the email, right? And Janelle and the CBI lady, Annette Tri-er-i went up and found his body along with an empty pill bottle and an almost empty bottle of Glenlivet. However. *How-ev-er*. No alcohol in old Mike's blood either, none, nada, zero. Also, no evidence of pills in his stomach. I mean, if he gobbled a whole bottle of pills, some would get absorbed, dissolved and digested, but some would take longer. Usually, you find pill residue in cases like that, man. But his blood test shows lethal amounts of Seconal. I think that's what they injected him with. So that's what we got, man, two dead guys who got injected with things that killed them except in both cases it was set up to look different. Like I said, real weird, man."

He looked around for questions again, and, when none materialized, he sat down. I think everyone breathed a sigh of relief.

"OK, thanks, George. Since there aren't any questions, Norm? How about an overview of what you've found?" Fran Schmidt still seemed strangely nervous.

"Right, Fran. I've been involved in two of these homicides. On Monday afternoon, I went up to Michael McMurphy's place on Crooked Creek Road to look for tire tracks under the snow before the plow came. There was nothing remarkable down by the road, but up by the house there were two interesting things. First, McMurphy's car hadn't been out of the garage since before the previous storm, which was a couple of weeks back. Second, the last vehicle up there was what I've identified, from the track width and the tires, as a Cadillac Escalade. Three people got out and went over to the front door of the house, then came back, out through the garage door, and left. This was after the plowing from that previous storm." He looked around, but the crowd had learned to sit on its hands.

"OK, well, the second of the cases was Lannie's, and yesterday I went up to Outhouse—for those of you who don't ski, that's an expert run that connects the top of Winter Park to the Mary Jane base—and dug some trenches in the snow. This was after Ms. Trieri found a swatch of fabric on a tree in the woods above where Lannie's body was found. It looks as if someone, probably the person who pushed her, skied out of control and got his shoulder scraped by the tree where the fabric was, and then he skied down to examine Lannie's body. We're following up on the fabric now. Questions?"

Someone in the middle of the crowd stood up. "When are we going public with the homicides? So far, public thinks they're what they were supposed to look like."

“I’ll take that, Norm.” Fran Schmidt stepped to the front of the room. “Today. That’s one of the reasons for this meeting, so none of you is blindsided. I’ll be having a news conference after lunch, and the DA’s office will be there, too. I’m going to avoid mentioning certain aspects of what we know, however, so don’t be surprised if you don’t read about some of the things you just heard. And everything you don’t read about, or hear publicly, has to be considered confidential information, which we need to remain confidential, clear?”

He looked around the room, but no one else stood. “OK, folks, I know you’ve all been working your tails off lately, and there still more to be done. But we’re going to find out who’s behind these homicides and put them away. You can all be proud of the work so far, and I’ll tell you straight out that I’m proud of you. Also, I’ll say that our CBI liaison has had good things to say about everyone, which makes me even more proud of you. I can’t think of a better bunch of people I’d want behind me in a situation like we’re facing. Let’s get out there and catch these guys.”

\* \* \*

Norman Dzenge and George Neering were sitting together in the front row, and Fran was just finishing thanking them when I approached.

“Fran? Good job all around. You seem nervous, though.”

“Aw, it’s the press conference. I hate press conferences. Plus, the DA himself is in Denver today, so guess who is representing his office?” He rolled his eyes and shook his head.

“Oh. I see. I’d be nervous, too, with a loose cannon like her on deck. Want me to be there? I could repeat in public what I’ve said to you about your people.”

He thought about it. “You know, that’s a great idea. And if you put in a plug for increased staffing, it wouldn’t bother me in the least.”

“I’ll be diplomatic about it, for sure.” I recalled something from the earlier briefing. “Say, I couldn’t help but notice that Norman didn’t mention all we know about that fabric.”

He nodded. “Right. We talked about it beforehand and decided to keep that quiet for now. Thing is, we have people on staff with agendas about the ski area. Some love it because they have relatives working there. Some hate it because they have relatives that weren’t retained by the new company that’s operating it. The more invisible the company stays in this thing, the better, at least until we have something solid.”

“I guess this is another facet of this small-town thing I keep seeing. Like with you and Donna Little. There are all these connections in unexpected places.”

“You should have been up here twenty, thirty years ago. Back then, it was ridiculous. But we’ve had enough new people move into the county to help with that some.” He grinned. “I guess you’re finding out about all the girls I used to date, though.”

I grinned back. “Only two, three counting your wife, so far. You mean there’s more? And, not to change the subject or anything, I found out something interesting this morning, some of it possibly relevant.” I told him about the conversations with Rod Anderson and Charles Shure.

“So this guy Shure is coming up here this weekend so we can interview him? I’m impressed. And the money is a new angle altogether. Puts Summers’ murder in a different category from the other two.” He looked thoughtful, measuring implications.

“Chuck’s people are going to trace it, or keep watch on its progress through banks.”

“That should help us. How do you know this guy, anyway? Doesn’t sound like you’d travel in the same circles.”

“Old case. We had a state senator down by Telluride with delusions of grandeur, who tried to recruit Chuck for his vigilante gang. It didn’t work because Chuck came to us instead. He wound up getting kidnapped for his trouble, and I rescued him.”

“Oh, yeah. I remember reading about that, uh, some time back. And now he’s bankrolling this institute that Hal is setting up? Interesting. You know, it’s great that he bought out that development to use. Winter Park was getting close to condemning it and tearing it down. And please tell me they’re going to change the name.”

He had led us back to his office, where a stack of phone messages was waiting, along with Donna Little, who was sitting on a side chair, overflowing it by a large margin.

“Ms. Little. What can I do for you this morning?” His tone was polite but not quite friendly.

“You could have invited me to that meeting you just had, for one thing.” Her tone was impolite but not quite hostile.

“I don’t think so. I’ve discussed it with your boss on a couple of occasions, and we both agree that it’s better to keep some distance between the investigators and the prosecutors, at least in the early stages of investigations. Then, when we make an arrest, we work together and you come to our meetings. Finally, when the actual prosecution starts, we fade away unless called on. He and I talked about writing up a formal agreement to that effect, but then we decided to keep it informal. I guess word didn’t get to you.” His tone was still polite.

“What are you, joined at the hip to this person?” She jerked her head in my direction, an amazing feat considering she didn’t seem to have a neck. “I need to have a private conversation with you.”

Despite her now-rude tone, I kept quiet.

“Ms. Little, the only conversations that are appropriate for this office concern official county business. Ms. Trieri, in her role as our consultant from the CBI, is privy to all official county business. It’s therefore appropriate for her to be part of conversations in this office.” His continued ability to remain polite was remarkable.

I thought about excusing myself but sensed that Fran wanted me to stay, so I remained as impassive as I could while watching her little piggy eyes dart back and forth between the two of us.

“I thought you wanted to hear about the meeting that Lannie Young had scheduled with me. It doesn’t concern *her* at all.” She jerked her head in my direction again, and her several chins flapped with the motion.

“Actually, it does, Ms. Little, now more than ever. Because Janelle Kennedy has recused herself from the Lannie Young investigation due to a perceptual conflict of interest, I’ve asked Ms. Trieri to take more of a lead role. Anything involving Lannie is relevant for Ms. Trieri to hear.” Fran had not discussed this with me, but I wasn’t going to say anything under the circumstances.

“Really? Your cute little token-ette has given up? I always thought she didn’t have the right stuff. And I’m not sure it’s appropriate, or even legal, for you to involve this person,” again the jerk of the head, again the flapping jowls, “whatever her credentials, in an official capacity. I’ll have to look into it. And until I do, you’re just going to have to wait to hear about my meeting with Lannie Young.”

She struggled to her feet and wobbled off down the hall.

“Oh, *man*. Maybe I should just cancel that press conference.” Fran had begun nibbling on a thumb-nail.

“Have you and she discussed an agenda for the press conference? Who goes first and says what? And don’t cancel. It’ll just get the reporters even more stirred up.”

“Yeah, you’re right. I’ve only done this once before, when there was a big car-bus crash involving alcohol. The DA and I had a press conference to talk about it. He went first, he’s a take-charge guy, did a short introduction and turned it over to me. Then he summarized by talking about drinking and driving in general and how Grand County has zero tolerance, blah, blah. Very political, but, then, it was only a couple of months before the election.”

I thought about it. “Well, it sounds to me as if that’s a precedent. Go to the conference on time. Sit down and wait for her to do something, assuming she’s there on time. Then wing it. And do not, under any circumstances, let them see you sweat.”

He smiled through his nerves. “I’ll go spray my face with Right Guard.”

\* \* \*

## Ten

“Ladies and gentlemen, thank you for coming. I’m Grand County Sheriff Fran Schmidt. We also planned to have representation from the District Attorney’s Office today, but I know that they have people out of town and are short-staffed. Some kind of pressing matter must have come up.”

It was ten after one, and Fran had waited as patiently as he could, even to the point of pretending to get a cell-phone call to let extra time pass. He’d called Donna Little at five after, but her secretary didn’t know where she was.

“We called this press conference to discuss with you suspicious circumstances of three unattended deaths we’ve had in Grand County recently. Although we thought, at first, that these deaths were either natural, accidental, or self-inflicted, they now classify as homicides, all three of them. Let me explain what I can tell you about them, and then I’ll take questions. There’s also a press release ready for you that’s being passed around.”

Fran proceeded to talk for a good half hour, explaining each death in as much detail as he could without giving away information we had agreed to hold confidential. Then the questions started.

“Sheriff, with regard to Tobias Summers. His body was found in the apartment of the school superintendent, Emily Griggs. Were they having an affair?”

“There’s no indication of that whatsoever. Dr. Griggs was out of town, stuck in Denver due to the big snowstorm we had a week ago. When she returned Saturday afternoon, she found Mr. Summers’ body and called us immediately. Why and how he was in her home is something we do not yet understand, and neither does Ms. Griggs. Yes?”

“Sheriff, is it true that Mr. Summers was in Denver as well? Couldn’t she have killed him and set this up?”

“Let me be clear. Ms. Griggs is under no suspicion. She is cooperating fully and wants this cleared up as much as we do. We believe that Mr. Summers was in Denver during the same time frame as Ms. Griggs, but that he was brought back here sooner than she returned. We have testimony from several people in Denver as to Ms. Griggs’ activities, and there’s also the issue of size differences. Ms. Griggs is

a petite woman; Mr. Summers was bigger than I. She simply could not have manhandled his body to set this up. Yes?”

“Sheriff, is it true that you and Ms. Young were having an affair?”

“No. Lannie and I had a relationship years ago, before I met my wife, and we ended it as friends and still were friends. And Lannie and my wife were very close. Lannie’s death has been a personal tragedy for my wife and me both. Yes?”

“Sheriff, why did you relieve Under-Sheriff Kennedy of her duties on these cases?”

“I did not relieve Under-Sheriff Kennedy of her duties; in fact, she remains the lead on the Summers and McMurphy cases. She recused herself from the Young case because the body was found at the ski area and Ms. Kennedy’s husband works there. She is trying to avoid any appearance of a conflict of interest. Yes?”

“Sheriff, there’s a rumor going around to the effect that Emily Griggs is a lesbian. Do you think it’s appropriate for the school superintendent to be a lesbian?”

“In general, I think the appropriate criteria for selecting a school superintendent relate solely to educational qualifications and experience—how much the individual can provide leadership in the education of our kids. And it’s clearly not appropriate for me to make any comments or to speculate about Ms. Griggs’ personal life. I will say that she seems like a fine person to me, though. And she seems like just the sort of superintendent we need here. Yes?”

“Sheriff, Lannie Young was a real-estate agent and Tobias Summers was a developer. Do you think they were involved together in something that got them both killed?”

“There’s no information that would suggest such a thing. Yes?”

It was amusing to watch Fran bob and weave among the questions, trying to be forthcoming with straight answers without venturing into the territory he wanted to avoid. The only question that took him aback was also the only question about Michael McMurphy.

“Sheriff, there’s been a persistent rumor going around for years that Michael McMurphy had a huge stash of gold nuggets from that mining claim that he built his house on. Did your people find anything of that nature when you searched his place?”

Fran paused, stared at the reporter for a full ten seconds, and burst into laughter.

“Excuse me, excuse me, I’m sorry. The answer, of course, is ‘no.’ And no one on my staff has run off to the Bahamas, either. I had a conversation with Mr. McMurphy some time back about this rumor, and I’ll tell you that we both had a good laugh about it. It turns out that he used the mine site for his home because the tailings made good fill for the foundation and the entrance to the old mine itself made a great wine cellar. But there never was any gold in that hole, or anything else of value, for that matter.”

At last, after a half hour of such give and take, he thanked everyone again for coming and the gathering broke up. Donna Little never put in an appearance, and I didn’t get asked to speak, either.

“Sorry I didn’t introduce you, Annette, but I think these people have short attention spans. That hour was about their limit, I think.”

“It’s OK by me. I wonder what happened to your colleague from the DA’s office.”

“God knows. I hate to wish bad things on people, but that’s one person who tests my restraint. I mean, it’s been twenty-five years. You’d think she’d be over it.”

“It’s on her by this point. Has she ever had other relationships?”

“Oh, for sure. She went to college and then law school, in Fort Collins and then in Boulder. Got married and worked in Pueblo for a while. When her marriage broke up, she came here, home, and landed the job with the DA’s office. That’s when she let herself go to hell, must have gained two hundred pounds. That was about five years ago.”

We had left the small auditorium where the press conference had convened and were walking down the hallway toward Fran’s office. A young woman in uniform saw us from the other end of the hall and rushed toward us.

“Sheriff, sheriff, did you hear? About Assistant District Attorney Little?” She was slightly out of breath, flushed, clearly distraught.

“Calm down, Anna, calm down. Take a deep breath. What happened? I haven’t heard anything.”

“Donna Little, she, she...well, she’s dead. It looks like she was trying to run across the highway, coming back from lunch just now, and she slipped on some ice. Only, she was running to get across the traffic and after she slipped she got run over by a highway department sand truck. Killed her instantly, they say.”

\* \* \*

Considerable sorting out ensued. Because the accident—and it appeared from every perspective to have been an accident—had happened right in front of the sheriff’s department’s offices, there was no lack of official people on hand. Because the highway was still closed, with a side street bearing the brunt of re-routed traffic, and there were uniforms standing around doing official things, the reporters who had left the press conference had no shortage of people to quiz.

For his own protection from the reporters as much as anything, the driver of the sand truck, Shorty Thistlebaum, was hustled into the sheriff’s office, given a cup of coffee and paper and pencil, and told to write out his description of what had happened in as much detail as he could remember. The main purpose of this exercise, I discovered on talking with Fran, was to buy time and keep Shorty out of more trouble.

George Neering was fetched from his morgue and asked for an opinion about the cause of death, to which he immediately responded “squashed like a bug, man. I mean, a really *BIG* mother of a bug, you know?”

When this opinion was greeted with somewhat less than official approval, George decided, apparently, to play only by the rules and required the body to be transported to his examination table. The three deputies who were tapped for the task each suffered back strain and were sent home to rest.

It appeared that Donna Little had finished a late lunch at the diner across the highway and was hustling to the press conference, which she mistakenly had thought to be scheduled for 2:00. This was confirmed by a notation discovered later on her office calendar. Fran and his secretary were certain they had told Donna’s office that the press conference was at 1:00, so the mix-up remained mixed up.

The District Attorney was tracked down at his meeting in Denver and called to the phone, at which point Fran had the unpleasant experience of delivering the bad news.

“Strange.” Fran said afterward. “He wasn’t particularly concerned about Donna or her family. All he could talk about was how he would be able to afford a replacement. It sounds like Donna was underpaid by a significant amount.”

Then we finally were able to talk with Mr. Thistlebaum, who, we discovered, was in sore need of a bath. The task of writing out the incident seemed to have set him under considerable stress, and he had

stunk up Fran's office something fierce. We left the door to the hall open and cracked a window despite the cold air outside.

Fran handed me Shorty's essay to read while he asked questions.

"Now, Shorty, your initial statement was that you were driving west on US 40 at about the speed limit when the victim started running across the highway, right?"

"Yessir, sheriff, that's right. And she probably woulda made it if she hadn't slipped and fell. I hit the brakes anyway, before she slipped, just to slow down more. But then she fell in front of me and I just couldn't stop, not with that load of sand and that little downhill grade there."

"OK, fine. Now, two things. First, it happens that we had radar enforcement watching that stretch of the highway—people tend to speed through town here all the time—and your story is backed up in full by the officer on duty. He saw the whole thing and clocked you at 33 in the 35 there. And you already passed the breathalyzer test. So you're clean." Fran looked at his notes while Shorty looked relieved. "But you've said that the victim slipped on the ice. Shorty, I need you to think about it carefully and picture it in your mind and tell me exactly what you saw."

"Well, I think that's what musta happened, because one minute she was running across the highway and the next she was flat on her back in front of me. And, you know, when I say she was running, well, it's not like she was an athlete or anything like that. What I saw was this really big woman start across the highway at a fast walk or slow run, moving pretty quickly for someone that large, actually. I hit the brakes to slow down for her and looked in my mirrors to see if anyone was following me too close, and then when I looked back at her she was down, lying right in front of my right wheels. I woulda swerved to miss her but there was this school bus coming the other way, and besides with a full load that old truck don't handle too good. Anyway, I stood on the brakes but I couldn't stop and then there was this ka-bump ka-bump and I ran over her. Geez, it makes me feel terrible."

"My officer on duty also saw the school bus, so your story is solid, Shorty. This was an accident, pure and simple, and I'll make sure the highway department hears that from me personally, in writing."

At this, Shorty looked even more relieved and began to thank Fran profusely, almost in tears.

But there was a knock on the door and George Neering stuck his head in. "Sheriff? Got revised opinion for ya, man."

He looked over Shorty's highway department uniform and rendered an accurate assessment. "Say, man, you the truck driver? Bummer, man, bummer. But, listen, it's not your fault, man. I mean, yeah, you squashed her like a bug, man, but that's not what killed her. She had a massive heart attack, man, must have keeled over in a flash, dead as a doornail before she hit the ground. You just made her fit into a different sized coffin, man. Pancake shaped instead of like a fat bowling pin. Unless they make her un-flat again. Say, man, do you suppose they can *do* something like that?"

Shorty promptly fainted and George became distraught, thinking he had caused Shorty to have a heart attack. Fran groaned and put his head down on his desk.

It was all I could do not to laugh. "George, with all due respect, I think you need to work on your people skills, man."

Fifteen minutes later, Fran and I had his office aired out and to ourselves.

"That's enough excitement in one day for me, Annette. And we didn't even make progress on our cases."

"I wonder if Donna had any calendar notations about that meeting with Lannie Young a week ago, the meeting that didn't happen. She had the press conference on her calendar."

“Let’s go see.” He stood and stretched. “Maybe I can get one positive thing accomplished today.”

“You think we’ll be able to look at her calendar? Really?”

“Now that she’s dead, her secretary will let me, I’m sure. We’re old friends.”

“Another ex-girlfriend, eh?”

He actually blushed. “Well, yeah, but in this case she’s the one who dumped me. And I don’t blame her, I was being a jerk at the time. So I’ve since apologized and we’re friends”

We walked down a different hallway to the opposite side of the building and came to an office suite that was furnished extravagantly, at least by comparison with the sheriff’s department. A set of glass doors, hand-painted with gold letters, said

District Attorney  
A.D. Sonos, D.A.

“Axel is quite proud of the fact that he’s probably the only district attorney in the whole country whose name and title make a palindrome. Go figure.” Fran pulled one of the doors open for me, and we walked across thick Berber carpet to the secretary.

“Honey, this is Annette Trieri, visiting my office from the Colorado Bureau of Investigation. Annette, Honey Blaise, the person who keeps the DA’s office functional. What we need, Honey, is to see Donna Little’s computer calendar. She had a meeting scheduled with Lannie Young last Friday, the day Lannie got killed.”

“She was killed? Ohmygod.” Honey Blaise’s blue eyes were as big as her huge glasses. “I didn’t know. Ohmygod. And now Donna.” She burst into tears.

Fran plucked a tissue from a box on the desk and handed it to her. “Honey, Donna died from a heart attack. George examined her. You know she was ripe for one. Look, I don’t mean to be cold about this, but we really do need to see her calendar. Can I go look?”

“OK, sure.” Sniff. “I’m sorry, Fran, but it’s been a tough day.” Honk. “Donna gets killed, or dies from a heart attack or whatever. Axel calls and chews me out for no reason. And now you tell me that Lannie was killed, that it wasn’t just a bad accident. Um, there’s a password. Donna’s last name backwards, with capital ‘L’ at the end.”

We walked into Donna’s office, and Fran bumped the mouse on her computer table. The screensaver changed to a password box, and Fran carefully typed in “e-l-t-t-i-L” and the screen came on, opened to her calendar program. There was the press conference, mistakenly scheduled for her at 2:00. He clicked on a notation for noon on the previous Friday.

The calendar program opened a new little window, which said “Lannie Young, water shortage, Summers land grab, McMurphy protection.”

\* \* \*

By the time we got everyone gathered for dinner, it turned into a party of six. There was a big basketball game at the gym in Granby, so Fran and his wife and Janelle and her husband dropped off their youngsters to cheer on the team and then got themselves up to Winter Park to join Hal and me for dinner at Carlos and Maria’s. The three spouses made Fran, Janelle, and me promise not to talk shop, which put the spotlight on Hal.

The first thing he did was to order, along with the usual pre-dinner chips and salsa and guacamole, sides of regular and of vegetarian green chile. They came about the same time as all the drinks, a mix of margaritas and beer, with iced tea for Hal, and he set about a tasting.

“Hmm. Not quite as good as Santa Fe—too much cumin—but far, far better than anything in Durango. Quite a nice kick, actually. Annette, we’re staying!” And he toasted everyone including the chef.

“So, Hal.” Mary Schmidt, a tiny woman in her late thirties wearing granny glasses and her hair long, had told me earlier that she was fascinated by the idea of MPARC. “Tell us about this MPARC thing you’re starting up. As long as I can remember, there’s been nothing like it here. Ever.”

“And I don’t quite understand that, but there it is. Maybe it has to do with the highway. It’s in great shape now, but only a few years ago it was something of an adventure, getting over that pass in the winter. And it still can be, I suppose.” Hal popped a chip covered in two kinds of green topping—one of the chiles and some guacamole—in his mouth. “But aside from that, this valley has everything you’d want for high-tech companies. It’s close enough to Denver and the airport to be convenient; it’s isolated enough to keep people focused on the work at hand; it’s got the kinds of recreational activities that high-tech company employees want. I’ve heard that the schools leave something to be desired, but that can be fixed. Medical services are also not really up to par, but that would change if there were more people with real jobs here, instead of all the minimum-wage service-industry jobs.”

“But why MPARC?” Mary wasn’t going to let Hal off with generalized philosophizing.

“I’m not completely certain about that, either, except for what the force behind it has told me. Charles Shure—oh, he’s supposed to come talk with you, Fran; he called me to verify his arrival this afternoon and almost immediately several cars full of people showed up at that main house up the road from us to prep it, I guess. Anyway, Charles Shure runs this conglomerate that includes a big electronics company that’s a competitor of Intel. They think they’re onto a new computer chip technology that will revolutionize things and they need a real-world test-bed. Turns out that Shure was on a federal advisory committee chaired by the Secretary of Commerce, who oversees the National Oceanic and Atmospheric Administration. To make a long story short, the Secretary was griping about how US climate modeling is lagging because we don’t have the computer power needed to do the job. Shure decided that would make a good test-bed for his chips and talked to me about it at a Frémont State fundraiser we both attended. Made me an offer I couldn’t refuse.”

“And you’re starting this thing from scratch? That sounds like a real challenge.” Daniel knew something about big organizations.

“Except Chuck bought me lots of time by going over my head and buying that not-quite building down the street. It’s going to take at least a year, maybe two, to whip that thing into offices ready for occupancy, and I really can’t do much hiring, or installing of fancy computers, until then. Meanwhile, I’ll set things in motion and probably do some traveling to check out how other institutes work.”

Fran Schmidt set down his bottle of Corona. “Hey, even if this whole thing falls through for some unforeseen reason, getting that building completed will be doing the community a huge service. It’s just a dangerous eyesore now. What are your plans for it?”

“I think I want to make it shorter. As planned, it has at least twice as many square feet as I can ever imagine needing, and it looks—I don’t really know what I’m talking about here, because I’m not an architect—it looks frail. Maybe condos don’t need as much structure as I think office buildings need. So one thing I’m going to suggest is disassembling the fourth story and using the steel to reinforce the floors below. That’ll leave more room than I’ll need but make the thing more manageable, and more aesthetic, I think.”

“Oh, Hal,” Mary had stars in her eyes, “The height of that damned Epworth thing has had people upset ever since it was approved, and when the roof went on there was talk of blowing it up. If you do that plus bring all these new jobs to the valley, you’ll be a god around here. You’ll have the town council eating out of your hand. And I know at least a half dozen women in the East Grand Environment League who will give themselves to you as sex slaves.”

“Hey, wait a minute...” My protest was drowned out by their laughter.

Dinner arrived, and everyone quieted down for a while. Finally, Daniel addressed a different issue related to MPARC.

“With no building, like you said your style is cramped. But is there a hiring plan?”

Hal washed a mouthful down with his iced tea so he could talk. “I’ve been thinking about that since Wednesday, when I found out about my not-quite building and also got spending authority. Some of what we’ll need will be taken care of, at first, by the UNELECO people, that’s Charles Shure’s company. Accounting, setting up human resources policies, that kind of thing. Legal. But I’m going to need both advice and help on some things pretty soon. Public relations, for one thing. As much as I hate to say it, I’ll need a PR flack. And, Mary, seriously, I don’t care so much about the sex slaves—you owe me one now, Annette—but your comment about the building is important. We want to score PR points all we can, and that tip will be helpful, I’m certain. Let’s see, I’m going to need a couple of computer people, maybe consultants, maybe employees, I’m not sure. Our networking will be ready to rock pretty soon, and I want to get the school district and some other partners connected as soon as possible. Sometime soon, I’ll have to find a chief scientist. And, Dan, I wasn’t kidding about needing security help. Does your job let you do consulting on the side?”

He snorted his disgust. “My job lets me have the honor of working for the company, full time, no outside interests, no consulting, nothing. I need to learn to read fine print better. Besides, you’re married to someone with pretty good security skills, I bet.”

Hal winked at me. “Yeah, but she’s got a job, and I want to stay clean, in terms of nepotism issues. I got picked for this position—I don’t know—maybe because of my good looks, and I don’t want people to think of MPARC as a place that plays favorites. Besides, I could be a lousy boss, by her standards. I’d hate to have to fire my own wife. Who knows what I’d find in my dinner?”

Since everyone was looking at me, I jumped in. “Dinner, schminner. Mary, if that happened, he’d come crawling for the names of those sex slaves, count on it.”

After the laughter died out, Janelle changed the subject. “Hal, didn’t I hear from Annette that you’re also scoping out the county for the higher education commission?”

“You may have, because I am. With the growth here, including what appears to be an increasing number of retirees, the demand for both community-college resources, including continuing education, and a four-year college is only going to grow as well. Personally, and professionally, too, I guess, my own perspective is that a good four-year institution here would be a real winner. I can say that it will scare the crap out of my colleagues in the administration at Frémont State. I mean, think about it: if you were college age and thinking of smaller universities in the Colorado mountains, which would you pick, Durango, Gunnison, or, say, Tabernash, all other things being equal? At least, it would be a close call, right?” Hal popped the last bite of his chicken enchilada into his mouth.

“You know, I didn’t think of that.” Mary was once again overly impressed with my rather ordinary husband, I thought. “I heard about the CCHE study, but I was only thinking in terms of a place for our kids to go to school locally, instead of having to leave home for college. But a university here would mean that kids from other parts of Colorado, other states, even, would come here, wouldn’t it?”

Hal looked at her. “Like Durango. But just remember the old Chinese curse about being careful what you wish for.”

\* \* \*

## Eleven

The others were constrained by the timing of the basketball game, so our dinner party broke up by eight-thirty. Hal and I stayed for coffee and a chat with the manager, who got a promise of future catering jobs for MPARC.

It was about 9:30 when we finally made it up our series of back roads and the long driveway home. We had left lights on, but the car in our driveway was a surprise.

“Expecting company? I’m not.” Hal is almost always more calm than I when things get strange.

“Nope. Normally, I’d assume it was OK, though, because home burglars don’t tend to park in the drive. But there’s really no place else to park around here without getting stuck. I’m not liking what I’m thinking.” I rummaged in my purse for my Glock 26, which, as it always does, contained a full magazine.

“Hmm. Can’t read the plates, they’re covered with dirt. Car’s kind of old and beat up, but so are at least half the cars up here. Any ideas?” His casual tone of voice suggested he might be discussing tomorrow’s weather.

“If they’re in the house, I wonder why they didn’t open the garage and pull the car in. And it’s not backed into the driveway, like you’d do if you were planning a quick exit.”

“You’re right. Sounds like we’ve got real amateurs here. How insulting. I mean, c’mon—we don’t rate professional burglars? Geez!” Now he sounded as if he was complaining about sub-standard service at the dry cleaners.

“Well, tell you what. Going by the book means I don’t charge in there without backup. And, no offense, but you don’t qualify. I’m going to call the sheriff’s office and see if they can send someone out. We can just wait here in our warm car until help comes.”

“We could drive up to the main house and see if any of those people I saw go by are still there. You know, reinforcements.” Hal, I could tell, wanted some action.

“They’re probably housekeeping service people and caterers. They don’t count as backup either.”

“OK, have it your way. How about I park behind this car to block it and take a little nap?” He pulled our car up to block the one in the drive and leaned his seat back.

I called the sheriff’s office and was assured that someone would be up from Fraser within fifteen minutes—name recognition on my behalf was beginning to spread through the department, and they were treating me like family.

Fifteen minutes later, a very long and slow fifteen minutes, a sheriff’s department Blazer pulled up beside us, and a uniformed officer whom I didn’t recognize got out. I lowered my window.

“Sergeant Rolf Hendricks, ma’am. I understand you’re concerned that someone may be inside your house.”

“Correct, Sergeant. We don’t recognize this car, and we aren’t expecting anyone. I didn’t want to go in there without backup. I do have my weapon, however.”

“Tell you what, ma’am. I realize that you’re the superior officer, here, but it’s really my jurisdiction, you know? How about if you be my backup?” He was right, no doubt about it.

“Fine idea. We don’t have keys, though. We’ll have to go in through the garage door, using the opener. Unless they left the front door unlocked.”

“If this garage door is like mine, it’s noisy. Let’s check the front first. I’m on point.” And he began walking carefully up the sidewalk to the door. I told Hal in no uncertain terms to stay put, quietly got out of the car, and followed Sergeant Hendricks by the book.

On the front porch, he opened the storm door slowly, listening for squeaks, and then tried the main door. It opened easily. He waved at me and disappeared inside. A minute later he was back at the door, motioning me to come in.

“This end of the first floor is clear. Come on in. I’ll check the other end of this floor and then go upstairs. You can watch my back and the basement stairs, OK?” He was whispering.

I waited by the stairwell while he checked the other end of the first floor, and then moved to a better vantage point in the shadows of the dining room to watch the basement while he tiptoed upstairs. Two minutes later, there was a feminine squeal and a short paragraph of frantically spoken Spanish. Very shortly after that, a small man carrying a broom emerged from the basement, just as a woman came down the stairs with her hands raised. Hendricks was following her, his weapon in his holster.

“Sonya?”

The small man dropped his broom when he saw Hendricks and raised his hands, too. I stayed in the shadows.

There was more Spanish spoken, which Hendricks tried to keep up with, succeeding only by asking the couple to repeat themselves. Finally he seemed to have things in hand.

“Ms. Trieri? It’s your housekeeping, ma’am.”

I emerged from the shadows of the dining room and stood in the doorway, making no effort to conceal my weapon. “I don’t have housekeeping, Sergeant. Can you ask them if they have a business card, or any identification of whom they’re working for?”

He gave me a look as if to say “yeah, like I know how to say ‘business card’ in Spanish,” but plunged in anyway. The small man, hand quivering, reached into his shirt pocket and pulled out a card. Hendricks took it and read it on both sides.

“Says that these people are Miguel and Sonya Rendón, US citizens from Mora, New Mexico, and the other side is the card for a company called Mountain Home Care, which it says here is licensed and bonded. Oh, yeah. I’ve heard of them, maybe from an ad in the paper or something like that.”

“Annette? I need to come in.” I recognized Hal’s voice from the direction of the front door. “I’ve got an explanation with me. OK? Is it safe?”

I sat down on a dining room chair. “Right, Hal. Come in.”

“I know you said I should stay put, but, uh, there are mitigating circumstances.”

He was accompanied by a woman in her late twenties wearing a jump suit. Her blonde hair and blue eyes were a marked contrast to the appearance of the Rendóns, despite the similarity of clothes. They obviously recognized her but didn’t speak. Instead, they were pleading with their eyes.

“Who are you? And why are you harassing my employees?” Her indignation suggested that she felt herself to be in the right.

“I’m Annette Trieri, with the Colorado Bureau of Investigation. You’ve apparently met my husband—he and I live here just now. This is Sergeant Rolf Hendricks of the Grand County Sheriff’s Department. I called him to help me investigate the unauthorized entry of unknown persons into my home, unauthorized by me, at least. I will tell you this one time: you and your organization are on very thin ice here, so I suggest that you not speak unless you want your words to be potentially used against you in a court of law. Understood?”

She opened her mouth and then closed it, nodding instead. Perhaps she noticed the Glock I was still holding.

Having commanded her undivided attention, I softened my tone. “Now. First, your two employees, the Rendóns, are just fine, aside from having had a little excitement. Sergeant Hendricks’ uniform, I’m sure, was reassuring to them that they were in no real danger. Should I assume that your company has a contract with Win Frederickson to clean his house and this guest house, too? And that you got a rush call today to have it ready for guests to arrive tomorrow?”

The blonde woman nodded again.

“I see. Then this is all a misunderstanding, although I’d suggest that your company be more careful about entering houses that are obviously being lived in, as this one is. Please accept my apology, and please apologize to the Rendóns for me. I’m sorry that I don’t speak Spanish, or I’d do it myself.” I tucked my Glock into my belt in the small of my back.

A rapid fire conversation followed, and eventually everyone was smiling.

“Ma’am? Ms., um, Tree…”

“Trieri.”

“Ms. Trieri?” The blonde woman was still smiling, so I knew things were still fine. “Miguel and Sonya want to know if you’d like them to finish up. They’re almost done.”

\* \* \*

“Sure am glad you had cash last night, lover. If anyone ever deserved a big tip, those two are first in line.” I bit into a toasted bagel.

“Right you are. But I had an ulterior motive. What say we call Mountain Home Care and arrange for the Rendóns to come once a week, not Friday night, though, and do the whole house? You’re too busy to houseclean, and I know I don’t want to. Laundry, I can handle, but housecleaning is something else.”

“From what I’ve seen, they did a bang-up job. They even oiled the dining table. Yeah, let’s do that.”

Saturday morning was bright and sunny, the house flooded with light from the reflections off all the snow. Only a few puffy clouds were scattered about the deep blue sky, and the icicles on the eaves had already started to drip.

“I’m not certain that we’ll be able to specify the Rendóns, but I’ll try. Did you get the name of that other woman?”

“No. I think she was too preoccupied with ogling Rolf to introduce herself.” Under different circumstances, I would have been ogling Rolf Hendricks, too.

“And he was looking her over as well, it seemed like. Anyway, I’ll try for the Rendóns. So, what’s your schedule for today?”

“Chuck Shure is supposed to arrive sometime, and I expect we’ll go over to Hot Sulphur together for his statement. I thought I’d pick up reports when I’m there and bring them home to read. Got any ideas?”

“It’s too nice a day to go skiing—weekends can be tough over there. And Chuck talked about skiing on Sunday anyway. One day of putting up with those crowds is enough for me. How about a stroll around the grounds on snowshoes? I’ll probably need to spend some time with Chuck, too, but we should have an hour or two when we can get away together.”

“Did he say when he would be getting here?”

“By noon. He’s driving up from the Springs. It took me a little over two hours, but that wasn’t on a Saturday morning. We’ll see.”

It was about eleven when my phone rang.

“Annette? Chuck Shure. Listen, I’m sorry to say I’m stuck in traffic on the interstate. I’d heard about this but I had no idea. At the rate we’re going, I won’t be there until about one, I’d guess.”

“Where are you now?” I knew there were no shortcuts I could tell him about, but I was curious.

“We just passed something called the ‘Chief Hosa’ exit, up on the top of the foothills, I guess. My memory of this road is a bit vague, but I think we go back down a big hill to a valley, then up the valley to the Winter Park exit.”

“That’s right, and all you can do is be patient. If it’s any consolation, a crew of people showed up last night and blitzed the main house, so it’s ready for you.”

“I’d rather have it dirty and get there sooner, but what the hell. See you this afternoon.”

Hal and I took advantage of the delay to spend two hours tromping around the grounds. During the week, he had made several new trails to seek out different views, so we had various options. Two hours, I discovered, was just the right amount of time for my hip muscles to start complaining again.

We were eating lunch when the doorbell rang. I found magnate of industry Charles Shure standing humbly on our front porch.

“Made it, finally. We just pulled in, haven’t been up to the house yet.”

“Glad to see you. I’d ask you in, but I bet you want to get up to the house. Come on back down when you’re ready to go over to Hot Sulphur Springs, and you and I can ride together.”

It wasn’t clear to me what he had meant by “we,” but I resolved to be patient.

At about 2:00, the doorbell rang again, and once again our porch was graced by a VIP. He had pulled his vehicle in behind my car, so we took the easy approach and climbed back in to his big SUV.

Inside, I couldn’t help but notice it was a Cadillac Escalade, given the insignia staring at me from the dashboard.

“Chuck, you weren’t up here two-three weeks ago, by any chance?”

“Say, two-and-a-half weeks ago? Hmm. No, I think I was in Europe. Why?”

“We’re working on these three homicides, of which Tobias Summers is one. At the house of another of them, the last vehicle to be there has been identified, by its tires, as a Cadillac Escalade. Just thought I’d check, you know?”

He laughed. “Nope, not mine. Besides, this doesn’t have the factory tires, so you’d never have identified it that way. This is my winter car, studded snow tires all around.”

“In that case, we can take the short-cut to Hot Sulphur.”

I showed him where to turn onto County Road 55, and shortly we were at the county building in Hot Sulphur Springs. I’d called ahead to give Fran a heads up, and he was waiting for us at his department’s front desk. After introductions, we made ourselves comfortable in Fran’s office.

“Now, Mr. Shure, I’m going to be a little formal about this, including recording it, but I want to be clear that there is no reason for you to think of this as adversarial—you’re in no way considered a suspect.” Fran pushed a button on a pocket cassette recorder. “You’re here, Mr. Shure, to provide us with information about a homicide victim, Tobias Summers. As far as we now know, you’re one of the last people to have seen him alive. To get this started and help the stenographer, we need to introduce ourselves. I’m Fran Schmidt, Grand County Sheriff.”

Fran looked at me, and I introduced myself, and then Shure followed suit. Fran’s questions allowed Shure to expand on the narrative he’d provided to me on the phone, and I heard that Summers had been dressed for a business meeting in his stylish fashion, upbeat and alert, ebullient, even. The purchase and its closing had been accomplished more quickly than is usual for such things, given the amount of money involved and the complexity of the title, but Charles Shure gets things done quickly when he’s motivated. Finally, Shure had covered in detail the ground he’d skimmed over with me on the phone.

Fran Schmidt was looking thoughtful. “This business of Summers’ walking off with that big check changes things considerably.”

“And I’ve found out more about that. No mystery, it turns out, but I just hadn’t paid attention. That’s what I pay my legions of accountants to do.” Shure smiled. “It seems that Tobias Summers walked out of our closing meeting and down the block to the downtown Denver branch of the Western Slope Bank & Trust, where he kept a personal account. He deposited the check at 1:45 and waited until it verified, which it did because that’s where I got it. Then he withdrew almost all of it, 3.1 million, in cash and cashier’s checks in his name, \$50,000 in \$100 bills and the rest in \$50,000 checks. Sixty-one checks and five hundred \$100 bills. We found this out because the bank has to report such things and I have an in with them. He had a nearly empty briefcase when he left the closing meeting, and he filled it up at the bank.”

\* \* \*

I was the first to recover—Fran was in shock, I think.

“So you aren’t the last person to have seen him alive, because people at the bank did. Well, that’s something at least. But now we have our victim wandering around with three million in what amounts to cash.”

Shure nodded. “Right. Except, unlike real cash, those cashier’s checks can be traced, up to a point. Whoever accepts them and deposits them can be traced by the bank, and, in my experience at least, they can’t be second-partied.”

“Meaning?” I wasn’t sure I understood.

“Meaning, say, I couldn’t sign them over to you and then you sign them over the sheriff. If I had the original checks I could sign them to you but then you’d have to deposit them. You could go ahead and sign them over to the sheriff and he could accept them, of course, but he’d be in for a nasty surprise when he tried to deposit them because they wouldn’t be accepted. Sheriff? You here?”

Fran's far-away look dissolved. "Yeah, I'm here. Three million dollars is a lot of money to be floating around. I was thinking about what I know about Tobias. From what I've been hearing, he was in some financial trouble. The Epworth thing has been hanging over his head like a dark cloud for years, racking up legal expenses and so on, a bunch of other projects barely broke even, and he extended himself to the limit with the new subdivision. That three million must have been a godsend to him. Except to liquify it that way, well, it doesn't make much sense to me." Fran shook his head as if to clear cobwebs.

"I don't have real experience with this, sheriff, but it seems to me there aren't many possible explanations for it. Maybe he had some off-the-books loans to pay back, where he needed cash. He could make stops at various banks and turn the checks into cash, one-by-one. Each transaction would get reported, but by the time they all came in and someone noticed the pattern, he'd be finished before he could be stopped." Shure's explanation made sense to me, but that kind of high finance wasn't something I was familiar with.

Fran nodded understanding. "And that kind of loan is usually associated with people who are very persuasive about getting paid back. So much so that Tobias would have been more worried about them than the fallout from cashing all those checks, probably. I guess what we'll have to do is to get the bank to put traces on all those cashier's checks, watch for them and see who deposits them. If it's lots of other banks, well, that's a start. But we can't get much in the way of that done on a Saturday afternoon."

"Not officially, sheriff, but as I said, I have an in with them. I'll see what I can do to get things started today. Do you need me for anything else?"

"No, Mr. Shure, we're finished here, I think. Let me thank you, though, for coming in. And also for endowing the new computing center that Annette's husband is setting up. I think that's going to do wonders for our county." Fran stood and extended his right hand, and Shure stood and shook it.

"Here's a little-known secret, sheriff. I'm going to find a house here and use the center as an excuse to get up here to ski. I'm fed up with this all-work and no-play business."

I stopped by the office that Fran had found for me and gathered up an armload of reports to take home, and we went outside to Shure's car.

"Becky asked me to stop off and pick up some special coffee creamer she's taken to. Is there a grocery store on the way back?"

"In Granby and in Fraser, each a little out of the way. Might as well start with the Granby one to see if they have it." I was amused by the notion that a multi-billionaire would be doing such errands. "Who's Becky?"

"Huh? Oh, my wife, Rebecca. I guess you've never met her. She's between assignments just now, so she came up with me. She's a fashion photographer, used to be a model but got tired of starving herself. So she switched ends of the camera a few years ago. I have to say, I think she's even more beautiful now. I guess I just don't appreciate skin and bones on a woman."

"Are the two of you rattling around in that huge house by yourselves? Want to come down the road for dinner with us?" If we were going to the grocery store, I thought, I could come up with something.

"You beat me to it. I was going to invite you and Hal out somewhere with us. But, you know, having a quiet dinner close to home would be even better. Thanks. But, ah, I've got to warn you that Becky's a vegetarian. Not super strict, but she doesn't eat red meat at all."

"If chicken is OK, then I'll get Hal to make a civilized version of his green-chile chicken enchilada casserole, meaning not as hot as he likes it. He can have hot stuff on the side. If we're going to the store, I'll just pick up what I need. Oh, and turn left when you get to the highway."

“Sounds perfect. Ah, good, a cell signal. I need to call my accounting group about that bank thing, get a trace started on those cashier’s checks.”

“And I’d better call Hal and let him know we’ll be having company for dinner.”

We finished our respective phone calls at about the same time that we arrived at the grocery store on the east side of Granby, which we reached by virtue of some pantomimed hand signaling on my part.

“So, Chuck, I don’t completely understand. Banks tend to be open for business on Saturdays now, but only the public face. The behind the scenes work is still Monday through Friday, at least if that business about accounts being credited on Monday for Saturday deposits means anything. How can you get traces started today?”

“Well, I didn’t want to say anything to the sheriff, but that in I have with the bank is a big one. I own about a quarter of its stock, so I’m on the board. The president is a friend of mine, and my accounting group interacts with theirs all the time. If those checks were negotiated, we’ll know by this evening, I expect.”

\* \* \*

## Twelve

Rebecca Shure, Becky to friends, turned out to be a farm girl from North Dakota who was not at all spoiled by her years of association with the fashion industry. I’m sure that she was glad to have a career in photography rather than in farm chores, but she seemed like the kind of person that could still slop the pigs if need be.

And she was one of the few women I’ve met whom I’ve felt plain around. You don’t graduate from the farm in North Dakota to the runways of New York, Paris, and Rome without striking beauty, and she had it to spare. And it wasn’t her makeup, or her hair color, or any of those things you see supermodels touting in advertisements, it was just her.

They arrived for dinner on snowshoes, having followed one of Hal’s trails to our house. She was carrying a camera bag and proceeded to snap off a dozen shots of the alpenglow on the mountains across the valley. Our view, she declared, was better than any of the rooms of the main house had.

Hal and Chuck launched immediately into a discussion of Hal’s ideas for the not-quite building that Chuck had bought, so Becky followed me into the kitchen and offered to help. I put her to work slicing vegetables for the salad. The casserole was already in the oven, so I puttered about with appetizers and dessert.

It made me feel just a little better that, as beautiful and successful as Becky was, she didn’t know the first thing about how to prepare vegetables for a salad. Ha! Some vegetarian.

After making our guests and myself margaritas and putting out the appetizers, and watching them dive in just like normal folks, proclaiming their satisfaction with both the drinks and the salsa, I was able to relax a little. No doubt the tequila helped.

As we were putting dinner on the table, Chuck Shure pulled me aside for a moment.

“I don’t want to talk shop at dinner, Annette, at least not your cases, not without you starting it. But I’ve heard about the cashier’s checks. They were deposited with brokerage firms in New York City. Five

firms, the money was spread around evenly, six hundred grand per firm. There's one check and the cash unaccounted for."

This was a surprise to me, to say the least. I asked the first question that came into my head. "When?"

"Started Thursday morning, the day after my closing. The last one was deposited late Thursday afternoon." He handed me a piece of paper, a list of companies and names of individuals. "These are the firms and the brokers with his accounts."

"Thank you. I need to think about this, and maybe we'll have a chance to talk about it later. And I'll talk with these brokers on Monday. But tonight I want to know what you guys are going to do about that building you bought for Hal. A full report over dinner." And I led him into the dining room.

The enchilada casserole that Hal and I make has evolved over time, but it's still the same basic ingredients—roast chicken, green chile sauce, and tortillas. It's the spices in the sauce that have evolved, and I think we have it fine-tuned to the point that it would stand up to anything served in Santa Fe. For Chuck and Becky Shure, we made certain to keep the heat in the sauce under control, though.

Becky raved over it, remarking that she was so tired of chicken that new and different recipes were something she always looked for. Like her chunky vegetables in the salad, this made me feel better. Petty, I know, but there it is. Because she seemed to be in a talkative mood, I used her to open the subject of the not-quite building.

"Becky, what did you think of that building site your husband bought? He must have pointed it out to you on the way through town."

"Not only did he point it out, we stopped to look. It's certainly depressing, isn't it? And from where we stopped, just on the shoulder, it blocks the view of the mountains behind it. Which means it blocks them from the sidewalk, too." She shot her husband a dirty look.

I rescued him. "It's been controversial in the community, I'm told, for that and because of its size, its footprint. I'm hoping these guys have ideas about how to fix its problems and make it into a building we can all be proud of." And I shot my husband the "you're on, don't blow it" look.

"Yeah, well, Chuck and I were looking at the plans before dinner. Thing is, the plans say "Mount Epworth Arms" in big letters on each page, and that's a big distraction. We kept getting sidetracked on new names for the thing."

Shure laughed. "Right. And I'm opposed to having my name on it, so that eliminates one possibility. Calling it the 'MPARC' building is too ordinary, unimaginative. So we're thinking of famous dead guys to name it after. Scientists, maybe. But we also made some progress with the problem you mentioned, Bec. Hal suggested taking off the top floor, making it shorter by one story, and that's a great idea. And we're going to have the area from the front of the building to the street be landscaped, park-like, with some aspens planted to screen it. There's already an enclosed garage in the plans, and we'll take advantage of that as much as we can to eliminate a lot full of cars. Also, I think changing the exterior treatment is a good idea, we need to make it blend in with the other architecture in town more. Whoever designed that thing should go back to designing for southern California."

Hal looked thoughtful. "One thing I want to do is to see what's available in town in the way of meeting facilities. We're going to have several meeting rooms in different sizes, and it's occurred to me that we could get some points if we had a big auditorium that we offered to the community for meetings they don't have a room for. I don't know what that means, exactly, but it's one way we could make people feel better about the building."

Becky had cheered up. “Well, if you’re going to make it a story shorter, that’ll help a lot with the view. And you could have public tours, too. You know, design it so that groups of people walking around getting lectures wouldn’t disturb the staff and so on. If you’re going to have the world’s fastest computer, it seems like people will want to see it, even if it is something of a bore.”

“Actually, I’m thinking that it’ll mostly be nearly two stories shorter. Right now, it’s got a peaked roof over the whole thing. I’d like to limit that to the eastern half, the back half, and have the front half with a flat roof that’s a patio for the staff. Make it into a running track, or something like that. We could use it even in the winter, by keeping the snow off with radiant heat, waste heat from the computers. But you’re right, Becky. Even though big computers are pretty boring, public tours will still be a thing to do. We’ll want to use them for educational purposes, that’s for sure. I ran into the need for that already.” Hal described his encounter with County Commissioner Simon Murcheson.

Shure shook his head. “You find that sort of know-nothing attitude everywhere, I guess. One reason that I didn’t even consider the Colorado Springs area for this center is that it’s even more pervasive there. Between the right-wing Christian organizations and the retired military people, there’s an overwhelming distrust of science. I was hoping it would be a little more progressive here.”

“Oh, it probably is.” Hal put yet another spoonful of the special hot green chile I’d put out for him onto his serving. “Besides, these jobs we’re creating will overcome resistance. Truly professional positions are hard to find in this valley, and we’re going to be introducing a big change in the local culture. Real professional people with real money who actually live here. It’ll be interesting to see how it all evolves.”

“What do people here do now?” Becky was on her second helping, way ahead of the rest of us. Making up for years of starving herself, I thought.

“Looks to me like they mostly sell real estate.” Chuck Shure’s cynical streak was emerging. “For sale signs everywhere, new developments. That and work at the ski area, I’d say.”

“Construction is a big employer, pays well, too. Lots of the people who used to be in extractive jobs, mining, timber, do that now. But a high proportion are low-paying service industry jobs, associated with separating tourists from as much of their money as possible.” Hal also had a cynical streak, I reminded myself.

“But what’s interesting about this is our housecleaners.” I told the story of our encounter the previous evening, getting a good laugh in the process. “The thing is, though, the two folks cleaning our house are from New Mexico. Nice, hardworking people who can’t find work there. It must be that this company that contracts with people who own second homes has to import the labor they need to do the actual work. So even the service jobs don’t always return their cash flow to the local economy, at least not all of it.”

“Well,” Hal summed things up. “Let’s see if MPARC can start a trend in a better direction.”

\* \* \*

Sunday morning, Hal and I declined the opportunity to ski with Chuck and Becky, opting instead for an extended breakfast at home over the Sunday paper that Hal drove down to fetch.

While he was making the trip, I called Fran Schmidt at home.

“New York, huh? Brokerage firms, like stock brokers? You think he was playing the market? What happened to the Dow on that Friday?”

“I’m going to do some checking tomorrow. I didn’t know him, of course, how he operated or anything. All I do know is that the cashier’s checks were deposited with five different brokerages on Thursday, a little over a week ago. And then Summers turned up dead on Saturday afternoon.”

“Must be that he thought he could turn that three million into more. But the way he looked, especially the beard, well, something must have gone wrong.” His voice faded out as he thought about it. “I can’t quite put this together. I mean, he hadn’t shaved for a couple of days, at least. Shure said he looked quite professional on Wednesday, so that morning must have been the last time. So he closed the deal with Shure, flew to New York, and spent Thursday at brokerages, with a day-old beard. That’s just not the Tobias Summers I knew.”

“Fran, I think this is just one more fact that we need to catalog. It’s not a case-breaker or anything. I wanted you to know about it today, though. I’ll work it some more tomorrow.”

“Yeah, and thanks for calling, Annette. Oh, say, I’ve got information, too. You probably didn’t hear it. Dan Kennedy did his job in fine fashion and found out the owner of the torn ski suit, at least we think.”

“Good for him. How’d he do it, line everyone up and look for patches?”

“No, he went to the clinic they have up there for ski injuries. Based on what he heard from us, he figured that whoever lost that swatch of fabric would have enough of a shoulder injury to want to get medical help. So he asked them about employees with shoulder injuries, on the pretext of checking out workman’s comp fraud. Turns out they had someone come in last Friday afternoon, said he’d hit a tree. He must have changed, though, because the report didn’t note any tears in his ski suit. But Dan cross-checked and found out that this guy ordered two suits last fall. It’s Junior Murcheson, I mean, Simon Murcheson, Jr.”

“The son of the county commissioner? My, my.” I remembered the senior Murcheson from the commission meeting.

“My, my, indeed. This one is going to be touchy. Simon, Sr. is someone that I have to be friends with, whether I like it or not. He’s chair of the commission’s law enforcement committee. Also, I asked around and found out that Junior and Lannie were an item up until a couple of months ago. I guess Lannie must have been desperate.”

“And right now, everything you have is circumstantial. Junior has a shoulder injury and we have a swatch of fabric. He could have disposed of his other suit by now, meaning there’s no way for us to connect the two.”

“Right on the button. But wait, as they say, there’s more. See, Junior has worked for Tobias Summers’ construction company as a foreman for several years. Their work was down just now, so he hired on with the ski area—I guess he’s a great skier and has been on the ski patrol in the past.”

“A connection between Junior and Summers? Interesting. Does this suggest to you that they may have conspired in Lannie’s death?”

“Hey, it’s just like the thing with New York. One more fact for the file. However, when you add this next thing to it, suggestions like that become easier to believe. We ran a check of all the Cadillac Escalades in the county. All four of them. Guess who turned up?”

“Not Chuck Shure, probably, although he’s got one. But it doesn’t have the original tires. Four? That’s all?”

“Chuck Shure’s got one? Huh. Uh, yeah, four. Now, if it was a Ford Explorer or a Chevy Trailblazer or any number of other everyman SUVs, we’d have too many to think about. Escalades are

another matter. Anyway, what we found is that Mandy Summers drives one, and it does have the original tires. We waited until she went shopping and checked them.” He sounded proud of himself and his troops.

“Mandy Summers drives an Escalade? What did Tobias drive?”

“Last I saw, he was tooling around in one of those Hummer H2s. Bright yellow.”

“Y’know Fran, if those two had driven more sensible cars, the money they would have saved on gas would have probably kept them out of financial trouble.”

His laughter was genuine, I could tell. “But you’ve got to impress those clients somehow. Anyway, the facts are piling on, one after another. I still don’t know what they mean, though.”

“Take the day off, Fran, go skiing. It’ll clear your head and help you think it through.”

“Ski? Today? Not me, not on a Sunday. Besides, my list of chores needs catching up on. See you tomorrow, Annette.”

Hal had returned during the conversation and was puttering around in the kitchen.

“Did I hear you suggest that Fran go skiing?”

“Yeah, he needs some R&R.”

“I hope he doesn’t. There’s a traffic jam on the highway, southbound toward Winter Park. It took me fifteen minutes to get to the store, usually only about a two minute ride.”

“Oh, really? That must be why he said he doesn’t ski on Sundays. And I’m glad we’re not, either.”

“And Chuck and Becky Shure are going to be stuck in that traffic. I feel sorry for them. All the money in the world won’t help, either.”

\* \* \*

I think I have a built-in lawyer detector that works something like the radar detector Hal has in his S4. Lawyers walk around giving off evil rays, when they’re on the job at least, and my lawyer detector picks the rays up and sets off an alarm in my head.

But because I try to have as little contact with them as I possibly can—a neat trick for someone with a job like mine, but I work at it—it doesn’t go off very often and I forget I have it. Then when I finally do run into a lawyer, the alarm always confuses me for a minute. My brief encounters with Donna Little set it off that way—the first time I had to remember what it was, and then the second time I remembered and recognized it right away.

I was therefore on the alert when the young man appeared in my office doorway late Monday morning.

I had been working through the reports that I hadn’t had time for over the weekend, and re-reading others in light of the information that Fran had passed my way Sunday morning. My next task was to call the New York stock brokers visited by Tobias Summers. But first I was ready for a break—maybe a cup of coffee and a chat with whomever was hanging around the front desk—when my alarm started its “bottom-feeder bottom-feeder bottom-feeder” clamor in my head.

Even for a young one, he already looked the part, I’ll give him that. Three-piece suit under a trench coat, slicked-back hair with no part, tortoise-shell glasses frames with large round lenses, oversized briefcase—there was no mistaking it.

“Ms. Trieri? Ms. Annette Trieri of the Colorado Bureau of Investigation?”

“What can I do for you?” I always try to be polite, even to bottom-feeders, until they give me a good excuse not to be. His pleasant tone didn’t quite qualify as a good excuse.

“May I come in?” He did so without waiting for an answer, and he closed the door behind him. I made a careful note of his actions.

“May I sit down?” This time he didn’t move, apparently waiting for an answer. I kept writing much longer than necessary as a tactic to see what he might do.

I finally looked up. “Oh, excuse me. You came into my office and closed the door without an invitation and without introducing yourself, so I just assumed you’d sit down, too. Are you going to present credentials or do I need to yell for help? Although I suppose I may be able to handle things myself.”

My Glock made a solid thud as I set it on the desktop. He turned around, opened the door, and fled. I began thinking about the cup of coffee again.

Shortly, Fran Schmidt appeared in my doorway with the young man in tow.

“Annette? What’s going on?”

I handed him the paper that I’d taken notes on, and his eyebrows arched almost to his receding hairline as he read. He finally looked up at me.

“I see. Thanks for the clarity. Please excuse us.” He turned to the young man. “You. Come with me. Now.”

It was a half-hour later, after I’d had that cup of coffee and a nice conversation with Rolf Hendricks, whom I’d run into at the coffee machine, about trails for snowshoeing in Rocky Mountain National Park, that Fran and the young man reappeared in my doorway.

“Annette? Let’s see if we can start this all over. I’m not sure it will really help, but at least there may be a little more progress.” He turned to the young man, whose face was beet red. “Go.”

“Excuse me, Ms. Trieri, and please accept my apologies for my earlier behavior. I’m Gerard P. Yount, an attorney for Front Range Water. I assure you I meant no disrespect nor do I represent any sort of threat to you. I do, however, need to speak with you about an important matter.” Despite his embarrassment or anger, whatever was making his face red, he managed the same pleasant tone he’d used earlier.

“Thanks, Fran. I think it’ll be OK. Come in, Mr. Yount. Please be seated.”

“May I shut the door?”

“No.”

“Ms. Trieri, I have confidential information to discuss. It really would be appropriate for the door to be closed.” His tone shifted to the school-girl lecture mode.

“FRAN!” His return was remarkably quick. “Fran, is there an interview room that’s free? I need this conversation to be witnessed and taped.”

Yount looked as if someone had told him his fly was unzipped in front of the Supreme Court. But he came to see me, I reasoned, and I was therefore in the position to call the shots. Besides, overtones of water rights resonated throughout the three homicides, and it made sense to have the conversation on tape for future reference.

It took only a few minutes for us to get tape rolling and introduce ourselves to it. Yount was quite adaptable, all in all.

“Now, Ms. Trieri, as I said, there is something of a confidential nature that I need to discuss with you. I’m not entirely comfortable with these recording arrangements, but I will have to assume that they, the recordings, I mean, will be kept secure.”

“But first, Mr. Yount, there’s something we need to clarify. You have twice introduced yourself as an attorney for something you’ve called ‘Front Range Water.’ I know of no such organization. Does it have a real name?”

He looked confused but then recovered quickly. “I thought everyone knows what Front Range Water is. Of course, the full title is Front Range Associated Water Board, Inc., a public, not-for-profit corporation in which water users from Fort Collins to Pueblo, more or less, are shareholders and vote for the board, mostly by proxy through their local water providers. But we generally go by Front Range Water.”

“Thank you. I believe that it’s also called by its acronym, FRAWB. Now, what is this confidential matter you wish to discuss?” My FRAWB comment startled him, but once again he recovered quickly. He’s good, I thought.

“I, in representing Front Range Water, am given to understand that you believe us to be complicit in criminal activity here in Grand County. Specifically, in one or more of the three homicides currently under investigation here.”

“‘Given to understand’ is a fine-sounding phrase without real meaning, Mr. Yount. But please continue.” His assertion was surprising to me, but my well-practiced poker face combined with the little semantic tactical diversion seemed to be a sufficient response.

“To put it plainly, Ms. Trieri, what I’ve heard is that we’re on your suspect list.”

“And?”

“And, Ms. Trieri, *and* that’s completely inappropriate and from our perspective legally actionable. Any public hint of this and we will see you in court. Front Range Water will not stand idly by and be libeled.”

“Oh. Well, let me be certain that I understand. You’re threatening to sue me, meaning the Colorado Bureau of Investigation, and, presumably, the Grand County Sheriff as well, if FRAWB’s role, should there be any, in criminal activity is investigated? So, in effect, either we give you blanket immunity for past, present, and future activities or you sue us? Hmm. Well, OK. Thank you for coming to see me, Mr. Yount. It’s been instructive.” I rose.

He didn’t.

“Is there something else, Mr. Yount?”

He took a deep breath. “Ms. Trieri, we are obviously not asking for blanket immunity of any kind. Front Range Water will take responsibility for its actions and for the actions of its employees. Our concern is about slanderous information being published.”

I remained standing. “Surely, Mr. Yount, that’s a matter between FRAWB and publishers. Neither the CBI nor the Grand County Sheriff publishes anything.”

“But you could leak information that could damage us. We won’t stand for that!” His veneer showed a slight crack—he was good, I thought, but not that good.

“Mr. Yount, be serious. We clearly have no control over what is published or broadcast. And for you to expect us to prove that we did *not* provide information that might be published or broadcast in the future is patently absurd. You’ve threatened me twice today, Mr. Yount, once in my office, implicitly, on a personal level, for which I have real-time notes and corroboration via a credible witness of your subsequent behavior, and once here, on a professional level, on tape. I’m through with you, Mr. Yount. Good day.” And I walked out.

Fran, having been in the control room behind the one-way mirror, caught up with me as I was walking down the hall.

“Annette? Um, listen. We’re friends, and that’s the way I want it to stay, OK? I don’t ever want us to be on opposite sides of anything, you know?”

\* \* \*

### Thirteen

Fran Schmidt must have played the tape for his senior staff—that’s the only possible explanation for the standing ovation I got when I walked into the staff meeting after lunch. My hunch was confirmed by the first item on the agenda.

“You’ve all seen Annette’s interview with the Front Range Water lawyer this morning, and I wanted you to see it because it has disturbing implications. Somehow they’ve heard that they’re part of the investigation and are worried about it.”

“But Fran,” Janelle looked puzzled. “They’re not. We’ve talked about connections to water issues, sure, but no one I know of has suggested FRAWB as a suspect.”

“And that simply means that they’re getting their information third- or fourth-hand and it’s garbled as a result. The good news is that no one here or in the rest of the department is leaking information to them, because it wouldn’t be garbled. But it points out two things. We’ve got to be extremely careful, not only about whom we talk to but also about how we ask questions when we’re investigating. People draw inferences, and that’s probably how they got their garbled information. We can’t prevent it, but we can be aware of it. The other thing it points out is how concerned about all this they are. What’s that line from Shakespeare? *Macbeth*, maybe—‘the lady doth protest too much, methinks’? Something like that...”

“*Hamlet*.” Someone in the middle of the group knew Shakespeare, it appeared.

Fran looked surprised. “*Hamlet*? OK, you’re probably right. Anyway, if Front Range Water is so worried that they sent a lawyer after us, via Annette, based on garbled information, well, they’re worried about *something*. I’m curious about what that something is.”

The remainder of the meeting was the usual weekly outlook, including traffic control assignments and so on. After Fran provided the updates on the homicides that he and I had discussed Sunday, without naming the owner of the torn ski suit, there was a question from the back.

“Sheriff, should we quit worrying about the other Escalades now?”

“No, to be complete, we should get tire information from the other two. We know that one fits the profile that Norm developed and one doesn’t. I got a call this morning from the patrol over in Kremmling. That rancher’s Escalade has the wrong tires on it. And we can’t assume that the vehicle we

think was at the McMurphy place is one of the four registered in the county. But let's continue to keep our eyes peeled and see if we can get tire info from the other two. Anything else? No? OK, let's go to work."

Fran and I were headed down the hall toward his office when I spotted an unfamiliar person coming our way and my lawyer alarm went off. He wasn't wearing a topcoat or carrying a briefcase, but the signature three-piece suit was tailored just so, and the breast-pocket handkerchief was coordinated with his tie.

"Annette, let me introduce you to Axel Sonos, District Attorney for Grand and Jackson Counties. Axel, this is Annette Trieri, our CBI liaison, whom I've mentioned. And, say, I'm sorry about Donna. She and I didn't get along, as I'm sure you know, but I'm still sorry about it."

"Yeah, that's a real tragedy." The tone belied the words. "Ms. Treery, glad to meet you at last. Please call me A-D. AD the DA. I understand you're doing more than just planning, that you're actually helping Fran's department with these homicide investigations."

"So far, I'm observing and commenting, a consultant, sort of. As far as I can tell, they're doing just fine. But I'm glad to help. The cases have some interesting twists."

"Well, I'm ready to prosecute, when you make a case on someone. I had planned to take the cases myself, we don't get many homicides up here. But now I'll have to. And I have no idea whatsoever when and if I'll be able to replace Donna. I've got some creative budgeting to do."

"I'd think, AD, that an assistant district attorney position here would be quite attractive. Having a real job and living here is a combination that's hard to beat." I wanted to probe the county's employment policies a little.

"True, but we don't pay as much as most other jurisdictions. Oh, we're higher than the smallest counties—Moffat County, Rio Blanco County, up in the northwest corner, they pay slave wages. But people would rather work down in JeffCo, make real money, and drive up here to ski than live up here and take the pay hit." AD the DA shrugged.

"I guess that also allows the people who work for you their eccentricities." I was thinking of George Neering, the medical examiner, who was part of the DA's staff.

He knew exactly what I meant. "Sure does, and we've got one whom you've probably met. But don't be deceived—he's sharp under that layer of weirdness, believe me. Well, I've got to run. With no assistant, I'm doing two jobs. Talk to you later, Fran. Nice to meet you, Ms. Treery." And he marched out, full of purpose.

"Ah, yes. The Alpha Male. Do you get along with him, Fran?"

"About as well as you could expect. What I told Donna the other day was true, we have an agreement to stay out of each other's way during the different phases of an investigation and prosecution. That helps us get along, I think. And we both do a fair job of treating the political party difference as a joke. In some ways, given the small population here, it makes sense to have one of us be a Republican and one be a Democrat. Keeps the balance of power from getting tilted." He began leading the way to his office.

"I notice you call him 'Axel.'"

"There are a few of us who've known him for a long time who do, and that *is* his name. He adopted the 'AD' thing when he first ran for office. I've just never switched. It probably bugs him, but, hey, do I care?" He grinned.

“In my opinion, anything you can do to keep a lawyer off balance is a good thing to do. As you may have noticed this morning.” I grinned back. “And, by the way, your comments about FRAWB, or Front Range Water or whatever we should call them, were right on the money. I’m wondering if we shouldn’t see if we can get our hands on all of Tobias Summers’ financial records and Lannie Young’s real estate transactions, just to see if they might relate to Front Range in some way.”

“I’ve been thinking about that, too. Lannie’s files shouldn’t be too hard, because her sales will be public documents. And I’d think that her agency wouldn’t object to our knowing what other properties she’s been representing. But Summers’ files might require subpoenas. And that could get sticky. If Mandy objects, she could easily cast herself as the bereaved widow who’s being harassed by the nosey cops.” He shut his office door behind him, and we both sat down.

“But, Fran, our side of that argument is stronger—that we need his files to catch his killer *and* to find out who looted his company, meaning to find out what really happened to that three mil. Mandy couldn’t possibly object to either of those things, and if she did, she’d look disingenuous. That would keep you on the high moral ground, at least.”

“Hmm. Good point. And maybe we can use those arguments to persuade her without a subpoena. I don’t know what the real situation with Tobias Summers’ financial empire is, but that missing three million has got to be an issue. If she balks at our tracking it down, she’ll begin to look complicit somehow. And if we can avoid a subpoena, that’s the way to go. I know that Tobias was a big contributor to the Republican Party and to Axel’s election campaign. The DA will want a very compelling reason to go the subpoena route.”

“What are you going to do about Junior? I noticed you didn’t mention his name at the meeting.”

“That’s another problem. On top of what I told you yesterday, that Simon, Sr. has some clout when it comes to my budget, he’s also a Republican. He and Axel will stick together. We need an air-tight case against Junior before we can do anything. At the least, we need the torn ski suit. What we have now is just too circumstantial.”

I thought for a minute. “How about a ploy? Janelle has recused herself, which is fine. But I’m certain that Danny wants this sorted out as soon as possible. Suppose we figure out a way to get Junior to wear that torn ski suit out, assuming he hasn’t destroyed it. Maybe, someone, could be Danny, ‘accidentally’ spills coffee on Junior’s good ski suit. While it’s being cleaned, he’d need the other one, and Danny or one of us could get a look at it.”

“Definitely sounds like a ploy. But I guess it might just work.” He stared at me. “Annette, like I said before, I want to always be on your side.”

\* \* \*

It was about 2:30 when I got back to my office—just the right time to begin working the New York brokers. The market was closed, and they wouldn’t be distracted by what was going on there. Or at least that was my hope.

At the first two firms identified by Chuck Shure as having received Tobias Summers’ cashier’s checks, the individuals on the list had left for the day. But the guy at the third was still in, not that it helped much.

“I’m not sure what I can tell you, Ms. Trieri. It’s our policy to treat these transactions confidentially.”

“I’m investigating the murder of your client. His body was found two days after he deposited six hundred thousand dollars with your brokerage, with you. If I need to come to New York and do this formally, I won’t be in a very good mood. You can save yourself and your firm a lot of grief by cooperating here. What I need to know is what he instructed you to do with those funds. That seems simple enough.” I tried to keep my tone polite, but because I’m a native of Chicago, dealing with New Yorkers has always been a challenge for me.

“Ms. Trieri, you need to look at this from my perspective. You call me and ask me questions, but I don’t really know who you are. I don’t really know if my client is really dead. Why should I believe you?”

I wanted to say that one good reason would be to keep the Securities and Exchange Commission off his back, but that didn’t seem politic. Instead, I simply thanked him for his time and said I’d be in touch.

I felt better when I hit pay dirt at the fourth brokerage.

“I saw the story in the newspaper that he had died. But murder? Geez.” The voice on the phone sounded scared.

“You read the Denver papers? Don’t tell me this made the papers in New York.”

“No, neither. But I subscribe to a search service to keep track of stories about all my clients, especially new ones I don’t know anything about. His name popped up last week. But it didn’t say anything about murder.”

“That wasn’t in the initial stories, but it should be out by now. Anyway, we found out that Mr. Summers had deposited something like six hundred thousand dollars with you two days before his body was discovered. I’d like to find out what he had you do with those funds.”

“It was strange, I’ll tell you that. He had this tip, he called it, about an IPO that he wanted to buy into. A small company that was going public based on a new technology that it had developed to desalinate brackish water. He said I could ride along if I wanted to, but he wanted all of his six hundred K to buy into it on Friday. Even mentioned that he had some other brokerages doing the same buy.”

“Why is that strange?”

“Well, we try to keep on top of IPOs, and this one didn’t look like a very good investment to us. We, and I mean our firm, here, we had decided to pass on it, both on behalf of all our clients and the firm itself.”

“And you told him this?” I don’t really know anything about the stock market, but this did sound strange.

“Absolutely. I tried hard to talk him out of it. But he insisted—he even wanted us to place an expedited order to buy at the opening bell. I made him put it in writing.”

“Had Mr. Summers dealt with you before?”

“No, he was a brand new client to us. Basically walked in off the street. He told me that he picked us because we have a reputation of being able to get into IPOs effectively, though, which we do pride ourselves on. So he must have done some research.” The voice held a hint of pride.

“So, what happened?”

“Well, we did what we do best—we got our order in early, and we bought him the six hundred thousand worth of PureAgua, that’s the company’s name, right off the top on Friday morning. Had no trouble getting in at the initial price, because the IPO was for twenty million.”

“You said that Mr. Summers mentioned that he was having other firms make purchases of this nature, too. We think he was trying to make a fast buck with this IPO, because he was in some financial trouble and he had just received a considerable sum—not enough to get himself out of trouble, but enough to speculate this way. Do you have any idea of how the stock did?”

“Well, naturally, I watched it. It went up a little early in the day, about a percent or two. But then it stopped selling, after about five million worth of shares got grabbed up. And then it started to sink. By noon, it was down about fifteen percent—the company had let it float all morning. And then, early in the afternoon, there was an announcement of a lawsuit against PureAgua for patent infringements. The stock tanked and they had to stop trading it. When they finally froze it, it had lost about eighty-five percent of its initial value. It dropped so fast they couldn’t rescue it sooner. Mr. Summers’ six hundred thousand dollars with us was down to less than ninety, after our fees.” He sounded embarrassed.

“Did Mr. Summers have anything to say about this?”

“I didn’t hear from him—our last conversation was on Thursday afternoon, when he left me the written instructions to buy at the opening bell. I kept expecting to hear something, but then my service found the story about his death. I guess his account will be part of his estate. Maybe they can write the loss off against other assets and minimize the estate taxes, or something.” His closing comment sounded to me like a verbal shrug. After all, what did he care? His brokerage got its fee.

Just as I was about to call the fifth brokerage to see if I could get this story corroborated, Fran Schmidt stuck his head in my door.

“We got him, Annette. Junior, I mean.”

“You arrested him?”

Fran came in and sat down. “No, not yet. I want to discuss the arrest with you and with Axel first, because Simon, Sr. will make a stink. But we verified that Junior has the torn suit. I called Daniel about your idea, and he decided to try something else first. They do random drug checks on the employees, and that includes searching their lockers. So he did a random locker search, with Junior’s locker having been ‘randomly’ selected. The torn ski suit was hanging in it.”

“Sounds as if Junior isn’t the brightest star in the galaxy.”

“That’s putting it kindly, Annette. I think it’s more like he’s five beers short of a six-pack. Anyway, what I want to do is review the evidence with you and see how it looks. Then we can vet it with Axel to see if he thinks it’s solid enough to justify a politically sensitive arrest. If so, we can try to find Junior and bring him in.”

“Um, ‘try to find Junior’?”

“Right. Daniel told me he hasn’t clocked in at the ski area in a couple of days, and he was signed up to work the weekend. No one seems to know where he is.”

\* \* \*

“We’re going to meet with the District Attorney tomorrow, discuss the evidence, and see if he thinks we have a case.”

“And if he agrees that you have a case, then you get an arrest warrant?” Hal looked up from the report he was reading.

“Right. And then all we have to do is find the guy. He disappeared and left his truck parked at his cabin up in Grand Lake. It’s as if he just walked off. Danny Kennedy told us that Junior hasn’t been at work for a couple of days, so we checked this afternoon.”

I was putting together dinner for two at home, one of my invent-it-on-the-spot tomato sauces for spaghetti—this one was going to have rosemary overtones. I won’t claim that this ability is genetic, but it feels like it. Growing up, I learned enough from watching my grandmothers that it comes easily.

“So you’ve got a torn ski suit in the locker of a guy with a sore shoulder. Does the piece of fabric you found in the woods match the tear? And even if it does, it seems like a barely competent lawyer would be able to make it all look coincidental. From what you’ve said, you haven’t established much of a motive.”

“I know. That’s why we’re going to talk to the DA about it. That and the political issues. Your good friend, County Commissioner Simon Murcheson, Sr., has Fran running scared.”

Hal’s laugh was bitter. “Right. A Luddite know-nothing in control of the budget for the sheriff’s office. Reminds me of some of the people I’ve had to deal with in the rural school districts, the ones who insist that the Grand Canyon was really created in a day or two, isotopic and geologic evidence notwithstanding. People like Murcheson are why I think higher education is so important for this valley.”

“Just be glad we’re not doing this year away from home over in Utah.”

He groaned. “Don’t get me started.”

“Speaking of getting started, have you made any progress on what positions you’re going to fill first for MPARC?”

“I’m going around in circles. I talked with Chuck Shure’s architect and he told me the idea of taking off the top story is workable but that I need to decide on what’s needed in the way of office space, computer space, and meeting space. To figure that out, I really need people to help plan it, especially a chief scientist and what I’ll call a chief engineer, a computer person. But I can’t really hire anyone until I have a place for them to sit. I think I’m going to have to rent some office space somewhere for a while. I mean, I can work from home, but I really can’t expect every MPARC employee to.”

“You also said something about a public relations person.”

“Yeah, and I need that right away. By rights, I should find a chief operating officer and let that person hire a PR type, but I need a PR person now.” He sounded helpless.

“Contract someone to work with you temporarily, try for someone local. That’s what you need right away, local PR connections and help. Then find a COO and let him set up a real PR department, or whatever, maybe PR and educational outreach.”

“Too bad you’ve already got a job.” He smiled at me, and winked. “Except, of course, I do want to avoid playing favorites. And you’re definitely my favorite. But, you’re right, a short-term local PR person would help. I’m afraid, though, I may have to play favorites with the chief scientist and chief engineer, just offer it to people I know and trust. A real search would take months and months.”

“Surely there are people all over at universities who would like to do the chief scientist job for a year while they’re on sabbatical. Maybe the chief engineer, too, if it’s really to set up this fast new computer you keep talking about. Say, didn’t Sandy Livingston talk about needing a break from Santa Fe when we were down there just before Christmas?” Livingston had been helpful in a case that involved related murders in New Mexico and Colorado.

“Sandy? Yeah, he did. But, gee,” he tried to look innocent. “I’m not sure I want him sniffing around you.”

“Oh, he got over it, I think. You should have seen him when he first met me, an appointment at my office. I thought he’d step on his tongue.” I had to laugh at the memory. “But he seemed pretty taken with Angela by the time we left.”

“And she with him.” He looked thoughtful. “Hmm. I wonder. You know, you’ve been talking about how Fran needs more staff. Angela’s got credentials as good as Janelle’s, I bet, maybe better because her experience is in civilian law enforcement. And our experience the other night suggests that Fran needs people who can speak Spanish. Maybe there’s some way we could get both of them up here. I guess I should see what I can find out about Sandy, his scientific credentials, I mean. I’ll Google him after dinner.”

“OK, good. That’s the chief scientist. Now what about this computer person, your chief engineer?” Not that I’m a control freak or anything, but sometimes Hal needs a little kick in the pants to set things in motion.

“I think maybe I’m going to consult with Chuck Shure on that one. We’re supposed to build the world’s fastest supercomputer using his new processors, so maybe he has someone he could recommend. The COO is the bigger problem. Also a security person, both for computer security and other stuff. For all I know, Chuck will want us to have a classified capability.” He scratched his head. “Hmm. I wonder if Mac MacQuarrie is tired of Florida yet. He’d probably know about all that stuff. But first I really do need a COO.”

MacQuarrie, ex-CIA and other spooky agencies, had been investigating theft of nuclear material and its transport on a cruise ship we’d been vacationing on. He seemed like overkill for Hal’s institute, but I decided not to go there.

“A chief operating officer implies someone who can make the organization run, and that implies knowing something about the local culture, to me at least. Does that suggest it ought to be someone local? You could do a search to gauge the local talent pool in about a week, I’d think. Plant a story in the local paper here, that one with different versions in each little town, along with an ad in the classifieds, and see who responds.”

Hal nodded. “I’d be willing to bet that Mary Schmidt would. Didn’t she say something the other night about wanting to find a way to put her bank manager experience to work?”

“Hmm.” Now it was my turn to try to look innocent. “I’m not sure I want her to have the opportunity to sniff around you. She was in the hero-worship mode the other night.”

“The sheriff’s wife? Right. Let’s see, what other ways could I think of to endear myself to the community? I know! I’ll do what I can to have our non-profit center avoid paying taxes, stiffing the fire departments, the school board, and everyone else. They’d love me then, especially because I told the county commission I wouldn’t.”

I was just about to put water on for the pasta when the phone rang, so I turned the sauce down to a simmer and answered it.

“Annette? Fran. I’m going to cancel our meeting with Axel tomorrow.”

“Uh, OK. Why? Are we giving up on Junior?”

“In a way. I just got a call from Simon, Sr. It seems that Junior usually has dinner with his folks over in Kremmling on Mondays. Sort of a family tradition that started with Monday Night Football and turned into a year ’round thing, or something like that. Anyway, Simon, Sr. and Marge, that’s his wife,

didn't hear anything from Junior and he didn't show up at the usual time. He didn't answer their calls. So they drove up to Grand Lake, to Junior's place, to see what they could. They have a key, so they let themselves in, and found Junior. I'm up here now, and he looks a lot like Tobias did. Peaceful, even a sort of smile on his face, dead as a doornail. Lying in, or on, his bed. No obvious signs, although George is sure as shooting going to look for needle marks in his nose. At least he's not frozen solid."

\* \* \*

## Fourteen

Tuesday morning, I decided to try the other brokers before the market opened, so I made phone calls from home after breakfast. Numbers one, two, and five told me much the same story as number four had on Monday, and number three, the recalcitrant one, finally gave in and corroborated the story as well. Given information to verify, he allowed that he could help me. He just didn't want to volunteer information outright, he said.

It probably helped persuade him to cooperate when I dropped the FBI into the conversation. They, after all, would become involved if a Colorado murder and a New York securities fraud case became intertwined, I suggested.

The net result of all these calls was that I knew far more about Tobias Summers' finances than I had before. Of the three million dollars he had invested with the New York brokerages, he had well less than half a million left—after one day's trading.

Perhaps he had been a wheeler-dealer in the Fraser Valley real estate market, but his record on Wall Street was not very impressive.

But Charles Shure had said that the transaction on Wednesday had involved \$3.2 million, that Summers had withdrawn almost all of it. He had deposited Shure's check and withdrawn 61 cashier's checks at \$50,000 each and 500 \$100 bills. Somewhere, there was still one of those checks and a considerable amount of cash floating around. I got busy.

Airline records revealed that Summers had taken a red-eye from Denver International to JFK in New York on Wednesday night, and that he'd returned to DIA Thursday night. Some of that missing cash probably bought tickets, I thought. On a hunch, I checked records for the companies that sell traveler's insurance at those two airports—computer databases and connections to the FBI have made such things much, much easier than they used to be. It turned out that Summers had plunked down \$500 in cash for airline passenger policies for his trip to and from New York. That cashier's check was still a mystery, though. I drove to Hot Sulphur Springs with its fate on my mind.

When I got to the sheriff's office, I realized I needed a distraction. I had copied Michael McMurphy's water-rights book from Janelle's computer, and it seemed like it could serve the purpose.

Besides, I thought, it might help me understand something. If FRAWB was so sensitive to all this that it was trying to lean on the CBI and the Sheriff's Department based on rumors, something had to be up, as Fran had suggested. Maybe McMurphy could provide enlightenment.

Halfway into the first chapter, past where I'd stopped the other time in Janelle's office, I discovered that the polemic faded and that the guy could really write. It turned out that this was a good thing, because his topic wasn't exactly a page-turner.

But it was instructive. In my years in the Southwest, I'd picked up bits and pieces of water lore, some of it apocryphal and some of it informed, but I'd never seen it formalized before. And McMurphy started at the beginning and provided a step-by-step development of just how things got to where they are now.

It all began, I learned, with the "first in time, first in right" doctrine of beneficial use. Whoever had arrived in a particular region first and laid claim to its water resources had senior rights to those resources, and as long as he used them for beneficial purposes he retained them.

One sticking point was the definition of "beneficial," an issue made all the more problematic by society's changing values. Keeping fish alive, for example, didn't used to count; in recent years, it's begun to. But for more than a century, "beneficial use" has meant agricultural and domestic consumption, fish and wildlife and natural stream-flows be damned.

Another sticking point raised in recent years concerned who was really first. Early European settlers always thought of themselves as first, and senior water rights reflected that tradition for decades. But Native Americans have rightly pointed out that they were here long before the Europeans, and their water rights were increasingly becoming recognized, throwing water-law precedent into chaos in some river basins.

In north-central Colorado, the first European claims were agricultural, among them farming communes in the Greeley area. Water on the plains was scarce, so farmers dug ditches into the foothills to divert the Cache la Poudre and other streams. Because natural stream-flow is so dominated by the springtime snowmelt, they built reservoirs to store the water for use later in the summer.

And when all of the Poudre's water was claimed, they looked to the west side of the Continental Divide.

One of the first, and, for the time, most ambitious, of the diversion projects was the construction of the Grand Ditch, a canal still in use today that runs along the flank of the Never Summer Mountains on the west side of the baby Colorado River. It catches snowmelt that would otherwise feed the Colorado in the Kawuneechee Valley in Rocky Mountain National Park and guides it northward *around* the Colorado's headwaters across the Continental Divide at La Poudre Pass and into the Cache la Poudre drainage. It's not merely moving water from the other side of the mountains to the plains, it's moving it from the next range of mountains.

In more recent decades, this engineering approach has resulted in lakes' being created, including Granby and Dillon and dozens of smaller impoundments, and tunnels' being bored, so that nearly all of the water that melts off the snowpack in the central Rockies is pumped back east one way or another.

McMurphy's tone switched back from historical explanation to polemic when he got to the creation of the Front Range Associated Water Board. It amalgamated a host of smaller water districts and boards several years back, centralizing the Front Range resources into a single entity with more clout than ever. This allowed it to expand its acquisition program, offering farmers and ranchers hugely attractive buy-outs for the senior rights that had been attached to their land for decades.

Of course, buying and selling commodities is the American way. Despite some shady dealings and a history of protecting the status quo with political donations and lobbying, the water industry wasn't doing anything out of the ordinary. But slaking the thirst of the cities and suburbs of the Front Range was causing increasing hardship in the mountains. The hardship was particularly difficult in growing communities, where local development meant the need for additional water, water that was being pumped back east.

It was puzzling to me that McMurphy didn't seem to appreciate the irony involved. It was the developers of the Front Range, after all, who were responsible for the pressure to grab ever more water

from the Western Slope—water that the Western Slope developers wanted for their new subdivisions. Warring developers—even better, I thought, than warring lawyers.

It was looking as if the developers from the east side of the Continental Divide were winning the war, not a surprising turn of events given their strength in numbers, constituent population, and money. And with the consolidation of the Front Range water interests into FRAWB, several new, even more ambitious attempts to acquire water rights had surfaced. Both the Arkansas River and the Rio Grande were at risk, with attempts to fill the middle Arkansas Valley with a huge lake and to pump the subsurface aquifer in the San Luis Valley dry.

And the granddaddy of all water projects, what had been dubbed the “Big Straw,” a giant pipeline/canal project designed to pump water all the way back uphill from the Colorado River at the Utah border to the Continental Divide was being discussed. Even though such a thing sounded like a bad joke, high-ranking politicians from both the Front Range and the Western Slope were serious about it.

I was just starting on a chapter entitled “Drying up the Back Range” when my phone rang.

“Annette? Chuck Shure. Listen, I just found out where the last cashier’s check went.” He sounded triumphant.

“I’ve been wondering. Turns out that his investments on Wall Street tanked, and he lost more than just his shirt. He was pretty much down to his jockey shorts.”

“What happened?”

I told him about the PureAgua IPO and its disastrous day and got a low whistle in response.

“Maybe that explains the check. He cashed it at a Western Slope Bank & Trust branch in Black Hawk. That’s why it didn’t show up before, because the transaction was purely internal to the bank. He bought the check from Western Slope and cashed it there. I had my people looking outside.”

“Black Hawk, huh? Where all the casinos are?”

“Right. On Friday. I expect he may have been feeling desperate.”

\* \* \*

I went searching for a Colorado atlas. I thought I knew about where Black Hawk was in relation to the Fraser Valley, but I wanted to check. Some lucky person, maybe me, was going to get to drive over there and question casino operators. But instead of an atlas, I ran into George Neering.

“Yo, Ms. Tri-er-i, nice mornin’, huh?” Despite his strangeness, you couldn’t fault George for bad moods. “Say, you know, I’m on my way to see Fran with autopsy results on Junior. Wanna tag along?”

“I will, George, thanks.” I decided a little friendly confrontation might prove interesting. “Y’know, George, no offense, but I think I’ve got you figured out. You have this persona you present to the world—reminds me of the old George Carlin stand-up routine he called the ‘Hippy-Dippy Weatherman’, as a matter of fact—but behind the façade there’s an analytical mind that’s sharp as a tack. You just like to keep it hidden, and you present yourself this way to make people think you’re spaced out. Does it give you a significant advantage, or something?”

He had been walking down the hall toward Fran’s office about a step ahead of me, boogieing along to his internal music, and he now stopped and turned toward me. His look of surprise quickly changed to full-out laughter.

“George Carlin, huh? Well, I guess I should take that as a compliment, I’ve always liked him. Actually, I don’t know about advantages, man—I’m just the way I am. But I think I know what you’re talking about. Guess I’m just an unreconstructed hippy, man.”

“I bet you tone it down in court testimony, though.”

“Only when I have to go down to Denver. Around here, the judges all know me, and it’s really a pretty effective way to get on a jury’s good side, you know, man?” His big smile was infectious, and I began laughing.

Fran Schmidt’s door was open, so we walked in to find him staring at a spreadsheet on his computer screen. He turned and looked at us with a sour expression.

“You two look like you’re having way too much fun. Here, help me with these budget numbers. That’ll fix you right up. George, I expect you’ve got autopsy results for me.”

“You guessed it, man. Junior’s got a needle mark up there in his nose, just like the other two. Only difference is the shit-eating grin he was wearing. But I think I know what caused that—looks like he’d just had sex, and there was some cocaine caught in his nose hairs.”

“Any idea of what he got injected with?”

“Too soon for blood test results, man, and they may not help anyway. Remember how we didn’t find anything in Summers’ blood? It doesn’t take much when it’s injected right into the brain, man.” George looked philosophical. “But I bet it’s a pretty good rush. Whew!”

Schmidt leaned back in his chair and put his cowboy boots on top of a pile of spreadsheets on his desk. His feeling about budget numbers was apparent.

“So…” But George interrupted.

“Sheriff, man, you know, if I was from Southeast Asia, I’d think you were trying to offend me, man. You don’t show people the soles of your feet there, man, it’s an insult.”

“Huh?”

“Yeah, man, I read that somewhere. I mean, you’re a politician, man, you’ve got to be careful about offending people, right?”

“Give me a break, George. You’re not from Southeast Asia. And if I recall, you went to great lengths to avoid visiting Southeast Asia at Uncle Sam’s expense some years ago.” He didn’t move his feet.

Fran shot George a nasty look. “So, where was I. As I was going to say, it looks like we have a secondary murder now. What I mean is, there were three first-level targets, Summers, McMurphy, and Lannie, and now one of the killers is doing clean-up. Getting rid of the original gang, assuming Junior killed Lannie.” Schmidt stared at the ceiling. “I wonder if this means Junior was at McMurphy’s?”

“If that’s the case, Fran, then we can expect another. There were three people at McMurphy’s house, right?” His theory clicked for me. “And, assuming Junior was heterosexual, one of them was a woman. That would fit with the single set of smaller footprints.”

“Junior was definitely not gay, man. In fact, he was one of the biggest gay-bashers here in the valley. God-damned bigot was what he was, man.” George’s normally serene expression had turned fierce. “Besides, man, the evidence of the sex includes some spermicidal foam on his dick, man. That’s pretty conclusive, I’d say.”

I had to laugh. “George, it’s a good thing the judges around here know you. Man.”

For the first time I'd seen, George looked embarrassed.

"Fran, I have some other information about this whole mess as well. We've almost accounted for Summers' whereabouts up to the time of his death. And the money, too." I explained the stock-market fiasco and Summers' apparent trip to Black Hawk.

"Black Hawk? That's strange. Tobias was a real straight arrow. Somehow, I can't imagine him gambling." Schmidt looked genuinely puzzled. "Besides, that's small-stakes gambling. You can't make real money at that."

"Well, I dunno, man. You sure can *lose* real money there. I gotta a friend, man, inherited a bundle, bought himself a Porsche, went over there for some fun. Drove home in a beater Nissan, broke. And as for Summers, man, well, that stock market deal sounds like gambling to me." George, apparently, wasn't going to let a little embarrassment keep him out of the conversation.

"Speaking of cars, Fran, I think you told me that Summers drove a Hummer. Did that ever turn up?" That detail had escaped me up to that point.

"I've been wondering about that, too. Nobody's seen it, at least not that I've heard. You don't suppose it could be over at Black Hawk in a used car lot?"

"No used car lots there, man. Land's too valuable. My friend told me his Porsche ended up at a used car place down in Lakewood."

Schmidt nodded his understanding. "Well, if Tobias drove that Hummer back here on his fatal Saturday morning, we'd probably have seen it around the county somewhere. That means he either drove back in another vehicle or someone went and picked him up.

"I was looking for an atlas when I ran into George here, because I don't remember exactly where Black Hawk is. Over in the Front Range foothills, isn't it? Somewhere over there?"

"Right. It's up the north fork of Clear Creek Canyon, the turnoff is a couple of miles below where I-70 and US 6 meet up just below Idaho Springs." Fran looked a question at me. "Why?"

"So it's sort of on the way back here from Denver? Yeah, well, I'm sorry to be so suspicious, but I think that we need to elevate Emily Griggs back up a level on our suspect list."

"What? Annette, c'mon, I thought we had eliminated her." Fran was looking perplexed, and George just stared at me in astonishment.

"I know. But now we know there's a woman involved in this thing, and Emily's a woman, regardless of her orientation. If she had help, she could have overcome the size difference we were wondering about and moved Summers around. She came back here on that Saturday morning, and her alibi pretty much evaporates west of Denver. There's no real reason to think she didn't pick up Summers somewhere on her way back up here." I held up my hand to stop their protests. "Look. I'm not naming her as our prime suspect or anything like that. And the only real connection involving her is to Summers—there's no reason I know of to think she'd be connected to Lannie Young's murder or to McMurphy's. But until we know how Summers got back here and into her condo, we have to keep her in mind, OK?"

\* \* \*

Fran's office had a better view than mine—he could see out the front of the building to the street, while I was able to see only two big dumpsters in the alley. Because I was across Fran's desk from where he sat with his back to the window, I was able to see a large SUV pull into a parking place out there. As it

maneuvered into position, its logo and nameplate told me it was a Cadillac Escalade. And when its door opened, my lawyer alarm went off. It took only a minute or so for Fran's phone to ring.

"Yes?" I guessed it was his intercom line. "OK...Oh, well, she's in here. Please bring her over." He set the phone down.

"Annette, you've got another visitor from FRAWB, another lawyer. Be nice, OK?" He was laughing.

George looked startled. "A lawyer from FRAWB? I'm outta here, man." And he disappeared with amazing speed.

"George lives on a little ranch next to one of the feeder ditches FRAWB owns. I suspect that he's rather free and easy with their water when he needs it." Fran's explanation helped me understand George's departure just in time for the arrival of our new visitor.

She turned out to be the female version of Gerard P. Yount, the previous FRAWB lawyer—young, aggressive, sure of herself, clearly in need of a spanking of some kind. I was going to try to be nice, but I knew it would be a chore. Rita Chesley-Hayes was in her early thirties, about three inches over five feet tall plus a couple of inches because of her heels, and dressed in an expensive tailored suit that looked like camel's hair. Fran's front desk officer made introductions and quickly excused herself.

I decided to take the offensive. "Where's Mr. Yount? I was beginning to like him. I think we hit it off."

She looked surprised and unused to being off balance. "He was, uh, assigned elsewhere, I understand. I was asked to continue his discussions here."

Fran assumed as innocent an expression as he could muster up. "What discussions were those, miss?"

"My understanding, sheriff, is that Mr. Yount came up here yesterday and discussed with Ms. Trieri certain concerns that Front Range Water has, concerns about being libeled."

"Well, my goodness, I don't blame Front Range Water at all for being concerned about libel. What's the issue exactly, and who specifically is Front Range concerned about?" Fran had changed from innocence to indignation in a heartbeat. I wondered if he had taken acting courses in college.

"I thought you understood the issues here, sheriff. We are concerned about your office, of course."

Now he was back to innocence. "My office? I don't understand. How could my office libel Front Range Water? That just doesn't make sense to me at all."

"If media reports mention Front Range Water in connection with these murders you've had here in Grand County, sheriff, we will consider that libel."

"I'm sorry, miss, but I still don't understand." Fran's first reference to her as "miss" had produced a sour expression, and I think he had decided to push that button intentionally. "If you're libeled by the media, you'll have to go after them. I don't see how my office would be involved. I suppose we could forestall this issue by putting out a press release saying that the Grand County Sheriff is not considering Front Range Water as a suspect in these murders. But from what you just said, maybe you'd consider even reports of that nature to be libel."

Before she could say anything, I jumped in. "If it would help, we could put out a joint statement from the sheriff's office and the Colorado Bureau of Investigation saying that the ongoing investigation of FRAWB has not yet made any connection to the murders. Oh. Fran, before I forget, she pulled up in a Cadillac Escalade. It's parked behind you."

He looked at me, then swiveled his chair around. “Really? That car’s hers?”

He reached for his phone and pushed a couple of buttons. “Norm? Say, could you take a minute and check out the tires on an Escalade that’s parked outside my window? The sooner the better, because I don’t know how long it’ll be there, OK?”

Now Ms. Chesley-Hayes was the indignant one. “What, may I ask, is this about?”

I decided to keep my mouth shut—it was Fran’s investigation, after all. And he was thinking about what to say.

Finally he decided. “Well, miss, you see, one of our recent murders involved a writer who was working on a book that exposes, shall I say, some of the more assertive tactics used by Front Range Water in effecting its goals. Someone who was driving a vehicle with tires that come standard on Escalades was at his residence shortly before the time of his death. And his computer files, including the working copy of his book, were destroyed. So we’re checking the tires on every Escalade we run across.”

With Fran’s lead, I knew it would be appropriate for me to chime in. “And it would help us to know your shoe size. There were footprints, also.”

Ms. Chelsey-Hayes’ look of indignation had been frozen in place until my comment. Then it turned to anger—even through her lawyer mask, it was obvious that she was mad as hell.

“This is outrageous! You do not have my permission to examine my automobile, sheriff. And my shoe size is none of your business.”

“Well, miss, I’m afraid that when the media reports facts, it’s not libel. So when they report that a Front Range attorney refused to cooperate with our murder investigation despite, as Annette suggested, its ongoing nature and despite an apparent connection to forensic evidence, well...” Fran shrugged.

“Perhaps you’d care to tell us about the two people you were with that day, Ms. Chesley-Hayes.” I made a point of making my voice completely flat, devoid of any emotion or inflection, despite the fact that her demeanor was making me want to burst out in laughter.

“What? What day? Are you accusing me of being at McMurph...at wherever it was that you were talking about?”

“Ms. Chesley-Hayes, it seems clear that you know where it was that we were talking about. You almost said it. Fran, I remember you told me that all conversations with civilians in this office are recorded.” I turned toward him and winked. “Can I assume that the equipment would have recorded Ms. Chesley-Hayes’ little Freudian slip, there?”

“Absolutely, Annette.”

“Good. Oh, look, there’s Norm. I wonder if the tires will be a match. Say, Fran? Do I remember correctly? Isn’t that a handicapped parking spot there? I think I recall it from my first day here, I almost parked in it, then I saw the sign.”

Fran shoved some papers on his desk aside and picked up a walkie-talkie. “Norm? Norm, can you hear me? Over.”

I saw Dzeng turn his head and reach toward a lapel. “What’s up, Fran? Over.”

“Norm, is that Escalade there in the handicapped spot? It sort of looks like it from here. If so, impound it for towing, would you? Over.” I saw Dzeng looking toward a sign on the curb and nodding.

“It is, and will do, sheriff. We’ll have to call for the flatbed from Granby, though. Can’t really tow these all-wheel-drive vehicles. And we’ll have to break in to get it on the flatbed, break a window, I guess. Gonna get expensive. Over.”

Fran turned to look at Ms. Chesley-Hayes but looked surprised instead. I turned, and saw that she had vanished.

“Norm? Any minute now, you’re going to have a very angry lawyer on your hands. It’s possible that she’s the owner of the Escalade, but we don’t know that unless she has her registration on her person, not in the car. Think you’ll need backup? Over.”

“Angry lawyer? C’mon, Fran, I’m just the tracker. You bet I’ll need backup. Out.”

\* \* \*

## Fifteen

“Fran and I went outside to act as Norman’s backup, out a door Fran has in his office, so we got there before she did—it surprised the fight out of her to find us standing there. She turned into putty in Fran’s hands.” I chuckled at the memory.

Hal and I were on our way to a school-board meeting, where he was going to wear both of his new hats. I’d spent the entire afternoon dealing with Ms. Chesley-Hayes and got home just as he was leaving, so on the spur of the moment I had jumped in his car to go with him.

“Fran probably exceeded his authority, but it was only a parking violation and it was also linked to the investigation. But he essentially plea-bargained with her, getting her to authorize a search of her vehicle in return for not towing it. He even tore up the ticket that Norman Dzung had written. The interesting thing is, we found a pair of Sorels in the Escalade, hers, and they match the size of the small prints that Norm found at McMurphy’s place. And the Escalade had its original tires, so they’re a match, too. And then there was her McMurphy slip. She knew she was looking bad.”

“Does Fran really record conversations in his office? I thought that was illegal or something.” It was snowing again, and Hal was taking the curves on the northward stretch of County Road 5 with extra care.

“No, he doesn’t. But he could so she couldn’t be sure. I spent most of the afternoon talking with her in an interview room, where things *are* recorded, talking about her remark in Fran’s office. Part of the plea bargain, the part where he tore up the ticket, was that she would explain herself fully.”

“Tire tracks and footprints aren’t conclusive, surely. I mean, there are other Escalades driven by small-footed people wearing Sorels, right?”

“Right. And, I have to say, to think that a FRAWB lawyer would have murdered Mike McMurphy is a real stretch for me. But we now think there’s a woman involved, because of Junior Murcheson’s death.” It took me until the outskirts of Granby to explain that wrinkle.

“So how did this FRAWB lawyer explain herself?”

“According to her, Front Range has known about McMurphy’s book for some time. And his death was in the papers. So when Fran talked about a dead writer who was working on an exposé of FRAWB, she says she put it together easily. Then she let the name slip out without thinking about it. Where are

we going, anyway?” Hal had turned off the highway—the main street through Granby—and it looked as if we were headed away from civilization.

“The high school—it’s supposed to be up here somewhere. The board’s meeting in their auditorium. I bet that’s it over there.” Through the snow, we could see lights on an institutional-looking building.

Hal’s two roles at the school board meeting were to explain his Colorado Commission on Higher Education assessment of future higher-education needs in eastern Grand County and to provide the board with an overview of MPARC and its staffing needs in the coming years. Because he was listed on the agenda in two time slots for these roles, the board members had questions. The chair, Asa Scanlon, acted as their spokesman when Hal’s first turn came up.

“Mr. Weathers, it says here that you’re supposed to talk about higher education needs now, and then later you’re back to talk about this new institute. Surely the institute will have higher education needs. This feels like a conflict of interest. How can you represent the people of Colorado, via the CCHE, and this private institute as well?”

“Well, sir, I guess the quick answer is time scales. MPARC, which I’m going to talk about later, is on a two-to-three-year time scale to get rolling. I’m about to hire its first personnel soon. And, as I’ll explain in more detail later, our needs are going to be rather specialized, in terms of the types of higher education degrees we’ll be looking for and so on.

“On the other hand, my study for the CCHE deals with the longer-term higher education needs here, ‘longer-term’ meaning ten years and more. Part of the basis for the study is a set of planning assumptions, assumptions that include, implicitly, organizations such as MPARC and others. On the time scale of a decade and more, MPARC will be a drop in the bucket, so to speak.

“If you hear me advocating that CCHE recommend a graduate school of computer science or earth science that would start next year, well, you can feel free to label that a conflict of interest. Those sorts of things would benefit MPARC. But that’s not where this study will go at all. What it’s primarily concerned with is undergraduate opportunities for the population here, four-year opportunities leading to a baccalaureate degree.”

Scanlon was still the one with the questions. “We’re part of the Colorado Mountain College special taxation district. What about that?”

“CMC is a two-year college, for the most part, and it awards two-year degrees, associates degrees. Growth projections here suggest the need for a four-year college, at least, in the future. Other communities have both, so there’s really no issue. The four-year college would be part of one of the state systems, CSU or CU most likely, and there would be no special district. Now, to be sure, the legislature could do all sorts of things in the meantime. For example, it could mandate somehow that CMC become a baccalaureate institution and start awarding bachelor’s degrees. If that happens, well, that would be on the table and it would represent one possible solution.” He paused to take a deep breath.

“I have to say, the main purpose of this new campus would be to provide baccalaureate opportunities for the population here, which is projected to be much larger in the future than it is now. But a spin-off of this would be additional business opportunities. A campus here would draw students from all over—I mean, who wouldn’t want to go to college in Grand County, Colorado? With all due respect to the folks out east, it would beat the pants off going to Greeley. This would mean visits by out-of-area parents, motel room sales, restaurant meals, and on and on. Eventually, athletic events would draw people here, too—I expect, for example, that home games during football season would fill a slow time just before ski season starts. It represents an environmentally friendly industry, in some sense, on top of the existing tourism base.”

“So what does this have to do with the East Grand School District?”

I’d been listening carefully, but then two things happened. Hal launched into a discussion I’d heard before, about how the presence of a college locally would raise the bar for the primary and secondary schools, and I was passed a copy of the meeting’s agenda. Naturally, the first thing I checked for was Hal, and there he was, in two places.

But in between, mixed in with a budget discussion, a proposal for grade-point requirements for athletes, and a review of the high-school biology curriculum, it said “Future of Superintendent.” I looked around, but Emily Griggs was nowhere to be seen.

\* \* \*

“You sure you want to create this new institute up here? I bet Chuck Shure could figure out some other way to make money on that building he bought.”

We were on our way home, Hal plowing his S4 through eight inches of new snow on the county roads. It was light snow, and the studded snow tires and all-wheel drive kept the car moving easily.

I had skipped dinner to go to the meeting with Hal, so at one point during the meeting I went foraging in the high-school hallways, to find only vending machines full of candy bars. The sugar and chocolate had me a little wired.

But what had us both upset was the last half of the school board meeting. Their treatment of Emily Griggs and their discussion of the biology curriculum had showed us a side of the local culture that we hadn’t seen before, a side that made us very uncomfortable. When Hal’s second turn at the podium came up, his comments about MPARC were attacked with the same know-nothing attitude the board had shown us in their remarks about the curriculum, including “magnificent design,” or whatever they called it, in the biology courses.

“Well, we have to remember that we were hearing just the school board, not the people. School board members have to get themselves elected, and that takes motivation. Motivated people have, well, motives—what I mean is, they have agendas. They invest in getting elected to advance those agendas.” Hal’s ability to detach himself and look at things objectively is something I envy.

“I was proud of you when you were talking about MPARC. They were worse than that time at the county commission, and you stayed cool.” I patted his right leg.

He looked grim. “I’m going to have to re-think our community investments, though. Because we won’t have to pay taxes, I’d intended to make up for it with donations. Plus, we were going to provide the schools with real broadband internet access and computers and so on. I don’t know if I’m comfortable with giving that bunch of bigots a lot of freebies, now.”

“But you don’t want to hurt the kids, and especially the kids’ future, just to spite the bigots, huh?”

“No, and that’s the dilemma. One factor in our recruitment will be the schools here. It’ll be hard to get the scientists and engineers I need if the schools are lousy. Of course, with a cadre of highly educated people here in the valley, the level of the schools will rise simply because these new parents will demand it. Maybe that’s the way to look at it. We’ll get the last laugh when this current flock of turkeys is voted off the school board.”

“Now I have a better idea about what that group of women I had breakfast with last week was talking about. I was thinking of them as subversives then, but now I’m thinking of them as saviors. It’s a good thing we don’t have kids in school, lover, because I’d be lobbying hard to move back to Durango tomorrow.”

“Well, if we had kids in school in Durango, they’d be in a private school. You haven’t been paying much attention to the school board down there, have you? I guess school boards everywhere can be pretty pathetic.” It was his turn, so he patted my leg. “So, do you suppose we’ll have any late-night visitors tonight, like the last time we were out in the evening?”

“Good question, but I don’t see any tire tracks.” We were on our way up the driveway, and I felt my stomach growling. “But if there are, I’ll roast ’em and eat ’em. I’m famished.”

“I’ll make you an omelette. By the way, I was proud of you for maintaining your cool during that discussion of Emily Griggs, for not jumping up and screaming at those idiots. I don’t know if I think it was a good thing she wasn’t there or not. Maybe she should hear what those folks think of her.” He pulled into the garage.

“I bet they wouldn’t have said those things if she’d been there, so maybe she stayed away on purpose, to let them vent. That comment about how much it would cost them to break her contract now injected some reality into the discussion, at least.” I could tell my blood pressure had risen a little—even though I had Emily Griggs back on our suspect list, I was not prepared to abandon her to the homophobes on the school board.

Hal made me a three-egg omelette with pepper-jack cheese and smoked ham, and I practically inhaled it.

“Now, remember to chew, dear. It’s healthier.” He smiled, and I slowed down just a little. “You know, I thought of something about the schools—I guess I reminded myself with that comment about private schools in Durango. One way to improve our recruiting abilities would be to help set up a private school for our employees’ kids. A Montessori school or something like that. Maybe provide tuition as a part of the benefits package, or at least part of the tuition.”

“Wouldn’t that discriminate against the singles and the childless couples?”

“In the same way that we’re discriminated against for having to pay school-district taxes. We don’t have kids, so we don’t get anything directly for paying the assessment. It’s one of those societal greater-good things.” He nodded. “But you’re right, this would be one more such hit. I’ve also been trying to figure out how to have ‘ski days’ built into the benefits package without discriminating against non-skiers.”

“What, no ‘fly-fishing days’?”

“Oh, that’s not a fringe benefit, that’s a fundamental human right. After work, at least. But ski days, or maybe we should call them ‘powder days,’ are something that actually makes sense. Not that we’d close the institute or anything, but a way for people to take a morning off after a big snowfall and not feel like they’re missing something would be an attractive perk.” He leaned back in his chair and stared at the ceiling.

“Well, that’s easy—just cancel organized meetings and so forth, and make the skiers take a half-day of vacation. Non-skiers can come to work and save the vacation for something else. Or not. But the private school tuition is something else. It’s real money.” I popped the last bite of omelette into my mouth. “Yum. Thanks for making that. I was starving.”

“Any time, for you.” He shrugged. “Yeah, I’ll have to think about it, the tuition thing. I expect there are precedents elsewhere. This is what a human resources person does, I guess, figure stuff like this out and make it legal.”

“Which is why you need to hire that chief operating officer, so he can hire an HR person.” Nag, nag, I thought. How does he put up with me?

“Well, you’ll be glad to hear that I talked with Chuck today about this very issue. And the chief engineer, too. But for the COO he pointed out, from his experience at least, you need different sorts of people when you’re starting an organization from when you’re running an established one. Builders are different from maintainers, is what he said. So I’m thinking I’ll hire someone local for now, with the idea of turning them into the community liaison, or something like that, when we get to the point of needing a maintainer-type COO with experience in bigger organizations.”

“So, are you going to advertise?”

“Yeah, I’m running an ad in that local paper, so it’ll appear everywhere up here over the next week or so. A quarter-page display in the main section, not the classifieds. I’ll show you the copy upstairs on the computer.” He rolled his eyes. “I learned I’m not as good at copywriting as I thought I was. But maybe it’ll work.”

“If it’s a good job with benefits, I bet you’re buried in applications. Do you suppose our mailbox will be big enough?” We had rented a normal, residential sized mailbox at one of those pack-it, mail-it stores down in Fraser.

“I’m using the spanking new, official MPARC address, a box at the post office in Winter Park. A big box. Another detail I got taken care of. This setting up MPARC business is overwhelming me with details. I guess that’s the point of a builder-type COO.”

“You’re used to details, surely. Being Dean of Natural Sciences must involve a load of them.”

“Yeah, but that’s what Alice used to do for me, be the detail person. I had no idea, I guess. Anyway, enough! I want to sit in the hot tub and relax before bed. Want to join me?”

“You mean I don’t have to wait an hour after eating? Well, then, sure...”

\* \* \*

On Wednesday morning, eleven days after her husband’s body was discovered and a week after his funeral, Mandy Summers was scheduled for another interview by the Grand County Sheriff’s Department. Two previous interviews, conducted immediately after the body was found and again a few days later, had been unproductive, and this third one, we hoped, would get our questions answered. Janelle Kennedy, as lead investigator of Tobias Summers’ murder, was slated to conduct the interview, and she had invited me to be part of it as well.

Mandy showed up on time with her lawyer in tow. My lawyer alarm was in perfect working condition, having been exercised by the FRAWB duo, so I had the benefit of a warning. Janelle was blindsided, however. It changed her attitude immediately, and the tone of the entire interview was affected. Without the lawyer, I think it would have been informal and maybe even friendly. With him present, it started out on the wrong foot and went downhill from there.

Steven Sheffield, portly, salt-and-pepper beard, was wearing a what looked to me like a custom tailored three-piece suit, and his briefcase matched his alligator cowboy boots. His business card listed a Denver address.

After introductions all around, he went on the attack. “Mrs. Summers has endured an overwhelming emotional upheaval, as I’m sure you know. Why you would choose to add to her distress by insisting on yet another grilling is unfathomable. You should be ashamed.”

Mandy took the opportunity to dab at her eyes with a handkerchief. She was one of those “five-foot-two, eyes-of-blue” girls who had not let herself go as she approached middle age—something all the

more remarkable because of her five children. In fact, it occurred to me that Tobias Summers, unlike many men his age, didn't need to find himself a trophy wife—he already had one.

“Mrs. Summers, please understand that all of us at the Grand County Sheriff's Department would like to express our heartfelt condolences about your husband's death. We've waited for the week to pass since the services so that you could begin to regain your equilibrium. I realize that it will always be too soon to do this interview, in some sense, but it needs to be done. It's part of completing our investigation, and it may be that you have knowledge that will help us find whoever is responsible for this, knowledge that you may not be aware of. You see, putting together information that we already have with what you know could provide us with the final piece of the puzzle we're trying to assemble.”

Janelle was talking directly to Mandy Summers, quietly, calmly, and looking as relaxed as she could manage. She was not even acknowledging the lawyer's presence.

But he wasn't going to let himself be ignored. “How DARE you suggest that she knows anything about this heinous crime! She's as much a victim as poor Tobias was. What kind of heartless soul are you anyway?”

“In addition, Mrs. Summers, we have learned some things that you probably need to know, because they relate to Mr. Summers' estate. It's new information that you may not have heard about.”

“What's this!? You've been withholding information from my client, information pertinent to her future? This is actionable, and you can expect action!” Sheffield was doing a fine job of getting himself worked up. It occurred to me that Mandy might be suitably impressed, enough so to pay his bill without arguing.

Janelle finally looked over at him, her brown eyes maintaining their sleepy gaze. “Mr. Sheffield, are you aware of how ridiculous you're going to look on the videotape?”

She turned back to Mandy. “Now, Mrs. Summers, I understand that the last time you saw Mr. Summers was Wednesday morning, the Wednesday before he died. You've said he was on his way to Denver, is that correct?”

Mandy sniffed behind her handkerchief and looked at Sheffield. He nodded almost imperceptibly.

“Yes, that's true. Tobias said he had an appointment in downtown Denver Wednesday afternoon.”

“Do you know the nature of that appointment, whom it was with?”

Again the look at Sheffield for permission, again the assent.

“No, he didn't tell me. He had this way of...Oh. Excuse me. Um, no, I didn't know anything about the meeting in Denver.” It happened so quickly I almost missed it—she had been watching Sheffield, and when she began to volunteer information, he shook his head no—just a twitch—and she stopped.

““He had this way' of what, Mrs. Summers. It will help our investigation immensely if we can understand Mr. Summers as much as possible.”

But Sheffield twitched his head again, something I didn't think that Janelle could see.

“Ahem, excuse me. The record needs to show that Mrs. Summers' attorney is advising her not to cooperate.” I made my stare at Sheffield as steely as I could manage.

“Why, that's a damned lie! I demand an apology!”

“I point this out to suggest a careful, frame-by-frame examination of the videotape, should there be any question about it in the future. Sorry, Detective Kennedy, for interrupting.”

“Thank you, it’s not a problem. Now, Mrs. Summers, I hope you understand that you’re under no obligation to answer our questions let alone volunteer information for us. Our purpose here is to see if there is any way that you can help us with the investigation of your husband’s murder. I must say, though, why you would balk at helping us, even with advice from an attorney, is something I just don’t understand at all. In fact, it seems unusual, even somewhat suspicious, that you wouldn’t be eager to help. But, as I said, you’re under no obligation to answer my questions. I do have more. Is it worth our time, yours and mine, for me to continue?” Janelle’s patience was impressing the daylight out of me.

“I’d like to confer with my client privately.” Sheffield’s tone was decidedly dismissive.

“Fine. The next room is free, I believe, and not on tape just now. We’ll be here.” Janelle heaved a huge sigh of relief when they’d left.

“Janelle, I can’t tell you how impressed I am with how you’re handling this. I hope my comment about his prompting wasn’t too much of a distraction.”

“On the contrary, I didn’t know about it. Glad you mentioned it for the record. What in the world do you suppose all this is about? Why would she want a lawyer anyway?”

“Especially an expensive Denver lawyer like this. Maybe he’s been handling the family stuff, I don’t know. You’re right, though, this is very strange.”

“Annette? What do you think about this? I won’t tell her what we know about Summers’ stock-market fiasco unless she cooperates. Does that seem unfair?”

“Well, I don’t think we’re under any obligation to reveal to her what our investigation has uncovered.”

“No, we’re not. It would be nice to let her know, I guess—for one thing there is the half million or so left, unless that stock’s gone down more. But I’ve got to say, this lawyer is getting my back up.” Her eyes flashed, sleepy no more.

“He’s going to want us to tell her the information you mentioned earlier, of course.”

“Right. I’ll have to think of something innocuous. Hmm.” But her thought was interrupted by the return of Mandy Summers and her expensive Denver lawyer.

Once again, he went on the attack.

“Is the tape running? Good. I want the record to show that Ms. Summers has answered your questions about her knowledge of her husband’s last days. Now, I believe that you have some information for us.” He crossed his arms over his chest, stood behind his client, and looked stern.

Janelle had switched back to her sleepy mode. “Actually, the record of this discussion will show that Mrs. Summers answered two questions, one of which was in the nature of a confirmation of what she’d said previously. There are many, many more questions that I have, questions which you seem to want to avoid, Mr. Sheffield. For example, Mrs. Summers, was there any contact of any kind—telephone, email, anything at all—between you and your husband after he left for Denver on Wednesday?”

Because Sheffield was standing behind her, Mandy couldn’t see him, and she began to panic. The silence quickly made her uncomfortable enough that she started talking to fill it.

“Just a phone call, Thursday evening. I don’t know where it was from. He said that his meeting went great and that we’d be out of the woods by the weekend. At the time, I had no idea what he meant. And, uh, it’s still a complete mystery to me, I have no idea what it was about.”

Her demeanor had changed significantly between the last two sentences, but I wasn't clear on why. Then I noticed Sheffield's hand on her shoulder.

"Thank you, Mrs. Summers. I can see that this is very stressful for you, so let me suggest that we continue this another time. And, with respect to the information we uncovered, I don't know what your husband meant by 'out of the woods,' either, but if it had to do with financial matters, it appears that he was mistaken."

Why Mandy didn't react to this leading comment was yet another puzzle.

\* \* \*

## Sixteen

"I'd say it's pretty obvious she knows lots more than she's letting on."

Fran Schmidt and I were headed up to Grand Lake to have a look at Junior Murcheson's cabin, and he was reacting to having watched the tape of the Mandy Summers interview.

"That's what Janelle and I think, too." She and I had discussed every possible angle and couldn't conclude anything else. "The prompting by the lawyer and then when Mandy ignored that comment Janelle made about the finances, well, something's fishy, that's for sure. Anyway, what's this business with Junior's cabin?"

"We sealed it up after we found Junior's body—of course, we don't really know how much Simon and Madge might have compromised the scene before they called us, but at least it should be intact from the time we got there on. A forensics team went up today to go over everything carefully, and they called me a while ago, said they've got something I need to see."

We had crested the hill that takes the highway from the plains of the Colorado River Valley up to the plateau on which Lake Granby sits, and I was astonished at what a difference a couple hundred feet of elevation made. Down on the flats all the way from Hot Sulphur Springs through Granby, it had been sunny and warmish—the highway had melted off and there was even dry pavement most of the way. But up on top, the wind off the frozen lake was creating ground blizzards, and the highway was glazed over, a sheet of packed snow with ice on top. As we rounded the first curve by the little overlook parking lot, Fran hit his brakes, and the studded snow tires on his Explorer skittered and scratched the heavy vehicle to a stop.

The studs on his tires stopped us in plenty of time—we weren't anywhere near crashing into the jack-knifed semi that was blocking both lanes of the highway. Other cars, though, the ones without studs, I guess, weren't so lucky. Two were wedged under the trailer, like piglets suckling on mama, and a third looked as if it had bounced off the truck's front bumper before landing in the left-hand ditch.

"Well, crap. Looks pretty new, or I'd have heard something on the radio." Fran reached for the microphone. "Annette? I'm going to call this in. How long has it been since you played traffic cop?"

"Longer than I want to admit. If I remember, though, you just wave your arms around as if you know what you're doing and try to look authoritative. I'll give it a shot, but first I'll see if we have injuries." I opened the door and then quickly shut it.

"Damn! It wasn't this cold in Hot Sulphur. Geez." I zipped up my parka and put my gloves on before opening the door again.

I was wearing the insulated boots that I use for snowshoeing, running-shoe technology transformed into warm, winter footwear. The bottoms had big rubber cleats, but they were no match for the road surface. As soon as I put weight on my feet, I felt them slipping. The Explorer was sitting, held by its steel studs, on the slight banking of a curve to the left, so I had the car to lean on—which was fortunate, as the wind off the lake was pushing me into it. But as soon as I made my way past its front end, I was on my own, and I had to use all of my combined skiing and ice-skating skills to make it to the left shoulder of the pavement without doing so on my backside.

On the shoulder, it was somewhat easier going, but I still had to shuffle my way forward to stay balanced against the wind. After the fifty yards or so to the tangle of vehicles, I finally had the hang of it. I climbed up to look in the cab of the semi, nosed into the left-hand ditch, and found it empty, so I worked my way back to the car in the ditch. The cabin was so full of smoke that I couldn't see the driver, so I opened the door. The smoke puffed out, and it smelled like some kind of acrid chemical. Powder from the air bag, or something, I guessed.

“Hello? Can you hear me? I'm a police officer.”

The driver's left arm waved at me, accompanied by coughing.

“Are you hurt? Uh, if you feel OK, give me a thumbs up, how about?”

The left thumb pointed skyward, with more coughing.

“OK, listen, if you can get your seat belt off and get out, you'll be able to breathe. Although it's cold out here, as you can probably tell. Otherwise, this dust will clear out soon. I'll open a back door.” This elicited another thumbs up, and I opened the rear door. The dust began to swirl around and puff out into the open air.

As I began to work my way toward the cars wedged under the trailer, up toward the middle of the roadway on the glare ice, a guy in a hooded parka came around the front of the tractor cab. I saw him take a look at Fran's vehicle, now with its emergency lights ablaze, and heave a sigh of relief.

“Man, am I glad to see you folks! I called 911, but they said it would be a while.”

“We were just on our way up to Grand Lake. What happened?”

“The car in the ditch there came around the curve in the wrong lane, almost sideways. I went into a slide and wound up like this after he ran into me. Then that other SUV there couldn't stop in time. The little smashed-up car there must have happened while I was putting some flares out up the road in that direction. At least maybe there won't be more people sliding into this mess from there. The road's bad all along this side of the lake, so people coming from that way will be taking it real easy.” His adrenalin was really doing its job, I could tell—he hadn't taken a breath, it seemed like.

“Well, the road's just fine until about a hundred yards back south,” I gestured over my shoulder toward Granby, “which probably explains why these people wound up like they did. I'm glad that the sheriff has studded tires. Let's see if there are injuries.”

And there were. We shuffled our way to the closer of the two cars wedged under the trailer, where we found a woman alone flailing about with her hands in the dust of her SUV's air bag. The vehicle itself was big and sturdy enough that its front end had smashed into some of the understructure on the trailer, so, aside from a wrecked car and some smeared makeup, she was fine.

But the other car was a small Kia sedan, and it held a family of four, or what was left of them. The front-seat air bags had deployed and prevented the front-seat passengers—Dad and Mom—from crashing through the windshield. But the car had slid under the trailer far enough that the front half of the roof was sheared off, and those air bags meant that Mom and Dad couldn't duck. And one of the kids

in the back seat must not have been wearing a seat belt, because she was scrunched head-first into the place where the gear shift normally sits.

It was tragic, and ugly.

I waved frantically at Fran and made the slice-across-the-throat gesture, and he nodded and began talking into his microphone with more urgency.

\* \* \*

It took several hours to get things squared away. The only survivor in the Kia was a young girl, age about eleven, who had been wearing her seat belt in the back seat and didn't have a scratch. But she was traumatized into incoherence—we couldn't even get a name from her.

Emergency vehicles showed up little by little, their drivers taking extreme care on the icy roadway, and two Colorado State Patrol cruisers arrived to handle the increasingly complex traffic problem. Their solution was to make formal the de-facto road closure, turning people back to where they'd been coming from.

Finally, a heavy-duty tow truck arrived, chains on all its tires, and, after hauling the cars out from under the semi-trailer and moving them to the roadside, it got the semi itself straightened out and off the road. Department of Transportation sand trucks arrived and began their salt-and-gravel treatment of the icy road, and life began to return to normal for all but the occupants of the Kia.

By then, lunchtime had come and gone—my stomach was reminding me of that in no uncertain terms—and Fran and I still had considerable paperwork to do. We had been first on the scene, and there were the three deaths. Fran told his forensics team to seal up Junior's cabin, that he and I would have to get there another day. Then we headed back to Granby for food and forms.

Fran was grim-faced, and I could tell it wasn't from concentrating on driving.

"Damn. That poor kid. Her whole family got wiped out." He smacked the steering wheel with his hand.

"I guess they took her to the emergency clinic? But she didn't seem injured. So what's next for her?" I had found out only a few days before that the nearest real hospital was a couple of hours away, down by Denver. Kremmling was developing one, but it was still understaffed.

"Social services, I suppose. She's a minor, and she's obviously in need of some psychological help. I hope she's got grandparents, or maybe aunts or uncles. Lord." He shook his head. "I just don't know how we can prevent that sort of thing. If people won't slow down when conditions are bad, it really doesn't matter what speed limits we post."

"I don't know if you noticed, Fran, but that car didn't even have all-season tires. They were clearly not prepared to be driving up here. And I heard one of the state officers say that he thought they must have been going 65 or so, based on the damage to the car."

"Yeah, I know. But I still feel responsible when folks get themselves killed in my county. Maybe I'm just not cut out for law enforcement—I care too much. On top of Lannie's getting murdered, this kind of thing is something I really didn't need. Not, mind you, that I'm blaming those poor folks. But it sure is depressing."

"If they keep the little girl up here, maybe we can look in on her. I think that would help me some." Fran's depression, I was discovering, was infectious.

We stopped at a little diner on the west end of Granby and had them make us some box lunches to go, and then we turned west toward Hot Sulphur and the paperwork that was awaiting us.

I managed to fill out one set of accident forms and eat my sandwich at the same time, feeling rather proud of myself for not getting mustard on Form 111-14-B, or whatever it was called. About the time I finished, my cell phone let out with Hal's personal ring, Eric Clapton's opening riff from "Layla."

"Hiya, lover, you're just who I need to talk to. Cheer me up."

"Are you having a bad day?" Just hearing his voice helped.

"I'm having a horrible day." I summarized the accident.

"God, that does sound horrible. Let's talk about it tonight, though, while I make you dinner—I don't think it's the sort of thing we should talk about on the phone. And I don't know if this will cheer you up, but it'll change the subject. I called to tell you about a very strange lunch I just had." He paused, probably to organize his thoughts, I figured.

"I got a call this morning, on that line I had installed in MPARC's name, from a Rita Chesley-Hayes, she introduced herself as an attorney for Front Range Water. She wanted to have lunch to talk about what sorts of studies Front Range might have MPARC do. So I met her at Randi's, over in Winter Park. She showed up wearing a dress kind of like that little black Donna Karan number you got last fall, only red and cut lower. And she proceeded to pretend to talk about hydrological studies while coming on to me."

"I've met her, although in a quite different context. She's worried that Front Range is going to be libeled by our murder investigations."

"Oh. Well that explains a lot. I'm betting she didn't get what she wanted from you, so she tried me. Anyway, what she really wanted to talk about was how Front Range could help MPARC in a political sense. She hinted that most of the local politicians are in their pocket and that Front Range could smooth the way for us, or, by implication, that they could make things difficult for us. Uh, and she also hinted that the payoff for me would go way beyond that, if you get my drift. I really didn't understand their interest, but if she's leaning on you, that probably explains it."

"She came to see me, or Fran, or both of us, late yesterday morning. She's actually the second FRAWB lawyer they've sic'd on us—I sent the first one packing with his tail between his legs. And we did a number on her, too. Did you get to the part of the conversation where she told you what she wants you to do in return for these favors, personal or otherwise?" I tried to keep my voice level—I trust Hal completely and didn't really feel threatened, but it pissed me off.

"That was the interesting part. She talked and talked, had a couple of martinis, ate a salad, and schmoozed me every which way. Every time I tried to steer the conversation around to the 'what can I do for you' perspective, she steered it back away. Finally I got to feeling manipulated, so I just asked her—I told her it was nice to hear that FRAWB was so interested in helping MPARC, but it must be that FRAWB wants something in return. She looked at her watch and said she was late for an important meeting and had to run—that we could continue the conversation later, over a late dinner if I wanted. She left me her phone number and dashed off."

"Late dinner, huh? Where? At her place? Hmmph." I could feel my claws emerging.

"Probably. But I'm making dinner for you, remember?"

"Yes you are, and you're going to help me with this horrible accident today. But, look, maybe you shouldn't just blow her off. Front Range could probably make trouble for you, something you don't really need, and I'm interested in them, too. FRAWB is just too nervous about our investigations for

them to be completely innocent. Fran pointed out that it's like that line from *Hamlet*—only he thought it was *Macbeth*—where someone says ‘the lady doth protest too much’.”

“Hamlet’s mother, the Queen, says that, she’s talking about a character in a play whose role is the Queen. Yeah. Front Range is acting as if they’re involved in this stuff somehow, aren’t they? If they send a cute little twenty-something after a geezer like me, they’re desperate, seems like. I wonder what they’re up to.”

“Me, too. And I think I’ll do a little digging.”

\* \* \*

I blasted through the rest of the accident forms and spent the remainder of my afternoon with that digging, which turned out to be remarkably productive. Fran assigned Anna Hermanson, who had front-desk duty and some time on her hands, to help me, and she went to work on the internet ferreting out information about Front Range Water. I wandered over to the county clerk’s office and poked around in the files of disclosure forms for political donations. By the end of the day, we had quite a portfolio assembled.

FRAWB, being a public, non-profit corporation, was required to publicize its board membership and senior employees, so Anna had no trouble making a list. Most interesting were the cross-connections she made between FRAWB big-wigs and executives in the large companies that provided many of the jobs in the communities in the central Rockies. The big resort corporation that was now operating Winter Park, being relatively new to the area, wasn’t represented, but the others were, as was the railroad and just about every big construction company.

There were also quite a few local politicians listed. I recognized the names of Grand County Commissioner Simon Murcheson, Sr. and Asa Scanlon, the chair of the local school board. If, I thought, the others are as much in the Luddite camp as those two, it appears that FRAWB’s strategy is to support people who are intent on keeping their communities behind the times. Like the “keep ’em barefoot and pregnant” oppression of women, this strategy would delay any modern thinking on the part of the mountain communities and thus help assure FRAWB’s future ability to exploit them.

What was more interesting was the comparison of the list of FRAWB board members and executives with the list of people who had donated to political campaigns in Grand County. Both Scanlon and Murcheson were the beneficiaries of support from other FRAWB insiders, in fact those sources combined made up the bulk of their campaign war chests, and the list of recipients went on and on—it even included Fran Schmidt. It was all very cozy.

I found it strange that in all of the documentation, Tobias Summers’ name appeared only on the list of donors to political campaigns. It was as if he was completely disconnected from FRAWB, an outsider. But he was still working to build his own base of people who owed him favors. His biggest donation was to the campaign of the District Attorney, A.D. Sonos. To the extent that he was not part of the FRAWB crowd, I reasoned, he could have been working an agenda at cross-purposes with theirs. A possible motive in Summers’ murder began to emerge in my mind.

But just as I was thinking that the information was all neatly packaged, I ran across a wild card. Steven Sheffield, the Denver lawyer who had accompanied Mandy Summers to her interview, was on the FRAWB directors list and also showed up as a donor to the Murcheson and Scanlon campaigns. Mandy Summers, wife of the FRAWB outsider was represented by a FRAWB insider. What, I wondered, could that mean?

As I was pondering this puzzle, Fran Schmidt wandered into my office.

“Annette, I got a list of the properties that Lannie Young was representing. You’ll never guess who’s on it.” Fran, I remembered, was working the Young case because Janelle Kennedy had a perceived conflict of interest, with her husband working at the ski area.

“No, I probably won’t. This is all too complicated. Fran, do you remember getting political campaign donations from FRAWB directors?”

“Huh? Well, not specifically. I only accepted donations of a hundred dollars or less, and there were lots. I figured that anyone who thinks he can buy the sheriff for that amount of money is too stupid to worry about.” He scratched his scalp. “There were FRAWB directors? Interesting. But I guess it’s not surprising. They’ve got a stake in what goes on up here. We’re the collection point for a significant amount of their acre-feet.”

I didn’t want to push Fran on this point but just to let him know that I knew about the donations. “They seem to have donated to just about everyone, down to the county surveyor. The heavy hitters are Murcheson, Sr. and Asa Scanlon. They raked in the dough. Anyway, whose property was Lannie trying to sell?”

“Mike McMurphy’s place. He listed with her only about a month ago, and it appears it was to be one of those ‘by appointment only’ things that don’t get advertised much.”

“““Curiouser and curiouser,” said Alice.’ We’ve about decided that Junior killed Lannie, right? Do you suppose this means that Junior was involved with McMurphy’s death, too? That would suggest that he was just a flunky, and now the master-mind is going around killing off the flunkies.” I tapped my chin, thinking.

“Well, there’s more. Mike’s place was an old mining claim, three, actually, that he bought years ago and combined into a single property. The water rights came with the claims, and they include an extremely productive cirque up on Byers Peak, several hundred acre-feet a year. So Mike’s place is water-rich. He had a complicated arrangement set up that leases the rights to the town of Fraser for a nominal fee. But the kicker is that he worked a conservation easement deal such that the water rights forever remain with the property and any leases have to be relatively short term and made with local, Fraser Valley entities. Not anything like FRAWB.”

“And this is inviolate? It stays with the property, no matter the owner? But what happens if FRAWB buys it?”

“Doesn’t matter.” Fran was shaking his head and smiling. “Mike must have paid a very smart lawyer lots of money to set up the restrictions on the sale, restrictions that apply regardless of his living or dying. And subsequent sales. His water stays in the Fraser Valley for primary use and for subsequent re-use. And it’s set up that whatever amount that makes it to the Fraser River has to flow to the ocean—meaning the Gulf of California down in Mexico. It’s a remarkable piece of work.”

“This means that someone local, a developer like Tobias Summers, would have access to this resource, if he could pay for it, right?”

Now Fran was nodding and smiling. “Right, assuming he could persuade the owner, whether it’s Mike or his estate’s executor, to deal. I can tell you for sure that Mike was not a big fan of Tobias’s plan to fill that meadow up with houses.”

“So, do we know who the executor is? Will he deal, or she?”

“Can’t. It was supposed to be Lannie Young. She was representing his property, but apparently their relationship went beyond that. Now there will have to be a court-appointed executor. I guess it’s worth noting that Lannie wasn’t a fan of Tobias’s big subdivision, either.” He shrugged. “If Tobias was still alive, he’d be the one with motives for Mike’s and Lannie’s deaths.”

“But if the water rights are locked away from FRAWB, they don’t have a motive in those cases, either.” Now I was truly confused.

“Which is just as well, because it’s simply too much to believe that FRAWB is behind these murders. As we’ve discussed before.”

“Yep. Although their behavior is pushing me toward being a believer.” I told him about Hal’s experience with Rita the FRAWB lawyer.

“She what? How strange. I really didn’t think she was attractive enough to pull something like that off. But maybe that’s just me.” He made a sour face.

“From what Hal said, she wasn’t wearing that business suit we saw her in yesterday. But his reaction was similar to yours anyway. What do you suppose Front Range is worried about, anyway? Could they be concerned about losing their hold on the communities up here? Bad publicity wouldn’t help them, that’s for sure.”

“Maybe that’s right, Annette. As more people move up here, retirees and people who work on the internet and so on, Front Range Water has a new set of folks to deal with, many of whom don’t know the history up here well enough to understand why the water rights are all in the hands of the folks over the mountains. Hal’s institute is going to bring even more of those folks up here. From FRAWB’s perspective, the peasants are getting restless.” He shrugged. “Legally, FRAWB holds all the cards, but in the long run, those laws can evolve. They’ve always taken the long view.”

“The long view would be to get their hands on Mike McMurphy’s water rights. Do you suppose they’re going to challenge the conservation easement stuff in court? Get it all thrown out so they can buy up the rights?”

“That would put us back to FRAWB’s having a motive in the murders, wouldn’t it? I sure hope we don’t have to go there.”

\* \* \*

## Seventeen

“I wonder how that little girl is doing. I can’t imagine how she must have felt—the crash and then looking around and seeing her whole family mangled and dead.” I was sitting at the kitchen table, drinking a glass of chardonnay and trying to unwind.

“I guess there’s no information yet about whether she has other family, huh?” Hal was working on comfort food for me, fettuccini alá Alfredo. He had a mound of grated pecorino Romano cheese waiting to be put on top of a pile of buttered pasta, and he was tearing up romaine for salad.

“Not yet. And I’m not sure how much information we’ll be able to get, either. Social services has the kid now, and they’re in their own little world. They sort of own her, for the time being.” That thought didn’t help cheer me up much.

“But Fran’s the sheriff, and people that work there live here in Grand County. He could make their lives miserable if they’re jerks about the whole thing.”

“And I wouldn’t be surprised if he leaned on them some. He was at least as upset as I am, probably more so because he seems to take stuff like this personally. But enough of that.” I took another gulp of wine. “I found out something interesting today. Lannie Young, the victim of that so-called ski

‘accident,’ was acting as the Realtor for Michael McMurphy, the old guy whose death was supposed to look like suicide. His place was for sale, quietly, and only to certain types of buyers. He’s got several hundred acre-feet of water rights, senior rights hooked to the old mining claims, and they’re all locked up so that FRAWB or other such predators can’t get at them.”

“You were up there, right? Is it a nice place? Good views?” He looked up from his salad preparation.

“I guess you’d call it ‘rustic elegance,’ and the view is better than here—it’s higher up.” I looked a question at him.

“Did Lannie work for an agency? I mean, do you suppose someone has taken over her accounts?” He deftly ignored my question.

“Where’s this going, anyway?” There. Ignore that, sport.

“I’d be curious to know what they’re asking for the place. Land is always a good investment, after all. And we’re freeloading here. Could be it’s way out of our price range, but if that’s the case, well, Chuck Shure said he’s going to buy a place up here, and *nothing’s* out of his price range, nothing.” He looked up and smiled.

“Fran said that there will have to be a court-appointed executor for McMurphy’s estate, and I guess that would include the sale of his real estate. Hmm. If it was contracted to be on the market before he died, it would be hard for a public trustee—that’s what a court-appointed executor would be, I guess—it would be hard for a public trustee to take it off the market for anything but very solid legal reasons. Owner’s intent, and all that. I’ll look into it tomorrow, I mean whether Lannie worked for an agency. But I doubt that Chuck Shure would be satisfied with McMurphy’s house. It’d work for us, but I imagine he’s got bigger needs, for entertaining and so on. Also, I’m not sure if he’d be into that rustic a level of elegance.”

“If it’s got senior water rights, I bet it’s expensive. Maybe we could do a partnership with Chuck, buy the house but let him buy the land with the idea of putting up another house for himself. We could probably wrangle something legal, like calling the existing house a ‘guest house’.” My sweetie, Hal the ex-dean, is a conniver when he puts his mind to it.

Between the comfort-food dinner, really just a fancy version of macaroni and cheese, and the intriguing notion of buying McMurphy’s place, my depression lifted considerably. I suppose the wine helped, too. Or maybe it was when I sat at the kitchen table after dinner and continued the conversation with Hal while he cleaned up.

Anyway, I felt a lot better. And my imagination went into overtime, thinking about owing a place like that in the mountains. One of the first things I thought of was snowshoes, especially that long trek I’d made up through the woods next to Mike’s driveway.

“So, if we live up there, how do we get in and out in the winter? Are you going to buy a snowplow, or what?”

Hal looked up from the dishes in the sink. “Somebody’s contracted to keep the driveway here plowed, and the entrance roads, too. I’m betting that he and his equipment wouldn’t mind additional customers. And the same guy would probably run a blade over the driveway in the summer whenever we paid him to, if it needed smoothing.”

“Well, there’s electricity up there, and maybe gas, I don’t remember. Internet service could be iffy, unless there’s TV cable with it, like here.” I was trying to think of what civilized infrastructure we couldn’t live without. “Oh, and there’s some kind of drinking water, probably a well.”

“Like here. Based on the real estate prices I’ve seen, it’ll depend both on the quantity of the water rights as well as their seniority of the rights, on top of the total acreage. I’m betting it’s beyond our abilities, though, even if we cashed out our retirement investments and so on. So it’ll need Chuck Shure’s involvement for it to work for us. The deal-killer will have to do with whether Chuck likes the location enough to want to buy it. It’ll depend on whether there’s another building site that catches his fancy.”

“You know, if we’re going to spend very much time here in the Fraser Valley, it *would* be nice to have a place of our own. I mean, this house is great, but you’re right, we’re freeloading. It feels, well, uncomfortable somehow.” I hadn’t really thought of it until Hal had mentioned it, but he had hit it on the nose.

“To me, it feels impermanent. And even if we’re here for only a year, or even less, it’d be nice to feel really moved in. Here, it’s like living in a fancy rental condo, even with our stuff around us. Do you know where this place is? Think we can find it on one of our maps?” He had finished the dishes, dried his hands, and was looking for the next thing.

“Maybe. Probably. Let’s see.”

So ten minutes later, I had my chin on Hal’s shoulder, looking at a computer map of the area. The roads in Middle Earth Estates were too new to be on the map, but the general area was easy to spot. And I found the county road that Janelle and I had navigated on our way to the McMurphy place, and then identified what I thought was the spot where the driveway climbed up the side of the mountain to the house.

“What are those different colors?”

Hal pulled down a menu. “Land ownership, looks like. That color where you pointed looks like, well, *voilà*, mining claims. Let’s blow things up a little...and it looks like three separate ones, see the boundaries? So this must be McMurphy’s land now. A lot. Um...close to a half section, I bet. If it could be subdivided, it would go for several million, I expect.”

“But I don’t think it can be. Fran talked about how the water rights were restricted through some kind of conservation easement. Anyone who would take the trouble to do that would also restrict development.”

“Meaning it won’t be worth as much on the market. Say. Look at this.” He made an imaginary line on the computer screen with the mouse pointer. “I think we should be able to see that mountainside if we work our way over this ridge here. And unless I’m mistaken, that’s the ridge behind the Win’s main house up there, the first ridge, not the big one.”

“It’s too bad that the local roads aren’t on there. I guess it’s too much to expect the driveway to be there, though.”

“Not at all. We can use the version of this mapping program I have on the laptop with that little GPS gizmo—put everything in the car, drive all the roads, and they’ll map onto this program. Then we can go over to McMurphy’s driveway and map it, too. I can’t think of any better way to get Chuck interested than to show him where this is in relation to that big house he and Becky stayed in. Just like casting to a rising trout.” His smile reminded me of the Cheshire Cat’s.

\* \* \*

The little girl’s name was Natalie Stokes, she had just turned twelve, and she had grandparents, whom she’d never met, in Florida. They sent Christmas and birthday presents in the form of savings bonds,

along with cards. Social Services had contacted them, and they were helpless, they said, as they lived in an adults-only retirement community and were on a very tight budget.

George Neering's field test revealed that Mr. Stokes, the car's driver, had a blood-alcohol level of 0.221, nearly three times the legal limit. According to Natalie, she and her sister had been pulled out of school in Aurora for the day in order to go snowmobiling with their parents up at Grand Lake, a birthday present that seemed more appropriate for her father than for her. They had stopped for an early lunch at a bar in Granby.

Fran Schmidt told me all this on Thursday morning, obviously still haunted by the tragedy. He also mentioned, almost in passing, that we were set to try again to examine what his forensics people had found in Junior Murcheson's cabin. But clearly his heart wasn't in it.

About halfway through the morning, I checked my email and found a note from Hal, with an attachment. After navigating all the warnings on the computer about how attachments might contain viruses and did I really, really want to open it, I found myself looking at a picture just like the one that had been on Hal's computer the evening before, except this one had more roads.

The text of the email said simply "Bingo! I also got photographs.", and it didn't take me long to recognize the roads in Middle Earth Estates and then our driveway. And there was Mike McMurphy's driveway, too. A driveway, it dawned on me, that had crime scene tape across its entrance.

Hal answered the phone on the fourth ring.

"Hi, lover. Sorry, I was on the other line with Chuck Shure."

"You work fast. But how did you get McMurphy's driveway on that map? It's supposed to be sealed off." I tried to put an unspoken question in my tone.

"It is, with yellow crime scene tape. Tape that's tied to itself, not very tightly, after wrapping around a couple of bushes on either side of the driveway. I guess the sheriff's office trusts the folks around here more than you CBI people do."

"Don't tell me..."

"I won't tell you anything. But I had the GPS on when I found the driveway entrance, and it was easy to see up there a ways. So I could have just drawn in that driveway by hand, based on an educated guess, right?"

"Um-hmm. What do you suppose would happen if I had Norm Dzung go out there and take tire-track casts, say, half-way up the driveway?"

"Gee, dear, I don't know. There were plenty of tire tracks on top of the snow, new-looking ones. I don't know who made all of them."

"Right. You just know who made the newest set. Someone with four fairly new, studded snow tires."

"Ah, well, if you say so. I bet there are dozens of cars up here with tires like that. Studded snows seem popular in these parts."

Hal, I knew, could play innocent with the best of them, and in a way it was endearing. He knew that if I didn't have confirmed knowledge of something, I wouldn't be put in the position of having to act on it, at least if it was something fairly trivial like this.

"I don't suppose that any of those photographs you got were of Mike's house?"

"Well, now, how could that be? I couldn't see the house from down there on the road. Although I did get a long shot earlier, right after breakfast. I snowshoed up to that ridge behind Win's house on up

our driveway. I also found out something interesting. Lannie worked for the Upper Fraser Associates real-estate agency, and they still have the place listed. For two point five million. That's why I called Chuck. He's coming up from Colorado Springs tomorrow afternoon."

"Hal, it's a crime scene. Nobody's supposed to go up there."

"Yeah, that's what I told him. He told me not to worry. And he invited you to come along, if you could arrange to be off duty. He didn't want you in a conflict of interest situation."

"How could it not be a conflict of interest for me?"

"If we go in with an official police escort that's not you, that's how. I think he's going to, um, persuade Fran to take us in. Chuck can be very persuasive, you know. He persuaded me of how good an idea it would be to form a partnership for the property, after I suggested it. The guy's a marketing genius."

I found out just how much of a genius Chuck Shure was on the ride with Fran up to Grand Lake that afternoon. Fran spent most of the drive talking about Natalie Stokes and her uncertain future. When we crested the hill and came to the spot where the accident happened, he slowed way down, despite the layer of gravel on the road's surface.

Because he was in his official car, with the lights on top, the traffic behind him slowed, too, not daring to pass.

As we drove through the built-up area around the Soda Springs Ranch, he suddenly changed the subject.

"Oh! Say, I almost forgot. I got a call from Charles Shure earlier today. He asked me how he could get in to have a look at McMurphy's property, I guess he's interested in it. So I offered to escort him in, although I told him we can't go into the house yet. He said he'd meet me at the driveway tomorrow morning at ten and that you and Hal might come. Are you guys in on this somehow?"

I tried not to seem conspiratorial "Well, you know, we feel like we're freeloading in that guest house we're staying in. You must have heard that Chuck is the money behind this institute that Hal's setting up, and Chuck wants to have a place here, closer to where it's going to be than where he lives, Colorado Springs. Mike's house isn't likely to suit Chuck, but it would suit me and Hal. So Hal's talked to him about a partnership. It's all pretty spur of the moment—we just dreamed it up last night. Uh, Hal works fast when he wants to."

"I guess. And so does Mr. Shure. He said he would have a helicopter photographic survey done this afternoon, and he may show up with a snow cat tomorrow, so he can scope out home sites above where the existing house is."

I felt the need to confess. "Fran, I think that Hal may have untied the crime scene tape and driven up the driveway this morning, to get a GPS track on the location. And he probably took some pictures. Want me to throw the book at him?"

"You *think* he may have?"

"Well, he sent me a computer map with Mike's driveway on it, and also with our subdivision's roads. He mapped those with his GPS and the computer in his car, I know. And I wouldn't be surprised if he mapped Mike's driveway that way, too. Although he told me he could have drawn it in by hand."

"Well, we should be able to tell if he went up there. It's been snowing since we were up there last week, so his tracks ought to be obvious."

"He said there were lots of tracks. He was being cagey, like he does sometimes when he doesn't want me to know the whole story about something."

“Lots of tracks? Well, I’ll check, but I don’t think we’ve had anyone up there since last week. If there are lots of tracks, I need to know what the hell is going on.”

“I’ll make sure he tells me the whole story tonight, count on it. When he knows the significance of the other tracks, assuming there are some, he’ll be forthcoming. And then, of course, we’ll see for ourselves tomorrow. Um, where in the world are we going?”

We had turned off the highway onto a series of ever-worse side roads up and over the ridge to the west. Almost all of the pines were dead, and it was depressing. Eventually we began bumping our way down the hill toward a small cabin visible in a little meadow next to a stand of bare aspen. There was another sheriff’s department SUV sitting beside it.

“Junior’s place. Bachelor paradise, you’ll see. Brace yourself.” Fran wasn’t smiling.

\* \* \*

Gayle Weston and Roger Traubman, deputies in Fran’s department, were waiting for us. They said they had gone over the cabin with a fine-toothed comb on Tuesday, and their seals on the doors were intact.

Inside, I had to take a minute to get my equilibrium. I found myself standing in a large room that, as Fran had suggested, was some kind of bachelor boudoir. There were movie posters on the walls—not guy-type action movies, either, but art movies—and indirect lighting. A king-sized bed was centered on one exterior wall, with mirrors over the headboard and on the ceiling. Just about every horizontal surface was covered with candles, and there was a fireplace on the wall across from the bed.

“What’d I tell you, Annette?” Now Fran was smiling.

“I take it that Junior fancied himself a ladies man, huh? George said he was found dead, on his back, in the bed, right?”

“That’s right, Ms. Trieri. Right in the middle. Naked. He had been involved in a sex act.” Gayle Weston spoke these words clinically, with obvious distaste. “We found a little stash of cocaine, George tested it out for us, and some marijuana as well. And watch this.”

She walked over to the bed and pushed a button on a pad on one of the nightstands. A motor whirred, and a section of cabinetry in the little kitchenette rolled forward, a bottle of champagne and glasses visible.

“And how about this?” She pushed another of the buttons, and the bed began to vibrate visibly. “Magic Fingers, remember when they had this in motels?”

“Or this?” She poked another button and sections of paneling on the wall next to the bed drew back, revealing a wide-screen plasma television, with four rows of DVDs in bookshelves below it. “But that’s not all. If you check out those movies, they include the ones he has posters of and lots of other ‘sensitive films.’ But look!”

She poked the button again and the shelves opened like little doors, revealing more DVDs behind them.

“Here are his real movies, action stuff and porn.” She was shaking her head.

Fran was shaking his head, too, barely containing laughter. “So, what was it you wanted to show us, guys? Surely you didn’t drag us up here just to see all these toys.”

“Sir, we found something quite interesting behind this mirror.” Roger Traubman gestured toward the head of the bed.

He felt along the right edge, and I heard a click. The mirror swung on hinges on its left side, opening like a door. And behind it, there was an array of electronic equipment, with one fat wire extending out to the center of the mirror itself.

“Two mini-cameras, one here,” Traubman pointed to the end of the wire on the mirror, “and one on the back of that mirror on the ceiling up there. Two DVD burners, linked to the cameras through this computer system. The guy was making movies of his, uh, activities, probably without his partners’ knowledge.”

“The dirtbag! I couldn’t believe it when we first found it.” If Gayle Weston had been clinical before, now she was seething.

“Gayle? Do I detect something more than professional indignation here?” Fran was not disciplining his employee, but he was moving in that direction.

She turned beet red. “Uh, no sir, well, almost. That is, I’m certain I wasn’t victimized in this way, although it wasn’t for his lack of trying. I’m glad I didn’t go out with him, that’s for sure.”

Fran pointed at a row of little cases, those CD jewel boxes. “I take that his archive is in those?”

“Probably, sir, they’re labeled by hand with first names and dates. Uh, I’ve been careful not to take note of any names. We’re talking about innocent victims here.” Roger was more than a little embarrassed. “Except for one ‘victim,’ the last one. You see, when we discovered this equipment, it was on. He was recording his last encounter.”

“You mean we’ve got his murder on tape, or DVD or whatever?” Fran’s astonishment overwhelmed his interest in the archive.

“Well, sir, we thought we’d let you watch it and decide for yourself. Uh, but, sheriff, and Ms. Trieri, I’ve got to warn you that this is real-live porn—not what I’d call super-hard-core—no close-ups, after all—but the real thing anyway. So just be aware of what you’re about to see, OK?” Now Roger was turning red.

“No sweat, officer. I had a case last fall that involved a segment of the porn industry. I think I’ve been immunized against its shock value.” Being the newcomer to the sheriff’s office, I thought I should be the one to reassure the others. “One thing I figured out during that investigation was that humor is helpful in these situations. We kept running across unexpected dirty pictures, computer screen savers, for example, and humor helped us stay grounded. So I got into the habit of it. Uh, that’s a sort of warning.”

“OK, well, sure. Anyway, I’ll play the DVD we found in the machine, the one from the camera behind the wall mirror. It’s curious. It starts when they come in the front door. It’s as if he had the recording equipment hooked up to the light switch, or the door lock or something. So, anyway, I’ll play it until you understand what’s going on, and then I’ll fast forward it—and tell me if you want me to stop or play parts at real speed—to where we get involved. Meaning where there’s something that’s relevant for us in the sheriff’s office. OK?”

“Go.” Fran was all business, but his demeanor changed the instant the woman in the recording was recognizable. “My God...that’s Mandy Summers! Holy shit! Why didn’t you tell me?”

The frame froze.

“Got that Gayle? Sir, Gayle is going to take notes of your comments. That one was important, and it’s why we didn’t tell you anything about this. We wanted your initial reactions to this thing. You recognized that person, named her, without any prompting. We recognized her, too, of course, but your

reaction verifies our identification. So, now I'm going to fast forward past most of the, uh, action." Roger's coloring was turning toward red again.

The recording took on that jerky, high-speed character that digital fast-forward creates, but it was still obvious what was going on. Clothes came off, and Mandy vanished into the bathroom—while she was out of the room, there was considerable cocaine sniffing by the male. She returned and groping commenced, and before too long the two people—I recognized Mandy Summers, too, and I had to assume the other one was Junior Murcheson—were hard at it on the bed. This went on for some time in various positions, finally winding up with Junior on his back and Mandy on top, riding him like a rodeo star. I almost made a wise-crack about how she must have had some plastic surgery, because, for a mother of five in her forties, she was far less bouncy than she should have been. Then the recording slowed to regular speed.

"OK, I think this where we want to pay attention." Roger was already doing so, apparently quite absorbed in that surgically damped bouncing.

I was startled when the sound came on—but of course that made perfect sense, that Junior would record both video and audio, I thought.

"Now, close your eyes, honey, I've got something extra special for you." Mandy's voice was as recognizable as her face.

She looked downward, probably at Junior's face, which was out of the frame. Satisfied, she reached over to the nightstand and picked up her purse. She opened it and took out a syringe, held it up and tapped the air bubbles out of it, and then positioned it in her right hand to give an injection, thumb on the plunger. Finally, her hand and the syringe disappeared below the bottom of the frame.

\* \* \*

## **Eighteen**

"I don't believe it." Fran Schmidt's reaction summed things up nicely, I thought.

Just after Mandy's hand holding the syringe disappeared, Junior made a sort of squeak and then an ecstatic moan. Mandy sat there, perfectly still, for about half a minute, then dismounted, grabbed her clothes, and disappeared into the bathroom. Shortly, she emerged, fully dressed, found her coat and put it on, and left. At that point, Roger stopped the DVD player.

"Her lawyer's probably going to call this 'circumstantial evidence,' because we don't see her stick the needle in him. But, then, there's the camera on the ceiling. Maybe it'll show something. I'll tell ya, Fran, it's good enough for me. I say we get an arrest warrant, murder one." I was having trouble believing it too, but I was mad enough to hunt Mandy down and throw away the key.

As soon as I saw her with the syringe, all the pieces fell into place for me. There were three people at Mike McMurphy's house—most likely Mandy, her husband Tobias, and Junior. Then Junior killed Lannie Young, for the same reason that they killed Mike—to position themselves to buy the McMurphy property without any awkward questions and to secure the water rights for that new subdivision that Tobias was putting together. But Tobias screwed up with the cash from the Epworth Arms sale, cash that would have bought the McMurphy place, so Mandy went down to Black Hawk, brought him back to Winter Park, and, with Junior's help, got him into Emily Griggs' place and killed him. And, finally, Junior had to go as well—he knew too much.

“Roger, do you know how to work this equipment? I mean, to make recordings?” Fran was moving to the next step, I thought.

Roger nodded. “I think so, sir. Do you mean make recordings from the cameras?”

“No, I mean to make duplicates of that disk, also the one from the ceiling mirror, that one should show her sticking the syringe in the poor sap’s nose. I’d like...ah...three copies of each, made with Gayle watching you and noting your actions. That’ll give us the originals and three other sets. One set of the copies goes to her lawyer. We keep the others, in three different secure locations. Can you do that, Roger?”

Roger nodded again. “I think you just treat the DVD like a computer disk, copy all its files to the other burner and burn away.”

“Good. Now, Annette and I are going to take off, but first, I want to gather up all of the DVDs that Junior made, except for the two of Mandy, of course. I’m going to take all of these damned things and lock them away for now, and I’ll eventually destroy them personally, after this case is completely adjudicated. I don’t want to know who’s on them, and I certainly don’t want to watch them. In fact, maybe I’ll give them to Annette to secure, so I won’t even have to look at those first names on the labels. Right?” Fran looked at me, eyebrows arched.

“I think I see what you want to do, Fran. And I’m far less likely to recognize the names than you are. I’ll put them, sealed, in the CBI archive down in Denver until we can destroy them. OK?” I started pulling the home-made DVDs off the shelf behind the mirror.

“Good plan, Annette. Let’s just leave everything else as is, all of these secret compartments and so on open, and seal the door when you leave, Gayle. Annette and I are going to see if we can get an arrest warrant based on our knowledge. If not, we’ll use one of the copies of the Mandy discs to persuade the judge. Roger, making these duplicates will just take as long as the burner’s speed, right?” Fran seemed pleased that Roger was agreeing. “Good. Make the duplicates, Gayle you watch him so you can testify if need be, and then get back to Hot Sulphur in case we need them for the warrant. OK?”

We found a sack to put the DVD collection in, and Fran and I left. The first thing he did, after we got over the ridge and on smoother roads, and back in the cellular coverage, was to call his office.

“Anna? Listen, could you please find out who is on patrol closest to Legacy Park? I want someone to block Mandy Summers’ driveway, detain her if she tries to go somewhere, or if she comes back from somewhere, OK? Stay in contact with them and let me know who you find. I’m on my way back to the office right now and I need to see a judge. Could you also find out who’s available?...Right. I’m surprised, too. I’ll fill you and everyone else in when I get back. I’m just getting to the highway now, it’ll be, oh, give me fifteen minutes.” He reached down and flicked the switch for the emergency lights.

About the time we reached the stop sign at Granby—which Fran blew through—and turned west toward Hot Sulphur Springs, my cell phone let loose with “Layla.” Fran almost started singing along before he realized he didn’t know where it could be coming from. When I pushed the “talk” button on my phone and the music stopped, his jaw dropped.

“Hi, lover, Chuck Shure just called to tell me he’s arranged a tour tomorrow morning at ten. Can you get away?” Hal’s voice was excited.

“Fran told me, and you bet I’m coming along. For one thing, we’ve got to get something figured out. You told me there were lots of tracks up that driveway, right?”

“Uh, well, yeah, I guess I said that.” Now his voice was wary, careful.

“OK, well, listen. I don’t much care if you went up there or not, but I really, really need to know if there were tracks up that driveway that you didn’t make. And how many. It’s important.”

“Ah...it’s not as if I counted them or anything. But I’d say, you know, enough to represent at least a half-dozen round trips, up and down. What’s the problem?” His wariness had switched to curiosity.

“Fran says he hasn’t had anyone up there since it snowed. There shouldn’t be any tracks, yours or anyone’s. Did you get a photograph of the driveway, by any chance?”

“Let me think. Yeah, I think so. I tried to shoot up the driveway and keep the crime scene tape out of the picture. I see what you’re getting at—it should show some of the tracks. I’ve got the pictures out of the camera—I sent ’em to Chuck—so do you want me to email the driveway one to you?”

“Excellent idea. Same address you sent the map to. I’m not sure if we’ll be able to do anything about it today, because we’re going to be a little busy. I’ll tell you all about it this evening. But Fran and I both want to see it.”

“All right, it’ll be right there. And, listen, I just found out this afternoon that I need to go talk to the Winter Park Chamber of Commerce this evening, they have a dinner meeting. It’s at Carlos and Maria’s, starting at five-thirty. Can you make it?”

I checked my watch and was surprised to find that it was 3:30 already. “Maybe, but I have to hustle to get home. See you in about an hour?”

“Wonderful. Then we can drive down together.”

Fran, pushing the speed limit, had reached the flats into Hot Sulphur Springs by then, and soon we were inside his office, in the middle of a whirlwind of activity. It took only a few minutes for A.D. Sonos, D.A. to show up.

“What the hell is going on, Schmidt? You can’t get a warrant for Mandy Summers, you idiot!”

“Afternoon, Axel. And maybe you’re right, at least for the time being. But when the video gets here, it’ll be a snap, believe me.” Fran was serene.

“Video?” Sonos’ bluster evaporated.

“Video, Axel. Showing her screwing Junior Murcheson, two very consenting adults, and then jamming a syringe up his nose. Seems old Junior liked to tape his sex conquests, or whatever you call it when you record it onto DVD.” Fran was gambling on what the ceiling camera showed, I realized.

“So where is this video? I need to see it.” Sonos was either just doing his job or wanting to have a look at Mandy having sex, I couldn’t tell which.

“It’ll be here soon, along with some copies. Mandy’s lawyer will want a copy, I bet. Meantime, you probably don’t want to make a big scene in opposition to the warrant, Axel. It’ll look bad, believe me.”

“But it’s Mandy Summers, the famous grieving widow. This better not backfire on us, Fran.” Sonos was trying to be menacing, but it just wasn’t working.

\* \* \*

“Certainly is nice that the Chamber of Commerce is more progressive than those other groups you talked to.”

“Well,” Hal smiled, “I didn’t know how they’d take the news about the salaries we’ll be paying. But I guess the prospect of our new professionals in the valley, professionals with lots and lots of money to

spend, by local standards at least, made them forget about how we may steal some of their employees. And, yeah, it's nice to have an influential group on our side for once."

We were in my Ourback, heading down from our perch near the top of Middle Earth Estates toward the other side of the Crooked Creek Valley, to the meeting with Chuck Shure and his various minions, including, for the morning, Fran Schmidt. I knew from experience that Chuck would make everyone feel good about being a minion, though. That Fran was keeping the appointment in the face of his unsuccessful search for Mandy Summers was testimony to Chuck Shure's importance in the scheme of things.

On the other hand, there wasn't much that Fran could do anyway. After verifying that Mandy Summers was indeed the murderer—it showed clearly on the recording from the ceiling camera—he had obtained an arrest warrant for her late Thursday afternoon. Late into the night and all morning, he and his people had scoured the county for Mandy, with no luck. She wasn't at home or at the company office; nor was she anywhere else that anyone could think to look. With an all-points bulletin out for her Cadillac and the State Patrol on the alert, along with the TSA people at the Denver airport and security folks at the Amtrak stations, Fran had all the bases covered.

So, as we had discussed earlier Friday morning on the phone, he might as well play tour guide for Chuck Shure as sit in his office and stew. Cell phone coverage on the mountainsides around the Fraser Valley was surprisingly good, so he'd be able to stay in touch with his office.

Down by the soccer fields on County Road 5, Hal turned south onto the connector to Crooked Creek Road, and after a few miles of climbing the other side of the little valley, we arrived at Mike McMurphy's driveway. It would have been easy to find because of the crime-scene tape, anyway, but Chuck Shure's presence made it unmistakable. He'd arrived in his own SUV, and he was accompanied by a crew-cab pickup truck with dual rear wheels towing a trailer with a snow-cat on it. A sign on the door said "Forest Fiber Products, Inc., A Division of UNELECO," and the driver inside was asleep. Fran was there, too, sitting in his Explorer talking on a telephone. All of these vehicles were parked on the far side of the road from the driveway entrance.

When Fran saw us drive up, he put the phone down and got out, directing us to park on the same side of the road as the others.

"Thanks, Hal. I want to have a look at all those tire tracks before we go up there and create more. Norm Dzenge is on his way. Is this the car you were over here with the other day, what was it, only yesterday?" Fran was all business.

"Yesterday morning, right. But I had my Audi. Different tires, I guess that's what you're interested in. Let me show you." Hal led Fran over to the driveway entrance and began to point at the ground, and I tagged along. "See? These tracks with the big chunky lug patterns and the zig-zag stripe down the middle are mine. Nokian Hakkapelitta 4s, studded.

"Nokey-whats?" Fran looked confused.

"Nokians. They're from Finland." Hal kept pointing at the ground. "I nosed in, just under the tape here, to turn around. Then I backed up the road a ways, here, and rolled back down, parked, and got out to take a picture up the driveway. I think these are probably my footprints."

So he *hadn't* crossed the crime-scene boundary, at least not substantively. Somehow, I was proud of him.

"Annette? Do you remember those tracks that Norm got the casts of up at the top of the driveway? Do these look similar?" Fran was gesturing at the various sets of tracks uphill from the yellow tape. I walked over to take a look.

“Could be, Fran. Afraid I don’t remember for sure, though. But all of these tracks on the driveway look identical to me. Is that Norm coming up the road? He’ll know.” I pointed toward a sheriff’s department car on its way toward us.

It was, and he did. Why there would be several sets of Cadillac Escalade tracks up and down Mike McMurphy’s driveway was a puzzle, but, as Norm pointed out, one that we would probably figure out shortly. There was a set of tracks, headed uphill, on top of all the others.

“You don’t suppose this is where Mandy Summers is hiding out?” I meant my question to be rhetorical, and humorous, but Fran took it seriously and got back on the radio.

After instructing people in his office, Fran walked over to Chuck’s SUV. The driver’s window opened.

“Mr. Shure, I hate to do this, but we may have a situation here. We’ve got the possibility that our murderer is up there, you know, the murders I talked with you about last weekend?”

“No kidding! Annette?” Chuck Shure looked my way. “I don’t know what it is about you, but we seem to see each other in the strangest situations. How can I help, sheriff?”

“Well, I’ve got lots of backup on the way, and when they get here, we’ll head up the driveway and see who’s up at the house.”

Chuck got out of his SUV and leaned on the door, thinking.

“You know, I didn’t come to look at the house. I was going to take that puppy,” he twitched his head in the direction of the snow-cat, “and explore the valley above the house, look for another, bigger home site. The aerial survey my people did yesterday shows another old road, probably an old mining access road, just up the way. It bypasses the house by a half mile or so. I could go up that in the snow-cat, with some of your people, if you’d like, while you go in the front way. It holds four plus the driver, I think. That way, we’d have that particular escape route covered, if your suspect is really up there.”

Now it was Fran’s turn to think. I’m positive that the prospect of sending a civilian, especially such an important one, into what could turn dangerous concerned him. But if I were in charge, I thought, I would give the suggestion serious consideration, because it would get Chuck out of the way.

“Fran, how about this? Chuck, Hal, and I can go with the snow-cat driver up that old road. Then we’ll be out of your hair. And I’m carrying, if things should get strange.”

“Not a bad idea, Annette. But if you see Mandy, don’t get within arm’s reach. She’s pretty damned quick with that syringe. Oh. I didn’t tell you. We did some background checks and found out she’s trained as a nurse. Never worked at it, apparently, because she married Tobias and started popping out babies. But she’s got the training.” He paused, thinking some more. “OK. Let’s do it. We can get that snow-cat unloaded and things ready to start when my other people arrive. And, Annette, let me give you a two-way radio, so you can keep track of what’s going on.”

The driver of the pickup towing the snow-cat was also the snow-cat driver, so we woke him up from his nap and put him to work. With the maneuvering of the various vehicles, it took us about fifteen minutes to have everything ready. At that point, several more cars from Fran’s department showed up, creating something of a miniature traffic jam on the narrow county road.

As Fran’s contingent headed up the driveway, Chuck, Hal, and I climbed into the snow-cat cab, a cozy fit with the driver. Willie McGee was probably a small, wiry sort, but it was hard to tell with the insulated jump suit he was wearing. All I could really tell was that he needed a shave.

“All set, Mr. Shure? Folks, it’ll be a good idea to buckle up.” He handed a sheaf of paper to Chuck. “I reckon you want to navigate, right, Mr. Shure?”

“Right, Willie, but I won’t need those. Hang on a second while this thing gets a fix.” He opened his door and reached out, and, with a metallic click, something attached itself to the roof. Then he opened a laptop computer, which was already on. It took about 10 seconds, and I saw a blinking triangle appear on the screen, superimposed on a map that was superimposed on an aerial photograph.

“That looks like Hal’s gizmo, the one he used to map the roads in Middle Earth Estates.” My comment got Hal’s attention, and he leaned forward to look.

Chuck glanced back our way. “It’s the military version, though. Lots more accurate, and faster. OK, Willie, let’s roll. Or creep or whatever this thing does.”

We started up the main road, the three-foot wide treads of the snow-cat making clacking noises on the packed snow, and I watched the blinking triangle moving along with us, leaving a trail of shadow triangles in its wake. After about a quarter mile, Willie slowed down, and he and Chuck began a conversation about where the old mining road’s entrance might be. I couldn’t see anything that looked likely, but suddenly Willie turned left, lowering the snow blade on the front of the machine enough to cut himself a path through the drift on the shoulder.

“We could have just gone up and over this, folks, but I figured you don’t need to be rocked around that much. I don’t know what it’s going to be like up here in the woods, though, so please hold on.”

Hal and I, in the back seat, held on to each other and to hand-holds on the roof, while Willie worked the snow-cat into the forest. Although it didn’t appear so at first, presently it was clear that we were on some kind of roadway, for there was the unmistakable slot through the trees ahead. Around a curve, it opened up a little, and Willie revved the diesel engine, putting on more speed, such as it was. Snow-cats just aren’t very fast.

\* \* \*

“Looks like a half-mile or so before the valley opens up.” Chuck Shure, riding shotgun, was studying his computer screen. “Any idea what’s going on with the sheriff?”

“Oh. I suppose it’d help if I turned this radio on.” I fumbled to find the pocket I’d slipped it into.

“Clear in the garage.” The voice was tinny but undistorted. I recognized it but couldn’t put a name to it.

“Clear on the left side.” It took me a few seconds to recognize this voice as Janelle Kennedy’s.

“And it’s clear here on the right.” That was Fran. “I’m going to work my way toward the back. And Roger, ease into the house.”

Ah, I thought, that must have been Roger Traubman in the garage.

“Roger, Janelle? I’ve got a snowmobile track, looks pretty new, leading into the woods, up the hill and away from the house.” Fran’s voice sounded excited. “Annette? Annette? Are you there?”

“Right here, Fran. Sorry, but I missed most of the first part of what you’ve been doing. Uh, over.”

“We got up here and found Mandy’s car. I used the code to open the garage door, and we’re looking for her. But now I found this snowmobile track. It looks as if it’s following a path up into the forest. Hard to tell. It might be angling off toward your road, though.”

“Well, OK. We’ll keep our eyes peeled. What are you going to do, Fran?”

“We’ll make sure she isn’t here, and then we’ll try to follow the track. It’s going to be slow, though. The snow’s pretty deep. Maybe we can find some snowshoes. Or back-country skis. Stay in touch, Annette.”

“Will do, Fran. Out, but I’ll listen.” I released the “talk” button. “Chuck? Do you see any evidence of a road uphill from the house that intersects this one? Maybe...wait one.”

“Sheriff?” The voice on the radio was Roger’s. “I’ve found something, sir. In what looks like a study. A television with a picture of all our cars at the bottom of the driveway. And there’s Anna walking around, trying to keep warm, looks like. Mandy must have seen us coming.”

“Aw, hell. Well, that explains why we didn’t hear the snowmobile. She probably took off while we were all hanging around down there with our motors running.” Fran was clearly disgusted. “Must be some kind of hook-up that Junior put together for her. He was big on cameras. Any hint of why she would have been in that room?”

Roger’s voice was excited. “I think so, sir. There’s a wall safe here, and some tools. It looks as if she was trying to drill it.”

“OK, well, that answers that. Annette? You still there?”

“Roger, Fran. I don’t remember any closed-circuit TV stuff when we looked through the house a week and a half ago. And we didn’t run across the safe.” But, then, I thought, we didn’t look very hard.

“Annette, Mandy’s car had open ski racks on the top, suggesting she may have skis with her. So if you find an abandoned snow machine, there should be ski tracks leading away from it. I’ll see if I can find some snowshoes.” Fran now sounded resigned to a long slog in the woods.

Chuck Shure was gesturing at me and pointing to his laptop’s screen. “Annette? Look at this. There’s a track on here showing the driveway up to where the house is, that’s this little black square, and then this other track. It intersects our road way up here, about two miles in. Could that be her route?”

“Hey!” Hal’s indignation was just for show, I could tell. “I want a map like that! Mine doesn’t show any of that stuff.”

Hal, sitting directly behind Chuck, couldn’t see the smirk that I could.

“Fran? You ought to call in another snowmobile. Or two. It’s a long way up the valley, and you really don’t want to be stuck on snowshoes.”

“I’m on it, Annette. If she comes down your way, be careful. She could be armed with more than that syringe.”

“Mr. Shure?” Willie, who had been concentrating on moving the snow-cat ahead as fast as it would go, broke in. “What the hell is going on? Who’s she talking to?”

I answered before Chuck could open his mouth. “Sorry, Willie. I’m with the Colorado Bureau of Investigation, and I’ve been working with the sheriff on some murders we’ve had up here. We think we’re talking about the murderer. We’ve got a warrant for her, and she’s on the run. So if you see someone coming down the road toward us, it would be helpful if we could stop her, somehow. But my first priority is to keep you guys safe.”

“Oh. Well, if she’s on a snowmobile, I can run her into the woods or into the stream with the blade.” Willie twitched a control lever, and the snow blade on the front of the cat lifted a foot and angled itself to the left a little more. “This thing actually handles pretty well, and the road isn’t much wider than it is.”

“Well, let’s all watch out for her. She could come barreling around a curve at us, like this one just ahead.” But my comment was unnecessary, because when we rounded the next curve, the valley opened up, with the road running straight ahead of us for at least a mile.

“How much did you say they want for this property, Hal?” Chuck was looking around at the scenery, a mix of gray aspen patches and dark green conifers on the sides of the valley, with Byers Peak dominating the skyline at its end off to the west.

“Two point five mil. Think there might be a place to put a house here, Chuck?” Hal, I could tell, was wishing we could afford it ourselves.

“How about on that little shoulder over there?” Chuck gestured over to the right slope. “South facing, so it would get winter sun, might be high enough to see out to the Fraser Valley behind us, great view of the peak there. And a whole hillside of aspen across the way. I’m making a phone call.”

He fumbled in a pocket and came up with a portable phone the size of a beer bottle. “Satellite phone. I didn’t know about cell coverage up here.”

We listened as he instructed someone in his Colorado Springs office to make an offer on the McMurphy property, full price, no haggling. Finished, he disconnected and turned in the seat. “I had my lawyers look over the paperwork on this place, and the conservation easement is both strict and flexible. Definitely no subdividing, but another house or two is fine. Not having seen the existing house, Hal, I don’t know what an appropriate level of investment for you folks is, but I’m certain we can work it out.”

He turned back to look at his new home site. “This is exactly what I had in mind. Private, great views, and I bet I can make this into a first-class trout stream. Very, very cool.”

Then he pointed up and left toward about ten-thirty. “Say, who’s that skiing down my hillside over there?”

\* \* \*

I got back on the radio. “Fran! We’ve got a skier headed down the hillside our way, from your general direction. She must have abandoned the snowmobile. Fran, do you read?”

“Loud and clear, Annette. You don’t have to shout. And we’ve got snow machines on the way, but it’ll be twenty minutes or so. Where are you?”

Chuck Shure was the one with the map, so I handed him the radio. “Sheriff? This is Chuck Shure. I’ve got a pretty good computer map here, it even shows the road she took away from the house. We just got to the bottom of the valley where it opens up, and I’d say she made it halfway to where her road intersects ours higher up. She’s headed down through aspen toward the valley bottom and our road. No idea if she’s seen us, but maybe not. We’re sort of behind a huge boulder, and she’s probably paying attention to her skiing, dodging trees. Uh, over.”

“Any way you can stop her?”

Chuck handed me the radio. “Fran, the snow’s too deep for us to get out of this thing, but maybe we can get back down the road to where the valley is too narrow for her to pass us. But, Fran? I’d have people waiting for her down at the main road, just in case. Out.”

Willie had already started backing down our road, slowly enough to keep the skier in view. “Mr. Shure? I’m not an expert backcountry skier, or anything, but I’m thinking she’ll have to start walking when she gets out of the aspen. The snow’s pretty soft and deep, and the slope flattens out. I’m betting I can catch her.”

Chuck turned toward me. “What do you think, Annette?”

“Great idea, Willie. Let’s wait until she slows down, though, just to be positive.”

Willie was right. Once out of the aspen onto the flatter slope, her momentum couldn’t keep her going against the increased friction of the deep powder, and soon she started into the cross-country skier’s long, swinging stride. Her technique was impressive, and she was making good time. But it looked as if we could catch her in the snow cat.

“Let’s go get her, Willie!” And he revved up the diesel and away we went.

But because she didn’t have to concentrate on dodging trees, she could look around. The roar of the engine got her attention, and she looked our way immediately. Then she changed course, heading for the creek instead of angling down toward us on the road.

Willie was the first to notice her change of direction. “Uh oh. If she gets to the creek, she’ll be able to get around us. And back down there it’s steeper, she’ll be able to speed up. We can’t chase her down the creek in this thing.”

I felt my hopes of catching her myself being dashed. “Well, hey. It’s crowded in here anyway. If she gets around us, we can follow her by staying on the road, and I can keep the folks down below apprised of the situation. No way will she get clean away on skis.”

Willie wound up the diesel to its red line and tried to cut her off, but she made it to the creek easily. Then she gained some ground down the hill on us while we got the snow-cat turned around. But Willie pulled back onto his first set of tracks, and we picked up speed, slowly gaining on her.

It was strange—a slow-motion chase, her striding along in rhythm, our roaring after her, rocking a little with the motion of the cat.

She knew we were gaining on her, so she tried to speed up, but we still were a little faster. It looked as if the narrower part of the valley, below where it had opened up, might afford her protection from us, because our road had not always followed along the side of the streambed. But down in there, I remembered seeing deadfalls across the creek, which would surely slow her down more.

I picked up the radio. “Fran, Fran are you there?”

“Here, Annette. What’s happening.”

“I’m afraid she got around us, and she’s headed down the stream bed. We’ll stay behind her, pushing her along, sort of herding her, I guess. If your people are waiting down by the road, particularly where it crosses the stream, maybe you can get her. Probably take fifteen minutes, at least.”

“Ten-four Annette. We’ll get her, count on it.”

But it didn’t work that way. On the way up, when we rounded the last curve, we were all so taken by the view of the upper valley that we didn’t notice the waterfall in the stream just next to the road. It wasn’t a big waterfall, maybe a two-foot drop, but the flow wasn’t completely iced over.

Mandy, striding along, took the drop easily, but ice on the pool below wasn’t strong enough to hold her when she landed. When we pulled up beside the pool, she was in it up to her waist, floundering and thrashing about in the cold water.

I opened my door and saw that there was a good five feet of roadway between the snow-cat and the stream, so I jumped out, just as I heard Willie yell “Wait! Don’t jump! No!”

In all the excitement, I’d forgotten that the snow-cat, with its pair of three-foot wide treads, was made to ride on top of the snowpack. And backcountry skis do that, too.

Consequently, when I yelled “Mandy Summers, you are under arrest for the murder of Junior Murcheson! You have the right to remain silent...” and so on, I was standing up to my armpits in fresh powder.

\* \* \*

## Epilogue

I have to credit the three guys in the cab of the snow-cat for not laughing *too* hard—just hard enough for me to hear them.

Fortunately for me, I’d jumped down, not out, so Hal was able to reach me and haul me back up. And fortunately for Mandy, there was a coil of climbing rope in the snow-cat, so we were able to haul her out of the pool. It took some doing, but I got her frisked and cuffed, just in case she was armed, and then she rode down the hill toward the sheriff’s assemblage sitting between Hal and me. I think the heater in the snow-cat saved her from a nasty bout of hypothermia.

When we got down to the county road, Fran Schmidt took her into custody, and everything else was cut-and-dried. Eventually, when the whole thing worked its way through the legal system and went to trial in late summer, A.D. Sonos was masterful at getting into the record the two other murders that had involved the same means of death as Junior’s. So, even though the evidence for Mandy’s involvement in Mike McMurphy’s and Tobias Summers’ deaths was only circumstantial, the jury got to hear about it. Her conviction took them all of six hours, and the foreman told me later that it would have been quicker except that they wanted to make it look good, and also to have some pizza on the court’s nickel.

In the library of candid-camera porn DVDs that I had taken from Junior Murcheson’s place, I found another one, older, with Mandy’s name on it and a date weeks before Tobias Summers’ death. I eventually destroyed all of the other ones without watching them, but that particular home movie proved interesting. In addition to a very similar version of their tryst—except that Mandy didn’t end up on top on that occasion—there was a post-coital conversation about how Junior needed to eliminate Lannie Young, and how he should do it. He resisted, but Mandy threatened to discontinue her sexual favors and he finally gave in.

By the time Mandy was convicted, Hal’s new Middle Park Advanced Research Center was up and running with a staff of about thirty and a brand-new computer courtesy of UNELECO, although they were still in rented office space, awaiting completion of the re-designed Mount Epworth Arms. He hired Emily Griggs, who had been terminated by the school board, as his chief operating officer, and she was put in a position to extract her revenge by providing liaison to the schools on her terms.

The FRAWB lawyers continued—still do—to plague the folks of the Fraser Valley, and everyone in the Central Rockies, generally, but we feel good that we control a fair bit of water that they can’t get at. Ever.

Chuck Shure, bless his soul, built a tasteful house of reasonable size in his valley, a house not at all like Win Fredrickson’s ridiculous mansion, and now he lives there about half time. And Hal and I went into partnership with him for that wonderful piece of land and moved into Mike McMurphy’s old house in May, after we had done some remodeling.

At that point, Fran Schmidt and his wife Mary were up to their eyeballs in paperwork, trying to adopt Natalie Stokes. After the accident in which her family had been killed, she was placed in a foster home, and Fran and Mary decided to provide something more permanent for her.

Best of all, Fran and all the folks in his department decided to keep me. Despite the fact that my arrival had coincided with four murders and four traffic deaths, more loss-of-life than Grand County had been confronted with in as long as anyone could remember, their vote was overwhelming in my favor.

I don't know when I've ever felt so wanted by such a good bunch of folks. We're staying.

A^Four Corners Mystery

## Power Play: A [Displaced] Four Corners Mystery

### 1.0

The red blinking LED and its accompanying *tweep* told the man in the lightweight black wet suit that the idling outboard motors over there were putting out enough heat for the missile to lock on. A kilometer across the sparkling waters of the Florida Current, the *Stream-Tracker*, at first glance just another thirty-seven-foot Boston Whaler, sat rocking gently in what passed for swell.

A closer look, though, would reveal hints that it was more than just the usual recreational fishing boat. The three 350-horsepower Yamaha outboards, which over-powered the hull rating by a substantial margin, were one clue. They were throttled back at that point, nearly at idle, working just hard enough to keep the boat stationary in the 4-knot current and to run the electronics. And those electronics were another clue to the *Stream-Tracker*'s true identity, a clue so obvious as to be hard to miss. Eight antennas of various designs decorated the T-top, and the radar dome was twice as big as most others. Less obvious was the sophistication of all that gadgetry. What was holding the boat stationary was an autopilot system linked to a military-grade GPS computer, the whole customized arrangement created specifically for precise station-keeping.

Standing in the cockpit, Skip Nicholls wiped the sweat from his face with a soggy bandana. The near calm was helpful for their work—calm conditions are a real blessing for doing oceanography—but a little more breeze sure would have made life a lot more comfortable. He watched the large flat-screen display on the console, studying the flashing numbers with concentration and trying not to drip on it.

“Jorge, be ready to bring her up in two minutes, OK?”

Skip glanced at the figure crouched in the aft workspace.

“And, c’mon, willya? Put that PFD back on. I know it’s hot, but when you’re recovering equipment, you really do need it.” He shook his head in frustration.

It bothered Skip not at all that he had taken his own personal flotation device off, despite unequivocal rules and regulations, an hour before.

“Hear that, Amelia? Two minutes.”

He turned his attention to the young woman sunning herself in the bow. She was lying face down, and he saw that, in the interest of a uniform suntan, her bikini top was unhooked.

“But, you know what? You don’t have to put your PFD on if you don’t want to. Or anything else, for that matter.” He couldn’t help but grin at his joke.

“In your dreams, pal.”

Her rejoinder was appropriate for the circumstances. A seagoing electronics technician, her dealings with the male-dominated oceanography community had helped her grow a skin as thick as an M-1 tank’s.

She stood up with her back to both men, adjusted some straps and other things, slipped into her PFD, and turned to face him.

“Did you get any error messages this time?”

They were working with an acoustic velocimeter, a notoriously finicky piece of equipment. Its data stream, fed back to the *Stream-Tracker*'s computers by an optical fiber cable, was frequently a mixture of meaningful numbers and complaints in the form of various error messages. But her latest ministrations had worked, apparently.

“Not so many this time. None at all that I've seen, even. Whatever you did, it did wonders, looks like.” He smiled his appreciation. “OK, Jorge, let's start the winch.”

A mechanical whining noise emerged from the stern.

“*What the hell...*” Amelia's voice tailed off, and Skip looked up to see her staring over his shoulder toward the aft horizon. His mind barely had time to register her dive over the side before the explosion.

\* \* \*

From the tuna tower of the fifty-foot sport-fisherman a kilometer north, the man in the wet suit watched the exhaust trail tracing the missile's path toward the *Stream-Tracker* just long enough to be sure it was seeking accurately. Then he slid down the ladder toward the waiting *Zodiac*, reaching it as the *ka-rump* of the explosion rolled across the water.

“Let's get over there, now!” He was clearly used to being in command.

The *Zodiac*, with its three passengers, set off on full plane, and the sport-fisherman followed at dead slow.

It took the *Zodiac* only a minute in transit, by which time most of the smoke had begun to drift away on what little breeze there was. The ocean surface was littered with fiber glass and the closed-cell foam that made Boston Whalers famously unsinkable—indeed, this one was still floating, albeit in hundreds of very small pieces. They recognized two tattered PFDs, empty.

“Over there.”

The leader had stood to survey the scene and spotted something just to the west, something obscured by the glare of the mid-afternoon sun. He sat down as the rubber boat accelerated toward what was thrashing about in the water.

It took only a minute to haul the dazed young woman aboard. Before she could recover her equilibrium, she was relieved of her flotation vest, and almost immediately she grew uncomfortable, despite her thick skin, with the three wet-suit-clad men undressing her with their eyes. Her discomfort turned to anger when the man behind her slipped a commando knife from a sheath strapped to his right leg and sliced through the straps of her bikini top. She struggled to cover herself as the top fell away into the sea.

“Forget whatever you're thinking and let's get on with it. Time is short.” The leader's growl spurred the other two into action.

The half-naked young woman was unceremoniously pulled to her feet by one of them, and the other fastened a dive belt around her waist, stealing a grope or two in the process. The belt held an unusually large number of lead weights.

“Hey, what are you doing...get your hands off me, you scum...*what's going on, anyway?*”

Her voice rose in panic as her hands were yanked behind her and fastened to the dive belt with plastic zip-ties. They used doubled-up zip ties to bind her elbows together, pulling her shoulders back and up in the process.

Her struggles produced a most fascinating syncopation, and the leader's stare at her chest was long and intimate. He licked his lips, twice, then shook his head in disappointment.

"How sad. Such a waste." His voice was flat as his shove toppled her over the side.

\* \* \*

## 1.1

It took only a couple of days of trying to be on vacation on South Florida's Gold Coast for me to figure out that I'm not a beach person.

Beaches, I decided, are great for kids who want to dig and build sand castles or for teenagers who want to chase each other around and squeal a lot, but lying in the heat and getting windblown sand stuck to my suntan lotion just isn't my thing. Besides, the entire business of tanning is just decidedly unhealthful.

Hal, I discovered, isn't a beach person either, but he had more trouble admitting it to himself. He thought his years as a graduate student in Miami had left an indelible impression, but time, it seems, can change a person. We settled on morning walks down by the water while it was still cool and mostly deserted.

This explains why we were reading the Fort Lauderdale *Sun-Sentinel* while sitting in the morning shade of the west-side balcony of our condo instead of lying on the beach, that Wednesday morning on which the story of the *Stream-Tracker* tragedy broke.

Normally, a story like that wouldn't have grabbed our attention. South Florida is rife with boats, many owned and operated by untrained, incompetent drunks, and accidents happen all the time. But in this case Hal knew the victims—and Professor Solomon "Skip" Nicholls was highly trained and fully competent on the water, with years of experience in all sorts of vessels. He did have a habit of imbibing to a state of considerable silliness at parties, but at sea he was all business.

I was reading the local news—Hal always starts with the editorials, followed by the comics—and when I saw "Pompano State" in the article I tossed the folded-up section his way.

"You're not going to like this at all. Lower right corner." I took a deep breath and tried to think what to say to him.

"Aw, geez. What could have happened?" I watched his face turning gray as he read on. "Gas fumes? Explosion? That doesn't ring true—it was a brand new boat. And out on the water they keep the engines running to power the equipment. No way can fumes build up."

The story repeated Coast Guard speculation about an explosion associated with the fuel system—lacking any solid evidence, it looked like they were trying to buy time with obvious guesses.

"I've got to call Shorty Ringwold." He went looking for his cell phone.

Randall Ringwold, chair of Oceanography at Pompano State University, always introduced himself as "Shorty" because, at 6-feet-4, he had been the least tall of the members of his college basketball team,

and that's what they had called him—or so he told it. He was also the host of Hal's visit to the Gold Coast.

As Dean of Natural Sciences at Frémont State University in Durango, and more recently on extended sabbatical as a special advisor to the Colorado Commission on Higher Education, one of the roles Hal had taken on concerned the coordination of renewable energy research at Colorado's universities, a job not unlike herding cats, but one that needed doing in the face of state budget cuts. To him, this coordination began with canvassing universities around the country to see how they conducted collaborative research on related topics. Pompano State had embarked on an innovative project in collaboration with other Florida universities that involved the underwater equivalent of wind power—they had been funded to test the concept of placing turbines in the Gulf Stream between Florida and the Bahamas. Pompano State had both the lead role in the project and the responsibility for observational studies—additional measurements of the current's speed, structure, and variations were needed.

It was just a coincidence that the most convenient time for everyone to have Hal visit Pompano State was March and April. Or so he told it.

He had been basking in the sunshine for a week, but I'd arrived only a few days earlier. My job as investigator-at-large for the Colorado Bureau of Investigation had kept me busy in Colorado's icebox—the Fraser Valley—for most of February and early March, and I was finding that spending the Spring Equinox on the beach was just fine indeed.

Except for the beach part. Aside from the sand problem, the college kids on spring break were pretty obnoxious, both their behavior and, well, their skin. My generation had vastly different idea about propriety from the younger ones, I discovered. Hal seemed to enjoy it, though, or at least the distaff half.

“Annette?” Hal's voice echoed slightly from the interior of the condo. “They're having a briefing over at the OceanLab in an hour. Want to come?”

“I'll get dressed.” The rest of the paper was going to have to wait, I decided.

\* \* \*

Hal had been fortunate to find a 15<sup>th</sup>-floor condo on the beach side of South Ocean Boulevard in Boca Raton, just south of the Boca Raton Inlet. The condo belonged to a Pompano State professor who was in Australia for the spring semester, and we were taking a turn at house-sitting. It was a rather ritzy neighborhood by our standards, but a nice place to visit. Compared to the winter conditions I'd left behind, the luxury of opening windows on both sides of the building and letting the trade winds waft through all night was positively decadent.

Pompano State's OceanLab sat on Hillsboro Inlet, about five miles to the south along fabled State Highway 1A, known by a variety of names depending on the town of the moment—five miles that could take a half hour at some times of the day. Hal managed it in about six minutes that morning.

As a result, I was still on the phone when we arrived, so, to avoid losing him, I had to trot along and talk at the same time. I had called in a favor and found, through an FBI contact, whom to call at the Coast Guard.

“We actually have surveillance photos that may be of interest in the investigation. I can't say more on this phone call, but they will be made available to the folks on the case.” He was undoubtedly referring to assets the Coast Guard used to monitor smugglers, classified assets of the eye-in-the-sky variety.

“I appreciate your help. And you think the local office here will be handling the investigation?”

“Yes, ma’am, at least the search. Probably out of Station Fort Lauderdale. If they did an air search, it would have originated at Air Station Miami.”

“Thanks very much. I’ll contact them.” I was glad to disconnect, as Hal was waiting impatiently. Besides, I was starting to breathe hard, talking and trotting at the same time. I made a mental note to hit the gym.

Hal was looking at me with a question on his face.

“Coast Guard. They have satellite pictures, sounds like, which the local office will get. They’re on the case, I guess.”

“Good to hear.” His expression turned grim. “They need clear proof for me to believe it was a fuel explosion.”

We walked through the OceanLab building—a converted, upscale shopping mall that had been foreclosed, acquired by the county, and donated to Pompano State—to a patio overlooking the inlet, a wide part known locally as Hillsboro Bay. Seating had been arranged and a podium set up, but the only one present was a very tall, middle-aged man wearing tan slacks and a blue blazer. His tie sported a nautical theme.

“Hey, Shorty. This is horrible. What happened?” Hal’s tone revealed his feelings, a mixture of grief and incipient anger.

“Well, the Coasties are saying it was a fuel explosion. That’s all I’ve heard. Hi, Annette. Good to see you again, but I’m sorry about the circumstances.” We shook hands.

“Me, too. It sounds like a real tragedy, regardless of what caused it.”

Just as he was about to respond, I noticed that his attention had shifted to something over my shoulder. I turned and saw a military officer in dress whites walking onto the patio toward us.

“Lieutenant Duncan Jones, Coast Guard Station Fort Lauderdale. I take it you’re Professor Ringwold?” He stuck out a hand.

Ringwold shook it. “Correct. And this is Dr. Hal Weathers and his wife, Annette Trieri. Thanks for coming, Lieutenant. I’m glad that you were on the invitation list.”

“I came early to brief you, Professor. Um, I’m afraid that some of what I have to tell you is classified, though. I understand that you’re cleared, but...” He let the sentence hang to see if we would get the hint.

Hal did. “Lieutenant, Shorty, that is, Professor Ringwold here, is cleared through the Navy because of his research with the Naval Research Lab. It turns out that I have a very high-level Department of Energy clearance, through Los Alamos. And Annette is cleared to Top Secret through the FBI and Homeland Security. I think we’re probably all good, although this location may not be.”

“Hal’s right, Lieutenant. And I was just on the phone to your headquarters—did you get the satellite pictures they have?” I wondered if that would establish some credibility. It may have helped that Ringwold was nodding agreement.

Jones looked surprised. “Satellite pictures? No, I don’t know about satellite pictures. I’ve been in the car for the last 45 minutes. We do have some aircraft surveillance imagery, though. Is there somewhere we can be secure?”

Ringwold led us back into the building, to a laboratory with various warnings about security and a complicated lock on the insulated door. We sat down at a conference table.

“OK, here’s the story.” Jones jumped right in. “Late yesterday afternoon, at 1650 hours, we received an emergency call from the skipper of a yacht, a sport-fisherman called *Reel-Thing* based in Fort Lauderdale, from out on the Gulf Stream. They provided us with GPS coordinates about 15 clicks east of here. We scrambled a helicopter out of Miami. The *Reel-Thing* skipper said that they had seen an explosion on the horizon and motored over to investigate, but all they found was debris scattered on the surface. No victims or bodies or even remains, he said. Our helo reached the site and found the *Reel-Thing* still there, with a crew motoring around in a Zodiac looking for survivors. We took pictures.”

He opened a portfolio he was carrying and passed around a stack of 8x10 color images, which verified what he had described.

“We also scrambled one of our new high-speed response boats out of Fort Lauderdale, and it arrived on the scene within less than an hour, with some daylight left. The helicopter crew had not spotted survivors, nor bodies for that matter, and neither did the boat’s crew. They did recover quite a bit of debris, however, and we put people at work analyzing it overnight.” He paused for a breath.

“Most of the debris is fiberglass fragments, from the hull and buoyancy compartments of what was probably the *Stream-Tracker*. It’s clear that the explosion was in the stern of the boat, because the bow debris is in bigger pieces. And there was also some personal gear such as a flotation vest, the top of a woman’s swimming suit, meaning a bikini bra, an ice chest that stayed latched shut and was floating, stuff like that. We think we found some of the fiberglass from the transom—it appears to have paint on it, like lettering or something—and that’s being analyzed for chemical signatures as we speak. Uh, I guess I should say that the story in the paper was just our way of buying time.” He looked around to see if we understood.

Ringwold nodded. “You said ‘probably the *Stream-Tracker*.’ Are you sure? I mean, yeah, the *Stream-Tracker* is missing, but there may be other explanations. Could that debris be from another boat?”

There was a long pause, and Jones cocked his head sideways. “Ah, well, let’s see. The skipper of the *Reel-Thing* told us he’d seen the *Stream-Tracker* in that area earlier, and later in the evening your place here reported that it had been in the area and was missing. Some of the larger pieces, from the bow, look like Boston Whaler construction. So we inferred it’s debris from the *Stream-Tracker*. Is there any reason to doubt this?”

I jumped in. “With all due respect, Lieutenant, it seems like a positive identification would be a good thing to have. I’m an investigator for the Colorado Bureau of Investigation with a lot of FBI training under my belt, and this seems pretty basic. Is there some way someone could use the debris to make a positive ID?”

“Actually, we’re hoping to do just that. One of the reasons I came up here today was to see what help might be available.” Jones appeared both relieved and a little abashed at the same time. “One thing that would help us would be a good-quality photograph of the boat’s stern, so we can compare the paint color and lettering with that piece we found. And anyone closely familiar with the boat ought to look at the debris as well.”

Ringwold was nodding. “I’d be one of those people, and I have a photograph on the wall of my office. I’ll come down later this morning.”

\* \* \*

At that point, it was time for the briefing that Ringwold had scheduled. An audience including several reporters, many people from the university administration, and nearly the entire Pompano State

Oceanography contingent had gathered on the patio. Shorty had a fine line to walk, and he focused on repeating the official Coast Guard story that Jones had told the public. He added some elaboration based on what Jones had said to us, emphasized that official confirmation that the wreckage was the *Stream-Tracker* was still lacking, and eulogized the three lost oceanographers just enough to be respectable. It was definitely a mixed message, but that's about as good as he could do under the circumstances, given incomplete information.

Questions from the reporters were, to me, surprisingly subdued and dealt with Nicholls' credentials and on-water experience, and the roles of the two technicians. The entire event lasted only about half an hour, but Shorty had to stay around and converse with various concerned individuals for another hour and a half.

Afterward, Hal and I rode down to the Fort Lauderdale Coast Guard station with him. He was silent on the surface streets over to I-95 and all the way to just past the airport, Fort Lauderdale – Hollywood International, and then he started talking.

"I just don't know what to think about this whole thing. There's a small part of me that wants to cling to the hope that it was some other boat—which is still a tragedy, of course, but for someone else—but the evidence is such that I just can't make that small part grow." Shorty heaved a huge sigh. "So I guess we have to face it. But I'm like you, Hal, I didn't buy the gas fumes business either, and Jones confirmed that it was just made up. Which, of course, raises the question of what did happen. And I can't think of any other accidental cause for such complete destruction. I mean, an electrical explosion, a big short or something, could disable everything on that boat, and it would float away. But even a breach of the hull wouldn't sink the thing, those Boston Whalers are truly unsinkable. So it sure looks to me like this was some kind of deliberate sabotage, or maybe an attack, using explosives."

"If that's the case, Shorty, there will be some chemical residue on that debris that the Coasties brought in. I presume they're analyzing for that. And I'm interested in those satellite pictures I heard about before." I had been thinking along the same lines. "Suppose you're right. Who'd do such a thing?"

"Yeah, right. I've been speculating about that, too. Thing is, people who might want to do bad things to Skip wouldn't go this far, or even have the ability."

Hal cleared his throat. "Just to be sure, can we eliminate your two technicians as the targets?"

"Probably, at 99% or so. They were great folks and valuable employees, but I don't think they had public visibility. And you'd think that any private grudges would be settled more privately. If there was a target, it would be Skip. His own opinion of himself was quite different from what many other people thought of him." Shorty, I could tell, was working hard at not speaking ill of the deceased.

"Could be that the boat itself was the target, I suppose. Or your research project." Hal said.

Hal was in the front passenger seat, staring out his side window at the mangroves zipping by as we worked our way out a beautiful boulevard toward the ocean. This was a new part of the metropolitan area for me, south and east of the airport, and I'm still not completely sure where we were. Shortly, we came to a drawbridge, which was just starting up, so we got in line with the rest of the traffic to wait.

"If Skip's enemies aren't suspects because they lack means, that's about all that's left, strange as it might sound." That joint observation by Hal and me wasn't earthshaking, but it changed the conversation.

Shorty thought about it. "Y'know, you both may be right. It just doesn't make sense to me that Skip would have been the target, at least not intentionally. I guess it could be that the *Stream-Tracker* was just in the wrong place at the wrong time. Barring that, though, it must have been the research project."

“But you’ve talked about how the project has captured the public’s imagination.” Hal looked puzzled. “That outreach stuff you’re doing with the schools has those kids practically giddy with excitement about all this. And even the people in our condo have commented on how cool the whole idea is—when you can get stodgy old folks like that engaged, you’ve really got something.”

“That doesn’t mean it’s everyone, though, Hal. There’s been some push-back, even in the oceanography community. You’ve heard of NIMBY, I’m sure, ‘not in my back yard’.” He smiled. “Well, there’s a new one for what we’re doing: NIMO—‘not in my ocean’.”

I couldn’t believe what I was hearing. “You’re saying that there are people in the scientific community who would sabotage your current measurements and kill the participants? That’s hard to believe, Shorty.”

“No, no, not people in the scientific community. Some of our colleagues, especially some of the regulatory office folks at NOAA fisheries, they’re worried about setting precedents, but even they understand that our one little installation won’t do any damage to anything.” He was talking, I figured out, about the National Oceanic and Atmospheric Administration’s responsibilities for fish-stock monitoring. “Their worry is about large, commercial installations in the future, with arrays of lots of devices. On the other hand, there are some radical environmental groups that don’t have such a balanced view of things, and we’ve heard suggestions that some of the conventional power producers are unhappy with the possible competition.”

Hal spoke up again. “You said something before, Shorty, that I hadn’t thought of, and maybe it’s the Occam’s Razor solution in all this. Maybe the *Stream-Tracker* really was just in the wrong place at the wrong time. They saw something someone didn’t want them to, and they paid the price. Isn’t there still quite a bit of smuggling in these waters?”

“Some, for sure, but I don’t know how much. Drugs and people both. And the drug smugglers have pretty bad reputations, so maybe you’re right—that’s the obvious answer.” Shorty shook his head. “Well, here we are, and maybe the Coasties will be able to enlighten us a bit more.”

\* \* \*

## 1.2

The Coast Guard Station was on the barrier island, across that drawbridge over the Intracoastal Waterway, then north through the entrance to a state park. Like all U.S. government facilities these days, it was surrounded by a no-nonsense fence, and, given its military connection, this one had razor wire on the top. The guard at the gate, equipped with a sidearm, had our names on a list, fortunately. He handed us visitors’ badges and directed us toward a nondescript building next to a serious antenna mast. The station was on the Intracoastal side of the island, just across from Port Everglades, and there sat a gigantic cruise ship that dwarfed everything else in the vicinity.

Inside was a small waiting area with an enlisted Coast Guardsman who seemed to be Lieutenant Jones’ staff assistant—military protocol and duties always get me confused, though, so I could be wrong. Anyway, he asked who we were and said that the Lieutenant was waiting for us but tied up on a phone call, so would we please have seats? They were hard plastic seats designed for rugged military bottoms, it turned out, with shapes very different from mine, but I managed to keep my wriggling to a minimum.

We would have continued our speculations, I think, but for the presence of the Seaman in the room, so, instead, we all studied our phones, looking for new email. Mine was brand new, and I was still figuring it out, but Hal and Shorty were pros. They actually *answered* their email instead of just reading it. We were all engrossed in our own little screens when the Seaman's desk buzzed, and he ushered us into the Lieutenant's office, or at least that's what the door said.

But it was really a small conference room, and Lieutenant Jones was there with three other Coast Guard officers, two of whom had fancier insignia than his and all of whom were wearing blue uniforms, formal ones. They stood as we entered, and Jones began introductions.

"Captain, let me introduce Drs. Randall Ringwold and Hal Weathers and Ms. Annette Trieri. Dr. Ringwold is head of oceanography at Pompano State and Dr. Weathers and Ms. Trieri are visiting him. Ma'am, gentlemen, this is my commanding officer, Miami Sector Captain Hector Galliari, and these officers are Commander Paul Snedaker of Miami Sector's investigative division and Chief Warrant Officer Garrett Kraus, an agent of the Coast Guard Investigative Service. I've explained to them about your clearance levels. Um, it seems that we have some developments since I last spoke with you." He gestured us into seats around the conference table. "Captain?"

"Thank you, Lieutenant. Folks, let me first pass along condolences from the very top, the Coast Guard Commandant in Washington and from my Rear Admiral here in Miami, who commands the Seventh District. They are in the loop on this and my presence here is an indication of just how seriously the United States Coast Guard is taking this incident of piracy."

He paused, and the three of us civilians were too stunned to say anything, I think, until I blurted out, "Piracy? As in walking the plank and so on? Really? Arrr!"

Captain Galliari sat stone faced while just hints of smiles flicked across the faces of his men. "For us, piracy is simply the term for felonies on the high seas, Ms. Trieri. And the new information that Lieutenant Jones mentioned suggests that we have three murders to contend with here."

I could feel my face getting red. "My apologies, Captain. Forgive my ignorance—I guess it comes from serving in a state with no oceans except those very old ones we see evidence of in the rocks."

"Not necessary, Ms. Trieri, it happens all the time." He let out a little sigh and shrugged almost imperceptibly. "Just like the outlaws Butch Cassidy and the Sundance Kid have come to be folklore heroes out west, there's something about seventeenth-century pirates that has captured the public's fancy. Certainly those Hollywood movies haven't helped. But I'm sure you know they're no joke in reality."

He continued, "In any case, we believe that we now do have a positive identification of the wreckage as the *Stream-Tracker*, I'm sorry to have to tell you, and, what's more, we found indications of chemical residue on a piece of the transom. High-explosive residue, HDX, the chemical used in many shoulder-fired, heat-seeking missiles. That's why Chief Warrant Officer Kraus is here. He's been assigned the investigation, and he'll be keeping my office in the loop via Commander Snedaker. Before you ask, you should understand that it's our practice for CGIS investigators to be Chief Warrant Officers. Chief Kraus is one of our best—he has to be, given all the wild and crazy things that happen in our district. Chief?"

"Thank you, Captain. Think of CGIS as the Coast Guard equivalent of Navy's NCIS. You've probably seen the TV show about them—we even have our share of wise-ass investigators like that show does. Like them, we're independent from just about every aspect of the normal chain of command. In this case, though, we'll be working closely with people here at Station Fort Lauderdale and in the Miami Sector generally. I'm quite confident that this is not an internal Coast Guard issue." He smiled.

“Now, one thing we’d like to do is to have a close liaison with your lab at Pompano State, Dr. Ringwold. Because of her investigative background,” Kraus tapped a file on the table in front him, “which I have to say is extraordinary, the CGIS proposes to make Ms. Trieri a full member of our team both to provide that liaison and to assist with the investigation. Again, to anticipate your question, Ms. Trieri, it’s very common for us to employ civilian investigators.”

This time I really was speechless. That he’d assembled such a fat file on me so quickly and was offering me a job was hard to believe. But Hal rescued me, if you can call it that.

“Well, I can vouch for the wise-ass part.”

It annoyed me that he was too far away for me to kick him under the table.

\* \* \*

The Captain and the Commander departed after once again expressing their condolences, leaving the rest of us to get down to business.

“So you’re sure it was the *Stream-Tracker*, huh?” Shorty sounded ready to give up hope.

“Let’s show the pictures, Lieutenant.” Kraus got up to dim the lights while Jones fiddled with his laptop. “This first one, Dr. Ringwold, is a side-by-side look at a piece from the transom that was recovered yesterday, cropped to leave off the ragged edges of the broken fiberglass, and a cropped section of that photograph you gave to Lieutenant Jones earlier this morning. Can you tell which is which?”

I sure couldn’t, but, being a crackerjack investigator and all, I was suspicious. “No Photoshop on either one, or anything like that?”

Kraus smiled. “I’m going to like working with you, Ms. Treri. Nope, no Photoshop or anything. Just cropping to show the same areas. And the photograph one is blown up, of course.”

Shorty had slumped down in his chair far enough to justify his nickname. “Ah, crap. My worst fears. Damn, damn, damn.”

“I’ll add my sincere condolences to the others’, Dr. Ringwold. And be assured that the CGIS is going to spare no effort to clear this. Lieutenant? Let’s see the next one.”

Jones poked the keyboard, and a picture of a yellow bikini top appeared, arranged clinically on a black background. I couldn’t help but think that it was not much fabric to cover an obviously well-endowed woman, one who didn’t need a whole lot of support, and it harked back to the twenty-somethings on the beach for me. Modest, it wasn’t. Then something caught my eye.

“Is the real thing available? I’d like to have a close look at it.”

Jones went over to a footlocker sitting on the credenza, opened it, and lifted out the yellow top with a pair of large forceps that were in there too. He handed the forceps to me.

“I assume you noticed that someone cut these straps with something sharp, Chief?”

Kraus looked startled.

“Huh? I haven’t really examined any of this yet, beyond doing an overlay of the two transom pictures to be sure about the identification.” He leaned across the table and squinted at the bikini top. “Damn. You’re right. We’ll have my lab tech figure out if it was scissors or a knife.”

“A knife, I think, but it’ll take a microscope to be sure. This puts a new wrinkle on matters, doesn’t it?” I knew I’d have to give this some thought. “Are there more? Pictures, I mean?”

“Not of the bikini, but lots of other things. What I thought what we should do now, Ms. Trieri, gentlemen, is to look at a couple more important ones and make a plan for tomorrow. I mean, there’s no way we can clear this case today. Can I assume you’ll accept my suggestion about joining us, Ms. Trieri?”

I pointed at Jones, and he advanced to the next picture, an aerial view of the ocean, with boats. “I need to talk with my boss in Denver, although I think it’ll be a formality. I just finished a case, and this is a slow time where I’m assigned. What’s this?”

“A satellite image from one of the classified birds we use to watch for smugglers. This is the first of a sequence, and they can be zoomed in to see all sorts of interesting things. It’s good that Lieutenant Jones explained your security clearances to me earlier, as it gave us a chance to verify them.” Kraus walked over to the projection screen and began pointing to the image. “Now, this is the *Reel-Thing*, and this is the *Stream-Tracker*. In fact, if you zoom in, you can see the yellow bikini in action on the *Stream-Tracker*.”

“That would be Amelia Albright.” Shorty had shaken his earlier depression and become engaged. “Our best electronics tech. Except you shouldn’t be able to see the bikini top because she’s supposed to be wearing a personal flotation device. And our PFD’s are pretty much a torso cover-up.”

“Well, in this shot, she’s not really wearing the top, just lying on it, sunbathing on the bow. What’s obvious is the bottom, its and hers.” How Kraus said this with a straight face is beyond me, but he did.

“Now, the important thing here is that the time of this image is 1512 local time. Remember that the call from the *Reel-Thing* was logged at 1650?” He looked at us until we all nodded. “Well, have a look at this next image. Duncan?”

The screen switched to another picture of the ocean, this time with only one boat plus a little raft or something. And there seemed to be quite a bit of clutter on the ocean surface around them.

“This is a half hour later, and everything is displaced a couple of nautical miles north because of the current. The *Reel-Thing* is there in the middle, and the small blotch to its right side is a Zodiac rubber boat. They’re both motoring in the patch of debris that used to be the *Stream-Tracker*. The time is 1545 local.” Kraus’s expression was somewhere between a snarl and a triumphant grin.

Hal cleared his throat. “So it took them another hour to call this in, hmm? Are there any images between these two?”

Kraus shook his head. “Unfortunately, no. We can pull these back, though, and look at a bigger area. That would show, in that first shot, two additional boats, one north-bound somewhat to the east of this image and another south-bound, somewhat to the west. Both are high-speed recreational boats, what people generically call ‘cigarette boats’, and both transited the area here during the time between these two pictures, just after the first one. So we’ve got three candidates for the missile, and an hour’s worth of time discrepancy on the *Reel-Thing*.”

“No doubt you’ve started the search for the other two boats?” I wanted to deal with the easy stuff first.

“Yep, and the north-bound one disappeared sometime between 1715 and 1745, the southbound disappeared between 1745 and 1815. We have these images every half hour, so where they disappeared to can be narrowed down by quite a bit. The rest, we’re working on.”

Hal spoke up again. “If there’s an hour of time discrepancy, there must be an hour’s space discrepancy, too, four miles or so? Shorty, do you have your research people file float plans or something? We can tell where they wound up. Do you know where they started?”

Shorty looked surprised. “We do require float plans, but I don’t recall theirs. I’ll have to check. You’re suggesting that the explosion wasn’t where the *Reel-Thing* people want us to think it was, I guess?”

“Where and when, yeah. Maybe there’s something important about the where.”

One point for Hal, I thought, and then I asked my pay-off question. “What have you found out about the *Reel-Thing*?”

“It’s a sport-fisherman out of Fort Lauderdale, available for day charters. We’ve got people following that up.”

\* \* \*

Somehow, it had become one in the afternoon, and Chief Kraus had the good graces to return to his earlier comment about making a plan for tomorrow instead of trying to solve all the world’s problems today.

And my stomach was starting to complain about its emptiness.

Fortunately, our two hosts were also ready for lunch and, besides, they had various other afternoon commitments, they said.

We asked about local opportunities for food and were directed to a place on the Intracoastal called Jimbos, just south of the drawbridge. Lieutenant Jones put it in the category of serviceable and authentic Florida, an outside deck under a tiki hut roof on the water. Try the seared ahi tuna salad, he suggested.

Ten minutes, conference table to dining table, including navigating the gate through that razor-wire-topped fence, turned out to be about what I was hoping for. It wasn’t long after that that Hal and I had those ahi salads in front of us, looking delicious. Shorty, in a fit of comfort-food mania, had gone for a grilled mahi sandwich with fries.

“So, Annette,” Shorty did a pretty good job of talking with his mouth full, “are you going to take this liaison position and become a CGSI agent?”

“Well, like I said, I have to talk with my boss. And Hal and I need to figure out whether it will work.” I looked at him only to find that he was poking at his salad with little interest.

This time we were close enough, so I gave him a little kick under the table. “And if there’s some problem with it, well, we’ll work it out together, right, Hal?”

“Hmm?” He looked up, trying to pretend innocence. “Right. Sure.”

As I mentioned, my smart phone was brand new at that time, so I wasn’t familiar with all of its capabilities. One of them, I knew then, was texting, but that’s still something I try to avoid. It’s just too, well, quick-and-dirty to be helpful as communication. Still, I’d already learned some of the texting jargon. And my response to Hal if I had voiced it—or texted it—would have been *WTF??*

It was fortunate that Shorty’s mahi sandwich seemed to be cheering him up, because he came to the rescue of an awkward silence.

“Sorry I’ve been so quiet today, but I’ve been thinking a lot. One thing I’ve been wrestling with already is what to do about this big project that Skip was principal investigator of. Believe it or not, I was approached this morning by two other faculty members who were so kind as to volunteer to take the thing over as PI.” Shorty rolled his eyes. “Not that they have designs on the eleven million or so that’s still available in the project budget. No, they were willing to make the *sacrifice* to take this on.”

Hal came alive. He looked up at me, winked and patted my hand, then turned to Shorty. “Shorty. Do you mean to suggest that some of your professors may not be entirely candid with you about their motives? Really? Why, who ever heard of such a thing in academia?”

Shorty’s dour expression morphed into mirth. “Hal! What an insight! I never thought of that!”

And they both broke into such gleeful laughter that I couldn’t help but join in.

When Shorty got himself under control, and swallowed the fistful of French fries that he had stuffed in his mouth, he continued.

“Anyway, what’s occurred to me is that we do indeed need a new PI for that project. And maybe the best way to do that is to have an interim PI who can get it over this bump in the road—not that I’m trying to minimize Skip’s death, or Amelia’s or Jorge’s, either, but I do have to think of the future. And moving into the future is what this project needs to do. In the long run, of course, we’ll need to find someone permanent. But maybe we should defer that in favor of an interim PI.”

Hal was now actually eating his salad instead of just poking at it. “I had to deal with things like this, sort of, not this tragic and sudden, but a bit like this, when I was Dean. And you’re right, Shorty, buying time with an interim person can be helpful. Especially if the entity in question is in need of organization, or fixing, or some other kind of help. Is this project in disarray? I mean, of course, aside from losing its PI?”

“We haven’t really talked about that, have we? Well, I think that ‘disarray’ would be a bit of understatement. Thing is, between my office and its actual execution, the project has a layer of insulation, Pete Chu in the OceanLab Director’s office. Skip and Pete were buddy-buddy and liked to do things their own way, even though both report to me. I was letting them handle the project until I got a report from my external advisory committee that scared the crap out of me. Then I looked into it and found that the whole thing is headed for a train wreck. And it wouldn’t do for that to happen. We got a total of about sixteen million for this project, which is an astronomical amount of money for Pompano State, and there’s a consortium of universities involved, some with their own pots of money. Our reputation is on the line here, and the deans, the provost, and the president are all on my side.”

A thought popped into my head. “Let me guess. Dr. Chu is one of those who would make the purely altruistic sacrifice to take over the project, if you asked him nicely.”

Hal grinned, but Shorty laughed out loud. “Absolutely! He’s extremely busy, but he would reluctantly be willing to step in to do the additional work to manage the project if the university really needs him to. You nailed it, Annette.”

“She’s heard a lot of war stories from me about how academics operate.” Hal reached over and patted my hand again. “You said there’s about eleven million left? What’s the five been spent on?”

Shorty rolled his eyes again. “Well, some of it isn’t really spent, just promised, ‘obligated’ as our budget people call it, and ‘encumbered’ on their spreadsheets. About two million is in that sort of limbo, promised on contracts to other universities to work with us on the project. Um, there’s some computer modeling up at Florida State, for example, on how the Gulf Stream might respond to having some of its energy turned into electricity. And the people up the road at Florida Atlantic have a contract to do research on sea turtle populations. We’re worried about sea turtles.”

He looked up at the underside of the thatched roof and pondered. “The other three million got frittered away on toys, mostly. The *Stream-Tracker*, for example. They bought a brand new, top-of-the-line Boston Whaler, turned it into a hot rod with those three big outboards, and set to work on modifying it and buying gadgets for it. While it was still in one piece, it was probably the most well equipped and expensive Boston Whaler in existence—including the trailer and big pickup they bought to haul it

around, they put nearly a million into that damned thing. Then there was the OceanLab computer network, which needed upgrading, and their computer labs, too. And all the professors with offices there needed computer upgrades, and do they ever have the taste for high-end systems. Finally, there's our experimental energy conversion device, the turbine. It's not very big, just a small-scale prototype, but it's proving to be a money pit. And it looks like Skip didn't really go through a formal design process, so we may have to start over on it."

"I hate to ask this, because I think I know the answer—was the *Stream-Tracker* insured?" Hal winced in anticipation of the answer.

"As a state university, we're officially self-insured, and purchasing commercial insurance is not allowed." Shorty shook his head. "Of course, in practice that means that it's not going to be replaced any time soon, unless we pop for another million from our remaining funds. But they need to last at least another five years."

Shorty drummed his fingers on the table as the server came by with our check. "It's occurred to me that I've not been doing the sales job I'd intended."

He sighed. "Well, I guess that's why I'm a professor and not a stock broker. But Annette's possible assignment to the CGIS team got me thinking. Hal, do you suppose I could twist your arm into becoming a Visiting Professor and the acting PI for a while, long enough for us to find a more permanent replacement?"

\* \* \*

### 1.3

I was fascinated by the idea of working with the CGIS people, as much to learn about how they operate as for the specific case. Hal, I knew, would find a short-term appointment to the Pompano State faculty rewarding, even if it did involve preventing the impending train wreck, and even if it would put a crimp in his ongoing work to organize his new institute back at home

But we really needed to sit together and have a long chat about the whole thing before we made commitments, not to mention having conversations with our respective bosses in Colorado.

I thought about this as I visited the ladies' room after lunch and tried to figure out a strategy. But when I returned to the table, Shorty was signing the credit card slip, and Hal was putting his phone away.

He smiled at me. "I just made us a dinner reservation at a nice quiet place where we can talk about all this. It's not every day that we *both* get new job offers."

Shorty nodded. "And I promise not to talk about it anymore today, except to say that we'll really hustle on finding someone more permanent if Hal accepts."

And he was true to his word. He drove us back to OceanLab so we could pick up our car, and talked instead about all sorts of other things. Now that I think about it, though, those other things were the sales job that he hadn't done before. I'd be surprised if the section of the Gold Coast around the Broward / Palm Beach county line has ever been painted in such rosy colors as Shorty used that afternoon. And I also recall that he dropped in a little weather tidbit about how Denver was in the throes of one of those big spring snowstorms at the time. Maybe he *should* have been a stock broker.

We got back to the condo just after three, and I noticed that the newspaper had fallen off the table on the balcony and blown around a bit in the breeze. It was startling to think that it was just over six hours ago that we'd been peacefully sitting there reading it, so much had happened in the meantime.

My conversation with Rod Andersen, CBI Director, went swimmingly—he agreed that experience working with CGIS would be invaluable and made me promise to provide training for CBI people when I returned. What I heard of Hal's conversation sounded encouraging as well. He wasn't asking permission so much as informing whoever it was on the phone of his intentions, but apparently there wasn't any push-back.

So it began to look as if we'd be staying around even though we hadn't had a chance to discuss it all. And then it occurred to me that I'd come for a week's vacation instead of an assignment. My wardrobe just wasn't up to police work, I knew, which meant only one thing, a thing that I rather dread, shopping. I mentioned the problem, and Hal sent me off in the car to a mall he knew about in Boca Raton.

Fortunately, the place was big enough that it had sensible stores in addition to the glitzy ones—Bloomingdale's and Neiman Marcus I just didn't have any use for. By 5:30, I was back with appropriate clothes for the CGIS work, including a couple of pairs of khaki slacks, several polo shirts in muted colors, some Topsider boat shoes, and a summer-weight blue blazer cut full enough to give me room for a side-arm in a holster in the small of my back. Rod and the CBI safety people, I knew, wouldn't like that choice, but, then, who was going to tell them? And I could always get the blazer tailored when I got home.

To complete my outfit, I was hoping to score one of those cool Coast Guard ball caps from the Fort Lauderdale station.

That evening, we finally did have a chance to talk it over, and even though it was pretty much after the fact, it was a good conversation to have. Hal's reservations were at a place in downtown Boca Raton called Truluck's, an elegant seafood restaurant with, Hal assured me, all the Florida stone crabs I would want as well as a great wine list.

The mention of stone crabs reminded me of our courtship, which had been of the whirlwind variety. I first met him on the campus of Frémont State in Durango when I was doing investigations for the Durango PD and one of his professors got killed by a drug dealer's goons—not that the professor was innocent in the whole thing, mind you. I noticed electricity between us right away. Then, after I shot one of said goons and got put on routine administrative leave, I jumped on a plane for Miami to meet up with an old girlfriend.

She, though, had obtained a personality transplant from somewhere, and we just didn't connect. So I was trying to figure out what to do all by myself on Key Biscayne, sitting on the beach-side deck of my motel's bar, when who should turn up but Hal. I guess we'd call it "stalking" now, but he was so sweet and careful about not coming on strong that it was irresistible. We wound up spending a long weekend together exploring far south Florida and the upper Keys, and he introduced me to Florida stone crabs, a culinary experience I've never forgotten.

Because they're not available in Colorado, at least not in Durango or Winter Park, I hadn't had them for a couple of years, but the memory made my mouth water when he mentioned them.

The only bad thing I can say about Truluck's is that the black ceramic tile in the entry and bar made me feel like those kittens you see on a glass table, scared of not being able to see the floor that they can feel with their feet. But the feeling vanished when our waiter, a very helpful fellow named Ron, brought the bottle of Puligny-Montrachet that Hal, with his advice, ordered for me.

“Oh!” I said when I tasted it. “This will work. Yum. Tell me, Ron. Is it gauche to have a stone crab appetizer before a stone crab dinner?”

He looked surprised in a reserved sort of way and then smiled. “Well, ma’am, not in my book. You could make it a tasting that way, by trying a couple of large ones for your appetizer and a big plate of mediums for dinner. See how they compare. Or...hmmm...maybe I’d do it the other way around. Mediums first.”

I decided on that other way around, and asked for the green salad between the two. Hal ordered the stone crab dinner as well, but chose the barbeque shrimp for his appetizer and a Caesar salad.

“So,” he said, as I was digging in to a knuckle on my first medium crab claw, “it seems as if we’ve decided to stick around and help these poor folks out. Either that or you’ve got a lot of new polo shirts to cart home.”

“It’s OK with my boss, and it sounded to me as if no one is going to give you trouble about it. And I checked. Shorty wasn’t jiving us. There’s a snowstorm back home.” I popped a big bite into my mouth. “Mmm. Yes! This is just right. How’s the shrimp?”

“Tasty, good sauce.” Hal swallowed. “I guess I worry about how long I might be stuck in the acting PI role. Shorty said he’d get right to finding someone more permanent, but it could still take months.”

I eased the meat off a claw with the little fork and dipped it in the mustard sauce. “I thought of that, too. I mean, there’s no way to know how long this investigation will take.”

He nodded. “Yeah, we could both be here for a while. Of course, that’s not so bad until about June, though, weather-wise. But hurricane season starts then. And at least your job as liaison will be easier with me at Pompano State.”

“Yup. And I bet you can help with the investigation, too, by telling me all of the gossip you hear. All that stuff with the satellite pictures this morning was pretty telling, but we still don’t know of a solid motive. For all we know, Skip Nicholls was sleeping with the wrong person’s wife, or something like that.” I shrugged.

“Now there’s a possibility. I was at a party last Friday, before you arrived, and he was hitting on anything in a skirt.”

“Gee, I’m sorry I missed that,” I said, just as our salads arrived.

\* \* \*

We were back at home, as I resolved to force myself to think of it, sitting on the sea-side balcony listening to what surf there was splashing on the beach, when I remembered my phone. As new as it was, I kept forgetting it because it didn’t have the little belt holster that I was used to from my previous one, one of those oh-so-passé, and dumb, flip phones. So I set the last of the Puligny on the table—Ron had been a gem and helped me to smuggle the remainder of the bottle out of the restaurant—and went to find it. And, surprise, it had voice mail waiting for me. That meant I had to fumble around and find the instruction manual that I’d carefully packed somewhere just for something like this, and then figure out how to get to the message.

It actually turned out to be fairly easy, and I discovered that the message was from an area code 305 number. Hal told me that was Miami.

“Ms. Trieri, this is Garrett Kraus calling, CGIS. I don’t know if you’ve made a decision about joining our investigation, but I really hope you do. By the way, your observation that the bikini top was cut with a knife has been verified. Anyway, if you do want to work with us, and I hope you do—oh

sorry, I said that already—please call me first thing Thursday morning. I think your cell phone will have the number, but here it is anyway.” And he rattled off a phone number, then continued. “We try to keep our bureaucracy to a minimum, but there still is some, so you’ll need to come down to the Miami Sector headquarters to get signed on and so forth. I’ll have the paperwork all ready, but we really do need you here in person. Hopefully, that’ll be your only trip down here. And if we can get this done in the morning, I’d like to go find that boat we saw, the *Reel-Thing*, and have a little chat with its owner. I’m up and going by six in the morning, and I’d sure like to hear from you. Take care.”

That’s why, after an early breakfast together, Hal and I came to be headed south on I-95 Thursday morning a bit after seven. I was going to drop him off at the airport so he could pick up the rental car he’d reserved—I got to keep the Mustang GT convertible he’d originally rented—and then continue on down to Miami. One of my law-enforcement resource sites on the internet told us that the Coast Guard station there was on a little island just off MacArthur Causeway, and that the main gate opened to qualified visitors at eight. I’d called Garrett and he assured me that I would be expected.

“So, I really appreciate having the use of this car, Hal. This GPS gizmo is going to help immensely. What did you reserve for yourself, anyway?”

“Well, I did give it some careful thought. I found a luxury rental outfit, and, you know, I’ve always wanted to drive a Porsche. But I doubt that Shorty is going to be paying me enough to justify that. Another thing that seems like a good idea is a pickup truck, so you could use it when you need it for all the dead bodies that you’ll probably turn up.” He grinned, and I reached over and slapped his thigh. “But, well, the parking in that building of ours is pretty limited, and the spaces are too small. So I opted for a little zippy car. I’ve got to negotiate when I get there, you know, find out just what they have available and all. It’s early in the day, so maybe I’ll have choices. And I’m going to extend the rental window on this car as well. We’re covered. But don’t leave the top down too much. You’ll get sunburned.”

The first thing I did after he walked into the terminal was to put the top down.

Because Hal had been in town for a while, he’d already purchased a SunPass, one of those radio-frequency identification tags that you charge to a credit card and use for toll roads and such. It came in quite handy after I dropped Hal off, because there was an express lane on I-95 down through the north end of Miami that let me cruise past the worst of the morning congestion. It was what got me to Terminal Island, a very nautical-looking facility, just a bit before 8. As a bonus, the guard let me in a few minutes early.

I found a visitor parking spot next to a good-sized ship of some kind with that familiar red stripe, and I was staring at it when I heard Garrett’s voice behind me.

“It’s something, isn’t? 210 feet. Our Reliance-Class cutter. Bad guys beware.”

I turned to shake hands with him and found him wearing civilian clothes instead of the uniform he’d worn the day before, jeans and running shoes, with a Hawaiian shirt under a windbreaker.

“I’m thinking it has a significant intimidation factor in addition to its real capabilities,” I said.

He laughed. “They probably didn’t design it that way, but, yeah. And there’s a high-speed pursuit vessel on the stern for the whack-jobs who think that they can out run us. Anyway, glad you found us. But speaking of intimidation, I didn’t think to ask if you were carrying.”

“I’m here on vacation, so I decided to skip the paperwork hassle of bringing anything.”

“That’s good, the not carrying part, because until you’re official it could be problematic here on the base.” His amusement took on a philosophical edge. “But if you didn’t bring anything with you, we’ll

have to get you something. And, well, this *is* Miami. We can probably find you whatever you want. Need a full-automatic Uzi, by chance?"

"Mmm. Awfully hard to conceal, I'd think. How about something compact that I can put in the small of my back?"

"You can do that? We've got a rule against it."

"So do we. Something about possible injury if you fall on it. But the rule is in Colorado and I'm here." I put a conspiratorial smirk into my smile.

"Well, everyone would sure feel better if you used a shoulder holster. That blazer looks big enough. Can you manage that?"

"Everyone but me, probably. You guys just don't have the right anatomy to appreciate how uncomfortable they can be. But maybe I can get things adjusted to make it work."

He took me into the main building, and a several hour processing process began. By the time I was finished, though, I was official, beyond official, actually, because I was authorized to ignore the base Captain's orders if I needed to, equipped with a really shiny gold-plated shield, and armed with their standard Sig-Sauer 229, a nicely compact .40 caliber automatic with a 12-round magazine that would have fit comfortably on my back if they would have let me wear it that way. As it was, it took quite a bit of fiddling to get the shoulder holster to work, and even then I wasn't going to win any quick-draw contests.

I knew that Hal liked them, and I did, too, for that matter. But sometimes they're just in the way.

\* \* \*

The last stop was back in the main building's lobby, where I found Garrett waiting in a side chair, with a ball cap on his lap. He stood up and handed it my way, and it occurred to me that this just might be fun—tooling around South Florida in a Mustang convertible with a 30-something guy who bore a resemblance to Tom Selleck in his Hawaii days. I tried the cap on, adjusted the size a bit, and found I liked it.

He cocked his head sideways and smiled. "Perfect! Now you've got the CGIS look. Except you're going to have to learn to scowl."

I felt my knees go a little weak—it was the killer Tom Selleck smile that he had. But that happy thought couldn't hide the rumbling in my stomach.

"So, you said something about finding that other boat, the *Reel-Thing*, but I need some lunch first."

"Me, too, actually. Our people found out that the *Reel-Thing* docks at a marina just off Southeast 17<sup>th</sup> Street in Fort Lauderdale, Cove 17 Marina, it's called—there's a new Westin Hotel next door to it. And all sorts of restaurants around that area. Unless you're so hungry that you want to try the mess on the base here." He grinned. "To paraphrase a famous Hollywood guy, 'Just how hungry do you feel?'"

I considered it. "I'm hungry, and I'm sure that the mess has perfectly fine food. But let's go see what they have at this marina. We can scope the place out while we eat."

He told me that he lived in North Miami, so, rather than having to come all the way back south to the base, we took two cars up to Fort Lauderdale. With the GPS, I had no trouble at all locating the Cove 17 complex, and I found him next door at the Westin's outside lounge, at a table with a metal briefcase on it. He'd ordered a smoked fish appetizer, some kind of fish salad with crackers, and I stuffed a big bite into my mouth almost as I sat down.

“Mmm. Yum. I’m starving.” I looked over at the marina, which had a new look to it. “Not a bad place at all to have your boat docked, is it?”

“Probably pretty expensive, but they undoubtedly pick up charters from the hotel’s guests. I’m told that the marina there has been around a long time, sort of just existing, but when they built this Westin next door to it, business picked up dramatically. And I’m thinking their charter rates are what you’d charge Westin customers.” He waved at a server, and we ordered lunch.

“The *Reel-Thing* is over there on the second dock, almost all the way out.” He waved toward the left side of the marina. “We’ve had it under surveillance since this morning. Oh, and we found out that the other two boats in those satellite pictures aren’t worth worrying about. We’re all in on the *Reel-Thing*.”

Even though I was hungry, I stuck with a salad for lunch—a salad with shrimp on it, though—so I’d be ready for action if need be. Garrett ordered a fried grouper sandwich but got a side of fruit instead of fries.

“Jimmy—my partner—he’s been after me about eating better, and this way I can tell him I had fruit for lunch.” His grin was impish.

It took a minute for the comment to sink in. Sure, he probably had a regular CGIS partner. But would that person be concerned about Garrett’s diet?

Then I realized how lucky I was. I could flirt with a guy who reminded me of a movie star with total impunity. This, I thought, *was* going to be fun.

After lunch, we stopped by the dock-master’s office.

Garrett flashed his shield. “CGIS, federal agents. We’re going to take a stroll around the docks.”

The response was less than cordial. “Oh? Got a warrant do you?”

“Well, the way I look at it, you’ve got two choices.” Garrett smiled that winning smile again. “Either we get to walk around out there to our hearts’ content, or I make a phone call and a team of Coast Guardsmen shows up and sets to work on a detailed inspection of everything here, boats, docks, pilings, office paperwork, everything. And, of course, they’ll be telling boat owners about how you didn’t cooperate. Want me to make the call?”

He had pulled his cell phone from his shirt pocket by then, and the dock-master quickly got religion, not that he was happy about it.

“Let’s walk around a bit before we try that second dock there. Establish a casual presence, look at the boat from different angles, you know?” Garrett was doing his best tourist impression, so I started rubbernecking as well.

After a suitable interval of wandering, we strolled out the second dock, and presently came to a sign advertising the *Reel-Thing* as available for charter at \$1,000 for a half day and \$1,750 for a full day, for up to six people. But the boat was deserted and closed up, and the gangplank was sitting on the aft deck. There was a rubber boat on the cabin roof hooked to two little crane-like gadgets, which I’ve since learned are called davits.

Garrett, with the metal briefcase in his hand, hopped on board and walked over to rap on the hatch to the cabin.

When nothing happened, he came back to where I was standing on the finger pier.

“The thing is, if you were going to fire a missile from one boat at another over any real distance, you’d probably want to get as high as you could, right? That would help your missile’s infrared system

to lock on more effectively to the target, right?” His question was probably rhetorical, but I couldn’t help but lean back and look up at the big metal structure with the platform at the top. “It’s called a ‘tuna tower,’ and it’s helpful for spotting fish. And if the missile, or RPG or whatever, that took out the *Stream-Tracker* originated from this boat, chances are that it was from up there, right?”

I nodded, still looking up at that tower. “Makes sense to me. I’ll cover you from down here, if you want to go up. What’s in that briefcase?”

“A quick-and-dirty analysis kit, like the ones that TSA uses in airports, but better. More sensitive.”

“Huh?” I was beginning to feel that my relatively sheltered existence in the Colorado mountains was a little too sheltered.

“Haven’t you ever been at an airport where some TSA person swabs down someone’s luggage and then sticks the pad into a gadget? That does a quick-and-dirty analysis for explosive signatures. If they find it on your luggage, well, get ready for a thorough search, the rubber glove kind. This thing,” he wagged the briefcase, “is a better version of that. And, yeah, keep an eye peeled.”

He began to make his way up the ladder to the platform at the top of the tuna tower, and I tried not to watch only him.

Even so, I missed the scruffy fellow with the beard coming down the dock and didn’t see him making the phone call.

\* \* \*

## 1.4

Garrett was busily taking swab samples from various spots on the *Reel-Thing*’s tuna tower when a golf cart carrying three uniformed security guards, all wearing sidearms, rolled down the dock. It was then that I noticed the scruffy, bearded guy off to the side, sitting on a dock box.

One of the guards, a large fellow whose uniform was a couple of sizes too small, walked toward me down the finger pier, his right hand on the grip of his automatic. Before he could say anything, I decided to try to defuse the situation.

I turned on my Level 2 voice, keeping Level 3 in reserve just in case. “Halt! We’re federal agents, CGIS. Take your hand away from your weapon, now!”

That was enough to bring him up short, and he was smart enough move his hand to a less threatening position. I backed up a few steps so that I could see his compatriots without looking away from him.

“I’m going to take my ID out of my pocket, so don’t get nervous.” I retrieved the little wallet with my new shield and ID card from my left hip pocket, and held it up with the shield showing. “We need to talk with the owner of this boat, or, barring that, with the captain.”

The guard had been squinting at my shield but finally seemed to be satisfied. He jerked a thumb over his shoulder. “That’s him with the beard, up there on the dock. He called us just now.”

“Thank you, Mr., ah, Clumley” I’d discovered his little name badge. “I think we can handle things from here.”

After just enough hesitation to make me wonder if he was going to take the hint, he did, turning back to the others. “Let’s go, guys. They’re for real, Rafe.”

“Rafe” turned out to be Rafe Wellingworth, skipper of the *Reel-Thing*. He was clearly conflicted about us—we weren’t the threat he’d first thought, but he was still nervous. The fact that he had not bolted when I identified myself was, I thought, a point in his favor, so I tried to evoke a casual demeanor as I approached him. We introduced ourselves and decided that a conversation in the *Reel-Thing*’s cabin would be a good idea.

He walked down the finger pier, jumped on board, and put out the gangplank for me. I couldn’t tell if he was just being polite or if I looked like that much of a landlubber. Of course, I *was* a landlubber all the way, but I was hoping I didn’t look it. I mean, I had those Topsiders, didn’t I?

Garrett, whom I’d noticed making a phone call, came down the ladder from the tuna tower about the time that Rafe unlocked the cabin. He rolled his eyes and nodded while Rafe was looking the other way.

We all got settled, and Rafe asked if we’d like some water, which he produced from a little refrigerator. The air conditioning felt good.

“Now, then, agents. What can I do for you? And why, pray tell, were you up there on my tuna tower?” He had looked past me and was now staring at Garrett.

Garrett blinked a few times. “You mean you really have no idea?”

“How would I know? You show up and start climbing all over my boat. What’s going on?”

“Well, you did make that call about an explosion on Tuesday. And talked to our crewmembers during the search, right?”

“Don’t know what you’re talking about. I was here on shore on Tuesday, doing errands.”

Garrett looked surprised. “But the boat was out, right?”

“Right, yeah. It was a bareboat afternoon charter. An Asian guy and a some others that I really didn’t meet. They must have been the ones that your crew talked with. I mean, I can probably find several people who will remember seeing me Tuesday afternoon, those guards, in fact. I had a long conversation with Jim Clumley about what the Dolphins need to do in the draft this spring, mid-day some time. He’ll remember, I’m sure.”

Garrett was astonished, but I didn’t know to be. “Bareboat? This? Really?”

Rafe was embarrassed. “Yeah, well...see, the thing is, it’s been slow this spring. And this guy offered me more than five times the usual rate, six grand altogether, cash, for the afternoon and talked a good line about his experience, how he used to own a Hatteras 60-footer and so on. He showed me the right documentation. And she came back in fine shape, even cleaned up. They were good customers. I hope they come back.”

“Well, I’m thinking you won’t see them again. What was the name on the documentation?”

He looked even more embarrassed. “Uh, well. John Smith.”

“An Asian guy with the name John Smith? Christ! What were you thinking?”

“I was thinking about how that six grand would help my balance sheet, that’s what. Times are tough.”

I could see that Garrett was trying to relax. “Have you done any cleaning since the boat came back on Tuesday?”

“Just the usual housekeeping, my stuff, trash and so on. What’s this about?” Rafe looked back and forth at the two of us.

“We’re going to need to have a forensics team examine your boat, Mr. Wellingworth—I already called them and they’re on the way. Because you’re here now, that probably means you don’t have a charter this afternoon, and that’s good. The team should be finished by this evening.” Garrett looked around the cabin. “If you don’t mind, I’ll take a little self-guided tour while Agent Trieri here gets descriptions of your Tuesday clients. We need as much information about them as you can remember, Mr. Wellingworth.”

Rafe could hardly object, but he obviously didn’t like it, so I treated him with kid gloves as I tried to coax all he knew about his Tuesday clients from him.

\* \* \*

Garrett and I waited until the forensics team arrived and got to work, and then we retired to the table where we’d had lunch. I discovered I was exhausted.

He looked at his watch. “Well, it’s too early for me to have anything but iced tea.”

The thought of a lemonade sounded good, so I ordered two, which perked me right up. I guess I’d been dehydrated. Even though the humidity was high enough to make the air feel sticky, the heat was enough to dry you out, it seems.

“In addition to the usual stuff, that team of ours will take better swab samples than I could, and maybe we can find a pattern. I found evidence of something, maybe the missile fuel, but you could argue that it got that from passing through an exhaust plume, or from the smoke of the explosion. But if that’s the case, the residue would be pretty uniform. If there’s a pattern, though, that’ll tell us what direction the thing was fired.” He shrugged. “Thing is, none of that’s any help without those mysterious clients. How’d he do with descriptions?”

“He talked to only one of them, but he says there were four altogether. The other three were fetching equipment from a van, he said, fishing gear, ice chests. He was surprised because normally all that comes with the boat. Anyway, the guy he talked to, the one with the documentation that said he was John Smith, he was Asian, tall, maybe five-eleven, and thin, around 175 or so. Short hair, but he had a ball cap on. No particular accent at all, so it kind of sounds as if he grew up in this country. But that’s hard to tell. And Rafe, not being Asian, wasn’t very good at specifics. He actually went so far as to say ‘they all look alike to me at some level’. He couldn’t tell me if the others were Asian, too.”

“Well, we’ll have to get a sketch artist in here to see if he can produce a likeness that Rafe can buy into. There’s a good computer program for that now.” Garrett leaned forward and played bongo drums with the table top. “So, an Asian guy named John Smith with all the right boating-safety paperwork shows up, puts down a big wad of cash, and gets a bareboat charter on which he takes three accomplices and some equipment, presumably including a heat-seeking missile. They blow up the *Stream-Tracker* sometime around 1530, then take over an hour to call it in.”

“Presumably, they were looking for survivors or other incriminating things during that hour. That explains the second satellite picture.”

“Right. And they didn’t find that bikini top. I wonder what they *did* find.”

“Probably whoever was wearing it. If she’d perished in the explosion, they wouldn’t have cut the thing off.”

He looked up with pain in his eyes. “Ugh. Right. We’re dealing with some real heavyweights here, aren’t we?”

“Indeed. Back to basics, I guess. We’ve got means and opportunity. Hmm. Wait one.” And I stared at the sky for a minute. “Hang on, I need to go ask Rafe something.”

I was back in five minutes. “The bareboat charter was a walk-in, no reservation. I was thinking about opportunity. Either those dudes in the *Reel-Thing* were just out there and the *Stream-Tracker* blundered into them, or they knew the *Stream-Tracker* would be where it was and were waiting for them. And if it’s the latter, then our perps have real-time access to the Pompano State float plans, or something like that. It’s not much, but it’s something.”

Garrett looked thoughtful. “Yeah, it is something, something maybe important. What if the perps took the *Reel-Thing* out for some other purpose, to deploy something at that place, and the *Stream-Tracker* just happened to be working there, too, and had to be disposed of?”

“The wrong-place-at-the-wrong-time theory. It’s certainly one possibility.” I nodded.

“But it also means that maybe there’s now something deployed out there, something we could find that would help us.”

“Well,” I was feeling a little better about our path forward, “that gives us two lines of inquiry, who has access to the float plans, and what’s out there, along with the sketch artist. Except, how do you find out what’s out there?”

“Ah, you landlubber you, that’s what modern survey ships are for.” He grinned.

“Hey, c’mon. I’ve got these boat shoes, don’t I? And this official Coast Guard cap. Geez.”

He wagged a finger at me. “Uh-huh, but boat shoes don’t make the sailor, m’dear. Thing is, survey ships are expensive. Hmm. Maybe I can figure out a way to persuade Captain Galliari that his people need some survey training or something.”

“Weren’t Skip Nicholls and the others doing oceanographic measurements out there? Current measurements, or something? If they’re interested in that particular patch of ocean, maybe they’ve done surveys already. I mean, it would have been before Tuesday, but the old surveys would establish a sort of baseline, right?” I wasn’t sure what I was trying to say, but it felt close.

“You’re right, they would, at least in terms of what kind of equipment we would want for a new survey. Knowing the character of the bottom is important for getting the right instruments to find out more about it.”

“What do you use, anyway? Some kind of sonar?” I knew about air searches and some sophisticated equipment that Hal had described once, but water was different.

“Yeah, some special sonar systems. And a magnetometer, a gadget that will detect metal, iron. And if we need to, an ROV.”

“ROV?”

“Remotely operated vehicle. A swimming robot on a power and control cable. They usually have tools like grappling claws and cutters. And cameras.”

“Oh. Sure. And I guess it could bring back whatever you find.”

He nodded. “Unless it’s too heavy, but then the ROV can take a line down and fasten it on so the thing can be hauled up.”

I smiled. “No doubt Captain Galliari’s people could use some ROV training, too.”

He laughed. "I'll have to check. So, at least we've got some next steps. I assume you can follow up on the float plan thing, right, and any existing surveys? And I'll see about a new survey and make sure we get a sketch artist to talk with Rafe Wellingworth. For now, I'm going to wait to talk with the forensics people, but that could take quite a while."

"I need to go up to that OceanLab and make sure my husband found himself a car, so I can get started on some stuff this afternoon. What about tomorrow?"

"Depends on forensics. If we have to impound the boat, we may need to be here. I'll call this evening and leave a message again. At worst, we can get together here or somewhere and use one car for the day, seems like."

"Good plan. Now, after all the lemonade and Rafe's bottle of water, I need to find the ladies room."

"See? What'd I say? Landlubber. It's a *head*. And I think they're over that way."

\* \* \*

Back at OceanLab, the main gate was open, so I went onto the site and found a parking place. But the receptionist was gone, so I was pretty much at loose ends, having been there only that once. Until, that is, I remembered my new cell phone.

I'd only made a couple of calls with it, so I had to learn that little trick all over again, but it helped me out by remembering Hal's number, which I didn't need it to. What I needed was for it to know numbers I didn't, but it wasn't that smart.

Because the phone was programmed with my old number, he recognized who was calling.

"Hi, sweets, how's your day?"

"Interesting. And, say, I'm an official Coastie now, cap, shield, and all. And a new handgun, even. Where are you?"

"In the office that Shorty is loaning me. Where are you?"

"In the main lobby, I think."

"Oh. Here. Well, sit tight and I'll come find you."

Two minutes later, we rewarded each other with a big hug and then, because no one was around, a big smooch. Hal guided back me to his loaner office, which even had an extra chair for guests. I settled in with a sigh.

"You know those winter days at home, the weekends where the highway is bumper-to-bumper with people trying to get to the ski area?"

He looked puzzled. "Sure. Why?"

"Well, it's just like that here, except that there's five lanes each way and everyone's going about 80. It's nuts." I snuggled my way deeper into the chair and felt some tension evaporating. The day hadn't really been that stressful, but I knew that working with a new partner always had its subtle challenges.

"That's what's so nice about our little corner of the world out there. Nuts is the exception rather than the rule." He smiled. "Anyway, I hope you made as much progress on your problem as I did on mine."

"Well, we did make some, and I've got some official liaisoning to do as well."

“Let’s get at it, then. It’s only 4:30. Whatcha got? No, wait. You said before, on the phone, that you’re an official Coastie now. I’ve gotta say this. I can’t help but think that ‘Coastie’ isn’t really the right thing to call people in the Coast Guard. I’ve probably used it myself, but it just sounds, well, demeaning, somehow.”

I had to smile. “I got a little lecture about that today, during my all-morning sign-up process. There seem to be two schools of thought. There’s an old school that hates it, fights against it, and gets their blood pressure up about it. A lot of those people are also the ones who think that the term ‘sailor’ should be reserved for the Coast Guard because the Coast Guard has a real sailing ship that they use for training purposes. The Navy doesn’t, and so Navy personnel aren’t really ‘sailors,’ although it’s not clear what they are. Most of the alternatives I heard aren’t fit for family consumption. And the other school is the ‘go with the flow’ school. They recognize that pushing back on this usage is just futile, and they’re trying to embrace it and make it respectable. I’ve heard you say that being a ‘weather weenie’ is something that you’re proud of. Well, I’m going to be proud of being a ‘Coastie’. End of lecture.”

He blinked a couple of times and let his breath out. “Right. OK. Well, then. Let’s see. You’re my Coastie and I love you. So. Whatcha got?”

I jumped up and sort of dove over his desk to give him another big smooch, messing up all of his nice, tidy piles of paper in the process. Then I sat back down, composed myself, and continued as if nothing had happened, while he tried to get the papers reorganized.

“We found out a variety of things and those have led to some new requests for information.” I proceeded to give him a sketch of what Garrett and I had discovered and asked about the float plans and existing surveys. “Oh. And just so you’ll know and never worry yourself, Garrett, who reminds me of Tom Selleck but seems smarter, is probably gay. So if it seems like I’m flirting with him, I’m really not.”

“Um. OK. Sometimes, dear, there’s such a thing as too much information. But I really do appreciate the worry.” His smile told me what I needed to know. “I’ll have to work on the float plan stuff and the old survey information tomorrow, because I don’t know whom to ask and because people seem to have been drifting away starting a little while ago. Like that receptionist who wasn’t there in the front lobby for you.

“On the other hand, I did find out all sorts of interesting things today. Let’s see.” He looked up at the ceiling.

“First, and it really was first, first thing this morning just after Shorty installed me in here, I met Dr. Pete Chu, who’s the director of this facility, and whose visit with me verified what Shorty said, that he, Pete, really, really wants to be the new principal investigator of this project, in fact, the whole program, all the bananas. He was quite polite, obsequious, almost. But he isn’t a happy camper with me here.”

“How tall is he? Just curious.”

“Um, maybe a couple of inches shorter than I am, five-eleven or so. Not at all heavy.”

“Short hair?” I hadn’t told Hal about the interview with Rafe Wellingworth.

“Yeah, I guess. What’s this about?”

“Ah, well, nothing much. I like to be able to identify people in case I run into them. You know how it is, I bump into someone and they know who I am but I don’t have a clue. So if I run into a sort of tall Asian-looking guy around here with short hair, I’ll be ready to think of him as Pete Chu.” My conscience was whapping at me mercilessly, but I ignored it.

“Anyway, I think I sucked up to him enough to make him feel less threatened. So. Second. I found out a lot about where the *Stream-Tracker* was, what it was supposed to be doing there, and why. And there’s additional information that allows us to track its position, and its pieces’ position, for the time period of those satellite pictures we saw yesterday and more. One helpful thing about this whole business is that Pompano State has a remarkable array of equipment watching that particular piece of ocean. About the only thing we’re not going to know is who and why—which, of course, are the payoff questions.”

“OK, well, now it’s my turn. Whatcha got?”

“We know where the *Stream-Tracker* was because the float plan says where, and because the boat had a sophisticated station keeping ability. You go somewhere that you want to be, push a button, and a GPS system that’s linked to an autopilot keeps you there. This, I understand, is something that’s pretty common for big ships with the right kinds of propulsion systems, but it’s not so common for boats the size of the *Stream-Tracker*. Where they said they’d be is where they were on that first satellite picture we saw. That position, it turns out, is a couple hundred meters upstream—south—of a bottom-mounted ADCP that they’ve got out there.”

“A-D-what?”

“Acoustic Doppler current profiler. It’s a gadget that sits near the bottom, looks up, and uses sonar technology to measure the current as a function of depth in the water column above it. Skip was a bit upstream with another instrument with different capabilities, measuring the current on smaller spatial scales. The idea was to combine the two datasets and figure out what might happen if you had an ocean current turbine system there getting turned by all that water with its turbulence and so on.”

He was on a roll, and I knew I had to pace him or get left behind.

“So this ADHD thingy sits there for a long time and gets the big currents, and Skip’s instrument, the one he was out there with, gets the small ones?”

“ADCP, right. And because both the big currents and the small ones are what a turbine would feel all at the same time, it’s important to know both, so you can engineer the thing properly.” He paused to take a breath.

“Now, there’s another thing. OceanLab here has some radar systems on the beach that measure the surface current. There are radar signals they shoot out over the ocean that are scattered by waves on the surface; the scattered signals are received by antennas. Some of the waves are moving on their own, some pretty much drift with the current. So you can do complicated math on the radar signal and figure out the surface current. That means we know what the current was doing the whole time, at least at the surface. And because everything was floating with the surface current during and after the time of those two satellite pictures, we can figure out exactly where they were. After the Coast Guard boat arrived, of course, we know their position from their log, and that’s a way to verify the other data.”

“What about the sub-surface currents?”

“The ADCP is measuring those, and its dataset is transmitted here by an undersea optical fiber cable. So we know the vertical structure of the current at that location—and we’re pretty sure that that structure doesn’t change very much over the time interval we’re concerned with, a few hours.”

I stared at him while I was thinking this over. “So if someone dropped something off a boat and it sank to the bottom, you’d know the currents that it was falling through?”

“We would. And I think I see where you’re going: you want to know where it would end up on the bottom. To calculate that, though, would require knowledge of what the object was, its size and weight, with some information about its shape, too.”

“But you could do estimates and provide, um, circles or ellipses on the bottom where things with poorly known weights and sizes would wind up, right?”

“Yeah, I suppose so.” He looked surprised, and I knew he was surprised that I’d thought of that. “What are you thinking about?”

“Well, we don’t know why the *Reel-Thing* was there. Maybe it was there to deploy something. It would help to know where that something might wind up on the bottom.” I shrugged. “So, like I said. Garrett’s thinking about a survey—which is why we’re interested in old surveys, so they can provide guidance.”

“Hmm. Right. I see what you mean. Well, I’ll get on that tomorrow.”

“Y’know? I’m liking this liaison job. We make a good team.”

“We do. And it’s a good thing we’ve both got jobs now, because it looks like we’re going to be eating out a lot, or eating deli food, given how busy we are. How about I stop at Fresh Market and get something on the way home?”

\* \* \*

## 1.5

At eight Friday morning, I found Garrett under a palm tree on the Westin patio next to the marina, at work on a very large cup of something Starbucks, reading the *Miami Herald*. The outdoor lounge where we’d eaten lunch the day before wasn’t open, but I’d found the Starbucks too, so I joined him to work on my own, smaller, concoction.

He looked up as I walked toward him. “Good morning, Annette. Y’know, I sure do like mornings in this part of the world, especially places like this where they water things overnight. Everything’s so fresh, and it’s still cool, at least sort of.”

I took a deep breath, and the freshly watered landscaping *did* smell good. “It is, isn’t it? Did you grow up down here?”

“Ohio. A small town about dead center. Summer mornings there were kind of like this—maybe that’s why I like them here.”

“I grew up in Chicago, and I can see the allure of this place for midwesterners. Winter there sucks.” I smiled. “Did we make the paper today?”

“Haven’t found anything. We did yesterday, with much the same story that was in the Fort Lauderdale paper on Wednesday. But today the *Herald* is all abuzz about a new political scandal they’ve uncovered in the county commission, as if that’s new news. And the Fort Lauderdale paper has decided that prom dresses are what’s important to report on. Seems that prices are up again, so second-hand ones at consignment stores are the new big thing.” He smiled. “Y’know? I never could find a prom dress that really fit right.”

I almost mentioned my own prom experience, but then his comment soaked in and I just laughed and changed the subject.

“Well, if the papers are losing interest in us, that’s just fine by me.” I dragged a chair over to where he was and sat. “So, I don’t know if you do this, but now and then I wake up in the middle of the night

because I've thought of something I should have thought of before. It happened last night. And what I thought of is this: Doesn't the Coast Guard, and DEA and every other agency, still seize boats used for smuggling operations? And if so, why in the world would Rafe Wellingworth, or anyone, send their boat on a bareboat charter? Seems like an incredible risk."

"Right. I thought of that last evening, too, when I was talking things over with the forensics team. Today, I'm thinking that we owe Mr. Wellingworth a bit more attention."

"Did they find anything interesting? The forensics team, I mean?"

"Some indications of more residue on the port side of the tuna tower framework, the outside of it, suggesting that, if there was a missile, it was fired off to port. A strange dearth of fingerprints, as if someone had polished a lot of the obvious places. And, in less obvious places, lots of Rafe's prints plus those of someone else, whom the fingerprint database computers have kindly identified as one Gustav Moroney. Goes by Gus, I'd imagine."

It took me a minute to catch up, as I'd been brought up short by his use of "dearth," not a word I'd have expected a CGSI agent to use in conversation. Maybe he writes, or something, I thought.

"Um, why does this Gus person have prints in the computer?"

"Well, they weren't in the criminal database, it was the military one that found them. He was a Marine. We have some resources that civilian law enforcement doesn't usually get to use." He grinned. "Anyway, we'll need to have another chat with our buddy Rafe. Maybe we can practice our good-cop / bad-cop routine."

"Any thoughts on an undersea survey? Hal's taken on the role of acting principal investigator on that ocean energy project at Pompano State, so he's getting access to all sorts of information that could be helpful." I filled him in on what Hal had told me about tracking the position of things from the oceanographic data they had.

"Good! That's important, because it'll help narrow down the survey area. Surveys cost a boatload of money, no pun intended, and the cost goes directly with the area." He was nodding. "I had a conversation with Captain Galliari late yesterday, so he's aware that we may need to do one."

"Are we going to impound Rafe's boat?" I surprised myself by using the "we." Strange how easy it was to slip into the CGIS role.

"Mmm, it would be a stretch at this point. Although I guess it'll depend on how our next conversation with him goes. I want to get the sketch artist finished before we put the heat on, though. If he cooperates, we'll get better information about our mystery charter client."

"Meantime, I guess we should corroborate his alibi. Do you suppose that security guard is around?" I glanced around the patio, not really expecting to find him. I didn't.

"Let's go talk to the dock-master. Maybe he'll be less surly than yesterday."

But he wasn't. "You people again? Why don't you go find some drug smugglers to arrest, or something. You'll upset our clientele, hanging around here."

I stitched my most charming smile on, or at least that's what I thought it was, and peered at his little name badge. "Well, Mr., ah, Wiggins, that's certainly one possibility, arresting drug smugglers. Right here, even, at Cove 17. Of course, we might have to call in one of our cutters to hang out here to prevent our quarry from escaping. And I'm sure that the locals would want in on the fun as well, you know, the Fort Lauderdale police, the county sheriff, the DEA."

"Ahh, get out of my face, lady."

“I will, and you can make it happen. We need to talk with that nice Mr. Clumley, the security guard whom we met yesterday. How can we find him?”

He looked daggers at me, but picked up the phone. “Hello? Wiggins here. Is Clumley over there? Yeah? OK, could you have him come to my office? These damned Coast Guard cops are here and want to talk to him again. I sure hope he’s not got his ass in any trouble.”

Garrett, I could see, was coming to a slow boil, so I steered him outside. “I’m not sure the good Mr. Wiggins needs to hear this conversation,” was my excuse.

Presently, the security guard rolled up in his golf cart. I couldn’t help but think that he’d fit into his uniform more comfortably if he’d walk instead of riding.

Garrett was still fuming, so I took the lead. “Mr. Clumley, thanks for meeting with us. We need to talk with you about Tuesday afternoon. I’m sorry we didn’t think to do this yesterday, but we didn’t know we needed to.”

He nodded and tried not to show too much curiosity.

“Specifically, we’d like you to tell us about conversations you had with boat-owners here in the marina on Tuesday afternoon. Can you do that?”

“I’ll try, but it’ll help if you’ll tell me what this is about.”

Garrett, who was standing off to the side where I could see him but Clumley couldn’t, winked at me and jumped in. “It’s all pretty hush-hush, but I can say it’s a national security matter involving one of the boats here. Uh, I can tell you that yesterday we were only using the *Reel-Thing* as a decoy, though.”

“National security, huh? Don’t tell me that we’ve got some of them damn’ raghead terrorists around here.”

“OK, I won’t tell you that. But what can you tell us about your conversations on Tuesday afternoon here at the marina?”

“Well, let’s see. There was Mr...no, wait. That was Monday. Tuesday, you want. Hmm. Rafe. I talked for quite a while with Rafe Wellingworth. About the Dolphins. He thinks they need to shore up their defensive line in the draft next month. I sure would like to see them find a real quarterback, though.”

I nodded. “Sounds like the conversations I hear in the hardware store out in Colorado. Same sentiments about the Broncos. Was this conversation down on the dock by the *Reel-Thing*?”

“No, it was over at that table there.” He pointed down the quay.

“Ah. Where was the *Reel-Thing*? I thought a good skipper never let his boat go anywhere without him.” I smiled and tried to make it a little joke.

“Yeah, well, Rafe had a long hard weekend. Clients from hell, he said. He sent Gus out with the Tuesday group. They were headed out just as I got here.”

\* \* \*

After we had sent Mr. Clumley on his way, with profuse thanks and hints about how he could be most helpful to our “national security” investigation by paying close attention to any suspicious activity, Garrett and I retired to the chairs we’d used for morning coffee earlier. I thought our new information over while he fetched refills from the Starbucks in the hotel lobby, a decaf for me.

“That sheds a bit of light on things, doesn’t it?” I sipped at my coffee as he settled in.

“It explains what we talked about earlier, the risk of a real bareboat charter. But it also means that we can’t trust our good friend Rafe worth a plug nickel.” Garrett shook his head sadly. “I guess we’re going to have to lean on him.”

“We can just ask him who Gus is. We’ve got those prints.”

He agreed. “Good plan. That’ll give him a chance to volunteer more information and redeem himself. A little.”

It was getting on toward nine, and we’d seen the *Reel-Thing* in its slip from the dockmaster’s office. We decided to see if its skipper was around. He wasn’t on board, so we went back to our chairs under the palm tree to await the sketch artist.

He showed up about fifteen minutes later, just as we noticed Rafe walking down the dock to his boat. We hurried after him.

“Good morning, Mr. Wellingworth. I guess things *are* slow if you’re here instead of out there.”

“Well, good morning to ya both. Yeah, things are slow. To what do I owe another visit from the Coast Guard’s finest?”

“This is Randy Lin, our sketch artist, Mr. Wellingworth. We’d like you to work with him on a mock-up of that client of yours from Tuesday. It’s all computerized now, so you’ll find it easy.”

Rafe looked skeptical, but we set him to work and retired to our chairs on the patio.

An hour later, Randy walked up and showed us a computer sketch. He wasn’t optimistic. “I don’t know if this is going to help—it’s pretty generic. I think I did manage to get him to agree that the person was of a Chinese background, as distinct from Korean or Japanese, though. And I talked to him a lot about the accent business. He said he didn’t hear any hints of a Chinese accent, but maybe there was a bit of Spanish there. Of course, there’s so much Spanish spoken around here that he may have just assumed it or something. Anyway, good luck with this. Call me if you need me.”

As we headed back down the dock to the *Reel-Thing*, I decided I’d be the good cop, and I was curious to see if Garrett would pick up on being the bad one.

Rafe was fiddling with something at the dock box by his boat.

“Thanks for your help with that sketch, Mr. Wellingworth. I’m sure it will be a big help to us.”

Garrett spoke up. “So, we need to talk some more. Who’s Gus Maroney?”

Rafe looked surprised. “Uh, Gus who?”

“Wellingworth, you’ll be better off in the long run if you don’t give us trouble. As you well know, I’m asking about the Gus Maroney whose fingerprints are all over your boat, including lots in places where a client would never leave prints.” The menace in Garrett’s voice told me that he had indeed fallen into the bad cop role.

Rafe paused as if he were trying to decide whether to give innocence one more try, but then he caved. “Oh, yeah, that Gus. He’s my First Mate.”

It was my turn. “Ah, your First Mate. Well, obviously we need to talk with him. Where can we find him.”

“I’d like to know, too. Haven’t seen him since Tuesday. Must be off on a drunk somewhere. He’s like that sometimes.”

Garrett jumped back in. “What time Tuesday did you see him last?”

“Hmm, ah, well...”

“Mr. Wellingworth, we talked with the security guard, Mr. Clumley.” I put resignation and a bit of sadness into my voice.

Obviously glad to have the subject changed, Rafe perked up. “Yeah? And he told you I was here, didn’t he?”

“Among other things, yes. Mr. Wellingworth. Rafe. Is there anything you forgot to tell us about Tuesday?”

“Well, sure, I forgot to tell you about Gus, I guess.”

Garrett walked in close, getting in Rafe’s personal space. “And you still haven’t told us where and when you saw him last, have you? What are you trying to hide, Wellingworth?”

“I...I told you I haven’t seen Gus since Tuesday, but I don’t remember when I saw him on Tuesday.”

“Clumley does.” Garrett’s voice was perfectly flat.

“Well, then... Well, ask him. Why don’t you leave me alone? I didn’t do anything. I was here all afternoon, you said that Clumley verified that.”

His bullheadedness was beginning to annoy even me, the good cop. “One thing we can’t quite figure out, Mr. Wellingworth, is why you’d send this lovely boat, which is clearly worth a lot of money, out on a bareboat charter. The DEA and others still confiscate boats, don’t they? Why would you take that risk for a mere six thousand dollars?”

“Hey, maybe six G’s isn’t much to you, lady, but I had bills to pay. And I didn’t have any reason to think those guys were involved in anything illegal. They just wanted to go off fishing by themselves, is all.”

“C’mon, Wellingworth,” Garrett was practically snarling, “Don’t give us that crap. You’d never trust people you don’t know with that boat. It’s worth at least a hundred times what they paid you.”

“What can I say? They were persuasive. I needed the cash.”

I deliberately turned away from Rafe to talk directly to Garrett. “I’m concerned that he may be the next target, Garrett. And we can’t afford to lose him.”

Garrett looked appropriately concerned. “I thought of that, too. Protective custody, maybe?”

“Good idea. And I guess we’ll have to impound the boat.”

“Whoa, whoa, hold on there.” Unlike Garrett’s superficial concern, Rafe’s was real. “What’s this about? What do you mean that I might be the next target? And what are you talking about, impound my boat?”

“Mr. Wellingworth, if you’re not going to cooperate, I’m afraid you’ll have to come with us. I suspect you should frisk him, Garrett, just to be official.”

Garrett’s eyes lit up, and he positively started to swish.

“Oh! Why yes! What a *wonderful* idea! And won’t that be just *so* much fun! I just *love* it when they assume the position,” he simpered.

Rafe looked alarmed and backed away. “Hold it! Hold it! Get away from me! I just remembered. Gus went with them. It was about noon when I saw him last.”

\* \* \*

“I have to say, Garrett, that was a brilliant tactic. I wasn’t thinking of it when I suggested frisking him, and it was brilliant.”

He laughed. “I’ve used it before a couple of times, and it invariably works like a charm. If only these yokels knew that the very idea of frisking them actually creeps me out.”

Rafe’s confessions had persuaded us not to take him into protective custody—at that point, if he were to become the next victim it wasn’t going to bother us that much anyway—and we decided not to impound his boat because we might well need his continued cooperation. If we managed to find an Asian guy who resembled that sketch, Rafe could be helpful in identification of a photograph or a line-up.

It wasn’t a lie, Rafe insisted, that he’d told us it was a bareboat charter, because that’s what he called it when he, the skipper, didn’t go along. That the First Mate, who also had a captain’s license, went along didn’t change that, nor did the fact that the rest of the world took “bareboat” to mean a charter with no crew at all. And Rafe insisted that it was true that he hadn’t seen Gus since he left on the boat early Tuesday afternoon. When Gus didn’t return on it, the clients had explained that he had asked to be let off at another marina on the way up the river to Cove 17, so they’d left him there. They were vague about which other marina, even though there were few, but the \$1,000 tip that they left with Rafe had quelled his curiosity.

Garrett and I suspected that poor Gus was sleeping with the fishes somewhere.

We were back sitting in our favorite chairs on the patio under the palm tree, with iced tea and lemonade. It was going to be time for lunch before too long, and we decided to find somewhere else, after we planned the afternoon. The Cove 17 Marina was nice, but it was beginning to get old.

“I guess we know more, but it doesn’t really help us much.” Garrett stared off at the sky. “And that means we’re still stuck on the three basic possibilities about what happened to the *Stream-Tracker*, as far as motive goes, I mean. First, someone could have had it in, big-time, for one of the three people on board, and the chances are, I guess, that the person would have been Skip Nicholls. Second, someone could have had a problem with what Nicholls and crew were doing out there, at that place, for some reason. Third, it could just be a wrong-place-at-the-wrong-time kind of thing.”

“It’s hard to believe that anyone would object to current measurements. And if they did, you’d think they’d sabotage the permanent equipment out there on the sea floor, too.”

“Maybe they did. But I heard something about ocean energy related to all this. What’s that about?”

I knew I was not the right person to ask, but there wasn’t anyone else around. “Well, Hal mentioned something about the equivalent of underwater wind turbines. Maybe we should go see him and ask. But if we do, you’ve got to be prepared for a lecture. He turns into Mr. Science Person at the drop of a hat.”

“He seemed nice enough when I first met you guys on Wednesday. Not like some of the arrogant scientists I’ve met before, not at all.”

“No, he’s sweet as can be—he just gets carried away with explanations sometimes.” I scratched a bug bite on my ankle. “Maybe there’s value in knowing where the currents are fastest, and someone thought that Skip was finding out some secret about the best place to generate energy and make money.”

“Maybe, but it’s not like the Gulf Stream is a secret, or anything. I guess I’m betting on option three, wrong-place and so on. Our John Smith is really a foreign agent, or a drug smuggler—or a people smuggler—or maybe a terrorist.”

“I don’t know about smugglers, but the other two could well have put something on the sea floor that they don’t want anyone to find.”

“Or maybe the drug smugglers have a big, underwater warehouse out there they want to keep hidden.” He shrugged. “You’re right, though. Let’s head up to Pompano State and get the ocean-energy lecture. And maybe they’ve found survey information. What’s for lunch up that way?”

Once again, I knew I was not the right person to ask, so we had to wing it.

\* \* \*

## 1.6

“Well, I don’t mind boring Annette to death with long, complicated explanations, but I don’t like those to torment other people. Maybe we could talk about the specific things you’re most interested in.” Hal, I could tell, was going out of his way to avoid becoming Mr. Science Person.

Shorty Ringwold, trying to suppress a smile, was in Hal’s office with Garrett and me. I expect he was used to long, complicated explanations from a variety of people.

“Annette said something about underwater wind turbines. That’s a good way to describe it, I guess, if it’s accurate. But could someone find value in measurements of the currents out there?” Garrett, seated so he could look out the windows of Hal’s office to the open Atlantic, didn’t even have to point. We knew which “out there” he meant.

“Of course, I’ve been on the job here for only a day, so I’m not completely up to speed. But I talked with several people, Shorty here for one, and other people who are also closely familiar with the overall project and have a pretty good feeling for what’s going on. The measurements are all about providing information for companies who want to build the underwater turbine systems. If you think in terms of wind, the power available out there is like a gale-force wind a lot of the time. But when it is, the forces on the equipment are ten times what they’d be in that gale-force wind in the atmosphere. So equipment has to be designed properly. And the measurements are in support of that.” Hal, too, was staring out at the ocean. “But it’s hard to imagine that the information content of those measurements would be worth killing for, to anyone.”

“Hal’s right. Proper design is important, but our measurements are meant to benefit everyone. There’s no trade secret information here,” Shorty agreed.

“So there’s nothing special about that particular spot they were at, where they were doing the measurements?” Garrett was getting to the heart of the matter.

“Nope. In fact, Skip and the others picked that spot so it would be as un-special as possible. There aren’t any big bumps on the bottom upstream of it, or anything like that. It’s just the Gulf Stream in action out there, just like the Gulf Stream is from, oh, Key West up to maybe Savannah. A big river of water in the ocean. Ah, an unsteady, surging and meandering river, for sure, but a big river. It carries more water than all the freshwater rivers of the world, they say.” Shorty’s expression told me that he wasn’t quite sure of that one, though.

“When Annette talked about underwater wind turbines, I started thinking about whales and dolphins and fish. All the swimmers out there. Wouldn’t this be dangerous for them? Are there people who might get worried enough about it to do something to prevent this? Or maybe people in the shipping industry?” Garrett, I could tell, was casting about for motives.

It was Hal's turn. "It seems likely that any turbines out there would be deployed below the draft of ships, so that's not an issue. Environmentalist wackos might be, though. The people here are concerned about sea turtles, so much so that they sent a mega-buck across town to Florida Atlantic, where there are several sea turtle researchers."

Shorty threw up his hands in frustration. "One legacy that the project is going to have to deal with for a long time to come is a remark that Skip Nicholls dropped at a reception for the project. Skip, I can tell you, was not shy about tossing back whatever beer or wine or spirits they had available at these things, or all three, for that matter. And some reporter who was there got him going about this business of risks to sea life. And he said... wait for it... he said 'Well, we *are* a bit concerned about the Cuisinart Effect,' as if that were a commonly used scientific term of some kind instead of a cute metaphor he made up to try to get into her knickers. God save us from tipsy, publicity-seeking faculty with clever sound bites. Still, a missile attack? Even Greenpeace doesn't go that far."

"Not that I've heard, and they're something of a thorn in the Coast Guard's side so I would have." Garrett was nodding. "Besides, it's just too hard to believe that one turbine would do much damage."

"And one won't. But commercial-scale power, like the amount from a conventional power plant, that would mean a lot of them, like an underwater wind farm. That's why the turtles are such a concern. They're all endangered, and even the turtle advocates say they're not exactly rocket scientists." Shorty's little joke made us all laugh.

Garrett looked at me. "You can't be sure until you're sure—just like it's not over until it's over—but it sounds like there's no good reason for anyone to have blown up the *Stream-Tracker* based on what they were doing out there, or where they were doing it. Unless that place just happened to be the wrong place. At the wrong time, maybe."

I had to agree. "Right. And, Hal, that's why I asked about the business of surveys. It must be that there's something special about that location, and it could only be something on, or maybe down by, the bottom."

Hal nodded and looked at Shorty. "Yeah, and I found out today that this place could as well be called 'Surveys R Us' instead of OceanLab. They've got 'em by the map-drawer full. And some are even digitized."

"A lot of them are mine, in fact, although those are the older, non-digitized ones, I'm afraid," Shorty said.

"That could be helpful, at least if there are any in our area of special interest." Garrett thought for a few seconds. "One of our possible scenarios is that the perps were out there to deploy something. And, of course old surveys wouldn't show that. But they might show other things of interest out there, and they'd be good controls for new surveys."

Just as Hal was about to respond, Garrett cocked his head just a bit and raised a hand for silence. Then he arose and walked carefully over to the door, which he yanked open, surprising a middle-aged woman there, who quickly put her hands behind her back.

She looked up, clearly frightened. "Oh. Very sorry. Excuse me. I was just looking for Dr. Weathers."

"Oh, hi, Emily. What do you need?" Hal's tone was mild, but I could tell he was curious.

"Oh, ah, just to tell you that I have to leave a little early today, for a doctor's appointment."

"That's fine. I hope it goes well. See you tomorrow." Hal gestured for Garrett to shut the door as she turned away.

“Sorry. But I heard something out there, and it went on for quite a few minutes.”

“You think she was eavesdropping?” Hal looked astonished.

“No idea, really. It is what it is, as people say, although it’s certainly curious.” Garrett took a deep breath. “Anyway, those surveys could help. And I’m going try to pin down a precise area for a new survey, full-out, with high-resolution sonar and magnetometers. We’ll have an ROV with both video and high-resolution still cameras as well. If there’s anything new down there, I want to find it. Who was that, by the way?”

“Emily Chu, Pete Chu’s wife. She’s the staff coordinator and budget person for the position Hal’s stepped into.” Shorty rolled his eyes.

It was a good thing that Hal was smiling when he said, “What’s that you say I stepped into, Shorty?”

\* \* \*

It was my turn to figure out dinner, so Hal directed me to the grocery he’d been to the afternoon before—west at the light just north of our building, about a mile and across both Federal and South Dixie, on the left and obvious. I have enough experience with his directions that whenever he says “obvious,” I take it to mean “hidden away,” but in this case it actually *was* obvious.

Talk about a kid in a candy store.

Instead of dashing in and out, I actually did the shopping thing by exploring the entire store and stocking up on staples as well as by putting together dinner from their remarkable deli. Yes, I thought afterward, our isolated life in the Colorado mountains has its limitations.

When I got home, though, I was reminded of the hassle of living in a high-rise condo where you have to park in the basement and lug bags and bags of groceries up to the 15<sup>th</sup> floor. No more big-time shopping trips for me, I thought.

But we sure ate well. I couldn’t resist getting a couple of jumbo stone crab claws for us to start with, and then we had cold cedar plank salmon on top of a Caesar salad. There wasn’t any breeze and it was still warm, so we ate on the east-side balcony. We had to work not to gloat when we talked about the snowstorm in Colorado.

“Y’know, the staffing at OceanLab seems pretty cozy.” I’d been thinking about our eavesdropper. “Pete Chu is the OceanLab Director, and not only does his wife work there but she’s the budget person for their largest award, or at least I assume it is?”

“My thoughts exactly. I didn’t want to say anything earlier, but I’m going to talk this over with Shorty to see if that’s part of the train wreck he’s worried about. If so, maybe we can get her reassigned to the main campus.” He popped his last bite of salmon into his mouth. “It’s a weird arrangement overall. Shorty’s head of Oceanography—and it’s just “Oceanography,” not a department or anything, just a program—and he’s officially Pete’s boss. But Pete, who’s more like a landlord at OceanLab, with Shorty the owner, I guess, Pete has a tremendous amount of clout with the faculty there, because he controls their office and lab space. If you cross Pete, he’ll screw you by giving away your lab space and assigning you to an office the size of a phone booth. That leaks. In the basement. Next to the elevator and the air-conditioning equipment.”

“What fun. How’d he get himself in a position like that anyway?” The Caesar salad, I decided, had just the right tang and amount of anchovy.

“Good question. Shorty told me he was originally from China and came here after a stop for a while in Mexico, at some big oceanographic office there associated with the national oil company. That’s where he met his wife, in fact. Some under-the-radar Mexico – China exchange program, or something. Then he came here, worked his way up to full professor, and took over OceanLab while it was semi-autonomous, before Pompano State got serious about it.”

“Seems like Shorty could make a change, not fire him since he’s a full professor, but get a new OceanLab Director, and the faculty would like it.”

Hal nodded. “I get the impression he’s working on it. He’s got to find something else for Pete to do, something that sounds more important, so Pete can save face. That’s sort of the facts of life in a university. I don’t think, though, that the something else is going to be this project I’m baby-sitting, so that makes Shorty’s challenge harder.”

“Interesting background. I think I’ll suggest that Garrett run a check on him.”

“I’d be interested in one on Emily, too. That was too weird, the thing with my door this afternoon.”

I concurred.

\* \* \*

Rather than wait for the next morning, after dinner I sent Garrett a short email suggesting that he use those computer databases he was so smug about to run background checks on Pete and Emily Chu.

Before I could close out the email program, I got an answer

*Annette: How’s your bandwidth? Fast enough for really big files? –GK*

I asked Hal and he verified that it was as fast as was available using the TV cable company’s service, and then told Garrett. It wasn’t two minutes later that I got another message, with attachments, over 15 megabytes with an introduction reading

*Annette: I thought of background checks, too, and dug this up without trying very hard. I’m digging deeper now and should have more in the morning. Also, there’s more from the marina. –GK*

I’m all for instant gratification, but that was ridiculous.

There were three attachments, Randy Lin’s sketch of the Asian guy at the marina, who was probably Chinese, as well as files on Pete Chu and Emily Chu. The first thing in Pete Chu’s file was a photograph that resembled the sketch, at least to my eye. I decided to show the sketch to Hal blind, meaning without Chu’s picture.

The biographies were basically elaborate versions of what Hal had told me earlier at dinner, China to Mexico to Florida for each of them. After getting a Ph.D. in oceanography at a Chinese university I didn’t recognize, Pete, then Chu Long-Bin, had spent two years working on underwater remote sensing—meaning sonar and such—at the Chinese Academy of Sciences. Then he had disappeared for two years, apparently somewhere within China, and emerged to take a job at PEMEX in Mexico City. After five years there, he applied for a faculty position at Pompano State, within OceanLab, where he’d

been ever since. In the meantime, he'd Anglicized his name, become naturalized, and acquired a Secret-level clearance through the Navy, for whom he continued to do underwater acoustics research.

Despite myself, I felt superior for having a *Top-Secret* clearance.

Emily Chu, born in Beijing as Lo Shi, was mostly a mystery, known only to have earned a degree in history before taking a PEMEX job, again in Mexico City. Because her chronology was not complete, such tidbits as Pete's missing two years weren't available. She had not become a citizen but did have a green card.

As for the new information from the marina, I was suddenly addicted to the instant gratification, so I decided to call Garrett. But first I went and fetched Hal to show him the sketch.

He peered at the computer screen. "Hmm. Well, I can't say for sure I recognize him. Looks familiar somehow, though."

He went back to his March Madness basketball game, and I called Garrett.

Garrett answered the phone laughing. "I thought I'd hook you with that last mail!"

"Well, yeah. This is better than those stupid reality shows any time. Or basketball. What's the deal with the marina?"

"I had a team of six there this afternoon, interviewing other boat owners and anyone else they could find who was there Tuesday. The dock-master was his usual surly self, but my folks are good at yanking chains when they need to. He got his yanked good and he left them alone." He paused, and I heard background conversation. "Uh, where was I? Oh. They didn't turn up much, but what they did turn up was interesting. It seems that another group was making the rounds last week asking all sorts of questions. And the other group didn't show ID like our people do. They were polite but very firm, and several people reported being intimidated by them."

"What about those security guards with their golf cart? Clumley and friends?"

"A couple of the boat owners wondered aloud to my people about that. Apparently there were nowhere around. We've got lots of notes, and Randy Lin is going back tomorrow—he can use the Saturday overtime—to do the sketch thing with everyone he can find."

"And the dock-master didn't see this other group either?"

"Very good question. It was only after he'd had his chain thoroughly yanked that my people found out about the other group, and by then he was in such a sulk that they didn't even ask. But we can tomorrow. If you work on Saturdays, that is."

"Well, I won't say it's 24-7 on a case, but the seven part is pretty much unavoidable. Same time, same place?"

"Sounds good. And I'll have a better summary of today's interviews by then. For now, though, it looks like Group 2—meaning Group 1 is the Asian guy who chartered Rafe's boat and his friends—Group 2 was scouting out possibilities for Group 1. Or something of that nature. They acted as if they had a boat and were looking for a marina, you know, getting opinions from people with boats there. But some of the questions raised suspicions. Questions about clearing customs, how long it takes, frequency of inspections, stuff like that. Instead of dock rates and amenities, like you'd expect."

I laughed. "Like marijuana growers who are looking for a house to set up their hydroponics in. They don't ask about the usual stuff—schools, power bills, age of the appliances. They have other priorities."

“Something like that, yeah. I get the impression they were looking for invisibility and ease of access to the ocean. That’s one reason that marina is so attractive, because it’s right at the edge of Port Everglades.”

“Could Group 1 and Group 2 be the same people?”

He thought about it. “The descriptions are pretty diverse. One Asian guy in Group 2 but he was quiet, for example. All the others are mixed, apparently. I need to look at the reports more carefully, though, and we need sketches.”

“OK, tomorrow at eight, then. If I’m there first, what kind of coffee was that?”

“You won’t be. Do you get caffeine first thing in the morning?”

“I do. Americano, double shot in that small cup. Thanks.”

I found Hal on the west balcony, watching the lights of the metropolitan area winking at him.

“Sounds like you’re working tomorrow?” He looked up at me.

“Yeah, this is one of those all-the-time cases, I think. Sorry. Did you have something in mind?”

“Well, to tell the truth, there’s not much to do here if you’re not a beach person. And we’re not. Maybe we could get in a very early walk before you leave in the morning, though. And I thought I’d go down to OceanLab tomorrow and see about calculating some free-fall estimates for you. Make some of those ellipses you mentioned. And dig up some relevant survey information, if I can figure it all out.”

“That could be very helpful indeed. And if we’re getting up for a very early walk, we should go to bed early.”

“Uh, well, I’m not really sleepy yet.”

“Good. Neither am I.”

\* \* \*

## 1.7

Our early morning walk, in the half-light before dawn, was the perfect beach activity for me. We had the whole strip of sand to ourselves, except for one jogger, there was no wind, and it was blessedly cool. Even the beachy smells were just right.

That early-to-bed business the night before was even better.

As he said he would, Garrett beat me to Cove 17 and was waiting in our chairs on the patio next door under the palm tree with two Starbucks cups, a huge one and a little one. But I made up for it by surprising him with a scrumptious pecan Danish I picked up at that same Starbucks. I figured he’d never get one for himself if he was being careful about food.

We spent over two hours drinking coffee—decaf after the first one, for me—and watching Randy Lin get sketches from as many of Friday’s interviewees as he could find. It didn’t take me long to start feeling guilty that we were sitting and watching Randy work. But Garrett had a Plan, as he assured me.

And, indeed, after Randy finished with the people on the first dock, he came back to talk with us. I could tell that Garrett was about to spring into action.

Randy was anything but springy, however. “Man, I should have brought someone else to help with this. There are an awful lot of these folks. And I need two people so we can separate the husbands and wives. As it is, I’m working with one, and the other is over the shoulder, kibitzing. ‘No, the nose is different.’ ‘Weren’t you paying attention at all? The hair wasn’t like that.’ Then I finish with one and they switch places and the other kibitzes in reverse. It’s driving me nuts, and it’s contaminating the results.”

Garrett laughed, but nicely. “Don’t worry about it, Randy. Dock One there had the most people on it, so the others will go faster. Anyway, the interviews produced all sorts of contradictory descriptions, and we shouldn’t be surprised if the sketches are all over the map, too. But whatever you get will help. And it’s also making people think about this, so when Annette and I go and talk with them—and we’re headed over to Dock One now—they’ve had their memories refreshed by their work with you. This is just right, really.”

It didn’t take long on Dock One for me to understand Randy’s frustration. There were six people there we had to interview, three couples, and they were just impossible, contradicting each other, bickering, trying to get us to take sides. If this, I thought, is how rich people with big boats live their lives, I’ll stick to a little cabin in the mountains, snow or no snow.

By the time we were finished with the first three couples on Dock One, Randy was finished with Dock Three and had only one more sketch to do, on Dock Four. He was looking far more chipper than we felt at that point.

We spent most of the afternoon at it, but we finally finished with all of them and, to our surprise, found that a pattern was emerging from the seemingly contradictory descriptions. What Garrett and I had been calling Group 1, the probably Chinese guy and his three cohorts who’d taken the *Reel-Thing* out on Monday, had split itself into two pieces the week before and wandered around as Group 2, in two pairs, for surveillance. But the probably Chinese guy who had dealt with Rafe Wellingworth had stayed in the background, leaving the questions to his partner. Meanwhile, the other pair, neither of whom was Asian, both tag-teamed their questions.

No wonder, I thought, that the initial interviews by Garrett’s team were so confusing. Without those sketches that Randy produced, we would never have figured it all out.

So we knew that the team of four perps was careful and methodical, and we didn’t know any more who was really in charge of it. Although only one guy had dealt with Rafe, who naturally assumed that he was the leader, that could just have been more of their sleight-of-hand.

It felt as if we were going backwards.

But Garrett was not fazed. “Last night, I was thinking we had two separate groups of people here, and now it looks like only one. I’d say that’s progress. And we got some interesting new bits of information today, like the tattoos, right?”

Even though the surveillance teams had worn windbreakers, one of them had an exposed tattoo on the back of his left hand, some kind of odd symbol. Another had what looked like the head of a snake on his throat, coming up out of the collar on his tee shirt, one of our fractious boaters had said.

“If we find them, those will help us identify them, sure. But how will the tattoos help us find them?”

“Frankly, Annette, I’d be surprised if they’re still around. I’m betting they blew up the *Stream-Tracker* and left town as fast as they could. Our only hope is to keep our eyes on Rafe and the other charter boats around here in case they come back. And if they deployed something out there, which I’m beginning to think is the case, they just might come back.”

“Sounds like you’re in favor of a survey out there.”

“Yep. I’ve been putting the pieces into place. And I’m thinking tomorrow might work, if the weather cooperates. Today, though, we need to see what we can get out of our very best friend Mr. Wiggins. Oh joy!”

It was getting late in the work day, but the good Mr. Wiggins was in his dock-master’s office hard at work chomping on the remains of an unlit cigar and ogling a girlie magazine. He greeted us with an ebullient “Oh, crap!”

“Well, good afternoon to you too, Mr. Wiggins. I’m afraid I have good news and bad news. What’s your pleasure?” Garrett, it seemed, was setting himself up to go either way, good-cop or bad-cop, as the situation called for.

“My pleasure would be for you both, along with all of the others, to go away and never come back.” He spat the cigar into a trash can for emphasis.

Garrett’s smile was especially self-satisfied. “Well, then I’ll pick. The good news is that we, in fact, are done with all of our questioning, so your clientele won’t be pestered anymore.”

“That’s the first thing you’ve said that makes any sense,” Wiggins growled. “So what’s your bad news?”

In a deceptively smooth motion that was so quick I almost didn’t see it, Garrett’s Sig Sauer appeared in his right hand, leveled at Wiggins’ face. “I’m afraid that the bad news, Mr. Wiggins, is that you’re under arrest. Let me suggest you hold very, very still while my partner here cuffs you.”

That was all the hint I needed.

\* \* \*

We made a point of parading the handcuffed dock-master through the Westin Hotel lobby, where we asked for the manager and informed her of our need to remove Wiggins from the premises next door and that perhaps her concierge should know that marina was closed. She was not amused, so not amused that I wondered whether Wiggins would ever get back into the hotel’s good graces.

Then, after reciting Wiggins’ Miranda rights, Garrett installed him in the back seat of the official CGIS Charger Hemi waiting in the parking lot. It had some interesting accessories, including a metal bar on the security screen to which, after getting the seat belt on him, Garrett fastened Wiggins’ handcuffs.

Garrett rattled the cuffs to make sure they were secure, then shut the door.

He turned to me. “Let’s go see if we can find Clumley. Thing is, one of the people interviewed yesterday, he wasn’t here today, but he told my guys that he saw Wiggins taking money from our mysterious group of questioners. Meanwhile, Clumley and company were never around. I’m thinking we might ask him a pointed question or two.”

“Good idea. He does get credit, though, for telling us he saw the *Reel-Thing* go out the other day with Gus on it.”

Maybe that reminder mellowed Garrett out, because he was positively polite with security guard Clumley and his compatriots. Their explanation for having missed the previous week’s visit by the gang of questioners was simple: they didn’t get any calls and stuck to their normal rounds, during which they saw nothing amiss. There were people on the docks talking, sure, but nothing that got their attention. If something had been wrong, Wiggins, they said, would have called them. We didn’t point out Mr. Wiggins’ new status.

Back at the parking lot, we discovered Wiggins asleep in the back seat of Garrett's car. It was parked in the shade, so Wiggins was in no danger of heat stroke, but there was a drip of sweat dangling from the end of his nose. He barely stirred when Garrett opened the driver's door.

Just as obnoxious payback, I think, Garrett slammed his door, hard, and Wiggins jumped so high that his head bounced off the roof.

"I'm going to ferry our friend here down to the brig, Annette, on charges of conspiracy and lying to federal agents. That bribe puts him in the bad guys' camp." He shook his head. "The turkey. If he'd been nice to us and a little more discreet, he wouldn't be in this ugly position. As it is, even a plea bargain won't get him much of anywhere. Although maybe we can get additional information from him now, or after he spends a while in our facility."

"And tomorrow's Sunday, too. Seems like he might just languish there for a bit, hmm?"

"Y'know, I actually did forget about that, truly. But you're right. Or, at the very least, his lawyer will charge him a lot extra for a Saturday night or Sunday visit." He put on a pout. "Sometimes I feel like such a mean person."

"Well, he made his bed and all that." I stretched and yawned. "Is there a plan for tomorrow?"

"I think I'll see if we have the assets to do a survey out there. I'll give you a call when I find out." He opened the driver's door again and climbed in, which elicited a long string of profanity from Wiggins, causing Garrett to turn slightly. "Shut the hell up, Wiggins, unless you want to ride in the trunk!"

I was about to hit the road for home when a thought struck me. Maybe, just maybe, there was information in the dock-master's office that we should know of. Because we'd made an arrest for activities that happened there, it was a crime scene and appropriate to search.

I headed back to the marina, half expecting the office to be locked up, or occupied by a substitute. But we'd told only the hotel manager about our arrest, and she didn't seem disposed to do anything to help the marina out. So the office was wide open and vacant, which suited me just fine. I closed the door behind me, put the little "Closed" sign in the window, and set to work.

The decor was early government-office metal, a desk and some filing cabinets, with a box fan on the floor. With the door closed, the odors of cigar, sweat, and stale beer quickly became toxic, so I put the fan in the window and turned it on for ventilation.

The desk drawers held office supplies, some keys, and, surprise, more girlie magazines, some in the full-out porn category. Wiggins obviously had a lot of time, among other things, on his hands, I thought. But there was nothing of interest to us.

The left-hand filing cabinet had labels on the four drawers indicating that the contents were alphabetized, or meant to be. In the top drawer, A-F, there were files with peoples' names behind a three-ring binder with slip occupancy information, and the other three drawers followed suit. In the bottom one, I found the Wellingworth file and looked through it briefly, but it didn't seem to have any information beyond the lease agreement and payment history. Rafe, I noticed, had a tendency to get behind on his rent.

Dusk was beginning to signal the end of the day outside, and I was getting discouraged. But then, in the right-hand filing cabinet, I hit pay-dirt, a cache of security DVDs in the top drawer. I hadn't noticed any cameras around the marina, though, so it was puzzling. But then I opened a door that I had assumed was the head (I was beginning to think like a real Coastie, I realized) and found instead a closet full of electronics, including a bank of ten TV monitors. From the pictures, it looked as if each of the four

docks was covered by two cameras, and the other two appeared to be at the ends of the quay, looking along the shoreline.

A more careful examination of the DVDs in the filing cabinet revealed that they were only in the top drawer—the others held old VHS tapes. The system must have had a recent upgrade, I decided, maybe associated with Cove 17's newfound prosperity. But DVDs were there for the past month, nicely labeled by camera number and date. It occurred to me that we could add to Mr. Wiggins' set of charges another one of concealing evidence.

I suddenly wished I were not alone. I needed a way to haul a bag full of DVDs to my car, and I didn't want to leave the treasure-trove unattended, even for a minute. Then I remembered the keys.

One of them, to my relief, fit the office door, so I locked it behind me and made my way to the hotel lobby next door, where I remembered seeing a gift shop next to the Starbucks.

Fifteen minutes later, with a beach-bag—an absurdly expensive, cheaply constructed beach bag with palm trees on it—full of security DVDs, I returned to my car. The Cove 17 dock-master's office was locked again, and I had the key.

\* \* \*

By the time I got home, it was after seven. Door-to-door, I'd put in a twelve-hour day. On a Saturday. Are you ever going to get a real life, Trieri?, I asked myself. But that bag of DVDs had me feeling triumphant.

Hal had planned to spend the day at OceanLab, I remembered, but probably not twelve hours of it. And he hadn't, I discovered. Instead of getting home as late as I, he was there already, based on evidence I found in the kitchen. A big tossed salad was sitting on the counter next to a glass dish with marinating steaks, and the aroma of baking potatoes filled the air.

I heard a noise from the other room and discovered him on the west balcony, futzing with the gas grill out there. As I walked through the door, there was a startling *fwoosh* and a burst of flame, a fireball that looked as if it might have singed his eyebrows.

But Hal was fine, blinking a bit as he looked at me and smiled. "Just in time! I finally got this stupid thing working, and now that you're here I can cook the steaks."

That's how it turned out that, the week after the Spring Equinox, two days after a huge snowstorm in Denver and while another was pounding the Fraser Valley where we lived, dinner got cooked on one balcony, overlooking the Intracoastal Waterway and the City of Boca Raton, and eaten on the other, overlooking the Atlantic Ocean, which was still just splooshing along. It was making me have serious thoughts about the attraction of the place, I can tell you.

But the splooshing was different that night. More, well, forceful, somehow. I mentioned the difference.

"Probably the late-season Nor'Easter that's going to swoop up the east coast and screw up Sunday and Monday for everyone up that way." Hal paid more attention to weather patterns and events than I, which really could be quite helpful. "It's the same system that dumped on Denver the other day, rejuvenated by some additional vorticity advection from the north and a surge of warm, moist, high convective potential energy air from the Gulf of Mexico and now from the Gulf Stream up by Cape Hatteras. And it's stirred up some waves that are starting to arrive down here." Hal bit into another piece of steak.

Of course, that helpfulness could go too far, as in those times when I didn't understand much of what he was saying. But I heard the part about the stirred up waves.

"So the waves are going to keep getting bigger?"

"Maybe. Probably, I guess. Depends on just where the storm goes and how fast and so forth. But we'll probably get a cold front through here—which, by the way, will make the weather truly spectacular afterward—and there are often north winds behind cold fronts. North winds blowing against the Gulf Stream, which is trying to *go* north, make for some serious swell out there."

That sounded worrisome to me. "Oh. Um. Garrett is talking about a survey. Would waves screw that up?"

"Ah. Good question. I guess it depends on the vessel and the instruments. A small boat with instruments mounted on it would bounce around so much that I doubt they'd be able to get any real work done. But a large ship that tows instruments on cables, well, it might be rocky for the crew, but I expect that the survey would still work."

"I don't know what kind of ship Garrett is planning, but I expect that they know what they're doing. You said you were going to look into narrowing down the survey area. How'd that go?"

"Fair to middlin' I guess. We know exactly where the *Stream-Tracker* was when it exploded, and presumably the outboard motors fell right to the bottom, and some other stuff, too, like anchors. And we know exactly what the current at that spot was doing, so it's easy to plot a downstream trajectory. Then it becomes a matter of deciding what you're looking for and how far downstream to keep looking, and also how wide, across the current, to expand the search downstream. The final area of interest would be shaped sort of like a cartoon teardrop. But it all depends on what's of interest. Heavy, small stuff makes for a small area. Bigger, oddly shaped, lighter stuff—assuming it still sinks, of course—makes for a bigger area. Stuff that didn't sink will wind up in the North Atlantic somewhere."

I tried to visualize it. "So if they start where the *Stream-Tracker* was and follow the current for, ah, a couple of miles?, I really don't know, and then move, say, west a skosh and head back to the starting point, that would do it?"

"Right. When they got back to the starting point, they could move a bit east and head downstream again. The instruments will have a cross-track range, so you make sure the tracks overlap a bit to cover everything. Kind of like mowing a lawn."

I nodded. "Right. That makes sense. I'll send Garrett some email. Also, I've got a bit more homework this evening. Does our computer have a way to play DVDs? And to capture individual frames?"

The beach bag full of DVDs was a bit intimidating to contemplate, but once I got started it went quickly. The security cameras were set to record a frame every five seconds, and each had a time stamp. Playing a DVD made for a jerky movie, with time flying by. But I knew that the *Reel-Thing* had departed on Gus Maroney's last cruise sometime around noon Tuesday, so I picked the disc for Dock 2, the camera looking back toward the dock-master's office, and searched for that time.

And there they all were, standing around, loading stuff, casting off. It must have been because the security system was new—perhaps the camera lens was still clean—that the pictures were crystal clear. In the background, off to the left edge, I could even see Rafe and Clumley sitting at a table on shore.

Because another of Hal's abilities was a good dose of computer geek-dom, something that came in hugely handy for me, he'd installed a DVD player application with various bells and whistles, including frame capture and zoom. I paged forward through the frames until I found one that had a suspect in it, well lit, and then zoomed in and captured it.

They were almost as good as mug shots, and they made me impressed with Randy Lin's abilities—I'd seen those mugs before in his work.

Flushed with success, I checked for other pictures from the other cameras, but the Dock 2 one was the best. And then I backed up to the previous week, when the suspects had been questioning people on the docks. That took longer, but by 10:30 I had about 25 megabytes of pictures of all four of them, from various angles, including one in which Dockmaster Wiggins looked like he was accepting his bribe, or payoff, or gratuity. Whatever it was, it sure looked like a bundle of cash.

Then it was my turn to ask Garrett about *his* bandwidth.

\* \* \*

## 1.8

Back in Colorado, Hal and I have separate computers, something that, early in our relationship, we had decided was necessary after having tried to share one for a time. It seemed that we have different styles of computer housekeeping and they're not altogether compatible. He acts as my systems person, given my inability to do anything more than turn the thing on and log in, but he doesn't mess with how I organize things. Or don't.

But because I was on vacation, I didn't have a computer, so I was sharing Hal's laptop. And that earlier failed experiment at sharing had taught me to clean up after myself or get grumped at. It's sort of like my grumping at him when he doesn't pick up his dirty socks—something he learned to do rather quickly, actually. I guess he doesn't like me grumpy any more than I like him that way.

Anyway, after I sent the bandwidth question to Garrett, I was tidying up for a few minutes. So I was surprised to get an answer so quickly that late in the evening—yes he did indeed have bandwidth. I sent him the pictures, in five separate emails in case his system didn't like big attachments, and then did a little internet surfing to kill time for a few minutes.

As I expected, that's all it took for him to get back to me.

*Annette: These are amazing, and I feel like I must be losing my edge. I looked and looked but sure didn't see any security cameras at that marina. Naturally, Wiggins wasn't going to tell us about them. It looks like we've got him dead to rights, and maybe that'll get him to cooperate.*

*Meanwhile, we're set for a survey tomorrow, departing from the Terminal Island at 0400 because it's a couple of hours' transit up to the area. The weather looks fine, but the seas are going to be rough. —GK*

The computer was set up in the extra bedroom on the west side—we slept in the east-side bedroom where we could hear that wonderful splooshing surf—and a flash out to the northwest startled me. I paid attention and saw several more, and finally realized that it was lightning signaling the cold front that Hal had mentioned. At least, I thought, it would make its way through overnight. Like Hal had said, tomorrow's weather would be lovely, except for people in boats.

I composed a last message:

*Garrett: I feel as if should volunteer to be on that survey, but I'm exhausted and I don't know how I can get to Terminal Island in time to make an 0400 departure. –AT*

Almost before I could turn around, I got a response:

*Annette: Don't sweat it. You can't come anyway because you haven't had the required training. But pay attention to email tomorrow. You'll be hearing from me.*

*And these pictures are truly amazing. –GK*

Normally, I would have bounced around with glee, but I was just too tired. Hal was asleep, anyway, and such bouncing was always more satisfying with an audience. So I went to bed, too, eliciting a muffled “Mrrph” from him when I snuggled up, and then I fell asleep faster than I would have thought.

Sometime later, I awoke to thunder and wind blowing through the condo, but I just snuggled more and went back to sleep. That meant that, in the morning, just at first light, I awoke again after a dream about skiing in my underwear in a blizzard at the top of Winter Park. I had ski boots and skis, sure. And gloves. And a hat, I think. But as I got off the Zephyr quad chair, the bra and panties I was wearing were just not quite warm enough. Never mind that people were staring, it was the cold that bothered me.

And then I woke up and discovered that it really *was* cold.

Now, cold is relative. It really wasn't like being at the top of Winter Park in my underwear, blizzard or no blizzard. All I can say is that 55°, which is what I found out later that it was in that condo on that morning, was *cold*.

Hal was still there next to me—something I was glad for, because it would have been even colder without him—and I could tell somehow that he was awake.

“Well,” I said, “you did mention that there was a cold front coming.”

“Mrrph,” he said again. “But I forgot and left the sliders open. Got your fresh air in here this morning, don't we?”

“So, what are we going to do?”

“I'll get up and turn on the heat and then jump back in bed here, if that's OK with you.”

So he did, shutting the sliding doors to the balconies in the process, and presently the blower came on with a hot smell of burning dust, but it was circulating warm air instead of chilled.

I was resolved to snuggle until the temperature became tolerable, but then my phone started to make noises. In the other room. I could tell that it was my phone because Hal's was programmed to play music, the particular selection programmed according to the caller. His boss was the *1812 Overture*, for example. I didn't know what I was, and I wasn't sure I wanted to know.

My phone, on the other hand, played one of those generic electronic phone tunes, the annoying ones you hear everywhere, so I knew it was mine and had the choice of ignoring it or going out there into the cold. Garrett had said he'd email me, but the clock said it was 8:07, and I couldn't help but think that he was calling ship-to-shore. Maybe they had found something!

But by the time I untangled myself from Hal and what blankets—thin, inadequate, Florida blankets—we had on the bed, stumbled into the closet and found my robe, and figured out where in the other room the phone actually was, it had stopped playing its little tune. About the time I picked it up, it emitted an annoying *chirp* that meant I had voice mail, I'd figured out before.

So I went back to bed in my robe, which was nice and warm, altogether, and hid under the covers to retrieve the message.

“Good morning, Annette, it's Garrett calling from out here on the Gulf Stream. Fifteen foot seas this morning, I'd say, so be glad you're not out here. Even I'm a little queasy. But we've found some interesting possibilities on our first pass, so we're going back with the ROV and its cameras. I've already sent email, so I think it works, and I'll send more with pictures as they're available. Talk to you later.”

That, of course, made me feel guilty for not being there, but then Hal snuggled up with me and my nice warm robe, and I dozed back off.

\* \* \*

An hour later I woke up again, sweating this time. Hal must have set the thermostat way up there, and the heating system had done its work. Even though he wasn't in bed at that point, my robe and those few blankets were making things just toasty, too toasty.

Talk about famine or feast, I thought.

But there were wonderful aromas wafting my way from the kitchen, bacon and French-toast aromas with a hint of coffee in the background. Ten minutes later, after a very quick shower, I walked up behind him and gave him a hug.

“Something smells like breakfast, and it smells wonderful.”

“Good. I was hoping it would mask that stale smell from the heating system. I guess it doesn't get used very much. Coffee's hot. Probably too chilly to eat outside, huh?”

“I don't think I brought clothes warm enough.”

“You realize, of course, that back home, with 55° and sunshine, we'd be outside in our shirt sleeves.” He smiled. “But we've become accustomed to the low 70s at night and the 80s during the day, South Florida wussies.”

“Yeah, well, I'm glad this place has a heating system. Although, is it OK if I back it down a bit? It's certainly warmed up enough.” I went searching for the thermostat and turned it back to 74°, at which point the heater turned off.

After breakfast, I tackled the email and found five new messages from Garrett. The first was labeled “Test in transit” and the second “Test on station.” To my expectations, those had no real information. The third, a few minutes after the second, was a report of conditions and their location on station.

It was the fourth and fifth ones, sent after the phone message, that were most interesting—they had pictures. The message in email number four said

*Annette: The attached image is from the on-board multibeam sonar, medium resolution and annotated. We also have a high-resolution image from a special sidescan sonar that I can't send by email. It shows that the circled things on the attached image are outboard motors. So we're on the right track.--GK*

Email five, time-stamped 20 minutes later, said

*Annette: The circled object on this image looks in the sidescan image to be a human body. It was about 500 meters downstream from the outboard motors. We're staying with the original survey plan, but we'll be back to get photographs of this with the ROV later.*  
--GK

I'm pretty fit, for a middle-aged woman with a mostly desk job, but I discovered the second day I was in Florida that I float in the ocean. And Hal had said that only very heavy things sink fast and objects that don't sink wind up in the North Atlantic somewhere. How, I wondered, did a body wind up on the sea floor a few hundred meters downstream from those motors?

As I was tidying up, another message arrived:

*Annette: Could you please check with the people at OceanLab (maybe Hal?) to see where they've placed underwater buoys out here? We found the one near the explosion site, probably the ADCP that Hal talked about. We've also found another buoy farther north and a bit west (inshore), a much bigger one. Is that a Pompano State deployment? Thanks! --GK*

Probably, I thought. There seemed to be all sorts of measurements going on to support this curious business of generating energy from the ocean. But I knew I should ask anyway.

Hal was busy with the Sunday paper, outside on the east balcony. The sun on all that concrete had warmed things up enough to be quite comfortable out there.

"Hey? You talked about that ADCP whatever gadget that's out there on the bottom where the *Stream-Tracker* got blown up. Does OceanLab, or anyone, have other such measurement gadgets out that way, a bit farther north?"

He looked at me for a few seconds before responding. "Sounds like Garrett and his folks found something, eh? And the answer, I'm sorry to say, is I don't know. But I can call Shorty."

"OK, that would be helpful. And, uh, tell him that they also think they've located a human body on the sea floor about 500 meters north of where the boat exploded. They'll go back and get pictures after this first set of passes."

"Uh-oh. Any indication of who it might be?" He looked stricken.

"No, just a body. Uh, wait. I mean, 'an unknown body', nothing 'just' about it. But bodies float, right? How could one be lying on the bottom?"

"You mean to tell me, growing up in Chicago, that you never heard of 'concrete overshoes'?"

"Oh. Well, like you said, 'Uh-oh'."

\* \* \*

Shorty and Hal had a long telephone conversation, and from what I heard it was mostly concerned with instrument deployments instead of the body.

From a perspective of pure investigative detachment, I knew that the body was actually of secondary interest, as it was not surprising that one was found and it could be identified in due time. The new information about some kind of unknown instrument out there, however, carried a greater urgency, because it needed to be identified. Who was measuring what, and for whom?

But from a more human perspective, the body worried me.

When he was finished with the phone, Hal came and found me. “As far as Shorty knows, and from what other information I found out in the past couple of days, we don’t have anything else out there. Just that one ADCP mooring. How about you let Garrett know, and then we can figure out a plan for the day?”

So I sent the appropriate follow-up email to Garrett and then went back to the east balcony. “So, what’s this about a plan for the day?”

He looked up at me. “Oh, well, see, it’s Sunday. You’ve been working twelve hour days since, what?, Wednesday? Everyone needs a bit of down-time for rest and relaxation, otherwise you just burn yourself out. Right? And Garrett is on a ship somewhere on the ocean, so there’s not really much you can do, right? You came down here for vacation, so, well, let’s vacationize for a bit.”

It was hard to argue with that bit of logic, so I said, “OK, so what’s your plan?”

“Let’s leave our phones here and go wander around Morikami Gardens. Have a late lunch there. Relax. Contemplate the bonsai collection.” His look was serene.

“What’s this ‘Morikami Gardens’? Not that it doesn’t sound like a good idea, mind you.”

“A Japanese garden, with a museum and a restaurant. Something of a local institution, about ten miles or so northwest. This is a good day to go there, because the temperature’s nice and cool. And the humidity went down after that front. We can wear hats and sunscreen and summer clothes. All the locals will probably be wearing parkas.”

I giggled. “Yeah, I sympathize. I wanted a parka in here this morning.”

“Me, too, especially when I was running around in just my skin shutting those sliders and turning on the heat. Geez. But this is a perfect day for a walk there. In fact, the cold—or not-so-hot, or whatever—it’ll probably keep the visitor count low, so we may just have the place almost to ourselves.”

I’d been to the Denver Botanic Gardens once, and that was enough to get me interested in this Japanese garden. What such a place was doing in Boca Raton, or wherever it was in the vicinity, wasn’t at all clear, but it seemed like a good outing for a Sunday afternoon. And Hal was absolutely right: some vacation was in order, for both of us.

I thought about cheating by taking my phone but then decided that getting away from it all made more sense. There wasn’t really anything I could do for Garrett beyond sit and wait for more email, which didn’t seem especially productive.

Hal took us north on Highway 1A, which changed from condos and commercial buildings to parks, golf courses, and beach and made for much more pleasant scenery. But then we turned inland and had to negotiate several miles of the Boca Raton arterials lined with strip malls. And apartments. A proliferation of apartments.

When I was planning this little trip, I’d used the Google satellite pictures to try to get an idea of where I was going. Zoomed back, the Florida peninsula looked benign enough, but as I zoomed in on the southeastern part of the state, I began to realize that the different colors showed a metropolitan area about ten miles east-to-west, between the ocean and the Everglades, and maybe 100 miles long north-south. In that thousand square miles were some five million people, meaning 5,000 per square mile or so. And considering all the golf courses, those people were crammed together in far less space.

Meanwhile, my little corner of the world, Grand County Colorado, boasted about eight people per square mile. No wonder I felt crowded on the Gold Coast.

But Morikami, especially on a day with temperatures in the low 60s, was the antidote to the feeling of being crowded. We took a turn around the lake, stopping to check out the bonsai collection on the

little island and to sit on a bench in the sun. And just before lunch—a perfectly done teriyaki salmon—we strolled through the bamboo grove, the hundreds of culms clacking in the breeze. After lunch, we studied the museum’s special exhibit of ancient kimonos, some from the 17<sup>th</sup> century, on loan from a private collector in Japan. To top it off, we walked around the lake again in the opposite direction, bamboo first. It made me want a grove in our back yard—they’d make a nice complement to the aspen, I thought, except they’d freeze to death even before the truly cold weather set in.

And all the while we encountered only about a dozen other people, dressed, as Hal had suggested they would be, for winter conditions.

The peace and quiet, plus the exquisite views across the lake, motivated us to take our time and sit on every bench we came to, at least the ones in the sun, so we managed to while away the rest of the afternoon. Just what a vacation is supposed to be.

The drive home was a reality check—more strip malls and apartments, with, on the different route that Hal took, gated entrances to fancy subdivisions. Everything looked remarkably green and manicured, even after the careful pruning that was the hallmark of the Japanese garden we’d spent the afternoon in. But it also looked sterile somehow, and obviously full of people. I kept thinking how much better I liked the empty and natural look of the forests out west, even the dying ones.

About the time we got to downtown Boca Raton, Hal said, “Do we have a dinner plan?”

“No. And it seems funny to be hungry again, but I am.”

“Well, I think we should cap off a Japanese day with sushi for dinner. Shorty told me about a place downtown here somewhere. Let’s see if I can find it.”

Like stone crabs, sushi was not something we could get in our part of Colorado. Denver and the other Front-Range cities had it; so, I’d heard, did Aspen, all flown in fresh daily. But it just made more sense to me to eat raw fish near the ocean.

A nigiri-sushi boat for two, which followed cups of miso soup, finished our day in style. We would be back, I knew.

\* \* \*

## 1.9

Monday morning was not nearly as relaxed as Sunday had been, but, in our condo, it was a lot warmer. In the face of even cooler temperatures forecast for Sunday night, we’d left the windows closed and the heat on.

I had not quite succeeded in staying on vacation throughout Sunday evening, and so around seven I’d read the email that Garrett had sent me, telling me that he would be at OceanLab at eight in the morning to talk about the survey and would I try to get Shorty Ringwold to be there, too, please?

As a result, Hal and I had an early breakfast, during which we pored over a front-page, above-the-fold story in the paper about a political assassination down in Miami. Drug wars, we knew about, but this seemed like something new and, even for South Florida, over the top.

But our own case was commanding attention, and by eight Shorty, Hal, and I were in the OceanLab secure conference room talking over what we knew about it when Garrett arrived, with a guest. Both wore blue dress uniforms, but the new guy’s was different from Garrett’s in subtle ways.

I understood why when Garrett introduced him as Commander Rick Vanderhoff of Navy Counterintelligence, which, Garrett said, was part of NCIS.

“Commander Vanderhoff has been brought into this because of what we found yesterday. We want to talk with you folks about it because you’re probably the most knowledgeable about what’s offshore in this area.”

Hal looked surprised. “Well, I’m trying to come up to speed, but I’m sure there’s lots I don’t know yet. I’ll help out as much as I can, of course. Shorty, that is, Dr. Ringwold here, he’s the real expert.”

Garrett nodded. “I understand. One reason we need to talk with you is because the three of you have the highest clearances of anyone here at OceanLab. A generic ‘Secret’ clearance just won’t suffice for this. Before we get to that, though, I’m hoping that you, Dr. Ringwold, can identify this individual. Ah, this is a disturbing picture, let me warn you.”

He slid an 8x10 photograph from a folder and passed it to Shorty face down.

Shorty turned it over and gasped. “Disturbing is right, Chief. Ah, well, this looks like Amelia Albright to me.”

I understood. “Was that the body you found in your survey yesterday?”

“That’s correct. On the bottom in about 900 feet of water. Death by drowning. Someone had put a 50-pound weight belt on her and bound her hands to it. As we surmised, she wasn’t wearing her bikini top, either.”

Shorty was staring at the picture, looking distraught. “Amelia, I’m so sorry. We’ll get them for you, I promise.”

The events clicked into place for me, and I started to get angry. “So, those yahoos blow up the *Stream-Tracker*, but somehow Ms. Albright survives and gets rescued only to have half her clothes ripped off, and then they throw her overboard, alive, with those weights and her hands bound so she can’t possibly save herself. I agree, Shorty, let’s get these bastards.”

Commander Vanderhoff spoke up for the first time. “We’re highly motivated to do just that, Ms. Trieri. But the Navy’s motivation has to do with the other discovery from yesterday, with all due respect to Ms. Albright.”

“Right,” Garrett said. “Remember I sent you email about other deployments, Annette? Here’s a picture of what we found, first an image from the sidescan, and then we went back and got real pictures with the ROV.”

He passed around a series of pictures showing a strange-looking contraption hovering somewhere in the water column. It was big enough that the lighting wasn’t very good for the whole thing, but it reminded me of a hot-air balloon with three baskets, one below another, plus a little balloon at the very top. Close-ups of the basket-like things and the balloons showed more details, but they didn’t mean anything to me.

But Shorty knew what to look for. “That’s an odd bit of hardware. The big float looks like a syntactic foam buoy, nothing remarkable there. The little one above it is, too, probably. But what are those other things? I’ve never seen oceanographic instruments that look like those. And they’re certainly not ours. For one thing, we paint ours up with the PSU logo and so on.”

“So you don’t think, Dr. Ringwold, that the three bottom packages are some kind of instrument?” Vanderhoff, I could tell, wasn’t being entirely forthcoming with us.

“It’s hard to know what kind of instrument they could be. I’ve never seen anything that looks like that. They must be something else. They’re containers, rectangular boxes, but I’ve got no idea what

could be in them.” Shorty looked puzzled. “But you know where this mooring is, right? Why not just bring it in? You must have a cable cutter on that ROV.”

“And we almost used it yesterday, Dr. Ringwold.” Garrett smiled. “But then we came to our senses. Like you said, we know where it is, and it’s not going anywhere without our knowing. Our Exec Officer pointed this out yesterday, and he also suggested that it might not be safe to just cut the thing loose. He said it might be some kind of unusual mine.”

“A mine at 900 feet?” Hal, I could tell, was trying to understand this. “What’s that about? Surely it wouldn’t be a threat to shipping.”

Vanderhoff nodded. “Not surface shipping. And that’s proven by the fact that it’s been sitting there with all sorts of ships overhead. Although, if it went off, there’d be quite a disturbance on the surface, maybe dangerous to smaller boats. But the thing is, we have submarine operations offshore now and then. There’s a sub test range down by Port Everglades, in fact. Our working hypothesis is that the small structure at the top is a hydrophone package that’s being used to capture information that they download every now and then—that’s probably what the *Reel-Thing* was out there for—and they’re preparing to use it in ASW.”

He must have seen my blank look. “Anti-submarine warfare. It could be that the three packages below that spherical float are each full of an explosive and are designed go off in close sequence, which could devastate any subs in the vicinity.

“I see. They process the hydrophone data until they think they can recognize specific targets, then they program the mine to go off when one is close by.” Shorty was nodding. “But if that’s right, the existence of one means there must be more, don’t you think?”

“That’s what we think, Dr. Ringwold. This is CI’s top priority just now, in fact.”

It sort of made sense to me, except for one thing. “I don’t understand how they can communicate with it. To download data, I mean, or program it to explode with a specific sound pattern.”

“I bet you remember computer modems, Ms. Trieri, before we all had internet connections and Wi-Fi, right?” Vanderhoff wasn’t calling me old, I decided, just experienced. “Well, there are such things as acoustic modems, they translate digital computer signals into a sequence of sounds and transmit them as chirps and squeals and so on. Another acoustic modem picks the sounds up and re-digitizes them. It’s slower and a bit more error-prone than the kind of computer modem everyone used to have, but they work. And that fishing boat would be a perfect platform from which to lower a hydrophone with an acoustic modem and talk to a hydrophone package.”

“So the *Stream-Tracker* was just in the wrong place at the wrong time.” I looked at Garrett.

“Looks like, Annette. Of course, if there are more of these hydrophone-mine combinations along the coast, doing this kind of research anywhere could be dangerous. The *Stream-Tracker* was just the first unfortunate, innocent victim.”

Hal cleared his throat. “Are you at liberty to tell us your plan? I’m not sure we’re in the need-to-know mode here, but I bet we’re all curious.”

Vanderhoff smiled. “Well, Dr. Weathers, we’re actually hoping to get your cooperation. We could use the help. Your resources here, we understand, include an extensive archive of undersea surveys from Key West all the way north to Cape Hatteras. And you have this secure facility and the right clearance to work with us. If we provide our submarine tracks, could you compare them with the survey data and infer where such devices as this might be placed? This one, for example, is in a fairly flat, sandy-bottom area, not a lot in the way of rock piles or anything to interfere with sound propagation.”

Hal looked at Shorty. “Do we have additional T-S cleared people?”

Vanderhoff spoke up. “We can provide those, Dr. Weathers. What we need is someone to coordinate the effort, someone with oceanographic experience and organizational skills.”

Shorty looked at Hal, Hal looked at Shorty, and they both nodded.

“We’re in.” Hal said.

“Damned right,” Shorty said. “Let’s get these bastards.”

“So here’s the plan,” Vanderhoff leaned back and stared at the ceiling in thought. “We’re going to retrieve that top float this morning, cut it loose from the mine and hope that the mine doesn’t go off. If it does, well, we lose an ROV and are back to square one. But if we can retrieve it and it *is* a hydrophone and modem, then we can crack its coding, I’m certain, and figure out how to talk to it. Then we run towfish along the coast chattering away and listening for these things to talk back. When we find one, we disable it, the mine, at least. Naturally, we’d like to start in areas most likely to have these things, and that’s where you folks come in.”

The need for stealth occurred to me. “What if they come back to download more data? Won’t they find out their hydrophone is missing and get suspicious?”

Garrett smiled. “That’s one nice thing about acoustic modems that have been underwater for a long time, for our purposes, at least. They get unreliable and sometimes fail. So they’ll come back, theirs won’t answer, and they just won’t know if it’s gone or broken or what. The water’s way too deep to go diving for it, and a fishing boat like the *Reel-Thing* won’t have the ability to carry an ROV. Anything big enough for that, we’ll notice, for sure. There’s going to be surveillance there, right, Rick?”

Vanderhoff laughed. “I’d say just a little, yeah. In fact, Dr. Weathers, I’d suggest that you folks include us in all float plan distributions so we’ll know it’s you out there. Otherwise your folks might have some unplanned adventures with Navy assets.”

\* \* \*

We spent several hours talking strategy and tactics both, and by late morning Hal and Shorty had figured out the best way to help with the use of OceanLab survey information. Garrett and I listened but really weren’t part of all that—I could tell he wanted to talk with me instead. He had the chance when we all went to an early lunch.

OceanLab operated a pleasant little cafeteria just off the patio by Hillsboro Bay, and it had warmed up outside enough to make the open-air tables comfortable, to us at least. To others, it must have still been too chilly, because we had the patio to ourselves. That helped, though, because having no potential eavesdroppers made our conversation easier.

After we had settled in and sampled our various lunches, I spoke up. “Garrett, I brought you a present today, a big bag of DVDs. Better you keep them than I. They’re in the car.”

He nodded. “Excellent. I’ll get people to go over them frame-by-frame to see if there are any other useful pictures, although I have to say the ones you sent were great, just what we need. But maybe we can also get an idea of what they took with them on the boat, for example.”

“And even though the big picture seems to be under control, we still need to apprehend those four guys somehow.”

“We do, and the pictures you sent will help with that. They’re being run through the facial recognition system this morning. The guys with tattoos should be easy to recognize, if they’re in the database, at least.”

Hal was shaking his head. “I’ll tell ya what. All this modern technology, you can’t even rob a bank any more without some computer getting your picture and identifying you. Where’s the fun in that? And you know what I saw in the paper the other day? They’re using the SunPass information about when you go through the new no-stop toll plazas to calculate your speed so they can give you a speeding ticket automatically. Privacy is becoming a thing of the past. What’s the world coming to, anyway?”

We three law-enforcement people couldn’t help but laugh. Garrett got control of himself first.

“What’s interesting, Hal, is that people don’t seem to mind. There are insurance companies that will give you a price break if you’ll install a driver behavior monitor in your car. People seem to love it—they value the price break more than their privacy.”

Vanderhoff had his own take on it. “People are using credit cards, or debit cards, for more and more stuff now, down to cups of coffee. And those cards are anything but anonymous—you really lose privacy by using plastic. But what *is* anonymous—cash—is going the way of the dodo. Hell, my bank won’t take coins for deposit any more unless I pay them to count them first.”

I had to ante up my two cents’ worth. “Add all that to the personal stuff that people post on social media sites like Facebook and so on, and the computerized information gatherers are having a field day. And making gobs of money by selling that information to marketers.”

Hal snorted. “Yeah, well, by the time you all get to be grumpy old geezers like me, everybody will have little transponders in their heads monitoring their thoughts for bad ones. Check out some boobs, get a shock. Hmmph.”

Vanderhoff looked at me with a grin. “Why, Ms. Trieri! Don’t tell me you have a dirty old man on your hands.”

I rolled my eyes. “It’s the beach. He goes for walks on the beach and checks out all the twenty-somethings. Comes back with this wild look in his eyes. If he had one of those transponder things, he’d just wear out its battery.”

“Well, ma’am, I can promise you that would never happen to me,” Vanderhoff said with a straight face.

“Nor me, Annette.” Garrett managed to look serious, too.

I couldn’t help myself. “Easy for you to say.”

Garrett cracked up, but Rick Vanderhoff just looked confused.

“Hmmph, again.” Hal looked like he wanted to change the subject.

He was rescued when Garrett looked surprised and pulled out his phone. He must have it on vibrate, I thought.

“Kraus here...right.” He listened for a minute. “OK. Good work. Let’s start tracking them down.”

He looked my way. “Hits on two of ’em.

I raised my eyebrows, and he continued. “The Asian guy and the one with the tattoo on his neck. About a 60% on the Asian guy and a 100% on the other one, who’s Bulgarian, it turns out. His name is Grozdan Petrov. Long Interpol rap sheet. The Asian guy is another matter, because he seems to have a bunch of possible names. That’s why the ID is less solid. We’ll pull all of the other pictures we can find of him, from those DVDs you liberated, and run them all. Maybe we can narrow down the possibilities.”

“One of those names wouldn’t be ‘Peter Chu’, would it?” I thought it time to voice a suspicion I’d been nurturing.

Garrett looked surprised. “Someone you know? I’ll have to ask. I’ve got the pictures you sent here, though, if you want to look at them again.”

He pulled the pictures out, and Hal, Shorty, and I studied the ones of the Asian guy.

Hal started. “I don’t think that’s Pete, do you, Shorty?”

“No, but he sure looks familiar somehow. Why’s that?” Shorty looked up and smiled. “And, no, it’s not because all Asians look alike to me. We have all sorts of folks from the West Pacific Rim countries here, and I’ve learned that their features are just as distinct as those of us Europeans. But he does look familiar. Hmm.”

Another thing had puzzled me. “What about this guy Petrov, Garrett? If he’s so well known, how did he get into the country? False passport?”

“Probably. Customs tries, but like everyone else, they’re understaffed and undertrained. It’s pretty easy to slip in with fake documentation and a tourist visa. But we’ve got his fingerprints, so that might be helpful.”

“Every little bit will help. We just *have* to get these guys,” I said.

Shorty’s set jaw and flashing eyes told me he agreed.

\* \* \*

After that early lunch, Garrett and I talked it over and decided we both should head back to his office, at the Miami Station, where he had access to a sophisticated array of computer technology to process the DVDs I had in my car. Between the two of us, it seemed as if we would have a better chance of discovering whatever else there might be of interest. Also, he wanted to show me the details of the survey results, information that he had not brought up to OceanLab. So we hit I-95 for the 40-mile trek in that crazy traffic.

And it actually worked—we pulled through the guard gate just about 35 minutes later. By some miracle, there were no accidents or other slow-downs the whole way. I had my fingers crossed for the return trip.

Before we got down to business, Garrett took me to pay respects to his superiors, and we were able to give a bit of a progress report at the same time. It’s always a good idea, he pointed out, to let the bosses know you’re hard at work and getting results—even preliminary results—especially when you’re out of the office a lot.

I think that Garrett was assuming he could just breeze by various offices and give them some kind of equivalent of a “thumbs up,” but that didn’t work. His immediate boss, Commander Snedaker, was in the office of *his* boss, Captain Galliari, when we stopped by. Galliari I remembered, had authorized the previous day’s survey by the excuse of the need for training, and it turned out that he wanted to know what return there was on his investment. Or maybe we just caught him with some extra time on his hands.

“Ah, Agent Kraus. And Ms. Trieri! How nice to see you again. I had a lot of seasick sailors last evening, Garrett. What did it get me?”

“Quite a lot, sir.” And Garrett continued with about the same explanation he’d given earlier at OceanLab.

“A possible mine, that’s what your email said last night. And those pictures you sent do look suspicious.” Galliarì’s stern look bespoke his concern. “And there might be more of them? Got any additional pictures for me?”

“Uh, well, yessir. On the main server.” Garrett waited until Galliarì got himself behind a keyboard and then rattled off a string of numbers and letters with ‘slash’ interspersed. I guess it was a file pathway or something. “They’re chronological, sir, and you can see everything about the mooring there.”

“Right. Hmm. Right. I see. Some of these, of course, are what you sent me last night. And they looked pretty interesting. But these others are helpful, too.” Galliarì looked up at us. “Did you see the markings?”

“Markings? Uh, well, sir, I’ve been processing all of those and everything else we found, including the body, little by little, and I guess that I didn’t notice any markings, no.” Garrett seemed to be a bit embarrassed.

Snedaker spoke up. “Well, it made us wonder, and we sent out another ship first thing this morning. Navy CI is on this too, as I expect you know, and they went along to retrieve that top-most float there. We also put a rad counter on the ROV this time, but it didn’t find anything unusual. But we got better pictures of the markings.”

Galliarì did some things to his keyboard and mouse, and another picture appeared.

“Could that all be Chinese? Except for that symbol there. What’s that?” My afternoon at the Morikami the day before had involved a lot of Japanese characters in the museum, and these didn’t resemble what I’d seen. The exception was some kind of modern-looking emblem, a circle enclosing three arms and big dots on the ends of them.

Galliarì was solemn. “Good call, Ms. Trieri. It’s Chinese. And it translates to mean that those three box-like structures are full of warheads for RPGs. Rocket-propelled grenades. What you’re pointing at is the international symbol for chemical weapons.”

I think that both Garrett and I were stunned when we walked out of Galliarì’s office. The ante for our investigation had just gone through the roof, and I was feeling completely out of my depth. A chemical weapons cache in the ocean offshore of Deerfield Beach?

“Annette, I need to think about this. And talking will help me. How about a cup of coffee or something?” Garrett looked drained.

We headed for the station’s dining room, what Garrett called the ‘mess,’ although I was hoping it wouldn’t be. I was relieved when it turned out to resemble a no-frills Starbucks, only with more food choices. We assembled our drinks—one of those gigantic black coffees for him, a decaf peppermint mocha for me, because I needed the comfort value—and found an empty table.

“OK, well, mines with modems are one thing. Chemical warheads are another altogether. What’s your take on all this Annette? I’m just, well, I’m just mind-boggled.” And he looked it.

“Yeah, me, too. Still, this doesn’t change what we’ve found already—that the group we have pictures of chartered the *Reel Thing* and went out to talk to the modem the Navy has grabbed, most likely, and in the process they wiped out the *Stream-Tracker* and her crew. Right? These warheads are just bigger, much bigger, threats than the regular mine would have been. Right?”

“Which makes the whole thing that much more urgent. And I think we’re a long way... Uh, Annette?”

He stopped because I’d stopped listening, which was because I’d spotted someone I recognized, someone so unlikely that I was stunned all over again.

I stood up and tried not to shout, too loudly, at least. “Mac? Mac MacQuarrie?”

And that’s who it was. He turned at the sound of his name, took a couple of seconds to locate my voice and another to recognize me, broke into a huge smile, and walked over toward us. “Annette! Annette Trieri! Well, by damn. What in the world are you doing here?”

We had our old home minute, reminiscing briefly about the cruise ship caper on which we’d met while ferreting out a shipment of special nuclear material that had been stolen by a terrorist group. And I introduced him to Garrett, who was looking quite baffled.

“You’re a CGIS Special Agent, too?” Mac was looking at the logo on my ball cap.

“Oh, am I ever. But what in the world are you doing as one? I thought you and Sam were living in the Keys while you were learning to bonefish. And she’s painting or something?”

“We are, and I was, and she is. But I’ve got this temp job just now, so I’m here in Miami for a while. Let me get a coffee refill, and I’ll come back and tell you all about it.”

\* \* \*

## 2.0

When the reticle of his Leupold 16x40mm scope found the target’s left ear, the shooter allowed himself a small sigh. Now, he thought, it’s just a matter of time while I wait for the right part of the speech, a little while for me to think over the Plan once again.

He’d heard the speech a half dozen times, and he knew the cues to listen for, the build-up to the Big Moment when the target would stand perfectly still while his audience went nuts. At least that’s what had happened on those other occasions—and the shooter was confident that it would happen again during this Sunday noon-time speech to the rich condo geezers, giving him time to get off the shot without the target’s moving. And the crowd’s applause would cover what noise from the report and the sonic boom of the bullet that might reach them a half-mile away.

He had selected this event, a mid-day Sunday rally, for the hit because the speech was on the radio, loud and clear through his ear-bud. The build-up, he knew, was coming.

Another reason for selecting this particular event was the background, where the sun glinted off the waves, a bit of a distraction in the scope’s field of view but one that was worth the benefit. Even though his hand-loaded, match-grade .50-caliber hollow-point would lose its aerodynamic shape after blowing off the right side of the target’s head, the shooter knew it would continue to tumble for several hundreds of yards and splash into the turquoise water just past the sundeck over there. The chances of its ever being found were minimized by his having salted that part of the bay the day before with various bits and pieces of metal, including a dozen rounds he had put through watermelons as practice.

Snug up against his shoulder, the weapon he was using would, he knew, provide exceptional accuracy. Mounted on its bipod, his McMillan TAC-50 A1-R2 low-recoil, long-range sniper rifle was perfectly balanced, rock steady, and, with the technology of the scope, sighted precisely to compensate for the distance, the downward trajectory, and the light breeze from his left. His position, prone on the balcony of a vacant fourth-floor condo with its hurricane shutter opened just enough to aim through, was a bit claustrophobic, but it was also quite secure. And it provided him with a panoramic view of the sundeck four buildings down, over there beside Brickell Bay Drive, the sundeck that was now occupied

by several hundred people, many bundled up against the cool weather, who were enthralled by the speaker's charisma.

All things being equal, he would have preferred not to take the head shot. Even though putting a cluster of rounds in a four-inch circle at 900 meters was routine for him, just too many things could go wrong in an open-air situation—an unexpected puff of wind or a twitch of the target's head could ruin the whole setup. Indeed, the breeze off the peninsula, only partially blocked by all the big buildings, would make today's shot challenging.

Much better were torso shots, through the sternum from the front or the spine between the shoulder blades from the back. His special hollow-points were made of such soft stuff that, when the half-inch slug mushroomed, it would do so much damage that death was certain even if the entry point was a bit off.

But this time the head shot was necessary. His perch on the balcony was to the side of the target, who was surrounded by other people anyway. The only view of the target was his head, elevated slightly above the others on the stage with him. The guy was short, so he must be standing on a box or something, the shooter thought.

With all of the preparations complete, the remainder of the Plan involved post-shot activities. The shooter began some deep breathing exercises to calm himself as he reviewed what had to be done.

Given the muzzle velocity of the load he'd prepared, he would see the results of his shot within about a second of squeezing the TAC's trigger. Then he would watch the crowd for a few seconds to see if there were any hints of his being discovered and slowly pull the muzzle of the TAC back into the darkness of the balcony. The real work would begin after that: folding the bipod, removing the stock, sliding the weapon carefully into the golf bag that was now leaning on the wall behind him, placing a cute driver sock over the muzzle so it would look just like the real three-wood already in the bag, and heading for the car. It wouldn't make sense to take the stairs—no one who lived in the building would ever carry a golf bag down four flights of stairs to the underground parking and he couldn't risk being seen with it—so he would have to take the elevator. Then it was just a matter of driving casually and carefully away in the other direction, hopefully before any roadblocks were set up. He'd timed the elevator and discovered that he could be in the car and on his way within two minutes if everything went according to plan.

If everything didn't, well, then there was Plan B: abandon the rifle and the golf bag and become a pedestrian, blending in with the foot traffic along Brickell Avenue. That would be a shame, because the TAC and its accoutrements were a twenty-thousand-dollar investment. At least he'd leave no fingerprints.

Ah, there was the first cue in the speech. The shooter felt his heart rate jump slightly, and he took another deep breath, letting it out slowly. Now for the Big Moment, right on time, and he squeezed gently. The TAC boomed and the target's head exploded, but he saw no particular interest from anyone looking in his direction—they were all too shocked and panicked down there—so he got busy with the rest of the Plan.

\* \* \*

Just about the time that I was thinking how easily manipulated the crowd was, what a bunch of gullible morons they were, and why don't I try out that interesting-looking sushi restaurant for lunch instead of listening to all this crap yet again, the speaker's head exploded into a pinkish mist. Then there was chaos.

I'd staked out a vantage point on the seawall next to the bay, a nice, warm spot in the sun, and just as his head disappeared, I saw in my peripheral vision something splash into the water a bit outside the first slip in the little marina. It was easy to note my exact position and take a fix on the splash—it was about fifty feet away from me, slightly past that first piling, on a line stretching toward a little spoil island way off to the east across Biscayne Bay. Given that and the position of the victim, I tried to extrapolate back in the other direction toward the shooter's location. But the queue of high-rises off to the south offered just too many possibilities for me to guess where he could have been. I hadn't heard a report, but the crowd noise could have covered that, I thought.

The chaos meant that I might as well stay put—fighting my way through the panicked crowd didn't seem practical, even if I'd had a clear destination in mind. So I leaned against a lamp-post and tried to relax. It would have been the perfect time for a cigarette, except I'd given up that smelly habit several years before. Instead, I fished in my shirt pocket for a piece of gum to chew while I watched the excitement.

Back in the day, during my posts overseas in Southwest Asia, cigarettes had been *de rigueur*. In fact, if you *didn't* smoke, you were out of place—people looked at you funny and you would have a hard time getting anyone to trust you. And it had been my job, or part of it, at least, to blend in and to foster trust, so I was happily addicted to nicotine for quite some time.

But retirement had changed all that. For one thing, I'd taken up woodworking for a while, until my house got blown up by a disgruntled Arab, and the fire hazard was just too risky. Also, I'd developed a nagging cough—which disappeared when I weaned myself from sucking on those obnoxious little paper tubes. And I was certain that the lady I'd taken up with, despite her politically incorrect past, would disapprove if I fell off the wagon.

So chewing gum had to substitute. Sugar-free gum. I liked my teeth.

I don't mean to sound blasé about the murder I'd witnessed, but I guess I was. I'd seen worse and, indeed, had perpetrated similar things, from close-up, even, during my years overseas. That's what happens when you work for those secretive three-letter agencies that make up the national security establishment in Washington, you get some truly nasty assignments.

And I can't say I was particularly sorry to have seen that day's speaker meet his demise. I certainly wasn't at the rally to participate; in fact, it was rather distasteful to have to attend. But I'd accepted yet another post-retirement consulting job to observe and report on the whole thing. And some report it was going to be.

The pocket where I'd found the gum buzzed, and I pulled out my cell phone. "Mac MacQuarrie here."

"What the hell's going on down there, Mac?" The newly familiar growl of my new Washington contact on this case, Preston Sands, was a bit more frantic than usual. "The police frequencies are going crazy."

"Our boy got popped, Pres. Head shot, not from close-in. I couldn't tell from where, though, there are just too many possibilities. But it's obviously a professional job."

"You been made yet?"

“I’m about the only one who’s not running around like a headless chicken. But I don’t have an easy way out of here, so I’ll probably have to show some ID. Got a preference for which one I should use?” Sands’ people had supplied me with a wide choice of expertly prepared documentation, all bogus.

“Hmm. Aw, you might as well show ’em the Homeland Security one, I guess. But tell them that you can’t discuss why you’re there, OK?” In the short time I’d been working for him, Sands had often given instructions that were hard to comprehend and even harder to accomplish.

By that time the place was beginning to swarm with uniforms, and I could tell that it was going to be a while before before I was going to get any lunch.

\* \* \*

Frankie Muñoz, the individual whose head I’d seen explode just as I was contemplating a lunch of raw fish, was a not-quite-typical, second-generation Cuban-American. Decades ago, his father, Ubaldo, had been convicted of embezzlement and was languishing in a Cuban prison when Fidel Castro had the bright idea to export Cuba’s ne’er-do-wells, and Ubaldo, along with so many of his fellow Cuban convicts, was put on a boat in the Mariel Armada headed for Miami.

Once ashore in his new land, it didn’t take Ubaldo long at all to impregnate one Maria Sánchez, whose brothers, when they learned of Maria’s predicament, offered Ubaldo the choice of making an honest woman out of her or having his penis and testicles removed in what sounded to Ubaldo like an extremely painful fashion involving electric hedge-clippers. A consummate survivor, he wisely chose matrimony.

As a Sánchez in-law, Ubaldo became a part of the family’s business empire, laundering both clothing for the Miami Cuban ex-patriots and money for the burgeoning community of cocaine importers in South Florida, some of them Ubaldo’s Mariel comrades. Given his background in questionable finance, Ubaldo fit right in, so much so that it took him only a few years to rise to the top of the greater Sánchez empire, which at that point was earning itself about \$75 million a year in profit, all cash, mostly small, well-used bills.

Ubaldo and Maria had thoughtfully kept young Frankie in the dark about the family’s business affairs as he was growing up; instead, they sent him off to the best private schools that drug money could buy. A bright young fellow, he did quite well, eventually finishing in the top ten in his class at Harvard Law. Then, per the family strategy, he returned to Miami to go into politics. After several small successes, Frankie was ready for something bigger.

So it was that Frankie had been touring Miami-Dade County for the past several months, giving the same campaign speech over and over in his attempt to win the April primary in the race for State Attorney for Florida’s most populous county. He was a wonderful speaker—I knew this because I’d seen most of those speeches—who exuded the sort of charisma that folks of my generation associated with rock stars of the ’60s and ’70s. And Frankie was the perfect South Florida candidate, seamlessly bilingual, charmingly handsome, and, a particularly attractive attribute to young, unmarried women, single. Of course, he was also on track to become something of a Sánchez-empire fox in the henhouse of public interest, even if he didn’t know it.

Why had I seen most of those speeches? Well, I had been retired comfortably into a rental house on Big Pine Key with my significant other, a lovely lady named Samantha Winslow, and was trying to improve my fly-fishing abilities, when I’d received a call from a Preston Sands about a consulting job. He told me that he worked for the NSA and that he had been assigned to take over Bill Petersen’s portfolio of special operations personnel. Bill, who had been something of a burr under my saddle

throughout my career in the Washington agencies, was my contact on my previous consulting job for them, a nuclear terrorism case that Bill didn't survive.

This time, it seemed that a special task force Sands was working with, a task force coordinated out of the Office of the Director of National Intelligence, was quite interested indeed in Frankie's chances of becoming South Florida's chief prosecutor. The Sánchez clan had apparently expanded its business interests beyond money laundering for drug smugglers and was now involved in that activity and several others, including gun-running, in association with a couple of groups on the international terrorist watch lists. Sands' task force had decided that some boots on the ground were needed to pay attention to young Mr. Muñoz, and I, being in the area and experienced in such things, seemed like a good candidate, even though my preferred footwear had degenerated to flip-flops rather than boots. For me, it was a case of too-easy money and, relative to my fly-fishing skills, too-smart bonefish.

But obviously there was no young Mr. Muñoz to pay attention to any more. Why that was, though, was not quite so obvious.

\* \* \*

It took about a half hour before any of the uniforms noticed my presence, and I congratulated myself on looking so nondescript that they would have ignored me for so long. Of course, they were all busy with hysterical bystanders for most of that time. Eventually, though, a comely young woman in a crisp blue uniform wandered over my way. She was young, but with an old woman's cynical eyes

"Officer Holden," I tried not to stare at the bulge under her Miami PD name badge, "I'm sorry your afternoon is so upside-down today."

"You and me both buddy. You been here the whole time?"

"Yes, officer, I have been. Here's some ID for you, and I think I can save everyone some time if I talk with your senior investigator." I flipped open the wallet with the DHS shield in it, and she looked startled.

"Homeland Security, huh? What the hell are you doing here?"

"Yes, well, that's a bit problematic. But I can make up for it with some critical observations about what went down. If you want to find your lieutenant, or whoever, I can wait right here."

She squinted, making those cynical eyes dark with suspicion. "OK. But you wait here, right here, because if you're not here when we come back, it's going hit the fan for sure, right?"

"Absolutely, officer." I smiled and went back to gum-chewing and people-watching.

After about fifteen minutes she returned with a black man in street clothes who wore a shield on a chain around his neck. "This is the DHS guy I told you about, detective." She put her thumbs in her belt and stared at me. The classic police stance seemed odd for someone so pretty.

I stuck out my hand. "Ben Worthington, detective." I'd remembered to check out the name on my DHS ID.

"Detective Charles Jefferson, Mr. Worthington. What have you got for us?"

"A few observations, detective, and just maybe the rifle slug that killed that poor guy." I maintained a poker face while he looked surprised.

"You've got the bullet?"

“No, but I might be able to direct a diver to it. It’s over there in the bay, I think.” I jerked a thumb over my shoulder and then nodded toward the sushi place. “Have you had lunch? Maybe we could go over there and get some while you debrief me. I’m starving.”

I don’t know whether I was more surprised that he agreed or that he was able to manage asking questions, taking notes, and eating sushi all at the same time. For my part, I decided to go with a mixed tempura, something nice and cooked. That pink mist of blood and brains had put me off raw fish for the time being.

I told him everything I’d seen and, with some dancing around the issue, persuaded him that my interest in the rally as a DHS official had to do with how important South Florida was in the overall DHS scheme of things—how the Coast Guard, for example, was our first line of defense against smuggling, blah, blah, blah—so naturally we’d be interested in the State Attorney campaign. The business of Frankie’s possible connection to the Sánchez empire didn’t come up. I decided to pad my consulting hours bill to reflect that little success.

Not surprisingly, he was most interested in my having noticed the splash, which was possibly an indication of the location of the bullet that killed Frankie.

“So, you saw a splash just after the shot, right?”

“Right. In my peripheral vision. But then I looked over there and saw the ripples and got a fix on it. So I should be able to direct a diver to the spot, within a reasonable distance, of course. A few yards, probably.”

“What do you think this was all about?”

“Well, it seems like it must have been a professional hit with a military-grade sniper rifle. I don’t really know much about this kind of thing,” I lied, “but it seems like the shooter must have been quite a ways down south, several of those big buildings down. I kind of extrapolated from the splash and where the victim was, and that line extends down the coastline. And it probably came from several stories up.”

“Got any ideas about a motive for this?”

“I’ve been thinking about that. And I can’t say I do. I mean, here’s this guy running for public office, but it’s only in the primary election. And someone assassinates him. Sure, the bad guys don’t like the State Attorney, even candidates for the office. But the sitting SA hasn’t had any attempts on her life, has she? So this must be about something else, something bigger. Much bigger.”

“Yeah, well, we’re in the very early stages of this investigation, obviously.” Jefferson let out a huge sigh. “Information gathering, and all that. We’ll be looking at his family and everything else, you can bet. Um, how about tomorrow morning for the search for the slug? You available?”

By the time we were finished, the crowd outside had mostly dispersed, and I was able to be on my way. But I didn’t quite know where that was. I’d planned to be at Frankie’s afternoon rally, down in Coral Gables on the University of Miami campus, but that, I thought, would probably not be happening. So I called Sam.

“Hi, kiddo. How’s your day going?”

“Well, I got some shopping done, at least.” She sounded flustered, I thought. “The traffic up here is ridiculous, though. When did you say you’d be done?”

I’d commuted alone from Big Pine Key for most of Frankie’s speeches, but this time she and I had driven up together early that morning. When we moved to the Keys, she had been eager to get out of the city and enjoy the peace and quiet down there, but she had underestimated her attachment to urban amenities. Necessities—groceries, gas, some pharmaceuticals, at least, hardware, tourist clothes—were

available there, but the choices were limited. After nearly a year of the mail-order consumer experience, Sam was more than ready for some serious time at a high-end mall.

But it sounded as if the reality of urban population density, with all its cars, was taking her by surprise.

“Well, my plans have changed. I’m done now, I guess, although I need to be back here tomorrow morning for a while.”

“Good. I’ll pick you up where I let you off earlier, and let’s head back south. It’s nuts up here.” She sounded relieved.

Her pink VW Beetle convertible showed up about fifteen minutes later, and we worked our way over to South Dixie Highway, where we joined the southbound stream of cars. It was somewhere in South Miami that my pocket vibrated again.

“Mac MacQuarrie here.”

“You’re debriefed by now, I expect.” Preston Sands’ raspy smoker’s voice was quite distinctive.

“Yeah, and I’m headed back to the Keys. Somehow I don’t think the afternoon rally will be happening. You need me to send you an invoice?”

“Huh? Are you resigning?” His confusion was obvious.

“Uh, well, I signed on to keep an eye on Frankie Muñoz, to go to the political rallies and get a feel for his politics, right? Seems like that’s all over now. I do owe you a report, I guess.”

“Well, yeah, that part is and you do. But now we need to figure out who did this and why. And we sure could use your help with that.”

“Oh? You positive? The Miami PD is all over it. And the detective I talked with seems like a competent guy. Are you planning a parallel investigation, or what?”

“You said it looked like a professional hit. That means we can call it ‘terrorism.’ And the cops think you’re DHS, right? Everyone knows DHS does terrorism. Seems like you could work your way into their shop and keep tabs on where they are.”

I didn’t like the sound of that one bit. “Until the real DHS shows up, maybe. And you can bet the local investigative team will really resent anything that they perceive to be federal interference, whether it’s a fake DHS guy or a real one.”

“Well, figure something out. That’s what you’re good at. We really need to be in the loop on this.” He sounded frustrated.

“OK, but my fee is doubling as of today. Watching speeches is one thing. Investigating is another altogether.” And I hit the disconnect button.

“Should I turn around?” Sam was trying to look at me and the road at the same time.

“Hmm. Well, that’s a good question. I’m going to have to spend more time up this way, it looks like. So you’ve got to decide if you want to be down at the house by yourself or up here with me, in a hotel or something.” I patted her leg. “It would be great to have you here with me, but I think you’ll be pretty bored. At least at home you can work, right?”

She cocked her head and tapped her fingers on the steering wheel, thinking. “How about this: we go home and pick up some stuff, then come back up here prepared for a long stay. I’ll bring my paints and so on—there are plenty of places around here I could do. The zoo might be fun. And Vizcaya! And maybe I can get in some golf. I’m bored with the courses down at home.”

When we'd moved to the Keys a year before, Sam took up painting, with water colors and acrylics and oils, as well as sketching with pastels and charcoal. And she rocked. She had a great eye and a sort of minimalist style, not quite abstract but certainly not what you'd call "realism." Whatever you do call it, people ate it up: her stuff was selling like hotcakes from the galleries of Key West all the way up to the metro area.

"Now, that sounds like a plan. I'll rent a car so that you don't have to shuttle me around, and we can find one of those suites places, with a kitchen." Having her with me, I knew, would make the whole consulting thing much more pleasant.

"So, you're going to do some kind of investigation. Did something happen?"

"Oh, right. You wouldn't know. Well, see, I've been watching this guy Frankie Muñoz's campaign rallies, his speeches and all. But today someone shot him. I guess I'm going to see if I can work with the local cops on finding out who and why." I could see worry lines taking shape around her eyes. "But, look, it's just an investigation, nothing with real action, OK? I don't see any danger here, or anything. I wouldn't want you with me if there were."

"Yeah, well, if there were, I wouldn't want you involved, either, y'know? We had enough of that before. Now we're just a middle-class retired couple living in the Florida Keys. No more spook stuff, OK?"

I think I managed to suppress my smile. "No, this is probably just boring detective work. Finding the right people to ask the right questions of. Stuff like that."

But I was wondering how difficult it was going to be to smuggle my Sig Sauer 9mm up to Miami with me. It looked like separate suitcases for sure.

Even though the traffic was murder—spring break was in full swing, after all—we made it home by late afternoon. I was packed and ready to go within about fifteen minutes, but Sam was still scampering about gathering all that she wanted to take along, so I got online to find us a place to stay. It turned out that the Residence Inn on Tigertail in Coconut Grove, about a block from the orgy of shops at the Mayfair and Cocowalk, had the perfect vacancy for us, so I grabbed it. I knew there were places with more local color available, but I was certain that the Marriott plumbing would work, so it was my preference.

Eventually we were on our way, northbound for the second time that day on the Overseas Highway. Because it was getting toward suppertime, we stopped in Islamorada at Marker 88, the venerable old seafood restaurant with the great view of Florida Bay, and had a glorious dinner before heading into the Grove.

Preston Sands didn't know it yet, but I always doubled my expense account whenever I doubled my consulting fee. He and his bean-counters were just going to have to figure out workarounds to the normal federal travel rules.

I was thinking about all this as I ordered the evening's special, all-you-can-eat stone crab dinners, for both of us, accompanied by a \$200 bottle of the vintage Meursault. Thanks, Uncle Sam!

\* \* \*

At nine-thirty Monday morning, I met Detective Jefferson and a police department diver at that sundeck just by Brickell Bay Drive. I'd spent some time Sunday evening rehearsing my role as Ben Worthington, DHS official, but I knew it was going to be tough getting used to being called "Ben" after a lifetime of responding to "Mac."

When I arrived, Jefferson was sipping at a huge cup of Starbucks something and the diver was gearing up, wet suit, tanks, everything. "Morning, Mr. Worthington, let's see if we can find that hunk of lead, shall we? This is master diver Randy Simms."

"Good morning detective, Mr. Simms. Please, call me M..., ah, Ben."

"And I'm Charles. And everyone calls this guy Randy." Jefferson smiled, the first time I'd seen him do so. "So, you say you got a fix on a splash you think was the slug?"

I lined him and Randy up with the sight I had taken toward the spoil island and told Randy to look around just outside the first piling. While Randy was swimming out to the spot, towing a little orange float to use as a marker, I exercised my curiosity.

"So, Charles, I thought everyone worked with a partner these days. Are things so tight you're on your own?"

He shook his head. "My partner got demoted, and I'm solo until someone else is available. It's actually not all bad, because he was something of an impediment. And this way, I can run this Muñoz case my own way."

A plan materialized in my head a plan that would fit with my persona, if only I could remember my name. "Hmm. Well, y'know, my bosses at DHS are more interested than ever in this whole thing. Muñoz the candidate was one thing, but Muñoz the dead guy has really got their attention. Need an observer? Um, I'll stay out of the way unless you need backup, and that's something that I'm good at, very good."

He look at me sharply, then stared out at the bay, watching the trail of bubbles from Randy's search pattern. "If you were FBI, I'd say 'no.' But federal credentials can come in handy now and then. How about we try it on a provisional basis, meaning I can call it off any time, for any reason? I mean, I don't want to sound paranoid, but some of the complexities on this one could get sticky, and the last thing I need is sensitive information floating around out of control."

I stuck out my right hand. "Done. And I'm also very good about sensitive information. Ah, see, I used to work for the folks at Langley, out in the field. Middle East. Being sloppy with information over there gets you killed. And, well, here I am, alive and healthy."

He grinned, and we shook. About then Randy surfaced and spat out his regulator.

"How many shots did you say?" He had to shout a little.

"Ah, well, I only know of the one. But I didn't hear it, I saw it. I guess there could have been others. Why?" That, I thought, was puzzling.

"Got two so far. And counting. I haven't finished the pattern yet." And he stuffed the regulator back in his mouth and submerged.

"What the hell? Two? And he thinks there's more?" Jefferson looked my way, suspicious. "What are you not telling me?"

"I've told you everything I know about this. I saw one shot, the one that killed Frankie Muñoz. And it's hard to believe that the shooter was just wailing away, because no one else was hit. I don't have a clue here, Charles." I shrugged.

Randy spent another twenty minutes under water, and then he surfaced and headed for shore, towing his little orange marker. We helped him out, and he handed Jefferson a net bag.

“Did I see a pool over that way?” As soon as he got rid of the regulator, Randy was looking over our shoulders. “I bet it’s fresh water. I’m going to go rinse off. Oh, and there are four slugs in the bag there. I didn’t look at them too closely, but they all look to be about the same caliber. Big.”

He stripped off his flippers and headed off toward the pool, still wearing his scuba tank.

Jefferson was carefully extracting the slugs from the net bag, trying not to damage them. After a couple of minutes he had a row of four large-caliber hunks of lead with mushroomed ends sitting on the railing.

“Must have been hollow points. And, damn, I’d say a .50-caliber.” He looked at me.

“Agreed. And I’d say it was definitely professional hit, given that kind of weaponry. And accuracy.”

Randy Simms took off in his own direction in his own car, and I followed Charles Jefferson in what I’d rented, a plain-vanilla Ford Focus. I wanted to be invisible, and I knew that Sam’s pink VW Beetle wouldn’t work for that. Besides, I didn’t want to be caught dead driving that thing. But I was surprised that Jefferson—a plainclothes detective—would be driving a seriously red Lincoln Navigator, not what I’d call invisible. At least, I thought, I probably wouldn’t lose him.

The Ben Worthington business, I knew, would get old fast. And even if I were able to remember the pseudonym, there was a good chance that someone would do a background check on me and find out the subterfuge. So, at a stop light, I fished out my phone and called Preston Sands.

“Pres, I need a *bona fide* ID of some kind, one with my real name on it. Not FBI, though, people here don’t trust them. But if I’m going to work closely with the locals, I can’t use a fake name. They’ll find out for sure. Or I’ll slip up somehow.”

There was a long pause, and I began to wonder if the call had been dropped. But then he responded. “Yeah, well, how are you going to explain yourself? I mean, you already got introduced as someone else, right?”

“Only to a couple of people, the lead detective, a uniform. And I think I can earn some trust with the detective by coming clean.”

“OK, well if you don’t want an FBI shield, what’ll it be?”

“I used the Homeland Security ID before. And one of the concerns about our late friend Frankie was that his family’s got itself entangled in drug and gun running with some of the nasty groups, right? Smuggling, at least down here, is a Coast Guard thing, right? So how about some kind of Coast Guard credential? They’re even DHS, so it’ll make my explanation easier.”

“Hmm. Not a bad idea. Let me pull some strings and see what twitches. Um, there must be a Coast Guard station down that way, right? Maybe I can set it up so you can run over there and pick up whatever you need. I’ll call you back in a while.”

The light had long since changed, and I had resumed making my way through Miami’s absurd downtown traffic behind Jefferson’s red Navigator. Finally, in the midst of a number of government buildings, he pulled into a parking lot filled with squad cars, and, without any real alternative, I followed. He parked, got out, and walked over to my driver’s window, which I lowered.

“Ben, on the way over here I got a phone call, and I’m going to have to abandon you for a couple of hours. Sorry. But we’re having some internal affairs people poking around my section, and I need to handle it. I’ve got no say in the matter.” He looked chagrined, to say the least.

“That’s OK. It’s after eleven, and I’m starting to think about lunch—I didn’t have much in the way of breakfast. How about I go find some and wait for a call from you? Maybe we can move this thing along a bit this afternoon.” We exchanged phone numbers, and I headed out, back toward Coconut Grove.

But just as I was passing the Rickenbacker Causeway entrance—I’d made my way over to Brickell Avenue to head south—my pocket vibrated.

“Mac MacQuarrie here.”

“OK, you’re all set, Mac, or will be by the time you get there, which is to the Miami Coast Guard station on Terminal Island off the MacArthur Causeway. You’re going to be a Coast Guard Investigative Service guy, for real, as a matter of fact. They hire civilians all the time for special projects, and they’re going to hire you.” Preston Sands sounded quite pleased with himself.

“And no doubt you’re going to make up the difference between whatever salary they offer and what my consulting fee is, right?” I wanted to make sure he wasn’t pleased with himself for saving a lot of money at my expense.

“Huh? Oh, yeah, well, right, sure. That’s all just bookkeeping. No problem.” Now he sounded unsure of himself.

“Pres, you’re not a good liar. But I’m sure you’ll figure it out. Anyway, I’ll head up there right now and get sworn in, or whatever their process involves.” I could see the light for 17<sup>th</sup> Avenue up ahead, so I put on my turn signal.

\* \* \*

A while later, I had a quick lunch at the Coast Guard Station’s mess, where, to my surprise, I ran into Annette Trieri, who was also working on a CGIS case. She and I traded war stories and phone numbers, and then I proceeded with more paperwork than I would have thought necessary until I was an official CGIS investigator, shield and all. They even gave me a ball cap like Annette’s and an extra box of shells for my Sig Sauer.

I checked my phone and found a message from Charles Jefferson, so I headed back to downtown Miami. On the way, I called him for information about where to park, and he met me at the parking lot entrance with a hang tag for my mirror.

That gave me the opportunity I needed.

“Charles, before you go introducing me around or anything like that, you need to see this.” I handed him my new CGIS credentials, which I’d made sure to put in an old, battered, leather flip case. “‘Ben Worthington’ was a cover I was using for the political rallies I’ve been at. But if we’re going to work together, well, I need to be straight up with you. Call me ‘Mac’.”

He looked at the ID card and shield, at me, and back at the ID card. Finally he shrugged. “Yeah, well, whatever. But why was CGIS interested in Muñoz, anyway?”

“His family, the one he married into, the Sánchez clan. They run drugs and people, and we think they’re moving into guns, big time. A State Attorney with those connections had us worried. I was keeping an eye on him and the people at his rallies.”

“So why shouldn’t we think that you people shot him?”

That certainly took me by surprise. “Good question. But I never heard it mentioned, even joking. It’s still before the primary, after all, kind of premature to be quite that worried, seems like.”

He thought for a minute and finally nodded. “Yeah, you’re probably right. We knew about the Sánchez connection, by the way, and about their, uh, business interests. But that information isn’t something we want to go public with.”

“OK, makes sense to me. But now that it’s out in the open between us, do you have any thoughts about the shooter you haven’t mentioned? It’s occurred to me that it could have been someone working for a Sánchez competitor. I mean, if we in the Coast Guard were worried about Muñoz becoming State Attorney, it must have made competitors crazy with worry, right?”

He looked straight at me. “That’s our primary theory right now. It could change, of course, but that’s where the smart money is. C’mon, let’s go inside.”

He led me through the front entrance and past a main desk, which was the center of the sort of turmoil you might expect for a downtown police station, to a conference room at the rear of the building. It was occupied by four others, three of them plain clothes. They looked at me, the new guy, with some combination of curiosity and suspicion.

“Captain, guys, this Special Agent Mac MacQuarrie, CGIS. He’s the guy who helped us find the slugs in the bay.” Jefferson looked at me. “And we’ve got something interesting, Mac. Captain?”

The uniform spoke up. “Good to meet you Special Agent MacQuarrie, and thanks for the help with the slugs. What’s interesting is that of the four we found, three are similar and one is different. Our ballistics people put all they had into it for the past couple of hours to come up with this.”

I cleared my throat. “Just call me ‘Mac’, everyone. They looked like fifties to me, Captain. Three alike, one different, eh? Interesting. That makes it sound like the unique one was the kill shot.”

Jefferson spoke up. “Randy Simms is back out there now, looking for more. And, you’re right, they were .50-caliber hollow points. Must have been some special load.”

“Which means your guess about this being a professional job was a pretty good one.” It had been my guess—more than a guess, really—but I thought Jefferson should get the credit in front of his boss.

“I thought you were with Homeland Security. That’s what Charlie told us.” The Spanish-accented voice was from the end of the table.

“He’s right, I am with Homeland Security, that’s where the Coast Guard sits, not in Defense. But I wasn’t using my CGIS ID at those political rallies, that’s all.” I smiled to try to defuse any suspicion. “And from what Detective Jefferson and I talked about just now, it sounds as if our interest in this thing is similar to yours, the connections of the victim to the Sánchez clan.”

They all nodded in agreement except for the guy with the Spanish accent, who just looked suspicious.

“So, anyway,” I continued, “I’m glad to be of whatever help I can with this thing. If it was in fact a professional hit, and it sure does look like it, I guess we have two challenges: find the shooter and figure out who hired him and why.”

Jefferson nodded. “Captain Davis has been making assignments about these very things. We figure there can’t be too many people out there with .50 caliber sniper rifles for hire. And the who part is already a short list, the Sánchez competitors we talked about.”

Davis looked around the room. “That about sums it up, gentlemen. And Jefferson here has the lead, right? Let’s get out there and see what we can find. Perez, I need to see you in my office.”

The guy with the Spanish accent followed Captain Davis out, and Jefferson turned to the remaining two.

He grinned. “Well, with two main tasks and the four of us, it looks like an easy call here. Want to flip for it?”

“What about Perez?” The thinner of the two managed to look bored.

“I think he’ll be assigned to something else. Mac, that’s Jordan Miles, and next to him is Bill Sharp.” Jefferson pulled a quarter from his pocket. “You guys got a choice? I’d just as soon look into the Sánchez competitors, unless you guys want to.”

They looked at each other, and Sharp answered. “Nah, we’ll go after the shooter and his big rifle. That should be interesting. A .50 caliber? I don’t think I’ve ever seen one of those.”

I had to smile. “They’re, well, big. And they’ll dislocate your shoulder unless they have some kind of recoil mitigation. I took out a tank with one over in Iraq a few years ago, using a Mark 211 round. I think it was a pretty cheap shit, Chinese tank, though.”

“What’s a ‘Mark 211 round’?” Miles looked puzzled.

“Armor-piercing, high-explosive, incendiary. I don’t think it would work on one of our Abrams tanks, but it did its job on that Chinese one.”

“Well, whatever, the choice is OK by me.” Jefferson nodded. “Maybe start with some follow-up interviews of the people at the rally. Mac and I’ll see about talking with some other folks, starting with Frankie’s family.”

\* \* \*

Jefferson and I headed out. On the way through the front room he stopped, tossed his car keys at the sergeant behind the front desk, and said “I need a beater.”

The response was laughter, a different set of keys, and “The SST.”

Jefferson shook his head. “My favorite. I’ll get it detailed for you.”

I didn’t quite understand this until we had walked the length of the parking lot, to its rear fringe, where there sat an early ’90s Chrysler Concorde that, I imagined, had been white at one point.

Jefferson patted its roof. “We call this baby the ‘SST’ because we actually had some landings at Miami International by the real Concorde a few years back, before they retired it. I figure that we need something expendable, where we’re going. That red Navigator I was driving wouldn’t last five minutes there. We got that one when we busted a big drug ring, and I want to keep it as long as I can.”

He drove us south, across the river, and west on SW 7<sup>th</sup> Street, the beginning of the westbound Tamiami Trail. A couple dozen blocks later, in a seedy section with nary an English-language sign in sight, he turned right into a small lot and parked beneath a “Fire Lane Do Not Block” warning in both English and Spanish.

“This is the back of one of the Sánchez commercial laundries, where their business offices are. Frankie’s father works here, mostly. The entrance is around to the front.” Jefferson and I got out, and he locked the SST’s doors despite its lack of appeal.

The front of the building was on a side street and surprisingly stark. In an era when businesses put significant effort into marketing themselves, the Sánchez operation appeared to be attempting invisibility. Still, it was easy to see that the place was prospering—the heavy-duty steel door was but one example.

Inside, Jefferson broke into fluid Spanish, which I was able to catch only a bit of. It sounded as if he was asking, rather nicely as far as I could tell, to see Ubaldo Muñoz. He was told that quite naturally Ubaldo was at home with his family in this time of grief and why didn't Jefferson go somewhere else and do anatomically impossible things to himself? All-in-all, it came across to me as a straight-forward, if spirited, exchange.

We left without much in the way of pleasantries.

"Thing is," Jefferson was looking thoughtful, "Ubaldo lives in Coral Gables, in a big mansion down off Old Cutler Road, out by the bay. Not my jurisdiction."

"But it's mine, though, right? I'm a federal agent, after all."

He looked at me with new respect. "Right. Yeah. But, tell you what, let's go back and get the Navigator. Down that way, we'd be picked up for vagrancy, driving this piece of crap."

I arranged for him to pick me up at our suite in central Coconut Grove, so that I wouldn't have to make another trip into downtown Miami that day, and he followed me south.

Once back in his Navigator, I was glad not to be driving. I'd been down Old Cutler Road a couple of times, once to scout out the Saudi Consulate down there in the home of a rich sheik and the other, by kayaking in from Biscayne Bay, to take some isotope readings from his dock, where I almost got caught. But I'd always used Le Jeune Road, not the old highways, Main and Ingraham, south from the Grove.

With Jefferson driving, I was able to take in the banyan-canopied road and its variety of classic South Florida homes—most of which, I've since discovered, start at about \$1,000 per square foot and head up from there. Eventually, we came to Le Jeune and then its traffic circle, where the right-of-way widened and things opened up a bit. But that was also where the real estate became truly palatial.

A mile or so farther, Jefferson turned left onto a newer side street and pulled up at a guard gate a block in, where the next adventure began. The guard, an older fellow who, obviously, didn't want any trouble, said he was under strict instructions not to admit anyone asking about the Muñoz family, because they were in mourning and there were too many media people chasing after them. And Jefferson's Miami PD affiliation didn't impress him at all. On the other hand, my casual mention of a federal obstruction of justice charge did get his attention, and he caved. So the little gate rose, and we drove through. After another mile or so, the street took a hard right, and we found the address on the left side, the bay side.

Actually, the Muñoz estate wasn't nearly as overbearing as many of the others in the neighborhood. There was a tennis court between the house and the street but no fence or stone wall, just lots of pointy-looking shrubs. Between them, we could see a reasonably sized house. Frankie, I remembered, had been an only child, and Ubaldo, with his accounting background, would naturally be something of a penny-pincher, relative to his big-spending neighbors, at least.

The driveway held a half-dozen vehicles, all large, black sedans of one or another German marque. Ubaldo and his wife weren't the only people in mourning, it appeared.

"Looks as if we're badly outnumbered, Mac. What do you think?"

"I think you're right. But we didn't come for a fight, just a conversation, right? And it's a necessary conversation, although our timing sucks. So we ought to be sensitive to that. I mean, if we *didn't* show up to talk with them, they'd be justified in thinking that the PD is incompetent, right?"

"Yeah, that's true enough. I'd sure feel better with backup, though." Jefferson was looking worried.

“Think of it this way, Charles. I was there. I saw it all. I bet that Ubaldo and...what’s her name? Maria? Anyway, I bet that Ubaldo and Maria would like to hear that I can assure them that Frankie didn’t suffer in any way.”

“That’s probably true, Mac, yeah. OK, well, let’s go knock on their door and see what happens.” He started to open his car door, but stopped. “Hmm. So. Do you think we should be carrying in there?”

“Well, I’m supposed to. Everywhere. It’s part of the CGIS policies. But I do think we should be discreet about it.”

We both got out, started up the driveway toward the walk, and turned for the front door. Before we could reach it, however, two very large, bored-looking gentlemen men in black suits carrying what looked to me like Uzis, the big, standard model, stepped out of the bushes behind and ahead of us. Jefferson and I froze.

“I don’t know about you, Charles, but I’m going to stand very, very still.”

\* \* \*

## 2.3

Their suits didn’t fit very well, and the two gorillas didn’t look comfortable wearing them, even though it wasn’t too awfully hot. I think they just weren’t used to being all dressed up. But those thoughts were interrupted by a burst of rapid-fire Spanish from the one in front of us. Jefferson responded in his fluid way, showing a remarkable calm. I’m pretty sure the gist was a question about what the hell were we doing there and who the hell did we think we were. And I heard *policía* somewhere in Jefferson’s answer. That didn’t seem to impress them, however.

I say this because they both continued to look bored into a stupor—I was swiveling my head back and forth like a spectator at a tennis match—and as menacing as ever. Then the guy ahead of us made a little jerking motion with his Uzi, which both Jefferson and I interpreted as “go back.” So we did.

But then the guy who had been behind us made his own little jerking motion with his Uzi just as we reached the driveway. We were being steered into the garage, I thought, and, as verification, the big double door, the one on the right, began to rise. In we went.

It turned out to be a quadruple garage, with two of those big double doors, and our side was missing a car. The other spaces contained a trio of practical but expensive rides, no Ferraris or Lambos to be seen. In the empty space we walked into, followed by the goons with the guns, there was an armchair with its back to us, occupied by someone smoking a cigar, and two uncomfortable-looking straight-back chairs facing him. We didn’t need prompting to figure out which chairs were to be ours.

To my surprise, as we did, Jefferson brightened up.

“Almaro! What in the world are you doing here?” He looked both surprised and tickled to death.

“Why, if it isn’t Detective Charles Jefferson. And a new partner? Or what?” The cigar smoker acted as if we were meeting in his favorite dinner club.

“Almaro, this is Special Agent Mac MacQuarrie, CGIS, uh, that’s the Coast Guard Investigative Service, meaning he’s a federal agent. Mac, this is Almaro Sánchez. He’s the public spokesman for the Sánchez business empire and I know him from a bunch of news conferences and so on.” Jefferson, I could see, was relaxing a bit. “Almaro, Mac is with me on a sort of inter-agency cross-training deal.

And, of course, we're here both to pay our respects to Ubaldo and to make sure he understands that the Miami PD has this case as its number one priority. Also, Mac was at the rally yesterday, and he saw the whole thing."

That last got Sánchez's attention. His eyebrows shot up in close proximity to his hairline, and he looked quite impressed.

"Ah. Well, now. I should think that Mr. Muñoz will want to talk with you about this. And Mrs. Muñoz also, if you, Mr. MacQuarrie, can be respectful of her grief." His eyes shot a question at me.

I took a few seconds to give myself a bit of control of the situation. "I'm glad to meet you, Mr. Sánchez, and, if I may say, that smells like an extraordinary cigar. Now, I'll be happy to answer whatever questions Mr. and Mrs. Muñoz have, and, of course, I'll be as respectful as I possibly can be, given the situation. I think the best message I can pass along is that Frankie's death was instantaneous. No suffering or anything. Just whatever death is, in a flash."

Sánchez was nodding. "That, Mr. MacQuarrie, is the best thing you could tell them. I think that Maria...I mean, Mrs. Muñoz, she has some fantasy that Frankie is in the hospital with injuries and will come home someday. If she hears from you that his death was obvious and quick, well, maybe that will help her understand. I don't know what to suggest about, um, clinical details, though. Maybe not too explicit."

"I understand. And, of course, we need to have a formal conversation with at least Mr. Muñoz about the legal side of this, the murder. May I suggest that we suggest to Mr. Muñoz that we conduct that conversation as soon as possible? It could help us with the investigation before the trail gets any colder."

A look of incredulity, with just a hint of indignation, morphed onto his face. "Surely you don't believe that Mr. Muñoz was involved with it somehow."

Jefferson jumped right in. "No, no, Almaro, on the contrary, we suspect just the opposite, that someone did this to get at Ubaldo somehow. I'm sure that he's going to try to avenge this himself, and I'm not even going to try to head that off. But if he helps our investigation, there's a good possibility that we can do more harm to whoever did this than he can, at least at the organizational level. Believe it or not, we're best positioned as allies on this one."

Sánchez smiled, a wide, satisfied smile. "Well, there's always a first time for everything."

Then he tapped the arm of his chair. "Of course, I can't let you in to see them without having you frisked, you understand?"

Jefferson nodded. "We get them back when we leave, though, right?"

This time, Sánchez's smile was more like the Cheshire Cat's. "Sure. Unless you're carrying something we haven't seen before."

\* \* \*

Sánchez had the goons relieve us of our weapons and sent them back outside to watch for more unwanted guests. Then he set his cigar carefully in an ashtray by his chair and led us into the house and up what must have been the back stairs into a large family room with a wall of windows looking out at Biscayne Bay. On that day, however, the windows were covered by semi-translucent shades, making the room rather dark.

But that was appropriate for the mood. There were a dozen people, one obviously a cleric, sitting on various couches and chairs talking in murmurs with each other, and a couple sitting separately, over by the windows in a corner. The woman was dabbing at her face with a handkerchief and moaning softly. It

was to that corner that Sánchez led us, and the man, whom I decided must be Ubaldo Muñoz, became increasingly steely-eyed as we came closer.

“Mr. Muñoz, I’m sorry to intrude, and I’m very, very sorry for your loss. It’s horrifying.” Jefferson pre-empted whatever Sánchez might have been going to say, and continued in Spanish with additional apologies.

It also sounded as he was introducing me, something that made itself clear when Muñoz looked at me and his expression softened.

“You saw it all, Señor? Tell me.”

I looked around for a chair so that I wouldn’t be literally talking down to him, and he waved me into one nearby.

“Mr. Muñoz, Mrs. Muñoz, let me express my sincere condolences as well. This is a terrible, terrible thing. I’ve never had children, so I can’t really know, but it must be truly heartbreaking to lose a child, even a grown one.” At this, Mrs. Muñoz let out a more anguished groan, which helped me because it meant she understood English. “I was at the rally yesterday morning, standing off to the side about, oh, twenty feet away from the speaker’s platform. Your son was a dynamic speaker, and he held my attention, so I was watching him when it happened. The assassin’s bullet struck the left side of his head, and he died instantly. I’m sure he felt nothing, knew nothing. It’s tragic. But at least he did not suffer.”

Mrs. Muñoz commenced to sob, and one of the other women in the room came over, shot me the dirtiest of looks, and led her slowly away.

“Mr. Muñoz, I’m so sorry to have upset her even more, but you said to tell you.”

“I did, and I’m glad for it, thank you. She needed to hear that, because I don’t think she has quite believed it. We haven’t seen Frankie, after all.” With this, Muñoz looked at Jefferson. “When will we be able to bury my son, detective?”

Jefferson, who had pulled up a chair of his own, took a deep breath. “I have to be honest with you, out of respect. I can’t say exactly. I promise, though, to make it as soon as possible. Truly.”

Muñoz sighed. “I guess I understand. You’re conducting a murder investigation. But I hope you understand that we need closure on this.”

“I do, Mr. Muñoz. And I hope you understand that an important part of our investigation is a conversation with you about such things as who your son’s enemies might be, and so on. Not here, this is not the time or place, of course. But as soon as you can manage it.”

Muñoz looked at the door through which his wife had disappeared. “The sooner the better, as far as I’m concerned. Let’s take a little walk outside. I need a cigar.”

We followed him down the main staircase—three or four times as wide as the back one, and curved—and through the lower level to a bay-side patio door. Because the entire house was about as dimly lit as that upstairs room had been, it was quite a shock to walk out into the sunlight. We all fumbled for sunglasses, and Muñoz reached into an inside jacket pocket and came out with three cigars.

“*Cohiba Limitada?*”

I knew that I would still stink of the thing when I finally returned to our suite, and that Sam would give me hell. But, then, I had the rest of the afternoon to think up an excuse, didn’t I?

I’m no cigar connoisseur, but I could tell right away that this one was far better than what Sánchez had been puffing on in the garage. If Muñoz didn’t splurge on cars, I thought, he made up for it with his smokes.

“What a country, America. There is so much freedom and opportunity, you can make a fortune, but the women have so much power that you can’t smoke in your own house.” Nicotine seemed to make Muñoz wax philosophical. “Now then, Agent MacQuarrie, perhaps you can tell me why the Coast Guard Investigative Service was so interested in my son that you were at his rally yesterday?”

“Actually, Mr. Muñoz, I’ve been at most of his rallies. I was ordered to attend, to watch and listen, and to report on anything unusual. And the only unusual thing at any of them happened yesterday. I’ve almost got your son’s campaign speech memorized by now, I’ve heard it so many times. But why I was ordered to do this, I’m not so sure.” I was glad to be outside with sunglasses, as I probably didn’t have an especially honest look in my eyes just then. “I expect that it has to do with our interest in someone who might wind up as State Attorney for one of our busiest jurisdictions. This is the best cigar I’ve ever had, by the way. Thanks.”

He had walked us over to the seawall, and he put his foot up on it and stared out at the bay.

“Mmm. Well, that makes a good enough cover story, I guess.” He puffed in expectant silence for a minute, but I didn’t rise to the bait. “Anyway, detective, you mentioned something about asking me some questions for your investigation.”

“I’m glad you’re so understanding about it, Mr. Muñoz. The obvious one is if you can think of anyone who might have done this.” Jefferson had his notebook out.

“You mean who shot my son?”

“Or who is responsible for it. It’s possible that this was done by a professional hit-man, hired by someone else. Did your son have enemies who would do this?”

“My son was a politician, and all politicians have enemies, detective. But I don’t know of any who would go to this extreme.”

“It’s also possible that someone did this to get to you, Mr. Muñoz.”

“It feels narcissistic to think that, detective, but I admit that I have. And, as you know, I’m sure, I have plenty of enemies.”

“Is there anyone in particular whom you think we should concentrate on?” Jefferson had a strategy, I was sure, but I couldn’t quite figure it out.

It may have been that Muñoz couldn’t either, as he smoked without saying anything for another minute.

“If I were going to take the law into my own hands, detective, and I assure you I’m not, I would begin with Jimmy Maldonado and his people. Jimmy has held a grudge against me ever since I got us the Jackson Hospital contract.” He looked at me. “You see, Agent MacQuarrie, I work for the Sánchez Commercial Laundry Company, and one of our capabilities is to be able to sterilize our product. And the Jackson contract was for five years, truly huge. It’s made us quite a pretty penny, if I don’t say so myself.”

Now, I thought, it’s *his* turn to hide his lies behind dark glasses.

\* \* \*

“Well, that wasn’t very productive.” Jefferson, once again at the wheel of his red Navigator, back onto the street and headed toward the mainland.

“You’re discounting the Maldonado suggestion?”

“All the way, just like I’m ignoring his assurance that he’s not going to take the law into his own hands. In addition to a variety of small-potatoes gambling operations, the Maldonados run another big laundry company, so that business about the Jackson Memorial Hospital contract could well be true. But Jimmy M isn’t behind Frankie’s killing, I’m certain. Ubaldo said that just to send us off on a wild goose chase.”

“To divert our attention while he goes after the real perp, huh? That means all we have to do is to keep an eye on him, and on his people, I guess, to see who’s the real suspect, in his mind, at least.”

“Or just wait and see who turns up dead, or missing.”

“I’d imagine that a wait and see approach wouldn’t go over too well with the powers that be, however.”

Jefferson laughed. “Hell, they probably don’t want me to eat, sleep, or even take a dump until I clear this one.”

“Well, then, best you watch your diet, my friend. And I guess I shouldn’t make any social plans for the future, huh?” At least, I thought, I could take Sam out for a special dinner somewhere. “Got a schedule for tomorrow?”

“Y’know, maybe we *should* have a chat with Jimmy M. As far as I know, laundry is all he does that could possibly compete with Ubaldo, but he may just have some ideas for us. And after that, we need to have a conversation with Willie the Manatee.” He shot me a look to see, I was sure, how I’d react to that, but I kept my poker face on.

“I’m sure there are plenty of other critters at the zoo we could talk with as well,” I said instead.

“Ha! No, not at the zoo, and don’t tell her I called her that. Willie’s more than a little sensitive about her weight these days. The manatee thing grew out of her size and her real nickname, which you can’t use until you get to know her well, ‘Wet Willie’.” He shook his head and laughed. “She used to be a working girl who was, uh, always ready to go, if you know what I mean. Now, she’s Miami’s most successful madam, with something like a dozen brothels in various parts of town. There’s one near you in the Grove, as a matter of fact. But what’s useful for us is that she used to be into drug smuggling in big way, until the various cartels, including the Sánchez operation, squeezed her out. She hears all the gossip, though, and maybe she knows who’d be out to use Frankie to get to Ubaldo.”

“Do you think that Ubaldo was up front about Frankie’s having no real enemies?”

Jefferson tapped his fingers on the steering wheel. “Hard to say. I do know that Frankie wasn’t quite the little angel that Ubaldo and Maria think he was, so there are probably people outside the Sánchez empire who would have been in a position to pull Frankie’s strings if he’d gotten himself elected. That being the case, there are probably other people who were worried about that.”

“Right. Well, you remember that I told you that we, I mean CGIS and Homeland Security and so on, we were interested in Frankie because of his father’s connection to all the smuggling, including their new venture into gun-running? I sort of hinted at that to Ubaldo, told him the truth but not the whole truth. Right?”

He looked quickly at me and went back to watching the Navigator’s position on the narrow stretch of Ingraham Highway he was negotiating. “Right.”

“That’s all true. What I haven’t said is that we think that the Sánchez empire, because they’re new to the guns part of all this, is small-fry. What we’re really worried about is whoever it is that they’re trying to take over from, or who they’re working with. Or whatever. And, see, the thing is, some of those people seem new as well. It’s like there are gunslingers with automatic weapons moving in on the

territory of people with old-fashioned six-shooters. And we don't know all of the players. I'm still trying to sort them out. For example, I didn't know about Almaro Sánchez. Who's he?"

"Ah. Well, see, the Sánchez empire started with old Raul, Alamaro's grandfather. He had three children, Maria, whom you met just now, Raul Junior, and Pablo. Raul Junior and Pablo persuaded Ubaldo to marry Maria after she got pregnant, 'persuaded' being a polite euphemism here. And then, about a year later, Raul Junior, the smarter of the two, according to legend, got himself killed in a cocaine cowboy shootout." Jefferson shrugged. "So the lineage is now old Raul, Pablo, and his son Almaro, who's putting in his time as the empire's PR person. But meanwhile, Ubaldo, because of his skills with accounting, has taken over. Pablo is the chief enforcer, but Raul listens to Ubaldo when it comes to strategy and business decisions. Pablo, I hear, isn't too fond of this arrangement, but it's been in place for years."

This all fit with the briefings I'd had, except no one had told me that Raul Junior had died. "Was Raul there today?"

"No, the story is that he's bedridden just now. He's about 90, and he picked up some kind of pneumonia or something. May recover, may not. If he doesn't, there's going to be an interesting power struggle within the Sánchez empire, Ubaldo versus Pablo, smarts versus muscle."

"Well, my money's on smarts in the long run, but the muscle could sure create havoc in the short run."

\* \* \*

## 2.4

I got lucky. Sam was still out painting something somewhere when Jefferson dropped me off at the Residence Inn, so I scurried about to put my clothes on hangers outside on our little balcony to air out, to take a shower and wash my hair, and to brush my teeth, which I did twice.

I'd been honest with Muñoz about the exceptional quality of his cigar, although its nicotine buzz was a bit more than I really needed. But good as it was it still smelled like a cigar. Sam had a very sensitive nose, as she'd proven on several occasions, and I knew I was at perilous risk for sleeping on the couch.

But my scurrying worked, mostly. She arrived about an hour after sunset, carrying her bag of charcoal and pastel supplies, along with a sketch book. All it took was a welcome-back hug.

"Eww. Where have you been? A pool-hall? You smell like cigar smoke."

I made the excuse of having spent much of the day on interviews with people from the Cuban community—quite true, all-in-all—where cigars are the vice of choice. But I didn't tell her about my involvement in sharing the vice.

Then I distracted her by asking to see her new sketches.

"Mmm." She looked unsure. "I don't know quite what I managed to do. I was out on Key Biscayne. The last ones are of the sunset across the bay."

For my eye, not especially sophisticated but well-experienced with her work, this was some of her best yet. Her style, which captured the large scales and then filled with bare hints of detail, was perfect for the afternoon sun as it sank into the mainland across the bay.

“Geez, you’re good at this. These sketches work so well, it’s like there’s no need for you to go back and fix them or do another version. Do more, yeah. but these are ready for one of the galleries.” I smooched her on the ear, and she melted. “Where were you? You said out on Key Biscayne?”

“Yeah, on the seawall out in the state park on the south end of the island. There’s a great view across the bay from there, right at the setting sun. These aren’t quite finished, though. I took some photos with my phone to help me tomorrow. I’m thinking about a sunset sequence, all framed together.”

“You’ll sell a million copies of that, I just know.” Maybe, I was thinking, she’ll forget about the cigar thing. “So, I think I’m going to be pretty busy this coming week, but maybe we can go out tonight? There are all sorts of restaurants around here. Within easy walking distance, even.”

“Good idea. We can walk and get you aired out a bit. And maybe this room will get aired out while we’re gone.”

So much for the forgetting, I thought.

Although most of the cool air from the weekend storm had lost its punch, it was still a bit brisk as we walked over to the heart of downtown Coconut Grove. We vowed to eat somewhere that we could sit inside.

The noise and crowds at the nearby tourist malls were unappealing, so we kept walking and wound up at the corner of Main Highway and Commodore Plaza, where a place called Lulu looked good. That is, it looked good until I saw that it specialized in something called “small plates”. But when Sam saw that, she dragged me inside. I started to protest, but she patted my stomach and gave me one of Those Looks.

Ah, well, I thought. If they’re real small, I’ll just have two or three of them.

But they turned out to be quite nice, all-in-all. There was a wonderful variety, rather like a *tapas* menu, and we had a ball sharing and trying different things. I also remembered to tell Sam whom I ran into earlier.

“Remember that cruise we went on last year? And Annette and Hal?”

It didn’t even take her a second. “Of course! That was a wonderful time for the two of us, and the four of us, too.”

“Well, oddly enough, I ran into Annette today, when I was getting things straightened out at the Coast Guard station.”

“Uh, wait. Coast Guard?”

“Yep. I’m an official Coast Guard cop now, for this investigation thing. Shield, very cool official ball cap, and all. And so is she. She and Hal are staying up in Boca Raton for a while as some kind of working vacation for him and a real vacation for her, but she got pulled into a case up there. Someone blew up a research boat belonging to the university where Hal’s visiting. A place called Pompano State U.”

“Why would anyone do that? A university research boat?”

“Yeah, well, see, Annette’s thinking it was just in the wrong place at the wrong time. The Coast Guard did an ocean survey and found something underwater, something that they think is a kind of underwater weapons storage container. And it looks like,” I suddenly felt a flash of paranoia, peered around Lulu’s dining room suspiciously, and lowered my voice “it has some kind of chemical weapons in it. Annette and this real Coast Guard guy that she’s working with think it’s some kind of weapons smuggling operation.”

She whispered, “Weapons smuggling? That sounds pretty heavy-duty.”

I nodded sagely.

Cocking her head sideways just a bit, a familiar gesture that I always found to be delicious, she said, “Wait. Didn’t you tell me, uh, yesterday, when we drove back up here, that this investigation you’re involved with has to do with a bunch of people here in Miami who are getting into gunrunning? I mean, isn’t that just weapons smuggling with a different name?”

“Oh, but...” My reflex was to dismiss this connection, but that was just my mouth kicking in before my brain.

When my brain caught up, I realized that it made sense as a possibility. We, Jefferson and I, were in the very initial stages of our investigation, after all. As I thought more, I realized that this was a case of the old proverb “out of the mouths of babes...”, except this was a different connotation of “babe.”

“You, sweetie, are brilliant. I need to talk with Annette first thing tomorrow.”

“Well, thanks, but just make sure you also find out when we can all get together. I want to see them again.” She smiled and patted my hand.

We loved each other a lot and got along quite well, but our priorities weren’t always the same.

\* \* \*

“What? That’s all you’ve got? And I’m supposed to waste a half day on I-95 for this?” Charles Jefferson, during our early-Tuesday phone conversation, rightly pointed out the tenuous connection between Annette’s case and ours.

“Charles, you said yourself that you folks are aware of the ambitions of the Sánchez empire. And we’ve hypothesized that there is some kind of gang rivalry going on to dominate weapons smuggling in South Florida, right? But weapons smuggling, especially exotic stuff, probably means some foreign group bringing contraband here and, most likely, a local group taking charge from that point. At least that’s one scenario. Seems like that Coast Guard case up in Boca could be the foreign group. And if it’s Pablo Sánchez or Jimmy M or whoever on this end, it’s likely to have a bearing on our case. See?”

I decided that the extended silence was a good thing—at least he was thinking about it. For my part, the coincidence of two weapons-related smuggling cases only about 50 miles apart was too much to ignore, even for South Florida. I just don’t believe in coincidences.

“Annette said she’s got pictures of suspects, some of whom they can’t identify. Maybe you ought to at least look at them.” I hoped that would reel him in.

“Yeah, well, I suppose that couldn’t hurt. You got a Sun Pass? I’m not going up I-95 without using that express lane.” Charles sounded resigned to the journey.

Fortunately, my rental car had a such a gizmo on its windshield. “I do. Where can I pick you up?”

He had to explain to me about the express lane and, even so, I almost missed its entrance. But I could see right away why he wanted to use it. We cruised smoothly by miles of bumper-to-bumper, stop-and-go traffic that filled the three peon lanes, and I saw the worth of the \$7.50 toll. It all came to an end at about the Broward County line, and joining the peons for the last few miles was quite the let-down. But before too long we were able to exit at Atlantic Boulevard and head east to the ocean, where we turned north to our meeting with Annette.

The meeting place was a Pompano State facility, OceanLab, on something called Hillsboro Inlet, and it turned out to be an enviable place to have a meeting. Even though we assembled in a secure room

with no windows—it turned out that the Coast Guard guy had a Navy guy with him, and they wanted to talk secret stuff—the air of the whole place was at once both operational and researchy in a spectacular setting. It seemed like a very cool place to work.

Hal Weathers, Annette Trieri's husband, was there, so we had our "good to see you again" moment, and then the introductions went all around. There was an oceanographer from the university, a tall guy incongruously called "Shorty" along with Hal and Annette, plus the two guys in uniform. Although Charles and I were outnumbered, everyone made us feel right at home.

Finally, Shorty cleared his throat. "Well, since this is sort of my conference room, maybe I should call things to order. Um, I thought I'd review where things stand with the *Stream-Tracker* tragedy, both for the benefit of those of us involved with it and to bring our guests up to speed. And then perhaps they can fill us in about events in Miami."

Charles and I were then treated to a fairly detailed presentation of everything that was known about the attack on the university's research boat and about the mysterious package the Coast Guard survey had found underwater, which the ocean experts were calling a "mooring". The pictures were interesting.

"So, you said it's on the bottom in about 900 feet of water? How high up is this set of packages?" The light in the pictures didn't tell me much.

"The bottom box is about 100 feet up, and the whole string is about 50 feet long," Shorty responded.

I thought for a minute. "OK, but why so deep? Doesn't that make it harder to get to?"

"Ah, good question. Two things. First, there's probably what's called an 'acoustic release' that holds this string of boxes and the floats to the mooring's anchor. Go out there in a boat, lower a hydrophone, make the right noises, and the release lets go so it all floats to the surface. That float, the big spherical thing, has a lot of buoyancy." Shorty took a breath. "Second, the current is strongest near the surface. Down there, the water's still flowing northward, but much more slowly."

"Ah, let's see. Some oceanography background. Bear with me." Shorty looked just a bit embarrassed. "At the surface the power you can get out of the Gulf Stream is about the same as what you could get from a gale-force wind, right? That's because the water is almost a thousand times more dense than air. Power goes as the cube of the speed, and the Gulf Stream is flowing about a tenth the speed of that gale-force wind. But I won't bother you with the full equations unless you beg. Thing is, the same factor means that the *forces* on equipment are about ten times more than in the air, because the forces go only as the square of the speed, and the density is still part of the equation. So, down deep, with the slower current, the force is much lower, and that's where you want to put things, so they don't break. Uh, end of lecture."

I wasn't going to beg for equations, and I didn't think Charles would want to, either. "OK, I think I understand. To retrieve the stuff, you do that acoustic thing, so it doesn't matter how deep the stuff is. Um, unless it's too deep for the acoustic signal, I guess."

Shorty looked surprised and a little impressed. "Ah, good point. Turns out that the depth isn't too much of an issue, around here, at least. But proximity is. What I mean by that is that the boat with the hydrophone you do the signaling with has to be pretty close to the mooring, right over it. And, because of the current, the boat tends to float away unless you use the engines. But they can mess up the acoustic signal. So, it helps a lot to have a very precise location of the mooring, so you can drift by and signal at just the right spot."

The Navy guy, Commander Vanderhoff was laughing quietly and shaking his head. "You're making me feel like I'm back at underwater warfare school, Professor. But that's OK because I can

always use a refresher. Anyway, we've got a plan to defuse the immediate threat of those RPGs down there. And, maybe, we can also catch these guys."

"You said you've got pictures of them?" Charles spoke up for the first time since the introductions.

"Oh, right." It was the Coast Guard guy's turn, a Chief Kraus, who started some 8x10 prints passing around. "We've identified this first guy with the tattoo as a Grozdan Petrov, originally from Bulgaria. He's got quite an international criminal record and is known to be active in arms trafficking all around the world. And this second guy is someone that our facial recognition search thinks it recognizes, but we don't have an solid ID for him."

"Oh, that reminds me." Shorty spoke up, and took an 8x10 print out of his portfolio case. "I scanned this in from a photograph this morning."

The picture he passed around looked remarkably like Kraus's second picture. Annette and Kraus were both taken aback.

"This is him," she said, and looked at Shorty. "Where'd you get this?"

Shorty smiled. "Remember I said that your picture of him looked familiar? Well I figured it out. This morning, early, I came in and took it out of a frame that was sitting next to a picture of Pete Chu on a shelf in Emily Chu's bookcase, in her office. This is a pretty good scan, so I put the original back."

\* \* \*

"Shorty, I'd say that you have a little personnel problem. Or somebody does." Chief Kraus had a sympathetic look in his eyes.

"Yeah, that's occurred to me. It's not my problem, really, because technically she works for OceanLab here, and her husband is the director. For now, I'm thinking we should just keep this quiet, though." He looked around with a question on his face.

Annette nodded. "Until we get everything sorted out, that's probably a good idea. Anyway, let's pass those other two pictures around, Garrett."

I was sitting next to Kraus, so I saw them over his shoulder. They didn't mean anything to me, nor anyone else as they were handed around in the other direction. But when they got to Charles, he looked surprised. He carefully put the first one on the table in front of him, face up, and then, looking positively startled, laid the second one next to it. He stared at them as he adjusted their positions, squaring them up to the millimeter.

He turned to glance my way. "Thanks, Mac, for dragging me up here today."

Scanning around the table at all the faces staring at him, he continued, "Sorry to be melodramatic, but I'm surprised as hell and don't quite know what to say. Uh, probably I should start by saying that I recognize these two guys. But it'll help you all understand who they are if I go over the case that Mac and I are working on."

"Commander, I'll try not to lecture, but if I do, don't worry, there won't be a test." He smiled. "You all have probably read in the paper about the assassination of Frankie Muñoz a couple of days ago down in Miami. A relevant point is that he was shot from long range with a .50 caliber sniper rifle, not a piece of hardware that just anybody has access to. And the shooter wasn't a neophyte, either. He was an expert, probably a professional."

"Without going into more detail than you probably want to hear, I may gloss over something, so don't hesitate to ask questions. But, sound-bite version, this is connected to greater Miami's Sánchez

family, who have been getting rich laundering drug money for several decades and now are trying to move into gunrunning. Or weapons smuggling, whatever you want to call it. Now, the patriarch of the family is 90 and won't last much longer—and who's next in line is up for grabs. One of them is Frankie's father, Ubaldo Muñoz. The other is this fine fellow, Pablo Sánchez." He turned the second photo he'd received around to face those across the table.

"Meanwhile, this upstanding citizen," he turned the other photo around, "is Arturo Ventador. Arturo is one of Pablo's best friends, and he works for the family off and on. He's ex-Army Ranger. I've seen his DOD file, and he was quite the success in sniper school. But he's also an expert at hand-to-hand combat and, believe it or not, computers. What you might call his day job is coordinating the activities, such as they are, of an outfit that calls itself '*Omega Nueva*'. It's one of the few third-generation Cuban ex-patriot para-military groups. Uh, see, after the first wave, or first generation, of Cuban refugees around 1961, there were lots of these groups, some pretty serious. After the second wave, the Mariel boat-lift in about 1980, which was the second-generation from the first wave, these groups continued to be active, but at a somewhat reduced level. And the third-generation from the original wave, which matches up, sort of, with the second generation of the Mariel wave, has *Omega Nueva* and a couple other groups. Most of the original ones have faded away. Of the new ones, *Omega Nueva* is the most active and probably the most dangerous."

"So, what's all this mean?" Charles looked around the table. "I probably need to think this over more carefully, but I've got two first impressions. Pablo and Arturo, from the pictures that you've explained, were on the cruise during which your boat, Shorty, the *Stream-Tracker*, you said?, when it was attacked and sunk. They were with a couple of shady characters, one of whom is involved in international weapons trafficking. Probably, they, and I mean Pablo and Arturo, they were out there to learn how to retrieve the cache of stuff that had been put there for them to pick up. From what you've said, Shorty, it sounds non-trivial and some instructions about the pick-up are necessary. This means that Pablo is trying to move the Sánchez empire into weapons quickly, and that Arturo may be his first real customer. I've gotta say, if *Omega Nueva* gets its hands on chemical weapons, real trouble is brewing."

He drummed his fingers on the table. "Second, it seems like Arturo is a prime suspect for Frankie's murder—maybe he did it as partial payment for the shipment, who knows? But that means that Pablo has decided to go to war to eliminate Ubaldo Muñoz as competition for leadership of the Sánchez empire. Getting rid of Frankie puts Ubaldo in a much weaker position to take over the empire."

He looked at me. "And it probably also means that Ubaldo knows all this, and that's why he tried to send us off on chasing after Jimmy M yesterday, Mac. Oh, for the rest of you, Jimmy Maldonado is, as far as I know, a mostly legitimate businessman who competes with the legit side of the Sánchez empire. Commercial laundry."

There was a long pause while everyone assimilated the information. Finally, Shorty spoke up. "Well, I'm not in law enforcement, but it seems like we ought to just lock all these people up and throw away the key. Oh, yeah, and do something about that underwater cache of chemical weapons. Commander, you said you have a plan?"

Vanderhoff looked surprised to be called on so suddenly, but he recovered. "Oh. Right. We do—it's like a bait and switch. We thought we'd get a work boat out there with an ROV—that's a remotely operated vehicle, for you landlubbers—and cut the cable on the mooring right at the release. We've decided it's probably not a mine, so that ought to be safe. Then we'll pick it all up when it surfaces. We've already got the top-most part of the string of stuff, and we'll reattach that with identical hardware. And we'll empty those cases—very carefully, mind you—and fill them back up with something that looks just like whatever's in there, only dummies. And we'll include a tracking beacon, probably several. Then, we'll hook it to an anchor, put it down at the same place as the existing mooring

and, with the ROV, transfer the bottom of the cable over to the existing acoustic release. When someone comes out to pick it up, and it sounds like Pablo Sánchez might be that someone, they won't be getting the merchandise they think they are, and we'll be able to track them as well with the beacons."

"Um," Vanderhoff looked at his watch, "in fact, this should all be happening right about now."

Hal Weathers, I noticed, seemed puzzled. "Impressive planning and getting the logistics to work so fast, Commander. But there's something I can't figure out. Garrett showed us several satellite pictures, in sequence, of the time around the *Stream-Tracker* explosion. If Pablo, or whoever, goes out there in a boat and releases the mooring string, won't that show up? This all seems like a pretty risky way to do weapons smuggling. I mean, why not just drive into Port Everglades and unload things before you clear customs?"

Kraus nodded. "Good questions, Hal. But the satellite pictures are a half hour apart. If you know their timing, and that's no real secret, you just do the pickup in-between shots. It doesn't take very long to grab the floating string. And using a local boat from out of a marina here for the pickup is a lot safer than driving a foreign ocean-going vessel into port, from a clandestine perspective. There are so many sport-fishermen going in and out each day that you'd get lost in the crowd, whereas we keep pretty good track of the foreign ships."

He continued. "Well, folks, I don't know when I've been at a more productive meeting. We've got everyone identified, or almost, and we may just have clear paths forward to clearing both of these cases."

Annette spoke up. "Yeah. And maybe, just maybe, we *will* get these bastards."

\* \* \*

## 2.5

Charles Jefferson and I were creeping along in the southbound I-95 traffic—we hadn't reached the beginning of the express lanes yet—and deconstructing everything we'd heard and inferred from it.

"So, Charles, I'm glad I was able to persuade you to come up here today, but, gotta say, I had no idea. I figured there was an off chance of a little progress. But, damn."

"Yeah. Like I said, I'm glad you dragged me to that meeting. Really glad."

"And I have to say that I rather agree with what Shorty said about locking all these guys up and throwing away the keys."

He laughed. "Right. Except for the problem of the lawyers they'd bring in. Hell, right now, I don't think we could even hold them overnight if we did arrest them. I mean, we've got damned little."

I realized he knew a lot more about the nuances of the legal system than I did.

"Y'know, Mac, I'm sure that you can understand that I did a bit of background checking on you. And I have to think you'd expect that." He paused long enough for me to look at him and nod. "So, I found out that you've worked for CGIS for, like, almost 24 hours. And I also found out that you've worked some places that I'm not allowed to find out about. I've decided not to be upset about that, because it means that your experience is likely to be very helpful. After all, you did say you're very, very good at backup and you're also good at being, ah, discreet. Right?"

None of this worried me—in fact, I found it rather amusing. “Where is this going, Charles?”

“Well, I’m thinking that those places where you worked, the places I’m not allowed to know about, probably didn’t have much to do with domestic law enforcement activities. So I’m the expert at that, and I’m hoping you understand. On the other hand, I’m also thinking that there may be some, um, skills at which you eclipse me completely. And, though I hope not, it could be that those skills could come in handy for some things I’ve been thinking about.”

“Yeah, well, I’m certain that you know volumes more about domestic law enforcement than I do, despite my time with the New York PD. And it worries me that I might screw up and do something to blow the case because of the way, oh, I don’t know, the way evidence is supposed to be handled or the rules of evidence gathering in the first place.” I shrugged without letting go of the steering wheel. “And as for those other skills, well, I’m committed to this thing. I agree with Annette Trieri. Let’s get these bastards.”

I decided to take the plunge, at least up to my knees. “Oh. And if you’ll keep it to yourself, I can tell you that before I worked for the NYPD it was the NSA and CIA, mostly overseas. After the NYPD I moved here to retire and just kick back, but the NSA pulled me into something. So, last year, I was involved in clearing that nuclear terrorism business that happened down this way, and, maybe you didn’t hear about this, I also managed to get an outfit on Miami Beach called ‘Sun and Sand’ put out of business, although I had help with both of those.”

“No shit?” He broke into laughter. “Willie the Manatee would sure like to hear that story. They were one of her big competitors. And that was you on the nuke case, huh?”

“Yeah, with help. But this thing now is really what I told you, although it comes from higher than DHS or the Coast Guard. That’s just my operational identity. The weapons thing is the real deal. People all the way to the top of the food chain are worried.”

“So the only thing that’s bogus is your ID?”

“Nope, that’s real. But you’re right about its being less than 24 hours old.” I looked at the clock in the instrument cluster. “Getting close, though. Almost my one-day anniversary. But no gold watch, probably.”

“Meaning we’ve got, what, me, the local yokel, with people from Naval Counterintelligence, the CGIS, meaning Annette and Kraus, and, oh, who knows, something like the Director of National Intelligence’s office, meaning you, all working on this?”

“Yeah, well, I’m not supposed to comment on my specific pedigree, but that’s a reasonable operating assumption. And, as far as I’m concerned, you call the next steps.” I looked at him and grinned. “But, you know, no pressure, or anything.”

“OK, well, how about some advice? What would you like to do?”

We’d finally come to the entrance of the express lanes, so I was preoccupied with driving for a minute.

“If we were operating somewhere that I didn’t feel the need to have so much respect for the law, I’d go after this guy Ventador and just shoot him. Then I’d have a chat with Ubaldo and make sure that he understands the situation—that I know about the Sánchez empire’s aspirations about gunrunning and that I’ve killed his son’s assassin and that Pablo was behind the whole thing. And I’d show him the pictures of them together.” I paused to think. “And then I might just walk away from it all.”

“Um. Well, that does have appeal, I admit. But from my perspective, respect for the law is pretty important. So I’m not sure about just shooting Arturo, as good an idea as that is. And walking away after

telling Ubaldo about Pablo's being behind the assassination sounds problematic, too—it might start an extended shooting war in my town. Still..." He stared out the side window in thought.

I let him stare while I guided us south past all of those roller-coaster ups and downs through the north part of Miami. When we were closing on his headquarters, though, I had to interrupt.

"So, what's next, boss? Do we need to see Willie what's-her-name? Or who?"

He looked up, scratched his head, and squinted at the car's clock. "Lunch-time yet? Well, almost. Why don't we head on down to the Grove? You can follow me from the PD. We'll get some lunch and then go see Willie—maybe she'll have some good gossip."

\* \* \*

We picked up his Navigator downtown, and I followed him to a little open-air, bay-side restaurant next to a big indoor chain one, ours a small, local place that specialized in fresh seafood that was in season rather than stock menu items from the freezer. Our lunch was delicious.

Afterward, our destination was up on what passed for a bluff and turned out to be only a bit over a block from my Residence Inn, so I just parked there and walked back to where Charles was waiting for me. He was leaning against his Navigator, across the sidewalk from an eight-foot stucco privacy wall. There was a door in the wall just down the block a few yards with a column of little numbered signs stuck to the wall next to it. He started talking just as I walked up.

"Years and years ago, this neighborhood was way back on its heels. Businesses were struggling, crime was up, no one wanted to live here, houses were dirt cheap. So Willie bought up an entire block of little bungalows and had this wall built around the whole thing to make a secure compound. This wall's got a security system on top of it to make it even more secure. Now, there are probably a dozen little houses in there, each nicely equipped for Willie's, ah, business operation, two girls to a house. And what she's managed to do that's just brilliant is to keep the official addresses of the houses separate, despite the wall. That way, it's impossible to raid the entire place without individual warrants for each separate address." Charles laughed. "Vice has tried, and what happens is, they show up with warrants for an address or two, that's all they can get at one time, and the guy at the gate here reads the warrants carefully and signals Willie somehow. She then calls a fire drill that clears out any illegal activity in those specific addresses. It's brilliant. Vice has given up. With all the drugs on the streets, they figure they've got bigger fish to fry anyway."

He was laughing and shaking his head as we walked over to the gate. "So, I thought I'd mention the Sun and Sand thing to her when I introduce you. Is that OK?"

"Uh, I guess, but you don't need to make a big deal out of it."

"I won't, but don't be surprised if Willie does, a little bit, at least. Oh, and don't get the wrong idea when they greet me like an old friend. I'm not a customer." He looked a bit embarrassed. "Honest."

He pushed a doorbell button by the gate, and I heard a soft chiming from inside.

A speaker by the signs with numbers came to life. "Yeah?"

Charles cocked his sideways a bit. "That you, Roscoe?"

"Javod. Who you?"

"Oh, hey, Javod. Charles Jefferson, and a new partner."

"You got a warrant?" There was a hint of a giggle this time.

“C’mon, Javod, you know I’m not with Vice. We just want to talk to Willie for a bit. Share gossip and stuff like that.”

“Oh, well, I gotta ask, so hang on a minute.”

Charles looked at me. “Don’t let Javod scare you. He’s big, very big, and his job is to be intimidating. But he’s really a family man with three teen-age daughters, none of whom, I might add, will ever wind up working here.”

After a couple of minutes, the door opened, and Charles led me through. Inside the wall was a well-landscaped yard with brick sidewalks wandering off in various directions. Standing on one was a huge, ebony-skinned fellow wearing a sleeveless tee-shirt, no doubt to show off his full-sleeve, technicolor tattoos. This, plus his shaved head, piercings, and totally black sunglasses, on top of his size, maybe 6’10” and 350 pounds, did indeed add up to a significant intimidation factor. But then Charles asked him about “his girls” and Javod broke into a wide, happy grin.

“Oh, man, they’re a handful, being teenagers and all, but they’re great. Sharina, she’s going to graduate in May, as, what’s it called, val-dic-terin?”

“Valedictorian? No kidding! Well congratulations!” Charles shook his hand vigorously. “So, Javod, this is my temporary partner, Mac MacQuarrie. The case we’re working has nothing at all to do with you guys. Like I said, we just want to gossip with Willie.”

“She said OK. Over in the big house.”

We headed down a sidewalk to the right, toward a larger bungalow. About the time we got to the porch, the door opened to reveal a very large—not as big as Javod, but *big*—African-American woman in a flowing muumuu with draping long sleeves.

“Willie! How are ya, mama?” Charles walked up to her, took her two hands, and gave her a smooch on her right cheek. Then he stood back and looked her over. “Say, I think you’re losing weight.”

Her skin was light enough that I could just see a blush on her face. “Aw, you just sayin’ that. But my doc says my blood pressure is down a bit, with no drugs. So that’s a good thing.”

“It is, it is.” Charles turned to me. “Willie, meet Mac, Mac MacQuarrie. He’s with the CGIS, you know, the Coast Guard equivalent of NCIS, and he’s working the Frankie Muñoz killing with me.”

After a polite “pleased to meet you, Mr. MacQuarrie,” a look of concern and even sadness flowed over her face. “That was a bad, bad thing, Charles. I mean, sure, we lost a steady customer who tipped big, but a daytime assassination like that is just not what we need around these parts, is it?”

“I didn’t know he was one of your customers, Willie.” Charles looked quite surprised.

“Oh, yeah. For years now. Not here, though. He mostly went up to North Miami Beach, sometimes down to Kendall. I guess he wanted to be as far from his father as he could get.”

Charles shook his head. “Well, not only did you lose a customer, you lost a future friend in the State Attorney’s office. From what I hear, he was likely to win this fall.”

“Ain’t that the truth. Well, anyway, why don’t you boys come on in?” She led the way into a tastefully furnished combination living/dining room, the two separated by only the shape of the room. In the dining part, there were two young women working at sewing machines on the dining table, and in the living area another was watching TV.

“Tiffany, how about getting our guests some coffee?” Willie looked at Charles and me. “Or would you boys prefer lemonade? We got a rule here, no booze, not even beer, before three pm.”

We chose lemonade, and the young woman on the couch disappeared through the dining room and another door.

“Willie, I don’t want to embarrass Mac, but there’s something you should know about him. Last year, he was the person responsible for getting Sun and Sand Escorts shut down.” Charles smiled in anticipation of her reaction.

Which was, all-in-all, fun. Her eyes got big, and she looked back and forth at Charles and me for a few seconds. Then she burst into delighted laughter, huge belly-laugh that shook her all over as if she were made of Jello.

When she finally got control of herself, wiping tears from her eyes with a muumuu sleeve, she said, “Well, don’t that beat all. Damn. Mr. Mac, I owe you a *huge* debt of gratitude. Those dirtbag Russians weren’t such tough competition, but they treated their girls bad. And that makes people like me look bad. I can’t tell you how happy I was to hear about what happened to them.”

“Willie?” A timid voice came from behind the couch that Charles and I were on, and I turned to see one of the young women, red hair, pale skin, rather Irish to my eyes, from the dining room standing there. “I’m sorry to interrupt, but I heard him say something about Sun and Sand. Um, sir? Do you know whatever happened to Dolly? She was my best friend there, at Sun and Sand, I mean. Is she OK? Oh, and, say, I remember seeing you at that shithole hunting camp out in the ’Glades. I can’t thank you enough for saving us all from that nightmare.”

Willie smiled. “Crystal used to work for those dirtbag Russians, or maybe a better word for the situation is ‘enslaved’. And, Crystal, remember to watch your language around guests.”

\* \* \*

As Tiffany returned with our lemonade, I had a minute to think. Crystal’s question sat me squarely on the horns of a dilemma, and those horns, sharp ones, were poking me in the ass. Dolly now went by her real name, Samantha, and she was staying with me in the Residence Inn just couple of blocks away. I was keenly aware that Sam had been working very, very hard at putting her past behind her as completely as possible. Yet here was a friend, and maybe more, whom she hadn’t seen in a year or so.

I decided to split the difference as best I could. “Well, I don’t know if you knew it, but Dolly’s real name is ‘Samantha.’ And, uh, we saw so much of each other last spring, you know, when Sun and Sand went out of business, that we hit it off. So I can say for sure that she’s just fine. She’s an artist now. If I can get a way for her to contact you, maybe she’ll call soon. And if there are any other ex-Sun-and-Sand girls here, she might like to see them, too.”

“Oh, thank you so much, sir. I hope she calls.” Crystal was almost breathless.

I was embarrassed at being called “sir.”

And Charles was staring at me with his jaw hanging down.

“Aw, close your mouth, Charles,” I said. “Didn’t you ever take in a stray puppy and have it turn into a best-of-show champion?”

“Now, see there girls? Here’s an example of how it’s possible, if you treat your clients right, to wind up with a better life. Much better. Just remember that.” Willie looked smug.

I wasn’t sure how I felt about the implications of that statement for my situation, but I decided to let it slide.

Charles was still staring at me, but he had finally closed his mouth. “Working girls’ hero, huh? I’ll be damned.”

“Anyway, Willie,” he looked over at her, “have you heard anything new about Frankie’s murder? Anything not in the papers?”

“Well, now, you know that what I hear isn’t always credible.” She made a show of thinking. “But from both the papers and other things I’ve heard, it sounds like a professional hit, some kind of sniper-for-hire sort of thing. Ain’t many of those guys around, at least not with the skill to make the shot, is what I’ve heard.”

“What would you say if I told you that *Omega Nueva* was behind it?”

Her eyes got big. “Uh-oh. I’d say, uh-oh. But I guess I’d also say it don’t really make sense. Why would they shoot Frankie? Last thing they need is for the Sánchez clan to get on their case.”

“Yeah, you’re right. I guess I’ll have to think about this some more.” He looked at me, eyebrows raised, and I took it to mean it was my turn.

“Willie, one thing we’ve done is to have a chat with Ubaldo Muñoz, Frankie’s father. He said we ought to go after Jimmy Maldonado because Jimmy is carrying a grudge about some big laundry contract.”

“Jimmy M?” She laughed and jiggled like Jello again. “Well, that’s just dumb. Jimmy’s mostly legit—hey, he even does my laundry, and a good job of it, too. And what ain’t legit is small-fry stuff, a little gambling, stuff the Sánchez clan don’t care about. Ubaldo’s trying to send you guys off on a wild goose chase so he can take steps on his own, without police interference.”

“What about the theory that it’s an internal Sánchez family power play? We hear that old Raul is not long for the world.” Charles’s question was something that had occurred to me as well, but I didn’t know if it was OK to ask it.

“Well, now, that makes lots more sense. Pablo undoubtedly sees Ubaldo as a rival, and he also saw Frankie as a rival for his own son, Almaro. So even though Frankie was his nephew—his sister’s son—I’m sure that Pablo feels better that he’s out of the way now.” Willie was nodding. “But I don’t think Pablo has the skill to have done that. Or the *cojones*, either. But I guess he could have hired somebody or something. And if he did, I bet anything that he and Ubaldo were together at some kind of family gathering on Sunday, when it happened.”

“Good thinking, Willie. We should have asked Ubaldo. But we haven’t talked to Pablo yet, so we’ll see if we can ask him about Sunday when we do.” Charles made a note in his little book. “And there’s one other thing I wonder if you’ve heard about. We’re hearing rumors of weapons smuggling. Not just the usual guns, though. Something bigger, more potent. Hear any noises about anything like that?”

“I think you know that’s something I’m very sensitive to, on account of my son.” She looked at me. “See, Mr. Mac, I don’t much care about drugs, as long as my girls don’t use ’em, or a buncha other stuff. But gun smuggling, or other weapons, well, my son Shakeem got killed by an illegal Uzi machine pistol in a gang fight. He was an innocent bystander. We don’t need those things on our streets, no sir. Anyway, Charles, there *has* been some talk about something more than guns. I thought it might be something like explosives, or grenades, but that ain’t it. Don’t know what it is, though. But it’s got me a little worried, I’ll tell you.”

“Thanks, Willie, and thanks for the lemonade. And, listen. If you’re worried, I’m worried. We’re going to stay on top of this one, you can bet. Last thing we need is some kind of new more dangerous weapon on the streets down here.” Charles stood up, and I did as well.

Willie disappeared into the dining room for just a minute, but then returned to walk us to the door. “Mr. Mac, I remember Dolly, or Samantha, I guess, too. She’s a good lady. You take good care of her, now, hear? And if she don’t want to call, well, I’ll understand.”

She slipped me a business card that she conjured from somewhere inside that muumuu.

\* \* \*

## 2.6

Charles said that he had more internal affairs issues to deal with and headed back downtown, and I walked back to the Residence Inn. Sam was out somewhere, either golfing or sketching, so I took the opportunity to fire up the laptop and work on reports for my Washington overlords. But just as I was getting started, my phone buzzed. I recognized the number as Preston Sands.

“What’s up, Pres?”

“Just thought I’d check in, Mac. Haven’t heard from you in a while.”

“I was starting a report for you before you called. I think we’re making progress. We’ve got possible suspects for the shooter and for who hired him. But, in a way, that’s the least of it. We also hooked up with CGIS investigators on what turns out to be a related case, and it looks like chemical weapons smuggling.”

“What? I guess I need to hear about this.” He sounded worried.

I gave him a condensed version of everything that Charles and I had learned without putting names to anyone, including the people whom we’d met with that morning. But I did bring in the possible role of a Cuban ex-patriot para-military group with respect to the chemical weapons. What I got in response wasn’t at all what I expected.

“Well, that’s all very interesting, Mac. But what we’re paying your outrageous consulting fees for is your clearing this assassination of Frankie Muñoz, not chasing around South Florida looking for submerged weapons caches or para-military groups, right?” Now he sounded angry.

“Maybe I didn’t explain...”

“You explained all I need to hear. And I’m telling you to forget all that other crap and concentrate on Frankie Muñoz. Understand?”

“Ah, well, I guess so. Like I said, we’ve got possible suspects. We’ll develop those leads. Is that what you want?”

“Exactly. Forget all the other crap in your written report. Just focus on Frankie.” He disconnected.

I just sat for a few minutes, stunned. Because the high-level group that Preston Sands was working for had concerns about weapons trafficking, I had assumed that the connections that Charles and I had stumbled into would please him to no end. But it was just the opposite.

Something very fishy was going on, and I, never a shrinking violet, decided to confront it head on. That meant making contact at a higher level.

So I called “Henry,” the pseudonym of a very high-up White House national security advisor whom I’d been in close contact with during my previous consulting job, that nuclear terrorism case.

But all I got at the number I had for him was voice mail. Even though that made me grumpy, I left a pleasant enough message and my number. Then, still in a grumpy mood, I tackled the report that Sands has asked for. After about a half hour, my phone buzzed again, and my grumpiness faded after I answered it.

“Mac, it’s Henry, sorry I missed you. How are ya? Haven’t talked with you in a while.”

“Ah, thanks for calling back, Henry. And I’m pretty good, although quite puzzled about something I’m working on. That’s why I called.”

“How can I help?”

“Well, I don’t know what you know about my activities. So stop me if I’m wasting your time.” I took a breath. “Anyway, I’m working for a task force up your way out of the DNI’s office that’s got some new concerns about weapons smuggling. My contact is a guy named Preston Sands. My initial job was to surveil one Frankie Muñoz, who was a candidate for State Attorney.”

“Right. I’m on that task force, and I was the one who recommended you for the job.”

“Oh. Well, thanks, I guess. And that’ll save a lot of background here. So, after Frankie got shot, Sands had me continue working for your group in a new role, working with the Miami PD to find his killer. And today we had a breakthrough.” I proceeded to fill him in about all Charles and I had learned, and this time I didn’t leave out names. “Now, the thing is, when I told Sands all this, he got angry and scolded me for going on a wild goose chase and ordered me to focus only on Frankie. Even though I told him very clearly about the chemical weapons that we think are headed for this *Omega Nueva* outfit. That’s obviously within the purview of your task force, yet I’m being ordered off. What the hell is going on?”

There was a long silence before he responded. “Well, you know, in situations like this, there can be all sorts of different threads being pulled from up here. And it could be that Sands has someone else working the *Omega Nueva* end of this, and he doesn’t want you messing that up.”

“Yeah, well, I’ve thought of that, but that’s not the impression I got when he called me off. Or maybe, I suppose, he just needs to work on his people skills.”

“He definitely needs to do that, in any case. Thing is, I’m not aware of any other personnel he has in play down there on this or on anything else. And I would be.” There was a huge sigh. “I have to let you in on something we were keeping from you Mac. And I hope you’re not too pissed off about it. See, Preston Sands screwed up big time on another matter that you really don’t need to know about. This was about six months ago. He’s on probation now. We assigned him to this in that mode, probation, because we didn’t think it would be too sensitive or critical. And I recommended you precisely because of your track record and my trust in you. I figured that if anything went haywire, you’d just call me. And you have. Thanks.”

It took me a minute to figure out what to say. “Oh. Well, that all makes sense, Henry. I’m glad I called you. Do you think that this is just another Sands screw-up from incompetence, or is it something more nefarious?”

“Make no mistake, Mac. Sands is a really, really sharp guy. So, I’m thinking Door Number Two.”

\* \* \*

Henry and I agreed that I should continue doing what Sands expected me to do, and to report to Sands on that, and I could also send that documentation to Henry along with information about all the other things I would be doing. Which was whatever I thought was appropriate to do.

So, in a much better mood, I went back to my report. I decided to write a comprehensive one to send to Henry and edit it down to send to Sands. That way the committee would understand the connections we were finding, even if my handler didn't. And it occurred to me that Sands' activities couldn't be too nefarious, at least if he was as smart as Henry seemed to think. If they were, Sands would have encouraged me to report to him all of my suspicions about all the connections between Frankie's killing and the weapons smuggling that Annette had found herself in the middle of.

Thinking about Annette reminded me of the morning's meeting up at OceanLab, and I recalled that the Navy, or the Coast Guard or both, had planned to implement their bait and switch plan. It seemed to me that Henry would like to know the outcome of that operation, so I called Annette.

"Annette? Mac here. Hey, I'm putting together a report on what's going on, a report to a guy who works directly for the President. He, I'm pretty sure, would like to know about what happened with that plan that Commander Vanderhoff discussed, the bait and switch business. Got any updates?"

"Hey, Mac. Interesting meeting this morning, wasn't it? Let me ask." She probably sat the phone in her lap while she was discussing things with someone, if the muffled noises were any indication. "Mac? Garrett tells me it went off without a hitch. Naval CI is now in possession of those weapons, and the whole mooring business is back in place down there underwater, at as close to the same spot as before as possible—he said within a few meters—so the dummy cache can be picked up by whoever knows the acoustic signals to use."

"I'm sure that'll be a relief to everyone. And there's surveillance? To spot who triggers that release thing?"

There was another pause with muffled conversation in the background. "Yes, but it's not close-in surveillance, because they've got the tracking beacons to go by. Apparently they're foolproof."

"Foolproof", eh? Where have I heard that before, just in time for things to go all to hell? Well, anyway, this will make the White House feel better. But it'll get to them through an informal channel, meaning me, so don't discourage Garrett or anyone from making it more formal, OK?"

"Uh, Mac? Does that mean I should keep your channel confidential?"

"Well, Garrett knows about it, since you just announced it, but you might caution him that it's really a backchannel that isn't official. Does that make sense?"

"Oh. Right. Sorry. You've got so much more experience with this sort of thing than I do. But, yeah, I'll relay that."

"Say, Annette? Sam wants us all to get together for dinner sometime. Can we make that work somehow?"

"Absolutely! I'd really like to see her. Maybe she can call me. How about we get together somewhere in, oh, North Miami or, uh, whatever's equivalent to south Fort Lauderdale? Some place with stone crabs on the menu. I've got to eat as many of those delicious guys as I can before we go back to Colorado."

I was chuckling as I disconnected, but her comment about Sam reminded me—I was also supposed to have Sam call Willie's place. I patted my pockets and found the card that Willie had given me in my shirt. The front said, in engraved type, "Wilhelmina Block, Personal Services Consulting" and had a phone number. While I was pondering the meaning of "personal services consulting" in the context of what I knew about Willie's profession, I turned the card over out of habit. On the back was a handwritten note that said "Samantha—I really hope you'll call. Several of the girls would love to see you. I would, too. W."

As I finished the report for Henry and sent it off, and then edited down a copy for Preston Sands, I worried at the issue of getting Sam in touch with her past. For the life of me, I couldn't decide whether she'd really want to do that or not, and, for a while, I considered tearing up Willie's card and forgetting the whole thing. But it seemed like she ought to be the one to make that decision. And it wasn't as if I'd waltzed into Willie's parlor and announced my role in the demise of Sun and Sand or in turning Sam's life around. Charles did that for me. And then Crystal recognized me. It just wasn't my fault!

I couldn't help it, I finally decided, if I was the working girls' hero. All I could do is to hope that Sam would understand.

A more pressing matter was Annette's news about the success of the Naval CI operation, so I put in a call to Charles Jefferson. I was glad to have his personal number so that I could bypass the PD switchboard.

"Jefferson, Miami PD"

"Charles, this is Mac. Sorry to bother you, but I'm glad you answered. I just got off the phone with Annette Trieri, and she told me that the bait and switch operation the Navy guy talked about this morning went off without a hitch. The replacement package on the new mooring, at the same site, has beacons in it, so they'll be able to track whoever picks it up."

"Glad to hear it worked. But I've been thinking about it. Suppose we're right. Suppose that Pablo and Arturo go pick that thing up. Eventually, they'll discover that the weapons are bogus. I guess when they figure that out will depend on what the Navy put back down there. I suppose it could take a while, even until Arturo tries to use them. But they'll find out, right?"

"Eventually, yeah, I guess. So?" I couldn't figure out why he was worried.

"Well, that's going to create a big rift between Arturo and Pablo, don't you think? Particularly if part of Arturo's payment for Pablo's smuggling services was the hit on Frankie. I mean, I can see this degenerating into a serious problem between the two of them."

"Presumably, by then we'll have tracked the boxes, using those beacons, to somewhere that we can arrest Arturo for having them, though. And arrest Pablo, too, for helping Arturo get them. Right? Or Naval CI or someone will move in ahead of us and do it for us. So I don't see the problem."

"The problem is if CI or whoever, including us, doesn't arrest them soon enough. If Arturo finds out about the bogus weapons and tells his *Omega Nueva* pals that Pablo screwed him, there's likely to be a war between them and the Sánchez family. And that would make the old cocaine cowboy wars look tame by comparison. I mean, who knows what other weapons of mass destruction those Omega guys already have? Did you account for every single speck of that, what was it, that 'special nuclear material' that went missing a while back?"

\* \* \*

The WMD reference was something I could have done without. But it woke me up, I'll give Charles that. The Naval CI guy hadn't specified what all they knew about the contents of those underwater boxes, but he'd alluded to chemical warheads. So I called Annette back.

"Hi, Annette, it's Mac again. Sorry to bother you. But do you know what those weapons that Naval CI recovered were? Chemical, yes. But do you know what specific agent?"

"Mac! Hi! And, listen, you can call me any time. Ah, let's see. The weapons. So, what we heard, based on the information printed on those boxes you saw, that Chinese-language stuff that the Navy

translated, is that what was in those boxes were binary warheads for RPGs. Rocket propelled grenades. The chemicals in there react to create sarin. Relatively safe until fired, but then, well, bad, bad stuff.”

“Sarin?” I felt like someone hit me in the stomach. “Bad stuff indeed. OK, thanks, Annette. And I’ll have Sam call you, I promise.”

What, I wondered, was *Omega Nueva* going to do with sarin? Attack Cuba? Kill off all the relatives they’d left behind?

The binary warheads would make them safe to handle—at least sort of safe—but they’d also produce *full-strength* sarin, not the weaker stuff that has sat around for a while. At least, I thought, it wasn’t going to be getting into the hands of those Omega crazies, thanks to the Navy’s preemptive recovery of the containers.

It was after mid-afternoon, and I began to wonder about where Sam might be. That morning, she’d talked about heading back out to Key Biscayne to make more sketches, but she’d also taken her golf clubs with her.

As I was thinking about where she might be, there was a knock on the door of our suite. Ah, I thought, she must have forgotten her key card this morning.

But when I opened the door, ready for a hug and all that, I was surprised to see Ubaldo Muñoz standing there, with one of his two gorillas standing behind him, the larger of the two I’d met at his house, if memory serves. The gorilla looked more comfortable this time, because he wasn’t wearing a suit but rather a loose-fitting guayabera shirt over too-short slacks. Or maybe they were plus-fours. And flip-flops. In any case, it all looked more comfortable than his suit had, which was much better—uncomfortable gorillas make me nervous. Even better than that, this time he wasn’t holding an Uzi.

“Ah, Mr. MacQuarrie, as I remember. I’m glad that you’re here.” Ubaldo’s tone was appropriate for ordering from a Starbuck’s *barrista*, and he smiled as if asking me to add an extra dollop of whipped cream to his order. “May we talk? I think you’ll find it worth your time. My man here will wait outside.”

I think I managed to recover from my surprise with reasonable composure. “Ah, well, of course. But, please tell him not to interfere with a woman who may be seeking to come in. She’s blonde and will be carrying a sort of large briefcase. OK?”

An exchange of Cuban-tinted Spanish ensued, and Ubaldo stepped across my threshold. I got him seated and offered refreshment—all I had was beer and wine, which he declined—and asked about his visit.

“Yes. Well, I’m certain that you can understand that I’ve been able to discover more about your background than the small amount that you and your friend the detective told me about. I guess I should say that I have the utmost respect for Detective Jefferson, by the way. And, based on what I’ve discovered about you, I have to admit to the same degree of respect for you.” His smile, though shark-like, seemed genuine.

Rather than interrupt, I simply nodded in a way that I thought would both acknowledge his compliment and encourage him. It seemed to work.

“Now, I’m sure that you know about my background. Certainly Detective Jefferson has told you. And you probably know that very soon, the revered patriarch of the company I work for will pass on. In anticipation of that sad event, there are forces at work positioning themselves to take advantage of this impending change of leadership. Naturally, I am seeking to make things evolve in a way that is favorable to me. Others have different agendas. Does all of this make sense?”

Once again I nodded without saying anything.

“I hope that you will believe me when I tell you that my aspirations for our company would take us in a completely opposite direction from the aspirations of others who are going to try to take it over. We have had a long history of, shall I say, somewhat shady dealings with the law. It is my hope that we can move away from that and move toward more, ah, conventional business practices. I’m absolutely confident that, with our talent and connections, we can grow and prosper in this way. Others, however, hold the opposite view, that the company should move into even more shady business dealings. Indeed, they are already moving us in that direction” He shrugged, as if helpless. “That may well be why you have connected with both Navy and other Coast Guard interests.”

This time, I didn’t nod but rather maintained my best-ever poker face.

“Now, I won’t insult you by asking what you and those interests have discovered,” he continued, “even though we might well be better off working together. It would, however, be very useful to me to know whether you and Detective Jefferson have made any progress toward finding the killer of my son.”

I decided I couldn’t really duck the implied question. “Mr. Muñoz, if you’ve investigated my background, I’m sure you know that I have some law-enforcement experience. But I have to say that it was not here in Florida, nor was I anything approaching an expert at evidence gathering. My partner and I, before I retired, we were concerned mostly with street crime, including drug dealing. My point is that I’m not really sure what it will take to convict someone for the murder of your son. Forensic evidence, certainly, would be the best. But we have none of that, yet, at least. Circumstantial evidence might not be so certain. So Detective Jefferson and I are hoping that circumstantial evidence that we may uncover will lead us to something more solid. Of course, we would value any insights you may have.”

It was his turn to nod but say nothing.

“One thing that we do have is the bullet that killed your son, Mr. Muñoz. Although that’s not much, it could be quite valuable, especially if we can also recover the weapon from which it was fired. I’m sure that you know about ballistics fingerprinting. Then, of course, we might be able to trace the weapon to the individual.”

“Mmm. I didn’t know about the bullet.” He stared at me for a few seconds, then reached into an inside pocket of the sports jacket he was wearing. “Perhaps this will help. It’s parked at the main lot of the Shark Valley Visitors’ Center area of the national park, out west on the Tamiami Trail.”

He handed me a 4x5 photograph of a large, white SUV with a variety of antennas stuck to the roof. It reminded me of a white version of the vehicles that I’d seen the Secret Service use.

“I’m afraid I have some bad news, though.” Now, his shark-like smile was not at all friendly. “It seems that the owner of this vehicle met with an accident that involved some hungry alligators that he encountered while fishing.”

“Ah, it sounds, Mr. Muñoz, as if you’re suggesting that we might just be able to find the weapon and even get a ballistics match, but that we won’t be finding the weapon’s owner?” I tried to sound as innocent as possible.

“That, I believe, would be a good assumption, Mr. MacQuarrie. And I hope that this little gesture gives you some indication of how I want to cooperate with you and Detective Jefferson?”

“Oh, it does, Mr. Muñoz, it does. And perhaps I can return the favor. Ah...well, you have to understand that our investigation is really in its infancy,” I waved his picture, “but this will certainly move it ahead. We have, however, developed some theories, and one of those has to do with the person who may have had that unfortunate accident. You see, we believe that he may have been expecting a clandestine shipment of some, ah, rather remarkable and very dangerous items. Items that you might not

want floating around South Florida. Well, let me reassure you that no one will be receiving that shipment. It's in safe hands now, very safe hands."

His smile morphed into a happy grin. "Really? My goodness, that *is* good news. Hmm. And that must mean that everyone who was associated with that shipment is in some jeopardy of being apprehended?"

I smiled and looked up at the ceiling, trying to maintain my innocence. "I'm afraid I have no idea, none at all, of anything about that, Mr. Muñoz. But I'll be glad to let you know if anyone is apprehended, if I have a way to contact you."

He started laughing as he handed me a business card with a phone number on it and was still laughing as he walked out the door.

\* \* \*

## 2.7

Charles Jefferson wasn't answering his personal number, and the PD switchboard was no help at all. But it occurred to me that the National Park Service might well expect its parking lot to empty out at the end of the day and become suspicious of cars remaining after the visitors' center closed.

So I left Sam a note and headed west. Although it wasn't far, it was all the way across the metro area through some of the thickest of its traffic. Rush hour was starting, and there was really no through, limited-access highway westward from my part of town. So I listened to the radio as I made my way down Bird Road. Once on the west side, I was able to pick up the turnpike north to the Tamiami Trail, and by then there wasn't too much development left to negotiate, so the 25 miles out to my destination went quickly.

As a result I made it to the Shark Valley Visitors' Center about a half hour before its closing time. It was easy to spot the big, white SUV with its antennas, so I parked next to it and walked over to the center to let the personnel there know about my presence and its purpose. I made sure to wear my CGIS ball cap.

I expect that it was the shield that impressed them most, though. The volunteer behind the counter promptly fetched a real Park Service Ranger, whose name badge read "Molly Curtin." She and I launched into a little conversation about procedure and so on, and, ultimately, because we were both Federal officers, she deferred to its being my case and said they'd leave the gate unlocked for me. That way, I could do a leisurely and thorough search of the vehicle without worrying about their closing time and still get home that evening. I promised to lock the padlock on the gate after I was finished.

Her main concern was the vehicle's owner—what might happen when he showed up and found me searching his car without a warrant. But after some discussion, during which I alluded to national security concerns and the dreaded "terrorism" possibility, I managed to reassure her that I'd be able to handle things.

One of the more valuable skills I'd learned in association with my assignments in the Middle East had to do with defeating automobile alarm systems and car locks. Before the battery-powered remote-locking systems so common today, it actually used to be harder to break into a car without damaging it. Of course, if you didn't care about damage, punching a lock out or just breaking a window worked fine. But picking one of those car-door locks of yesterday was actually pretty hard.

Remotes changed all that. All you needed was a very special piece of equipment, which I just happened to have kept from my time at the three-letter agencies, that had programmed into it the various radio-frequency and ultra-sound codes that manufacturers used for their cars. Turn it on, let it scan through the possibilities, and, presto!, the target car, along with several others nearby, probably, would unlock itself. Starting the ignition was another matter, unless the target had a remote start feature, but unlocking it was actually boring.

I found the gadget in my bag of goodies in the back of my car, along with some gloves, and it took about ten minutes to find the right code for the white SUV. While waiting, I conducted a thorough search of the bumpers, fender wells, and other likely spots that someone might stash an extra key, and I was rewarded with a dirty little magnetic box stuck to the top of the muffler. It was an interesting spot for it—of course, the box and its key would get quite hot when the car was operating, but, mostly, you'd need such an extra key only after the car had been sitting and was cooled down. I used the key to re-lock the door, then to unlock it, and to start the ignition. Whatever alarm system there was kept politely silent.

The glove box, which was not locked, held a registration card made out to one Arturo Ventador along with other assorted glove-box junk, including a small flashlight, and the box under the arm rest on the console had a phone charger, some loose change, and a pair of driving gloves. Overhead was a flip-down sunglasses holder with a snap case for wrap-arounds in it, but no sunglasses.

I decided that somewhere out there, beyond the visitors' center, its parking lot, the board walk, and the bike trail, was a 'gator hole with a 'gator in it wearing cool new shades.

But all-in-all, aside from the confirmation of Arturo's likely demise, the front seat area was unremarkable.

Things got more interesting in the back. Like in most SUV's, the back seat folded to increase the cargo area, first by lifting the seat cushion forward and then by folding the seat backs down flat. Under the seat cushion was a bit of storage, perhaps originally for a small tool-kit or the tire-changing tools. But instead there was a padded box containing a new-looking Steyr 9mm L-A1 automatic with several extra magazines, all full.

I picked it up and folded the seat backs forward. Surprisingly, they didn't fold flush with the rear but rather were set about 4" lower. It seemed clear that the cargo deck had been raised somehow.

That was even more apparent when I opened the rear hatch and lifted the rubber mat and the carpet under it back there. The plastic deck had been replaced with a sheet of painted plywood. And on the rear end of that wood deck was a fold-down door about 4" high that ran the width of the cargo area. Behind the door, under the deck, was a wide slot, and in that slot was a gun case with a handle presented to me, a big case that was quite heavy.

I removed the gun case and transferred it to the trunk of my car, and put the box with the Steyr in there, too. Then I got the flashlight from the SUV's glove box and examined the rest of the under-deck storage in the back of the SUV. There were two other flat boxes, which turned out to be holding the tire tools from under the back seat. Finished, I returned the SUV, minus its two weapons, to the condition in which I'd found it, and locked it back up.

Although the big gun case had a briefcase-style lock, it opened right up when I popped the latch. And even though I'd seen one before, and fired it, during an assignment in Afghanistan, the TAC-50's size and bad-ass appearance surprised me, despite its being broken down. Then and there, I made a promise to myself to figure out how to keep it in my personal collection.

As I was driving back east to the metro area, having locked the padlock on the visitors' center gate behind me, the problematic nature of that promise got me to thinking. After all, the TAC was evidence

in a high-profile murder case. If Arturo's fingerprints were on the weapon, it could be argued that the TAC as evidence was moot because the murderer was dead. But, with no body for verification, the evidence that Arturo was dead wasn't really evidence, just hearsay. And it seemed very unlikely that anyone would be examining the stomach contents of every alligator in the vicinity to see if that hearsay could be substantiated.

Maybe, I thought, I could exploit my CGIS status and the national security aspects of the whole thing to my advantage. So I called Annette.

"Hope I'm not interrupting your dinner, Annette."

"Mac! Wow, third time today. You're on a roll."

"I sure am, but I could use some help. Could you ask your partner, that Chief Kraus, if CGIS has a bullet trap strong enough to handle a fifty BMG round? I need a ballistics sample."

"Ballistics sample I get. But what was that round?"

"Fifty BMG. Big, honking bullet. He'll know what it is, and he can do a better job of explaining it than I can."

"He's right here, why don't you ask him?"

I looked at the dashboard clock and saw that it was past 6 pm. Annette, I thought, you need to get a life. As do I.

"Kraus here."

"Chief, I've got a favor to ask. I need a ballistics sample of a big-bore rifle, a TAC-50. Have you folks got a bullet trap that can handle one of those?"

"Hmm. Well, not a real bullet trap that I know of, but there's an indoor range north of here that's equipped for fifty BMGs. And it's very well padded to catch rounds without shattering them. Up in Pompano Beach. Seems like that ought to do the trick. Is this connected to that assassination you're working?"

"It is, but I need to keep this very quiet. How about I bring the TAC up to you tomorrow? Maybe someone can dust it for prints and then fire off a couple of rounds. And I'll fill you in on some interesting developments."

"That'll work. Looking forward to it, Mac. And we've got some new info for you as well."

\* \* \*

I got back to the Residence Inn at about 6:45 and found that Sam had returned from her painting/golfing outing. With a hint of sunburn.

"Ooh," I said. "I hope this isn't too tender. I may want to ravish you tonight."

"Mmm? Had a good day, did you?" She smiled and pulled me into a big hug.

"Maybe this whole investigation business won't take as long as I thought. I have to say, I really don't like it here, in the middle of all these people and traffic and stuff. Oh! But I can't forget to tell you to call Annette. I've got a phone number somewhere." As I was patting my pockets, I remembered Willie. "And, uh, I've got another number that I hope will be OK for you."

She leaned back from our hug and looked at me with those big blue eyes. "Oh? What's that about?"

“Ah, well, see, today, this Miami cop I’m working with took me to interview someone he thought would have helpful information for our murder case. A woman called ‘Willie’, she runs, um, some brothels.” I watched her big blue eyes get bigger. “And, well, he introduced me to her and mentioned that I had a role in shutting down Sun and Sand. So she made a big deal out of that. And then one of the girls that was there got all excited and asked about you. So, well, I’ve got this note for you.”

I handed her the card that Willie had given me.

While she read it, I continued. “And, thing is, Willie’s got a place here in the Grove, just a couple of blocks away. Seems like it’s her sort of headquarters.”

I have to say that I really didn’t know how she’d react. After all, she had been working hard to put her past behind her. For all I knew, she’d throw a fit. But I’d never have predicted what really happened.

“Aw, this is sweet.” She looked up from reading and there were tears in those big blue eyes. “Is it OK with you if I call her and go see them?”

I was stunned, speechless for just a bit.

“Of course. Geez, it’s your decision completely. But, ah, well, maybe not tonight. You know, they could be getting busy about now...”

“You think I don’t know that, you big dummy?” But she was smiling.

“Anyway, I’m hungry. What do you want to do about dinner?”

“I’m not sure. But the places here stay open late. And I’ve got an idea for *right now*.”

A few hours later, we found our way back to our little apartment at the Residence Inn, satiated by another wonderful meal and by its prelude, during which the sunburn hadn’t been a problem at all. I was ready for some sleep, but I discovered a voice mail message.

“Mac, it’s Charles. Listen, I’m sorry I was out of touch all afternoon. My phone says I missed some calls from you. But this damned Internal Affairs business has got me all tied in knots. I’m basically being ordered to drop everything else and deal with it. I’m sorry. Call me when you get this, if you can. Anytime, meaning, really, any time. Whenever you get this.”

So, even though it was about ten in the evening, I called him.

“Sorry it’s so late, Charles. I just got home.”

“Mac! Ah, good. Thanks for calling. I’ve gotta say, this IA thing is making me crazy, not to mention keeping me away from what I’m supposed to be doing. So, what’ve you been up to?”

“Well, oddly enough, after our little visit to Willie’s place after lunch, our friend Ubaldo paid me a social visit, here at the Residence Inn. I’m not sure how I feel about his knowing where we are.”

“No shit? And, yeah, no shit. Maybe you should consider moving.”

“He found me here so quickly that I expect he’d find me anywhere else. Besides, I’m not sure it’s really warranted.” I proceeded to fill him in on what Ubaldo had implied and about the white SUV I’d found in the parking lot out at Shark Valley. I conveniently forgot to mention the guns, however.

“You say you’ve got the key? Well, why don’t we drive out there in the morning and bring it back to our impound lot? Then the forensics guys can go crazy.”

“Ah, it might make sense to take someone out there and at least get prints off the steering wheel and so on.”

“Oh. Right. Sorry, I’m half asleep. I’ll pick you up around eight with a tech, OK?”

\* \* \*

So, early the next morning, Charles, I, and a forensics tech named Joe O'Reilly were on our way west. At least we were headed the opposite direction of most of the traffic, so it took less time than it had taken me the previous afternoon.

On the other hand, the parking lot at the Shark Valley Visitors' Center wasn't quite as sleepy as it had been the day before. The "Reserved for Ranger" and handicapped spots near the Center's entrance were full of official NPS patrol vehicles and an ambulance.

Meanwhile, our white SUV was sitting quietly by itself, where I'd left it, so Charles and I sent the Joe off with the key to do his forensics thing, and we headed into the Visitors' Center.

The same volunteer I'd talked with the previous day was behind the counter, looking nervous. When Charles and I showed him two separate agency shields, it didn't help to calm him down.

"Um, well, I'm afraid I'm the only one here just now. All the Rangers are down on the boardwalk." The volunteer nametag on his shirt said "Bob," and Bob was clearly wishing it was his day to stay home.

"You see, officers, first thing this morning, a visitor who was out there scouting for early morning bird activity found an arm. A *human* arm."

He looked back and forth between us in a conspiratorial fashion.

I nodded, trying to project a sense of calm and wisdom. "I see. Do you know if the hand is still attached?"

Bob turned a little green. "Uh, no, no I don't. Is it important?"

Charles nodded, Sherlock-like. "Identification. Fingerprints, you know."

Bob's greenness ripened a shade.

I looked at Charles. "Looks like we've got another job for Joe. Let's go see what's going on out there. Oh, Bob? Which way to this boardwalk?"

Bob was, I think, very glad indeed to have Charles and me out of his hair, what was left of it, anyway. And Joe wasn't at all upset by having another set of prints to take, assuming there was a hand left to take them from, so we all started off in the direction Bob had indicated, down a one-lane paved road.

Shortly, we came to a sign indicating the start of the boardwalk, which had yellow police tape across its entrance. We managed to bypass that and made our way along a pleasant-enough tourist walk for several hundred yards before coming upon a good-sized group of people in Park-Service ranger uniforms, all standing around with not much to do, apparently. I wondered if I'd see that alligator wearing its cool wraparound shades.

Charles and I had our shields held up, so we didn't get challenged by any of the Rangers; in fact, I recognized the young woman I'd talked with the day before.

"Ah, Ranger Curtin. I guess this means you won't be worrying about that SUV's owner now, eh?"

She rolled her eyes. "The paperwork on this is going to be horrific. And we'll have to close this boardwalk for weeks, right in the middle of prime birding season."

"Molly, this is the Miami police detective I'm working with on the case I mentioned yesterday, Charles Jefferson. And we brought a forensics tech with us, Joe O'Reilly. He's been getting prints off the SUV before we impound it."

Her expression brightened. “Oh, good. We’ve been debating about whether to call the FBI techs to see if we can get an ID.”

The mention of “FBI” caused Charles to shake his head. “No offense, Ms. Curtin, but even though this is federal land, getting the FBI involved will just make your paperwork all the worse, believe me. We heard something about an arm, from that guy Bob in the Visitors’ Center, but he didn’t know if there was still a hand on it. If so, Joe can get prints and we can run them for you.”

She looked relieved. “Thanks. You’re not the only one with reservations about the FBI. And because this looks like an accident, I don’t think they need to get involved. And, yes, there’s a hand, sort of chewed on and spat out, but the thumb looks intact.”

Joe was happy to have more work, it seemed. “Oh, good, a hand. I hope it’s the right one. I already got a really solid right thumb print off the door-handle of that SUV. I phoned it in, and it was easy to find in the database, because he was in the Army. Guy named Arturo Ventador, whose name is on the car registration.”

Good thing, I thought, that we left Bob back at the Center. His hue would be the color of ripe avocados about now.

The chewed-up hand turned out to be the left one, but its print was close enough that Joe gave it a 90% probability of belonging to Ventador. And, after some more work on the car, he also found a partial of a left thumb, which showed as good a match as possible under the circumstances; both matched the database. So we came away from the visit to Shark Valley convinced that, as implied by Ubaldo Muñoz, Arturo had perished in a most unpleasant way.

That made me feel better about absconding with that TAC-50, but I still wanted to get prints and a ballistics sample from it. Fortunately for me, Charles had yet more IA meetings for the rest of the day. I could tell his frustration was becoming unbearable.

I called Annette to let her and Chief Kraus know I was coming and discovered that they were up at OceanLab, so I hit the road for points north. Mid-morning traffic was not very much better than any other traffic, but the western bypass north and then east helped a lot.

Garrett Kraus had a simple fingerprint kit in his car, powder and lifting tape, and he used it to good effect. He found latents in various spots, but, oddly, none where you would expect them from someone firing the rifle. Then we headed out to the shooting range. It turned out to be fairly close, a couple of miles away on the west side of I-95 on Atlantic Boulevard. Kraus, it seemed, was a fixture there because he used the place to keep his skills honed, and we had no trouble talking them into letting us get our samples. We fired off three rounds from the TAC-50, creating quite a sensation among the other customers, retrieved the slugs, and went on our separate ways, Annette and Garrett back to OceanLab, me back south.

I was hoping that the prints Garrett had lifted from the TAC would match those that Joe O’Reilly had lifted that morning and that the slugs from the TAC would be a ballistics match to the unique one that Randy Simms had retrieved from Biscayne Bay. That would close all the loops involved with the Frankie Muñoz murder. I’d still have to dance around the issue of where the TAC had disappeared to, but maybe, I thought, the other evidence, including Ventador’s death, would let Charles Jefferson clear that case without the weapon itself.

Then, as I negotiated the late-morning traffic southward toward Miami, the issues that could arise if the prints Garrett had lifted were not Ventador’s began to gnaw at me. If the ballistics matched but the prints didn’t, Charles would need the TAC, barring some miracle. That was going to be tough to deal with, because I was already thinking of it as mine.

I'd learned, from my many years in the field, that having too much firepower in your arsenal, like having too much horsepower in your sports car—or, according to the Duchess of Windsor, being too rich or too thin—is just not possible.

\* \* \*

## 2.8

The TAC problem, though, was solved for me in a most unexpected way. Just as I was passing the exits for downtown Miami, my phone demanded my attention.

“Mac MacQuarrie here.”

“Mac, it's Charles. I need to make this short. Your phone will show I'm calling from a new number, so please don't lose it. It's a throw-away phone, but I'll have it for a couple of days. Long story short, I'm on administrative leave, relieved of duty on the Sánchez case, and everything else. Luis Perez, you met him on Monday downtown, he's assigned to take the case over. I think he's been working with Pablo all along, but he managed to persuade the powers-that-be that it's me who's working with Pablo. So, buddy, I'm afraid you're on your own, at least you and the two CGIS people I met.”

“Holy crap, Charles, that sucks, really sucks. If there's anything I can do to help, let me know. Meantime, I'll stay out of the PD picture as much as possible, OK?”

“Fine by me. Listen, I gotta go, because they may be listening to your phone. I'll leave messages for you with our mutual friend, the big one up the block, OK?”

It took me a minute to figure out that he probably meant Willie. “Ah, yeah, I think I know what you mean. Good luck, pal.”

I wasn't as worried as Charles that my phone was vulnerable, because it wasn't except to the most sophisticated eavesdroppers. Working closely and clandestinely with the White House has its advantages sometimes.

But I was worried about him. And puzzled. The tension in the PD conference room when I'd met the various detectives on Monday had been palpable, and Charles had alluded to some issue that Perez was involved in. And, of course, there was the ongoing IA mess that Charles was dealing with. But I had no idea it would lead to his being suspended. If anything, I'd assumed that it was Perez who would be put on leave. But now Perez was in charge of the case. It occurred to me that the PD probably had Charles' cell phone and contacts now, and I'd very likely be hearing from Perez at some point.

Maybe, I thought, I should find a storage locker somewhere, a place that takes cash. The gear in my trunk seemed like it needed a better home. Hmm. Or maybe there's a better alternative.

Back at the Residence Inn, I found a note from Sam that she'd gone up the block to Willie's for lunch. I thought about it a minute then called her.

“Hi, sweetie, sorry to interrupt your lunch.”

“It's OK—did you get home?”

“I did, all safe and sound. Do you suppose I could talk with Willie a minute? Is she there?”

“Sure.” She said something I couldn't quite hear, and a new voice came on the line.

“Mr. Mac, I want to thank you for passing my message to Sam here. I’m so glad to see her doing so well. You have my forever gratitude.”

“Willie, it’s my pleasure to make sure she’s doing well. And I treasure your gratitude. Do you suppose I could trade in some of it for a favor?”

“Well, I guess I could sure give it a try. What is it you need?”

“Thanks, Willie. And if this is too much or too risky for you, just say so. I’ve got a plan B. Anyway, I need some stuff hidden for a while. Uh, a couple of guns, actually, an automatic and a rifle. I’m worried that a corrupt cop is going to come after them.”

She laughed. “You know, Mr. Mac, it happens that we have several places here that are quite useful to hide things in. Turns out that some of these cottages have been around since Prohibition, and when we remodeled them we found various hidey-holes. So it’s not a problem at all. Bring ’em by.”

That little problem taken care of, or at least it would be as soon as I got the gun cases up the block, I decided it would be politic to let Ubaldo Muñoz know about the dust-up at the Miami PD. The number on the card he’d given me must have been his personal cell phone, because he answered immediately in that recognizable cigar-smoke voice.

“Yes?”

“This is Mac MacQuarrie, Mr. Muñoz. I have some information that you may find interesting. Can you talk?”

“Not on the phone. How about I come see you in an hour?”

“Ah. Yes, a very wise idea. Same place as yesterday?”

“I’ll be there.”

He’d said an hour, and I had the feeling that it would probably be less. So, if I hustled, I had time to walk up the block. It felt a bit foolish to be carrying the two gun cases along the sidewalk, but I didn’t run into anyone until I rang the bell on Willie’s gatepost.

It was the same routine as the day before. “Yeah?”

I didn’t recognize the voice, so I guessed. “Javod?”

“Yeah. Who there?”

“Javod, my name’s Mac. I was here yesterday with Charles Jefferson.”

“OK, yeah. Hang on, I gotta ask.”

I felt even more foolish standing there like some kind of traveling salesman, but the street wasn’t busy.

“OK, c’mon on in.” The door opened, and there was Javod looking as intimidating as ever. He didn’t like the looks of the two cases I was carrying. “What you got there?”

“Ah, well, I talked with Willie and she said she could keep these for me. I’m a little uncomfortable leaving them in the trunk of my car. Guns. Want to see them?”

His curiosity was apparent. “Gotta a rule here, sir, can’t carry on the premises.”

That made me feel guilty for having been there with a sidearm before and now as well. But this time I looked around and found a park bench to set the cases on, nodding all the while. “Smart idea, Javod. They’re not loaded—I checked personally—and the big one’s broken down. Here, let me show you.”

I opened the rifle case first and got an appreciative whistle in response. “Oh, man, that’s some piece of artillery. A fifty?”

“Yep.” I held up a magazine to show him its top cartridge. “Not what you want to get shot at with. But, see how it’s broken down, so it’s not any danger, right? And this other one’s interesting, too.”

I opened the smaller case and got another low whistle. “Now, that, sir, is something I can appreciate more. What’s that key for?”

He was referring to a little key sitting in a custom-cut depression in the foam lining of the case.

“This model has a key lock. And it’s locked, so it’s safe. And unloaded. Want to feel its heft?” I picked it out of the case and handed it to him. “It’ll feel light, because there’s no magazine in it. And the mag holds 17 rounds.”

Being a big fellow, Javod had accordingly big hands, but the Steyr fit him perfectly somehow. “Oh, this is a nice piece. I gotta get me one. Nine millimeter?”

“This one is. As I recall, there’s a .40 caliber model, too, but its mag is smaller.” A thought occurred to me. “Say, Javod, you want this one? I’m all set with sidearms, and Sam, that lady you let in for lunch a while ago, I guess, she thinks I’m way too set, if you know what I mean. I don’t need this one. And the owner is, ah, well, he met with a little accident, and he won’t be needing it.”

He took off his dark glasses and gave me a close look. “You serious? Really?”

“Sure. Now, I’ve got to warn you, I don’t know anything about its history, whether any of its slugs are in the local or federal databases. You know, for ballistics comparisons. Just to be safe, you might want to get the barrel re-machined. And I haven’t looked for a serial number, although it wouldn’t surprise me if they’re missing.” I shrugged. “But like I said, I don’t need it. And, well, it ought to have a good home, seems like.”

He held out his big right hand to shake and managed not to crush mine in the process. “Thanks, man, thanks. I’ll take good care of it, you can be sure.”

\* \* \*

Of course, that exchange meant I had a friend for life. He showed me and the rifle case into the house. Crystal, the redhead from the day before, answered the door, grabbed me, and gave me a big hug. Most pleasant.

“Damn, Mr. MacQuarrie, you a popular fella ’round here.” Javod headed back to his post, shaking his head and laughing.

Inside, I found Sam at the head of the dining table regaling a group of quite attractive young ladies, plus Willie, with stories about, well, me.

I could tell this because when I walked into the room, Sam said “Oh, here he is now.”

And everyone giggled.

I said “Hi, girls. Don’t believe anything she says about me. Willie?”

I tapped the case I was carrying, and she excused herself from the group. I followed her into a kitchen area, where she sized up the case.

“Hmm. Not too big, not too small. You say it’s a rifle? No, wait, you said there were two.”

“Right. The other’s a pistol, an automatic. I gave it to Javod. I don’t need it, and Sam’s not really happy with guns anyway. Uh, Javod was really pleased to get it, and I hope it won’t be a problem for you.”

She shot me a stern look that made me glad I didn’t work for her. “No, it won’t be. I bet he already has a piece at home, so this will just be another one. But I’m not sure I really approve.”

“I’m thinking he’ll be careful about it. And it’s got a key lock for safety.”

“Yeah, and I sure won’t let him forget to be.” She scratched her head. “So, Mr. Mac, what’s in here and what are you worried about?”

I figured I owed her a full explanation, so I gave her one, culminating with my wish that it be hidden from the Miami PD, should they choose to raid her place in the near future. “See, I think this new guy, Perez, he’s replacing Charles Jefferson on the Frankie Muñoz murder case, I think he’s dirty. I don’t have much to go on but instinct, but I’ve learned to trust that.”

She squinted in thought. “Perez. Hmm. Maybe Luis Perez? Dirty is too polite a word for him. So, I know just where to put this thing.”

She took the case from my hot, sweaty hand and disappeared down another hallway, then returned after only a couple of minutes wearing a smile.

“All set. No one but me and maybe Javod or Roscoe will be able to find it.”

“Thanks, Willie. I’ll pick it up before we head back south to the Keys, OK?”

“You gonna tell Sam about it?”

“Ah, in a way. Sort of. She’s not a big fan of guns, but she knows I use them in my work and she knows they’re helpful when they’re needed. So I’ll sugar coat it somehow.”

“Mr. Mac, you the best thing that happened to her, ever. I’ve known her for a long, long time, and she’s never been so happy before. You take care of that lady, hear?”

That admonition stuck with me—and still does, for that matter—on my walk back to the Residence Inn. But Ubaldo had arrived, as I could tell by the gorilla leaning against the black Audi A8L parked next to the hotel’s entrance. He recognized me and tapped on the rear window; the door opened and out stepped Ubaldo.

But it worked out—he apologized for being early, I for being a bit late, and we went upstairs to Sam’s and my suite. After I offered him a drink, which was once again declined, I got to business. For openers, I related the change of lead investigators on the Muñoz case without too much elaboration, but I didn’t fill him in on Pablo’s relationship to it all.

“Luis Perez, you say? Hmm. That changes everything. He’s in Pablo’s pocket for sure, I’ve known about that for years. And they’ve somehow set up Jefferson for a fall.” His validation of my instincts made me feel good.

“And there are a couple of other items, Mr. Muñoz. First, an arm that apparently used to be attached to Arturo Ventador’s left shoulder was found near a ’gator hole out west by Shark Valley. And that SUV you gave me the picture of had a rifle in the back, an unusual one that matches the caliber of the bullet that killed Frankie.” I watched Ubaldo nodding sagely. “Oh, and one more thing. My colleagues in the CGIS have photos of Arturo and Pablo Sánchez together in a situation that leads us to think they were involved in chemical weapons smuggling, the stuff I referred to yesterday. Uh, now you know pretty much all of what I know.”

“Right caliber? Any matches?”

“Not yet. And I’m a little worried that the slug that we think killed Frankie will mysteriously disappear from the PD evidence room. We also got fingerprints from the rifle, but I haven’t had a chance to run them—but if they’re Arturo’s, well, that’ll be pretty conclusive.”

“Mr. MacQuarrie, I appreciate very much hearing from you about this. I said yesterday that I have high respect for you, and this conversation has verified that for me. If there’s anything I can do, please let me know.”

“Well, Mr. Muñoz, Charles was worried about the possibility that your actions could start some kind of gang war, and I’d hate to see that happen. Maybe you could give me and the other CGIS people a couple of days to make some progress before you go after Pablo?” I held my breath, hoping I hadn’t offended him.

“Mmm. I’m afraid, Mr. MacQuarrie, it’s a little late for that.” He shrugged almost apologetically. “But don’t worry. I don’t see any kind of war coming out of this. Maybe another little skirmish or two, but no war. And thank you again for the information about Perez. He’ll be extra dangerous now, and I’m glad to be warned.”

“Ah, just so you’ll know, I don’t think he will be getting his hands on that rifle. Ever.”

“Oooh. Really, Mr. MacQuarrie? Well, now, that would be just fine indeed. Just fine. If you can prevent that, I’ll be more in your debt than ever.”

“Well, Mr. Muñoz, I don’t think of it that way. But I’m very pleased that we can have such a cordial relationship.”

“Exactly so. After all, we know where each other lives.”

Just as I had the day before, I took several deep breaths and poured myself a glass of wine after he left. About the time I was contemplating a second one, Sam walked in.

“Oh, you’re here! I’m so glad. Mac, that was such fun. I didn’t know how it would work out, but it was great. And maybe I was able to give those girls some hope.” She pulled me to my feet and hugged me even more pleasantly than Crystal had.

Then she leaned back and looked me squarely in the eyes. “So what was in that case you had, anyway? Did Willie keep it, or what?”

“Case? Oh, yeah. Ah, well, see, it’s like this. You and I have talked about how I spent most of my childhood growing up overseas, right? Because my Dad worked for the Foreign Service? Well, one year, he had an assignment in Washington, at the State Department, so we spent my sophomore year of high school in Silver Spring, Maryland, a high school where they had a big concert band. And I was discovering girls and trying to learn to flirt. So one day I saw a pretty girl who was in one of my classes carrying a case about like that one I had today, and I sidled up to her and asked her what was in it. She said something like ‘it’s my bassoon, stupid’ and walked off with her nose in the air.

“So, I won’t stick my nose in the air or call you stupid, but maybe it’d be better if we both pretend that the case I gave to Willie to store for me has a bassoon in it. OK?” And I smiled my most boyish, genuine smile and kissed her.

It was interesting to watch her sequence of expressions as she processed all that. First, it was curiosity—what the hell is he talking about this time—and then it was comprehension that I was actually being up front about not being up front. Then it was curiosity about what I wasn’t being up front about, and finally I guess she decided she really didn’t want to know.

“Hmmp. Well, I sure hope it doesn’t put Willie in any danger.” She pulled away and began pattering in the little kitchen area, a tactic I knew meant that she wasn’t entirely happy with me. “Oh,

and I called Annette this morning. I hope it's OK for us to go up to Fort Lauderdale this evening for dinner with her and Hal?"

"That would be wonderful—I'm glad you called her." I felt as if I was getting off easy. Too easy.

\* \* \*

I spent the afternoon thinking about the conversation with Ubaldo. His comment that it was too late for him to give me, Annette, and Garrett Kraus a couple of days to go after Pablo Sánchez suggested that something had already happened, just as something had happened to Arturo Ventador. And even if a gang war wasn't likely to develop, those skirmishes he'd mentioned could be messy, even for South Florida.

But the Frankie Muñoz case appeared to be cleared, even if there were a few loose ends. That reminded me of the fingerprints that we'd taken from the TAC, so I got busy with my computer and discovered that the ones of Arturo Ventador in the confidential files I had access to online sure looked like the ones from the TAC. Because there were no others on top of Arturo's on the TAC, that confirmed for me that he was the shooter, despite the lack of prints on the trigger or other appropriate places. A ballistics match would probably be needed for an indictment, but that wasn't going to be happening—the justice system didn't normally put detached left arms on trial.

That being the case, my involvement in the whole thing would seem to be over, I thought. Of course, I'd have to write up a final report, tally up all the hours, and expenses, I'd put into the thing, and send Preston Sands a bill, but more actual work on the case would be hard to justify. It began to look as if Sam and I could head back to the Keys as early as the next day.

But my experience suggested that such an optimistic outlook might well be naïve. So I decided to call my White House contact, Henry, even though that meant going over my handler's head again. But what the hell. Henry didn't trust Preston Sands anyway.

"Henry? Mac MacQuarrie here. Glad I caught you."

"Sometimes you just get lucky, Mac. I'm between meetings. Oh, and thanks for that report yesterday. I was glad to see that the chemical warheads didn't get onto the street."

"Me, too, Henry, as well as everyone down here. No one needs sarin to be on the loose."

"Sarin"? Did you say 'sarin,' Mac? Holy Christ."

"Yeah. I didn't find out until after I sent you the report. But not only is it not going to make it to the street, the guy that was getting the shipment is out of commission permanently." I explained the demise of Arturo Ventador and the likely demise of Pablo Sánchez. "And because of the fingerprints on the rifle that probably shot Frankie Muñoz, it seems like my role here is over. Although I don't know what Preston Sands will think."

"Does he know about Ventador?"

"Not from me."

"OK, well, here's what I'd like to see. The thing is, you've closed out Frankie's murder, high probability at least, and shut down the recipients of those RPG warheads. Sarin warheads, no less. Jesus." Henry took a deep breath. "Anyway, we still need to shut down the purveyors of the weapons. What I'd like, and I've discussed this with the senior members of the task force, is for you to string Sands along and team up with whoever's on the trail of who was delivering them. I think you said you've talked with some other CGIS people, and the Navy. We have reason to believe that Sands is in bed with the smugglers, though, so don't let him know what you're up to. OK?"

“Hmm. I take it that you’d like to get the kind of information on Sands that will let you put him away, then?”

“Right, along with putting away whoever’s behind this smuggling.”

“All right. Do me a favor and pass the word to the Coast Guard and Navy that you want me to continue on the case, would you? And I’ll stay in touch, Henry. Oh, and I guess I need to ask something. I was just a consultant and then Sands got me made into a genuine CGIS investigator. But CGIS isn’t paying me. Should I keep sending my invoices to him? Or what?”

“Ah. Good question.” There was a pause. “Um, to me, I think. That way, Sands won’t have the opportunity to screw them up, and you’ll get paid. We need you, Mac.”

Always good to feel needed, I thought.

“Are you about ready? I told Annette we’d meet her and Hal about six, up in Hollywood.” The tone of Sam’s voice, impatient and still annoyed with me, reminded me that feeling needed sometimes requires cultivation.

She was silent most of the way north while I negotiated the rush-hour traffic on I-95—when, I wondered, was it *not* rush hour in Miami? Once again, the express lane saved the day. I finally had to ask where we were going, so she had to speak to me again.

“A place on the Intracoastal called Billy’s Stone Crabs. Take Hollywood Boulevard east.”

I used that as an opening to chatter about not knowing the area very well, blah, blah, blah, and worked in a reference to a date we’d had early on at a lounge in one of the big hotels along the beach in that vicinity. This was in her working girl days, and she hadn’t entirely trusted my assertion that all I wanted to do was talk. But since that’s all we did do, things got off on the right foot between us, and it had been delightful ever since.

I made sure she understood how I felt about that, and it started to melt her hard freeze a bit. Then, when we walked into Billy’s and found Hal and Annette at a waterside table, she warmed up more.

I’d seen Annette several times recently, of course, and Hal at that meeting, but Sam hadn’t seen either of them since our cruise-ship adventure. So we had the usual round of hugs and handshakes, along with the sort of “looking good” comments you’d expect in such a situation.

They had only just arrived, so we all needed to order something. That accomplished, Hal looked at me with a question in his eyes.

“So, Mac, I was surprised to see you at that meeting. Annette explained a little about what you’re doing here, but I don’t quite get it. It seems like a really crazy coincidence that you’d run into each other at the Coast Guard Station. What was that all about?”

“Surprised the heck out of me, too. But it turns out we’re working the same case, just from opposite ends. We just didn’t know it at first. And you must be involved, too, I guess?”

“Yeah, well, I was here for a while to work with a renewable energy group at Pompano State. And then their boat got blown up by these weapons smugglers. So I’m now a sort of oceanography consultant for Annette and her CGIS partner, Chief Kraus. Oh, yeah, and I’m trying to keep the Pompano State faculty’s fingers out of the renewable-energy-project cookie jar.” Hal shrugged. “I guess my administrative experience as a dean put me in the wrong place at the wrong time.”

I had to laugh. “Wrong place at the wrong time—that’s the story of my life recently. Well, except for the bonus part. I wouldn’t have met Sam if not for that nuclear materials case and the cruise ship thing where we met you guys.”

I gave Sam's knee a little squeeze and felt her put an arm around me, completely melted, apparently. She smiled. "We supposedly retired and moved to the Keys to relax, but I'm having trouble getting Mac to understand what relaxing is."

"C'mon, I took up bonefishing, didn't I?" I smiled at her and then looked over at Hal. "She makes a wonderful guide, poling the boat where I need to go to get to the fish."

Sam snickered. "Yeah, I get him there and then he scares all the fish off with his casting."

Hal laughed. "Come on out to Colorado, Mac. There are lots of dumb trout out there. Annette's even catching some."

Annette was in the middle of sipping her gin and tonic, but she managed to swallow before showing her indignation. "Hey! Are you saying I can catch only dumb trout? Watch it, buddy."

"Colorado, huh? Hmm. I'm thinking I might like to paint some mountains someday. All this flat scenery is good, but mountains would be really interesting." Sam had a far-away look.

"She's taken up painting and sketching. And selling. The shops in the Keys can't keep her stuff in stock." I felt proud to tell the story. "She's a genius at capturing the essence of her subject with just a few strokes of a brush."

"Is it cold out there?" Now Sam looked worried.

"It gets chilly in the winter. But summer days are in the 50s and 60s, sometimes 70s, where we live. Nights get down to the 40s or maybe a little lower." Annette didn't realize the irony of her comment.

"Uh, no offense, Annette, but that's winter to me. Of course, I could just go shopping..." Sam looked at me and batted her eyelashes.

It made me glad that Henry and I had discussed my consulting fees.

### 3.0

It was time, he decided, to deal with liabilities.

Those bumbling Cuban fools in Miami he had delivered the merchandise to would undoubtedly make their fatal own missteps when they went to pick it up, so they weren't a worry. Their pet cop could be, though, maybe. But the Bulgarian, well, he was definitely, very definitely, an issue to be dealt with. And, regrettably, my half-sister and her husband know far, far too much to be allowed to live, he thought. The others, the people at the marina where the boat had been docked, the guy in Washington, those people back there on the west coast; decisions on all of them would have to wait until after an initial round of clean-up.

At least Lo Shi and Chu Long-Bin would not have to suffer. They could be dispatched quickly and relatively painlessly. But that pig Grozdan Petrov was different. Maybe, he thought, I can put that warhead I took out of the package to some use. Perhaps a series of small doses would draw out the sarin's debilitating asphyxia into a horribly torturous nightmare. Petrov deserved no less.

But Petrov was a professional. He wouldn't be so easy a target, even for a quick ambush, as would Pete and Emily Chu, as they were now known. On the other hand, Petrov's death, if done right, would

not be so publicly visible as the Chus' would—they would be missed at their university offices right away.

So it would have to be Petrov first and then the Chu couple. And then, probably, the Cubans and their cop. How to deal with Petrov was the question.

As he drove the several hours back from the Tampa Bay area to Fort Lauderdale, he pondered this, along with various other matters he was concerned about, as a distraction from the truck traffic on the two-lane road across the low, flat country north of the big lake.

That other package moored offshore Clearwater was something of an issue. It was in shallower water, which would make the recovery easier, in principle, but that also made it more vulnerable to accidental discovery. And the buyers in Tampa were no less incompetent than those in Miami had been—in fact, their training had been something of a fiasco compared to that of the Miami Cubans. Given what a bunch of buffoons those guys were, the potential for error was huge. That was why he had withheld the coding for the acoustic release until he returned to the southeast coast—he didn't want any screw-ups while he was in the vicinity of Tampa Bay.

On the other hand, that list of other al-Qaeda contacts they'd given him was a nice bonus. He was glad to have it in an encrypted file stored on his phone. It could well prove useful in the months to come, along with that duffle bag full of cash, of course.

Ah, finally, the interchange with that big highway called the Turnpike, where I head southeast toward Miami, he thought. And maybe I can get hold of Petrov and set up a meeting.

He reached for his cell phone.

\* \* \*

### 3.1

Aside from the company, I think maybe the best thing about the dinner that Hal and I had with Mac and Sam at Billy's Stone Crabs that Wednesday evening was that we talked business only very briefly.

Well, check that. Those stone crabs, along with that great wine that Mac ordered, were the best thing.

But the almost-no-business was a close second.

It would have been no business at all, except Mac, on the way out when he had me to himself for a minute, said in a low voice, "It looks like the Miami end of this is a wrap, and my boss in the White House wants me to work with you and Garrett on finding the guys who smuggled that stuff in. Can we make that happen?"

"Sounds like a plan to me, Mac. I mean, we're all CGIS, right?"

As I thought about it later, though, I wondered just *how* to make it work. Garrett and I had developed a great working relationship. As much as I liked Mac, I wasn't sure I'd be comfortable with working with him—his agency background had instilled in him something of a loose-cannon approach to investigations, as I'd learned on that previous escapade on the cruise ship.

Maybe, I thought, he and Rick Vanderhoff could team up. Intel and counterintel together again, or something like that.

On the other hand, my instincts told me that Sam would want Mac to team up with me, so that I could keep an eye on him. And it was obvious from our dinner together that their relationship was the best thing that had happened to her for a long, long time. So, despite my reservations, I felt compelled, for Sam's sake. Besides, I was the one who had agreed with Mac's suggestion to team up, and, not knowing how Garrett and Rick felt, I decided I needed to partner with Mac as a result.

A few phone calls on Thursday morning set the wheels in motion. Mac and Sam, it turned out, had decided to move north to be closer to OceanLab, a sensible decision given the perpetual traffic hassle. I suggested a meeting for late morning, and Mac said he'd be there.

Upon calling them, I found that Rick and Garrett would be coming too, and they both had interesting news. It seems they'd each received orders from the tops of their respective chains of command to the effect that Mac was to be a new team member and integrated fully into our investigation. My worries of the evening before were eased when they both suggested that they partner up and that Mac and I should do the same.

Mac also told me that Sam would drive north a bit later in the morning to begin a hunt to find just the right accommodations for the two of them. I almost started in with advice, but then I remembered that they'd spent quite a while in our neck of the woods a year before, so Sam probably didn't need advice. Instead, I suggested that their move up our way would make it easier to dine out together.

Then I sat back and tried to figure out my role in this new scheme of things. One thing that I realized in all this figuring was that, as a control freak, I probably didn't measure up to the others involved, so perhaps I should just chill out and let things take their course. It wasn't really my case, after all, even though I—as well as my premier cheerleader, Hal—felt strongly compelled to see it through.

We both wanted, first and foremost, to get those bastards.

It was Tuesday morning when Shorty had mentioned that he recognized the Asian guy from the Cove 17 Marina docks as a match for a picture in Emily Chu's office. By late Wednesday morning, Hal, the clever devil, had managed to weasel out of Emily the fact that the picture was of her half-brother, Fu Lin, whom she described as a Chinese embassy diplomat associated with their cultural affairs office.

Even Hal and I, the hicks from the Colorado sticks, knew that was baloney that had been hanging under the rafters for too long—it just smelled rank. Worse, to the best of Hal's judgement, Emily was most politely described as “evasive” when Hal asked if she'd seen her half-brother recently. Not that he was a trained interrogator or anything, but he'd had years of experience dealing with homework excuses from negligent college students, after all.

We convened in the secure conference room at OceanLab at ten, with Mac not yet arrived. That gave everyone else a chance to gossip about him a little—the two military officers were most impressed that the unassuming guy they'd met earlier in the week had the clout to generate orders from such lofty heights. Shorty was also suitably impressed, but Hal and I, having worked with Mac previously, already knew that he had serious connections in Washington. Really, it didn't surprise me at all.

Instead of getting started right away, we waited until Mac walked in, and then, of course, there was a long round of guy-type banter, including some sarcastic derision, about his superstar status, given the origin of the orders about him.

He took all that good-naturedly. And when he had a chance to respond to the jibes, he said that he had new news about the Miami end of the whole thing and emphasized that what was really important was to find the people on our end, the people who put that mooring out there in the first place.

That sobered everyone up.

“I’ll start,” Mac said. “Remember how the Miami PD detective I was with on Tuesday identified the two guys in your marina pictures? OK, well, first, that detective is all wrapped around the axle of some strange Internal Affairs investigation down there and has been put on leave. So he’s out of the picture for now. I’m convinced that things will work out for him, though. But, more importantly, one of the two guys he identified, the Ventador guy, he’s dead. And the other, Pablo Sánchez, is probably dead, too. It looks like Ventador was the shooter who whacked Frankie Muñoz, so that part of the case is cleared. The reason you guys got those orders is that the real priority now, and this is a special task force out of the White House talking, is to find out who put that cache of sarin warheads out there in the ocean for the Miami guys to pick up. That means identifying the other two faces in those marina pictures. And it sounded the other day as if we have a good start on that.”

Mac looked around the table to make sure that everyone understood.

“Right.” Garrett seemed to understand completely. “Our facial recognition software identified one of the two other guys as an international arms smuggler from Bulgaria, Grozdan Petrov. But the other is not someone whom we can really identify yet, although Shorty found his picture here at OceanLab, in an office of a staff member who was listening at the door the other day.”

“And, yesterday, I got a name.” Hal jumped in. “That staff member, Emily Chu, works for me, and I made a point of striking up a casual conversation with her yesterday, in her office. Turns out that the Asian guy is her half-brother, a Fu Lin, who works for the Chinese embassy in some role. She said he’s a ‘cultural attaché,’ but I think we all know what that means.”

Garrett pulled out some papers from his briefcase and sorted through them. “Fu Lin. Right. That’s one of the names our computers came up with. Except the file doesn’t say he’s with the Chinese embassy. It says he’s an independent businessman specializing in heavy machinery. And he works mostly with companies in Taiwan.”

“Well,” it was Rick Vanderhoff’s turn to chime in. “We know who they are, now we just have to find them.”

\* \* \*

About that time, Mac looked startled, said “Aw, hell,” and pulled his phone out of his shirt pocket.

He peered at the number on the screen and looked up. “Sorry, folks, I’ve got to take this...Mac MacQuarrie here. Secure...Ah, good morning...Well, I’m in a meeting with the team, but we’re in a secure room. At least it’s supposed to be secure. I’m not sure how this cell call went through, though. Anyway, everyone here is TS cleared, at least...OK.”

He squinted at his phone’s screen, finally poked at it a couple of times, and, as he set it down, he said, “On speaker now.”

A tinny little voice started talking. “Good morning everyone. I’m sorry to interrupt your meeting, but I have some information you need. And I’m sorry I won’t be identifying myself, but that’s standard protocol between Mac and me. Perhaps it’ll suffice for me to say that I made some phone calls to the Pentagon yesterday, and you’ve probably heard the results of them by now. They included the term ‘Task Force Matador,’ and I hope that term got to you in your orders.”

I saw both Garrett and Rick nodding and looking surprised.

“Anyway, one of the things our task force has been doing is setting up arms sales scams, or maybe I should call them ‘arms *purchase* scams,’ to try to catch the bad guys. One of them involves a fake al-Qaeda cell over in the Tampa area, and they hit pay-dirt. They’ve been negotiating for some time with

an arms dealer who's calling himself 'Fang Lu,' and this past weekend they finally met him. He took them out onto the Gulf of Mexico a few nautical miles and briefed them on how to retrieve an underwater package. Supposedly, it has in it more of what you folks recovered out in the Gulf Stream. He didn't give them the coding for the release at the time, though, but that came through yesterday. And he walked away with a duffle bag stuffed full of cash, a special duffle bag that had a tracking device sewn into its structure. But he ditched that bag over in central Florida, at a road-side park near a little town called Bartow. Thing is, we anticipated that and put into the cash a special RFID transponder. And we have access, uh, not entirely in an authorized fashion, mind you, to the highway RFID readers all over Florida that the toll roads use. From Bartow, he went east and then south on the Florida Turnpike at a place called, believe it or not, 'Yeehaw Junction.' And he got off the turnpike somewhere between the toll plazas at Lantana, in Palm Beach County, and at Pompano Beach, in Broward County. At Lantana, we got a picture of his car and its license plate—it's a rental—and I'll send it to Mac. Questions?"

Garrett had shuffled his papers. "Ah, sir? The dealer also calls himself 'Fu Lin,' according to both our recognition software and his half-sister. Along with several other names with the same initials. She, I mean the half-sister, she thinks he works for the Chinese embassy, but there is other contradicting information as well. Anyway, has the package from the Gulf been successfully retrieved?"

"'Fu Lin,' eh? Thanks." The tinny voice might have sounded pleased, but it was hard to tell. "And, yeah, Navy assets picked up the package on Tuesday. Anything else?"

Mac looked around with his eyebrows raised. When no one spoke, he picked up his phone and poked it again. "Guess not, sir. Anything for me? You're off the speaker...OK, you can be sure we will. I can't give you a time estimate, though. You wouldn't believe how many cars there are down here...OK, talk with you later."

He put his phone back in his pocket. "He says he'll let us know if there are any more RFID hits, although he's not optimistic about that. The transponder in the cash is built into one of the bands securing a packet of bills, and he may unwrap the packets and toss the bands. Still, there's a possibility."

Shorty cleared his throat. "You're right about all the cars, Mac. But he said something about a license plate number. Maybe that'll help."

"How about a three-county BOLO?" I didn't know if a wide-spread be-on-the-lookout would really help, but it seemed to me that some local law-enforcement involvement could be useful.

Mac looked at me with his forehead wrinkled up, so I guess he was thinking.

"I can't think of a down-side to that." Garrett sounded optimistic.

"Well," Mac's thoughts were coming to life. "There's at least one dirty cop involved in all this, on the Miami PD."

He filled us in about the relationship of a Detective Luis Perez to the Sánchez family. "The thing is, my information is that he was in the pocket of Pablo Sánchez, who's probably dead. And the guy behind Pablo's probable death knows of this relationship. So it could be that Perez is out of the picture already. Anyway, that's a factor, but I don't think a big one. Perez probably never met Fang or Fu or whatever he calls himself."

Rick Vanderhoff spoke up. "I like the BOLO idea. And when we get the license plate number, we should track its owner down, the rental car company. Maybe the car has a GPS chip in it so the company can track it, meaning we could, too."

"Track??" Hal was livid, or at least pretending to be. "Track? And I here was griping about piddly speeding tickets the other day. But track? Christ, we've got *two* rental cars, Annette and I, and they can *track* us? Sheesh. I need to get back to the cabin in the mountains and go fishing."

“Yep, they’ve got ya, Hal. All those trips out to the casino. Not to mention that other place—what was it called?—that ‘gentlemen’s club’?” Shorty grinned and did a Groucho Marx waggle with his eyebrows.

“Hmmpf.” But my grumpy old man winked at me.

And I noticed that everyone else was looking at me, too, as if I needed to come up with a response.

So, naturally, I said the first thing that popped into my head, “Oh, yes, that place. Wasn’t that a nice dinner we had there, dear?”

That shut ’em up.

But Mac, who had been poking at his phone some more, rescued them. “Here it is. White Chevy Malibu, rented from Budget at the Fort Lauderdale airport.” He rattled off a Florida license plate number, and I noticed that Garrett wrote it down.

“I’m going to make a phone call to our new cyber-enforcement people to see if Rick’s idea about tracking that car will work.” Garrett got up, walked over to the opposite end of the room from where we were all sitting, and fiddled with his phone.

Rick said, “OK, suppose we have this Fu Lin guy under control. What about the other one, Petrov? And are there others? This Emily Chu person, maybe?”

“If she’s involved, her husband probably is, too.” Shorty, I could tell, wasn’t at all happy that OceanLab personnel might be part of this whole thing.

“And then there’s the Miami cop, Luis Perez.” Mac said. “Like I said before, he may be out of the picture, but I don’t know that. And because he has law-enforcement credentials, he could be problematic.”

A discussion ensued, but there was nowhere much for it to go, so it just meandered around. When Garrett put his phone away and returned to the table with something of a Cheshire Cat grin, however, it found a direction.

“I’ll be damned,” he said. “Rick, you were right. Most rental cars now have some combination of GPS and cell-phone technology in them that lets them be tracked, almost in real time. And track them the rental companies do.”

“Aw, shit,” said Hal. “Even though it’s likely to work for us this time, well, aw, shit.”

Garrett smiled. “Y’know, Hal, I agree. But this time we can take advantage of it. In fact, there’s a waypoint list, along with a map, headed for my email as we speak.”

Garrett and Shorty messed around with a video projector and some cables for a few minutes, Shorty powered up a computer that was on a rolling stand, and then Garrett checked his email, via the computer, again.

“Hal, I don’t know what your driving habits would reveal, but here are Fu Lin’s.” Garrett clicked the mouse, and a map of Florida appeared on the screen with a dozens—maybe hundreds—of little triangles overlaid on it, most of them in Southeast Florida with a few leading up to Tampa.

Garrett zoomed the map in on what looked like the biggest and most dense blob of the triangles, and we saw that they were all in the vicinity—a parking lot, probably—of what turned out to be, based on Google information, a long-term-stay business hotel in Deerfield Beach, on SW Tenth Street just west of the railroad tracks.

“Apparently, on this map each triangle is the car’s position sampled on five-minute intervals, when the car’s ignition is on.” Garrett said. “So this must be where he’s staying, or something like that. Maybe we won’t need that BOLO after all.”

\* \* \*

Garrett forwarded the email that included the map of Fu Lin’s tracking data, and we four federal officers piled into two cars to head for the Deerfield Beach business hotel with the dense cluster of triangles. I think that was probably the very definition of “going off half-cocked,” as we didn’t know which room might be his, nor did we have a search warrant anyway. At least maybe we could locate the car, I thought.

But, although there were several white Chevy Malibus in the parking lot, none had a license that matched Fu Lin’s rental car. While we stood around and discussed next steps, Garrett fiddled with his phone.

“Ah, I found something. The map was only some of the position data, and they also sent me a list with all of it, point-by-point. With times and dates. He was last here late Tuesday afternoon, it looks like. Uh, and apparently he arrived Sunday evening and stayed put, pretty much.”

“And with all the other points on the map, he must have been here before that,” I observed.

Garrett fiddled a bit more and said, “Yeah, if you sort the points by position, there are locations here starting about three weeks ago.”

“Well,” Mac chimed in, “if he was here that much, maybe the office will remember him. Or Petrov.”

As we started walking, in a little group, toward the hotel’s office, Rick stopped. “Ah, let’s consider this. If we all troop in there, we’re going to scare the crap out of whoever’s at the desk. And probably the manager, too. Is that what we want to do?”

He, at least, seems to be trying to avoid a Keystone Cops episode, I thought.

“Good point, Rick. You think we can get them to cooperate? I mean, we don’t have a warrant or anything.” I was glad to be able to voice my concerns.

“Maybe scaring the crap out of them is what’s needed.” Mac shrugged. “I mean, look, they’ve had an international weapons smuggler, one who is proffering WMDs to terrorist groups, no less, staying here for the past three weeks, right? If they don’t cooperate, it seems like that could be interpreted as aiding and abetting, right?”

Garrett laughed. “Mac, that’s true. But telling them that would do more than just scare the crap out of them. We’d likely have a heart attack on our hands. Or two. Surely the management here has no idea of what’s going on.”

“What’s that old saying about catching more flies with honey than with vinegar? Anyway, why don’t we have a polite conversation with the manager, in private, and see if we can get some voluntary cooperation.” I paused to consider the scowl on Mac’s face. “And if we don’t get cooperation right away, we can start in with the good-cop-bad-cop approach. Mac can be the bad cop.”

I smiled at him, and he blushed a little and broke into a grin.

Shortly, we were all sitting around one of the little tables in the breakfast area just off the main lobby with an Asian Indian fellow wearing a name tag that said “Lal Krishnamurthy, Manager.” It was about at the five minute mark of our conversation with him that he began to sweat visibly.

“So, you are telling me that one of our guests is implicated in a matter of the gravest threat to national security?” His hands, folded together on the table in front of him, were quivering. “Can you describe him to me?”

“Better yet, I’ve got pictures.” Rick pulled pictures of Fu Lin and Grozdan Petrov from his briefcase and placed them on the table facing Krishnamurthy. “There are two of them, actually.”

“*Two* of them? Oh, my...But, yes, this fellow has been here for several weeks now. I remember him because he has been paying in cash. And he made sure to tell us in no uncertain terms to have housekeeping stay out of his room. We give him fresh sheets and towels in person, at his door. And he puts trash out for us to collect.” Krishnamurthy had picked up the picture of Petrov.

“We need to see his room.” Mac’s soothing tone made me proud of him.

“But, of course, you understand that we must follow the law in this, as well as everything.” Krishnamurthy sweat was making his face shine. “For example, a search warrant is needed for law enforcement to enter a guest’s room, unless there is immediate probable cause or some other emergency.”

Rick opened his mouth to say something, but stopped and closed it again. Mac just looked disgusted, and raised his eyebrows in my direction as if to ask if it was bad-cop time. But Garrett, who had been fiddling with his phone the whole time, bailed us out.

“Mr. Krishnamurthy, I believe that we are justified in proclaiming both immediate probable cause and an emergency, but we also have this.” He held his phone up for Krishnamurthy to see the screen. “If you have a wireless printer here, I can print this right off my phone. Otherwise, I can have my people fax it to you. Ah, in case you can’t make out the small print, it’s a warrant. And I’d say we need to get into that room as soon as humanly possible. Otherwise, we’re going to have to call in a large contingent of SWAT officers.”

“May I see this, please?” Krishnamurthy took the phone from Garrett’s hand and fiddled with the screen. “Ah, I see, yes. Well, that’s all I need. Let’s go.”

He led us down the west-side central corridor on the second floor, almost to the end, finally stopping before a door labeled “254.” As he took a key-card from his pocket and prepared to swipe it, we all drew our weapons, causing him to stop.

“Ah, if you don’t mind, I will let you do this.” He smiled and handed the key to Garrett, who happened to be closest at hand, and scuttled down to the end of the hall, well out of potential harm’s way.

“Easy or hard?” Garrett looked at the rest of us and placed an ear on the door. “Sounds like some TV game show blasting away in there.”

“Well, we didn’t see Fu’s car down in the parking lot, so at least there’s only one of them. See if you can be quiet about it.” Mac’s suggestion produced nods all around.

“Oh, wait one.” I gestured for Krishnamurthy to re-join us. “Mr. Krishnamurthy, we need to know the layout in there.”

“Ah, yes. That makes good sense.” He nodded, took out a pen, and drew us a little map on the wall by the door.

The door opened into a main room that had an efficiency kitchen just inside it, and there was a door to the bedroom toward the left rear. The bathroom was accessed from inside the bedroom.

“OK, let’s do this.” Garrett swiped the card, and Krishnamurthy scurried back to the end of the hallway.

Garrett opened the door slowly and carefully, peaking in the whole time. Eventually, seeing nothing, he walked into the suite and gestured for us to come in as well.

Although sorely in need of housekeeping's attention, the kitchenette area was in reasonably good shape, and the rest of the main room looked very lived in but not particularly messy. As Garrett had noticed through the door, the TV was on, with its sound level set to be somewhat louder than I would have chosen, except it wasn't tuned to a game show but rather to a CNN newscast. The air-conditioning system had been set to a cool 68° with the fan blowing all the time, and the door to the bedroom was open about an inch. Privacy curtains on the main windows were waving in the breeze, and it turned out that a sliding patio door was open.

With the main room cleared, we turned our attention to the bedroom. Once again, Garrett took the lead, shoving the door open with his foot while holding his automatic in front of him at the ready. But that room was empty, too, with its windows opened as well. Garrett shrugged at the rest of us and gestured toward the bathroom door, which was closed.

"Sounds like the ventilation fan is running in there, so maybe that's where he is," he whispered, "sitting on the pot."

"So we caught him with his pants down?" Mac responded.

"Or maybe he just went out to lunch," Rick was trying not to laugh.

Garrett motioned for us all to stand away from the door and any line of fire from anyone in there and then pounded on it. "CGIS. Federal agents. Open the door. Now!"

Nothing happened, so he tried the knob, which turned. He shoved the door open and stood aside. Still, nothing happened.

"Spot on, Garrett, Mac. We caught him with his pants down, sitting on the pot. I can see him in the mirror." Rick was looking at an odd angle into the bathroom. "It's Petrov. He looks dead."

And indeed he was. Someone, and our bets were on Fu Lin, had tied Petrov, naked, in a sitting position to the commode and proceeded to kill him somehow.

It was Mac who made the first guess of how. "Looks like symptoms of a nerve gas to me. The rigid, tortured expression with muscles contracted, the foam around the mouth and nose from the mucus membranes especially. Saw a lot of it in Iraq. It's just what a dose of sarin will do to you."

\* \* \*

## 3.2

Garrett was the only one of us who'd touched anything—doorknobs—so we backed out of the suite carefully and called in a CGIS forensics team to go over the place carefully. Mr. Krishnamurthy was naturally curious about what had happened in his hotel, but all we told him was that there had been an unfortunate death from unknown causes. We didn't allow him into the room, much to his disappointment—or maybe he was relieved, I couldn't tell.

While awaiting the arrival of forensics, we had a conference at the end of the hallway.

"Well, we know that Fu Lin was here for a couple of days. If the medical examiner puts the time of death before Tuesday afternoon, Fu has to be our main suspect." Rick started things off.

“And the fact that he and Petrov were working together cements that. No doubt they had some kind of falling out, and Fu killed him. With some of the sarin—Fu must have kept some of those RPG warheads for himself.” Garrett looked worried about that last deduction.

“The real question, of course, is where did Fu go next. We’ve got those GPS locations, so we need a better map. Some kind of chronological route, starting Tuesday afternoon.” Mac was, as usual, looking forward.

Garrett fiddled with his phone again. “Putting the list of all the locations back in chronological order provides a hint. The listing is in GPS coordinates as well as latitude-longitude points. And, from here, it looks as if he went straight west about, ah, um, nine miles and then a couple of miles north. After that there was some local wandering, or something.”

Rick stared at him, thinking and visualizing. “Hmm. Tenth Street here heads west and turns into the Sawgrass Expressway in a couple of miles. And, farther west, north of it is a country-club-type subdivision called Parkland. Or maybe it’s a town or something. But why would he go out there?”

Garrett poked his screen and squinted at it. “It looks as if he’s been out there two or three times. But there’s no blob of locations, so he’s never stayed for long.”

He poked some more. “And he didn’t stay long this time, Tuesday afternoon. Looks like he came back east in the evening. We need to get these points on a high-resolution map to make real sense of them, though.”

I walked down the hall a few yards and called Hal. “Hi, it’s me. We found one of them, dead. The Bulgarian.”

“Well, I suppose that’s progress. Although I’d rather get the bastards alive.” He sounded almost disappointed.

“Yeah. Looks as if the Asian guy, Fu Lin, killed him. Listen, I called because I have a hunch. Can you find out Emily and Pete Chu’s home address?”

“I’m sure I can, but I don’t how long it’ll take. I’d ask Emily, but I haven’t seen her since Tuesday. Hold on, here’s a big phone book.” He rustled some pages. “Yeah, it’s on a Majestic Court in some place called Parkland. Want the number?”

I poked at my phone until I found a way to input both the street and phone numbers. “Oh, Hal? I’m going to forward to you the email that Garrett got with Fu Lin’s rental car GPS record. In addition to that map we all saw, there’s a complete list of locations, lots more than were on that map. Could you make a map of the full list? With a chronology? We need to see where he’s been recently, full resolution. Um, I don’t want to be demanding, but we need this like, yesterday.”

“Uh, OK. I expect I’ll be able to get what help I need here.”

I thanked him and tried the phone number he’d given me.

No answer, but a nice enough voice message came on, apparently recorded by Emily, asking me to leave my number.

I walked back to the others and announced, “Pete and Emily Chu live in Parkland. And Hal hasn’t seen Emily since Tuesday.”

Mac nodded, Rick looked puzzled, and Garrett said, “Ummmm...?”

“Look. Fu Lin goes up to Tampa and gives instructions to our bogus weapons buyers about where to find a cache up there in the Gulf of Mexico. He comes back here Sunday night and goes to Petrov’s place, where he stays for a couple of days. Petrov winds up dead. Then he goes out to Parkland.”

Mac was still nodding. “Housecleaning. I’m thinking we ought to get out to Parkland, stat.”

When we’d left OceanLab earlier, Mac and I had managed to keep our discussion of which car to take—his or mine—short. He agreed on mine and immediately began transferring several bags of gear into its trunk, including an odd hard-sided one that looked as if it was made for a big musical instrument.

And on the drive west, I was glad to have the Mustang—I needed its get up and go to keep up with Garrett’s Charger Hemi. I could see out of the corner of my right eye how Mac settled in, adjusted his seat so that he could brace his feet, and found the hand-holds to grab.

Garrett reached out and stuck a magnetic, red emergency beacon on the roof of his car, and then Rick did the same from the passenger side. Garrett also must have done something with a special switch inside, as his car’s various taillights and turn signals started blinking as if on steroids. Then he roared out of the parking lot with me in pursuit.

His lights helped a little; what helped more was when the street morphed into an expressway and we didn’t have to worry about cross-traffic. We were doing about 100 when we blew by a State Trooper parked in the median, and I watched in my mirror as his lights all came on and his spinning rear tires caused him to make little fish-tails on the grass as he accelerated after us.

I flashed my headlights a couple of times, and Garrett must have noticed both me and the trooper, as he stuck his hand out the window in an “OK” gesture. So I decided just to go with the flow.

And flowing we were, so fast that the few miles to the exit Garrett decided on flashed by almost instantly. As we slowed down the off-ramp for the intersection with the cross-street, its stoplight inevitably red, the trooper zipped by us on the left shoulder and slid into the middle of the intersection, lights ablaze. He jumped out and signaled Garrett, and me, as I was sticking to Garrett like a leech, to turn right. Then I watched in my mirror as he jumped back in his cruiser and made little fish-tails again, this time on pavement, as he took off after us.

“Well.” Mac was just an observer, but a very interested one. “I guess he’s more of a friend than I would have thought. Garrett must have a radio. Or something.”

“Ah. Good thinking. I’ve been a bit too preoccupied to figure that out. I’m glad. A speeding ticket for what we were doing would be really expensive, I bet.” Just then I noticed that Garrett had put on his left-turn signal. It managed to blink clearly amidst all the other flashing that his car was doing.

Garrett turned left onto a street whose name I didn’t catch, and almost immediately he switched on his right-turn signal. But there was no place to turn, so I just slowed and stuck behind him as he slowed in the right lane of the manicured boulevard. The landscaping reminded me of the drive Hal and I had made to get to Morikami and back.

As we slowed, the trooper flashed by, Garrett pulled out to follow, and I stuck to his rear bumper as well as I could. Shortly, his right-turn signal came on, and I prepared for another change of direction. But this time, we didn’t speed up after the turn. Instead, we came to a stop, confronted by a guard house and a security gate. The State Trooper was, apparently, negotiating entrance.

I really couldn’t see what was going on, with the two cars in front blocking my Mustang-limited view, but eventually the trooper exited his cruiser and forced his way into the guard-house. And then the right-hand-lane gate—the residents’ gate—rose. Garrett pulled into that lane, and I followed.

It finally dawned on me that Garrett had a GPS in his car that had been programmed to find Pete and Emily Chu’s house, because a couple of turns on an affluent-looking residential street took us right to the house number that Hal had given me on Majestic Court. Garrett pulled into the driveway, and I pulled in beside him. As we were getting assembled, the State Trooper slid to a stop at the foot of the drive.

He left his motor running and lights flashing, got out, and walked up to us with a big smile on his face. “Folks, I haven’t had that much fun on the job, ever. I sure hope it’ll be worth it all. Trooper Eduardo Diaz here. Call me Eddie.”

“Eddie, I’m the one you’ve been on the radio with. Garrett Kraus.” Garrett stepped forward with his shield in his left hand and his right hand extended for a shake. “We’re all federal officers working this terrorism case, which involves chemical weapons smuggling, and we’re going in that house. Hope that’ll be OK with you.”

Eddie nodded. “I’ll be right here if you need me.”

I heard all this as Mac and I were headed up the sidewalk to the front door. Mac tried the door and found it locked, but then he pulled something out of his pocket that he set to work on the lock with. The lock yielded in about ten seconds. He opened the door, and we both recoiled from the overwhelming stench of rotting meat. Even in air-conditioning, things in Florida spoil quickly.

Mac looked at me. “Tuesday evening. We’re too late for us to do anything but pick up pieces.”

\* \* \*

We decided that Pete and Emily had been at dinner, no doubt on Tuesday evening, with a guest, no doubt Fu Lin. Pete had sat across the table from Emily, with the third place setting on the end between them. We found Pete face-down in a plate of something I didn’t want to know the name of. Mac grabbed his hair with a napkin to lift his head, and we found a small bullet hole, pencil-sized, in his forehead. Emily, meanwhile, was slumped sideways in her chair, a similar hole behind her right ear.

“Fu must have excused himself somehow, walked behind her, and shot him and then her. Probably grabbed her first. Quick and clean. No evidence of sarin I can see.” Mac’s expression was grim but analytical.

It all fell into place for me. “More housecleaning. And he has a 36-hour head start. Who else is on his list, do you suppose? Who’s next?”

“Well...” He paused as Garrett and Rick walked into the dining room.

“Ugh. How about I open some windows?” Rick, despite his military background, wasn’t liking the aroma.

“And I’ll see about getting forensics out here.” Garrett didn’t look hopeful, but he pulled out his phone. “Maybe the team at the hotel is finished.

“Forensics is necessary, but all we need to know is what we’re seeing here. One tap each. Very different approach from how Petrov was killed.” Mac looked at each of them in turn. “Small caliber, probably a .22, maybe suppressed. That’s what I’d do. Annette was just asking about who might be next. And I’m thinking we need that GPS data from his rental car.”

I nodded at Mac. “I asked Hal to make a high-resolution map for us. And, Garrett, how real-time is that rental car data you got for us?”

But Garrett was in conversation with someone. Rick looked ready to toss his lunch, and both Mac and I had seen all we needed to. I led everyone back out to the front yard and heard Trooper Diaz say “bye, sweetie” before he quickly put his phone away as we came out the door.

“Anything I can do to help?” He seemed eager for something besides writing speeding tickets.

Mac thought for a couple of seconds and then marched over to the cruiser. “Trooper Diaz, my name is Mac MacQuarrie. Like Agent Kraus there, whom you were talking with, I’m a CGIS agent. But he’s

local, while I'm really not. My assignment is working with a special task force out of an office in, ah, Washington, a task force that's concerned with smuggling. That's highly classified, by the way, you mustn't breathe a word of it to anyone. So, what's in this house needs protection from prying eyes. The owners of the house were executed by person or persons unknown, people whom we're certain are involved in a matter of highest priority national security. WMD—that's weapons of mass destruction—WMD smuggling, with al-Qaeda cells involved as the recipients. Does this make sense?"

I could tell that Eddie's head was spinning. "Uh, well, ah, sure. Sounds like you want me to keep the house secured, right? Um, until when?"

"A CGIS forensics team is going to show up soon. If you're hungry, well, order a pizza. If you need to go, I noticed a lavatory inside the door and to the right, just let the forensics team know that you did. We'd stay, but we're on the trail of the killer and we need to get going. Oh, and one more thing. I don't care what kind of security clearance you have, this is all way, way above it. That means if any of this appears in your report, you won't have any back-up on it. I'm sorry about that, but that's just the way these things work. Your report needs to show that you had a really, really boring afternoon watching law-abiding citizens obey the speed limits."

Eddie looked quite surprised. "What? You're kidding, right? Nobody would ever believe that!"

Mac smiled and patted Eddie's shoulder. "Well, yeah, you're right. But you'll think of something."

I was still laughing when I called Hal from the car. I'd decided to let Mac drive so I could focus on where to go next. Besides, driving that car was *fun*, and he deserved a turn. Except that his turn was going to be less wild and crazy, as we all agreed to meet back at OceanLab, and that there was really no big rush. We didn't know where we were headed next, after all.

Hal answered on the second ring, with a smile in his voice. "You again? And I was just beginning to enjoy the peace and quiet."

"Hi, guy. Ah, I should tell you that you won't be seeing Emil Chu again. Or Pete, either."

"Huh? What happened?"

"It looks like her half-brother shot both of them. Anyway, we're headed back your way to see if there's a good map of Fu's locations yet."

"Yeah. Sort of. Gotta say, though, this is harder than you might think." He was on the verge of shifting into his Mr. Science Person mode, I could tell. "Visualizing three-dimensional datasets effectively is always a challenge. Computer screens are two-dimensional, after all."

"Three dimensional data'? C'mon, it's not like Fu is a bird. He sticks to the ground, and that's two dimensions, isn't it?"

At least he was patient. "Yeah, but time is a third dimension here. So without an animation, the visualization is hard. We finally settled on six-hour segments, with arrows indicating directions and some time labels. So you'll be getting four maps per day, although some are blank, like at night when he wasn't moving around."

"Oh. I see. Well, for viewing on our phones and so on, I expect that's a good approach. Animations would take forever to download and probably be confusing on the little screen. But, say, the data you've got is obsolete now. Time is passing and more locations may be available."

"Yeah, we thought of that. I talked with Garrett and found out his CGIS contact for this, so that guy and I have set up a way for new locations to be added to the latest map as they come in. Apparently, the rental car makes an automated phone call to its office each hour and sends the previous hour's worth of

locations. So there are a couple more hours since Garrett's first download. And that's on the latest map now." Now he sounded almost smug.

"Damn, that's perfect. You're good. I knew I married you for some reason."

"Yeah, well, I'll show you how really good I am tonight. 'Bye now."

I hoped I wasn't blushing too much to be respectable and quickly changed the subject.

"So, Mac, I heard what you told the trooper. And I'm surprised. I would have thought even those not-quite-half truths are too classified to talk about."

"Hmm? Oh. Well, you heard the last part, right? About how he wouldn't get any confirmations from anyone if he reported on the whole thing? And, of course, the particulars were all pretty vague." He managed to shrug with his hands on the steering wheel. "I'm sure the CGIS forensics people will thank him profusely and send him on his way without giving him any information. And we really did need his continued cooperation, not to mention being able to ditch him. We sure don't need him following us around like some lonely puppy. Uh, I hope I can find OceanLab from this direction."

"Yeah, I get confused, too. Most of the east-west streets don't go through to A1A." I poked at the rental car's GPS display. "Ah. Hillsboro does, a half-mile north of us. Then south on A1A. We're staying about a mile north of Hillsboro on A1A, so I know that neighborhood fairly well."

Mac's forehead wrinkled up again. "Hmm. Yeah, I remember that area, sort of. See, I lived in far west Boca for a while, and then Sam and I stayed in a place in Boca, closer in, while I was sorting out that SNM business. That part of A1A is tall condos on the beach, right?"

I laughed. "Right, and we got a great one, a place owned by some professor who's off in Australia for the spring. Not at all like what we have at home, a little cabin in the mountains. Well, maybe not so little."

He glanced over at me. "That sounds better than what's here in South Florida. Fewer people, I bet."

"If you can stand the winter. It can be brutal out there." I shook my head. "Say. You said Sam's up here looking for a place for you guys to stay, right? But you won't be settled in right away. Why don't the two of you come over for dinner tonight? Hal can grill steaks and we can watch the ocean over drinks."

"Well, I'm driving. Why don't you call Sam and ask her?" He recited a telephone number slowly enough that I was able to punch it in.

\* \* \*

While I set up a dinner arrangement with Sam, who was getting increasingly frustrated with her accommodations search, Mac got us back to OceanLab without incident. I think he was hoping for some excitement, so that he could test the Mustang's capabilities, but all he got was South Florida tourist gridlock.

Eventually we arrived, only to discover that we'd somehow managed to beat Garrett and Rick. That gave me the time to brief Shorty and Hal about what we'd found out in Parkland and about the demise of Grozdan Petrov. Rick and Garrett walked in when I was about half-way through.

"The autopsy will tell us more, but I'm betting that Petrov didn't die quickly. Fu was there for at least 48 hours before we found Petrov's body." Mac looked around the table. "What we don't know yet is how much more sarin, or its constituents, Fu has with him."

Rick spoke up. “Actually, we might. Turns out that there was one less RPG warhead in the cache in the Gulf of Mexico than there was offshore here. Each warhead, though, has four little capsules of each of the two constituents in it. So we might infer that Fu had four sarin doses available.”

It was Garrett’s turn. “But we don’t know how many of those he used on Petrov. Still, it seems prudent to assume he has at least one dose left, one capsule of each constituent.”

“Anyway, we’re all here now. Let’s see the maps.” Mac, obviously, was impatient.

But just as Shorty put the one with the most recent locations of Fu’s car on the screen, Mac looked pained and pulled out his phone.

“Ah, crap. Sorry, gotta take it.” He stood and walked to the far corner of the room and then, within about a minute, waved at us to continue and walked out the door.

“So, it seemed to me that you’d want to see where Fu is now, or was most recently, and that we could work backwards to Parkland. Track his routes and all that.” Shorty looked around for questions. “It looks like he went into downtown Boca around lunchtime, and before that he made a stop just south of that at the Boca Raton Resort and Club, just off Camino Real.”

“We can see that from our west balcony. It’s that big, pink monstrosity, Annette.” Hal looked over at me, and I nodded.

Shorty put up a new slide. “Last night, it looks like he was in Fort Lauderdale, down by Port Everglades. There’s a Westin Hotel about where this little cluster is.”

Garrett looked surprised. “That’s also where the Cove 17 Marina is, where the *Reel-Thing* docks. Do you suppose he was after Rafe?”

“Maybe he went out to check on his off-shore package.” Rick pulled out his phone and wandered over to the other end of the room.

Garrett looked at me and shrugged. “Guess it’s just you and me left, Annette, along with our OceanLab colleagues here.”

Then Shorty’s phone rang, and Garrett could only shake his head. I took advantage of the lull to update Hal.

“I invited Mac and Sam over to dinner tonight. Told them you’d grill steaks. Will that work?”

He nodded. “I’ll leave early and pick some up.”

Garrett, meanwhile, had picked up a used copy of the *Miami Herald* that was sitting on the table. He was into it by a couple of pages when he looked up.

“Hey? Didn’t Mac tell us about a dirty cop in Miami, name of Luis Perez?” Garrett looked at me, and I thought about it.

Hal spoke up first. “Yeah. Something about his being connected to the Sánchez family.”

“Yeah. And how Perez got put in charge of that assassination that Mac witnessed.” I nodded.

“Well,” Garrett squinted at the paper, “seems that the Miami PD found a body floating in the Miami River last night, way west of downtown, out by the airport where the river is more of a canal. Fingerprints identified him as Detective Luis Perez. Death by drowning, apparently. Very high blood-alcohol content.”

“That’ll interest Mac. There must be some housecleaning going on down there, too.” I mentally checked another one off the list.

About then, Mac returned from wherever he'd gone, so Garrett showed him the newspaper story.

"Can't say I'm surprised. That Sánchez outfit is a real snake nest. But maybe this will be the last of it all." Mac looked around. "That phone call was for my ears only, but I've got to talk about some of it with y'all. Did I miss anything?"

Garrett summarized what we'd talked about and explained why Rick was on the phone. Mac, I noticed, perked up visibly when Garrett mentioned Fu's stop at the Boca Raton Resort and Club. By the time he was finished, both Shorty and Rick had rejoined the group.

"No particular activity in the vicinity of the mooring, today or yesterday," Rick announced, "and nothing unusual at that marina, either."

We all looked at Shorty, who looked embarrassed.

"My call was something entirely different. Another faculty squabble. At some point, I'm expecting a call from the administration about Pete Chu's death, though."

I nodded and looked at Mac. "Your turn."

"OK. But why don't we let Shorty finish with the maps first?" Mac looked around for agreement.

Nobody objected, so Shorty picked up where he'd left off. "So, today Fu is in Boca. Last night he was at the Westin in Fort Lauderdale, by the marina, and he spent most of yesterday down there. But Rick just said nothing much happened."

"We should probably check to make sure Rafe isn't dead, though. Maybe he is and nobody's noticed," Garrett said. "I'll just make a very quick call to have someone go look."

"Good idea. Anyway, Tuesday evening, it appears he had dinner with Emily and Pete Chu, and after that he got a room just south of there at a cheap motel in Coral Springs." Shorty looked around. "That's what we know about Fu Lin's movements in the past couple of days."

Mac waited until Garrett rejoined us, which wasn't long. "OK. My turn. This is going to be a little awkward, for two reasons. First, some of it is officially compartmentalized and limited to people with need-to-know. So I'm going to tell you only what you need to know. Some of it may be a bit, or maybe a lot, over your clearance levels, so treat all of it carefully. We should discuss it only among ourselves. Second, some of it falls into the category of 'agency dirty laundry.' Used to be I worried about stuff like that a lot, but not so much anymore. Still, I'll not name the agency."

"Now, you already know about the part of this whole thing that involves catching this Fu Lin guy. Uncle Sam is—rightly, I suppose—indignant about folks' trying to sell WMDs to terrorist groups, particularly on US soil, and that's what Fu Lin tried to do in Tampa. And here in South Florida, too, as far as that goes, although I imagine that not everyone would consider that Cuban group to be terrorists." He looked around at all of us again. "Here's what you don't know. Fu Lin is paying a guy in Washington, a guy connected with that Matador task force, to pass him information. That is to say, we've got a traitor in our midst. So in addition to catching Fu Lin, Uncle Sam would like it a lot if we could catch the traitor as well. We know who he is, but we don't have *prima facie* evidence of his traitorous activities."

"Now, I'm using the word 'traitor' in a specific way here. If this guy were a regular US citizen, what he's doing would be criminal—aiding and abetting an arms smuggler. But he's a sworn intelligence officer, so his activities make him a traitor. There's a sort of gray area here about whom he's helping, but it could be seen that he's helping an enemy that we're in a shooting war with. This means he may earn himself the death penalty." Mac looked around the table again. "I'm telling you this because you need to know how serious the situation is."

“Also, I’m telling you this because the guy is coming here to South Florida, most likely to meet with Fu Lin. He’s using the cover for his travel paperwork that he’s meeting with me, but that’s not the case. I’ve talked with him on the phone, but I’ve never met him, and there’s been no contact about today or tonight.” This time, Mac looked only at Shorty. “What’s interesting about your maps, Shorty, is that he’s got a reservation for tonight to stay at the Boca Raton Resort and Club.”

\* \* \*

### 3.3

Mac and Shorty figured out how to print pictures from Mac’s phone, and he passed out copies of a nondescript, middle-aged fellow wearing glasses over brown eyes, a conservative haircut, and no facial hair. There was a label reading “Preston Sands” at the bottom. Combined with the photos of Fu Lin we all had, we were prepared to identify them on sight.

But it turned out that not all of us were going to have the chance to.

“Now, the final bit of information I have was tough for me to swallow. But, all-in-all, I have to admit it’s probably reasonable.” Mac threw up his hands in frustration. “See, I’m involved in this as a consultant to Task Force Matador, which is to say that I’m a civilian. From Uncle Sam’s perspective, so are you, Annette. This means that Rick and Garrett get to have all the fun. Ah, along with quite a number of their colleagues, I should add. You guys will be getting, or already have, some orders about all that. I guess I should add that this would normally be handed off to the FBI, but there just isn’t time. Even the FBI guy on the task force agrees with using CGIS and Naval CI to bring this all down.”

Garrett and Rick immediately began checking their email, and almost simultaneously they rose, wished us all a good afternoon, and left in a hurry.

As Shorty was disassembling the projection and computer equipment, Mac, Hal, and I sat and stared at each other.

“Well, I guess we just have to wait.” Hal seemed to be waxing philosophical. “At least we can have a pretty good feeling about how this is all turning out.”

“Actually, that’s fine with me. I’m not sure I want to be involved with taking down a guy who could be carrying sarin with him.” My sense of relief was even greater than I was letting on.

Mac nodded without saying anything, and I could tell he was just stalling for time.

Eventually, Shorty excused himself to deal with that faculty squabble, and the three of us were left to ourselves.

“Out with it, Mac.” I shot him my best school-teacher look.

“Yeah, I didn’t want to say anything in front of Shorty. Hal, Annette mentioned that you guys live on the island just south of the Boca Raton Inlet. If I remember my local geography correctly, I’m betting you can see the Resort and Club from your place.”

“Yeah. I mentioned that when you were on the phone, I think.” Hal looked surprised. “It’s one of those faux Moorish, ugly pink buildings just northwest of us.”

“Right. Well, another bit of information I got is that Preston Sands here,” Mac tapped the picture, “has reserved a room on the southeast corner, up high. I expect we can see it, if we have appropriate equipment. He’s supposed to arrive around five.”

“Ah! Well, I got a spotting scope for us, to check out the shore birds. Zooms, big objective lens, tripod, the works.” Hal looked pleased.

“And I’ve got some good field glasses and an amazing rifle scope, still in Annette’s trunk. I saw those orders, and we’ve got a couple of hours to get set up to watch the show.” Mac’s grin was infectious. “In fact, it’s still a while before Pres is going to arrive, although I guess he could be early. He’s flying on an agency plane into Boca airport.”

“I wonder if Sam found you guys a place yet?”

“Probably ought to call her, huh?” Mac drummed his fingers on the tabletop. “The thing is, she’s going to be upset about that rifle. But its scope will be the best way to watch whatever might be happening.”

“She doesn’t like your weapons?” I could understand this, even though I owned several.

“Not really. And she thinks this rifle is a bassoon. Well, that’s what I told her to pretend.”

That cracked me up. “You must mean that hard-side case I saw. A bassoon? Mac, I can just picture you playing a bassoon.”

Hal jumped in. “C’mon, now. I happen to think bassoons are quite dignified.”

Then he cracked up. “Let’s get out of here.”

With some help from me, Mac transferred his bags, and that “bassoon” case, back to his rental car, and then he followed me north toward home. I could see him talking on his phone during the drive.

After we got settled at our place—I made us some iced tea, as it was still early—Mac related the happy news that Sam had finally found a Residence Inn suite with a kitchen up in Delray Beach, a bit far north but still reasonably convenient.

“Trouble is,” he continued, “it looks like this is going to be all over with tonight, and we can go home tomorrow.”

“You said that she’s drawing now, or painting, I guess. You ought to stick around for at least a day so she can do some sketches at the Morikami.” Our visit the previous Sunday was still fresh in my mind.

It took Hal an extra half hour to get home because of his detour to the market for dinner. When he did arrive, we set up our various bits and pieces of equipment on the west balcony, all trained on a corner room in that big, pink building just north and across the Intracoastal Waterway from our condo. Hal moved our spotting scope over from the east balcony and found a camera tripod for Mac’s field glasses. Then he had an inspiration and put his longest lens on his camera, setting it up on another tripod. All the while, he and I watched Mac use the little cocktail table to set up that scope he professed to be so fond of, the one that was mounted on a rifle. Or maybe I should call it a cannon.

In any case, we wound up with four big lenses trained on that hotel across the way, on the balcony of a specific room where we thought there might be some excitement a bit later.

By that time it was getting on to about 5:30, and Mac started to fidget. I assumed it was because he was wondering when Preston Sands was going to show up, but he proved me wrong. We had made drinks and were sitting on the west balcony keeping an eye out for any signs in our various lenses but generally trying to relax.

“Annette? Where do you suppose Sam is? I thought she’d be here by now.”

“She probably decided to do some errands. I mean, she thinks you’ll be there for at least a few days, right?”

“Oh, yeah. OK. And I guess that means I need to be prepared to stick around, don’t I?” He grinned.

“Good plan, pal. Unless you want to be doing those kinds of errands yourself.” Hal raised a glass to toast this idea.

“OK, well, the other thing I’m thinking about is whether we should call Garrett and let him know that we have eyes, big eyes, on that balcony. I don’t know if it’ll be helpful or not, but he should know.” Mac returned Hal’s iced-tea toast with a scotch-rocks toast of his own. I raised my wine glass in a general salute to whatever needed saluting.

“I like that idea. We might also be able to get a better idea of what’s going on over there.” I grabbed my phone and speed-dialed Garrett’s number.

“Kraus here.”

“Garrett, it’s Annette. Listen, I don’t want to interrupt whatever you’re doing, but I have some information that might be helpful. Mac and I and Hal are sitting on a condo balcony with big eyes on the balcony of the room that Preston Sands is supposed to check into. Now, or soon, or whenever. Could that be helpful to your people?”

“Uh, well, I’m not in charge here, but I can’t imagine it would hurt. Is Mac there? Can I talk with him?”

On one level, my feelings, not to mention my ego, were crushed. But on another level, I understood. Mac was obviously the more experienced in terms of real-time operational savvy. So I handed him my phone.

“Garrett?...Yeah. What she said. I can see the screws in the deck railing with my scope...Well, I’m just using it to watch, and we also have other eyes like it. Kind of an observation gallery on this end...Oh, well, yeah, that. I’m not planning on using it, you understand, just to watch. It’s on the TAC...Well, of course. Wouldn’t you?...those match-grade BMGs we fired a couple of...OK, OK, I know. Look I’ve seen the orders you got. But that was version one, so I don’t know what the end game is. And, well, I *am* zeroed in...So, it sounds like this isn’t really your show. Who’s in charge down there?...Hmm. Don’t know the name. You remember our conversation about additional sarin doses, though, right?...OK. This is Annette’s phone, but I’ll use mine with a headset so we can talk in real time if something starts to happen that I can see...Yeah, later.”

As he handed me my phone, he rolled his eyes. “Someone else got put in charge, even though he isn’t fully briefed. I didn’t want to do it, but I’m going to have to pull rank.”

\* \* \*

He fumbled in a shirt pocket and pulled out his phone, poked at it, and put it to his ear. “Henry?...Good, glad I caught you. I *am* following instructions—I’m a half-mile away from the location. Thing is, I’ve got a great view of Sands’ room, so I can provide intel as needed. But the ground-crew leader doesn’t know me and isn’t fully briefed...Fu may have more sarin on him...OK...But, look, it’s pretty clear on this end that Fu is doing housecleaning, and it wouldn’t surprise me if Sands is probably the next dust-bunny...Ah, can I take that as an official finding with a Presidential pardon to back it up?...OK, yeah. My contact down there is a CGIS Agent named Garrett Kraus. I’m going to set up a phone link as soon as I see Sands in his room...Yeah, I won’t forget. What about Fu?...OK, got it.”

Just as he was putting his phone back in his shirt pocket, the entrance buzzer started making noises, which startled all of us. It turned out that Sam had arrived.

She still had to negotiate the elevator and hallways, so it took her another five minutes or so to get to our door. When I heard her knock, I opened it to find someone hidden behind two completely full paper grocery bags.

“Sam?”

“Yeah, I’m in here somewhere. Uh, I thought maybe some appetizers would be fun.”

I took one of the bags and led her into our kitchen, where we began unpacking. It turned out that “some appetizers” was something of an understatement, and I had to wonder if the refrigerator would be able to hold the leftovers.

But as soon as Mac and Hal saw what she’d brought, I began to wonder if there would be any leftovers. After giving Sam a big hug, Mac prepared *two* plates full of various things and disappeared back to the west balcony, where he could monitor activities across the way, and Hal just started eating on the spot.

“Where’d he go?” Sam was looking around.

“Well, it’s a long story. But, basically, we’ve got a ring-side seat, sort of, for what may be the culmination of the case that Mac and I, and Hal, too, for that matter, have been working. Something’s going down soon in a building we can see, and Hal suggested setting up our spotting scope to see it better. Then Mac brought in some gear he has, so we’ve got four long lenses set up on our balcony.” I shrugged. “It’s not what I had in mind for a dinner party, but it’ll probably be over before too long. And then Hal can grill those steaks.”

“Yeah!” Hal was talking with his mouth full. “But in the meantime, thanks for bringing all these goodies. It’ll keep us from starving until I can grill.”

Sam rolled her eyes. “I’ve gotta see this.”

I led her through the spare bedroom to the west balcony, where she found Mac sitting at the little table staring through the rifle’s scope. She was not exactly tickled.

“What the hell? What’s that thing, anyway?”

Mac looked up, sheepish. “Uh, well, I guess you wouldn’t believe me if I said it was a bassoon, huh? But don’t worry, I’m just using it to see with. I’m not going to shoot anyone. Well, probably not.”

He should have left off the last part, I could tell. I left them to sort things out and headed back to the kitchen to monitor Hal’s calorie intake.

It couldn’t have been too bad out there, because Hal and I didn’t hear any yelling or screaming, so several minutes later we wandered back that way. Mac was once again looking through the rifle’s scope, and Sam had an eye glued to Hal’s spotting scope.

“He’s standing on his balcony with a drink in his hand, talking on the phone. And he’s wearing a shoulder harness with a piece on one side and several mags on the other.” It took me a few seconds to figure out that Mac was talking to his phone’s headset. “Yeah, I’m told he came down on a private plane, so he’d have no trouble with airport security. No sign of anyone else in his room.”

Sam looked up, wide-eyed. “Hal, this thing is amazing. I can read the monogram on his shirt pocket. It says “P S” in fancy script letters.”

“We’ve been having fun identifying sea birds down on the beach with it.” Hal smiled. “Some of their distinctive markings are kind of like that monogram, in a way. But it would make it a lot easier if they wore initials.”

Sam and I nibbled while Mac and Hal stuffed their faces, Mac watching through the scope most of the time, for an hour or so. Nothing happened in that hotel room across the Intracoastal until the lights went off. Then there was no sign of Preston Sands.

We waited another five minutes, and I could tell that even Mac was getting bored. Time to play hostess, I thought.

“I’ve got an idea,” I said. “Nothing’s happening over there, and we’ve been stuffing ourselves already. How about a walk on the beach before Hal starts dinner? We can see if our appetites come back.”

Mac thought about it. “Probably a fine idea, Annette. I expect that Sands is smart enough not to meet with Fu, or anyone, alone in his room. A public place would be better. Safer. As long as Fu keeps his, ah, chemicals in check.”

We all left our shoes in the condo and took the elevator down to the lobby, then we walked out to the seaside deck and down the stairs to the sand. Mac had on a baggy Cuban shirt, and I suspected that he was carrying something in his belt underneath it. For my part, I’d taken my promises to CGIS seriously, and I had on a small shoulder holster with my Sig Sauer in it under my light jacket. It seemed dumb at the time to go for a walk on the beach armed, but dumb is better than dead, all-in-all.

We headed north, toward the Boca Raton Inlet, along the water’s edge, with a light breeze from the southeast tickling our right ears from behind. It was dinnertime, deepening dusk, and the beach was almost deserted. The life-guard towers were empty and all closed up, and except for a couple of people up by the inlet and, as I’d noticed before turning north, a jogger well to the south of us, we had the entire beach to ourselves.

Late March, barefoot on the sand with comfortably warm water splashing at my ankles occasionally, no real need for the jacket I was wearing except to cover the Sig. I tried to think of what it must be like at home in Colorado—even if the weather was called “good” out there, it would be cold and breezy, at the least, with two or three feet of snow in the meadow in front of the house and more in the woods. Overnight it would likely get below zero. There might even be a blizzard in progress—I hadn’t been paying attention.

Yeah, I thought, there’s a reason people move here, and it’s this.

We wandered up the beach, chatting quietly, lost in the peacefulness of the subtropical evening.

When we were a few hundred yards from the rip-rap of the inlet’s breakwater, Mac looked up.

“What kind of drama do you suppose that’s all about?”

He was referring to the two people we’d seen earlier. The one on the left, wearing a light-colored sports coat and standing on a big rock, was gesturing wildly, but whatever noise he was making was either carried away by the wind or covered by the splooshing of the surf. The other reached into his jacket and pulled something out, pointed it at the guy on the left, and we heard a faint “pop” at almost the same time as the first guy’s head snapped back and he collapsed.

Mac said, just loudly enough for us to hear, “Get down,” and took off up the beach in about the 11:00 direction, inshore from where the guys by the inlet were standing.

Ah, I thought, he’s going to cut the shooter off.

Then the other three of us hit the sand—there was really no cover to speak of, but lying on the ground seemed like a better idea than standing up. It was dark enough that maybe, just maybe, it would be hard for the shooter to see us.

But he seemed more interested in escape, as he took off across the beach toward the grove of thick vegetation that separated the beach from the street. Mac had a head start, though, and was ready to intercept him—we even heard garbled shouting about “federal agent” and “halt.”

But he didn’t halt. Instead, he turned left, south, toward Sam, Hal, and me. It wasn’t clear that he saw us, but he was headed right at us. I heard a sharp report, a 9mm Parabellum from Mac that must have been headed out to sea, because the shooter kept coming. My turn, I thought, and my stomach did a little flip.

I rolled to my right side just enough to extract my Sig, assumed the prone firing position, and bellowed “FEDERAL AGENT, FREEZE” in my Level Four voice.

But he didn’t. I wondered briefly if he didn’t speak English or if he was just stupid, but, whatever, he kept coming. So I sighted through the gathering dark as best I could at his torso, exhaled, and squeezed three times. The shots weren’t perfect, but they were good enough to knock him down. He fell on his right side, spinning a little, and he landed with his hip on his jacket’s side pocket.

He lay still for a few seconds, but then he began struggling to get up. First, he got to his knees and began rubbing his eyes. He patted his right jacket pocket—the one he’d fallen on—and screamed. Looking around frantically, he managed to get oriented and then stood up and stumbled into the water.

\* \* \*

Mac came running back our way and was panting when he reached us.

“Damn, I’m getting too old for this stuff. Keep him covered, Annette. We can only watch. At least we’re upwind.” His short sentences were punctuated with deep breaths. “Good shots, by the way.”

“But he got up.”

“Vest, probably. And I’m thinking he crushed some binary sarin capsules when he fell. A vest would be stiff enough to make that happen, maybe. Stupid of him not to separate those capsules.”

“Shouldn’t we try to help him?”

“Nothing we can do without danger to ourselves.” He pulled out his phone and poked it.

“Garrett?...Yeah, the first one was me and the rest were Annette. She got him with all three, and he went down. But he must be wearing a vest, because he got up...Now he’s in the ocean trying to wash off. I think he dosed himself somehow. Don’t know how bad. Got any hazmat people with you?...We’re just south of the inlet. Upwind of him.”

Hearing our conversation, Hal apparently decided it would be OK to get up from his position on top of Sam—why he tried to protect her and not me was something I was going to have to deal with later—and helped her up. Except for Mac, we then all spent a minute brushing sand off ourselves and keeping an eye on the person flailing in the shallows. He seemed so preoccupied with his ablutions that he didn’t pose an obvious threat, except perhaps for what vapor might be drifting off him.

About that time, all hell broke loose out of the vegetation up by the sea-wall. A half dozen vehicles with more lights than I’ve ever seen poured out of a break in the bushes and roared in our direction. Hal saw Mac waving his arms over his head and began to do the same. It took only a few seconds for an official-looking SUV to get to us, at which point Mac gestured in the direction of the guy in the water.

“Careful,” he shouted. “He’s armed and dangerous.”

The vehicles formed a sort of semi-circle with their headlights illuminating the shooter, who was still splashing water on himself and rubbing his face. He seemed oblivious to the lights and the activity. I was expecting some kind of strongly amplified command directed at him, but, except for the idling motors, and the surf, everything was strangely quiet. Then I noticed a pitiful moaning from the guy splashing in the water.

It took him about two more minutes to collapse, at which point three people in protective suits rushed him. And Garrett Kraus, dressed in a camouflage uniform, emerged from that first SUV and walked over to us.

“You folks look OK, but I need to ask.” He smiled. “Oh, and I bet you’re Sam. Nice to meet you, finally.”

“My pleasure, although this isn’t the best time or place.” She’d regained her composure, apparently. “And I’m fine, although Hal managed to knock the breath out of me.”

“Hey, even with all this sand, you seemed like the softest place to land, so…” Hal shrugged and winked at me. I gave him a “you’re in trouble, now, buddy” look, although I was laughing when I did.

“Garrett, there’s another body over by the breakwater there,” Mac waved in a northerly direction, “and I expect that’s Preston Sands. It looked like a small-caliber head-shot from where we saw it, about here.”

One of the suited-up people, this one carrying some kind of briefcase-sized gizmo, walked up to us. “No contamination there, Chief Kraus, but there probably was at one point. We found some shards in a pocket, and a .22 automatic. And he’s wearing a vest, some kind of body armor that I haven’t seen before.”

“Must be some good armor. What’s his condition?” Garrett asked.

“Not good. We got some atropine in him, and an ambulance is on the way. Not sure his eyes will ever be the same, and his breathing and heartbeat are pretty ragged just now. We’ll see.”

“Well, treat him with care. Care for yourselves. He’s way dangerous.”

“Say, Garrett,” Mac looked curious. “Before, on the phone, you said you weren’t in charge here. Where’s the boss? Um, or CO, if that’s appropriate?”

“Well, there must have been close interest in this thing up high. After Sands slipped through our fingers over at the Resort—that’s how he got here, I guess—I got a field promotion. I really don’t know what all happened.”

“Well, I’m sure there are obscure details, but the main thing is that we really *did* get the bastard.” I couldn’t help but be relieved that it was all over.

Later, after we had walked back down the beach to our condo and our respective adrenalin levels had returned more or less to normal, we discovered that all the excitement had rejuvenated our appetites. So Hal fired up the grill—on the downwind, west balcony, after we put all the gear away—and broiled those steaks. He opened a couple of bottles of Cabernet, I whipped up a big salad, and with the rest of Sam’s appetizers to nosh on, we had a splendid dinner on the east balcony with that splooshing surf as background.

And even though I’m still not a beach person, it really did begin to feel like I was on vacation.

**A Four Corners Mystery**

# Valley of Death: A Four Corners Mystery

## Prologue

Channeled by a small ravine and nearly invisible in the moonlight, the yellow-gray mist slid down the mountainside, its progress marked only by the rocks and bushes that vanished as they were enveloped. When it reached the valley floor, the mist oozed outward, obscuring the trunks of spruce and aspen in the glade, engulfing the tents filled with sleeping women and children.

Down by the stream, the campfire was burning low, and the men hunched near it, passing around the last of a fifth of Jose Cuervo *Reserva*, were about ready to turn in. The fire had warmed them outside and the tequila inside, but the topic of the conversation still chilled their souls.

Miguel Parada, expressing himself in his Cuban-accented Spanish, had summed it up when he suggested that they adopt military tactics to protect themselves, by posting armed guards and so on. After all, he said, it was one thing to be called greasers and wetbacks, but it was entirely another to have people threaten to burn you out. Sometimes threats like that could be ignored, written off as mere noise made by harmless loudmouths. But then Jorge's son Roberto had been roughed up by the gang of toughs in town, and that was worrisome.

At least, they all agreed, this camping spot was pretty safe, even if access was somewhat inconvenient, a good thirty kilometers out of town winding around on roads so bad they made the back lanes in Mexico seem like super-highways. But the fact that the location was hard to find made it all the safer, and no one could possibly complain about the site—a high mountain cirque with clean air, a stream full of trout, and unbelievable scenery. And there was even plenty of firewood, trees so dry from the summer's drought that they burned without having to be dried out first or even split.

The mention of firewood prompted Jorge to reach out with a boot and kick the unburned end of a log into the center of the bed of coals, where it promptly burst into flame. Then, as it continued to heat, what moisture remained turned to steam, causing it to split with a loud pop and a shower of sparks. Startled gasps turned to nervous laughter as the men realized that it was just the fire, not someone shooting at them, and they began to make jokes and poke fun at themselves.

As it wafted across the glade and crept toward the men by the stream, the mist spread out, rolling down the gentle slope like a slow wave coming ashore. And it was thinning, mixing with the ambient air, becoming even more invisible than it had been on the mountainside.

So it was that the spark arcing over Jorge's head landed in a rich mixture of fuel and oxygen.

Because there was no confining container in which to build up pressure, the explosion was relatively mild. But when the gas-oxygen mixture ignited with an audible *whump*, it had enough force to shove Miguel backwards into the stream, where he was knocked cold when his head hit a rock. Everyone else ended up sprawled on the ground, watching in horror as the flame front raced uphill through the glade, torching all in its path. They all sprinted toward the camp to try to save their families.

But it was not to be. The dry trees ignited, and the gas tanks in the cars and trucks soon caused real explosions, adding their fuel to the conflagration. For a time, a new Circle of Hell replaced the sub-alpine glade with flame, and everything organic was cremated. Only charred rocks and the frames of burned-out vehicles remained.

In the moonlight, with no wind to stir them, the ashes revealed shadows of what had been—tents and toys, trees and tools. And ghost-like patterns of skeletons. Many, many skeletons.

## **Part I: Up in the Air**

### **One**

Angela Espinosa's arrival in the Fraser Valley, coinciding as it did with the discovery of what looked like mass murder, could not have been more timely.

I had called in a couple of favors to persuade my boss at the Denver office of the Colorado Bureau of Investigation, CBI Director Rod Andersen, to let me hire a deputy. I was working the increase in crime in the valley that's just over the Front Range of the Rockies from the northern end of the Denver metro area, helping Grand County Sheriff Fran Schmidt and his people get a better handle on things in the eastern part of his county. Angela's experience with the New Mexico Bureau of Investigation, not to mention her command of Spanish, made her the perfect choice, because all of us were completely baffled by the upsurge in hate crimes against the burgeoning Mexican labor force in the upper Colorado and Fraser River Valleys. The laborers were documented, most of them at least, and they gladly took all the jobs no one else wanted, making them indispensable in both the construction and tourist sectors of the local economy—and those were about the only sectors of any significance. Without the Mexican workers, the economy would have stumbled to a halt.

Angela had arrived Saturday evening after driving up from Santa Fe, and she spent Sunday getting situated in the condo that she and her boyfriend were renting in Fraser. On Monday she was busy with CBI paperwork and meeting the people that I was working with in the sheriff's office. And then it all hit the fan on Tuesday morning.

I got a call from Fran Schmidt at about 8:15—he was relaying a message from Forest Service personnel on the scene of a small wildfire that had burned itself out overnight, leaving a several-acre patch of hot ashes with burned pickups and other evidence of people. It was located at the head of a valley high on the northwest slope of Byers Peak, in the Keyser Creek drainage. Next to Keyser Creek itself they found a young man, suffering from hypothermia, with a lump on the back of his head and a concussion. He spoke no English and was confused about the situation to the point of incoherence even in Spanish, an odd version of Spanish that no one at the scene recognized.

Hal and I—Hal is my husband, on an extended sabbatical from his job as Dean of Natural Sciences at Frémont State University in Durango—had just moved into an eclectic house on the mountainside above Crooked Creek Road on the northeast flank of Byers Peak, so Fran Schmidt offered to pick me up on his way to the scene of the fire. I called Angela and managed to describe well enough how to get from her place in Fraser up to my house on the mountain that she was able to arrive a few minutes before Fran, who had to come over from Hot Sulphur Springs. Shortly after, we were in Fran's Ford Explorer, using its all-wheel drive in low range, grinding our way up the bumpy jeep roads to the fire scene.

“Angela, I’m afraid you’re going to be thrown into a tough situation on your first real day of work here.” Fran was fighting the steering wheel as the Explorer clawed its way over loose rocks. “We’ve got a very confused person who speaks only Spanish at the scene of what may be multiple deaths. The Forest Service people told me they counted four burned-out vehicles up there.”

I looked back to see Angela trying to take notes despite the rocking and rolling of the SUV. She cleared her throat. “Sheriff, is there any indication of what may have caused the fire?”

“They told me they found the remains of a campfire across the creek from where they found the confused guy, and it hasn’t rained for weeks. The forest is bone-dry. So maybe a spark from the campfire set the bigger fire off. The preliminary indication, at least, is that the fire started there and worked its way uphill to where the vehicles are.” He shook his head and sighed. “With four vehicles and only one person accounted for, it looks as if we may have a number of deaths in this thing.”

I grabbed the hand-hold with both hands and hung on while Fran maneuvered through a little stream bed. “Is anyone on the Forest Service team a fire expert? I mean, can they spot evidence of arson?”

Angela’s voice from the back seat was modulated by the jostling of the car’s suspension. “Annette? Maybe I can. I’ve had arson training courses and was involved in a couple of cases as well. You just have to know what to look for in terms of accelerants or other residue. Burned up matches, for example, you’d be surprised how many times they turn up. I sure hope they haven’t compromised the scene with footprints.”

“They said they were going to stay clear of it. But I guess we’ll see.” Fran’s stare, straight ahead out the windshield, was grim.

And well it should have been grim. After another 45 minutes of bumping and grinding and rocking and rolling, we reached the scene and found three green-uniformed Forest Service employees using a surveyor’s field tape to measure the perimeter of a burned-over area on the side of a beautiful sub-alpine cirque, at the head of a valley, across a pretty little stream from where we pulled up. The remains of several vehicles were visible in the center of the burn. One of those barf-green Forest Service pickup trucks was sitting on our side of the stream, near several boulders, idling, with someone wrapped in a blanket sitting in the cab.

Fran stopped, thought for a minute, and parked directly behind the pickup, blocking it in. Then we all got out and worked our way upstream several hundred yards to find rocks to cross on. I couldn’t help but think how nice the place would be under different circumstances—circumstances involving free time and a fly rod.

Once on the other side of the stream, we walked over to where the Forest-Service people were waiting.

“Morning, Tom, Hank, Alice. Good to see you again, although I’m sorry it has to be this way.” Fran seemed to know them, but I’d come to expect that. The population of permanent residents in the east county was small enough that they all were friends, almost.

“Folks, let me do introductions. This is Annette Trieri and Angela Espinosa, they’re with the CBI, assigned to work with my office.” Fran gestured at me and Angela, and we responded with the appropriate smiles and nods. “Ladies, Tom Allen, Alice Long, and Hank Welton. You can probably tell from the uniforms they’re with the Forest Service.”

We all shook hands while Fran looked around. “Is this as bad as it looks?”

“Hard to tell until we look at what’s over there.” Tom Allen nodded toward the burned-out vehicles. “We’ve been working the perimeter so as not to track up the ashes.”

Angela spoke up. “Good idea, because this doesn’t look like a natural fire to me.”

“I had the same thought.” Hank Welton was nodding in agreement. “The start line down here is too broad. I don’t think it started from a single point, not without some kind of accelerant.”

“Exactly.” Angela swept her arm along the charred line by the creek. “No way would this happen by itself. That must be your survivor over there in the truck?”

“Right. He’s in there with the heater turned up high.” Alice Long shrugged. “We gave him some hot coffee and leftover donuts, so maybe he’ll be OK. Poor guy was lying in the creek most of the night, we found him curled up in a ball on the far bank, shivering, undoubtedly hypothermic. We would have taken him into town for a medical exam, but we thought you might have questions for him. I hope one of you speaks Spanish, though.”

Angela, the Spanish speaker and arson expert in our group, had to decide where to begin. She suggested that the Forest Service team continue with their measurements and put Fran and me to work photographing the scene with the cameras we had brought. Then she turned toward the pickup truck.

But it was too late. Its occupant must have decided that he didn’t really want to talk to someone who had arrived in what was obviously a police car—Fran’s SUV had a light bar on the roof and a big decal on the side proclaiming its officialdom—so he slid behind the wheel of the pickup and put it in reverse.

That Forest Service truck may have been a putrid color, but it was quite some piece of equipment. The first hint of this was a sickening crunch, the truck’s rear bumper caving in the passenger side of Fran’s SUV, which started sliding sideways. Then the SUV’s driver’s side tires caught on the rocks and it began to tip, the pickup’s engine revving only slightly from the exertion. Finally, as Fran was making little whimpering noises, the Explorer fell over onto its side with another crunch, creating room for the pickup to jockey itself out of the space and take off down the hill.

“Son of a bitch! My car! And it’s only six months old!”

Hank Welton had a different concern. “Well, sorry, Fran. But let’s hope the radio still works. Otherwise, it’s a damned long walk out of here.”

\* \* \*

Because the Explorer’s passenger doors were caved in and stuck shut and it was lying on its driver’s-side doors, getting at the radio was going to be challenging. At least the air bags hadn’t triggered. But Fran was able to open the rear hatch and find what I’ve since discovered is called a “come-along,” a sort of hand winch that he kept in a box of emergency gadgets back there. The men went to work on righting the SUV, and Angela, Alice, and I proceeded to examine and photograph the burn.

Alice and I were taking pictures of everything we could, focusing mostly on where we planned to step next, so it was Angela who discovered the skeletons.

“Oh my God! Annette? Alice? Over here. And please try to stay in my footprints as much as possible, OK?” She sounded almost panicked.

They weren’t really skeletons, just ashes of a distinct color and texture in the pattern of skeletons. The breeze had blown the ashes around a little, but they were still recognizable—it was apparent that a number of people, people of all sizes from infant to adult, had died in the fire.

When we got them all counted, we discovered that the number was 23.

Alice, who told us later that she joined the Forest Service to work on ecosystems restoration, sat down on a rock and cried. Angela and I couldn't help but be affected by the tragedy, but we had a job to do, so we did it, taking pictures until the digital cameras were full, then taking pages and pages of notes. Even if it never rained—and the way things were looking, that seemed like a real possibility—the wind was going to destroy the scene soon enough.

Early in the process, while we were about halfway through making a grid of footsteps in the ashes to document things—Alice had taken several archeology courses in college and suggested this approach—there was a creaking, crashing noise from the other side of the stream. We looked over to see the dust settling from under Fran's Explorer, which was sitting on its tires instead of its driver's door. He immediately scrambled into the thing and, to everyone's surprise, started it up on the first try.

I wanted help documenting the scene before the wind destroyed everything. "Alice? Could you run over there and ask Fran to get some people with video cameras up here as soon as possible? Assuming his radio still works, I mean. Oh, but not by helicopter. We don't want things to blow around, right?"

She must have been relieved to have something to do besides examine the ashes, for she dashed off toward the stream crossing we had used earlier. I turned back to the work at hand, only to find Angela staring up at the ridge-line high above us, deep in thought.

"Annette? Something's strange here. I mean, well, of course the whole thing's strange, but there's something I don't understand. Some of these skeleton patterns are sprawled about, but many are, well, sort of arranged. Know what I mean?"

I had noticed it as well. Many of the victims appeared to have been lying down, as if asleep. "Right. Like they were asleep and didn't wake up. But wouldn't a fire wake you up? The heat, I mean? And aren't fires this big noisy?"

"I'd think so. You don't suppose they were dead before the fire? Or maybe unconscious?" She squatted down, fished in the ashes, and came up with a gold ring. "Oh, God. A wedding ring. A smaller skeleton, with two very small ones nearby. A mother and children. God."

I could see she was fighting back tears, so I changed the subject a little. "You said that this didn't look natural, like it wasn't started by the campfire down there."

She shook her head and wiped her eyes with the sleeves of her shirt. "Yeah. A natural fire would have started in one or two spots and spread uphill, making a characteristic V shape, or two or more Vs. But this looks like it started on a line almost parallel to the creek, as if someone poured gasoline along there and lit it. Or something like that."

"If someone did that, there would have been a line of fire working its way up the hill to here, right? But it couldn't have been very fast, because that would mean wind, and wind would have destroyed these patterns we're seeing. And a slow fire would have given everyone time to wake up and get out of the way. So maybe you're right, they were already dead, or unconscious. If that's the case, maybe they didn't suffer." I was keenly aware that there was something I didn't understand at all.

We continued our note-taking for another fifteen minutes or so, until we were interrupted by Fran's arrival. He looked relieved.

"Well, I'm glad to say that my radio still works. I've got a half-dozen people coming up here, including all my forensics experts, and they're bringing food. I'm thinking they'll be here most of the day." He stopped and took a deep breath. "Alice said you've found evidence of at least twenty-three deaths. And, Angela, I heard you say that the fire didn't look natural. What that means to me is that we may have some kind of mass murder here. Or at least a horrible accident, a mass manslaughter, maybe.

Plus we've got that guy on the run, and he has to be considered a suspect. I called in the information and he'll have a tough time driving that truck out of the valley, either ours or the Blue River Valley."

Byers Peak, I remembered, sits in the Vasquez Range, which runs north-south between the Fraser and Blue Rivers. Hal had taught me the local geography: east to west there were the Front Range, the Fraser River, the Vasquez Range, the Blue River, and the Gore Range. Then it got all jumbled up, as there were no more north-south rivers.

I opened my mouth to tell Fran about my confusion regarding the skeleton patterns, but stopped. It was just too confusing. "Ah, well, Fran, what's your plan for now? I guess your people should be here in, what, an hour or so?"

He nodded. "I expect so. Meantime, we need to keep this scene secure, at least as much as we can. Nothing we can do about the wind, I guess. Listen. Could you two stay here and wait for my people? I need to take those folks down the hill. I think my car will make it OK—it seems like the damage is mostly cosmetic. Damn his eyes."

Angela and I had to agree that it was a reasonable plan, so we watched Fran and the Forest Service team drive off down the hill in Fran's bugged-up SUV.

"Angela, tell you what. We've got our notes and pictures, and there are several other folks on their way up here to get more. Let's go sit somewhere comfortable, somewhere that we can watch this place, and see what we can do to get our minds off this tragedy. OK?"

A little way up the hillside, we found a flat rock with a commanding view of the valley. Fortunately, there was a thin, high cloud cover, and the sun wasn't too harsh.

"Annette, I didn't have time to say anything earlier, but that's some house you've got. I couldn't believe the view."

"We lucked into it. This new research institute that Hal is setting up is funded by Charles Shure, he's an industrialist from Colorado Springs. And Shure bought the property, several hundred acres, to build himself another bigger house up the valley from us. So we got that older one, it came with the property. We're sort of junior partners in the whole deal. But you must know about the institute, that's where Sandy is going to be chief scientist, right?" I wiggled around, trying to get my bottom to conform to the texture of the rock more comfortably.

"He's told me a little about it, but I don't think I understand it very well. What's it called? Em-park?"

"MPARC, right. Middle Park Advanced Research Center. Hal's taken to referring to it as 'computer simulations are us'. They're scheduled to move into their new building sometime next year. He hopes." I had to smile. "You should have seen what they started with. That building was a steel framework, a real eyesore. I think the town of Winter Park will love them forever for making that thing into something attractive. Also for changing its name. It started life as a condo development called 'Mount Epworth Arms'."

She laughed. "Sounds like some kind of geezer rest home. Anyway, Sandy's been excited about this whole thing, moving here and going to work at MPARC. I think he was done with Santa Fe."

"Easy for him, he grew up in Indianapolis, I remember he told me. But what about you? You've got family down there, right? Are you OK with this move? I mean, I'm sure glad you took the offer, you're just the person I need to help me up here, but what does your family think?" I stood up to move to a different spot—one, I hoped, with fewer sharp bumps to poke my backside.

“I’m trying hard to get them used to my independence, even though they’re fighting tooth and nail to keep me in their traditional little box. And I’ll be OK with this move when Sandy gets here, which should be sometime today, I think. This evening, maybe. He was going to stop in Colorado Springs to meet with this Mr. Shure, he told me. His house closed yesterday, and the rest of our stuff is on a truck somewhere.” She looked at her watch.

“Renting that condo was a smart move—it’ll give you time to find just the right place to buy, if that’s what you decide to do. We stayed in a guest house belonging to one of Hal’s college friends for a while before lucking into our house.”

She stared off into space. “Yeah, you’re right. It’s a nice place, our condo. But the thing is, it has this great view of Byers Peak. At least it was a great view this morning. But I’m thinking that the view won’t be so great for me any more, now that we’ve found this ... this Valley of Death.”

\* \* \*

## Two

Somewhere in the vicinity of Wagon Mound, Sandy Livingston finally figured it out: it was the newspaper, or, rather, the lack of one, that had finally launched him out of his Santa Fe rut.

For the past 50 miles or so, he’d been mulling over his rationale for leaving. As usual, the scenery of Glorieta Pass and the southern foothills of the Sangre de Cristo Range had kept him enchanted for the first forty-five minutes east, south, and then finally back north from Santa Fe. But after that, beginning at about Romeroville, Interstate 25 was perfect for mulling things over all the way up to Colorado, an hour and a half or so through high plains pasture, overgrazed, parched, and browning nicely in the August heat. Normally, about the only way to stay awake on that stretch was to count the pronghorn, those unique critters called by scientists *Antilocapra americana*—“American antelope goat”—that, although American all the way, are really neither antelope nor goat. But even they were smart enough to have moved to higher ground during the several months of drought.

Sandy had been trying to figure out why he was feeling so liberated, leaving Santa Fe behind. He knew he’d be back to visit—after all, it was a *great* place to visit, and Angie’s family was there. Visits would be unavoidable and even welcome.

Angie, he knew, was as excited about her new career opportunities as he was about his. For him, becoming chief scientist of a new research institute that would focus on complex systems simulation represented a potential capstone for his career. And for her, the position within the Colorado Bureau of Investigation represented a huge step up from her flunky position in the NMBI, both in terms of the positions themselves as well as the respective organizations. He knew Annette Trieri well enough to know that she would treat Angie as an equal, and being attached to a CBI Deputy Director had to be a Good Thing.

And more than that, relocating to Colorado for the new jobs was the perfect excuse for them to move in together, putting an end to the nightly lottery of whose place to stay at. Her family, tradition-bound from its three-century history in Santa Fe and close ties to the Church, would never have let her hear the end of a cohabitation arrangement anywhere local. But 400 miles north on the other side of the Continental Divide was enough distance to get away with it, they decided. Besides, Sandy was having serious thoughts about making an honest woman out of her—truly serious thoughts indeed, given his status as a forty-ish life-long bachelor.

But what really made him feel so good about heading north and leaving Santa Fe behind, he decided, was that he'd not have to put up with missed Sunday newspaper deliveries any more. Not that yet another missed delivery was such a big deal in and of itself—but it was a symptom of all that was wrong with Northern New Mexico: the condescending notion that incompetence could be excused by calling it “charming” or “quaint”; the deep-seated indifference to—even contempt for—the fundamental value of education. Thirteen years of living in a third-world society was plenty, he thought, way, way more than plenty.

He had been surprised by how easy it was to shed that thirteen years' worth of his life. His house sold for its full asking price within a week of its being put on the market, proving that his personal investment in compulsive maintenance had been worth the effort. And the guys at Automotive Resources who maintained his restored Porsche 959 found a buyer for it in no time. While the people at the Santa Fe Institute were sorry to see him go, the prospect of future collaborations with a new, well-funded organization that worked on issues similar to theirs was something that they relished.

So he had the movers come and pack up the stuff in his house, add Angie's stuff to it, and head north. All things considered, it was easy—so easy that his car wasn't even very full for this trip.

He had left Santa Fe early, just after dawn, so that he could get to Colorado Springs with time to spare. It just wouldn't do to be late for his lunch appointment with Charles Shure, the benefactor of the new research institute in Winter Park. Hal Weathers had emphasized that Shure was a “regular guy” and that Sandy shouldn't be intimidated. But even to someone with Sandy's experience with high finance—he had amassed a low eight figures in the stock market while in his late twenties and early thirties—a self-made multi-billionaire was just flat-out intimidating.

As he drove north, Sandy's thoughts shifted from his liberation from the velvet shackles of Santa Fe to the future. Having a Ph.D. in mathematical physics from Berkeley with a specialization in the behavior of complex nonlinear systems made him a natural for MPARC—even if its first major topic was to be earth-system simulation, his more general background opened a range of opportunities for the future. But staffing, he thought, will need to be balanced between the topic at hand and his own type of background so that MPARC would not become locked into climate as its only forte.

Staffing and other issues for MPARC occupied his thoughts through Springer, Maxwell, and Raton, and then the change in landscape over Raton Pass got him to thinking about living in Colorado generally and about living with Angie in particular.

He knew that the condo he'd leased for them to share was far too big for two people, but it would allow them the luxuries of avoiding complete unpacking and of having a lot of room. Folding two separate households into one wasn't going to be an issue, but they were both used to their personal space. Besides, it came cheap because he'd made the arrangements during the mud season back in late April, while on an interview trip to Winter Park. But they'd have to work at finding a house to buy before the lease ended in December—renting the place during the ski season would put a big dent in even his bank account.

As he was cruising into Trinidad, at the base of the north side of Raton Pass, his cell phone began to make the squawking noise that indicated it held voice mail for him. He checked it, and found that Angie had left a message a little earlier, apparently while he between cell towers somewhere in the mountains going over Raton Pass, telling him she would probably be out all day on a new case that had come up—the first case of her new appointment. She didn't know details, but she hoped to be home to welcome him that evening when he arrived.

It made him feel warm all over, and the miles between Trinidad and Colorado Springs flew by.

Interstate 25 through the Springs reminded him—not with fondness—of Albuquerque, only with the mountains closer. But soon enough he was on the north side and looking for the glass office building with the headquarters of UNELECO, Charles Shure’s company, on its upper floors. He found it at about 11:45, so he took a little time in the lobby men’s room to put on a tie, something out of character but, he thought, probably appropriate under the circumstances.

The directory on the wall by the elevator listed UNELECO as occupying the top three floors, with the lower floors full of various religious-sounding organizations, so Sandy punched the button for the top. No point, he knew, in pretending that the big boss would be on a lower floor.

He hadn’t really thought about what to expect when the elevator doors opened, but it certainly wasn’t what he stepped into. The top-floor elevator lobby was an atrium with a glass ceiling, full of plants. They looked tropical, and, while he was trying to figure it out, a hyacinth macaw, deep blue with a four-foot wingspan, flew down from somewhere, landed on a branch within about three feet of his head, and let out a loud screech.

“Oh, Burgess, be nice!” The voice was human and, as Sandy discovered on turning around, belonged to a lovely woman wearing an almost invisible wireless telephone headset and a big smile. “Dr. Livingston, I presume? Sorry, that must get old for you, but I couldn’t resist, especially given our atrium here. I’m Glinda—and if you want to get me back for the stale joke, you can ask if I’m the Good Witch of the North or the South. Unless you happen to remember.”

“Very nice to meet you, Glinda. And, uh, Burgess, too. If I did ask, which would it be? North or south, I mean, I’m afraid I don’t remember.” Sandy felt he was succeeding moderately well in retaining his equilibrium under the circumstances.

“Oh, definitely the North. But I never wear dresses like the poofy one in the movie, I promise. Also, I don’t have a magic wand.” She smiled even more. “Mr. Shure is expecting you, but he’s running just a little late. Lunch is in the conference room, and he’d like you to meet him there.”

She led him through the greenery down a path that ended in a door camouflaged by palm fronds.

If this is what they have for a lobby, he wondered, what in the world could their conference room be like?

\* \* \*

Sandy didn’t know whether to be relieved or disappointed. It was just an ordinary conference room. A huge, extremely well appointed conference room with an unbelievable view, to be sure, but just a conference room. He noticed a small table over by the windows that was set for a meal, meaning, he guessed, that they wouldn’t be eating at the main table, the solid teak one about the size of his garage floor.

He didn’t know what “running just a little late” might mean, but he was prepared to wait. The view of Pike’s Peak was stunning, and there were binoculars on a credenza.

A while later he heard a door close, and a voice said “I never get tired of that.” Sandy lowered the binoculars and turned to find a medium-height man wearing jeans and a plaid shirt, making his own tie and jacket seem overdressed.

Ninety minutes later Sandy was back on the road, with instructions about how to get off I-25 and take a county road up to the Denver by-pass, thereby avoiding the congestion in Castle Rock and the south side of Denver.

And he realized that Hal had been right: Chuck Shure was a regular guy, even if he didn't wear clothes like that every day, only, he said, when he was touring his timber operations. He'd been over by Norwood earlier in the morning, and his helicopter didn't get the tail-wind they were expecting—that's why he was late for lunch.

It took only about five miles of the interstate for Sandy to realize how valuable the advice about a back road would be, at least if that five-mile stretch was any indication of the traffic to Denver. And, after he turned off I-25 at Monument and found the county road through Perry Park, his appreciation of the advice increased, for it was beautiful countryside, rolling horse country next to the Rampart Range, with almost no traffic. For as long as it lasted, he enjoyed it, putting off further introspection until the road got boring again.

He finally reached Fraser a little before 5:00, after taking the by-pass around Denver and then I-70 through the foothills and up Clear Creek Canyon to the exit over Berthoud Pass. Except for the parts around Denver, which were suburban superhighways through tract-house subdivisions, it was all beautiful, especially the last few miles down from the pass, with a view across the upper Fraser Valley. On the way up Berthoud Pass, he had spent most of the time in the passing lane, blowing the doors off the summertime tourist traffic. But at the top, he found himself behind a semi with a big sign proclaiming its owners as something called "Western Slope Environmental Services" and, unable to pass, he simply fell back to enjoy the vista.

As he had been during his springtime visit, he was saddened by the dead trees on all the mountainsides. Like the loss of the piñons all over northern New Mexico, the loss of the lodgepoles to that drought-driven invasion of hungry beetles was a flat-out tragedy. But, still, what a place to be moving to, he thought.

Having no idea of when Angie might arrive home, he decided to stop at the Safeway in Fraser to find something special to make her for dinner, and then he pulled into the parking lot of the condo complex just after 5:30. But he had no further phone messages, and their place was empty—four bedrooms and three other rooms of echoing emptiness, because it held only the personal possessions and, on the floor of one of the bedrooms, the queen-sized air-bed that Angie had brought up in her Forester. The moving van, he remembered, would arrive on Wednesday. Meanwhile, he was glad to have brought in his car a box full of kitchen equipment. Cooking would be at least possible, perhaps even civilized.

He had also brought a computer, so he set it up on the breakfast bar and plugged in his broadband card to get email and reconnect to civilization. A priority, he knew, would be getting some kind of real internet hooked up. Maybe the cable company would have it.

Because Angie wasn't home, and because he didn't know when she would be, he decided to return to the store to get something to bake in the oven, a casserole of some sort. It would cook and be ready whenever, and he could unpack and plan for the arrival of the movers.

But when he returned with the ingredients for baked ravioli, her car was in the parking lot, there was a pile of very dirty, truly filthy, clothes in the corner of the bedroom opposite to where the bed was, and he heard the shower running.

He decided to go with the ravioli anyway, and, as he was futzing with putting it together in the kitchen, he felt her arms close around him.

"Mmmm. I'm so glad you're here. Sorry I wasn't home before, but we were way up in the mountains." She smelled well-scrubbed.

"And I'm glad to be here, really glad. This place, this valley, is even prettier than I remember it. And so are you." He picked her up in hug. "Gotta say, though, you sure could use some furniture."

She giggled. “Right, wise guy. Hey, at least there’s a bed! Why don’t you put that dish in the oven and come try it out with me?”

Later, eating dinner sitting on big cushions she had brought in her car, he talked about his drive up. She had come the other way, straight north from Santa Fe on US 285 and other two-lanes—more scenic by far, but somewhat longer. And he told her of his encounter with the force behind MPARC.

“He’s a sharp guy, no doubt about it. We’re really a test-bed for this new computer-chip technology his company is developing. We get free computers, but they’re experimental, so life could be interesting. At least he’ll be around some, so he can take a personal interest in us, not just pull strings from far away. He said he’s building a house up here, up some valley he described.”

“Oh, right. He bought this big piece of land with a small house on it, and that’s where Hal and Annette live. And he’s building himself a new house up there. I was at Annette’s place this morning, so I have a vague idea of where the other house must be. Sort of.” She spooned more raviolis onto her plate.

“But other than that, I just drove and drove all day. You, on the other hand, started your first case up here. Although it looks from your jeans like you just played in the dirt. How was it?” He winked at her.

“Oh, geez, Sandy, I’m not sure I know how to talk about it.” She stopped eating and put her fork down. “We don’t quite understand what we found. There was a small forest fire last night, up there on Byers Peak, that mountain you see from the front window. And we think there were twenty-three people killed in it. And it may not have been an accident.”

Her big brown eyes were starting to tear up, he noticed. “Most of the victims were women and children.”

He put down his fork and leaned over to hug her. “Angie, I’m sorry I brought it up. I didn’t know. I figured it would be something trivial. Sorry. Twenty-three women and children? Not accidental? I don’t know what to say.”

“It’s OK, really. And maybe it will help if I talk about it a little. We certainly talked about it all day, Annette and I and the other folks up there, and I feel better for that.” She took a deep breath. “There was one survivor, but he drove off in a Forest Service truck. We found the truck this afternoon, so he’s probably still up here in the Fraser Valley somewhere. Maybe if we find him, we’ll be able to learn more about what happened. And it will involve me, because he speaks only Spanish, we were told.”

He looked puzzled. “So, there were two dozen people—uh, camping?—up on this Byers Peak and all but one died in a fire of suspicious origin? If the survivor speaks only Spanish, it stands to reason that the others would, too, although maybe some were bilingual. So they weren’t locals, right? What, then? Workers from Mexico, or Central America? Illegal immigrants?”

“That’s what we don’t know, and that’s one of the things we need to ask the survivor, if we can find him. Annette told me there have been incidents involving Mexican workers here. There are lots of them in construction and the tourist industry, she said. Some of the locals resent them, even though these same locals don’t want the work they do.” She took another deep breath and picked up her fork. “I may be a little upset, but I’m also starving. All they brought us for lunch was a batch of white-bread ham sandwiches.”

“Where is this place, anyway? I mean, you said it’s on Byers Peak, but I want to look it up on my computer atlas.”

“Keyser Creek. It’s a valley way up there, around the other side a little.” She popped another ravioli into her mouth. “But I think everyone’s going to call it by the name I accidentally made up this morning. The Valley of Death. *El Valle del Muerte*.”

\* \* \*

### Three

I finally made it home about 5:30 and sent Angela on her way post-haste. Hal, bless his sweet soul, had potatoes baking in the toaster oven and a couple of steaks marinating in something that smelled barbequey and made my mouth water.

But the first thing I had to do was to get clean. The hot sun and hard work up there on the mountain had got me to sweating, and the breeze stirred up the ashes, which stuck to the sweat. I was covered with a gritty, gray film. And those ashes, I couldn't help but remember, were partly people.

It was just all too creepy.

So I stood under a shower—a cool refreshing one—for about fifteen minutes, and it did wonders for my disposition as well as my cleanliness. Then I went Hal-hunting.

Our house is an interesting structure, built little by little over the years by its previous owner, a reclusive writer named Michael McMurphy. Years before, he had purchased three adjoining mining claims, two of which were on opposite sides of a lovely little valley—the one that Chuck Shure built his house on the side of—and for his house McMurphy remodeled and added onto an old mining cabin on the spot with the best view of the backside of the Colorado Front Range. And, true to his nature, he wound up with an eccentric house. It included a wine cellar in an old, abandoned mine shaft and a step or two up or down between just about every room, definitely not wheel-chair friendly.

Hal wasn't in the wing with the bedroom and the business study, so I poured myself a glass of chardonnay on my way through the kitchen to the guest wing. We had turned one of the bedrooms there into a recreational study, and I thought I might find him tying flies to re-stock his vest. Our last outing to the Colorado River below Parshall had depleted the inventory.

But he wasn't there, either, and I wandered back into the living-room area and out to the side porch—the one with the view. Hal was asleep in the net hammock we have strung between two of the porch posts, shaded by an aspen tree, rocking gently back and forth in the breeze. I sat on the porch swing and enjoyed my wine rather than wake him up right away.

It occurred to me that this could well be about the last chance I might have to relax for quite some time. By all appearances, it looked as if we had come across a mass murder up there on Keyser Creek—in Angela's Valley of Death. And there was no doubt in my mind that a mass murder with 23 victims would become media fodder sufficient to create a feeding frenzy the likes of which the Fraser Valley had never seen, not even when that wacko with the bulldozer had demolished half of Granby. The fact that the victims were most likely Mexican nationals would make the whole thing even crazier, because it would become an incident involving international diplomacy, and it would also attract the publicity-hungry and politically correct immigrant rights crowd. Oh, I thought, won't the locals just love *that*.

At least the windfall for the merchants would help make up for the slow summer tourist season. The drought, with all of its restrictions on outdoor fires, had scared most of the campers and picnickers into staying home, and the economy had been slow for months, ever since the ski season had ended.

Partly as a result, I suppose, throughout the spring and summer we had been seeing more than the usual number of culture clashes, and it was worrisome that this tragedy up on Byers Peak could be the latest chapter. For the most part, Fran Schmidt's people had been managing the issue well with warnings

and a few arrests for disorderly conduct and harassment. There was a significant uneducated, entry-level labor force in the area, but they wanted no part of the work they were qualified for—instead, they seemed to think they deserved the few white-collar jobs available.

Yet they resented the eagerness of the folks from Mexico and Central America to take the service jobs they disdained, and they were confrontational about it. Previously, the worst incident had been that assault, the gang of young thugs from the east side of Granby who beat up that poor teenager at the arcade in Winter Park.

We still hadn't found out just who was involved, because there was a conspiracy of silence among the witnesses, including the victim. But in questioning everyone, we discovered something peculiar—not only was there tension between the lower social strata of the local population and the immigrant workers, there also was tension among various factions of the immigrants themselves. The worst was actual enmity between the Guatemalans and the Mexicans—they truly seemed to have it in for each other.

Caught in the middle of all this was a group of US citizens from New Mexico, people from the poor mountain villages north of Santa Fe who came up to take advantage of employment opportunities not available in their region. The locals dismissed them—incorrectly, of course—as just another group of Spanish-speaking foreigners, which the Norteños, as they called themselves, naturally resented. And they didn't want to associate with the immigrant communities at all, feeling themselves to be superior by virtue of their citizenship. The whole situation was a mess.

Like I said before, Angela's arrival on the scene was just what I needed.

My wine was gone and Hal was still asleep, drooling through the net hammock. As much as I love the guy, that was something I didn't need to watch, so I went back inside to check the day's email.

Even though Hal was still working at getting his institute set up, it was already paying off in fringe benefits for us and for the community. A super fast network connection, some kind of ultra-internet using new technology that was mumbo-jumbo to me, had connected the Fraser Valley to the rest of the world, and the dial-up access we had to put up with for our first months here was history. The school system was set to take advantage of it when classes began at the end of August, and Hal's institute would be putting it through its paces in the coming months.

I hadn't told anyone about it, but somehow it seemed that Rod and the rest of his CBI staff in Denver had figured it out almost from day one. Ever since the new network came up, they had been sending me volumes of information by email, including case files with pictures and fingerprints, huge graphics files. Hal had long since upgraded my computer with a giant hard disk, but I wasn't sure how long it would take for it to get filled up at the rate they were sending me stuff.

Among Tuesday's email haul was something new—an analysis of how small-scale production of methamphetamine in kitchens and other jury-rigged laboratories had become epidemic in rural areas. These “meth labs” produced toxic by-products—not that the methamphetamine itself wasn't toxic—that could contaminate the building and poison the neighbors. And the byproducts could also blow up, and did on occasion, creating spectacular fires.

Because one of the ingredients needed was available in over-the-counter antihistamines, the state legislature had long ago passed a law restricting sales of allergy pills, but that didn't have any real impact on what had become, literally, a cottage industry. The analysis I got via email provided the latest details of all this and gave suggestions about what to watch out for. Fran, I knew, would be interested in it.

And there was also a long discussion in the weekly terrorist alert bulletin, distributed by the Department of Homeland Security in Washington DC, about what they described as an imminent threat.

The bad guys, they said, were planning to rent or buy small airplanes, fly around over the mountains, and toss out incendiary devices. This would start massive forest fires and act as a diversionary tactic, allowing these same bad guys, or their friends, to do something even more nefarious in a populated area, like blow up the Golden Gate Bridge or, much worse to the Federal crowd, topple the Washington Monument.

Normally, I would have filed this electronic bulletin along with the others, in its special Homeland Security folder that I never looked into. As far as I could tell, worrying about terrorists in Grand County Colorado was akin to worrying about stampeding kangaroos in Chicago.

But, given how I had spent the day, the discussion of forest fires made me take a second look. I'd have to ask Angela whether our fire could have been started that way, I thought.

"Hungry yet?" Hal's voice from behind me told me he'd finally had enough nap.

I turned and burst into laughter—the entire right side of his face was covered with a half-inch grid of red lines, made, I guessed, by the net hammock. That'll teach him to drool on my porch, I thought.

But what I said was "You bet! Starved. And glad to be home at last."

\* \* \*

If Hal can't nap gracefully, he's an artist with the grill, and my steak was done just the way I like it, seared dark on the outside and medium rare inside. Plus, the marinade had the perfect tang.

"Are you telling me that there was a mass murder of some kind? With 23 victims? My Lord!" Hal's reaction to what we'd found was pretty much what I expected. "But the evidence for homicide is just the fact that you, or Angela, think the fire wasn't natural, right?"

"Right, but one of the Forest Service guys thought so, too. And we found more evidence that backs that up. See, the sides of the main valley up there are scored with little ravines, and this fire burned up one of them. But it burned higher than there was real fuel—there are rocks high up in the ravine, past the grass and bushes, where the lichens are charred. It's hard to see how that could have happened without some kind of additional fuel source. It's like there was a giant fireball up there that ignited whatever else would burn." I sliced off another bite of beef.

"I don't suppose there was any evidence of an impact crater, like from a small meteorite?"

"We didn't think of that, actually. But, well, let me think. No, at least not a 'crater' in the sense of something as big as, say, a car. I guess there could be something smaller, which could have filled up with ashes and therefore been hidden. But nothing very big." I made a mental note to check on this. "What we really need to do is to find the guy who drove off in the Forest Service truck."

"Except you said that he might have had a concussion, implying that he could have been unconscious when it all went down." He was eating his baked potato skin with his fingers.

"But, still, maybe he saw or heard something. He's all we've got to go with for now." I was using my potato skin to mop up steak juice. "Anyway, do you know if Sandy Livingston arrived? Angela was all a-twitter about it."

"He sent me some email late this afternoon, said he was sitting in a big empty condo looking at some mountain. Probably Byers Peak. Didn't you say their place is off County Road 8 on the first ridge?" He watched me nodding. "Said he's going to wait around for the moving truck to arrive tomorrow, so I probably won't see him until Thursday. Except maybe I'll go by and say hello."

He stopped and cocked his head. "Do I hear a car?"

Our place is up about a half-mile of steep, winding driveway, so visitors usually announce themselves with their laboring car engines, or, if it's after dark, with their lights flashing through the woods. It was still too early for lights, but I heard it, too—the deep rumble of a big V-8. I got up to clear the table, and Hal started a pot of decaf coffee.

Shortly, we were sitting on the porch watching the last of the sun on the Indian Peaks across the valley. Fran Schmidt and his principal undersheriff, Janelle Kennedy, had driven up to talk strategy with me, which meant that Hal got to play waiter.

Janelle and her husband Roger met each other in the Shore Patrol and could hardly represent more of a contrast, both visually and culturally. She grew up on what she calls the wrong side of the tracks in Savannah, and his New York Irish heritage is apparent in both his ruddy complexion and his accent. The first case of my CBI assignment with the Grand County Sheriff had involved both of them, because a murder victim was found near a ski run at the Mary Jane side of the ski area, where Roger was head of security.

“We’re going to have to go with homicide for now, Annette.” Fran was sipping the coffee that Hal had fetched for him. “The origin of that fire is just too suspicious. Although, I’ve got to say that I can’t imagine how it could have started the way it looks like it did.”

“I worked this thing all day, from when Fran first came back with the Forest Service team. We found some aerial photographs taken last summer.” Janelle was drinking herbal tea. “There was a small grove of trees about where the burned-out vehicles are, so that would explain how the fire was so hot right there—how it incinerated everything except for the metal and the teeth we found. The forest has been so dry, it’s not surprising that it burned like that. But Fran’s right about the fire’s suspicious origin. From the pictures that came back, it just doesn’t make much sense.”

“I heard late this afternoon that the Forest Service pickup turned up.” I was hoping for confirmation of this and for a lead on the whereabouts of the missing survivor.

“Right, over below Hot Sulphur on Beaver Creek Road, down by where it comes out on the highway at the bottom of Byers Canyon. It’s like the guy knew the roads, because he got over there without getting lost. That’s no small feat, what with all the logging roads up there.” Fran looked thoughtful. “But there’s no sign of him. He must have hitched a ride from where he left the truck.”

“Tom Allen told us he’s worked with Hotshot firefighting crews from New Mexico, so he’s learned some Spanish. But he said that the missing guy’s Spanish was heavily accented in a way he didn’t recognize—he dropped a lot of his consonants, Tom said. Not the usual New Mexico accent and not like the Mexican or Central American immigrants around here, either. So that’s another puzzle.” Janelle looked perplexed.

“Dropping consonants sounds like it might be a Cuban accent.” Hal spoke up. “I went to graduate school in Miami—didn’t ever really learn Spanish, but their accent down there is pretty distinctive.”

“Cuban? We got Cubans here, too? Along with the Mexicans and the folks from all those different Central American countries? How am I ever going to keep them all straight?” Fran was shaking his head.

“Maybe Angela can help, at least I’m hoping so.” I took another sip of tea. “And, you know, if the guy’s really Cuban, not just from Miami, maybe he’s not documented and that’s why he took off this morning. Meaning he’s going to be hard to find.”

“Assuming he’s still in the county at all.” Janelle shrugged.

“Anyway, Fran, have you given any thought to dealing with the media? When word gets out that there’s been a homicide of this magnitude, the sharks are going to close in. Or maybe piranhas would be

a better analogy—they travel in schools, I think.” But I could tell from Fran’s expression that this was something he hadn’t considered.

“Ah, crap, you’re right, Annette. And that’s probably going to take a full-time person to deal with them, too. Crap.”

Hal laughed. “Think of them as guppies, Fran. They’ll nibble you to death if you let them, but mostly they’re harmless.”

Fran smiled. “Or mosquitoes, a cloud of them. Annoying, all that buzzing around and blood-sucking.”

“Or roosters, strutting around, crowing about themselves, pecking at every little thing they see, squabbling with each other.” Janelle was getting into the spirit of it.

“Maybe you can get Axel to do it.” I was referring to the district attorney, A.D. Sonos. “Isn’t he up for re-election? He’ll be looking for the free publicity, right?”

“Hmm. Not a bad idea, Annette. Although I’m sure he wouldn’t have the stamina or attention span to do it full time. Besides, he and I have this agreement about division of labor. We investigate, he prosecutes.” Fran looked thoughtful. “I guess I’m going to have to look for volunteers.”

He was carefully avoiding looking in Janelle’s direction.

“Ten-four, sheriff. I get the message. But you’re going to have to do the first news conference, you’re the boss, it’s your county. And you’re also up for re-election, right? So you need the publicity, too.” Janelle’s smirk told us that she knew the news conference would be her revenge for having been conscripted.

\* \* \*

## Four

Angela Espinosa’s phone had a message from Tuesday afternoon that the movers wouldn’t arrive until about noon on Wednesday. With plenty of time available, she decided Sandy could start learning his way around the county by taking her to work Wednesday morning, to the sheriff’s office in Hot Sulphur Springs. Later, he could come and pick her up, or she could catch a ride with Annette, whose route home went by their place anyway, more or less.

Although they both had tiring Tuesdays, Angela and Sandy stayed up late talking and testing out the air bed again, so it wasn’t until just past nine the next morning that they arrived at the sheriff’s department. And because Angela wanted to introduce him around—she had learned on Monday that it was a small community and everyone knew everyone, so Sandy needed to be introduced around—she took him into the departmental offices, where they blundered into the beginning of the news conference.

Fran Schmidt had convened it on short notice, hoping that it would be sparsely attended. But word of the tragedy had leaked down to Denver somehow, and the piranhas—or guppies or mosquitoes or roosters, depending on your viewpoint—had arrived in force. Angela and Sandy knew something was up, from all the trucks with satellite dishes parked everywhere, but they didn’t know that the conference was being held in the lobby.

“Ladies and gentlemen, thank you for coming on such short notice.” Schmidt’s knuckles were white from his grip on the sides of the podium, and his eyes were squinted against the television lights.

“I want to provide you with what information I can about a tragedy that’s occurred here in Grand County. We don’t have all of the details, and we may never have all the details, but I want to tell you what I can.”

He stopped to take a breath and was immediately interrupted by a man with carefully coiffed blonde hair and an absurd amount of makeup. “Sheriff, does this concern the fire?”

“Let me make my statement, and then I’ll take questions.” Schmidt looked worn down already, even though the fun was just getting started. “Monday night, there was a small forest fire up in the Arapahoe National Forest, in a valley on the flank of Byers Peak. It occurred in an isolated grove of trees and destroyed about a hundred acres altogether. Because the grove was isolated, the fire didn’t spread but just burned itself out. From the perspective of wildfire, this could have been worse, because so much of the forest lower down is dead and it’s all so dry. If it had spread, we wouldn’t be here talking about it because we’d be working it.”

He leaned back from the microphone and coughed. “Because the grove was dry, it burned hot, leaving only ashes. But in the ashes we found evidence that there were people up there. So we didn’t have just a little fire, we have a tragedy of major proportions. We’ll probably never know exactly how many people there were, but we have evidence that at least 23 people perished in that fire.”

Jaded as the reporters were, there was a collective gasp from the crowd, followed by murmurs and whispers.

“There are two more things I can tell you about this. First, my office has been aware for some time that there was a group of people camped up there, we believe they were guest workers from Mexico. To our knowledge, they had appropriate documentation to be in the country and the people with jobs had work permits. Camping in the national forest is perfectly legal, as I’m sure most of you know. We had some questions about whether they were staying too long in one location and whether they were obeying the fire restrictions we have in place because of the drought, but generally it looked to us like these folks were not doing anything to warrant our concern. We’re understaffed here, and minor stuff like that tends to stay under our radar screen.”

He took out a white handkerchief and wiped his forehead. “Now, we knew there was a group up there, but we never fully identified them, unfortunately. Presuming those are the people who were killed, we have no idea who they were. The fire destroyed everything except the burned-out frames of some vehicles and some other metal items. We may, and I stress ‘may’ because the fire was pretty bad, we may be able to extract vehicle identification numbers and learn more that way. That work is in progress.

“And the second point I want to make is this: we have suspicions about the origin of the fire. There are indications that point toward the possibility of arson. Consequently, we may be looking at a very serious criminal matter. Now I’ll take questions, but I need to say …” Schmidt held up a hand and the rising swell of shouts subsided. “But I need to say that my answers may have to be vague because of our lack of knowledge or because of our need to protect the integrity of the investigation.”

In awe, Angela and Sandy watched the sheriff field questions from the assembly. Even though it was not even 9:30, there was a sense of urgency to the questions, as if a deadline was only seconds away, and every sentence that Schmidt finished was immediately followed by a babble of new questions.

After about five minutes, Angela felt a tap on her left shoulder and turned to see Annette Trieri standing behind her. Annette gestured toward the door, and she understood. Tugging on Sandy’s hand, she led him outside behind Annette.

“Glad to see you made it, Sandy, although you probably feel like you walked into a feeding frenzy of some kind.” Annette was wearing a grim smile.

“That’s for sure, with the sheriff as the bait. I thought I was just going to get introduced around.” His expression read: “Why me?”

Angela squeezed his hand. “Sorry. I should have figured that something like this would be happening. Annette and I talked about the publicity this thing was going to get when we were coming down the mountain yesterday.”

“Yeah, but I didn’t know the timing until first thing this morning.” Annette shrugged. “Fran thought he’d get only a small crowd at this time of the morning, but they sure came out of the woodwork. And it *is* a big deal, with 23 deaths, or more.”

“Uh, do you have a plan for the day? I was going to drop Angela off and then go back and meet the movers, tell them where to put boxes and so on. If I know where you’ll be, I can pick her up later.” Sandy was looking back and forth between the two women, looking for an answer that would make his life easy.

He looked so pathetically hopeful that they both burst into laughter.

“Oh, Sandy, don’t worry, we’ll figure out something easy. Maybe Annette can drop me off on her way home.”

“Angela’s right, Sandy. And I don’t quite know what’s on the agenda for today. We have a meeting with Fran when he’s through getting skinned alive in there. Poor guy. But I’ll drop Angela off late this afternoon. That’ll give you a chance to get everything arranged and unpacked, no?” Annette’s impish grin suggested that she knew what moving to a new place entailed.

“OK, well, I’ll be off, then. Let’s see, I just head back through Granby, right? We were talking on the way over and I wasn’t paying too much attention.” He looked both relieved and a bit confused.

“Right.” Annette thought briefly. “But there’s a shortcut, it bypasses Granby. A back road, it’s easy and shorter. Don’t bear left at the Y in the highway a few blocks back, bear right. It’ll take you over Cottonwood Pass, you can actually see it from here. Just watch out for cattle.”

“Huh?” Sandy looked confused. “I thought Cottonwood Pass went over to Crested Butte from somewhere ... ah ... somewhere in the Arkansas Valley. Or something like that.”

“Not that one, a local version. It’s just a little saddle, really.”

“She’s right, Sandy. We came over that way on Monday morning, it’s easy. And in your car, it’ll be a snap. I’ll see you this afternoon sometime.” Angela stood on her tiptoes and kissed him on the cheek. “Have fun with the movers.”

\* \* \*

With Sandy on his way, Angela and Annette sat down in Annette’s office to follow-up on the reports from the fire scene. They wanted to be prepared for the meeting with the sheriff.

Fran Schmidt’s statement at the press conference about identifying the victims had shaded the truth a little, because the investigators at the scene had found the vehicle identification number plates—the small strips of metal with the VINs etched on—from two of the pickup trucks. The others were missing, meaning that they were either buried in the ashes somewhere or had been removed for another reason. These VINs, though, were all they had to go on. The license plates had not been stamped, just painted, and the other vehicle identification tags were as burned off as the plates.

But extensive searches of the national stolen car database had not turned up either of the two VINs they had, and sales records in Colorado and the other states they had access to didn't reveal them, either. Searches would continue, but things were looking bleak.

It was about 9:45 when Fran Schmidt walked into Annette's office, looking as if he had just finished the Ironman Triathlon. He sat in an empty chair and shook his head.

"I escaped, thank God. They're working over Janelle now. But she's better at this sort of thing than I am, so I think it'll be all right." He sighed. "Any progress?"

"No, sorry, Fran. Those VINs are just not showing up. But we ..." Annette was interrupted by the telephone.

"Yes? She's here, hang on." She handed the receiver to Angela.

"Hello? Oh, hi Sandy. Don't tell me you got lost ... What? Alive? Did you call 911? ... OK, we'll get right over there." And she handed the phone back to Annette.

"Sandy found a guy, badly injured, along that road we told him to take. He called 911 and is doing what First Aid he can. I told him we'd get right there." She looked back and forth between her two superior officers.

"Any ID?" Schmidt looked somewhat less exhausted all of a sudden.

"He didn't say. And his description wasn't any help, either. Uh, sheriff? Annette and I can probably handle this." Angela felt a little worried about overstepping.

"Good idea. But keep me informed, OK?" Schmidt looked relieved.

They made it over the local version of Cottonwood Pass in five minutes, and down to where Sandy's Audi allroad was parked in another two. In response to Angela's call, they heard his voice coming from behind a little stand of willows. They found him kneeling on the ground next to a prone figure in a plaid shirt and jeans.

"That was quick," he said as they approached. "Got a First Aid kit? I'm out of tricks."

Annette turned and ran back to her car, and Angela knelt beside Sandy. "What happened?"

"Looks to me as if someone wanted this poor guy dead but botched the job. He's had the crap beat out of him, and there's also an abdominal puncture wound. No idea how deep. He's got a fast, shallow pulse and his breathing isn't real good. But he's alive. Quite a bit of blood loss." Sandy was holding pressure on a spot on the victim's left side, near the base of the rib cage.

Annette came running up with a small case, and they got to work just as the siren of an emergency vehicle chirped back by the cars. Angela jumped up and ran that way.

Ten minutes later, the victim was on his way to the hospital in Kremmling, about 20 miles west, the scene was surrounded by yellow tape, and Angela, Sandy, and Annette were sitting on a log beside the spot where the victim had been lying.

"No ID on him, so for now he's a John Doe and, from what the EMTs said, maybe a DOA one. How'd you find him, Sandy? We couldn't see you from the road." Annette had a notebook out, pencil poised.

"Birds. I was taking it easy, because I don't know this road and you said to watch out for cattle. There was a big flock of magpies that spooked when I rounded the last curve above here, and I wondered what they were about. So I got out and looked. Uh, it was supposed to be a good excuse to recycle some of that breakfast coffee I drank." Sandy shrugged. "I'm glad I had all that emergency training back in Santa Fe, that's for sure."

“Annette? What about if we have those Forest Service people get over to the hospital to see if they recognize him. Maybe it’s our missing guy from the fire scene. You know?” Once again, Angela felt unsure of herself.

“Wonderful idea! Call Fran, here’s my phone, the number is on the contacts listing, and let him know about this and your suggestion.” Annette passed a cell phone to Angela, who looked surprised.

As Angela wandered off with the phone, Annette turned to Sandy. “Sandy, I can’t tell you how happy I am that Angela came up from Santa Fe with you. Yesterday, at the fire scene, she did a fantastic job, and you just saw how good her instincts are.”

“And that was a good move, having her make that call. She’s used to being stifled a little, at the NMBI. The Nimbies are, shall I say, somewhat less than progressive. She did a pretty good job of ignoring it, but I think she needs just the kind of shove you gave her with this phone call.” Sandy smiled. “I’ll be interested to see how she fits in with the locals here. So, are you done with me? I’ve got furniture to meet pretty soon.”

“Let me get you some Tyvek gloves so you won’t mess your car up with that blood. And you can come in later and give us a more formal statement, OK?” She arose and led the way back to the road.

They reached the cars just in time to hear Angela say “OK, sheriff, I’ll tell her. And we’ll be back shortly.”

“Tell me what?” Annette was all ears.

“Huh? Oh, hi.” She handed the cell phone back. “Tell you that the sheriff’s office got a concerned citizen’s tip about a drunk shooting his mouth off in a bar last night. Talked about picking up a Hispanic guy hitch-hiking—only he called him a ‘greaser’—and beating him silly before dumping him in a pasture.”

“Sounds as if we should get back and interview this concerned citizen.” Annette reached into the back of her car, rummaged around in a box and handed Sandy a pair of blue plastic gloves. “Good luck with the furniture, Sandy. I’ll drop Angela off later, OK?”

With the civilian sent on his way, the two CBI officers headed back to the sheriff’s office in Hot Sulphur Springs, back over Cottonwood Pass.

“How the call go? Did Fran like your suggestion?” Annette looked over at her passenger.

“When I mentioned that the victim didn’t have an ID on him, he jumped all over it. Said he’d try to get the Forest Service people there by noon, or at least one of them.” Angela looked pleased with herself. “I hope it’s OK for me to shoot my mouth off like that. I have these ideas and they just pop out sometimes, you know?”

“That’s exactly what you need to be doing. Nobody here has any reason to worry that you’re after their job, right? I mean, you’re CBI and they’re all with the Grand County Sheriff’s Office. Except me, and I have to say, if you want my job, you can have it. Hal keeps coming up with things for me to do at his institute.” Annette smiled with the memory of one in particular, a role as Hal’s sexy receptionist.

“The sheriff won’t think I’m too, um, forward or something?”

“Well, he’s big on credibility. If you’re wrong with hunches and so on, eventually you’ll get ignored. But he likes good ideas. And he likes initiative. And this particular case is one that we can be full participants on—he wants it that way. Sometimes we need to sit back and just be advisors. But this is a big one, and we need to be out front if necessary.” Annette pulled her car into the sheriff’s department parking lot.

“Now. Let’s go see if we can dig up the dirtbag who beat up our John Doe, shall we?” Annette’s smile was not a happy one.

\* \* \*

## Five

It turned out that the concerned citizen who phoned in the tip was a bartender. Wendy Wallenstein worked late shifts at the Shadow Mountain Tavern, a decidedly blue-collar dive just off the highway on the way to Grand Lake. One of the few remaining places in the east county that didn’t cater to tourists, it had a reputation with the sheriff’s office as a trouble spot.

Fran sent a forensics team, with a metal detector, off to comb the pasture, and Angela and I made arrangements to meet Wendy for lunch at a diner in the middle of Granby, about half way between our respective locations. Wendy didn’t want to risk being seen at the sheriff’s office, and there was no way she wanted us to come to the bar.

“I don’t like ratting out my customers, you know? I figure bartenders are the poor man’s shrink, and we need to keep what we hear confidential. But this guy is just too much. He’s always puffed up about something, usually something pretty slimy, and this was just over the top.” Wendy was fidgeting, in need of a cigarette, apparently, but forced into holding off by the state law about restaurants. “Besides, we’ve got some Mexican people working at the tavern, ya know? And they’re just the nicest folks you’ll ever meet. Hard-working, family-oriented. It just pissed me off, what he was saying and his attitude and all.”

Somewhere in her late 40s, but with the smoker’s aged look, Wendy Wallenstein was probably once a high-school cheerleader and prom queen somewhere. During introductions, she told us that she was divorced with kids out on their own—in fact, she was about to become a grandmother. It was pretty obvious that she was conflicted about that.

“And he was boasting about having beat up someone?” Angela had adopted the fresh approach, keeping the information about our stabbing victim to herself.

“Yeah, he said he picked up a hitch-hiker down toward the bottom of Byers Canyon, headed west. Turned out to be a Hispanic guy, only spoke Spanish, he said. Seemed to think that beating him up would teach him a lesson, like he needed to learn English, or something.” Wendy twirled her table knife like a little baton.

“Did he say anything about where he left the victim?” Angela was taking careful notes.

“Something about a pasture, and a Cottonwood Pass. I didn’t recognize the place, so it sort of slipped by me.” Wendy stirred the bowl of chicken vegetable soup the waitress brought her.

“So,” I said, “it sounds as if this guy is a regular, if you hear his stories a lot.”

“Yeah, Stick Murcheson. Local family, father’s a county commissioner. He had a brother killed a while back, maybe you know about it.” She looked back and forth between us.

Angela didn’t, but I did. Stick’s older brother, Junior, had been murdered by the woman who had since become known as Grand County’s black widow killer, the wife of a developer fallen on hard times. It was that first case I’d become involved in after Hal and I relocated from Durango.

“Stick can’t be his real name.” Angela had her ballpoint ready.

“No, it’s Randall. He was a local high-school basketball star, would have made it big in college, probably, except for a snowmobile accident that tore up a knee real bad. And if you saw him now, you wouldn’t call him ‘Stick’ any more—not with the weight he’s put on.” She stirred her soup some more, not really eating.

“Ms. Wallenstein, this has been very helpful. I think we need to get our sandwiches wrapped to go and check out this pasture as soon as possible. We’ll get the bill. And we’ll keep this meeting to ourselves.” Angela nudged me under the table with her foot. “One more thing, though—did Mr. Murcheson say anything about more than just a fist-fight? We need to know what we’re likely to be up against out there.”

“No, he just talked about beating him up, broke his nose and maybe his jaw, he said.” She finally took a sip of soup. “And he, Stick, I mean, he had some blood on his shirt, little spatters. So maybe he really did.”

“You wouldn’t know where Mr. Murcheson lives, by any chance, would you?” I always think that it’s worth trying.

“I heard he moved into Junior’s place, that cabin where they found him dead. Kinda morbid, if you ask me.” She seemed to like the soup and was now shoveling it in.

“Did you know Junior?” I couldn’t keep my curiosity bottled up.

“Oh, yeah. He was quite the ladies’ man, and I was one of the ladies, there for a while, at least. Before he hooked up with that Summers broad.” She grinned. “From what’s come out about the case, it sounds like he got what he deserved. No great loss to mankind, but that place of his was somethin’, I’ll say that.”

“Oh, one more question, then we’re done, I promise, Ms. Wallenstein. Do you happen to know what kind of job Randall Murcheson has? Where he works?” Angela was once again ready with her pen.

“Feed store here in Granby, just down the street, west. He’s real proud of a promotion he just got, to some kind of assistant manager or something. Got himself a loan for a new dually pickup. Said he’s gotta find a dry cleaners for his clothes now, because he has to dress better. Not that it’ll help his looks, until he loses about a hundred pounds. Or more.” She broke a cracker into her soup and continued eating.

On the drive back to Hot Sulphur, I filled Angela in.

“Junior Murcheson’s cabin was a bachelor love pit. He had it all set up to look romantic, with lots of candles and mirrors and a big flat-screen TV. Lots of DVDs. Plus, and I bet Wendy doesn’t know this, full video recording capabilities with two cameras focused on the bed. And a library of his conquests. That was our case against Mandy Summers. She killed him while they were having sex, and it’s all there on DVD.” I shook my head at the memory, to help to get it out of my consciousness.

“So Wendy is on DVD, too?” Angela looked to be scandalized.

“Probably, but I’ll never know. We destroyed all of the DVDs except for the ones we needed. Didn’t even look at the names. It seemed unfair to all those innocent women. Well, sort of innocent.” I had to smile.

By the time we returned to the sheriff’s office, the field team from the pasture was back. They had nothing in particular to report, so there was no telling what had made the hole in John Doe’s side. Fran Schmidt was therefore not in a very good mood when we reported our findings.

“Stick Murcheson? Well, damn. I always thought those boys would come to no good, and Junior sure didn’t. Now Stick, eh? You say she saw blood stains on his shirt?” He looked thoughtful.

“That’s what she told us, Fran. I’m not sure how cooperative she would be if we brought her in, though. I think she’s worried about her standing in the community, the part of it she hangs out with, at least. The lowlife crowd.” I thought I knew where Fran was going.

“This is almost enough to get a warrant for him, for a search at least. Almost. If his father weren’t a commissioner, it would be, I’m sure. Hmm.” Fran scratched his head.

Angela was looking puzzled, so I explained. “This came up before, Angela. Simon Murcheson is not only a county commissioner, he’s in charge of Fran’s budget, and he’s pretty tight with the district attorney. We need rock-solid evidence to go after his son.”

“You don’t suppose he’d take that blood-stained shirt to his new dry cleaners, do you?” Angela was looking at her notes. “Seems like that would be pretty solid evidence, if we could get hold of it.”

Fran’s head snapped up, and I reached for a telephone book.

Hal and I had moved to eastern Grand County from a small city, Durango, and were beginning to feel well settled. But one thing we were still getting used to was the much smaller range of choices for services and retail than had been available in Durango.

For once, though, this turned out to be a blessing. It took only one phone call to find where Stick Murcheson took his laundry and, after some persuasion by Fran, for them to tell us that he’d dropped off quite a load that morning, which was awaiting its turn in the equipment.

\* \* \*

“I always thought that Junior was a about five beers short of a six-pack, but it looks like he was a brain surgeon compared to his brother Stick.” Fran Schmidt was staring at the huge shirt we had liberated from the dry cleaner’s in Granby.

Angela and I had hustled over there and, with the help of another phone call from Fran, had persuaded the manager there to “lose” this particular shirt for a day or two. Hey, everyone knows that weird stuff happens at dry cleaning establishments, right?

The garment in question was in a plastic bag with the dry cleaner’s logo prominently displayed, hanging neatly, if not cleanly, on a hook on the back of Fran’s door. Fran’s forensics people were overwhelmed with trying to understand what happened at the site of the wildfire, so the medical examiner was on his way over to get a blood sample out of the shirt.

Fran’s telephone rang, and he absently reached for it while continuing to stare at the shirt. “Hello? Oh, yeah, good ... you what? ... Really? Well, that’s something. I don’t suppose there’s any hint of a name or anything ... There is? Miguel Parada? Outstanding! ... Are you on your way back to Grand Lake or what? ... OK. Could you stop by my office on your way through town so we can get a formal statement about all this? And maybe you could get the hospital to make copies of all his documentation? ... Great! See you about two.”

He was beaming. “Alice Long and Hank Welton—remember them from the fire site yesterday?—they went to the hospital over in Kremmling and identified the stabbing victim as the guy they put in their truck yesterday. And the hospital staff found that he had ID on him after all, a flat, zip-lock bag taped to the inside of his left thigh, passport, foreign driver’s license, some cash.”

“What kind of passport?” Angela was first to ask.

“Cuban. But he’s got a driver’s license from Mexico, with an address in Monterrey, so he must have been there for some time. No US documentation, so he’s here illegally, looks like. Oh, and he’s in intensive care. Critical, but still alive. They aren’t optimistic, however.”

“So we’re looking either at assault, maybe assault with a deadly weapon if we can link the knife wound to Murcheson, or at murder, if he dies, I guess, right, sheriff?” Angela, I was learning, liked things neat and tidy.

“We need a match between the blood on that shirt and Parada’s, first. Speaking of which, where’s George, anyway?” Fran looked impatient.

It didn’t surprise me that George Neering, the medical examiner attached to the district attorney’s office, hadn’t shown up. He was as free-spirited a person as I’d met in a long time, and he pretty much kept his own schedule. But despite his casual attitude and laid-back ways, he was as sharp as anyone I’d ever met. If anyone could get a positive identification on those blood stains, he could.

“I hate to be the one raising this, but the Murcheson thing is just a diversion. What we need is for Parada to survive so we can find out what he knows about that fire the other day, right?” I looked back and forth between them.

“Ouch, a reality check if there ever was one.” Fran winced. “Yeah, of course. And maybe we ought to proceed as if Parada’s not going to regain consciousness. Then if he does and we can learn something from him, it’ll be a bonus.”

“What I’m still trying to figure out is the behavior of that wildfire.” Angela scratched the back of her head. “Even with an accelerant to start it, I just don’t understand how it could have been so fast and so hot at the same time.”

Fran sat up straight. “What we need is to re-create it somehow, do a controlled burn or something to see if a natural fire would behave at all like that. The Forest Service people are coming by in a while, maybe we can ask them.”

I had a simpler idea. “What about a computer simulation? Hal talks all the time about how advanced computer simulations are becoming the third leg of science, along with lab experiments and field measurements. He talks about how it’s all tied together by theory, wrapping everything into a neat package, blah, blah, blah.”

“And we do have this new institute here, don’t we?” Fran looked pleased with the idea. “Do you think this would be possible?”

“Well, I *do* have some pull with the director.” I tried to look innocent. “Let’s ask him. Is that a speaker phone, Fran?”

Getting Hal took only a few seconds. “Hal? I’m here with Fran Schmidt and Angela Espinosa, we’re on a speaker phone. And we’ve got a technical question for you.”

“Oh, *man*, and here I thought I’d won the sheriff’s charity raffle or something.” The speaker made the voice tinny, but it was definitely Hal.

“In your dreams. Anyway, remember the fire I told you about last night, the one I spent the day at yesterday? Killed all those people?” I was sure he did, but I wanted to start us all on the same page.

“Right. Up on the side of Byers Peak. You talked about how it didn’t behave like a normal fire would.”

“Angela thinks that, and the Forest Service people do, too. So, here’s the question. Do you think you guys, I mean at MPARC, could you do a computer simulation of this fire? Help us figure out what happened?” I nodded at both Fran and Angela, who nodded back.

There was a much longer pause than I expected. “Hal? You there?”

“Yeah, I’m here. And I’m trying to figure out why I didn’t think of that myself. But wait, don’t answer that, it’s rhetorical. I know damned well why—it’s because I’m doing all of this administrative crap instead of using my brain being a scientist. I think maybe I’ll swap jobs with Sandy. Who I just talked with, by the way, and we even talked about what a tragedy that fire was. Arrgh! But he’ll love this idea. So, anyway, of course we can do a computer simulation of that fire, a whole bunch of ’em, in fact. We’ll need all sorts of information, naturally, and the more help we get putting it together the faster we’ll have answers. But, sure, what a great idea! Let me make some calls. ’Bye.”

Angela and Fran were staring at the phone in either shock or disbelief, I couldn’t tell.

“Yep, that’s Hal. Once you wind him up, he makes the energizer bunny look lazy.” I laughed.

Fran started to respond, but there was a knock on the door, and a bewhiskered face peeked in. “Hey, sheriff, I heard you called, man. And, yo, Ms. Tri-er-i, hey there. And hello new person, too!”

George Neering had arrived.

“Thanks for coming by, George, come in. And this new person is Annette’s deputy, Angela Espinosa. She’s CBI, too, and she’s already made herself indispensable. Angela, this is George Neering, our medical examiner.” Fran said all this with a straight face, trying hard, I could tell, not to influence Angela’s first impression of George.

“Annette’s told me all about you, Dr. Neering.” Angela smiled and held out her right hand for a shake.

“Uh-oh.” George looked at me nervously, but took the hand.

I laughed. “Don’t worry, George. I just raised her expectations of your good work. Speaking of which, we’ve got something for you. Fran?”

“Right. George, I can never keep up with all the latest techniques you use. What would it take to match blood on clothing, a shirt, say, with the blood of a particular person?” Fran pointed at the shirt on the back of the door.

George looked carefully at it through the plastic. “Well, man, it sure helps if you have a particular person in mind, and it helps even more if that person is available for a blood sample. I mean, first things first, ya know? Any idea how old these stains are, man?”

“Maybe a day. And, yes, we have the person available. He’s in the hospital over in Kremmling. Still alive, barely.”

“Ah. You want to confirm an assault suspect, or something like that.” George poked at the shirt. “Well, get me some blood from the vic, and this’ll be a piece of cake. I’ve got a DNA lab down in Denver that owes me a favor, so I can get a quick turn-around. Maybe a day.”

“George, will the shirt be damaged? Uh, the perp doesn’t know we’ve got it. If there’s no match, we’d just as soon get it back to him without anyone knowing.” I tried a hopeful smile.

“Hmm. Well, I think I can handle that.” He nodded.

“Also, Dr. Neering, the victim lost a lot of blood and there’s a chance they’ve been giving him transfusions. A blood sample might not be, you know, his real blood, all of it.” Angela looked worried. “Should we maybe substitute some of his clothes or something?”

“Very good—no, make that *extremely* good thinking, Ms. Espinosa. A sample and some clothes both, I think. I like it when new people are smart.” George nodded at her and then looked around the office. “This is cool, y’know, man? Another thing I like is being in on this stage of things instead of having to wait until everyone’s dead.”

\* \* \*

## Six

Hal Weathers was feeling incredibly stupid.

Here he was, director of an advanced computing center, a center that would have one of the world's fastest supercomputers pretty soon, if everything went according to plan, and he had to wait for his wife to come up with the bright idea of simulating that tragic wildfire.

Good grief.

But he knew the feeling would pass quickly, all the more so if he plunged into the problem. So he put in a call to his new chief scientist.

"Sandy? Sorry to bother you, can the movers do without you for a few minutes again?"

"Sure. I'm at the wave and point stage. What's up?" Sandy was still supervising the furniture unloading, it seemed.

"So, let's see if you feel as dumb as I do. Annette just called and asked if we could do some simulations of that wildfire we just talked about."

There was a long pause, and then Sandy laughed. "Well, I don't know, how dumb do you feel? I bet I feel dumber. I'm supposed to be your chief scientist, after all. Can I assume you told her we could?"

"Oh, yeah. Although, I have to say, now that I think about it, I really don't know quite how. We got the small-scale NCAR model up and running about a month ago, but that's just weather, not fire." Hal was referring to the National Center for Atmospheric Research, which made copies of its production codes available to the user community.

"Right, MM5. I remember talking with your guys about it when I was up here in April. And that'll be the perfect starting point. We can do a high-resolution simulation of the local weather up there using all the data we can find, then use those results to provide boundary conditions for this wildfire behavior model I know about. A friend of mine at Los Alamos developed it, we used to go rock climbing together, and he'll think this is a great use for it. We can run it at a couple meters' resolution and see what kind of fuels would have been necessary to create a fire like that." Sandy must have realized he was running on, because he stopped.

"A couple of meters? Must have some kind of different turbulence closure, huh?"

A half-hour later, they had talked themselves out and developed a plan in the process, so Hal called his wife back.

"Annette Trieri, CBI."

"Hal Weathers, MPARC, here. I hope you don't need those simulations done by this evening."

"Well, why not? You're the one with the super-duper computer, or whatever it's called." She loved to tease, as he knew from years of experience.

"Of course, of course. But we have data to assemble, some of it from you guys. We figured that would take several days of requisitions and requests and God knows what all paperwork to break through the CBI bureaucracy. Seriously, though, it *is* something of a big task, considering we haven't

done it before. But Sandy's on board, and he knows of a fire-behavior model that has just the capabilities we need."

"'Knows of a model'? So you agreed to do this without having a computer model to do it with? Pretty confident, I'd say, Mr. Director." The humor in her voice was unmistakable.

"Yes, well, you just wait and see." Hal felt it best to change the subject. "So, I know it's only Wednesday, but do you have a feeling yet for how Angela is going to work out?"

"Well, Fran called her 'indispensable' today, so that's a pretty good start, I'd say." Annette was proud.

"Excellent! And based on my two phone calls with Sandy, I'm feeling good about him, too. I think we picked a couple of winners. Maybe you and I can take more time together now." Hal remembered conversations between them about all work and no play.

"Why, that would be lovely." She sounded pleased. "The immediate future looks busy, but maybe we can plan a long tour of the changing aspen this fall. That would give you an excuse for a new car."

Ouch, Hal thought. Another subject I need to avoid just now. "An aspen tour sounds great. We can start here in the north and wind up in Durango, maybe. Follow the changes south. See some old friends down there while we're at it."

She was delighted. "I'll put it on my calendar in ink. But I've got to go now, OK? See you for dinner at home?"

"You will. We can invent something. 'Bye."

Hal felt relieved that the topic of a new car had been avoided, because, in his mind, what they really needed were *two* new cars.

Oh, the cars they had were fine. But the one that was happy off the pavement was not all that happy where they now lived, at 9100'; and the one that didn't mind 9100' definitely preferred pavement. What they really needed were two cars that both liked the thin air at 9100' and also relished going off-pavement. Not truly off-*road*, necessarily, although one of the two ought to manage that as well, he thought.

Annette, he knew, really liked her Subaru Outback, so all that was needed was an upgrade of it to the six-cylinder version, which would handle the elevation better. And as much as he enjoyed his twin-turbo Audi S4, it was getting a bit long in the tooth, and running it up and down all those gravel roads every day wasn't really to its liking. Audi had been ignoring the non-pavement market sector, though, at least recently. Something with a turbo and off-road capability seemed to be the thing, along with enough refinement to pick up important people at the airport, go to the opera in Denver, and so on.

There was only one vehicle that he knew of that combined all of those attributes, but, for the life of him, he couldn't figure out how to persuade Annette that buying a Porsche Cayenne Turbo made sense. Maybe, he thought, I should just do it and then ask for forgiveness instead of permission.

But he wasn't going to figure it out today, because this wildfire simulation business had to come first. He put in a call to his institute's benefactor, Charles Shure, using the private number that only he, Annette, and a few others had.

"Chuck? Glad I caught you. It's Hal Weathers. Have you got a minute to chat about an MPARC matter?" Hal was certain that the time would be made, if it didn't already exist, for Shure was always ready to talk MPARC.

"I've got a plane to catch as soon as this car gets me to the airport, but until then I'm all yours, Hal." Shure sounded eager.

“We’ve talked about a development plan for MPARC, I know. But I’m wondering if you think it’s flexible enough for us to drop everything and work on a special project for a while.” Hal filled Shure in on the wildfire simulations that were being discussed.

When Hal was finished, Shure didn’t hesitate. “Sounds to me like a no-brainer, Hal. This is going to sound awfully self-serving, I know, but consider the good publicity that MPARC can get from this, helping out local law enforcement shed light on a mysterious tragedy. And apart from that, MPARC gets a new computer simulation code that we can figure out new uses for, plus we’re doing good science. Have you got all the resources you need?”

“Well, not really. As you know, our new system isn’t fully configured yet, so we don’t have all of the computer horsepower we will in a year or so. And these simulations will gobble up computer time, I’m told, and I hope we have the speed to do what we need to. But I’m a little concerned about it. The timing is awful.” Hal was trying to avoid raising expectations too high.

“Don’t worry about that. It sounds like you’ll need to lots of separate calculations for this problem, meaning you can do them on distributed systems instead of a single, central one. I’ll make sure you have access to the appropriate systems to do them on. We’ll get her done, count on it.”

Hal couldn’t help but think how nice it was to have powerful friends who understood his problems.

\* \* \*

Feeling comfortably accomplished, Hal turned to his computer to make notes of his conversations with Sandy and Charles Shure. Email, however, was waiting.

There were two messages from someone called “sgl3@mparc.org” labeled “Data needs” and “Data needs 2”, the second about twenty minutes newer. Hal opened that one first.

*Hal – In addition to that first list, there’s something else we’ll need, and I don’t know where to find it. I’ve talked with a couple of other people at MPARC whom I remember from my visits, and they agree: we need to pinpoint as closely as possible the time of ignition of that fire, if we’re to simulate it successfully. The burn was too small to be visible on most of the weather satellites, though. Let’s talk about this. SGL3.*

It took a minute, but Hal eventually remembered that Sandy’s given name was Sanford Gentworthy Livingston III, a passed-down combination, Sandy had mentioned, of his paternal great-grandfather’s and grandmothers’ maiden names, a combination that Sandy had no intention of passing on to the next generation. Sandy’s MPARC email using his initials had been set up the day that his hiring process was completed.

Curious, Hal opened the first email and found a list of data that made perfect sense: digitized topography, in as much detail as possible; all available satellite imagery including LANDSAT and anything hyperspectral; whatever information about fuels the Forest Service might have; and all available weather data, beginning two days before the fire, for Colorado and Wyoming.

Hal picked up the phone.

“Sandy? How’s the moving going?”

“They finally left, so now I’m alone with ten thousand boxes. Or so. I’m glad you called—I need the diversion.” Sandy sounded overwhelmed, Hal thought.

He got right to the point. “I called about the ignition email.”

“Right. Good. See, one of your weather guys I called earlier—he’s all excited about this project, by the way—he mentioned that there was a little system that went through Monday night. A weak trough, but it caused some wind shifts. The timing of the fire relative to those wind shifts is going to be crucial to its behavior. MM5 will reproduce the trough and the winds, I’m sure, but if we don’t start the fire at the right time, it won’t behave realistically. The timing is a variable that we need to eliminate first.”

“Ah. Understood. There’s a chance that GOES might have picked it up, but maybe not, with that low resolution. And even if it did, that would pin it down only to within a half hour.” Hal was thinking out loud about the geostationary weather satellite.

“The only thing I know that might have it is something I don’t really know anything about, and I couldn’t talk about it if I did. The NRO monitors for rocket launches globally, I think. And this fire would have been seen by their birds. But how to get hold of their data is way beyond me.” There was a hopeful note in Sandy’s voice.

“Hmm. It would. Have been seen, I mean. I don’t know if they archive that data, though. Even though it was only a couple of days ago, it may be long gone.” From his service on government advisory boards, some of them classified, Hal knew just a little about the capabilities of the National Reconnaissance Office, the super-secret watchdog in the sky. “Good suggestion, though. Let me check into it. Chuck Shure has connections to that world, because his aerospace division supplies the feds with all sorts of gadgets. And I know some other folks, too. I’ll tell you what I can.”

“I think my clearance is still alive.” Sandy had mentioned during his job interview that he also had a security clearance, for his own set of advisory committees.

“Yeah, it is. I checked. But this phone isn’t secure, so we’ll have to talk about it some other way. I’ll let you know.” Hal disconnected.

Hal thought the problem over while he disposed of several routine emails, some by literal disposals to the Trash icon, some by quick responses to the sender. He finally decided he should call Mac MacQuarrie.

MacQuarrie, Hamish Angus MacQuarrie in full, was a retired CIA and NSA officer whom Hal and Annette had met and become friends with on a cruise ship. A rag-tag band of terrorist wannabes had managed to steal several containers of Special Nuclear Material—the stuff of thermonuclear weapons—and had smuggled the material aboard the ship to move it from Florida to California. Hal, aboard to provide scientific entertainment for the passengers, happened to notice the containers, and MacQuarrie, out of retirement to assist in the national effort to find the stuff, was called in. A year later, they’d run into Mac again when he was working a case of weapons smuggling in South Florida and Hal and Annette were enjoying Spring Break in the sunshine.

Annette had gone so far as to suggest that MacQuarrie might be an appropriate security officer for MPARC, a position Hal had yet to fill. Security—in the sense of securing the premises from unwanted intruders—didn’t seem to Hal to be much of an issue in the Fraser Valley, except maybe for simple burglaries. But now security—in the sense of having a secure facility capable of handling classified information—had become an issue, so maybe Annette’s idea had merit, he thought.

Hal, grateful for the computer search function, was able to find old, post-cruise email that he and MacQuarrie had exchanged, and soon had a telephone number.

“*Hell-o.* Mac MacQuarrie here.”

“Mac, it’s Hal Weathers. How’ve you been?”

There was a brief pause. “Oh. Right. Hal Weathers. Sure. Of course. I’m good, Hal, and how are you and Annette? You get moved to wherever it was yet? I recall you talked about a new house or something.”

“A couple of months ago. We’re all settled in, way up on a mountainside above where we were. Uh, is it appropriate for me to ask about Sam?” Hal remembered that, last time they’d seen each other, Mac had still been in the company of an ex-call girl, Samantha Winslow, whom he and Annette has originally met on the cruise.

MacQuarrie laughed. “Sam’s just fine. We’re still renting this place in down here in the Keys, have been for, well, I guess it’s way over a year now. I’m talking to you from a flats boat, as a matter of fact, trying to out-wit some bonefish. So far, the bonefish are winning, like they always do. Huh? Oh, Sam says hi.”

“And hi to her as well, from me and Annette both. Listen, Mac, if you’re out fishing, this isn’t a good time, but I’ve got a little puzzle I thought you might have some advice about. Let me give you the sound-bite version, and maybe we can talk more when you’re on shore with a drink in your hand.” Hal proceeded to sketch the situation.

“Arson? 23 people? Racist overtones? Nice place you moved to, Hal. Geez. But I get the drift, and, yeah, I think I can help. The Washington spook shops are keeping me on retainer, based on that little weapons caper you folks helped with, and I have what access I’ll need. I’ll call you this evening, OK? Uh, let’s see. My cell phone will remember this number you’re calling from. Will that work?”

“Sure will. I’ll forward it home. And thanks, Mac. Good luck with the bonefish.” Hal disconnected, feeling good about the progress he was making.

One more bit of good luck, Hal thought, and I can declare the battle a success. He logged in to the UNELECO computer network and clicked his way to the corporate directory. Ah, right. Phillip Peters, computer security director. Hal picked up his phone, selected the line with the red button, and punched in a series of seemingly random numbers. There was a muted beep, and he punched in Peters’ number from the corporate directory.

“Peters.” There was another muted beep. “Secure.”

“Phil, it’s Hal Weathers. Glad I caught you.”

“How are things up north, Hal?”

“Ready to rock, I hope. We might have an opportunity to use that secure network sooner than originally planned. That’s why I called.” Hal crossed his fingers.

“Far as I know, it’s ready. You’ll need to get someone on site with the right clearance to make it really functional, though, a systems person. But my people got all the hardware in and the encryption software is what we use here. Can I ask what the application is?” Peters’ curiosity was obvious, but the question was appropriately polite.

“We may be getting some NRO data to provide verification for a non-classified project we’re starting up. A wildfire simulation, you’ll probably read about it in the paper tomorrow. And we don’t have a systems person with a clearance yet. We weren’t planning on using this secure network until the new system is up, sometime early next year, probably. But now we need it. Do you suppose I could borrow someone from your shop for a week or two?” Hal’s fingers were still crossed.

“Don’t have to wait for the paper, it’s all over CNN now. An arson fire that killed 23 people? Pretty serious stuff. What’s the NRO data for?”

“Time of ignition, and the fire’s progression if there’s a sequence of images. We’ll see. I’ve got a guy looking into it. But if he can get the data, we’ll need a way to get it here and a place to store it.” Hal paused to let that sink in. “And we’ll need someone to process it, too, but I’ve already got that under control.”

Peters understood. “Right, got it. And I can lend you one of our guys, I think. Someone with some processing experience to boot, maybe. I’ll let you know.”

Hal stared at the red button on the phone. Looks like, he thought, all this spooky stuff I let Chuck talk me into will come in handy after all.

\* \* \*

## Seven

Angela and I, doubled up in my little office, were working through a day and half of unfinished CBI paperwork. This, of course, was routine drudge work for me, but for her it was new and different and exciting.

Ha! I was thinking. Let’s see how long that attitude lasts.

We were interrupted, to my relief and Angela’s annoyance, when Anna Hermanson, one of Fran’s junior deputies, burst in.

“Quick, turn on Fox News! Sheriff Schmidt’s on TV!”

When we didn’t immediately jump, she turned to my little television and hit the on switch. A picture materialized, with a voice intoning in solemn pronouncements.

“... at a press conference today. There are no suspects at this time. In fact, it is not clear that a crime has been committed. Still, the fire is a major tragedy.”

The scene shifted to a nervous-looking Fran Schmidt standing behind a podium, brow glistening, eyes squinted. He must have been answering one of the questions we missed.

“Now, I wouldn’t go that far. Uh, after all, we don’t know for sure that this was arson. We, uh, just have, er, these indications, the ones I mentioned before, you know, the strange burn pattern and all. Like that.”

The scene cut back to the solemn talking head. “Harold, wouldn’t you say this appears to be a cover-up of major proportions?”

A split screen appeared, with the first talking head on one side and a frazzled-looking suit in the other. He started shouting. “Cover-up? That’s something of an understatement, don’t you think? I don’t know what these small-town cops think they’re going to pull over our eyes here, but you can bet they’re going to look like real hicks when we find out the truth. And find it out we will!”

I couldn’t stand it. “Anna, will you *please* turn that off. That’s not news, that’s, that’s ... oh, just turn it off.”

She complied, to my relief, and began apologizing. Getting that stopped was another effort, but I got her shut up without hurting her feelings. Eventually, she excused herself and went back to work.

“Welcome to Grand County, Angela.” I had to laugh.

“Poor Sheriff Schmidt. They certainly didn’t pick very flattering video of him, did they?” She seemed indignant.

“By design, I’m sure. But ...” I was interrupted by the telephone, which Angela grabbed.

“Espinosa, CBI.” She winked at me and grinned. “They are? Thank you, we’ll be right down.”

She hung up the phone. “The Forest Service people are here. Interview room one.”

We joined Fran, Janelle, Hank Welton, and Alice Long. Anna was rustling up coffee for takers, and we had to borrow extra chairs from the other interview room. After everything was organized, Welton plunged right in.

“He’s unconscious, Fran, but alive. Prognosis isn’t good, though. And it’s for sure the same guy we found by the creek yesterday. Like I said, he seemed hypothermic, so we gave him what warm coffee we had and some food, wrapped him in a blanket, and put him in our truck with the heater turned up high. And then you showed up and, uh, well, you know what happened after that.” Welton was trying to hide a smile.

“Don’t remind me.” Fran was still grumpy about his Explorer. “Alice, what about it?”

“Just like he said, Fran. Same guy. Same clothes, for that matter, we brought ’em along with a blood sample the hospital wants your ME to have. Seems he was badgering them.” She wasn’t bothering to hide her smile.

“Good old George. And how about the documentation they found?” Now Fran was smiling, too.

“Oh, right.” Welton took a plastic bag out from his inside his jacket. “They said we could have the originals. I guess they got copies of what they need.”

The plastic bag contained a passport, Cuban as advertised, a Mexico driver’s license, a little over \$900 in cash, and several photographs of a woman with several small children. Despite his continued Cuban citizenship, it appeared that Miguel Parada had settled down in Monterrey, Mexico and started a family. No doubt he, like so many others, was illegally earning money here in the states to send home.

“Did they say anything about the wound in his side?” Fran was studying the pictures.

Welton thought for a few seconds. “It was clean enough they think it was a knife, a hunting knife, from the size and depth of the incision. It missed most of the important stuff, but it cut open his intestine and they’re fighting serious peritonitis. And he lost a lot of blood, so they’ve been transfusing him.”

Fran nodded. “Ten points for Angela. Thanks for that suggestion. Anna, could you call George Neering and tell him we have the blood samples from Kremmling?”

She had been hovering about and now, with something to do, ran off.

“OK, Hank, Alice, thanks for everything. I think this part is a wrap. But the fire itself is still something of a mystery. However, we may have a handle on that soon. The folks at that new institute, MPARC, they’re going to put their computers to work on the problem. I expect they’ll need to talk with you, and Tom, too, about the whole thing.” Fran looked back and forth at the two Forest Service employees.

“You mean they’re going to run some model studies? Very cool, right Hank?” Alice seemed excited at the prospect.

“Absolutely. I want to be part of that. Please have them call us, Fran.”

Back in Fran’s office, we settled in to discuss the day’s progress. Fran had his TV on, with Fox News now fixated on the latest overseas crisis *du jour*.

“Sheriff Schmidt, it’s too bad about that clip from the press conference they used, especially given that this is an election year.” Angela had been indignant when she saw it, and that indignation returned with this comment.

But Fran was unfazed. “Hmm? Oh, that video clip of me? Well, thanks for the worry, Angela, but it’s all right, really. Better than all right. I hope every voter in Grand County saw that. It’ll get me re-elected by a landslide. Whenever the suits in the big media centers like New York and Los Angeles do things to make us folks out here in the real world look bad, the voters always side with whoever is the target of the media spotlight. Doesn’t matter that I looked like one of the suspects on America’s Most Wanted. That clip will get me a ton of votes. Really.”

He leaned back in his chair and stared at the ceiling. “OK, folks, here’s what I think. I think we’ve run this horse about as far as it will go today. We can’t go home yet, because all those media types outside will think we’re slacking off, even though everyone put in a lot of extra time, hard time, up on the mountain yesterday. At least Janelle and I can’t go home. You CBI types can, though. Plain clothes have their benefits, I guess.”

I was ready to leave, but I was also wondering about the next day. “Fran? Is there anything in the works for tomorrow?”

“Well, I’d like to have Angela standing by in case Parada regains consciousness and can talk. And maybe George will work a miracle with the DNA sampling and we can arrest Stick Murcheson, get him to tell us what he knows. But mostly, Annette, I’m interested in what your husband and his scientists can find out. That’s about our only real hope for understanding what happened up there.”

Not, I thought, that this puts Hal and company under any pressure or anything.

\* \* \*

Fran was right: plain clothes do have their benefits, at least when it comes to ducking the screaming media horde. Angela and I made it out to the parking lot and to my car without being noticed. Given the large numbers of satellite-dish-topped vehicles and people with cameras and notebooks wandering around outside the sheriff’s offices, we considered that to be something of a victory.

Unfortunately, I’d come to work in my CBI car, quite unmistakable. Compared to the underpowered version of Fran’s Explorer that I had been stuck with in Durango, my new CBI vehicle, a Jeep Grand Cherokee with a Hemi V-8, was a hot rod. But it had a light bar and big decals on the doors, so when I pulled out of the parking lot with Angela in the passenger seat, it attracted the media people like an open bar. One of those idiots, an over-dressed, made-up, and coiffed blonde woman with a microphone in her hand, even stepped in front of the thing, as if to stop me. But I just turned on the siren and both Angela and I had a good laugh as she ran for cover, hands over her ears. I heard a satisfying crunch as the right rear tire ran over her microphone.

“Well,” Angela was philosophical, “I guess we won’t be able to be anonymous tomorrow.”

“We can if I bring my Outback. And then on Friday you can drive. Did I hear something about a Forester? Hats and sunglasses, that’s what we’ll do.” I laughed. “So I’ll drop you off, but I’m not totally sure where.”

I had taken the right at the Y, and we were headed over Cottonwood Pass. It seemed like an eternity since Sandy had called us that morning.

It turned out that their condo was in a development off County Road 8, to the east of the highway and just north of Fraser. Five minutes or so to the supermarket, compared to the twenty or more from my house. I was jealous.

But when I finally arrived at home, after a stop at that supermarket for salad makings and some staples I remembered, the jealousy evaporated. Our view and privacy trumped any convenience of other locations in the valley. I wasn't sure how I would like it in winter, way up there, but we had done just fine before in a place well off the beaten path that was only a little lower down.

When I walked in the house, I heard Hal talking, and it quickly became obvious that he was on the phone, so I put the salad stuff away and began thinking about what to invent for dinner. It didn't sound as if Hal was close to being finished, so I decided I was on my own. Whenever that happens, my first instinct is to concoct some kind of tomato-based red sauce for pasta, using distant memories from how my grandmothers used to do it.

A while later, Hal walked into the kitchen where I had a credible sauce ready, water waiting to boil pasta, a salad, and a loaf of garlic bread in the toaster oven. He came over and kissed me on the back of the neck.

“Mac and Sam send their best. They're still down in the Keys.”

“Mac? ... Oh, sure, Mac and Sam. Are you going to finally hire him to do security for you?” I'd suggested just that some time before, but it never went anywhere.

“That's not why I called him. We're going to need some satellite data to do that simulation of yours right, classified satellite data. I wanted to ask about his connections in the world of spooks.” He began setting the table.

“My simulation?” I put the pasta, a linguini, in to boil.

“You suggested it, so you get credit for it. The wildfire simulation. Both Sandy and I feel pretty dumb for not thinking of it ourselves. It's a great idea, your idea. Sandy pointed out that we'll need to get as precise a time for when the fire started as possible. And the fire was too small to show up on weather satellites, probably. But it might have shown up on one of the spy satellites, the ones that watch for rocket launches.” He retrieved a wine glass for me from the cupboard by the refrigerator.

“How's Sam?” I was hoping she was still in her new line of work, as a landscape artist.

“Uh, well, we didn't really talk about them much. When I first called him this afternoon, though, they were out fishing together. That's something. Maybe they've settled down. How heavy is that sauce? Will this Bardolino work?” He was holding a bottle of wine for me to inspect.

I glanced up from the making salad dressing. “Just fine. Could you grate some of that Romano? And that sounds like a good thing, them settling down. I really mean her, of course.”

He laughed. “You never did like her profession, did you? You know, in some cultures, being a courtesan is a high calling that's considered an art form.”

“Hmmp. Yeah, well, in our culture, being a whore is just considered slutty. Besides, it's dangerous. She's a nice person, and I'd hate for anything bad to happen to her.” I gave the salad an emphatic toss and some of it ended up on the counter.

Five minutes later we were both twirling forks of linguini and chowing down on garlic bread.

“So, if this is going to be ‘my simulation’, I guess I need to know more about it.” I took a sip of the Bardolino.

“Well, I’m sure you don’t want the seminar.” He looked up and grinned. “But the short version is that it’s just like a weather forecast calculation, only really, really hot. What you do in a weather forecast is divide the atmosphere into lots of boxes and, in each box, calculate the winds, the temperature, and the humidity. One of the things that affects the temperature is radiation, solar radiation and infrared radiation from the ground and from the air itself. That’s the heat you feel, for example, on a cold day standing by a brick wall that’s been warmed by the sun.”

He took a bite and chewed for a minute. “To make this a fire calculation, you add some equations for the chemicals that combust, the volatile gases given off by wood when it’s heated. Then you ‘ignite’ the fire by raising the temperature in one of the boxes enough to combust those gases, and off it goes. The combustion releases heat, raising the temperature, and that releases more gases from the fuels that combust if the temperature is hot enough. Meanwhile, because hot air rises, winds get created. So it’s a really hot weather calculation.”

I thought for a minute, realizing that I sort of understood it despite the lecture. Hal sometimes goes into what I call his “Mr. Science Person” mode, which I often tune out. But this was interesting, given the case we were working on.

“So you put fuel into these boxes, the ones on the ground, I guess, and it releases the volatile gases when it heats up?”

“Right.” He nodded. “Think of it as evaporating sticks. A little heat, the ignition temperature we specify, releases a little gas that ignites, further raising the temperature, which releases more gas. And off it goes, until the fuel is all burned up, or, more specifically, until all the volatile gases are used up. By then, though, the hot temperature has spread, by the wind or by the radiation, to the next box over, and the fire has spread.”

He reached for the Romano. “Two more details might be useful for you to know. First, the topography plays a strong role. Because hot air rises, it will flow up a hill and carry the fire with it. This can produce fast-spreading fires up hillsides, and these models simulate this quite well. And, second, fire calculations use very small boxes, so that the fuel can go into the ones next to the ground, simulating, say, grass, or the next higher up ones, simulating bushes and trees. If the numbers start at one on the ground and go up as you go higher, you can have grass and small bushes in box one, nothing much in box two, some fuel simulating crowns of small trees in box three, and more fuel simulating crowns of taller trees in box four. That part is going to be important for your simulation because of that grove of trees that burned. Also, we can put in the gas tanks of the trucks in box one at the locations where the trucks were. That’ll make a difference, too, a big difference.”

I nodded. “It sounds horribly complicated, but I think I get it. You can do the calculation lots of times with different fuels at different spots and see how the computer fire behaves. Then you compare that to what we saw up there. Makes sense, somehow.”

And I did get it. In fact, I got it too well. I almost asked if he was going to put the people in as part of the fuel.

But we were eating.

\* \* \*

**Eight**

Mac MacQuarrie didn't really care if the bonefish were winning, because he wasn't keeping score. For him, just being out on the water was what it was all about. And the fact that Sam had learned quickly how to handle the flats-boat pole and never tired of the job of moving him quietly from spot to spot made it all the better.

When Hal Weathers had called, he was reeling in his fly line, having just spooked another boney with a sloppy cast. The phone call was a welcome diversion. But the subject was troubling, and although he spent the next couple of hours casting at unsuspecting bonefish, with no success, his heart wasn't in it. Just before sunset, they headed back to their rental house on Big Pine Key.

What troubled him was not Hal's request for NRO data, but the reason Hal called in the first place, the fire. Mac had years and years of overseas operations experience for various three-letter federal agencies under his belt, and he had seen it all. But when people burned to death—women and children especially—it got to him. He'd seen it happen in Vietnam, in Afghanistan, in Africa. And no one deserved that, no one.

Probably because of her own years of experience, Sam wasn't the nosey type. But their relationship had grown to the point that she could tell when he was upset, and she always sought ways to fix the problem.

"That phone call got to you didn't it, Mac?" She waited to ask until the boat was tied up with everything stowed away for the night.

For his part, Mac had learned that she never asked such questions idly, and that it was a good idea to be responsive. That, he thought, was part of the reason their relationship had grown so.

"Yep, sure did. Hal told me the short version of a real tragedy that happened out where he is, a fire that killed at least 23 people, including women and children. It's seriously depressing, brings back bad memories for me." He wanted a hug and reached for her.

"I heard you say 'arson'."

"Hal did, and so did I. Yeah, they think maybe that someone set the fire intentionally. Give me just five minutes alone with whoever did that, is all I ask." He realized that the sea air and sunshine had made her hair smell especially fresh.

"Do they know who did it? What are you going to do?" Her voice was apprehensive.

"No suspects. And Hal called to ask if I might be able to get him access to some information, classified information, that could help the investigation. And that's what I'm going to do, get that information for him." He leaned back and kissed her on the nose.

"Does that mean you're leaving? I don't want to be here alone. It's hurricane season. Last year it got scary, and this year hasn't been any picnic."

"Well, except for certain buildings in and around Washington, and some rooms in other places, you go wherever I go, I promise. But I don't know if I need to leave for this one. I'll find out when I call Hal in a while. What do you want to do about supper?" He had discovered that she was quite the chef when she wanted to be.

"Call Hal first, and let's go out. My arms are too tired to cook." She smiled. "I need to save my remaining strength for later."

That sounds interesting, he thought. "Out we will go, then. I'll shower and then call Hal back."

Clean and dressed in white tennis shorts, a Hawaiian shirt, and flip-flops—summertime going out to dinner clothes on Big Pine Key—Mac listened to forwarding clicks before the phone on the other end rang.

“Hal Weathers.”

“It’s Mac, Hal. Gotta say, pal, that fire thing is first-class depressing. I’ll do whatever I can to help. But there is the issue of how classified the NRO data is.”

“Indeed. Except we’re set up for it.” Hal proceeded to sketch MPARC’s secure computing capabilities, going as far as he could over the unsecure phone connection.

“And you’ve got people with the right clearances to use the data?” Mac was impressed, but still careful.

“I think so. Me, for one, and my chief scientist. Also a couple of the scientific staff.” He sounded confident, no doubt about that.

“Impressive, Hal. What kind of outfit is this MPARC thing, anyway? Never heard of it before.” Retirement, Mac thought, has its perks.

Before Mac knew what was happening, Hal had launched into the MPARC Briefing. As Hal talked, Mac became ever more aware of two things: Hal had found something that really excited him, both intellectually and on a much deeper, emotional level; and the organization Hal had created had a unique potential to tackle any number of issues that his former employers were never quite able to get their arms around.

They had developed a surprisingly close friendship on that cruise, a friendship rekindled on the second case, so Mac was happy for Hal in his involvement with the organization he was building. But what really got Mac’s attention was that unique potential, made all the more attractive by the facts that they already had classified capabilities and that they were funded through an endowment and therefore financially independent. Too many of the agencies’ usual contractors depended on those contracts for their very existence, so they were always just full of good news to keep the customer happy. Those agencies needed a dose of reality now and then, no matter how harsh.

Mac knew that more phone calls were going to be in order even after this NRO business was concluded.

“Y’know, Hal,” Mac waited until Hal wound down, “when we talked about your position at the university, back when we were wandering around on that damned cruise ship, you never had the excitement in your voice that I’ve just been hearing. It sounds as if you’ve found your true calling.”

Hal laughed. “Well, I don’t know about that. Setting MPARC up and being its director seems every bit as bureaucratic to me as when I was dean. But this fire problem that sort of got dumped in our laps does have me on a roll, I’ll say that.”

“Nothing like a scientific challenge to get the juices flowing, eh? Tell you what, Hal. Let me get the technical information, and then I’ll make some calls tomorrow. It’s too late tonight. I guess approximate time and the precise location are what I need.”

Hal rattled off some numbers, Mac wrote them down, and they said their goodbyes. The whole conversation made Mac feel much better. Sam was going to have a far less depressing dinner partner now.

\* \* \*

First thing Thursday morning, Mac sat down at the computer and navigated his way to the web site of the National Hurricane Center. Sam’s comment about not wanting to be alone in the Keys during hurricane season had haunted him all night.

He knew it was hurricane season, of course. Everyone in Florida with more intelligence than grapefruit—meaning at least a third of the population—followed such things closely. And their favorable rental rate on the Big Pine Key house was because of the year-round lease. Just try for a rate like that in, say, February and watch the owner giggle himself into hysterics.

On his own, Mac would have paid just enough attention to the whole thing to be prepared should a storm head his way. He had survived mayhem and destruction on five continents, at last count, so a little weather wasn't something that was going to bother him.

But Sam was another matter. If storms worried her, well, then they worried him, too. And that meant he was questioning the sense of spending the rest of another summer in the Keys.

The NHC web site provided more information than he ever wanted to know, including a discussion of a new depression that was forming up over the Virgin Islands. It was expected to re-curve northward up through the Bahamas, but the uncertainty was big enough that the Keys were in the forecast cone beginning at day 4. That thing, he thought, bears watching.

Back at the NHC home page, he followed other links that looked promising, and at one he discovered a general discussion of conditions in the Atlantic Basin and what the hurricane experts were saying about the future. A train of tropical waves was progressing westward toward the Leeward Islands—that depression he had looked at had developed from an earlier one, he learned—and conditions, including the warm ocean surface and the uniform winds with height, were favorable for development of any of them. Or all.

The depression, then, was the first of a series of potential hurricanes, any of which could keep on their present track until they got right over Big Pine Key.

Maybe, he thought, it's time to get out of Dodge.

He heard a whining, rattling noise from the kitchen and recognized it as the coffee grinder. Sam was up and making the morning pot of caffeinated. He knew from experience that she preferred to be left alone in the morning until she had most of a cup of coffee in her, so he continued to study the NHC information. And the more he read, the more he was persuaded that it was time to beat the traffic and head north. Not that there was a pack-up-and-run emergency brewing, but sometime within the next couple of days would make sense.

Besides, those damned bonefish were too smart for him anyway. What I need, he thought, are some really dumb fish, hungry ones.

Shortly he heard the floorboards creak a little, and a cup of coffee was placed on the computer desk beside the keyboard.

"Morning, tiger. Say, I thought you were supposed to be an old, retired guy. Where'd you get all the energy, anyway? Got some secret pills or something?"

It was their long-running joke. The first time he almost responded by saying "Aw, I bet you say that to all the guys," but realized just in time that it might be true, given the profession she'd left. But then he told her he almost said it, a sort of confession, and she just laughed. No, she'd said, what I used to say to all the guys was "Mastercard or Visa?"

But it was true—she brought out the teenager in him, and, by treating her like a real person instead of a use-and-throw-away sex toy, he humanized her.

They had been together for over a year, having bonded during the cruise on which they had met Hal and Annette. Sam, seeing how a comfortable relationship can actually work, let her guard down and fell for Mac like a ton of bricks.

Mac's first retirement pastime had been woodworking, but he knew he wasn't very good at it and gave it up at the first excuse. Now he was working at fly-fishing. He'd actually landed a tarpon, so he had enjoyed just enough success to keep him interested. But the bonefish were too wary for his skill level.

Sam, meanwhile, had become an artist. She had a natural eye for form and color and the ability to capture the essence of whatever her subject was with a few strokes of a brush. Her minimalist paintings—watercolors and acrylics—and her pastels were hanging in galleries up and down the Gold Coast.

He took a sip of the coffee. "Umm. Thanks. See what I'm looking at here?"

He had navigated back to the forecast track for that tropical depression, and he pointed the mouse cursor at their location in the Keys.

She snuggled up beside him and leaned down with her chin on his left shoulder. "Uh-oh. Is that coming here?"

"Too soon to say for sure. But maybe. Thing is, there are more behind that one." He tilted his head just enough to brush her ear.

"Are you trying to say something here?" She stood up and began a shoulder massage.

"I'm not sure. One thing I do know is that I don't want to be part of an evacuation. That kind of traffic nightmare just isn't something I can deal with. I'd rather stay here and drown." He felt the tension draining out of his shoulders and neck. "Oooh. That feels *very* good."

"Well, then, let's just beat the crowd. I mean, didn't you say we got a really favorable out clause on this second year of the lease? Screw it. It's not like this place has a hold on us, you know? Hell, you can't even catch any fish." She giggled.

"That's right. Rub it in. Just remember, though, if I were catching them, you'd have to take the hooks out. That's the guide's job. And they're all slimy. So I'm just doing you a favor." He smiled and patted her hand. "Anyway, I'll probably have some business in Washington, we could go there. When was the last time you saw all the museums and so on?"

"That'd be fun for a little while, but Washington isn't really the place to go in the summer, everyone says it's so hot and muggy. What about after you finish your business there? No point in coming back to Florida in hurricane season, right?"

"Let's go somewhere that they have dumb fish, that's what. And new things for you to paint. I don't know. There's time to think about that. But as far as I'm concerned we can start packing for Washington." He closed the browser, glad to have the hurricane threat dealt with.

After a two-mile swim in Florida Bay and breakfast, Mac started making phone calls. It wouldn't do at all to just drop in on people at the National Reconnaissance Office. Those people, he knew from experience, didn't like surprise visits.

He started with a contact of his in the White House who always went by the pseudonym "Henry" in his dealings with Mac. His position was just too sensitive for him to use his real name when dealing with the sorts of things Mac got involved in.

Media hysteria notwithstanding, the world was quiet, so Mac found Henry in his office.

"Henry, Mac MacQuarrie here. I thought you were going to retire after we brought that terrorist group down last year, the ones in bed with the Cuban mafia in Miami." Mac remembered the stress Henry had been under during that particular crisis.

“Hey, Mac, how are things? Yeah, well, I can’t afford to retire. Unlike someone I know, I haven’t spent enough time overseas with easy access to Swiss bank accounts for my ill-gotten gains. Looks like you’re still in Florida.”

“Just for a little while. There seem to be some storms headed our way. Hurricane season, you know?” Mac heard a chuckle.

“So, I called to see if you might know about a couple of our old friends, if they’re still working the eyes in the sky. Harley Talbot and Tom Ciccorelli.” Mac knew Henry wouldn’t answer without knowing more, but he was ready for questions.

“The Big Bird twins? Good question. Haven’t heard from them in quite a while. What in the world would you need them for? Tracking schools of fish or something?”

“Well, now, there’s an idea I hadn’t thought of. Gotta say, though, it wouldn’t help me. I’ve discovered I’m the sort of fisherman who would starve if it weren’t for the grocery store.” Mac knew that poking fun at himself would put Henry in a helpful mood. “No, it’s something more interesting, potentially at least. There’s this organization, it has the right kind of secure computers, that needs some data they probably have. And I’d like to get it to them as a sort of test of their capabilities, because I think you folks would be interested in what they can do. They’re developing simulation capabilities that’ll make your beltway bandits look foolish.”

Henry was skeptical. “Don’t be too sure, Mac. Everyone has a supercomputer these days.”

“Yeah, but not the world’s fastest supercomputer. And this group isn’t working for profit, either, they don’t need customers, so they’ll give straight answers to hard questions. Plus, their focus is on earth simulation issues. I seem to recall that you folks and the boys over at Langley are interested in how climate change is going to affect economies and political stability in various regions. These folks could be quite a resource for you. That’s why I want to try this little test.”

Despite his skepticism, Henry was smart enough to recognize opportunities worth pursuing. Mac got his contact information.

## Nine

Given that my CBI Jeep was a media magnet, on Thursday morning I picked Angela up in my Outback. Just to thumb my nose at them, though, I wore a CBI ball cap.

But when we pulled into the parking lot at the sheriff’s office in Hot Sulphur Springs, we didn’t see any reason to have worried—the crush of satellite-dish-topped trucks and other traffic had vanished. Inside, I asked and Fran was more than happy to explain.

“It was such a zoo out there that we had to do something. I decided that freedom of the press doesn’t include freedom from obeying parking ordinances, so we started enforcement. After I had the first truck towed—I picked on Fox News, just to be mean—the exodus began. All the others teamed up and made a deal with the hotel over by the river to set up shop in the parking lot there.” He was grinning from ear to ear over this little success.

“Well, that makes life around here a lot easier.” I smiled back, sharing his success. “What’s on tap for today, anything new?”

“Press conference at ten. Miguel Parada died overnight. We’re going to play it as being due to injuries from the fire and all, just to keep whoever beat him up off balance. But it’s new news, and that’ll give that school of sharks something to justify their existence for a while.” Fran shook his head. “Poor guy. The only survivor of that awful fire, and he gets killed for the heck of it by some local yahoo.”

Angela spoke up. “Did the hospital tell you a cause of death? Was it that knife wound?”

“They’re saying it was probably the head injuries. George will do an autopsy, though, so we’ll have an official cause later today. Along with, I hope, those DNA results he promised.”

“Is Janelle handling the press conference?” I had my fingers crossed that there wouldn’t be any need for a CBI presence.

“Right. I’m going to pay attention to all the other county stuff that’s going on. And I’m thinking maybe we ought to see if we can make some discreet inquiries in the local Hispanic community about all this.” Fran looked at Angela.

“My job for sure, sheriff. I’ll need a car, though. Probably an unmarked one would be better.” Angela had that official “let’s get to work” tone.

“Are you OK with using your car?” I looked at her and she nodded. “Good. I’ll run you back to your place, and then I think I’ll pay a little visit to that feed store where Stick Murcheson works. That all right, Fran?”

“Check him out, eh? Good idea. I’ll be interested in your impressions.” Fran couldn’t hide his smile.

Angela and I discussed strategy on the way back to Fraser. She was going undercover, essentially, into what could be a risky situation. Even though she was confident of her ability to handle whatever might come up, I was concerned. The local Hispanic community had all sorts of internal factions, and it would be easy for her to run into the wrong bunch.

“Have you thought about where to start?” I didn’t want to undermine her confidence, but I wanted to minimize her risk.

“Well, I thought I might stop by that arcade up in Winter Park, where the teenager got beat up. See who’s there, maybe ask some questions.” She shrugged. “Maybe that’ll lead to the next place.”

“Good idea, although you need to be very careful there. Another possibility is with a home cleaning service I know about. We stayed in a guest house belonging to one of Hal’s rich friends when we first moved here, and their service took care of us. We had Norteño housecleaners. That would be a group you wouldn’t be threatened by, I’d think, and they could point you in other directions. Maybe give you some tips about who hates whom and why.”

She looked surprised. “Norteños? Really? I wonder if any of my cousins are up here. Small world. And you’re right, that would be the place to start—I didn’t know about that lead. Thanks.”

I suddenly felt embarrassed. “Uh, I don’t mean to, you know, act like your mother or anything. But things have been rough up here for a few months now, and you’re new on the scene.”

She laughed. “Are you kidding? My mother? She’d be so preoccupied with the fact that Sandy and I are shackled up that she wouldn’t be able to think about anything else. Besides, you’re right. I really don’t have any background on what’s going on here. I don’t need to go blundering about, either getting myself in trouble or scaring off potential sources of information.”

I provided contact information for the housecleaning service, and we agreed that she would call me with a progress report around noon. After I let her off by her car I turned back toward Granby, trying to

decide on an excuse to go into the feed store and chat up the help. It came to me just after I passed the turnoff to Cottonwood Pass, when I drove by a little ranch where a half dozen horses were loafing around a stock tank.

Granby Grain was—dare I say it?—a seedy-looking place on the northwest end of town, next to the railroad tracks sandwiched between other non-tourist businesses in what passed for the industrial zone. The parking lot in front was occupied by a couple of battered, working pickup trucks and a shiny new red one with an extended cab, dual rear wheels, and all sorts of chrome. They made my Outback seem out of place. At the last minute, I remembered to leave my CBI ball cap in the car.

Inside, it smelled like a feed store, dusty and, well, fertile, somehow. There were sacks of various kinds of animal food piled everywhere, and a small section with a variety of esoteric ranching implements took up space by the window.

The clerk behind the counter looked up from his magazine when I walked in. “Help you, ma’am?”

I smiled at him. “Yes, well, I have some questions about horses, and a friend recommended I speak with a Mr. Murcheson. Is he here?”

“Sure is.” He turned toward the rear of the store. “Yo! Stick! Gotta customer with questions. Up front!”

One thing we do in law enforcement is to describe people, to notice and categorize features, and to size them up, literally. This is something that I have years of experience with. Mostly, though, we do this with people who fall into some kind of average category. Very small people present problems when it comes to estimating height and weight, because we just don’t run across that many. And the same applies to very large people.

I’m therefore not certain that my estimate of 6’10” and 400 pounds for Stick Murcheson is quite accurate. But it doesn’t matter, because whatever the actual numbers, this was one huge fellow. I was forewarned by the size of the shirt we’d retrieved from the drycleaner’s, but the seeing him in person was even more impressive.

Obviously, his nickname came from his younger years, when he was a skinny kid. But in his middle twenties, bulked up, he was overwhelmingly large and intimidating, even dressed in the white short-sleeved shirt and tie. Although he was trying to dress for his new job, he’d already sweated through the shirt, and the tie appeared to be choking him.

“Stick Murcheson, Assistant Manager, ma’am. How can I help you?” He wiped his hands on his jeans before sticking out his massive right one for a handshake, a surprisingly gentle handshake, it turned out.

“Mr. Murcheson, someone told me you were the person to ask about something I’ve been thinking about. My husband and I bought some property, several dozen acres above Fraser, and we’re thinking about horses. But we want to make sure we know what we’re getting into. So I’d like some advice on how much they eat, what costs are involved, and all that sort of thing. I mean, we both know how to ride, but we’ve never had horses of our own. I wouldn’t know what to feed one, for example, except, you know, hay and oats.” I tried to look earnest.

“Well, ma’am, you’ve come to the right place. Let me show you some of our products for horses.” And he launched into an educated-sounding sales pitch for a variety of horsie things.

But I pretty much had him tuned out, because I’d seen what I’d come to see, the backs of his hands. All of his knuckles were scabbed over, and his left pinkie was taped, sticking out straight.

Mr. Murcheson had been involved in serious fisticuffs in recent days.

\* \* \*

It took me a half hour to escape gracefully, during which time I took enough notes about amounts and prices to seem credible as a potential customer. And even though I had tuned him out, enough of his pitch soaked in so that I learned that, despite being enchanted by them, I really didn't want to own horses. Given all the things that can go wrong, I had no doubt that I'd wind up with a dead horse in short order and a guilty conscience on top of that.

Back in my car, I took a minute to think about my next move. It was getting on toward lunch time, but that was still too soon to expect DNA results from Denver. Arresting Stick based only on bloody knuckles and hearsay testimony from a reluctant witness seemed premature. But Parada's death would likely be all over the mid-day news on Denver TV, and that could put a scare into him, even if the cause were reported to be fire-related. On balance, it seemed best to wait. I knew where he lived and where he worked, after all.

I decided that catching the noon news was a priority for me, because there would undoubtedly be some video of Janelle's press conference. I wanted to see how the story was being spun on the Denver stations. The Long Branch, the restaurant where Angela and I had met with Wendy Wallenstein, had televisions, I remembered.

I arrived early enough to beat the local lunch crowd and so was able to get a table to watch the news on a TV at the back of the main room. Angela was due to call at noon or thereabouts, and I needed to check in with Fran and report the condition of Mr. Murcheson's knuckles. I remembered how much Wendy had liked her soup, once she'd gotten started, so I ordered that.

The soup arrived, Angela called, and the TV news report about the news conference came on all at once, so I was busy there for a minute. Rather than put Angela off, I gave her a blow-by-blow of the news story, in which Janelle reported that the sole survivor of the fire, who had driven away from the scene in a Forest Service truck that was later recovered, had been found injured a short distance away and had subsequently died from head injuries apparently suffered at the fire scene. I was certain that Janelle had her hands full of questions after that statement—any reporter with even half a brain would be all over the truck business—but the news report cut back to the talking head. There was no mention of a cover-up, just that the investigation was proceeding.

Angela was as relieved as I was by the spin of the news report, and she had news of her own. The housecleaning agency had been most cooperative, and Angela had managed to talk with a Northern New Mexico couple who was on staff. I asked and found that it was not the same people who had cleaned the house Hal and I had stayed in.

They told Angela that the intra-Hispanic bad blood was troubling to everyone but that no one knew how to put an end to it. There were cultural issues between people from Mexico and from Central America that they didn't fully understand, and everyone from south of the border was hugely jealous of the Norteños' US citizenship. The bad blood extended throughout the Hispanic community and even included the children.

They also provided Angela with a helpful list of the places the various groups liked to congregate for social purposes, and, based on Miguel Parada's driver's license, she was going to see if the Mexican community could help with the identification of the victims of the fire.

Once I assimilated all this and ate my soup, I called Fran.

"I saw part of Janelle's press conference, just a little bit, her statement, and I thought she came across well." I saw my server emerge from the kitchen and waved at her.

“Better than me, that’s for sure. I was there, at the back of the room, and she handled the questions like a real pro, too.” He sounded relieved.

“It must have worked, because there was no particular spin on the story that I could pick up. Nothing like that Fox business yesterday.” I pointed at pecan pie and coffee on the menu, and she nodded.

I filled Fran in about Angela’s progress and reported the state of Murcheson’s hands, which elicited a low whistle.

“And the guy died, from head injuries according to the hospital. I’d say that Stick’s in serious trouble.”

“Have you heard from George about the DNA?” I suspected it was still too soon, but asking seemed like the thing to do.

Fran sighed. “No, but he said it ought to be ready sometime this afternoon. I’m also putting the autopsy on high priority. Do you think that Stick has any inkling about what’s going on?”

“Not that I could tell. I used a cover story—horses and horse feed—and that seemed to persuade him I was a real customer.” The coffee arrived, and I took a sip. “It didn’t seem like I had a good enough reason to arrest him on the spot.”

“Probably not. But if we get a DNA match, we’ll get a warrant in a flash. I’ll send my biggest deputy and have him take a Taser, no, two.” Fran chuckled. “Stick’s a big boy, isn’t he?”

“And he seemed nice, all in all. But carrying that much weight around isn’t going to let him live very long, even in prison.” The pie arrived, so I dug in.

“Will I see you back here soon? Janelle wants to get together to go over her, ah, performance. She’s always wanting to improve.”

“I’ll head back right after I finish lunch. I’m in Granby, so it shouldn’t be more than a few minutes.”

My server saw that I was finished with the pie and held up her order book, so I nodded. The check arrived, and I paid in cash with a big tip—the cost of living in eastern Grand County was far outpacing service industry wages, and I always tried to help a little.

There were restrooms in a back hallway, I noticed, so I went in to wash up. But as I came out and turned toward the main room, a large hand was clamped over my mouth from behind and an arm wrapped itself around my torso.

I struggled and tried a couple of the standard tricks—a heel kick to the groin, which didn’t connect with anything, a stomp on an instep, which did but to no effect—whoever had hold of me was very big and very strong. Before I knew what had happened, really, I was dragged out a back door at the end of the hallway, where a large, bright red dually pickup truck was sitting, diesel engine idling.

Then the lights went out.

\* \* \*

**Ten**

Fran Schmidt's county, spread across an area of Colorado's high country almost the size of the state of Delaware, was a law-enforcement challenge. Most of the action and money was east of Hot Sulphur Springs, the county seat, because the Fraser and upper Colorado River valleys contained the ski areas, the lakes, the western entrance to Rocky Mountain National Park, and nearly all of the new development. To the west was more the traditional western economy based on ranching, mining, and timber. So the sheriff's department dealt with drugs and similar big-city problems over half of its jurisdiction and cut fences, trespassing, and other such rural issues over the other half.

When the Colorado Bureau of Investigation had finally granted his request for a presence in the county the previous winter and Annette Trieri had turned up, he really didn't know what to expect. But it was working out for everyone. Now that she had a deputy, a Spanish-speaking one at that, Fran was optimistic about the future.

Although he had an election coming up in the fall, he really hadn't given it much thought. Depending on the timing of the resolution of this Valley of Death case, he could either be the hero or the goat, he knew, and there was any number of unpredictable things that could sway voters at the last minute. But overall he was confident that his approach to law enforcement worked for Grand County and that the voters would recognize this with another term for his leadership.

His Thursday morning was busy, but the fact that he had such good people working for and with him helped a lot. Janelle Kennedy's outstanding job at the morning's press conference was but one example.

That reminded him: the issue of notification of kin was still hanging out there. Janelle had dodged the questions about the victim's identity using the standard excuse that the family hadn't been notified yet. But because they had Parada's driver's license, they had information available to do just that. Except the family was in Monterrey Mexico, and a simple phone call didn't seem appropriate. Maybe, Fran thought, there's a Mexican consulate in Denver.

It turned out to be easy to find, and, when he called, he was greeted in Spanish by an automated answering voice followed by a "For English press 2" instruction. Grateful for the choice, he did.

This time it was a real person. "Good morning, Consulate of the Republic of Mexico."

It took some explaining, but finally he was connected to someone with the right credentials to be helpful. But the situation was still confusing.

"I'm afraid I don't quite understand, Sheriff Schmidt. You say that this Miguel Parada has a Cuban passport?"

"Yes, but he has a Mexican driver's license with a Monterrey address, and pictures of family. So I'm assuming that he lives with family in Monterrey. They should be notified, and that's where your office comes in. I think. I mean, it seems better if your office handles this notification than if our State Department does, or if I just call down there, you see?" Fran was resolved to be a patient as necessary to get the job done.

"I think so, but shouldn't you also contact the Cuban embassy? Oh, wait, maybe there isn't one. Well, there's some kind of Cuban diplomatic office somewhere, isn't there?"

"Candidly, I'm not at all concerned about the Cuban connection. I'm concerned about this poor guy's family. They should be told about this in some official way." There's also the issue of claiming the body and so on, Fran thought. The next bridge to cross.

"Yes, of course, you're right. Hmm. I'll have to see what to do. Is there a cause of death we can provide?"

Fran hesitated. “Well, the hospital believes it to be a head injury, but the official autopsy will be later today. We’ll know more then. Now, I don’t know if you have followed the local news recently, but Señor Parada’s death is part of a bigger issue. Have you heard about the fire we had here in Grand County, the fire that’s being called the Valley of Death?”

“Oh, yes, *El Valle del Muerte*, indeed. This Miguel Parada was connected with that?”

“Yes, he was found at the scene with a head injury. He stole a truck and disappeared, then was found with fatal injuries. But I bring this up because the victims in the *El Valle* may have been Mexican nationals. Everything was burned in the fire, so we haven’t been able to verify anything yet. We do have two vehicle identification numbers, from the burned frames of trucks. We haven’t been able to locate those numbers on any US databases. Perhaps it would be worthwhile to check in Mexico?” Fran was hopeful that such things existed.

“I see. If he lived in Monterrey, it’s possible that he was there with others from the same region. If you can fax me the numbers, I can have them checked on.” The voice was troubled, Fran could tell.

Relieved, Fran made a note of the fax number he heard. “Thank you, that will be most helpful. I’ll also fax you the documentation we found on Señor Parada’s body. Perhaps that will also help.”

“It will, thank you very much. I’ll be getting back to you.”

Well, Fran thought, that was pretty easy. This next one probably won’t be. He dug out an list of obscure emergency telephone numbers he had assembled when he was new to the job.

“US Department of State. How can I direct your call?”

“This is Sheriff Fran Schmidt, Grand County Colorado. I need to speak with James T. Green, please.” As he waited, Fran hoped that Green was still in his old job, because he didn’t know who else to ask for.

“Jim Green here. What can I do for you, Sheriff Schmidt?”

“Mr. Green, I have a dead Cuban national on my hands. We haven’t yet determined if it’s an accidental death or a homicide, and there are various complications that you probably aren’t interested in. For one thing, this person, a Miguel Parada, was carrying a Cuban passport, but he also had a Mexican driver’s license and family pictures. It appears he emigrated to Mexico but kept his Cuban citizenship. As far as we can tell, he was in this country illegally, probably with a group of guest workers from Mexico.” Fran wondered what kind of reaction that would elicit.”

“You don’t know if it’s an accidental death or a homicide. Hmm. Do you know cause of death?” Green had the cautious tone of a second- or third-generation bureaucrat.

“The autopsy is later today, but the preliminary indication is a head injury. He was the only survivor of a group of people who perished in a forest fire. It appears he hit his head on a rock. But the autopsy will provide an official determination.” Fran heard the clicking of a computer keyboard in the background.

“Well, I don’t find any Miguel Parada on any of my watch lists, so that simplifies matters. Have you informed anyone else?” It sounded to Fran as if the tone was asking if he’d started an international incident.

“The Mexican Consulate in Denver, to get the family notification process started. Should I call whatever offices Cuba maintains in the US? Is there an embassy?”

“No, but there are offices. But, you know, I think the best approach to this is to treat the guy as if he’s Mexican, at least unless the Mexican government bows out. If he’s got family there, they’ll want

the body, probably, and if they get it then it's out of our hair completely. The Mexicans can deal with Cuba." Green sounded pleased with himself.

It felt to Fran like passing the buck, but he sure didn't want to deal with the Cuban government, and he completely understood why Green wouldn't want to either.

Talk about starting an international incident.

\* \* \*

It was getting on toward lunch time, and Fran was wondering what Mary had made him. Last night's dinner didn't have leftovers, he remembered, so it would be a sandwich of some kind. But just as he was about to fetch it from the refrigerator in the copy room, the phone rang. Annette informed him that she had surreptitiously interviewed Stick Murcheson and observed lesions on the backs of his hands. With Parada dead, Stick was in deep. If the DNA results from Denver implicated him further, it would be time for an arrest warrant.

That meant that it was time to call Simon Murcheson, Sr. He and Fran weren't on the best of terms, but Fran depended on Murcheson's good will to keep his department functional, given that one of Murcheson's county commissioner roles was budget oversight of the sheriff's office. But this wasn't a case of sucking up to a politician, because Murcheson, Sr. had lost his Junior to the black widow killer. Having his remaining son in trouble with the law the way Stick was would break his heart. Fran empathized and wanted to deliver the bad news personally.

Fran knew that it would be better to do this face-to-face, but Annette was due soon and Murcheson lived on a ranch near Kremmling. So it was going to have to be a phone call. But his stomach reminded Fran that lunch was waiting.

He reached Murcheson after downing a wonderful home-made meatloaf sandwich. The connection sounded like a cell phone near the edge of its coverage, and there was the sound of lowing cattle and the creak of leather in the background. Simon, Fran thought, is moving his herd.

"Simon? Fran Schmidt. Sounds like you're busy."

"I can move cattle in my sleep, sheriff. What can I do for you?"

"Well, I'm afraid I've got some bad news about Randall." Fran knew that Stick's parents never did like his nickname. "I'm not sure just how bad yet, but it'll be at least a little bad. I thought I ought to let you know before it all comes to a head."

Fran listened patiently to a string of expletives, some aimed at him, some at Stick, some at the cattle or the world in general, it was hard to tell. When Murcheson wound down, Fran explained the situation and made sure that Murcheson understood the gravity of the worst case scenario.

"It's all going to depend on the autopsy results, Simon, and that's in progress now. If the cause of death is the head injuries from the beating, well, then it's homicide. I don't think there would be a case for murder one, but any kind of homicide charge is serious, as you know." Fran held his breath, waiting for the explosion.

But Murcheson was surprisingly calm. Sad, even. "Ah, Jesus, Fran. You think you raise your kids right and then something like this happens. I guess all I can do is hope for a different cause of death. What then? Will there still be an assault charge? Sounds like the evidence is circumstantial, and the victim won't be able to testify."

“Not my call, Simon. I’m thinking we’re probably going to have to bring him in, though. I’ll make sure you know when we do that and keep you informed about the bail situation and so on. That’s the best I can do, I’m afraid.” Fran hoped it would be good enough.

“I understand, Fran, and I appreciate it. And thanks for the call. I think I’ll have to throw my phone in the lake so I don’t call A.D. and try to influence him.” Murcheson’s reference to A.D. Sonos, the district attorney, served as a reminder to Fran that other forces would be at work in the resolution of the case.

Annette had still not arrived. Well, Fran thought, she must have gotten tied up somewhere. Maybe I can knock off some of this damned email.

Like everyone else in the world, Fran was the lucky recipient of more email spam than real messages. Unlike those more fortunate, he didn’t have spam filtering on his official email box. It was available, and the county information management people urged him to use it. But he didn’t trust it to deliver everything he wanted delivered. As sheriff, he received some strange emails from some truly odd addresses, and every time he’d tried to use the filter, some important messages got filtered out.

Of course, that meant simply that the spam filter for Sheriff Fran Schmidt’s mailbox was Sheriff Fran Schmidt himself. So much of it was obviously bogus that he could simply trash it without reading it. And, because he’d discovered that the spam ran in cycles and that there were periodic floods associated with new tricks invented by the spammers, he was able to learn to separate the wheat from the chaff quickly.

But if there were this much chaff on my farm, he thought, I’d go into another line of work.

And, like everyone, he occasionally ran across something that was legally questionable, something that, as sheriff, he would forward to the appropriate place. Kiddie porn solicitations, for example—he sent them to an FBI address set up for that purpose and kept his fingers crossed that the feds would catch the slimy bastards.

Wading through the day’s haul, he ran across the usual questions about the size of his manhood and suggestions about how to improve matters, a range of hot stock tips, and a variety of innocent, even authentic, sounding subject headings that were really solicitations for one of those two categories or maybe new girlie pictures. He had figured out the trick of highlighting groups of mail headers without opening the messages, so he was quite adept at trashing large numbers of bogus messages quickly. And trash he did, with vehemence, until a subject line reading “The Deadly Valley” stopped him cold.

It was dated early that morning, and the sender had a *hotmail.com* address, meaning it was probably sent anonymously and could be anyone, anywhere. Fran moved it to his “Pending” folder and continued his culling process.

After trashing about 50 messages a good spam filter would have caught and dealing with 5 authentic messages, Fran returned to his “Pending” folder. The only message was the one he’d put there earlier. It had no attachments indicated, and Fran was confident of his anti-virus and -spyware software, so he opened it.

*Sheriff— The whole thing was a tragic accident. Those poor people were simply in the wrong place at the wrong time. Nothing like that was ever meant to happen. I’m so sorry. Mortified.*

It took Fran a minute to decide that “Mortified” was the *nom de plume* of the sender. The mail address was *razzmatazz975468@hotmail.com*, which sounded as if might be a one-use temporary address, but Fran decided a response was worth a try.

*If you're truly “Mortified”, helping us clear this case will make you feel better. We are most interested in the identities of the victims. A good explanation of the behavior of the fire would also be welcome. Fran Schmidt.*

*PS: Only I open my email, so you can consider this correspondence to be confidential.*

He pushed the “Send” button and held his breath for a few seconds. When the system didn’t send an immediate “undeliverable” message, he felt better. Maybe, he thought, this will lead somewhere. Lord knows we need all the help we can get.

\* \* \*

## Eleven

I awoke with a headache, to find myself lying on my side with my hands tied in front of me and a burlap bag over my head and upper torso. It smelled of feed store. I was stretched out enough that I seemed to be on the back seat of that red pickup truck, facing the seat back, which I could feel my face pressing against. The truck was on the move, purring along a paved roadway, it felt and sounded like.

*Deja vu* washed over me, quickly resolving to the other time this sort of thing had happened. At least those guys, I thought, didn’t knock me out, and the bag they used was velvet. Or maybe soft wool flannel of some kind, I couldn’t remember. Not nearly so itchy.

This time my head hurt, but I knew I had to ignore that. Of the two courses of action I could think of, passivity and trying to take charge somehow, taking charge, or at least trying to, seemed worth a shot. I took a couple of breaths and cleared my throat to make way for my Level Three Command Voice, as Hal likes to call it.

“Mr. Murcheson! Do you have any idea at all how much trouble you’ve made for yourself?”

I waited for what seemed like a full minute but got no response. Finally, I decided I had his attention, probably, and toned it down a little.

“I’m going to assume you can hear me, that you don’t have earphones on or something like that. And I’ll also assume that you’re aware that what you’ve done here constitutes kidnapping. Is this something you do to all your customers, or what?”

That got his attention for sure, because there came a snort from behind me. “Jesus, lady, how stupid do you think I am, anyway? I was sitting right behind you in the Long Branch, and I heard everything you said on the phone. Jesus.”

That, at least, explained a lot for me. “Then you know that you’ve kidnapped a police officer, a state police officer, as it happens. Like I said, do you have any idea of how much trouble you’ve made for yourself?”

“Lady, you’re my ticket *out* of trouble. I heard that TV report, about how that greaser I stomped died. And you were in the feed store checking me out before. Well, you may think I’m just a big, dumb ex-jock or something, but surprise, surprise. Look who’s in charge now. That big dumb ex-jock. And like I said, you’re my ticket out of trouble. It so happens I know who you are, from the black widow case. And the sheriff ain’t going to be letting a Colorado Bureau of Investigation VIP get herself hurt, no way.”

I eased my Voice back a little more, trying to sound just a little conciliatory yet still rock-solid firm.

“Mr. Murcheson. Stick. Listen carefully. Sheriff Schmidt will have no say in the matter. We have unshakeable policy not to meet kidnapper demands, any demands of any kind, in situations such as this. When you call, or write or whatever you do, and try to make a deal, you’ll get no cooperation whatsoever. That’s the way we work these things. No cooperation whatsoever. The only way out of this for you is to try to minimize your legal exposure. And to do that you need to untie me, right now, no more screwing around, and drive us both to Hot Sulphur. The longer this goes on like this, the worse it’s going to be for you. I hope you understand me.”

“Don’t bullshit me. Murder is way worse than kidnapping. And I don’t believe you. They’ll negotiate. You’re too important for them not to.” Did I hear just a hint of uncertainty in his voice?

“So far, we can’t prove murder, Stick. We can prove, circumstantially and with hearsay testimony, that you beat up that poor guy, yeah. And he died. But he did indeed have a head injury yesterday, long before you picked him up. For all we know, he may have died from that. Or from delayed effects of exposure. He was unconscious and lying in a mountain stream most of the night. So we can’t prove murder. But we sure as hell can prove kidnapping, and like I said, the only way you can keep this from spinning completely out of control is to untie me and drive us to Hot Sulphur. You do that and I’ll testify to your good-faith actions. That’ll help you. Anything else, though, will only hurt you more.”

I felt and heard the truck slowing down, and then it veered to what seemed to be the left. I could tell at once that we’d turned onto a gravel road, and it seemed to be climbing. A little gamble couldn’t hurt, I thought.

“Oh, Stick, *really*? Are you taking me to your place? C’mon, man. Now it’s my turn. How stupid do you think the sheriff is, anyway? This is the first place he’ll look.”

“Shut up! I’ve gotta think.” I realized he had a Command Voice of his own.

“Well, while you’re thinking just remember, we can’t prove murder, as far as I know. That means this kidnapping is by far the worst thing you’ve done, and, like I said, I can help with that.”

“Shut up, dammit!”

We bumped along the gravel road for a while and then seemed to come over a crest, for all of a sudden we were descending. I felt myself slipping off the seat little by little. And the road worsened, so that the big truck was pitching about as it eased down the hill.

“My daddy’s a county commissioner, you know. He’ll help me out of this.” Now the uncertainty in his voice was obvious.

“Not with kidnapping he won’t. Maybe with the assault he could, though. I don’t really know how these things work in Grand County.” That, of course, was a bald-faced lie, but I figured he wouldn’t know that. “Stick, if you want to help yourself, you need to untie me and drive us to Hot Sulphur.”

“Well, what about if I take you back to the Long Branch and we just pretend this never happened?” Now he was in the pleading mode, almost. My original attempt to take charge had finally worked!

“Hmm.” Playing along was the obvious course of action, but I knew it couldn’t be too easy. “Well, that might work. But I’m not certain, because maybe someone saw you putting me in the truck and called it in. Or maybe the sheriff’s office is looking for me and has already found my car—they knew where I was having lunch. What I mean is, you and I could pretend it never happened, but it might not be in our control any more. That’s why I think you should untie me and drive us to Hot Sulphur Springs, to the sheriff’s office.”

He didn’t say anything more, but shortly the truck lurched to a stop and then jockeyed back and forth to reverse direction. I could tell because at the end of the jockeying I was sliding into the seatback again, meaning we were heading back uphill.

But instead of climbing the hill, the truck stopped and the engine was turned off. I heard a door slam.

\* \* \*

Lying there inside the burlap bag, it was difficult for me to tell how much time passed. It couldn’t have been too long, but it sure seemed like an eternity. Eventually, the door opened and the truck’s suspension shifted with new weight. The door slammed, the engine started, and up the bumpy hill we went. After a while, we were over the crest and headed back down.

Finally, after we were back on pavement again, he spoke. “OK. So. We’ve gotta make a deal. You’ve gotta promise me you’ll forget this ever happened, right?” His pleading had an undercurrent of resolution this time.

“Stick, weren’t you listening? I can’t promise that this will work. The sheriff may already be looking for me.”

“I’ll take my chances on that one. We’re heading back to the Long Branch, and you’ve gotta promise me. You said you would.”

Actually, I hadn’t, but I wasn’t going to push it. “Stick, I can promise I’ll just forget the whole thing, sure, but I can’t promise you’ll get off scot-free. I don’t make promises I can’t keep. It isn’t fair.”

“Well, like I said, I’ll take my chances with others. I just want your promise. Do you?”

“I said ‘sure’ didn’t I? And I meant it.” I summoned up an authentic-sounding sneeze. “So now that you’re going to let me go and we’re going to forget this happened, do you suppose you could take this bag off my head? I think I’m having an allergic reaction or something.”

But instead of slowing, I felt the truck speed up.

“It won’t be too long. We’re pretty close,” was all he said.

I could tell when we reached Granby because of the stop sign and subsequent left turn, and then after a little while we turned left again, into the Long Branch, I guessed, because the truck came to a stop on gravel.

“OK, now, you’re gonna forget this ever happened, right? And here’s what’s gonna happen now. I’m gonna put your shoulder bag, with the piece in it and keys and everything, on the ground next to your car. The Outback, right?” He was talking fast, and I treated his questions as rhetorical. “Then I’m gonna drive over to the other side of the parking lot and untie your hands and set you on the ground on your feet, and I’m outta here. You can take that bag off and walk back to your car, but I won’t be around by then.”

“Where are you going?”

“None of your damned business, lady. And don’t come looking for me, because you promised.”

A door opened and slammed again, and we moved a little way before coming to a stop. The same door, it sounded like, opened, and then another. I felt myself being turned on my back, and I resisted the urge to kick out. Then I was lifted bodily and set on my feet on the gravel, and my hands were untied. I guess I should have been grateful that he didn’t try to grope me in the process.

“OK, I’m leaving. You can take that bag off. Uh, it’s sort of tied with a drawstring in the front.”

As I fumbled with the string, an awkward thing to do because the bottom of the bag was drawn tight around my elbows, I heard the truck door slam and the tires spin on the gravel as it roared away. I couldn’t tell for sure, but it sounded like it turned left, southbound, headed for Fraser, Winter Park, and eventually Denver.

I got the bag off my head and looked around, squinting in the sunlight. No one was there, though, so Stick had managed to let me off with no witnesses. And because he grabbed me in the back hallway and put me in the truck behind the building, there were probably no witnesses then, either.

Maybe, I thought, this bag with “Granby Grain” stenciled on it will count for something.

True to his word, Stick had left my shoulder bag, with everything in it including my Glock, sitting next to my car. I fished out the keys and my cell phone, and hit the right speed-dial keys.

“Fran? Annette.”

“I thought you were coming right back here. What’s going on?” He sounded half worried, half annoyed.

“I’m on my way right now. I had a little, ah, detour. I’ll tell you about it when I get there. Meanwhile, I think that Stick Murcheson is in his red truck headed southbound on US 40. If you have anyone south of Granby, they should stop him, arrest him for assault and kidnapping, and bring him in. I don’t know if he’s armed, but he’s so damned big he’s for sure dangerous.”

By then I was behind the wheel and moving. I turned right out of the parking lot, making my own little spray of gravel, from all four wheels. I fear I broke any number of speed laws getting back to Hot Sulphur Springs.

When I arrived, I went straight to Fran’s office. He looked up, surprised to see me so soon, I guess.

“Well, you look a sight. Whatever happened? I’m guessing he kidnapped you, based on that phone call.” His surprise changed quickly to worry.

“Indeed he did. He overheard our conversation before and decided to use me to bargain his way out of the murder charge.” I realized I had dust on my face and grabbed a tissue to wipe it off.

“That’s not going to do it, Annette. What did he do, throw you in a feed bin or something? That looks like rabbit chow in your hair.” Now he was smiling.

“He put a sack over my head. This one.” And I plopped the burlap bag on his desk. “Be right back.”

Ten minutes later, I was feeling much better, pretty clean even, with no more rabbit chow in my hair. I returned to Fran’s office and fell into a chair.

“Much better. And I bet you feel better, too. And this should help: we got him, up by Snow Mountain Ranch. He didn’t even make it to Tabernash. Looks like he was planning on a long trip, as he had a big pile of clothes and some other stuff in the passenger seat.” Fran shook his head. “I kind of feel sorry for the guy. According to your interview notes, Wendy said he just got a promotion. My deputy says it’s a brand new truck. He was on something of a roll, and now he’s crashed and burned. How’d you persuade him to let you go?”

I tried to relax a little. “Well, first I told him that we don’t have proof of murder. And that’s really true, isn’t it? Even if the autopsy shows that the cause of death was the head injuries, Parada had a lump on his head from something that happened up at the fire scene. A good lawyer would be all over that. Anyway, that persuaded him that he didn’t need me as a bargaining chip. And then I pretended to promise him that he could drop me off at my car and I’d just forget the whole thing. So he did. Even gave my Glock back. And you’re right. It’s easy to feel sorry for him.”

“That explains it.” He nodded. “My deputy, Roger Traubman, was saying that Stick kept repeating ‘but she promised’ over and over.”

“But I really didn’t. Too bad there’s no transcript. Anyway, I’ll swear out a complaint, and that way we’ll have him in custody pending the autopsy. How’s George doing?”

“Last I heard, he was just getting started. He should be done in a couple of hours, I guess. And maybe that blankety-blank DNA result will come in. Do you really think Stick can avoid a murder charge if there’s a match?” Fran looked puzzled.

“I think it’ll all depend on the head injuries. The first one was in the back, as I recall, like Parada hit his head on a rock. The others from the beating are on the sides and in front. We’ll see what George says. But there’s certainly assault and battery, maybe assault with a deadly weapon if the knife turns up, and now assault on a police officer and kidnapping of a police officer. Stick’s in deep, deep shit, I’d say, even if his daddy is a county commissioner.” Suddenly I felt tired. “I’m headed for my office, I think.”

“Go home, Annette. You look beat. We can criticize Janelle’s acting tomorrow.”

“Right. That’s a better idea. See you tomorrow. Oh. Angela. She’s out doing interviews and is supposed to call me. I’ll be sure to let you know if anything comes up.”

I hurried through the complaint forms and left for home a little later. On the way, I decided to call Hal to see about dinner plans, but I only got his voice mail.

“... please leave a message, and I’ll get back to you as soon as I can. And in the meantime, I hope you’re having a great day.”

You owe me one for that, buddy, I thought.

\* \* \*

## Twelve

Despite his laid-back demeanor and outwardly casual approach to just about everything, George Neering was a classic workaholic. He spent far more time in his office and in the morgue than he did at home, making it a good thing he had never married. And when he wasn’t working on an active case, he was reading and studying the latest techniques and developments in his field as well as writing his own refinements up for publication. As a result, he had a surprisingly long list of technical articles to his name and had received several awards from his professional societies.

If his boss, the district attorney, and the local law enforcement establishment had any idea of how many big-city job offers, at what huge salaries, he had turned down, they would be embarrassed by their treatment of him. But he was happy in his little world of work and delighted to be living in Grand County.

He'd been delighted to be living in Grand County, in fact, ever since he'd arrived from the West Coast in a beat-up Porsche Speedster in the early '70s. He had used his freshly minted MD degree to get a job at the only clinic in the area and shopped for land. Where he got the money to purchase outright nearly two square miles on a mountainside southwest of Granby was something that he was always extremely vague about. Even back then that was quite a bit of cash.

In the intervening years, of course, the value of that land had skyrocketed. Around the turn of the century George had made a deal with an environmentally sensitive developer—an oxymoron, to be sure, but George had him checked out carefully—to turn one and a half of the square miles into an exclusive subdivision. It would include only as many lots as the land could reasonably carry and ownership of one of those lots came with restrictions and covenants designed to preserve as much of the native ecosystems as possible. George made millions and promptly got the old Speedster completely restored. Mostly, he drove a battered, fifteen-year-old Subaru wagon, but the Speedster came out when the weather was good.

He kept the other 300-plus acres for himself, living in a modest cabin at the end of the road that wound through the new subdivision onto his land. He used some of his money to hire local high-school students to build a log fence, made from lodge-pole pines he thinned from his land, around the property. When the bark-beetle invasion killed so many of the trees in Grand County forests, George's already thinned stands fared relatively well. Meanwhile, the fence didn't do much but allow him to post prominent "No Hunting" signs, because it was designed so that elk, deer, moose, and everything else in the woods could walk right through it.

His job at the clinic lasted had only as long as it took for something more interesting than fixing skiers' bunged-up knees came along, and eventually that led to the office of the medical examiner. When he was finally promoted to head that office, there were plenty of skeptics in county government, but his skills, dedication, and innovations had won everyone over. George had made himself truly indispensable.

But he still felt left out. His job, after all, was cleaning up the mess, in a sense. Bodies arrived from around the region—he was so good that other western Colorado counties used him, too—and he figured out what had happened. What he wanted was to be in on the action at an earlier stage.

That explained the glee with which he took on the task of obtaining the DNA analyses associated with the Miguel Parada assault and, eventually, death. It also explained why he had been nagging the lab in Denver for results, results, results!

The autopsy itself gave the people in Denver a respite from the nagging for a couple of hours, but as soon as he was finished, George called. Again. His persistent affability finally paid off. He wandered off, head nodding to the internal rhythm he carried around, to the sheriff's office.

George arrived just in time to overhear the end of a telephone conversation.

"Simon, I'm sorry. If he hadn't pulled this stunt, well, maybe this could all wind up OK. But, c'mon, even here in Grand County where we try to act like family, we can't have police officers' being kidnapped ... I don't know about the assault charge, maybe she'll drop that. But I'm going to insist on prosecuting the kidnapping charge. I've got to protect my officers ... No, I'm hard over on that one, sorry. I'll let you know when bail is set." Fran was staring at the telephone in disgust when George walked through the door.

George decided on the spot to pretend he hadn't heard. "Hey, there, Fran. Got some info for ya. Results I bet you've been waiting for."

It wasn't clear whether it was George's cheery disposition or the prospect of results, but Fran smiled. "I'm all ears, George. Results from you are good news, by definition."

George had to laugh. “Yeah, well, man, I sure wish everyone felt that way. Anyway, I got two things. First, the DNA all matches. Sample from the vic’s clothes matches the sample from perp’s shirt matches the vic’s blood sample, although that’s a bit more complicated. But they all match.”

“And, so you’ll know, Annette found that Stick Murcheson has lesions on the backs of his hands, as if he’d been in a fight. So that’s all consistent. What else?” Fran nodded.

“OK, well, second, the person whose body was delivered to my morgue by the hospital in Kremmling, identified as one Miguel Parada by documents found on him, died from head injuries. He also had a knife wound in his left side, just below the rib cage, but cause of death was the head injuries.”

George could tell that he had all of Fran’s attention, and he passed Fran several photographs before continuing.

“There were multiple head injuries, one to the back of the skull with some bone damage, and several to the facial area with extensive fractures. See that?” He pointed to a picture Fran was examining.

“These were consistent with a beating. The injury on the back of the skull, however, was consistent with blunt trauma. It’s in the third picture. I think I heard something about a fall up at that *Valle del Muerte* site. My determination of cause of death is clotting associated with that blunt trauma injury.” Pleased with his summary, George stopped.

“So you’re telling me this is an accidental death rather than a homicide with Stick Murcheson the suspect?” Fran wanted things crystal clear.

Unfortunately, George wasn’t able to oblige. “Well, now, sheriff, that’s an interesting question. See, we might ask if Mr. Parada would have suffered those clots if he’d been left to recover from the blunt trauma injury in peace. What I mean is, would he have died if Stick hadn’t beat the crap out of him?”

“You’re the ME, George. I’m just the dumb cop. What’s the answer?” Fran’s eyebrows were arched in the question.

“Figured you’d ask.” George was smiling. “Thing is, that’s a subjective judgment. Generally speaking, the worse a beating like that, the worse the effects on the body generally. This was a severe enough beating that it probably affected that other injury. So the answer is probably no, Mr. Parada might not have died.”

“Hmm. Well, if we’re going to persuade a jury of even manslaughter beyond a reasonable doubt, you’re going to have to make a stronger statement than that on the witness stand, and then you’re going to have to answer tough cross-examination questions unequivocally. From the way you’re being careful with me, it sounds as if you might have to waffle on the stand.”

George felt slightly offended. “Hey, man, remember. I’m the ME. I provide facts and educated opinion, and I label that opinion carefully. I’m not on anybody’s side up there, on the witness stand.”

“Right, right. I know, and I’m not suggesting otherwise. Moreover, you do a stellar job at what you do. I’m just thinking of this from the prosecution’s perspective. If you can’t testify unequivocally that Parada’s death was due to Stick’s actions, or, more precisely, the actions of whoever beat him up, then I’m not sure we have a case. No offense intended.”

George accepted the apology gracefully. “And none taken, man. We’re all working together on this, but there is a line between us, has to be. Say, y’know? I was tickled to get involved with the DNA analysis, to call in those favors and get it done fast for you guys, but maybe I crossed that line, huh? Hmm. I’m gonna have to think about that one, man.”

\* \* \*

Normally, George was not an especially introspective person. He probably wouldn't have given the line between providing forensic information to the district attorney's office and helping the investigating team much more thought, had it not been for a voice mail waiting on his office phone.

"George, this is Simon Murcheson. Listen, I have some official county business I need to talk with you about. It's, ah, getting on to three on Thursday afternoon. Hope you have the chance to return the call today, it's important. Thanks. Oh, and you'll need to call me on my cell phone." He left a number, which George dutifully wrote down.

Having overheard the last part of Fran's call with Murcheson a few minutes earlier, George had a pretty good idea of what the "official county business" was all about. A county commissioner doing damage control on behalf of his delinquent son, no doubt.

It was inevitable that politics would intrude into George's little world now and then. He usually dealt with it sticking to the facts and letting them speak for themselves. It was up to the sheriff's office and the district attorney to make value judgments about whom to charge with what and how to prosecute them—and that's where the politics came in.

But because he had crossed the line into the investigator's world, George knew that he would now have to deal with the associated politics.

And George also knew that this particular brand of politics would be particularly odious. Simon Murcheson was as conniving as they came, and it didn't help that George couldn't really sympathize with the plight of son Stick.

For over twenty years, George had been volunteering with the local school district in a variety of roles, one of which was as a referee for both boys and girls basketball. In all his years wearing stripes, he'd never seen a dirtier player than Stick Murcheson. The irony was that Stick had natural talent to go along with his size, and he didn't need to play dirty. But he did, throwing elbows and even punches, when he thought he could get away with it, and complaining excessively when he got caught and a foul was called on him.

To make matters worse, Stick's parents were always in the audience, and they always sided with their son to the point of abusing the officials on the court.

George considered blowing off returning the phone call, but he knew that Simon Murcheson was as tenacious as he was conniving. Sooner or later, they would be talking about the "official county business" that Simon had on his mind.

Oh, well, George thought, might as well make it sooner rather than later. He punched the cell-phone number into his desk set—but stopped before hitting the last digit. Maybe, he thought, I should have someone else here to hear what Simon has to say. A witness.

But who? Murcheson had his hooks into the DA's office and the sheriff's office as well. No one would be willing to take the risk of offending him. It couldn't be a county person, then. Of course! That CBI lady, or, because there were now two, either of them. He looked up Annette's office number on the county directory and called it.

"Angela Espinosa, CBI." Ah, the new one, George thought.

"Hey, Ms. Espinosa, how are ya? This is George Neering, the ME, we met this morning, remember?" George always asked this to be polite, but he actually took for granted that everyone remembered. They always did, it seemed. "Say, I wonder if you could do me a favor, if you're not in the

middle of something? I need to make a phone call that, well, I'd kind of like to have a witness to, if you know what I mean."

"Yes, Dr. Neering, I do remember. Well, let's see. First, when? I just walked in the door and need to make sure my field notes are in order. And, ah, can you tell me about the nature of the call? What I mean is, I believe it would be inappropriate unless it's official business." She came across as being quite formal. I'm gonna have to loosen her up, George thought.

"Oh, well, sometime before the end of the work day would be fine. I need to return a call to a county commissioner who said he called me about official business. But I'm thinking it may be about going easy on his son, the suspect in that assault case that's connected to the *Valle del Muerte* business, ya know? And I'd like someone to listen in on the conversation so it's not just my word against his. And because you're CBI, well, that gives you more objectivity than someone in my office or the sheriff's office, right?" George discovered he was actually nervous about this whole thing. "Does that all make sense?"

"It does, I guess. I'll ask at the front desk where to find your office and be there in a half hour." A no-nonsense one, that Angela Espinosa, thought George.

Half an hour later, right on time, she knocked on his door.

"Oh, hiya, thanks for coming over. This means a lot to me, I owe ya one. So, I've been thinking, and I think we should use two handsets instead of the speaker phone. OK?" George realized his nerves hadn't calmed down.

"That will be fine, Dr. Neering. I'll take notes, if that's all right."

"Oh, yeah, sure, that'll be fine. And, say, could you call me 'George'? Everyone does, and sometimes the 'Dr. Neering' thing just goes over my head, y'know?"

"And I'm 'Angela', George. Any time you're ready." She had positioned herself by an extension phone on the other side of the office from George's desk. He punched in all of the digits this time.

Murcheson answered after five rings. "Yeah?"

"Commission Murcheson? This is George Neering returning your call." George looked a question at Angela, and she nodded.

"Ah, yes, George. Thanks for calling so promptly. George, I've been paying close attention to the coverage of this fire business, all aspects of it, and we're certainly in the media spotlight. I'm wanting to make sure that everything is proceeding as quickly and as correctly as possible. How is your part of it going?" Murcheson seemed to be asking something without asking it, George thought.

"Well, commissioner, my part is moving right along. I finished the autopsy of the survivor of the fire, the person who died at the Kremmling hospital, and my full report should be ready tomorrow morning." George wondered if Murcheson was going to ask for an advance copy.

"Good, good. I'll be sure and have a look at it when it's ready for the public. I also understand that you have been running some tests for the sheriff?" Murcheson had finally showed his hand.

"DNA tests, right. All of their forensics people were tied up with the fire scene, so they asked me if I could help out. I know a lab in Denver that can sometimes do fast turn-around tests." George decided to be extremely careful about this one.

"Ah, I see. Helping because of the big work load. Makes sense. But I need to understand more about these DNA tests. What can you tell me, George?" Murcheson had slipped into an oily tone of voice.

“Well, see, they had blood samples, blood directly from the victim, the hospital took a sample, blood on the victim’s clothes, and blood on an article of clothing from someone else.” George wondered if Murcheson would go so far to ask.

“What someone else, George?” He did!

“I dunno, a suspect, I guess. Anyway, the results came back and I gave them to the sheriff this afternoon, the written report. I was busy with the autopsy, though, and didn’t really study the report.” George saw Angela taking notes.

“I see. Well, thanks for all your help, George. Gotta go.” Murcheson disconnected.

George looked at Angela. “That went better than I feared. Sorry to drag you over here.”

“Glad you did, George. I’m the new person, remember?” She smiled. “I need to learn whom to watch out for. I think he made my list.”

George laughed. “Like I said, I like it when new people are smart.”

\* \* \*

## Thirteen

Even though I’d cleaned up a bit at the office, it was a relief to get home and stand under the shower for a long time. Washing the remnants of the rabbit chow, or whatever it really was, down the drain did wonders for my disposition.

When I was out, dried, and dressed, I noticed that the message light on the phone was on.

“Hi, sweetie, they said you’d gone home but you must not be there yet. Anyway, we’re making great progress on getting these simulations going and I’m wanting to stay in the middle of it. I haven’t had this much fun at work in years. How about giving me a call on my cell phone and we can figure out this evening. ’Bye.” Hal *was* excited, I could tell.

I called him right back. “Hi, there. Sounds like you’re making progress.”

“Definitely am. Or we are, I should say. It’s just great to have a team of experts all working together on a problem. Want a progress report?”

“If it’s not too technical.” I hoped he could dumb it down to my level.

“OK. In order to simulate the fire, we have to provide the fire model with detailed weather information, what the background weather is doing, right? The fire makes its own weather, locally, but it’s strongly affected by the background weather. Anyway, we’ve got that all ready to rock. And the fire model itself, it’s a computer code we got from a guy at Los Alamos, and he’s coming up tomorrow to work with us on this, the fire model is working on our computers, actually they’re UNELECO computers that Chuck has given us access to. That doesn’t sound like much, but it’s really a big deal. With me so far?” He paused.

“I think so. What’s next?”

“We just started a cold run with the fire model, meaning that we’re running it with just the background weather, no fire. Assuming that works, we’ll light a fire using our best first guess of what the fuel situation was like up there. Maybe later this evening.” He paused again, but then continued.

“Anyway, I hate to abandon you, but I really want to stay with this for a while. Can you manage dinner?”

“Of course, but, more to the point, what about you?” I had visions of him and his staff forgetting to eat in all their excitement.

“Oh, we’ll figure out something. I don’t know what, but something.” He sounded distracted.

“Well, how about if I show up with a bunch of pizzas? Would that help? Then we could at least eat together.”

“*Great* idea. Um, let’s see, there are at least a dozen people here. Bring lots, OK?” Now he sounded hungry.

I called the pizza place in Fraser that we’d adopted as our own and placed an order so large they didn’t believe me at first. An hour later, I pulled into the parking lot of the MPARC headquarters, the refurbished condo building. There were two piles of pizza boxes in the back of my car, and inside it smelled like the restaurant had, only more so.

I was greeted by the MPARC staff like a conquering hero, but that lasted only a minute or so. Before I knew it, everyone was back at their computers, munching pizza and probably getting grease all over their keyboards.

Hal was in his office, deep in a discussion with Mary Schmidt, Fran’s wife. I think he smelled me coming, with his favorite combination of toppings, essentially an everything-but-the-kitchen-sink pizza.

“Annette! Like I said, this pizza thing was a great idea. Mary, there are probably more out there if you don’t like all these toppings.” He cleared a space on a work table and took a roll of paper towels out of a drawer. “There are soft drinks and water in that little refrigerator over there.”

Mary, after looking at Hal’s pile-o’-toppings, wandered off in search of a slice of something simpler, and I walked up behind Hal and tapped him on the shoulder.

“Hmm?” He turned half-way around.

“Hug time.” I said.

A while later, he leaned back and looked at me. “Hard day?”

I told him to start eating, then I told him about my day.

When I was finished, he nodded. “Yep. Hard day. Wow. You’re sure the bump on the head is no big deal?”

“It’s sore, but I think I blacked out briefly more from lack of oxygen than the bump. He has hands the size of baseball mitts, and my mouth and nose were covered while I was struggling.” I took a bite of the everything pizza and chewed for a bit. “Anyway, it’s over and I’m fine. And to tell the truth, this pizza idea of mine was so I wouldn’t have to be alone this evening.”

He reached over, patted my hand, and smiled. “Well, since you’re here, we’ll just put you to work. Mary’s working on a press release. I hired her as a PR consultant for this thing. But you can make sure that, first, it’s accurate, and, second, it’s not going to step on official toes.”

“What I should really do is call Angela. She was out on her own today, and I want to make sure she’s home safe.”

“I think Sandy just talked with her a few minutes ago. Ask him. Last I saw him, he was out in the big room on the other side of the lobby.” He started on another slice.

“Then she must be OK. I think I’ll stay here with you.” I’m normally not the clinging type, but that evening I just needed to be close to him.

\* \* \*

Friday morning was late starter for me. At the institute the night before, Hal kept coming up with reasons for not leaving, and I didn’t want to go home alone, so by the time we finally left and got home, it was close to two in the morning. I took him back to MPARC at ten and went inside with him to see what updates there might be.

The level of activity was more subdued than it had been the previous evening, but everyone was still busy. Sandy was there, sleeves rolled up, talking with a small group of the staff. When he saw us arrive, he broke off and came over to talk with us.

“Well, we’ve got fire, we’ve got winds, we’ve got everything except temperatures hot enough to cause the observed damage. You could roast marshmallows with what we’re simulating, but not much more. Fuel’s too sparse, air’s too thin.” He shrugged.

“And you’ve packed in the fuels, dried them out, and so on?” Hal was instantly engaged.

“Yep, and even though that sends the temperatures up, it’s still not enough, not with any realistic amount of fuel. One thing we did find, though: to reproduce the burn pattern requires a linear ignition source, sort of along the bank of the creek. That campfire couldn’t have caused the wildfire all by itself.” Sandy shrugged again. “I suppose that means some kind of accelerant, like someone poured gasoline along a line by the creek and lit it.”

Hal asked, “Did you put the trucks with gasoline in?”

“That’s running now. And it will certainly change things, make it a lot hotter. But a simple energetics calculation suggests that it still won’t be hot enough to do the damage that was observed. We’ll see.” Sandy smiled this time instead of shrugging. “Hope you both got some sleep. This could drag on.”

As Hal and Sandy launched into a discussion of how to improve the turn-around on the computer graphics renditions of the results—I interpreted this to mean animated cartoons—I took my leave and headed north and then west to Hot Sulphur Springs.

Angela’s Forester, I saw, was already in the parking lot. She had come by MPARC the evening before in time for the last of the pizza, and she and Sandy were still there when Hal and I left. Yet she beat me to the office. The virtues, I guess, of being young.

I went directly to Fran’s office to check in with him and to update him on the progress, or lack of it, at MPARC. He was working at his computer and waved me toward a chair, handing me a sheaf of paper in the process.

On top was a strange email message, apologizing for the Valley of Death fire and asserting it to have been an accident. As I was finishing it, Fran’s printer hummed.

“I’m actually having an exchange of correspondence with this yahoo.” He reached for the printer and handed another sheet of paper my way. It included the message I’d just read, a response from Fran asking for more information, and a response to that.

“Just so you’ll not think I’m a big, fat liar, I consider you to be in my circle of confidants.” He smiled impishly.

The message was cryptic at best.

*Sheriff – I fear that nothing will ever make me feel better about the tragedy in the Valley of Death. It will haunt me for all my days. The innocent victims, at least, probably did not suffer as much as it might seem. No one knows who they might have been or what they were doing there. The valley was supposed to be empty.*

*As to the behavior of the fire, I doubt that the MPARC people will be able to simulate it properly, although I dare not say why. I can say it was not at all natural. Again, I'm so sorry. Mortified.*

“Hmm. Dated this morning. I haven't seen the papers, Fran. Is the MPARC press release there?”

“Yep. Both Denver papers picked it up. That explains the MPARC comment in that message, I guess. Also the reference to the “Valley of Death.” The papers are having a field day with that one. I'm wondering about two things in the message: the business about the victims' not suffering and the fire's not being natural. Do you suppose there might be a connection?” He tilted his chair back and put his boots on his desk.

“How could they not have suffered? They burned to death.” It didn't make sense to me.

“Maybe they didn't burn to death, at least not all of them. Remember how it looked like some were lying down, asleep? What if they were already dead. Or unconscious?”

I remembered the positions of the ash-skeletons all too well. “Angela and I speculated on this when we were up there. But what are you saying?”

“I'm not sure. But what if something killed them first, asphyxiated them, maybe, and that same stuff caused the unnatural fire?” He moved his feet and knocked a pile of papers onto the floor.

“Like some kind of gas or something. I get it. So, somehow, this Mortified person and, presumably, his pals, they release gas into the valley, where they didn't know any people were, and it kills everyone, or almost, and then explodes because of the campfire.” I closed my eyes to think about this possibility. “It sounds like a stretch. But, then, the whole thing is a stretch.”

I explained the MPARC non-results as best I could.

“So, basically, you're saying that Hal and his staff have confirmed that the fire wasn't natural, it sounds like, right?” Fran nailed it.

“Right. But they don't know what unnatural things to put in the model to make the simulation work. Maybe this gas thing would be worth trying, I don't know.” I yawned, in need of coffee. “Anyway, they're doing remarkable things with their computers, and they're not done. We'll see what they come up with. How's young Mr. Murcheson? Did his daddy come get him?”

Fran looked abashed. “Yeah, bailed him out this morning. And he's been putting pressure on everyone, Simon, I mean. Called George, called me, called Axel, probably more than once.”

The call to Axel Sonos, A.D. Sonos, as he likes to be known, was predictable, but those to Fran and George seemed to me to be over the top.

“George got your Angela to sit in on his call, as a witness. But all Simon did was to try and get the DNA test results,” Fran continued. “I don't know what he and Axel talked about, but even without those calls I'd be surprised if Axel decides to prosecute a murder charge, or even reckless manslaughter. I talked with George, and a good defense lawyer would be able to nit-pick him to pieces, at least from a

jury's perspective. The other stuff in that pile of paper is pictures George gave me, that Miguel Parada guy. From the autopsy."

"So, no murder charge." I recognized Parada from his driver's license. "But there are still my assault and kidnapping charges."

"Yes, and I need to mention something about that. When I talked with Simon, I suggested I might talk you into dropping the assault charge but that I'd have to stick by the kidnapping charge. I was trying to placate him. But now that I know he's been putting pressure everywhere, I say let's not drop anything." He looked slightly embarrassed.

"OK by me. I ..." I was interrupted by Fran's phone.

"Oh, hi, Hal. Say, Annette's here, let me put this on the speaker." Fran pushed a button.

"Hi, Hal," I said.

"I just got an interesting phone call from Mac MacQuarrie. Can I get you both to come over here sometime soon? This is something we have to discuss in person."

Hal's voice was pleasant enough, but it had an official edge that I've heard on only a couple of other occasions.

It was edge that meant "do this and don't argue, please."

\* \* \*

## Fourteen

After Annette's departure, Hal and Sandy continued their discussion of the use of advanced visualization techniques for presenting the model results for a half hour. Because, fundamentally, the model results consisted of numbers representing temperatures and winds and so on, it was possible to simply look at the numbers and tell what was happening in the model. But the problem was the sheer number of numbers—millions. It's simply not possible for people, no matter how smart, to assimilate such a volume of numbers and learn anything.

The trick, then, is to make pictures from the numbers. For simple things, these are the familiar bar charts and line graphs that spreadsheet programs generate with a push of a button. For something as complicated as a fire simulation, the pictures need to show patterns in color, and they need to show changes over time. Computer animation is the tool for this.

How to do this quickly and efficiently was what Hal and Sandy were discussing, and they finally agreed that additional resources in that direction were needed. Hal planned to call Chuck Shure to see what UNELECO group might be borrowed for the duration. And they both resolved to make visualization more of an MPARC priority for the future.

They were going take up the topic of how to make the model fire hotter when, to his surprise, Hal got a phone call, on the phone line with the red button. Sandy went back to work, and Hal picked up the handset and pushed the red button.

"Hal Weathers." Hal heard the muted beep. "Secure."

"Hal, Mac MacQuarrie here. How are things in Colorado?"

“Pretty good, all things considered. Say, I’m impressed that you got me at this number.” Hal knew Mac was connected, but this was a whole new level of connection.

“Yeah, well, you just gotta ask the right computers the right questions. So, I called on this line so I wouldn’t have to tiptoe around. Can I assume that you’re alone and can say whatever you need to?” Mac was being careful, Hal decided.

“Yeah, I am. I may want my chief scientist here, though. He’s Top Secret, too.”

“OK, well, let’s wait and see. Here’s what I called about. I got your NRO data. More than that, I’ve looked at it with some people who know their stuff,” Mac said.

“So you know the ignition time? Great. That’ll help our guys.” Hal felt elated at finding that bit of missing information.

“Yeah, maybe it will, but that’s the least of it.” Mac paused and cleared his throat. “God-damned Washington DC is full of cigarette smoke. Ahem. Sorry. Anyway, the real interesting stuff comes from the sequence of images they got. The ignition triggered an automatic, high-speed, very-high-resolution digital camera. At least that’s the layman’s explanation, what they told me. So they have the ignition and a movie of the fire itself.”

Hal felt the hair on his neck stand up. “So there are fire spread rates and so forth?”

“Absolutely. And the thing is, the guys I looked at it with said they’ve never seen anything spread that fast. Well, almost. They’ve seen one thing, which I’m not going to talk about even on this phone. I’m landing at Denver International late tonight. What do I do after that?” Mac, Hal realized, was a real take-charge type when he wanted to be.

“Uh, you mean to get here? Well, you rent a car and drive up. If you’re arriving very late, the traffic will be down and it should take, oh, maybe two hours. Let me give you some URLs for on-line maps.” Hal spelled out the web site addresses carefully and heard typing noises. “How can I help? Can I get you a place to stay?”

“OK, I see where you are. Well, I think what I’ll do is get a car, get a motel room by the airport for a few hours, and head up your way early, try to beat rush hour through the city. I’ll be up your way by, maybe, eight or so. We can worry about tomorrow night tomorrow. OK?”

“OK with me, although you may be surprised by the traffic anyway. But you’ll get here eventually. What about the ignition time. Can you tell me that?” Hal had a pencil ready.

“I can do better. Here’s a URL.” Mac spelled out an address on a classified computer system, and Hal reminded himself to shred it after typing it in.

“OK, well, thanks, and I’ll see you in the morning.” Hal knew his head wasn’t really spinning, although it sort of felt like it.

His first move was to pass the classified URL to someone with a clearance and to warn him about its sensitivity, with the instruction to see what data was there and grab it if possible. That new secure network connection was going to be put to immediate use.

He then considered his next step. Obviously, there was something truly odd about that wildfire, something so bizarre that Mac wouldn’t talk about it on the secure telephone. That meant that Fran Schmidt should be given a heads up. Hal called the sheriff’s office.

Twenty minutes later, which, allowing for walking to and from cars and so on, implied an average speed of just over 70, Fran and Annette were sitting in Hal’s office.

“I’m sorry to be so spooky about this, but that call I had from Mac was just too weird.” Hal sketched the gist of the information Mac had provided as well as what he didn’t provide.

“Sorry, but who’s this Mac character?” Fran needed filling in, and Hal and Annette provided a tag-team response.

“OK, I see.” Fran thought for a couple of seconds. “You now have the time of ignition, right?”

“11:13 pm Monday night.” Hal was proud of how fast his people had accessed and downloaded the data from the classified URL Mac had given him.

Fran nodded. “Well, at least that’s something. Now, what about this sequence of images?”

“We’re working on that data now. And, uh, I don’t quite know what I can show you, Fran. There are classification issues. I’m not really sure if I should have told you that this data even exists.” Hal felt worried that he’d already violated some protocol or other.

“I’ve got a clearance, although I don’t know if it’s up to NRO standards. It comes with the territory.” Fran rolled his eyes.

“I do, too, Hal. CBI got clearances for all people above some level I’ve forgotten. It has to do with Homeland Security stuff, as I recall.” Annette shrugged.

“Well, that’s good. At least I won’t get thrown in jail for talking to you about this.” Hal actually felt relieved. And a little mad—this security stuff was a pain, he decided.

“Anyway, when my people get that data processed and put into some form we can make sense of, we’ll know more. But Mac has the punch line, I guess, and that’ll be tomorrow,” Hal said.

“Meanwhile, I’ve had my own little break-through. Well, maybe not break-through, but it’s something.” Fran handed Hal a copy of the three email messages.

Hal read for a minute and handed the paper back to Fran. “Interesting. He’s implying that the victims were dead before the fire happened. And that the fire wasn’t natural. Well, that agrees with what my people have found and what Mac hinted at.”

“Annette and I talked about this, and here’s something. Suppose some kind of gas was in that valley, moving along the ground, and it killed the people and then, when it reached the campfire by the stream, it ignited. Seems like that could explain a lot of things,” Fran said.

“Hmm. Some kind of gas, something like that.” Hal’s thought processes went into overdrive. “I wonder what we’d need to do to simulate that.”

\* \* \*

“Well, look, even though it’s sort of my idea, it’s just speculation.” Fran seemed to be getting cold feet all of a sudden. “Maybe we should think this through before you put a lot of effort into it. I mean, sure, some kind of flammable gas could explain the fire, but we’ve also got to explain the gas, right? Like, how could it get there? Saying that our mystery email guy put it there isn’t really an explanation unless we know how he put it there. Right?”

Hal nodded. “Right. And, further, there are all sorts of possibilities, really, far too many to just start computing away on. Getting a better idea of how this mystery gas got there would help narrow those down. I’ve actually got some of my guys trying to work the problem in reverse, meaning we’re starting from the end result and working backwards. Mostly, this means figuring out what temperatures were needed to cause the damage, estimating the amount of energy that would have needed to be released by combustion, inferring the necessary fuel source from that. We’ve already decided it wasn’t just bushes

and trees, there was something else. Maybe the gasoline in the trucks will explain it, but I'm not that confident."

Annette remembered something. "You know, when Angela and I were up there, waiting for your forensics people to arrive, Fran, after you took the Forest Service people down the hill, remember? We were pretty far up the hillside, and we noticed that the lichens on the rocks were charred, way higher than there was any real fuel, I mean natural fuel."

"So, if it was a cloud of gas, it filled the area from the creek to somewhere up the hillside, above the trees, I guess. We could estimate a volume ... no, that wouldn't work. But knowing the fire went up that high is important." Hal stared off into space.

There was a knock on the door, and Sandy stuck his head in. "Oh, hi, everyone. Am I interrupting?"

Hal shook his head. "Not at all. Anything new?"

"Well, the gasoline from the pickup trucks, even if we assume they have full gas tanks, when it ignites there's a huge surge of heat, of course. But the temperature patterns are all wrong, and they're still not quite hot enough anyway. And the only reason they're still that hot is that we left in an unrealistic amount of natural fuels."

Annette spoke up. "Sandy, with the gasoline, how high up the mountainside did the fire get?"

He looked surprised. "Good question. I'll get some pictures."

Annette looked at Fran. "I hope that briefcase you grabbed on the way out the door has the fire documentation in it."

Fran began to shuffle through papers, and pulled out a file just as Sandy returned. He put several sheets of paper on a table, and they all gathered around.

Sandy's pictures were aerial views of the Valley of Death, one a blown-up color satellite image, the rest computer renditions that included various-sized puddles of bright yellow, orange, and red colors superimposed on a black-and-white version of the satellite image.

Sandy put the picture with the largest puddle of color on top. "Here's the maximum extent of temperatures hot enough to be called 'fire.' The deep red is the hottest here in the middle of the grove and on its edge by the trucks, and you can see this yellow, which is hot enough to ignite tinder and dry fuels, extends to here on the hillside."

Annette pulled the satellite picture out from underneath the pile, studied it, and pointed to a rocky outcrop. "So, the yellow on that picture looks as if it extends to about here, right? I think that Angela and I were sitting on these rocks, and we saw charred lichen well above this, several hundred feet above us up this little gulley. We even scrambled up to look at it, just to make sure it was not simply black or dark-green lichen. But it was charred for sure."

"We could probably deduce flame lengths from the model data. I bet they would be pretty impressive just downwind of that grove. But I can't imagine they would reach that far up the mountainside." Sandy unconsciously nibbled a thumbnail. "So there are two anomalies, temperatures and the extent of the burn pattern up the side of the valley there."

"Uh, guys, I hate to bring this up." Fran looked slightly embarrassed. "But you're getting computer model results that don't match reality. Isn't one explanation for this that the computer model is just wrong?"

"Oh, it sure is." Sandy nodded. "That's what I meant by anomalies. In general, though, if you tell this model the right conditions, it will do quite a good job of reproducing the behavior of real fires. The guys who developed it have tested it against real fire data in a wide variety of conditions. And whenever

their results weren't right the first time, they tracked it down to something that was wrong about the conditions they gave the model to work with. The model physics do a good job of describing how fires work if you give the model the right data to work with. Otherwise it's just the old garbage-in, garbage-out thing."

"So you're saying that the model would reproduce what we see in these burn patterns and so on if we gave it the right conditions to work with?" Fran wasn't ready to give up just yet.

"Always has in other circumstances, so it should with this one. We're just missing something." Sandy shrugged. "There was some energy source there, probably some fuel source, that we're missing."

"Well, that fits with this, I guess." Fran handed Sandy the email printout.

Sandy read for a minute. "Do you know who ... oh, hotmail. Never mind. Well, this confirms what we've been thinking, that the natural fuels couldn't have produced a fire of this intensity. What's this bit about the victims' not suffering?"

"One possibility is something that Fran suggested, that there was some sort of poisonous, inflammable gas in the valley that asphyxiated the victims before it exploded." Annette looked grim. "As for this being an 'accident,' I'd say that someone needs to do more than just apologize for it."

"Seems like," Fran was looking thoughtful, "there are several possible felonies that might have taken place. Tell you what. Why don't we find Mr. Mortified and his pals and see just how many of those felonies we can charge them with?"

\* \* \*

## Fifteen

Fran and I, having planted the idea of an inflammable and possibly toxic gas cloud with Hal and his crew, left them to it and headed back toward Hot Sulphur Springs in the replacement for his dinged-up Explorer, another one a bit older, with a big V-8 but no low range for truly off-road work and various dents and scratches. He told me he'd borrowed it from the motor pool, and that it was definitely not up to his standard.

Just north of Winter Park, half-way to Fraser, my cell phone rang. I could see from the display it was my office phone. "Angela?"

"Yeah, Annette, it's me. Are you and the sheriff coming back here soon? I think you should meet with someone, one of my contacts in the Hispanic community." She sounded excited.

"Sure, any time. Have you got any details?"

"Well, he's here now, in our office." Now she sounded tentative, so I decided she didn't want to say much more.

"OK, well, how about fifteen minutes?" I looked at Fran and pointed down the road, and he sped up. It felt nice to have such a good rapport with him that I didn't have to say anything.

I hadn't been paying attention to the calendar, but it must have been Murphy's Law Observance Day—an obscure holiday about which Fran and I found out the hard way.

We were just past Fraser, headed toward Tabernash, when Fran's police radio crackled. "10-46 at the 34-40 stop sign."

“Aw, crap.” Fran activated his lights and siren and sped up.

I had to think about it, but then I decided it must mean that there was a traffic accident of some kind at the intersection of US 40 and US 34, just on the west side of Granby. I called Angela to warn her that we might be delayed, and discovered I should start holding on. Fran was suddenly in a big hurry.

We blew through Tabernash without incident, but halfway up the long grade to Snow Mountain Ranch, at the intersection with north end of County Road 5, that all changed.

An overloaded logging truck, headed downhill toward us, was trying to take the right turn onto CR 5 without slowing down—maybe he thought he was driving a sports car or something. But his trailer jack-knifed and then spilled. We were suddenly faced with dozens of tree trunks rolling down the pavement toward us. Before Fran had time to express himself using colorful expletives, as I’m sure he would have liked to, he was preoccupied with maneuvering to avoid the logs.

That took us off the right shoulder, perilously close to the edge of the roadbed, which was built up at that point to cross a small drainage. I could see that going over that edge into the drainage was not an option, as it would have rolled the SUV catastrophically. I was hoping Fran realized this, too. He must have, because, after dodging the first few logs, he swerved back left onto the pavement. Unfortunately, that maneuver put us sideways right in the path of another rolling log, which was, ironically, the last one. It undercut the wheels on my side and that force, combined with our off-balance stance associated with the swerve, pitched the vehicle over onto its side—my side. But there was still too much momentum, so we rolled another quarter turn. After sliding for several dozen feet, we came to rest on the Explorer’s roof, hanging from our seat belts and cushioned solidly in place by the airbags, which had all exploded into action.

“Shit!” Fran took a couple of deep breaths, and I followed suit, trying to get my equilibrium re-established. It was challenging, though, hanging upside down and all. “You OK, Annette?”

I wiggled my extremities carefully and thought about it. “All things considered, I’d say so. Been better, but I think there’s no damage. How about you?”

“I think my dignity is all that’s damaged. Except that’s just going to get worse. We need to crawl out of here somehow.” He fumbled around by the steering wheel and came up with the radio microphone.

“Schmidt here. I’ve got my own 10-46, at the north end of CR5. No injuries, we think, but we’re going to need a tow truck and another vehicle. I expect mine’s totaled. And there are logs all over the highway, so traffic is going to be a real mess real quick over here.”

A muffled “ten-four” came from somewhere on the dashboard.

It wasn’t very long before people came to check us out. Because I saw feet outside my window, I lowered it up a bit to let them know that we were not injured. A crowd quickly gathered, and before long someone suggested rolling the vehicle upright.

By then the airbags had deflated, for the most part, but the seat belts were still holding us tight. Fran and I looked at each other and shrugged, upside-down shrugs.

“What the hell. Might be easier than getting out of here this way.” He looked resigned to the fun.

At least the crowd out there managed to minimize the rocking. With only a couple of back-and-forths, they pushed the Explorer back over onto my door, and Fran was suddenly dangling above me. By then, someone with a winch had happened by—lots of guys with Jeeps in the Valley have winches, as if it’s a way to display their manhood, or something—and the trick that Fran had used with the come-along before was repeated, except with him, and me, inside the car this time. Thud.

After the Explorer was finally upright, we sat inside for a minute to gather our wits, making thumbs-up and A-OK signals to the crowd outside.

“Well,” Fran tried to appear optimistic, “the other one started that other time, after it got tipped over. Cross your fingers.”

It wasn't going to happen, though. The electrical system had stayed on, so the radio was functional, but the engine just wouldn't fire. Sideways had been OK for the other one, but upside down for this one was just too much.

Although his window didn't work, Fran's door still did. It creaked and groaned as he opened it, and I creaked a little, and felt like groaning, when I stepped out my door. I had a stiff back, and there was a twinge in my ankle. I heard noises from the crowd to the effect that “it's Sheriff Schultz!” and “that's the CBI lady.”

Fran, I guess, decided that there were enough people assembled to warrant a little politicking. He climbed up on the hood of the Explorer and scanned the crowd.

“Thanks very much, everyone. That was good thinking, getting us upright like that. And that's one of the things I like about Grand County—people willing to pitch in to help others. It's one of the reasons I'm proud to be your sheriff.” Whether he was starting into a canned political stump speech or just speaking off-the-cuff wasn't clear.

Whichever it was, I tuned him out and worked my way to the back of the crowd. I needed to do some serious stretching and try to walk off the ankle problem. Also, I reminded myself, to call Angela. Our delay was getting stretched out. She was just going to have to figure out how to keep her guest entertained a little longer.

All-in all, it took about an hour to get things sorted out. Finally, Fran and I made it back to his office, and shortly thereafter we were all seated in an interview room in the sheriff's department.

Angela introduced Fran and me to Don Nuestro, as she called him, a wizened gentleman, nattily dressed in classic clothing that was a tad worse for the wear.

“He speaks only Spanish, so I'll have to translate. I met him very briefly yesterday and gave him my card. Well, your card, Annette, with my name on the back. And, um, he's ‘Don Nuestro’ as in ‘Mr. Neustro’. I mean, Don is not his first name, right?” She was smiling and looking back and forth between the three of us. Mr. Nuestro was looking a bit confused.

“Don Nuestro, how nice to meet you. Thank you for coming to talk with us.” Fran smiled as Angela translated his greeting.

The response was long, emphatic, and obviously more than Angela could handle at once. She and he talked, and it appeared that he started over, stopping after a couple of sentences this time.

“Don Nuestro says that he is pleased to meet you, Sheriff, and he wants to know where his family is. Um, the first time through was more than I could remember accurately, so I got him to start over. But the rest concerns his family and how he thinks that his people are getting the short straw up here in Grand County.” She shrugged.

“Please tell me about your family, Don Nuestro.” Fran looked at Don Nuestro as he talked while Angela translated.

They soon got into a rhythm, with Don Nuestro stopping after every two or three sentences to let Angela catch up.

His family, a good piece of the Nuestro clan, had come to the U.S. eighteen months ago after obtaining coveted work visas. He had been receiving mail, and bank account deposits, from them ever

since they got themselves established up here, and a small nest egg was accumulating back home in a Monterrey bank. Its purpose was to provide a legacy for the next generation, his great-grandchildren.

I could tell, even without words, that he took great pride in passing around the photographs.

It was picture number six that stopped me short, and I handed it to Fran. “Look familiar?”

His eyes got big, and he looked over at me. Then he took a deep breath and turned to our guest. “Don Neustro, who is this person?”

“My son-in-law, Miguel Parada, who married my daughter Rosalina. He’s originally from Cuba, but he has lived in Mexico for over ten years. He and Rosey were here with my sons Jose and Eduardo and their families.” Don Neustro smiled with pride, but Angela looked scared as she translated.

I started counting the different people in all the photographs and, leaving out Don Neustro himself and a woman of his generation who appeared in several pictures, tallied up sixteen. In a single stroke, two-thirds of the Valley of Death victims had identities.

What a tragedy for Don Neustro. And what a headache for Angela, who was going to be breaking the bad news.

\* \* \*

How I managed not to doze off, face down in my dinner, is something I’m not entirely clear on. By the time that Hal and I made it home that evening, after a very pleasant dinner with Angela and Sandy, I was completely done in. I think maybe Hal noticed this and hurried the meal up a little on my behalf.

At least I stayed awake enough to enjoy it. I’m no expert, mind you, but as far as I can tell, the folks that run Fontenots, in Winter Park, have New Orleans cuisine down pat. Hal and I had been curious about the place, but we’d never managed to get there. When Sandy suggested it, we jumped at the opportunity.

“I can tell that I’m going to miss Santa Fe food, so I want to try out the alternatives early and often,” was Sandy’s excuse.

We were halfway through appetizers—fried green tomatoes with a remoulade sauce, and crab and crawfish cakes with a ginger-lime sauce—when the day’s progress came up.

“Angela tells me that you had a tough day today, Annette, but made some headway.” He bit into another tomato slice.

“I think it was Angela who had the toughest day. But we did manage to get IDs on many of the fire victims, we think.” I took a sip of wine.

Hal looked up from dissecting a crab cake. “What’s that all about? I thought there weren’t any bodies to identify.”

I looked at Angela and nodded, so she launched into the story. I was hoping that it would help her to talk about it.

“... and I think that was the hardest thing I’ve ever had to do, tell poor Don Neustro about his family.” By the time she finished, she was on the edge of tears, but she hid it behind a gulp of her giant margarita.

“Angela, I’m so sorry. I didn’t know what I was asking.” Hal looked as contrite as his words.

“No, no, it’s OK, really. It’s the job, and I have to deal with it. But, geez, I hope it isn’t like that very much. This case is a bitch.” She downed another huge swallow of cocktail. “But, so, yeah, we made

progress. And according to what Sandy told me earlier, it sounds like you're making progress, too. With that computer stuff."

"We did." Hal seemed relieved to be able to change the subject. "It's too soon to be sure, but the idea—Annette's, or maybe Fran's idea, actually—that there was some kind of inflammable gas near the ground when the fire started looks promising. Without a really serious extra energy source, we're not able to reproduce what happened up there. But early results with propane in the air look better. Of course, that begs the question of where propane or any such thing would have come from."

Hal paused to chew, and I took advantage of the silence to jump in.

"I keep thinking about the charred lichens and so on that we found way up the valley sides." I speared myself another crab cake. "You guys talked about flame lengths today, and maybe those would provide an explanation with a source of energy near the ground, like the propane thing. Of course, if the propane were up there, too, that would *really* explain the burnt stuff, right? But there's still the question of how it got there."

"Mmm. I don't know about these green tomatoes, but this sauce is just outstanding." Sandy licked an index finger. "Annette, you've said you thought you saw burn marks and so on, but did you really look closely? Take samples? What I'm asking is, would it be worth a trip up there to do that? Maybe to see if there is any residue that could be analyzed?"

Angela grinned. "Aw. Isn't that cute? My very own hunk, the scientist. Thing is, Sandy, I don't know if we could get to some of the places we thought we saw burn marks. They were high up on the sides of the valley, above sheer cliffs and so on. Serious climbing terrain."

"Well, somewhere in all that stuff we brought up from Santa Fe is some serious climbing equipment. I did several BERT rescues involving stranded climbers." Sandy's involvement in the Santa Fe Back-country Emergency Rescue Team had provided him with a variety of outdoors experience, I remembered.

"You could be right, Sandy." I thought back to Tuesday. "When we were up there, we were so shaken by finding all that evidence of the deaths that we really didn't do a complete area analysis. And I don't think that Fran's forensics people got very high up the sides of the valley, either. Maybe another trip up there would be a good idea."

Hal swallowed a mouthful of crab cake. "Seems like a good idea would be to have a theory of how this inflammable gas—propane or whatever—could have been in the valley and especially high up the sides of the valley. It's not like something such as this occurs naturally."

"How about swamp gas? Isn't that methane, sort of like propane?" Angela didn't seem to be arguing, just asking.

"Sort of." Hal nodded. "But methane, which is just natural gas, is lighter than air while propane's heavier. So I guess if there are bogs in that valley, there could be methane released, which could then flow up the hillsides. But in that environment, it's hard to see how enough methane could have been released all at once to cause that fire."

Sandy agreed. "I don't think that the simulations with propane will provide enough heat, although the results will be better. What that means is that some other more energetic gas is indicated. And it's about 99.9% likely that such a gas would be heavier than air. Meaning that it would flow down, not up. So where could it have come from?"

I couldn't help but sigh. "Well, folks, it looks like we need to trek up there and find out. Believe it or not, I've had climbing classes. Do you suppose I could borrow some of that equipment of yours, Sandy?"

## Sixteen

Samantha Winslow had spent all of her life south of Orlando, getting even that far north, to visit the Disney complex, only a couple of times. Oh, there were the quick trips with Johns up to Atlanta, Boston, New York, even to Washington DC with that South American diplomat, but those had all been limited to the cities. And big cities tend to be the same everywhere.

So her trip out west to the Fraser Valley with Mac MacQuarrie was eye-opening in the extreme. The film and television versions of the Rocky Mountains that she had come to be so familiar with over the years had done nothing to prepare her for the real thing, she discovered.

For one thing, it was bigger in real, three-dimensional life, flat-out huge, with views of more landscape than she ever knew existed. For another, when the sun went down last night in Denver, it had turned into winter, at least the South Florida sort of winter she was used to. What, she wondered, will it be like up here in the mountains, and, worse, what will *real* winter be like? Do they make heated underwear?

And beyond that, it was scarier, especially riding in the passenger seat with those unbelievable drop-offs zipping by just out the window half the time and those menacing walls of rock the other half.

It was a good thing, she decided, that Mac had been driving, because she would have had to stay right in the middle of the roadway, with that permanent double yellow line smack between the car's tires. No way would she be able to stay in the right lane, over there where gravity might reach out and suck her into the abyss. And there were all those big trucks and busses coming the other way. Yikes!

But mostly her eyes were opened by the spectacular, rugged beauty of the landscape. Each time they came around another of those sweeping curves and a new expanse of view opened up, she delighted in the thought that she'd brought her art supplies.

In the months or so that she and Mac had been living in that rental on Big Pine Key, she had turned out paintings and pastels of sunrises and sunsets, clouds and gulls, sailboats and palm trees, all in her distinctive minimalist style that people were snapping up as fast as she could get them framed. With its complexity and visual impact, this new subject matter was going to be a challenge, she could tell, but that would be just fine. Nice as they were, she was done with the Keys.

It occurred to her, though, that she might just have to re-evaluate this conclusion come the weather of February.

The whirl of activity and travel over the past couple of days had her head spinning, and the low-oxygen atmosphere of the Colorado high country wasn't helping any, either. But her car, Mac's, too, and a load of their personal possessions from the Keys house as well as from a couple of storage locations they had been using up on the Gold Coast would all be arriving within a week or so. As soon as she could get her breath, she was going to find them a place to stay for at least several months, a place big enough for her to have a studio. Maybe with a nice view—although she was beginning to understand that the two words were automatically linked up in the Fraser Valley, where there just didn't seem to be any mediocre views available. Hell, she thought, even the parking lots seem picturesque.

I just have to find *something* before the moving truck gets here, she reminded herself. Mac was going to be too involved in this business with the mass murders to be much help, she knew. And even

though he seemed to like playing the gallant hero by fulfilling her every wish, she knew that their partnership would be all the stronger if she pulled her weight.

One possibility, she realized, would be to put their various pieces of furniture in storage and negotiate a long-term lease here, at the place Mac had found somehow. It was an elegant, three-bedroom house on the hillside across the highway from the ski area, completely furnished and with weekly housekeeping service. Probably costing us an arm and a leg, she thought.

It was nice, but it would never feel like home. Just like the house in Big Pine Key. Nice, but not home. She wanted a home, even if it was going to be temporary.

Well, she had a map, a computer with a fast internet connection, and the rental car while Mac was tied up at that institute place. And she had Annette's cell phone number.

"Annette? Hi, it's Sam Winslow. I don't know if you heard, but Mac and I got in this morning. Oop, excuse me, I think I've got to breathe." Sam panted.

"Sam! I knew but didn't know the timing. Glad you're here." Annette was delighted. "And, yeah, you've got to breathe a lot up here, especially at first. But your body will adapt, trust me. It will help if you drink lots of water, lots. Like, quarts, plural. Where are you staying?"

"Mac found us a short-term rental house, across from the ski area. Really nice, but it seems kind of isolated. My job is to find something more permanent, and find it before the moving van gets here." Sam panted again for a few seconds. "I thought maybe you might have some advice."

"Hmm. Well, Hal and I are still kind of newcomers here, so I don't know all the ins and outs. You probably want a long-term rental, right? I mean, you're not going to buy something right away, are you?"

"Yeah, we need to rent something. Mac is here to work that mass murder case, I guess it's your case? I don't know how long that will take or what's next after that." More breathing. "Also, frankly, I don't know if I'll survive the winter or, if I do, be up for a second one."

Annette laughed. "Don't you worry. We'll teach you to ski and you'll never want to leave. Here's an idea. Let me have Mary Schmidt call you. She's the sheriff's wife, and she grew up here, knows everyone and everything. She's working for Hal now, but helping you guys will fit in with her job at the institute. At the least, she'll be able to put you in touch with a real estate agent who can help."

"Uh, the sheriff's wife? You don't think that my, you know, my background might be an issue?" Sam's previous career as a high-priced Miami Beach call girl weighed on her at unpredictable times.

"Not with Mary, don't worry. And if it is with anyone, I want to know about it. That kind of hypocrisy I don't need around here." Annette, Sam realized, could sound fierce when she wanted to. "I'll give her this number you called me from OK? Sam, I'd like to talk, but I've gotta go. We're planning a little mountain climbing expedition for tomorrow and there's a ton of stuff to organize. I'll have Mary call."

"Uh, Annette? Tomorrow's Sunday, right? I don't think I'll get much accomplished on Sunday up here. It strikes me that people here probably go to church on Sunday. Do you need any help tomorrow?" Sam wasn't sure what she was getting herself into, but she did want to help.

"Oh. Well, let's see. I think I heard Hal mention something about how you guys were flying in and staying in Denver for a night, and tonight you'll be up here. Which you are already, I guess. So, anyway, you have a start on getting used to the elevation. Meaning you'll probably be OK up there, where we're going, if you don't have to work too hard. And we need a spotter. Somebody to stay at the bottom of the

valley we're going to and watch us through a telescope. Talk to us on a radio. Like that. How's that sound?"

"I could do that, I bet. What should I wear?"

"Outdoor gear, in layers. Good, solid boots. A hat. Sunglasses. You can use my sunscreen." Annette paused. "You just arrived, right? From Florida? There's an outdoor shop in Winter Park that has that stuff."

"Oh. Shopping. Well, that's something I can handle, for sure. I'll call you later, Annette. Thanks." Sam and Mac had really arrived from Washington DC, but she still needed clothes for the occasion. And for most every occasion up here, she suspected.

\* \* \*

The next morning, it was about halfway up the hill—Sam asked—that she began to question her snap decision to volunteer to help Annette and the others on the expedition up Byers Peak. Sandy was driving Annette's CBI vehicle, the Jeep SUV, and he seemed to be managing its scramble up what passed for a road quite well, all things considered. Angela, the petite Latina who was Sandy's girlfriend and Annette's assistant, was sitting in the backseat with Sam, riding comfortably, it appeared. But holding on amidst the bouncing and jerking turned out to be real exercise, and Sam was having to breathe hard just sitting beside Angela, strapped in.

At least she felt well equipped. Her life in Miami Beach, as socially questionable as it had been, had taught her two quite practical skills: expertise in bed, and How To Shop. The nice folks at Mountain Duds in Winter Park were amateurs by comparison, and Sam felt a bit guilty about her ability to take advantage of them.

Her first step was to observe. Yesterday she had driven the two or so miles from the rental house across from the ski area down to the Winter Park strip, parked, bought a latté at a Starbucks, and sat on a bench under an aspen tree to watch what people were wearing. It took her only a few minutes to separate the tourists from the locals—shoes were a big tip-off—and then she realized that there were subtle differences between local "business" and "casual" attire that provided important hints about what she should invest in, style-wise.

Then she walked into Mountain Duds, explained her situation, and pretended to turn herself over to them. Despite all the big "sale" signs in the windows, she was the only customer, so she got the royal treatment.

Two hours later, she walked out of the place to fetch the car—so that the Mountain Duds employees could load it up with her purchases, clothes from the skin out, from toe to scalp, from cool- to hot-weather conditions. All acquired at well better than twenty percent below those "sale" prices. Compared to Sam's experience with the merchants on Miami Beach, the Mountain Duds people were pushovers.

Some of the wardrobe she understood—good sports bras seemed necessary—and some she didn't. The business about materials that were both water-proof and breathable, something called "Gore-tex," sort of made sense but was still a bit mysterious. The finer points of shoes—boots, actually—were also a bit obscure, but it was easy to agree with the suggestion of "comfort first." And why she needed a sales pitch about spending the extra money to buy wicking underwear that didn't retain body odor instead of cheaper underwear that did—well, duh.

So, the next morning, sitting in the pitching SUV—she was reminded of a john who had insisted on taking her for cigarette boat rides on the ocean before he got the sex he was paying for—she began to appreciate all the high-tech jargon in those sales pitches. The exercise of holding on had her working

pretty hard in a warm car, but she was quite comfortable—just as she had been comfortable first thing in the morning, at that ungodly hour before dawn, when thermometer in the car had told her it was 40°, something she'd experienced only once before in her life, on a trip to New York.

But, holy crap!, they were only half-way there, and it kept getting worse and worse. How the SUV didn't just break, crumble into lots of little metallic parts, or something, she couldn't understand. And she was lost beyond any hope of finding her way back, should there be a need to, and, besides, there were probably bears or mountain lions or wolves out there. Or all three.

She didn't want to be the wuss, though, so every time Annette or Sandy or Angela asked if she was OK, she gamely replied "You bet!" The rest of the time, she just tried to hold on and listen to their conversation, what there was of it. Mostly, it seemed like uncertain directions—"I think it's a left here, Sandy"—which naturally reinforced Sam's concerns about becoming lost in the wilderness and ending up as a snack for something with Big Teeth.

But they eventually got there, "there" being an unbelievably spectacular valley surrounded by high, rocky ridges. It was so beautiful that Sam could only stare.

They all stepped out of the vehicle and, following the others' leads, Sam did some stretching, which helped with the kinks. Then Annette and Angela gave both Sam and Sandy a quick overview of what they had seen the day after the fire and how it had changed—mostly ashes blowing around—since.

After Sandy's questions were answered, and he had lots, the three climbers began plotting their route up the side of the valley. And when Sam figured out what they had in mind, she had to sit down before she fainted. They were climbing *that*? What was really a surprise was Sandy's comment to the effect that it probably wouldn't require ropes—that they could just scramble up to get the samples they were after.

While they were talking, Sandy was unloading equipment, and one of the first items was a folding camp chair, which he set up for Sam's use. She sat, facing the burn, and studied the side of the valley while the other three talked. Then Sandy handed her a pair of binoculars to help to give her a better perspective.

Yes, it was steep and got steeper with increasing elevation. But what cliffs there were extended across very limited spans, and there were ways around them. And everywhere there were plenty of hand-holds. So maybe it wasn't impossible, as long as someone else was doing the climbing, she decided.

As she studied rocks, alternating between the binoculars and her regular vision, she began to notice a pattern.

"Annette? Angela? Is the edge of the burned area you've been talking about up there by that, um, big, sort of pointed square rock? I think I see a sort of stripe that goes up to the right of that rock and down toward its left." Sam pointed.

Annette came around and stood behind her. "Let me see the binoculars... Yes, that looks like it. Angela and I were sitting way to the left, much lower when we saw it, though."

Sam squinted at the mountainside, then defocused her eyes—a trick she'd figured out when she was painting—then asked for the binoculars back. "So, what I think I see is a sort of big arc, like McDonalds Golden Arches, only it's a faint black-ish stripe, that goes from there, up around, and then down to there."

She made a sweeping left-to-right arch with her right arm. All three of the others were studying the rocks carefully.

“I think I see it, too, Sam. The highest point is...” Angela was holding her left hand at arm’s length, cocked back as if she were going to press it onto the mountainside, “...oh, maybe four fingers to the right of that pointed square rock you mentioned, right?”

Sam, Annette, and Sandy held out their arms, too, and Sam agreed. “Yeah, something like that. There’s a little overhanging rock at the top. Well, maybe it’s a big overhanging rock. The perspective has me all confused.”

“Foreshortening.” Sandy had found the rock and was studying it through the binoculars. “When you look up, or down, it’s very hard to judge distance and therefore sizes of things. You can do it on flat ground pretty well, but hillsides like this get your eyes and brain all confused. But you’re right, Sam. That looks like the top of the charred rocks. And that’s where I’m going to climb to, I guess. Oh, boy. What fun.”

\* \* \*

## Seventeen

When Sam volunteered to accompany us on our little expedition, I was just a little concerned about how she would do. Even though our job for her involved sitting in a chair all day while the rest of us climbed, my recollection of her from our cruise-ship time together was not entirely compatible with mountaineering.

But after she made it up that ridiculous jeep road with us in one piece and then spotted that burn pattern right off, I knew I’d made the right decision.

It was Angela who asked, so I didn’t have to. “So, Sam, how in the world did you see that pattern so easily? I’m still not sure I see the whole thing, just parts.”

“Well, I just saw it, that’s all. It sort of jumped out at me without the binoculars, and with them, I could see details. Which made the whole thing easier to see.” Sam thought for a minute. “Maybe it’s my painting style. I do these sort of minimalist paintings, where I try to capture the essence of a scene with as few strokes as possible. And those are what I look for first. So with this mountainside, I’d probably use a palette knife to cut in the ridge line, a few vertical blotch-strokes for the big, dominant rocks, and the arc of that burn pattern, in a faint grey-blue. Maybe add a cloud against the deeper blue sky.”

“Let me know when you get some paintings ready for sale, Sam. We’ve got lots of bare walls.” Sandy grinned as he passed around radio sets. “Now, these are hands-free sets, which means the mike gets activated when you talk. Or breathe really hard, or burp, or whatever. You can set the sensitivity with this little slider. I recommend wearing the headset under your climbing helmet. And even though we’re not going up together, I recommend helmets. Rocks can let go at the most inopportune times, like when your head is in the way.”

“So, it sounds like you have a plan, Sandy.” I was staring at the mountainside, trying to get psyched up.

“How about I go straight up the middle of this shallow gully, to the top there, the top of Sam’s arch, and take a sample every ten meters or so? Here are plenty of plastic bags for all of us, and you’ve got knives, right? We just take scrapings of burned lichens from the rocks, put ’em each in a separate bag.” He handed around bunches of zip-lock bags. “Annette, you and Angela can go straight up on the sides of the burn, maybe twenty meters to my left and right, and take samples the same way. Then we’ll have a

crude grid of samples, when we're done. Oh, and here are some indelible markers, we each get a different color. Number the bags, please, starting at the bottom."

I had to smile. "Seems as if you may have done this before, Sandy."

"Not exactly, but close. We did a ground search this way one time, looking for a lost kid. Much bigger area, flatter terrain, more searchers, but we used the same basic technique. Grid it out. Let's see. For you and me, Annette, ten meters is probably four body lengths including reach. For shorty here," he twitched his thumb toward Angela, "I'd guess five."

He got punch in the arm for his wisecrack, a hard punch, it looked like, and Sam giggled.

"Now children. Play nice." As the oldest by several years, I couldn't help myself. "I guess we ought to get started, and maybe we'll be done by lunch. What do you think, Sandy?"

"Well, maybe, but don't rush. Remember, you're on your own up there. This isn't really free climbing, it's just steep scrambling. But you don't want to lose your balance and tumble back down, so let's be careful up there, right?" And he started walking toward the middle pitch of the mountainside.

I looked at Angela and shrugged. "You want left or right?"

She chose left, and off we went, leaving Sam behind in her folding camp chair, with the binoculars and a high-powered spotting scope on a tripod to keep her company.

"Radio check." Sandy's voice was suddenly inside my head.

"Check." I responded.

"Check," said Angela.

"Um, I guess it's my turn, and I heard all you guys. So, ah, we're all here. Be careful, OK?" Sam hadn't been to radio training, I decided.

We labored up the slope more or less in parallel with each other, and after a while Sandy came back on the radio. "I've got a nicely charred lichen here on a rock, so I think I'll start sampling. See what you can find at about this elevation. Then we can try to stay more or less in sync as we climb."

It quickly became routine. We'd walk or step up or scramble, using our hands for balance and climbing assistance, for a short distance, and Sandy would come on announcing he was taking yet another sample. Angela and I would work our way to about his elevation and find samples for ourselves. Scrape, bag, label, repeat. The pauses for samples were actually quite helpful, because we were able to rest and catch our breaths each time.

It was between samples eleven and twelve when Sam came on the radio. Annette? You're just about to cross the charring line. Another couple of feet."

"When you cross, it, Annette, get a sample, then get another uncharred one a few feet above, OK?" Sandy had it all figured out.

Shortly after I took my uncharred sample and was preparing to start carefully back down, Angela crossed the charring line and took her last samples.

Then she realized how far up we'd climbed. "Holy shit! Sandy! I haven't been looking down until now. We're way the hell up here, aren't we?"

Her voice was not quite to the level of panic, but it was getting close. And, of course, her comment made me look down, which I hadn't been doing, either, and I immediately understood her situation. The mountainside had become increasingly steep, and looking down made it feel like we were clinging to the face of a cliff. Gulp.

“Angie, all you have to look down at is your feet, not the whole mountainside. And because you got up here pretty easily, I think, you can get down. Just take it step by step, like you did on the way up. You, too, Annette. Slowly and carefully. And Sam can give you advice about where to step if you need it, right, Sam?”

“I guess so. I can read the label on the back of Angela’s boot, if I zoom this thing in, so I can see where her feet should go. If she needs it.” Sam’s voice was also tentative.

“And if you both want to, you can just wait and rest until I get all the way up and come down to this level again. And we can all descend together.” Sandy was the only one with any real confidence at that point.

He had continued to climb and take samples while we dithered, and because he wasn’t waiting for us, he sped up. It took him only about ten more minutes to reach the top of the charred arch.

“OK, last sample of charred lichen, now I’ll go up a bit and get some uncharred ... hello. What the hell is ...?” Sandy stopped in mid-stream.

“Sandy! You OK?” Angela was instantly on alert. “Sam! Is Sandy OK?”

“It looks like it. He climbed up to that overhanging rock, and he’s under it, poking around.”

“I’m fine, gang, really. Just surprised by what I’ve found. I think we now know where our mystery gas came from. There’s a little tunnel into the mountainside up here, under this overhang. About, oh, a foot and a half in diameter. Maybe two feet. And it’s lined with pipe, that corrugated steel stuff that culverts are made from. There’s a lightweight screen grate over the end here. Somebody must be using it as ventilation for whatever’s going on inside this mountain. This is just nuts.”

\* \* \*

We climbed down without incident and, because we were concentrating on not falling, in relative silence. Descending was a challenge at first, but it got easier the lower we were, and eventually we all turned around and just walked back down to where Sam was sitting. Sandy, who had been climbing with a backpack full of what-all, had taken several photographs of the exhaust pipe. And then, for good measure, he spray-painted the end of the overhanging rock fluorescent pink, to mark the outlet of that little tunnel.

If we didn’t talk on the radios on the way down, at the bottom we made up for it.

“A tunnel, what the hell is *that* about?”

“Where’d you get that shocking pink paint, Sandy?”

“What’s going on inside that mountain that someone needs an exhaust stack, anyway?”

“Wait ’til the sheriff hears about this.”

“Sandy, you said that propane wasn’t strong enough. What kind of stuff could have been coming out of that pipe?”

“Is it lunchtime yet?”

That last question, asked by Sandy, got everyone’s attention.

Angela, Sam, and I looked at each other, and said altogether “Yes!”

Along with all the climbing equipment and Sam's chair, Sandy had brought a cooler full of goodies, and we were able to make an elegant picnic by the stream before starting down what passed for a road. I was hoping this would be my last trip on it.

At least I wasn't trying to drive. Before leaving Fraser earlier, I'd asked Sandy if he had any back-road driving experience. He allowed as to some, and that was enough for me—I put him behind the wheel of my CBI Grand Cherokee, and he did a great job getting us up the hill. I figured it would be for the best if he took us back down as well.

And I'm sure it was, because I don't know if I could have handled a couple of the steeper downhill stretches. Between the grade and the loose rocks—plus the ruts and boulders in the “road”—I bet I would have run that Jeep into a tree or something. But Sandy did fine, even to the point of making it possible for us to talk about our discovery.

“So, now that we've got all those little plastic bags full of charred lichen, what are we going to do with them?” Angela, ever practical, was leaning forward between the front seats.

“What *is* that stuff, anyway?” Sam's curiosity got the better of her.

“Lichen is a sort of plant that grows on rocks and on tree bark up here.” Sandy seemed eager to lecture—maybe, I thought, he was hanging around Hal too much. “It's actually a pretty interesting organism, because it's two things that live together symbiotically. Another example of that symbiosis is coral reefs. Lichen, though, is an algae and a fungus, most often. I think. Green mushrooms, sort of. But I don't know what the plan is. Annette?”

“To get it analyzed. Uh, somehow. Back in Durango, I used to take anything and everything to a chemistry lab at Hal's university. Gil—meaning Gil Taylor, the lab guy—he could tell you what was in anything. But I don't quite know how to get such a thing done here.”

“Well, isn't that what FedEx and other overnight delivery services are for?” But Angela still looked puzzled. “So, I guess the idea is that this Gil person could detect chemical residue on the samples we got?”

“Right.” And I had to brace myself as Sandy slid the Jeep to a stop.

“Be right back.” He jumped out, rummaged around in the back, and disappeared into the woods.

“What's that about?” Angela couldn't hide her surprise.

“Potty stop, I bet.” Sam said.

“Nice of him to let us know, eh?” I had to chuckle.

A few minutes later, Sandy appeared out of the woods, carrying one of the little plastic sample bags.

“Ewww. I've heard of the ‘leave nothing but footprints’ thing about low impact wilderness hiking and camping, but that's gross!” Angela's nose was all wrinkled up.

Sam gasped. “Do you mean...? Ewww, for sure.”

Sandy hopped back in behind the wheel and held out the bag for me.

“Uh... What's that?” I just looked at it as the car started rolling forward, down the hill.

“Here, take it. I need to drive. It's more lichen. For a control. You know, uncontaminated. I bet your chemistry lab guy will appreciate a control sample.” He was concentrating on the not-quite-road.

“Oh.” I turned back to look at Angela and Sam, and they broke into laughter.

“What did you think it was? And take it, would you?”

I relieved him of the bag and tried to think of a polite answer.

“You jumped out and ran off so suddenly that we thought you had an urgent call of nature, Sandy.” Angela was more direct.

“You mean...? Ewww.” Sandy looked disgusted. “OK, time to change the subject. Anybody know anything about mining around here?”

“Hal and I live in a house with an old mine shaft for a wine cellar. So there is, or was, some,” I volunteered.

Sam chimed in. “I remember, on the way up, just before we went around a real sharp curve up toward that pass—uh, Bertha Pass?—there was a sign for a turnoff to the Henderson Mine. So maybe there’s still some today.”

“I think it’s ‘Berthoud Pass’, Sam. With a ‘d’ on the end. Yeah, I remember seeing that, too.” Sandy looked thoughtful. “And I think that was one of the locations proposed for the doosle.”

“‘Doosle?’” The three of us were once again in unison.

“Yeah, it’s an acronym—uh, let me think, um, the Deep Underground Science and Engineering Laboratory, DUSEL. The National Science Foundation had a competition a few years back to see where to site this new facility, and a bunch of universities and the state of Colorado and the mining company proposed a part of the Henderson Mine.”

“Did they win?” I hadn’t heard of such a thing.

“No, it wound up going to the Homestead Mine in the Black Hills. South Dakota. Some people say it was a political decision all the way, but the Homestead site does have a somewhat deeper set of tunnels. I read about it in *Science* magazine or somewhere like that.” Sandy jerked the steering wheel to avoid a large rock, and we all grabbed for hand holds. “Anyway, you’re right, Sam. I bet there are still active mines around here today. And it must be that one of them is under that ridge we were climbing up, and that it has a vent, that pipe I saw.”

“What do they need a deep underground laboratory for, anyway?” Angela looked even more puzzled.

“Believe it or not, cosmology and astrophysics, for one thing. See, there are these elementary particles called neutrinos that pass all the way through the planet. But you can detect them with the right equipment. It helps a lot, though, to be deep underground so all the other particles flying around through space get filtered out and don’t contaminate your neutrino measurements. It’s high-energy physics stuff.” Sandy shook his head. “When I was in graduate school, it was all so weird for me that I concentrated on nonlinear and chaotic systems dynamics instead, which is pretty weird in its own right. But I have some friends who are up to their eyeballs in neutrino physics.”

“Particles flying around? Where?” Sam, unclear on the concept, was swiveling her head around looking for something.

“Everywhere, all the time, Sam. From the Sun. From deep space. You can’t see ’em. Most of them are completely harmless, so don’t worry.” Sandy looked at her in the mirror and winked. “But it’s a good thing you saw that charred lichen up there. I bet I wouldn’t have found the vent pipe otherwise.”

“So, I’ve heard about mine explosions. Could the gas that caused the fire up there be the same thing?” The connection between the mine vent and the mysterious fire finally came into focus for me.

“Well, like swamp gas, the gas in mine explosions is usually methane, which is lighter than air. And methane explosions are usually in coal mines. I think what’s underground here is all metallic ore, molybdenum or something like that. Maybe the mines got started looking for gold and silver, though.”

Sandy thought a minute. “But we need to ask about toxic gas hazards in these mines to see if that could be an explanation. Maybe this whole thing was just an accident.”

“Yeah, that’s what that anonymous email from our mysterious friend ‘Mortified’ said. But accident or not, we’ve got two dozen people dead, and we need answers.” I was haunted by those skeletons.

“‘Mortified’?” Now it was their turn to ask questions in unison.

“Email? What’s that about, Annette?” Angela was the first to solo.

“Fran got anonymous email apologizing for the whole thing, calling it an accident. He responded and now has an exchange going. In the second one, this Mortified person suggested that none of the victims suffered.”

“Annette, I haven’t been here very long, but I can tell you that there are some real cracker-jack computer guys at Hal’s institute. Maybe they could find out more about who this anonymous emailer is.” Sandy shot me a quick glance but returned his focus to the road immediately. “Say, it looks like we’re getting down to the better part of this road.”

“Good thing, too.” Sam said. “I was beginning to wonder if y’all had an air-sick bag.”

\* \* \*

## **Part II: Down to Earth**

### **Eighteen**

“It’s what?”

Gil Taylor finally called me Wednesday morning with the lab tests of the residues on all those lichen samples we had bagged on our climb up the side of the little valley on Sunday. We shipped the samples, along with the control that Sandy had thought to obtain, Monday morning, overnight; Gil got them Tuesday; he worked all night on them and called me Wednesday. Sometimes progress on an investigation is constrained by the reality of distance and testing procedures.

I wondered if my reaction would be typical of what everyone else would think. Gaseous trinitrotoluene, meaning evaporated TNT, just didn’t make sense for me. I thought TNT was supposed to come in sticks or bars or something like that, after all.

“You remember how this equipment works, Annette. It finds molecular weights of the constituents of whatever you feed it, and it also provides information about what individual elements are involved. The closest formula I can match up to the residues on those lichens you sent is TNT.” Gil and I had worked closely on analyzing various weird substances over the years, so he has learned how to explain things to me—a political science major who didn’t do very well in the real science courses that Northwestern required of everyone. “And I’m glad to have that plain sample as a control. Lichens are strange organisms with all sorts of oddball molecules of their own.”

“That was Sandy Livingston’s idea. He got it from the forest lower down than that valley I told you about.” I’d called Gil with background information on Monday, when I shipped the samples. “We also got samples across the char-line, as we’re calling it. Is there any difference between those?”

“Well, yeah, for sure. The charred samples show evidence of oxidized TNT and the un-charred ones evidence of un-oxidized TNT. But, remember, Annette, I’m calling this TNT because I don’t know what it really is. It’s close to TNT but not spot on.”

“Everything else we know suggests that it was a gas, and I never heard of TNT as a gas.”

“Me neither. But maybe that’s consistent with what I’m seeing. If someone has invented a substance with the same properties as TNT but that can exist as a gas, well, that would be something. And it might have the subtle differences from TNT that I’m seeing. Tell me again where this stuff came from?” Gil curiosity came through loud and clear.

“Out of a pipe in the ground that vents to the side of a mountain. Way high up in the Rockies. It must be from a mine shaft under the ridge we found it on.”

“A mine shaft? Something pretty strange is going on in that mine, let me tell you.” He rang off with his best wishes for our investigation.

Angela had walked into our shared office in the Grand County Sheriff’s office about half-way through this conversation. “Did I just hear you talking about dynamite on that lichen we put in those bags?”

I nodded as I tried to sort out what I’d just heard. “Not dynamite, that’s something very different. It’s made out of nitroglycerin, he said. What Gil found was TNT, but not exactly. Maybe we can find out more, though. Let’s set up a conference call with Hal and Sandy at the institute. And I hope Fran’s around to hear all this.”

It took about a half-hour to get everything organized, but we were all finally assembled, and I related Gil’s findings.

“It’s *what?*” was the response from everyone, just like I’d suspected it would be.

“You heard me. Gil’s best description is that it’s TNT, but he says it’s not precise. He doesn’t know a better name for it, I guess.”

“Well,” I recognized Sandy’s voice, “that will let us refine our simulations, right Hal?”

“I’d imagine that this would put more energy into the system than what we’ve been doing, right?”

“Way more. Maybe we’ll get the fire hot enough to match those...ah...indications we’ve seen.” Sandy’s careful and indirect reference to the highly classified NRO data on this open line made me smile.

Fran Schmidt, who was in the office with Angela and me, cleared his throat. “What I’m hearing is that you may have found the—what did you call it?—the fuel source for that hot fire. Some unexpected gas that must have spilled out of the pipe and down into the valley. Right?”

Because Fran and I were sitting across from each other, I could use body language to emphasize my response. “As I understand it, yes and no, Fran. Nothing that Hal and Sandy have been able to put into that computer simulation has been able to make the heat that the real fire made. This new information suggests that there was a fuel for the fire that they’ve not yet simulated, this gaseous TNT-like stuff. And the pipe that Sandy found, along with the lichen samples, suggests a source for that fuel. Right, Sandy? Hal?”

“Uh, right.” I recognized Sandy’s voice. “We don’t have anything definitive, just a lot of indications. We’re going to re-run the simulations with the extra heat source implied by something like a TNT-like chemical and see what happens. And we can also use that pipe I found as the place in the computer model where this chemical comes from.”

“I’m still not clear on where this is getting us.” Fran, sitting across from me, looked skeptical. “Suppose you put some chemical like TNT into this computer model and the results look like what we saw up in that valley. What’s it going to prove—prove in the sense of admissible evidence in court?”

Hal’s voice was more than familiar, it was comforting to me. “The way we look at this, Fran, is that we’re trying to answer the question ‘how could this have happened?’—‘this’ being that very hot fire that killed all those people and melted almost everything except the frames of the trucks and so on. And the answer we can try to provide is that the only way we can account for that amount of heat is for some very energetic chemical to have been present, something that would act as a significant fuel source not only to get the trees burning but to do significant damage itself. Without a chemical of that nature—an unnatural fuel source, I guess you could say—without that we just can’t get enough heat generated to do the damage that you’ve all seen up there. Of course, the computer is still grinding away on its latest set of simulations, so we’ll have to wait and see what the results tell us.”

“But up to now, you’ve got squat, right?” Fran, I could tell, was only trying to understand matters from the law-enforcement perspective.

“I’d say we have lots more than that, Fran.” Sandy, at least, wasn’t offended. “Our simulations so far replicate everything we know from observations except the heat and the spread-rate of that fire. And the observations of those things are not likely to be made public, even for a trial. I really shouldn’t say more on this phone line.”

Hal took over. “I think what Sandy’s saying, Fran, is that we’ve eliminated a lot of possibilities, especially natural causes, for this fire. Combine that with the vent pipe that Sandy found, plus all that information from the lichen samples and the burn pattern and so on, and it seems pretty clear that some kind of inflammable gas from that vent pipe was what caused the intensity of that fire. So the next step would seem to be to find out where that pipe comes from and what’s going on down there. Right?”

“You seem pretty confident of what the computer is going to say.” Fran was steadfastly skeptical.

“Yeah, well, I hope not over-confident. See, we’ve been doing a lot of these simulations, and they all point in the same direction, the direction of needing more chemical energy to make the results look like those observations. We’ve been careful not to put into the model any conditions that have no basis in reality. But with these lichen results, that reality has changed. And we may be able to match the observations now. We’ll see.” Hal’s confidence was shining through for me, and it felt good.

“So.” Fran had his feet up on the desk, twitching a western-booted toe in random patterns. “It sounds like what we need is to find more about what’s under that damned mountain.”

\* \* \*

I had trouble not laughing, for I’d spent the previous two days trying to learn as much as I could about what was under Byers Peak and its neighbors in the Vasquez Range.

It had taken me only part of Monday morning to exhaust the mining information resources at the county offices, after which I tackled the information resources of the State of Colorado’s office that dealt with mining. Finding my way through *that* maze of confusing jargon and curious identification terminology was made a little easier by virtue of their on-line mapping tools, but I when I tried to discover what was actually going on at a particular mine claim, I hit a dead end. So I’d learned that something was going on under that ridge on Byers Peak, but not what that something was.

On Tuesday, I’d talked with Sandy about the DUSEL competition, and he’d been able to unearth the interesting fact that the Henderson Mine proposal was one of the Phase 2 entries in the competition, meaning it had passed muster in Phase 1. It turned out that there were several other Phase 1 proposals

that had not been invited to the next level, and one of those involved the same mine claim that I'd discovered to extend under that Byers Peak ridge—Monument Ridge, it was called, named for the rock formations along its spine—that we were so interested in. An extensive network of shafts and drifts called the Ute Mine, the entrance to which was a tunnel that surfaced over on the other side of the Vasquez Range off Ute Pass Road, simply wasn't deep or extensive enough to make the cut in the DUSEL competition.

The state's mining records, however didn't have any information about what happened to the Ute Mine after it was eliminated from the DUSEL competition. It was as if time had stopped at the end of the NSF Phase 1 program. So it was back to the county's property ownership records for me.

Angela was bugging me about what could she do to help, but because she had worked all day Sunday—Saturday, too, for that matter—I sent her home to get her place whipped into shape. Sandy, I figured, would be at MPARC, babysitting the computers.

At least the county offices were there in Hot Sulphur Springs and I could invoke the authority of the Sheriff's Department to get help. That made things much easier than trying to navigate obscure web sites for information. After I pulled rank a couple of times on Tuesday and became a general nuisance to everyone, the assessor herself assigned one of her staff assistants to, surprise!, assist me.

Jan Miller, in her early thirties, nondescript, bookish and shy, ripe for a makeover, turned out to be a wizard with the county's property database. I made a point of getting us on a first-name basis as soon as I could.

“So, Annette, what you're trying to find out is the history of this mine's ownership, right?”

“Right. I found out yesterday that there was a proposal to use this mine for a deep underground laboratory, for scientific research. The National Science Foundation declined to consider it beyond their first round, however.”

“Oh, right. I remember reading about that somewhere. The Henderson Mine, west of Empire, they made it to round two, right? Too bad they didn't get selected. It would have given the economy around here a real shot in the arm, I bet. Let's see what this says about the Ute Mine's ownership.” She had pulled up a spreadsheet with names, dates, and dollar amounts. “Hmm. Well, according to this, the current owner is something called ‘Ute Holdings, LLC’ out of Las Vegas. Before that it was something called ‘Ute Mine Associates, LLC’ also out of Las Vegas. They sold to Ute Holdings five years ago.”

“I wonder how we can find out who controls these organizations. I mean, these two sound like the same bunch with a slight variation on the name.”

“Yeah, we see that a lot, Annette. Probably has to do with tax dodges and stuff like that. A new company gets created just to take over the holdings of the old company, and then the new one has some number of years to show a profit, before they have to pay taxes and so on. Meanwhile, the old one goes bankrupt or something.” Jan shrugged. “Anyway, all we have here is this. It doesn't tell us anything about the company, or anything like that.”

“Or what they might have been doing with the property.”

“You mean, like working the mine? Well, for some things they'd need specific permits. But that could be hard to find, because this Ute Holdings outfit could have leased the mine to some operator, and the permits would be under the operator's name.”

“So what's the easiest way to find out what's going on down in that mine, anyway? I mean, assuming it's just not sitting there idle.” I was finding the whole thing too frustrating.

“Got me. Find the entrance and watch to see if anyone goes in or out, and ask them, I guess.” Jan wanted to help, I could tell. But the county’s database had only so much information.

At least one of those bits of information was a long code number for the assembled claims associated with the Ute Mine. Armed with that, on Tuesday afternoon I checked both the county’s and the state’s environmental permit databases and discovered that the Ute Mine was not permitted for mining operations by anyone. But there was an organization calling itself AirDX, LLC that had put in for permits for “underground research” of an unspecified nature. AirDX had a post-office box in Evergreen, in the foothills above Denver. I’d heard the name but never been there, and I was surprised when Google Maps told me that Evergreen was just a few miles down I-70 from the interchange with the road over Berthoud Pass, US 40. Maybe, I thought, a visit there is in order.

Or, because it was so close, it occurred to me that someone local might know something. I went looking for Fran.

“AirDX? Hmm. Sounds familiar somehow, but I can’t place it.” Fran scratched his head. “Maybe I’ve seen a sign or something. Mary and I go over to the Wal-Mart in Evergreen a lot. So does everyone around here, for that matter.”

“It’s funny. They have a post-office box but no listed phone or web site. But according to the county, this is the outfit that’s got the permit to work in the Ute Mine. And that’s what’s under that valley up there, at least if the mining claims are any indication,” I said.

“Do we know it’s their ventilation pipe that Sandy found?”

“Yeah, good point. No, I guess we don’t. Although it’s hard to believe it could come from anywhere else. Monument Ridge is smack in the middle of the consolidated Ute Mine claims.”

“Things are still pretty circumstantial, don’t you think, Annette? Yes, there’s the pattern of charred plants on that mountainside and so on, plus the chemical sampling results. But I’d be really surprised if any judge would give a search warrant on the basis of this stuff.”

“Maybe we could persuade the postmaster over at Evergreen to tell us who really owns that post-office box. Don’t they require a street address and so on in their application?”

Fran nodded. “Couldn’t hurt to ask, I guess.”

\* \* \*

## Nineteen

Angela, I assumed, had taken my advice to go home and be domestic, although part of me suspected that she was out interviewing people in the Hispanic community. Because it was only a bit after 1:30, I decided to make the drive to Evergreen to see if the postmaster might cooperate.

Given that the Colorado Bureau of Investigation needed to speak with AirDX principals, and given the obscure nature of their public presence, surely the U.S. Postal Service would want to protect itself and provide contact information for whoever rented the box. It sounded persuasive to me, at least. Maybe I could persuade the postmaster, I thought. If not, well, I could always stock up on toilet paper and so forth at the Wal-Mart.

After fighting the summer tourist traffic on I-70 in both directions, I finally made it home about 5:30 with a car full of paper towels and tissue, rolled and boxed. Hal’s car wasn’t in the garage, so I put

myself to work on making an interesting dinner. By the time he arrived an hour later, the mix of red and green bell peppers was nearly sautéed, and I was slicing the Italian sausages I'd grilled—grilled all by myself, no less—to add to them. When they finished, I was going to warm up some slices of polenta in the pan and then deglaze it for a bit of sauce.

He looked too pleased with himself for me not to be curious.

“Good day at the institute?” I asked.

“Encouraging. And interesting too. Let me set the table and pour you some wine.”

He studied the pepper-sausage mixture for a minute and disappeared into the wine cellar.

“How about a *Chianti Classico*?” There was a slight echo from the recesses of the old mine shaft.

“Sounds fine. What was so encouraging?”

“The numbers we found for TNT chemical energy. Assuming that the real thing is close to that should give us the energy we've been looking for, to make that fire realistic. Of course, we'll have to experiment with gas concentrations—too much would just blow the whole place up, I expect. But we can start with what would be toxic if you breathe it, on the assumption that some of those people were poisoned by it.” He reappeared and set to work with a corkscrew.

“How long will the computers take?”

“Until tomorrow, probably. At least for the first set of results.” There was a muffled *pop*.

He looked up at me with a frown. “You know, when we're working on this, like that business of deciding what gas concentrations to use, we get all involved in the technical details, hot on the trail, sort of. We tend to forget that we've got a couple dozen victims for this whole thing. And every now and then something reminds me of it, and it's quite a shock.”

“Happens all the time to me, too. The thrill of the chase, or something, it makes you forget about what started the whole thing, sometimes. But it's good to remember now and then, because it restores your motivation to succeed.” I poured a shot or so of vermouth into the sauté pan to deglaze it. “Let's get this on the table and eat. I'm starving.”

After a couple of bites, Hal looked up, surprised. “Say, this is different from the last time you made it. Got a secret? And how was your day, anyway?”

“Secret Treiri herbs and spices.” I winked at him. “And I grilled the sausages first. My day? Well, I drove down to Evergreen this afternoon. Seems that there's a company called AirDX that rents a PO box there and also leases something called the Ute Mine from its ownership. And the Ute Mine includes the claims up there where that fire happened.”

“Sounds like progress. But I thought that the postal service was protective of customer privacy.”

“They are. I got a lesson in that. But they cooperate with law enforcement, because they're very risk averse when it comes to their PO boxes' being used for anything illegal. So I found out who rented the box and how to contact him, some guy named Glenn Marquardt. With an 'Esquire' suffix. A lawyer, it seems. He's tomorrow.”

“AirDX?” Hal stopped chewing to think. “AirDX. That reminds me of something, or it's familiar or something. Hmm.”

“AirDX, LLC. Like I said, they're leasing the mine from some Las Vegas outfit called Ute Holdings, LLC, who bought it a while back from Ute Mine Associates, LLC.”

“Sounds like people are trying to limit their liability with this property, huh?” He grinned around his mouthful.

“Yeah, well, whoever’s working underground there just now would appear to have stepped into a big, fresh, steaming pile of liability. And if there’s any hint of negligence, in terms of standard practices for whatever was going on in that mine, well, it could turn into manslaughter in a New York minute.”

“Seems like there’s a good chance that the EPA, or maybe the state’s Air Quality Control Commission, might get interested as well. If that stuff was really toxic and they released a significant amount, that’d be some kind of violation.” He sipped his iced tea.

“Now, that’s an interesting angle. We found pretty strong evidence of a release of some kind, didn’t we? All those lichen samples, I mean, with the vent pipe there. Hmm.” I’m not a huge multi-tasker, but chewing and thinking I can manage. “I think I’ll take that approach, because if state air quality regulations were broken, I’ve got jurisdiction as a CBI official.”

Just as Hal was going to respond, the triumphant theme from Tchaikovsky’s *1812 Overture* burst forth from his shirt pocket. He look flustered, and said “Sorry, this is one I have to take...Chuck? What can I do for you?”

I decided that he’d programmed his phone with that melodramatic bit of music for when Charles Shure called, and that’s why he took it at the dinner table. Normally, we ignore the phones while we’re eating.

“When did you get in?...And the house is OK? Good. Want to come down for dessert and coffee? OK, we’ll see you in an hour or so.”

He put his phone away. “Have we got anything that would make a credible dessert? Coffee I know we can manage.”

“I got some blueberries and raspberries at the store yesterday, and I could marinate them in some Cointreau. And I think there’s some cookies around. What’s going on?”

“He said he wanted to talk about a couple of things, that’s all. Rebecca is in Europe doing a photo-shoot, so he’s probably lonely up there all by himself. He’s staying in Win’s house again, and it’s way too big for one person.”

“Well, I’m glad we had the chance to talk at dinner. I’ve got a clearer path forward now.” I began clearing the table. “Pollution violations, even for toxic chemicals, are not nearly as serious as manslaughter, but they’re easier to prove. So that gives me something to start with. AirDX, in the person of this Glenn Marquardt, has some explaining to do. And it might give us the leverage we need for a warrant.”

\* \* \*

Charles Shure rumbled up our hill in his Cadillac Escalade about 45 minutes later, and shortly we were sitting on the porch watching the alpenglow across the valley.

“I don’t know, Hal. Sometimes I think you got the better end of the deal we made for this land. This view is remarkable.”

“C’mon, Chuck, yours won’t be so bad, either, especially with those giant windows you’re putting in. You’ve got that wonderful aspen grove to watch, after all. Anyway, are you up here for vacation this time? You keep threatening to do that, but you always seem to be working.” Hal loved to poke gentle fun at his boss.

“Both, as usual. And I’m rattling around in that place all alone without ’Becca there. Thanks for inviting me down. These berries are great, Annette.”

“In any case, you’re here in time to see some interesting new results from the wildfire simulations we’re doing.” Hal proceeded to fill Shure in on the latest effort to introduce sufficient energy into the computer model.

“TNT-level energies in a gas? That’s pretty strange, because one of my divisions is looking at something like that as an investment. I shouldn’t talk about it, though, unless you guys really need to know about it.” Shure looked question marks at us.

“We’re both probably cleared for it, but I’m not sure of the need-to-know.” Hal, with more experience than I in the world of classified information, seemed to want to avoid hearing about things he didn’t need to. “At least we can wait for our new results, right?”

“Right. There’s something else I want to talk to you about, anyway. Biotechnology. Know anything about it?” It was pretty clear that Shure had shifted into his business mode.

“Well, as you know, my specialty is earth science, in particular atmospheric science. But biology is a natural science, as least as Frémont State defines it, and there were any number of attempts to get a biotech program going while I was dean.” Hal picked up his coffee cup and swirled the dregs around while he thought. “There were two camps, those who thought we should focus on bioinformatics and those who thought that bio-engineering was the way to go. I was a sort of referee, so I learned enough about all of it just to be dangerous.”

“Hmm. There’s overlap of course. We’ve got a Biotech Division—you probably remember it from that business with the old Nazi concentration camp journals, right?” He paused, and Hal and I nodded. The X-S ranch case was a hard one to forget.

“Thing is, as a corporate division, they’re very bottom-line focused. And I don’t think we’re getting enough cutting-edge work done. The profit motive is fine—look where it got me, after all—but it doesn’t lend itself to risk-taking. That’s one reason I set up MPARC, Hal. I figured that with the endowment, you’d be willing to take bigger risks than if you had to earn your way. And I guess that’s what you’re doing with this wild-fire simulation stuff.”

“You’ll recall that I phoned you before taking it on, right? But I think I know what you mean. In my field, it’s like it used to be when you could get an NSF grant to work on something as compared to, say, a NASA contract to work on the same thing. The NASA contract would specify ‘milestones’ and ‘deliverables’ and all sorts of other bureaucratic crap. The NSF grant took the approach of ‘find out a bunch of interesting new stuff and publish on it.’ Guess which arrangement produced the really interesting advances in the science?” Hal shrugged to indicate the obvious answer.

“Right. And what I want to do is to encourage more risk-taking at the cutting edge of research in my Biotech Division. With all due respect, Hal, it’s more complicated in biotech than in the world of computer chips, like the MPARC work, because in biotech you’re not only doing all the computer analysis and simulation, but you’re also growing real beasts in a laboratory, and sometimes they don’t want to cooperate.” Shure rolled his eyes as if he ought to be able to control those “beasties” but couldn’t. “Anyway, what I’ve thought of is another institute, only not quite as independent as MPARC. Here in east Grand County somewhere.”

Hal stared at the backside of the Front Range while he tapped his fingers. “I haven’t talked to you about this much, but maybe now’s a good time. I’m not sure how the local folks would feel about such a new venture here. I mean, we’re doing computer simulations of various things, mostly related to weather and climate, and we’ve run into an astonishing amount of...well...call it ‘know-nothing-ism,’ for lack of a better term. Seems like biotech, with all of its threatening things like gene splicing and stem cells, it

could have trouble getting support from the community. Or, worse, it could engender significant opposition. I know that there are some folks among the county commissioners and on the school board that would put up a fuss.”

“Even with all the new jobs and money flowing into the economy, huh? Idiots.” Shure leaned back in his chair and took a deep breath of the evening mountain air.

“Absolutely. In fairness, I expect that you’d find the same push-back anywhere you proposed such thing, except maybe at the University of Colorado medical campus down in Aurora.”

“*Aurora?* Hell, why not all the way to Kansas? Why in the world would anyone want to start an institute there? Anyway, it seems like your success in getting MPARC rolling suggests that another high-tech research institute up here could work.” Shure seemed to me to be revealing a pre-determined agenda bit-by-bit.

“Lab facilities for such a thing would represent a bigger start-up investment than MPARC, though. I mean, our computers are going to cost a bundle, but most of them are going to sit down in Colorado Springs on your nickel, right? You’d need biological labs up here to do what you’re talking about. Maybe even a level 3, or possibly 4, biohazards lab. That’s a huge investment. And the public relations problems could be show-stoppers.” Hal’s experience with the local residents was an ongoing source of frustration to him.

“I figure it would cost two to three times as much as MPARC per research scientist. But there are models for an organization like this. Take the Scripps Research Institute, out in La Jolla, and I guess they’ve opened a branch down in Florida somewhere. They run what’s essentially an academic shop, with senior scientists who manage lab groups of post-docs and students. And I get it about the PR problem, but that what’s those overpaid PR people are for. Let them deal with it.” Shure dismissed the issue with a small wave.

“So, Chuck, what are you suggesting?” I couldn’t keep quiet any longer. “A new, independent institute with some kind of big endowment like MPARC has? A second MPARC operation, like a second division or something? Or what?”

Shure laughed. “I think ‘what’ is the best idea, at this point. I do know that your husband is doing a cracker-jack job of setting up MPARC. He’s good at that sort of thing.”

“Uh-oh,” Hal said, looking at me. “Does this sound like what I’m afraid it sounds like?”

Now it was my turn to laugh. “Don’t look at me, sweets.”

Shure forged ahead. “I know that you look at directing MPARC as a full-time job, Hal, but now that you’ve got a chief scientist and a chief operating officer along with computer support from UNELECO, you can offload a lot of the stuff you’ve been doing. Delegate, and so on.”

“Hmm.” Hal, I could see, was interested but also cautious. “Seems like I should ask for a raise, but I’m already getting an obscene salary.”

“You academics live in a different world, don’t you?” Shure smiled rather like I thought a shark might. “Tell you what. I’ll double your salary but put the new part into tax-deferred retirement annuities instead of giving you the cash. Then you won’t feel so guilty.”

“Well, I’m all for living guilt free,” said Hal. “But, look, how about we think way ahead here. You started with MPARC as an institute to help your computer division move forward, and now you want to expand it to do the same thing for your biotech division. UNELECO does lots of other stuff, too. Should I, as the director of MPARC-next, be thinking of other potential areas for expansion? Like, maybe, your

defense work? I mean, it seems like a good idea to think big at this point rather than ooze along governed by unexpected, random mission creep.”

“Got to admit, Hal, that the thought had occurred to me, most recently a a few minutes ago. That stuff about TNT as a gas switched on a light. In fact,” Shure looked around, pretending to be suspicious, it appeared, “as long as no one else is listening I might as well tell you about that. See, the Defense Department is always looking for more effective munitions. And one modality they’re interested in is conventional explosives for the Air Force, what are called ‘fuel-air explosives,’ in particular. We’re looking into purchasing a small start-up company that’s made a significant advance in that area, and it’s occurred to me that another institute like MPARC, or an MPARC division, could advance defense research as well.”

Although I was hoping that Hal wouldn’t take the bait to turn MPARC into a military research organization, Shure’s comments also got my antennae perked up. “Chuck, what’s the company you’re trying to purchase, can I ask?”

“Sure. It’s a local outfit, more or less. Something called AirDX. You probably haven’t heard of it, though. Their work is all classified.”

\* \* \*

## Twenty

Hal and I stared at each other for long enough that Chuck Shure began to fidget.

“What?” He finally broke down. “What’d I say?”

“Chuck, two things. I now have need-to-know about what came up before, this gaseous TNT stuff that you shied away from talking about. And, second, if you’re in the process of purchasing AirDX, let me suggest that you postpone any offers for a while.” It occurred to me that perhaps I was giving the guy inside information about a possible financial transaction, but what the hell, I thought, he’s got information I need and I owe him something.

“Uh, OK. Let me make a quick phone call.” He got out of his chair and wandered down across the yard in front of the porch while Hal and I stared at each other, exchanging shrugs, for a couple of minutes. “OK. I took you at your word and put our negotiation on hold. Now, tell me what all this is about and I’ll tell you everything I know about AirDX.”

I picked up on Hal’s subtle body language and took over.

“So, you know a lot already about the fire that killed at least 23 people, about how it just doesn’t seem like it could have been natural, about MPARC’s simulations and their search for energy sources, right?” I paused, Shure nodded.

“The business about the gaseous TNT-like substance came from two steps in our investigation. A bunch of us went up to that valley last Sunday and climbed up the mountainside that the fire had burned. We got lichen samples from the burned area. And Sandy, Sandy Livingston, your MPARC chief scientist, he found a ventilation pipe up at the top of the charred area. Then, we sent the samples out for chemical analysis, and it turns out that there were traces of something resembling TNT on them. So I looked in the mining records and discovered that there seems to be a mine under that area, the Ute Mine, the owners of which have leased the property to a company called AirDX. They have a permit for

underground research of an unspecified nature. Naturally, I, meaning the Colorado Bureau of Investigation, I am interested in AirDX at this point.”

He stared for an uncomfortably long time, and finally let out “Oh.” After a few more seconds of contemplation, he continued.

“Right. So, thanks for the heads-up that let me put our negotiation on hold. Here’s what I know.” Shure took a deep breath. “AirDX is a start-up company formed by a retired Air Force Academy professor, Herschel O’Donnell. The company name is a take-off on ‘RDX’, which is a military explosive developed in World War II and still the munition of choice for most applications. Its chemical make-up is rather close to TNT, but it’s far more energetic. O’Donnell’s idea was to develop something with the power of RDX in gaseous form, hence ‘AirDX.’ As I understand things, he and his staff have been working on developing variations on the RDX molecule that would exist as a gas but be stable until ignited. The application of interest is for fuel-air explosives.”

He looked at each of us, as if seeking questions, and continued when he saw none. “In our purchase negotiations, they’ve listed as liabilities a multi-year lease on an underground research facility and as assets a multi-million-dollar Department of Defense contract and a whole load of laboratory equipment, plus the intellectual resources of O’Donnell and three Ph.D.-level assistants.”

“I’m puzzled, Chuck.” And Hal did indeed look puzzled. “I know that UNELECO does lots of defense-related work, in several different divisions, I think. But I don’t recall any actual weapons work. Surveillance equipment, communications, yeah, and all sorts of other things. But this weapons business seems like a new direction.”

“Our interest isn’t for its potential for fuel-air explosives so much as it is for fuel, period. For rockets. The disclosures that O’Donnell provided included information that their latest chemical can be cooled and pressurized to liquid form, then ignited through nozzles to power rockets. With, he said, about ten times the efficiency of traditional fuel mixtures.”

“You said the company was O’Donnell and three assistants. There’s another person, a Glenn Marquardt, who rented their post-office box for them. He’s a lawyer.” Maybe, I thought, I won’t have to drive down to Evergreen to interview this guy after all.

“Right. He’s who we receive mail from and so on. I’ve had only limited contact with O’Donnell. Marquardt is on retainer as a mouthpiece, I think, and, probably, for legal advice. But he’s not an employee or an intellectual resource.”

“Have you met any of the assistants?”

“Not yet. But I’ve seen their CVs, and they’re an impressive bunch. So those intellectual resources are truly an asset worth a lot.”

“I don’t suppose you have any of the chemical formulas of the new chemicals they’ve been experimenting with?” I knew that was a stretch, but I could hope.

“Some were included in the disclosures, but they’re proprietary, of course. I can get them for you, I guess, if you don’t disclose them out in public.” Shure looked a bit worried about this.

“How about names and contact information for the assistants, and O’Donnell?” Might as well try, I thought.

“That’s easy. I’ll email it tonight. So, suppose the chemicals match, the ones I give you and ones you found on the plants...”

“Lichen”

“...lichen, whatever. Suppose they match. And you interview the assistants and one breaks down and talks about a release through that vent pipe. Then what?”

“Well, they I’d say that AirDX has more liabilities than just that multi-year lease.”

Shure sat back and let out a long breath.

“OK, well, if that happens, then I guess there will be two good things to come from this. You’ll get your mystery of—what’s it being called?—of the Valley of Death solved, and I’ll be able to purchase AirDX for a song.”

“Just remember, Chuck, it could take a while. We’ll need to investigate to see whether there’s any negligence involved. If so, that would change the entire complexion of this thing. You just might end up with fewer intellectual resources than you think.”

\* \* \*

Having checked on the progress of the latest simulations before we went to bed Wednesday night, Hal was motivated to get up and out the door on Thursday morning. I dallied around the house trying to decide how to start my day and finally settled on a trip into Winter Park to see what results Hal and Sandy and company might have.

It was one of those spectacular summer days we have up in the high country, and there were serious-looking clouds forming up over the Continental Divide—a good sign, for the drought had been going on far too long. It occurred to me that Hal and I needed to spend some time on the water somewhere, maybe up in Summerland Park northeast of Grand Lake. North Inlet Creek always provided both beautiful scenery and interesting trout action.

But there was work to do. Fran had hinted that he would be holding another real news conference on Friday—Janelle Kennedy had been providing daily updates since the last one, but it was time for the boss to stand up and take his lumps. I needed to decide on the right approach to the AirDX crowd and to see how much of that information should come out to the media. And sooner or later, we needed to arrest someone. I wasn’t quite sure of whom or what for, but maybe the air pollution charge would come in handy.

At MPARC there were all smiles. Hal hustled me into an inner office, a conference room with no windows and an electronic lock on the door. Sandy was waiting.

“Welcome to our secure facility, Annette, the place where we can freely discuss classified information.” He waved his hand around the room. “It’s not much to look at, but it’s all ours and it serves the purpose. We dragged you in here to show you the results we got overnight, along with some hush-hush data that Mac found for us.”

“Where is he, anyway? Haven’t seen him since they got into town.”

“He’s in Hal’s office, which is also secure, trying to get more information about that Ute Mine you found. Seems he has access to all sorts of very interesting classified databases.” He picked up a little remote control gizmo from the conference table. “Hal? I think this will show better with the lights dimmed way down.”

It made me feel quite academic, actually, based on things Hal had told me over the past few years. A seminar of sorts, using what I assumed to be Microsoft Powerpoint slides, given by a guy shining a laser pointer on the screen to emphasize his remarks.

“This first slide is actually an animation that I’ll start in a minute. It’s from a series of surveillance images that Mac got for us.” Sandy was referring to a nearly all-black image with various pinpoints of

light here and there plus a cluster of lights over to the right side. As I stared it I saw that the black was really various shades of gray, and eventually what looked like the Front Range emerged along the right side of the image.

“This is just before the fire ignited. Here’s Fraser,” Sandy hit the cluster of lights with the laser pointer, and then moved it left and waggled it, “and Byers Peak is about here. Now watch carefully.”

A little hand appeared on the screen, and Sandy clicked a button. Almost immediately a new pinpoint of light appeared just above and slightly to the left of where Sandy had indicated the location of Byers Peak. It quickly grew back in the direction of the peak, moving across the landscape with remarkable speed. After a few seconds, most of it faded, leaving a flickering bright area about in the middle of where the large patch of light had been.

“That’s speeded up by a lot, so the 15 seconds of video there was really an hour and a half of real time. The lingering bright patch was the forest fire, which got started by that initial fast-moving fire. We’ve dissected this frame-by-frame, and that gives us solid estimates of the speed of that initial fire, and the intensity of the bright patches on the frames gives us the heat output. Quantitatively. So we can compare it with our simulations.” He looked quite pleased with himself.

“This is the background topography in our model, with a Google Earth image showing what it looks like.” A picture of the mountains, with a snow-capped peak just off center, appeared overlain by a bulls-eye of little lines. Elsewhere the lines reminded me of a plate of spaghetti.

“Now I’m going to zoom in on our little valley, with its ridge to the left. The red spot is where I found the vent pipe, and here’s the grove of trees where the truck frames were.” Obediently, the picture expanded to include only Monument Ridge and its adjacent valleys, with the Valley of Death to the right. The grove was obvious even without the laser pointer’s illumination.

“Now I’m going to show a series of videos, each 15 seconds long, like that surveillance data. But the real elapsed time for each is different, and it will appear on the last frame.” Sandy made the picture fade and the little hand appear again. “Here’s what we think of as a ‘natural’ fire, with grass by the creek to get it started and moving up toward that grove of trees.”

Against the darkened background, a spot of light appeared and began moving left, becoming bigger as it moved. After a few seconds, there was a “V” of light, and when it reached the grove, it brightened considerably. It did not progress much past the grove, though. After the 15 seconds of video, a little notation of “8:45” appeared in the upper right hand corner of the screen.

“You saw the time, and, what’s not obvious from that, the temperatures of the fire are way lower than from the data as well. So that natural fire doesn’t resemble the data at all, right?” Sandy was looking at me, so I nodded.

“Now, we’ve got a whole boat-load of these videos, but it seems like a good idea to cut to the chase instead of boring you with all of them. So here’s what we got overnight, after we heard about this gaseous TNT stuff or whatever it is as fuel. We had to make a bunch of assumptions about how much there was and its actual chemical composition. That was complicated by the information you got from Chuck Shure last evening. So we assumed a chemical energy equivalent to half TNT and half RDX, and we used just enough of the resulting gas to probably be toxic to people who breathe it.” Sandy twitched his thumb, again the hand appeared, and again the fire took off.

This time, at the end of the 15-second video, the notation said “1:15.”

“So,” Sandy took a deep breath, “an hour and a quarter of computer simulation compared to an hour and half in the data. And the burn patterns match well. Best of all, from the perspective of accuracy of the simulation, the temperatures match up almost perfectly. So we’re quite pleased. We could mess

around more, decrease the gas concentration or the mixture, but because we really don't know what this stuff was, that doesn't seem all that useful yet."

"I think you're probably right. If we ever do find out what it was and how much was released, we can re-run that last simulation to see if it improves. But this is pretty good, all things considered, I guess." I stopped to think for a minute.

"So." Now it was my turn to take a deep breath. "There's a vent pipe up on the side of the ridge there, and some amount of some toxic, highly energetic gas gets vented out of it. The gas is heavier than air, so it flows down the mountainside, into the valley, and eventually gets to that campfire we saw, where it ignites and turns the valley into a firestorm. The people who weren't killed by the toxic gas were killed by the fire. Does that make sense? Did I miss anything?"

"I think that must be what happened, Annette." Hal was persuaded, it sounded like.

Sandy was staring off into space, deep in thought. "Y'know, we could take this one step further. We've been concentrating on the fire so much we haven't really paid attention to the gas before it ignited. We could do a dispersion calculation, let the gas out of the pipe by injecting it into that model gridpoint as a source term, track its flow down the side of the valley and so on. It would help a lot to know its exact molecular weight and concentration, of course, but we could probably pinpoint the time of the release by working backwards."

Hal said, "After the fire simulation, that would be pretty easy, I'd think. Hell, we could even use the same code, don't you think, Sandy?"

"Right, yeah. That's just what I was thinking. Would that be helpful, Annette?"

"Anything that provides more insight into this will be helpful. For all we know, there's a record in the lab down there documenting the release. The timing could be useful."

"We'll work on that, then. Um, one thing to keep in mind is that the surveillance data can't be made public. So whatever timing we're able to work out isn't something that could be used in court, or even to get warrants." Sandy looked uncomfortable. "Mac worked hard to impress on Hal and me how highly classified that data is, and we have to respect the restrictions on its distribution. Right, Hal?"

"Yeah, I'm afraid so. The existence of data from surveillance satellites about events in the US is extremely sensitive stuff. In fact, officially, it doesn't exist." Hal shot me the "why me?" look.

"Oh," I had to smile. "Don't you boys worry your pretty little heads about that."

\* \* \*

## Twenty-One

Hal, I knew, would have taken my wisecrack for just that. I wasn't so sure about Sandy, but, then, I didn't care all that much. Rather than worry about it, I followed Hal back to his office.

Mac MacQuarrie was there, and he looked up from whatever he was absorbed in on the computer screen.

"Annette! Good to see you. Double good, because I think I'm finding some things that will interest you."

“Uh, Annette? I’ve got to meet with a business group for lunch, so I’ve got to get going. See you for dinner?” Hal was on the way out the door, but I grabbed him for a quick hug.

“You will. Knock ’em dead.” I turned back to Mac. “Haven’t seen you since you got here, Mac. How are you and Sam settling in?”

“She’s making lists of places to rent. That house across from the ski area is great, but it’s just not our style. Too, oh, plastic, I guess. And she’s been going on and on about your little adventure on Sunday. Won’t shut up about it. She’s even talked about signing up for climbing classes somewhere.”

“Well, I’ll tell you what. I forgot how rugged the terrain is up there, and that jeep road as well. I wondered whether I’d made a mistake taking her along. But she saved the day, actually, by spotting something, a burn feature, that none of the rest of us saw. She made the process of getting those samples all the more effective.” I realized I should thank her again. “Say, why don’t the two of you come up to our place for dinner? You haven’t been up there, and you’d enjoy the view, I bet. And maybe it would give Sam new ideas about places to rent. Uh, I know it’s last-minute and you could have plans already, but tonight would work for us.”

“Why, thanks. Let me give her a call.” He reached for a phone.

Five minutes later, we were staring at Hal’s computer screen, dinner arrangements complete. Even better than dinner arrangements, Mac had found an interesting set of drawings of the Ute Mine.

“I’m not going to tell what web site this really is—that URL you see at the top there is completely bogus. But it turns out that certain agencies in Washington like to keep close track of defense contractors, what they’re doing and where they’re doing it. As soon as that AirDX company was awarded the Air Force contract, they leased part of this mine. And one of those agencies decided to find as much as there was to find. This is part of it.”

We were looking at what amounted to an underground map, drawn in a three-dimensional perspective that allowed various levels to be shown together. Per the normal convention, north was up, but up was also up.

The entrance to the mine was a horizontal shaft—called an adit, I learned—into the western side of Byers Peak, and after several hundred yards of sloping slightly down to the east, it became a decline, sloping downward in a clockwise spiral to access various horizontal drifts at different levels. Several of these were aligned, like hallways in a skyscraper, apparently to access the same ore body, and one, labeled “ore belt” apparently served as a second entrance to the mine on the south side. Others sprouted off in different directions and led to large, excavated caverns. One of these, at the end of an upward-sloping drift near the main entrance, appeared to me to be more-or-less under where Monument Ridge ought to be, although it was hard to tell.

“Mac, is this to scale? Is there a way to superimpose the surface topography?”

“I already thought of that. It’s not trivial, because of this 3-D perspective drawing. But I grabbed a Google Earth image and played with tilting it. This,” he clicked the mouse on an icon at the top of the page, “is as good as I could get. It’s backwards, of course, with the mine on top of the topography, but I think it shows the relationships of everything.”

“You can see that the entrance lines up, here…” he pointed the mouse cursor over that spot on the two figures, “…and there’s a second reference where the old conveyer belt surfaces over here. Things line up there, too.”

Because the map of the mine was perched above the topography on the computer screen, it took me a few seconds to figure out that, in real life, Monument Ridge had a large excavated cavern under it.

There was even a faint line labeled “air vent” running up to the side of the ridge, above a valley that, in the Google picture, had a grove of trees in it.

I pointed to that cavern. “I bet this is the space that AirDX is leasing, right?”

“As near as I can tell. And there doesn’t seem to be any information about what, if anything, is being done with the rest of the space down there. But there are pictures.” He proceeded to flip through a slide-show of photographs, some from satellites and some obviously taken from ground level.

“Whoa, stop. Go back one, please. That’s the entrance, eh? Presumably the main one, because that looks like a good-sized overhead door.”

“Right, let’s see…” Mac stepped forward three slides, “...here’s a shot of that door with a truck coming out, so it’s big enough to drive through.”

It was a highway semi-tractor, a Peterbilt, by the nameplate on the radiator, of unknown vintage, and the entrance was three times taller and more than twice as wide. Big door indeed, I thought.

“So, do you suppose AirDX was having a delivery that day? Or what?”

“Got me, Annette. I guess I had the impression that they were involved in laboratory chemistry experiments, but supplies for those shouldn’t need that size of truck. Here’s another.”

This one was a side shot of a delivery van, a side shot that revealed no corporate markings. The mine door’s size dwarfed the van.

“So, if you found all this, you must have found information about the lease arrangement and the company that owns the mine, too, uh, Ute Holdings, I think?”

“Annette, I’ve got more information than you could possibly want. And I haven’t had time to really study it all, but there some interesting parts. The AirDX lease is, I guess, what you’d call ‘prospective,’ in the sense that the monthly cash flow is small but future promises are high. Ute Holdings gets a percentage of eventual stock sales or whatever. That made me wonder what kind of outfit Ute Holdings is, and this is where things get really interesting.” He minimized the window with the mine drawing in it and brought up a word processor. “I’ve made these notes—you can see that Ute Holdings is at the end of a series of shadow companies that eventually track back to these eight, uh, gentlemen.”

“I don’t recognize any of those names. And they all have Las Vegas addresses, so that isn’t surprising, I guess. Who are they?”

“My connections at Treasury and at the FBI were able to provide some very interesting comments earlier this morning. Apparently they represent various shady organizations from all across the country. Two of them are associated with New York and New Jersey outfits, then there’s Boston, Chicago, Houston, Los Angeles, San Francisco, and Seattle. My guy at the FBI got all giddy when I told him that they were all co-owners of this network of companies. He actually giggled on the phone.”

“Well, let’s see. There are, ah, 1, 2, 3, 4 layers between Ute Holdings and these fine gentlemen.” I was pointing to Mac’s list. “This traces Ute Holdings up to them. Is there a way to start with them and work down, to see what other companies there are in the various layers?”

Mac’s smile was serene. “Used to be, you really couldn’t do that very effectively. But now, with computer search capabilities, you can. And I kind of thought you might be interested in something of that nature.”

One time, when Hal was at work on his computer, I looked over his shoulder and saw a diagram of how the climate system works. There were boxes for parts of the system, circles for processes between and within them, and curvy arrows showing all the links. It looked like a map of the Los Angeles freeway system that had been drawn by a very inebriated individual.

The picture that Mac brought up next was rather like that, but instead of boxes for “ocean” and “atmosphere” and so on, there were company names. I couldn’t help but notice that many of those names involved the words “Environmental Services.”

“Mac, did you think to run the license plate on the front of that Peterbilt that was coming out of the mine, in that picture you showed me?”

\* \* \*

After all the work he’d done, I felt petty for the little charge I got when he said “no.” But then he ran it, faster than I could have, and I decided I needed all the charges of that nature I could get. I was supposed to be the CBI Director in control of things, but he was a master.

The Peterbilt, it turned out, was registered to something called “Western Slope Environmental Services,” and it took us only a minute to find it on that corporate freeway diagram. Relative to the Eight Gents, as I had begun to think of them, it was at the same vertical level as Ute Holdings, but far removed horizontally.

On the other hand, it had a web site—a single-page web site—with a clever WSES logo, contact information, and virtually nothing else. On a lark, we picked several of the other “. . . Environmental Services” companies at random and looked up their web sites. They were all similar. Obviously, someone, or eight someones, was trying to be very, very private in their business dealings.

It was getting on toward lunch time—a fashionably late lunch time at that—and I was starved.

“Mac, we’ll see you at, say 6:30 or so for dinner, OK? And I’ll have Hal print you out a map. I think I need to find that AirDX lawyer as a next step. This stuff you’ve uncovered is all very interesting, and it’ll help us move ahead, I’m sure.”

Forty-five minutes later, including a stop at City Market for some lunch goodies, I arrived at the sheriff’s department in Hot Sulphur Springs, having played good citizen with respect to speed limits most of the way. A note from Angela told me that she was in the field doing her Hispanic community investigation again.

So I dialed the number of Glenn Marquardt, Esq. while munching on a ham sandwich.

“Attorneys’ office,” was the response, in the voice of a Minnie Mouse sound-alike.

I maneuvered ham and sourdough into my cheek. “Hello. This is Annette Trieri of the Colorado Bureau of Investigation. It’s most important that I speak with Mr. Marquardt.”

“Please hold.” This was just fine, because it allowed me another bite and a gulp of lemonade.

“I’m sorry, but he’s not available just now. May I take your number, please?”

I paused long enough to swallow. “Well, Ms. . . . um, I’m afraid I missed your name?”

“I’m Poppy Stanople.”

“Thank you. Ms. Stanople, I’m aware that you’re a staff assistant of some kind, and it’s completely inappropriate for me to badger you. So I won’t, if you will please communicate to Mr. Marquardt in the strongest possible terms that the Colorado Bureau of Investigation needs to speak with him—the alternative being that we will visit him in person and in force and very shortly.” I knew I had command of sufficient resources to make this only a small bluff.

This time the pause was long enough for me to finish the rest of my sandwich. Just as I polished off the lemonade, I heard a click.

“Ms., uh, Treery? This is Glenn Marquardt. How can I help you?”

“Thank you for taking my call, Mr. Marquardt. I’m calling because you are the registrant of an Evergreen post-office box in the name of AirDX, LLC and you are also representing them in a pending financial transaction. You and I need to talk about AirDX, and then I need to see their facility at the Ute Mine.”

I began to wish I’d bought some dessert to while away this new pause.

“Ms., uh, Treery, I’m afraid I have no idea what you’re talking about. And even if I did, it sounds as if some legal documentation, for example a warrant, would be required for me to comply with what you’re suggesting.”

“One of my hobbies, Mr. Marquardt, is keeping track of how many lies people tell me, and it’s the big lies that I find particularly interesting. I’ll chalk a big one up for you. Now. Would you like to do this the easy or the hard way? I have your office address, your home address, your automobile registration, your driver’s license, which, of course, has your picture, and impeccable information concerning the statement I made previously. If I obtain a warrant, it will be for your arrest for obstruction as well as for aiding and abetting 23 capital felonies, which crimes are the single highest priority of the CBI just now. How much trouble do you want to make for yourself?”

I know. I came on rather strong. Thing is, I just don’t like lawyers, and lawyers that lie to me just plain piss me off.

“As an officer of the court, Ms. Treery, I’m afraid that I find your threats to be hollow. Good day.”

It took me all of an hour to provide CBI central in Denver with what they needed to obtain an arrest warrant for Marquardt. Rod Andersen, my boss, was delighted with all of the information we’d assembled about the fire and its origins—even though I managed to avoid sending him anything remotely classified—and he agreed to apprehend Marquardt with an appropriately flashy show of force. Poppy Stanople, after some persuasion, let me know that Marquardt would be attending an Evergreen Chamber of Commerce meeting later in the afternoon on behalf of un-named clients—I didn’t push her—and I let Rod know that would be an appropriate place to find him. We agreed that Marquardt could spend the night in Grand County’s finest facility, the Hot Sulphur lockup, and that I would question him in the morning.

Then I went shopping.

My drive home included passing the two big grocery stores of the Fraser Valley, so I had choices. What, I wondered as I left the office, should I feed Mac and Sam? And, of course, my dear husband, who was developing just a bit of a paunch. It was hot—those clouds I’d noticed earlier had moved off east—so something summery and cold seemed in order.

On the way, I called Hal on my cell phone. Surely, I thought, he’d be back from the luncheon.

“Weathers, MPARC.”

“Treiri, CBI here. How was lunch?”

“Oof. Too much by half. Can we have a light supper?” He must have read my mind, I thought.

“We can indeed, although it needs to be nice. I invited Mac and Sam to come up. Could you print him out a map, please?”

“You bet. How was your afternoon?”

“Well, between you guys and your simulations and Mac and his on-line sleuthing, we’re going to make an arrest tonight. Ah, well, there’s also the fact that the guy we’re picking up is a lawyer and he lied to me. Turkey.”

“You know what? I’m sure glad I’m a scientist. I don’t think we’d be happy together if I were a lawyer.”

That kept me smiling all the way to City Market.

\* \* \*

## Twenty-Two

My drive to the office in Hot Sulphur Springs on Friday morning was leisurely, because I was in no real hurry to confront Glenn Marquardt, Esq. And it was in stereo.

The right side of my brain was thinking about the lovely evening that Hal and I had spent with Mac and Sam over dinner—salmon that I got for Hal to grill, placed in chunks on top of a Caesar salad—and then dessert and coffee on the porch, watching the alpenglow. Mac’s comment earlier in the day had been spot on: Sam’s horizons for places to live were expanded significantly.

Meanwhile, the left side of my brain was grinding away at various analytical issues related to the day ahead, plus a more pleasant one: where to find a good framing shop. Sam had made us a present of a charcoal sketch of the Back Range—what the locals seemed to call the backside of the Front Range—more or less as seen from the house we stayed in when we first came to the Fraser Valley. I immediately understood why she had developed the reputation that Mac had talked about—it captured the essence of the parade of 13,000’ peaks by using just a few strokes and omitting needless detail. Sam, I could tell, would be able to open her own gallery if she wanted to.

Remembering the sketch, of course, was a right-brain activity, but the thought of a gallery and all its logistics switched things back to my left brain, and it wasn’t long before less pleasant thoughts—Mr. Marquardt, Esq., in particular—intruded.

I’d checked my email before leaving home and found, via a message from Rod Andersen, that the arrest had gone as smoothly as possible, all things considered, although Marquardt’s threats of a lawsuit—no, several lawsuits—made for a rough spot or two. Per our plan, he was waiting for me at the Grand County facility in Hot Sulphur.

Fran’s news conference was scheduled for 10, so I thought I would soften Marquardt up a little first, leave him alone to ponder his fate a bit longer while I watched Fran’s performance, and then see how far Marquardt would take me along a path to getting inside the Ute Mine.

I found Marquardt in an interview room, wearing an orange jump suit accessorized by wrist and ankle shackles. For some odd reason, he was out of sorts.

“Mr. Marquardt. How nice to meet you in person. Let’s talk about hollow threats, shall we?”

“You’ve made a huge mistake, Ms. Treery. The CBI will find itself awash in lawsuits, as soon as I get out of here.”

“Well, that certainly gives us an incentive to release you, doesn’t it? Now, just so you don’t embarrass yourself further, my name is Trieri. Tri-er-i. I expect that Ms. Stanople may have mispronounced it for you. And with respect to any lawsuits you may file, there were plenty of witnesses

to your arrest and our people are good, so I'm sure you weren't mistreated. And your incarceration here is purely by-the-book. Further, we have credible, first-hand knowledge of the matters I mentioned on the phone yesterday, the ones you denied knowledge of, so the obstruction charge is a foregone conclusion. That, of course, will result in your disbarment and your own suits will be tossed—unless you can find someone to represent you in a hopeless situation. Good luck with that.” I tried to keep my smile pleasant.

“So. Where things stand is this: if you cooperate, we can cut a very nice deal for you with respect to a plea bargain on these charges, one that will save your status before the bar, I think. So why don't you consider your options for a little while so that I can attend to some other business? I should be back in an hour or so. Should I have someone bring you coffee or something? No? Well, I'll be back shortly.”

As I left him, he was staring a hole in the wall opposite the door to the interview room.

I found Fran Schmidt in his office, pumping himself up for the press conference. He, too, had received email from Rod Andersen about Marquardt's arrest, and I took a minute to brief him on some of the background, carefully tip-toeing around anything classified.

“You're saying the simulations finally worked? What did it take for that to happen?”

“The right kind of fuel, not the natural fuels but the gas we've talked about. And, as you heard, Sandy found that vent pipe, and using that place as the source for the gas helped the simulation as well. This guy Marquardt is connected to AirDX, which has a permit for research in the mine, but he lied about it. That's the obstruction. And because he was involved with trying to sell AirDX, that's aiding and abetting whatever happened—a stretch, but credible at this point.”

“Yeah, well, the arrest last evening is all over this morning's papers, so there will be questions. Do we know who the AirDX principals are?” He put his feet up on the desk.

“We do, but we haven't found them at their homes. Our next step is to get a warrant for the mine and their lab space in it, but I'm hoping I can talk Marquardt into cooperating and taking us in.”

Rod looked up at the wall clock. “OK. Showtime. I'm glad to have some progress to report. Thanks, Annette.”

A few minutes later he was out in the lobby, behind the podium, looking stressed. “Good morning, ladies and gentlemen. I'm Sheriff Fran Schmidt, and I have some items of interest related to what you've called the ‘Valley of Death’ case. I...”

“Was that arrest in Evergreen last night related to this case?” The voice was deep in the crowd so I couldn't identify the speaker, and the question unleashed a torrent.

Rod backed away from the microphone a couple of feet and stood patiently, waiting for the hubbub to subside. It finally did after about a minute.

“Folks, I think this will be much more efficient if I make a statement first and then take questions, OK? There are two major items of interest.”

He proceeded to sketch the outline of the simulations and emphasized the conclusion that the fire could not have been natural, and then dove into the matter of Glenn Marquardt, Esq. I thought he did such a good job that all possible questions were answered, but, then, I'm not a hungry journalist.

Once again, Rod managed an admirable job of bobbing and weaving among the questions, answering those he could and either avoiding or ignoring those he couldn't. He was even casual about mopping the sweat from his forehead a couple of times. The final question he took was one we'd asked ourselves:

“Sheriff, could this have been just a tragic accident?”

“I don’t think that ‘just an accident’ is the right way to put it, in a circumstance where 23 people may have burned to death. But this is a question we are asking as well. The answer will depend on what we discover about the nature of that fire, meaning what un-natural fuels may have been involved and how they got there. I do believe it’s safe to say that this was not an intentional mass murder. But there could well be negligence involved somehow, meaning that ‘accident’ is not really the right term. Ladies and gentlemen, thank you. We will be providing daily updates as we have been.” And with that he walked off the stage, ignoring the din of additional questions that followed him.

“Great job, Fran. You covered everything without giving away the farm.”

“Thanks, Annette. Is it too early for a shot of scotch?”

\* \* \*

At that point, I decided that Glenn Marquardt had been allowed enough time to contemplate his options. But before I could see him again, I discovered that I had a little gantlet to run, in the form of Steven Sheffield, Esq., who was sitting dressed in his usual over-the-top western lawyer outfit on a bench in the hallway.

“Why, Mr. Sheffield. I haven’t seen you up here since you lost Mandy Summers to life without parole. What brings you up this way?”

“Ms. Trieri.” He touched the four-inch brim of his western hat. “I read about Glenn Marquardt’s arrest last evening and found out that he’s being held here. He’s a friend of mine, and I thought he might want representation.”

“How thoughtful. Well, I’ll be sure to call you if he asks for you. Nice seeing you again.” I’m not very good at hypocrisy, but I can pull off a bit of it when I need to. He had made our prosecution of Ms. Summers far, far more complicated and expensive than it really needed to be.

In the interview room, Marquardt was still staring at the wall.

“Ready for a conversation, Mr. Marquardt? The arrest reports says that you were fully Mirandized. Any opening comments?”

“You’re bluffing, Ms. Trieri.” He managed, at least, to get my name right.

“The Evergreen postmaster provided us with the record of your renting the AirDX post office box. For you to have told me you don’t know about AirDX was a lie. That’s obstruction of an active investigation, one that’s potentially 23 separate capital cases. We’ve got you dead to rights on this, Mr. Marquardt. Like I said, if you help us, we can help you. What’ll it be?”

“I think I should have an attorney present.”

“That’s certainly your right. You’re aware, I’m sure, that this is being recorded, so that request is on the record. And, for the record, Mr. Steven Sheffield is out in the hall awaiting your call. However, and this is your last chance, if he enters this room as your attorney, any help we can offer you with respect to the obstruction charge will evaporate. Mr. Sheffield may be able to ameliorate the damage from the aiding and abetting charge, but the obstruction in a case this serious will get you disbarred. Your choice. Work with us, or call in Sheffield. Or anyone else, for that matter, but that will take longer.”

“What’s Sheffield doing here?”

“He told me that he read about your arrest in the paper, found out, somehow, you’re here, and came up, as a friend, to offer assistance.”

I was patient as Marquardt looked around the room in thought, first at the hole he'd stared in the wall before, then at the door in opposite wall, then at the one-way mirror that he knew a deputy was behind, then at the table top, where he was drumming his fingers.

"You know the old saying, I'm sure, that 'with friends like him, who needs enemies?' It applies here, so let's leave him sitting there indefinitely. It turns out that your obstruction charge isn't as solid as you think, because I can invoke attorney-client privilege. Except I haven't seen my client for a couple of weeks, and I'm getting worried. So maybe I should work with you, for his sake as much as mine. What can you provide to make me trust you?"

I knew that attorney-client privilege would not apply to my question about his knowledge of AirDX, so he was blowing smoke. But all I wanted was for him to work with me, so this was a breakthrough.

"As tough as it may seem, Mr. Marquardt, we'll have to trust each other. I'll drop my charges, you'll drop your threats of lawsuits and cooperate, and we can move this whole thing ahead. My main concern is clearing the Valley of Death case, and we are certain that AirDX is involved somehow—probably involving some kind of accident, maybe or maybe not involving negligence. That's what I need to figure out. And find evidence for. But what's this about your client's having gone missing? How often do you normally speak with him?"

Because his wrist shackles were not fastened to his waist, he was able to hold out a manacled hand. "Deal. You drop charges, I won't sue, and I'll cooperate." We shook on it.

"Lately, we've been speaking every few days, by phone, because of this financial transaction you mentioned. We had a possible purchase offer in the works that I was negotiating on behalf of the AirDX owner."

"Who is?"

"Professor, professor emeritus, actually, Herschel O'Donnell, chemistry department at the Air Force Academy." Because I already knew this, his answer let me relax a little—it looked as if he was actually sincere about working with me. I waved at the mirror for the deputy to come in and remove the shackles.

"He has this idea of how to re-engineer the military explosive called RDX into a gas, and the Air Force is funding him so that they can improve their fuel-air explosives."

"I read about those somewhere, how they are the largest non-nuclear munitions. Why would they want bigger ones, anyway?"

"Well, I think bigger is always better for these things. But they're also interested in what they call 'efficacy,' is my understanding. More bang for the buck, or something. Anyway, O'Donnell leased some space in the Ute Mine for the research. He needed a facility that could be highly secure and would offer blast protection in case of an accident." He massaged his wrists and waggled them as the deputy removed the cuffs. "Thank you, by the way."

"When was the last time you were at their laboratory?"

"I don't go there much. It's been over a month, I'd guess. Let's see." More finger drumming. "I guess it was four and a half weeks ago, I went up to talk with him about the latest developments in the purchase offer. He instructed me to haggle about some of the conditions, and that's still in progress."

"You went up there? So you know where it is and have access?"

"Right. The mine entrance has a keypad with codes, and so does the AirDX section, different codes. All you have to do is avoid getting in the way of the trucks."

"Trucks?"

“Yeah. There are semis going in and out of there at odd intervals. Completely unpredictable. No idea what that’s about. You just have to stay out of their way. Fortunately, once inside the entrance, we turn left and head up, the trucks turn right and head down.”

Now it was my turn to think for a minute.

“I believe that we will have to make a little expedition up to that mine, Mr. Marquardt. Now, you said you’re involved with negotiating the potential purchase offer. Did you also file the environmental permit application?”

He nodded “I did, but that was trivial. We made it as generic as we could because of the classification issues.”

“And did you negotiate the lease that AirDX has with Ute Holdings, LLC?”

This time he looked surprised. “I’m impressed with your research, Ms. Trieri. I did that as well. It was dicey, let me tell you. AirDX is cash-poor, so we had to provide them with the equivalent of stock options against the company’s future value. It was all I could do not to give up control. Of course, this means that Ute Holdings wants us to succeed, so that’s helpful.”

“What can you tell me about Ute Holdings?”

“Not much, beyond the fact that they’re shrewd negotiators. They’re based in Las Vegas. I flew out there once, and I met with their people in Silverthorne on a couple of occasions, one of them to take a tour of the space. This all happened after the Air Force contract came in, so we’re paying nominal rent on the space from that cash flow. But the real payoff for Ute Holdings will be when this purchase is finalized.”

“Hmm. That raises another question. You mentioned that AirDX is cash poor. It’s my understanding that O’Donnell has three Ph.D. level assistants, and then there’s you. Are their salaries and your fees paid from the Air Force contract as well? What’s your financial interest in AirDX?”

Once again he looked surprised. “You *are* good, Ms. Trieri. The assistants’ salaries are paid from the Air Force contract, but my arrangement is rather like Ute’s. The contract pays out-of-pocket expenses, but my fees are against the company’s future value. So I’m motivated to see it succeed as well. And, of course, Professor O’Donnell isn’t drawing salary either, so he’s got the same motivation.”

“I see. OK, one last question, Mr. Marquardt, and then we’ll get you out of here. What do you know about email from someone calling himself ‘Mortified’?” I had my fingers crossed, hoping for a home run.

But he looked genuinely mystified. “‘Mortified’? Huh?”

Disappointed, I looked at the mirror, ran my finger across my throat, and pointed at the door. “Let’s go see if Mr. Sheffield is still sitting in the hall, waiting for your request for assistance. Be sure to give him my regards. We’re old ...um... acquaintances.”

\* \* \*

I made sure that Marquardt was treated with kid gloves for his release—Fran’s policy of having the street clothes of jail inmates cleaned and pressed overnight helped a lot—and we parted on good terms, all things considered.

By then it was lunchtime, and I decided to celebrate by having a pizza delivered to the office so I could catch up with paperwork. If some of the pizza grease got dripped on the paperwork, well, whatever.

Just about the time that the pizza arrived, so did Angela, back from another morning of trying to sort out the relationships among the various factions of Hispanics in the Fraser Valley. She’d been at it since our climbing expedition on Sunday, and although I’d been reading her daily reports, we needed to catch up in person.

The look on her face suggested that my taste in pizza agreed with hers, and she filled me in about her activities while we ate.

“I’m starting to figure out the different Hispanic groups, at least a little.” She chewed thoughtfully. “I thought maybe I’d know some of the Norteño folks, but I really don’t. Some of them know a couple of my cousins, though, so we were able to connect at that level. That’s helped.”

“I remember that someone—one of the forest rangers, I think, anyway, someone—talked about how that Cuban guy’s Spanish had a difficult accent. Are you running into that? Seems like it might be a clue to who’s who.”

She grinned. “Yeah, you’re right, except I’m finding that my own accent, the Northern New Mexico brand of Spanish I grew up with, it has its own, um, distinctive characteristics. I remember that it was pointed out to me when I was in college in Boulder. I found myself talking with the non-New-Mexico groups over there using the best text-book Spanish I could summon up. But I think they still recognized my origins.”

I had to smile. “There have been times when my midwestern accent hasn’t exactly fit in, like when I had to deal with fourth- and fifth-generation ranchers down in the Four Corners.”

“Right, probably like that. So, anyway, I’ve still made a little progress. There’s an interesting pecking order, in terms of jobs and stuff. The Norteños, being U.S. citizens, they seem to get the pick of the jobs, for example.”

“Really? We have a housecleaning service, we started with them before we got our current house, last winter, and they’re from Cebolla or someplace around there. I mean, the service is this company they work for. An older couple.”

“Well, yeah. Compared to most of the jobs the Hispanics are working in this valley, housecleaning for the likes of you is almost a desk job.” She smiled before chomping on another slice of pizza. “A lot of the Norteño guys are truck drivers, seems like. Good pay, relatively easy work, overtime—they’re doing all right.”

“Truck drivers? Like, for construction jobs, or what?” A little bell in my head was ringing.

“Highway trucks. Someone mentioned an environmental cleanup company, or something like that.”

The ringing turned to clanging. “Did anyone mention the company?”

“Something about ‘environmental services,’ I think. So, anyway, they’re at the top of the pyramid. Then everyone else, all the other groups, I mean, they have their own niches lower down until you get to the folks from Central America. They’re working the scut jobs.”

“Could it have been ‘Western Slope Environmental Services’?”

“Huh? Oh, well, yeah, I think. Why?”

She was eyeing the last pizza slice, so I slid it toward her and launched into an explanation of the Ute Mine and its interest for us. By the time I was finished, she'd wiped out the pizza.

“So, this trucking company is doing something in the mine where this other company, uh, AirDX, right?, where they've got some kind of lab?” She looked around for a napkin and came up with one from under the pizza box.

“And our main concern is with AirDX, but there's something strange about those big trucks, too. It might be interesting to interview some of the drivers.”

“Well,” she looked skeptical, “I'm not sure how much cooperation you're likely to get if they think their jobs are in jeopardy.”

“No doubt. But our real interest is the AirDX operation, and it could be that the drivers have information about that. Comings and goings, people they might recognize, that sort of thing. And that shouldn't be a problem with their jobs, no?”

“I'll just have to ask someone and find out, I guess. But they seem like a pretty suspicious bunch.” Angela's expression wasn't encouraging. “Anyway, it sounds like you're planning a trip into this Ute Mine, huh?”

“‘Huh,’ indeed. I'm not much for underground exploration. That climbing we did Sunday, out there in the wide open air, that's more my style. But I guess we might need to.” Just the thought of entering the Ute Mine had sent a shiver up my spine. “Maybe Fran has some people with experience underground.”

“Uh, I guess this mine's under that mountainside we climbed up, or somewhere close. But where's the entrance? I mean, if those big trucks are going in and out of there, it's not up that jeep road we took, right?” She looked puzzled.

“Ahh...well, that's a good question. I know where the entrance is, because I saw a map. But I don't know exactly how to get there. That lawyer, Marquardt, told me he met with people about it in Silverthorne, and that's in the next valley over, the Blue River Valley. Maybe the road is over there. Let's go find Fran and see if he knows.”

We found him in the staff break room, a sort of combination kitchen and lounge, socializing, apparently still decompressing from his ordeal at the hands of the piranhas.

“Annette! Glad you stopped by. How did your interview turn out?” I had mentioned it to him earlier.

“Better than I would have hoped. Let's go talk about it.” And the three of us retired to his office, where I filled him in about the Marquardt interview and the Ute Mine connection, and he filled Angela and me in about access.

“I think you get there on Ute Pass Road, which is improved and maintained over in Summit County, off State Road 9 along the Blue River. It winds over a range of foothills, down into a valley, and then branches out into the Vasquez proper here in Grand County. Lots of times when we have something to deal with over there, we sort of sneak in through that Summit County road, because getting there from the Fraser Valley can be slow and unreliable. It should work now, there's a turnoff to the south just before Parshall, but in the winter it can be a chore.” He leaned back and put his feet up on his desk. “You're telling me that this Ute Mine is the key to the Valley of Death case? Really?”

“Like I said earlier, we’re almost certain that the fire was caused by some kind of gas that came out of a ventilation shaft from that mine. So, yeah, it’s the key to it all.” I paused and took a deep breath. “And I think we’ve got to get in there. As much as I really, really don’t want to.”

He cocked his head to the side and frowned. “Really? Some kind of claustrophobia thing? Maybe I can get some people to handle it. I mean, it’s a Grand County investigation, you know.”

It was ever so tempting. I wasn’t concerned about the diagnosis—claustrophobia, achluophobia, cleisiophobia, whatever—as much as I was about the reality of stepping inside that mine and having that huge overhead door close behind me.

But I knew that I couldn’t let someone else take my place. It had to be me.

\* \* \*

We spent an hour or so briefing Fran, and he pointed out the road to the Ute Mine on a topo map for us. After that, well, it just seemed like a good idea to case the joint.

So Angela and I headed for Kremmling and then points south, toward Ute Pass Road, in my CBI Grand Cherokee. Angela, a willing participant in the little outing, was nonetheless dubious about its advisability. She asked me about it on our way down the canyon just west of Hot Sulphur Springs.

“You sure you want to do this today, Annette? You seemed pretty nervous about this business with the mine. Maybe we should plan it all out more carefully.”

“Oh, we will, don’t you worry. All I want to do today is to get the lay of the land. Reconnaissance. No way am I planning to go through that door today. Besides, Marquardt said it’s locked, some kind of keypad thing. Although I expect the truck drivers have something like garage door openers, or something, so they don’t have to stop. But that kind of stuff is what I want to check out.”

“So, this guy Marquardt didn’t give you the codes?” Angela had a way of getting right to the heart of the matter.

“Uh, well, right. Yes he did. I’ve got them written down in a notebook in my bag. But I’m not planning on using them today.”

“Oh. Well, that’s good. I don’t think we’re prepared for, what’s it called?, spelunking? Either equipment-wise or psychology-wise. And I don’t mean to be forward, Annette, but I’m a little surprised. I mean, you and Hal showed Sandy and me your wine cellar when we were up there for dinner on Monday. And you didn’t seem to be worried about that particular mine shaft.”

And she was right. She and Sandy had come up to our house for dinner on Monday—with the progress of the case from our climbing expedition and the optimistic computer results, a celebration was in order—and had the grand tour. And that wine cellar wasn’t a problem for me at all. What, I wondered, was bothering me about the Ute Mine?

“Yep. You’re right. Again. As usual. I don’t know—maybe our wine cellar is small and familiar. But even at first, it didn’t bother me. I don’t know.” It was exasperating, not understanding my own psyche. “But this Ute Mine has the hair on my neck standing up, that’s for sure.”

She kept quiet, and I turned the problem over and over in my head, all the way to the turnoff southward at Kremmling. About five miles past Green Mountain Reservoir, there was the sign for Ute Pass Road, so I turned us east, back toward Grand County. It annoyed me that my heart rate jumped a bit.

Once again, Angela proved her worth by navigating us flawlessly along a maze of county roads. I kept my speed down to try to minimize the dust cloud, but I could see in the mirror that the attempt really wasn't working.

"OK, Annette, the next left should be the road up to the entrance of the mine."

"I remember that on the map—there's nothing else on that last bit of road except the mine." I considered the matter briefly. "I think I'll just drive past and see what we find farther up this road. We can always turn around and come back."

Shortly, we passed a turnoff to the left, one that was well-used and, by the way the gravel was tracked, used only by vehicles coming up the valley and turning in, then turning out back down the valley. No tracks turned in the other direction.

About a half-mile later, the road crossed the creek and began a series of switchbacks up the side of the valley, and at the apex of the third I pulled to a stop.

"Let's see what we can see back there." I said, and got out. My heart rate had evened out since we'd passed the mine entrance road, and I felt much better.

Back across the valley, there was the mine entrance, the big roll-up door set into the hillside, with about a half-acre of cleared and almost level gravel in front of it, a big enough space to turn around a big truck. Angela was studying the scene with binoculars.

"The only sign I see is a huge 'No Trespassing' sign, Annette, good-sized, red letters, on that door. 'Danger!' 'No Parking—Trucks May Exit at Any Time' Lots of warnings but no name or anything." She played with the focus wheel. "Oh. And there's a little post just to the left of the door, maybe 20 feet out, with what looks like a keypad or something like that on it."

"Any sign of vehicles there, in the trees, maybe?"

"No, it looks deserted. I don't see any place to hide a much of anything up that entrance road." She was scanning the area carefully.

"I guess those pictures I saw were taken by someone on foot, hiding in the woods or something like that."

"Pictures?" Angela looked up, surprised.

"Mac showed me a secret web site, some un-named agency he knows about, with all sorts of pictures, including ones with trucks going in and out." A plume of dust down the valley caught my eye. "We got a license plate number and that's how we found out about Ute Holdings and Western Slope Environmental Services and all that. Look at the dust. There's a truck coming up the valley."

"Mac? Oh, yeah, Sam's guy. He's working with Sandy and Hal, right? He sounds like a piece of work—I've got to meet him." She was looking down the valley toward the dust. "Yep. A big semi dump truck, red tractor and a sort of dirty gray trailer. It's full of dirt, or gravel or something like that."

She looked at me and grinned. "Have we got good timing, or what?"

"We do indeed. Let's see the procedure here."

But there really wasn't one. About the time the truck reached the intersection with the entrance road, the big door started to roll up, and the truck barely slowed down as it disappeared into the mountainside. The door immediately began to roll down.

"Damn." Angela was clearly impressed. "They've got that timed out all the way. I mean, from when you mentioned the dust to when that door closed was barely two minutes. It must be such a routine that it's like clockwork."

“Yeah. I was thinking that, too. And that means there are lots of trips in and out of there. With lots of loads of whatever was in that thing. I don’t suppose you could see a license or anything like that?”

“I could see that it had one, but I couldn’t read it.” She was looking at the mountainside with the door again. “Hey, it’s opening. That’s a quick turn-around in there.”

“That’s for sure...oh, wait. The tractor on this one is green. Say, see if you can see a company name when it turns onto the main road.”

Just as the red truck’s entrance had been perfectly timed, the green truck’s exit was as well. It came roaring out of the mine entrance at a good clip, and the door started closing immediately. And the truck was empty.

“That’s some operation they’ve got there.” I was as impressed as Angela. “It sure would be interesting to know what they’re leaving behind down in that mine.”

Angela was sitting on the back bumper of the SUV, her elbows on her knees to steady the binoculars. “Nope, I couldn’t make out what was on the door. Sorry, Annette. But you’re right. I wonder what they’re dumping in there?”

“I guess the only way to find out is to go exploring. At least I’ve got the code for that keypad you said is down there. For when we need it. Not today, though.”

“Hmm. Well, getting in there might not be so easy as you’d think. Now that I’ve got these glasses steady, I can see more stuff. Like, what looks like a camera above the door, scanning back and forth across that sort of parking lot they’ve got there.” She looked up at me, blinking in the sunlight. “It looks as if they don’t want anyone sneaking up on them.”

\* \* \*

## **Twenty-Four**

We took the more leisurely, and scenic, route back to Hot Sulphur, along the continuation of the Ute Pass Road from where we had turned off to find the mine. Although slower and less well-maintained than the main highways, it was really something of a shortcut, north through the heart of the Vasquez Range, along the eastern flank of the Williams Fork Reservoir, and then back to US 40 just east of Parshall. Angela noticed it on the map we had, and Fran had mentioned it, so we just went for it rather than retracing our original route.

The two of us were uncharacteristically quiet along the way. I don’t know what Angela was thinking about, but I was trying, with some desperation, to figure out how to avoid entering that mine. Every time I thought of the possibility, my heart rate jumped and I could feel the sweat beginning to ooze.

We had waited another half hour at that switchback turnout for the red truck to emerge from the mine, and by that time a third truck, a dingy burnt gold, had entered. It seemed as if there was an assembly line of two trucks per hour or so dumping something or other into the depths of the Ute Mine. On top of the AirDX matter, my psychosis about that mine made it all almost too much to deal with.

“So, I think we’ve got to keep our focus here.” I’d turned the SUV back eastward on US 40 toward Hot Sulphur Springs. “Whatever’s going on with those trucks is really not what we’re concerned with. It’s the AirDX business that’s related to our Valley of Death case, right?”

Angela's nod was easy to see in my peripheral vision. "You're right, but I'm not sure that we can ignore the one in favor of the other. And I guess I'd turn it around. Maybe we need to bring in some big guns, and I think I'd bring them in for the AirDX business. Isn't that related to Defense Department stuff? The dumping, whatever it's about, that seems like more of a Colorado thing. Right?"

"Well... Hmm. Maybe so. Those two dozen deaths up there are a Colorado matter, for sure. But if that's all related to something highly classified, well, maybe there's a federal connection that we shouldn't ignore. Yeah. Hmm." I took my eyes off the road to glance over at her. "Angela, I'm sure glad to have you here. You make a great sounding board. I like to think I have good common sense, but you're even more sensible. Don't ever let me discourage you from speaking your mind."

I couldn't watch her, because the canyon twists and turns demanded my attention. But I got the feeling she was blushing.

Back in our little shared office in the sheriff's department, I put a call in to MPARC. Because I knew that Hal had not yet hired a receptionist, it wasn't too much of a surprise when he answered.

"MPARC, Hal Weathers here."

"Trieri, CBI, here. How's your day, guy?"

"Quite a nice day, love. We're putting the finishing touches on those simulations for your wildfire. I think we should have everything sanitized and packaged up by later this afternoon, and that means that you can make our results public."

"Really? Despite all that classified stuff?"

"Yep. We're packaging everything for public consumption, including what is likely to be needed in court. Should it come to that."

I felt a surge of elation and told him I'd thank him later, which provoked a comment that made me blush.

"Yes. Well, I'll certainly look forward to *that*, Hal. Ahem. Anyway I also need to talk with Mac. Is he there?"

"You're probably blushing, aren't you? And changing the subject is a good idea. Let me see if I can find Mac. I'm pretty sure he's around somewhere."

By the time Mac came on the line, I was beginning to recover.

"Annette? Hey, how are you? I heard that you were off on a recon expedition today, to that mine I showed you the pictures of." Mac's voice, humor, concern, and all was unmistakable.

"I was, and I'm back, and I need advice from someone who knows a bit about how our agencies in Washington work."

"And you want to talk to me? Oh, you poor confused soul." It was all humor now, that voice.

"Confused is right. Thing is, we have two issues here, the business with that wildfire that you've helped so much with, and another thing, what looks like it might be some kind of environmental issue, a waste dumping thing. And the wildfire business for sure looks to have federal connections, you know, connections that I really don't know much about. But you probably do." I took a deep breath. "I guess what I was hoping was that you'd know if it's time to call out the cavalry, I don't know, the FBI or somebody to investigate what was going on in that AirDX part of the mine."

"Mmmm." Just his murmur, somehow, was comforting. "Well, even the dumping could be a federal thing, I suppose. But I'm more concerned about the other thing, this AirDX stuff. And maybe you're on the mark here. Maybe we *should* think about bringing in the cavalry. Or, more precisely, a team that can

get to the bottom of this without compromising your local investigation. I saw one of those press conferences, and, gotta say, your sheriff is a stand-up guy. We don't want to do anything to screw up his investigation, right?"

"Absolutely not. But it may be over his head, at least if there are classified issues about AirDX that should be forever protected." I tried to think of the most constructive approach to my dilemma. "If we could only find the AirDX principals, that ex-professor and those research scientists, well, that would be a good start, no?"

"Absolutely right, Annette. And addresses, at least, are easy, I've got 'em for you. Plus a bit more. Herschel O'Donnell and two of those assistants haven't been heard from for over a week. But the third assistant has, at least in terms of his cell phone and credit card records. I'll send you all the stuff I have on him."

"Why, Mac, have you been snooping around?"

"Isn't that what I'm supposed to be doing? I mean, I could be out there trying to catch those trout that everyone talks about, the dumb ones at least. But I do like to help out where I can." His smile almost showed through the phone line. "I mean, I've got to make a place for myself here, now that Sam has dug her heels in to stay."

"She has? That's great. I was worried that the outing last Sunday would make her want to move back to somewhere more flat."

"Not a chance. She's sticking with the mountains. Maybe it's the possibilities for her artwork, I don't know. Maybe it's just the rarefied air. But she's working harder than I would have believed on finding us a better place to live. More permanent, even."

"I like what I'm hearing. If there's anything that Hal and I can do to help you and her find something, just let us know." This was certainly good news for me. "But what about the cavalry for this AirDX business? Who might they be?"

"Well, if I understand things, what's needed is to find the principals, all of them, and to figure out what's happened in that facility they have, that underground lab, right?" He paused to let me answer, but I didn't. "So we need to find the guy with the newer credit and phone records, and we need to figure out what happened to the others. And it seems like a trip into that underground facility is in order. Right?"

I knew he was right, but I couldn't bring myself to say so, because I also knew that I'd have to be making that trip underground.

"Anyway, what I thought was that you could track down that guy whose records are active, Annette, based on the stuff I'll send you, and we could get a team of specialists I know to get into that underground lab. How does that sound?" His voice had lost the humor and concern in favor of all business.

It was a good thing that this conversation was on the phone, or I'd have kissed him with just a bit too much passion to be respectable.

\* \* \*

Before leaving for home that Friday afternoon, I sent my boss, CBI Director Rod Andersen, an email that asked:

*Does anyone know what Western Slope Environmental Services is dumping into the Ute Mine?*

By time I was home, I had an answer, in the form of questions:

*What makes you think that is happening? And how is the Valley of Death investigation going?*

Without revealing my concerns, I responded simply that I'd seen evidence of such dumping and that the investigation was moving ahead expeditiously. And it occurred to me to wonder about what kind of political minefield I might be getting myself into. For the most part, Rod had never questioned my activities. It seemed an odd time for him to start.

But it was Friday evening, and I decided to forget the whole thing. In the morning, I'd get someone over in Summit County to pick up Luke Peckham, the AirDX research scientist who was still using his cell phone and credit card, at his condo in Frisco, and we'd proceed from there.

On the drive home, just after I dropped Angela off at her place, Hal called with dinner plans, a table for six at Carlos and Maria's, the Santa Fe style restaurant in downtown Winter Park.

"A table for six? You mean we've got four friends?" I was feeling cute.

"Well, I promised to pick up the tab. That's probably what persuaded them. Sandy, Mac, and I had a powwow earlier, and it seems that Sandy's homesick for Santa Fe food. He thought Angela might be, too."

"And she told me today that she wants to meet this Mac character she's heard so much about. Want me to meet you there, or are you coming home?"

"I am home, awaiting your arrival. We're not expected until seven. See you soon."

Dinner was grand, especially after the interlude that Hal and I managed to sneak in before we headed out to the restaurant. The food was delicious, the margaritas were just right, and we even managed to keep away from the topic of our mutual business. Sam, having tasted only the bland, South Florida version of Mexican food, ate cautiously, but in the end she declared that she wanted to come back and try everything. And Angela and Sandy were tickled that they could find something so close to their home cooking in the Fraser Valley. Even if the levels of chile-related heat were moderated compared to what they were used to, they pronounced the place first-rate.

First thing Saturday morning, I called over to the Colorado State Patrol office in Frisco, gave them what information I had about Luke Peckham, and asked them to pick him up for questioning. My relationship with the Patrol was on sufficiently good terms that they even offered to bring him to us in Hot Sulphur Springs.

But it wasn't to work out that way, as I found out when my cell phone demanded attention a half hour later.

"Director Trieri? This is Trooper Jim Chance, Frisco office. I'm here at the address you gave us for this Luke Peckham fellow, but he's not at it. His mailbox is overstuffed, and there's a pile of newspapers with his name on them, in the lobby of the building. It looks like he's been away for some time, maybe a couple of weeks."

"Hmm. Well, thanks, Trooper, I guess all we can do is try, eh?" I heard him chuckle as I rang off.

But Mac, I remembered, had emailed me some files with the cell phone calls and credit card transactions that told us that Peckham was still among the living—or, at the least, that someone was using his card and phone. The list of credit card transactions was especially helpful when viewed in chronological order, as they told a story of Peckham’s travels from Frisco down to Denver (with a stop for gas at Georgetown, and lunch near Evergreen) and then his stay in the Queen City. Most recently, he’d been eating at restaurants in the Washington Park part of town. But there were no hotel or other accommodations receipts, so, I decided, he must be staying with friends.

The cell phone records pinpointed his location nicely, because Mac had processed the cell tower triangulation information onto a couple of maps. The large-scale one of the Denver area showed that he was traveling around a bit during the day, and the zoomed-in map of the Washington Park neighborhood revealed a large number of evening calls at a particular address in the eleven hundred block of South Corona. I called Rod Andersen.

“Hey, Annette. How’s your Saturday?” His voice was distinct but there was also background noise, crowd noise of some sort.

“Fine, Rod, how’s yours? And where are you? There’s some odd background noise.”

“The ball park, Coors Field. There’s a Rockies game in an hour or so, and we’re settled in to have a couple of hot dogs for lunch and enjoy the pre-game warm-ups and so on. The crowd is still pretty thin, but, yeah, it’s a bit noisy. What’s up?”

“Well, maybe after the game, you can make arrangements to have someone picked up for questioning about this Valley of Death case. It’s one of three Ph.D. scientists that worked for the AirDX outfit, the company that lawyer Marquardt was representing. By the way, that whole thing worked out great. I got everything I needed from him, after he’d spent a night in the wonderful accommodations in Hot Sulphur.”

“Not a problem. And I’m glad the Marquardt thing worked out. He was certainly upset when we arrested him. Is he going to follow through on those threats of lawsuits and so on?” He made a chomping noise, and I envisioned mustard on his phone.

“Not a chance. I showed him the error of his ways, and he cooperated quite nicely. We also have been getting information from, um, sources I can’t reveal just now, on the phone. But I’ll email you the info about this AirDX guy. His name is Luke Peckham, and he seems to be staying with friends near Wash Park, at least in the evenings.”

“That’s my neighborhood. Maybe I’ll walk over and get him after dinner.” His mirth came through loud and clear. “Oops, gotta go. Here come the Rox for batting practice.”

“Wait one. Please? Just a quick question. Is there something sensitive about that business of the company, ah, Western Slope Environmental Services, possibly dumping stuff into the Ute Mine?” I realized I was holding my breath.

“Ah, right. Well, not really, but sort of. And I’m sure that’s as clear as mud. But it’s not something I want to talk about on the phone, either. Are you coming down to get this Peckham fellow, or interview him or anything? We could talk about it then.”

“Sounds like it might be worth a trip into the big city for me. Tomorrow? Monday?”

“Let’s make it tomorrow, my place downtown. Is 10:00 OK? We’ll have Peckham there, too.”

“That works. Thanks, Rod. Enjoy the game.”

Great, I thought. A Sunday morning trip into downtown Denver. Well, it'll be a good opportunity for Angela to meet the big boss. And, it appears, to hear about some of the internal politics that makes law enforcement in this state so amusing.

\* \* \*

## Twenty-Five

At least we were headed opposite most of the traffic on Sunday morning, toward the city when everyone there was making a mad dash for the mountains. And I knew that, later in the day, it would all be reversed, so we'd still avoid the bad traffic. A small thing, I know, but unless you've been in one of those weekend traffic jams on Interstate 70 in the mountains west of Denver, you really can't appreciate how bad it can get. From what I'd seen, the afternoons tended to be worse than the mornings—Mom is exhausted, Dad has had a couple too many beers, the kids are getting cranky, everyone has to pee. And they're all trapped in this cramped little rolling box that's not rolling fast enough for any of them. When three lanes of bumper-to-bumper rolling boxes all have this problem in common, it's just a nightmare.

As it was, we managed to make it from Angela's place to downtown Denver in a bit over an hour. CBI headquarters, in a high rise office building near the venerable Brown Palace Hotel, had its own parking for employees, and, because it was Sunday, we found a spot right next to the elevator. In a couple of minutes, we were on the 19<sup>th</sup> floor, just outside Rod Andersen's office.

Angela was nervous and fidgeting, adjusting her hair and clothes—she'd worn a crisply pressed uniform for the occasion—and wiping a spot off her shiny black shoes, so I thought to calm her down.

“Chill, Angela, really. This isn't an interview or inspection, or any such thing. Rod's probably wearing really ugly plaid golf pants, and he'll want to make it short so he can get to his tee time.” I'd worn weekend casual clothes for the occasion, just nice enough to give Luke Peckham the right impression, but comfortable.

“Oh, I know. But I can't help myself. This is the Director, after all.”

“Right. And I'm chopped liver. You don't have to try to impress him, because you've already impressed me and he knows it. Hell, my big worry right now is that he'll assign you to his own staff.”

Just then Rod's door opened, and he strode out with an empty coffee cup in his hand, clad, as I expected, in hideous green and yellow plaid slacks and a purple polo shirt. “Oh! Annette! Good morning. And this must be Angela Espinosa. Very pleased to meet you, Angela, very pleased indeed.”

“And you, sir, it's an honor. May I fill that cup for you?” She almost clicked her heels together, she was so formal.

“Huh? Oh, well, I'm afraid there's no coffee. I'm under strictest orders from Sandy, she's my admin assistant, to stay away from the coffee equipment, so I don't dare make any on weekends. I was just going to get some water in this.”

“Yes, sir. Right away. Ahh...I guess the kitchen is this way?” And she turned about face, quite smoothly, all-in-all, and marched off down a hallway.

“Right. Second door on the left. Ice cubes in the fridge.” Rod smiled.

I lowered my voice a bit. “She's, well, a bit nervous, meeting you for the first time.”

“I’ll be nice, don’t worry. From what you’ve been reporting, it sounds like she’s working out well.”

“No question. She’s been with me for only two weeks and is already indispensable. We’d better leave the door open, or she’ll feel compelled to knock.”

We found chairs in Rod’s office, and, after knocking anyway, Angela joined us with a coffee mug—freshly washed, I was sure—full of ice water for Rod. She had to be invited to sit down, and even then she was sitting at attention.

Rod smiled even more broadly. “Angela, Annette’s had nothing but praise for you. I’m glad we were able to entice you away from our colleagues in New Mexico. Their loss is our gain. I hope you’re enjoying your new assignment?”

“Absolutely, sir. I’m learning a lot, and I feel like I’m contributing, too.”

“Good.” He sipped at his cup. “Well, I’m glad you’re both here, because I can brief you a bit on this business with Western Slope Environmental Services. You saw full trucks entering that mine, the Ute Mine, and empty ones exiting?”

I nodded; Angela said “Yes, sir.”

“This is something we’ve been aware of for some time, and we’re watching them closely in cooperation with the Summit County Sheriff and the state environmental folks.” He stared out the window toward Mount Evans. “It seems that most of what’s going down that hole in those trucks is quite innocent. But there’s reason to believe that maybe one truck-load out of ten is not so innocent. But we have no real evidence that we can take action on the basis of. How much do you know about the company?”

“Well, Western is part of a very complex network of companies that all seem to operate under the same board of directors, a bunch of guys in Las Vegas. They also control Ute Holdings, the company that owns the mine. Part of our Valley of Death investigation turned this all up, when we needed to find out about the Ute Mine.” I thought for a second. “Are there any ideas of what these one-in-ten bad truck-loads contain?”

“Some kind of toxic waste, either radioactive or chemical, we’re not sure. Or maybe, God save us, both.” Rod sighed. “That kind of stuff is supposed to be processed, which is extremely expensive. It’s cheaper to just dump it. We think Western is doing this, and then covering up the toxic stuff, literally burying it, with the innocent stuff, fill dirt and so on. But we haven’t been able to get a warrant to get in there.”

“Well, if we’re going to clear the Valley of Death case, we’re definitely going to need to get into the AirDX part of the mine. I’ve got the keypad codes to do it, and I think I can get authorization from an AirDX representative. Is there some way that this access can help your investigation?”

“From what we’ve seen, it just doesn’t look healthy to go wandering around in there. For one thing, you’d run the risk of getting squashed by one of those trucks. And then there are the guards.”

Angela gasped and then realized she should say something, having gotten our attention. “Ahem, sorry, sir. But we didn’t see guards. There is a surveillance camera, though.”

“Yep. And now and then a guard, armed with an assault rifle, pops out and cleans it off. We’ve had our own surveillance there for quite some time.”

“Well, maybe the best that we can do is to avoid screwing up your investigation, Rod. But I don’t see how we can not get in there, at least if we want to understand what happened to those 23 people. And we thought to do it without ruffling Ute Holding’s feathers as best we could. Right now, that means

some kind of special ops team, which has explicit permission and keypad codes from that lawyer Marquardt.” I took a deep breath and let it out. “What do you think about that approach?”

“Hmm. What’s this ops team?”

“Probably some team from somewhere in the Defense Department. They have a close interest in this AirDX business, and they’re probably the best equipped and trained to do something like this. Thing is, this guy Peckham that you picked up for me? Well, he’s one of four people who were the AirDX principals. And the other three have been missing for several days now. It’s possible that they’re in that AirDX space in the Ute Mine, dead. And if that’s the case, how they got dead is important for us, for the Valley of Death case, and for the Defense Department, for security reasons. I’m thinking if we can keep the AirDX investigation completely separated from yours, maybe Ute Holdings and those guys in Vegas won’t change anything that will interfere with what you’re doing.”

Rod, staring at the mountains out the wall of windows, looked pensive. “Keeping these investigations separate seems like a good idea. I think the thing for me to do is to give you *carte blanche* as long as you keep the separation in mind. What I don’t know won’t come back to haunt me if Ute Holdings, or Western, gets their shorts all twisted up.”

I nodded. “Right. And it works the other way, too. If I don’t know the particulars of what you’re doing, well, I can play dumb as needed. But, you know, we do need to communicate about this, so we don’t blunder about into each others’ way, right?”

He looked straight at me. “Absolutely. And nice meeting you, Angela. Keep Annette on track for me, will you?”

\* \* \*

Our interview with Luke Peckham was to be held in one of the little rooms on the 17<sup>th</sup> floor, so we took the stairs.

“So, Angela, what do you think of the boss?” My voice echoed in the stairwell, even though I kept it low.

“Sharp, perceptive, on top of things. If he’s fair, then I’ll like him.” She seemed to have relaxed, although it was hard to tell walking down stairs.

“He’s always been more than fair with me, so I think this is a good start.” I pushed open the door to the 17<sup>th</sup> floor hallway. “Now. Let’s see what Mr. Peckham has to tell us. Or is willing to.”

“Annette, I’m not really sure of the status of my security clearance. I had a good one with NMBI, but I don’t know now. Is that going to be an issue?”

“Oh.” I hadn’t thought of that. “Well, I’m sure paperwork is in progress to get it transferred to us. But if this whole thing is to be recorded, and it will be, then the guys behind the one-way mirror will hear it all, and they may not be cleared. I’ll just let Peckham know about that.” We had arrived outside the little room. “Good thinking. And I think having you in there, with your spit-and-polish uniform and all, I think that would be helpful.”

I waited to let her blush fade a little then opened the door, and in we went.

We must have interrupted his pacing back and forth, because he was turned toward us but standing near one of the side walls of the little room when we first saw him.

“Who are you and what the hell am I doing here?”

I took the time to seat myself at the room's little table—his pacing had been on the other side of that table—and to compose myself carefully.

“Good questions, Mr. Peckham, very good questions, both of them. I'm Annette Trieri, Deputy Director of the Colorado Bureau of Investigation in charge of what's called the Valley of Death case. This is my assistant, Angela Espinosa. You're here because you're the AirDX employee whom we've been able to locate. Your colleagues seem to be missing. And AirDX is front and center in that case. Potentially, at least, it's a capital case involving 23 unexplained deaths. We know that AirDX has some connection to it, and because you're connected to AirDX, you're on the spot here.” I paused and drummed my fingers on the table. “Let me add that we should not discuss classified matters here, at least not in detail. Why don't you have a seat, and we can talk this all over?”

During this little speech, I'd watched him progress from his initial pumped-up bluster to looking as he was about to faint, to regaining his color to the point of looking about to burst.

“I don't know what the hell you're talking about. I want to see a lawyer. Now.”

I turned to Angela. “You, I recall, told me that you're pretty good at reading credibility. What about this guy? Is he telling the truth here?”

“Not very likely, Annette. I think he's lying through his teeth.”

“That's what I thought, too. Thanks.” I turned back to Peckham. “Would you be wanting to call Glenn Marquardt, Mr. Peckham? You should know that he and I are the best of friends now. He's told me all he knows about this.”

This brought him up short, and he decided to sit down.

“What am I charged with?”

“Ah. Another good question. You Ph.D. guys really *are* smart.” I paused to smile. “Just now, nothing. To the extent that you're our guest here at the CBI, you're being treated as well as we're able to treat anyone. We'd just like to get some questions answered. However, what with the federal Patriot Act and all, we do have plenty of latitude to charge you with all sorts of awful things, some of which would put you outside the reach of civilian courts. Perhaps a visit to Guantanamo would even be in order.”

“Now you're bluffing.” Given his position, he was being quite obstinate.

“Not more than a little. I mean, you well know the security level at which you were working. Even a hint of impropriety to your Air Force sponsors would put you away instantly, and for a long time. You know that.” I paused to let that sink in. “Now. First question. Are you using the *nom de plume* ‘Mortified’ in email correspondence with Grand County Sheriff Fran Schmidt?”

Physically, he reacted as if I'd punched him in the stomach. But he just said, again, “I don't know what you're talking about.”

I had only to turn to Angela, and she said, “Another lie.”

“My thought as well. Mr. Peckham. Listen carefully. Based on what we know now, your comments to Sheriff Schmidt about how the entire Valley of Death tragedy was an accident are actually quite credible. We have a team of specialists who will be entering, very carefully entering, the AirDX space in the Ute Mine to see what evidence there is about that, and our opinion of the matter may change. But right now, I think it might well have been an accident. If it was, this would be a very good time for you to talk to me about it. Then, whatever evidence our ops team finds can be interpreted in that light.” Once again, I paused for effect. “So. One more time. Was that you using the email handle ‘Mortified’ in correspondence with Sheriff Schmidt?”

This time he didn't answer right away, and, to me, that was progress. Instead, he leaned his elbows on the little table and put his head in his hands. All I heard was his breathing. He took a good two minutes to think about it, a long stretch of complete silence in that little room.

"OK. Right. That was me. And the whole thing was an accident, a horrible accident. I don't know what all you know, but the accident also killed Professor O'Donnell as well as Rick and Miller."

"Rick and Miller?"

"Rick dePoint and Miller Hague, the other two research assistants. See, the Ute Holdings people were getting impatient for results that would produce cash flow, and we were under a lot of pressure. So we had a system of shifts. O'Donnell was practically living in there, and the rest of us would work for 24 hours and take 12 off. I was outside, and they were all inside when it happened."

"How do you know what happened?"

"There's a live web camera link, one that we record. So I happened to look at the live link and saw the mess in there, with bodies on the floor, then went back and looked at the recording. It looks as if they had a gas leak or something and didn't turn on the air evac system soon enough. And when it turned itself on, automatically, all the gas got dumped out the ventilation shaft, into that valley of yours. And there must have been a campfire up there, or something." He heaved a huge sigh. "It was all a tragic accident. Truly."

"And instead of raising an alarm, or getting up there yourself, you decided to hide out in Denver."

"Well, yeah. But that was related more to my concern about the Ute Holdings people than with anything else. As the only survivor, I knew they'd expect me to finish the R&D work and get to their payoff. So I came down here to town to think about it all." He shrugged. "You probably haven't met their local muscle. Those dudes are, well, scary."

"Hmm. Mr. Peckham, let me propose something. Let's see. Unless we find evidence that directly incriminates you in the willful cause of that event in the AirDX lab—and I have no idea what will be found up there—but if we do not find a smoking gun that shows you were willfully at fault, I think we can offer you both protection from Ute Holdings or anyone else as well as immunity. What I suggest is that we find an appropriate place to have this discussion at the appropriate level of classification."

"I still think I should have a lawyer. But, on the face of it, that sounds pretty attractive. Where do you have in mind?"

I knew I'd be pushing the envelope to new limits, but I also knew the best place.

"Let's take a little drive in the mountains. And, say, on the way, we can stop and pick up all your mail. How's that?"

\* \* \*

## Twenty-Six

We slogged through the paperwork to get Luke Peckham released, treated him to a wonderful gourmet lunch that included two glasses of wine at the Denver Art Museum's cafe, drove by the Corona Street house to let him pick up what possessions he had there—I was glad to see they included a laptop computer—and hit the road westward. And, when we merged off the Sixth Avenue Freeway onto I-70 out in Lakewood, I was once again glad to be going opposite to the main flow. What was simply heavy

eastbound traffic in Lakewood got heavier and heavier all the way to Silverthorne, 60 miles to the west and on the other side of the Eisenhower-Johnson tunnels under the Continental Divide. Even the Department of Transportation's trick of switching one of those twin tunnels into two-way traffic, to create an extra east-bound lane, wasn't helping much.

Our passenger, with the entire back seat to himself, had begun the journey full of conversation, but by the time we crested Floyd Hill, the wine he'd had for lunch put him to sleep. That was the opportunity I was waiting for, and I pulled out my phone.

"Hal? Oh, good, I found you. I hope you're getting some R&R today. It's Sunday, after all."

"Well, you're working, and I figured I should, too. So I'm at the institute. How'd your morning go?"

"Quite well, actually. And that's why I'm calling. We, meaning three of us, are headed into Idaho Springs shortly. We need to make a brief detour to Frisco, so it'll probably be another hour and a half or two before we get back. But what I called about is this: do you know if Chuck is in the Valley today? Or is he in the Springs?"

"Well, before coming into the office here, I took a little walk in the woods this morning, after you left. And from that little view spot where we can see to the north, I saw what looked like his car in the drive over there at Win's place. So maybe he's here. Why?"

"I've got a present for him, of sorts. Do you suppose you could entice him into the institute this afternoon, say, around 3:30? We should get there by then. And it might make sense for Sandy to be there, too."

"Oh, he's here now. You stole Angela away from him, remember?"

"Oh, right. Tell him I'm sorry about that. But, anyway, I'll be seeing you by about 3:30, OK?"

"Sure. Drive safely. I'll get Chuck down here, don't worry."

My phone went back into my pocket, but it sat there for only a couple of minutes before it demanded my attention.

"Trieri, CBI, here."

"Annette, it's Fran. Listen, I just got a call from the Gilpin sheriff's office. They found Glenn Marquardt's car at the bottom of a canyon this morning, with him in it, dead. It looks as if it ran off the Central City Parkway, southbound, sometime overnight. Apparently there are some skid marks and so on suggesting he may have been forced off the road."

"Hmm. So maybe he was on his way back to Evergreen from an evening at the Black Hawk casinos? I guess it's too soon for blood alcohol and so on."

"Yeah, but they're going to get it done, for sure. Also, the news reports this evening will include a request for witnesses to contact the Gilpin office, so maybe there will be more information. Anyway, what's your schedule today?"

"I'm delivering a package to MPARC, which, with this sad news, is all the more valuable. I ought to be there by 3:30, if you want to meet us there."

"OK, I'll do that. See you later."

"Oh! Say, Fran? If those skid marks are being interpreted as foul play, then maybe it would be a good idea to get someone, I guess it would be JeffCo, to check Marquardt's office in Evergreen, maybe his home, too. I don't remember the addresses, but you can probably Google him and find the office one. Just a hunch."

“Good hunch, Annette. Will do.”

As I put my phone back in my pocket, I noticed that Angela was looking question marks at me, so I filled her in.

“Oh,” she said, jerking her left thumb in the direction of the back seat. “I see what you meant about the ‘package’ being all the more valuable.”

The stop in Frisco for Peckham’s mail took longer than I would have liked, because he insisted on fetching more clothes from his condo in addition to his mail, and that led to the discovery that his place had been thoroughly tossed. After a short, contentious argument, during which I had to suppress my law-enforcement instincts, we decided that it would be best simply to leave things in their disheveled state without any police report. That way, whoever had been through Peckham’s things wouldn’t know that Peckham was aware of it. At least, though, Peckham vowed to tell the post office to hold his mail delivery for the time being and to stop the newspaper delivery. Along with the mail, we also gathered up all the newspapers in the building’s lobby for recycling.

I guess sometimes I’m just a little compulsive about these things.

Rather than become embedded in the traffic back east through the tunnels, we got off I-70 eastbound at Silverthorne and headed north along the Blue River, toward Kremmling and then Hot Sulphur, Granby, and finally Winter Park. It was nice to have the alternative.

\* \* \*

MPARC was crowded when we arrived at 3:15. I’d used my emergency lights and flouted the speed limit to make up for the time that argument in Frisco had taken, and I guess I overdid things just a bit. At first, I couldn’t figure out why there were so many people standing around—after all, I’d invited Fran and Chuck Shure, but that was only two extras. Where, I wondered, had everyone else come from?

But then I noticed that most of the strangers were standing together in a group around the conference room doors. And when I looked more closely, I was jarred at how out of place, yet how normal, they all looked. All were what we law-enforcement people call “above-average” height by a couple of inches, and all were quite fit looking, extra fit, even. All mid-twenties or so. Quiet. Self-assured. Something of a military bearing. And some looked vaguely familiar.

Mac, fortunately, had the answer.

“Annette, let me introduce you to Commander Ross Bierkens. I don’t remember if you met him on that little cruise we all took or not, but he was leading the SEAL team that made the transfer of that material off the ship. Hey, Ross!”

One of the ultra-fit crowd, and this one looked to be in his thirties, a slightly taller, blond fellow with bright blue eyes, it turned out—all-in-all a real hunk—looked up, said something to the guy he was speaking with, and strolled over our way.

“What’s up, Mac?”

“Ross, this is Annette Trieri, Deputy Director with the Colorado Bureau of Investigation. I first met her on that little cruise ship caper that you and your guys handled so well, and she and her husband Hal are the reason that I’m here—and therefore the reason you’re here.”

“My pleasure, Ms. Trieri.” He even got my name right!

“Mine, too, Commander. It must be that you and all the other gentlemen I see over there are the team of specialists who are going into that underground lab. But Mac said something about SEALs. Isn’t this a long way from the ocean for you?”

“Ma’am, we go wherever we’re needed. And I guess there’s something hinky, maybe, about the air in this lab of yours. Well, we’re used to operating with no air, underwater and all, so bad air is just as easy for us.” His smile was making my knees weak.

“Better you than me, Commander. And it might be easier than we were all thinking it would be. I’ve brought a present, the last surviving person who knows anything at all about what was going on in that lab.”

“Someone with real intel? That, ma’am, is the best news I’ve heard all day. I owe you one. We were beginning to think this would be sort of catch-as-catch-can. And that’s always a bit of a worry.”

How, I was thinking, can I get him to stop with the “ma’am” thing?

I had sent Angela, with Luke Peckham in tow, to Sandy’s office, on the theory that either it would be empty or that Sandy would be the best person for Luke to meet first—scientist to scientist, as it were. So many people were going to want to talk to him, I now understood, that we almost needed a sign-up sheet.

“Mac, do you and Commander Bierkens have a time-table yet?”

“We did, but with new intel I think we should put that on hold until we can be fully briefed. Right, Ross?”

“Absolutely. And that will give my guys a chance to find accommodations and to settle in.” He looked back at me with those wonderful blue eyes. “We got here just before lunch. It’s a resort area, so there must be lodging—but have you got any suggestions for us, Director Trieri?”

I suppressed the urge to make some kind of wisecrack like “It’s too bad my bed is already full, Commander.” Get a grip, Trieri, I thought. You’ve got at least fifteen years on him. He thinks you’re his Aunt Marge.

“Well, Commander, that’s the trouble with living in a place like this, you never get to stay in the commercial lodging. I bet that someone here at MPARC has some ideas, though. They get lots of visitors.” I looked around the room. “Mac, do you know where Hal is?”

“In his office, talking with someone who looks important.”

“Ah yes, probably Chuck Shure, the big money behind all this. And he’s got an interest in AirDX as well. Hmm, let’s see. Commander, I’m thinking that you and your guys get top priority with our newest guest, the AirDX survivor. He can brief you in one of the secure rooms here, and then you’ll be able to get onto a schedule again. After that, I think he should meet Chuck.”

It turned out that Sandy was indeed in his office, and I interrupted what sounded like an extremely technical discussion between him and Luke Peckham. But it was good that Sandy was there, because he was able to get things set up in a secure room for the SEALs to talk with Luke.

With that organized, and not seeing Fran anywhere, I went to find my husband and his boss.

“Annette! Well, the cop bearing gifts or something.” Hal, facing the door, saw me first.

“I am. Hi, Chuck. I’m afraid you’ll have to wait just a bit longer though. My present is closeted with those SEALs, I guess Mac brought them in?”

“What? You gave my present to the SEALs?” Chuck didn’t quite manage to look hurt. “Well, as long as it isn’t food, or girls, I guess it’s OK.”

“Girls? C’mon, what would Rebecca say. Sheesh.” I shook my head. “No, it’s actually better, because we can always go out and get food. It’s a scientist named Luke Peckham, the last of the AirDX crew. The other three scientists are dead, he says, including the senior guy, O’Donnell. And the lawyer that was representing them, Marquardt, he was killed in a suspicious car crash last night.”

“Oh! Well, it *is* better than food, or girls, too, because you can always buy them.” Chuck grinned. “Not that I’d know anything about that personally, mind you. Excuse me a minute.”

He pulled out his cell phone and walked away to a deserted corner of the outer room.

Hal and I looked at each other, shrugged, and I drifted over for a hug.

“I think, love, that we’re making real progress with all this.” My voice was muffled, talking into his shoulder as I was.

“Glad to hear it. You’ve been working too hard these last couple of weeks. We need to go fishing somewhere.” He kissed the top of my head. “Oh, hi, Fran.”

“Hi, guys. Uh, I’m guessing I’m not really interrupting too awfully much.” Fran sounded just a bit embarrassed.

“Not at all, Fran.” I turned to greet him. “I just got back from Denver, and I brought the last surviving AirDX employee, the guy who was emailing you as ‘Mortified’.”

“Aha!” His eyes lit up. “I need to talk with this fellow.”

“You surely do. But I think it’s a matter of getting in line. The SEALs are with him now, no doubt pumping him for information about the AirDX lab and how to get in and out safely. And Chuck Shure wants him, too, although I think you’re probably a higher priority.” I rolled my shoulders to try to get the last of the driver’s kinks out. “He says that the gas release, and it was a gas release, toxic and flammable, out that pipe we found, the gas release was completely accidental. It killed his colleagues as well as fueling that fire in the Valley of Death.”

“What about culpability, negligence or something of that nature?”

“Don’t know yet, Fran. But Peckham, that’s his name, Luke Peckham, he says there’s an on-line video archived somewhere that he knows of, a video that shows the entire sequence of events that winds up with his colleagues dead in that underground lab. He said that they were working shifts, and he was at home when it all went down. So maybe there will be some evidence of negligence or something, perhaps by the company, but Peckham is just a salaried employee. He’s probably clean.”

“Is he cooperating?”

“It didn’t start out quite that way, but, then, he was picked up by CBI central and held overnight without much information. So he started out pissed. But I told him that Marquardt had been cooperating, so he caved.” I had sat in a side chair to flex my neck muscles, and now I looked up at him. “By the way, have you heard anything more about Marquardt’s crash?”

“Just that the skid marks look as if an eighteen-wheeler was involved somehow, maybe forcing him off the road into the canyon. It was a long way down, apparently, and the tumbling of the car, combined with the air-bag deployment, broke his neck.”

Hal cleared his throat gently, and it got our attention. “Based on what Chuck said to us about his acquisition of AirDX, I’m betting he’ll want to hire this Peckham guy on the spot, maybe have me hire him, even. What that means is that he will be around here to help dot the i’s and cross the t’s in this whole thing.”

“As well as to help Chuck move into the AirDX business sphere quickly and with less expense.” I couldn’t help myself from being a bit cynical. “But there will still be the AirDX assets and liabilities to contend with, at some point.”

Fran nodded. “I’m thinking that some of those liabilities may well be serious, too.”

“Right,” I said. “Especially because AirDX has some obligations to this strange group that controls Ute Holdings and Western Slope Environmental Services. And, by the way, Western seems to consist mostly of a fleet of eighteen-wheelers. So, tell me, Fran: to what extent do you believe in coincidence?”

\* \* \*

## Twenty-Seven

For the rest of that Sunday, and for part of Monday, it was definitely the Luke Peckham Show at MPARC, the Grand County Sheriff’s Department, and the CBI.

As he explained to the SEAL team, and then to all of us, everything that AirDX did was kept in the Cloud, that nebulous computer world that no one really understood very well. AirDX information, including the web-cam videos, was all encrypted at state-of-the-art levels, and it was scrupulously *not* kept in any other form, anywhere, including that underground lab in the Ute Mine. Experimental procedures were dictated, in real time, and recorded and stored in the Cloud, so all that was in the lab were raw chemicals and various bits and pieces of equipment. And now, of course, three dead bodies.

Therefore, the SEAL team’s role, entering that lab with the goal of protecting national security information, was really superfluous. There wasn’t any such information there to protect. They could have packed up for home, except Ross Bierkens, backed up by a unanimous vote of his team, felt they should still effect the entrance just to be sure there were no extraneous notes left around. Besides, someone had to go in there sooner or later, and they were the best trained and equipped to do so.

Luke’s formal statement to Fran Schmidt was consistent with his briefing and the comments he’d made to Angela and me in the car—it was all an accident, as seen in the web-cam video, and he wasn’t there at the time.

Chuck Shure, after that curious phone conversation he initiated, was insistent that Hal hire Luke as a research scientist at MPARC for whatever role Hal could dream up. That suited Luke just fine—when Sandy showed him the simulations of the Valley of Death wildfire, Luke’s only comment was “Holy crap, how’d you do that?” He was eager to work with such an advanced group.

The question of who would own the AirDX assets, and who would be responsible for their liabilities, was left in the hands of UNELECO corporate attorneys. But from a practical perspective, Shure had control of everything good, because Luke now worked for him via MPARC.

And, after all of the other interviews that included question-and-answer sessions bordering on inquisition, Luke was kind enough to talk with Rod Andersen using a video conference link that we set up. That conversation filled in the blanks about the actual operations of the Ute Mine *vis-a-vis* entering the AirDX space for Rod and me. Luke had already covered the same ground in careful detail in his secure session with the SEALs.

“It’s like you suggested, Mr. Andersen. The main entrance operates by either a sort of garage-door opener device or by that keypad you can see on the pictures. And then, a couple dozen meters down the

main tunnel, there's an alcove on the left with another door and another keypad. No automatic opener there, though. You have to enter the code."

"What about those big trucks?"

"Well, the alcove has plenty of space to get out of the traffic lane in the main tunnel. That traffic lane continues down in a sort of clockwise spiral. But I never went down past our alcove, so I don't know what's down there."

"So the way it worked was, you got in between the trucks, ducked into the alcove, and then opened the lab door and you were in, right?"

"Right. And the trucks had a kind of schedule, with a couple of windows per hour of safe transit into and out of our lab. The Ute Holdings people were always quite clear that we were at risk of death outside of those windows. They sent us a schedule. But there was time to get a delivery truck in, when we needed to. And out again. Without that schedule, though, well..."

"This is all quite interesting, Dr. Peckham. Hmm. Do you know how often the schedule gets updated?"

"As I recall, there's a daily schedule posted on a web site they told us about."

"Ah. I hope they're still doing that. Now. A payoff question. Do you have any idea what those trucks might be transporting?"

"Not really. One thing, though. We have, or I guess I should say, we *had* a variety of monitoring systems in our lab, for all sorts of things. All of the data from them were recorded and stored in our space in the Cloud. One of the instrument systems records radioactive decay, to monitor the mine's background count. And I remember looking at that out of curiosity one time. Every now and then that instrument would spike, showing a high decay count. Like when a Geiger counter goes nuts. But I never thought to figure out why, or what it might correlate with. The intermittency and short duration weren't a health consideration for us, so it was just an odd measurement that I didn't have time to figure out."

"Interesting. Is there any record you know of about the timing of the trucks entering and exiting the mine?"

"Well, we probably have that too, or at least it can be inferred from the seismometer data we recorded. They probably make the ground shake enough to register. Those are pretty sensitive instruments. Oh. Hey. I think I see what you're getting at. What about correlations between the radioactive spikes and ground shaking from the trucks? Right. Well, I never looked at that. Maybe, if I get a chance, I'll do that. These folks here at MPARC seem to have some computers that could do that kind of analysis pretty easily."

\* \* \*

By early Monday afternoon, the SEALs were ready. They had everything Luke Peckham could tell them about the workings of the mine, and they'd even talked with Rod Andersen about what he knew. Fran Schmidt, the cognizant law enforcement official for civilian crimes, was acting as a cheerleader for their activities, and I was breathing easy, now that I was absolved of the responsibility of going in there. Still, it was a strange afternoon and evening for me, starting out normally and, it seemed, speeding up until it was all over. If I hadn't had a break in there for some supper, I don't know but what it would have seemed like fast-forward toward the end. But, as I said, it started normally enough, with a briefing.

Given the variety of national, state, and local interest in the matter, Commander Bierkens decided to bring in all the senior leadership, public and private. Hal, Mac, Fran, Angela, Sandy, Luke Peckham,

Chuck Shure, and I were seated around a conference table in the secure room, and the SEAL team were seated in chairs along the room's walls, making it all quite cozy. Ross was standing at the end of the table, in front of a projection screen.

"Now, I'm given to understand that all of you have an appropriate level of security clearance for what I'm going to talk about. Dr. Peckham and I have discussed some things that you may not be cleared for, but that's complicated chemical formula stuff, which isn't really relevant for this briefing." He looked at Luke, smiled, and shook his head. "And I don't understand it well enough to tell you about it anyway.

"One thing I want to emphasize right off the top, though. All of you have been through some kind of training associated with your clearances, and I bet my mortgage, or I would if I had one, that was training for *information* security. As its name suggests, that's for the protection of information. Well, what we're dealing with in this briefing is covered by something else, *operational* security. In some ways, it's far more sensitive, because slip-ups could get people killed, specifically me and my people. And, well, we all have this odd aversion to that. So it's critically important that what's said in this room stays in this room. If you want to talk about it among yourselves—and it needs to be *only* among this group of people, no others allowed—do it in here with the door closed.

"I hate to be melodramatic, but I'd like to go around the table and have each of you agree to this."

And, like passengers in the exit rows of an airliner, we each looked at him and said we agreed.

"There's a second thing that I think I should mention as well. This is an off-the-books operation. My team is active military, Navy special operations. And my friend Mr. MacQuarrie has been telling me about the national reconnaissance assets he's been using for the investigation. None of this is supposed to be happening, but the folks at the Pentagon and in the White House—and, yes, it's gone that far—they've decided to invoke some rather obscure Presidential powers to authorize it. The level of concern about what happened in that lab is a matter of the highest national security, particularly given the rather slippery nature of the group of businessmen behind the ownership of the mine. Because it's all off the books, we won't be arresting anyone or doing anything to generate publicity—Sheriff Schmidt has agreed to provide several units to back us up, should anything like that be needed. From our perspective, if anything happens to come out for some unpredictable reason, any accidental publicity, this is all a training exercise. OK?"

He looked around the table, and we all nodded—it occurred to me that he was getting us trained.

"So." He fumbled with a hand-held gadget of some kind, and the screen behind him lit up, showing the map of the Ute Mine that Mac had shown me the previous week.

"Here's the objective. More specifically, we're interested in this upper area here." A little green dot appeared on the screen from his laser pointer. "All these other tunnels and so on down lower may have interest for some of you, but our objective is this upper area, which this next slide shows magnified. Notice that there's the entrance, just off the main entrance of the mine itself, and there's also a long ventilation shaft. I understand that Dr. Livingston discovered its outlet on the mountainside."

He looked at Sandy, who was nodding. Ross continued. "Apparently, the shaft is lined with a corrugated steel galvanized pipe about 18" in diameter, not unlike a larger driveway culvert. When I first saw this diagram, I thought that the ventilation shaft might be a clandestine way in, although only a couple of my team members would be able to do it. Nonetheless, the clandestine approach has significant advantages."

The mere thought of wriggling through that shaft gave me goose bumps.

“However,” Ross sighed in apparent frustration. “Dr. Peckham provided critical information that changed my mind about this. It seems the shaft has two very high-volume fans, one at the bottom, and another about two-thirds of the way up. They are designed to replace the air in the lab in under a minute. Ah, the replacement air comes from the main tunnel, through some one-way vents by the lab’s main door. Now, although the fans wouldn’t be likely to come on during an ingress attempt, they’re welded in place, effectively blocking anyone who might try to get in that way. We could take tools in, but the noise associated with breaking the welds would eliminate any chance of the truly clandestine approach.”

Sandy raised his hand. “Sorry, Commander, but I’m a life-long academic, and we always have questions.”

“Not a problem, Dr. Livingston.”

“Well, not to put too fine a point on it, but I can’t help but wonder how that fan in the shaft got there. It’s hard to believe that someone crawled in and actually did welding in an 18” pipe.”

Luke spoke up. “May I, Commander?” Ross nodded, with obvious relief.

“It was put in when the old, bare rock shaft was lined with the pipe. The rock shaft is quite a bit bigger, and the pipe was pulled through using some kind of complicated mining trick that I still don’t understand. But that piece of pipe had the fan in it when it was put in place a couple of years ago. The empty space between the outside of the pipe and the original shaft was ultimately filled with grout to prevent leaks.”

“In any case, we’re not going in that way. And I expect a couple of the guys here are OK with that.” Ross grinned. “But that leaves the main entrance, which has the truck traffic and a most annoying video surveillance camera. Because we don’t know what kind of lens it’s using, we don’t know how much of the area it really sees. But the scanning is quite suggestive.”

He had advanced the slides to one showing the gravel area outside the mine entrance. “We do have the truck schedule, and there is surveillance in place to verify that schedule as we speak, and it appears that there is plenty of time for us to stage in the woods here to the sides of the entrance area, get across the gravel, open the door, and get into the AirDX alcove without any issues with the trucks. The camera, though, is something of a concern, at least if we don’t want to have our presence advertised.”

This business of the camera was the only issue that generated any discussion. Ross was willing to listen to suggestions, even if some of them were, well, less than constructive.

“How about taking a picture of what the camera sees, then suspending the picture in front of the lens? That would fake out whoever is watching it, right?” Sandy, I decided, had seen too many spy films.

Ross was diplomatic. “Well, we’d first have to sit at the place where the camera is to take the picture. Then we’d have to make it a movie, because the camera scans. That seems pretty complicated.”

“Could you just spray the lens with black paint? That would black everything out and give you time to get in. The people monitoring it would probably just think it broke, or something.” Hal, I thought, just stick to what you know, OK?

“Yes, that’s true. But to do that, we’d have to get to the camera without being seen. And that doesn’t look feasible from these pictures.” Ross looked around. “Any other suggestions?”

“Aw, just shoot the fucker.” Mac’s voice was so distinctive that I almost giggled, and I heard some chuckles in the room.

Ross couldn’t help but smile. “Um, yes, well, that’s what we were thinking, too.”

## Twenty-Eight

As preparations were being made for the assault on the mine—and it was clear that the SEALs were thinking of the operation as an assault—Luke Peckham poked his head into Hal’s office, where I was holed up.

“Ms. Trieri? Could I trouble you for a minute?”

“Sure. Ah, do we need to go into that secure room?”

“Not for this. And I think you’ll be interested, too, Dr. Weathers.”

I saw Hal wince. “Hal, please, Luke. Commander Bierkens’ approach notwithstanding, we don’t stand on formalities around here.”

I piped up, “Right, and I’m Annette. At least now that you’re not in my custody.”

Luke smiled. “I’m having a lot more fun this way, let me tell you. And the latest fun is something that I talked about with Director Anderson and you, Annette. Remember I mentioned that we, meaning AirDX, we had both a seismometer and a decay counter in the lab, with the data stored in the Cloud? Well, take a look at this.”

He laid on the table a piece of legal paper covered in squiggles, red and blue ones, which ran lengthwise across the page six times.

“This is a time series of the decay counts and the seismometer record—each separate graph is a month, so what this page shows is six months of data. You can see that the decay counts, the red line, are pretty flat most of the time, but it spikes now and then.” He pointed out several places with these spikes. “And you can also see a pretty regular pattern of seismic motion, several times an hour, at least during the day, all these bumps throughout each month. Those, I’m sure, must be the trucks going in and out. And note how the decay spikes always, *always*, occur during one of the seismic episodes. And it turns out that they always occur during the more *active* seismic episodes, which are probably the full trucks entering the mine. Now, this is just the raw data on a graph, but you can actually do some statistical processing of this pretty easily. Very easily, actually, given the computing resources here. I envy your systems, Dr. . . . er, Hal. Anyway, the statistics clearly show a highly significant correlation between the counts and the stronger rumbling. I’m convinced that some of those trucks, one out of every 15 or so, maybe 2 a day, ones entering the mine, are the source of the radioactivity we’re seeing in these spikes.”

“Two truckloads of radioactive waste a day? Those are big trucks, so that’s a lot. Rod needs to hear about this. I don’t know what he’s going to want to do, but we should call him now.” I motioned for Luke to follow me and headed for the conference room with the video setup.

“So let me see if I understand.” Luke had run through his data analysis again for the boss, and now Rod Andersen was trying to make sure he had the facts straight.

“Among other instruments in the AirDX lab, there in the Ute Mine, you’ve had a radioactivity instrument, what you’re calling a decay counter, like a Geiger counter, and also a seismometer that measures ground vibrations. Every time a truck goes by, the seismometer detects it. The in-bound trucks give stronger signals than the out-bound trucks, because they’re loaded and heavier. And some of the inbound truck signals correlate with the spikes in the radioactivity?”

“That’s right, Director Andersen.” Luke looked pleased that his message had gotten through.

“Are these instruments reliable? Are they calibrated?”

“Yes, sir, they are. Now, I’ve not been talking about absolute decay counts, or absolute seismometer measurements, just relative ones. And as long as the instruments don’t drift, the correlations are solid. We know they don’t drift because of our calibrations.”

“OK. Thanks. Well, Annette, this looks like a smoking gun to me. What’s the plan for the AirDX lab? Can we...oh, wait. I guess I’ll have to get some kind of court order to shut down the WSES operations, and that’ll take a couple of days, most likely. What’s your schedule?”

I was quite aware that our videoconference link was not a secure one. “Well, ah, probably on a very different schedule. I really can’t talk it about it here, though. Maybe we should just continue to keep the two things separate.”

“Hmm. Right. OK, well, I’ll work the court order, and you all do what you’ve got to do. Let’s stay in touch.” He leaned forward, reached out with his arm, and the screen went blank.

“Great work, Luke. He’ll probably need some written documentation, though. Could you put all this into some kind of report I can email him?”

“I’ll get right on it. But do you think I’m supposed to go over to the mine entrance with Commander Bierkens?”

“Probably not. It’s likely that you’ll be patched in to the voice communications, though, in case they have any questions about what they find.”

No, Luke, I thought. The SEAL team won’t be taking along civilian passengers, nor me, either. We all get to watch from a safe distance.

I found Ross in the big conference room, checking equipment along with his team members. He was dressed all in black, apropos the late evening operation they’d settled on.

“I didn’t say anything before, Ross, but shooting that camera will bring someone out to look at it. My boss has been watching that place for some time, and there are guards with assault rifles.”

“I’d be surprised if there weren’t, Ms. Trieri. And Director Anderson briefed us thoroughly. But it’s OK. We’ll be inside by the time a guard gets there, and he’ll be, um, harmlessly neutralized for the duration. Our mission is to collect any national security information. But from what Luke Peckham told us, there’s none in there, so there’s not going to be much for us to do in that lab except check to be sure. And we’re going to bring out the bodies. We’ve got body bags for that.”

“So the truck schedule is still on?”

“That’s what we’re hearing. Really, this looks like it will be pretty easy, as these things go.”

“I’ll be here with Luke, and available by whatever radio link you have, if questions come up.”

“Good, that might be extremely helpful. We need to stay in touch.” He smiled, shouldered a knapsack of gear, and led his team out the door.

It would take them an hour to get there, I knew, plus another hour or so to get staged in the woods near the entrance. During that second hour, Fran Schmidt’s people would also be getting into place as inconspicuously as possible, in case real law enforcement might be needed.

So, with two hours to kill, I went looking for Hal again.

“Hey, lover.” I’d found him still in his office, staring at the computer screen. “I’ve got a couple of hours of waiting coming up. Want to go out and get a bite?”

“That’s probably a good idea. I’m certainly not making any sense of all this.”

“What’s ‘all this’?”

“A mistake, I suppose. This whole operation was put together in a big rush, and Mac gave the folks who support Bierkens and his team the MPARC address here, for deliveries of their equipment and so on. And, I guess it’s just government bureaucracy at work, a bill of lading was sent separately to the general MPARC email address for some reason.”

“So you’ve got a list of their equipment and so on?”

“Right. All sorts of stuff you’d expect. Night vision scopes, some very interesting communications equipment, weapons. But, for the life of me, I can’t figure out why they’d need so much thermite.”

“Thermite?” I couldn’t place the familiar term, for some reason.

“It’s a mixture of some kind of metal, like aluminum, with an oxidizing agent that creates an extremely hot chemical reaction when ignited.” Hal scratched his head absently. “I recall reading about how it’s used in underwater welding and so forth. And there are military applications as well.”

“Well, SEALs are underwater experts, so they’re probably familiar with the stuff. But why would they need it for this mission?”

“That’s what puzzles me.” He shrugged. “Anyway, you’re right. Let’s go find something to eat and be back here for the fun. Or whatever it turns out to be.”

\* \* \*

We walked down the street to Randi’s, a venerable Winter Park hangout with reasonable, if not terribly creative, food with an Irish spin. An hour and a half later, just after dark, full of corned beef, we were back at MPARC, where we ran into Mac.

“Hal! Annette!” He looked relieved. “I’ve been looking for you. We need to have a conversation in that secure room of yours, Hal.”

We found ourselves some coffee—someone had made a fresh carafe—and followed Mac down the hall. I closed the doors behind us, and the rules then allowed us to talk about anything.

Mac seemed reticent to start, so I went ahead without him. “Any word on progress over there?”

“All’s going to plan so far. Ross and the guys are about in place, and Fran’s backup units are ready.” Mac sighed. “It’s that plan I need to tell you about. There was one part that Ross left out in the briefing earlier. I don’t know if it’s a big deal to you or not, but it seems like you might as well know. It’s probably too late to call it off, anyway.”

“What’s this about, Mac?” Hal’s voice was full of concern.

“Well, Ross and his guys have orders to destroy whatever is left in that lab. They’re going to get the bodies out, like they said, but they’re going to pretty much melt down the place after they do.” He looked back and forth at the two of us. “The boys in the Pentagon don’t want anyone to take that lab over and try to recreate what AirDX was doing. Now, Luke doesn’t think that would be possible without the information that’s squirreled away in that computing cloud he keeps talking about, but the Pentagon isn’t taking any chances. So when Ross and company leave, it’s all going to be turned into melted metal mush. Like I said, I don’t know if this is a big deal to you or not, but I just thought I should let you know now.”

I couldn’t tell if he was acting or if it was real, but he managed to look guilty.

Hal spoke first. "Well, it's certainly no big deal with me. I wonder what Fran will think?"

"Me, too. I mean, both of those things." Now it was my turn to shrug. "I can't imagine that's there's evidence in there that would interest Fran. He seems to have bought into the story of the accident. And this will shut the lab down for good, eliminating any possibility of another such accident, right? And I sure don't care."

"Oh!" Hal looked surprised. "I guess this explains all that thermite."

And then he had to explain to Mac how he knew about it, which produced its own little explosion.

"They emailed you the shipping list? Holy Christ! Those people in Washington are hopeless. No wonder our ops get so screwed up sometimes. My Lord!"

There was a knock on the door, and Sandy stuck his head in. "Showtime. We set up all the communications stuff in here."

As other people filed in, Sandy fiddled with some equipment in a cabinet and nodded to Mac.

He looked at his watch, cleared his throat, and said, in a normal voice to the room at large, "Base live."

"Terrier live," came a response from the speakers in the ceiling.

Sandy held up a remote control. "This mutes our microphones so we can talk. Mac will have it."

"Terrier'?" Hal looked surprised.

"Yeah, what the hell, you know, little dogs that go into holes after rats." Mac grinned and pushed a switch on the remote. "We copy five-by-five, Terrier. Status?"

"Nominal. Camera down, tunnel accessed. Lab door open...now! Ugh! Breathers on, squad."

Mac wrinkled his nose as he pushed the switch. "I wondered about that. It's been a couple of weeks, right? Those bodies..."

He pushed the switch again. "Terrier, don't forget the ventilation system."

"Copy, Base. Thanks." The sound of a powerful fan soon emanated from the ceiling.

Mac pushed the mute. "Well, we probably won't hear much because of that fan, and they can operate on hand signals. But so far, so good, sounds like."

In fact we heard nothing at all but the fan for about 15 minutes. It was something of a shock when it stopped and the ceiling started talking again.

"Terrier clear, subjects evacuated, no anomalies."

"Good work. Base out" Mac tossed Sandy the remote.

"Well, that was pretty anticlimactic." I couldn't help myself. "What did he mean by 'no anomalies'?"

"They shot the camera, remember? I guess none of the guards there came out to investigate. Everything went perfectly." Mac looked relieved, and then shrugged at me with a "hell if I know" look. I took it to mean he couldn't tell about the thermite business.

Luke, who had come in with Sandy, spoke up. "Can I assume that the 'subjects' they 'evacuated' were the Professor and Miller and Rick?"

Mac put on his fatherly face. "I suspect so, son. And it wouldn't surprise me if you get asked to identify them at the morgue."

Luke looked at the floor. “Yeah. Well, they were good people.”

To my surprise, my cell phone was buzzing.

“Trieri, CBI.”

“Hey, Annette, it’s Fran, and this connection may not last because it’s a radio patch through God knows where. Anyway, we’re all headed back. Everything went smoother than I could have imagined. See you in an hour or so.”

“Fran? Are you coming to MPARC? Or what? I need a conversation, tonight.”

“MPARC will work. I’ll come back through Georgetown. See you later.”

The Monday evening traffic must have not been like Sunday’s was, because Fran made it through those tunnels, then down past Georgetown and back over Berthoud Pass, in 55 minutes. Even Hal was impressed.

“Long day, Annette. What was it you wanted to talk about?” Fran was all business as he strode into the conference room and sat.

So I told him about the thermite and the SEAL team’s orders. I think his feelings were hurt, because they didn’t tell him themselves, but he wasn’t really upset.

“One thing, though—this is going to make the next press conference a little dicey. I’m going to need to talk with someone at the Pentagon so we can get our stories straight.” Fran leaned back in his chair and put his feet on the conference room table. “I’m thinking that those bodies that Ross and his guys recovered tonight are really ‘charred remains’ of a catastrophic and extremely hot fire in the lab two weeks ago, at the same time as the Valley of Death. But if we can pull this off, I think it may just be the last press conference. That’d be a relief.”

\* \* \*

## Twenty-Nine

It bothered me for a couple of days, that fib that Fran was conspiring with the Pentagon about. The time of death, of course, wasn’t a fib, and, just like some of the Valley of Death victims died from inhaling that gas, the guys in the lab had, too. Fran didn’t need to lie about that. So it all came down to the time of the fire in the lab and the condition of the remains. I finally rationalized the whole thing by telling myself that, given that the victims hadn’t burned to death, “charred remains” would probably be less traumatic for the families than “really gross remains that had sat around and rotted for two weeks.”

In the end, the Pentagon put out a press release about an accident in a research laboratory in Colorado that killed three researchers with toxic gas and then started fires both in the lab and in a patch of trees on a mountainside, which killed more people. They also obfuscated the matter by talking about how the gas, had it not burned up, would have been degraded by sunlight in a matter of a few hours—never mind that the release had happened at night. And while Fran had been eager to modify reality about the time of the lab fire, some of the other official lies began to really piss him off.

But there was nothing we could do, as we were all rounded up and, under the shadow of penalties associated with various National Security criminal matters, were made to sign a complicated non-disclosure form about the whole thing. And that would have been the whole story, except, on Wednesday, Luke Peckham disappeared.

We had made arrangements for his car to be brought up from Denver on Tuesday, and he was using it to look for a permanent place to stay. According to Hal, he had received a phone call Wednesday morning, excused himself to go look at a possible apartment to rent, and simply never returned.

“We were discussing the benefits plan that MPARC offers—I was trying to guide him through the maze of retirement program options. A phone call for him was routed to my office. It seemed to be about an apartment somewhere, a deal that sounded good to him, from what it looked like. So as soon as we could wrap up, he took off to check it out.” Hal shrugged. “I haven’t seen him since.”

We had been sitting on the deck, watching Wednesday evening creep up the other side of the valley.

“Is there any reason to suspect foul play?”

“Well.” He took a sip of iced tea. “He and Sandy were deep into some kind of new calculation or other. The kid worked fast, I’ll say that, and he really seemed to like our shop. Sandy was certainly expecting him back after lunch. And there wasn’t even a phone call.”

“Does Mac know?” At one level, I knew it could all be perfectly innocuous, but on another level something about it bothered me.

“Uh, well, he didn’t see Luke all afternoon, but I don’t know if that concerned him.”

“Luke mentioned to me being scared of some goons that Ute Holdings put onto the AirDX team. And now that Luke’s the only one left, well, maybe his fear was justified.”

“Except that he spent all day yesterday shut up with several people that Chuck Shure brought in, with the Pentagon’s blessing. I think they were pumping him for everything he could tell them about AirDX.”

“Are you saying he’s expendable?”

“Well, no. But I guess I am saying that he’s not as indispensable as he was on Monday, as far as the AirDX stuff is concerned,” he said. “But I’d hate to lose him, because it looks like he’ll be a valuable member of our team.”

That made me feel better. “If he’s been gone only for the afternoon, I don’t think we can do much yet. Did you happen to hear an address for that apartment he got the call about?”

“No, but he wrote it on a notepad on my desk using a ball-point pen I handed him. And I haven’t touched the pad. Maybe there’s something there.”

“If he doesn’t come in tomorrow, let’s follow that up.”

Peckham didn’t show up at MPARC on Thursday, and the address we were able to recover from the imprint on the notepad was an apartment building with no vacancies. No one there had called him on Wednesday.

Around noon, we had a meeting of the minds at MPARC and decided to call the folks at the Pentagon who had made us sign those nondisclosures. They, being only spineless lawyers, referred us to the FBI. Neither Fran Schmidt or Rod Andersen was especially happy about that.

“Oh, crap. The Feds poking around in my county. Just what I need,” was Fran’s reaction, when I called him.

“Aw, geez! Those guys will screw up my illegal dumping investigation for sure.” Rod’s concern also came through loud and clear on the phone.

But Rod also had good news, and it concerned that dumping investigation: Luke Peckham's analysis of the radiation and seismologic data from the Ute Mine lab had persuaded a judge to sign a search warrant. If Rod was concerned about the presence of the FBI, he was elated about the warrant.

"We'll shut down their operation while we go in and see what we can find. If we get lucky, shutting down their operations will include detaining a truck full of whatever that radioactive stuff is. I'm putting together a task force that'll cover all the bases. Can I count on you, Annette?"

Like a bad dream that wouldn't let me wake up, the specter of having to go down that damned mine was still hovering around.

"Of course, Rod. I'll start by assembling everything we know about that hole."

To do that, I went looking for Mac MacQuarrie, and, after searching all the usual places, found him in a new one, an office Hal had provided.

"Annette! Say, how do you like my new digs? Not so big, but some view, huh?"

And it was, toward the east over the treetops to the foothills.

"Does this mean you're going to work here, Mac?"

"Well, we haven't got that far yet. I don't quite know what I'd do here anyway. I'm a retired spook, not a computer weenie."

"Don't sell yourself short, Mac. Just look at the job you did for us on that AirDX business. Speaking of which, we're now interested in what's going on deeper in that mine. Tell you what. Work for me, and it'll give you a better bargaining position with Hal."

"What's the pay?"

"Um. Well...oh, I know. How about a shiny shield to wear on official business? And I can throw in 52 cents per mile when you use your personal car, too. I'll deputize you!" I thought a minute. "Actually, that's probably a good idea anyway. In all seriousness. That way, you'd be doing the data gathering on the mine in an official capacity, if it ever comes up in court or anything."

"Do I have to swear on a Bible? I might get struck by lightning if I do."

"Huh? Oh, well, we'll figure something else out. I need to find my CBI field kit to do it anyway. I mean, it's not like I carry spare shields around all the time. And it'll be a new experience for me." I winked at him. "Anyway, would it be possible for you to put together high resolution, or as high as possible, maps of that mine, everything that's known about it? We don't care so much about the AirDX part any more, just the deeper stuff."

"I'll get right on it, boss. Does this mean I get to go along on the bust? I've never been in a deep mine before—sounds interesting."

If only, I thought, I had his fortitude.

\* \* \*

It occurs to me that I've not been shy about expressing my dread about going underground into that stupid mine. Strangely, as the time to do it got closer, and as the preparations got busier and time seemed to speed up, a lot of that dread up and vanished. Not all, but a lot.

Rod Andersen's task force really was quite some force. People showed up unexpectedly late Thursday afternoon at Fran's offices to measure me and Angela—who was also going to have the pleasure of going underground—for Demron suits, so our exposure to whatever ionizing radiation might

be down there would be minimized. I made sure that they also stopped by MPARC to measure Mac. And we were all treated to a mine safety training session, and then an advanced one.

Mac's research produced even better maps of that mine than he'd found previously, and I made sure to send them to Rod. That ore-belt entrance on the south side got a big red circle around it on one of the maps. I sure didn't want any escapes by that route to go un-noticed.

By early Friday morning, there was even a plan. Rod had left his comfortable office suite in downtown Denver to be in on the action, and we assembled in the MPARC secure conference room for a pre-deployment briefing.

"OK, people, let's go over this whole thing." Rod didn't get to do this very often, and he seemed to be having fun.

"First, as Annette pointed out, there's a back-door escape tunnel that comes out on the southeast side of the mountain. Sheriff Schmidt and his people will be monitoring this and will arrest anyone who tries to escape that way.

"Second, there's the question of the regular truck traffic in and out of the mine. We're handling that with three steps. A, we've found out the radio channel—this isn't a regular CB channel, they have HAM radios—the radio channel they use, and we'll simply jam it in an area about ten miles around the mine. B, at T equals minus 10 minutes, we'll begin stopping WSES trucks anywhere on Ute Pass Road. C, we'll block the mine entrance using loaded dump trucks in such a way that the inbound WSES trucks can stop without crashing, assuming they choose not to crash. If they choose to crash, well, it's on them. There will be only a couple of outbound trucks to deal with, and we'll handle that easily.

"Third, when the outbound trucks exit the mine, then the roadway in there will be clear. That's when we'll send our units. Three armored vehicles will enter the mine and penetrate to the bottom. Our presence and purpose, serving a search warrant, will be broadcast over loudspeakers. Any resistance will be met with force, deadly force as necessary.

"Is this all clear?"

No one had questions, or at least no one dared ask any.

"Excellent. When the mine is secure, the fourth armored vehicle will enter, the one with the science team. They will take samples from where those loads of debris have been dumped, and they will have equipment to be able to monitor radioactivity. When they obtain enough samples—and it's at their discretion when this will be—they will give an 'all clear' signal and all four vehicles will proceed up the tunnel to the entrance. When the four vehicles are clear of the mine, we will proceed to Part Two as necessary."

Rod stopped for a minute to catch his breath. He scanned the room for questions again, and, although I'd thought of one, I kept quiet. I decided to ask it privately, later.

"OK, well, Part Two depends on what the real-time measurements of the science team reveal. If they find significant radioactivity, meaning something much greater than would be expected in natural background radiation in such a mine, then we will do our very best to evacuate any and all personnel in that mine, no matter who they are, no matter who they work for, and we'll seal it up. Otherwise, we'll take our samples and simply leave, having executed our search warrant and obtained what evidence we need for future prosecution. Clear?" Rod looked around the room for questions, but again found none. "OK, the show starts at 1500 hours today. You all have instructions about where to be and what to do. Let's make this as easy and safe as we can, folks. Good luck!"

A couple of people didn't quite know whether to applaud or not, but their feeble attempts didn't start anything—the meeting just broke up. Mac hustled around to the table to find me.

“Annette, can you introduce me to your Director? I have some questions I need to talk with him about.” He looked worried.

“Me, too. Let’s go.”

For an old spook, Mac was really quite diplomatic. After I introduced him to Rod with a brief outline of his background and, half-jokingly, as my newest deputy, he allowed as to his curiosity about the vehicles that Rod had lined up for the trip into the mine.

“Oh, right, I didn’t mention that, did I? Well, we know that full-sized semi-tractor trucks go in and out of there at a good clip, so there’s plenty of room for just about anything. But we really don’t need anything too big, so I contacted an old friend of mine who’s high up in the National Guard and arranged for Humvees. I figured with their maneuverability and ground clearance, they’d be the most useful. Everyone going in there will be wearing Demron suits for rad protection, and I doubt we need really heavy armor.” Rod looked pleased with himself.

“Any real firepower? Um, all of my own is in transit.” Mac smiled. “We flew out, and you know how hard it is to get an HK417 past the TSA guys at the airport these days.”

I could tell by Rod’s expression that he had no clue what an HK417 was—for that matter neither did I—but he sure wasn’t going to admit to that.

“One of the Humvees has an M134 Minigun on a ring mount. That ought to do it.” He looked even more pleased with himself.

Mac nodded. “Sure should. Um, if you don’t have anyone with real experience with that thing, I’ll volunteer. They’re a bit, well, different from most armament. It takes some practice to get it to do what you want it to. And it’s all too easy to chew through a box of shells before you know it.”

Rod’s eyebrows shot up. “Really? Hmm. Annette, you say you deputized him? I think I’ll take you up on that, Mac. How about the rest of the plan? Do you see any holes?”

This was the opening that Mac had been waiting for. “Well, I don’t know if Annette told you, but I’m the guilty party who put together that portfolio of information about the mine. So I’ve had a chance to study its layout. That long, spiral decline has several drifts branching off it, at various places on the descent. I suppose the main chamber at the bottom is where the dumping is happening, but those drifts are a bit worrisome. They could get us set up for an ambush, maybe cut off our retreat if things get rough.”

“I was wondering about this, too, Rod.” I didn’t know whether this would help Mac’s credibility or make Rod think I was piling on, but it had been worrying me as well.

“I’ve discussed this with several people, and we don’t think there’s any threat from those side tunnels.” For the first time, though, there was indecision in Rod’s voice.

Mac pressed his advantage. “Well, yeah, I was part of an operation once where...oh, never mind, you don’t want to hear my old war stories. But it seems like we have plenty of time, there’s no rush once we get the truck traffic stopped and the mine entrance secured, right? We could easily clear those drifts one-by-one as we ease our way down that decline. I mean, the driver could back the Humvee with the Minigun into each one that has any sign of recent activity—you know, tire tracks, footprints—until we make sure it’s empty. And, say, that makes me think of something. At the last drift before that big chamber at the bottom, we could turn all the Humvees around and back down the last bit of the decline, with me on the Minigun taking the lead. That way, if we run into resistance, at least into any significant resistance, we’ve got the opportunity to get out of there quicker, while I hose down the place if need be. I mean, if the rate of fire on that thing doesn’t make whoever is in there back down, well, it’ll be time for a strategic retreat and a Plan B, y’know?”

Rod's mouth was open slightly, and he blinked two slow, stupid, cow-like blinks. "Ah, well, I guess that all makes sense to me. No reason not to do it that way, I suppose. Uh, glad to have you on board, Mac. Er, let me know if you have any other suggestions."

\* \* \*

### Thirty

Rod's meeting broke up at around ten Friday morning, and the five hours between then and zero-hour at three that afternoon were jam-packed, so much so that I missed lunch and had to descend into that stupid mine on an empty stomach. But not everything was quite so grim, and it proved to me that, when things hit the fan, they're not necessarily all foul-smelling.

What made me miss lunch was a very excited Rod Andersen. He jumped up from the computer workstation he'd borrowed, rushed over the printer, and let out a whoop. The rest of us, our attention thoroughly got, stared at him in surprise.

"Got him!" he exclaimed. "And a search warrant to go with it."

He looked around the room as if he was expecting applause or something, so I bailed him out. "Got who, Rod?"

"Oh, yeah, I didn't mention it earlier, did I? Well, see, we didn't have any trouble with a warrant for the mine, based on that analysis that Luke did of the trucks' shaking the ground and the radiation. But we were waiting on another warrant for the people involved, especially the boss of the thing. There's this guy named Silvio Estrada who's connected to the Las Vegas crowd. He's the head of Western Slope Environmental Services. And we figure he's likely to have some records of their shipping manifests, or some such thing. Because he works out of his home, we had to get a separate warrant, and it just came through. They faxed it to my email and I printed it out." He waved the paper in his hand. "It also looks as if he's a principal in Ute Holdings, too, the company that owns the mine. That makes for conspiracy among the companies and their directors and owners, assuming we find evidence of illegal dumping in there."

"Any idea where we can find this Silvio guy, Rod?" I was wondering whether our schedule would get changed again, but most everyone else had returned to what they had been doing before Rod's whoop.

"That, Annette, is the beauty of it. He has a small ranch on the east bank of the Blue River, a couple of miles upstream from the turnoff to Ute Pass Road. And by 'ranch' I really mean a mansion on the river, with a horse or two. It was built as a fishing lodge a few years back, but the original owner got wiped out in the housing crash and had to sell it." He smiled. "So we can secure his house and office pretty much on the way to the mine. That way, if there's communication down in the mine, like a telephone or something, his people in there won't be able to warn him, and he won't be able to shred any paperwork or whatever."

We decided that securing the mansion and the people in it could take some time, so we hit the road two hours before we'd planned to. And I missed lunch.

It turned out that the mansion was a huge, full-log house sprawled on a high bank next to the river, set back from the highway by a couple hundred yards. There was a closed gate, but our Humvee made quick work of that. Because we hadn't put on our Demron radiation suits at that point, at least we didn't

look like aliens on the attack, just normal law enforcement personnel on the attack, to the poor housekeeper who answered the door.

“Si? Ay...,” was all we got from her as we hustled into the foyer and spread out.

We didn’t have any advance knowledge of the layout of the place, so we had to wing it. Angela and I went left and wound up clearing the dining room and walking into in the food-preparation area, where I immediately came down with a severe case of kitchen envy. All I could do was stare at the restaurant-grade everything organized in enough square feet to hold a barn dance. It occurred to me that I really didn’t have any special use for a 60” Wolf dual-fuel range with two ovens, six burners, a griddle, and a charbroiler, but I sure wanted one.

The kitchen staff, though, weren’t so distracted. They froze in place, terror in their eyes, as we, with our Kevlar vests, helmets, and automatics pointed here and there, explored various nooks and crannies.

Once again Angela proved her value by launching into a little speech in Spanish. Even I was reassured just by the sound of it, and I could see the staff relax. “I told them not to worry, that we’re not ICE, that we’re not after them. I also suggested that they hold off on cooking dinner.”

Just as I was about to respond, we heard shots from another part of the house, so I switched on my headset. “Trieri here. Kitchen and dining area clear. What were those shots?”

“Petersen here. Subject has barricaded himself in a study. He put a couple of holes in very nice hand-carved oak door. Flash-bang is next.” And about five seconds later we heard the thud of a door being kicked in and then the bang part, which rattled the pots and pans and scared the bejesus out of the staff. Angela went to work on them with more reassurance, and, when she finished, we headed out for the other end of the house, back through the dining room to the foyer, and then right this time.

But right turned out to be wrong—it was some kind of guest wing—so it was once again back to the foyer, where we tried straight ahead. Down a long hallway, there was smoke through which we could see a door askew.

I keyed my microphone. “Rod? Are you in the room with its door blown half off?”

“Roger, Annette. And you might want to get in here.”

Rod and two other CBI agents were lifting a limp form from the floor. Another individual, looking quite dazed and confused, was seated in a straight-back chair, arms behind him. Angela and I secured our weapons.

“Those flash-bangs are quite something, aren’t they?” My question was rhetorical, designed to let Rod know we’d arrived.

“Unless you’re prepared, yeah.” Rod pointed at the second figure. “Recognize this guy?”

Even through the smoke I could see that the unconscious person they’d placed in a second chair, securing his arms with handcuffs, was Luke Peckham.

Rod continued. “We’ve had a computer watch on his bank account, and when it got a hundred-thousand dollar electronic deposit yesterday, we thought we might find him here. It was Estrada who shot up his own door, though.”

He gestured toward the desk, where a long-barreled .45 revolver lay.

“So, Rod, what do you suppose all this means?”

“Well, that guy you brought in, Mac what’s-his-name. He’s pretty smart. Maybe he can figure it out.” Rod shook his head. “I’m just glad no one got really hurt in this. I don’t like getting shot at one bit.”

“You’ve got that right. Let’s hope that none of the Western employees in that damned mine take shooting into their heads.”

Rod laughed. “Hey, your friend Mac volunteered to go in there first on that Minigun, right? Let ’em shoot. He’ll make ’em wish they’d taken up knitting instead.”

\* \* \*

And Mac did.

We arranged for the detention of our two captives, Peckham and Estrada, and for careful searches of computers and paper files. Then we backtracked to the Ute Pass Road turnoff and made our way to the mine entrance, where a surprisingly large group of people was assembled, along with several more Humvees including one with a menacing-looking machine gun mounted on its roof. That, I thought, must be Mac’s Minigun.

And there was also one of those semi-tractor dump trucks sitting off to the side. Its driver seemed to be the fellow sitting on the ground, leaning against a front tire, hands behind his back. One down, I thought, and who knows how many to go?

Angela, however, had a more personal perspective. “Oh, shit. Annette, I think that’s my cousin Ernesto sitting over by that truck. And is he cuffed?”

“If he was driving it, he just might be. Rod doesn’t want any interference with the plan.” I thought a minute. “Why don’t you go ask him what’s going on? Ernesto, I mean.”

“I think I will.” And she headed off in the direction of the truck.

It occurred to me that the only thing I had to do was to put on my Demron anti-radiation suit, so I decided I’d rather go with Angela. I trotted after her to catch up.

“I thought you said that you didn’t have any cousins up here.” I was only slightly winded.

“Not over in the Fraser Valley among the folks I talked to, no. Ernesto must be staying somewhere else.”

As we got closer, I saw the instant of recognition in Ernesto’s face—his eyes got big and his mouth dropped open.

“A-a-angela! Buenos dias!” He managed to blurt this out, and more Spanish followed.

Angela, though, answered in English. “What I’m doing here is busting your bosses’ asses, Ernie. Did you know that you’re involved in an illegal dumping operation? What’s in this truck, anyway? Where’d you get it filled?”

“Oh, uh, well, we’re not supposed to talk about that stuff, with anyone, you know? That was the deal when they hired me on.” He looked a bit embarrassed.

“Annette? Do you suppose anyone here has checked this truck load for radioactivity?”

“Good question. You see what you can get from him, and I’ll go check.” I turned, located Rod standing by the other Humvees, and headed his way. He had his anti-rad suit on, but the headgear was sitting on the top of one of the vehicles, so he looked a bit like a pin-headed astronaut. I started to get the giggles.

Mac, dressed the same way but able to pull it off better, was standing with his torso sticking up out of the roof of one of the Humvees, fiddling with the Minigun. I walked over to talk with him while I got my mirth under control.

“So, Mac, is that going to serve your purpose?” My voice got his attention, and he looked down and grinned.

“I’d know better if I knew what my purpose was supposed to be. But it’ll probably do. Like I told Rod, I’ve used one. And, more to the point, I got shot at by one of these things once. Well, not *at*, exactly, but in the direction of. Just before I met you on that cruise-ship caper, as a matter of fact. It really is like a fire-hose of lead.” He shook his head and looked at the mine entrance. “I don’t know who or what’s down there, but this ought to make ’em think twice about giving us trouble.”

“Well, I’m glad you’re in charge of that damned thing. I don’t think this is the time for rookies. Say, Mac, do you know if there’s anyone around here with a rad counter? Seems like we should check that truck over there.” I gestured Angela’s way.

“Been done. It’s clean, mostly. Readings a bit higher than the background, but not enough to suggest that the load is hot. Maybe he’s carried a hot load in the recent past, though.” Mac shrugged, then looked up past me. “And here comes another one, looks like.”

Someone else had noticed it, too, because a whistle blew, one of those sharp, piercing whistles that basketball referees use. I turned to see what everyone was looking at and saw Rod the pin-headed astronaut taking a whistle out of his mouth. A convenient fit of coughing covered my snicker as he raised a bull-horn to his face, making himself look truly loony.

“OK, team, another inbound truck coming. You did great work on the first one, so you know what to do.”

A half dozen people sprang into action, including Mac, who spun the Minigun around to point at the entrance in from the main road. As the truck made the turn at a good clip, given the curve and all, several of the rad-suited CBI folks set up a relay of signals that reminded me of how aircraft are guided into the gate. It worked, because the driver caught on immediately and began a counter-clockwise circle around the big parking area, slowing the whole way. He finally slid to a stop next to Ernesto’s truck, and three people wearing rad suits—including helmets—and carrying gadgets of some kind sprinted toward him.

It took them only a few seconds to start backing away, and they gestured for Angela, Ernesto, and the new driver to join them. That truck, I decided, must be a hot one. A fourth guy in suit carrying a different, bigger gadget went over the truck more carefully and, after a few minutes, came my way with his helmet shaking back and forth like a robot with new, high-voltage batteries.

Rod, I realized, had come up beside me. “What’ve you got, Anton?”

“Bad shit, Director, bad, bad shit. Can’t possibly be just uranium mining waste like we thought. Not with this range of energies. Looks more like the kind of weird isotopes they make down at Los Alamos. Or a whole truckload of medical isotope waste, maybe. An alphabet soup of nasty elements, Americium, Barium, Cesium, you name it. We’re probably OK here, but I wouldn’t get much closer. And for sure don’t expose yourself to the contents of that trailer.” He shook his head some more as he walked off.

“Time for you to suit up, Annette.” Rod wasn’t shouting, but his no-nonsense tone told me not to argue. “And get Angela suited up, too, pronto. It looks like we’ve hit pay-dirt, so to speak. If it’s in that truck, there’s more down that hole there.”

He looked over my shoulder and raised his voice. “Angela! Over here!”

“What do we do with the drivers?” With all the radiation flying around I wasn’t comfortable letting them just sit in the parking lot.

“We’ve got just the thing.” He pointed toward an armored truck parked in the shade on the other side of the clearing as Angela walked up with the two truck drivers.

And she was not happy. “Jesus. H. Christ. On. A. Crutch. Annette? This another of my cousins, Ernesto’s brother Alberto. Next thing I know, *my Mom and Dad* are going to drive up the road, for God’s sake!”

“Uh, Bert? And Ernie?” Where, I wondered, had I heard those names before?

“Well, yeah, we had *Sesame Street* in Santa Fe, just like everyone else.” Angela looked grumpy. “My Aunt Consuela was enchanted with it. I think my cousins got tired of it pretty early on, though, and now, what with all the innuendos, they’ve started calling themselves ’Nesto and Al. But I’ve known them since the Bert and Ernie days. Right now their names are Dumb and Dumber, as far as I’m concerned.”

Angela’s two cousins were standing behind her, towering over her but trying to look small, shifting from foot to foot, staring at the ground. I struggled to keep a straight face in the presence of this little family comedy-drama.

“Well, I think we’re going to have to confine them for the duration. Over there.” I gestured toward the armored truck. “Gentlemen, don’t take this the wrong way—it’s just temporary. We’ll certainly want to talk with you about what you know, and I’m sure that your cooperation will be rewarded.”

Angela walked off with them toward their accommodations for the afternoon, and I decided I couldn’t put off getting into my Demron suit any longer.

\* \* \*

### Thirty-One

I couldn’t reasonably complain. They had provided me with a radiation suit that fit quite well, even with my Kevlar vest underneath, and it didn’t bind in the armpits or other uncomfortable places I thought it might. Now I, too, looked like a pin-headed astronaut, of course, but we’d all look the same with our helmets on, I knew.

I had Angela’s suit ready for her to climb into when she returned from delivering her miscreant cousins to our paddy wagon, and we were ready to go just as Rod blew that damned whistle again. It was 3:00 sharp.

“OK, team, saddle up! Time to lock and load!” If he were to use those sorts of clichés all afternoon, I thought, I just might have to shoot him instead of the bad guys.

Maybe it was just my nerves. I’d been trying to avoid thinking about entering that mine, but, with the rad suit on, the reality was starting to sink in. Angela, on the other hand, was ready to rock.

“I think we’re in the Humvee with Mac, Annette. If there’s any action, that’ll be where it is. This could get exciting!”

Even with her full suit on, her enthusiasm was infectious. I watched her practically jump into the Humvee that Mac was sticking out of and tried to psyche myself up.

Inside, there was Mac’s south half, standing on a little platform that provided access to the roof hatch and the Minigun. I took a seat across from Angela just aft of Mac’s backside. It took a little

adjusting, but soon I was plugged into the communications network that let us talk from inside the helmets. At first it was buzzing with conversation, but then it went off and on again, and everyone shut up.

“OK, people, the entrance door is going up. Humvee Alfa goes in first.” Rod’s voice came through loud and clear, and I felt my lower abdomen clinch up. I’d passed him the passcode for the doors without thinking of the consequences for myself, but as we began to move those consequences hit home.

I have to say, though, after that it was boring for quite some time. Progress was slow enough that I couldn’t feel any sense of turning the curves on the spiral ramp I’d seen on the underground map. We stopped and backed up several times, to clear side tunnels, I assumed, without incident and then continued. In between backing into those side drifts, we bumped down the washboard created by the outbound dump trucks’ grinding up the grade of the decline. I kept my jaw clamped shut to prevent my teeth from chattering.

Talking wasn’t possible because of radio discipline, so I stared at Angela and made shrugging gestures from time to time. Two other CBI officers, whom I couldn’t identify, had joined us in the back of the Humvee, but there was no way to make polite conversation. I finally noticed the chevrons on my sleeves and, out of curiosity, felt for and found the insignia on my shoulders, where epaulets would normally be. Neither Angela nor the other two had them.

Great, I thought, I get to be In Charge, even though I’m so scared I might toss my cookies into my helmet. At least I had that empty stomach working in my favor.

After a while, there was one last side drift, and then, after some jockeying around, we kept going backwards, down the final bit of the decline into the chamber at the bottom.

Just as I was thinking it, Rod came on the radio. “Showtime, people.”

I saw Angela fumble around under her seat and come up with a weapon, an assault rifle of some kind, so I followed suit. Mine turned out to be an Uzi SMG with full automatic capability and the extra-large magazine. A sort of hand-held mini Minigun, all things considered. I reminded myself that the magazine wouldn’t last for even a second-long burst, probed around for more clips under the seat, and found a shoulder bag.

About that time, the vehicle leveled off and our backing up came to a gentle stop. Mac had turned around during the entries into the drifts, so we were no longer seated by his backside. I patted his right knee and, using the voice-activated microphone, wished him well; he tapped his right heel twice in response.

Just then Rod’s voice came through the radio set and through the air as well, with a slight echo, from a loudspeaker. “This is the Colorado Bureau of Investigation executing a search warrant. Anyone present is commanded to present themselves, hands raised. Resistance will be met with deadly force.”

Then there was a pop from somewhere far away, and, as an answer, Mac let fly with a several of seconds of Minigun fire, a few hundred rounds, I guess. It made a sort of loud purring noise, far more civilized than I would have thought.

“OK, folks,” Mac’s voice was purring more softly than the Minigun had. “That ought to make them keep their heads down, at least, so I think we’re secure. You can pick up the pieces while I cover you.”

They guy on my right popped the door and jumped out, and his companion followed, with Angela behind him. Then it was my turn.

What was it, I wondered, that bothered me so? I’d been sitting in a little window-less box for probably an hour during the descent, and now I was to get out into a much larger chamber.

Claustrophobia should surely affect me in the little box more than outside. It just didn't make sense. Even with flying lead, the cavern wouldn't be such a confining space, I knew.

But it still took everything I could summon up to follow Angela out that back door.

There was nothing straight out the back except cave, but to my left at about 11:00 there was a building, or what was left of one. I guess it had been a metal, pre-fab warehouse building, with windows, at one time. Now, though, its top half was sagging and the whole thing looked like Swiss cheese. Aware of my exposure, I scurried around to my right to hide behind the Humvee. Angela and other two, I discovered, had taken the same approach.

I peeked around the open back door of the Humvee, using it for cover, and was rewarded with a little flash from the remains of the building and a clanging noise on the door. And Mac opened up.

After about fifteen seconds, a very long time for a weapon like that to fire continuously and for its shell casings to rain down where I was standing, the building was unrecognizable as anything but a ruin. My earpiece came alive.

“Rod? MacQuarrie here. I'd like to think that it's safe for your rad team to take samples now, but I can't be sure. Whoever is, or was, in that building over there doesn't seem to have an ounce of sense. I can provide supporting fire—there's still plenty of ammunition left—but there could be stray shots coming our way. Maybe you can back one of the vehicles in for them to use for cover.”

Somehow, the round that clanged off the door I was behind got me going. Maybe it pissed me off; maybe it just gave me the hit of adrenalin I needed to quit moping. I patted my three companions on their shoulders and began making hand signals. They followed me around the front of our Humvee and across a short open space to a jumble of boulders.

“Rod? Trieri here. I'm going to take a small team and approach what's left of that building from its left side, using these rocks as cover. Mac? I'll assume you can see us.” I heard two sets of double clicks in response as I slipped from boulder to boulder, hoping that my companions were following.

\* \* \*

Unlike the yellow and orange Nomex firefighter suits I've seen, our rad suits were a dark gray, almost black, and I was glad for it. The lighting in that big chamber was limited to the Humvee headlights and a few work lights here and there, apparently meant to guide the dump trucks in, and the dark suits helped us feel hidden as we made our way toward the remains of the building in the gloom. It was sitting on a mound at the side of the chamber, and as we approached it from one end I could see a pickup truck parked behind it. I sent the two unknown CBI officers to secure it and watch the back of the ruin while Angela and I carefully picked our way toward what once must have been a door.

“Mac? Trieri here. Can you see us? We're between you and a whole bunch of bullet holes just now, so I'd appreciate it if you stood that damned thing down for a bit, OK?”

“Roger that, Annette. And you're like a shadow up there. You be careful now.” His reassurance was just what I wanted to hear.

“Thanks. I think we'll see if we can kick this door in.”

Angela and I used the standard drill, where she stood flush against the wall while I exposed myself enough to give the door a good, hard kick right next to its handle with the flat of my right foot and then dodged out of the line of fire from the inside. It was a good thing I didn't really put my full weight into the kick, though, because the door didn't offer any real resistance as it flew open on the remaining hinge.

What followed was a lovely bit of choreography of the kind you see on TV cop shows, in which Angela and I alternated peeking into the room and quickly pulling back, then exchanging official-looking hand signals. And I'm sure that it would have looked every bit as cool as when the big TV stars do it, except for the rad suits we were wearing. No doubt they made us look like robots trying to learn the cha-cha. At least, I thought, we're not pin-headed robots, given that we're wearing our helmets.

After a few of these peeks, Angela and I agreed that it was safe enough to duck into the building, so we dashed in and flattened ourselves against the walls on either side of the door, so as to avoid presenting a silhouette target.

But there was no need. If the outside of the building looked like Swiss cheese, the inside was grated, like maybe the Parmesan you put on your spaghetti. Oddly, the ceiling lights still worked, and we could see two dark forms on the floor to our left. I had Angela cover me as I walked over to them.

"Rod? Looks like we're clear in here, with two casualties. Can't tell their condition, as they're wearing something...ah, something that looks like the suit I'm wearing. But they're not moving and the suits have lots of holes."

"Rad suits? Interesting. Along with the truck outside and what our team in here will probably find, I'd say we've got these guys dead to rights."

"Well, they sure do look dead, I'll say that." Sometimes my radio discipline slips a bit.

"OK, team, Andersen here. I'm told we've got the samples we came for, and you just heard about the house up there. Let's wrap this up and get the hell out of here. We can let the real pros deal with this place, given its probable contamination levels."

After that, it was all pretty anti-climactic. Angela and I, plus our two colleagues whom I never did manage to identify, trudged back to our Humvee, climbed in the back, and, with Mac sitting with us this time, began the ascent of the spiral. After about fifteen minutes, we emerged from the mine. The daylight streaming in through the roof hatch was most welcome.

I was stripping off my Demron rad suit when I thought of it.

"Angela! Hey! This is our chance to see the AirDX lab in there. Maybe our only chance."

She looked up at me. "You're right. Got the code?"

"No, but Rod has. And he ought to see it, too." I looked around. "Hey! Mac!"

He was sitting in the shade over by Rod's Humvee and turned his head my way, a question on his face.

"Where's Rod? We all need to go into the AirDX lab, that first drift up here by the entrance. Right?"

Mac's face broke into a serene grin as he nodded.

I had to assert myself, but only a little for Rod to see the wisdom of that plan. He did indeed have the AirDX door code, so we all trooped into the mine again—and I was OK with it this time—and down the hundred yards or so to the lab entrance.

The code worked, and the steel door clicked open. A little puff of smoke, or maybe dust, poofed out. It was easy to see why.

Inside, the place was a mix of what you'd expect in a chemistry lab and something else that resembled blobs of melted candle wax, except it wasn't wax, it was metal and other things. I looked and looked, and finally decided that one puddle used to be a computer—it was a suggestive puddle, somehow. The others, well, I had no clue.

Neither did anyone else, except maybe Mac. But he was keeping his thoughts to himself, about the specifics of the ops team, at least. Other things were another matter.

He pointed at a ceiling vent. “This must be the intake for that ventilation system that pushed all the gas out to the valley up there, ya think?”

I looked around and didn’t see any other candidates. “Might well be. So, up there is a half-mile of tunnel that leads to that mountain-side outlet that Sandy found, huh?”

Mac was standing by a big, red panic button on the wall. “Let’s see. Hang onto your hats, kids.”

He slapped the button and it sounded like a jet engine was winding up. The dust or smoke or whatever that had been lingering in the air all started whisking away into the ceiling vent. I could feel the breeze in through the main door on my exposed skin, and some blotter paper on the lab table under the vent were fluttering around the edges as if they wanted to launch.

Mac hit the button again, and the fans started to wind down. He was shaking his head as he walked over to the door opening.

“Yeah, even with the door closed, there’s plenty of ventilation from outside to let that thing pull air in. We should check the main door to the mine to see how its ventilation works, but I expect that it lets outside air in as well.” He thought for a minute and looked at Angela. “They must have had a gas leak in here that killed them before the fans turned on automatically. But then the fans did turn on, and all the gas got shoved up the vent shaft and out to the valley up there. Into Angela’s Valley of Death, where two dozen people died.”

Rod had been standing by the doorway quietly. “And meanwhile, there was this dumping operation going on under the whole thing, the Hell Below, a radioactive and chemical nightmare that has the potential to kill thousands of times that number, hundreds of thousands, maybe millions altogether. Stuff that leaches from this mine could well contaminate the Fraser River, which provides water for the cities of the Front Range, and the Blue River, which drains into the Colorado and provides water for everything downstream, including Las Vegas, Los Angeles, Phoenix, and San Diego. Those two dozen people in the Valley of Death died in a tragic accident, but it was because of them that we were able to do this today. Without that incident, we’d not have been able to get in here to shut this place down. And to get a cleanup started.”

\* \* \*

## **Thirty-Two**

Angela, bless her soul, once again proved her worth on our way home. She suggested to Rod that we stop by that mansion to see how our two suspects, Peckham and Estrada, were doing.

But her real motive was to get back into that house so we could get cleaned up and use the bathroom.

What began as a check on our suspects and a rest stop turned into something more interesting, though. When we pulled into the long drive to the mansion, we found a luxury car in the driveway, a Bentley Continental GT that we hadn’t seen before. Mac wandered off somewhere while Angela, Rod, and I went in the house.

Inside, we found Mr. Steven Sheffield, Esq. looking glum, sitting in the foyer with two State Patrol troopers. I could see down the hallway the door askew, like it had been before.

“Ah, Ms. Annette Trieri, CBI. I’m glad to see you here. I’ve been waiting quite some time for someone with authority. These gentlemen and their colleagues in there,” Sheffield nodded toward the hallway, “are not being particularly cooperative.”

“Mr. Sheffield. How, um, interesting it is to see you again. Let me introduce Rod Andersen, the CBI Director. If you want someone with authority, he’s it.”

“Director Andersen? Yes, pleased to meet you at last. I’ve heard your name on any number of occasions. Now. You will please tell me when I can see my client.” Sheffield, in his usual way, was taking charge, or so he thought.

“Client? Hmm. Now, who might that be?” Rod, I could tell, was going into his stodgy bureaucrat mode.

“My client is Mr. Silvio Estrada, the owner of this beautiful home. Or what was beautiful until your people trashed it.” Sheffield nodded down the hallway.

“We trashed it? Goodness. That’s a serious allegation, Mr. Sheffield. I hope you have proof. After all, there are four witnesses here, all sworn police officers.” Rod was shaking his head. “Now, let’s see. You say that Mr. Estrada is your client. I guess that means he provides you with a retainer of some kind? Or is there something specific that brought you here today?”

Sheffield stood up, straightened his tie, and looked down his nose. “Well, I came here on a business matter. I’m a board member in the company he runs, Western Slope Environmental Services. But I saw the damage down the hall and was intercepted by these two officers, so there must be some issue I need to become involved in. When can I see my client?”

“Oh! You’re a WSES board member? Really? Well, then, Mr. Sheffield, it’s my pleas...um, no, my duty to inform you that you’re under arrest. I think ‘conspiracy’ will suffice. You have the right to remain silent, as I’m sure you know. And the right...”

I tuned Rod out as he recited the rest of the Miranda warning that we all knew so well. But just as I started down the hallway toward the den, where we’d last seen Peckham and Estrada, Rod must have finished, because I heard a roar. Turning, I saw Sheffield being restrained by the two State Patrol troopers and Rod wearing a Cheshire Cat grin.

“Guys, I’m sure you know how to handle unruly suspects. Just remember he’s a trial lawyer though.” Rod got confirming nods from the troopers and looked my way. “How refreshing, don’t you think, Annette? Could this day turn out any better?”

“Well, maybe not. But, say, maybe. Do you suppose that Luke Peckham has recovered from that flash-bang? Let’s go see.”

He and Estrada were sitting in chairs in the den, hands behind them, with two more State Patrol troopers, who were reading magazines. They looked up sharply as we walked in.

“At ease, officers. Thanks for coming and watching our two suspects here. Any trouble?” Rod smiled as the officers shook their heads. “Good. Your two colleagues out there are now busy with the arrest of that fine fellow they were sitting with. If you’ll take the chance here to stretch your legs, I think we can have you on your way with these two shortly. Oh. Wait. How about a bathroom break for everyone first?”

With a “Yes, sir, Director Andersen” from one of them, they took Peckham and Estrada down the hall. Rod scratched his head and came up with an idea.

“Angela? Could you please check out what’s behind that door over there?” He pointed toward the wall to the left. I thought it might just lead to the dining room, but I wasn’t sure. “Annette? I think we might question these two gentlemen separately. Would you like Mr. Peckham?”

Angela came back. “It’s some kind of game room, Director. Couches and overstuffed chairs, with a pool table in the middle.”

“Good plan, Rod. We’re going to take advantage of this bathroom break business first, though.”

After that all got sorted out, Angela and I wound up in the game room with Luke Peckham, and I sent her off to that glorious kitchen to calm the staff some more.

To say that Luke was nervous would understate things by quite a bit.

“Luke, we sure would like to know what you’re doing here.”

“I was kidnapped. Honest.”

“But not for ransom, apparently.”

“No, it was for information. Estrada wanted me to tell him everything I know about AirDX. He said he knew that everyone else in it was dead, even Marquardt.”

“And his stock options, or whatever, were riding in the balance. But, c’mon, Luke. We know about that big deposit in your checking account.”

“Huh?” And he really did look surprised, too much so for me to believe that he was faking.

“Yesterday. A hundred large. Seems kind of coincidental that you’d disappear, wind up here, and suddenly get rich.”

“Uh, well, I don’t know anything about a deposit yesterday. Honest.”

“I guess we can put that aside for the time being. What have you told Estrada in the meantime?”

“Well, of course, he wanted to know all of our classified stuff. So what I’ve been doing is a sort of *1001 Nights* thing, like Scheherazade. Letting little tidbits out, mostly all garbled up.” He shrugged. “It seems like it’s been working, because he’s been treating me real well, food, great wine. I’m pretty sure everything has been recorded, in that cabinet behind the desk in the den. So you can check out my story.”

“Ah. Well, that’s interesting. If the recordings check out, maybe we’ll let you keep that hundred grand.” I smiled. “And I’d hate to disappoint Chuck Shure. He’s keen to have you on staff.”

\* \* \*

We found Mac on the back deck overlooking the river. He was finishing a Heineken Light and watching the water.

“Beautiful river, huh?”

“Sure is. It looks just like the trout stream of my dreams. Any fish in there?”

I smiled. “It’s one of the best fisheries in the state.”

He didn’t smile. “Hmm. That probably means it gets a lot of pressure. And that means smart fish. I came out here to find dumb fish.”

I laughed. “Well, this stretch, probably as far as we can see in both directions, is likely to be private, which means not so much pressure. And we’ll have jurisdiction over this house for a while. So if you

want to come back and, you know, check for more fingerprints or something and get a little time on the water in the process, it'll be your call. But if you really do want dumb fish, Hal and I can take you up some little streams where they're positively brainless. Kind of small, but no smarts at all."

He nodded and looked up at the trees and the hillside across the river. "Sounds like both are in order. And I bet that Sam could find things to sketch in both places too."

"That's what Colorado is really about. All this crime investigation stuff is just the excuse to live here."

\* \* \*

Saturday evening, Hal and I had a dinner party for eight despite the rain. Given the long drought we'd been having, rain seemed like a cause for celebration. It was the slow, all-day drizzle sort of rain instead of one of those violent mountain thunderstorms we get in the summer sometimes, just the soaking that everything needed. There was no reason not to go ahead with the party.

I took the day off and so had plenty of time to talk with Hal about my little adventure, including that strange business of my phobia about going into the mine and how it all played out. His only comment was "Geez, and here I thought you had a desk job."

I also had time to get things organized for the dinner, but that was easy because everyone insisted on bringing something anyway. Mary Schmidt made such a big tossed salad that Fran had to carry it in. Sam exercised her shopping muscles and, with Mac's helpful advice, found wonderful pastries for dessert at a bakery in Winter Park. Angela and Sandy, not knowing what we were going to eat, brought a case of wine, three different grapes, more than we could possibly drink. Despite the rain, Hal put himself in charge of the grilling the split Cornish game hens I'd marinated, and I wound up having an easy time of it by making a side dish from some orzo with a few diced vegetables for flavor and color. Everyone even pitched in to get the kitchen whipped into shape afterward.

By the time we got to dessert, the stars had begun to peek out of the clouds, and we all gathered on the porch with pastry and coffee of various octane levels to listen to the roof drip.

"So, Sam. I've been busy lately. Any luck on finding a home?" I hoped it wouldn't put her on the spot to ask.

"Oh, you didn't hear, did you? Mary found us a place. It's a guest house that no one uses, and the owner would rather have it occupied than empty. Nominal rent. Great view. Uh, I guess it's over that way a bit." Sam waved generally northward.

Mary laughed. "It's Win Fredrickson's guest house, Annette. Where you guys stayed. I'd heard that it's been empty, so I made some calls."

I was smiling so big that I couldn't talk.

Sandy perked up. "I guess that means you're going to move out of that house you mentioned, the one across from the ski area, huh?"

Mac and Sam both nodded at him.

"Well, how about we take over your lease? In Santa Fe, the ski area, a little home-town place, was about a half hour up the hill from my house. But living across the street from Winter Park / Mary Jane would be the stuff of dreams. Uh. Assuming that Angela thinks so too." He remembered her just in time, I could tell.

She was sipping her coffee and looking as relaxed and contented as I'd ever seen her. "Hmm? Did I hear my name? Something about a house? We have a pretty nice condo in Fraser, but a house by the ski area? Sandy's right, that's the stuff of dreams."

Hal laughed. "Well, it sounds like musical houses solves everyone's problems. But what about you, Fran? Is this case going to help your re-election chances?"

Fran looked pensive. "I can probably make some good out of it, I guess. As long as the public doesn't find out too much about yesterday. My guys and I were watching that southeast entrance to the mine, the one over here with the conveyer. And nothing happened all day. We got a lot of naps in. Other than that, though, it seems like it was a victory all around. The Valley of Death tragedy was a horrible accident, so I'm not running a county with mass murders. We got a serious illegal dumping case cleared. CBI did that, of course, Annette, but you know that I'll be able to make points because of it. I'm pretty sure I came across well in all those press conferences. Yeah, I'll be OK this fall. How about you guys, Hal? Did this come out OK for you?"

Hal smiled and put his arm around me. "Oh, I'd say so. Rambo here impressed her boss in a combat situation. I impressed my boss with how I'm running his new institute, and he's got a new employee who's going to make the company yet another fortune because of the whole thing. My friend Mac here tells me that there's likely to be interest in our capabilities from various federal agencies looking for honest answers. And we've got living in the Fraser Valley to help us keep our heads clear. And you all, of course."

He looked around the bunch, and then stared off through the mist. "I've said it before, but I'll say it again. Durango was great, but this is home. We're staying."

A Four Corners Mystery

# Climate for Murder: A Four Corners Mystery

## Prologue

Phil Linton was relishing one of the best rides of his life, right up to its unexpected and abrupt end. Of course, that was how it had all been planned.

As was usual for him, only half of his brain—no doubt the right half—was enjoying the spectacular late-August day. The cerulean blue of the sky peeking through the emerald aspen leaves rattling in the breeze and the deep, almost-black green of the spruce and fir framing the extremely challenging trail down the mountain only added to his exhilaration.

Meanwhile, also as usual, the other half of his brain was busily analyzing whatever needed analyzing. On that Friday morning, what needed analyzing was the degree to which he'd succeeded, by the half-way point, in subverting the purpose of the two-week-long meeting in which he'd been participating. Would his new sponsors think he'd pushed hard enough? Would they keep funding him? And how would that affect his future?

If Linton was honest with himself, which was only part of the time, he had to admit to being a little surprised that he had been invited to the meeting in the first place. It was being conducted under the auspices of the United Nations Intergovernmental Panel on Climate Change as a U.S. strategy session for the next scientific report on the future evolution of global climate in the face of ongoing greenhouse-gas emissions, not a body to which he was in any way connected. But the meeting's local organizing group and host institution, the Middle Park Advanced Research Center, seemed to have been given the discretion to issue a few invitations of its own.

Luckily for Linton, MPARC's director, Dr. Harold Weathers, was Dean of Natural Sciences at Frémont State University in Durango, just now on a very long sabbatical at MPARC, in the Fraser Valley, just west over the Colorado Front Range from the Denver metroplex. Linton's position as Assistant Professor of Earth Sciences at Frémont State, along with a stellar publication record over the past several years, no doubt got his application special consideration.

For Linton, the big question was whether that publication record would earn him tenure next year. His average over the past five years of a half-dozen solo-author technical papers per year in A-list refereed archival journals, plus probably twice that many as a co-author, was quite impressive, he knew. But his teaching record was not as solid as it really ought to be for tenure at a place like Frémont State, which valued teaching above all else. In fact, it was pretty dismal. His impossibly high standards, at least for the caliber of students attending Frémont State, kept his teaching scores pitifully low, and his file in the departmental office bulged with student complaints. He knew these complaints to be bogus, but, still...

A factor in his favor was that he'd been successful for several years at winning grants from the National Science Foundation and other top-flight agencies, until, mysteriously, those funding streams had dried up recently. His new sponsors, however, were most generous—they even paid full overhead rates—so perhaps the funding record plus the publications would make up for his weaker teaching accomplishments.

Earning tenure was the number-one goal in Linton's mind, indeed in his entire life. With tenure, he could shop his publication and funding success to more prestigious institutions and possibly be appointed Full Professor right away. Harvard, MIT, UC Berkeley, Princeton—when he was feeling optimistic, the times when his honesty with himself lapsed, he pondered which might offer him the best deal.

He was also surprised at how easily he'd been able to manipulate the direction of this IPCC meeting so far. His expertise, reflected in his publications, was concerned with various feedback mechanisms affecting the climate system. But despite several possible destabilizing feedbacks, he was unrelenting in his emphasis on how basic physics implied that the planet had a very strong, fundamental stabilizing feedback built in, which undoubtedly had prevented a runaway climate in the past, he maintained. He hammered on the point that if the planet could survive whatever killed off the dinosaurs, a little warming from additional greenhouse gases in the atmosphere didn't seem like too much to be concerned about. His new sponsors, he knew, were quite happy with that message.

If the environmental advocacy groups wanted to play Chicken Little, well, that was their business, he thought. But a solemn, well-credentialed group such as the IPCC panel ought not to go off the deep end about so-called "tipping points," given that fundamental stabilizing mechanism.

As a result of his efforts to bend the will of the larger group, the subcommittee drafting the strategy recommendations from the meeting's first week of discussions had requested Friday morning to complete its work. The second week, to be devoted to a plan for the implementation of those recommendations, would be less crucial to the overall outcome, and Linton felt that most of his work was done. In any case, he and the rest of the meeting's participants had some time off, and he and a colleague, that loser of a post-doc from the University of Colorado at Boulder, had decided to spend the free time to try out the Winter Park mountain biking opportunities.

And so here he was, happily zipping down the mountain for the second time that morning. The first time had involved quite a bit of uphill pedaling above the top of the chairlift and then a long, moderate descent, a sort of warm-up. But this trail was one of the most difficult, and it even had several expert-only sections. This suited Linton just fine, as he had gained considerable mountain biking experience during his years in Durango. And he was pleasantly surprised by the bike he'd been able to rent—it was at least as good as his own, which was sitting in his apartment back at home.

He was wondering where that guy from Boulder had got off to, when he came over a little roller and around a blind curve to find the single-track trail weaving between two good-sized lodgepole pines—with a bowling-ball-sized rock smack in the middle of the trail between them, just where his front tire needed to go to make the turn safely. Coming off the rise of the roller had put him in the air just enough to un-weight his tires and almost eliminate any real traction—he was gritting his teeth merely to make the curve—and grabbing the brakes didn't have much effect on his speed at all. So he hit the rock hard, with his front wheel a bit askew, and over the handlebars he went, his torso bouncing off the downhill tree in the process.

He landed face-down on the edge of the trail, knocking the wind out of himself, and slid into the woods down the hillside, where it was steep enough that he kept going for several yards, head-first. He could tell that he had lost some skin from his arms and legs on both the gravel of the trail and the ground-cover of the forest—rocks, sticks, and pine needles—and the sharp pain in his right side suggested perhaps a cracked rib.

As he was re-orienting himself through the pain and trying to figure out the best way to stand up from his awkward position, on his belly, head downhill on the steep mountainside, he heard feet crunching through the trees.

“Whoa! That was some spill! You OK?” The voice definitely wasn’t the Boulder guy’s, but it seemed friendly somehow. His ears were buzzing, though, so he couldn’t really identify it.

He found that his own voice didn’t work yet, so he just grunted a response as the footsteps came closer.

“Here, let me give you a hand.” And he felt someone picking him up by his armpits, raising him to his knees, so he sat back, looking downhill, seeing stars from the pain in his side, his heels digging into his butt, and tried to focus. He shook his head to clear the fog, glad for the helmet he was wearing, and unsnapped the chin strap and took it off. The breeze in his hair was refreshing and helped him regain his equilibrium.

As he was turning around to thank his benefactor, he noticed movement in his peripheral vision. Then fireworks went off in his head, and everything switched to black.

\* \* \*

## **Part I**

### **One**

My first impression was that the sheriff wouldn’t need my help on this one. But you know how misleading first impressions can be. Maybe mine was just wishful thinking. That’s something I’ve been guilty of on a number of occasions.

It didn’t sound as if he’d need my help because, at first, it looked like just another mountain bike accident—a bad one, to be sure, but bike accidents on mountain trails had become pretty common in recent years around here. Eastern Grand County, and especially the ski areas, had become hotbeds of mountain biking as the local merchants latched onto it as a way to increase their summer business traffic. And there’s no doubt that the economy had seen the benefits—the summers had become almost as clogged with visitors spending money as the winters have always been because of the skiers, and the bike business was booming. The hiking community, though, wasn’t especially happy about all those bicycles on the trails. And many local residents had become grumpy about all the crowds and congestion, including the other kind of traffic, the cars—summer used to be their quiet time, relatively speaking.

It didn’t surprise me that I first heard about it through the grapevine. When the body was discovered by a small group of mountain bikers descending the expert trail early that Friday afternoon, they called 911. The sheriff’s office, as well as the ski area’s security people, were all over it right away. My deputy, Angela Espinosa, heard about it before I did, probably from water-cooler gossip at the sheriff’s department offices in Hot Sulphur Springs, and she called me right away.

She caught me on my way back from a late lunch with community movers and shakers in Winter Park. I’d finally figured out how to deal with my phone’s Bluetooth connection to my car, so it was easy for me to poke the appropriate button on the steering wheel and say, “Treiri, CBI.”

“Annette, it’s Angela. I just heard there’s been a mountain bike accident up at the ski area, with a fatality. I thought you’d want to know soonest.” She was a bit breathless.

“Good call, Angela. Thanks. I’ll head right up there. Which base?”

“Uh, Winter Park side, I think.”

So I turned around and headed back south, up the valley to the ski-area base. Any unattended death gets the attention of us law-enforcement people, and even though I knew that it was the Grand County Sheriff’s jurisdiction, it seemed like it wouldn’t hurt to have the Colorado Bureau of Investigation on the scene, if only to observe.

And, as I said, at first it looked purely like an accident. I arrived just about the time that the body and the bungee-up mountain bike arrived at the base, carted the rest of the way down the mountain on a little trailer towed by an ATV, and I was able to listen to the sheriff’s deputy on scene take statements from the guys who had run across it. What they had to say certainly made it sound like an accident—an expert-only trail and a sharp, blind curve between two trees with an imposing bump just above it that would make braking difficult. And, apparently, a crash with a fatal skull fracture, helmet notwithstanding. Open and shut, right?

If only.

The first hint of something other than an accident was provided by the bike-rental-shop technician. He’d come by to retrieve his mountain bike and was dismayed to learn that it would have to be impounded at least until the autopsy was completed. But he had a chance to look the thing over and, upon hearing the supposed sequence of events, became skeptical.

“That front rim looks like he hit an obstacle, like a rock or maybe a log. And the way the fork is bent proves that he was trying to turn when he crashed. But I know the spot where this happened, I mean, I ride that trail all the time. And there’s no rocks on the trail there, or any other obstacles that could do that damage, either. Also, if he was going too fast to make the curve, he’d have skidded down and ended up on the uphill side of the trail, most likely, or crashed into one of those trees.”

Not being at all familiar with the trail, except possibly when it was covered with six feet of snow, I couldn’t make sense of these comments, so I simply filed them away.

At least the victim had identification and a hotel key, one of those magnetic card keys, in one of his pockets. The key really got my attention, because I recognized the hotel as the one where Hal’s conference attendees were staying. So I got the guy’s name from his driver’s license—it was a Phillip Linton from Durango—and called Hal right away.

“Weathers, MPARC.”

Hal had been unsuccessfully trying to find an administrative assistant ever since he’d founded the Middle Park Advanced Research Center, so he still had to answer his own office phone. Not very dignified for a Research Center Director, as I kept reminding him, but his own fault.

“Hal, it’s me. Listen, is there a Phillip Linton at your conference?”

“Phil? Yeah. He’s an assistant professor at FSU. Why?”

FSU, to us, was Frémont State University in Durango, where Hal was working when we got married and I was just starting out with the CBI.

“Bad news. Really bad news, and I’m sorry to be the one to tell you. He’s been killed in a mountain-bike accident on one of the Winter Park trails.”

“*What?* Good Lord! When did this happen?” He was hit hard by the news, I could tell.

“His body was found early this afternoon, so it probably happened late this morning. But how come he wasn’t at the conference?”

“Everyone but the committee members drafting our first set of recommendations had the morning off. And, yeah, I remember he said something about going mountain biking. He told me it’s his favorite summer sport back in Durango.” I heard a big sigh. “This is horrible. I guess I should find out if I should notify someone.”

“Well, officially, that’s the sheriff’s job. But he may come to you for information. I figured out to call you because of the room key Linton had on him, and I’m sure that Fran will figure that out, too.”

Fran Schmidt, Grand County Sheriff, and his wife Mary had become friends of ours during the time we’d lived in Fraser, and he and I had worked several cases together. My assigned role was to be a liaison between county law enforcement and the State of Colorado, but pitching in when things got busy was also expected. And get busy things did, because eastern Grand County had become an increasingly popular destination for both Colorado Front Range residents as well as people from the rest of the country and even the world. The Chamber-of-Commerce types who played at being Grand County boosters had done their jobs too well, from my perspective.

“Yeah, it would be better for Fran to be the bearer of the bad news. More official that way. But I’ll call down to the U to find out next of kin and whatever. Geez. How depressing.” Another big sigh. “I can’t say I’m personally too upset, but this is probably going to be a public relations nightmare. I’m glad Mary’s so good at what she does.”

Mary Schmidt had become Hal’s Communications Director at MPARC. Some people thought it was all too cozy, but he’d interviewed several applicants and found her to be far and away the best.

“OK, sweetie. Don’t forget we’re having Mac and Sam over for dinner tonight.” Given the circumstances, I was glad that I’d already done the necessary shopping.

“Aw, crap. I forgot about that. And I was really looking forward to it. Hmm. Well, I hope I’m not too late. I’ll try hard, really.” His blood pressure was escalating, I could tell.

\* \* \*

“To tell the truth, I’m a bit embarrassed that I invited him to our conference. After all, this thing is supposed to be a sort of showcase meeting for MPARC, and we need to present our best side to the world with both expertise and elegance. To have one of the people I invited take it over in such an outspoken fashion wasn’t what I had in mind.”

Hal, having made it home in time to greet our guests, had been asked about the victim and was doing a good job of venting, in a restrained sort of way.

“But, well, I feel beholden to the university that’s treated me so well during my academic career and more recently. What began as a simple year-long sabbatical leave from my deanship at Frémont State has been extended several times, and I feel like what this I want to do permanently. I mean, in my mind, I have no intention of ever going back. Nor, I think, does Annette.” He shot me a look, and I nodded.

“We even put our house in Durango up for sale. But I know they, FSU, I mean, they’re assuming that we’ll return at the end of the year. This coming winter, I’ll ask for another extension of my sabbatical, and they’ll probably grant it, because it’s not costing them anything. And maybe they think I’ll eventually come back and bring MPARC with me or something.” He smiled and shook his head. “Anyway, getting one of their young faculty members involved in this IPCC strategy session for U.S. contributions is something only I could have managed to do—indeed, they were stunned at the news of Phil Linton’s invitation, and delighted. It was a first for the university, and something they can get a lot of mileage out of.”

He shrugged. “What I didn’t know at the time I invited him was that he’s started singing with a different choir about matters related to climate. Because he’s something of a prodigy in the scientific community and definitely a superstar by Frémont State standards, and because climate always has been one of my primary scientific interests, I’ve kept up with his publications. And, for the most part, they’re carefully neutral about future consequences to society of greenhouse-gas emissions in the process of thoroughly analyzing a remarkable variety of feedback processes in the climate system, some positive—which would amplify any change—and some negative. His analysis of the complexities of cloud feedbacks has set a new standard for both its summary of their net effect and its scholarship in developing that summary.”

Hal forged ahead. “And then, at this meeting we’re hosting at MPARC, he’s been spouting the standard drivel you normally hear from the professional anti-climate-change lobbyists, the ones funded through all the shell organizations that operate under the fossil-fuel-industry umbrella. It all came out of nowhere, as far as I could tell, this change of tune.”

“Not that it’s a bad thing to have a variety of points of view at the meeting—indeed, the IPCC organizers invited several people with well-known opinions about the uncertainties involved in projecting future climate change and its root cause, and nearly half the participants are sitting on the fence about what to do, if anything. But it was meant to be a *scientific* meeting, and advocacy just wasn’t on the agenda. That is, until Phil Linton started brow-beating everyone.” He looked around the dining table and shook his head. “Oh. Sorry. I’m lecturing again.”

Mac MacQuarrie, now Hal’s Chief of Security at MPARC, laughed. “Go ahead and lecture, boss. It gives me time to drink up this delightful Merlot you’re serving.”

Samantha Winslow—Sam to everyone she knows—looked puzzled. “I know about ‘feedback’ when it comes to rock bands, but not when it comes to climate. So when you got to that point, I just got confused.”

“It’s just like rock bands, Sam. If the microphone picks up, you know, a guitar riff from an amplified speaker, it amplifies the riff more and sends it through the speaker even louder. And the microphone picks up *that* and amplifies it yet some more. And eventually something gives and you get those horribly distorted, and very loud, noises. That’s positive feedback.”

Hal could see Sam nodding, so he forged ahead.

“In the climate system, examples abound. Take clouds—they can be spectacular to look at, and you sketch them beautifully, but they’re also quite important in climate. Some, like low marine cloud decks, reflect sunlight that would otherwise warm the underlying ocean. Others, like high, ice clouds, the ones called ‘cirrus,’ they let sunlight through, pretty much, but they absorb the Earth’s heat that would otherwise get radiated out to space, just like the greenhouse gases do. So if, in a warmer climate, there are more cirrus clouds, that’s a positive feedback because they’ll warm the climate even more.”

“The thing is, climate is so complicated that there are lots of these feedback processes, positive ones like snow and, maybe, cirrus clouds, and others, negative ones that slow down change and tend to stabilize things. So far, what’s going to dominate ultimately isn’t really clear. And what happens in the meantime could be pretty bad as well, in terms of stress on ecosystems and so on. And society. After all, our society is pretty vulnerable to even small changes in the *status quo*.” Hal took a breath and toasted the table with his iced-tea glass. “Really. I mean it. No more lectures.”

I couldn’t help but giggle. Hal has this Mr. Science Person persona that he slips into at the drop of a hat, and I’ve teased him enough about it that he gets embarrassed when he realizes he’s doing it.

Mac set down his wine glass. “Fair enough, although someday I’d like to hear more. Sam would, too, I bet. But, really, the issue now is that guy who died up on the mountain. You don’t seem too

broken up about it on a personal level, although it probably upsets your conference. But what I'm wondering about is the 'accident' part. Is that certain? I mean, from what you were just saying, it sounds as if this guy wasn't too popular."

Hal's smile was grim. "Yeah, well, there were several times this past week that I wanted to wring his skinny damned neck. But I've got pretty good alibis. For today, at least."

He looked me and winked. Mac laughed.

"Good thing, too," he said. "But what I meant was that it sounds as if there are plenty of people with a motive to do him harm, if he was so unpopular. And, if everyone except a small group had the morning off, plenty of people with opportunity as well. Assuming it wasn't an accident, that is."

Sam rolled her eyes. "I hope you can forgive Mac for being suspicious. That's pretty ingrained in him from all his years as a spook."

It was Hal's turn to laugh. "Exactly. That's why I hired him to be the MPARC head of security. If we're going to protect our classified work and facilities properly, we need a suspicious person in charge of it all. Someone with lots of experience in the classified world. My own classified experience is limited to those committees I'm on for Los Alamos, and I've got enough other details to worry about without having to become a classification expert as well."

"You did just fine last summer." Mac raised his wine glass to acknowledge Hal's efforts.

"But you've really got us organized now. I'm more certain than ever that we're in full compliance with all those rules, and will be even more when we get into our new building, thanks to your design help. Of course, this IPCC conference isn't a problem in that regard. But it's going to be seriously out of kilter when I report today's events at tomorrow morning's session." Hal looked glum.

"No doubt. I recommend being as vague as possible, though. If it wasn't an accident, the folks at your meeting will be under some suspicion, for sure." Mac shrugged.

I had to nod in agreement. "More than that, I expect that Fran will want to talk with at least some of them to see what they might know about it all. Even if it *was* an accident."

Hal looked even more glum. "Ouch. Well, tomorrow's session is scheduled for all day, so they'll be around. Fran has time tomorrow to talk with anybody."

\* \* \*

After our guests had left and we were cleaning up, I mentioned something I'd seen that afternoon.

"Hal?" He had soapsuds up to his elbows, working on a particularly stubborn sauce-pan that we didn't want to run through the dishwasher. "Remember when I called you this afternoon? To tell you about Phil Linton's accident?"

"It's too soon for me to have forgotten that." He was scrubbing at a cooked-on spot of some kind.

"Well, when I was on the phone with you I noticed that another guy who was dressed for mountain biking approached the sheriff's deputy on the scene and had something of a conversation with him. A guy about Linton's age. Not quite so tall, but thin like Linton, with longish blonde hair and a beard." I paused to think about the description, but that was about all I could remember. "It seemed like maybe he and Linton had been biking together and got separated. He was in the crowd at the base when I arrived, when Linton's body was being brought down."

"Hmm. Sounds like it could have been Chris Brothers. He's a post-doc at CU-Boulder, attending our meeting as a *rappporteur*."

“A what?”

“A note-taker. Meetings like this almost always invite junior scientists to act as note-takers, all expenses paid. But *rapporteur* sounds fancier and helps their egos. If they do a good job, it turns into a nice entry on their résumés. And, in this case, a good recommendation from me, should he ever need one.”

“OK, well, he’s probably someone Fran should talk with. And any suggestions you might have in that direction will be most welcome, I’m sure.”

“Good idea. I’ll have to give it some thought. I…” But he was interrupted by the weird noise he was using for his cell-phone ring-tone just then—he liked to switch it around, for some reason. “Ah, crap. Where is that damned thing?”

He grabbed a towel, dashed off, and came back in mid-conversation. “...Annette said she was there at the ski base when the body was brought down. You want to talk with her, Fran?”

And he passed the phone to me. “Fran? I presume that you’ve got a report from your deputy by now?”

“Oh, I’m way past that, Annette. I had the most interesting experience of descending that trail on a mountain bike late this afternoon. Very, very slowly. But it was still pretty hair-raising. Anyway, it’s beginning to look as if there’s more to this than we first assumed.”

“How so?”

“Were you there when the bike technician talked to Roger Traubman, my deputy?”

“Yeah, I overheard all that. The tech was skeptical of how the accident was described by the bikers who found the body.”

“And now so am I. The area was disturbed when they retrieved the body, but I’m going back up there tomorrow morning with Norm Dzeng.” Fran didn’t sound overly thrilled by the idea.

The name bounced around in my head for a few seconds before I could put a face on it. Dzeng, a wilderness expert, had been most helpful on my first case in Grand County by reconstructing ski tracks that had been buried by fresh snow.

“Oh, yeah, your tracking guy. What do you think he’ll be able to tell you?”

“Like I said, the scene isn’t at all pristine. But maybe he’ll be able to reconstruct what happened, at least partially. I don’t want something to be called an accident unless it really was. Hey, I’ve got an idea! Want to come along?”

“I haven’t ridden any kind of bicycle for more years than I care to count. Let alone a mountain bike on an expert trail.”

Fran Schmidt’s voice turned gleeful. “Well, then, I think you’re precisely the right person. Today I learned the meaning of ‘just like riding a bicycle.’ It’s really true.”

“Ah...are you sure that I wouldn’t be more valuable if I were to be at Hal’s conference tomorrow? He’s going to have to tell them about this, and they’re going to have all sorts of questions, I just know it. Scientists are like that.”

“Mmm. Well, I guess you’re right, Annette. As usual. But remember, we have to wait for an autopsy before we can really think in terms of anything but an accident.”

“I’m pretty good at being vague. Any idea of when George will get around to it?” George Neering, the medical examiner for our part of Colorado, was one of the best in the business.

“Monday, probably. He’s out of town at some meeting or other. And I want him to do it, highest priority.”

“Good idea. Say, would you like Angela to come with you tomorrow?”

“Hadn’t thought of that. Yeah, sure. If this turns out not to be an accident, CBI on the scene will be helpful. Tell her I’ll meet here in Hot Sulphur at eight, and we can drive up together.”

“OK, I’ll call her right away. Have fun tomorrow. On the bike, I mean.”

As I poked the “End Call” icon, I heard a derisive snort.

Fortunately, Angela Espinosa was at home.

“Hi, Annette! Find anything out about that biking fatality?” She’d learned quickly that most of my phone calls were business related.

“I just got off the phone with Fran Schmidt. He’s wondering about whether it was really an accident.”

“Ohhh...that tidbit isn’t making the rounds yet. Is there evidence?” She sounded eager to hear details.

“Well, that’s what I called about. Fran’s going to ride the trail where the body was found, it’s an expert trail that I didn’t get the name of, with Norman Dzung tomorrow. To look for evidence of whatever happened. And, um, he has the notion that a CBI presence could be helpful. I was hoping you could go with them. Eight in the morning at his office in Hot Sulphur.”

“Norman? I met him a while back. What an amazing guy. And his lab is just too cool, with all those plaster casts of tires and animal prints and everything. So, I guess I get a lift pass, huh? Sure, I can manage that, Annette.”

“Just remember, Fran’s not a mountain biker like you are.” I remembered that she and Sandy had taken up the sport with a vengeance. “Go easy on him, OK?”

She chuckled and disconnected.

Hal had finished the dishes, so I wandered off to find him, something harder than it sounds in our modernized and added-onto mining cabin. But, as I’d figured, he was in front of his computer.

“I don’t know how much of all that you heard, but Angela’s going with Fran and I’m coming with you tomorrow. OK?”

He looked up and nodded. “Sure. But we need to go in two cars so that you won’t be trapped all day.”

“Good idea. Can we talk about other people at the meeting? I mean, you know, people who might have some kind of vendetta against Linton?”

“I guess I already put myself in that category.”

“Yeah, but you’re off the hook. I don’t want to waste my time investigating you. Again.”

Startled, he tore his gaze from the computer screen. “Huh? What do you mean, ‘again’?”

I just winked at him. “Besides, I can’t imagine you on an expert mountain-bike trail anyway. I’m more interested in people at your meeting who knew Linton already, before the meeting, and may have had some conflicts with him in the past. Stuff like that.”

“Well, I’ve got everyone’s CV, and I guess you could look through those to see if there were any past connections between Phil and anyone else. I don’t know of any offhand, though.”

“Ugh. Well, it’s pretty early yet. Can I get to them tonight?”

I knew the rest of the evening would be mind-numbing.

\* \* \*

## Two

It took me longer than I’d thought it would to cross-correlate all those *curricula vitae*—meaning long-form academic résumés—on Friday night, so Saturday morning, bright and early at Hal’s meeting, I was groggy and in need of extra coffee. Fortunately, in trying to impress everyone, Hal had ordered breakfast catering from a local coffee roaster who had some super high-test available.

And although it took a long time, the CV exercise was worth it. Several of the meeting attendees, it seemed, had been in graduate school around the same time at Georgia Tech, including Phillip Linton. Moreover, Linton’s post-doctoral appointment at Penn State had put him in close proximity with several people for long enough that enmity had had plenty of time to develop. In addition to Chris Brothers, Linton’s biking companion, I had come up with several others to talk privately with.

That part seemed straight-forward to me. But something I’d gleaned from all those CVs was a puzzle. Hal’s meeting was a climate conference, a strategy session, he’d said, for the U.S. contributions to the next report of the Intergovernmental Panel on Climate Change. But only about half of the people at the meeting had climate science backgrounds, and the other half seemed to have an odd mixture of ecology and botany and zoology backgrounds. The next morning, I cornered Hal while his group was still noshing on the breakfast goodies the caterer had laid out.

“So, since you went to bed so early last night, I couldn’t ask you then. But what’s the deal with the scientific backgrounds of this group? Only about half are actual climate scientists.”

He cocked his head sideways and scrunched his eyebrows in puzzlement. “Oh. I think I know what you’re asking. See, the business of what’s happening, and what’s going to happen, with the *physical* climate system—temperatures, sea level, ice, all that—is not really the cutting-edge science any more. Not that we’ve got it all completely licked, mind you. We’re still improving our simulations. In fact, MPARC is going to be part of the physical climate simulation ensemble for the next IPCC report, along with all sorts of other organizations. But what’s become more and more important to figure out, as we learn more and more about what the physical climate is likely to do, is what’s going to happen to life on Earth. Ecosystems, species, the entire web of life. So you’re probably talking about all the people at the conference with those backgrounds.”

“Ah. That makes sense. You said that Linton pissed off a lot of the folks here.” I waved my hand around the room. “Were these, um, biological scientists among them?”

“Probably more than the physical scientists, to tell the truth. I figure that if you study some critter for all your life, you can develop an emotional attachment to it and don’t want to see it be stressed any more than it already is.” He shrugged. “All week, Phil was hammering them about ‘Bayesian probabilities’ and what he called ‘compounded uncertainties’ and how it’s impossible to justify taking specific actions to deal with possible risks to individual species or even ecosystems. I guess you’re homing in on motive, eh?”

“Assuming we find real evidence that it wasn’t an accident, it’s important to pin motive down as soon as possible.”

“Understood. And I’m going to call some people I trust down in Durango to see if I can find out what’s behind Phil’s change of tune I mentioned at dinner last night.” He looked at his watch. “But first I’d better get this show on the road.”

The breakfast goodies were spread on tables in the back of the auditorium, which had a rostrum with a lectern on it at the front, a couple of long rows of tables for the official delegates, and several rows of seats for the audience behind the tables. Hal walked up to the lectern and tapped on the microphone, producing a loud thumping throughout the room and getting the crowd’s attention.

“Good morning everyone! Welcome to the half-way point of our IPCC strategy session. We have a full agenda today—more full than expected, in fact—so we need to get going.”

While the participants and the audience took their seats, Hal continued an ongoing patter about that agenda and what needed to be accomplished. In the process, little by little he lowered his voice to a more conversational level, and the chit-chat among the audience faded into silence. I thought it was a clever way to bring the meeting to order.

When everyone had settled in, Hal continued. “Now, first off, you need to hear about something that happened yesterday. Some of you may already know about this, but I’m sure that not everyone does. Um…”

He looked directly at me. “We haven’t talked about this, but I think an official sort of announcement would be appropriate.”

My heart sank as I realized that he wanted me to tell them.

“So let me introduce Deputy Director Annette Trieri of the Colorado Bureau of Investigation.” His apologetic smile helps, I thought, but he’s going to need more than that to make up for this little surprise.

As I made my way to the lectern, amidst the audience’s buzz of speculation, I hastily organized my thoughts about what to say.

“Good morning, all. The Colorado Bureau of Investigation maintains offices around the state to provide liaisons with local and county-level law enforcement, and I’m stationed here in Grand County. I work closely with Grand County Sheriff Fran Schmidt.

“Yesterday, about mid-day, his office was called about a mountain bike accident at the Winter Park Ski area—as I expect many of you know, mountain biking has become a popular summer activity in these parts, and Winter Park has some outstanding trails. Unfortunately, the accident involved a fatality, and, worse, that fatality was an attendee at this conference. I’m sorry to report to you the death of Dr. Phillip Linton, Assistant Professor at Frémont State University in Durango. My condolences to everyone.”

I had to raise my voice, because the previous buzz had returned in force. “Now, this accident was not witnessed, so this is what we in law enforcement call an ‘unattended death,’ and unattended deaths need investigating. That means that we need to gather other information to make sure that it was really an accident. There will be an autopsy, on Monday, probably, and that will be crucial for gathering some of that information. In the meantime, I need to interview several of you as well. Let me emphasize that these interviews are for background purposes only. No one—I repeat, *no one*—is under any suspicion or classifies as a ‘person of interest.’ I’m sure you’ve heard that term on TV, but it just doesn’t apply here. I anticipate that these interviews will be short. Several of you worked with Dr. Linton in his previous positions, and you can be very helpful for background.”

I could tell that suspicion was rampant in the audience, so I nodded at Hal, stepped off the rostrum, and headed for the back of the room, ignoring the several raised hands. To my delight, his expression morphed to panic as he realized that he'd be the one facing the questions.

“Ah...um...well, I certainly understand that you'd have questions after an announcement like that. But I'm afraid that, at this stage, there really aren't any answers. Phil...er, Dr. Linton's body was found by other mountain bikers, off the trail, by itself, and his bicycle exhibited clear signs of a crash. But, as Annette...er, Deputy Director Trieri said, with no witnesses an investigation is necessary. Because Dr. Linton is—or was—not a resident here in the Fraser Valley, she needs to put together background information on him, and that, as I understand it, is the purpose of the upcoming interviews. We'll certainly make more information available to everyone when we have it. Perhaps we should observe a moment of silence out of respect for our late colleague.”

I had a great deal of trouble not laughing out loud during that moment of silence, recognizing it as a gambit to, in effect, change the subject and avoid those questions. As usual, the silence was well short of a true minute when Hal broke it.

“Thank you all. And let me add my condolences to those already expressed.” He raised his hands, palms up, in an elaborate shrug. “Now, I'm afraid we really need to get down to business. At the least, we should think of our ongoing work as a sign of respect for our late colleague. Would the drafting committee chair please provide an overview of the committee's work yesterday?”

Time to go, I thought—this isn't going to be meaningful to me at all. I signaled Hal to join me out in the hall.

\* \* \*

He showed up five minutes later with a cup of coffee in one hand and a giant sticky cinnamon bun, the kind with pecans stuck to the goo, this one with a big bite out of it, in the other hand.

“Second breakfast, hmm?”

“Mmmrph.”

“Seems like that went as well as I could have imagined. Great idea, by the way, the moment of silence. It defused things nicely.”

He managed to swallow the bite of bun. “I'm glad I thought of it. Anyway, now they're absorbed in this document we're all supposed to agree to, and I think that'll keep them occupied all day.”

“I don't want to interrupt things in there, so could you be the one to go in and ask the people I want to interview to come out when I need them? Please?” I was hoping I wouldn't have to play the “you owe me one, pal” card.

“Good idea. It'll be less intrusive that way, I think. Uh, no offense, but now that they know you're the law, they'll be a bit antsy around you.”

“Thank you, for fetching them, I mean. Based on the CVs I looked through last night, there are seven people I'd like to talk with. Plus, of course, Chris Brothers. I hope that's not too many. They're all people who knew Linton before he got the job at FSU.”

“Eight altogether? Oh, that sounds doable. When do you want to start?”

“Is there a mid-morning break?”

He looked at his watch. “In about ninety minutes, just before ten.”

“OK, let’s start after that. During the break, you can let the first person know. Um, let’s see…” I shuffled through some papers I had. “How about Callie Wentz?”

“Works for me. I’ll let her know during the break. Why don’t you use my outer office? It’s pretty non-threatening.”

“Yeah. And I can threaten them with the inner office if they don’t cooperate.”

I was smiling, so I think he knew I was kidding. Maybe my wink helped.

Seven hours later, at around five that afternoon, I was bushed but pleased with the day. I’d managed to work in all eight interviews plus a bite of lunch and even another, unexpected, conversation.

Callie Wentz, Associate Professor of Biology at Penn State and yellow-bellied marmot specialist, which critter she touted as an indicator species for climate change, turned out to be a good start to the day. She admitted to having had a little “fling” with Linton during a lonely year when he was a post-doc and she was an Assistant Professor seeking her way. But she had soon recognized him for the self-centered jerk, according to her, that he was and broke it off. That was years ago, and they had had no contact since then except for the current IPCC meeting.

Rod Stringer, now a research scientist in the Earth and Atmospheric Science group at Lawrence Livermore National Laboratory, had been a couple of years ahead of Linton during graduate school in the atmospheric science program at Georgia Tech. He, immersed in his own self-importance, didn’t have anything much to contribute beyond directing me toward Pat Grover, another of the conference attendees on my list. She and Linton had been what Stringer called an “item” during graduate school until a rough break-up, he said.

But my interview with her, the last of the day, didn’t exactly corroborate that perspective. According to her, she and Linton had simply drifted apart after a few months of twenty-something lust together, the drift associated with a lack of mutual scientific interests. Her specialty was peat bogs, after all, she noted with a shrug. In the early stages of a promising career as an agency program manager in Washington, she’d moved far beyond the indiscretions of her student days, it seemed.

Chris Brothers, who’d been mountain biking with Linton the day before, got interviewed over the lunch hour so that his duties as *rappporteur* for the conference would not be interrupted. I think he was relieved, actually, because it meant he didn’t have to eat with the others and deal with their questions. But deal with my questions he did, most satisfactorily, and I was left with no suspicions about him. His comments about the sequence of events at the top of the expert run before Linton’s and his descents were quite helpful in establishing additional context.

The remaining Penn State scientists and Georgia Tech graduates also passed my personal, law-enforcement sniff test with flying colors—even my most leading questions didn’t faze them in the least. But the last conversation, the unexpected one, turned out to be quite rank indeed.

Dexter Lemone was sitting at a table in the auditorium lobby amidst similar pamphlet-covered tables of organizations not officially invited to the IPCC meeting but there nonetheless. He turned out to be the state coordinator for climate and ecosystems at Students and Citizens for Animal Rights and Biodiversity, or SCARAB as it was called, an acronym that got my attention because it rang an unidentifiable alarm bell in my head, one with unpleasant connotations. As I talked with him, trying to identify that alarm bell, he was not at all shy about expressing his contempt of Linton’s anti-climate-change stance at the conference. He even made an off-hand remark about how Linton and his type deserved to be taken out and shot, not, under the circumstances, a smart thing to say to a suspicious investigator like me.

Even though I was exhausted after that full day of interviews, during which I had to be “on” the entire time, I still needed to be debriefed by Angela concerning her day on the mountainside with the sheriff. I couldn’t help but wonder whether she followed Fran around or whether he had to keep up with her. I called her when I finally got home.

“Angela? Annette here.” I heard jazz in the background, a saxophone backed by a small combo, so I figured she was at home. “How was your day?”

“Hi, Annette! Super!” She was not unwound yet, I thought. “I even got in a couple of extra rides down the trails!”

“I hope you didn’t wear Fran out completely.”

“Aw, he did fine. Although he needs more practice to build up his confidence.” She took a breath. “Anyway, you probably want to know what we found out. Or, rather, what Norm found out. How was your day, by the way?”

“Not so exciting as yours, I’m sure. And isn’t Norman quite the resource?” I wanted to keep the focus on her side of the investigation.

“Awesome. He’s just awesome. It’s like he’s got magic eyes, all the subtle stuff he sees. But when he points it out, it’s as obvious as a zit on your nose.” Another breath. “So, bottom line, he thinks it’s no accident. Fran wants to wait for the autopsy, but I think we can assume there will be a homicide investigation at minimum.”

“What makes Norman think it was no accident?”

“Various little things. The hillside where the body was found is all messed up, of course, from the recovery team, but he found several things. Like, there was this bowling-ball-sized rock on the hillside that had been picked up and set back down in a somewhat different position. Not upside down, but different. You can see that from lichens and so on, and from how the rock didn’t quite fit into its, uh, resting place. And how some new sticks and pine needles had fallen into that spot when the rock was picked up, and then were squished under it. They looked completely different from the older sticks there. Norm thinks the rock may have been set onto the trail to make a barrier and then, afterwards, replaced. And he found a couple of footprints that really can’t be accounted for. He took impressions and is going to compare them with the recovery team’s shoes. I’ll write everything up and I’m sure Norm will, too.”

“Hmm. So, the theory is that someone used that rock to make an obstruction on the trail, and that caused the bike crash that killed Linton?”

“Something like that. Norm was puzzled by how the crash itself could have killed him, though. He said he’s taken worse spills himself with just scrapes and bruises. Although he couldn’t tell how fast Linton was going. And even though Linton suffered a bad skull fracture—that’s probably what killed him—we couldn’t really tell what he’d hit to cause the fracture. I guess, though, his helmet was off when those guys found him. Linton, I mean.”

I thought for a minute. “Sounds credible to me, I guess, although the thing with the helmet needs some thought. Why would his helmet be off? I’m not surprised that Fran’s being cautious, though. He’s pretty conservative about things like this. And publicity shy. News about a bike accident with a fatality is way less of a hassle than news about a homicide.”

“And I think he wants to avoid putting the perp on alert at this point. Assuming there is a perp. Let him think he’s still in the clear. All that, you know?”

I found myself nodding even though she couldn't see me. "Actually, that's a good strategy. Especially if it's someone who's at Hal's meeting. They'll be around for another week, seems like, so we know where we can find them, if need be."

"I thought I'd follow up by getting a list of everyone who rented a bike on Friday. Anything on tap for you tomorrow?"

"Well, it's Sunday, and you need the day off. And I'm not sure there's much to be done about that list until Monday anyway. Thanks for today, Angela. I couldn't have managed that hillside on a bike, I'm certain."

\* \* \*

I was ready for a little Saturday-night R&R, and not the least interested in cooking, so I had stopped off before heading up the hill to home and picked up a couple of pizzas, a loaded-with-everything one for Hal and a more restrained one—mozzarella and basil, mostly—for me. That, plus a feel-good rental movie, would put me right, I decided.

And it almost worked out that way. As a start, the pizzas were just fine. But when we were about to agree not to talk about the Linton case, Hal made a "time out" signal.

"OK, let's watch a movie. But I need to tell you something before I forget. I heard it from Sandy this afternoon. He's been sitting in on our sessions due to his interest in climate change as a nonlinear physics problem."

I nodded, cautious but agreeable, at least a little.

"He said that he and Angela were out to dinner at Fontenot's Thursday evening and saw Phil Linton and Pat Grover having what he—Sandy—described as an 'intimate dinner for two' off in a corner. Sandy recognized them from our conference, of course."

Inwardly, I groaned. Another complication I didn't need. But then it occurred to me that Grover hadn't really lied to me—all she'd said is that she and Linton hadn't seen each other until the IPCC conference at MPARC.

"Mmm. He's sure?" I tried to maintain an poker face.

"Uh, well, I didn't really press him. But he seemed to be. I mean, he didn't use equivocal words, and he made the comment as a sort of afterthought. So I've no reason to doubt him."

"I wonder if Angela saw them, too. She wouldn't recognize them, of course, but corroboration would be nice."

"Well, just like your MPARC ID has your picture, all the people at the conference have IDs with pictures, too. And they're on our computer system somewhere. Sandy can show a bunch to Angela, I guess, and see if she recognizes anyone."

The little knot that had tightened up in my midriff loosened a tad. "That would be an excellent thing to do. I'll give Sandy a call while you pick out a movie. A romantic comedy, please."

"Aw. No exploding pickup trucks?"

I shook my head with emphasis. "And no half-naked bimbos, either, OK?"

"Aw, *man!*"

Sandy, as it turned out, was not only cooperative but in full agreement with me about getting Angela's corroboration. He said he'd set up a photographic line-up of conference attendees and see if

she could pick out the couple they'd seen at Fontenot's. And he pointed out that it must have been a special occasion for them, given the intimacy he observed, and the prices there.

Hal, bless his soul, picked out one of my favorite movies to watch again, *The American President*. Even with that contrived drama toward the end, it never fails to delight me. For Hal's part, I think that he has a sort of crush on Annette Bening, so he didn't really need exploding pickups or bimbos to enjoy it. And what can I say about Michael Douglas, except for, perhaps, "Yum!"? At that point in our relationship, Hal and I had been together for long enough that those sorts of movie-star—um—fantasies served only to bring us closer together.

So Sunday morning I awoke late, refreshed and full of energy. Hal was already up and about somewhere—maybe, I thought, out for a morning run on the old logging road up the valley and back. He needed it, given his sedentary but stressful job. I got to work on a light brunch, an appropriate repast for what the clock was telling me and for limiting Hal's calorie intake.

Of course, there was always the possibility that he'd just eat leftover pizza anyway, but I thought I'd try.

That Sunday was a beautiful late summer day, and I set our brunch up on the front deck, the one with the big view of the west side of the Front Range. Back in Durango, Hal and I had made a practice of Sunday breakfasts—which were often more like brunches—on the patio, surrounded by food and the Sunday papers, print version. Since we'd switched to reading the papers online, it wasn't quite the same, but at least pages of newsprint didn't get blown around like they used to.

I was working on my second cup of coffee and listening to the breeze whisper in the aspen leaves when Hal came huffing and puffing up. It seemed that he'd actually run down our driveway—a half-mile and about 250 vertical feet down to the road—and back up. He stood at the base of the deck's steps and panted for a while, hands on his hips.

"Well." More panting. "That looks inviting. Do I have time for a shower?"

He trudged inside to get himself cleaned up, and shortly we were munching on the last of the season's Rocky Ford melons, in an updated version of our traditional brunch.

One thing still the same was the presence of our phones, though, and I was disappointed when mine started tweeping at me.

"Trieri, CBI"

"Annette, it's Fran. Sorry to pester you on a Sunday morning, but I thought you'd want to hear about our little excursion yesterday."

"Angela gave me the Cliff Notes version last night."

"So you know that Norman thinks it wasn't an accident?"

"That's what she said. Do you suppose that George will be able to do an autopsy tomorrow?"

"He got home last night, and I'm on his case to do it today. I think he'll cooperate. How did your interviews go yesterday? Any reason to suspect any of those folks?"

"I don't believe so. They'll be here for another week, and we know where to find them if need be after that. And they all live here in the U.S." I paused to take a breath. "There were a couple of things that came up during the interviews that got my attention, but no real red flags. And, well, based on what Angela told me, it seems like it would have been almost impossible for a single person to pull this off. I mean, assuming that it was intentional, someone had to know that Linton was heading down that particular trail at that particular time and be in place to move that rock around."

“Turns out that there was a ‘Trail Closed’ sign at the top until shortly before Linton took it. One of the employees up there told me, but he didn’t know why it was closed—he just assumed someone was doing maintenance.”

“Ah. I didn’t know that. Still, it seems like at least two people were working together on this. One to monitor everyone at the top and take down the sign, one to move the rock and, I guess, put it back.”

“So you think maybe *two* people at that conference were involved in this?” Fran sounded skeptical.

“I don’t know if any were. But I don’t quite get how just one person could have managed it. And, look, we need to be sure it wasn’t an accident. George should be able to address that, don’t you think?”

“I sure hope so. I’ll turn up the heat and let you know if he’s able to do it today. Want to be there?”

“Um. No, not really. George is so good that I’d just be in the way. But call me if you hear anything, please.”

\* \* \*

### Three

Hal looked up at me from his tablet. “Well, it’s in the *Denver Post* this morning, but without MPARC, thank you very much. It’s short and to the point, calling it an accident and noting that Phil was from Durango. It mentions a Monday autopsy.”

“Short is good. And congratulations about staying off the radar screen so far. I bet there will be lots more if we decide it’s not an accident, though.” I couldn’t help but sigh.

“Did Fran have anything new?”

“Just that he’s going to put the heat on George to do the autopsy today. You’re sure that all of your meeting people are staying for the second week?” I had my fingers crossed.

He scratched his head. “As far as I know. I could probably find out from the hotel if anyone has checked out, given that we’re picking up the tabs.”

“Before I came home yesterday, after I finished my interviews, I ran into a guy in your lobby at one of those tables. What’s that all about?”

“Transparency. Inclusion. We have this set of invited delegates, the official people, who are developing strategy, and a subset of them were on the drafting committee that worked all day Friday. But the whole thing is basically open to the public. And there were groups who wanted space to distribute their propaganda—uh, sorry, I mean ‘information.’ Rather than let them wander through the crowd and possibly be disruptive, we set up tables in the lobby. What guy?”

“Funny name. Lamond or something, from an outfit called ‘SCARAB.’ That’s an acronym, and it rings a bell for me, but I can’t quite identify it.” It was my turn to do some head-scratching.

“Mmm. I bet you mean Dexter Lemone. Students and Citizens for Animal Rights and Biodiversity, SCARAB. He’s a real pain in the ass. Remember back when we met? That guy who got blown up in that irrigation tunnel up above Lake Vallecito, he was the FSU chairman of SCARAB.”

The light bulb went on for me. “Yeah! Right! Now I remember. You mean that group is still around? And they’re here in the Fraser Valley?”

“Well, maybe not here in our valley. Dexter seems to be from Denver.”

“Ah.”

“Yeah, well, count your—our—blessings.”

“Did you make the folks with tables in the lobby register for the meeting, or anything like that?”

“You bet. There are probably a few people in the audience section—not the delegates, of course—who haven’t registered, but we made people who have some formal, or semi-formal, presence register. To get a table, you had to register, and without a table, you were going to get tossed if you tried to distribute propaganda. We’re being inclusive and transparent, and we want accountability in return.”

“So, from those registrations, we’ll know where to find them if we need to. Thing is, this guy Lemone told me that Linton deserved to be taken out and shot because of his views on climate change. Yesterday, after knowledge of Linton’s death was wide spread.”

“Yeah, some of those people aren’t what you’d call ‘tolerant.’ Sometimes they remind me of those religious fanatics over in the Middle East. But you’re right, we know where to find him, and the others.” Hal sighed. “That sure doesn’t seem like a very politic thing to say to you, but, still, it doesn’t really seem like it makes him guilty of anything more than bad judgement.”

“Or just plain stupidity.”

Hal burst into laughter. “I seem to remember a hefty dose of that in the Durango guy...oh, what was his name, anyway? Bradford, or something.”

A fuzzy memory tickled my brain. “Yeah...Will...no...Wh...Whitby, Whitby Bradford, that’s it. Died most unpleasantly, as I recall.”

“Yes, and I think the FSU chapter of SCARAB never recovered. But apparently the parent organization is still with us. Ah, well.” He shrugged. “I suppose Dexter will be around for our week two, playing the role of gravel in our hiking boots.”

“What’s the conference doing during week two?”

“Well, yesterday we agreed on the draft recommendations that emerged from the subcommittee on Friday afternoon. Now we have to come up with an implementation plan. A plan that involves as many participants as possible—not just our meeting participants, either—and one that doesn’t require any new infusion of funds. Something of an impossible task, if you ask me. MPARC can do its part without additional funding, but I don’t know about the university folks.”

“But your committee’s recommendations ought to have at least some influence on the funding agencies, no?”

“Sure, but those agencies are already stretched pretty thin, even without new mandates. And Congress sure isn’t going to pony up for additional climate change research, not this Congress. If anything, their agenda is in the opposite direction.”

“I understand completely. As far as most of them are concerned, the whole climate-change thing is a big hoax. A socialist hoax, if you listen to their leadership.”

“Hmmp. Tell that to the folks living on those Pacific and Indian Ocean atolls, or to the Inuit up by the Arctic Ocean.” He shook his head. “Anyway, today’s a day off for everyone, including me, from the conference. Although I do need to spend a little time this afternoon closing out a couple of our summer things. Almost time for the interns to head back to school, for one, and there’s paperwork to be done.”

“Interns? What interns? You never told me anything about that.”

“Really? I thought I mentioned it last spring. Anyway, it’s no big secret or anything. We’ve had a couple dozen undergraduate students from smaller universities in Colorado with us for the summer. They earn some money, quite a bit, actually, and get experience in a variety of high-tech roles. The universities think it’s great, of course, and it actually benefits us, too.”

“What universities?”

He started counting on his fingers. “Well, let’s see. University of Northern Colorado. And maybe I can remember all the others: Mesa State in Grand Junction, Western State in Gunnison, and Adams State in Alamosa. Metro State in Denver. And, naturally, FSU. Can’t forget them.”

“How about that? I didn’t know there were any FSU students here. Do you suppose any of them knew Phillip Linton?”

Hal looked up at me, surprised. He blinked a few times, cocked his head sideways a bit, and said, “Don’t know. But I guess we ought to find out.”

\* \* \*

There were three of them, and, as Hal had access to MPARC computer files from home, he was able to pull up their transcripts. Two of the FSU student interns that summer, Raoul Martinez and Sandra Winkler, had taken a course from Phillip Linton, it turned out, and each had received a “B.” Not, we decided, a compelling reason to want to kill anyone. The third, a Daniel Santini, was a history major who had fulfilled his general science-course requirements via the biology department instead of earth sciences.

Wait, I thought. A history major at MPARC? So I asked Hal.

“Sure, why not? He applied and wrote a well thought-out letter that outlined his interest in the history of science and how he wanted to see how modern institutions work.” Hal shrugged. “Most of our interns are either computer science majors or budding engineers or something, but it didn’t seem like branching out a little would hurt. And he’s been doing well. He spent this last week listening in on our IPCC meeting, and he even wrote a couple of nice drafts for Mary’s regular news releases.”

“Mmm. Well, I guess all I can do for now is to keep a list.”

“Still not sure about the accident thing, eh?”

“No, but maybe Fran will talk George Neering into getting the autopsy done today.”

It seemed that Fran did, because later that afternoon, close to dinnertime, I got a phone call.”

“Trieri, CBI.”

“Hey, there, Ms. Tri-er-i” George always pronounced my name carefully after he’d initially screwed it up on our first case together. “Howya doin’? Thought I’d deliver some news myself. Got a minute?”

“George! Good to hear from you. Uh, I think. I hope you’re not too put out at having work to do on a Sunday?”

“Well, y’know, man, whenever I’m out of town for a few days, I begin to miss my lab here, so I woulda prob’ly come in anyway. And, given that there was something that needed doing, well...”

“So what’s the news, George?”

“Very low probability of an accident. I just don’t see how that skull fracture and the resulting trauma, not only a serious hematoma but also some bone fragments that penetrated, I don’t see how it

could have happened accidentally. Especially because the recovery team has photographs showing the helmet right there by him, as if he'd taken it off after the crash. And Norman says he couldn't find any rock or log or anything that would have made the fracture. So that'll be my official finding, at least a suspicious death and a high-probability homicide."

"Angela told me there was a rock, about the size of a bowling ball, I think she said, a rock that looked like it had been moved."

"Yep, Norman and I talked about that. He said he didn't find any signs of blood or hair on it, though. He said that it was probably used on the trail, and something else was used to whack the vic. The whole thing's a real bummer, man."

"It is at that, George. Especially as we're short on motive. I mean, nobody seems to have really liked the guy, but to bash him with a rock or something? That's a stretch. Also, Angela told me before that his helmet was off when his body was found, and you just said there are photos."

"Yeah, and that's pretty weird. The helmet would definitely have prevented that head trauma, or at least mitigated it. It's not part of my own findings, though, so I don't really have an official opinion about it. Except that it's weird." He paused and took a breath. "But it's also strange that it happened out in the woods like that. I mean, it's not like they were in a bar, where they might have got into a fight. This seems like murder one to me, but I'd have trouble with a cross-exam if I said that in court."

"Right. You'd get chewed up by the defense, I bet. I wonder if there's any point in looking for the weapon up on that hillside?"

"Pretty big hillside, man. Norman said they covered quite a bit of it, but it could be anywhere. And I'm betting it was a rock. The wound looks more like a rock made it than a log or a branch."

"Thanks, George, that helps. And thanks for doing this today. At least nobody's going to leave town for a week, so we have a little time."

"No problem, Ms. Tri-e-ri. You take care, now."

I called Angela immediately, but her phone went to voice mail. So I tried her condo's land-line number.

"Hello? This is Sandy Livingston." The familiar voice of the MPARC's Chief Scientist took me by surprise.

"Oh, hi, Sandy. Is Angela there? Her phone must be off."

"She's here, but she's in the shower. Should I have her call you?"

"Please, right away."

"OK, will do. And, say, Annette—want to hear some good news for a change?"

"Good news I can always use."

"Anj and I are going to get married. We talked about it again the other night and decided to take the plunge. So I guess it means we're intending to get formally engaged, but I have to ask her father first."

"Sandy! Why, that's wonderful! Congratulations! But I thought she was avoiding all that because of the fuss her family would make."

"Yeah, it'll be a big deal. We'll need to have a giant, formal ceremony down in Santa Fe at the Cathedral. Probably not for a year or so, it'll take so much planning." He sounded a little embarrassed. "Uh, and what do you think about it if I ask Hal to be Best Man?"

“Well, I think that would be wonderful! And you’ll look quite elegant in a tux. Of course, Angela will look spectacular no matter what she wears.”

“You know, I hadn’t thought of that yet. But you’re right. Oh, here she is.”

After I heard the murmuring of some background conversation, Angela came on the line. “Hi, Annette! Sandy told me that he let the cat out of the bag.”

“He did, and congratulations! But I guess it’s going to be a work in progress for a while, huh?”

“My family is sooo traditional. Yeah, we’re going to keep a lid on it until we can go down to Santa Fe and do things their way. And it will probably be a long time, really. But we finally decided, which is a step in the right direction.”

“Well, I won’t tell anyone, except maybe Hal, if that’s OK. I’ll make him take an oath of secrecy, though.”

She giggled. “Sure, that’d be fine. Anyway, what’s up?”

I did a quick mood switch. “George called me with the autopsy results. He says he thinks it’s a homicide. I thought I’d let you know soonest.”

“Oohhh. Well, I guess I’m not too surprised. And that certainly changes some things, doesn’t it?”

“No doubt. Fran’s going to have to deal with a different sort of publicity, for sure. And maybe Hal and Mary, too, given that Phillip Linton was in town to be at the MPARC conference. You and I can sort of stay in the background, though. At least I hope so. And I think we should all keep quiet about it, at least until Fran makes an announcement. He may want a head start on the investigation.”

“For sure. And if all you had was a phone call from George, it’s not really official yet. Not until he has a written report ready to go. I bet Fran told George to go slowly with that, to buy some time.” She paused. “And, speaking of that, I just remembered something. Sandy showed me some pictures, from ID badges, I guess, pictures of people at the MPARC conference. Turns out that we saw two of them having dinner together at Fontenot’s the other evening, uh, Thursday, it would have been. That’s when Sandy and I got serious about this engagement thing. Anyway, one of the people we saw was the victim, Phillip Linton. And the other was a woman named Patricia Grover. They seemed to have had quite the romantic *tête-à-tête* going. I don’t know if that’s relevant, but it was definitely the two of them.”

“Ah. Thanks very much, Angela. And I don’t know how relevant it is, either, but it means I need to have another conversation with Ms. Grover. It seems that she wasn’t entirely candid with me when I talked with her yesterday.”

\* \* \*

First thing Monday morning, Grand County Sheriff Fran Schmidt convened an all-hands meeting in his briefing room in the departmental offices in Hot Sulphur Springs. Angela and I were there, of course, along with George Neering and everyone in the department except the receptionist.

“Well, folks, it was looking like we might make it through the summer with nothing worse than a bad accident here and there. Like that so-called ‘mountain bike accident’ on Friday, I mean.” Fran shook his head. “No such luck, though. George here doesn’t think it was an accident.”

George Neering, believing it was his turn, started to stand up.

“No, hang on, George. In a minute. I need to make two more points. First, this is one of our busiest times of the year anyway, the coming weeks especially, and a homicide investigation like this we don’t really need. But we’re stuck with it. I’m going to ask our CBI colleagues to help out as much as they

can,” Fran’s glance in the direction of Angela and me was almost pleading, “so that we don’t have to divert too much manpower to this. Second, and George and I have already talked about this, he’s going to be so kind as to drag his feet on his official autopsy report to buy us a day or two before it all hits the fan. In the meantime, I want total secrecy on this, OK? There’s a bunch of visitors here who now qualify as ‘persons of interest,’ and I want them to be kept in the dark.”

He looked around the room. “Questions for me? No? OK, George, they’re all yours.”

George ambled up to the podium and turned on his folksy persona, the one with more than his usual bit of hippy-dippy thrown in. Everyone there knew him well enough that they expected this but weren’t going to underestimate him because of it, like most newcomers did.

He proceeded, with the help of a few rather gruesome pictures, to give a more technical explanation of his conclusion than he’d told me on the phone the day before. But the conclusion was still the same: at least a suspicious, unattended death and probably a homicide, likely premeditated. Like Fran, as he wound down he asked for questions.

Angela raised her hand. “Dr. Neering, I was with Norman Dzung and the sheriff on Friday afternoon, and there was no sign of a rock that might have been used as a weapon. We examined several in the vicinity. Do you have an estimate of its size from the shape of the wound?”

Hardly anyone, ever, called George “Doctor,” and it took him a few seconds to recover his equilibrium. “Hmm. Excellent question, man. About the size of a softball, I’d say. And, assuming I’m right about all this, the perp could have carried it off with him and got rid of it somewhere else entirely. If it were me, I think I’d have found a creek to drop it into—that’d wash off the blood and so forth. And any prints I might have left. Like I said, good question, Ms. Espinosa.”

He grinned at her and winked, not a come-on but rather a compliment. “Any other questions?”

No one spoke up, so he took his seat as Fran again took the stage.

“So, now what we’ve got to do is to use whatever time that George can buy us to make some progress. I’m thinking that we need to look carefully for both motive and opportunity. Means, we pretty much know about. Annette Trieri interviewed a number of people who are at the meeting at MPARC that the victim was attending. Anything there, Annette?”

I shook my head and cleared my throat. “Not too much yet, sheriff. With this new information, I need to talk with a couple of them again, and that may help with opportunity. I’d like to know, for example, more about exactly the sequence of events up on top of the mountain, say, from an hour before Linton started down that trail until his body was found. And one of the people at the meeting was biking with Linton on Friday.”

Fran nodded. “Right. That’d be this guy Brothers, I guess?”

“Yep. And there are a couple of other potential leads associated with MPARC that I’ll follow up on.”

“Good deal. I guess that’s all for this group. Remember, people, this coming week is going to be crazy, what with that heavy metal music festival that started yesterday and the crowd it’s attracted. And there’s another festival that starts, uh, Wednesday or Thursday, country and western. Put the heavy-metal head-bangers together with the folks here for the rodeo in Granby and we’re looking at the potential for some real trouble.” He shook his head. “Let’s all be careful out there. Norman? Angela? Could you meet with me for a few minutes please?”

The meeting broke up and the tracker plus my deputy followed the sheriff into his private office. I noticed that it was about nine, an hour or so before Hal's conference would have its morning coffee break, so I hit the road for Winter Park.

By pushing the speed limit—all of the officers likely to stop me were still back in Hot Sulphur Springs, anyway—I made it to Hal's rented MPARC building at the village of Winter Park's main intersection a little before ten.

He was, I knew, champing at the bit to get out of the rental and into MPARC's new, permanent home. The new building had begun life as a failed condo development, the bare frame of which had been a huge eyesore for several years before MPARC came along. Hal and his team of architects—with Mac's recent advice for computer and other security matters—were turning it into something of a showcase, a showcase that would provide five-star office space for holders of the high-quality jobs in eastern Grand County—a place where most jobs were medium-quality at best—that MPARC was providing. But it was still a work in progress.

The lobby of the auditorium in the rental building looked like it had on Saturday, with several tables laden with pamphlets off to the side. SCARAB's setup was still prominent, something that encouraged me. Dexter Lemone's comment concerning Linton's deserved fate echoed in my head. And why had Pat Grover not mentioned the dinner with Linton? Also, that Stringer guy seemed like he was hiding something, the way he diverted my attention to Pat Grover.

These and other cynical thoughts swirled in my head while I waited for the morning coffee break to begin. I would have much rather that George Neering had decided that Linton's death was an accident, but, with the opposite finding, I was ready to assume my suspicious investigator guise and not trust hardly anybody. Maybe Hal. Maybe.

I heard crowd noises from inside the auditorium and watched while people filtered into the lobby. Some were just wandering, some were on a mission. One of those, Pat Grover, had her sights set on the Ladies' Room, I could tell at once. Too much pre-conference, coffee, I thought. So I camped outside the door to await her exit. No sense in disturbing her in a moment of some urgency, after all.

Hal and his architects, I remembered, had planned on outfitting the new MPARC building with facilities to take into account the relative amounts of time that men and women tend to spend in those facilities, but in that rental building the line outside the Ladies' Room was what I'd learned to expect. I understood why Pat Grover had been in such a hurry.

That meant, of course, that she was one of the first to emerge, and it was easy for me to walk up to her and catch her unexpectedly.

"Dr. Grover? I hope you remember me from Saturday. Annette Trieri, Colorado Bureau of Investigation?"

"Huh?" She looked appropriately surprised. "Oh, yes. Ms. Trieri. I hope your Sunday was more relaxing than your Saturday."

"Somewhat." I managed what I thought might be a disarming smile. "But it seems that the more people I talk with, the more questions arise. May I have a few more minutes of your time?"

Still looking surprised, she glanced around the room. "Well, I was hoping to... Oh, but I can do that later. Certainly, I have a few minutes. Maybe we can find a spot to sit and talk?"

I pondered her switcheroo, from nervous and hesitant to calm and confident within the span of a sentence, as I led her outside. We found a great amenity provided by the Town of Winter Park, a bench on Vasquez Road under a grouping of aspen trees, in large pots, just beginning to hint of their upcoming switch to fall colors.

“Interesting things keep coming up about Phillip Linton, Ms. Grover. Now, as I recall, you mentioned that you and he were romantically involved years ago, when you were both graduate students.”

She smiled. “My perspective these days is that it wasn’t so much ‘romance’ as it was that we just had the hots for each other. It was one of those things that seemed like a good idea at the time.”

It was my turn to smile. “You mentioned something about that. Anyway, you also said that this meeting at MPARC was the first time you’d seen him since back then?”

“Yes, I was surprised to run into him, actually.”

“And so you had what’s been described as a ‘romantic *tête-à-tête*’ Thursday evening for old times’ sake?”

This startled her. “Well, I don’t know about ‘romantic *tête-à-tête*.’ Although he was definitely hoping to do *something* for ‘old times’ sake.’ But that wasn’t in my plans, not no-how. Am I under some kind of suspicion here?”

All of her body language suggested that she was being forthright with me, so I decided to move on. “I’m sorry if it seems that way. I’m just tying up loose ends, that’s all.”

I think we parted friends. Pretty much.

\* \* \*

## Four

Back inside, the lobby was crowded with conference-goers, and all of the tables, including the SCARAB one, were occupied. But I didn’t see Hal anywhere. I almost giggled out loud when it occurred to me that perhaps he was standing in line for the Men’s Room. What, I wondered, do men talk about in situations like that? Or do they talk at all?

Because Dexter Lemone had no one at his table, I decided to tackle him next. He graced me with a truly dirty look as I approached.

“Mr. Lemone, good morning. We need to talk a bit more. Would you like to do it here or perhaps somewhere less public?” I tried to present him with my least threatening smile.

But he just scowled. “Now what? I thought I made it clear on Saturday that I didn’t know anything about that guy Linton.”

“Except that he deserved to be shot.” I let my smile slip just a bit. “What I wanted to ask, though, was whether SCARAB had ever managed to replace Whitby Bradford down in Durango?”

“Whit? How do you know about him?” Now he was on alert.

“I was chief of detectives in the Police Department there when he got killed. It wasn’t my case, of course, but I certainly heard a lot about it. Especially his role in the local drug trade. Is that something that SCARAB personnel participate in generally, selling drugs? I guess it could be an effective fundraising tactic.”

“What? No, of course not. SCARAB is concerned with environmental issues. Like the name says, biodiversity, animal rights, stuff like that.”

“And, of course, wishing death on people who don’t agree with you.” I took out a notebook, opened it to a blank page, and held a pencil at the ready. “Perhaps you could fill me in about where you were and what you were doing from about mid-morning Friday on.”

“What’s this all about anyway? You’ve got no reason to treat me like this, just because some guy I don’t like got himself killed accidentally.”

“That, of course, remains to be seen. The autopsy report, when it’s available, will clarify matters, I’m sure. In the meantime, though, I’m still in the business of gathering background information. Would you rather wait and talk with me after the report becomes public?”

He stared at me for a few seconds. “Given your attitude, I think that would be the most appropriate course of action. I’ll have legal representation, of course.”

“Your call. I’ll make a note of it for future reference.” I shrugged as I turned to walk away. “The folks here at MPARC are being most cooperative, so we’ll know where to find you if we need to.”

The coffee break was winding down, but I managed to catch Chris Brothers just as he was headed back into the auditorium.

“Dr. Brothers? Do you suppose we could have lunch again?”

“Oh, Ms. Trieri. Uh, well, sure. I guess. Especially if you’re buying.” He grinned. “More questions?”

“I want to go over your morning on Friday in more detail. We’re tying up loose ends, and you can be very helpful. This isn’t what you’d call ‘adversarial’ at all, just getting facts straight. OK?”

“Sure. Meet you out here? I mean, after this next session. Um, I’ve got to get in there now, though.”

“Thanks very much. See you then.”

As the lobby emptied, I caught sight of Hal coming from the direction of his office.

“Well, Director Trieri! To what do we owe the honor this morning?”

“Hmmp. I guess that means no big hug and kiss, eh?”

“Well, there’s always my office...” He looked around. “But proper public decorum will improve your credibility, don’t you think?”

“One of these days, I’m going take you up on your offer to retire to your office. Like I did that other time. Then what’ll you do?”

He actually blushed. “Well, we did get away with it that once. But now, if you call that particular bluff, I’ll probably have an important meeting. Today, though, I just have some news for you. I made some calls down to the U.”

“Oh? Doing my job for me?”

“Not exactly. Just setting the table a little. I figured I might pull some strings down there. Turns out that I’ve still got some influence in the provost’s office. And you may remember that he’s got legal responsibilities there as a state official.”

“Uh-oh. What has my ex-Dean done now?”

“Good things, I think. First off, I talked him, John Martin, I mean, into sealing up Linton’s office. Then I persuaded him to get their computer people there to change the password on Linton’s computer account. They use an omnibus password system now, so that’s pretty easy, as it gets pushed out to all of a user’s devices. And John is also going to lean on HR to pull and secure Linton’s entire personnel file,

both in HR and in the college and departmental offices. You know. Just in case any of that stuff might be relevant for your investigation. He didn't volunteer to send copies our way, but at least the files will be preserved."

Proper public decorum be damned, I grabbed him for a big smooch.

"Thank you! Something of that nature was on my to-do list, and I'm glad it's done."

"I'm glad you're glad. I was told that it might take a court order to pry the personnel files loose from HR, but, yeah, at least they'll be secure in the meantime. And John can get you into Linton's office, if need be."

"Sounds as if you're suggesting a trip down there might be in order."

"That's up to you. I'm just trying to be helpful where I can, and FSU seems like one of those places. Oh, and I didn't spill the beans about the autopsy results. I just told him that there was an ongoing investigation."

"Good deal. I don't know when I'll have time to get down there, though."

"Well, if it's after this week, I'll come along. I can be your driver, or something." He winked at me. "So, any progress this morning?"

"It seems that Mr. Dexter Lemone, of SCARAB, isn't going to be talking to me again without a lawyer. I consider that a victory, of sorts. And I'm going to have lunch with Chris Brothers. I want to know details of Friday morning."

"Are you harassing my *rapporteur*? Again?" He poked me in the ribs.

"Me? Of course not. I just think he's hot, and I want to seduce him over lunch."

Hal's chuckle made me uneasy. "Well, go easy on the poor kid. He's apt to want to call you 'Mom'."

"Oh, you *rat!*" I whapped his shoulder with my bag, an object of significant heft, and he almost stumbled.

"Hey, now!" He rubbed his shoulder. "Ouch. Look, Chris is something of a prodigy, a post-doc at age twenty-five. As in *twenty-five years old*. I mean, do the math."

I did. "Mmm. Point taken. But you knew I was kidding anyway. About the seduction, I mean."

"Of course." He grinned at me. "Not, mind you, that I think you wouldn't be good at such a thing..."

He dodged out of range before I could whap him again.

\* \* \*

I decided that getting Chris Brothers away from the MPARC crowd would make our conversation easier, and so I dragged him down the street to that old Winter Park standby, Randi's Grill and Pub, which had recently eased back from its original Irish flavor but still retained its sports-bar *milieu*. Hal even provided dispensation to take until the afternoon break—he promised to assume the *rapporteur* duties himself, despite what he described as a dislocated shoulder. After Chris and I were seated and got our orders in, I pulled out that old cliché.

"So, Chris, you're probably wondering why I asked you here."

“Well, you said something about talking about Friday morning in detail, and that makes sense to me. But it must mean that there’s more to the whole thing than you thought there was when we talked on Saturday.”

“Hal said you’re smart, and that’s coming through loud and clear. So let me say that yes, there’s more, but I can’t talk about details yet. What that ‘more’ means is that everything is ratcheted up a notch or two. Now, I’ve done enough checking to be persuaded that you’re unlikely ever to be in the category of a person of interest or anything like that. But you do know, perhaps more than anyone, about what all happened Friday morning. So I’m hoping to pick your considerable brain for details.” I was a little surprised that the flattery seemed to go right over his head.

He nodded and stared at one of the TV screens for a bit, then looked back at me. “That must mean that you’ve concluded somehow that it wasn’t an accident. I recall something about an autopsy today.”

“What I’m hearing is that the autopsy report won’t be available for a few days. And, like I said, I can’t talk about details yet anyway. This is the Grand County sheriff’s jurisdiction, after all, and I’m just assisting him.”

He nodded. “So, first, I have no idea of what really happened to Linton. I wasn’t on that trail with him when it happened. But, second, I’m smart enough to know that someone who was with him that morning must be, clearly *has* to be, under suspicion at some level. So I’m worried about having anything I say misinterpreted.”

“We have a witness from the top of the lift there who says that he saw you going off in a different direction onto a completely different trail from the one that Linton headed down, your trail being one with no connections to Linton’s. Even the sheriff’s back-country expert doesn’t see how you could have been involved with whatever happened to Linton.”

“Yeah. I looked at the trail map and decided I just didn’t want to try that expert section. Phil was all gung-ho about it, but I’ve done enough mountain biking, including various spills and a couple of real crashes, that I’m over being gung-ho. I just like smooth descents with moderate excitement.” He grinned. “I’m discovering the same thing about skiing. I guess that comes from having done both since I was about eight.”

“So, take me through the morning from the time you met up with him.”

“We’d agreed to take Friday—neither of us was stuck with that job of being on the committee that had to work—and go mountain biking. He suggested it to me on, oh, I think it was last Wednesday during the afternoon break. Or maybe the post-meeting reception. I guess he picked me because I’ve been riding my bike from the hotel instead of walking or taking the shuttle—I brought it up from Boulder on my car. I’d never met him until this meeting, but he talked about how he’d become interested in mountain biking down in Durango and wanted to take advantage of the Winter Park lift system.”

He stopped to think for a minute. “So, on Friday we met up for breakfast at the hotel and went up to the base in my car. I took my bike, of course, and his rented one, which he got for the two weeks of the conference at the ski area. He was bubbling with enthusiasm because he said the bike he’d rented was better than his own.”

“We rode up the main lift from the base and did a long, easier trail down, sort of to get warmed up, but that was really just my excuse. I didn’t want to get too technical too soon. I wanted to check out his skill level before agreeing to hard stuff. But he was good, so we decided that the section with the expert trails might be interesting.” He took a breath.

“I guess the way this all works is sort of like skiing. You get on the lift, although with a bicycle somehow, and at the top you get off and figure out which way down?” I was studying a trail map as I asked.

“Right. The lift operators help with loading and unloading the bikes. And then you do the prep, like tightening your helmet strap, popping one foot into the pedal clip, stuff like that. And, like skiing, if it’s an expert trail down, you get psyched up in your own special way. I just take a lot of deep breaths, but some people, and Linton did this, they make noises, like grunting or something. He was actually demonstrative enough that I got a little embarrassed about it.”

“That’s probably why the witness I mentioned noticed you guys.”

“Oh. Yeah. I hadn’t thought of that, really.” He nodded his understanding.

“Anyway, after all that, we headed down our respective trails, with him first. He said something like ‘See ya at the bottom—don’t make me wait too long.’ Turned out that I was the one who had to wait. A long time, actually.”

“I was there and saw your conversation with Roger Traubman, the deputy. But I’m interested at the top. Were there other people around when you and Linton got off the lift?”

“Oh, yeah, mmm, a dozen or so, I guess, plus the lift guys. And, the thing is, I could swear that I saw a barrier, meaning a yellow or orange tape, across the top of the trail that Phil eventually went down. That’s why I was looking at the map and came up with the idea of a different trail.

“Then, when Phil got all excited about the trail I thought was closed, I looked again and the tape was down. So he went that way and I went the other, having talked myself out of that truly expert-only section.”

“I see.” A puzzle was assembling itself in my head. “By the time that Linton started down that newly opened trail, were there still that dozen people up there?”

“Well, not the same dozen. More had come up the lift, and some of the originals had headed down.”

“But they were not on your radar, so you probably can’t distinguish them, huh?”

He looked at me and squinted. “Look. You mentioned skiing, so it must be that you’re familiar with it. Right?”

“Well, yes, some.”

“So, think about what you remember from getting off a lift. I mean the people around you. They’re all dressed in ski outfits with all sorts of colors and so on, but you really don’t pay that much attention. You’re too focused on, first, getting off the lift cleanly, and then what’s next, where you’re going. All that stuff, right?”

I closed my eyes and thought about it. “OK. I see what you’re saying. It’s a crowd of people in colorful outfits, but they all blend together and so no one sticks out. Combined with your own distractions, it’s hard to recall a picture of it all.”

“Exactly. So all I can say is that there were other people up there, one of them must have taken that closure tape down, and I have no clue who it could have been. We hung around for a couple of minutes, he got himself psyched up with a lot of grunts, that kind of deep breathing accompanied by a series of ‘unh, unh, unh’ noises, and we headed down the mountain on our respective trails. And that was the last I saw of him alive.”

“You said you hadn’t met him before this conference.”

“Correct. I’ve read many...most?...all?...of his papers, but I’d never met him. His output and his analyses truly impressed me. I guess that’s why I decided to go biking with him. I’m just a lowly post-doc, and his invitation was flattering. But at the conference, he came across as something of an asshole, er, excuse the expression.”

“You’re not the only one with that opinion.”

“It’s like he was on someone’s payroll and trying to live up to their expectations. Not at all like most of the scientists I know. Someone must have got to him.”

The files that Hal and I had discussed, the ones down at FSU in Durango, I thought, could well reveal who that might have been and whose expectations weren’t being met. Along with any number of other things of interest. How, I wondered, could I get copies of those files?

\* \* \*

My first impulse was to jump in my car—my CBI Jeep Grand Cherokee Hemi, actually—and head south and west. But that just didn’t seem like a good use of my time. It would take a good six hours each way without traffic hold-ups, even using that hot Jeep with its emergency light bar to push the speed limit.

Maybe, I thought, I could get my friends at the Durango CBI office involved. I knew I’d end up owing them a huge favor, but I decided I could live with that.

After lunch, Chris Brothers and I walked back to the MPARC offices, and he managed to return to the MPARC conference in plenty of time to resume his *rapporteur* duties—something he was glad to do, as I think he didn’t trust Hal to carry the ball without fumbling. Because the afternoon session hadn’t begun yet, I also had time for a couple of follow-up conversations with Linton’s old grad school cronies. But they didn’t lead to anything new. Then I left Hal at the conference and took over his office, so that I could use his phone.

My first call was to Derek Petersen, the crack field agent whom I’d turned into an equally crack administrator, and who’d replaced me in CBI’s Durango field office when I moved to Fraser.

“Hey, Annette! Glad to hear from you! How are things up your way?”

“Ugh. Here I thought we were moving to a winter-sports valley. But summer’s almost as crowded as Durango now. I guess that’s happening everywhere, though. At least the locals are making some money.”

He laughed. “You got it. Year ’round craziness. What’s up?”

I filled him in on the Linton death and the still-confidential autopsy results. He agreed that searches of Linton’s apartment and office would be a good idea and volunteered to obtain warrants for both.

Chalk one up for the good guys.

My second call was to the FSU Provost, John Martin. As Chief Academic Officer at Frémont State, Martin was Hal’s boss, at least when Hal was on campus. And Martin had also been an almost suspect in that case where I’d first met Hal, so he and I had an odd sort of relationship. But I’d kept his confidences and even helped out the university on other occasions, so he’d begun to trust me.

“Hello, Annette. After Hal’s call, I had a suspicion that I might be hearing from you.”

“John, I need first to offer condolences on FSU’s loss of someone who seemed to be on track for superstardom. Hal’s told me of Professor Linton’s accomplishments and potential, and he sounded like a prodigy.”

“Thank you. And by our standards, he certainly was a prodigy. I have to say, though, that it’s doubtful that we would have been able to retain him. Or, really, that we would have chosen to. With his research accomplishments, he was ripe for being poached by one of the big research factories, and he really wasn’t that solid as a teacher, which is something we value highly.” Martin sighed. “We’ve learned, or at least some of us have, like Hal and I, that we can’t have it all ways, down here in our little outpost of higher education in the mountains. I think we would have likely let Linton advance his career elsewhere without too much of a fight.”

“Hmm. Not to speak ill of the deceased or anything, but I heard from Hal that Linton had made enemies at the conference up here in the span of only a week. How were his relationships there?”

“Oh, I guess I’d call them ‘mediocre.’ His faculty colleagues were somewhat in awe of his research output but not complimentary about his collegiality, in general. And I’ve discovered that he had a wide range of conflicts with students who took his courses. In fact, he was regarded as something of a pariah on the student grapevine. Word on the street was to avoid signing up for one of Linton’s courses unless you’re something of a masochist.” He voice took on an air of curiosity. “All we’ve heard down here is that he was killed in a mountain bike accident. But that doesn’t explain why you’re calling.”

I knew Martin as a sharp cookie, so I’d been expecting some probing of this nature. “It looked like an accident, for sure, but the sheriff up here—and it’s his case—he’s making sure to cover all the bases. It was an unattended death involving some violence, and, even if the violence was accidental, it needs a full investigation.”

“Hal mentioned something like that. So, what do you need?”

“Everything. And, so you’ll be covered, I believe there will be a warrant.” I explained my call to Derek Petersen. “We’re hoping for insight from his files down there at the U. Oh. By the way. Is the next of kin thing covered and so on? Hal said he’d call you, but I don’t know how that went.”

“It’s covered, at least as far as we can manage it. Someone, I think it’ll be Linton’s brother, will be coming into town probably next week to take care of things. I’ll say, *that* was a phone call that I don’t want to repeat.” There was a pause. “I suppose I should have the university legal counsel vet any paperwork, like a warrant, but we’re all State of Colorado so I’m not going to worry too much. And I already pulled all of Linton’s personnel files as well as his files from the contracts and grants office—I figured there might be interest in them. So you can have those, with an IOU, of course, if we can get them to you somehow. It’s too much paper for the mail, about a two-foot stack.”

This was welcome news to me, two-foot stack or no. I wondered if anyone from Derek’s office would be interested in a quick courier run.

“Hal said something about a computer password.”

“Oh. Right. The systems people changed it, and I’ve got it written down here. I’ll put it into the first file folder of this stack. If his laptop, which he probably had with him up there in Winter Park, if it’s powered up, it’ll have the same password. We’ve got this system that pushes passwords out now, kind of like the way that Microsoft does system updates.”

“OK, good. I don’t remember if you’ve met my replacement at the Durango CBI office, Derek Petersen. Anyway, he’s the one getting the warrants we need, so you’ll probably be seeing him. Or maybe the new dean will be seeing him. Er, interim dean, I guess. How’s he doing, by the way?”

“She, actually. And quite well, as a matter of fact. It’s the former chair of physics, and her specialty is nonlinear systems, which are by their nature unpredictable. I think that helps her deal with the faculty.”

“‘Nonlinear systems,’ eh? Hal hired a guy with that background to be the Chief Scientist at MPARC. And, yeah, he’s used to things that are unpredictable. Takes ’em right in stride. He came from the Santa Fe Institute, where I guess that’s pretty much what they all do.”

“How’s that new MPARC thing coming along? Hal mentioned it when he called, but we really didn’t talk about it.” Martin’s interest, I knew, was much greater than he was letting on.

I knew I had to be careful, as FSU was expecting Hal back in a few months. “They’ve come a long way in a short time. I mean, this conference they’re having is a big, prestigious deal, it seems like. But Hal really wants to see MPARC get into this new building that he’s shepherding along. All in all, though, I think he’s having fun, with both MPARC and the work he’s doing for the Colorado Commission on Higher Education.”

“Well, be sure and tell him for me that we’re looking forward to seeing him back here. You, too, Annette. The two of you were stalwarts at those fund-raising parties the president has all the time. We miss you both.”

But Hal and I had no real intention of returning, and the conversation started my feelings of guilt building. I was glad when Martin brought the conversation to a graceful end, allowing me to escape without having to get caught in a lie.

During the conversation with Martin, I’d heard my phone booping for attention, the signal for another incoming call. I checked voice mail and discovered that Derek had left a short message, so I called him right away.

“Any luck, Derek?”

“Yep. Judge Sandoze is still as cooperative as ever. We found Linton’s home address and got a search warrant for it. Also a warrant for the university, in case we need it. Linton lived in an apartment, a pretty nice one, up on the north side. There’s a manager who will let us in. We could have a look this afternoon, if you want.”

“Sounds like a plan. While you’re at it, I’ll check in with the PD and say hi to folks there. And let them know what’s up with all this, to be polite. Give me a call when you get there so I can listen in on what you find at the apartment, OK? Oh, and I wonder if there’s anyone around down your way who could run a big pile of paper up to me. Linton’s personnel and other files from the U. I’m sure I can figure out how to pay the overtime, or whatever.”

“Not a problem, Annette. I’ll give you a call from Linton’s apartment.”

Fred Winders, who’d been promoted into my position of Lieutenant and was in charge of the investigations unit at the Durango Police Department, was glad to hear from me. I called him first, and he immediately put me on the speaker and dragged Captain Jankowski, under whom I’d worked during my tenure at the PD, into the conversation. Then Amy Hodges, now Vanderberg, I learned, who got gently kidded a bit about being seven months pregnant, wandered in. It was old home week there for a while.

I managed to escape after only about a half hour by promising to be sure and keep in touch, and that made me available for Derek Petersen’s call from Phillip Linton’s apartment with minutes to spare.

\* \* \*

I'm not quite sure what I was expecting from Linton's apartment, but, whatever it was, it wasn't there. Derek gave me, over the phone, a blow-by-blow description of his team's search and documented it with a series of near-real-time photographs. That, it seemed, involved a nifty phone trick that I vowed to learn.

From what Derek described, for an early-thirties bachelor Linton was the most compulsively clean and tidy man imaginable. I suppose that, given he knew he was going to be away from home for the better part of a month, he'd want to return to things in good shape. But apparently the place was spotless, even the main bathroom. And his wardrobe was hung just so in the closet; the kitchen cupboards were arranged to perfection; and even all the bookshelves—a good many—had the look of a professional librarian's organizational touch, according to the CBI team.

Spotless and well-organized it may have been, but it was also sterile. There were no family pictures, personal tchotchkes, or much of anything else in the way of personality. And, on a writing table where you'd normally expect to find a computer, there were the attachments—monitor, keyboard, mouse—but no actual computer. After a bit of discussion, we decided that Linton must have used his FSU laptop for everything, carrying it with him and plugging in the accessories wherever he was. That made Fran Schmidt's examination of Linton's hotel room in Winter Park all the more relevant. Linton's FSU office was also going to be an important place to search, we realized.

That, we speculated, could well be somewhat more of a challenge. Frémont State University was still in its adolescence as a full-spectrum research university, and it retained some of its long-time traditions from its liberal-arts college days. One of those was the lack of a true university police force—they still operated with what they called a "security team," a group of people who were basically only a couple of steps above rent-a-cops. The CBI, however, was the state criminal investigative agency, and FSU was a state institution, so we definitely had jurisdiction. It was just a matter of persuading FSU officialdom of that fact and getting them to cooperate. Fortunately, I had laid the foundation for that cooperation with my earlier conversation with the provost. So Derek and his team headed for the campus while I tried to contain my impatience.

Derek called me again when they opened the door to Linton's office. His initial reaction was that someone had tossed the place—apparently, the contrast to Linton's apartment was staggering. Because Derek was escorted by John Martin, I was able to hear both sides of a conversation.

"Provost Martin, I think we need to wait here in the hall until my guys can dust in there for prints from whoever turned this place upside-down."

"Huh?" Martin's voice was familiar. "What's wrong? It looks like a typical faculty office to me."

"Uh." Derek's eloquence was in full flower. "Surely someone came in here and searched everything and turned it over in the process."

"You think so? Really?" Martin seemed incredulous. "To me, it looks like most all of the other faculty offices I've been in. And not just recently. This is the way they always look, more or less. Even mine when I was teaching. I'll give you that this one is in the 'more' category, though."

"Maybe it's the contrast. We, I mean, these other guys and I, we just searched Linton's apartment. It was neat as a pin." Derek was clearly skeptical.

"Ah. I'll stipulate that this doesn't fit that description. But I see no reason to think it's been disturbed since he was here last. There's more organization here than you think, I bet. I'll leave you folks to it."

At that point, Martin excused himself to let them get to work.

To Derek's, and my, surprise, the team's discoveries validated Martin's point of view. What had first appeared to be random jumbles of paper were actually somewhat disordered piles of different sets of notes, homework assignments, test papers, and correspondence associated with publications. It seemed that Linton, though organized, simply wasn't very good at constructing and maintaining neat, squared-up stacks of paper.

While there was the same set of computer accessories that they'd found in Linton's apartment, there was no actual computer in the office, either. This helped validate our conclusion that Linton's laptop was his sole device—and that it was probably in Winter Park. There was, however, a large-capacity external USB drive, which we decided might be a back-up drive. Whether Linton also kept information stored on the FSU servers—or another server somewhere, for that matter—was something that was unclear.

Like his apartment, in his office there was little in the way of a personal touch. His name, of course, was either written or stamped on just about every piece of paper, but personal effects *per se* were absent. Apparently, they guy had lived for his work. And Hal's comment about his prodigious research publication record fit right in with that.

In any case, Derek and company didn't find anything of interest in that office. I was therefore hoping that something of interest would emerge from those files that John Martin was going to send my way. Derek verified that he had them and was going to send them off by courier, probably in a State Patrol car. And maybe, I thought, Linton's laptop will be helpful, assuming we find it up in Winter Park.

After finishing with Derek, I called Fran Schmidt. "Fran? Annette here, I'm calling from MPARC."

"Annette! Good to hear from you. Any progress?"

"Not yet. I got my CBI colleagues in Durango to go through Linton's apartment and campus office, but there was nothing of interest at either place. I've got a pile of file folders being sent my way, though, to go through, his personnel files and so on. But one thing they didn't find was a computer there, so I'm thinking that the one he had with him up here is what he used for everything. Which makes it all the more important."

"We got a laptop from his hotel room. Do you suppose that's the one you're interested in?"

"Probably. Was it turned on?"

"Yeah. It wants a password."

"Ah. Well I may just have one for it, or I will when the files get here. I'll let you know, OK?"

At that point, it was getting on toward suppertime. I could tell that going through those files was going to be a chore, but they wouldn't arrive before midnight, or, more probably, noon the next day. Instead of worrying about it, I went looking for Hal and found him in the lobby at an after-session wine-and-cheese party.

He lit up when he saw me. "Hi, Sweets! Hope your afternoon was good."

"Yeah, it was fine—Derek Petersen and his team in Durango got Linton's places searched. And John Martin is sending me a stack of file folders, personnel files and what he called contracts and grants files. By courier somehow, through Derek's people. Or the State Patrol. Or something."

"Ah, yes. Maybe those grants files will provide some hint about why Linton changed his tune recently."

"Oh. Hadn't thought of that. But, yes, maybe they will. Anyway, my assignment for whenever they get here is to go through these files so I can give them back to John soonest. Maybe I'll end up copying a bunch of stuff, though." I paused and took a deep breath. "And there's something I need to talk with

you about. See, I talked with John on the phone for a while. He seems to think that you'll be returning to FSU, this fall or next January. He got to talking about it and I started to feel all guilty that he doesn't seem to know our plans to stay in Fraser."

"Hmm. Well, I expect that he was *trying* to make you feel guilty. The thing is, I already put him on notice that I was going to need to spend at least another year here. You know, to make sure the new building gets finished and moved into. I told him in writing. Well, email. But that's writing these days, because he acknowledged it. And he asked about what after that, and I just said 'We'll see.' So don't let him get you feeling guilty, OK?"

"Hmmp. Now I just feel manipulated. But I guess that's one of his skills that you've told me about." I sighed. "I have to say, I respect him, but I'm not sure I like him."

"Bingo. I've been glad to have him as my boss for these several years, but I've never considered him a close friend. He's too much of a chess player with everyone he deals with. And, yeah, being manipulative is definitely a big thing in his skill set."

"Anyway, I have homework at some point. But not this evening. That's a hint."

"Hmm. Hint taken. Want to go out? Pick a place."

"Good idea. I'll think about where."

"Good. And look. You probably don't need to copy stuff in those files when they get here. Just keep 'em until all this gets sorted out, and then you can ship them all back to the U. Scan what you need to keep. Save some trees, and all. That means you can start with triage, or something like that."

"Well, now, there's a good idea. I'm told the pile of folders is a couple of feet tall. Sounds daunting." I remembered something. "Oh, and I should tell you that Fran says he has Linton's laptop, got it from the hotel room. And the new FSU system password, which is supposed to work, is coming with the files. So, even though we didn't find anything in his apartment or office, maybe there's something on that computer of interest. And they also found what's probably his back-up drive, it's coming with the files."

"Sounds like you did have a good afternoon, even if it was just ordering Derek and everyone around." He paused and scratched an ear. "You know, some time back—I forget when—we talked about doing an aspen tour this fall. Now's the time to plan that. Seems like a few weeks from now, down that way, would be a good time frame. You could return the files to John in person."

I tried to remember what he was referring to. "Yeah, I remember that conversation. What are you thinking?"

"Well, with the drought we've been having, another horribly dry summer, the aspens will probably start changing up here pretty soon. Get this Linton thing cleared, and we can do a southwest Colorado tour a week or two later after they start here and take those files with us. And come home via Silverton and Ouray. If we get lucky and catch the aspens at their peak, it'll be spectacular."

"Great idea! Let's do it. But now I've got to figure out what I want for dinner."

\* \* \*

Angela's mention of Fontenot's as the setting for Sandy's and her decision to become engaged made it just too tempting—I couldn't *not* want to eat there. As it tends to be, they were busy, but Hal made some kind of magic happen and we were seated at a relatively secluded table for two out of the main traffic patterns.

Fontenot's had begun calling itself a "fresh seafood and grill" sort of restaurant, but their menu still grew from their New Orleans roots. Hal started with their gumbo, the traditional deep-red Cajun soup, and I opted for something I'd never get at home, fried okra with a *remoulade* sauce. For his entrée, Hal went toward traditional French with the *bouillabaisse*, and I took the in-for-a-dime approach by ordering the shrimp *étouffée*.

We promised each other to eat frugally all weekend. But we broke the promise we'd made on the way to the restaurant to avoid talking shop.

It worked for a while, at least, the no-shop-talk promise. Hal had obviously been thinking about itineraries for our aspen tour, and that occupied most of the gumbo and okra course. Because he'd previously found several web-cams down there in the San Juan Mountains, he allowed as to how we ought to get on with precise planning because he was seeing early changes in the leaves. One place he was hoping for was a stop-over in Lake City, where an exceptional restaurant, Bruno's, beckoned. Besides, Hal pointed out, the previous time we'd fished the Lake Fork of the Gunnison River, we'd nearly been skunked. Maybe we'd have better luck this year, he said.

Somehow, it surprised me that it didn't surprise me that our aspen tour would involve fly-fishing. And that I'd expected it and, even, would be looking forward to it.

But eventually, about the time his fish soup and my shrimp arrived, curiosity got the better of us, and our mutual promise for no shop talk bit the dust. I think we'd both hoped for one of those romantic dinners like Sandy and Angela's, but we were too wrapped up in recent events for that to happen.

I spent Tuesday morning catching up on paperwork at my office in the Sheriff's Department, trying not to fidget. I was expecting the files to show up there, but didn't know exactly when. It turned out to be a pleasant surprise when a State Patrol car slid to a stop in the gravel parking lot about ten-thirty.

I decided to take the files home so I wouldn't be distracted by the hustle-bustle of the office. On the way, I realized that the triage idea would be a huge help with all those files, so I put it to work as I settled in at home with a new pot of coffee. That big pile of paper seemed not quite so intimidating at that point.

It also helped that I started with the files of Linton's research awards, because they were arranged in reverse chronological order. It turned out that the first thing there pertained to a grant—a very generous grant, as I later figured out—from something called "Partners in Energy and Economic Security." At the time, that didn't mean anything to me, but as I dug deeper into the awards files, more familiar names, such as "National Science Foundation" and "National Aeronautics and Space Administration" began showing up, so my curiosity about those Partners was piqued. Some background research on them was needed, I decided, so the Partners information went into my "priority" pile.

That worked so well that, when I found that Linton's personnel files were arranged chronologically, I simply started from the bottom. The newest section, which dealt with his pre-tenure review process, was interesting, as it contained letters from people around the country—including some from both Georgia Tech and Penn State—attesting to Linton's stellar research accomplishments as well as a couple from other FSU faculty with very careful wording, not entirely laudatory, about Linton's teaching record. And there was a portfolio, apparently assembled by Linton himself, making his case for tenure. It appeared that a decision would have been imminent, but for his demise.

I set aside those materials in the "maybe" pile I was building. There were also annual performance evaluations, which included advice to the young professor, and a more substantial review of his initial performance that had been done toward the end of his second year. The evaluations and that two-year review also went into my "maybe" pile.

The rest of the file folders that John Martin had given me included some labeled, in big, bold typeface, as “Student Perceptions of Teaching” forms, a sort of multiple choice test, they looked like. Mixed in with these were also what turned out to be complaints at various levels of formality from students. Once I figured out the SPOT scoring system and skimmed a couple of the complaints, I decided that Linton hadn’t been popular with the students—which validated one of Martin’s comments—even to the point of having quite formal, legalistic complaints filed against him. These went into my “priority” pile as well. It wasn’t at all clear that any real leads would emerge from a more careful reading of all the “priority” material, but at least a clearer picture of Linton’s history at FSU would come into focus. And, perhaps, Hal would be able to figure out why Linton suddenly defected into the climate-change opposition camp.

That seemed like the simplest question, so I had a closer look at the “Partners in Energy and Economic Security” paperwork. PEES, eh?

A verse of doggerel popped into my head, something I’d heard many a time at big family gatherings during the holidays. One of my great aunts, on my mother’s side, had married a first-generation Swede, a farmer from Iowa, Ole Sorenson, who wore Farmer John denim overalls everywhere—even to church, where they were always clean and pressed, with his tie tucked in the bib—and was a consummate cut-up. That made him quite the character, especially to all of us city-bred youngsters of distinct Italian extraction. In his not-quite Swedish accent, he’d crack us kids up by reciting, usually at the dinner table,

*I eat my peas with honey ...*

The first thing, chronologically, from PEES must have been a response to an inquiry made by Linton. “Dear Dr. Linton: Thank you for contacting us...” The rest made it clear that they were indeed glad to hear from him and provided information about how to submit a proposal.

*I’ve done it all my life ...*

This was followed by a glowing letter about how pleased they were to receive his proposal and how scholarly it was. I couldn’t help but notice a reference to how Linton’s views “*seem to fit with ours...*” There was also language about their expectations and how they might use his research findings.

*It makes the peas taste funny ...*

The rest was in the nature of budget negotiations and contract-like paperwork. It was interesting that PEES seemed to be offering a good bit more funding than Linton had asked for.

*But it keeps them on the knife.*

What was missing from the PEES paperwork was any hint of where the Partners got their own funding. For all I could tell, they were just printing money and, from the looks of things, lots of it. Like the ones stuck to the knife, there was something funny about this other PEES.

By that time, it was getting on toward mid-afternoon, so I called Hal, hoping to catch him at a coffee break.

“Well, good afternoon. Hope your day’s going well?” He sounded like he needed coffee, and, I decided from the background noise, he was probably getting some.

“Just fine, Hal. I’m finishing up with the Linton files—they arrived this morning—and I want to alert you to something. Got a pencil and paper?”

“Right. Sure. Somewhere in my jacket pockets. Hang on a minute.” There was a pause and some fumbling noises. “OK, got it. What’s up?”

“I thought I’d let you know something I found out about Linton’s research files. It seems that his most recent grant, or I guess it’s been two grants, were from some outfit that calls itself ‘PEES,’ with two ‘e’s, which stands for ‘Partners for Energy and Economic Security.’ There’s no information here about where their money comes from, but it doesn’t seem like one of the usual government funding agencies.”

“ ‘PEES,’ huh? Can’t say I’ve heard of them. And they’ve been funding Linton?”

“Linton seems to have written them a letter of inquiry or something, and they jumped at it. Then he must have written a proposal, and they funded it. Most generously, in fact. But none of their correspondence includes the usual contact information, like a web site address or even a phone number. There’s a mailing address, though, a post office box in Arlington, Virginia. Very odd.”

“Indeed. Well, good work. I’ll see what I can find out about them. I can skip this last afternoon session, I think.

“Thank you! I’ll see what I can come up with for dinner. And I promise no shop talk this evening, OK?”

\* \* \*

Wednesday morning, I stayed home to comb through the Linton files more carefully. The previous afternoon’s triage had been a good start, and it was time to pay close attention to the contents of the “priority” pile and sort through the “maybe” pile again.

And although I tried, I just couldn’t find anything of any real interest in those files beyond the PEES business. It was disappointing, but at least it was done. Maybe, I thought, Hal had come up with some information about PEES. I headed down the hill to town to see if he had anything for me. The no-shop-talk the previous evening had held, for once.

The people at the MPARC conference were just breaking for lunch when I walked into the lobby. As I saw Hal coming out one of the doors from the auditorium, I heard a voice over my shoulder.

“Ms. Trieri? Do you have a minute.”

I turned to find Pat Grover standing behind me. “Uh, yes, if you’ll give me a minute first.”

I chased Hal down. “Hi, guy. I finally finished those files. Had lunch?”

“I was just thinking about it. How about we take a stroll?”

“Um, I want to have lunch with you, but someone needs to talk with me first. Can we manage that?” I had my fingers crossed.

He nodded. “No problem. I’ll go find some take-out sandwiches and meet you in my office, how about?”

“Excellent. Now, let’s see what Dr. Grover wants.” I walked back over to where she was waiting. “Sorry. I wanted to let my husband know I’m here, so we can have lunch.”

Her eyes got big. “You’re married to Dr. Weathers? Really? He seems like a great catch.”

“That’s my feeling, too. Now, what can I do for you, Dr. Grover? Shall we go see if that bench of ours outside is available?”

It was, and we sat in the shade of the aspens again.

“So, Ms. Trieri, you told me you were looking for background information about Phil Linton. And I told you everything I can think of about me, or, I mean, my role in his background.” She paused, using what I think of as a professor trick to make sure the student is keeping up, so I nodded.

“Anyway, I thought of something else. It doesn’t involve me, that’s why I didn’t bring it up before. But it’s something about Phil’s background.”

“I’d like to hear it. At this point, we’re casting a wide net.”

“Well, let’s see if I can get it to make sense. Like I said before, he and I were an item for a while, when we were both grad students at Georgia Tech. After we parted ways, I didn’t see him anymore, socially or anything, because we had very different circles of friends and we were in different departments. But I would see him around campus sometimes. I mean, Tech is a good-sized place, but after you’ve been, um, close to someone, it’s easy to recognize them in a crowd, right?” Another of those pauses, so I nodded again.

“I realize that this is going to sound like catty gossip, and it was all eight—nine?—years ago. But you said you wanted information about Phil.” She waited for me to nod again. “To make a long story as short as I can, it was toward the end of our time there, his and mine both, shortly before he moved up to Pennsylvania, I guess, that I was seeing him around campus in the company of another woman. At the time I really didn’t think anything of it. I believe I told you that our parting was mutual, so I wasn’t jealous or anything.”

This time her pause was for a deep breath. “Now, I don’t know exactly when he left Tech for his next thing, that post-doc he had in State College. He told me about that at dinner the other night. But I was around for another semester, and it was just after the beginning of that semester, the next fall after he got his Ph.D., I mean, that there was a story in the Atlanta paper, with a picture, about a woman who had committed suicide. I recognized the picture as the woman I’d seen Phil with.”

“Hmm. To be clear, you’re saying that a woman whom Linton had been seeing, or at least you’d seen them together, she committed suicide shortly after he left town?”

She nodded. “I saw them together on several occasions, but I don’t know anything about what sort of involvement they had going. And, see, in the newspaper article, it mentioned her name, Miciela Abercrombie, and said that she was a program assistant somewhere in the administration, the registrar’s office, maybe. And, um, that she was married to a soldier, an Army guy, who was stationed in Korea, I think it was.”

“Ah. So Linton was seeing a woman who was married to a soldier stationed overseas; he, meaning Linton, left town; she killed herself. The plot thickens.”

“Yes, well, to push the metaphor, I’d say the plot’s congealed. Thing is, there was a rumor around campus—she was an employee on campus, after all—that she was a few months pregnant when she died.”

“Oh. Goodness. Miciela Abercrombie, you said? I guess I’ll have to do some digging. Presumably, the Atlanta paper keeps archives I can search.” I tried to stop looking shocked and smiled. “Ms. Grover,

thanks so much for this. I don't know if it will have any bearing on Linton's death, but it's certainly the sort of background I was looking for. We'll just have to follow up and see where things go."

"Well, it seemed like I should tell you about it."

"I'm glad you did. Do you suppose that any of the other Georgia Tech alums who are here would know about this?"

"Mmm. Let me think." She stared off into the distance. "I believe they all were long gone by the time of the suicide. Except maybe Dex. Uh, Dexter Lemone. He's got a table here for his organization, that SCARAB outfit."

"Dexter was at Georgia Tech? I didn't know that."

A rosy blush crept upward from her collar-bones to her cheeks. "Another of my youthful indiscretions, I'm afraid. Back before I figured out how to pick 'em more carefully. Uh, I'd dumped Dex a couple of years earlier in favor of Phil. Duh."

I couldn't help but laugh. "Happens to the best of us."

I switched my smile to the apologetic mode. "And thank you again. Now, though, if you'll excuse me, I've got to find out what sort of sandwich Hal rustled up for me. I promised to have lunch with him."

The big deli sandwich—a sort of club with three meats and cheese—Hal bought for me took care of my hunger and left enough over for supper. When he saw that I was slowing down, he decided that conversation was once again possible

"So, I looked into that PEES outfit you mentioned yesterday." He was still nibbling around the remaining edges of some kind of Italian sub he'd got for himself. "They're quite coy about providing the sort of information that you'd normally expect from a non-profit. And they're not tax-exempt, so they don't have to file public tax returns."

"Do they have a web site?"

"Yep. What would we do without web search engines? It's not one of the usual suspects, though, like pees.com or pees.org. In fact, pees.com is some German electronics company. Anyway, I found it and learned quite a bit. It must be that Linton found it a couple of years ago and sent them the letter you mentioned." He heaved a sigh. "And I guess I should have expected what's there. It's obviously some kind of front for the activist fringe of the fossil-fuels industry. The people who are digging in their heels against anything that interferes with their business-as-usual profit-making, climate change be damned. If Phil was getting funded by them, then he was in the business of creating propaganda for their so-called education campaign. The one that provides fodder for the right-leaning wingnuts and the anti-environment politicians."

"So Dexter Lemone is right? Not that Linton deserved to be shot, I don't mean that. But that he sold out? And that he wasn't doing real science these days?"

"Seems like. But, you've got to remember, plenty of scientists have become active in political issues. And that means that the objectivity of their science comes into question, too. It's not just the climate skeptics like Linton. Fortunately, our meeting here has been relatively free of that stuff, with the exception of Linton. And, of course, he's not disrupting things this week."

"Lemone isn't really part of the meeting, I guess."

"We have public comment opportunities now and then, and people like him can say their piece. But they're limited to two minutes, and if the list is long, those who haven't spoken get priority. I think he's

had only a couple of chances since the meeting started. And our official meeting people, the delegates, they saw right through him during his first time behind the microphone.”

“So Linton became a shill for the fossil-fuel industry. Does that make him a target for murder?”

“Doesn’t seem likely. I mean, there are lots of shills like that, many far more visible. Surely, an environmentalist hit squad would go after the visible ones first. I mean, for all his local celebrity, at FSU and at this meeting, he was really very small potatoes.” He cocked his head sideways. “So, I saw you talking with Pat Grover yet again. Anything new?”

“Ha! Is there ever. Had your dose of soap opera for today?”

\* \* \*

## Six

After discussing dinner plans—we agreed that finishing the rest of those big sandwiches along with tossed salad would be plenty—I left for points north and west, specifically the sheriff’s office in Hot Sulphur Springs. I needed a look at Linton’s laptop, and I was hoping that the department’s computer wizard could help both with that and with an online search for information about Miciela Abercrombie. And, especially, her husband. Where, I was wondering, had he been the previous Friday?

Fran’s department had managed just enough budget restructuring to hire Linda Welch as their very own computer person. Previously, the sheriff’s department had shared one of the county’s people, but so much in the way of police work had begun to depend on computer wizardry that a dedicated specialist was needed. Because there was only one of her, she was stretched pretty thin, given both the hardware and software worlds to manage, not to mention that new, very weird world of social media. But she liked challenges.

In fact, it surprised me that she hadn’t already cracked Linton’s password. But then I looked at the slip of paper that John Martin had put into that top folder and found a twelve-character string of random letters, numbers, and oddball keyboard characters—just like what all of the computer security people recommend and what no one uses because it’s impossible to remember.

When I showed her that new password and told her how it was supposed to have been pushed out to the laptop, she was skeptically hopeful.

“I think it’ll depend on how the guy who owned this laptop—Linton did you say his name was?—how he had it set up. Maybe the push worked, but maybe he had to give it permission. Anyway, we’ll see.”

I handed her the USB drive I’d liberated from Linton’s office.

“This goes with it? Ah, backups, maybe. Well if that password works, we’ll be in business. Let me finish this for the sheriff, about ten minutes. Then I’ll have a go at the laptop.”

That gave me the chance to hunt down the sheriff and fill him in about my trip, and especially about what Pat Grover had told me.

“You said that was eight or nine years ago? Seems like a long time.” Fran was clearly not encouraged.

“Fran, it’s about the best thing in the way of motive we’ve seen. A guy goes off in the service, his wife gets seduced by another guy, or at least he sees it that way, she gets impregnated and commits suicide. I’d say he’s got reason to have a grudge. And if he was stationed overseas, it might take a long time for him to act on it back here in the states.”

“But you don’t even know his full name.”

“ ‘Abercrombie’ is a good place to start, at least. I’m hoping to be able to search the Atlanta paper’s archives online. He’ll be mentioned in the obituary. And Linda might be able to help with that.” I looked at my watch. “Oh, she may be started on Linton’s computer by now. Want to see?”

His curiosity got the better of him, so he followed me back to Linda’s cubicle.

When she noticed him standing there, she jumped up and almost saluted. “Sheriff! Ah, sir!”

“She was in the Navy.” Fran said this looking at me, then he turned to Linda. “Easy there, Linda. Down, girl. When it’s just us, we’re casual around here. If you feel the need to be formal in public, fine. Otherwise, casual is better. Now, Annette tells me you’re going to be able to get into this computer.”

“Yes, sir. All done. Uh, the password worked, Director Trieri.”

Fran smacked himself on the forehead. “Linda, c’mon. Really! It’s just us. I’m Fran, she’s Annette. Really. Chill. It’s fine. Please. Sit down and show us.”

“OK s..., uh, Fran.” She sat and turned to the keyboard. “The password worked, but there’s nothing out of the ordinary. Just a computer running Windows, the newest version. And that USB drive is a backup, uh, Annette. I thought I’d restore those files onto another disk someplace, just to see if there’s anything unique there.”

“Linda, can you tell if there are notes from this meeting that’s going on up in Winter Park?” I was interested in anything that Linton may have had to say about other meeting participants.

“Not without a search. Although there’s a folder here on the desktop called ‘IPCC.’ Could that be of interest?”

“Perfect. I’ll take the laptop, if you don’t mind, and let you work on that backup drive, how about?”

“OK. Um, ma’am, can I suggest that we change the password again, first? And that I disable that business of how new passwords get pushed to it?”

“Outstanding idea, Linda. Please do it. And, hey, make the password something we can remember, OK? I mean, it probably won’t be connected to a network again. We’ve got other systems for that, right?”

“If it’s OK with you, Fran, Annette, I’ll be making some changes so that this computer will be under our full control. That way, we won’t have to worry about anything.”

“Mmm. Look on the bottom of that thing, Linda. I bet there’s a property sticker there proclaiming it as FSU property. That means it’s State of Colorado property, and I’m a State of Colorado law enforcement officer. Therefore, I have jurisdiction over that little box. And having full control is just right. Thanks in advance for the changes.”

Linda looked a little dazed, but that was all right with me.

While she was working on Linton’s laptop, I returned to my office, to find Angela Espinosa concentrating on paperwork that I recognized was part of her required firearms requalification. Seeing it reminded me that she and I would be spending part of a day at the firing range down at the base of Byers Canyon sometime soon.

“Annette! You’re back! Do any good this morning?” She was still new enough in my office that she was full of enthusiasm, even for paperwork. Or maybe it was youth in action. Whatever it was, it made me feel tired.

“I did. And also a tad more when I stopped at MPARC on my way in.” I sketched a summary of my various findings for her.

“Married, with her husband overseas in the service, and pregnant? And abandoned by the father? No wonder she couldn’t handle it all.” Angela was indignant. “Do you think this has something to do with Linton’s death? And what about this guy Lemone? He’s got a reason to have a grudge, too, if he thinks Linton stole his girlfriend, that woman Pat Grover.”

“No way of knowing, yet, either of those things. I think a little more research into this Miciela Abercrombie would be worth the effort, though. At the least, maybe we can find the newspaper article that Pat Grover referred to. And I need to talk with Lemone again. Ugh.” I shrugged. “The thing is, we’re light on motive in this case.”

“So you think maybe her serviceman husband did this, for revenge or something?” Angela looked skeptical.

“I’m not ready to suggest that, at least not yet. But I want to check it out. If you’ve got a better idea, I’ll sure listen. Anyway, we’re into Linton’s computer now, and maybe we’ll find something of interest there.”

“Ah, that’s definitely progress. And something I thought of, Annette. Linton and the post-doc guy, um, Chris Brothers, they planned to go mountain biking last Friday. But, assuming this really was a homicide, whoever did it must have known about their plans. Do we know who they might have talked to about going up there on Friday, the lift, the timing? Or who could have known about it somehow?”

“Hmm. Good thinking. I didn’t ask Brothers about that specifically, and maybe it would be a good idea to. He certainly didn’t volunteer that anyone else knew about it, beyond saying that Linton had proposed the outing at a coffee break, I think it was. Or maybe he said a reception. But this is important, because it’s a huge component of opportunity. If the perp, or perps, didn’t know about the biking plans, they wouldn’t have been able to set up that so-called ‘accident.’ And the means, that rock, which was lying there on the hillside. Motive, means, opportunity. That’s what we need.”

“I guess the conference is over tomorrow, right? Seems like Brothers might not be around too much longer.”

I checked my watch. “Right again. OK, tell you what. How about you tackle the computer search—you’re better than I am at that anyway, and you can email me the results—and I’ll hightail it back to Winter Park and catch him at the end of today’s session.”

\* \* \*

Wednesday supper was decidedly more casual than Tuesday’s, at Fontenot’s, had been. The sandwich leftovers were just fine, especially when washed down with some Beaujolais. While we ate, we caught up on our respective afternoons—mostly mine.

“I had another interesting conversation with Chris Brothers this afternoon.”

“Yeah, I saw the two of you over there in the corner by yourselves.”

“Angela, and she’s doing the computer search on Miciela Abercrombie, by the way, she pointed out that if this really was a homicide, the person, or persons, who were responsible for it had to know that Brothers and Linton were going mountain biking last Friday, and they also must have had some idea of

where they were going. Chris said that he didn't tell anyone, but, of course, he couldn't speak for Linton."

"Mmm. Seems like Linton stayed pretty much to himself during the evenings, although I don't really know that. But he didn't seem to socialize much."

"Yeah, well, what Brothers did say that was interesting was that he and Linton talked about going biking the Wednesday before, during one of your meeting's coffee breaks. He clarified that for me today. And he said there were all sorts of people around, and they could have been overheard."

"Did they talk about where they were going? Like, what trails?"

"Apparently. Brothers said that Linton was talking about a map he'd downloaded, and that he, Linton, I mean, was especially interested in some expert trails he saw. They talked about details quite a bit, I guess."

"So it's someone at the meeting, then. Great." Hal looked pretty disgusted at that point.

"Or someone at the meeting told someone else. I have to say, I'm going to have to look more closely at Mr. Lemone, the SCARAB guy. I found out that he was at Georgia Tech around the same time Linton was. *And* he got dumped in favor of Linton by Pat Grover."

Now Hal looked surprised. "You really think that Lemone, or maybe SCARAB, put out a hit on Linton? Really?"

"Yeah, well, I guess it's a stretch, isn't it? But there's something about that guy that pisses me off."

"Hmm." He laughed and shook his head. "Just don't neglect other possibilities in the meantime. I mean, everyone leaves town Friday night or Saturday. Well, mostly. No doubt some people will hang around for vacation time, but I don't know who."

"Oh. So I've got all day tomorrow to get this figured out, eh?" I tried, but probably failed, to waggle my eyebrows, Groucho-style. "Well, on that note, I'm going to indulge in dessert. I stopped at the Safeway and got some ice cream and cookies to bring home. Want some?"

Hal, of course, was not going to say "no" to that offer, so we indulged. I wound up eating too much that evening by half at least. But I didn't drink too much, so Thursday morning I was ready to rock 'n roll when I saw Angela's email about the results of her computer search. It provided new, and quite interesting, information.

Miciela Spadaro Abercrombie had married one Jason Albert Abercrombie thirty months before her suicide. The groom was a third-year student at Georgia Tech and part of the ROTC program there; his initial deployment, immediately upon graduation, was as a U.S. Army Second Lieutenant in a quartermaster company in South Korea. He had therefore been overseas for about a year before his wife killed herself. Angela noted, in a sort of footnote, that based on her research it was improbable that Lieutenant Abercrombie would have visited stateside during that year. Jason Abercrombie's current location was unknown, although, because Angela couldn't find anything about him on the internet, including its social media branches, she suggested that he might still be in the Army.

More interesting, to me, was what Angela found and didn't find about Miciela's family. Her father, Tony "the Ferret" Spadaro, according to archived newspaper stories, had been quite active in the New York crime syndicates until a year after Miciela's death. His role was not quite clear, but his arrest on a variety of mob-related charges and subsequent ratting out of his entire organization had made large-type headlines for some months. Then he, as well as his wife Fabiana, had simply disappeared along with Miciela's two brothers, Antonio Junior and Danilo.

It seemed obvious to me that Antonio Senior had taken advantage of the federal witness protection program and had since been living somewhere obscure under a different name and, most likely, in disguise. Barring some sort of miracle, any further investigation of Miciela's family was very likely going to be a dead end. On the other hand, if Phillip Linton's callous behavior had somehow precipitated Miciela's suicide, the Spadaro family's personal motivation to extract revenge could well be right up there with Jason Abercrombie's. And their cultural motivation could well be even stronger, if she really had been pregnant. All this made, for me, any motivation that Dexter Lemone may have had pale by comparison.

So, finding the whereabouts of Jason and of the Spadaros seemed to be a priority, despite their being far removed from the scene of the action and from both means and opportunity.

Rather than have Angela work at a task at which she'd probably not be able to succeed, I decided, after considerable debate with myself, to call in the heavy artillery.

"Mac MacQuarrie here. Oh, wait. I'm supposed to say, 'MPARC, Mac MacQuarrie speaking.' Sorry, I'm still learning." It was early in the day, and he sounded like he needed more coffee.

"Mac, good morning. It's Annette. And I really don't care what you're supposed to say, I'm just glad I caught you."

"Annette! Good morning! Say, Hal said you went to Fontenot's a couple of evenings ago. Is that as good as I've heard?"

"Best in town, assuming you're looking for seafood with a southern Louisiana bent. Most satisfying. Take Sam there, and insist on a table away from the crowd. Hal managed to pull that off, and I'm sure you can, too."

"Good. Glad to hear it. Sam and I need an evening out for some conversation. And I should warn you, that conversation may come your way eventually. She's making noises about wanting to move over to Estes Park, and I'm betting she'll want to talk with you about it."

"Really? Oh, Mac. Hal and I would hate to lose you guys. Except, I guess, it's just over those hills, the big ones to the east. But thanks for telling me, so I can be ready if Sam raises the topic."

"Thanks, Annette. And it's not like I need you to talk her out of it. I mean, what she says makes a lot of sense in some ways. But she needs someone to listen, someone besides me. Anyway, what can I do for you this fine morning?"

"Mac, I remember that you did a lot of magic with computer searches, searches on computers that people like me don't have access to, for that mine investigation."

"Yeah, well, I do still have some connections to that old, weird world I used to live in." He sounded hesitant. "But I don't know how I could help."

"You know about the Linton case, right? That guy at Hal's conference that turned up dead?"

"I'll tell ya, Annette—it's the talk of the town. Or at least my little part of it."

"Well, I don't know if this classifies as an MPARC security thing or not, but it would help us make progress on clearing it—and, here's a secret, it's a homicide, according to the ME—it would help if I could get some restricted computers searched."

"Oh. That's easy. What do you need to know?"

As I was telling him, I decided I didn't want to know what he had thought I wanted, when he'd hesitated before.

Unbeknownst to me, Fran Schmidt had decided to make the autopsy results public on Thursday. That explained the influx of non-sheriff's people into the departmental offices about the middle of Thursday morning, something I noticed after my phone call with Mac. Many of those people were of the overly-coiffed, hyper-made-up types that marked them as TV reporters even without their camera guys tagging around after them.

When I figured out what was going on, I went looking for Fran and finally found him in his office behind a closed door.

"Big day today, huh?" I decided to let him tell me about it all.

"Yeah, well, George has been bugging me, says it'll make him look bad if his report isn't released, and he's right. I owe it to him. So I'll have myself the usual little show-and-tell out there." He was oddly calm about it all, given his usual case of nerves before going on such public display.

"It's been almost a week, and they're going to want to know about suspects and so on. Got a story?"

"Not unless you've managed to pull a rabbit out of your hat in the past couple of days, I don't." He shrugged.

"Maybe you could calm things down if you said that we have no reason to think that anyone from here in Grand County is responsible." I rubbed the end of my nose. "That's true enough, after all. It could raise questions about where we're looking, but you can dodge those by talking about not compromising the investigation."

"Won't they ask about people from Hal's conference?"

"Ah. Good point." I thought for a few seconds. "And if anyone at the conference talks to the press, that could make things a bit dicey. No one there seems to have thought very well of our victim."

"But you've talked to them, and you got only helpful information, right? No reason to suspect any of them, is what you said."

"Not really. I mean, there's nothing of any real substance. And maybe that's the answer if questions about the conference come up. Everyone there is shocked, and they've cooperated fully, and there's no reason to think any of them is involved."

"Angela told me that she was doing a computer search for you. Want to tell me about that?" He stared right through me, clearly not too happy.

"I think I'd rather wait until this press conference is over, Fran. For one thing, she didn't get very far. And, for another, it's all pretty removed from this Grand County homicide. Also, we don't want to show our hand on this one too soon. We might frighten someone off."

"Hmm. OK. Well, does that mean you've got a solid lead?"

"'Solid' is probably too strong. It's more like a Jello lead. But I think that if you were having Mary do this press conference, you wouldn't tell her about it in advance." I shrugged. "We can talk about it over lunch or something, OK?"

So it was that my colleague the Grand County Sheriff went into his press conference as less than a happy camper.

But it worked out well, all-in-all. He started with his usual announcement, a summary of the press release that was simultaneously handed out.

“Thank you for coming, all. It’s been almost a week since we recovered the body of a white male, a fatality near a mountain bike trail here in eastern Grand County. He was identified as Phillip Linton, age 32, single, a resident of Durango. It was our initial assessment that the death was accidental, but we now have autopsy results that suggest otherwise. We’re now treating this fatality as a suspicious death that may be a homicide, and a priority investigation is in progress. I’m afraid, however, that so far the headway we’ve made is limited to eliminating possibilities rather than closing in on a suspect. To complicate matters for us, this week was full of the sort of petty crime that’s kept us busier than we’re staffed for, what with some local events that attracted, well, less than upstanding citizens to our valley.”

He looked around the room. “I’ll try to answer questions, but I have to warn you that I’m going to have to declare a broad area of interest off limits, to protect the integrity of our investigation.”

One of the TV people, a middle-aged man who, from the back, was obviously wearing a hair-piece, jumped up. “Why did the autopsy take so long, sheriff?”

That didn’t faze Fran in the slightest. “‘Take so long’? Really? I guess you folks from the affluent parts of Colorado, like the Front Range, are used to instant gratification or something. Up here, we’re under-funded and, like I said, under-staffed on all quarters. Given all the activity we’re dealing with this time of year—the summer tourist season has begun to rival the ski season, after all, and this was the summer week from hell—I’m quite happy that we had the autopsy results when we did. Our Medical Examiner, George Neering, is the best in the state, as far as I’m concerned, and lots of others, too, and he did a superb job.”

“What was it in the report that led you to conclude that the fatality might be a homicide?” Hair-piece guy wasn’t giving up easily.

“That, actually, was Dr. Neering’s conclusion. And he won’t be telling you any more about it than I will, because we need to keep that confidential as part of our investigation.”

“Sheriff? Lou Wendelstadt here, Grand County Times. Could you elaborate on your ‘week from hell’ comment?”

“Lou, you know what all’s been happening up here this past week as well as I do. All sorts of summer events that draw crowds from the rest of the state and from even farther afield. Lots of non-residents in town, more than the usual number. Groups that don’t necessarily get along. And my job, and the job of my staff, is to play referee. Very time-consuming and manpower-intensive.”

“Sheriff Schmidt? What is the role of the FBI in this investigation?” A woman both over-dressed and overly made-up, at least by Grand County standards, had arisen.

This question did surprise Fran a bit, and he looked it. “Role of the FBI? Huh? Uh, as far as I know, no role at all. We haven’t called them, and they haven’t called us. And there’s no reason for them to be involved, as far as we can tell.”

“That’s not what I’m told, sheriff.”

“OK. But what you’re told isn’t at all relevant to me unless *I’m* told, and told by the FBI, not by some rumor-mongering bystander.” He stared bullets at the reporter, and she sat down.

It occurred to me that perhaps she had meant “CBI,” and so I decided that it was a good time to escape gracefully. I noticed, as I walked out the door, that Angela was following me.

“Whew! Angela, I think we got out of there just in time. I bet that TV lady really meant to ask about our role, not the FBI’s.”

“I think you may be right, Annette. So, did you get that email about the Spadaros?”

“You mean the one where you said they just disappeared?”

“Right. I’ve done some more digging, but there’s nothing there. Or, at least, nothing on the computers I can search.” She looked discouraged.

“When I read that—and, by the way, good job on what you *did* find—when I read that I thought of the federal witness protection program. It’s their job to disappear people, not in the South American way, of course, but just as effectively.”

Her eyes got big. “Oh. Yeah. I see what you mean. Of course. I feel dumb that I didn’t think of that. I mean, Tony the Ferret turned snitch. He’d be dead meat without some kind of protection.”

“And any information about where he is and what his name is now and, I suppose, what kind of plastic surgery he’s had is buried way deep in some super-secret computer somewhere in the U.S. Marshals Service offices. Way too deep for the likes of us to have access to it.”

“Annette, you have a funny look in your eyes.” Angela and I had been working together for only a couple of months, but she’d learned to read me right away.

“Who, me?” I tried to look innocent. “Anyway, if I find out anything, you know, if a little birdie tells me or something, I’ll be sure to let you know. Meanwhile, though, I had that chat with Chris Brothers you suggested.”

“Huh? I didn’t suggest it, you did.”

“You suggested that we need to figure out how the perp, or perps, knew that Linton was going to be on that trail at that time, and you mentioned Brothers. Anyway the answer is that Linton and Brothers talked about their plans in the middle of a crowd at a coffee break at that conference.”

“Oh. Well, that doesn’t help much.” She was obviously let down.

“Except that it means that someone at the conference is involved somehow. I’d about given up on that. Oh. And Fran doesn’t know this, yet. Nor does he know about your computer search results. You need to be available to explain it all to him. I promised that we would. I should say, though, that when I talked with him before, he seemed put out that he didn’t know about your work already. So when you explain it to him, you can mention that you just started yesterday afternoon. And a brief summary is probably all that’s needed.”

“I have to explain it to him?”

“Don’t worry. Let’s go find him together. We can gang up on him. He’ll be fine, you’ll see.”

\* \* \*

## Seven

To his credit, Fran was patient with both of us. Angela went first and, as I’d suggested, provided only a summary of her findings about the Spadaro family. My comments about what Chris Brothers had told me the day before were more interesting to him.

“And this conference ends tomorrow? So people will be leaving town? That complicates things, doesn’t it?” He leaned back in his chair and put his cowboy boots up onto a pile of paper on his desk.

“At least we have solid contact information for all of them.” Although I was trying to be as upbeat as possible, the prospect of traveling all over North America for more interviews didn’t seem very appealing to me.

“Mmm. I’d sure hate to see this case go cold.” He tapped the pointy toes of his boots together. “Annette, you’ve maintained that there must have been two people involved in this, right? I guess that means that one was up at the top of that expert trail, by the top of the lift somewhere, and the other one was down the mountain a ways, in the woods. So they communicated by walkie-talkie or something.”

“Or maybe text messages, or phone. There’s cell service up there, right?”

“Right. I forgot. Hmm.”

Angela jumped in. “Sheriff, we could get cell-phone records from the tower that reaches that part of the mountain, couldn’t we? And I finally got a list of everyone who rented bicycles at Winter Park last Friday. But I haven’t had a chance to look at it yet.”

He looked impressed. “Good thinking about the phone records, and the list could help, too, because of this: Where I was going before was to suggest that it’s possible that this guy Brothers you talked with is the person who was at the top, acting as a look-out and so forth. I’m not saying it’s true, just that it’s possible.”

“Fair enough.” I didn’t believe it, but it *did* seem possible.

“Right. That takes care of how the perps knew about the biking arrangement, where they were and when they were there. Now it’s just a matter—well, maybe not ‘just’—but it’s a matter of figuring out who was down there on the mountainside moving rocks and bashing heads.” He pointed a finger at the ceiling. “And I think you told me that this guy Brothers lives over in Boulder, which is close enough that some friend of his could have come up here for the day. They discussed the mountain biking on Wednesday, you said. That’s plenty of time to set all this in motion.”

I opened my mouth to object, but then I had to close it when I realized that he was right. Except for one thing.

“What about motive, Fran?”

“Aw, hell, I don’t know. Maybe something early in the meeting, like on Monday or Tuesday, pissed him off. Or maybe there was something from their past, like at some other meeting or something. Don’t all these guys travel in the same professional circles?”

“Actually, they don’t, Fran, as I found out when I went through all their credentials last weekend. They’re all over the scientific map. Although I don’t remember specifically about Brothers and Linton. Brothers said he’d never met Linton before this meeting, though.”

“Mmm. Let’s make sure their respective backgrounds corroborate that. If so, well, I’ll be less inclined to waste time and energy on Brothers. Of course, that puts us back to square one.” He looked at Angela. “Except for the cell-tower records. That’s a good idea. And maybe we could get a list of all the people at the conference and see how that compares to the rental bike list. Any one of them could have done what I was just speculating about.”

And another idea, although perhaps not exactly such a good one, had popped into my head. Someone who did have motive was my favorite scapegoat, Dexter Lemone. If he’d overheard the conversation between Brothers and Linton, he could have been the second guy, the one on the mountainside. And Brothers, at the top, might not even have known Lemone’s plans. As much as I’d decided that Brothers was not involved in Linton’s death, this possibility was making me re-think my earlier conclusion. Lemone’s whereabouts the previous Friday suddenly became important for me to know.

I remembered that Lemone had declined to talk with me about where he had been on that fatal Friday until after that autopsy report was public. And now it was. He’d also suggested he would be

wanting a lawyer. Given that, it seemed to me that we ought to pick him up for questioning and hold him in Grand County's resplendent public facilities until his legal team showed up. At least, I thought, that would give me a warm, fuzzy feeling all over.

That reasoning gelled in my head as Angela and I were leaving Fran's office, so I turned back and outlined it to him.

"You want to pick up a guy for questioning because, first, he said the victim deserved to be 'taken out and shot,' I think you said, because of his political views, plus he has a personal grudge, and, second, because he wouldn't talk to you about where he was last Friday?" He frowned. "Seems like the former is just stupid, but the latter could be interpreted as withholding evidence or some such thing. How do you think he'd react? Could be he'd sue us, I guess."

"He'll want a lawyer, I'm pretty sure. That'd give us some time to make him cool his heels and wake up to how seriously we're treating this." I shrugged. "He did a pretty good job of just blowing me off before."

"C'mon, Annette. I don't see a justification to bring him in. The last thing we need is a harassment lawsuit to deal with."

"Fran, aside from that connection to Linton's girlfriend committing suicide, Lemone is the only person we've found who has anything resembling a motive. And he was in the right place at the right time, by which I mean he was here in the valley last Friday with a day off from the conference. And he could well have overheard Linton's and Brothers' plans. At least we should find out if Lemone has an alibi." I understood Fran's desire to avoid unnecessary litigation, but it was frustrating that he didn't seem to want to pursue this lead.

"Well, go question him again, and lean on him this time. Make sure he knows that we know it wasn't an accident. If he's got a verifiable alibi, then he ought to tell you about it, I guess."

Although I didn't relish the notion of talking with Lemone again, this was enough of a victory that I felt successful.

I checked the time. "All right, I guess that makes sense. And if I hustle, I can catch him during the conference lunch break."

I may have set yet another record for getting from Hot Sulphur Springs to Winter Park Village. Partly, it was my frustration, but I really did want to avoid having to drag Lemone out of the afternoon session. That, I knew, would be the penultimate afternoon session, and no doubt he'd want to observe it.

I was glad to find him sitting behind his propaganda table, as I'd begun to think of it, munching a sandwich. There was a mountain bike leaning against the wall behind his chair, and it bothered me that I couldn't remember if he'd had it the other times I'd seen him in the lobby.

"Ah, Mr. Lemone. I'm glad I caught you before the afternoon session starts."

"Ah, crap. Now what?" He, it seemed, was his usual not-so-gregarious self.

"When we talked the last time, the sheriff's office hadn't released information from Phillip Linton's autopsy, and I wasn't authorized to do so. But now it's been discussed in a press conference." I paused for effect, but it didn't work—he didn't react. "It turns out that Linton's death was not accidental. Rather, it appears to have been a homicide."

That did have some affect, although perhaps not what I'd expected. He continued chewing and swallowed, then picked up a bottle of water and took a long drink. No doubt he was buying time to think.

"And? You want to talk with me why?"

“You declined to discuss your whereabouts last Friday morning before, and, well, I’m sure you can see that it’s more important than ever now.”

“Meaning I’m some sort of suspect?”

“No, I wouldn’t say that. Yet. But, based on your comment to me about Linton’s deserving to die, I do need to put you in the ‘person of interest’ category. If, however, you have a verifiable alibi for last Friday morning, you’ll be in the clear. Understand?”

“What I understand is that you’re harassing me for no good reason. And those Denver lawyers with all those ambulance-chasing TV ads do more than chase ambulances, they also take on harassment cases.”

“Mr. Lemone, you can make your life much easier if you simply tell me about where you were, and when, last Friday morning. By not cooperating, you’re deepening my suspicions, and that will apply ten-fold with the sheriff. He may just decide it’s too risky to let you leave his county. And if you’re held for the twenty-four hours allowable without a charge, I doubt if any of those lawyers will be interested in you when they hear that you’re there on a possible murder one.”

“You wouldn’t dare!”

“Oh good grief. Look, pal. I might look to you like a member of your mother’s bridge club or something.” I was remembering Hal’s wisecrack about how Chris Brothers would likely want to call me “Mom.” “But I’m an honest-to-God law enforcement officer with all the tools of the trade, including a service weapon and cuffs and various other doo-dads. And I know how to use them. I don’t think I’ll ever be able to forget a poor schmuck a few years ago who was also probably thinking ‘you wouldn’t dare’ when I had him in my sights and he didn’t obey my command to drop his weapon and I blew him away. Do you really want to play bluff here? I mean, c’mon, man, all you need to do is to talk to me about where you were last Friday.”

My little speech had been delivered in a gentle, conversational tone, but, at the end, he began to slide his hands off the table-top, where they had been resting, toward his body. So I turned up the gain.

“Mr. Lemone, I command you to *freeze!*” And I reached behind my back toward where I was wearing my Glock. “Keep your hands on the top of the table where I can see them!”

\* \* \*

Like a good boy, he froze. This also had the effect, I could see in my peripheral vision, of attracting a good bit of attention, part of which involved people who, it seemed, had been directly behind me and suddenly decided to move off to the sides.

I was glad to see that I’d turned up the gain enough, to about my level two-and-a-half voice, to get Lemone’s undivided attention. He suddenly stopped with the sneering, arrogant look and become frightened.

“Ah, OK. Shit. Everyone’s staring at us. Um, I’m frozen, OK? And maybe we can just chill for a minute until people lose interest, how about?”

As casually as I could, I slid my hand around and into the front pocket of my slacks, and I also resumed my gentle, conversational tone. “Can I now assume you’re going to cooperate, Mr. Lemone? And you should know that the fact that I had to use that command level at you puts me fully in the driver’s seat here. I did it because it appeared to me that you might be reaching for a weapon. With lots of witnesses. I now have probable cause to arrest you and incarcerate you pending a judicial hearing.

Given all the attacks on law enforcement officers in recent times, judicial hearings of that nature tend to favor positions such as mine. In other words, pal, you either cooperate fully or you're fucked. Got it?"

He reminded me of a bouquet of daisies that had been neglected—he flat-out wilted. I wondered if he'd burst into tears.

The tap on the shoulder was startling, but it was gentle enough that I didn't jump too high.

I turned my head, still staring at Lemone, just enough to say, "Yes?"

Hal's voice was reassuring. "Everything OK here, Ms. Trieri?"

"It is, Dr. Weathers. I hope your afternoon session goes well." And I turned just enough to wink at him.

He smiled and turned to the onlookers. "OK, folks, I think we need to get our afternoon session started. Let's head on in there."

And, to my relief and even more to Lemone's, probably, Hal sort of shooed everyone ahead of himself into the auditorium. I waited until the lobby was cleared out.

"Mr. Lemone, I was trying to get our conversation finished in time for you to be part of this session. But your attitude and all foiled my plan. Do you want to have our conversation here, or would you like a bit more privacy?"

"Uh, well, I ..."

"I don't want to have a conversation with me standing here and you sitting there. That's stupid. So I could snag another chair and sit here, if that would work for you. Or, we could go outside and sit on a bench out there, where I had a very nice conversation with another conference person, one of your old girlfriends, in fact. It's under some lovely aspens."

He picked the aspens. I found it amusing that he was extraordinarily careful to keep his hands away from his body and visible to me at all times during our walk outside to that bench I had in mind. I was wondering if he'd rise to my bait about Pat Grover, and also about why he'd lied previously about knowing Phillip Linton.

"So, Dexter—I feel like we should be on a first-name basis by now—what's the problem here? Why don't you want to tell me about last Friday? Are you always this obstreperous? Is it my law-enforcement credentials that put you off? Or what?" It occurred to me that five questions might overload his circuits, but I was prepared to be patient in case he needed a reboot.

"OK. So here's the deal. Yeah, I said that I thought Linton deserved to die. But, c'mon, that was a figure of speech, you know? I was as shocked as everyone else when he did die. And, I have to say, I was more upset about it than some of the other people at this meeting. During that first week, he made some people really mad, and they never met him before. I mean, here he is, an assistant professor at an obscure little university out in the boondocks, and he's coming on as if he's a National Academy member or something."

He let out a big sigh. "That sort of arrogance fits him perfectly, always has. I'll never understand why Patty was so attracted to it. In retrospect, though, I'm sort of glad she was. It's worked out better for me that she dumped me."

"So you'll know, what you're saying is pretty much in line with what others have said, including Dr. Weathers. He, in fact, mentioned that he would like to—let's see if I can quote him—'wring his skinny damned neck.' Linton's, that is." I smiled, trying to be encouraging and heartened by his admission about Pat Grover.

“Right. Exactly. I think a lot of people in there,” he jerked a thumb in the direction of the building, “felt that way. But everyone was pretty shocked to hear of his death. And when they hear that the sheriff thinks it’s a homicide, well, they’ll *really* be shocked.”

He heaved a huge sigh. “So, anyway, what was I doing last Friday morning? Well, I was trying to avoid talking about it because I’m embarrassed about it. But at least you can verify it, if you need to. What I was doing was being interviewed for a job. A job with a real, competitive salary and great benefits. I mean, with all due respect for SCARAB, it’s not exactly a career capstone, if you know what I mean.”

I waited for what seemed a long time before I just had to ask. “And, of course, you’re going to tell me with whom this interview took place? And where? And the timing?”

“Yeah, shit. It was last Friday morning, all morning, with a guy from the National Rifle Association, for a position that they call ‘wildlife resources officer’ for the Rocky Mountain region, meaning that my job would be to lobby the Colorado Division of Wildlife, as well as similar agencies in other states in the region, to increase the number of hunting licenses for, well, for whatever critters they sell hunting licenses for. And I went down to Evergreen and met with this NRA guy, I’ve got one of his cards I can give you.” He fumbled in a pocket, after a careful look to see if I would let him, and handed me a business card. “Thing is, I grew up hunting with my Dad and an uncle, so it’s something that is part of me. Advocating for it would be a natural. And the NRA, like I said, has a real job doing it.”

I looked at the card and saw a telephone number and an email address. “I’ll be sure to contact this guy to verify what you’ve told me. And then you’re completely off the hook, as far as I can tell now. But, geez, this seems like a big change for you, this NRA job.”

“Yeah, well, I don’t have it yet. So, please, when you verify that I really had this interview, don’t scare them off, OK? And like I said, I’m all in favor of more hunting. My favorite things to do in the outdoors are hiking and backpacking. And it looks to me as if there are way too many deer and elk and so on out there. Not to mention the bears. That’s how you control the population, hunting.”

\* \* \*

The confessional with Lemone hadn’t taken *too* long, although he wound up missing the first part of that afternoon’s session. And I immediately decided to treat it as a confessional, because he’d revealed a side of himself that, despite my bad attitude about him, deserved to remain in confidence. It was still suspicious, though, that he’d initially lied about knowing Linton.

With all of the morning events—the press conference, my not-quite-contentious discussion with Sheriff Schmidt, and then the rush to lean on Lemone, which, at least, had worked, mostly—I’d not had lunch. As much as I loved Hal dearly, missing another part of his meeting wasn’t going to bother me in the least, so I went hunting for food. I was also hoping for some solitude to mull over all I’d learned, so I crossed the highway and walked a block or two down the valley.

I wound up at a place that seemed to specialize in Hatch-green-chile-topped burgers, meaning those famous chiles from New Mexico, something that rather surprised me to run across in the northern Colorado mountains. A green-chile cheeseburger sounded like such a treat, one that I’d learned to enjoy during my visits to Santa Fe. The Santa Fe versions were always a little too hot for my tender taste buds, but I couldn’t resist trying the Winter Park version. Perhaps, I thought, it would be toned down.

The taste part worked out as I hoped, but the solitude part didn’t, although it turned out well anyway. Mac MacQuarrie, as it happened, was having a late lunch there, too.

“Mac! Well, fancy meeting you here, if I may resort to a cliché.”

“Well, hey, Annette! Good to see you. Gonna have lunch? That’ll give me the excuse to order another of these.” He raised a nearly-empty beer glass in my direction.

I pinched up my face into a disapproving-old-aunt look. “Does Sam know about this?”

That surprised him enough to give him pause. “Uh…”

So I broke into laughter. “Aw, don’t worry about it, Mac. I won’t tell. And I think I want something like that, too. Or maybe a margarita. How are the burgers here?”

“Quite respectable, although I’m not sure about this green-chile business.”

About then, a server showed up, and I ordered a margarita, rocks and no salt, and as plain a green-chile cheeseburger as the menu offered, without fries.

“I understand completely. It’s an acquired taste. You need to spend time down in New Mexico to really get it. Anyway, how are things going?” After I said it, I realized that he would probably take that to mean I was asking about his progress on what I’d asked him to do only a few hours ago, and, to my dismay, he did.

“Well, I think I found what you’re interested in, although I ran into a roadblock that I haven’t managed to break through yet.”

“Ah. Well, that’s good to hear, but I didn’t meant to grill you about that. I was just asking generally. How’s Sam?”

He broke into a huge smile. “Busy as hell. She can’t crank out those paintings of hers fast enough to keep up with demand. I keep telling her not to worry about it, to slow down and let her prices inflate. But she’s somehow compelled to try to keep up.”

“At least she’s successful, even if it keeps her busy. She likes it in Colorado, though?”

“Oh, yeah. Like I told you, she’s agitating to move over the Front Range to Estes Park, but that’s not because she doesn’t like it here. It has to do with a bunch of little things. I think I’ll let you hear it from her, because I’m kind of on the fence.”

“Hal’s told me that you’ve done a stellar job of setting up all the security protections that MPARC needs, and I’m sure he can find someone to take over if you decide to move. Did you ever meet Charles Shure, the money behind MPARC? Oh, yeah, he was at the big pow-wow we had in connection with that waste dumping business. Anyway, he runs this big international conglomerate that has a huge computer security group, and I bet that at least one of those guys would love to move up here and take on your role.” I made sure to look him squarely in the eyes. “What I’m saying is that if you and Sam want to move over to Estes Park and really be retired, well, don’t feel like Hal has you under some kind of obligation here. And, like I said, it’s just over there, sort of northeast. We can still get together.”

He smiled. “One thing I learned after all my years working for those secretive agencies in Washington was to look after myself first. So I will. But thanks for your encouragement. I mean, I do have some little bit of conscience left in me, and I don’t want to let Hal down.”

“Don’t worry about it. And anyway, if you’re over there, then I’ll have a friend on the other side of the mountains when the CBI needs some kind of help or other.” I tried to make my smile disarming. “Since you mentioned it, though, did you have any success with what we talked about?”

“Like I said, up to a point, and then it stopped. Let’s see if I can explain things in a way that makes sense. There were basically three lines of inquiry, Miciela’s two other names, Spadaro and Abercrombie, and her death.”

He held up an index finger. “First, her death. Suicide, by official decree. But it seems that the decree was a close call. Her body was found at the base of a large cliff, at the top of which is a regionally famous scenic overlook. It’s in a park. Her car was found in a public parking area there, and it had a note on the dashboard about why she was going to kill herself. The note was computer generated. Only her fingerprints were found in the car, so despite some ambiguities and unresolved questions, it was ruled a suicide.”

He stuck up a second finger. “Second, her maiden name, Spadaro. This is where I ran into the roadblock. You said you know about her father’s background, that is, Antonio Spadaro, and that you suspect that he might have been subsumed into the witness protection program. I almost certain that you’re right. I don’t know of any other way for people to disappear so completely.”

“However,” and he wagged his two stuck-up fingers for emphasis, “I’m not sure that you appreciate his position before he turned snitch. This guy Antonio Spadaro had big-time involvement with just about everything underground in the New York mafia scene. A real player. Turns out that his turning snitch brought down no less than four dozen—*four dozen!*—made men in the City, including at least two bosses. Even I remember, from when I was a New York cop on the drug beat, I remember hearing his name come up. Point is, there’s considerable enmity floating around out there, which probably includes some hefty contracts for his head on a platter. For his sake, we should both hope that the U.S. Marshals Service is taking his protection seriously. Assuming that he’s under their protection, I mean.”

Then he poked a third finger up. “Finally, there’s the Abercrombie business. Yep, our girl Miciela married a Jason Abercrombie when he was a student at Georgia Tech and she was an employee there. He was in the ROTC program, and he became an Army officer when he graduated. He was assigned to the 339<sup>th</sup> Quartermaster Company at Camp Humphreys in South Korea, about fifty miles south of Seoul, and he spent several years there, during which he extended his original enlistment, the one he was obligated to for his ROTC benefits. And, since then, he’s re-enlisted again, maybe become a lifer, and is now stationed at Fort Carson, just south of Colorado Springs. He’s done well enough to become a Captain. And it appears that he’s now married to a Korean woman, original name Seong Bun-Hae. He’s got a solid record with no hints of any improprieties.”

My margarita had arrived somewhere between fingers one and two, and, by finger three when my burger arrived, I was contemplating a second one, maybe a double, with salt this time. But trying to keep up with what Mac had found made me glad I hadn’t.

\* \* \*

## Eight

I’d first noticed earlier, when I was sitting outside with Dexter Lemone, and then, more in the background when I was in the restaurant with Mac, that there seemed to be an unusual number of emergency sirens wailing away, especially for a Thursday. There were sirens on vehicles that seemed to be coming and going in all directions, and the variety told me that the vehicles were associated with at least two different agencies in the Fraser Valley, maybe three. What really got my attention was, as Mac and I were walking back up the street to MPARC, when I saw Fran Schmidt’s vehicle headed south toward the Winter Park Ski Area base, adding to the cacophony.

Rather than bother Fran, I phoned Angela. “It’s me, Angela. What’s with all the activity up here? And was that Fran I saw zoom by just now? I’m on U.S. 40 in downtown Winter Park Village.”

“Yeah, Annette, I was just about to call you. We saw you walking on the sidewalk there.” She seemed rather breathless. “Remember what Sheriff Schmidt said in his press conference about how this was the ‘summer week from hell’? Well, it seems that something of that nature has busted loose.”

“Oh. You were in Fran’s car, huh? I didn’t see you.”

“Yeah, well, he’s big and I’m little, and I’m hunkered down to brace my feet. He’s in a hurry.”

“Uh, do you guys need me?” I was hoping they didn’t, but I had to ask anyway.

I heard a muffled consultation, and Angela came back on the call. “Fran says probably not. Although you might be able to help back at the office. We may have some people to process. And having you available could help if some other call comes in, he says.”

“OK, I’ll head back to Hot Sulphur.”

I tried to sound enthusiastic, but I’m afraid I didn’t succeed—I’d been hoping to head home early. But, no rest for the wicked, I decided, so after thanking Mac for his information, I cruised up north and west toward whatever was waiting at the sheriff’s office.

Whatever it was, though, wasn’t there when I arrived. It was true that everyone except a new deputy sitting at the front desk, a young woman whose name badge read Norma Spears, was out, apparently a part of all the sirens zooming about the valley. Meanwhile, Norma was calmly filing her nails and talking on her headset.

“Oh, sorry, Charlene, someone just came in. Gotta go.” She poked a button on her desk phone and looked up at me. “Can I help you?”

I smiled. “I don’t think that we’ve been introduced. I’m Annette Trieri, Deputy Director with the Colorado Bureau of Investigation. I work here with my deputy, Angela Espinosa. Perhaps you’ve met her? Short, wearing khakis today, as I recall.”

She hesitated. “Uh, well, I’ve been meeting so many people that I’m afraid I can’t recall everyone. Is she the young woman who ran out the door with the sheriff a little while ago?”

I nodded. “Probably. She called me and said she was with him on the way to something going on at the ski area. Any idea what that’s about?”

“Some kind of rumble, I guess, at that big concert they’re having there. Everyone, well, almost everyone, is up there trying to get things under control. We’ve also got a couple of traffic accidents being dealt with.”

“And you got left here to mind the store, eh? Well, maybe I can help. Let me go put my stuff in my office, and I’ll be back to keep you company.” I couldn’t tell if she looked relieved or un-nerved.

Two minutes later, I was back in the lobby, and this time she was definitely un-nerved. Perhaps, I thought, it’s because I’d taken off my jacket, and my shoulder harness with its six magazine carriers, as well as my Glock in its small-of-back holster, were visible.

“Norma, could I make a suggestion?” I watched her reaction carefully and was happy to see her nod. “I think it would have been a good idea for you to ask to see my shield before, just for identification. Especially before I went back down the hall there. You didn’t really know who I was, and I could have been anybody. You know?”

She winced. “Oh, yeah, you’re right. And I’m here alone. Sorry.”

“There’s a lot to learn, I know. But you’ll get it figured out, don’t worry. Now, I think I’ll just sit over here and try to deal with this paperwork. If you get a call that you don’t know what to do about, put them on hold and ask me about it, OK?”

At that point, she was definitely looking relieved.

But, in the typical feast-or-famine fashion of Fran’s office, nothing at all happened for at almost two hours. I could have as well been in my office, which would have let Norma go back to her conversation with her friend Charlene. As it was, Norma had to find something else to do, so she wound up reading through the departmental policies and procedures manual and trying to stay awake.

That particular famine ended in style, though, at about four, when the front door burst open and several large and very scruffy individuals tried not to bump into each other on entering. The ones wearing only leather vests for tops were definitely men, but some of the others were ambiguous on first glance. All had their hands zip-tied behind their backs and were being herded in by Angela, Fran, and several of his deputies. I decided it would be polite to give up my seat in the lobby to one of our new guests—which one didn’t really matter to me.

“Roger? I guess you’re the lucky one to get the processing of these folks started.” Fran Schmidt looked around and finally spotted Roger Traubman, who seemed to be trying to hide behind a couple of the larger scruffies. “Meanwhile, everybody listen up! Any more misbehavior and we’ll zip-tie your feet together, all of them, in one giant tangle. And my people all have instructions to use their Tasers at their own discretion. I don’t care how tough you feel, you don’t want one of those used on you. So behave!”

When he spotted me—I’d retired to hide in a corner and try to figure out why my personal lawyer alarm was going off—I gave him a big smile. “Hey there, Fran. How’s your day going?”

“Ugh. Don’t ask. And this is only half of the trouble-makers. The Winter Park police have the others. Seems there was a kind of brawl took place at the music festival.”

“I thought the heavy metal bands were last weekend, no?”

“Yeah, well, this time it’s country-and-western, but it seems that these yo-yos here decided to stick around. And the cowboys didn’t like it too much.”

“So the Winter Park police got the cowboys, and you got, what, the Indians? No, that’s not fair at all. To the Indians, I mean. Looks like you got the dirtbags.”

“Hey, lady, it’s not like we can’t hear you, OK? There’s no call for insults.” One of the biggest of the scruffies, a very tall and fairly wide fellow wearing a studded leather vest open down the front and sporting approximately equal amounts of hair on his head, face, and chest, with his head a distant fourth place, had shouldered his way to the front of the pack. That set my lawyer alarm off even more than ever.

“Look, sheriff, my name’s Tony Sands. I’m an attorney, licensed before the Colorado Bar with a practice in Montrose, and these fine gentlemen are all my clients. And you know as well as I do that what happened back up there wasn’t really our fault, it was those damned rednecks.”

Fran looked at him with a jaundiced eye. “That remains to be seen, Mr. Sands. And you know what they say about lawyers who represent themselves, right? Meanwhile, you and these other fine gentlemen with you are going to be spending some time in our holding cells, so enjoy it out here while you can. Oh, and in addition to all the questions we have about this afternoon, we’re going to be asking you about where you were last Friday. If you claim not to have been in my county, you’d better be ready to prove where you were.”

That surprised me. “Fran, you don’t think ...?”

“I don’t quite know what to think, Annette. There are parts of this you haven’t heard about yet. Let’s just keep an open mind, eh?”

It occurred to me that Fran and I needed to have a private conversation, ASAP.

\* \* \*

The scruffies’ having been consigned to two of the holding cells, not quite what you’d call “packed in” but quite cozy with standing room only, Fran had a minute to talk with Angela and me in our little office.

“Sorry I was short with you out there, Annette. It’s been a stressful day. And I hope you’ll hang with me on this. We’ll question all of them, and see what we can find out. We do have an opportunity to press charges—these bozos are no way country music fans. They were at that big concert to make trouble, it’s pretty obvious. And, from what I heard on site, the cowboys were goaded into the rumble.”

“Is this bunch, like, a motorcycle gang, with a name and all?”

“That’s one thing I want to find out. I’ve got some people back up at Winter Park figuring out what motorcycles belong to which of these guys, and we’re going to impound them and bring them back here. Maybe they’ve got insignia or something. Geez, these guys just piss me off, you know?”

“I have to say, they’re not people I’d invite to dinner.”

“Right. And they’re not people I want in my county. On the other hand, the cowboys, they’re mostly the guys from the Granby rodeo, I’m fine to have them here. Good guys, all of them.”

“So, this motorcycle guy Sands is a lawyer, and he’s going to represent his gang, I guess.”

“Apparently. A lawyer with a fool for a client, if he really decides to represent himself and the others.”

“Hey, it could be worse, Fran. Maybe Steven Sheffield is hanging around here like the vulture he is, sniffing about for possible clients.”

“Oh, Annette, spare me, please. Don’t even suggest it.”

Sheffield had proven himself to be a burr under Fran’s saddle on several occasions, most recently in the case involving the illegal dumping of toxic materials into the underground sources of the Denver water supply. Somehow he’d managed to dodge disbarment for legal entanglements of his own in that case, and he was still sniffing about for new clients, I knew.

About the time I finally got home, Mac called. Fortunately, Hal had decided to make dinner for us, and the fact that I’d completely forgotten about it turned out fine. That also allowed me to take Mac’s call instead of scrambling to make dinner.

“Hi, Annette. I need to ask you a question about the computer searches I’m doing.”

“Hiya, Mac. Shoot.”

“Well, remember I mentioned a roadblock? I need to know what lengths to go to in order to get around it. I’ve figured out that I’ll need to call in a favor from a very-high-up person I know in the White House to do it, and he’ll probably have questions. Also, if I do get into this blocked computer, they’ll know it, the computer’s owners, I mean, and that’ll alert them that something’s going on. They’re very, very sensitive about such things.”

“Hmm. Sounds like you know whose computer it is.”

“U.S. Marshals Service.”

“Ah. Well, that validates what I’ve been thinking, that the Spadaros are in witness protection. And knowing it for sure is probably sufficient for now. I don’t see much point in your calling in favors from the White House or in alerting the Service to our interest.”

“So you’re OK if I just leave things alone now?”

“I think so. We can always start up the search process again if we really need to. Thanks for the help, though. Just knowing whose computer it is helps a lot.”

“Any time, Annette. Say, why don’t you talk with Sam? She’s right here.”

That was a change of pace, for sure, but Sam is someone I always like to talk with. There was a pause, and her voice came on the line.

“Annette? Hi. Mac says you want to talk.”

“Well, he said that *you* might want to talk. About moving east, I mean.”

“Oh!” She was obviously surprised by my directness. “Well, um, see, we, I mean Mac and I, we’ve been talking about it. And I feel a little guilty, because we came out here because Hal asked us to. And paid us to.”

“So? Mac has done for Hal, and MPARC, everything Hal brought you both out here to do. You’re not bound by any sort of long-term arrangement or anything, at least not that I know of. But, to be candid, I’m curious about why.”

“Well, I guess it’s a combination of things. Services. Access to the Denver airport. Proximity to the Front Range cities, as far as that goes.” She chuckled. “You know, malls. I’m feeling isolated up here, in terms of things I’d feel better about being closer to. Medical things. Stuff like that. I hope you understand.”

“Oh, I sure do. We moved here from Durango, a small city down in southwest Colorado. And it has much more in the way of what you’re talking about than this place does. I’m still getting used to some things here. Can you say ‘gynecologist’? It’s been getting better and the future looks good, but it’s still a long way from where it needs to be. I can’t blame you in the least. And, hey, Estes Park is just over those mountains we look at.”

I remembered that she and Mac had just moved into a “guest house” that one of Hal’s old friends had, a house with a remarkable view of the western side of the Front Range. We’d stayed in it for a few months when we first moved from Durango.

“Just get a place with a guest room, and we’ll come and visit. And you can do the same here.”

“Oh, that’s sweet. But I’ll miss having you in the same town.”

“Me, too. But, look. Over there, you’ll have a whole new set of mountains to sketch. And a whole new set of galleries to get your stuff into. You’ll make out like a real pro.”

“I never thought of that. But I guess you’re right.”

“I’m sure I am. Your stuff is great, and it’s selling like hotcakes over here. I bet you do even better over there. And there’s something else that I already mentioned to Mac. Having you in Estes Park gives me a contact there, one with credentials, as he’s still got that deputy’s shield I gave him before, remember? Not that he’ll be using it much, but having him there could be quite helpful to me.”

Her voice brightened. “And it could give him something to do. Before we moved here, I was getting a little worried that he was too bored with his retirement for it to be healthy. He’s been better with this

MPARC job, but I don't know if he'll be able to find anything to do over in Estes Park. Maybe you can throw some stuff his way."

"Exactly. So, do you guys have a schedule for this?"

"Not yet. We'll probably drive over and check out real estate sometime soon. The area looks good on paper, or on a computer screen, but we really need to see it in person and explore around."

"Be sure to let me know if there's anything Hal and I can do to help, OK?"

"Thanks, Annette. Thanks so much."

\* \* \*

I managed to get back on track Friday morning. Even with an active investigation in progress I knew that a twenty-four/seven work schedule would be counterproductive, so time off was important to have. And Angela, being still relatively new to CBI, was even more apt to burn herself out from enthusiasm, so I practically had to order her to take days off. I wanted to make as much progress as possible on Friday so we could both have a bit of weekend.

It turned out, though, to be a good start to the day, as Angela had information for me. She must have beat me to the office by a couple of hours, and she was bursting to get going.

"Annette, I finally got the list of bicycle rentals compiled, the ones from last week."

"Oh, right. I'd forgotten about those. Any interesting names there? And what took so long?"

She looked embarrassed. "I had to lean on a couple of the bike rental places some. They said they were busy, they'd get to it someday, blah blah. And I had to go back to a couple of them. They gave me lists of their daily rentals for last Friday but not for all the bikes they had out that day. There were others that were weekly rentals and so on. And then I had to get all the separate lists organized. Sorry."

"Too bad it was such a hassle. It's not a problem, though. And, say, you were going to get cell phone records, too. Any luck with that?"

"Well, I've got those, too. The phone companies came through like champs. You're going to like all this. Bicycles first."

She handed me several sheets of paper with spreadsheets printed on them. I scanned through them and found Phillip Linton's name on page two and then, on page three, one Anthony Sands.

Tony Sands, outlaw biker and Montrose lawyer, had rented a mountain bike on the Friday of our homicide? That was too weird not to take notice of.

Fran stuck his head into our little office. "Morning Annette, Angela. Guess what we found out? Those bikers we brought in yesterday are indeed an organized motorcycle club. Not one of the American Motorcycle Association clubs, though, so that means that they don't just look like it, but they actually do fall into the nebulous 'outlaw biker' category. The 'Swords of Satan' is what they call themselves. Their membership is all from the Gunnison and Uncompahgre Valleys out west, from Grand Junction south."

"Is that lawyer of theirs, the one who was barking yesterday, is he going to represent them?"

"I think he's chosen discretion over valor. Right now, they're demanding public defenders."

"Which is going to overwhelm the office here, no doubt. How about I talk with this Sands person, the lawyer? See what his thinking about this all is."

Fran shrugged. “I guess that makes sense, Annette. I’m not sure I’d want to be locked into a little, stifling-hot, airless room with him, though. He’s probably pretty rank by now.”

The thought made me wince, but I tried to keep to the high ground. “Do you suppose there’s any percentage in getting him to promise to keep the club out of Grand County for the rest of eternity in return for dropping charges?”

I knew I was supposed to be working on behalf of all the people of Colorado, but my first loyalty was to where I lived.

“I’ve been thinking about that, Annette. Prosecuting these guys is going to be a huge pain in the ass without a lot of return on investment. We don’t have much on them.”

“How about if I float that idea with him?”

“I’d say let’s try it. Don’t make any promises, because I don’t know what the DA might want to do. He sometimes gets strange notions because of his political agenda. But maybe he’ll be reasonable this time. Besides, I do have some discretion in these things. Thanks.”

As he was turning to leave, Angela spoke up. “Wait, Sheriff. There’s something else. The cell phone records came in.”

Fran looked interested. “Anything there?”

“Well, since we’re talking about him, there are calls recorded between cell phone numbers registered to Anthony Sands and a Daniel Santini. Santini to Sands at about 11:30 last Friday. And then another about fifteen minutes later, Sands to Santini. Uh, and I mentioned to Annette before that the rental records have an Anthony Sands on a mountain bike Friday morning.”

Fran looked surprised. “Well. I guess I need to think about all this, but, Annette? How about we don’t let this Sands guy out of our hands, even if all the others walk, OK?”

“Good plan, Fran. If he, as spokesman, agrees to keep the club out of the county, they walk except for him, right?”

“Right. I’ve gotta go, an appointment with the DA.”

After he left, Angela looked me in astonishment. “You mean that you’d just let these guys go free?”

“In return for staying away from here, yeah. Except for Sands. Like Fran said, potential charges on the others are pretty weak, overall, and the hassle factor is pretty high.” I stood up and stretched.

“Are you really going to talk to him? Sands, I mean?”

“Just what I wanted to do with my Friday, spend it alone in a little bitty room with a big, sweaty guy who needs a bath.”

“Ugh.”

“Exactly. But after today, I’m going home and staying there until Monday. And you get tomorrow and Sunday off, too. Remember, your position here doesn’t carry overtime, like you got down in New Mexico. You have to pace yourself.”

It took about a half hour to make arrangements to interview Anthony Sands—there were other interviews in progress and only so many rooms, and there was a worse shortage of people to act as monitors from behind the one-way mirrors.

But eventually I was settled in one of those little rooms, sitting on an uncomfortable chair across a little table from Mr. Anthony Sands, Esq., of Montrose, Colorado, who must have been even more uncomfortable than I was, given his size relative to his chair. And, yes, he could have sorely used a bath.

“Mr. Sands, my name is Annette Trieri, and I’m a Deputy Director with the Colorado Bureau of Investigation.” My affiliation definitely got this attention.

“CBI, eh? What are you doing questioning me? This was just a little dust-up at a concert.”

“I thought I’d see if I could find out various things that might guide the sheriff’s investigation here. He reports to the local DA, but I don’t. The sheriff is likely to follow my recommendations with respect to how hard he pushes the case. My formal role is to be the CBI liaison to this fast-growing area and to help out locally when appropriate. Like now.”

“What’s in it for me? Cooperating now, I mean. After all, we’ve put in a request for a public defender. That means we’ve requested a lawyer, and you can’t question us until we get one.”

“If you’re any kind of a lawyer, you know we can question you when and where and how we want to. What your request means is that any evidence our questions may reveal is likely to be inadmissible in court, should it come to that. And I’m not going to be asking those sorts of questions, anyway. I’m also sure you know that we’re being recorded, audio and video.”

“I’d be surprised if that were not true.”

I nodded. “So, you stepped forward yesterday, when your group was brought in, as if you were going to represent them all. But you’ve now changed your mind?”

“We want a lawyer, yes.”

“Does that still mean that you speak for the group somehow? Are you its leader in some sense? What I’m asking is if you’re in a position to make an agreement on behalf of everyone. You see, I think the sheriff might be prepared to drop charges associated with that, er, adventure yesterday at the concert and release all of you, provided you all agree never to enter Grand County as a group, ever. Individually, entry would be negotiable, but as a group, if you’ll accept a ban from Grand County, you’re out of here.”

That obviously surprised him, because he thought about it for quite a while. “I can’t speak for the others, but I could take the proposal to them and see what they say.”

“That works for me. I think they’ve been dispersed into several separate holding cells, though.” I switched gears. “One more question, first. Just curiosity. What’s with this ‘Swords of Satan’ business? Isn’t that sort of thing just so, well, last century? Do you people really mean to come across as outlaws? Aren’t most of you dentists and doctors and accountants? And lawyers?”

He rolled his eyes. “Well, yeah. And grandparents, a few of us. The name is a long, long story that’s just stupid. But mostly we’re the good guys. Check with the Grand Junction TV stations. Every year we do a “Gifts for Grandkids” thing around Christmas, to help out all the poverty-level old folks on the Western Slope, and a food drive around Thanksgiving. And a blood drive, believe it or not, around Easter.”

“But in the summer you go on road trips and get into rumbles with locals in other parts of Colorado and the West, eh?”

“Hmm. No comment. Are you really serious about dropping charges if we promise not to do a road trip back here?”

“Formally, as you know, it’s the DA’s call. But I don’t think that he’s heard about this yet. So it’s still in the hands of the sheriff. And I’m pretty sure he’ll take my advice. So we can probably settle the business of yesterday’s rumble ourselves.”

“But I need to talk with all the guys.”

“And I can’t promise anything except that I’ll talk with the sheriff.”

“Shit.”

“I hate to say it, but that’s what you’re starting to smell like. You sure you don’t want out of here? Go in there and don’t ask. Just tell all your other guys that you made a deal and everyone’s free if they don’t come back. Is that so hard?”

He took a tentative sniff at his armpits, an easy thing to do in that vest he was wearing. It made him wince.

“OK, I’ll do it. Anyone who doesn’t agree, you can keep. How’s that?”

“Thank you. That’s what I was hoping for. Let me talk with the sheriff.” I turned to leave but remembered something. “Oh. You understand, of course, that we’ll be checking your credentials and so forth. Over in Montrose, I mean. So everything we’ve discussed depends on all that checking out. Right? And we have to check on everyone else, too. Anything that comes up could scotch this deal for anyone who’s flagged somehow. OK?”

Despite his scruffiness, his nod was surprisingly dignified.

\* \* \*

## *Nine*

It was quite a relief to get out of the stuffy little room, and I breathed deeply as I walked back to my office. I was disappointed to find it to be as crowded as the little interview room had been—with three other normal-sized people this time, rather than a single very large, and stinky, one.

But in there with Angela were two colleagues, Norman Dzung and George Neering, both wearing the sorts of grins that would put the Cheshire Cat to shame.

Norman was the first to notice me as I came down the hall. “Ah, here she is. Greetings and felicitations, Annette. We’re here with interesting news.”

I hadn’t seen him for a while so our handshake was extra warm. “Good to see you, Norman. You’re looking fit.”

George couldn’t contain himself. “Hey, man, good to see you again. Man, do we have something for you!”

“Hey yourself, George. What’s up?”

Dzung twitched his left thumb toward a large plastic bag on Angela’s desk. It appeared to hold a softball-sized rock.

“I spent parts of the last several days quartering the mountainside below where we found the body last week. It occurred to me that the perp might have just tossed his weapon down the hill. Because the damned thing is almost round, it rolled a long way, but eventually I found it about five hundred yards down. It hit a big log and stopped there.” He looked pleased with himself.

“Um, you must have some reason to think that’s the murder weapon.”

George opened his mouth, but Dzung spoke first. “Well, it wasn’t sitting in a normal position or place. Erosion causes rocks to break loose and roll downhill spontaneously on occasion, but this one was

quite new because it was sitting on top of everything else. So I had a close look at it and saw what appeared to be hair and blood on one side. Then I bagged it and brought it to George.”

I nodded and looked at George, who had decided to play coy. “What have you got for me, George?”

“Well, man, it’s too soon to be conclusive. We’re going to get a DNA test done on the hair and blood.” His grin got bigger. “However ... HOW. EVER. ... we also have some indications. See, I discovered during the autopsy that Phillip Linton, the vic, he had a very rare blood type, the most rare, in fact, AB-negative. And the blood on Norm’s rock is AB-negative.”

Dzeng jumped in. “Plus, and I’m embarrassed I didn’t notice this up there in the woods, there was a partial fingerprint in the blood on a sort of smooth spot on the rock. George has already determined that it’s not Phillip Linton’s print.”

It was Angela’s turn, and her excitement was bubbling over. “So I worked this up, Annette. We got fingerprints on all those guys we brought in yesterday, when we booked them, right?”

She handed me a piece of paper showing a gray-scale photograph of a partial print on a rock side-by-side with a booking print time-stamped the previous afternoon. I’m no fingerprint expert, but they sure looked similar to me.

Before I could ask the obvious question, however, Fran Schmidt came bustling in, and my little office was suddenly overcrowded. We had to put up with it, though, because all the conference rooms were occupied.

“Bad news, folks.” Fran shook his head. “A.D. is all up in arms about something he heard from the Feds.”

“A.D.” was A.D. Sonos, the District Attorney for Grand County, a showboat and politician first and the people’s prosecutor second. Still, he was in charge of what cases would move forward in his jurisdiction.

“Seems that they think they have a runner, a person who was in the witness protection program who’s vanished.”

I cleared my throat. “Uh, Fran? WITSEC is part of the U.S. Marshals Service. I’ve had reason to become acutely aware of that recently.”

Fran nodded. “Right. That’s who I meant by ‘Feds.’ Anyway, A.D. is all up in arms because the they wouldn’t tell him anything that might help us, not that we really want to get involved. But these WITSEC protectees are often the sort of people who could become a danger to the public. Our public.”

“Did they tell A.D. anything at all? Like, a name or anything?”

“Nothing. He does have a point of contact, though. Here.” Fran fished in a shirt pocket and handed me a crumpled piece of paper. It said “Mason Niemeyer” above a phone number.

“All right. Be right back.” And I stepped out of the jam-packed little office, grateful for the elbow room out in the hallway. I wandered outside to the parking lot as I punched numbers into my cell phone.

The call was answered on the second ring. “Niemeyer.”

“Mr. Niemeyer, I got your name and this number from District Attorney A.D. Sonos in northern Colorado. My name is Annette Trieri, and I’m with the Colorado Bureau of Investigation. I need to ask you some questions about the information you gave Mr. Sonos. I understand the sensitivity of this, but it’s highly relevant to your investigation or search, or whatever you’re doing, as well as to something I’m working on.”

There was a small grunt of dissatisfaction, or maybe frustration, from the other end of the call. “May I ask, Ms. Trieri, what your relationship to the District Attorney’s office is?”

“It would be more appropriate for you to identify yourself fully, Mr. Niemeyer. All I have is a name and this telephone number. I understand you’re a point of contact with the U.S. Marshals Service, but that’s rather vague.”

“Oh. Of course. Deputy U.S. Marshal Mason Niemeyer, WITSEC Program.”

“Ah. I see. Thank you. Well, I’m assigned by the CBI to be a liaison with the Grand County Sheriff and help out when their resources become stretched. Grand County is part of Mr. Sonos’ district. As you may know, the CBI is a state-level agency and so remains above the local politics in which the sheriff and DA are involved. I also hold a federal security clearance at a level that would surprise you if I were able to divulge it over the telephone.”

“Hmm. That’s encouraging, but I’m afraid that, just like your clearance level, my information can’t be discussed over the telephone, either.”

“Ah. I guess that doesn’t surprise me. Well, my clearance gives me access to a SCIF down the road that has an elaborate communications setup. I can be there in a hour or so. Would that work?” I had my fingers crossed that Mac would help me work the equipment in MPARC’s Sensitive Compartmented Information Facility, Mac’s pride and joy.

“A SCIF? Really? I’m impressed. And, yeah, that’ll work fine. Call this number on a secure phone from there and we’ll talk next steps. And don’t rush—I was just out the door on my way to lunch.” Niemeyer’s voice took on a level of respect I hadn’t anticipated.

“OK. And have a leisurely lunch. I’m going to have to round up some help to work their comm gear, and it might take me a little time in addition to getting over there. Talk with you later, Marshal.”

When I walked back through the door of my crowded little office, the conversation I’d heard from the hallway came to an abrupt halt, and I found everyone staring at me.

“What? I hope I didn’t violate any protocols by calling the name on that piece of paper, Fran. In any case, it all worked out well. I’m going to get details from that guy over a secure line in a while.”

“I didn’t have the chance to tell you, Annette. The fingerprints on the sheet I gave you. The prints that look like the one from the rock.” Angela cocked her head sideways as she spoke. “They belong to Anthony Sands.”

\* \* \*

“Niemeyer.”

Over the secure line from MPARC, his voice sounded the same as it had previously on my cell phone.

“It’s Annette Trieri, Marshal. And I’m on a secure line this time.”

“Excellent. Have you got video there as well?”

I looked a question at Mac, and he nodded. “It seems I do. And help to make it work as well. Secure help.”

“All right. Here’s a URL.” And he slowly recited a long and complicated internet address.

Mac and I had both taken the dictation and, after we compared notes and found they matched, he started typing. An official looking U.S. Marshals Service screen appeared on a large monitor on the wall.

“OK, we’re looking at a Marshals Service screen. There’s a ‘Home Page’ link in the middle. This looks like what most organizations call an ‘About’ page.”

“Right. That’s for people who stumble on this page accidentally. The link goes to our public home page. But that’s not your path. Here’s what to do: Type in a question mark, my last name, no caps, followed by the six digits of today’s date, month, day, year, and a pound sign. You won’t see what you’re typing on the screen, but it’ll work and initiate an encrypted connection. If you don’t make a typo. If you do, hit ‘Escape’ and start over. And if nothing happens after you hit ‘Enter,’ you made a typo without knowing it, so hit ‘Escape’ and start over.”

Mac typed, and shortly the official screen dissolved to a picture of a middle-aged, nondescript man sitting at a desk. His closely cropped haircut and cheap-looking suit gave him the distinct appearance of some kind of middle-level government person. He nodded.

“Afternoon. I’m speaking to you from our office in Grand Junction.”

It occurred to me that he must be able to see me, and I suddenly felt camera-shy. But I managed not to fiddle with my hair.

“And we’re in Winter Park. I don’t know what you’re seeing, Marshal, but I’m here with Mr. Mac MacQuarrie. He’s cleared even more highly than I. Do you need to see my credentials?”

“No, but thanks. I’ve had time to do a bit of homework, and all’s well. I also was able to infer the location of your SCIF and discover some very interesting information about Mr. MacQuarrie. I must say, I would not have expected anything like this in Winter Park.”

Mac cleared his throat. “This research institute, MPARC, has some high-level classified work with the Pentagon and, um, some other agencies, Marshal. Ms. Trieri is married to the director here. I’m involved only to help Ms. Trieri with the equipment, though, and now that it’s working, I’ll excuse myself. I’ve no need-to-know about what you’re going to discuss.”

“Thank you, Mr. MacQuarrie, although I have to say that this is trivial compared to some of what you’ve been involved in. Now. Ms. Trieri, I understand that you have some questions?”

“More than what I had before, because I’ve since received some additional information. First, could you tell me what you told District Attorney Sonos? Only with more specifics?”

“My call to him was part of our routine. On occasion, one of our protectees disappears, and we inform DAs in the region so that they can pass the information along to their law enforcement agencies at their discretion. But we don’t provide much in the way of specifics, because we can’t control the information’s distribution. I’m sure you know, Ms. Trieri, how sensitive our work is.”

“Absolutely. Life and death, in many cases. And if you called everyone within an area out to our distance from Grand Junction, that’s a lot of calls and people to talk to. No wonder you weren’t exactly generous with specifics. The thing is, we have a murder case here that may have some connection to your work, possibly even to this disappearance of yours. Is there anything else more specific that you can tell me?”

“A few years ago, we relocated an individual, along with his family, who had provided information that resulted in successful prosecution of a large number of people in organized crime in New York. It’s this person who has disappeared. His wife is still at their home, which is in a senior living community, and his sons, the two of them, have not exhibited any odd behavior, although we’ve just recently lost

contact with one of them. The gentleman who's disappeared is in his seventies and is in poor health, as is his wife. It seems that he left his medications at home, so his medical situation may become an issue."

"Marshal Niemeyer, the victim in the murder case I'm investigating had an affair years ago with a married woman whom he impregnated and who subsequently committed suicide. Or that was the coroner's decision, at least. This was in Atlanta. Her name was Miciela Spadaro Abercrombie. And when I looked into it a bit more, I found out about her father, Antonio Spadaro. Tony the Ferret. Shortly after his testimony resulted in the conviction of so many crime bosses in New York, he dropped out of sight. Completely and utterly. I mention this to see if you'll volunteer any more information rather than to ask you directly for it."

"Because we're on a secure line and you know how sensitive all this is, I can tell you that it was indeed Antonio Spadaro who disappeared recently. He has a new name, of course."

"Of course, as do his wife and their two sons, no doubt."

"Right. They're the Santinis now. Although the older son, Antonio Junior, uses Sands. He opened a law practice down in Montrose and thought that would be more, er, marketable, I guess. Danilo Spadaro is now Daniel Santini. He's a college student in Durango."

I felt a huge weight lift from my shoulders. "And, as you probably know, Daniel is presently here in Winter Park finishing up a summer intern job at MPARC, in whose SCIF I'm sitting. Further, and you may not know this, his older brother Tony is sitting in a holding cell at the Grand County Sheriff's Department awaiting me. He thinks I'm going to release him on the stipulation that his motorcycle club never enters Grand County again. But, because we have forensic evidence linking him to the murder I mentioned, he's sadly mistaken. His fellow club members may be released, but not him. And we expect to arrest young Daniel on an accessory-to-murder charge as soon as we can get a warrant. This conversation not only clears up the name issue for me, but it also provides us with a clear motive. It seems that there are questions about whether their sister's death was really suicide. And her pregnancy by our murder victim provides motive even if it was."

There was a long pause. "Oh. I see. Well, I guess that all makes sense. It explains why we've briefly lost track of Tony Junior, for one thing. I don't know whether you know about our policies, Ms. Trieri, but in cases such as this, when our protectees run afoul of the law in their new locations, they're on their own. Tony Junior is all yours, as is Daniel if you arrest him. I'm still concerned about Tony Senior, though."

"And from what I've read about it all, your concern is justified. I'll be sure to let you know if I learn anything about Tony Senior from our questioning of his two sons."

"Thanks very much, Ms. Trieri. I'm glad the CBI is willing to be such a good partner in this sort of thing."

"The pleasure's all mine, Marshal. You've dotted the i's and crossed the t's in this case of ours."

The screen on the wall went blank, but I didn't know how to shut down the system so I went looking for Mac. Somehow, I wasn't surprised to find him in Hal's office.

"Gentlemen, glad I found you. Uh, Mac, we finished and the screen went blank. But I didn't touch anything so the equipment's still on."

Mac shrugged. "It'll be fine. Hope your conversation went well?"

"Indeed. Except, Hal, I've got some bad news. I'm probably going to have to arrest your intern Dan Santini as an accessory in Phillip Linton's murder. His brother Tony is the killer, and they conspired on the opportunity and means."

Hal's face went white despite his summer tan. "Dan? Really? Why would he get involved in something like that?"

"The brothers believe that Linton was responsible for their sister's death a few years ago, in Georgia. Linton impregnated her and left her; she committed suicide, or at least that was the official finding." I tried to look sympathetic. "Do you know when his internship ends, when he'll be leaving for home?"

Hal looked thoughtful. "His internship ends today, and I had what amounts to an exit interview with him yesterday afternoon. He told me he's going to take a week for a backpacking trip before he returns to Durango. Something about some of the interns and friends they'd made this summer doing the Continental Divide Trail from Grand Lake south to Berthoud Pass. He said it was something like 55 miles. They're getting a ride north to downtown Grand Lake tomorrow morning, first thing. He said they're going north-to-south to make the first couple of days the easy ones. They've got some kind of schedule to keep because of the camping permits involved. Sounds like a killer hike, actually."

"Ah, to be young and full of energy. At least I guess we'll know where he is, more or less, when we get his arrest warrant."

\* \* \*

On the drive back to Hot Sulphur, I was congratulating myself on clearing a murder case in only a week, probably a record for me. Of course, I had loads of help.

Back at the office, I went looking for Angela. She, conveniently, was in Fran's office already, so I didn't have to drag her off looking for him. He was holding a piece of paper up to the light, one that I recognized as Angela's side-by-side of the fingerprints.

She was asking, "Do those two fingerprints look alike to you, Fran?"

"Sure do. Hey, Annette. I think we've got our man dead to rights this time."

"And now there's a motive." I explained my conversation with Deputy Marshal Niemeyer, emphasizing the sensitivity of the information as I did.

"So we've got the murderer in custody and know how to find the accomplice, for now at least. I imagine that D.A. will figure out a whole list of charges for them, but murder one will be the biggie. We need to get a warrant for the brother, I guess." Fran had his feet up and was looking thoughtful. "Do we have any loose ends that we'll need to bargain with them for?"

"Not that I can think of, Fran. I do owe Tony Sands a conversation about letting his buddies go in return for staying out of your county. He, though, won't be going anywhere, and I need to let him know about his arrest on the probable murder charge."

"He was asking for a public defender for the disorderly conduct charge we were contemplating, last I heard. You suppose he'll stick with that?"

"Good question. I'll find out when I interview him."

"Should be interesting. Mind if I watch, Annette?"

"It's your department, Fran. Maybe you can run the video camera." I winked at him, and headed for the interview room.

Tony Sands had managed to clean himself up a bit, but he still needed a change of clothes. It occurred to me that he'd be offered one shortly, a nice, clean, orange jumpsuit with "Grand County" stenciled on the back. It probably wouldn't fit too well, though, unless the county had the XXXL size.

“The sheriff agreed, Mr. Sands. Your friends can depart subject to their agreeing not to return. Their release is in progress.” I shrugged. “I’m afraid, though, that your situation is different.”

He looked surprised. “Why? I’ll promise not to come back, too. Ever.”

“Mr. Sands, or Mr. Santini if you prefer, I need to inform you that you are under arrest for the premeditated murder of Phillip Linton last Friday.” And I read him his rights.

He squinted at me, apparently thinking. “I guess I shouldn’t be surprised that you’d discover my professional pseudonym. But I can assure you that’s simply for business purposes, with no deception involved or intended. Out there on the western slope, ‘Santini’ sounds just too foreign to some potential clients. But what’s this about a murder?”

“There’s no point in bluffing here, Tony. We have sufficient forensic evidence to make a defense hopeless. Formal charges, of course, will be filed under your legal name, which we’ll research and get right. But I’m happy to call you whichever you feel most comfortable with. I guess I’ve already assumed it wouldn’t be ‘Spadaro’.”

I watched his reaction carefully.

And I have to give him credit: he was as good at maintaining a poker face as anyone I’ve dealt with. But years of experience plus some formal training have taught me to notice the little changes of expression that are subconscious when someone is put under stress, little twitches and tics, nearly invisible, and other such things. He had them all.

“Oh, and I guess it’s appropriate for me to add that we’re going to pursue an arrest warrant for your brother Daniel as an accessory to the murder. Because it’s murder one, it wouldn’t surprise me if the DA manages to develop a set of capital charges against both of you.”

This time his reaction didn’t need my skills to see. He deflated like a beach ball stuck by a hat pin. But he recovered fairly quickly, given the circumstances. Much of his previous bluster had evaporated, however.

“Well, this time I won’t even pretend to want to represent myself. Or ask for a public defender. And whether a defense is hopeless remains to be seen, of course, based on your evidence. So I guess I won’t say anything, except I have to tell you that Danny’s case needs to be separated from mine. He’s innocent of anything related to murder one. Oh. And you might as well stick to ‘Sands.’ Fewer syllables.” He managed a weak grin.

“I’ll do that, Mr. Sands. Now, just like our first conversation, your request for legal representation means that anything you say here in its absence is unlikely to be admitted in court. And, of course, there’s a video camera behind that window and a microphone in here.” I drummed my fingers on the little table. “But you’re a lawyer and should be quite familiar with all of these matters, so any claim you may make about being duped by us is very likely to be rejected. To me, this means that we could make useful progress, particularly where your brother is involved, if we continue to talk about all this.”

His facial expression indicated suspicion, but he nodded slightly.

“Good. I’ll start. Your brother Daniel Santini is a student at Frémont State University in Durango, and he’s been here in Grand County all summer as a student intern at the Middle Park Advanced Research Center in Winter Park. He owns a mountain bicycle. Last Friday, you rented a mountain bicycle from a rental shop in Winter Park. The Wednesday before, Daniel attended a coffee break at MPARC at which the victim, Phillip Linton, and an acquaintance discussed going mountain biking at the Winter Park Ski area on last Friday. Around noon that day, Friday, you and Daniel exchanged cell phone calls, two of them. Shortly after that, Linton’s body was found about half-way down one of the expert trails there with its head bashed in. The trail he’d been descending had been blocked with a rock,

which we have in our possession, and another rock, which we also have, was used to crush Linton's skull. That second rock has traces of Linton's blood and one of your fingerprints on it, in the blood. We are confident that we'll find your prints on the first rock as well." I stopped to take a breath. "This covers the opportunity and means parts of the crime."

"As for motive, we have testimony that, some years ago, Phillip Linton was engaged in an affair with your sister, Miciela Spadaro Abercrombie, while he was a student and she an employee at Georgia Tech in Atlanta and her husband was stationed overseas in the Army. Linton broke off the affair after she became pregnant, and she subsequently committed suicide, or at least that's the official version. Regardless of how she died, you and your brother therefore have a clear motive for your crime. I have no doubt that any jury will take but a few minutes to convict you both."

There was a pause while he processed all this. "What's your theory of Danny's alleged involvement?"

"He was the lookout at the top of the ski lift and manipulated a closure tape across the beginning of the expert trail to keep everyone off it but Linton. When he saw Linton get off the lift, he opened the trail, then he called you when Linton began his descent. After that, he put the closure tape back up to keep others off the trail. After killing Linton, you called him to tell him that his role was complete and he could leave."

It was his turn to drum his fingers on the table as he stared at the one-way mirror in front of the camera. After a long enough time for the drumming to become annoying to me, he sighed and shook his head.

"Well, my first priority has to be to protect Danny from all this. So I think I'll tell you a story, a true one, Ms. Trieri. I hope the folks back there with the camera have lots of blank video tapes or memory sticks or whatever, though, because it'll take some time. But it'll all be true, scout's honor. And, for the record, I'm doing this of my own volition, with full knowledge that I am voluntarily waiving representation and that anything I say can be used against me in a court of law."

"It sounds like it's going to be a long story, Mr. Sands. I suggest we begin tomorrow morning, after you have a night of sleep in a cell of your own and get into a change of clothes."

The offer startled him, and he looked grateful.

I realized that my weekend plans for time off were going to have to be shelved, but it seemed as if it just might be worth it.

\* \* \*

## **Interlude**

Yesterday, you said something that suggested to me you know my family name was originally "Spadaro." I don't know how you found that out, but I guess it also means you know something about my family history. Still, you'll probably be hearing some new details from a new perspective, so bear with me. And, say, how about a bottle of water? I've never quite managed to get used to the dry air out here in the mountain west.

That's because, of course, I grew up in humidity of the City, the only city on the planet that counts for anything, as far as I'm concerned, New York City. I was born there, went to school there, all the way through law school, and I didn't leave until I joined the Army after I got my law degree. Then I spent

five years traveling, courtesy of Uncle Sam, most of it in far east Asia. Afterwards, well, things changed for me, but I'll get to that later.

But growing up in the City was the best. Lots of reasons for that. The place is alive, twenty-four hours a day, and it offers anything you want. And everything. Like, the food. I'd sacrifice my left...er, let's just say I'd make a big sacrifice if I could find a source out here for real New York bagels, for example. Or a bowl of matzo-ball soup like from Zeppie's Deli down the block from our apartment, the one when I was a sophomore in high school. Or Chinese food made the right way. What passes for Chinese in these parts just doesn't cut it. And we don't have anything out there in Montrose County that even pretends to be French, and don't bother to ask about Italian food, especially pizza. There's just no place else where you can get pizza like in the City. If I could get authentic New York style pizza at home in Montrose, I'd die a happy man.

Don't get me wrong. I love it, living on Colorado's western slope. Elbow room. Peace and quiet. Unbelievable scenery. And skiing! I never really knew about skiing until I moved out here. It's the closest thing to flying I've ever done. And, to be fair, you can get most anything now online, if it's not available in local stores, so it's really quite comfortable.

Still, I miss the City. As I was growing up, especially as I got a little older and started dating, all the variety of things to do got more and more interesting. Museums—I mean, is there any place else with museums like in the City?—and galleries and shows and sports and...well, I could go on forever. But I'm sure you get the idea.

Naturally, it helped, helped a lot, actually, to have money. I mean, the City is expensive, very expensive. I didn't know how expensive until I moved out here. Clothes, a place to live, food, you name it. There's this nice place in Montrose where I eat breakfast a lot. Great breakfasts, way too much good food. You can get it for under ten bucks. In the City, at a similar place with similar food, if you could find such a place, it'd be three times that. I mean, it's crazy there. That's one nice thing about living here. On the other hand, wages are much lower here, so that makes up for a lot of it.

But, anyway, when I was growing up, money wasn't a problem. We had plenty, not that my parents let us kids spend much of it. Missy and I, that's Miciela, my sister, Missy and I had allowances, sure, but we also had chores to earn it. Cleaning, errands, that kind of thing. And it wasn't as much as the other kids in our building got, because our parents were careful not to spoil us. That's how I learned to hustle, in fact. The other kids with more money were easy marks for all sorts of little games I ran on them. But that's another story.

So where am I going with all this? Well, eventually I'm going to get to Danny and how he shouldn't be part of any murder charges you might have in mind. But to do that, I need to give you a lot of background about us, because it figures in to how things all went down. So I'm starting with my childhood in the City. It's not like I have this all scripted, so it'll probably come across like some kind of disjointed stream of consciousness thing. But I'll get there.

Ah, thanks for the water.

Where was I? Oh, yeah, growing up in the City.

I remember living with my parents and Missy and, after a while, Danny, in a sequence of ever-bigger, and nicer, apartments. We'd move every couple of years to something better as my Dad's business ventures became more and more successful. Huh? Oh, don't worry, I'll get to that bye and bye. Anyway, one thing that all those different apartments did was to get me familiar with different parts of Manhattan, where all of them were. When I was in grade school and middle school, I explored a lot on my way to and from school and learned my way around everywhere.

And then in high school, when Danny came along, much to my parents' surprise, Mom had to look after him, and I had a lot of freedom to do whatever I wanted to. Or what I could get away with. And moving around so much also meant that I never had long-term friends, like a gang that I was with for all of my childhood, like lots of kids do. I wasn't exactly a loner, but I was never part of a gang of kids, either. So I explored a lot on my own and picked up little odd jobs here and there to earn a few bucks now and then.

Whenever we moved, I had a whole new neighborhood to learn about and, especially, a whole new gang of other kids to get to know. And that was challenging almost every time because those other kids were always suspicious of the new guy. But I never had trouble from these new gangs of kids whose neighborhoods I moved into because I was always big for my age. I just kept outgrowing my contemporaries. And so the older, and bigger, kids in the new gang didn't mess with me, or if they did it was only once.

The trouble is, I've noticed that the business of outgrowing my contemporaries is still happening, except it's horizontally rather than vertically. I guess maybe it's a good thing I don't live in the City any more, with all that great food.

Anyway, because I was big as a kid, I never got picked on by bullies. Because I never got picked on, I never became a bully myself, I guess, although I was always very protective of Missy, who was a couple of years younger than me. In fact, I've come to understand that it was probably because I was so protective of her that she chose to leave home to go away to college, to Agnes Scott College in Atlanta. It was for women, so that made my folks happy, and it was far away from my over-protectiveness.

I stayed in the City for college, though, at NYU and then law school there. It was probably my first two years at NYU, which were also Missy's last two years of high school, that convinced her to get far away for college. Seeing the behavior of first- and second-year college guys made me so over-protective that I don't think she dated at all. So, as much as I hate to say so, it's my fault that she left for Atlanta, which led to all the other stuff that happened there and, eventually, her death. I've been searching for ways to purge my guilt about it all ever since.

Anyway, because I was always good in school—it came easy to me, and I never really had to study very much—I blew through the NYU undergraduate program and then their law school in five years. Law school was one of those things that seemed like a good idea at the time. My undergraduate degree, it was in business, a pretty nebulous major that I made even more nebulous with my choice of elective courses, that degree didn't seem to offer the sorts of career opportunities that the professors touted. But I figured with the business background, a law degree on top would open lots of doors for me. What I didn't know about at the time was the glut of new lawyers that were coming into the job market at the same time that I was. And many of them had worked harder in law school than I did, including taking internship positions in law firms and so on. I was too lazy to do that. So my opportunities were considerably more limited, much to my chagrin.

You might ask why I didn't go to work for my Dad. Well, first, I don't think he would have hired me. He had a good idea of how lazy I was, even to the point of ragging on me about it almost continuously. I guess I should have got my own place to live while I was in college, but the free rent and incredible food I got at home were just too good to give up on. And the other reason I didn't go to work for him was that he operated on his own. If you know anything about him, it's probably from the newspapers back during trials he was involved in. And that probably gave you the idea that he was part of some big New York crime family, or something like that. But that's all wrong.

\* \* \*

Maybe I should spend some time setting the record straight.

Antonio Spadaro Senior, my Dad, was born in the City just after World War Two, about nine months after my grandfather returned from his Army service overseas. Granddad was wounded, not too bad but bad enough to get sent home, in the reinvasion of the Philippines. He arrived stateside in the late spring of 1945, a couple of months before we dropped those A-bombs on Japan, the ones that ended the War. Granddad settled down out on Long Island, got himself a civil engineering degree on the GI Bill, and was part of the big post-war building boom, so his family prospered. Although I've pretty much lost touch with them, I've got two uncles and three aunts back east, my father's younger siblings, plus a host of cousins. Most of them live in Jersey now. None of them, that I know of at least, got involved in the sorts of things that Dad did.

Just like I turned out, Dad was something of a loner growing up. What I mean by this is that he didn't run with a single group of guys all the time, but instead spent time with different groups, what I guess you'd call "street gangs" with various agendas. And, in doing so, he got to know them all pretty well and was able to play the role of peacemaker between them when trouble arose and to forge alliances when there was something that required combined resources. And, as I understand it, he started down this road when he was ten or twelve and just kept at it until he developed a niche for himself on the streets, a niche that provided him both protection and income. Nobody else could do what he was able to, so he was indispensable in his own way.

Now, all this isn't something that I've spent a lot of time discussing with people over the years, but there have been the occasions that the topic came up. Activities on the wrong side of straight-and-narrow, I mean. And those times that I've discussed it, I've found that almost everyone has the wrong idea about organized crime in the City—and the rest of the country, too, for that matter. I expect that's because of Hollywood and the popularity of movies and TV about it all. You know, *The Godfather* and its offspring; *The Sopranos*; stand-alones like *Goodfellas* and *Casino*; all that sort of thing. What's important to understand is that almost all of those sorts of movies, and even the TV shows, are pretty dated. The whole culture of that underworld evolved considerably over my Dad's lifetime. It's not at all like it was in the 1950s.

For one thing, among the original *mafia* families, the ones from Sicily, most of the immigrant and first-generation guys have died off from old age, and many of the second-generation guys have, too, or else they got themselves whacked for some reason. So what leadership there is in that group is made of guys who not only grew up in New York, their parents grew up in New York. Almost all vestiges of the old country are long gone. The old clichés about the godfathers and so on don't apply so much the way they used to.

For another, there's a wider range of cultural backgrounds represented in organized crime these days. African-Americans, Puerto Ricans, South Americans, you name it. Remember that movie *American Gangster* with Denzel Washington playing the head of the drug-dealing family in Harlem and—what's his name?—oh, yeah, Russell Crowe playing the cop? That was based on a true story. And the Russian influence, which was a tidal wave after the Iron Curtain fell back in the '90s, is both far-reaching and quite powerful. Naturally, all these groups are concerned with turf and so on, and conflicts abound. And that's where my Dad came in. Just like when he was growing up, he found his niche as a peace-maker and truce-negotiator. In the process, he got to know the hierarchy all over the City, who was in charge of what and where they operated, stuff like that.

I asked him about what he did—what his job was—one time when I was fourteen or so and trying to figure out what I wanted to do with myself.

"What's my job?" He thought about it for a minute. "Well, I'm a kind of broker. You know what a broker is?"

“You mean like a stock broker? Those guys who work down on Wall Street?” We lived on the Upper East Side at the time, but, like I said, I knew Manhattan pretty well.

“Well, sort of.” He thought for another minute. “Stock brokers are the middle-men in deals between buyers and sellers of stocks and bonds. I broker deals that involve information, mainly. I get information from all over the place and know who might need it, so I make deals to get it to them. It’s more complicated and more of an art form than being a stock broker or a real estate broker, but it’s basically the same thing. Being a middle-man. Why? You looking for a job or something?”

We weren’t in the habit of having talks of this nature, so the question embarrassed me a little. “Naw, not right now. I’m plenty busy. But I gotta think about my future, y’know? Lots of my friends have their lives all planned out, or I guess their parents do. And I’m just wondering about possibilities.”

He thought about it for a minute. “What I do is pretty specialized. I don’t know what kinds of opportunities there are for it. Also, it’s not the kind of thing that there are, you know, companies or partnerships or whatever for. It’s more of a lone wolf job. I’m probably not a good role model for you.”

“But you seem to make lots of money.”

“Some, yeah, but there are lots of ways to do that. What you need to do is to figure out what you’re good at, and what you like doing, and aim at that. Like, a career in business maybe. You seem to have lots of little business things going all the time. Or maybe business law. Lawyers are always in demand, and it’s getting more and more complicated to run a business without trouble.” He paused and stared off into space. “One thing I can say for sure is that you need to learn how to earn and keep people’s trust. That means, in my world, at least, knowing what to keep confidential and what to pass along. When to tell the truth, and how much of it to tell and how much not to. And when, and how, to lie.”

Even at an earlier age than fourteen, I’d learned not to ask too many questions about my Dad’s business associates, the people he was now telling me he brokered information among. Given the strange hours he kept, I knew he didn’t go to some office every day, like so many of my friends’ dads did. It wasn’t too hard for me to figure out that he was working on the fringe of legitimacy. And even though that fringe seemed exotic and attractive to me, his advice stuck, so I went to the NYU Business School and then Law School. And it’s worked out pretty well for me.

Anyway, as the middle-man, or go-between, who brokered deals for information among all the outfits in the City, he was privy to all sorts of their secrets, probably more so than anyone else ever. That advice about trust he gave me was based on his own experience—he earned and kept the trust of all sides, of all the different outfits. And because he kept such a low profile—he never, ever, participated in any of their jobs—he wasn’t a target for law enforcement at any level, not the NYPD or the FBI or anybody.

I was in the Army and out of the country when it all came crashing down on him, so I don’t really know the details very well. He’s never talked much about it. And even if I’d still been living with my folks, I don’t think I’d know much more than I do. I’ve talked with Danny about it, and it’s all pretty much a mystery to him as well.

But, apparently, things were going along quite nicely with his little lone-wolf business of brokering information, when one of those FBI RICO stings ensnared him. The Feds had high-tech surveillance on a couple of the outfits, and they got sound and pictures of Dad talking with the bosses. Because he was the only common thread between the two outfits, they started focusing on him, and that got them sound and pictures of him talking with yet more bosses. Eventually they pulled him in and confronted him with it all, and offered him a deal if he’d spill. The deal included the witness protection program, and, because he knew a good deal when he saw one, he took it. Next stop, Grand Junction, Colorado and new identities for all of us. Except Missy. She was dead by then.

Like I said, I was in the Army at the time, so I wasn't in the middle of it all. First I heard of it was when I got pulled into my CO's office in Seoul for a little chat with a U.S. Marshal. But that's getting ahead of myself. First, I need to talk about how I got to Seoul, too.

\* \* \*

The old slogan used to be "Join the Navy and see the world!" I don't know if the Army ever tried something similar, but if it did, it would be more along the lines of "Join the Army and see whatever. And don't gripe about it." Although I guess I should feel lucky that they wanted me to see east Asia rather than Iraq or Afghanistan, it would have been nice to have some say in the matter. But maybe I'm just a control freak.

How I got to Korea, I guess, started with that advice that Dad gave me about Business School and then Law School with a business-law focus. Thing is, by the time I finished high school and college, including the law degree and passing the New York State Bar and all that, ten years had passed and things had changed. Lawyers were a dime a dozen on a good day, and newly minted lawyers were way, way less than that. About the only things available to me were hourly, contract jobs, no benefits, proofreading briefs for real lawyers. If you were an exceptional proofreader and got lucky enough to be able to work over a lousy brief into something successful, maybe that law firm would offer you something more full-time and permanent. That happened to a couple of my buddies. But not to me.

I needed the job, though, because I was too proud to continue living with my folks—also, that was too confining. I couldn't have dates over at home, not with Mom there. So I needed an income stream to pay rent. But, as everyone knows, rents in the City are absurd, so I was barely getting by.

Then Missy came home for a visit from Atlanta, it was for one of the holidays, I think, maybe Thanksgiving, and she started talking about her boyfriend, a guy in the Army ROTC program at Georgia Tech. Guy named Jason Abercrombie. Ha! Good old Sicilian name, right? Boy, was Mom ever freaked out.

But anyway, Missy talked about him for the whole time she was home, and I heard a lot of stuff he'd told her about opportunities in the Army. College grads who had been through ROTC got officers' postings right away, and people who had graduate degrees also got special consideration for enlisting. And my law degree was a graduate degree. So I looked into it. And it looked good.

It turned out that there was a requirement for a sort of accelerated officers' training program upon joining up. I'll spare you all the Army jargon for this stuff, but it was six weeks of kind of a gentrified basic training. That turned out to be a snap for me. All that experience from when I was a kid, getting along with different gangs of guys and so on, fitting in, those kinds of things, all that got me through it without any problems at all.

After that, there was a special training program for the JAG Corps, a couple of months in Virginia. Specialized law school, sort of. Oh, sorry, Army jargon is hard to shake. JAG is Judge Advocate General, the Army lawyers. That training made me a real Army lawyer and ready for whatever they decided they needed me to do. But no way was I in any kind of training for combat.

While they were figuring it all out, I had some leave coming, and I used it to visit Atlanta, to see Missy and her boyfriend Jason. I figured I ought to check him out and thank him at the same time. I probably wouldn't have enlisted if Missy hadn't been so full of information about Army opportunities from him.

As much as I love the City, I have to say that Atlanta in the springtime is just glorious. No wonder Missy liked it so much there. And Jason turned out to be a stand-up guy. He was a bit younger than me,

but we got along just fine. It made me proud that I was the first person to know of their engagement. But I got shipped out before the wedding, something that I regret to this day.

Because of what I concentrated on in the NYU Law School, the Army decided that I was best suited for their contract law needs, with some possibility of working in administrative and labor law. That was something of a relief, as I knew I'd be no good at criminal law or some of the other more traditional specialties. And it turned out that the Eighth Army's mission in South Korea, combined with rising tensions with that wacko dictatorship to the north, was motivating a build-up of personnel, meaning there would be lots of new contracts with both U.S. and Korean civilian suppliers. Meaning they needed more lawyers.

All I knew about Korea was that I loved their barbeque. When I was in high school, there was a take-out place down the block, and it was a favorite of ours when we wanted a change from pizza and Chinese. Not much, but at least it was a start in the sense that I wouldn't have to starve.

Camp Humphreys, or, more formally, U.S. Army Garrison Humphreys, is some sixty or so miles south of Seoul, enclosed in a big oxbow bend of the Ansong River. I heard that it's the biggest U.S. military installation anywhere overseas, and I'm not surprised. The place is huge, and it's got so much in the way of familiar amenities—familiar to Americans, I mean—that I didn't have to worry about ordering Korean barbeque to keep from starving. After all, there were Whoppers with fries, or maybe one of those Spicy Chicken sandwiches, as well as truly lousy pizza.

It was easy to settle in and start my new job as an Army lawyer. It turned out to be a lot like the old job, though, only this time it was reviewing and proofreading contracts, mostly for construction and maintenance work that the base outsourced. Except this time, the pay was better, by a bit, and there were benefits and job security.

To my everlasting surprise, after I was there about a year my brother-in-law, Jason Abercrombie, showed up. He and Missy had got themselves hitched, with my parents' blessings, fortunately, and he'd graduated, after which the Army had made him a Second Lieutenant in the Quartermaster Corps and shipped him off to Korea.

I got a heads-up from my sister about his deployment, in a letter, so I was ready to find him when he arrived. I think he appreciated having family around to help him learn the ropes of both the base and the local culture. And it was especially helpful for him that I was there when he got the message, a couple of years plus a few months later, that Missy had committed suicide. It affected me, too, of course, but I just couldn't believe that she'd killed herself. I knew there was more to the story. But he was crushed. What created in me a cold rage that was going to find out the real answer to it all turned him into a puddle of mush.

I knew that she couldn't have killed herself because I knew Missy. Growing up, she and Mom went to church every Sunday without fail, and it was to one of the most conservative Catholic parishes in the City. To Missy, suicide was a mortal sin. And later, when I looked into the whole matter more and found out that she had been pregnant, well, that only reinforced my conclusions, because to her abortion was another mortal sin. She just wouldn't have killed herself, no way.

Anyway, we both got stateside leave to attend her memorial service, and we travelled together. Good thing, too, because I don't know if he could have managed by himself. And it was also a good thing for him because it seemed to give him some closure. But it didn't do that for me.

After we returned to the base in Korea, we sort of went our separate ways. I guess the shock and sorrow just made it too painful to see much of each other. Time slid by, and it was a something over a year later, maybe eighteen months, when I was summoned to my CO's office, where a U.S. Marshal was waiting to see me.

“Captain Spadaro? Have a seat.” He turned to my CO. “Thanks for the use of your office, Colonel.”

The dismissal was clear, and it surprised me that Colonel Winston got the message so quickly. I sat in the chair the Marshal indicated as Winston closed the door behind him.

“Captain, I have a package of information for you here, but it needs explanation. The bottom line is that your name is now ‘Santini,’ and you’re to be honorably discharged within a month or so and shipped back to the States. New York, though, is going to be off-limits to you.” And he proceeded to fill me in on Dad’s arrest and plea deal, which included having the Witness Security Program oversee our new lives.

The Army, apparently, didn’t have a place for someone in the Program or the resources to provide the level of protection that WITSEC did. And, I guess, they had plenty of new, eager lawyers available to proofread contracts at Camp Humphreys. So strings were pulled and deals were struck and I was mustered out with full benefits, such as they were after only five years, an honorable discharge, and a complicated sequence of air travel arrangements that would take me to Grand Junction, Colorado. My first reaction to that, of course, was: *Where?* But it turned out to be fine, after the initial shock wore off.

\* \* \*

Even though my time in the Army had set me on a course to be a solid, upstanding citizen, there was still plenty of New York street operator left in me. WITSEC was helpful with my transition from the military to the civilian world, even to the point of providing funds for some of what I wanted to do. But I didn’t want them poking their noses too closely into my new life. So one of the first things I did was to move the sixty or so miles southeast to Montrose, change my name again, this time to something less ethnic, Sands, and set up a law practice. That, in part, was to keep me busy while I made plans to travel back to Atlanta and do some snooping around about Missy’s death.

It didn’t take much snooping, although it did take some time, to find that the coroner’s report was less than definitive, at least by the legal standards I’d been trained to in the Army, and that there may well have been foul play. I managed to track down some of her friends and co-workers, which put me on the trail of one Phillip Linton, who’d been in the Georgia Tech grad school while Missy was employed in an administrative office on campus. It was her car found with the note in it at the scenic overlook where she went off the cliff—he, I was told, didn’t have a car but rather got everywhere by bicycle. So I figured that he’d put the bike in her car, they’d driven to the overlook, and he’d pushed her off. It would have been easy for him to ride the bike home, mostly downhill, in fact.

So, in addition to making a new life for myself as a small-town lawyer, I had a personal mission: find the dirtbag who murdered my sister and confront him about it. Several years passed, I lawyered successfully and got interested in motorcycles, and Phillip Linton remained elusive.

Eventually, my little brother Danny, now Danny Santini, finished high school and went off to college at a small university south of Montrose, a place called Frémont State U in Durango. He and I had been having conversations about Missy’s death—he had bought into the suicide story, and I felt I should let him know the truth—so that when he ran across a Professor Linton at Frémont State, he let me know. And, it seems like the rest *you* already know about, or at least some of it. But there are a couple of additional things I need to sum up with.

First of all, Danny. Like I said, he’s not culpable in Linton’s death. Yeah, he told me of Linton’s being in Durango, and he also told me when Linton showed up here in Winter Park last week. And we talked on the phone last Friday. But he had no idea, no idea at all, what I had in mind about confronting Linton. Never during our conversations about it all did I mention anything about that. OK? If he’d known, I’m certain that he would have tried to talk me out of it. That’s one reason I didn’t mention it, in

fact. So whatever charges you come up with for him, they shouldn't relate to the murder one you're probably going to charge me with. And if they do, he'll be found innocent, or should be. If you have the evidence you claim to, it doesn't matter whether I'm really culpable, because it's likely to look that way to a jury no matter what.

Finally, I need to talk about my Dad, because that relates to why I've been so candid here about the whole WITSEC thing. Normally, we're not supposed to talk about that, no way, never.

And even with what I'm about to tell you, it would be better for all involved if this video recording never found its way into public consumption, or anything close. The fewer people who see it the better. Not only will that help Danny and me and my folks, it'll also help law enforcement, because you'll have several fewer unexplained deaths to investigate.

When Danny went off to college, my folks moved into a senior living complex in Grand Junction, one of those places with graduated levels of care. As you get older and need more and more assistance and care, they are set up to provide it. This move was mainly because of my Mom. She never quite got over the shock of Missy's death, and it seems to have set her on a downward spiral of early-onset dementia, or maybe it's even Alzheimer's. Dad was having trouble taking care of her, so they moved into this new place. And, well, that downward spiral has been *really* downward, because Dad told me she's not expected to live more than a couple more months.

This development has set Dad on a new course. He's pretty much persuaded himself that, with Mom no longer at risk, he can get Danny and me off the hook for retribution from the New York crowd if he makes it known where and who he is now. Sort of like he's thinking about sacrificing himself for us. Needless to say, I've tried to talk him out of it, and I'll continue to. But, with Mom gone, or leaving, or however you say it, he says he's got nothing left to live for. A dead daughter, no grandchildren—he wants to do the right thing by Danny and me and get us out from under the WITSEC cloud.

And just like Dad, I want Danny to have as good a life as possible, because he's going to be the only one left. One reason I'm coming clean with this long story is that you seem to have the goods on me. But another is that it really doesn't matter. Given how long cases like this, particularly capital cases, take to get through the system, I'll probably die before I get to trial. See, I was diagnosed with early-stage pancreatic cancer a couple of months ago, a type that has no cure. The symptoms aren't too much of a problem for me, but I've noticed they're progressing. And the outlook was for three to four months more before it kills me.

So if Dad sacrifices himself, Danny will be the only one left. That's why I'm so concerned that his alleged involvement in last Friday's events isn't linked to the worse charges against me. Anyway, I'd be surprised if you can convict him of capital charges anyway, because whatever evidence you have is circumstantial. Phone calls? So what? Mountain bike? Another so what. Lots of people have mountain bikes. Even if you can get a witness to identify him as having been on that mountain last Friday, that's still under the heading of circumstantial. Maybe you can get him convicted for knowing about something in advance and not taking steps to prevent it, but we both know that's not anything like accomplice to murder.

Anyway, that's the story, and I appreciate your patience for letting me tell it. And thanks for letting all the other guys off the hook. I'm sure they'll abide by the agreement not to come back here to Grand County, no matter how grand it is.

\* \* \*

## Part II

### Ten

For a big, hairy guy who liked to wear smelly leather vests and ride disreputable motorcycles with a gang of other guys similarly inclined, Tony Sands gets credit from me for both his candor and his perspicacity. It turned out that his assessment of his brother's legal exposure was virtually spot on, as all of our evidence against Dan Santini was circumstantial. We had found no witnesses who could put Dan at the top of the ski lift, and, because his phone call was picked up by only a single tower, his location could not be triangulated. Those phone calls with his brother might have taken place with Dan anywhere on the mountain. So we really didn't have much on Dan besides his not having told law enforcement about what he knew of his brother's plans. I began to doubt our ability to get an arrest warrant for him.

I had set up our Saturday interview—or, perhaps more accurately, Sands' soliloquy—in a different room from the Friday interview, one without an observation window and with the video camera in a corner instead of next door. I operated the camera myself, so I was the only one who saw and heard what Sands had to say. Given his admissions concerning the WITSEC Program, that was probably just as well.

It occurred to me that I should remind everyone in the information loop of the sensitivity of it all and also apprise Deputy Marshal Niemeyer of the situation, especially Tony's comments about his father's intentions. Maybe, I thought, the recording could remain confidential, as our evidence against Sands was complete without it. The fewer people who heard about the Spadaro-Santini connection the better, in terms of the family members' life expectancies.

I found the right number in my phone's recent call list and turned it into a new contact, name and all, then poked it.

"Niemeyer."

"Marshal, it's Annette Trieri again, from over in Grand County. This is not a secure line, but I have some information I think I can give you anyway."

"Greetings, Ms. Trieri. I hope you have good news."

"Mmm. I doubt you'll think this is good. The person whom I'll call 'Junior,' I think you'll know who I mean, he gave a long statement today, which was recorded, but I was the only one present and I have the only copy of the recording. It includes what amounts to a confession to the murder I've been investigating, or at least as close to a confession as possible without actually admitting anything specific, and it also includes some information you'll be interested in."

"I'm all ears, Ms. Trieri. And I infer that you may be in a position to keep that recording confidential."

"Correct, Marshal. The information for you is that Junior has the idea that his father is planning to sacrifice himself to try to ensure the family's safety. Apparently, Junior's mother is at death's door from Alzheimer's or something, and Junior says he is also, from an especially aggressive cancer. So if his father's plan works, it will get his younger brother out of trouble, while the other three, most likely, won't be living much longer anyway. I thought this might perhaps explain your runner problem."

“Well, if that doesn’t... Sometimes, Ms. Trieri, I wish I’d followed in my father’s footsteps and become a plumber. Even fixing clogged toilets would be more fun than what situations like this present.”

“I sympathize, Marshal. And if I hear anything about, uh, Senior, I’ll be sure and let you know soonest. But I don’t think that Junior knows that his father is missing. He said his father talked about outing himself, with respect to your program, but he didn’t suggest it had happened. And he’s been here for several days, out of touch with events over your way. Given the situation, I expect the sheriff here will be keeping Junior in protective confinement, to the extent that’s possible in a small, rural department like we have here.”

“If you want to bring your suspect to trial, that’s probably wise. I doubt that Senior’s plan to get his family out of jeopardy by sacrificing himself is going to work. Some of the, um, ghosts of his past are just too vindictive for that, and from what I hear there’s a very substantial bounty out there for public evidence of a successful hit on any in that family. Not only do those ghosts want revenge, they need to make an example of all the family members as a warning to potential turncoats in the future.”

“I thought that might be the case. It’ll be hardest on the younger brother, and because our case against him as an accomplice is mostly circumstantial. I’ll be surprised if we can get a warrant for him. And he’s just a college kid.”

“I’ll be letting my people in...uh...where he goes to school know about all this, for sure. Let’s just hope that whatever Senior is doing, it doesn’t include anything to do with the name he’s been using. Or anything that would identify that name. Thanks for the call, Ms. Trieri.”

My stomach growled, and I noticed that the clock on the wall was reading 1:15—I’d missed lunch. Maybe, I thought, Fran’s around and we can go get a sandwich together. I needed to discuss some things with him anyway.

I found him in his office, cowboy boots on his desk, reading a sheaf of stapled-together paper of some kind.

“Hey, Fran, had lunch? I got busy and forgot, and now I’m starving.”

He looked up. “Hey, Annette. What time is it? I got so absorbed in this crap that I forgot, too. One-fifteen? Shit. Ettie closes in another fifteen minutes on Saturdays, if I remember. Let me call over there.”

He picked up his phone and poked at it. “Ettie? Hi, it’s Fran Schmidt. Hey, I forgot lunch. Can I come by and get something before you close? I’ll leave right now...Oh, great. Thanks. See you in a couple of minutes.”

It was a beautiful day, so our walk the few blocks to the west, down the main drag of Hot Sulphur Springs, was quite pleasant. Fortunately, the traffic on that main drag, U.S. Highway 40, was pretty thin at that time of day.

Because it was about to close, the Glory Hole Cafe, a breakfast and lunch counter with a few tables, was deserted when we walked in, and Fran talked Ettie into not throwing us out until we finished. We took a table by the window, to watch what traffic there was.

“Glad you asked me, Annette. I completely forgot. Then I would have binged on junk-food snacks from the vending machine this afternoon, and Mary would have found out—she always does—and I’d be in trouble. Again.”

“I got wrapped up in stuff this morning, too. And even though I’m starving, I want to talk about it. It’s pretty sensitive stuff.”

Fran swiveled his head around. “Well, it looks like just you and me and Ettie. And she’s pretty deaf. Whoever’s back there in the kitchen isn’t going to hear us, not with that exhaust fan.”

After we’d ordered, I plunged in.

“I think you know I was taking a statement from Anthony Sands this morning, right?”

“Yesterday, I heard him warn you about a long story, so you wanted to wait until today.”

“Right. It wound up being his life story, and it took all morning. I’m not sure quite why he felt like he had to tell it. Maybe it was to justify what he did, which is murder Phillip Linton a week ago, although he didn’t exactly confess to doing so. One thing he tried to emphasize is that his brother, Dan Santini, isn’t culpable in the murder. And, culpability aside, it’s not clear that we have a solid case against Dan anyway. Everything we have is circumstantial. I don’t know that we’re going to be able to get a warrant for his arrest.”

“Does the case against Sands depend on his brother in any way?”

“Well, we’ve talked about how Sands would have needed an accomplice to be a lookout at the top of the ski lift. And the circumstantial evidence sure points to his brother. But with the bike rental, the murder weapon—that rock—and the motive, I think we’ve got a lock on his case. Talking about the motive in open court, though, is going to put the entire family in jeopardy, because it will entail making public the connection between the Spadaros and the Santinis. Once that happens, Tony the Ferret’s past will undoubtedly show up to haunt all of them.”

“So to convict a murderer, we’ve got to endanger his parents and brother? Great.” Fran shook his head.

“Oh, I don’t know. Sands told me that he has terminal cancer. Maybe that will get him first, before this all has to come out in court.”

\* \* \*

After we finished lunch, Fran and I thanked Ettie profusely and left her a big tip for staying open late for us on a Saturday. Then I made a point of doing what I’d essentially ordered Angela to do—take time off. I spent Saturday afternoon relaxing, and on Sunday Hal and I took advantage of the late summer weather and went for a long walk in the woods up the valley from our house. The aspens in the big grove were showing signs of the coming autumn.

That reminded us to talk over his idea of making an aspen tour to see the fall foliage in the southwest part of the state. Such a trip would also let me return the files on Phillip Linton to FSU, and we could touch base with old friends and colleagues in Durango. Hal promised to check all the web cameras he could find to see if there were any hints yet of how the turning leaves might be progressing. The extremely dry summer we had endured could, he suggested, mean an early change of color statewide.

And then on Monday it was back to work, although, with the Linton case cleared, the pressure level was much lower. Knowing this, I took it easy that morning and didn’t get to the office until about nine-thirty. Angela was there already, up to her elbows in paperwork, but Fran was nowhere to be found. I asked and was told that he had an early appointment next door in the District Attorney’s office.

It was about ten when my desk phone buzzed, signaling an intra-office call. “Yes?”

“Um, Ms. Trieri, there’s a gentleman out here looking for the sheriff, and he’s not taking ‘no’ for an answer.” The voice of Norma Spears, whom I’d met on Thursday before the motorcycle gang was brought in, registered in my head. “I thought maybe you’d know what to do.”

“Has he introduced himself, Norma?”

“He gave me a card that says he’s Wilson Lingenfelter, a lawyer from Grand Junction. He says he’s here to represent Anthony Sands.”

“Ah, I see. Well, tell him to have a seat and I’ll be right out. Don’t ask him, tell him. But you can say ‘please’.”

I stopped at the restroom to check myself in the mirror—I wanted to look as professional as I possibly could—and while looking at myself staring back in the mirror, I had a scary thought. The very next thing, I stopped by the holding cell with Sands in it.

“Morning, Mr. Sands. Tell me. Did you call a lawyer?”

“Huh? Uh, no. I mean, after that long session on Saturday, I figured it would just be a waste of time and money, at least until you file charges and I know what I have to deal with.”

“Ah. Well, there’s a Wilson Lingenfelter wants to see you. Says he’s your Grand Junction lawyer.”

“Lingenfelter? Hmm. The name’s familiar for some reason.” He scratched the stubble on his chin. “If I remember, he’s a high-profile defense attorney in Grand Junction, so that part fits. Calls himself the ‘Cowboy Lawyer’ as I recall. I don’t know how he’d know to be here for me, though.”

“You didn’t call him.”

“Not a chance. Say. Maybe one of my guys sent him to help, you know, someone from Friday who you released. They certainly knew that I wasn’t being released and that I’d be here.”

Even though the possibility seemed reasonable, I was still puzzled when I walked out to the lobby.

“Mr. Lingenfelter? I’m Annette Trieri, Colorado Bureau of Investigation. I understand you’re here to see your client, Mr. Sands?”

He was sitting in one of the lobby’s chairs, briefcase primly on his knees, and he didn’t bother to stand up. The nickname of “Cowboy Lawyer” fit, by the looks of him—big western hat over too-long hair; full beard with a handlebar moustache.

“Right. But first I need to see the sheriff.”

“I’m afraid the sheriff isn’t available—he’s in a meeting with the District Attorney as we speak.” Why, I wondered, did that voice seem sort of familiar?

“I need to know what my client is charged with before I talk to him.”

“I’d like to know that as well, Mr. Lingenfelter. Mr. Sands is incarcerated because of a disorderly conduct episode, and more serious charges are pending. Would you like me to arrange a meeting, or would you rather wait here?”

“What’s all this to the Colorado Bureau of Investigation?”

“The CBI has been assisting the sheriff in the investigation. That’s our job, as I expect you know. If you’ll excuse me, I’ll see if the sheriff’s meeting is wrapping up. Sit tight, and I’ll be back shortly.” I walked back down the hall to my office and took the long route to the DA’s office.

Thinking about it all later, I guess I should have noticed that my internal lawyer alarm, usually quite a trusty, if mysterious, warning system for me, wasn’t activated by Lingenfelter. I suppose I’d become so used to its presence during all my time with Sands on Saturday, and then again that morning, that I just tuned it out. Then, when it wasn’t there, I didn’t notice that either. And that turned out to be a tragedy.

I reached the District Attorney's office, unmistakable with its large, hand lettered, palindromic door sign saying "A.D. SONOS D.A." on it, just as Fran Schmidt was coming out. He looked annoyed. I had barely opened my mouth to say something snarky, when my phone started demanding my attention just as Fran's did his. I poked mine first.

"Trieri, CBI"

"Annette, it's Angela." Her voice was shaking, and she was panting. "I walked out to the lobby a minute ago and found Norma, she was on duty at the front desk, I found her slumped over, face down in a pool of blood. And the back of her head's been blown off by the exit wound."

"Oh, Christ. I'll be right there." Fran was already running in that direction, phone pressed to his ear.

But at a junction of corridors, he turned toward the holding cells while I kept on toward the lobby. By the time I got there, a small crowd was gathered, and I heard an ambulance siren outside. Although its increasing volume told me it was headed our way, it was clear that Norma Spears was beyond its help.

The small crowd was all sheriff's department employees, with no signs of the recent visitor, Wilson Lingenfelter, the supposed Grand Junction lawyer. It dawned on me why Fran had been headed for the holding cells—Tony Sands was in there.

When I reached Sands' holding cell, Fran was already on his phone setting up roadblocks. As soon as he saw me he handed me the phone.

"It's dispatch. Give her a description of the guy."

I had to work to focus on describing the man who had claimed to be Wilson Lingenfelter, because I was distracted by Tony Sands' body lying inside the cell. Both of his knees were shattered, his lower legs at very odd angles, and his torso was leaning sideways against the back wall, an arc of blood from the back of his head showing where he'd toppled to the floor.

As I passed along Lingenfelter's description, it registered on me that it certainly wasn't the Grand Junction Wilson Lingenfelter that Sands had recalled and, in any case, he'd probably not look that way now. What I had to say sounded very artificial—as if he'd been wearing a wig and a fake beard he could dispose of along with the big hat. The only thing distinctive I remembered were his eyes, an unusual shade of turquoise that made them seem quite penetrating. Colored contact lenses? And I hadn't really paid attention at the time, but the thousand-word picture of him in my mind now included "disguise" repeated over and over. I was no help when asked for a vehicle description.

Although there were only two directions in which he, presumably a visitor who didn't know the area, would have fled—east or west on U.S. 40—I verified that the local county road providing a shortcut bypassing Granby to the east was also going to be monitored. His only alternative to those possibilities would put him so deep into the back-country on such lousy roads that he'd need camping gear and a modified Jeep or some such vehicle. Surely, I thought, he'd want to get as far away from Hot Sulphur Springs as he could as quickly as possible.

So even without a solid description, it seemed to me that we had a good chance of catching him.

\* \* \*

As Fran, Angela, and I settled in to deal with the mess and wait for updates from the roadblocks, my phone once again demanded my attention. Its screen told me that Deputy U.S. Marshal Mason Niemeyer was calling.

"Ms. Trieri? I hate to have to tell you this, but it's started." His voice was grim.

I realized that he couldn't possibly know about our situation that soon. "What's happened to whom?"

"Fabiana Spadaro, now called Filomena Santini, had a peculiar accident last night at her nursing home. Fell down a flight of stairs and broke her neck. Normally, she doesn't leave her room after she's brought back from supper, but this happened in the middle of the night sometime. I thought you should know so that you can decide about protection for Tony Junior."

I let out a huge sigh. "Well, yeah. We would like to provide that. But it's too late."

I told him of the events of the past hour or so.

"Ah, crap. That's certainly not what I wanted to hear. Although I guess I can't say it's unexpected. Let's see. I suppose there was plenty of time for the person who was here dealing with Mrs. Santini to have driven over your way overnight or early this morning to deal with Tony Junior. Maybe that's just wishful thinking. That we've got only one killer on our hands, I mean. But I'm going to go with that until we have reason not to."

"Makes sense to me, especially because it's probably not random bounty hunters but rather someone sent out by whoever Tony Senior contacted."

"My thoughts exactly. I've already alerted my people down in...er, down south so they can take steps to get Danny in protective custody if he returns from his summer job. Do you know his plans?"

I remembered my conversation with Hal and Mac. "I'm told that he's on a week-long backpacking trip. I don't think I'll say where on this call. But being out in the wilderness seems like a pretty safe place for him, assuming our killer is a city guy. And, listen. When Dan does head for home, I used to run the CBI office down there and I know all the guys. If you need help from them, let me know and I'll pave the way with a phone call."

"I'm hoping we can handle it, but thanks. That could come in handy. Sorry I didn't call sooner, Ms. Trieri, but I just heard about Mrs. Santini a few minutes ago."

"Good luck with Dan, Marshal, for his sake."

Fran was looking question marks my way after I disconnected, so I filled him in.

"Mmm. That makes our roadblocks all the more important. Can't have a stone killer wandering around the state whacking people. Besides, he needs to be called to account for Norma. Geez. She just started last week. And she's got a three-month old baby, or I guess her husband does now." Fran shook his head in despair.

At least, I thought, she hadn't suffered, having been killed by a single shot through the forehead from close range. No doubt Lingenfelter, or whatever his name was, had taken the weapon from his briefcase, hidden it behind the case, and innocently strolled up to her as if to ask a question.

Tony Sands, however, had obviously suffered from the double knee-capping before being dispatched with the shot through the forehead. Because none of the four shots had been heard, the killer had used a very effective suppressor on his weapon, and the hollow-point loads, which the exit wounds suggested, only made his attacks that much more effective. It was clear that we were dealing with a professional.

I began to wonder whether Dan Santini really was comparatively safe up on the Continental Divide Trail, as I'd suggested to Niemeyer. Maybe my throw-away thought that the killer had camping gear and a Jeep wasn't so unlikely after all. If Dan had written to his parents about his CDT plans, he could well be in big trouble up there in the woods—and his friends, too. It seemed likely that everything that Tony Santini Senior had known about his family was now known to whoever put out the hits.

These thoughts came spilling out to Fran and Angela in a rush. As time was passing with no reports of success from the roadblocks, they began to seem less and less far-fetched.

“I’ve hiked most of those stretches of the CDT,” Fran was staring off into space, “and even done some camping up there. Most of it’s in either the National Park or the Wilderness Areas, and you need camping permits this time of year.”

“Hal mentioned something like that—they have a schedule to keep, he said.”

“Maybe we could get a look at those permits in the Forest Service office. Or offices. See where the group is supposed to be when. Intercept them or something. You said they started Saturday from Grand Lake? They’ll be a bit past Monarch Lake by now, I’d guess. It gets harder after that, steeper and higher.”

“Fran, I bet you were going to tell me what Sonos told you before we got those phone calls.”

“Oh, yeah. Well, some of what he said is moot. He was positively giddy about the prospect of a successful prosecution of Sands, but obviously that’s not going to be happening. And he also said that there’s no point in pursuing a warrant for Daniel Santini. Everything’s just too circumstantial. I don’t think that Sands’ death will change his mind on that.”

“So if we intercept Dan and his friends, it’ll be for his own protection, I guess. Theirs, too. But not to arrest him.”

Fran nodded. “Right. And we can keep an eye on the places where Jeep roads cross the CDT, or where it follows one. Places where our killer might be able to access the Trail and get at Santini.”

For the first time, Angela spoke up. “Could we use horses, Sheriff? I know that motorized vehicles aren’t allowed in Wilderness Areas, but how about horses?”

“If I remember correctly, we can. Good idea, Angela. Also, we can do a helicopter fly-over and see if we can spot them, of course.”

“And I don’t mean to be a wise-ass, Sheriff, but, look—we have his phone number from that call list I got. Why don’t we just call him first?” Angela shrugged. “Maybe he’s somewhere in cell range—there’s pretty good coverage on the sides of the valley up here, seems like, at least at the ski area. Maybe the east side of the valley, too. We owe him a call anyway, to tell him about his family.”

Fran and I looked at each other, and he spoke first. “Annette, do you feel as dumb as I do just now? Maybe I should look into retirement options.”

“That’s the trouble with these new-fangled gadgets we didn’t grow up with. We don’t automatically think of them. Anyway, Fran, is there an end game? I mean, if we manage to keep Dan safe from this particular killer, that’s just this one guy. Don’t you think whoever put out the hit will keep at it?” I hoped I didn’t sound as depressed as I felt.

“I sure would like it if we could turn Santini over to his WITSEC people safe and sound. After that, well, it’s on them, I guess. But I already lost one of their charges here in Grand County. I don’t want to lose any more. And certainly not any more of my people.”

“Sheriff, it seems like we should be able to do that, get Dan Santini back to the WITSEC people, I mean.” Angela looked thoughtful. “From what Annette said, our killer is probably a city guy, sent here from New York or someplace. Even if he’s equipped for the outdoors, he’s probably not an outdoors person, and he’s also probably not familiar with the territory here. But you are, and Annette and I are sort of familiar with it in general, if not this specific trail. So we’ve got the huge advantage of all that, in addition to numbers and technology. If we can find out about their camping permits, we can narrow

down where to find them on a given day, then move in with horses to get them out, or at least get Santini out. I think this should work out in our favor.”

Fran nodded, then broke out in a big grin. “I hope you’re right, Angela—I hope that’s more than just a pep talk. Although I guess I can use all the pep talks I can get right now.”

\* \* \*

## Eleven

Dan Santini was either out of cell tower range or he had his phone turned off, as my call went straight to voice mail.

Because Dan had worked all summer at Hal’s institute, and because I was married to Hal, I got nominated and elected to make the call. The reasoning appealed to both Angela and Fran, but it just seemed like an excuse to me.

Still, it was useful to be able to invoke Hal’s name in my message. “Mr. Santini, my name is Annette Trieri, and I’m married to Dr. Weathers, the MPARC Director. He’s told me about your backpacking trip, and I’m hoping you’ll turn on your phone and check for messages somewhere that there’s a signal up there. Please call me back when you get this, as it’s essential that I talk with you as soon as possible. Thanks very much.”

It surprised the hell out of me when he called back about lunch time.

“Trieri, CBI.”

“Ms. Trieri, this is Dan Santini. You asked me to call you?”

“Mr. Santini! Thank you so much for calling. I didn’t expect to hear from you so soon. Um, how’s your battery situation?”

“I’ve got a solar charger, so I’m fine.”

“Oh, good. And I’m not going to ask where you are—you’ll understand why shortly. Now, first, I’m afraid I have some tragic news for you. It’s about your family. Sometime last night, your mother died from a fall down some stairs at her assisted living place in Grand Junction.”

There was a long pause followed by a low moan. “Oh. God. That’s...that’s awful. Geez. She wasn’t doing very well at all, last I heard, and I guess that’s what happens when people become frail and unstable on their feet. But that’s awful.”

“Well, I’m sorry to say I’m not done with the bad news yet, and it will help you to understand if I give you some background first. I’m with the Colorado Bureau of Investigation, and I work with the sheriff’s office here in Grand County. I’ve been involved in the investigation of the death of Phillip Linton, whom I expect you remember from that MPARC conference the past couple of weeks. And because of the investigation, I’ve found out all about your family’s history. *All* about it. I’ve had several conversations with Deputy Marshal Mason Niemeyer of the WITSEC Program. So the bad news is really bad, I’m afraid. Can I get you to sit down, please?”

I heard faster breathing. “I’m sitting on a log now, actually. We stopped for a lunch break.”

“OK, well, here goes. Your brother told me that your father had decided to turn himself in, so to speak, to the people in New York who are after him, who you all ran away from. He must have done so

sometime in the last few days and been made to tell all, because your mother's death was meant to look like an accident but includes some suspicious circumstances. Worse, your brother was murdered this morning, execution style. The killer is at large here in Grand County, and we think you're likely next on the list." I paused for a breath. "I would have much rather been able to talk to you in person about this, but it seems like telling you soonest takes priority. And I should say that this is just an ordinary cell phone call between us, so please take care about what you say concerning your location just now."

"Jesus Christ!" More rapid breathing. "I...I need to turn off my phone's GPS, hang on."

My heart sank. That would probably be too little, too late if someone was already onto him, I thought.

"OK, that's done. And I told all my buddies to turn theirs off, too. I hope that'll help. And it's not like, you know, we're walking in Times Square just now. We'll be hard to find."

"My colleagues in the sheriff's office have suggested several ways to find you, though, so I expect that others could figure out the same approaches. What we'd like to do is to get you back into the arms of the WITSEC people for your own protection. Does that make sense?"

"Fat lot of good they've done us."

"I'm not sure that's quite fair, Mr. Santini. It seems to have been your father who's responsible for the lapse of security. Your brother told me that he, your father, had decided to turn himself in with the hope he could persuade whoever it is to leave you and your brother, and your mother as well, out of it all now. But that didn't work, it seems."

"You talked with Tony?"

"I did. He and his motorcycle buddies got into a rumble last week, and they were all brought in by the sheriff's people. So I helped with questioning them."

"Yeah, but why would he talk to you about Dad?"

"Because of what I found out about your family during my investigation of Linton's murder. It starts with your sister, of course."

"Oh. Right. But wait! Tony was in jail when he got whacked? What the hell kind of crap sheriff's office is that, anyway?"

"One that lost a desk officer in the incident, a young woman with a new baby, as well as your brother, Mr. Santini. The killer was a professional who didn't care about anything but doing his job. I'm very sorry for your losses, Mr. Santini. My main concern now is your own well-being. And we're proposing to get you back with the best protection we know of, the WITSEC people. Understand?"

"And you think this hit man is after me now, huh? Yeah, I guess that makes sense. If they've got Dad and they've done Mom and Tony, well, I'm the only one left. And it means my friends here are probably at risk, too. But do you really think he'll come up...er, come to where I'm going to be? Most of the hit men I've heard about aren't exactly, you know, mountain men or anything."

"I hope you're right, Mr. Santini. Without realizing who it was, I got a glimpse of the guy this morning; he was disguised as a lawyer claiming to be your brother's attorney. Quite harmless looking, actually. By now, though, I'm sure he's changed his appearance. And the thing is, we don't have any idea of his whereabouts now. He could be on his way to where you go to school. Oh. that reminds me. Did you write to your folks this past summer about where you've been and your plans for right now?"

There was another long pause. "I made a point of writing every week and including postcard pictures for Mom. She likes those. And, yeah, I talked a lot about my internship, and then last

week...no, two weeks ago I talked about this little walk I'm on now. Crap. If they've got Dad, he'll have been made to tell them, I'm certain."

"I don't suppose that you have any idea of who "they" might be, would you?"

"Tony and I used to talk about that a lot. But it was all pure speculation. One outfit that was especially hard-hit by my Dad's information, though, was a bunch of Russians who operated out of Brooklyn. Letivshenko, or something like that. Boris Letivshenko, maybe. But it could be just about anybody. Dad had his fingers in lots and lots of pies in the day."

"So I've heard. I hope you realize how much of a hero he is in law enforcement circles. And I'm sorry about his current predicament. Anyway, I expect it's time for your group to be on your way. If your phones are all off, GPS-wise, then where you are now is your last recorded location. The sooner you get away from there, the better."

"Ah. You're right. Good thinking. We'll be on our way shortly. But I want to make sure you and I cover everything we need to first, because I don't know about cell signals where we're headed."

"Good idea. What we need to do is figure out where to pick you up as soon as possible. In your letters, did you tell your folks about your precise route? Which direction you were going, where you were starting from? And when?"

"I see what you mean, I think. When, yes. Direction, no. It wouldn't have made any sense to Dad anyway, and Mom doesn't have much of a clue about anything."

"So all your father could have told anyone is pretty general stuff that wouldn't let anyone pinpoint your position. Good. Now we just need to settle on a rendezvous spot and a time. Without telling each other where. Any ideas?"

"Well, you know, I spent a lot of time over the summer planning this trip, so I know the terrain pretty well from maps and also from short day hikes on parts of it. So let me suggest this. Ask Dr. Weathers what the ring around the Sun is called. I'll be there late tomorrow afternoon. If you're there in a way I can identify as safe, I'll show myself. OK?"

"Ring around the Sun? Huh?"

"He'll know. And you'll figure it out. See you tomorrow afternoon."

\* \* \*

Not surprisingly, Hal was puzzled about why I called him and asked about the ring around the Sun. But our years together have included all sorts of odd requests for information in his various areas of expertise, so he didn't extract a price for telling me.

Not that "corona" helped me a lot. But, when I mentioned it all to Fran, things became clear as crystal.

"Hmm. I figured before that he was headed southbound somewhere just past Monarch Lake, right? I guess if he busts his tail, he can make it to Corona by tomorrow afternoon, and maybe even get some sleep tonight while still below tree-line. Did he say if the whole group was going to be there? That might take longer."

"No, but he did mention that they were probably at risk, too. And he had all of them turn off the GPS in their phones."

"So the thing to do is to take several vehicles up there, four-wheel-drive patrol cars, and park where they can be seen. Maybe have all their lights going. And if there are other cars there already, we can call

in the plates to see if they might be rentals. Presumably that's what our guy's driving." Fran scratched his head. "How about you and Angela and Roger Traubman in separate vehicles, armed to the teeth? You can take that hot-rod CBI Jeep of yours and see how it does on that road. I'll probably need to stay here and continue to deal with the fallout from this morning."

"Where are we talking about, Fran?"

"Corona, the site of the old railroad stop up at Rollins Pass. Up on the Continental Divide. I'm sure Roger's been up there. It's something like fifteen miles up a county road, Grand County Road 80, I think. It starts across the highway from the ski area."

I thought for minute. "There's that stoplight where the cross street leads to condos up on the east side of the valley across from the ski area. That place?"

"No, it's just a gravel road that takes off from the highway about a half-mile north of where you're talking about, between there and the old Idlewild campground entrance. The county road is an old railroad grade, and there's only one steep section at a creek crossing where the railroad bridge isn't safe to drive on, about half-way up. All fifteen miles get graded in the spring, but by now it'll be full of potholes from all the traffic and some wash-outs from the weather. People do it in regular passenger cars, but an SUV with clearance is a lot better." He looked wistful. "I wish I could go. The last few miles are above tree-line, and except for all the bumps it's quite scenic, a beautiful ride."

"Passenger cars? So it's not like that so-called road up to Angela's Valley of Death?" Fran had driven us up that one during an earlier investigation, and my shook-up insides had taken a long time to recover.

"Huh? Oh, that one. No, no, this one's lots easier. Safer, too. You'll want to go slow in a big vehicle, though, so I'd plan on its taking at least an hour up to the top."

The rest of the afternoon and most of the next morning was involved with i-dotting and t-crossing concerning the two deaths in Fran's departmental offices. We found a picture of Grand Junction lawyer Wilson Lingenfelter, and I verified that it didn't look at all like the guy I'd seen in the lobby. Fran dealt with the sad task of informing Norma Spears' husband about her death. We interviewed everyone carefully and found that no one had any information concerning what sort of vehicle the killer had driven away in. Four flattened 9mm hollow-point slugs were recovered and bagged to allow a ballistics comparison should a suspect gun ever be found. Myriad other tasks, big and small, associated with what little there was to do in the way of investigation were completed.

I slept badly that Monday night.

If Sunday had been a beautiful late summer day for Hal and me to walk in the woods, Tuesday was one of those overcast, drizzly days when you want to sit at home drinking hot chocolate. I was too busy to have noticed what was happening Monday, but it was probably some sort of transition. It seemed that the Southwest Monsoon had decided to undergo an end-of-August resurgence.

I wouldn't have minded Tuesday's weather except for our planned excursion up to the Continental Divide on an unpaved road. Drizzle in the valley often meant heavy rain, or even snow, way up there. And I also knew that the otherwise spectacular views would be limited to close-ups of fog banks. At least, I thought, it might hide some of the drop-offs.

Fran was right—Roger Traubman had been up to Rollins Pass numerous times, most recently the previous June, so he led the way with Angela following, both driving sheriff's department Ford Explorers. I brought up the rear in my CBI Jeep. Roger suggested, and I agreed, that as soon as we climbed high enough to be in the cloud bank we all turn on our emergency lights. That way, we'd not

only warn others of our presence but also be able to keep track of each other more easily in the cloud-turned-fog.

He also allowed as to how that road would normally be a piece of cake, albeit bumpy, but that with the rain it could be slick in places. He was glad to have the four-wheel drive and warned us to pay attention to his wheel placement, as much as possible in the fog. We didn't, he emphasized, want to get stuck or to slide off the edge.

Angela's big, brown eyes got even bigger than usual when she heard that.

Despite the nasty weather, I was glad not to be hanging around headquarters Tuesday afternoon. The morning had been bad enough, because media interest was snowballing. A sheriff's deputy shot on duty and a prisoner executed in his cell—the media sharks, you could tell, were relishing the blood and potential scandal.

Given the weather, we didn't know how long the drive would take, so we doubled Fran's estimate. Fifteen miles in two hours wasn't going to set any speed records, but it would allow us to take special care. We left after lunch with the idea of getting to the top by about three.

I hadn't known what to expect, but it turned out to be pretty boring. There wasn't anything in the way of scenery, even before the cloud turned to fog, because the rain obscured the forest around us. And the drive itself wasn't especially demanding. The only tricky place was where Fran had mentioned the creek crossing—climbing up out of that gully gave all three of us a chance to exercise the low-range of four-wheel-drive in our SUVs. At least we had radios on which we could talk with each other, although, because anyone in the department could be listening in, we kept that to a minimum.

The cloud turned into fog at about tree-line, and the rain turned to big, fat snowflakes a couple of miles above that, but it was still melting on surfaces. My car's outside temperature readout had it a couple of degrees above freezing, and by the time we reached the top it was in the high 20s with the snow just beginning to accumulate on the ground.

I'd taken the time to look carefully at satellite pictures of our destination, so the parking lot at the top wasn't unexpected to me, nor were the trails and vehicle tracks marring the tundra. The tourist signs, though were a surprise, a reminder that we weren't as far from civilization as it might have seemed. Fortunately, the weather was so lousy that there were no other tourists up there, at least not that we could see.

We got out and talked together about it, and then decided to park in an outward facing triangle, far apart enough to make our lights separated in the fog but close enough to be able to see anyone who might be approaching from the rear of any of the vehicles. We weren't feeling exactly paranoid, but the fog was spooky enough to make us feel cautious. Then we each settled in to wait for our intrepid hikers to appear out of the mist.

It was like being inside a snow globe, a well-shaken one. A snow globe with disco lights, as the red-and-blue emergency lights on all three of our SUVs reflected off the snowflakes in gay abandon. The effect was mesmerizing, and it became hard to concentrate on watching for approaching pedestrians, especially as the snow came down harder.

That, I suppose, explains why I was so surprised, and why neither of my colleagues noticed his approach, when there was a tapping on the passenger-side window of my SUV. I couldn't see very well, so I decided to take a chance by lowering the window.

Imagine my surprise to see the wet, bedraggled face of Dexter Lemone staring in at me.

\* \* \*

He looked utterly miserable.

I'd been sitting, bedazzled by the light show, in relative quiet, hearing only the soft rumble of my idling Hemi V-8 and a slight whooshing from the heater fan, and it took me a few seconds to realize that the strange, new clicking sound was his teeth chattering.

"Why Dex! We've just *got* to stop meeting like this, man. Want to climb in and warm up?"

I flicked the "unlock" switch on my door's armrest and heard a click. It surprised me that he was polite enough to take off his outer jacket and shake it off before climbing into the passenger seat. I turned up the heater fan for him.

"I can't tell you how glad I am to see you, Ms. Trieri. And the others will be, too."

"Are you with Dan Santini's group, Dex?"

"Right. When Dan mentioned your name, I told him I knew you, from the meeting. So I got chosen to check out the occupants of these vehicles. Kind of glad they chose me, actually. It's nice and warm in here."

"So the rest are around here somewhere?"

"Yeah. Waiting for an all clear signal. Dan's initials in Morse code. Horn or lights or whatever."

"OK. But, uh, I don't know 'D'."

"Dash Dot Dot. At least that's what Dan told me. He thought all this up."

So I set to signaling "D-S" using Morse code on the horn, and after a few repetitions and a comment on the radio to Angela and Roger about what I was doing, a group of backpack-bearing, snow-covered forms emerged trudging through the fog. Two of them climbed into the back seat of my Jeep, after tossing three backpacks in the rear hatch, and the others climbed into the other vehicles. My two turned out to be a young man and a young woman.

"Thanks, Ms. Trieri. I'll talk with you more when we get back to town." And, with that, Dexter Lemone was out the door and sprinting to Angela's SUV, into which a lone backpacker had climbed.

A woman's voice from the back seat said, "Where's he going?"

"To sit with Rhonda, I bet. You know how he's been coming on to her. Probably wants to snuggle on the ride down. Cop a feel," the man's voice responded, eliciting a giggle

Hearing the voices had drawn my eyes to the rear-view mirror, where I saw the young man's clean-shaven face looking back at me, bright green eyes under a long shock of black hair sticking out from under a stocking cap. The face lit up and said, "You're Annette Trieri! I recognize you from the MPARC conference last week."

I smiled. "I was there, yes. And you are?"

"I'm Dan Santini. And, boy, am I glad to meet you here. Oh, and this is Allison, by the way. We're both glad. This weather sure went all to hell."

"Dan, I saw six people come out of the fog. Is that all of you?"

"Yeah. Looks like we're evenly divided among your three cars."

"Then I vote we head downhill." I got on the radio and relayed the sentiment, receiving full agreement from the other two.

Once again, Roger took the lead, with me in the middle this time.

“Dan, I’m sorry I don’t remember you from the conference, but I’m glad to meet you now. Glad to meet you, too, Allison. Why don’t both of you call me Annette?” I tried to watch the road instead of the mirror. “Is it warm enough back there? I can turn the heat up more.”

“This is heavenly,” Allison said.

“Dan, congratulations on coming up with a great plan, Well, except for the weather, but I guess that’s not on you. And you were right. Hal knew about ‘corona.’ He didn’t even have to think about it very long.”

“How’d you find out about the place called Corona?”

“Sheriff Schmidt has lived here forever. He knows all the place names. And the deputy in the car ahead of us has been up here lots of times. Which reminds me. The sheriff thought when you called me on Monday that you were probably a bit this side of Monarch Lake. How right was he?”

“Not bad, actually. I’m impressed.”

“And he said you’d have to bust your ass to get up to Corona in a day and half. I’m glad you made it, but how was it?”

Allison laughed. “Annette, this guy is a regular slave driver. Before he called you, we were having a nice walk in the woods, camping out under the stars. After your call, when he had a destination to get to, it was a forced march.”

“Hey, c’mon. I was motivated. You get a New York hit man after you, you get motivated. And we made it, didn’t we?”

“Well, look at it this way.” I tried to sound philosophical. “If not for the forced march, you’d be looking at a couple of nights above tree-line in that weather up there. As it turned out, you’re in a nice, warm, dry car.”

“Annette?” Allison sounded worried. “Is all that stuff Dan told us really true?”

“I’m afraid I really don’t know what all he’s told you.” I decided to dodge that question as much as possible.

“Pretty much everything, Annette.” Dan sounded resigned. “My family history, what you told me about Tony and Mom. And Dad.”

“About Phil Linton, too?” I wondered how much I should push on that topic.

“Dex knows about Phil, of course. He said you thought he was a suspect.”

How much, I wondered, should I divulge here? If the district attorney was not going to go after an arrest warrant for Dan as an accomplice, then his part in the whole thing was a non-issue. Tony’s death had put to rest his prosecution. It seemed like the entire case would simply fade away now. Also, had Dex told them about his NRA interview?

“For a while there, pretty much everybody at that conference was a person of interest, Dex included. And he was acting strangely—threatened to get a lawyer every time I asked him a simple question. It made me suspicious. But he was never a real suspect.”

“Did you ever find out who killed Linton?” Dan’s question was guarded.

“We did, but I can’t talk about it. I don’t know how much will ever come out. Given the thing about your sister, I hope it all brings some closure for you, Dan.” I wondered if he’d told his friends that part of the family history.

“Tony was more obsessed with that than I’ve ever been. But it’s all over now.” He was looking side-to-side out the windows, I saw in the mirror.

And there was more to look at now. We’d descended to an elevation below the snow line and emerged from the cloud base, which had lifted, and it was drizzling again, a fine, misty spring-like rainfall. The temperature was up by a good fifteen degrees, and you could see the terrain around us.

The road, having started life a hundred or so years ago as a railroad grade and been subject to periodic maintenance over all those decades, was in much better shape than I would have thought. Enough gravel had built up the base that it was not just mud, and somehow, with all the water, the potholes were less nasty.

It wasn’t too long after we’d entered the forest again that I noticed that my two passengers were fast asleep in the back seat. That forced march must have exhausted them both.

Because I didn’t have to keep up my side of a conversation for the rest of the drive, I had time to think about next steps. Angela and Roger could take their passengers to wherever they had left cars, or to wherever they were staying in town. But I realized that my situation was different. There was a fair chance that Dan’s car, or his apartment or whatever, was being watched. What I needed was advice from WITSEC.

Maybe, I thought, I could head for MPARC and contact Deputy Marshal Niemeyer from the SCIF. He could talk with Dan about next steps. I wondered, had Allison been an intern there as well, or was she someone Dan had met in town?

When we finally reached the stop sign at US 40, across from the ski area, the clock in the instrument cluster said it was 4:45. I’m pretty sure my colleagues, the drivers in the other two SUVs, shared my sigh of relief.

\* \* \*

## Twelve

At the stop sign, Roger, Angela, and I got out to confer because three-way radio conversations were just too stilted. The drizzle had become a minor nuisance, most of it evaporating well before it hit the ground at that point. It almost felt like August again.

They agreed with my approach for Dan, and we transferred Allison and her gear to Roger’s SUV and Dex’s gear to Angela’s. They both turned right, north down the valley, to take their passengers home or to their cars.

Dan woke up during all the shuffling and wanted to know what was going on.

“Everyone but you is going wherever they want to, Dan. I’m worried, though, that your car is being watched. Or your apartment. Or both. So I thought we’d go to MPARC, where we can set up a conversation with WITSEC for you.”

“Hmm. Dex and Allison have cars waiting up at the top of Berthoud Pass. We left them there for when we finished the hike. Mine’s in front of my apartment building. Up Vasquez Road a ways.” He yawned and scratched at an armpit. “You think that hit man might be watching for my return, huh? I guess discretion trumps valor here. And I think I do want to hear what WITSEC says. Did you say you’ve been talking with Mason? He’s the senior guy on our case.”

“Mason Niemeyer, yeah. I’ll call him now and alert him to the MPARC conversation. There, both ends will have video as well as voice.”

Although it was a bit past five when we got to MPARC, I didn’t have any trouble rousting the help I needed to use the SCIF’s communications facilities. Sometimes having special pull with the Director comes in really, really handy. It was only five-thirty when Mason Niemeyer’s face appeared on the big screen.

“Ms. Trieri, good to see you again. Hey, Danny. Heard you had a little adventure.”

“Hello, Mason. Annette here tells me my family’s all dead.”

“I know first-hand your mother is, because I identified her body today. Ms. Trieri told me about Tony, and it’s all over the news as well. And all I know about your father is that he disappeared last week and hasn’t been seen since. But I’m not very hopeful, given what he apparently told Tony, that he was going to go visit one of the New York outfits. Let me offer condolences all around.”

“Thanks. But what’s going to happen to me?”

“That partly depends on the situation there, Danny, or at least what the sheriff has in mind. Ms. Trieri? How circumstantial is that evidence you alluded to the other day?”

“Too circumstantial for the district attorney to want to pursue it. And with Tony dead, I think the whole thing will be closed on our end.” I didn’t know that for sure, but I decided to trust my instincts. “As far as we’re concerned, whatever you think will keep Dan here alive and well is the best thing to do, going forward.”

“Fair enough. Mmm. Ms. Trieri? Could you please excuse Danny and me for a while? I hate to ask, and I don’t mean to be rude after all you’ve done, but the fewer people who know our plans, the better.”

“I was just thinking that, Marshal. I can’t imagine that I have any need to know your plans, and if I do I’m sure you’ll fill me appropriately.” I turned toward the door. “Dan, I’ll be down the hall and to the right, in the Director’s office.”

Hal, it appeared, was just about to walk out the door to head for home when I interrupted his end-of-the-day routine.

“Well, this is a surprise. Ah, do you have an appointment, Miss?” He grinned.

“I tried to call your secretary, but you know how that goes.” One of my favorite ways to tease him was about his lack of an administrative assistant.

“Yeah, well, it’s all your fault. I keep offering to hire you, if only you’ll wear that little black dress of yours. Sure would make my day a lot more fun.”

“And mine a lot more uncomfortable.”

Hal liked my little black dress because it was so short that all I could do was to stand still in it. Just about any movement at all, especially sitting, was simply indecent. And getting in and out of cars was, to say the least, quite drafty.

He wrapped me in a hug. “I know, I know. But you sure look delicious in it. Anyway, you’re too good to be an administrative assistant. But what brings you here this time of day?”

I told him about the not-so-scenic tour of the afternoon and our guest in the SCIF.

“I hope he appreciates being rescued from the weather as well as from the hit man. It seems OK outside here, but four thousand feet up it’s probably miserable. Are you still thinking of him as a possible accomplice?” He leaned back to watch my expression.

“The D.A. decided not to pursue it even before that murder yesterday, so I’m sure he’ll drop it completely now. Dan’s in the clear, looks like, at least as far as we’re concerned. But his family history may dog him forever. That’s why he’s in the SCIF, to talk with a witness protection guy about the future.”

“I hope they work something out. I have to admit to mixed emotions about this whole thing. There’s no question that Phil Linton was really getting under my skin, and my opinion plummeted when we found that he sold out. But that doesn’t mean I wanted to see him dead. And, although it seems rather like karma for his killer to have been killed, that’s not something I’d have wanted either. I guess I’ll hold on to Dan’s being eliminated from the legal side of all this as something positive.” Hal rolled his eyes. “But it’s too bad he’s going to have to carry this burden forever. I suppose the witness protection program will get him yet another new identity and so on, and move him somewhere else. Not a fun way to have to live your life.”

“No, but a lot better than being charged with murder one, even if only as an accomplice. Or being dead.” I shrugged. “Anyway, I think we’re done with it. Want to stay down here and eat out somewhere before we head up the hill?”

“I like that idea. I wonder if we can get into the Ranch House over at Devil’s Thumb? Seems like you were up by its namesake today and it would be a good place to go.”

“Huh?”

“Oh, yeah, with this cloud deck you wouldn’t have seen it. But I’ve pointed it out from home, that rock outcropping up there north of Rollins Pass? That’s the Devil’s Thumb. I suspect that the ranch is named after it, but maybe it’s the other way ’round.”

“You mean, which came first, the ranch or the rock?”

“Right. I recommend we discuss it thoroughly over a glass of something.”

“Suits me. I hope they’ve got a good wine list.”

“I think you’ll be satisfied.”

\* \* \*

I was. And even more with dinner.

We left my CBI SUV at MPARC, and Hal drove us down to Tabernash and back up the county road to the Devil’s Thumb Ranch and Spa with its great restaurant. That way, I was able to sample the wines-by-the-glass to my heart’s content without worrying about driving home. As always, Hal stuck to iced tea.

The next morning, we went into MPARC together, and I picked up my SUV and headed north to Hot Sulphur Springs and my office. I was hoping that all the mess of Monday would have been taken care of and that even the media crowd would have dispersed. I discovered my hopes were a bit optimistic, but it wasn’t too awful. First thing, I went looking for Fran to give him a report of Tuesday’s excursion.

I suppose I shouldn’t have been surprised that Angela had already beat me to the punch, though. All Fran still wanted to know was the end game for Dan Santini, which, of course, I really knew nothing about anyway. In fact, it turned out that he actually knew more than I did.

“I got a call this morning from the Winter Park police chief, who told me about a request he got from a Deputy U.S. Marshal, name of Niemeyer.”

“Ah, yes. He’s the guy I’ve been talking to. Sort of the case officer for the Spadaro/Santini/Sands crowd.”

“OK, that makes sense. It seems that Deputy Marshal Niemeyer asked the chief to ticket a car parked up Vasquez Road in front of an apartment building, and then, after the appropriate time, have it towed away as being abandoned. Apparently, at some point, a moving company is going to clean out an apartment there and tote away all the personal stuff in it.”

“Sounds like that’s how Dan Santini’s presence in Winter Park is going to be erased without putting him in jeopardy. We kind of think that his car and his apartment are being watched by that hit man who’s on the loose.”

“Ah. Sure. It all fits together. Meanwhile, Santini can be spirited away by the Marshal’s Service to whatever future they have planned for him. And we here in Grand County can wash our hands of the entire episode.” He stared out the window for a minute. “I think I’ll make sure that we have someone watching when the car’s towed and the apartment is cleaned out. We might get lucky and catch the hit man watching for Dan.”

“That’s a good idea.” I nodded. “And you’re right. I think that’ll close the book on this whole thing. Except for those media people who are still hanging around.”

“Why, thanks for reminding me, Annette! Makes my day, that does.” He shook his head. “As a matter of fact, I’ve got a press conference scheduled in an hour. Oh joy.”

“I’ll let you have some time to prepare, then. I’ll go talk with Angela about how things worked out with the other backpackers.”

“Thanks, Annette. Maybe I’ll meditate.” He closed his eyes. “Ommm…”

Angela was in our shared office, focused on her usual task of paperwork. She was better at it than I, and I was her boss, so she was the lucky person who got to handle it.

“Morning, Angela. How’d it go with the hikers yesterday?”

“I was glad to have the company on the drive down the hill. It was lonely going up. And they helped me keep my mind off that road.” She winced, then smiled. “I don’t think I’m cut out for that four-wheel-drive recreation thing.”

I agreed. “I’m not either, even as a passenger. Between the jouncing around and the stress of the narrow roads and drop-offs and everything, I’d rather sit at home by the fire. But it’s a useful skill to have in our jobs, the ability to navigate those Jeep roads. At least if you want to live here. A hundred miles east it’s probably not so important.”

“I get that, for sure.” She looked puzzled. “And what’s with that guy that jumped in my car, what was his name, Dex? He’s sure a piece of work. If I hadn’t been in the front seat in my uniform, I think he might have forced himself on the girl he was with in the back.”

“Mmm. And just as I was beginning to give him the benefit of the doubt, too.” I filled her in about my interactions with Mr. Lemone. “I guess it was good that he was along on that backpacking trip, as he was able to identify me up there at the top and tell me how to signal the rest of them. But I also guess I hope he doesn’t cross my path again.”

She smiled, in a sort of wicked way. “Actually, I wouldn’t mind at all if he tried to pull some of those fast-hand stunts on me. I can always use the practice with my karate moves. Without pulling the punches like we do in practice.”

As I was trying to think of what to say, George Neering wandered in, head bobbing to his usual internal music.

“Hey, good morning, ladies. Lookin’ good! Hope your day is going well? I hear you both took a little excursion up to Rollins Pass yesterday.” He looked back and forth at the two of us, still keeping time to some inaudible music. “I was hoping that you might be able to fill me in on how the road is this year.”

This time, Angela’s smile was friendly. “Morning, George. How did those autopsies go?”

He put on a professional mask of non-expression and shook his head, internal music interrupted. “Mmm. Bad, bad business. Poor, poor Norma. At least it was quick for her. But that Sands guy, he had to live with those shattered knees for several minutes, at least. Nothing unexpected, though, on either of them. Only real evidence is the slugs. Bad karma, man.”

“Bad karma, indeed, George. Especially because we don’t have any idea about where the shooter went. He could be hanging around here, or he could be long gone.” I shrugged.

“Thanks, George. Anyway, I don’t have a good standard of comparison for that road. It was way better than the so-called road up to that *Valle del Muerte* we rode up earlier this summer, but not nearly as good as, say, Cottonwood Pass.” Angela, I could tell, wanted to be as helpful as she could.

“Hmm. No rock falls or big trees? Wash-outs?” He was back to the music.

“Just lots and lots of potholes. And that stream crossing wasn’t bad at all. That help?”

“Sure does, man. Thanks. I like to get up there at least once each summer, and it helps to know which car to take.”

George, I’d learned, had a small collection of vehicles ranging from a restored classic Porsche 356 Speedster to an almost new Land Rover. I was betting he’d take the Land Rover.

“It was wet, of course, and muddy,” I chimed in, “but it’ll dry out with a day or two of good weather. And all that snow will melt quickly, I bet.”

“Thanks, sounds good. I got a secret place up there I go skinny dipping.” He grinned. “Ice cold, but refreshing. Gets me all shriveled up, though.”

My imagination pictured George skinny dipping, making me wince. Angela looked as if she was going to break into giggles any second.

“George, man, way too much information, OK?”

“Oh, yeah, sorry, man. Anyway, thanks for the info. And, say, if that shooter does turn up, I hope he’s still got the weapon. I’d like to get ballistics tests done.”

He ambled off, and Angela and I looked at each other and burst into laughter, badly needed laughter, given all that had been going on.

\* \* \*

It was just after lunch when Hal called, bubbling over with enthusiasm.

“Afternoon, sweetie. I’ve been decompressing from that conference, doing some serious internet surfing. And there are various real-time web cams that show aspens changing here and there.”

“Really? So soon, eh? Well, it sounds like we ought to plan our tour.”

“My thoughts exactly. We could drive to Durango and back, a day in each direction, easily. But that seems too hurried to me.”

“Agreed. This time it’s truly the journey more than the destination. So I guess the question is, how many nights on the road in each direction? How much do we want to wander around?”

“Well, I’m looking at a map right now. Google, naturally. I guess the first thing to do is to figure out where we want to stay for those nights.” He paused briefly. “Hmm. How about from here to Steamboat Springs, via Willow Creek Pass, Walden, and Rabbit Ears Pass, and then south to the Eagle River Valley, for starters? Take it easy and stay somewhere in Avon, maybe. Then, um, up to Leadville via Tennessee Pass, south to Twin Lakes and over Independence Pass to Aspen, and then down to Carbondale and over McClure Pass to Paonia and then Delta? That’s right next to Montrose, and there’s got to be someplace to stay there. And then down to Ouray and the Million-Dollar Highway south to Durango. Oh, wait. Grand Mesa would be worth seeing, I bet. Hmm.”

I had a pretty good map of Colorado in my head, so I was able to keep up with this itinerary reasonably well. I couldn’t fathom distances or times, though.

“Um, how about we talk about this at home, looking at a paper map? We must still have some of those somewhere.” A thought occurred to me. “And are you going to want to fish? If so, we need to build in time for that, you know, instead of just driving and driving all day.”

“Yeah, good point. Gotta put more thought into this, I guess.”

“What’s your time frame?”

“When I planned that IPCC conference, I intentionally left my calendar empty afterwards. I figured I’d need some time to relax. And the aspens seem to be turning now.” He waited, but I didn’t rise to the bait. “How’s your schedule in the next couple of weeks?”

I checked my computer calendar to be sure. “Good, actually. I think this business with Tony Sands and Dan Santini is cleared, from our end, at least. And I’d like to get Linton’s stack of paperwork back to John at FSU. What’s the situation with getting reservations likely to be? Have the aspen peeps started to fill places up yet?”

“Good question. Hopefully not. The leaves are turning early this year—I saw some spectacular scenes on those web cameras. So if we treat ourselves to multi-star places, maybe we can find something. Lots of times, the aspen crowd is on a budget.”

“If we do most of the tour during the week it could work. Traffic might be bad on the weekends, anyway.”

“Agreed. I’ll do some checking, and we can figure something out this evening.”

That exchange buoyed my spirits all through the afternoon, something quite helpful amidst the gloom of the departmental offices. Those two shootings on Monday had cast an impenetrable pall over the place. Angela was especially affected—I think she had developed a friendship with Norma Spears, as they were in the same age group. Norma’s new baby seemed to have Angela thinking about her own ticking biological clock.

I decided to see if bringing her into the aspen tour conversation would help.

“Hal and I are thinking of driving down to Durango, take our time and wander around to see the aspens turning. I’ve got to deliver a bunch of paperwork back to the university there, you know, Linton’s stuff.”

“Really? An aspen tour? That sounds wonderful. I wish I’d taken that approach when I drove up from Santa Fe to come to work here. You know, see the real Colorado instead of just those main highways I took.”

“I remember when Hal and I drove up here from Durango. We were *moving* and not the least interested in the scenery. We just wanted to get here. Like the horse to the barn, even if it was a new barn for us.”

She nodded. “Yeah, I felt that way. And there was this new job, too. Anyway, an aspen tour sounds fantastic. Have you got a route figured out?”

“Hal started in with suggestions on the phone, and I got lost right away. I need to be looking at a map for that sort of exercise. We’ll tackle it tonight, I expect—he’s always keen to get planning done. So much so that I bet that he’s spending all afternoon assembling information.”

She squinted at me, obviously thinking about that tidbit.

“I think you should have your own route ready to lay out to him. Not let him dictate your itinerary just because he’s a compulsive planner.”

I had to laugh. “I don’t know what he’d make of that. But, yeah, that’s a good idea. Tell you what. Let’s sit down, pull up some online maps, and see what we can figure out. This afternoon, so I’ll be ready. You don’t have anything truly urgent, do you?”

“Only the usual paperwork. Which, to tell the truth, I’m getting a little tired of.”

“OK, well, here’s something. This little, cramped box we’re sitting in is an official office of the Colorado Bureau of Investigation. I’m the boss of this office. And I say that CBI personnel need to be familiar with the state in which we operate. And you’re new to that state. So a CBI Geography Training Session is about to begin. Want to get a cup of coffee first?”

She giggled. “Good idea. That’ll give you a chance to develop an official lesson plan. Um, will there be a test?”

“No test, but a practical exam instead. After the lesson, you get to plan your own tour for you and Sandy to take when Hal and I get back. To tell the truth, I think we’re going to be a bit early, so you may just be seeing the best colors in a couple of weeks.”

When she returned with her cup of coffee, and one for me, too, my “lesson plan” was all set—I’d pulled up Google’s version of Colorado onto my desktop computer’s big screen, with the zoom level set so that it was all Colorado everywhere in front of me. Angela rolled her chair over next to mine, and I made room so she could see.

“You know,” she said, “I never really paid attention before. But there’s lots of federal lands in the western half of Colorado—at least I think that’s what all those green areas are, right?”

“Yep. National Forests, mostly, and a few National Monuments and National Parks. And something called generically ‘BLM Land.’ Bureau of Land Management holdings. Most of that, along with the National Forests, is leased to ranchers for grazing. Cattle and sheep.” I pointed to a green area at the northern edge of the right half of the map. “Not all of it is forests, though. The Pawnee National Grassland here is prairie.”

“So, where are the best places to see the aspens changing?”

I waved a pencil in a big oval over the center part of the map, just to the left of the north-south, wavy line indicating Interstate 25. “In this area with the texture. The mountains. I don’t know the exact numbers, but native aspen groves grow above eight thousand feet or so. Something like that. Of course, people plant them in their yards in Denver, but they need extra water to grow there.”

“And we’re here. Fraser, I mean.” Even though it wasn’t labeled, she did a good job of pointing to our home valley.

“Right. There are plenty of aspen groves to see around here, too. But a tour should take you somewhere away from home, don’t you think?” I looked at her. “I mean, ours will, because we have a destination in mind, Durango. But even without such a destination, a tour ought to get you somewhere else. Maybe spend a night in a romantic bed and breakfast, or something.”

“Agreed. So. Where are the best areas, broadly speaking, for aspen groves?”

Suddenly I felt completely inadequate as a geography teacher. For years, I’d been reading the late-summer articles in the Denver paper’s travel section about where to go to see aspen turning, but I couldn’t remember them at all. Then I had an idea.

I squinted at the screen and pointed out the little label that said “Aspen.”

“They don’t call this town “Aspen” because of the sycamore trees, right? And I remember postcard pictures of the Maroon Bells—those are two fourteeners, you know, fourteen-thousand-plus foot mountains—looking up a valley with groves on the sides. Just here, I guess.”

I indicated a north-south stripe in the texture on the map just to the west of the “Aspen” label, and she squinted at it.

“Trouble is,” I continued, “it’s so popular that you can’t drive in there anymore. Gotta take a shuttle bus. That’s always full, I seem to remember reading.”

“Oooh. Just what Sandy and I crave. Crowds.”

“Yeah, well, the big valley that Aspen’s in is also something to see. And Glenwood Springs here, where its river—ah, the Roaring Fork, I think—flows into the Colorado, Glenwood has hot springs and a grand old hotel. Plus, I seem to remember this area here, the Flattops Wilderness, is also pretty remarkable.” I indicated a broad green area north of Glenwood Springs on the other side of Interstate 70. “But there are no real towns or other amenities in there, except primitive campgrounds. I think.”

“Hmm.” She looked thoughtful. “I’ll remember this. Maybe Glenwood Springs would make a good place as a base for day trips. I guess Sandy and I will have to discuss whether we’re going to camp or what. And, if not, how posh we want our accommodations to be. Decisions, decisions, decisions.”

“That’s what Hal and I are going to have to deal with this evening. I hope I can get my ideas across.” I shrugged.

“Knowing him, all I can say is good luck with that, Annette.” She chuckled. “And, say, it just occurred to me that a tour like this ought to be done in a convertible. Really see the colors, you know? Breathe the fresh air, smell the fall aromas. All that.”

“Now there’s an idea. Hmm. Maybe I can use that as a trump card if Hal doesn’t like my choices of routes.” The very idea made me smile.

\* \* \*

## Thirteen

It turned out to be just fine, the discussion that occupied our evening. We started out, during supper, using the paper maps that Hal had found somewhere and then shifted to the computer, the one with the biggest screen, for dessert and coffee. When we got it all figured out, we transferred it back onto paper, using a highlighter pen. The route reminded me of the track of an ant foraging for crumbs.

And when I mentioned Angela's idea of a convertible—I did so to ease Hal's disappointment when we couldn't figure out how to work Grand Mesa or dinner in Lake City into our itinerary—he jumped all over it. Tomorrow, he said, he'd go down to Denver to fetch something appropriate.

Although Grand Mesa and Lake City didn't work, Hal managed to include several other roads I'd not considered. The Poudre Valley west of Fort Collins, and the Peak-to-Peak Highway south of Estes Park both required that we get ourselves over to the east side of those mountains we looked at from our living room windows, but that was easy. We really didn't need any excuse to drive over Trail Ridge Road—even twice. That meant that our trip to Durango, in the southwest corner of Colorado, started toward the northeast. There were also various twists and turns to accommodate obscure secondary roads and a couple of side trips that would allow us to see special places we'd otherwise miss.

Mostly it was set up for paved highways—there were a couple of interesting exceptions, as I discovered at the last minute—and mostly it avoided the interstates. That meant we'd miss the Vail Valley, but Hal promised a possible side trip at the end of our first day, should there be time.

Thursday, while Hal stayed home to arrange accommodations and find an appropriate convertible to rent—no Ferraris or other exotics, I insisted, and he just looked innocent and asked what I meant by “exotic”—I went into the office prepared to offer a second, more advanced geography lesson for Angela. That, and a long lunch “hour” all the way up in Winter Park, made the day fly by. After a flurry of packing on Thursday evening, we were ready to hit the road Friday morning. It left me somewhat breathless—we'd been thinking about a tour of the fall aspens for some time, but it had really only come together on Wednesday. And we were leaving Friday, first thing.

That ant track on our map added up to somewhere in the vicinity of 1300 miles altogether, and Hal began calling it our “Grand Aspen Tour,” capital letters and all, you could tell by his voice. Overnight stops at very nice places in Avon, Ouray, Crested Butte, and Breckenridge, with three nights in Durango between the outbound and inbound legs, meant a bit over a week on the road. That seemed just about right to me. A vacation, but not an over-long one.

Somehow, Hal found, at a car rental place in Denver, something from Mercedes-Benz called a CLK63 AMG (I had to write that down so I'd remember it). Stylistically, it seemed more age-appropriate for us than one of those exotics I'd warned against. On the other hand, its performance made Hal's grin stretch from ear to ear and my teeth clench as I held on for dear life. But, then, when I drove it on a couple of fun stretches of those highways on our map, those roles reversed. And it had plenty of room to spare even with a week's worth of my luggage packed into it. By some miracle, I managed to remember the box of paperwork about Phil Linton that I was taking back to John Martin at FSU.

Hal had reluctantly decided to forego fly-fishing, so we didn't have all that gear. He allowed that there were so many exceptional streams on our route that it would add several extra days. I'm not sure if we could have managed to fit all that stuff in anyway.

And so, dressed in white, sun-proof clothes with SPF50 rubbed into our faces, and wearing hats, we hit the road north and east on Friday morning, destination Avon via Estes Park and Steamboat Springs. It took only to Granby for me to realize just how perfect Angela's suggestion of a convertible had been.

I can't possibly describe all the details of the scenery, or the aspen groves, we drove through that day, or the other days, either. Some of the roads were quite charming, though. After descending the Big Thompson Canyon from Estes Park, and slowing way down for the tight curves through the deep chasm at the bottom, we turned onto a sequence of county roads toward the north, along the very base of the Front Range for a while, winding through horse ranches and foothills farms. And we only took one wrong turn in the process, a small victory.

We left early enough that, after Cameron and Rabbit Ears Passes, we were able to have a late lunch in Steamboat Springs—and we took our time at lunch, savoring the freedom and unwinding from the hustle and bustle of our everyday working lives. Even so, we arrived in Avon with plenty of extra time, so we decided on that side trip east on the interstate up to Vail Pass and back—and we got to see the Vail Valley’s turning aspens as a bonus to the day.

And the trees were indeed switching into their autumn colors. All day, we’d seen patches of trees as well as individuals in all shades of yellow and orange. Some of the big stands were uniform; some were in transition, with various greens and golds intermixed, looking from a distance like a French Impressionist painting.

Avon, a few miles west of Vail along the interstate, is one of those new communities spawned by the ski industry. Many of its ritzy hotels are up at the Beaver Creek base, but Hal had found us a nice room in the Westin, on the valley floor overlooking the Eagle River, which we would follow to its headwaters the following day.

“Don’t get *too* used to it,” he warned, as I was oohing and aahing over the modern amenities in our upscale room. “For the next couple of nights after this, we’re in what’s optimistically called ‘historic’ lodging. I’m sure it’ll be nice, both in Ouray and in Durango, but it won’t be new like this.”

And he was right. Day two found us at the Beaumont in Ouray, a lovely old place that opened in 1891 and had played host to President Theodore Roosevelt. In fact, Hal had procured for us the Presidential Suite, where Teddy had stayed. Fortunately, the mattress had been replaced since then. And in Durango, we were booked at the Strater, downtown on Main Avenue. We’d stayed there on our first New Year’s Eve together, back when we lived in Durango, and it was an old favorite, emphasis on “old.”

But I’m getting ahead of myself.

The Eagle River begins just south of Leadville, over the Continental Divide from that old mining town. It’s not what you think, though, as Leadville sits at 10,150 feet and Tennessee Pass, the Continental Divide crossing, is only 275 feet higher. Whereas the Eagle River is a tributary of the Colorado, which drains, if you can call it that (“dribbles” is probably more appropriate, given its lack of water at that point), into the Pacific, Leadville sits in the upper Arkansas River basin, which drains, via the Mississippi, into the Gulf of Mexico.

South from Leadville, with Mounts Massive and Elbert—Colorado’s highest fourteener—on our right side, we turned west toward Aspen after a few miles. The Independence Pass road, narrow and twisty, was full of Saturday traffic, but we just took advantage of the slow pace to enjoy the scenery all the more. Aspen itself was something of a disappointment, a victim of its own success, but below town the Roaring Fork Valley opened up and was just splendid. It was so nice we didn’t want to leave it behind, so at Basalt we took a little side trip up the Frying Pan River to Rudi Reservoir, where we had a picnic lunch. I drove back down the river road while Hal watched the water, and I could tell he was having second thoughts about his decision not to bring the fishing tackle.

Then it was on down the main valley to Carbondale and south over McClure Pass into the valley of the Gunnison River’s North Fork. The colors were just as spectacular as the day before, and the different geology of that area was a nice contrast from Friday’s.

The North Fork joins the main stem of the Gunnison just west of Hotchkiss and is then joined by the Uncompahgre at Delta, where we turned south and followed that river’s valley all the way to Ouray. The valleys of these two rivers are mostly wide and flat, agricultural land surrounded by distant mountains. But Ouray is at the base of those mountains, where the valley has narrowed to almost an abyss. The aspens up on the sides of the cliffs were breathtaking.

Even more breathtaking, for me at least, was the Beaumont's spa. I suppose it was their way of competing with all of the natural hot springs places in town. Hot springs, of course, are nice, but a massage followed by a spell in the sauna and then a hot tub were just what I needed after our second day of driving.

Sunday morning, we slept in and then went for a long walk before rustling up brunch. The drive down through Silverton to Durango was a short day compared to the first two, so we decided to take it easy. Although a local map showed us a perimeter trail around the whole town, we decided to focus on what's made Ouray famous in recent years, the slot canyon on which the winter ice-climbing competitions were held. So we found the trail on the southwest side of town called "Ice Park Loop" and got some exercise in before our last couple hours in the car. The very thought of climbing the ice-covered walls of that slot canyon made me glad to be visiting while the weather was warm.

\* \* \*

By stopping to enjoy the views, we stretched the short drive down the Million Dollar Highway from Ouray to Durango to three hours. The best part was in the big valley around the old Ironton site, north of Red Mountain Pass. Although not all of those sweeping groves were in full color, some were, and the others provided the contrast needed to avoid having the entire valley a mono-color shade of gold.

Durango was both familiar and at the same time a bit strange. Just enough had changed that we felt like visitors, but visitors who knew their way around quite well. We arrived in time for a late lunch but much too early to check in, so we decided to play tourist and wander around downtown, and the changes in the restaurants and shops were part of the strangeness for us.

But old favorites were still there, notably the Toh-Atin Gallery on Ninth Street, whose southwest art collection had tempted us for years and had provided several of our most prized pieces at home. Hal, I could tell, was in the mood for more, so I had to drag him away before he put another big dent in our bank account. But it was only Sunday, and we weren't leaving until Wednesday. And there was still a bit of room in the car, with more to come when that box of paperwork got delivered...and he had that look in his eye.

Another old favorite was the Palace Restaurant, on the south end by the train station. During our wandering, we stopped in and made reservations for dinner. We remembered that it could fill up quickly when the afternoon run of the Silverton, the historic narrow-gauge steam train up to the town of that name, returned with its load of sunburned tourists. Sunday evening was going to be our last time to ourselves for a while, so we thought we'd do it up right.

The room at the Strater that Hal got for us certainly did it up right. Old-looking, and even old-feeling, it was indeed, but everything was shiny new and up to date. He'd said something about treating ourselves when we first planned this trip, and that's what we were doing.

Monday morning, however, put us back in the saddle, because we had things to do and people to see. On my list were old colleagues from both the regional CBI office out south of downtown and the Durango PD in town. And Hal wanted to drop in on various faculty colleagues up on the campus to touch base.

We both, of course, had Provost John Martin on our lists, for different reasons. My reason, to give him back all of the Phillip Linton files, was easy. Hal's was tougher—he wanted to say hello, naturally, but he knew that Martin would bring up the question of Hal's return to Durango permanently yet again. Hal didn't want to deal with that one at all.

However, our plans were interrupted by a phone call for me just after we returned from our fancy, Monday-morning breakfast downstairs in the Mahogany Grille, the Strater's restaurant.

"Trieri, CBI."

"Mason Niemeyer here, Ms. Trieri. I'm taking you up on your offer to provide an introduction to the CBI office down here in the southwest part of our fine state."

"Marshal Niemeyer, good morning! Sounds as if you're in Durango. It happens that I am, too, so I'll be glad to do that, in person, even. I can run over and see them this morning. I was going to do that anyway, to stop in as a courtesy call and say hello to everyone."

"How about if I meet you there? The sooner the better, from my point of view."

"All right. Hang on a sec." I poked my phone's "mute" button. "Hal? Sounds like something has come up. Can I drop you off at the campus?"

"When?"

"Well, it sounds like I'm needed soonest."

"Hmm. Tell you what. I can use the walk. Where are you going to be?"

"Over at the CBI offices, at first, at least."

"Oh. *That* kind of business. Well, please don't get the rental car all shot up full of bullet holes. It's expensive enough without having to buy the damned thing."

I'd never asked about the cost of renting that hot-rod convertible we were driving, and now I was afraid to.

Another poke of the button got me back to Niemeyer. "I'll leave in a couple of minutes. I'm downtown, so it'll take only a few more. See you there."

"Thanks. And I'll fill you in when I see you. Don't want to on this phone."

I made it down to the CBI office in fifteen minutes, five of which were involved with my getting organized and changed into appropriate clothes. I'd put on a summery tourist outfit, and it sounded like whatever Niemeyer wanted was going to be all business.

He walked up to me as I was getting of the Mercedes in the CBI parking lot.

"Whoa. Nice wheels. Looks like the CBI treats its people well." The grin told me he was trying to push my buttons, so I went with it.

"Well, you know. Now and then we bust a big drug pusher and confiscate his property. And it'd be a shame to let something like this sit and rust, don't you think?" My wink served its purpose, because he started laughing.

It took him a minute to stop. "And all we get is those government-issue Chevys. Ah, well. Anyway, thanks for coming. Before we go in, let me tell you what's going on."

"Thanks."

"As I'm sure you've guessed, it's about Danny Santini. Or Dan. I need to stop thinking of him as a little kid. I guess you know he's a student at the university here, and he was just going to start his senior year. So that means that he's got an apartment here and so on." He sighed. "Well, it seems that he's both rich, or his daddy is, or was, and he's careful. So he got a fancy security lock installed, a biometric one that's keyed to his thumb print."

He shrugged and raised both hands in the what-can-you-do gesture. “We were planning to relocate him someplace else without having him return here, in case that shooter is lurking about. But he’s adamant about cleaning out the apartment to retrieve the rest of his stuff. He took most of it with him for the summer, but there’s still some of it here. And I can’t really blame him. He’s now the last of his family, and he deserves to keep whatever family items he has in there. Anyway, with the biometric lock, he has to be here. And I thought some serious back-up would make his activities here safer. I’ve got a couple of guys available, but the more the merrier, as far as I’m concerned.”

“The Durango PD might be able to help.”

“Like I said, he’s a rich kid. Not an arrogant one, but he lives well for a college student. So he lives up by Purgatory, the ski area, in a condo he’s renting. Helluva a commute to classes, but he told me he crashes at friends’ places in town a lot and they stay with him a lot during ski season. Anyway, I don’t have any information about the capabilities of the sheriff’s office.”

“Mmm. Then I think you’re right about going with the CBI. At least our people have the sorts of security clearances that you’re used to.” I nodded my head toward the door. “Shall we go inside and see who’s available? Oh, I should warn you. I used to be the boss of these people, so there will probably be sort of a family reunion for a few minutes.”

There was, and, to his credit, Niemeyer waited patiently, wearing a polite smile and shifting a bit from foot-to-foot while everyone made a fuss over me. Eventually I was able to introduce him to Derek Petersen, and we decided rather quickly that we should retire to Derek’s office to conduct our business.

\* \* \*

I let Niemeyer explain things, and he did so without going too deeply into the background of the Spadaro clan. But he did note that Spadaro used to be Dan Santini’s name, and that was enough for Derek.

“Marshal Niemeyer, we’re just a far-removed division office of the CBI, stuck way out here in the sticks of southwestern Colorado, but we do hear things. Sounds like this Dan Santini person is under your protection because he’s Tony the Ferret’s kid.”

“That’s right. And I’m sorry if I seem to be secretive. Force of habit, mostly, in cases like this. Although this time I have to remind myself that it doesn’t matter so much. Tony the Ferret’s probably dead, and we know that Dan Santini’s mother and brother are. Despite our best efforts.” He sighed. “Anyway, our concern now is for Dan, and we need to make it safe for him to get into this condo he rents up at Purgatory. The plan is to clean out all his stuff and move him somewhere else, so he can start over yet again. We owe him that much.”

Derek cocked his head to the side a bit and thought it over. “Seems like we could help out with the protection thing easily enough. Send a car full of agents up there when you take Dan and blanket the place. I can’t imagine anyone would be brazen enough to try anything if we had a visible presence, your guys and mine.”

“Well, Derek, maybe, maybe not.” I told him about the shootings at the sheriff’s office up in Grand County. “We’re dealing with a real pro here, one who seems to be willing to take risks.”

Derek grinned. “Well, I guess we could fire up our new Bearcat G3. Actually, it’s ‘pre-owned,’ as they say, but the dents and dings make it all the more intimidating. That ought to make anyone think twice about poking their nose in.”

Niemeyer looked surprised. “You guys have a Bearcat? Damn.”

Derek laughed this time. “Yeah, I know. A bit much for what we need in these parts. We got it with some left-over Homeland Security money, and it’s a pretty bare-bones version. The off-road capability is very helpful here, though. But it has no real armament. Scary as hell anyway, because it has a camouflage paint job. And even though it can’t shoot, it’s pretty well armored. We share it with the PD and the sheriff when they need the help. So we might as well share it with you. Mostly, it just sits in our lot.”

I didn’t know what he was talking about, but I inferred it was some kind of SWAT vehicle. And Niemeyer’s surprised reaction impressed me.

Now he looked thoughtful. “Y’know, that baby could be just what the doctor ordered. Dan would be pretty invulnerable if we transported him in it, especially in a convoy. And we could shield the door to the condo with it when he enters and exits. Thanks for the offer.”

He looked at me. “Annette, you want in on this? What are you doing down here, anyway?”

I explained about the part-vacation, part-business nature of our trip. “And I guess I’d be glad to come along, provided I can get a ride. Um, I lied about the car, Mason—it’s really a rental. And my husband already asked me not to get it shot up. When are you planning to do this?”

“That’s the question. Derek, what’s a good schedule for you?”

He thought for a minute. “It would be easier to arrange things on my end if we did it tomorrow. And I’d guess first thing in the morning would be a good time. I’d like to take a drive up there this afternoon and get the lay of the land.”

“That’s my plan, too. We can go up together this afternoon, if you’d like.” Niemeyer gestured at Derek’s computer. “Get the Google satellite image of the area, and I’ll point out the place to you now.”

Within a few seconds, Niemeyer and I were behind Derek’s desk, peering over his shoulders. An image of the Purgatory base was on the screen, with US550 running just to its east, through the middle of the picture. Niemeyer leaned over and pointed.

“His place is here, on the east side of the highway, in the, uh, seven-o’clock building here on Placer Court. Just south of this big pond.”

He pronounced it as a mining term, with the “a” short.

Derek snorted. “Well, hell. What good is that? Rich kid doesn’t even have a place at the base of one of the lifts? Hmmph. How’s he gonna get chicks with something way over there?”

Niemeyer laughed. “I asked him almost the same question. It seems these places on the east side are much newer and therefore a lot nicer than the ones at the actual base. And not so cramped together and loud and crazy when they fill up. Most of ’em are detached, single-family houses, in fact. And there’s a shuttle during the season. Also, notice the Nordic Center there, north of that pond? His condo has easy access to the cross country trails in the woods there.”

Derek looked at me. “Want to come on our scouting trip this afternoon, Annette?”

As tempted as I was, discretion prevailed. “I think I ought to check in with old friends at the PD and then see how Hal’s doing. Tomorrow sounds like it might take some time. I mean, I’m supposed to be on vacation, you know?”

“OK. I’ll call you and leave a message if I need to about tomorrow’s timing. Uh, do you need a weapon?”

“I’ve got my Glock in a traveling safe in the trunk of the car. Will that do?”

He and Niemeyer looked at each other. “Probably. Like I said, the Bearcat itself doesn’t have weapons itself, but we’ll put several options in it, I’m sure. Of course, I’m also sure we all hope that no weapons will be needed.”

Niemeyer nodded in agreement. “Right. The last thing we need up there is a big shoot-out. All we want is what stuff Dan didn’t take with him to Winter Park this summer, and he told me it’s really not a lot. Just some winter gear and a few family mementos, he said.”

I visited for a bit with other old colleagues in the office and then made my way back north to the police department downtown. Everyone there was surprised and pleased to see me, and a little group of us went out for lunch together. It occurred to me that eating so well, and so much, along with sitting in the car so much was going to mean a lot of remedial exercise once Hal and I got back home.

And one topic of conversation was “home.” I’d been recruited to the CBI’s Durango office when I was chief of detectives at the PD, and the nature of the CBI job was that I continued to work closely with the PD. So they knew that the move Hal and I made to Fraser was initially intended to be temporary. It was something of a diplomatic chore for me to let everyone know that we’d come to think of the Fraser Valley as home now, and that, while Durango was always a place we’d like to visit, it would just be a place to visit.

Hal, I was certain, would need even more diplomacy to break that news to his colleagues on the campus, especially to his old boss, John Martin.

\* \* \*

## Fourteen

I knew that Hal’s chore of breaking the news to his old boss would be tough for him, but I didn’t know it would be so tough that he’d seek my help. I found out that evening, however.

After a pleasant lunch with former PD colleagues, I returned to the Strater and found Hal immersed in catching up with email.

“There you are!” His greeting seemed a tad artificial to me. “I was wondering whether you’d got yourself lost somehow.”

I hoped my expression communicated “puzzled.” “No, just catching up with everyone. And dealing with that little matter that came up earlier.”

I proceeded to sketch for him the situation with Dan Santini and our plan for the morning. “Sorry to be caught up in this, but it feels like I ought to be there. And it doesn’t need to change our itinerary, after all.”

“No, no, it’ll be fine. I saw only about half the people I wanted to anyway. I can go back up there tomorrow.”

“Did you run across John today?”

“Just briefly. Uh, just enough to suggest to him that we all have dinner this evening. ‘All’ meaning John and his wife Edith.” He winced. “I hope that’ll be OK with you?”

What could I say? John and I had interacted on numerous occasions, and one of those gave me a creepy feeling about him, as he’d once had to confess to me his patronizing Durango’s strip clubs when

Edith was out of town. Although he was able to provide me with information about those sleezy places, valuable for a case I was working on, it was still creepy.

And, based on gossip I'd heard around town, those strip club visits weren't all that surprising, as Edith had the reputation of being something of a battleaxe.

And we were going to have dinner with them? On our vacation? And tell John that his prized earth scientist and ex-dean wasn't going to return from his sabbatical, ever?

Oh, joy.

But, what could I say? "It'll be fine. Did you guys settle on a restaurant?"

"He suggested one, actually, here at the Strater, where we had breakfast this morning. At seven. I made a reservation for us."

At least, I thought, I could come down with a strategic case of, say, indigestion and excuse myself easily.

So it was that, at about 6:45, Hal and I, wearing the best clothes we had packed, went down to the Mahogany Grille. In its foyer, perched on the edges of side chairs, sat John Martin with a woman who reminded me of my grandmother. I knew she couldn't have too many years on me, but in appearance she was at least two generations older. And maybe eighty pounds heavier.

As we walked up to them, I heard, "I just wish people would be on time these days, John. It's so rude to make others wait."

Game on, I thought. When they noticed our presence, I stitched onto my face the most artificial smile I could summon and found my perky voice.

"Evening, John! Here we are, six-forty-five, for our *seven o'clock* reservation! Good to see you again! Perhaps we should retire to the bar?"

Although I was glad for the glass of wine—from a more-than-adequate wine list—and the Martins had martinis, it really didn't help matters.

It was about half-way through the main course, during Act III of the melodramatic "Durango's Flaws According to Edith" that I decided on a headache rather than indigestion. I didn't want to insult the kitchen staff, after all.

During a short break in the monologue—she had to chew now and then—I smiled around the table and said, "I hope you'll excuse me."

And as I arose, I leaned toward Hal and whispered "surprise migraine. Good luck."

"I understand," Hal whispered back.

He knew, of course, that I was not a victim of migraines, although it wouldn't have surprised either of us if that one had been real, given the situation. I felt bad for leaving him alone in it, but, then, he'd set the whole thing up in the first place.

I still had the keys to the Mercedes in my purse, so I detoured to the car on my way to our room to fetch the travel case with my Glock in it. I figured that it might be therapeutic, not to mention precautionary, what with the plan for the next day, to give the thing a good cleaning.

Hal finally wandered in at about ten-thirty, looking drained. By then, the Glock was clean as a whistle, well-oiled and ready for anything, and I was feeling lots better.

His smile at me was rather weak, all-in-all. "I'll tell ya. Every now and then I regret having given up drinking. A couple of good, stiff belts would have made all that a lot easier."

I walked across the room to give him a big hug. “Sorry I deserted you down there. But I just couldn’t take another second of her whining. I don’t know how John puts up with her.”

“I’ve wondered that, too. Maybe one of the reasons he’s been so successful in his academic career is that he’s not distracted by wanting to be at home.” He leaned back and kissed me on the nose. “Frankly, my dear, I don’t give a damn. And I *like* it at home, especially when you’re there.”

“I hope at least something constructive came out of the evening for you.”

“John and I did have a chance to catch up a bit. It seems that she *really* likes fancy desserts, and so she shut up while she ate two, a concoction involving a chocolate brownie with chocolate ice cream and chocolate mousse, with chocolate on top, and then Bananas Foster. I was hoping the table-side prep for the bananas would set that hair-do on fire, but no such luck.”

He smiled. “And I know what you’re thinking. You’re thinking, ‘Did you tell him?’ And the answer is ‘yes,’ sort of. Not explicitly, but implicitly. What I did was to talk about retirement, but completely in the context of retirement from FSU and the state college system as a way to let me pursue other interests. I’ll stay officially on sabbatical and eventually transition to emeritus. That way, they can get some mileage out of keeping me on their faculty roster. But I think he now knows, deep down, that I won’t be back on campus in any kind of permanent role in the future.”

“A toast to you for that, my friend.” And I gave him a big smooch.

“Yum,” he said. “Better than champagne, by far.”

Then he noticed the travel case. “Got out your Glock, I see. Was she really that bad?”

I had to laugh. “No, not really. But I did find that cleaning it was quite helpful for me. Erased that ‘migraine’ completely.”

“Generally, you don’t clean that thing unless you’ve got some reason to think you might use it. Is this business of emptying out Dan Santini’s apartment tomorrow worrying you?”

I thought about that for a minute. “Only to the extent that the others involved aren’t taking the Hot Sulphur shooter seriously enough.

“I guess that makes it all the more important that you’re with them tomorrow. Well,” he gathered me into another hug, “you be careful out there.”

“Always.”

“Hmm. But you’re not going anywhere just now, are you?”

“No, not just now.”

“And, you know, that bathtub in there looks big enough for two, don’t you think?”

“Well, yes, I think it might be.”

“And I seem to remember seeing that it has those water jet thingies in it, like a Jacuzzi.”

“I noticed that, too.”

“Be a shame to let it go to waste, since we’re paying for it, don’t you think?”

“A shame.”

“Well, then...”

\* \* \*

Tuesday morning, Hal dropped me off at the CBI office before heading up to the campus in the car. He said he'd managed to wangle a parking pass on his visit Monday, so he'd be able to take the box of Phil Linton's paperwork back to the Provost's Office. That would check another to-do item off the list. And it would create room in the car—I wondered if Hal would make a trip to the Toh-Atin Gallery while I was busy up in Purgatory.

At the CBI office, Derek, dressed in a military-looking jumpsuit, was supervising the loading of several long guns and ammunition boxes into a camouflage-painted, boxy, SUV-type vehicle, one bigger than most and not designed to win any awards for its sleekness. The Bearcat G3, I assumed. It was idling with a low rumble, getting ready for its run up to the ski area.

It was about 8:30 when two gray Chevy Suburbans pulled up, and Mason Niemeyer climbed out of the first one. He looked around, signaled the second one, and two other men dressed much like Mason was—that cheap government suit look—climbed out, as did Dan Santini, from one of the rear doors.

“I get to ride in that thing?” He eyeballed the Bearcat in wonder. “Cool.”

Derek laughed. “You say that now, but you'll find it's actually pretty hot in there. It wasn't designed for comfort. And it's noisy, and the ride's pretty rough. But it'll get us there.”

Niemeyer spoke up. “Intentional overkill, Dan. You know what we're worried about. We could try to do this by stealth, but you never know if that's really going to work. We're taking the approach of doing it in the open, but with overkill in the way of manpower and security. I don't see how an out-of-town hit man could muster the resources to take us on. Even if it's a team. No way they'd have anti-tank missiles or anything like that.”

Santini shrugged. “At least it looks big enough to hold all my stuff. Which reminds me. Did you get everything from the Winter Park apartment?”

“Yep, and it's headed for our new destination as we speak. And your car and bike are getting shipped there, too.”

“But you won't tell me where.”

“Not yet, sorry. Soon.” Niemeyer looked Derek's way. “Derek? You about set?”

But I spoke up first. “What did you guys decide, anyway?”

They had been hashing over details when I'd left for the PD the previous afternoon.

Derek answered. “Oh, yeah, you weren't there. Well, you and Mason go in the first SUV, then Mason's two guys and Dan go in the Bearcat, with me driving, and then my two guys follow in the other SUV. We've got all the way north through town to manage, with all the traffic lights, and Mason's going to keep an eye on their timing, so we don't get separated. We're not using emergency lights or anything, so we're staying as legal as we can. Out on the highway, we'll be at the speed limit, if possible. I figure about 45 minutes.”

“Derek, you know about the timing of the lights?” I decided to show off my old knowledge from being in the PD.

“Uh...they're timed?”

“We get on the highway out there,” I waved toward the east, “at a traffic light a ways up the frontage road. Then there are two sets of lights, at the second one we go straight, which is into downtown. Then there are lights at, let's see, College, Ninth, and Main Avenue, where we keep on straight onto North Main Avenue. Uh, there's also a fire station emergency light at Twelfth, but that's probably not an issue. Anyway, if we keep to just the right speed, and it used to be about three over the posted speed limit, which changes, all the lights all the way up North Main will be green for us. Seven,

eight intersections. The first sets, though, are hit-or-miss, although they're green most of the time in the direction we'll be going."

Derek and Niemeyer stared at me for a minute, assimilating all that trivia.

I grinned, trying not to be embarrassed. "Used to be, I'd try to make it all the way through town without a red light, kind of a contest with myself and the traffic engineers. I got good at it."

One of Derek's CBI agents, one whom I remembered, Stan Hauser, had sidled over to where we were talking and, apparently, overheard my trivia.

"Uh, Annette? It's changed. I've got a place up north now and commute via Main Avenue. They've put those metal loops in the side streets to switch the lights now, and there are also school zones. Those seem to have kicked in today."

Now I *was* embarrassed. I managed a sickly grin. "Oh. Uh, sorry. Never mind."

Niemeyer laughed. "No problem, Annette. I'll just put you in charge of watching the lights way ahead, so I can watch the traffic instead. And we'll be in touch over the radio. If someone gets stuck at a red light, those of us in front will pull over and wait."

I turned to Stan. "Thanks for setting me straight. And, say, you're still here. I thought you were in that CBI rotation program."

He smiled down at me—at 6'10" or so, he had to. "Still here, Annette. I did leave for a while to finish that program, but Director Petersen and I conspired to get me back here. I like this place."

Niemeyer had been fidgeting. "OK, folks, let's mount up and roll. We're losing time."

Everyone climbed into their assigned places and Niemeyer took the lead out of the parking lot. We had a long wait at the frontage road light to get onto the highway, but then it was clear sailing all the way to Main Avenue, where things got complicated. But we made it north through town with only one stop to let the others catch up. I failed to warn Niemeyer a light was about to change, and they got caught.

Once out on US550 north of town, we sped up. It was interesting to look at the scenery with fresh eyes—on Sunday, southbound into town, I'd been a little burned out with the car trip. But sitting way up high in that Suburban provided a new perspective. Of course, the roof and the window pillars were different from our convertible, but it was still possible to see the changing trees well. Not that I'd want to be doing our tour in it.

Niemeyer was watching his mirror carefully, I could tell. "I wonder how that Bearcat is to drive on the highway?"

"I'd suggest that it's a bear to drive, but you'd probably not like it."

He turned to look at me for longer than was really safe. "Groan. Even compared to this big beast, you're probably right, though. Sluggish acceleration even with all that power—the thing weighs over eight tons, or some such thing. And with those off-road tires and suspension, it's probably noisy as hell. I wonder if Derek would let me drive it on the way back?"

"He said it gets hot. Surely it has air-conditioning. But probably not leather seats with ventilation."

"You're spoiled by that rental, Annette."

"Darn right. And proud of it. It wouldn't do to own that car where we live, though. Grand County is Subaru and Jeep country."

The radio came to life. "Hauser to Petersen. Derek, you there?"

“Petersen.”

“We might have a tail. Hard to tell, though. Could just be regular traffic.”

Niemeyer poked a button on his steering wheel. “Niemeyer. I’ll slow down a lot for this hill coming up. If he doesn’t pass us, I’ll pull off at the top, I remember a big gravel area on the shoulder up there.”

That elicited two “rogers.”

It turned out to be regular traffic, two adults and two kids in a mid-sized SUV with junk in the back. They zoomed by, at about the speed limit, when Niemeyer slowed down on the hill.

That, I hoped, was the day’s excitement. We surely didn’t need any up at Dan’s condo.

That big hill put us up on the plateau with the ski area, and it was high enough that the aspens thrived. If not for the odd mission we were on, it would have qualified as a repeat of part of our Grand Aspen Tour. Shortly, buildings began to appear in the trees along the highway, and Niemeyer eased over into a right-turn lane. He watched as the two following vehicles did as well, then turned right and came to a stop several car-lengths in.

He poked the radio button again. “We take the second left in to the condo’s parking lot, correct, Derek?”

“Roger that. I’ll take lead, you two can cover the entrance after I’m in.”

The Bearcat pulled around us, and we followed it into the parking lot of one of those ski-area condo complexes with a modern look. On closer examination, it appeared that there were six pairs of duplexes in a semi-circle. The Bearcat pulled into the parking place of the left-side unit of the building second from the left. We stopped at the parking lot entrance, partially blocking it, and Stan Hauser’s SUV did the same, blocking the other half. Phase one complete, it appeared.

\* \* \*

Someone had to stay with the Suburbans, just in case a resident needed access. Niemeyer and I nominated the two CBI guys, Stan Hauser and his companion. The rest of us formed a sort of moving cordon around Dan Santini on his walk up to his front door. I think we all felt kind of dumb, except perhaps for Niemeyer.

Dan put his right thumb on what looked like a touch screen, the thing lit up and buzzed, and the lock clicked. Quite slick, actually.

I’d read about biometric locks but never seen one, even at EcoARC, that relatively high-security place in Arizona where I’d been. One question that always came up was whether the lock could be spoofed, with a counterfeit of someone’s thumb- or fingerprint. The manufacturers all claimed that they also had other sensors built into the thing, sensors for moisture (sweat), biological activity (like a heartbeat), or some other secret sauce sort of thing. But other people claimed it was pretty easy to get around those protections. Even so, it was an impressive gadget, and I could see why Dan felt he had to be there personally to get into the condo.

“Pretty slick, Dan.” I said. “But it’s a good thing the battery didn’t run down over the summer.”

He grinned. “The battery’s only for backup. It’s powered from low-voltage contacts on the striker plate. All the wiring is in the wall.”

Niemeyer stopped him as he reached for the door handle. “Hold it, Dan. I’ll go in first and clear the first room, and the rest of you can come in there. Then we’ll clear the rest of the rooms before Dan gets to wander around, OK?”

“You really think someone’s in there, Mason?” Dan was a bit incredulous.

“No, but I’ve learned it pays to take as few chances as possible. Give me a minute.” And Niemeyer disappeared inside.

He opened the door after just a short time. “OK. The big room down here and the lavatory under the stairs are clear. Let’s everyone step inside, and we’ll fan out. Let’s see. How about this? Annette, you clear the kitchen. Gerry, Will, you take the upstairs. Derek and I will stay here and play human shield.”

Inside the front door, we were gathered in a corner of what Realtors would call the unit’s “great room,” a living and dining area, part of which had a high ceiling, that together occupied about two-thirds of the overall footprint. There was a coat closet straight ahead of us that provided some cover and then a staircase leading up to a second floor with an open loft area looking over the living room area and two doors that no doubt led to bedrooms. Mason’s two Marshals Service colleagues started up the stairs, and I decided to give them a bit of a head start. Almost immediately I heard “loft clear.”

I leaned over to Dan and asked, in a whisper, “Upstairs? How big is this place, anyway?”

He whispered back, “Two bedrooms, each with a bathroom, plus the area you see up there, I use it for a TV room. Down here, there’s the kitchen, that lavatory, and this big room on this floor. Yeah, it’s big, but you should see how full it gets on ski weekends.”

“With all those people, how do you deal with the door lock?”

“Oh, I just turn it off. I figure safety in numbers, you know? Like now.”

Ah, to be young and naïve again, I thought.

I hustled my way across the living room area and into the kitchen, under the right bedroom, and looked around, Glock in the ready position. Empty. “Kitchen clear.”

At least it was clear in terms of anyone’s being in there. But it was something of a mess, with fast-food and frozen-dinner boxes overflowing a trash can and a sink full of dishes. It didn’t smell clear, either.

“Dan, get in here.” He arrived at once. “You went away for the summer and left this mess for when you came back? What were you thinking?”

He looked surprised. “No, I didn’t. In fact, I got it completely cleaned up, washed the counters with bleach and everything. My Mom would have been proud.”

“So someone else has been here, then. Probably not Goldilocks. Which of your college friends is keyed into that fancy lock?”

“None of my friends are. That’s why I leave it unlocked when they’re here. Tony, my brother, and my Dad are, though.”

“Well, that’s not good news at all.” I raised my voice. “Hey, Mason?”

He stuck his head in the kitchen door. “What’s up? Ugh. What a mess!”

“You’re sure right about that. Look. Dan says the only other people keyed into that lock are Tonys Senior and Junior. I don’t know what-all people have touched—various door-knobs, I suppose—but now we’ve got a crime scene. Breaking and entering at least. We need to be very careful about everything.” I had switched into detective mode instantly.

“You’re right. What did you hear cleared from upstairs?”

“Mmm. The loft, two bedrooms, two bathrooms, and one balcony, I think. Does each of the upstairs bedrooms have a balcony?” The urgency in my voice got Dan nodding right away.

Niemeyer spoke up. “Derek? Get Dan here outside and into the Bearcat, now. And call your two guys to be with him there. And call 911. Get the sheriff up here with his crime-scene people. And reinforcements. Uh, please.”

“Got it.” Derek came into the kitchen. “Dan, c’mon, outside. Into that big, safe metal box we’ve got out there. Now.”

They left, and I heard the front door shut.

“Will? Gerry? What’s happening up there?” Niemeyer’s query, undoubtedly loud enough to be heard upstairs, was greeted by silence.

“Annette? Have you heard anything? Any odd noises?” He switched to whispering.

“Nope. This isn’t good. You and I need to cover that staircase. Carefully.”

“Got it.” He crouched by the side of the doorway where he would be in a position to see the stairs. “I’m going to scoot out this door and across the room to the other side of the stairs, by the front door. Then you can take my place here and we’ll have the stairs covered from both directions. I don’t know what’s happened upstairs, but I think we should wait for backup before doing much else.”

“Roger that. Derek will help, of course, if he comes back in. And I bet he does, after making that phone call.”

He did. Niemeyer declared that Derek was sufficient backup and it was his own responsibility to check out the upstairs. Those were his colleagues up there, after all.

There was a tense fifteen minutes or so while he crept up the stairs and eased his way around the various rooms. He decided to forego the fully automatic AR-15 that Derek had brought in from the Bearcat, so I got to stand around and hold it while Niemeyer searched. Damned thing was heavier than I’d thought.

Eventually, he came back down the stairs shaking his head. “Jesus. He got ’em both somehow, Gerry and Will. With a knife yet. Stabbed Gerry through the heart, from behind, and slashed Will’s throat all the way back to the spine. And he must have jumped off one of the balconies. There’s another parking lot about fifty yards across a field, so he’s probably long gone.”

I bit my tongue so as not to say “I told you so.”

\* \* \*

## Fifteen

“Gone, maybe, but not for so long. He’s got only two choices, north, to Silverton and points beyond, and south, back to Durango.” I was hoping I wasn’t just pointing out the obvious. “And, in either direction, it’ll take a while for him to get to where there are more choices.”

“Sounds like you think a couple of roadblocks are in order.” Derek whipped out his phone, poked a button, and winked at me while he waited. “Already did that, Annette. La Plata and San Juan sheriffs’ people. Just north of Hermosa and at Molas Divide, just south of Silverton. I’ll update them now.”

Niemeyer was staring at me. “Well, Annette, I shoulda listened to you more carefully. I underestimated him, the son-of-a-bitch.”

“Makes two of us, Mason. The question now is, how’d he get in here?”

“Somebody’s thumb, no doubt. Probably Tony Senior’s. Tony Junior wasn’t missing his, was he?”

“Not that I heard. Tony Senior makes sense. Well, anyway, now the U.S. Marshals Service is after him, and the sheriff of my county wants a piece of him, too. So as good as he is, he’s now got law enforcement after him with a vengeance. That never ends well for such folks.”

Niemeyer nodded. “And in the meantime, we just grit our teeth and do our jobs.”

Derek had finished and now spoke up. “The two sets of roadblocks now know the situation. I made sure to emphasize the ‘armed and dangerous’ part. Oh, and the crime scene people are about fifteen minutes out.”

Niemeyer blinked a few times. “Tell you what. Why don’t you and your guys, and Annette here, head back to Durango in the Bearcat and one of the two SUVs. I’ll stay here and deal with the crime scene people. Annette, if you ride with Dan, you can debrief him some.”

“Seems like Dan needs to disappear, Mason. When the New York crowd finds out their first guy failed, they’ll keep sending them, keep trying to kill him, won’t they?” I shrugged. “It’d be nice if we could make it look like Dan got killed somehow.”

Niemeyer nodded. “Good thought, Annette. Maybe I can get the crime scene people to go along with that, although as long as our guy is somewhere out there in the world he’ll be able to contradict it. Then, you’re right, there will be more such attempts.”

I shrugged again. “Maybe Dan had himself a heart attack from the stress when saw his condo had been broken into. Poor fellow has been kind of sickly all his life because of a bad heart...er, a bad heart *valve*, and the shock fibrillated him, and we tried CPR and everything but couldn’t save him. Tragic, really.”

“Hmm. I’ll have to think about that one. Say! If you get going, get Dan away from here, I can tell the crime scene people that little fib and how Dan’s being transported to the hospital, where, of course, he’ll not make it. Or, better yet, he’ll be DOA. Maybe we can make that stick somehow.”

“La-la-la-la, I can’t *hear* you.” Derek was staring at the ceiling with his fingers in his ears.

Niemeyer waited until Derek unplugged his ears. “All in a day’s work, Derek. We WITSEC people have been known to use subterfuge when it suits us. It’s even within policy, at least this sort of subterfuge that doesn’t hurt anyone. We’ll get a death certificate from the local ME and plant a story in the paper. Dan will be tragically deceased, killed by the shock-induced heart thing, and that’ll be that.”

“What! Subterfuge? The Feds pulling one over on the local hicks? Why, who ever heard of such a thing?” Derek sounded offended, but he was smiling.

“Ha! As if you never pulled one on the FBI or anybody.”

I decided to head off the budding inter-agency squabble. “He could even finish up his degree at FSU, if he took a semester off to get his appearance changed a little. And a new name. My husband and I have connections in the administration there, and I’m sure we could help with the details.”

“Actually,” Derek looked serious now, “I rather like this whole idea. We need to discuss it with Dan, obviously. Mason, can Annette do that on the way back to town? We can find a safe place to stash him for a while, I’m sure, until he’s officially dead. Then you can deal with the death of your guys here, and the crime scene people and so on.”

Niemeyer nodded. “Let’s do this.”

Ten minutes later, I was sitting in the back of the Bearcat with Dan. Stan Hauser was riding shotgun, Derek was driving, and his other CBI agent was following us in one of the Suburbans.

Sitting with Dan, I took the opportunity to explain to him our idea to make it appear as if he'd died. There would be, I suggested, a certain amount of hassle-factor to deal with, but, if the idea worked, he'd be off the radar screen of those New York outfits that had killed the rest of his family.

He looked thoughtful. "Y'know, this morning, when Mason explained today's plan and all, I thought it was just ridiculous. And then when they put me in this Bearcat the first time, I couldn't believe how stupid the entire thing was. But now I understand. Those guys, whoever they are, are serious shit. They got Mom and Tony, and it looks like they got Dad. And that's still not enough for them."

"No, and it probably never will be until you're dead. Or they think you are."

"And that's where that plan you outlined comes in."

"Exactly. It's not all-or-nothing, though. It might be possible to break it into parts and make substitutions if you're not happy with parts. What I thought of was trying not to make you start completely over again, in a new town and all that. Like you and your family had to do before. But maybe that's what you'd rather do. Anyway, you need to give it a lot of thought."

"I sure would like to finish up my college degree. I've only got about thirty more credit hours to take. Two more semesters."

"Like I told Mason, my husband and I have some pull with the administration at FSU. I'm not sure if you'd be safe in Durango, though. Certainly not with your present name. Or your old one. And it might be weird to be on campus with yet another new name, but with the same old group of friends."

"I guess I *do* need to do some thinking about this. One thing for sure, I don't want to live with having to run away forever."

"Can't blame you for that."

"Y'know, I had the best time this summer. That internship was just too cool. And Durango's a great little city, but I really liked Winter Park. And Allison lives there."

"I never heard what you were doing, exactly."

"GIS mapping of various old datasets, trying to get them all registered consistently so GIS tools could be used to analyze them together. Climate data, ecosystem data, all sorts of stuff. Um, 'GIS' is geographic information systems."

"Yeah, I've heard of GIS. But, let me think, I seem to remember you're a history major."

"I am. Many of these datasets are what's called 'historical datasets.' History research is required to make them fit into the bigger picture."

"Oh. That makes sense. Anyway, do you suppose you could get those last thirty credits on-line? Or maybe through independent study courses?"

"Probably. I've got good grades, and that gives me lots of flexibility with my study plan. The U is good about that."

"How about a new name, another internship at MPARC, new digs in Winter Park, and an FSU degree via independent study? Hal is an FSU professor, you know."

"Hal?"

"You probably think of him as Dr. Weathers, the MPARC Director."

“No kidding? Geez, that’d be awesome. I mean, really awesome.”

“But Dan Santini, or Danilo Spadaro, if you prefer, has to have died today. We, I mean Mason and I, we figured it was a heart attack. You were born with a weak heart, or something like that, and the accumulating shock of having your family all killed and your place broken into was just too much. You just keeled over. Terribly, terribly tragic.”

“Well, I just hope it was quick and painless.” His grin told me he was all in.

\* \* \*

Wednesday morning saw Hal and me cruising east on US160 in our overly indulgent rental convertible with the entire world to ourselves once again. Oh, there was some traffic, of course, but that didn’t upset things at all.

Our destination that day was Crested Butte, via Lake City—not the most direct route, but perhaps the most scenic, with two Continental Divide crossings and only a few towns. Because of that, we’d brought a gourmet picnic lunch that Hal had arranged for us at the Strater the previous day.

Hal insisted on a debriefing, of course. We weren’t able to that Tuesday evening because of another dinner date, this one far more pleasant, with old colleagues from his College of Natural Science, including his replacement as Dean. Instead, he started quizzing me Wednesday morning as we left town, in order, he said, to get the conversation going before the aspen groves became too compelling to talk.

So I filled him on the previous day’s little adventure, without, as usual, providing the sorts of details that would worry him. But, as usual, he filled in such details himself and worried.

“So you were in this condo with that mob hit man upstairs?”

“And four other law-enforcement professionals downstairs with me and all of us armed to the teeth. It was perfectly safe.”

“Not for those two U.S. Marshals, apparently. Sheesh. And what’s this about Dan’s being killed?”

“No, no, not at all. We’re floating the story that he died, a heart attack, probably. That way, the New York mob people will think he’s dead and quit coming after him. See?”

“Oh. Well, I guess that does make sense. But what’s really going to happen to him?”

So I outlined the plan Dan and I had discussed. “But, I said, I’ve got to stop calling him ‘Dan.’ He’ll need a new identity, once again. But at least he can move to a familiar place and work with people he knows. That is, if you buy into this senior year for him at MPARC.”

“Oh, that’s the easy part. That project he started interests me a lot. I can think of all sorts of analyses to do when he gets the data assembled. The hard part will be his new name.”

“Nick Parker. Nicholas, when formality is needed.”

“Huh?”

“Well, that’s what he picked. We talked about the senior year at MPARC and then it was time to think about a new name. He seemed stumped, so I asked him who he saw when he looked in the mirror, don’t think, just answer. Like those ‘what’s the first word that comes to mind...’ psychological tests. And he said, after about ten seconds, so he did think about it a little bit, ‘Nick Parker.’ Said it just popped into his head. Seems fine to me.”

“Fair enough. No other Parkers at MPARC, so that won’t be an issue. Any news about that hit man that got away?”

“Not yet, really. That call I got last evening was from Deputy Marshal Niemeyer, and it was encouraging. He told me that the crime scene team found blood smears on the railing of one of the bedroom balconies, and another smear on the balcony deck below the one on the railing. And there were somewhat deep foot impressions on the ground below that. So the guy stepped over the railing, holding onto it, held onto the deck, and dropped. That means it was only six feet or so. They also found a chunk of what looks like the heel of a hand, along with some material they think is from a glove, in the teeth of one of the dead Marshals. So it looks as if the hit man has a chunk of hand missing, and we have solid DNA samples from that hand. The U.S. Marshals Service will be all over that, and they’re usually successful in these things. If he’s still carrying the gun he shot Fran’s deputy with, that’ll be two more charges of murder one in Grand County.”

I stopped to see if I could remember anything else germane, but got distracted. “Ooh. Have a glance at that big grove up the side valley to your left.”

That change-of-subject was just what we needed, and we concentrated on the scenery for the rest of the day.

And what scenery it was. The San Juan Valley northeast of Pagosa Springs, still green and lush in the late summer. Wolf Creek Pass and the South Fork Valley, full of aspen trees and enchanting rock formations, and then the Upper Rio Grande Valley, with broad vistas of extensive aspen groves climbing the valley sides.

We stopped for our picnic at a little side-road bridge over the Rio, and, once again, Hal expressed second thoughts about having left the fly-fishing gear at home. Then we tackled Slumgullion Pass and the valley of the Gunnison’s Lake Fork. By the time we reached Blue Mesa Reservoir, Gunnison, and finally Crested Butte, we were once again so bedazzled by the early fall colors that we were glad to stop for the day. Thursday was to be a bit shorter, so we deferred the side trip Hal had planned to the next morning.

He had booked us a room in the old part of town rather than at the base of the ski area, so we stayed at a lovely bed and breakfast on a quiet side street—the kind of place where you’re treated like family, including the sort of breakfast that Grandma would serve.

Thursday morning, our side trip to Kebler Pass, a few miles west of town on a county road, provided the perfect start to the day’s drive. Aspens right next to the road made a tunnel of leaves of all colors that turned the morning sun into a light show. Driving back to town, into that sun, was actually something of a task, as it made it hard to see the roadway.

Then it was back on pavement, for a while, south toward Gunnison but then northeast up a county road to Taylor Park Reservoir. Another section of gravel followed that, almost all the way to Cottonwood Pass. That entire crossing of the Sawatch Range was the perfect mix of conifers and aspens, from the perspective of showing off the colors of each.

At Buena Vista, we turned south for a short stretch, and then back northeast, across the Arkansas River at Johnson Village, up over Trout Creek Pass and into South Park, an elevated high prairie that is the headwaters for the South Fork of the South Platte River. A northward turn at Fairplay took us over Hoosier Pass and into Breckenridge, and once again we were ready to stop and relax instead of pushing on.

In Breck, Hal had changed gears and booked us into a lift-base hotel, a Marriott this time. We had a lovely room overlooking a dammed-up bit of the Blue River, something called locally “Maggie’s Pond.” Lift-base it may have been, but it was still easy to walk downtown to dinner, and we took advantage of that opportunity.

Friday morning saw us once again on a gravel road first thing, this time over Boreas Pass. Of all the roads on our tour, this one was perhaps the least suited for that convertible of ours, but it was still just fine. Like the Kebler Pass side-trip, the smaller scale of the narrower road put us much closer to the overhanging trees. That made it all the more impressive when the scenery opened up on the way down the pass, back to the highway.

From there, it was east over Kenosha Pass, with its groves climbing the mountainsides, and north at Grant on the county road over Guanella Pass, to Georgetown and I-70. But the four-lane craziness lasted only a few miles, and then we exited onto the Central City Parkway, which took us over some foothills and down to the Peak-to-Peak Highway. I'd never seen that famous scenic byway, so its sixty miles to Estes Park were a new experience. Not only were the aspen groves beautiful, the east sides of the mountains with whose west sides we'd become so familiar were fascinating.

From Estes Park, we were truly the horses headed to the barn, even if the trail was the road over the ridge in Rocky Mountain National Park. After that, we discovered that, despite 1300 miles or so of breath-taking scenery and fall colors, home felt just right.

\* \* \*

I hadn't thought about it beforehand, but it turned out to be a bonus that we arrived home on Friday afternoon. It meant that we had the weekend to decompress, do laundry and shopping, and try to wrap our heads around going back to work on Monday.

And I can't find words to describe how wonderful it was to sleep in our own bed once again.

Saturday morning, Hal asked me if I wanted to go down to Denver with him, to turn in the rental car and, incidentally, do whatever shopping I might have on my list. Between local stores in eastern Grand County and online mail-order shopping, we did pretty well, but there were certain items that I just had to purchase in person that weren't available locally. So I jumped at the chance, especially because it was Labor Day weekend, and there would be sales to take advantage of.

While the drive itself was as scenic as ever, in both directions, the traffic in the Denver metro area reminded me for the umpteenth time how much I enjoyed our lives in the Colorado mountains. When so many people are packed into such a small area, life is just too hectic for my taste. And I say that knowing that Denver is not, by national standards, crowded. So it was good to polish off the big city errands and settle in back at home again.

Although I had set up one of those "I am out of the office until..." auto-reply messages on my office email before we left on our tour, I had also kept up with incoming mail on the trip so I could be aware of and reply to emergency messages as necessary. I'm glad I did, because it let me know that the memorial service for Norma Speers was planned for that Sunday, and we were able to attend. Angela and Sandy were there, too, so we all sat together.

Hal and I aren't church-goers by any means, so we found the service at the charismatic evangelical church in Tabernash quite odd, to say the least. Angela and Sandy did, too, but in her case, I think it helped her get better closure on the whole sad episode. Still, she told me later that she was sure glad she wasn't getting married there—the wedding at the Cathedral in Santa Fe would be weird enough, she said.

But it seemed to help Norma's extended family that we were there—in a situation like that, the more community members who show their respect, the more comfort is available for the deceased's loved ones. Regardless of how we felt about the service, the sight of Norma's husband—about her age,

early twenties—sitting straight and proud in the front row, holding their infant daughter, was both heartbreaking and inspirational.

As in many tourist towns, Labor Day, although well before the autumn equinox, is the last real weekend of summer up in Grand County, and everyone local is grateful for the upcoming break between summer and winter tourist seasons. Skiing doesn't begin until late October—and that's being optimistic—so, apart from a few aspen peeps and, later, the elk-hunting set, things quiet down.

The holiday weekend itself can be a nightmare for law enforcement, of course, but for once it turned out to be relatively peaceful, a blessing for Fran's stressed-out department. Angela and I, as third wheels in a fraternity that had closed ranks because of their shared tragedy, didn't mind the quiet a bit.

It gave us a chance to catch up on all the paperwork we'd been deferring, and to talk about things we'd not had time to before. I could tell she was affected by Norma Speer's death more than she was letting on, especially when she brought up the baby and how, now that she and Sandy were going to make honest people out of each other, that was something she was thinking about a lot. It felt good that she trusted me enough to expose that new and vulnerable side of herself to me.

Wednesday, Hal and I took a very nice bottle of *Morgon* over to Mac and Sam's place on the ridge, where she served an exceptional *cassoulet* that she'd been saving bits and pieces of various critters for. Chicken and turkey and pork and beef and even a little duck made a delicious potpourri of flavors in with the beans, and the fresh herbs she'd found at the farmers' market didn't hurt at all.

And they had a surprise for us. Sitting on the patio overlooking the Fraser Valley, watching the alpenglow on the mountains across the way, we were finishing after-dinner coffee. Sam seemed to be working up to some kind of announcement.

"Well, we did it. We think. While you were out of town, we spent couple of nights over in Estes Park, house-hunting. And we think we found one." She looked a little embarrassed, but pleased as well.

"We did." Mac beamed. "And it's even got a view. Not quite as impressive as this, but still amazing for an old flat-lander like me."

"Now," she said, "we have to wait to see if they take our offer. They didn't like our first deadline, but they countered with a promise not to consider any other offers for a week if we'd give them some time. I think they were surprised by the possibility of a sale and now have to find someplace to move to."

"Well, congratulations, both of you! As I've said all along, we'll miss having you as neighbors, but Estes Park is just over there." I waved my hand in the general direction of northeast. "You can visit us, and we can visit you. Winter holidays are coming up, after all. I hope everything works out."

And I really did. Sam and I would stay in touch, I knew, and having Mac over there to look into this and that, instead of making the trek myself, would be very helpful.

I went into work late on Thursday, where I found waiting for me a package, via FedEx, from Mason Niemeyer. It contained a copy of a recent death certificate for one Daniel Santini, with "Danilo Spadaro" noted on the blank for other names used, along with newspaper clippings from the *Durango Herald* and the *Grand Junction Sentinel* describing the sad death of a Frémont State University Student from Grand Junction. The cause of death was reported as due to a congenital heart defect and stress induced by the recent, accidental death of his mother. The newspaper stories were not in the form of obituaries, so there was no mention in either of such things as survivors or other family members.

The US Marshals Service WITSEC Program, I realized, knew how to work quickly when it wanted to.

Friday, Hal and I had a lunch date, and I drove up to MPARC to meet him at his office. The building seemed emptier than usual, but that was only because I'd become used to all the people from the IPCC conference in there wandering around.

Coming around a corner on the second floor, in the hallway leading to Hal's office, I almost bumped into a young man who was going somewhere with a purpose. He had dark brown eyes behind heavy-framed, horn-rim glasses, surrounded by a week's worth of reddish-brown crew-cut and what would someday be a luxurious full beard. I thought he looked familiar, but I couldn't quite place him.

"Oh, sorry," he said, "my bad. I need to slow down. Oh! Ms. Trieri! Nice to see you again!"

"Not at all." I smiled. "Um, do I know you?"

With no small amount of confidence, he stuck out his right hand for a handshake. "Nick Parker. Good to meet you."

His smile broadened as he took off his glasses, and a familiar face emerged. "And, to quote Mark Twain—correctly, I hope—'the report of my death was an exaggeration'."

**A Four Corners Mystery**

# Wet Work

## Prologue

What, he wondered, is that full moon up there called?

His thinking was muddled, for good reason, but slowly it came to him.

It's September, he thought, so maybe it's the Harvest Moon. Or the Hunter's Moon. One of those autumn moons. Well, whatever, it sure is spectacular now that it's starting to set over there, behind that big peak across the valley.

It occurred to him that wondering about such things was ridiculous, given his predicament, but the wonder offered consolation. As consolations go, it was a small one, even trivial. But it was the only consolation he had, so, well, he thought, why not make the most of it? Whatever else you might say about the situation, that scenery is amazing, even now, getting on toward morning.

They had planted him facing west, where he had been able to see both the peaks of the Front Range and the sunset without moving his head. That was good, because moving anything, anything at all, he had discovered, resulted in just too much pain. It hurt even to blink. Those slices on the soles of his feet that had been so painful at first, slices by unfortunately dull knives, they now seemed like playful tickles. At least he was held securely by all the duct tape wrapped around him, arms, legs, even his mouth, so he didn't have to try too hard *not* to move.

Now, many hours later under the light of the full moon, that tallest peak—Longs Peak, he remembered, a landmark that even the most outdoors-averse Estes Park resident like himself couldn't miss—was a showcase for the interplay of shadows and light. As the night had progressed and the angle of the full moon had illuminated different facets of the big, flat cliff on the face of the peak, the scene had kept changing like a slow-motion movie. It was all too beautiful for words.

But if the scenery served as consolation, the sounds of the night did not. At first, the breeze in the trees was soothing, but then he noticed various strange creaking and moaning episodes. And there was the startling rustle of little feet in the leaves on the ground, in the underbrush.

It was the yips and yowls, the baying, that bothered him the most, though. Whatever they were—coyotes? wolves? neighborhood dogs gone bad?—they seemed to be zeroing in on him, coming from various directions, approaching ever closer, as if they were talking with each other: *Find anything over there? It sure smells like there's something around here somewhere. Where is it? Find it yet?* It was taking hours, but the canine conversation came steadily closer.

Suddenly there were the eyes, golden glints around the edges of his peripheral vision, down in the trees. And snuffling sounds. Growling.

It was when one of them bit down on his left foot, at first a little nip but then ripping, jerking at his flesh, that he began screaming, the noise muffled by the duct tape. And even though he knew that no one would ever hear him, he screamed on and on, for as long as he remained conscious, a terribly long, long time while more and more of the hungry carnivores became brave enough to tear loose dinner for themselves and their whelps.

By the time the moon completely disappeared behind the big peak across the valley, peace and quiet had returned to the high mountainside, and the only sound was the satisfied snoring of the satiated pack.

\* \* \*

## One

After everything that's been written and said about that poor bastard's murder—all the TV talking heads' reciting their sound bites, the newspaper reporters' strutting the results of so-called investigative reports, the internet bloggers' spewing misinformation, the editorial teams' tsk-tsking about how it was handled, or not—I don't know that there's very much left for me to say about it.

And I suppose that I'd be well-advised to avoid referring to the decedent as "poor" anything, given what we discovered. It's just that it's hard not to, he died so horribly. In all my years of overseas covert operations, including my involvement in episodes in out-of-the-way countries where the natives' behavior defines "barbaric," I never saw such a thing, not even close.

So even though much of the public commentary suggested that he got what he deserved, well, they didn't see what I saw, along with the sheriff and his team on that first day. I can't imagine that anyone, no matter how embittered, would really wish such an end for anybody.

Except, of course, for the sadistic psychopaths who set the whole thing up—it was clear from the initial stages of the investigation to its end that it was no accident that he died that way.

I'll say this, though: what I saw certainly wasn't what I was expecting to see, on that lazy Labor Day.

It was a bit past noon, and I was working my way slowly, carefully up the nascent Big Thompson River, what had started out as the Forest Canyon branch, past the upstream end of Moraine Park, catching and releasing six- to ten-inch rainbows and brookies almost as fast as I could get my fly dry. Out in the meadow lower down, I knew that the fish would be wary, having learned their lesson from all the pressure they get. But up in woods, they were still learning, and I was having fun playing teacher.

It was what I'd been looking for when I moved to Colorado. Those bonefish in the Florida Keys were just too smart for me. They'd inspect the perfect imitation of a baby crab that I'd offered just where they were looking, and they'd turn their noses up with that "neener, neener" look of superiority that told me that I was just not in their league.

But these Rocky Mountain trout were the right amount of dumb.

And then, to my surprise, my phone buzzed. It was just my luck that the unpredictable cell-tower coverage in the Estes Valley happened to work at that particular spot in woods above the upper meadow, somehow. Maybe the signals were bouncing off that cliff face over there across the stream.

"Mac? It's Annette Trieri. How are you guys? Do you like it over there, now that you've had a chance to really get to know the place?" Annette and her husband Hal Weathers had been our closest friends when we were living on the other side of those mountains I could see at the head of the valley, over the Continental Divide in Grand County, on Colorado's Western Slope.

I noticed that my fly, a tan elk-hair caddis, size 18, was now affixed to the lip of a jumpy little trout. Fishing with one hand wasn't going to work, I could tell. Maybe, I thought, he'll spit it out. They can do that fairly easily with the barbless hooks I use.

“Pretty much, Annette. We’re finally getting comfortable. Sam seems to love it over here and I guess I do, too. You should pop over for dinner some afternoon this summer, while Trail Ridge Road is still open.”

“I imagine we will pretty soon, Mac. Listen, it’s a holiday weekend, so I’m covering a couple of districts, including the northern Front Range. And I got a call from the Larimer sheriff’s office. Are you available for a case?”

Besides being a good friend, Annette was a Deputy Director for the Colorado Bureau of Investigation, and she had deputized me for some work we did together over on her side of the Divide when Sam and I lived over there. It suddenly dawned on me that there had been no term of appointment specified, and she had never asked for the shield back.

“Depends on where, I guess, Annette. Right now I’m standing in a stream in Moraine Park. It’s something of a miracle that my phone works, actually. And I don’t have my shield with me.” Where, I wondered, had I put the thing?

“Well, the case is over there on your side. Some hikers found a body, or maybe half a body, up on the west side of Twin Sisters Mountain. It sounds like the missing half may have been eaten. The hikers managed to call in the sheriff, and he’s asking for help. I’m busy with about five different things happening over here, and it would take me a quite a while to get there anyway.” Annette sounded a little breathless, something odd compared to her usual calm and professional comportment.

“Uh, OK. A hiker turned into a mountain lion’s breakfast or something? Why call you?” I knew from my conversations with Annette that the CBI usually got involved in only difficult or high-profile cases, and didn’t seem like mountain lion attacks would qualify.

“The circumstances, at least as they were related to me. I need you to get up to the site soonest. Where are you? I’ve got a high-altitude helo on the way, and I can tell them where to land. Just in case, I asked, and the Park Service people told me that there’s a helipad on Upper Beaver Meadows Road, wherever that is. Think you can find it? I’ll send them that way. And don’t worry about the shield for now—I’ll call the sheriff and let him know who you are and all.”

A helicopter? Must be more than just a big-cat attack, I thought.

“I think so. I remember seeing a sign for Upper Beaver Meadows out on the main road. Ah, and my phone probably won’t work after I start moving, so I’ll go find the helipad and call you from the air.”

I disconnected, released the still-hooked little trout—a seven-inch rainbow, pretty tired out at that point—and sloshed across the stream toward the road and my Jeep. About the time I made it to the far bank, I could hear the familiar thwack-thwack of an approaching helicopter in the distance. That sped me up some.

\* \* \*

Finding the waiting helicopter was easy—its presence in the pastoral scenery of Upper Beaver Meadows, usually the domain of elk herds and wandering tourists, was obvious. The traffic was already getting jammed up by the time I reached it a few minutes later.

What was hard was finding a place to get me on the ground again, near the scene.

It was a short flight from the meadow just north of Moraine Park to the mountainside across the valley from Longs Peak and below the little unnamed summit to the south of Twin Sisters Peaks. I barely had time to call Annette and tell her I was on the way.

We circled a group of official-looking people several times, spooking a couple of the horses they had tied at the edge of a clearing, while we looked for a suitable landing site. The pilot finally sat the bird down about a half-mile to the south of the gathering, in a less-steep, treeless spot. I gave him a thumbs-up and climbed out; he waited until I cleared the rotor wash and took off again.

Shortly, a sheriff's deputy rode up, leading a rider-less horse. He looked so comfortable in the saddle that I decided he must have been a rodeo cowboy at one point, and his slight, wiry frame only added to that impression.

"Mac MacQuarrie? CBI?" He sounded hopeful and a little intimidated, so I didn't point out that random, middle-aged fly-fishers were unlikely to have been let off a helicopter in that particular location.

"That's me. And I'm glad to see you. I don't think I would have found my way to where you all are by myself." I managed to mount up with minimal loss of dignity, considering I still had on my waders, vest, and felt-soled boots. I wasn't really dressed for riding.

He wheeled his horse around, and I followed. "It's over this way, sir. Not a pretty thing, either. Frankly, I'm glad I got picked to come fetch you. I'm Deputy Aaron Smithy, by the way, Larimer County Sheriff's Department."

"Glad to meet you, Deputy Smithy. And what can you tell me? All I've heard is that a body's been found with some indications of a wild animal attack." I was glad he kept his horse at a slow walk, because the steep terrain and low branches everywhere made riding challenging.

"Sir, I don't know who told you that, but he gets the award for understatement of the year. I think you should see for yourself, rather than let me prejudice you, though. I'll say that those basic facts are correct. And I hope you have a strong stomach." He shook his head.

We picked our way northward across the steep side of the mountain, climbing a little in the process. Now and then we had to detour around a rock outcropping, and dodging aspen and lodgepole pine branches was just part of the routine.

It took about fifteen minutes for us to reach another less-steep, treeless spot on the mountainside, a sort of almost bench, on which a half-dozen people in uniforms were conducting a careful search of the ground. Little flags of various colors marked spots where one of them had found something, apparently. Smithy led me to the uphill end of the bench, to the edge of the trees where seven additional horses were tied. I wasn't paying too much attention to the people and horses, however, because an odd structure in the middle of the clearing had grabbed my attention.

Two lodgepole pine trunks, each about four inches in diameter and maybe fifteen feet long, had been stripped of their branches and fastened into a large X, the feet of which were set into the ground somehow so that the structure was standing up. The X was leaning back slightly, against a third, shorter, tree trunk that was providing a stabilizing third leg for the contraption. The intersection of the three logs appeared to be about six feet above the ground, but it wasn't possible for me to be precise right then, because my view of the intersection was obscured by something strapped onto the X, strapped with what turned out to be gray duct tape. The something appeared for all the world to be a rather bulky, legless body, arms taped to the upper legs of the X, torso and head completely wrapped in the same material, the duct tape, except for a cut-out where the eyes would be and what looked like a slit to breathe through. That, and the duct tape that dangled in tatters at the base of the torso, where the legs weren't, sent a shiver up my spine.

As the scene registered in my consciousness, I understood Deputy Smithy's comment about having a strong stomach. And when I put the scene together with what Annette had said about the victim having

been eaten, the horror of the situation almost made me lose my balance on the horse I was riding, along with my half-digested lunch.

Like I said, I've seen—and done, as far as that goes—some truly brutal things in my various assignments around the world, but this was way over the top for me.

Deputy Smithy was tying my horse as I dismounted, and when I turned around to face the meadow, I saw a large man in uniform wearing a drooping western moustache headed my way. His cowboy hat was pushed back on his head, and he was sweating.

“Mac MacQuarrie, I expect. Annette Trieri called me. I'm glad you're here. I'm Sheriff Brad Winchester, Larimer County. We've got us quite the deal here.”

“Sure looks like it, Sheriff, and I still don't really understand what it's all about. This remote location isn't helping any, is it?”

“Nope. My crime scene van is down by the highway, where the trailhead used to be, before they moved it, so we can process evidence as needed. But getting down there is something of an adventure.” He pulled a red bandana out of a hip pocket and mopped his face. “We're thinking that we'll gather everything up, package it somehow, and have it lifted out by helicopter. They can lower a line and winch it up.”

“No doubt your people have been careful, Sheriff, but what about before you all got here? Were things disturbed?”

“Well, the climbers who found all this said they didn't get out of the trees—they saw enough to scare the crap out of themselves and skedaddled. Fortunately, one of them had a GPS receiver and the presence of mind to get a fix, so they had a precise location for us.” He gestured over his shoulder toward the north. “They said they were climbing a rock formation back over there and saw an unusual number of birds circling, ravens and even a couple of vultures. So they contoured over here to investigate. And they called us right away. There are enough houses in the Tahosa Valley, along the Peak-to-Peak Highway down yonder, to have a cell phone tower, I guess.”

He paused and surveyed the scene. “And as far as ‘disturbed’ goes, well, those little flags you see represent various things. The red ones are bones, or bone fragments. The yellow ones are pieces of duct tape or clothes—it looks as if the vic was wearing jeans. And the blue ones are other things, including human footprints possibly left behind by the perps, maybe.”

“And it looks as if you haven't touched the victim. Yet.”

“Right. And I don't know who's going to draw that short straw. I'm thinking it would be best if we could just airlift that entire assembly to the lab, or at least into Estes, for processing.” He gestured toward the X with its gruesome cargo.

“Excellent idea. That bird that brought me in should be able to carry both the evidence package and that thing, too, I imagine. I wonder who that was?”

“That's the payoff question, of course. This whole setup is obviously carefully premeditated, and if the vic was alive and strapped to that thing, then left to the critters—by the way, we have lots of tracks out there, maybe coyotes, maybe something bigger—well, we're dealing with some real crazies.” He shook his head. “Not the sort of folks I want to have loose in my county, that's for sure.”

“Yeah, well, Colorado, especially the mountains, seems to have its share of whack-jobs, but you're right—we surely don't need this sort of thing. So, no one's touched the victim. How about looking closely enough to see, uh, well, what's left?” The thought of doing that made me glad it wasn't my job.

“Yeah, well, I checked that part out. Behind that dangling duct tape is the remains of a pelvis, with teeth marks on the exposed bones. It looks as if most of the intestines have been pulled out, which is consistent with what flesh has been eaten.” He coughed. “I almost tossed my cookies when I saw that. Never seen anything so awful, in nearly forty years in law enforcement.”

“I suppose that his legs were taped to the lower part of those logs, the way the arms are above, so those critters were able to eat their way up to where they couldn’t jump high enough to reach any more.” I shook my head to clear the picture. “Presumably, the vic died somewhere in the process, either from blood loss or shock. And he probably passed out fairly quickly. I remember reading something about how prey animals go into a sort of shock when the leopard, or whatever, grabs them, so their suffering isn’t what it might appear to be. I wonder if that happens with humans? I sure hope so, for this guy’s sake.”

I realized I was starting to babble, so I shut up.

“Yeah, well, that’s for sure. You can only hope he didn’t suffer too long.” Sheriff Winchester shook his head. “We’re going to need the CBI to help us clear this one, Mr. MacQuarrie. I hope you folks can come through.”

“Call me Mac, sheriff. And all I know is that I’m here, in Estes Park, I mean, and available. I’m just a part-timer, and I don’t know what CBI central has in mind for this one. But, yeah, I’d say this is one of those cases that the CBI ought to help with.” Little did I realize, at that point, how prescient that comment was.

\* \* \*

Annette Trieri had told me, ’round about the time she deputized me, that the whole purpose of the CBI was to assist local and regional law enforcement in whatever ways they need. Her main assignment was working with the Grand County Sheriff, across those mountains I’d been staring at earlier, to help his office deal with the explosive growth that eastern Grand County had seen in recent years—and with the increasingly sophisticated violent crime that came with it.

She’d told me that her way of helping local law enforcement had started during her first assignment in the CBI office in Durango, where she learned quickly that the best approach was to stay in the background, let everyone do their jobs, make whatever suggestions seemed appropriate, and resist the temptation to take credit. It didn’t take me long to see the wisdom of this, and I decided to adopt it as my strategy in this case I fell into. After all, I wasn’t looking for a job, I just happened to be fly-fishing in the wrong place at the wrong time, meaning within cell phone range.

That’s why I spent the most of Labor Day afternoon trying to stay out of the way by hanging around the horses on the edge of that clearing up there on the west side of Twin Sisters Mountain. With nothing better to do, I made some phone calls.

“Sam? How’s the project?” She had left early that morning to sit on the north side of Deer Mountain and sketch the peaks of the Mummy Range. Given that her phone worked, she must have returned home.

“I got a good start, but I’ll have to go back, I think. I’m trying to do one mountain at a time, and there are so many. How’s the fishing?” Her minimalist style, which had succeeded so well in the Florida Keys and over in the Fraser Valley, looked like it would in Estes Park, too. Several galleries and up-scale shops were already sporting “Landscapes by Samantha Winslow” signs in their windows.

“Well, it was just fine. But I got sidetracked.” I filled her in without mentioning any of the gory details. “Right now, I’m standing on a hillside watching all the folks up here doing their jobs. I think I’ll

be riding down in a helicopter in a while, maybe a couple of hours. The situation is under control, I can explain it when I see you later.”

“You’ll be home in time for supper?”

“That’s my intention, for sure. See you later.”

After that, it seemed politic to call the boss.

“Annette? Mac. The helicopter and a horse got me to the scene, and I’m on top of things as much as I can be. Really, though, Sheriff Winchester and his people have it all under control.”

“So, what’s the back-story, Mac? Did I really need to ask you to go up there?”

“I think it’s wise for CBI to have a presence here, so, yeah, it was probably a good call. And it’s hard to be accurate, but it looks as if someone did something to get himself set out as bait for hungry carnivores, and it worked so well he turned into dinner. What’s left of the corpse is still wrapped up in duct tape, of all things, so we don’t have an ID. All we can say at this point is that he—and, really I don’t know that it was a ‘he,’ I’m just saying that—that he or she was probably obese. The sheriff is thinking about airlifting the body and what it’s tied to out for examination in a real lab, instead of on this mountainside.” I tried to think of what salient information she would like to hear, but there was so little that I was pretty stumped.

“What real lab? Does Brad have a facility in Fort Collins?”

“Not sure, although he mentioned Estes Park. I don’t think that he has a specific facility in mind, though. The logistics are going to be challenging, because it’s a sort of crucifixion, with a pretty big cross, except it’s a X.” As a newcomer, I wasn’t familiar with Larimer County enough to know whether the sheriff even had an office in Estes, let alone a forensics lab.

“I like the idea of keeping the investigation close to the site of the crime. Let me make a call or two and get back to you ... No, actually, I’ll call Brad. Keep your eyes peeled, Mac. This sounds like it may become a high-profile case. The media just love it when someone gets attacked by wild animals, even accidentally. They’ll be all over this one in a heartbeat.” There was a pause. “Say! I just had a thought. This sounds like it’s going to be a pretty unusual post-mortem. Do suppose George would be able to help? I don’t think he’s got much going just now.”

She was referring to a guy I’d met before we moved, George Neering, the medical examiner for the judicial district that included Grand and Jackson Counties. Although he was eccentric, he was well-respected state-wide.

“Excellent suggestion, Annette. Why don’t you pass it along to the sheriff when you call him?”

I disconnected and looked around the clearing. The ground search was completed, and the deputies who had been searching were now bagging the items they had flagged previously. I hadn’t seen it, being preoccupied on the phone, but I hoped that someone had taken pictures of the scene with all the flags before the bagging started. There probably wouldn’t be any patterns to the colors, but you could never know.

Sheriff Winchester was standing near the X-shaped contraption at the center of the clearing, conversing with Deputy Smithy. I walked over to them, being careful to avoid stepping near any of the flags.

“...so I’m thinking we should just hitch this thing up and haul it out of here with that helicopter.” Winchester pointed at one of the legs buried in the ground. “I can’t imagine that whoever did this sank these too deep. I bet that chopper could just pull ’em up.”

“Well, I don’t know, Sheriff. I mean, I could rig this thing with a couple of additional small tree-trunks so it would be stable—we lifted stranger things when I worked for the crane company, and I did helicopter lumber-jacking for a couple of summers—but you’ll have to ask the pilot if he’s willing to try to pull it loose. That sounds risky to me. But what do I know?” Smithy shrugged.

“Ah, I’ll just suggest that he grow a pair if he balks. That works every time.” The sheriff turned my way as I approached them, trying to ignore the remains on the X. “How you doing, Mac? OK?”

“Sure. I have to say, though, this is far and away the strangest thing I’ve ever been involved with, and I’ve had some strange ones, I’ll tell you.” I surveyed the mountainside as a way to keep my eyes off the X. “If you’re going to yank this out of the ground, maybe I’ll just ride down on a horse, if you have an extra one. But I thought I’d give you a heads up, Sheriff. I just talked with Annette Trieri, and she had this idea she’s going to call you about. I don’t know the medical examiner over this way, but she suggested bringing in George Neering. He’s a tad odd, but he’s just incredibly talented and has a huge range of experience.”

Winchester laughed. “George, yeah. He’s a character. But, you’re right, he’s the best. And I already suggested that to Lindon—that’s Lindon Hanks, our ME. He agreed and said he’d call George right away, so he’s probably already on his way over here. And we do happen to have an extra horse. Hope you’re up for some rough terrain, though.”

\* \* \*

## Two

A word to the wise: Don’t try to ride a horse, especially not down a steep, rock-and-forest-covered mountainside, while you’re wearing fly-fishing gear. The felt soles on the boots don’t hold the stirrups; the nylon covering on the outside of the neoprene waders slides around in the saddle; the gadgets hanging on the vest click and clack and jingle, making the horse nervous and spooky. Even if you like adventure in your life, find another way to get some.

To add insult to injury, neoprene doesn’t breathe well, so my waders were hot and sticky inside and stayed that way until I got home. I wound up with a nasty case of something resembling diaper rash. Afterward, I ran right out and bought new ones made from some high-tech material that breathes. I still don’t ride in them, though.

But I did make it down to the highway, finally. Sheriff Winchester assigned a deputy down there to take me back through town to my car, and I discovered that professional courtesy, or something of that nature, allowed sheriff’s patrol cars into the national park without the usual fee. It got me to thinking about where I might have put the CBI shield that Annette had given me the previous summer—maybe I thought, it could get me into the park for free. Sam and I had an annual pass, but only one. Earlier that day, I’d had to fork over the twenty clams to get in because Sam had taken our park pass up to the Deer Mountain trailhead with her in her pink VW bug.

As I had expected, she was back when I got home that evening, fussing about in the kitchen with a new recipe. A few months earlier, we had waited out the last big snowstorm of spring with several rented movies. The one about Julia Child and the lady with the blog had motivated Sam to try out the business of making all the recipes in that French cookbook, so I’d been eating exceptionally well for weeks. My job was to critique her results—a task that tested my meager diplomatic skills with some of

those recipes—and to pick out wine for whatever she was cooking. That evening, the first thing I had to do was to figure out what she was making.

“That looks like scallions in the sauté pan, but, um, I smell something else I can’t identify. Something different. What are you up to this time?” I was sniffing at things while leaning over the island on which the cook-top was at work on a couple of pots.

“That’s because this is just the white sauce without any flavorings yet. There’s nothing much to smell except butter and flour. You’ll recognize more ingredients when it bakes, probably.” She had her back to me, separating eggs over the sink. “I’m making a crab soufflé. Want to beat some egg whites?”

I couldn’t help myself. “Why? Have they been naughty?”

She stopped with the eggs, shook her head slowly, then turned and gave me one of Those Looks.

“Ha. Ha. Read up on it in Julia’s book there.” She nodded her head toward the thick volume on the counter. “Follow her instructions carefully, and the whites will be perfect.”

That’s how I came to be flailing away with a whisk at a copper bowl full of egg whites when my phone buzzed again. The process didn’t seem to be at a critical stage—the bowl’s contents were getting frothy, but they were still fairly runny—so I put down the whisk.

“Mac MacQuarrie here.”

“Brad Winchester, Mac. It looks like we’re going to need you and the CBI more than ever. We identified the remains.” He sounded more stressed than he had up on that mountainside.

“Fingerprints? Or what?”

“Fingerprints as verification. We got the duct tape off the head, and one of my people recognized his face. Sorry, wait one, OK?” There was a muffled conversation I couldn’t quite make out, but it lasted only a couple of seconds. “Anyway, then we ran the ’prints through the NCIC database and got a match. We’ve also put in an order for dental records, but the ’prints and the facial ID do it for me. It was Trevor Swent. Looks like his trial isn’t going to happen after all.”

“Trevor Swent? You mean that local philanthropist who’s in the papers all the time for endowing this or that? Really? Gotta say, Brad, that’s pretty strange. Seems like I remember he got indicted for some kind of child abuse thing recently, though. Could that have anything to do with it?”

Winchester agreed. “Yeah, I thought about that, too. The child abuse was my collar, because it was outside the Estes Park town limits—we picked him up down in Glen Haven one day. The kid’s identity is being carefully shielded, though, and even I don’t know who she is. And then that stuff about his sex club activity came out, which could be related as well.”

Sam was making “wrap it up” gestures and pointing at the egg whites. “Listen, Brad, I’m in the middle of something and I have to go, but I’ll call you later, OK? And, say, have you thought about how to handle the media and all? There’s going to be a firestorm. That always happens when wild animals are involved, and with Swent as the victim, it’ll be crazy.”

“I know. That’s our next big challenge, at least in the short term. Talk to you later, Mac.”

I was back to flailing when Sam asked, “Where have I heard the name Trevor Swent before?”

“Well, let’s see. We’ve lived here how long? Less than a year? I think I’ve seen his name in the local paper, often with a picture, at least a dozen times, pretty impressive given that the paper is out only twice a week. And there was his recent arrest.” I was glad to see that the egg whites were thickening, as my wrist was beginning to complain. “Something about contributing to the delinquency of a minor.”

“Oh, yeah. I remember that. He was taking smutty pictures of underage girls, or some such thing. At least that’s the charge. That’s what you were doing this afternoon? What was that about wild animals?” She was folding the egg yolks together with the contents of a carton of lump crab meat.

I gave her a sanitized version of our discovery on the mountainside.

“It was truly bizarre. Of all the people for that to happen to, Trevor Swent is just not someone I’d have guessed. How’s this?” I held the copper bowl her way, showing her the perfect egg-white peaks I’d managed to produce.

She approved and proceeded to assemble the parts of the soufflé while I watched and thought about wine.

“Wasn’t there some suggestion of a sex club thing, in the newspaper article?” She slid the soufflé dish into the oven.

“Well, you can’t believe everything you read, especially about this kind of stuff. But the *Denver Post* was saying that he liked S&M parties, and one went too far. Someone actually got injured or something.” I settled on a crisp, but slightly fruity, non-oaked French chardonnay that was already in the wine cooler and poured myself a taste to make sure it was in good shape. Was it just right? It turned out I needed another taste or two. Fortunately, we had more than one bottle of it.

The soufflé was perfect, the wine complemented it nicely, and, with a spinach salad and a loaf of artisan bread, we had yet another elegant French dinner. It occurred to me once again that I was going to have to get more exercise if Sam really intended to go through that entire cookbook.

She was nibbling on a final bit of bread, looking thoughtful. “Y’know, I think I remember one of my friends in Miami Beach talking about S&M parties down there. I never went to them, but other S&S girls did, on occasion. And I think I remember she mentioned the name Trevor Swent. Yeah. It’s an odd sort of name, and I’m pretty sure I heard used it a couple of times.”

When I met Sam, she had been a Miami Beach working girl using the pseudonym Dolly, along with an appropriate blonde wig, on contract to a shady outfit called Sun and Sand Escorts, S&S. The shadiness of Sun and Sand had meant that Sam’s “contract” was really more of an indentured servitude, enforced by the company’s goons. With the help of a squad of Navy SEALs I met on a case, I was able to liberate her from that situation, along with all of her co-workers, who showed their gratitude to the SEALs in various creative ways. Sam and I have been together ever since.

“I remember you had some oddball jobs with them—that party where you were a nude cocktail waitress, for example—but I hope you didn’t have to do S&M parties. That sounds dangerous.”

“No, I never did. But the stories I heard made it sound more like play-acting than real, you know, sadism. But who really knows? That girl who called herself Cindy Sweet, only she spelled it S-I-N-D-E-E, she came back from one of those parties one time and talked about something going on in a back room that she wasn’t part of, something more secret.” She shook the thought out of her head. “So, it’s pretty crowded downtown, but how about we go out for ice cream anyway? I didn’t get anything for dessert.”

Calories or no, I’m a sucker for ice cream cones on a hot summer evening, so we were going to be braving the crowds downtown.

\* \* \*

The crowds and the ice cream kept us busy almost to ten, and I didn’t call Brad Winchester until Tuesday morning.

As the eastern gateway community for Rocky Mountain National Park, Estes Park is a popular destination during the summer. The weeks between Memorial Day and Labor Day, pretty much, see the town overflowing, and the transition to Fall throughout September and early October also attracts crowds. People come up from the Denver area metroplex for the day, especially on holiday weekends, and they come from all over the world to stay longer, either in accommodations in town, at the giant YMCA complex, or at one of the several camping areas in and around the national park and the nearby forests. Lines at the grocery and liquor stores are long, restaurants boom, and the downtown area labors under a nearly perpetual state of both traffic and pedestrian gridlock—and that’s not counting the occasional elk, or elk herd, wandering down the street. Throw those critters into the mix, and things become pretty ridiculous. Getting caught in an “elk jam” is just something we residents get used to.

But it’s actually refreshing, once in a while, to go downtown and mingle, as long as the intervals between those whiles were long enough. An advantage of living there is knowing where the one-way streets go and how to find parking. So Monday night we mingled with the tourists and ate ice cream.

Early Tuesday morning, I called the sheriff’s office and was told that he was already in Estes Park, at the temporary forensics lab that had been set up in a vacant building on West Moraine Avenue near Beaver Point. I got an address, but the person I talked to mentioned that the crime scene van was parked there, so I was sure to recognize it.

And I did. The hulk of the super-sized Winnebago camper van, converted to its new job and covered with official-looking graphics, took up several parking spots in the little lot out front. There was a hand-lettered sign taped to the building’s door with an access phone number, and my phone recognized it as the sheriff’s.

Although the outside of the building was spartan, that aluminum-siding, pre-fab look with no windows, on the inside it had been transformed into a modern crime-scene laboratory. One end was being used for the autopsy, and, inevitably, stray chemical odors floated about the entire space despite the humming ventilation fan. The other end had been laid out, using at least two dozen folding tables, as a reconstruction of the scene on the mountainside, down to a miniature X made out of popsicle sticks on one table, with bits and pieces of bone and cloth and other things, including the colored flags, scattered about the other various tables. The original, full-sized contraption was leaning against a wall. Brad Winchester was seated in the middle of it all in a complex of desks covered by computer monitors, and he looked up as I approached.

“Well, good morning, Mac. Hope you got rested up yesterday evening, because it’s just getting better and better on this end. As if there wasn’t enough other stuff to keep us busy.” He grinned through his big moustache, but I could see the stress behind the smile.

“It’s certainly looking better than yesterday, although I expect that’s not what you’re talking about. Any new developments?” I twitched my head in the direction of the autopsy setup.

“Yeah, well, some. Mostly, it’s what we expected, what I told you yesterday. But it turns out that there was bruising all over the remains, torso, arms, neck, even some on the head. George over there says that the vic got beat with something, probably a stick of some kind, after he was all taped up but before he died. Oops, excuse me for a minute.” Winchester’s phone had rung, so he picked it up.

Rather than eavesdrop on the sheriff, I walked over to talk with George Neering, who was absorbed in paperwork at another of the desks.

“George? Brad tells me you found some additional injuries on the victim.”

Neering, his long hair tied back in a ponytail, looked up from the paperwork and broke into a big smile. “Mac, dude! Far out! I didn’t know you were over this way, what’s happenin’, man?”

“Annette called me and asked if I could represent the CBI on this case. Sam and I moved over here last winter.” I worked my way around his desk to a side chair and turned it toward the end of the building with all the tables. I had noticed a large chest freezer in the autopsy end of the building, and I didn’t want to look at it or be reminded of its contents more than I was already.

“Oh, yeah, yeah, I remember she said something about you having moved. I dunno if I could manage it over here, though. It’s kinda crowded for my tastes, y’know? Anyway, yeah, we found hematomas, lots of them, all over him. No broken bones, though, the ones that were left, at least. Like he was used for a piñata or something, for quite a long time, probably. And of course he was bled out, but you’d expect that from the missing legs and so on. Oh, yeah, his vocal chords and his larynx were totally ruined, like he’d been screaming for a long time, probably. Gotta say, man, this is an awful way to die. Guy must of had some seriously negative karma going for him, or something, man.” An unreconstructed hippy, George was nevertheless the best in the business in the Rocky Mountain region.

“So far, we’re light on motive. He was arrested recently for an underage sex thing, and there’s a history of sex parties, but that doesn’t fit with how elaborate this whole setup was. Seems like someone, someone really evil, would have had to have been really, really pissed at him.”

“Yeah, I think you’re right, man. Like, why go to all these elaborate preparations and so on, just because your kid was involved with him? There must be something more. Maybe there’s layers. So, you know, maybe the beating was done by the kid’s dad and the rest was set up by someone with a more personal grudge. Someone looking for serious vengeance, like.” He shook his head, and his pony-tail waved about. “Anyway, it’s about a wrap for me, here. Annette called and said she’s got some car-crash bodies for me over on the other side, so I’ve gotta get going as soon as I finish with all this paper. Listen, man. You and Sam stop by and see me when you’re over my way sometime, right?”

I let George go back to the paperwork and returned to Brad Winchester’s desk. He was off the phone, staring into space thoughtfully.

“Well Mac, it looks like we’re going to have ‘help’.” He made quote marks in the air. “Turns out that Swent is a person of interest for the DEA in some kind of drugs thing that also includes something about federal bank fraud. So the Feds consider him their guy. That was a Special Agent Oglethorpe Reid, FBI, and he says he’s coming to take over. I guess I don’t know how to feel about that.”

I had to smile. “Relieved, maybe? If you’ve got a hint of that, go with it. I mean, he’ll take over anyway, no matter how you feel about it, so you might as well try to like it, right?”

He nodded. “Yep, that’s occurred to me. And something else did, too. I’m not sure exactly where we were yesterday relative to the national park boundary. The top part of Twin Sisters is in Rocky, and the boundary is a ways down the mountainside. So I think maybe this one belongs to the Park Service after all. And I guess they’d just call in the FBI. Let’s just hope that this Special Agent Oglethorpe Reid is more of a stand-up guy than he sounded like on the phone, at least if he wants anything from us.”

“Yeah, from me, too. I don’t know about CBI central, although I do know that Annette has little patience for FBI prima-donnas.” I scratched my head, something I tend to do when I’m thinking. “George agrees with my suspicion that this setup on the mountainside was just too elaborate to be related only to his recent arrest. I wonder what other skeletons there may be in Swent’s various closets?”

He looked up and nodded. “Right. There must be more somewhere. Well, I guess we’ll see just how good this Special Agent Reid is, won’t we?”

\* \* \*

My years working in the Washington intelligence establishment had resulted in a wealth of contacts in that shady world, and one of my recent jobs for them—the one in South Florida where I'd met Sam—had put me in touch with the highest levels of the administration. It's quite a thrill to get a phone call on which a melodic voice says "Please hold for the President of the United States," let me tell you. And because that job had been about as successful as it could have been, I had plenty of friends in high places.

Maybe it's time, I thought, to call in a favor or two. I found an empty desk and started making phone calls.

Those phone calls probably explained what happened when Special Agent Oglethorpe Reid showed up later that morning. Tall, thin, patrician-looking, he sneered down his nose at us and started in with quite the attitude, the one that FBI agents are notorious for, but then his pocket played a little tune. He pulled out his phone.

I could only guess who it was from the one side of the conversation that Brad Winchester and I heard.

"Yes? ... Who? The Director? Of course I'll take it. ... Hello, sir. ... Yes sir. ... You got a call from *who*? ... Of course, sir, I'll do my best. ... Yes sir ... Yes sir." As he carefully and deliberately put his phone away, I could tell he was doing some serious thinking.

"Sheriff, Mr. MacQuarrie, let's start over, shall we? I've just learned some things that suggest I ought to re-boot this whole conversation." He managed a weak smile.

I decided to take pity on the poor schmuck and rescue him. "That'll be fine, Agent Reid. Let me say, though, that both Sheriff Winchester and I know that this is appropriately your case, because it's pretty clear that the remains were found within the Rocky Mountain National Park boundary, on federal lands. That wasn't obvious at the time, but we've been able to pinpoint the site more closely today. Besides, I understand that Swent is a person of interest for the DEA or something."

I held up my hand to forestall Reid's response. "Now, Sheriff Winchester has certain responsibilities to the people of Larimer County, and I have responsibilities to the people of Colorado. So we need to be involved, at least with respect to information flow. But it's your case, and you get credit for whatever comes along. And you can be sure we'll both share any information we develop with you."

I didn't tell him that I had my fingers crossed during that last statement, so my little speech worked. By the time I was finished, he was falling all over himself with gratitude. Winchester made him copies of all the paperwork we could find, and, having just arrived in town, Reid hustled out to find himself a place to stay. He was going to need some luck, given how full the town was, but I wasn't wishing him any.

"So," I watched the door close behind Reid, wondering if it would actually hit him in the ass, like I'd been thinking about, "Maybe that'll calm him down a bit. And he probably doesn't know that I was lying about sharing all of our information."

"You and I think along the same lines, Mac." Winchester smiled. "Now, who the hell could that be?"

The desk phone turned out to have Annette on the other end, so Winchester put her on the speaker. We filled her in about George's autopsy findings and the FBI's involvement. And she had news for us.

"I'm not there on site, but I have some resources over this way, serious computer horsepower. One thing Hal's people have been doing at his institute is working on new search techniques, some project for the Google people. Something about how to implement searches on these super-fast computer chips

that Hal's institute has. Plus, of course, there's that secure access you set up while you were here, remember, Mac?"

I did. The supercomputer at Hal's institute, the Middle Park Advanced Research Center, had been able to simulate in exquisite detail a wildfire that killed two dozen people, opening the door to Annette's clearing that case.

"Anyway, I talked the Swent business over with Hal at dinner yesterday, and he set up a search across the entire network, including the classified part, last night. It came up with all sorts of interesting, new stuff, but I can't get it to you without a secure connection of some kind." I could tell she was asking a question without really asking it.

"Now that the weekend is over, maybe things will calm down a little for you. Couldn't you just drive it over? We can probably rustle up a safe." I looked at Winchester. "I expect that Brad here has the same clearance that your sheriff does, right? Is that good enough?"

Winchester was nodding. "Right, Annette, I've got the same credentials that Fran Schmidt does, you, too, probably. Unless something that I don't know about got the ante upped for you."

She was evasive, and I knew why: last summer, I had been the ante-upperer for her clearance. "Fran's clearance would be sufficient for this, I think. Maybe that's the easiest thing to do, just zip over your way. I'll fetch Hal and head right out. How about a late lunch?"

"On me, Annette." I told her where to find the temporary forensics lab, and she promised to show up in a couple of hours. I called Sam to let her know that Hal and Annette would be in town for lunch, and she promised to join us up the street at the Sun Deck Restaurant.

There being no Vaults R Us store in the little mountain town of Estes Park, Winchester and I had to work at finding an appropriate place to put whatever classified material Annette was bringing us. In the end, he called down to his main office in Fort Collins, and just about the time Hal and Annette pulled up in Annette's CBI vehicle, a couple of burley guys were unloading a weighty strongbox from a pickup truck for us.

"How's Trail Ridge Road today?" I knew Hal was an impatient driver and a worse passenger, so I couldn't resist yanking his chain. "Nice view of the backs of big lumbering camper vans?"

He grinned and nodded the sheriff's way. "Now I know why these guys in uniforms drive around with all those lights on the tops of their cars. Helps with traffic."

We figured out where to put and how to use the strongbox, stashed a thick folder Annette was carrying in it, and she, Hal, and I headed on foot up the street toward the Sun Deck, hoping for a nice view of Flattop Mountain and Hallett Peak.

Sam and I had become completely spoiled by the bewildering choices of restaurants when we were first together in southeast Florida, and then in the Keys we had to go almost cold turkey by comparison. That experience served us well in Winter Park, where there were a few good choices, but only a few. So when we moved to Estes Park, we had lost the habit of eating out—which was one of the reasons Sam had decided to tackle *Mastering the Art of French Cooking*. All this is a round-about way of saying that I'd never been to the Sun Deck before.

Connected to a nondescript motel, it sat diagonally across from the grocery store at Beaver Point. The crush of the weekend was over, and we were able to get a window table, with almost the view I had in mind. Flattop was screened by a foothill, but the peaks to the south of Hallett looked down at us.

Because it wasn't especially busy, the server was hovering about trying to be helpful. To make him go away, we ordered lunch—I got Sam one of her favorites, a mixed salad. And because they offered it,

I added the pecan smoked trout appetizer, as she had grown to like smoked fish when we lived in the Keys.

Just as the server walked off, we saw Sam headed our way down Marys Lake Road—she was hard to miss in that Mary-Kay-pink VW Beetle of hers, the one she had when I met her in Florida.

A gift from long-gone client, someone I didn't want to know about, it was her pride and joy, and, if I closed my eyes, I really couldn't fault it. Up in the Fraser Valley, she'd put studded winter tires on it, and it did just fine in all the the snow and ice. With the intercooled turbocharger, it had way more get-up-and-go than my Jeep at the 7500' or so where Estes Park sat, and the leather seats were lounge-chair comfortable.

But that leather was *pink*, along with the dashboard, the carpet, the convertible top, and the body all the way down to the bumpers. Even the wheels were pink. I was afraid to open the hood for fear that I'd find a pink intercooler in there.

Trouble was, I couldn't really insist that she get rid of it—first, it was all hers, and second, I had a car of my own that had followed me from Florida, an even more impractical car at that, a restored and tweaked up '66 Shelby Cobra, the racing version.

At least my Cobra was a traditional racing red. And was it ever fun up on the Peak-to-Peak Highway—in the summer. But the Cobra was useless in any kind of nasty weather, so in the winter I kept it in a rented storage unit and drove my Jeep.

The other thing I kept was my mouth shut, tight, about that pink VW, having learned that the alternative just wasn't worth the heartburn.

“Annette! Hal! What a great surprise to see you here!” Sam waltzed up to our table, bubbling over. “What brings you over the mountains?”

After the three of them traded hugs all around, Sam said, “Oh, I bet you're over here because of that business with the guy who got eaten by coyotes, or whatever, right? Trevor Swent. Mac told me about it, and I've been doing a lot of thinking. I may know something that could help.”

\* \* \*

### Three

“So, anyway, I was never close friends with Sindee Sweet, but, you know, we all worked for the same people so we talked with each other a lot.” Sam was packing away her smoked trout – salad combination with gusto while she talked about her time on Miami Beach. “She had these great stories about those parties that Trevor Swent hired her for—she got to dress up in a leather dominatrix outfit and swat people with a sort of whip, but it was made out of felt strips so it didn't hurt. She said it was an easy job, really, because she wasn't involved in any of the sex. She just bossed people around with her boobs hanging out.”

I could tell that Annette was trying to keep a straight face and doing her own dominatrix thing with kicks under the table to keep Hal from bursting into laughter.

“But Sindee also mentioned other stuff that she wasn't part of, stuff going on in private rooms. She wouldn't talk about it a lot, but from what I heard it sounded like the real deal, S&M-wise, where people get hurt. She used the words “nipples” and “needles” together one time, for example, and she overheard

people wondering about whether some of the girls were really of age. And she said that Swent would come and go from those private rooms throughout the party.”

“Where were these parties, Sam? Miami?” The “real deal” thing must have grabbed Annette’s interest.

“No, not just Miami. All over. Sindee told me she flew to San Diego once, Denver, and I think New Orleans. And she thought there were other parties she wasn’t part of.” Sam looked thoughtful. “Maybe the Denver parties could be a link to what happened here?”

Annette nodded. “Maybe indeed. It would sure be helpful if we could talk with Ms. Sweet, or whatever her name really is.”

“I never heard her real name. And Sun and Sand isn’t around to ask, thanks to Mac and his friends.” Sam patted my hand to let me know she wasn’t upset about this state of affairs.

“Sounds like a dead end, then.” Annette drummed her fingers on the table, annoyed, and the server took it as a signal and came over to inquire about dessert. We didn’t want any, and there were people waiting for tables, so we asked for the check.

But I had good news in the process. “Maybe not, Annette. When Sun and Sand was, um, closed down, I was there, and it happens that I liberated the contents of the office safe and stashed everything carefully away. Well, everything except for some cash, which turned up as an anonymous donation at a battered women’s shelter in Miami-Dade County, strangely enough. But there are all sorts of records. I’ve never really looked at them.”

“We need to examine those records, then. And you need to see what I brought over, those documents in that lock-box down the street.” Annette looked at me. “Mac? Where are these Sun and Sand records?”

They were at home, so Sam shuttled me back there to get them and then delivered me to the temporary forensics lab before heading across town for an appointment. Annette had sent Hal off fly-fishing for a while, and she was in the middle of a briefing by Sheriff Winchester when I got there.

“...and that’s about all we’ve got, Annette. The business about all the bruising adds another dimension to the whole thing, of course.”

“Is there any way to trace the origin of this tape?” Annette was holding up a piece of the duct tape that had been wrapped around Swent’s body, what was left of it.

“We’re doing that, but I doubt we’ll find out. If it’s a standard brand, like 3M, you can get it just about anywhere. I mean, there are at least four places here in Estes Park that sell it, for example. But lots of hardware and home improvement stores have those checkout scanners for inventory control, so we’re going to track down all recent purchases in the region. It’ll be a long list, I bet.”

“Well, sheriff, if you run across any large purchases, lots of rolls, by anyone who isn’t a contractor, be sure to let us know, OK?” She looked my way. “And Mac’s back, so let’s get that package out of the lock-box, shall we?”

It turned out to be a copy of Trevor Swent’s FBI file. That Annette was able to get her hands on it surprised me, and it showed me that I wasn’t the only one with connections in Washington.

“Aside from the fact that it’s an FBI file, meaning it’s not supposed to be public information, there are only a few truly classified documents in here. But we still have to treat it with care. We wouldn’t want our new friend Oglethorpe to know we have it, would we?” Annette was shuffling through the papers. “I looked through it all on the way over while Hal drove. It seems that the feds were paying attention to Swent for drugs and some strange bank thing. He had a big-time coke habit and was buying

in bulk, partly for his parties and partly for himself. As a result, he was into serious debt to one of the Mexican cartels.”

No wonder Hal was unconcerned about the trip over Trail Ridge Road, I thought. He’d been *driving* the car with the light bar on top.

But I decided to stick to business. “So Swent had some seriously bad people mad at him. That helps with the motive business.”

Annette nodded. “And there’s more. This information corroborates what Sam was telling us, and it goes a step farther. There are notes that tie a couple of deaths to those parties, one in Denver late last winter and one in San Diego a few years ago. We’ll want to follow up on the Denver one, at least, to see if whoever died might have left relatives bent on revenge, or something like that.”

Winchester chuckled. “Man, I’ve heard of people with baggage, but this guy takes the cake. I guess all that stuff he’s been doing up here in Estes, the philanthropy, that was meant as atonement or something. A smokescreen, maybe.”

“But, as they say on TV—wait, there’s even more. I haven’t even got to the classified stuff yet, Brad.” Annette was grinning. “That’s information that was passed over to the FBI through national security channels. Counterintelligence. I’m not sure of the protocols, but it looks as if it came from CIA or NSA. Isn’t that your old turf, Mac?”

“Mmm. I’m supposed to say ‘no comment’ right about now. It’s curious that the information would have ended up in an FBI file, though. Those folks don’t generally play well together.”

“It’s mostly related to Swent’s use of overseas bank accounts to squirrel away his fortune, so maybe the spooks didn’t think it was worth their effort. But there’s also one additional tidbit of interest. Swent worked at the Federal Reserve for about a year, some time back. And the file has something about deals he was making for Iraqi antiquities, back during Saddam’s downfall. Seems he was trading banking secrets for them, or something like that. But there’s only one reference to this, and it’s cryptic.”

Winchester had stopped being amused and was now shaking his head. “So we’ve got a victim who was a sex pervert involved in things, including maybe things with children, that maybe got people killed, and who was a drug addict in debt to a Mexican cartel, and who was a traitor. And I bet he didn’t use his turn signals, either. Christ!”

“Well, just remember, Brad, we’ve decided that he died on federal property, in the national park. So it’s the FBI’s problem now. You’re off the hook.” I couldn’t help but think, though, that my connections to the CBI and those no-comment agencies in Washington were going to keep me on it.

\* \* \*

Sam and I conspired to keep Hal and Annette in town for an early supper at our house, and they were treated to a dish based on one of Julia Child’s wonderful recipes, a poached salmon *en crouete* with a delicate sauce that involved raspberries. We ate on the patio, with hummingbirds zipping around trying to claim exclusive rights to our feeders and the late afternoon sunlight chasing the shadows on the crags up on the mountainside to the south. I could tell that the state of domestic bliss that Sam and I had slipped into pleased our guests.

Annette, Brad Winchester, and I hadn’t had time to get to the S&S records earlier, so I’d brought them home with me. That evening, I tackled them along with the on-line crime databases as well as a couple that required the use of my special encrypted communications protocols.

About the only thing of interest in the S&S records, unfortunately, was a phone list of their girls, what looked to be home numbers. Sam was in there, as was a Sindee Sweet. I made a mental note to try that number the next day.

But the other databases were more productive. It turned out that the person in Denver whom the FBI had already tied, loosely, to one of Swent's parties there was an Amanda Purdy, barely seventeen, a runaway who was supposed to be living at a half-way house for girls on the streets. Her parents lived about 55 miles south of Estes Park on the Peak-to-Peak Highway, in Gilpin County a few miles north of Black Hawk. The gruesome details in the autopsy report made it clear that, shortly before her death, Amanda had been involved in no-holds-barred S&M activities, including ones with needles, but the actual cause of death was an overdose of heroin. Her body had been found two days after, and on the opposite side of town from, Swent's party.

Swent's indebtedness to the Chávez clan of Ciudad Juárez was documented at several on-line locations, the most interesting one being at the Department of Homeland Security. In addition to drugs, a significant source of Chávez income was derived from smuggling people into the U.S., and DHS was watching them closely. The clan had a reputation for extreme violence at the drop of a hat, and several cases were detailed in which they had made examples of enemies or people who owed them something, or others whom they just didn't like very much. Juan Chávez ruled the clan with an iron fist, a bloody one at that, from a mansion in the countryside west of Juárez.

It was getting late by the time I got to the question of the Iraqi antiquities. That didn't seem to be a high-priority lead at first, but then I discovered, using a link to an organization I can't possibly name, that the people in Iraq whom Swent was dealing with were both vicious and patient. I had dealt with them myself on a couple of occasions on my assignments in the region, and they were not people you wanted to cross. The fact that this shadowy group was known to wait for a decade or more to extract its revenge for slights real or perceived was not lost on me, then or now. If Swent's payments in the form of banking secrets had turned out to be of no value, then he faced risks of a sort that would make the Mexican cartel seem like a bunch of nannies.

So we were swimming in possibilities, in terms of potential suspects with a motive to kill Swent.

It was after midnight when I'd finished pulling all of this together, so I waited to call Annette until Wednesday morning after finding out that Sindee Sweet's old phone number had been disconnected—she had disappeared.

But Annette still saw my information as progress.

"This gives us plenty of places to start, no? Lots of people and groups 'of interest,' as we say." She paused just long enough for me to agree.

"I'd definitely like to have us, probably the CBI western suburbs people, look into the Gilpin County connection, the Purdy family. Mac, have you got suggestions about what to do with the Iraq connection and with the cartel?" She was on a roll.

"Isn't Juárez just across the border from El Paso? And that's where I-25 starts, right? So those folks have a superhighway straight from home to Denver, with a convenient stop in Albuquerque. Also Santa Fe, Pueblo, and Colorado Springs." I wasn't quite sure what this all meant, though. "Maybe there's, like, a Chávez office or something in Denver that the Denver PD knows about, or maybe CBI central for that matter. And, about the Iraq connection, I'll have to dig a bit more into the Washington databases I have access to."

"Sounds like a plan, Mac. Let's stay in touch." She disconnected.

While I was on the phone with Annette, I'd heard Sam making noises in the kitchen, and I found her sitting with a cup of tea, staring out the dining room window at the mountain to the south—Twin Sisters, as a matter of fact. Her contemplation, unusual for her on bright and beautiful summer mornings such as that one, was obvious. I walked up behind her and commenced to rub her shoulders.

“Mmm. That feels good. Thanks—I need it.”

“You look like you're far away somewhere.”

“Oh, just thinking about the past. But we sure had a pleasant evening with Hal and Annette, didn't we?” She perked up a bit.

“You knocked their socks off with that salmon. Some of those recipes are just wonderful.”

Her giggle told me she was perking up more. “Is that supposed to imply that some aren't? How about calf's liver for dinner? Or those sweetbreads I told you about?”

“Well, you know, with this big case and all I may have to work late, way past dinnertime. But go ahead and make 'em for yourself, if you want.” I worked my thumbs under her shoulder blades and smoothed the muscles downward. “What's bothering you about the past, anyway?”

She took a deep breath and let it out in a huge sigh. “It never seems to go away. Like yesterday, at lunch.”

I made sure to let out a sigh as well, and held the pause for a minute. “Hal and Annette know about your past, of course, but they're not concerned about it. I don't think anyone else knows, not around here, at least. And you're so successful with the painting and sketches that you're creating a new persona entirely.”

“I just worry that it'll embarrass you.”

“Me? Not a chance. I've got so many skeletons in my closet that nothing can embarrass me.” I kissed her ear.

\* \* \*

One lesson I'd learned from my years working with the various three-letter agencies in Washington was about the Law of Unintended Consequences.

Trouble is, I have a short memory.

But it came back to me when I got the call from Washington later that morning. It seemed that my phone calls to pull in favors and have rank pulled on Oglethorpe Reid was going to haunt me.

“Mac? Henry here.”

I recognized the voice of my erstwhile contact in the White House, someone very highly placed who had always used a pseudonym with me. My normal agency handler, Bill Petersen, had been killed on that South Florida post-retirement case I'd met Sam on. And then I'd had a disastrous stint with a replacement, after which Henry got the permanent assignment.

“How are things out in the mountains?”

“Fine, until yesterday. I seem to have got myself tangled up in a pretty strange murder case out here.”

“I heard, and that's why I'm calling. See, some folks at the very top of the food chain here have concerns.”

My personal radar began setting off alarms. “Uh, concerns about me, or what?”

“No, no, not about you. In fact, your involvement has these people quite relieved. You’re golden. But it seems there’s a lot of sensitivity here about this Trevor Swent business. Something I don’t quite understand about family connections, something in two parts. One, they want everything to be as hush-hush as possible. Two, they want to make sure that FBI doesn’t pull any stunts.” Henry paused long enough for me to understand how serious he was. “We’d like to know if you think that Special Agent Oglethorpe Reid is withholding information from you and the other local investigators, now or any time in the future.”

I knew better than to withhold information myself. “I presume you know that I’m deputized by the Colorado Bureau of Investigation on this matter?”

“That’s why we want to know about the information flow. The case, overall, has federal implications, but we know that it’s really a Colorado matter. That sleight-of-hand you and the sheriff are trying to pull about the murder’s having happened on federal lands isn’t persuasive to everyone. And we want it handled as locally as possible to keep it as low profile as possible. ‘We’, of course, are me and the people up the food chain above me.”

“Is Reid going to be called off?”

“Can’t do that. It would raise questions and the overall profile of the thing. Like I said, hush-hush.”

This time it was my turn to pause.

“Hmm. Well, I certainly want to cooperate. But I have to say, for me to do this right, meaning hush-hush and all, I need to know the precise reason that your higher-ups are so worried. Without knowing that, I could easily put my foot in it accidentally. Right?”

He paused again. “Yeah, I understand. I’ll have to get back to you.” And he disconnected.

Sam was in the middle of her morning Yoga routine, so I went for a walk to think about it all. We live in a subdivision on one side of a little valley, and the street crosses the valley into the subdivision on the other side, making a nice walking loop that includes quite a bit of elevation change. I figured I could think and work off some fancy-French-food calories, if I walked fast enough, at the same time.

I knew from previous experience that Henry trusted me, and I trusted him. That meant that there was indeed significant concern about this Swent thing in the White House. And it also meant that Henry would find out for me what the concern was all about. His comment about the “top of the food chain” made it quite interesting. I knew of only two people higher on the food chain than Henry, the guys who lived in that big house at 1600 Pennsylvania Avenue and the other one at 1 Observatory Circle.

And although Henry was straight on a business level, that didn’t necessarily mean that I was going to be getting all of the best information as soon as it was available. He had his own agenda, and I was, and always had been, something of a pawn in the game. Our mutual trust went only so far.

But I was already a move ahead of him. Naturally it would be to the advantage of the concerned individuals in the White House for this not to be a federal case. But, whether they were persuaded or not, it sure looked as if it was, because the GPS position called in by that group of climbers was definitely within the national park boundary. Of course, the exact coordinates were on the edge of that clearing up there on the side of Twin Sisters Mountain, and the park boundary did run through that clearing. So where were the climbers? At the highest point of the clearing? That might make a local case. At its mid-point? Maybe it really would be a federal case. We were going to have to find the caller and ask—but he’d called in using a throw-away cell phone that wasn’t being answered.

That, in itself, was interesting, because it opened the possibility that the group of climbers was involved with the whole setup.

In any case, manipulating facts to serve the interests of high-placed federal officials wasn't going to be in anyone's best interests, even if they wished it so.

From my own perspective, and Sheriff Winchester's, too, it seemed like a good idea for the FBI to continue to think of this as a federal case. Then they'd do all of the hard work involved, and we could sit back and play peanut gallery.

I'd taken my cell phone on my walk, in case Sam should miss the note I left and call me. So when it buzzed, as I was slogging up a hill and breathing hard, I thought it was her. But it turned out to be Henry again.

"Mac? I think I've got what you need. It seems that a not-quite-proximate relative of a very highly placed federal official—an elected federal official, mind you, but that's all I can say—was involved in Trevor Swent's, um, flamboyant social circles and has wound up institutionalized at an unfortunately young age as a result. A female relative."

Between breaths, I asked "What's 'not-quite-proximate' mean? First cousin? Or what? And is it a relative by marriage or by blood?"

"What and marriage. Gotta go. You know how to reach me, right?" And he disconnected before I could answer.

By the time I had huffed and puffed my way to the top of the hill, I'd decided on a worst case: a niece of the President's wife had been photographed in a compromising situation, or maybe just so identified, at one of Swent's S&M parties and was now in prison or, possibly worse, a psychiatric hospital. My, my. Wouldn't *that* provide fodder for the tabloids and the internet bottom-feeders!

No one, not even a politician's wife, should have to go through that, I decided.

But as much as it might be patriotic to save the First Lady the embarrassment of having her family's tragedies aired in public, the Swent killing was just not something we could sweep under the rug. Whoever the psychopath was who set that up, we needed to get him. Or her, or them.

And I needed to get to work on it, which I vowed to do as soon as I walked back up the other side of the valley to home.

As I was breathing hard on that chore, my phone buzzed again. Why, I wondered, does this happen when I'm breathing too hard to talk?

Annette's voice was excited. "Mac? Maybe this will be easier than we thought. I called some folks I know in Denver and found out about Amanda Purdy's family. It seems her father is pretty well known in Gilpin County for his outspoken politics, which are well to the right of Rush Limbaugh's, and his religious views, which are extremely fundamentalist. He works at all sorts of odd jobs for cash, construction mostly, and he guides big-game hunts in the fall. But the most interesting thing, and this is what's possibly relevant, is that he keeps a pack of wolf hybrids—breeders call them wolfdogs—Purdy has a license and everything. They're all half wild, I'm told. It sounds like simply going onto his property is pretty dangerous because of them."

\* \* \*

Annette had been busy, doing things I guess I should have been doing. Except, without her contacts, I really didn't have anywhere to start the way she did. I alternated fretting and rationalizing while she filled me in.

I'd reached home, and, because of the flat section on the final stretch, caught my breath just as Annette wound down.

"Wolf hybrids? Hybridized with what, I wonder."

She snickered. "Probably anything they want. But, given the nature of Swent's remains, it sure sounds suspicious."

"It does. And it just occurred to me that maybe executing a search warrant at Purdy's place would be a good job for the FBI. Seems like Special Agent Reid would be the perfect person to check into things up there." This didn't square in my mind with my White House contact Henry's information, but that wasn't my main concern just then.

This time her laugh was just a bit mean. "Excellent idea! And, you know, maybe it would be a good idea for them to collect some wolfdog scat, because there might be relevant DNA, like, Swent's, no?"

That certainly brought me up short—literally. I stopped walking and just stood there, at that point in the middle of my driveway. The technical issues associated with her suggestion that some of Swent's DNA might have survived the wolfdogs' digestive processes, combined with the vision of Oglethorpe Reid doing pooper-scooper duty, were just about all my comfortably retired mind could handle.

I decided to tackle the technical issues first. "Uh, DNA in wolfdog crap? Wouldn't it be the wolfdogs' DNA that you find? I remember reading about someone trying to identify condominium dog owners who didn't pick up after their pets using that kind of DNA testing. But that was to identify the, uh, origin of the dog shit. Wouldn't DNA that's consumed be digested into oblivion? Oh! I just thought of something—that wolfdog crap should also be tested for duct tape shreds, seems like."

"Duct tape! Right! But you may be onto something about the DNA, Mac. I'll check into it. Meanwhile, let's get Special Agent Reid busy with a shovel and a bunch of plastic bags, shall we? Maybe I could even go so far as to recommend he wear plastic gloves."

Not for the first time, I decided I was glad that Annette and I were on the same side.

"Let's hope we can make that happen." I thought about how to relate my conversations with Henry to her. "Oh, and I need to tell you that there seems to be some pressure from high up in Washington to diminish the FBI role in all this."

I gave her a very sanitized version of my call from Washington.

"Really? They think that they can slough all this off on us? Let the hicks from the sticks take the fall for whatever strange things are going on? Really?" Annette was so mad she was amused, it seemed.

"He said that there's no way to call off the FBI completely without raising a lot of red flags, and they sure don't want to do that. But they do expect us to assume jurisdiction. It sounded as if they'd actually figure out how to move the Park boundary if necessary, retroactively."

"Do we have any way of knowing precisely where the murder took place; I mean, exactly where you found the body and that contraption you described? Did anyone get an exact fix?" She was thinking just what I had been thinking.

"I didn't, but let me find out if the sheriff's people did."

Down on Moraine Avenue, at Sheriff Winchester's impromptu crime lab, things were different—the lab was now an empty room, for the most part. The Sheriff was nowhere to be seen; instead, Deputy Aaron Smithy seemed to be in charge of the operation. He looked up from a computer screen as I walked across the open space, my footsteps making little echoes.

“Mr. MacQuarrie! Good to see you sir. I hope you're not looking for any of the physical evidence we had here.”

I looked around, puzzled. “No, no. But what happened, anyway?”

“Well, when the FBI thinks it owns a case, well, I guess they own it. Everything got packaged up and put on a truck headed for Denver.”

“Hmm. What about that safe we had here? Did that go to Denver, too?”

“Safe? Oh, yeah, the one we brought up yesterday. No, the sheriff took that with him last night. He said he didn't feel that it was secure enough just sitting here, even though it weighs a couple hundred pounds. All that's left is this computer, which I managed to keep out of their hands. I told them it had no evidence on it, which is true, and that it's our main communications tool up here, which is also true. They, I mean, the FBI guys, they looked suspicious but let it stay. I was just composing a report about this all.”

At least, I thought, we still have Swent's file and the feds don't know it.

“So, I don't suppose you'd happen to know how to contact Special Agent Reid?” I'd lost the card he'd given me.

“He thought there might be questions, so he gave me a card.” And Deputy Smithy pulled it from his shirt pocket. “They left, oh, about 45 minutes ago, so maybe they're out of the mountains and can get a cell signal by now.”

He was right.

“FBI, Special Agent Reid.”

“Reid, I thought we had an agreement about cooperation on this case. This is Mac MacQuarrie, CBI.”

“Mr. MacQuarrie. Right, I thought I'd hear from you. And we do have an agreement about cooperation, don't get your shorts all twisted. However, we also had overriding concerns about the security at that makeshift crime lab that the Larimer sheriff set up. The last thing any of us needs is for the evidence to be compromised somehow. We have a fully secure facility, and, if I may say, a much more advanced crime lab in Denver. With all due respect to Sheriff Winchester. The evidence will be safe there, and you and the sheriff will have full access.”

I couldn't help but recognize the sense of this. The building I was standing in wasn't very secure at all, and it was in a busy tourist area, with all sorts of people coming and going all the time.

Reid continued. “And I just got off a call with one of your CBI colleagues, an Annette Trieri. She understood our concerns and agrees with the transfer. She said you'd be able to smooth things over with the sheriff's office.”

Thanks so much, Annette, I thought. But I kept that to myself.

“Ah,” I said. “She must have called you about the Purdy wolfdog pack, then.”

“That's correct. ‘Wolfdog.’ I've never heard that description before. Anyway, we've started a search warrant process on the basis of her information, some of which we already knew. Purdy, in fact, is a person of interest for us for other reasons. We're hoping to execute the warrant this afternoon.”

“Well, I don’t want to intrude, but do you suppose it would be useful to have a CBI observer? It surely would be a sign of our cooperation on this whole thing, wouldn’t it?”

The pause went on long enough that I decided he was taking the request seriously.

“I guess that’s a good idea, although I’m a little concerned about safety issues. Ms. Trieri suggested that there’s some danger about entering that property, what with those wolf hybrids—er, wolfdogs—wandering around and all.”

“You must have already thought of a strategy to deal with that.” A little flattery now and then can be extremely helpful in greasing wheels, I knew.

“I really haven’t had time to figure it all out, but it’s on my mind, let me tell you. Any suggestions?”

“I don’t know. Maybe you could put a bunch of Denver animal control officers on contract and get them to do the control part while you do the search part. What would they use? Nets? Drugs?”

Reid laughed. “Both, I hope. To tell the truth, I’m actually more of a cat person.”

\* \* \*

The FBI can be ham-handed and seriously secretive, but they certainly can get things done when they’re motivated. I had to wonder what Henry and his White House higher-ups were going to think. At least, I thought, the lead about Purdy’s possible involvement kept the spotlight on Colorado matters. At the same time, Amanda Purdy’s name was sure to come up, and that could lead to media interest in other Swent victims. I needed to know more about the specifics of the White House connection. Even if my assumptions were correct, they needed verifying.

I thought about this and other things—how beautiful the Colorado mountains were, how to get Sam to quit worrying about her past, whether Purdy was really as strong a suspect as Annette seemed to believe—as I drove south along the Peak-to-Peak Highway toward Black Hawk. I was to meet the FBI team at one of the casino parking lots there, by the main stoplight, and we were all going to caravan to Purdy’s place. Having never been to Black Hawk, I wondered if “the main stoplight” was going to be a useful landmark, but I wasn’t going to let that spoil the drive.

It was a beautiful, blue-sky summer day without the threat of the usual afternoon thunderstorms, and I had the top off the Jeep. Given the drive, I’d been tempted to take the Cobra, but I knew there could be some challenging, unpaved roads to get to Purdy’s. So I just cruised and listened to the Wrangler’s off-road tires sing on the pavement.

The “main stoplight” location turned out to be obvious, particularly given the crowd of suspicious-looking characters hanging out in the parking lot there. Several individuals wore padded jumpsuits, which I took to mean that Reid had succeeded in recruiting some animal control specialists. Some of the others wore camouflage fatigues. All-in-all, there were nearly two dozen people standing around trying unsuccessfully to look nondescript. I pulled in and parked, and because none of them knew me, I was instantly the object of a group stare-down.

“Is Special Agent Reid here? I’m the Colorado Bureau of Investigation observer on this little shindig, Mac MacQuarrie.” I held my shield—which I’d finally remembered the location of—up for all to see. That broke the ice a bit.

One of the guys wearing a jacket with “FBI” stenciled on it sidled over. “Not yet, Mr. MacQuarrie. We’re expecting him momentarily. Do you know what this is about? We have some rather odd orders.”

“Well, I know what it’s partly about, although Agent Reid might have a broader agenda. We’re going to execute a search warrant to obtain possible evidence related to the Trevor Swent murder a

couple of days ago. He was partially eaten, and this guy Purdy has a motive related to his daughter—and he also has a pack of wolf hybrids, what are called ‘wolfdogs’. We, or you, the FBI team, are going to check for evidence in the wolfdog crap up there, duct tape and DNA.”

“Oh.” He looked crestfallen and heaved a mighty sigh. “Well, that explains the supplies they gave me, a package of tongue depressors and a bunch of plastic bags. Some of us are going to be busy, I guess.”

I had figured that Reid would delegate the pooper-scooper duty. “I’m puzzled, though. I guess I figured the digestive process would destroy Swent’s DNA.”

“Well, some, yes. But not all. A number of studies document that. There should be enough to tell if there’s human DNA there and, if so, whether it’s Swent’s. And if there’s really duct tape, well, that’ll be obvious.” He grinned. “We just need a shitload of the stuff, is all. Uh, pun intended.”

“I guess that’s why they pay you FBI guys the big bucks.” I noticed a car headed up the hill toward the spotlight. “Maybe that’s Agent Reid.”

“Whoever it is, he’s got a tail.” And the agent was right—following the first car I’d noticed was a police cruiser, lights flashing angrily.

It slid into the parking lot close after the first car, and its occupant, short and rather round, wearing a tan uniform with a western hat, scurried to the door of the car it was following. From that car emerged Special Agent Oglethorpe Reid, with his FBI shield prominently displayed. The uniform stepped back and removed his hand from his still-holstered sidearm. The rest of us clustered around to watch the fun.

“I don’t know who the hell you are, fella, but in my county you either stay within the speed limit or you use emergency lights!” The “my county,” along with the uniform, suggested to me that this might be the Gilpin County Sheriff.

I decided some diplomacy would be in order, so I stepped toward the two. “Sheriff? Excuse me. I’m Mac MacQuarrie, with the Colorado Bureau of Investigation. And I’m glad to see you here. As it says on his ID there, this is Special Agent Oglethorpe Reid, FBI. And the rest of these folks are the team he’s assembled to execute a search warrant up the road a piece. I’m here as a CBI observer, and your presence as a county law enforcement observer would be, I think, most welcome. Isn’t that right, Agent Reid?”

Reid looked sharply at me, but finally nodded. Although the uniform was dripping suspicion, I could see that he relaxed a bit.

And he was full of questions, short ones. “FBI? CBI? Search warrant? Who for?”

“I’ll explain on the way, if you’ll ride with me, Sheriff. And I think Special Agent Reid will provide some insight about now. Looks like a briefing coming up.” I herded the uniform toward the group that was clustering around Reid.

Reid’s voice amped up a notch. “OK, men. You’ve probably heard only part of the story on this. We’re here to execute a search warrant on the property of an Elias Purdy, rural Gilpin County. It’s up the road a few miles and then off on a county road a couple of additional unpaved miles. I’m told the property of interest is securely fenced, probably with a locked gate, and inhabited by a family of two plus at least a half-dozen semi-wild wolf hybrids, I understand they’re called ‘wolfdogs’. The animals will be the responsibility of the animal control people who have graciously agreed to help us.”

He waved at the guys in the padded suits. “I hope those suits won’t be needed, gentlemen, but I’m glad to see you’ve got the protection, just in case.”

He continued to the crowd. “Now, when the wolfdogs are subdued our team will split in two. Half of you have orders to take samples of the wolfdog feces, for laboratory analysis. The rest of us will search the house for other pertinent evidence. That sub-team will also maintain contact with whatever residents we find to keep them both safe and out of the way of the search. Such restraint as needed is authorized.

“I have the telephone number for the house, and when we’re all assembled on location, I’ll call and announce our intentions. My hope is that the wolfdogs will be in a separate enclosure instead of just wandering the property. I...uh, yes?”

Someone in the crowd had raised a hand. “Won’t the phone call alert them to destroy evidence and let these wolfdogs loose?”

“There’s no way they can destroy all of the evidence, because there’s just too much of it. Wolfdog feces, I mean. Other evidence, well, we’ll take our chances. And if he lets the wolfdogs loose after the call, that’ll tell us where things stand, won’t it? We’re planning to subdue what wolfdogs we need to subdue using nets and drugs, with lethal force only as a last resort. Any other questions?” Reid looked around and saw none. “Well, then, let’s saddle up. I’ve got a GPS navigation system with the location programmed in, so I’ll take the lead.”

The navigation system must have been old and in need of map updates or something, though.

The Gilpin County Sheriff, a rather nice fellow who introduced himself to me as Harve Little, and I followed the caravan of official-looking dark sedans up the hill north on the Peak-to-Peak and then west on a county road.

“What the hell?” Sheriff Little looked quite confused. “This isn’t the way to Purdy’s place. This road dead-ends about five miles in, and only the first couple of miles are graded. The rest is going to give those cars ahead of us more than they can handle.”

I had to laugh. “That’s why it’s so nice to be ‘observers’ on this little caper, Sheriff. We can just sit back and enjoy the scenery and the confusion.”

There must have been a rain shower that morning or maybe overnight, so what would have been a dusty ride was really quite pleasant. And sure enough, after about two miles of graded gravel, the road went all to hell, turning into a low-grade jeep trail. I suppose that most all-wheel-drive SUV-type vehicles, and some others like Subaru Outbacks, could have handled it, but the various official FBI sedans, loaded down with a full complement of adults and equipment, were just out of their depth. Reid gamely led the caravan about another mile in before the entire group came to a halt, brake lights blinking and then turning solid red all along the line ahead of us. We didn’t have a radio, but the others must have, because after about five minutes, the backup lights on the car just ahead of me flashed on.

Sheriff Little was laughing quietly and shaking his head. “Don’t know if you noticed, Mac, but there’s no way for these fools to turn around ’til a mile or so back there, where the road grader turned around.”

I swiveled to look at what was behind me. “Yeah. But I bet I can.”

The two-door Jeep Wrangler I’d bought when Sam and I had settled in Colorado was the Rubicon version, the baddest off-road capability that just about any car company offered. And the guy who’d owned it before me had added all sorts of bells and whistles. It was far, far more vehicle, in terms of off-roading, than I’d ever need, I knew, but that gave me the confidence to deal with the situation at the back of that caravan.

I fiddled with levers and switches until the Jeep was in low-range with all the axles locked, and I backed down that excuse for a road until there was a space between the trees to my left. Then I backed

up the little bluff that was pretending to be the shoulder and into that space, and set the parking brake so that the sheriff and I could watch the fun.

The various sedans bounced and bumped bottom and scraped things as they slowly backed by us down the hill. I'm sure the drivers, to a man, were all wondering why it was so much more difficult going backward down than it had been going forward on the way up—and up had clearly been hard enough for most of them.

When the last car in line finally arrived at our vantage point, it stopped, pulled forward a few feet to get out of my way and stopped again, and Agent Reid got out. He kicked the left rear tire, which was flat, and made his way to us, lugging a bulky day pack.

“Gentlemen, I’ve about used up all of my x-rated vocabulary on this little cluster-fuck, and I feel like a goddamned idiot. Do you suppose I could ride with you?”

\* \* \*

The Sheriff and I did admirable jobs of keeping our faces straight and our mouths shut as we three, with Reid jammed into the Wrangler’s tiny back seat, slowly followed the backward caravan down the hill. Of the dozen cars that had made the climb up, only nine made it down—in addition to Reid’s flat-tire casualty, there was a ripped-out oil pan with an associated blown engine, and a broken suspension. Except for Reid’s, each of those cars had to be pushed by hand off to the side as far as possible so that the others could squeeze by. There were also four instances of cars’ becoming stuck in deceptively deep mud puddles, and they had to be pushed out by hand as well. All-in-all, it was a good day to be an observer, especially an observer sitting in a Wrangler Rubicon.

When everyone was finally assembled, tired, muddy, and not a little cranky, at the upper end of the graded gravel road and pointed in the right direction, Agent Reid held another briefing, this one with the benefit of some advice from Sheriff Little.

“Well, men, my apologies. Thanks to the miracle of GPS navigation technology, combined with a mapping function that doesn’t know its ass from a hole in the ground, we’re not on the correct road. As you’ve no doubt guessed. Sheriff Little,” Reid nodded toward the sheriff and me, standing off to the side, “kindly set me straight, and he’ll be leading us to where we need to be. We’re quite a bit behind schedule, but the sheriff tells me it’s not far, and there’s plenty of daylight left to get our search finished.”

With Reid and Sheriff Little in my Jeep, I was at the head of the parade down the graded county road, and glad to be in front. The additional couple of hours in the bright sun had dried out the road surface, and I was raising quite the dust plume. The surviving sedans, I was sure, all had their windows up and their air conditioners set to recirculate.

When I reached the Peak-to-Peak, Sheriff Little had me turn left and then, after about a half mile, right onto another county road, oiled gravel this time. He turned toward Reid in the back seat.

“Same county road number, just a different part of it. I expect that your GPS system didn’t really know how the house numbering goes, so it sent you west instead of east.”

A sigh of despair was the only response.

After about three miles of winding and up and down through little valleys, the Sheriff had me turn right again, this time onto graded gravel.

“Now, Purdy’s place is just over that rise up there, and we might think about stopping soon and sending someone up there to scout things out. Before we go spilling over the top, I mean. Last time I

was up here, they saw me coming down the other side of this hill and were waiting for me.” Harve Little clearly knew the terrain.

Just like in those old horse-soldier movies, I raised my hand, palm flat, as I slowed to a stop just before the crest of the little hill, and the caravan eased to the sides of the road and came to a halt behind me. Reid hopped out, walked back down the line of cars, and came back accompanied by one of the guys in camouflage.

“...I’ve got some binoculars, and you can probably get a good view from that little clump of trees up there.” Reid was pointing off to the right of the hill’s crest.

While Reid was digging through his pack, the other guy, who reminded me of the Army Rangers I’ve known, introduced himself. “Sheriff, I’m Rick Jepperson, FBI. I wonder if you can tell me what I should expect to see over there?”

The sheriff looked impressed—I imagine he thought Reid’s headstrong behavior was typical of all federal agents. “Well, let’s see. Last time I was up here, there was a fenced compound about two hundred yards down the hill, with several buildings including a house facing this way. It’s cleared enough that you can see the front windows from the top of the rise. And there was a big pickup and a battered SUV of some kind, maybe an old Ford Explorer, in the yard in front of the house. His and hers, I suppose.”

As Jepperson made his way up the little hill toward the trees, I asked Reid, “Agent Reid, I don’t suppose you have an extra radio in that goodie bag of yours? It would be useful if the sheriff and I knew what was going on.”

As Reid was digging in his pack again, the sheriff nudged me and said quietly, “Good thinking. I want to hear this.”

Reid kept digging and finally came up with a radio, fiddled with it and handed it to us just in time for us to hear “Jepperson here. It looks just like the Sheriff described it. Fenced compound with several buildings, a house in a clearing facing this way. No vehicles at all, though. Whoa! What’s that? They’ve got some damned big dogs walking around in there, inside that fence.”

Reid keyed a switch on his radio. “Reid here. Those must be the wolfdogs. Are they fenced off separately from the main compound? And how many are there?”

“I see two—no, wait, there’s two more lying down. So I see four. And they’re just in the yard there, not in a separate cage or anything.”

Sheriff Little clarified matters. “Yeah, they’ve got the run of the place. Like I said, when I was last here they saw me coming, Purdy and wolfdogs both. But the time I got to that gate down there, Elias was on the porch with a shotgun and those wolfdogs were at the gate, growling and looking hungry. But if there’s no cars, nobody’s home, probably, at least nobody human.”

Reid scratched his head and keyed his radio again. “OK, Rick, come on back, quietly, though. And all hands, listen up. All but the last car, no, make it two cars, will drive down to the compound gate and get turned around. The last two cars, I want a road block just on the other side of the hill here, so that if anyone shows up, they can be detained here. I don’t know how you animal control folks feel, but if those wolfdogs line up at the gate like the sheriff just described to me, maybe the easiest and safest thing to do is to tranquilize them right there. Comments?”

“Ah, Agent Reid?” The voice was tentative. “It would be better procedure to observe their behavior before we make any final decision about that. Our tranquilizers are pretty safe for the animals, but not as safe as not using them at all.”

Reid frowned. “Yeah, well, I’m more concerned about our safety. Let’s roll.”

After all the fooling around with the detour and the tension of scouting the wolfdogs and all, the rest was pretty anti-climactic. The caravan rolled over the hill, and, being first, we could see four large animals in the yard setting up a ruckus—and they were quickly joined by two more. The six of them lined up at the gate and commenced to act about as fierce as I’ve seen any canid act. That persuaded the animal control personnel of the need for tranquilizers, and by the time that one of Reid’s team members had the gate unlocked, using the expedient of a lock-pick set, the six wolfdogs were snoozing peacefully.

Then the sheriff and I watched and tried to stay alert while the FBI teams searched the house and wandered around the yard doing their laboratory-grade pooper-scooper duty—scoop, bag, label, over and over. It occurred to me somewhere in there that I’d never seen pay grade 13 or 14 federal civil servants so preoccupied with shit before. The leader of the team kept shouting instructions about getting both fresh as well as days-old samples, and about making sure there was no cross contamination.

After about an hour and half, they were finished. Everyone left the compound, the animal control crew administered some kind of antidote and scurried out the gate, and, after fiddling with the padlock again, an FBI guy locked things up.

Reid looked satisfied. “Maybe, if we’re lucky, the Purdys will be grateful that we didn’t toss the place. And I’d say we finally deserve some luck.”

Harve Little could only shake his head in disbelief.

\* \* \*

## Five

The rain began on Thursday morning.

Now, summertime means thunderstorms over the Colorado Front Range—it took me only a few weeks to figure that out. Nearly every day, fluffy little cumulus clouds build over the high peaks of the Continental Divide, grow into thunderheads, start growling at whoever cares to listen, and roll out over the plains by late afternoon after ruining various picnics and other outdoor activities up in the foothills.

Unless you’re needing the excitement of possible lightning strikes, you start early in the morning to climb those high peaks.

But this rain was different. The low cloud deck was the first hint of that, and the winds from the east pushing the moisture in those clouds up the slopes of the foothills was the second. And it was drizzle, steady and fairly hard as drizzle goes, rather than the brief, fast-moving showers from the thunderstorms. Still, rain in this normally parched part of the mountains is always welcome, especially in the summer, as it helps keep the landscape green and the threat of wildfires down.

I checked the Weather Service radar loop and found that a large area of precipitation was covering most of the Front Range between Denver and Wyoming and not moving much of anywhere—it was looking like it was going to rain all day. What I didn’t know at the time was that it would also rain for the next four days, dumping well over a foot of water on the east side of the Front Range and causing one of the worst flooding events in history. All I knew at that point was that it would be soggy going if I had to work outside. And it was a good thing that the FBI guys had managed to get those wolfdog crap samples yesterday, I thought, chuckling at the memory.

By the time I'd taken Harve Little back to his car, listened to a long debriefing speech by Special Agent Ogelthorpe Reid, and driven the hour plus back to Estes Park, it was getting late, too late for east coast telephone contacts. Henry, I knew, was available to me any time, but there was no real reason to disturb his evening. But computers never sleep, so I was able to spend my evening working on some other possibilities for the Swent killing. Elias Purdy and his wolfdogs seemed to be too good to be true.

Because my time with the three-letter agencies had involved increasingly sensitive security clearances and computer access privileges, I had, at one point, been able to log in to virtually any federal computer anywhere. My official retirement had put that on hold, but it was all restored when I started working with Henry. It was the DEA computers that I was interested in.

Thursday morning, I called Annette to fill her in. After we shared yet another set of jokes about FBI agents and pooper-scooper duty, she changed the subject.

"Is it raining over there?" From the west side of the Front Range, it was often hard to tell how the east-side weather was behaving.

"Yeah, drizzle. What the locals call 'upslop'."

"Hmm. Well, listen. Hal's guys at MPARC have been doing regional-scale weather simulations as part of their tests of the new computer equipment they keep getting. He told me last night that all of their weather models agree that the rain you're seeing now is going to last for several days. There's a good chance for some serious flooding over there. The official Weather Service forecast is saying that, too, but Hal's simulations paint a much worse picture. You and Sam need to be prepared, whatever that means." She sounded worried.

"You mean that we left Florida to get away from hurricanes and now we've got floods to contend with? What's next? Plagues of locusts and frogs?"

"More likely forest fires, but not this time. Look up 'Big Thompson Flood' on the internet. There was a stalled rainstorm in 1976 that flooded the canyon and killed, oh, something like 120 people. Hal says this looks like a more wide-spread event, covering the whole northern Front Range. Who knows what could happen?"

"Is it raining over your way?"

"Some, but the computers don't have us getting nearly as much." She paused and took a breath. "Anyway, I thought I should tell you. So what else is going on with this Swent business? I've been thinking about Purdy and his wolfdogs, and I'm having trouble believing that he could have set up that crucifixion."

"On top of that, Annette, there's the issue of the wolfdogs themselves. I saw them yesterday, and they're big. Tall, as dogs go. It's occurred to me that if they had eaten Swent, more of him would have been eaten. I think whatever was out there was smaller." Now it was my turn to pause and take a breath. "We'll see what comes back from the FBI lab, but in the meantime I've been doing research in a different direction. I spent several hours last night and this morning poking around in the DEA's computer system. They have quite a bit of interesting information about the Chávez cartel, the group that Swent owed big bucks to. And some stuff about Swent himself, as well. I'll send it over to you."

"Any preview?"

I thought for a few seconds. "Chávez and his gang are highly diversified, apparently. They started with the usual drugs, cocaine, grass, and have moved in various other directions that include all of the other drugs as well as smuggling people and other commodities including weapons. DEA estimates they net over a billion a year. Dollars, not pesos."

“Sounds like Swent is small potatoes, even if he was seriously in debt to them.”

“Yeah. There wasn’t any indication of how much he owed, but there was commentary about how Chávez and company don’t hesitate to make examples of people. Also—and this is especially weird—Chávez himself is apparently something of a Puritan, sex-wise. He doesn’t allow his organization to deal with prostitution or any form of white slavery. Or anything like that. So he probably had a special enmity for Swent’s libertine ways.” I had to laugh. “I ran across a very recent, confidential memo suggesting that Chávez is responsible for Swent’s murder that also specifically warned against sharing this information with the FBI.”

“Nothing like Washington infighting, is there?” I envisioned Annette shaking her head in amusement.

\* \* \*

With the rain pattering down outside the study window, I encrypted the Chávez information and sent it off to Annette. Then I spent an hour or so exploring the third possible Swent antagonist I’d discovered, the group associated with the Iraqi antiquities scam he’d pulled. Much to my surprise, though, I ran into an off-limits filesystem, one that even my strongest credentials wouldn’t get me access to.

I called Henry, but all I got was his voice mail. “Henry, I’ve run into an unexpected roadblock with this Swent business. Maybe you can help. Give me a call, please, when you have a minute. Thanks.”

At some level I understand that people like Henry can’t possibly be available to me at my every whim, but, maybe because I’ve become an old geezer, it still makes me grumpy when they’re not. So I was sitting there, staring grumpily at my cell phone, when it startled me by ringing, that odd electronic tweedle that’s always a surprise. I must have turned on the ringer accidentally.

“Hello?”

“Mac? Brad Winchester. You up to braving this rain for a search through Trevor Swent’s house? We got a warrant for anything and everything.”

“No shit? You going to bring in the FBI on this?”

“Well, I expect that Special Agent Reid and his guys are pretty tired out from their expedition yesterday. I thought I’d bring them into the loop after we do the search.”

“Tell me where and when, and I’ll be there, Brad. Good work.”

It took me a bit longer than I would have liked, as I’d had the top off the Jeep the day before—and today that just wouldn’t do. So I put on the winter top, a composite affair that was almost like a hardtop. At least, I knew, it was passably waterproof. And I had to let Sam know what was going on and reassure her that this wasn’t anything dangerous for me. Still, I managed to arrive at Swent’s address before Winchester and his crew.

From what I’d learned from my computer-file snooping, it seemed as if Trevor Swent had been teetering on the billionaire threshold at the time he died. Subtract out the debts to the Chávez cartel, and maybe he was just in the very highest nine figures, but even so, that’s way up in the financial stratosphere from my point of view.

So it was a bit of a shock to me that his residence was so modest, relatively speaking.

Now, “modest” for a billionaire is rather different from the rest of us. I mean, his place would have fetched, maybe, somewhere near the low seven figures on the market—a tenth of a percent or two of his net worth. My house, on the other hand, represented probably 30-40% of my (plus Sam’s) net worth—a

figure not too far out of line with most folks, according to the magazine articles I've read, at least folks who aren't hugely in debt.

And what was more surprising, Swent didn't have other residences. Apparently, when he traveled, he liked to stay at four-star hotels instead of having houses and condos and villas scattered around the world like others of his means.

Still, for me, a mega-buck house was something to see. Swent's was on the north side of Estes Park, snug up against a hillside amid five acres of pines and rocks, looking out at both Lake Estes and the high peaks of the northern Front Range, including Mount Meeker and Longs Peak, Hallett Peak and Flattop Mountain, and all of the foothills of Rocky Mountain National Park that led up to those highest places. The sunsets must have been remarkable.

The house itself, perhaps 5,000 square feet on three levels, was in keeping with a kind of modesty—as I would discover, it included good-quality appliances and furnishings, but nothing that you couldn't find at regional, high-end retailers, nothing truly exotic. Its design was typical of such houses—a boat-front wall of windows on the west side under a steeply peaked roof, with a deck shading the lowest level, which included the garage stalls. A green metal roof with multiple chimneys covered the whole.

Brad Winchester's team soon arrived and went to work like army ants, invading every space, poking into every corner, and gleefully carrying out anything that they could reasonably justify as germane to the investigation. I took the other approach, standing back and trying to assimilate the bigger picture. And what I assimilated was puzzling.

There seemed to be missing spaces—at least a garage stall's worth on the ground floor, a bedroom's worth on the main floor, and a big, walk-in closet's worth on the second floor. What, I wondered, was that about?

I made such sketches as I could manage and brought it all to Brad's attention about the time that things were wrapping up.

"What? Missing square feet? Why didn't we figure that out?" Brad turned to his chief investigator. "You got anything about this?"

"Uh, no sir. We've been concentrating on what's in what we know about, not what's not there that we don't know about. And we've had our hands full. Sir."

The sheriff grinned. "You don't know what you don't know, eh? Where have I heard that before? Let's do a space inventory and make sure that we've found all the rooms and closets and so forth."

It took another hour or so to discover the hidden storage rooms.

Originally, I suppose, the two bottom-floor garage stalls had run the entire depth of the house, separated by a row of 6"x6" posts supporting one of the main joists in the floor above. Each stall had been deep enough to hold two vehicles, so the house actually had a four-car garage, never mind the nuisance factor of having to jockey cars around to get the inner two out. Somewhere along the way, about half of the inner two spots had been walled off, with a workbench and tool pegboard installed on the garage side. As we saw it, the house had a two-car garage and a small workshop. Very neat and convenient.

I was the one who noticed that the workbench had casters on its legs and that there was evidence—faint tracks on the epoxy-finished floor—that the workbench was moved once in a while. So we moved it and discovered that the pegboard slid on a track to reveal a doorway to the missing quarter or so of the original garage. This room was full of small wooden crates, a miniature version of that government warehouse scene at the end of *Raiders of the Lost Ark*.

On the main floor above, a modest wine cellar off the kitchen turned out to have a swing-out wall of wine racks, behind which was another room that was filled with file cabinets and a large safe, the legs of which were bolted to the floor with tamper-proof hardware.

And on the top floor, a guest bedroom must have originally had a walk-in closet, because at the back of the standard closet, which was paneled with cedar, was a hidden door that opened to another closet. This held all sorts of odd costumes and paraphernalia, which we decided were related to Swent's S&M fetish, plus an impressive collection of pornographic videos and magazines—many of which seemed to be oriented toward underage girls.

With what I'd learned from my internet searches, these new discoveries solidified my opinion. Trevor Swent may have been locally famous for his philanthropy, but in real life he was a secretive pervert without a shred of morals or integrity.

Still, I couldn't bring myself to think that he deserved to die that way.

Brad Winchester made a phone call that I overheard—he was summoning a team of specialists to get the safe open. And then we started on the crates in the storeroom on the bottom floor. We might well have been unpacking a museum, but instead it was Swent's stash of Iraqi antiquities, the ones that he'd supposedly traded banking secrets for during his year at the Federal Reserve. We found statues large and small made of both gold and beautifully carved marble and other stone along with no small amount of jewelry. To liquidate the invaluable collection would require its sale, bit by bit, to shady private collectors, but that was nothing out of the ordinary. One of the medium-sized statues alone would have paid off his debt to the Chávez cartel—which made Swent a financial moron on top of his other failings.

This was emphasized for me when Brad Winchester's guys finally got the safe open. That took a couple of hours—first they had to get themselves up to Estes Park, and then they had to get into the thing.

While they were fiddling with an electronic safe-cracking gizmo, Brad and I browsed through the file cabinets in storage room with the safe. What at first appeared to be a random jumble of papers turned out to be a reverse chronological filing system—older stuff behind newer stuff—without any other organization by topic. Tax records, including large annual packets each year around the April time frame, were mixed in with credit card receipts, monthly statements for various household bills, insurance policies, and, oddly, personal correspondence. But they were all in careful, reverse chronological order.

When the door to the safe finally swung open, we were greeted by piles of cash, bills of various denominations carefully sorted and stacked, and dozens of plastic bags containing a white powder.

“Any bets on what that stuff is?” Brad looked around the room but didn't get any takers from among his deputies.

“Probably just laundry detergent, don't ya think?” At least I was able to break the tension a bit.

\* \* \*

On my way across town toward home, it seemed like it was raining harder, but maybe that was just my imagination, as it was getting dark. I'd called Sam a couple of times during the afternoon to let her know our progress, and she made us a late supper, another new recipe from that French cookbook, Julia's version of French onion soup. It was the perfect thing for a rainy evening.

“I'll bet you're glad that you didn't have to get involved in another outdoors search today.” Sam's eyes were twinkling.

“That’s for sure. And, say, I talked with Annette. She says hello.” I tried not to burn my mouth on a piece of scalding hot cheese. “And she also said that this rain may last for several days, and we should be prepared for flooding. Hal’s institute has been making weather forecasts, it sounds like.”

“What does that mean, ‘be prepared for flooding’?” She looked puzzled.

“That, my dear, is a very good question. I guess we could get some water in the crawl space down there,” I thumped the floor with my foot, “but I can’t imagine what else. Well. Except the usual craziness at the grocery store and so on. And gasoline. Like when there’s a hurricane lurking, you know, everyone stocks up on everything in a panic.”

“How ironic. I mean, we moved out here to get away from hurricanes.”

“Right. Well, there’s always something, I guess. At least we’re not in any sort of flood plain or anything like that. I expect that whatever happens, it’ll mostly be an inconvenience for us. But I wouldn’t want to live down in the canyon just now. These little trout streams have a history of getting nasty when there’s too much water.”

Her eyes got big. “I saw an exhibit at the library about that flood back in, uh, 1976 I guess it was. That was horrible.”

I nodded. “Exactly.”

“So, what were you doing all afternoon, anyway?”

“Well, I guess it was a kind of scavenger hunt.” I proceeded to fill her in about our search of Trevor Swent’s house. “The thing is, though, I’m not sure we learned anything that will help us figure out who set him up and got him killed.”

“But it sounds as if you got confirmation of all the stuff you found about him online, right?”

“Well, some. His stash of museum-quality pieces from the Middle East would seem to validate those suspicions about him. And there was a huge amount of what’s probably cocaine, plus all sorts of porn and sex toys. So various people probably had plenty of reason to hate him.” I polished off my soup and sighed. “That, sweetie, was great. Much better than anything I’ve had at a restaurant. You can make it any time you want.”

“It’s all in the stock. Are you interested in dessert?”

But before I could answer, my phone rang—I checked, and it was Henry. “Oh, sorry, I really need to talk to this guy. I left him a message this morning.”

I pushed the special red button to secure the call. “Henry? Thanks for calling back.”

“Sorry that it took so long, Mac. It’s been one of those days. I did have time to check out what you called about, though, that Federal Reserve computer you couldn’t get into. I’m sending you some new credentials by encrypted email, the secure route.”

“Excellent, thanks. And it’s all the more important for what we found this afternoon.” I filled him in on the search of Swent’s house including the stash of relics. “Now, as far as I know, you’re the only federal official who knows about this. The FBI wasn’t involved with the search. I hope that’s what you meant by ‘hush-hush’ when we talked about all this.”

“It is, but this, plus the drugs you mentioned just now, means that things just got ratcheted up a notch or two. We’re going to have to get Treasury involved, along with the DEA. Probably some kind of emergency interagency task force. Got any further leads on possible suspects?”

So I told him about the search of the Purdy compound, and we shared a laugh about the foibles of the FBI team. “But, I’ve gotta say, Henry, I don’t think that this guy is a credible suspect, even if he

thinks his daughter was killed at Swent's party. He certainly couldn't have pulled that crucifixion off by himself. And his wolfdogs would have eaten more of Swent, probably."

"So, you're saying that this is probably going to go beyond your part of the Colorado mountains? Should I pass that information up the food chain here?" Henry sounded discouraged.

"It would probably be a good idea to prepare the First...uh, whoever has concerns about this for some national-scale publicity. Right now, the other main possibilities are a Mexican drug lord and the Iraqis whom Swent swindled, assuming that's what happened. Hence my interest in that computer."

Henry let loose with a few choice expletives. "This is the last thing I need to deal with right now, Mac. If you can work some magic and just make it go away, I'd be eternally grateful. And I'm sure you can imagine how you could benefit from that."

I decided to gamble. "It would help me, Henry, if I knew exactly who's worried about this and why. You can be sure this isn't something I'd ever share with the FBI or any other agency. But I'm trying to understand who this guy's enemies could be, and that means both passive and active ones."

"Huh?"

"Active ones I know about include the drug lord and the Iraqis, maybe. Passive ones are people who have a stake of some kind in Swent's activities, recent activities especially. If—how did you put it?—a 'proximate relative' of a high-up elected official was involved with Swent somehow, then that official has a stake in Swent's activities. I'm not suggesting that official is even a person of interest here, but I am suggesting that I've got to know what it's all about so I can put the pieces of this thing together. Right?"

The pause went on for a long time, and I couldn't decide if that was good or bad.

Finally he sighed. "All right. You talk about this to anyone, and my ass is fried, meaning yours is, too. Got it?"

"Got it."

"OK. Remember that the Vice-President is on her second marriage?"

"Uh, yeah...ah, didn't her first husband die of cancer or something? I don't remember his name, though."

"Correct, and you can look it up. So he had a sister, her married name is Stacy Riverton, and she and her husband have a daughter named Lauren. Lauren is presently in a vegetative state in a private hospital in Connecticut. Her condition appears to be the result of a drug overdose combined with some very unusual injuries. Injuries apparently sustained at one of Swent's infamous parties. Probably the drug overdose, too."

"Time-line?"

"Huh? Oh, right. This all happened after the VP remarried, so she's not really involved. Still, you know how the opposition party is when it comes to playing up scandals, and the VP is very sensitive to that."

"OK. Thanks, Henry. I'll be the soul of discretion on this, I promise. And I'll keep in touch."

\* \* \*

Friday morning was as gloomy as ever, with the rain coming down harder than ever. And it had rained all night, as I discovered when I got up a couple times—hey, I’m an old guy and it’s necessary.

I was in the study trying out my new credentials on that Federal Reserve computer system when I heard Sam calling me from the living room. “Mac, you’d better come and see this.”

“...and, as you can see from this map, there’s a continuing Flash Flood Warning for the Front Range foothills between Golden and the Wyoming state line.” The morning weather girl was waving vaguely behind her backside at a radar image with red rectangles superimposed on a large blob of blue, green, and even some yellow over Northern Colorado. “And, folks, this isn’t *going* to happen, it’s already happening, as we hear now from Bobbi Bishop in Boulder.”

The shot cut to a remote location with a slicker-clad young woman standing in the rain, looking quite miserable. Behind her was a stream out of its banks.

“That’s right, Crystal, I’m here on the bank of Boulder Creek just west of the library in downtown Boulder, and as you can see, the water is running high, very high, and fast. We have reports that other foothills streams are also in flood stage, from Coal Creek south of here; Left Hand Creek, both the North and South Saint Vrain branches coming into Lyons, north of here; and both the Little and Big Thompson Rivers. And the Cache la Poudre also. If this rain doesn’t stop soon, we’ll have a real flood on our hands. This is Bobbi Bishop reporting from Boulder.” The shot cut back to the studio.

“From that, it looks like they’ve already got a flood. Hal’s forecasts were right.” I leaned over and kissed Sam on the top of the head. “Thanks for letting me know about this. I’ll turn on the TV in the study.”

As Crystal breathlessly finished up her forecast—rain and more rain—I started my search on the Fed’s computer system. I suspected that my every move on that system would be tracked and logged somewhere, given the highly sensitive nature of some of the data it contained. But I wasn’t snooping to find information that I could use to get rich, I was looking for specific file systems that documented Trevor Swent’s time at the Fed. That information, I thought, should be somewhere in the personnel records, perhaps in that top-level directory called “Personnel.”

Ya think?

Trevor Swent’s year at the Fed had been turbulent, I discovered. Early on, he advocated for several innovative policies that the stodgy long-timers opposed. But he’d persevered and got a couple implemented—and their results had made Uncle Sam billions. This, naturally, had infuriated the stodgy long-timers, but the folks at the top appreciated results, and Swent’s stock climbed. He got moved into a position of more influence and autonomy.

It was the autonomy, I thought, that tripped him up.

All this was at about the time of Saddam’s downfall, and Swent’s personnel file was suddenly filled with confidential memos that flew back and forth and around among his peers and superiors—nothing from Swent himself was in the filesystem—concerning their suspicions about his contacts with unnamed people in Iraq. But there was no real evidence, just suspicions. One memo even went so far as to suggest a clandestine search of Swent’s Washington DC apartment and his house in Colorado—he lived in Estes Park even then, apparently—to seek out the artifacts that people suspected him of trading banking secrets for. Whether that happened wasn’t clear. But it was clear that nothing ever turned up.

Until yesterday. Maybe, I thought, that would explain the odd address labels we’d found on all those crates—they were addressed to a Thomas Smith, Suite 235, 812 Big Thompson Avenue, Estes Park.

One advantage of small-town life, I'd found, was that the folks who still bother to print up telephone books were starved for content. In Estes Park, they made up for it by printing both the usual alphabetical name section, along with as many Yellow Pages ads as they could sell, as well as a reverse-lookup section, arranged by address.

812 Big Thompson Ave. was a Package-and-Mail store, one with post-office boxes, their Yellow Pages ad told me. And next door, at 816, was Foothills Storage, whose ad touted units of all sizes including weather-proofed ones.

No wonder nothing ever turned up in Swent's residences.

Try as I might, I couldn't find a hint of what Swent's Fed colleagues thought his *quid-pro-quo* was for all those packages, at least not any specifics. But it was clear that he'd weaseled himself into the higher echelons of Fed policy-making and so was privy to all sorts of sensitive information.

All of this simply confirmed what I'd inferred previously, but it confirmed it in greater detail. I grabbed copies of the most relevant memos and of Swent's career trajectory at the Fed for my report. Report to whom, it wasn't quite clear, but the documentation seemed appropriate.

The only thing missing was the details of whom Swent had been dealing with. I knew quite a bit in a generic sense, but exactly who were his Iraqi contacts was still obscure. No doubt they were vindictive mothers, though, I thought. If Swent had sent them bogus—or even innocently mistaken—information for all those ancient goodies, he'd have earned himself some serious enmity with no expiration date, interest-earning enmity at that, so the longer it festered the worse it would be.

And what finally happened to him was, after all, pretty nasty.

I logged off the Fed's computer system and stood up to stretch, just in time to catch a late-morning news and weather update on the TV in the study. I'd had the sound low so I could concentrate on my computer search, but now I turned it up. A new weather guy was standing in front of the map, which still looked about the same—warning boxes of various hues superimposed on a large, multi-colored blob of rain. He repeated the flood warnings and, as Crystal had done, cut to a live remote reporter.

This time, Bobbi Bishop looked like a drowned rat. No doubt she had been sitting in a warm, dry, satellite truck most of the morning, but her time outside, however brief, was taking its toll. What was left of her makeup had streaked, and her hair was drooping out of the hood of the rain slicker that was obviously not doing its job for her.

"Yes, Brian, this situation is starting to move toward disaster. We've relocated north to investigate the Saint Vrain River just east of downtown Lyons, and its condition lives up to the reports we were getting and then some. I'm standing in the middle of US Highway 36, which is closed now, and I'm going to move over here by squeezing between these barricades to the side by the river so we can get a good shot of how high it's running..." The camera obligingly followed her, and she stayed in the picture as the river appeared in the background. "...and, as you can see, it's not just water flowing by out there, there are trees...oh, there goes a storage shed of some kind, and, my goodness, a car. Brian, I don't...Oh! Wait! What's happening?"

What appeared to be happening was that she was losing her balance, as her arms were waving about, which moved her hand-held microphone away from her face.

Then, with a shriek, she disappeared.

The picture jolted sky-ward, then stabilized on the river again and began panning downstream. The floating storage shed came into focus as the picture cut back to the studio, to the very nervous-looking weather guy.

“Uh, we seem to be having technical difficulties with Bobbi Bishop’s report, but, uh...” he cocked his head sideways, obviously listening to his earpiece, “...oh my God!”

The picture cut to a Pampers commercial.

\* \* \*

It was during the fourth commercial, one for animated, singing, blue bubbles that were positively giddy about the opportunity to clean your toilet, that Sam came in from the living room, eyes wide.

“Did you see what happened?” She was clearly shaken.

“Looks like that TV station is light one field reporter. I assume the bank of the river caved in under her. Not so smart to cross that barricade they had set up.”

“Mac! That’s so cold!”

I sighed and walked over to give her a hug, and she was as tense as a weathered two-by-four. “We have such different backgrounds. I’ve seen so many people die that it affects me differently from the way it affects you. Sorry. I don’t mean to seem cold or heartless or unfeeling. I mean, that was really awful.”

That, at least, relaxed her just a bit.

The commercials finally ended, and a middle-aged man with perfectly coiffed hair that had been dyed a hideous yellow color appeared, looking somber.

“Ladies and gentlemen, if you have been with us, you’ve seen a horrible tragedy. Journalist Bobbi Bishop was swept away by the raging Saint Vrain River near Lyons, north of Boulder. Photojournalist Steven Weeks tells us that the highway, US Highway 36, on which she was standing collapsed, and she fell into the torrent. We can only pray for a miracle now.” He paused and looked down at papers on his desktop.

When he looked back at the camera, he had stitched an expression more like anger onto his face. “News Eight reporters will be initiating an investigation of this tragedy to uncover who is responsible. Was it the contractor, for building an unsafe roadway? Was it the Weather Service forecasters, for underestimating the severity of this flood event? Was it public safety officials, for allowing anyone to be at that location? News Eight wants to know, and when we know, you will, too.”

And the station cut to another commercial, one for some kind of scented panty-liners.

This time Sam sounded cold. “Gee. Could it have been the fault of that idiot reporter for crossing that barricade line and getting too close to the river?”

I hugged her again. “My thoughts exactly. Maybe the thing to do here is to turn the TVs off.”

“Good idea. I need to get organized to make dinner anyway, because it’s going to be something of a production. You think we can get to the store?”

“The sooner the better, probably. We should take the Jeep, though. That pink bug of yours might float away.” I had to dodge the punch she aimed at me.

I’m sure her VW Beetle would have been fine, although even she admitted it felt more secure in the bigger, high-clearance Wrangler. We really didn’t get a full-scale view of what was going on—the little seasonal creek in the valley below our house was running quite full, and some of the houses lower down looked like they were going to get very wet at some point, but most of the way into town was on high ground. The ditches were overflowing in places, though, with water on the road.

It was when we had to cross the main bridge over the Big Thompson just as it enters Lake Estes that we got a look at the flooding in action. Although the 1976 Big Thompson flood had left Estes Park nearly unscathed, a 1982 dam break up in the national park on a tributary had flooded the downtown area. Subsequent rebuilding had included channelizing the river bed through town and bolstering the bridges—a good thing, too, given the present situation. As we crossed the river, we could see that the water was almost up to the roadbed. Fortunately, there were several bridges just upstream that must have caught the trees and other debris that could have taken the main bridge out.

As I had speculated the day before, the grocery store, a full-sized Safeway supermarket, was crowded with panic shoppers. Produce, meat, and dairy products were in short supply, and there had been a run on toilet paper. The checkout lines were ridiculous.

Sam, though, was not bothered at all. “I’m going to make the cassoulet recipe, and I’ve been saving bits and pieces of the meats I need just for today. What I don’t have are the right herbs, and I’m hoping that there are some white beans left, dried ones. For wine, have we got something red, but light, like Beaujolais?”

“We do. I hope we already have salad fixings, though. What’s here looks picked over.”

It was, so all we bought were herbs, beans, and a few other odds and ends; and our little grocery basket was almost empty, particularly as compared to what others were buying. We used the self-checkout line, which made life a bit easier, but not much.

After thinking it over, I decided to go home the long way, around the east side of the lake, just to see what was happening on that end of town. Like South Saint Vrain Avenue, Big Thompson Avenue followed the high ground, for the most part, until it passed the Olympus Dam, which held Lake Estes back. Today, though, it wasn’t doing that, as they had opened the flood gates and water was pouring out. The meadows on both sides of Mall Road were inundated, and the roadway itself was under water in a few spots. But the lake was acting as a reservoir for not only water but also debris, so the bridge seemed to be in no real danger.

South of US Highway 36, though, Fish Creek Road was blocked off. It wasn’t obvious why, but I was taking no chances, so we headed west across the causeway toward town and the way home we knew would work. The arm of Lake Estes on the south side of the causeway, into which Fish Creek drained, was full of floating logs, bushes, and all sorts of brightly colored plastic. It occurred to me that the houses built along the creek were having their yards cleaned out whether they liked it or not.

At home, warm and dry once again, we settled in to wait out the storm. Sam got to work on her cassoulet recipe, and I decided to call the sheriff.

“Brad? Mac MacQuarrie here. Thought I’d check in.”

“Hey, Mac. Good to hear from you. You all OK up there?”

“We’re fine, but it’s beginning to look as if some others aren’t. Did you hear about that TV reporter?”

“Yep, and although I hate to wish trouble on anyone, I’m glad that was down in Boulder County. I’ve got my hands full. That Swent thing is going to have to go on the back burner for now. Huh? ’Scuse me a sec, Mac.” There was a muffled side conversation on the other end. “Mac, I’m going to have to call you back. It seems that the Big Thompson Canyon is starting to wash out.”

“Anything I can do up here, Brad?”

“Well, if you can get over there, you might check on Swent’s place. We sealed it up yesterday evening after we removed that bunch of stuff, but I’ve got no one up there now. Everyone’s down here,

even my Estes Park guy, Smithy, and if the Canyon is going, I don't know how or when we'll get back up there. Gotta go, sorry." And he disconnected.

If Brad's so busy with this flood thing, I thought, the local cops probably are, too. So I'm on my own with the Swent business.

Except for the FBI guys. Where, I wondered, might they be? I called Special Agent Oglethorpe Reid.

"FBI, Reid."

"Mac MacQuarrie here, Agent Reid. I thought I'd check in with you to see if things are still on track."

"Good to hear from you, Mac. This rain is something, isn't it? And I guess it's way worse up where you are than it is here in Denver."

"I don't know how it is there, but here it's getting bad. We're starting to get isolated because of road closures. Anything new on the Swent business?" I was prepared to tell him about the search of Swent's house, but only if he played nice.

"It's too soon for lab results, if that's what you're asking. Although there didn't appear to be any duct tape shreds in all that crap. I'm thinking that search may have been for nothing. Anything new up your way? I expect the sheriff and his people are busy with this flood emergency."

"They are, and it's looking like I'm on my own with this thing." I made a snap decision. "One thing that happened yesterday was that we did a search of Swent's house here in Estes Park, before Brad got so busy with the emergency."

I explained about the hidden storage rooms and what we'd found. "I think that Sheriff Winchester's people impounded all the antiquities, and they locked the safe back up. It's not going anywhere."

"Sounds like we ought to get up there and have a look-see." He didn't sound mad, which was a relief.

"Fine with me, Agent Reid, but good luck getting here."

\* \* \*

Sam wasn't too happy with my going out to check Swent's place and leaving her behind.

"Mac, it's getting dangerous out there. And I don't like being here alone in all this."

"Sweetie, I'll be fine. And you will, too. Just keep working on that recipe, and I'll be back before you know it. And don't worry, I've got all that recovery gear in the back of the Jeep, remember?"

The Wrangler had a winch, and the gear included tow straps, chains, and various useful hardware to get unstuck, along with a plethora of unnecessary off-road accessories. I'd bought it barely used, after the previous owner had gone on an accessory binge and then couldn't make the payments.

But I didn't mention that I had my Sig Sauer 9 mm automatic locked in a metal box in the back.

Swent's house was still accessible, although the creek spilling out of Black Canyon was creating havoc along its channel. I was surprised, though, to find a late-model Lexus SUV in Swent's driveway, snug up against the left garage door. I parked the Jeep snug up behind the SUV, blocking it in, and made a call to CBI central to run down the license plate. It was registered to a Michael J. Decker of Estes Park. My CBI contact obliged me by performing a Google search on this name and came up with him as an attorney in private practice.

What was even more surprising was that the front door had been kicked in, the seal and prominent notice that the sheriff had posted on the door notwithstanding. I went back to the Jeep and retrieved my Sig Sauer, checked to make sure the magazine was full, and slid it under my belt in the small of my back.

Then I had a little debate with myself. Here I was, with no backup, about to silhouette myself in the open front door—there was no other practical way to get into the house. On the other hand, as I remembered from the day before, the front door opened into the living room, and to think that whoever did the break-and-enter job on that door would be sitting in the living room watching TV or whatever was just silly. But with just one person, clearing the various rooms in the house was going to be both slow and tricky. At the same time, it was unlikely that an Estes Park lawyer would be much of a threat—he probably had some left-over business with Swent and was taking this approach, illegal as it was, to completing it.

Finally, valor—or maybe just stupidity—won out over discretion, and, making myself as skinny as possible, I eased into the living room. With the shades down and all the gloom outside, the room was poorly lit, making it difficult to see. But there was a light on in the kitchen. With darkness behind me, I was more confident as I peered around the door frame, only to find nothing—except the door to the wine cellar was open. Looking through that door, I could see that the hidden storage closet was open, and a man in a trench coat, with his back to me, was looking through one of the file drawers. And he was male, at least by the haircut, which was revealed to me by virtue of the fact that his hat was sitting on top of the file cabinet.

I pulled out my Sig Sauer and chambered a round. The noise made him jump, but he must have recognized it because then he froze.

“Excellent. You just stay perfectly still, except I want your hands on the top of your head. Now!” He complied. “I’m a law officer, Colorado Bureau of Investigation, and you’re under arrest for breaking and entering, among other things.”

“Entering, yes; breaking, no. And what other things?”

“Are you Michael J. Decker?”

“Yes I am. I’m also Trevor Swent’s attorney and the executor of his estate.”

“And because of this you think you were entitled to ignore the sheriff’s seal and break in here? What are you looking for, anyway?”

“I told you, I didn’t break in. The door was kicked in when I arrived, and I entered to assess the situation. Despite the sheriff’s seal, yes, but I thought the kicked-in door provided sufficient extenuation to justify my entry. And what I’m looking for is none of your business.”

“I guess all that will be for a judge to decide. I want you to stand up slowly, hands on head, then reach forward and lean on that cabinet. Feet apart.” After he’d accomplished this, I frisked him quickly, finding only his wallet and a key ring with eight keys, including the one for the Lexus. I relieved him of them.

“You’re making a big mistake. I’m an officer of the court.”

“You’ve already made a big mistake. It’s called ‘looting’.” And I chopped the back of his neck with my gun hand just hard enough to put him out.

I hated to do it, especially because, as a lawyer, he’d probably sue me for excessive force and general impoliteness. But I’d hit him with the fleshy part of the edge of my hand, albeit wrapped around

the pistol grip, and I knew there would be no marks. And because I was alone, any other approach, such as trying to tie him up, would have been too risky.

The thing was, as a part-time cop, I didn't carry around all the gadgetry that real cops do, no handcuffs, in particular. But then it occurred to me that there just might be some in Swent's closet upstairs, mixed in with his S&M gear. I used Decker's belt to bind his hands around one of the feet of the safe and went exploring.

Along the way, I couldn't help but notice that the house was in the same shape we had left it the day before. Whoever had kicked in the door didn't toss the place or even muss it up. I made a mental note to check the bottom-floor storage room.

Upstairs, the porn closet wasn't disturbed, either. Rummaging around in a couple of trunks full of all sorts of weird sex toys, I found some handcuffs, complete with a key, hidden under a huge, black dildo.

Back on the main floor, I freed Decker from his belt and cuffed him, sitting on the floor, to a sturdy section of wine rack out in the wine cellar. Then I had a careful look at the storage room.

The safe was locked, just as it had been yesterday when we left, and still bolted to the floor. Presumably, what was in there yesterday was still in there today. The file cabinet that he had been looking in still had its drawer open. I could see where Decker had been examining its contents—the hanging folders were compressed on either side of the one he'd been looking through.

That folder, about an inch of papers, covered the previous February and part of March, around the time, I recalled, that Amanda Purdy had been found dead in Denver. I pulled the folder out of the drawer and, after shutting the front door, sat down with it in the living room to have a look at its contents, starting at the back.

Although filing by date rather than by topic was unusual, it turned out to be perfect for my purposes, as I was able to get a glimpse into Trevor Swent's life that would be hard to see otherwise. Mixed in with normal, monthly bills and statements were special, one-time invoices. Around the middle of February were several from caterers, a liquor store, a "party company" (whatever that might be), a booking agency called Hit Players, and an escort service—all associated with one of Swent's elaborate parties, no doubt. Then, dated only a week later, there were two invoices from my sleeping friend Michael J. Decker, one for Decker's hours and one for a variety of strange expenses that included transportation, consulting services, and expendables.

The date on which Amanda Purdy's body was found suddenly became more important to me.

But just as I was about to call Annette to see if she could find that out, there was a crash from below, the sound of metal tools hitting the concrete garage floor.

\* \* \*

## Seven

The noise startled me, and it woke my sleeping lawyer friend up, apparently, for I heard a groan from door to the kitchen. I walked through it and on into the wine cellar.

"Ah, Mr. Decker," I whispered, "I see you've recovered from your fainting spell."

“Fainting spell? You hit me, you motherf...” He stopped when he found himself looking at the 9 mm hole in the muzzle of my Sig Sauer.

“Easy, my friend. Just now you need to be silent. There was a noise downstairs that probably woke you up.” I paused for emphasis. “We can have a conversation about your health after I find out what that was. Meanwhile, your continued well-being depends on your silence. If there’s someone down there, he’s very, very unlikely to be your buddy, remember that. It’s probably nothing, but you never know.”

He nodded.

I’d learned the day before that the stairs down to the lowest level were not under those going upstairs, as they are in most houses. Rather, they topped out at another of the doors into the kitchen, probably for the convenience of bringing groceries up from the garages below, for they started at about mid-point of where the four cars, in a full garage without that hidden storage space, would sit. At least, I thought, the stairs headed away from the pivoting workbench, meaning toward the garage doors, instead of the other way. I wouldn’t be a total sitting duck, maybe just partly one.

But then I thought of the keys I’d liberated from Decker. There was an outside door in the floor below, I remembered, off the room with a pool table. That, at least, will give me a chance, especially if whoever dropped those tools is in the garage, I thought.

As quietly as possible, I went out the front door, across the deck and down to the ground, and around the side of the house to the outside door. The noise of the rain, I was hoping, would cover what sounds I couldn’t avoid, such as the key in the lock and the door mechanism. By the time I found the right key, I was getting pretty wet, though.

The lock didn’t click, the door opened silently—rich guys, I thought, buy the best—and then I was in the house again, on the bottom floor in a room with a big pool table. The window in the door let just enough light in from the gray outdoors that I could see my way around. And there was a bar of light under the interior door to the garage. I was sure that we hadn’t left any lights on after our search the previous day. Maybe Decker had come down and left a light on, but, then, maybe not. Now, I thought, if I can just get this last door open quietly...

But as I reached for the doorknob, the lights in the room came on, and a calm voice said, “*Careful, Mr. MacQuarrie, no sudden moves.*”

It took me several seconds, during which I stood perfectly still, to realize that he had said that in Arabic, Iraqi Arabic.

My father had been a State Department diplomat specializing in Middle Eastern cultures and issues, and I’d grown up in embassies all over the Arabic-speaking part of the world. My resulting fluency in Arabic, as well as several other regional languages, along with a penchant for adventure, had been the basis for a mutual attraction between me and those spooky agencies in Washington that I’d worked for. Although I was sure that my skills were a tad rusty, half a lifetime of speaking the languages of Sand-land meant that they were as much a part of me as English.

So it didn’t puzzle me that I’d understood the command to freeze without realizing at first that it wasn’t in English. What did puzzle me was that this person knew my name.

“*May I turn around?*” I asked this in my most respectful, deferential manner, and I asked it in Iraqi Arabic.

“*By all means, Mr. MacQuarrie, but, please, first use only two fingers to remove that pistol from your belt and place it on the table there beside you. I prefer to be able to see it at all times.*”

I did precisely as requested, even to the point of setting the pistol down pointed toward the wall and in a position that would make it very difficult for me to pick it up quickly, all before I began to turn around.

*“Wonderful, wonderful, Mr. MacQuarrie. I see you’ve lost none of your skills. Except, of course, that I seem to have—ah, how do you say it?—‘got the drop on you,’ I believe.”* The cliché was in English, but the rest continued the Arabic as before.

I turned slowly, wondering just who the hell this guy was. He was sitting comfortably in an easy chair, across the pool table from me, a suppressed automatic of some kind sitting on a table under the lamp he’d turned on. Slight by western standards but of average size in the Arabic-speaking world, his smile looked vaguely familiar, rather like the actor Omar Sharif in his middle age, big moustache and all. But I couldn’t quite place him.

*“Ah, with all respect, you seem to know me, but I’m afraid...”*

His smile broadened. *“Oh, Mr. MacQuarrie, I’m crushed. You don’t remember me? Well, maybe it was because I used to follow the Qur’an far more rigorously by maintaining a full beard. I’m afraid that my time here in the west has led to a certain level of, ah, religious improbity on my part.”*

He shrugged as he fingered his moustache. *“My name is Raheem al Muhammed.”*

That lit the mental lightbulb for me. *“Colonel al Muhammed! It is you, now I can see it. What a surprise to find you here, of all places!”*

Colonel Raheem al Muhammed was a political chameleon whom I’d run into both before and after the fall of Saddam’s regime. His before color was distinctly red, as in bloody. Afterwards, he turned white, or maybe baby blue, and espoused the new attempts toward democracy with the best of them. All the while, he’d been up to his eyeballs in Iraqi intelligence operations, especially what we in the US called “black ops.”

As far as I knew, based on our history together, he was neither an ally nor an enemy; rather, he classified as a neutral party. Maybe, I thought, this isn’t going to be as bad as it first looked. I began to relax.

“And I’m just as surprised to be here, frankly.” He had switched to English. “Is this some sort of outpost of Ireland, or what? This rain is absurd.”

I laughed and switched as well. “‘Absurd’ is a good description. Also, it’s getting dangerous, unfortunately. May I ask how it is that you’re in this house?”

“I’ll tell you if you’ll tell me.”

I pondered the offer and decided it was fair. “Well, I stopped by in my capacity as a law enforcement officer, a part-time member of something called the Colorado Bureau of Investigation. Right now, we’re investigating the death of the former owner of this house, who was murdered under very, very strange circumstances. Yesterday, I worked with another law enforcement official to do a search of this place—all quite legal, you understand. I was just checking things today and found the door open. By the way, there’s a fellow upstairs whom I found going through some file cabinets. He’s handcuffed to a wine rack. I’m betting he isn’t with you.”

Al Muhammed laughed. “No, no, he’s not. Although I did indeed break in, I had carefully closed the door behind me. The fellow upstairs must have left it open for you to see. I heard him walking around, so I finally made some noise to lure him down here. Imagine my surprise when you show up. You haven’t changed a bit.”

“Was that enough of an explanation that you’ll now tell me your involvement here?” I tried to be polite.

“Hmm. Well, I may have some questions for you, but, yes, it fits with what I already know. And, indeed, wasn’t that an extraordinarily creative way to deprive Mr. Swent of his life?” This time the smile was evil. “I expect that you have inferred that my involvement has to do with some, ah, museum pieces that came into Mr. Swent’s possession some years back. I’m commissioned to recover them, without regard to cost, and to see that Mr. Swent is appropriately chastised. It appears that someone did the latter for me, though. Would you have any ideas concerning who that could be? I might consider sending a thank-you note.”

“Well, if it wasn’t you or one of your compatriots, I can check that possibility off my list, I guess.” I smiled to reassure him. “Another possibility is a Mexican drug lord. There’s also a local guy whose daughter died at Swent’s hand, more or less, but I don’t think he could have managed this—what did you call it?—‘extraordinarily creative’ execution. And that’s what it was, an execution, not just a murder. Other than those two, I’m stumped.”

“Agreed about the execution. But in any case, that’s all—ah, what’s the expression?—water under the bridge. An appropriate expression in these circumstances, I think.” He sighed. “What’s important now is the location of the museum pieces, those artifacts that Swent obtained from us. All obtained illegally, transactions based on Swent’s lies, I may add. To put it mildly, our people were swindled. Unfortunately, not a one of the people involved is still alive, including Swent himself.”

It was my turn to sigh. “Right. Well, it could all be complicated, but maybe I can help. Personally, I think the artifacts should be returned to your country, assuming that they’ll be put back in museums to revitalize the Iraqi culture and heritage. But for now they’re in the hands of our legal system. The sheriff—the other law enforcement official I mentioned—has impounded them. I think they’re somewhere in the city of Fort Collins, but I don’t know where. And you can’t get there just now. The roads are closed.”

He looked sad. “Oh, dear. I’m afraid that’s going to cause no end of problems.”

\* \* \*

Al Muhammed was kind enough to agree to a sort of truce—he was right, he did indeed have the drop on me, so I was happy to accept his terms. But he never really explained the comment about “no end of problems.”

We exchanged cell-phone numbers and promised to keep in touch about those antiquities. It had occurred to me that I might be able to help him get them back to Iraq, by hook or crook.

Ultimately, he walked off in the rain, toward a car parked somewhere, leaving me to deal with Michael J. Decker and various other problems—one of which was my significant other, who undoubtedly had been expecting me home long ago.

“Hello?”

“Hi, sweetie, it’s me. I’m done and ready to head home. But I thought I’d check to see if I should stop at Safeway to pick up anything.”

“Are you OK? It’s been a long time. You said you’d be back soon.”

“I’m fine, really. I ran into some people who needed long conversations to bring them up to speed on what’s going on with the investigation. That’s all. Can I pick anything up on the way home? How’s the cassoulet coming?”

She was pouting, I could tell. “It’s fine. Maybe get some dessert? I don’t think we’ll want to go out in this rain.”

“You’re right about that. Any specific dessert requests?”

“No, just get whatever you think would be good.”

Uh-oh, I thought. Expensive chocolate, roses, and ice cream at least. How can I be creative?

I unlocked lawyer Decker, gave him his keys, except the ones for Swent’s house and cars, and sent him on his way with an official-sounding admonishment not to leave town. I didn’t tell him about al Muhammed; instead, I made up a story about searching the entire lowest floor and finding nothing.

He was full of bluff about his rights and so on, but I reminded him of the probability that a looting charge would stick, given the circumstances. That shut him up. Then, taking the file folder I’d looked through with me, I headed to Stanley Village, the shopping area.

The lady at the Rocky Mountain Chocolate Factory was a big help, especially as I was her only customer. She made sure I got the richest, darkest, pure chocolate truffles anywhere. And the Safeway still had its usual selection of Häagen-Dazs ice cream flavors—it occurred to me that people were worried about the power going out and therefore not buying perishables. But I decided that roses, or even a single one, would be too much. Like admitting guilt. No, I’d just bluff my way through with the dessert—but I did pick up some Pepperidge Farms cookies to go with the ice cream and chocolate. And a sad-happy romantic chick-flick movie from the Red Box machine.

It was getting on toward dusk when I finally got home, and I couldn’t help but notice the effects of all of the runoff. The ditches were eroding; the watercourses were more than full; there was a significant amount of water in the middle of the streets and roads.

But the house smelled heavenly when I arrived—a wonderful mix of herbs, spices, and simmering protein. Sam was keeping herself busy with a salad, a device, I’d learned, that she used to keep from hollering at me when I walked in the door.

But I needed to deal with it *now*, so she wouldn’t holler at me later.

“What a mess out there!” I announced cheerfully. “But I got everything done, and I even found us a movie to go with dessert. Gotta say, that cassoulet smells wonderful!”

“Well, it’s a good thing it gets better as it cooks longer, as long as I keep putting more wine in it to keep it from drying out.” She turned and tried to look stern. “What movie?”

“Oh, you know, that old, old one that we never saw together, about the beauty shop friends or something? I hope it’s OK”

“Ooooh! *Steel Magnolias*? Oh, that’s perfect, Mac. We can snuggle and cry together.”

Yeah, right, I thought. Better than me washing the dishes alone. But then, as she unpacked the shopping bag I’d brought in, she caught on.

“Wait. Wait. You just wait right there, buster. *Steel Magnolias*? Chocolate and ice cream and cookies? *What* is going on here? What happened out there? How much trouble are you in this time?” She had struck the classic pose, standing straight with her arms crossed under her breasts, a stern expression pinching her face.

I thought it made her look incredibly sexy, but I quickly decided it wasn’t the time to say so.

“Huh?” I was determined to bluff it through. “Trouble? No trouble. But I *am* late and I know it. So I’m just trying to make it up in the little ways I can. Anyway, that cassoulet is probably even better now.”

She relaxed a little. “Well, that’s probably true. At this altitude, those damned beans don’t behave the way they’re supposed to. So more cooking is probably a good thing. Yeah, you’re late, dammit. But are you at least hungry?”

And I was, so I could answer honestly, a first for the evening. “Starved. Let me wash up and open that Beaujolais, OK?”

The cassoulet was wonderful, although Sam was right about the beans—at our house, the boiling point of water is about 15° lower than at sea level, so beans and noodles and all sorts of things don’t cook the same. I rather liked their *al dente* texture, but she didn’t. She did like dessert, though, which we porked our way through during the first part of the movie.

As for that movie, well, the best thing about it for me was that it got me some serious snuggling time on the couch. And it was interesting to see Dolly Parton doing something besides vamping her way through songs—it reminded me of how Sam had costumed herself during her working-girl days, as a dead ringer for Dolly. It didn’t seem politic, though, to bring that up. The whole thing was teary for her—she went through about half a box of Kleenex—and she dragged me into bed afterwards. After *that* I tucked her in and gave her a last, big smooch, and she was already drifting off to sleep.

Still jazzed from the day’s adrenalin and those dark chocolate truffles, not to mention Sam’s various bedroom skill sets, which never ceased to amaze me, I was wide awake. I put on a robe and went into the study to write up the day’s events before I forgot them. But just as I was getting started, my phone rang. Who, I wondered, would be calling me at ten-thirty?

“Mr. MacQuarrie, my friend.” Even without the Arabic, I would have recognized al Muhammed’s voice. “You were correct, all the roads out of town are closed. But I need to get to this Fort Collins place. Do you have any suggestions?”

“Which roads did you try?”

“I have a map, of course. So the first one was the most direct to my destination, Highway 34 down the Big Thompson Canyon. It’s closed a few miles down where the road has washed out. The map shows a smaller road that bypasses the washout, it goes through a place called Glen Haven, but that’s closed, too.”

“Right. I’m not surprised. Glen Haven is on the north fork of the Big Thompson, and that’s probably creating havoc down there. Did you try Highway 36? To Lyons?”

“Yes, and it’s closed about ten miles down its canyon. Apparently the road there is simply gone for a half mile or so. Also, Highway 7 is closed up by something called Lily Lake.”

“Well, there’s one more possibility, that’s Highway 34 west. It goes over what’s called Trail Ridge Road, through the national park. Do you see it on your map?”

“Hmm.” I could picture him tracing the long road over the top of the park. “Yes, it goes to some place called Grand Lake.”

“Right. Fill your car with gas here, because not much will be open over there. I think one of those gas stations below the Safeway has pumps that work all night. After Grand Lake, 34 goes to Granby, where it ends. But you turn left, meaning south, onto Highway 40. From what I understand, it’s not been raining much at all over there, so the roads should be fine”

“Yes, I see. Highway 40 twists and turns over what must be a pass of some kind and then merges with Highway 70, which goes into Denver.”

“Right again. And 70 is a four-lane interstate. It’s not been raining so much in Denver, either, so you should be OK at that point. I don’t know what you’ll run into heading north from Denver to Fort

Collins, though. Also, I don't know if Trail Ridge Road is open, either. But that's your last hope. Be prepared for a long drive."

"Thank you, my friend."

"Well, I owe you one for not shooting me this afternoon. And let's talk tomorrow. I'm working on an idea to get your artifacts back to you."

\* \* \*

Saturday morning was still wet and dreary. I tried to sell myself on the idea that the rain had slacked off overnight, but I wasn't buying it.

Neither did Sam. "Mac, this sucks. Let's get in the car and go somewhere sunny."

"As good an idea as that is, it might not work. Most of the roads out of town are closed. Maybe Trail Ridge is still open, but the others are all washed out or something."

"Trail Ridge? That goes over to Grand Lake, right? And then the highway goes to Fraser, where we spent last winter? Maybe it's sunny over there. I'm going to pack a bag." She headed off to the bedroom.

"Uh, well, OK, but I've got some stuff to do this morning." I followed her and waited to see if she'd complain, but she didn't. "Actually, your idea of getting out of Dodge is a good one. If all the main roads are closed, trucks can't get here to resupply the stores. The Park Service doesn't let commercial vehicles on Trail Ridge. So food and gas and everything are going to run short pretty quick, unless they get another road open."

She turned to look at me, stunned. "You mean people here are going to starve?"

"Oh, I doubt that. I mean, remember all the canned stuff in the store? And, geez, if people start to get hungry, there are more elk around here than anyone knows what to do with. Nobody's going to starve. Listen, I've got to go out for a bit. I'll call you before I come home to see if you think of anything I should stop and pick up." I dashed off before she could object.

After al Muhammed's phone call the previous evening, I'd looked more carefully through the file I took from Swent's house, the file that Decker had been studying. Aside from the party invoices and the two from Decker, the only other document of any interest was Swent's will, a version that had been signed, dated, and notarized in early March. I decided I'd put the file back, after copying any and all documents of interest, to see if Decker might succumb to the temptation to return for another look. And if he found what he was looking for and took it, I'd be able to document the theft.

The trouble was, getting to Swent's house, over on the other side of town, had turned into an adventure. The main bridge over the Big Thompson had about three inches of water running over it, and an Estes Park police officer was turning people back, at least the people I saw in front of me. They were all in compact passenger cars, though. I finally got to the front of the line.

"Officer? Mac MacQuarrie, CBI." I showed him my shield. "I need to get over to the north side, off McGregor. This thing will make it through that water, don't you think?"

"Maybe. It should, I guess. Take it nice and slow, though." His voice betrayed how dubious he was.

"Is Mall Road still open?"

"Not right now. It's worse than this. Maybe if they lower the flow through the flood gates, it'll become passable, but we're not counting on it."

"How about upstream? Riverside? Marys Lake Road? Or are the two sides of town severed?"

“Riverside’s closed. Last I heard, Marys Lake Road was still open, though. Good luck.”

I put the Jeep into four-wheel low, and crept across the inundated bridge. I could feel the pressure of the water on the car through the steering wheel, but the off-road tires did their job and got me across. In my mirror I could see people arguing with the beleaguered cop, poor fellow. They were pointing my way in the “if he can do it, why can’t we” mode.

The rest of the streets to Swent’s were easy, and it took all of about three minutes for me to get there, slip the file back in its place in the correct drawer, and leave. But on the way out the door, it occurred to me that it really needed to be secured. Looting—real looting, not the trivial kind I’d accused Decker of—was probably not going to be an issue in Estes Park, but there was no point in taking chances. Maybe, I thought, the hardware store by the Safeway will have what I need.

Because I was going there anyway, I called Sam to see if she’d thought of anything she needed.

“Hardware store? Well, no. But you might get some serious snacks for the road at the Safeway.”

“Will do. But remember, we don’t know if Trail Ridge is still open.”

“Oh, it is, Mac. I called their hotline number. At least it was open a few minutes ago. Hurry home so we can get out of here.”

Between the tools I had in my Jeep and the inventory at the hardware store, I was able to put together a plan to secure Swent’s door. And, well, shopping for snacks is something that I’ve always been good at.

Back at Swent’s house, though, I had a surprise, a not altogether unexpected one except for its timing. Decker’s Lexus was back in Swent’s driveway. It didn’t take him long, I thought.

I found him just as I had the day before, looking through the files in the hidden storage room behind the wine cellar. Whatever he was looking for, it was obviously extremely important to him.

I hung back in the wine cellar, managing not to cast a shadow to alert him, and watched. He was paging through the same hanging file folder as before and mumbling to himself.

After a few patient minutes on my part, I heard a whispered “Yes! Thank God!” He removed several pieces of paper from the file, folded them, and slid them into his inside jacket pocket. Then he closed the file drawer and stood up.

When he turned to leave, he found me blocking his way, holding my CBI shield out for him to see. I’d decided that I wouldn’t need my weapon. The satisfaction of beating the crap out of him, should he try anything stupid, would be worth any skinned knuckles, I thought.

He was shocked into silence, so I took the lead. “Mr. Decker, I arrested you yesterday in identical circumstances and, based on your ties to the community, released you on your own recognizance. That event is documented in a report I wrote and submitted last night. This time, I should arrest you and take you to the police department. Trouble is, I just don’t have time to deal with you today. I will take those papers I just saw you put into your pocket, however. And please don’t try anything, because if you do I’ll take out my frustrations on you in a most unpleasant way.”

So what did I get for being so polite and business-like, lenient, even? The moron hopped into a taekwondo defense stance. I had trouble not breaking into laughter at the sight of a balding, flabby, nearsighted bumbler pretending to be Bruce Lee.

“I’ll have you know that I’m an expert in the martial arts. If you lay a hand on me, I’ll be forced to defend myself.”

“Mr. Decker. I’ve identified myself as a law enforcement officer and pointed out to you that I should place you under arrest. You are now resisting even that state of affairs and threatening me with violence. How much trouble do you want to make for yourself, anyway?”

I took a small step forward, as a feint, and he launched into action. I didn’t launch into anything but instead made one simple move, and the next thing he knew he was lying on the floor, on his back, with my right foot on his throat and his left hand in a wrist lock that was about a millimeter short of breaking something.

This time, he really did pass out.

Sam, I knew, was waiting, so I dragged Decker outside, being none too gentle with him down the steps on the porch, and hurried through the task of securing Swent’s front door. Then I frisked Decker, retrieved from his jacket pocket the papers he’d taken, dropped his keys on his chest, and left him lying in the rain.

Sam had said she had called the national park’s information line and found Trail Ridge Road to be open; now the question was, could we manage to get to the park entrance? I cut through the side streets and found that downhill, on Elkhorn, there was a serious amount of water flowing down the street. Most all of businesses had sandbags in front of their doors. But the intersection was clear, and Moraine looked free of water.

But where Moraine turned to the west, at the little amusement park, the water was almost up to that donut shop. Fortunately, Moraine itself was still above water level, and it stayed that way all the way to Marys Lake Road, which, somewhat to my amazement, was also passable although water-covered. The fact that the bridge was relatively new helped, no doubt. From there to home was easy, although the washouts along the sides of the streets, meaning the ditches, were getting serious. There were places where, if you let a tire stray off the pavement, you’d drop into a five-foot hole.

Sam’s idea to get out of town was looking better and better.

\* \* \*

## **Eight**

Sam was positively itching to hit the road, so much so that she’d packed several nights’ worth of clothes and such for me in addition to her own. And, to tell the truth, whatever was making her itch was contagious—I wanted out of town, too. Several loose ends needed tying up, however, before we got out of cell-phone range up on Trail Ridge.

My first call was to the Estes Park Police Department. “Hello? This is Mac MacQuarrie, Colorado Bureau of Investigation. I know you’re all busier than you need to be just now, but I’ve got something you need to know about.”

I told the officer all about Michael J. Decker’s escapades, with minimal embellishment. I’d let him free the previous evening on a personal recognizance bond, given how busy the PD was, I told her, but his return to the house meant he violated that bond, was therefore incorrigible, and really needed to be watched. Given that his activities amounted to looting, I was sure the PD would be interested. At the least, I thought they should pay attention to the security of Swent’s house.

Privately, I thought I had what Decker had been looking for—those papers—and that he wouldn't be back, but the PD needed to be on the alert. The officer on the phone appreciated my information and said they'd keep an eye on Swent's house.

Then I called Brad Winchester and Annette Trieri to fill them in on the latest developments. The conversation with Brad included a discussion of the location of the Iraqi artifacts, and the one with Annette offered a heads up that Sam and I were coming over their way, flood refugees. That produced an instant invitation to stay in their guest wing, something I knew would please Sam to no end.

My call to Special Agent Oglethorpe Reid, FBI, however, didn't go through, and his voice mailbox was full. What, I wondered, was that about?

Finally, I called Raheem al Muhammed. "Colonel? Mac MacQuarrie here."

"Ah, Mr. MacQuarrie. I should tell you that I'm no longer a Colonel. And, please, I would be honored if you'd call me Raheem."

"In that case, Raheem, please call me Mac. Can I assume that you made it over Trail Ridge Road last night?"

"I did, and I'm forever in your debt for suggesting it. But you were right—it's a very long drive. And I'm still not in Fort Collins. Many roads down here out of the mountains are closed due to the flooding."

"Raheem, I'm not sure you actually need to get to Fort Collins. Let me suggest an alternative." I proceeded to outline the plan I was formulating to recover the artifacts.

"Ah, Mac, my friend, that is quite brilliant! I'm going to need to arrange for some tactical support, but I'm sure that will be no problem."

"Just remember, Raheem, this is all preliminary. To make it work really well, I need to persuade some people high-up in the government about its wisdom. But I'm pretty sure I can do that. If I do, you'll need much less tactical support than you might think. Let's stay in touch, OK?"

I debated whether to call Henry—I was going to need his support, and that of his boss, too—to pull this off. The payoff in diplomatic terms, however, could be enormous.

"Mac, are you ready to go yet?" Sam was out of patience, and Henry would have to wait.

She'd piled everything into the Jeep while I'd been on those phone calls; I checked it out to be sure that she had her paints and added to the load our hiking boots and day packs. No point in sitting around idly when we could be enjoying the outdoors over there, I thought.

At the last minute, I decided to shut the house down as completely as possible—all of the electronics got turned off as well as the main water valve.

Then we were finally ready and headed out. It surprised me how much worse some of those eroded ditches had become in just the past hour or so. Here and there were houses with driveways full of mud—I hated to think what their basements must be like. And halfway down Marys Lake Road, my fears were realized. Some poor schmuck had drifted too far to the right, and his car was on its side in the five-foot-deep ditch.

At the entrance to Rocky Mountain National Park, we showed our pass and got a little lecture from the lady Ranger on duty. "We're allowing everyone to pass through west-bound, but only Estes Park residents east-bound. And be aware that there are rocks and water on the road in many places. Please drive carefully. And enjoy your time in Rocky!"

That last, in the cheery voice they must rehearse, seemed out of place under the circumstances, but I suppose her training just made her spit it out.

In the rain, Trail Ridge Road, also known as U.S. Highway 34, is just another twisty two-lane road. At first, there are trees along the sides, mostly, and then, above about Rainbow Curve on the east side, there is nothing along the sides. Flatlanders—and I did this too, when I was new to the area—tend to drive down the middle of the road, using the double yellow line rather like a monorail track, when the drop-off is on the right. They seem to think that gravity is going to suck them off sideways, into the abyss, so they drive far, far from the edge of the road.

This, of course, makes it exciting when a big vehicle comes their way, forcing them back into their lane.

On that particular Saturday, though, there was less traffic than usual for a late-summer weekend. Based on what the chirpy Ranger had said, only Estes Park residents were being allowed to come east-bound at us and there were very few of those. As a result, I was able to use the passing zones to good effect and get around the west-bound slowpokes.

Would, I wondered, my new friend Raheem al Muhammed have been a “slowpoke” last night? We had a potentially good thing going, but could I really trust him? Well, he wanted those artifacts returned and I had a (sort-of) plan. Maybe he’d just have to trust me a bit.

I don’t want to give the impression that I was ignoring the incredible scenery of this drive. At that time, I had crossed Trail Ridge Road probably a half-dozen times as a driver, and each trip had revealed to me new and breathtaking views of the interplay of light and topography on that highest paved through road. One day, I thought, I’ll have to make Sam drive, so that I can watch the scenery instead of that double yellow line that I’m desperately trying so hard to keep a couple of feet off my left front fender.

Once a flatlander, always a flatlander, I guess.

By the time we got over the top to the Alpine Visitor Center, the rain was really, truly slacking off, and it looked like the clouds were starting to break up. We stopped for a coffee break and found a couple of not-too-tacky gifts to take to Hal and Annette in Fraser.

Then, after descending the west-side switchbacks and cruising down the Kawuneeche Valley, we stopped at the west-gate visitor center just north of the town of Grand Lake, to recycle that coffee. The sun was out, and we felt like just standing around in the parking lot to soak it up. Sam was babbling about how she could feel the vitamin D that was being created in her skin cells.

The sun felt good to me, too, but what was really interesting was the conversation I had with one of the national park folks behind the desk at the visitor center. He confirmed the quick rules overview that we’d heard at the east-side entrance an hour earlier—everyone was being let out of Estes Park, but only residents were being let back in.

“Because of all the road closures, the strategy is to get the tourists out before they eat all the food, and use up all the toilet paper and gasoline,” he said. “There are going to be caravans of buses to bring people out of there before they eat the residents out of house and home.”

Although this sounded like a good plan to me, I couldn’t believe that it would ever be written down as official policy at any level.

\* \* \*

Hal Weathers and Annette Trieri lived at about 9100’ on the side of a mountain just west of Fraser. Their house started out as a mining shack that got added onto over its early years, then remodeled and

upgraded by the previous owner, and then renovated and upgraded some more by them. As a result, it was a rambling series of wings on different levels, with a deck across its east side overlooking the Fraser Valley. Their 180° view started at the Winter Park ski area on the south, almost next door, and swept north to the Never Summer Range, 30 miles away. In between, across the valley, was the backside of the Rockies' Front Range including the Indian Peaks and several of the same high peaks in Rocky Mountain National Park that were visible from Swent's house in Estes Park.

Their guest wing may as well have been a separate, private cabin, for it included a sitting room with a fireplace, bedroom and bath, and was connected to the rest of the house by a short hallway with steps. Because the sitting room had a microwave, electric tea kettle, small refrigerator, and sink, we were pretty self-contained. Still, I thought we'd probably be eating meals with our hosts, especially as Sam had mentioned on the way over that she'd brought her favorite cookbook. I was grateful that she didn't sleep with the thing.

Annette greeted us warmly, mentioned that Hal was supposed to return from his afternoon at the institute shortly, and showed us to our rooms. Dinner, she said, was coming home with Hal, probably steaks for the grill.

That comment set Sam off. "Cooking outside will be the perfect antidote to what we've been through for the past few days, Annette. It's been so gloomy and wet over there that even this partly cloudy sky is a relief. And thanks so much for inviting us to stay here. It'll make our escape into a vacation. Oh, but we don't want to be any trouble, so can we help with things? I brought my cookbook, if you'll let me make dinner sometime."

"I doubt you two will be any trouble. This guest suite sits empty all the time, and our housecleaner will be thrilled to have it used so she can do more than just dust. And, what cookbook? I think it would be fun to team up for meals."

"Julia Child's *Mastering the Art of French Cooking*. I got inspired to make all the recipes—well, as many of them as I can manage, at least. And some of them really need more than two people to eat them."

As they nattered on, I escaped to bring more of our stuff in from the car. Eating well was something that I was glad to do, but talking about it in advance was just not my thing.

The concept of traveling light doesn't seem to be part of Sam's universe, so it took me five trips to get everything, and Annette and Sam had disappeared by the third one. With the suite to myself, I was able to poke around and find the storage closets and start putting things away. I also discovered that our sitting room had an outside door that opened onto a little, private deck with a spectacular view to the north. Its chairs were just too inviting for me to pass up. Besides, I needed to talk with Henry.

"Henry? Mac MacQuarrie here. How's your Saturday?"

"Hey there, Mac. Saturday? It's Saturday? Then what the hell am I doing here in my office? Oh, yeah, trying to keep the world from falling apart."

"Well, Henry, I may have come up with a way to help, a little bit, at least. What would you think about a clandestine operation that would help mend fences with Iraq and score huge public relations points for the White House?"

"How can anything clandestine score big PR points? What are you talking about?"

"Presumably, you know something about Trevor Swent's escapades by now, given that you're so concerned about him. Well, we found the hoard of Iraqi antiquities that he'd accumulated through shady deals with people over there."

“Mm-hmm. I remember that. This all happened while he was working at the Fed, right? And there was speculation that he traded banking secrets for them.”

“Right, but apparently the so-called secrets were bogus. He swindled them. Now, if all this came out, it would be huge embarrassment for the Fed specifically and for the US generally. But returning those artifacts to the Iraqi government, with a stipulation that they not disappear into private collections over there, would be an incredible good-will gesture, don’t you think? I’m thinking that there’s a way to avoid the embarrassment and get the artifacts home. The first part of the plan would be to minimize any government involvement. Fortunately, right now they’re in the hands of the sheriff here, instead of the FBI, and I think he’ll play ball with us.”

Henry paused, probably to think. “But with no government involvement, where’s the PR score?”

“I said ‘minimize government involvement’, not ‘eliminate’. We get the artifacts to Washington, put a couple on a table, and have the President do a press conference announcing that, say, an undercover investigation run out of the White House discovered the existence of the artifacts and recovered them so that they can be returned to Iraq. The Iraqi ambassador could be there to thank him, and so on.”

“OK, I think I see how this could be a winner. But the press will be all over it, asking about details and snooping into every aspect of it.”

“Of course. But the official line is that it was an undercover investigation that’s ongoing and there’s no information because it can’t be compromised. Unofficially, you can leak something that you make up, something far from Colorado. Maybe some rich dot-com guy on the west coast, someone who insists on anonymity, bought the collection thinking that it was legit, and when he found out it isn’t, he had pangs of conscience. Turned himself in or something. Cooperated with the investigation. Hell, you’ve got people there who can make up better stories than I can.”

Henry laughed, a happy laugh instead of his usual embittered one. “Mac, I think this could work. Lord knows, the President could use a feel-good appearance like this. Let me talk it over with a couple of people and get back to you. You say your sheriff will cooperate?”

“I’m thinking he will, but if he needs persuading I know how to make that happen, too. Thanks, Henry.”

I pushed the red button a second time, which closed the secure connection.

As I was sitting there thinking that the conversation had turned out as well as I could have hoped, I heard Sam. “Mac? Where’d you go, anyway?”

I opened the door to let her out onto the deck.

“Wow, this is pretty nice. I thought this door was a closet,” she said, looking around at the view. “This will be great. I’m glad I brought my pastels and paints.”

“Oh, good. Annette and Hal and I have a lot of talking to do about this murder case I’m working on. Having your supplies will keep you from getting too bored.”

“Hal? What’s he have to do with it?”

“The computers at his institute are probably going to be helpful, like last summer with that wildfire business, remember? At least I hope so. I need all the help I can get.”

\* \* \*

After dinner, which was, as Annette had predicted, steaks, enhanced with a *bordelaise* sauce courtesy of Sam, Annette, and that cookbook, Hal and I sat on the porch to talk database searches.

“I can’t help but think I’ve missed something, Hal. I’ve got login credentials for just about every federal database there is, even the ultra-secret ones at agencies I shouldn’t name, but what I’ve come up with is pretty thin. And, well, superficial. Swent wasn’t in a position to have scrubbed his records, nor would he have known how to do that anyway. It just seems like something’s missing.”

“I don’t know if you heard, but we got an interesting contract from one of your old employers. The NSA has got us developing cross-platform search capabilities. They don’t know it yet, but we’re combining that with some of the new algorithms we’ve developed for Google to take advantage of our advanced hardware, and it allows some pretty remarkable, plain-English queries.” Hal sipped his decaf coffee.

“Uh, that sounds good, but I’m not sure what it means.”

“Well, maybe I can think up an example. Like, say you were interested in more information about that wolf-hybrid owner, that guy Annette told me about. Or, better yet, the dead guy—Swent?—himself. We could take your login credentials, all of them, and make up a script that would automatically search through every computer you have access to, plus all of the ones we do, like the Google and Apple clouds and more. The search would be in parallel, all the computers at once, and it would be recursive, meaning that it would start with his name and then proceed to search on any unique attributes associated with the search of his name, all the while doing cross-correlations. So, if searching on his name on, say, Google showed that he was a member of some organizations, those organizations and the relationships among them would also be discovered.”

“It sounds like that process could go on forever.”

“Oh, yeah, that’s for sure. You’ve got to build in some kind of boundaries, or you’ll get so much data from the search that you’ll be swamped. But, and this is the kicker, that data will be local, and it can be searched using the same technique with different parameters. And because it’s local, it’s way faster. I mean, say the first multi-computer search gives you a petabyte of results and takes, oh, twelve hours. Well, that local petabyte can be searched at MPARC in just a few seconds. I guess it’s sort of like harvesting all of the apples in the entire orchard and then sorting them to keep only the good ones. Hmm. Nah, that’s a bad simile. But you probably get the idea.”

“You mentioned ‘plain-English’ queries.”

“Yep. It’s not quite as conversational as talking with an iPhone, but close. So ‘Find Trevor Swent’ would get you everything. ‘Find Trevor Swent organizations and associates’ would narrow it quite a bit. Like that.”

“So, what if it was ‘Find who killed Trevor Swent’?”

“Ah, now you’re getting to the edge of the science. Absent concrete information in the databases, our algorithms would recognize the need to draw conclusions from the data. In this case, you’d likely get a list of possibles with some estimate of probabilities. But that’s an interesting idea. Let’s try it tomorrow. Hell, I’d start on it now, but it’ll be a lot easier with the equipment in my office.”

“Uh, sounds like you’ll need a list of computers and my credentials for each, right? I’m a little worried about the sensitivity of such a list, even with your security levels. I mean, you don’t provide your own credentials to others, right?”

“Correct. We’ve thought of that. Each search requires defining the network of computers involved. And those computers have all sorts of login procedures and various different operating systems. So, for a given network, the first time requires significant human intervention. What we’ll do is to have you sit

down and login to each of the computer systems you want included. Our system will then put each of those on standby and, while it's at it, figure out what the operating system is and so on. Then I'll sit down and do the same, and we'll also automatically login to the standard systems like the Google cloud and so on. As all this happens, our system will record the sequence in an encrypted script file, so the next time it'll be automatic. You and I will have the encryption keys, both required, to keep our credentials secure and allow only us to do additional searches on this particular network."

I had to smile. "I knew you guys were good when I worked with you last summer. But this is something else, a whole new level. Does NSA know you can do this?"

He grinned, somewhat sheepishly. "Actually, NSA is paying for it, but they don't have a clue. There's a guy in the White House we're working with. He's coming out Monday for a demonstration. Arrives tomorrow night."

That set me to wondering. "Well, if your computers can come up with who killed Swent, that'd make for some demonstration indeed. I probably shouldn't tell you this, but there's someone in the White House who's very interested in the answer."

The door opened and out walked our two ladies. Annette was carrying a tray with more coffee and two additional mugs, and Sam was carrying a tray of cookies.

"OK, guys, enough shop talk. Time to socialize." Annette's tone brooked no argument.

"Yes, dear," Hal said. "But that means we can't tell you about the potential breakthrough on your case."

"I can live with that. Whatever it is can wait until tomorrow." She paused long enough, looking around at all of us, to generate a bit of dramatic effect. "Tonight, though, Sam has a big announcement."

\* \* \*

## Nine

"Sam has a big announcement?" I thought. What the holy hell does that mean?

Then it dawned on me.

Sam was in her early forties. Living with a woman, you get to know her rhythms, and she still had hers. Nor had she complained about anything such as hot flashes. And even though I'm getting to the age of those guys in the purple pill commercials, I sure wasn't slowing down. Well, not much. All along, I'd been assuming that she was a birth control expert, given her previous occupation and all, and we never talked about it.

Uh-oh.

The next thing I knew, there I was lying back on the chaise lounge on the deck, with a cold, wet washcloth on my forehead. Sam and Annette were fussing over me, for some reason, as I could see through what seemed to be tunnel vision.

Hal was expounding. "Why, Sam, that'll be *great!* You're the best! It'll liven things up, and pass on a legacy for future generations."

The lighted tunnel of my vision started receding, getting smaller, smaller, and it closed down to a pinprick, then went out.

Oddly, I could still hear.

Female voice number 1: Oh, crap, he's out again. Any idea what's this all about, Sam?

Female voice number 2: Nope. It's scary. Nothing like this has ever happened, that I know about. Maybe we should call 9-1-1.

Male voice: Aw, just toss a glass of cold water on his face. He'll come around.

The notion of a face-full of cold water worked miracles, and the tunnel opened back up to reveal three faces staring at me, all looking on with some concern. I took a deep breath and shook my head.

It took a second deep breath before I could figure out how to talk. "OK, folks, show's over, nothing to see here."

Sam's face leaned in. "No so fast, buster. How many fingers?"

She was holding up three, index, ring, and pinkie, and I told her so. And I had to ask. "So, I'm sorry, I seem to have drifted away. Maybe it's the wine and the thin air way up here. But just so I'll know, what's this big announcement, anyway?"

I tried not to hold my breath, to keep breathing. Deeply.

"Why, I'm going to paint Hal and Annette a mural of their view, sweetie. What did you think?"

I was actually rather proud that I managed to keep the tunnel from receding away again.

One nice thing about all that—I got fussed over more than I deserved. They helped me to bed, tucked me in, and left me to lick the mortal wounds to my dignity alone, just as I needed to. I knew that I'd probably have to explain, at least to Sam, the reason for the whole episode, but at least I'd have some time to think up a good alternative to the truth.

Sometime later, I felt Sam slip into bed and snuggle up, and I drifted off into a very comfortable sleep.

Because I'd been put to bed so early, I woke up early Sunday morning. Sam was fast asleep, purring rather than snoring, and looking sweetly contented. It took me a few minutes to remember the end of the previous evening, and, when I did, I was both relieved and alerted to the need for an explanation for my fainting spell. Hmm.

I eased out of bed, found what I needed, left Sam a note where she'd find it right away, and went out through the door to our little deck to go for a run.

Although I'd assumed I'd go around the house and down the driveway, there was a clear trail off into the woods that appeared to contour along the elevation as it curved toward the west, rather than either climb or descend. That was so inviting that I followed it.

Stress, elevation, and maybe a tad too much wine for dinner. That seemed like a good explanation for my lapse. Of course, that would mean I'd have to watch the wine intake tonight and after, a restriction that I didn't need. Hmm.

As the trail contoured deeper into the woods, the downhill side began to open up, to reveal a pretty little side valley covered by an aspen grove. Across the way was another house, big, new, borderline ostentatious. But, then, ostentatious houses were almost run-of-the-mill in this part of the Fraser Valley.

How about blaming something in the food, some kind of allergic reaction? Of course, that would initiate a deconstruction of everything we'd eaten to figure out what it could be. And, really, there was nothing truly different that I could blame. Hmm.

After about a mile and a half, the trail just sort of petered out at the top of a hillside meadow. Even this late in the season, it was filled with wildflowers, mostly something I recognized as Indian Paintbrush, but there were some yellows and whites thrown in to make it all just lovely. I turned to retrace my steps back to the house.

Maybe I should just brazen it out. Bluff my way through. Shrug it off. That would be harder with Sam than with Hal and Annette, I knew. Hmm.

I discovered on the way back that the trail had not really been contouring but rather descending a little—I knew this because the slight upgrade got me out of breath right away. OK, I thought, this is just what you need, dude, a bit of a physical push. But it was a relief when the house came into view.

Of course, there was the option of just telling Sam the truth, that I thought her announcement was going to be that she was pregnant. But, then, that would just lead to questions, like, “why would that make you faint?” Hmm.

Obviously, I was going to have to play it by ear.

She was in the shower when I stepped back into our suite, so I did stretching exercises until she was finished.

“Oh, you’re back. Thanks for the note, by the way. How was your run?”

I told her it was the perfect way to start the day, and that she looked well-scrubbed and radiant.

“You probably missed it last night, being out and all, but we talked about going out for breakfast this morning.” She winked at me. “You should hurry up and shower.”

I opened my mouth to reply, but then realized there was nothing I could say that would help. So I went to shower instead. Shut up and follow instructions—that’s always a good way to get out of a jam.

\* \* \*

Hal and I rode together to the restaurant in his new Jeep Wrangler Unlimited, the four-door version of my Jeep and the same model, the Rubicon version. With its longer wheelbase, its ride was much less bouncy, but, damn, the thing felt *big* compared to mine. Because we were headed straight to the institute after breakfast, Sam and Annette rode together in Annette’s Subaru Outback.

This arrangement suited me just fine, as I didn’t think Hal would quiz me about my odd behavior last evening, whereas Annette and Sam, together, could have been counted on to do so. Maybe, I thought, we can get through breakfast without an inquisition.

Sharky’s, a Fraser institution, served the sort of breakfasts that skiers on their way out for a day of strenuous exercise in sub-zero temperatures need—huge piles of protein and fat in the form of eggs and meats along with lots of carbs, and more fat disguised as hash-brown potatoes. But why they also did this the rest of the year is something of a mystery to me. Maybe the mountain biking crowd needs the calories. In any case, after my episode the previous evening, I thought it politic to go easy, so I ordered oatmeal with a glass of grapefruit juice.

In order to avoid questions about my behavior, I took the initiative on the conversation. “So, Annette, you wouldn’t let us talk about the Swent case last night. But we do think there may be a break. We’ll see today.”

She swallowed a mouthful of French toast. “Are you going to tell me what the break is, or is this just teasing?”

“Just like last summer, it’s Hal’s computers in action.”

“Hey, they’re not mine. If they belong to anyone, it’s Chuck Shure.”

“Well, OK.” The oatmeal was actually pretty good, I thought. “Call them MPARC’s computers. Anyway, we think the new database search techniques they’re developing might help. I did searches on all the agency’s—agencies’, plural, actually—computers, but those were computer-by-computer searches. A unified search of all the systems could turn up things that I missed, relationships among the data that are revealed only when all of the data are combined.”

Hal chimed in. “Right. And what we find related to Swent can be searched in and of itself to see what additional possibilities arise.”

“Our interest list is pretty thin right now, Annette. We’re hoping to fatten it up a bit with the results of these searches.” Before I could continue, I felt my phone vibrating in my pocket. Its display told me that it was Henry. “Ah, crud. I need to get this. Sorry, excuse me.”

I pushed the red button, said “wait one” and made my way outside to the parking lot.

“Sorry, Henry, I was in a restaurant with some other folks.”

“Not a problem Mac. How’s your weather out there?”

“Well, here in Fraser—that’s across the mountains from where we live in Estes Park—it’s a beautiful late summer day. Sunny so far, and it’ll probably get hot later.”

“Good, good. I’m at the airport waiting to board a flight to Denver. But I thought I’d get back to you on those antiquities. I talked with The Man himself about your idea, and he loves it. He’s got to get it vetted with State, of course, but you know how easily he persuades people. Maybe you can have a chat with your sheriff to prep him for the whole thing.”

“Good news, Henry, good news. I’ll do that. And I’ll also prep another fellow I ran into, the guy that the Iraqis sent over here to do the recovery. This’ll make his job a lot easier. And more legal.”

“I’m not sure I want to know more about that, Mac.”

I laughed. “No, you probably don’t. Let’s just say that this approach will prevent considerable heartburn all the way from Colorado to Washington. Say, Henry, you said a flight to Denver. Can I ask where you’re headed?”

“It’s no secret, really. I’m flying to Denver and then driving up to some small town by a ski area, it’s called Winter Park. There’s an institute there...wait a minute. You’re the one who put me on to this place, last summer, so you know all about it. MPARC. They’ve been commissioned by the NSA to do some algorithm development.”

“Right. Winter Park is about four miles from Fraser, and Sam and I are staying with Hal Weathers, the MPARC Director. I’m glad I asked.” I thought about how to phrase the next part. “Now, the question I have is about whether we should run into each other and what to do if that happens. I’m aware that ‘Henry’ isn’t your real name. Are you traveling under another name? Do we know each other? I don’t want to screw up on this one.”

“Good thinking—I’m glad you asked, too. Well, let’s see. Maybe we should just give up the whole charade of ‘Henry.’ My real name is Harmon Jameson. In the White House, I keep a very low profile, but I work between the President and Vice-President on the one hand and the National Security Advisor, the Director of National Intelligence, the Secretary of Defense, the DCI, and the FBI Director on the other. But I’m traveling to MPARC as a lowly White House staffer who’s interested in database searches. That part of the charade we need to keep alive, OK?”

“Absolutely. And should I call you ‘Harmon’ now?”

“Actually, that’d make my life a lot easier, Mac. Oops, they’re calling my flight. I’ll probably see you tomorrow.”

Holy crap, I thought. My friend Henry—er, Harmon, Harmon Jameson—is higher up than I imagined. I wonder why I’ve never heard the name? “Very low profile” indeed.

I walked slowly back into Sharky’s, hoping my oatmeal would still be warm and wondering how to handle Jameson’s visit. For one thing, he hadn’t said whether he’d be using that name or a different one. For another, I wasn’t sure if I should greet him like an old friend or what.

“Sorry again. I hate it when I have to take a call during a meal, but that was Washington. It’s better if I don’t ignore them. So, did Hal explain this search stuff well enough, Annette?” I dug into my oatmeal, which was now lukewarm.

“Sure, but that doesn’t mean I understand it.” Annette winked at her husband. “It’s a good idea, though. Who knows what other tidbits about Swent will surface?”

“So, Hal, you mentioned that MPARC is having a visitor tomorrow. Do you remember his name?” I decided to grasp the nettle.

“Hmm. Let’s see.” Hal pulled out his phone and started poking at it. “Ah, here it is. Jameson, Harmon Jameson. He’s some kind of database guy at the White House acting as the liaison between us and this, ah, agency project.”

“Interesting. I’m looking forward to meeting him.” And I was, actually, because I’d only talked with him on the phone, never in person.

\* \* \*

The multi-platform search process was just as Hal had described. MPARC’s computer opened windows for me to login to the various agency computers I had access to; Hal logged into several others using yet more windows; some standard ones were added to the mix; and then a master window of sorts was used to start the search itself, which integrated the activities going on in all of the various windows. Or at least that’s how it looked to me. What was really happening was probably far more complicated.

“Let’s start with information about Swent in general,” Hal suggested. “That way, we can pull in the remote data to our system here and process it locally. Additional remote searches will probably be needed, too, but we can keep all of these various systems logged in for that purpose. OK?”

“Works for me.” I wasn’t going to disagree with the expert. He typed something, and lines of code started racing across the master screen. They were scrolling by too fast to read, but after fifteen seconds or so, they stopped and a message appeared:

*Estimated Search Time – 90 Minutes*

“That’s a property of the network we set up, meaning all of the computers we’re logged into, rather than of the search itself,” Hal said.

Perfect, I thought. That will give me time to catch up on phone calls. I walked outside to the roof garden.

MPARC, the Middle Park Advanced Research Center, was the brainchild of Charles Shure, the electronics (and other products) tycoon from Colorado Springs. He had recruited Hal to be its founding

Director a few years back and set up a generous endowment to run the place. It functioned as an experimental platform to test new computer-chip technologies that Shure's company developed on real-world problems and therefore as a center for high-performance simulation of just about whatever needed simulating. I first got involved with them the summer Sam and I'd moved to Colorado, when Hal and his wizards had simulated a wildfire that had, tragically, killed an extended family of campers. And according to Annette, they were simulating the Front Range flood event this summer. Apparently, the database searching thing was a new direction for them.

MPARC was housed in a brand new building that had originally been planned to be a condominium development. The developer went belly up at the stage of construction at which the building looked like an erector set, and the thing had sat as an eyesore in the middle of downtown Winter Park for a couple of years. Using Shure's clout, and money, Hal had been able to buy the property for a song, finish the building after some clever redesign—condos turned into computer-scientist offices turned out not to be too much of a stretch—and create a showcase for the community along with a large number of new, high-tech jobs. MPARC was second only to the ski area as a jewel in the Winter Park crown, and Hal had become something of a local hero because of it all.

One of the building's features was a third-floor roof garden, located outside the cafeteria and used for various activities year-round. It had radiant heating in the floor powered by waste heat from the supercomputers, and a variety of flower boxes and trees in big pots that were lovingly tended by a group of the employees. Previously, MPARC had been housed in rental space, which was fine, but this new building was the workplace equivalent of a five-star hotel.

I picked a secluded corner of the garden and called Brad Winchester.

"Brad? Mac MacQuarrie here. Any sun over your way yet?"

"Hey, Mac, how's it going? Yeah, well, not quite. But it's trying. Thing is, our problems are just starting. The water from all that rain just about destroyed everything in the foothills, and now it's spreading out all over the east county—and it'll continue to get worse downstream. What can I do for you?"

I filled him in about the Iraqi antiquities and the plan I'd hatched with Jameson to get them out of our hair and back where they belong, legally, even.

"Well, now, Mac, we impounded them because it's illegal for private citizens to own such stuff. But I don't know that I can just turn them over to the government."

"But you *are* the government, Brad. Believe me, Larimer County doesn't want to own this stuff, neither does the State of Colorado. And, for that matter, neither do the Feds. They want to give it all back. You give it to the Feds, they give it back to the Iraqis, you and the President both come out smelling like roses, especially you, because you can take all the credit for initiating the whole thing. I mean, it's not evidence in Swent's murder. Inventory it, photograph it, and get rid of it, that's your best bet."

"Y'know, I do worry about having custody of it. It's priceless stuff, I guess. So, how do we do this?"

"I'll get you a phone number to call, and you tell the person on the other end what you've got and ask if they'd like to take this stuff off your hands so it can be returned to the Iraqi people. Couldn't be easier." I'd be able to find the right person through Jameson, I knew. "Presumably, they'll come pick it up in an armored truck, or something. You can arrange for some publicity, pictures and so on, when they get there. And I think I can arrange for you to fly to Washington and meet the President the day he does whatever he does to give the stuff back. Probably a press conference. You may not like the President's

politics, but this kind of opportunity for good PR is something you can't pass up. I mean, there's an election coming up soon, isn't there?"

"OK, OK, Mac, I'm convinced. I'm not sure a picture of me and the President would help my chances of getting re-elected, but some part of this will. No doubt. I'll wait for a call with the telephone number."

Ha! I thought. One down, one to go. I called Raheem al Muhammed.

"Ah! Mac, my friend. I have done as you asked and been patient." He laughed. "And patient it's easy to be in a place like this. I found a room at the Brown Palace in Denver."

"Your taste is impeccable, Raheem, as always. And we have a plan. I hope you like it—I'm afraid I've had to be just a bit presumptuous, though. I remember from, ah, the old days, that you were always extremely publicity-shy, and I've assumed that you are still that way. I hope I haven't made a mistake."

"No, no mistake. Publicity is, to me, like death, because it would mean my death."

"I'm glad I assumed correctly. Now. Here's the plan." I outlined what I'd discussed with Jameson and with the sheriff. "I don't know how it will be handled at the end. Probably it will involve your embassy somehow, and then shipment across the ocean in some careful manner. It wouldn't surprise me if the President offered Air Force One."

"Mac, you've outdone yourself." He switched to Arabic. *"The only thing, a small thing, that I don't like is that the public part of the whole affair will involve the ambassador, who, in my humble opinion, is the human equivalent of a fresh pile of camel dung. But everything else is so brilliant that I'll just live with that."*

I switched, too. *"Raheem, I want to thank you again for not shooting me the other day. And let me say, we are still investigating the execution of Trevor Swent. I don't know where the investigation will lead, but I can guarantee that it will not lead in your direction."*

*"Why, of course it will not. I had nothing to do with it."* His eyes, I knew, would have been twinkling if I could have seen them.

*"Of course not. And I'll make sure that everyone else understands that, too, if your name should come up in any way."*

*"Ah. I see. Thank you again, my friend."* He disconnected.

I must admit to having had mixed emotions about how al Muhammed's part in all this turned out. In some ways, it would have been both convenient and, well, appropriate for him to have had a role in Swent's death and to have come to some kind of justice as a result. The world, after all, would probably be a better place if cold-blooded killers such as al Muhammed were not in it.

But, then, I suppose you could say the same thing about me.

\* \* \*

## Ten

I wandered back inside and, after looking around, found Hal in his office, working behind the biggest computer screen I'd ever seen.

“Oh, there you are. We’re getting interesting results.” He grinned.

“Already? Surely it hasn’t been ninety minutes yet.”

“No, but the results come in as they come in. That estimate was for completion of everything. What do you know about where Trevor Swent got his money?”

I thought for a minute. “Well, I know that he was a member of the billionaire club. And I remember seeing something about family money and investments. He worked at the Federal Reserve for a year, and did some dirty deals in the process, but I don’t think that was the source of his fortune.”

“That’s the basics of what we’ve got here. But the ‘investment’ part of it is looking interesting. He eventually worked at the Fed, but he got that job as a result of his time as an investment banker and counselor and trader at a bunch of different Wall Street brokerages. His family money was in the low eight figures, but by the time he went to the Fed, he was up to ten. And that several-ten-fold increase is interesting indeed. It appears that he got a lot of it by thrashing retirement funds and endowments.”

“Uh…”

“He earned percentage commissions on trades, and he made lots of trades within retirement funds, pension funds and so on, some big ones, some small ones and also within some endowment funds that had been set up for non-governmental organizations, NGOs, non-profits that are generally charities and so on. The trades sometimes worked, sometimes didn’t, in terms of doing good things for the funds, but he still got his commissions no matter what. In fact, several of the funds went bust as a result of his trades, especially the small funds. He was able to bet the ranch on trades with the small funds, while he could only trade a portion of the big ones at a time. So the big ones did better, especially the big, visible ones, which did pretty well, well enough for him to advance and eventually wind up at the Fed. And the interesting thing is that he linked his own money to the big-fund trades, the ones that worked. He didn’t put any of his own money into the trades that lost money, the small-fund trades. I’m not a banking expert, but it sure looks like he knew those small-funds were going to get hit hard.”

I had to put all this together. “Ahhh… and should I assume that this all means he ruined a bunch of retirees’ lives, and made enemies in the process, with these small-fund failures?”

“Good assumption, and he undoubtedly pissed off lots of people whose pet organizations lost their endowments. More to the point, a couple of the those group retirement funds he ruined are based here in northern Colorado. And some of them look like groups I wouldn’t want to have as enemies.”

“And you figured this out already? Damn, you’re going to impress this Harmon Jameson fellow tomorrow.”

Hal grinned at me. “Well, you wandered off somewhere—I thought it was to the john—and then didn’t come back. This stuff started coming in at about the fifteen-minute mark.”

“So…let’s see. We talked about secondary searches. Is there a way to find out who may have lost their shirts in the retirement- and endowment-fund failures and also has other specific motives to hate Swent?”

“Well, at this point, ‘hate’ is a term that’s not part of the search process. But connections are. We don’t have those yet, but the a few of the funds that Swent ruined are coming up.” He waved at me to come around to where I could see his gigantic screen and pointed at it.

“So, here’s one that doesn’t look especially threatening, at least as far as what happened to Swent, but it hurt a lot of people.” Hal was pointing to an account owned by something called Front Range Independent Teachers’ Organization.

“‘FRITO’? Is this for real?”

“Hey, I don’t make this stuff up—it’s in the computers. These folks got wiped out. It looks like several hundred retired teachers are now without a pension because of it.” He sounded offended at the possibility. “Here’s another group that lost everything, the Rockies Animal Breeders and Independent Dealers fund. And, yeah, that’s RABID. And here’s Big Game Outdoor Guides. These little groups of like-minded people must have set up retirement funds for themselves, and Swent trashed them. I mean, look how long this list is. I’d say he made a lot of people really mad.”

“OK, so, this provides the basis for motive, for killing Swent, that is. I guess we have lots of folks to choose from as far as that goes, on top of those we’ve already identified. Where do we go from here?”

“Well,” Hal scratched his chin, “I think we should let this first search play out and see what we’ve got. Then we can set up secondary searches.”

“Does the system know about the usual ‘motive, means, opportunity’ basis for suspecting someone?” I had no idea how these searches worked, but I had a suspicion that it wasn’t like how a human investigator did it.

“Not the way that, say, you would think of it. It doesn’t understand those concepts. Rather, the system looks at locations and times of the individuals, and then it correlates those with other bits and pieces of the data. What I expect it’ll come up with is a list of possible perps, whom you can then filter through the MMO part of the process. So it’s a sort of backwards investigation, with MMO last.” Hal looked quite pleased with himself.

“Well that’s a relief. I’m sure that I and all of my fellow investigators everywhere are glad to hear that we’ll still have a pivotal role in the investigative process.” I realized that this came across more sarcastically than I’d intended, so I back-pedaled. “What I mean is, as long as there are juries to persuade, there’ll be a human element to this investigative process, so it’s nice to hear that the computer side of the whole thing still needs it and relies on it.”

But I need not have bothered. He was absorbed by the new results coming in.

“Now, here’s something interesting. The search is finding and correlating names. It’s found Amanda Purdy. Annette told me about the FBI search of Amanda’s father’s place, and the system is processing him now. It’s as if it recognizes a possible motive, but that can’t be the real reason. It’s just these correlations instead.” He pointed at the screen. “Look at this. He’s a member of two of those small funds I mentioned a minute ago, the animal breeders and the backcountry guides. And his wife is a member of that independent teachers’ fund. Wow. A triple whammy.”

“Plus the thing about their daughter. Well, I guess that establishes motive.” Special Agent Reid, I remembered, had never returned my call. “I wonder what the FBI lab found.”

“I think we’re just getting started.” Hal was studying his big screen with interest. “Elias Purdy turns out to be a very interesting fellow, by virtue of some other groups he associates with. The Tea Party, as you’d expect, I guess, but also a survivalist forum, several gun clubs and chat groups, something called Americans for the American Heritage. Uh...and that outfit is on the DHS terrorist watch list.”

“Hmm. Sounds as if Purdy had the means as well as motive, even if he didn’t use his wolf hybrids.”

Hal stood up and stretched. “Well, OK, this thing says its basic search is 45% complete, and results are already coming in thick and fast, too fast to keep up with. Let’s see if there’s any coffee in this place on a Sunday.”

\* \* \*

We hunted around and, in the end, had to make some. But there was time to kill, so we started a pot in one of the break rooms and eventually took our mugs outside, back to the roof garden. The sun was even warmer than when I'd been outside earlier, and the main drag through Winter Park was humming with both car and foot traffic, Front-Range residents up for the day to enjoy a mid-September weekend in the mountains. In a few weeks, I knew, the aspens that were just starting to turn would be finished for the season, the weather would be making the unpleasant transition from early fall to winter, and the place would be almost deserted until the ski area opened, probably in late November.

“So, what’s your plan for tomorrow, Hal? I probably don’t need to be in the way all day, but I’d like to meet this Jameson guy. I’m the guilty party who told the White House—I’ve got a special projects contact there—I told them about your capabilities here at MPARC and suggested that the agencies might want to enlist them.” I took a sip of java. “See, you folks aren’t in the profit-making mode, like all the Beltway Bandit operations, so you can give the agencies straight answers instead of just telling them what they want to hear.”

“I wondered how NSA had heard of us. I guess I owe you one, or at least Chuck Shure will when he sells them the operational version of the stuff we’re developing. And these contracts with them are good for the institute, too. They pointed us in an interesting new direction.”

“Of course, now that all the electronic snooping has become public, it could put the brakes on their need for what you’re working on.”

“Oh, I’m not worried about that. Anyway, tomorrow I’m going to pick Jameson up and bring him here to the institute for breakfast, and then we’re going to regale him with background information and demonstrations. He’s bringing his credentials for some computer systems we don’t normally have access to, and we’ll do something like you and I did earlier, only on a more limited scale. Meaning the network we set up will be smaller, and therefore whatever search he chooses will be quicker.” He finished off his coffee. “You want to come to breakfast?”

“Good idea. After that, if the sun stays out, I expect we’ll think about heading home tomorrow.”

“Hmm. I’ll have to get out my camera and tripod and take a panorama sequence from the deck, so that Sam can have something to work with.”

“That’ll probably help her quite a bit.” The subject of the mural, however, wasn’t one that I wanted to linger on. “Say, how do you deal with classification issues in these computer network searches? I mean, I can’t know if you’re cleared to look at information from some of the systems I logged into this morning. And vice versa, I suppose.”

“Well, in principle, everyone involved has to be cleared for everything. Alternatively, one person with a clearance for the entire network used in a particular search can take on the job of working up the results. But, yeah, it’s an issue. After this project started, NSA got my credentials bumped way, way up, and so did Sandy Livingston’s. So maybe I’m OK for what we did this morning. And you probably are, too. I remember you’re cleared through the roof, and the computers I accessed are pretty low level.” He thought for a minute. “I think, though, I’ll put all of the results from the search on Swent into your filesystem, so it can be seen only by you. I’m certain I didn’t see anything already that I shouldn’t have, but, as the deeper results come in, you can never tell.”

“Where is Sandy, anyhow? I sort of expected to see him here today.” Sandy Livingston was MPARC’s Chief Scientist.

“He and Angela are probably driving back from Santa Fe right now. Or maybe in a couple of days, I don’t remember. They went down there to see her family a week ago. I think they were making plans for their wedding.”

I had to laugh. “Well, that’ll make her parents happy, for sure. Sandy told me they moved up here so they could live together without interference. But, man, I feel sorry for the guy. I bet there’s a wedding the size of the Super Bowl.”

“He mentioned something like that.” Hal looked at his watch. “Let’s go see if that search is finished.”

It was. Hal sat down at his desk and fiddled on the keyboard for a few minutes, then looked up.

“OK. So all the results are now your property, and I can’t see them any more than you can see what’s in my own filesystem. This computer is fully secure, so no one can hack in and get them, and they’re encrypted as well. I’ve emailed you the key and wiped my copy.”

I pondered. “Uh, OK, but how do I search the results?”

“Oh, right. You’ll need to use the search engine, because the data amounts to about a half a petabyte. We have an in-house, meaning local, and enhanced version of Google’s search engine. It’s called, believe it or not, Loogie, l-o-o-g-i-e—you’ll see an appropriate screen icon for the program—I’m afraid that some of our people have a juvenile sense of humor. Anyway, if you type something like ‘Loogie Swent’, it’ll scroll more data than you can manage. ‘Loogie Swent plus murder’ would narrow it down. But if you just type ‘Loogie’, it goes into a fully interactive mode, which is pretty intuitive, or it’s supposed to be, at least. I’d recommend that. If you can trust me not to look over your shoulder, that computer there should be what you need.” Hal gestured toward another desktop system, one with a somewhat smaller display, sitting on a side table. “I need to work on my presentation for tomorrow for a while.”

As Hal went to work, I fired up the other computer and got started, uh, Loogieing, I guess. It took me about two minutes to figure out how to implement Hal’s instructions and then another five to become astonishingly productive, by my standards, at least. The interactive version’s help menu provided both hints and a vocabulary, and Loogie’s syntax was both conversational and versatile. As I burrowed deeper and deeper into the network search for information on Trevor Swent, the results became more and more interesting.

About the time I’d documented fully the convoluted relationship between Swent and the Juan Chávez cartel—and pretty much eliminated the cartel as a suspect—my phone buzzed in my pocket. The display said “Henry”, so I pushed the red button and made a mental note to change his name in my contacts list.

“Mac MacQuarrie.” I was keenly aware of Hal’s presence.

“Mac, it’s Harmon Jameson. We just landed in Denver. And, listen, they have TVs on this flight, and I was watching news. There’s a story out of Denver about a car with government plates that turned up in the streambed of something called the Little Thompson River. It’s an FBI vehicle. There’s no sign of occupants. Apparently a small dam of some kind got breached up in a mountain subdivision, and the water ripped down the river taking out a half-mile or so of highway between a town called Lyons and Estes Park. I’m thinking that this may have been—what was his name?—Special Agent Reid.”

“Hmm. Could be, I guess.”

“Oh. It sounds like you’re not really able to talk just now.”

“Right.”

“Well, anyway, I thought you should know. And, say, did you talk with your sheriff?”

“I did. He’s on board all the way. But I had to promise that he’d get full credit for the idea and that he’d be in on the press conference, or whatever happens. I hope that’s OK.”

There was a pause, with all sorts of background noise.

“Y’know? I think that’ll make it even better—like, ‘small town sheriff initiates diplomatic coup of the decade.’ Something like that. This’ll be great. So, the way it’s going to work is that a guy named Algernon Simpson, he’s an archaeologist who specializes in the middle east and works in the cultural affairs office at State, he’s going to organize and handle everything. You need to call him at this number,” he rattled off a phone number, and I typed it onto the computer, “which is his cell phone. He’s so excited he’s probably hyperventilating, so call him anytime. And thanks for your help with this, Mac. Talk to you tomorrow?”

“I expect so. Thanks for calling.”

I went back to the keyboard mumbling to myself, “I love it when a plan comes together.”

“Hmm?” Hal looked up.

“Oh, sorry to disturb you Hal. I’ll tell you later.” I dove back in to the results I was getting.

\* \* \*

After three more hours, we were both burned out. I had a huge file of information, which I emailed to myself before I remembered that I could access the MPARC computers, remotely and securely, from my laptop or my desktop at home. Hal, I presumed, must have a pretty spiffy presentation ready after all that work.

In any case, it was Sunday and time to call it a day.

Back at Hal and Annette’s place, the first thing I did was to accept, quite gratefully, a scotch and soda. Then I fired up my laptop to see what information I could find about the FBI car found in the river bed. The Denver TV stations and the *Post* all had about the same stories, and the newspapers to the north of Denver essentially repeated them. Friday afternoon, after Bobbi Bishop had been swept away by the Saint Vrain River, Boulder County sheriff’s deputies were posted at the road closure on US Highway 36 in Lyons, cutting off access to Estes Park via that route. The deputy on duty reported that a dark sedan sporting federal plates with two people inside pulled up to the roadblock and demanded to be let through. When they were denied, they showed FBI credentials and informed the deputy that they would be going to Estes Park whether the road was closed or not. The deputy warned them about the danger and especially about partial washouts to be watched for. The sedan proceeded toward Estes Park.

Sometime shortly after that, a dam had let loose on a small reservoir on the Little Thompson River up in the foothills, sending a wall of water downstream. Several miles above Lyons, the highway parallels the Little Thompson in a steep-walled stretch of canyon, and the wall of water completely obliterated the roadway, scouring that section of canyon clean. Because the car was found a half-mile down-canyon past the place where the highway used to descend into it on its way from Lyons, it appeared that the car had been in precisely the wrong place at the wrong time.

Of course, if the FBI agents had listened to the sheriff’s deputy, the tragedy wouldn’t have happened. But they didn’t, it did, and the agents’ identities were being withheld pending notification of relatives.

One article speculated that the agents might have abandoned the car at the last minute and climbed the canyon wall to safety, and crews had been searching the area ever since the car had been found. Other reports were not so optimistic.

Well, I thought, that will set back the FBI investigation a bit. And Jameson will likely be relieved.

Thinking of Jameson reminded me to call the State Department archaeologist, Algernon Simpson. By then, it was about 8:30 in the evening on the east coast, but Jameson had said to call him any time.

“Mr. Simpson? My name is Mac MacQuarrie. I’m sorry to disturb your Sunday evening, but I’m calling about the inventory of Iraqi antiquities that you’ve recently heard about.”

“Oh. OH. Well, yes, I’m so glad to hear from you. Have you got them? What sorts of items are we talking about? Do you know their provenance?” His excitement was palpable.

“I’ve seen some of them, and what I saw were statuettes smaller than about three feet tall and a variety of jewelry, all in pristine condition. But the reason I’m calling is to explain the process here. You’ll be getting a call tomorrow from Sheriff Brad Winchester of Larimer County Colorado. He has charge of the items just now. He’s going to suggest the plan that I believe has been discussed with you. It will simplify matters if we all take the approach that Winchester originated that plan. Right?”

“Well, yes, I suppose so. But what’s the real story? This cock-and-bull business about an Iraqi expatriot who spirited them out of the country for safekeeping during the revolution and now wants them to go back, I mean, really.”

“That, Mr. Simpson is the story, and your instructions, I’m certain, are for you to stick with it, no ifs, ands, or buts.”

“Well, yes, of course, but...”

“No buts, Mr. Simpson, no buts. If you handle this the way you’re capable of, the President himself is going to be quite grateful.”

“Well, I suppose that *is* something of an incentive for an obscure civil servant like myself, isn’t it?” His question, I assumed, was rhetorical. “Since you know more about this than I, Mr. MacQuarrie, perhaps you could answer a question. Do you suppose it would be possible, after the ceremony, for the items to stay in the U.S. for a little while, to be displayed at, say, the Smithsonian?”

“That, Mr. Simpson, is between you, the President, and the Iraqi ambassador. But, hey, you’re a diplomat. Go for it.”

“I believe I will, Mr. MacQuarrie., I believe I will. Thanks for your call. Good-bye.”

If he can stick to the script, I thought, we’ll be fine.

Next, I called Brad Winchester to pass along the phone number for his call on Monday. I also suggested that he need not say anything to anyone about where the artifacts came from, because the State Department would be handling that. He seemed relieved.

My glass was empty, so I wandered over to find a refill in the main wing of the house, where he kitchen was humming with the final stages of dinner preparation. Sam and Annette, it seemed, had found some quite nice veal cutlets at the Safeway in Fraser, and we were having them with another of Julia’s sauces, along with some kind of exotic-looking potato recipe. I couldn’t believe that Annette would ever work her way through that entire book like Sam was doing, but I would have been willing to bet that Hal was going to be eating a lot better for a while.

Glass refilled, I found an inconspicuous corner of the kitchen in which to stay out of the way. “Annette, did you see the local news today?”

“Just the Sunday paper, this morning.”

“Well, this may be more recent. It looks as if Special Agent Oglethorpe Reid, FBI, may be a flood victim.” I summarized the stories for her.

“What? That sounds awful.”

“Compared to previous big floods, this one’s pretty benign, in terms of loss of life. Still, this particular death would be especially unfortunate.”

“It is, although I expect the Bureau will assign a replacement fairly quickly.” Annette looked me, staring for a few seconds. “But I wonder how that will affect the investigation?”

“You remember I told you about when Reid showed up at Brad Winchester’s portable forensics lab? He was all piss and vinegar, but then he got a phone call and turned into a pussycat?”

She nodded and smiled at the memory.

“Well, that call was because of a call *I* had made. I’m thinking I won’t make such a call this time—instead, we can just let the FBI do its thing. See, with what we came up with today, we probably don’t need them. I mean those computer search results.”

“But they’ve got all the evidence from the scene, right?”

“Right. And they’ll probably wind up getting whatever’s in Swent’s house, although the most important stuff is taken care of. I’ll tell y’all about that at dinner. But we’ve got the leads now, and we don’t need the feds. I think I’ll be able to have this thing wrapped up in a week.”

\* \* \*

## Eleven

Monday morning, Harmon Jameson and I had no trouble treating each other as new acquaintances, as we’d never really met before in person. He, Hal, and I had a great breakfast at the MPARC cafeteria, at which I learned that Jameson was a master raconteur with a repertoire of stories from his travels all over the world. He was clearly enjoying being out of the White House hustle and bustle for a few days.

I left them to their business, and drove back to Hal and Annette’s to pick up Sam and hit the road. While dinner was being prepared the previous evening and I’d been hiding out in the kitchen, Hal had taken some spectacular photos of the entire view from their house, including the view from the little guest deck. Then, after dinner, he fed all of them into computer software that stitched them into a panorama photo. Sam had just what she needed to do her mural.

At dinner, I’d sworn them all to secrecy and explained the plan for the Iraqi antiquities, leaving out any hint of Jameson’s role. That had both amused and impressed them. Annette, in particular, was glad to hear that Brad Winchester would be getting his PR boost from the whole thing. She wanted to see him re-elected.

By Monday, though, it was time to head home. The word from Estes Park was that the weather had returned to its usual September glory, and, even though it was only two nights on the road, both Sam and I wanted to sleep in our own bed again.

So I lugged the five loads of bags out to the Jeep, got Sam and me tucked into it, said goodbye to Annette, with profuse thanks for her hospitality, and hit the road north toward Grand Lake and the west gate of the national park. Sam had checked to make sure that Trail Ridge Road was open again—they had closed it overnight on Saturday because of ice.

At the west gate, we had to show identification, and we got the same little lecture about who was allowed through and who wasn’t. The Highway 7 collapse near Lily Lake was due to be fixed Tuesday

or Wednesday, and that would open a second route into Estes Park, but for the time being Trail Ridge was it.

The road itself was much as it had been on Saturday, when we'd escaped, but the sun was out and the sky was blue. The dusting of new snow on the highest peaks only added to the beauty of the drive.

Our route into town wasn't quite so lucky, although the Marys Lake Road bridge was still intact, with river water lapping at its underside. But those car-swallowing ditches were worse than ever, and the road itself was starting to collapse in spots. If this was typical of damage throughout the Estes Valley, it was clear that the rebuilding process was going to be long, arduous, and expensive.

But we were fortunate. Back home, I turned the water and the electronics back on, and everything was normal, as far as we could tell.

I was extra glad for that, because I had some work to do.

The various motivations within the Purdy family to see Trevor Swent dead were only the tip of the iceberg of what had come out in the search results. Almost every name that arose was associated with some event in the past that earned Swent hatred. The Purdys, with the triple financial whammy that Hal had discovered plus their daughter's death, had perhaps the strongest motivation, but others had plenty of their own.

Swent had become locally famous in the past few years for his philanthropy, but, according to the information we recovered and obvious inferences from it, people still hated him behind his back—virtually everyone did.

The question now was not who wanted him to die but rather whose hatred was so vicious that they wanted him to die in that horrible manner. And with the sheriff's office and the FBI out of the picture for the present, and the Estes Park PD overwhelmed by the flood-related issues, I was going to have to answer that question for myself.

Fortunately, I had the Trevor Swent reference manual at my disposal as well as the capability to find online updates, should they be needed.

Sam went off to the store with the hope she'd be able to find something, anything, to make into dinner, and, having forgotten, I figured out how to login to the MPARC computer from home again. That Loogie search engine of theirs had been so helpful the day before that I knew not to bother to proceed without it.

By the time that Sam returned, all a-twitter about how the Safeway must have received a delivery, a big one, because they had everything she needed, I'd managed to have Loogie organize Swent's family, associates, financial victims, sex-party invitees, and philanthropy recipients, along with all their various connections, into separate groups. It was then trivial to pull out names that appeared in more than one of the groups—Elias Purdy, for example, was prominent on that list.

But that cross-group list was much longer than I would have thought. If virtually everyone hated Trevor Swent for one reason or another, there were dozens of people with multiple reasons for hatred. It was a bit surprising that he'd lived as long as he did.

To narrow the list down, I needed another criterion to add to my Loogie search parameters, and so I chose the obvious one: money. Who would benefit financially from Swent's death?

A good starting place was the will I'd found in the file folder that Michael J. Decker had been examining—as well as the curious invoices that I'd also found in the folder. Then there was the paperwork I'd retrieved from Decker's pocket—similar invoices dated six months earlier.

Thinking of Decker reminded me, had the Estes Park PD followed my suggestion to keep an eye on Swent's house? I considered giving them a call but then decided that an in-person visit would be a better approach.

The PD is in the municipal building, downtown on Elkhorn. It turned out that getting there was a bit more involved than usual, because Elkhorn was closed and looked to be under a foot or more of mud. But at least the water under the main bridge across the Big Thompson was a little lower than it had been on Saturday.

The officer behind the front desk looked up as I walked in.

"Good morning—no, it's afternoon now, isn't it? I'm Mac MacQuarrie, with the Colorado Bureau of Investigation." I showed her my shield. "On Saturday, I called you folks about a collar I'd made but couldn't deal with. This was a Michael J. Decker. I thought I'd follow up with you."

"Yes, Mr. MacQuarrie—that was me you talked with. And we did make sure to keep an eye on that house you were worried about."

"Did you see anything unusual?"

"I wouldn't know about that, but the one of our officers would. Let me see if he's here." She pushed buttons and talked into her headset.

Five minutes later a uniform walked out from a back hallway. "Mr. MacQuarrie? Sergeant Alf Strzpyk. Ah, for your report, that's s-t-r-z-p-y-k. You're here to find out about that house up on the north side, used to belong to Trevor Swent?"

I nodded "Right. I'm responsible for asking y'all to keep an eye on it."

"We did the best we could, Mr. MacQuarrie, given how busy we are with this flood business. Several patrols every 24 hours. And we didn't see anything suspicious."

"Any indications about Mr. Decker's activities? He's the guy who got this all started."

"No, sir. We weren't tasked with watching him. I've heard the name—I think he's a lawyer here in town. But we weren't really paying special attention to him."

"No, I wouldn't have expected that. But, on the other hand, nothing about him turned up?"

"No, sir."

\* \* \*

I'd expected that Decker would have taken the invoices because they could possibly link him to Swent's questionable activities. But the will was curious. The one I'd taken from Swent's file was the original, by the looks of the signatures. If Decker really was Swent's lawyer and executor, he'd have a copy.

The only possible reason I could think of for him to want that original would be to clean up a paper trail—meaning he intended to modify it somehow.

Sam had lunch ready when I reached home, and it was a relief to eat simple ham sandwiches rather than some fancy French concoction.

"So how do things look out there?" She knew I'd been to a different part of town from her trip to the store.

"Elkhorn's full of mud and closed. You probably saw that the river's down just a bit but still way full. Did you notice that all the streets leading down to Fish Creek are blocked off?"

“I did. There must be some problems down that way. I was looking online to find out about damage, and it looks like the roads down the canyons are going to take a long time to fix. But they’re talking about having the Peak-to-Peak ready this week, except it will go only to Black Hawk. All the other canyons are out, too.”

I shook my head. “This is going to be tough on people who live here and work in Loveland or Boulder, and *vice versa*. We should count our blessings.”

“I am. And I’m going to volunteer for cleanup needs. There’s a way to do that on the town’s web site.”

“Well, make sure you get a tetanus shot and whatever else they recommend. Floods come with all sorts of weird pathogens. Broken sewer lines and so on. I’m afraid I’m going to be tied up with this investigation, though.”

“Yeah, I figured that. This volunteer cleaning stuff will give me something to do so I won’t worry so much.”

I reached across the table and patted her hand. “This one is figuring out things by computer. I don’t think you have anything at all to worry about.”

“But that’s what you say every time, isn’t it? I sure hope you’re careful out there.”

After lunch, I dug out Swent’s will. After the usual “sound mind” introductory legalese, it got down to the business of disposing of his property and assets, starting with heirlooms. These were bequeathed to various family members, all of whom were noted as living in other states, mostly in New England. Swent had moved far away from his roots.

The house and its contents were to be sold and the proceeds lumped together with his investment portfolio and bequeathed to various organizations, an approach consistent with Swent’s recent philanthropic bent. The bulk of it all, laid out in percentage terms, was to be split among several universities, some familiar national charities, and several local non-profits. One of these was called the Central Rockies Associated Foundations and Trusts, Inc. and another was called the Center for Retreats of the Army of God. CRAFTI, according to its web site, was a clearing house for non-profits throughout the Colorado mountains, and it redistributed funds widely.

I also discovered that CRAG, located just south of Estes Park on the Peak-to-Peak Highway at the north end of the Tahosa Valley, proclaimed itself the premier mountain retreat center for evangelicals interested in promoting their religion to non-believers. Every army, they asserted, needed to undertake strategic retreats, and the Army of God used its retreats, at the Tahosa Valley center, to formulate and fine-tune new strategies to bring the unwashed into the fold. Like the universities and the familiar charities, they were tax exempt—meaning, I suspected, that these beneficiaries collectively would offer tax shelters for almost all of Swent’s estate.

The question of who might benefit financially from Swent’s death was therefore not going to be answered by his will—unless a bunch of professors, or maybe the rugby team, knocked him off so that their university’s endowment could grow.

On the other hand, Swent’s relatives were basically getting stiffed—but they wouldn’t have known that, and if they had it wouldn’t enhance any previous motivations they might have had to kill him.

It didn’t surprise me that there was no mention of the cocaine or the sex gadgetry in the will, but I would have thought that the Iraqi artifacts would have warranted a paragraph or two. As it was, the instructions would have required them to be liquidated along with the house and furniture.

Well, I thought, that part had been taken care of, courtesy of my clever idea and Brad Winchester's good sense.

I fed the will into home-office scanner, and the optical character recognition software automatically digitized it so it became incorporated into the overall Swent database. Searches would now include its information as well as everything that Hal's original multi-system search had found. Out of curiosity, I re-ran the Loogie searches I had earlier, but with the will included this time.

The new results changed everything.

\* \* \*

The computer network that Hal and I had assembled for our search process at MPARC on Sunday had included all of the federal computers that he and I had access to plus some usual suspects such as the Google cloud. We had not, however, included any State of Colorado systems, because they were out of our respective universes, computer-wise. But several of the non-profits that had emerged from my Loogie search processes were Colorado corporations, and State of Colorado computer systems held their records.

It was mid-afternoon, and I suspected that Hal would still be tied up with Harmon Jameson, so I called Annette.

"Annette? Mac. Say, I wonder what it would take for me to get credentials for the State of Colorado's computers that hold public records, especially corporation records. The thing is, the computer search that Hal and I ran yesterday didn't include any Colorado computer systems."

"I think I understand. It shouldn't be a problem, Mac. Let me make a couple of calls." She paused. "How are things over there?"

"It's going to be a long, long road back, Annette. Lots of people have lost homes, and access to cities down on the plains is going to take several months. Sam and I are OK, but many others just aren't. And we're not all that far from winter, are we?"

"Well, if you need to get away again, we're here for you. Like I said, our guest wing hardly ever gets used, and we'd be delighted to have you here. And I'll call right back with the computer information."

While I waited, I set up a new Loogie search, using Sunday's results, the ones that Hal had put into my filesystem on the MPARC computers, to be combined with data from the new, Colorado computers that Annette was working on for me. That would make the whole thing faster, and I couldn't replicate Sunday's searches without Hal's involvement anyway.

Twenty minutes later, an impatient twenty minutes for me, Annette called back with the login information I needed, and it took me only another five minutes to get my new search started. Then I had to wait again, but the smaller network this time produced results that almost felt like instant gratification—and gratifying it was, because it validated the suspicions I'd felt after including Swent's will in the search domain.

Got 'em, I thought. Now I just have to prove it. Or, better yet, figure out how to flush them out in a way so that they prove it themselves.

As I was pondering this, the doorbell rang.

When we'd bought our house, the two sidelight windows on either side of the solid front door had been clear—and that seemed too public, so we had them frosted. But then there was no visibility out,

and Sam had insisted on installing one of those little peep-hole viewers. I'd become accustomed to using it.

And this time, what I peeped at was a Boy Scout, fidgeting. So I opened the door, and he launched into an obviously prepared speech.

"Hello, sir, We, the Estes Park Boy Scouts, are going door-to-door delivering these." He handed me a sheet of paper. "I'm sorry to say that the flood has destroyed the sanitary sewer downhill from here, and you're in the 'no-flush' zone. Have a good day."

He didn't waste time turning to leave, but our porch, with sets of steps and a sharp turn, doesn't lend itself to quick escapes.

"Wait!" I had, as you'd think, questions. "What about..."

He turned. "Oh, I'm sorry, sir, but I really can't answer questions. There's a phone number and email address on that sheet, if you have questions"

And he scurried off.

As I closed the door, I heard a toilet flushing, and Sam walked into the living room. "Who was that?"

I handed her the sheet of paper. "Now, don't you get going and feeling guilty. You didn't know."

I watched her eyes get big as she read it, and I continued to watch them as she read it again. The second time through, they narrowed into little slits.

"Well, what the hell are we supposed to do, anyway?"

"Right, well, you saw the deal. Public facilities for now, neighborhood port-a-johns pretty soon. All over this end of town. This must affect three or four thousand people."

"Port-a-johns!! Like, like..."

"Yeah, like your great-great grandmother used to have out back of the farm house. But these are fiberglass and will probably be conveniently located down the block. And hopefully they'll get pumped out every now and then."

"But...but..."

"I know, it seems bad now. And, y'know what? I think it'll seem lots worse as time goes on and winter weather starts to move in. I mean, I can probably manage by peeing on the bushes in the middle of the night, but, well..."

"Yeah! Exactly! But what about *me*...well, this is just impossible. Do something!"

She'd adopted that classic stance again, and, to me, it was just as sexy as ever.

"Well, let me see if I can find out how long this may go on."

Atypically, she followed me in to the study and stood behind my chair as I started trying to find information on the internet. The Estes Park web site offered little hope.

"Oh, see this, Sam?" I pointed at one of their recent updates. "The town is saying that it'll probably take about six weeks to get even a temporary sewer line installed."

"SIX WEEKS OF NOT FLUSHING THE TOILETS?" Sam was livid. "What are we supposed to do? This is the twenty-first century in the U-S-A, for Christ's sake. Not some third-world place in Africa or Asia where you have to use a hole in the yard!"

“Now, now. The damage has been pretty severe, according to what they’re saying on this web site. A couple of miles of ruined feeder pipes. And you don’t want all that sewage to just go into the watershed, do you, or the lake?” I had an idea, and stood up to hug her while I filled her in. “Say, maybe you could pack up your car and go stay with Hal and Annette. They’d be happy to have you, because you could paint their mural from real life, with all the changing light and so on, rather than from Hal’s photograph. And the aspen will be turning colors pretty soon, and that should be spectacular over there.”

She stopped yelling, and I could tell she was thinking about the idea. “It doesn’t sound like you’re going to come with me.”

“Well, I need to be here for this murder investigation. I can’t do it right from over there. But maybe, you know, I could come over now and then to visit and to work more with Hal’s computers.” Wait! I thought. Priorities, pal, priorities. “Mainly to see you, of course.”

She snuggled into my hug. “So, Mac, really. Why did you faint over there at Hal and Annette’s the other evening? What did you think I was going to announce, anyway?”

I’d known this would be coming, and I’d resolved to wing it. Let’s just say that I did so in such a way that our last night together was one to remember for a while. We opted for a motel that wasn’t in the no-flush zone and, lo and behold, the room we got had a Jacuzzi tub big enough for the two of us.

The way that worked out made me think about getting one installed at home.

\* \* \*

## Twelve

It took most of the morning for Sam to get started west on Tuesday. She decided to pack for six weeks, not that she had forty-two sets of undies or anything, but the upcoming changes in the weather were going to require a versatile wardrobe. By the time she was finished packing, she had so much luggage that I couldn’t see how it was all going to fit in her pink Beetle. Since I wasn’t coming, though, we managed.

As she was deciding what to take, I put the winter tires on her car, so that she’d be ready in case—or, more likely, when—it snowed at Hal and Annette’s place. Living almost next door to a ski area as they did, being prepared for snow after mid-September was part of the routine. I also made sure that Sam had the right maps to find her way back home after Trail Ridge Road closed for the season.

Sam had called Annette the previous evening to explain the situation and take her up on her offer of hospitality. Annette, of course, was shocked at the state of affairs, sanitation-wise, and virtually demanded that Sam get herself over to Fraser right away. She eased up a bit only when Sam told her that we were in a flush-capable motel for the night.

Although I was listening to Sam’s end of the conversation, it didn’t sound as if my name came up at all. Sure, I thought, worry about Sam—guys like me can just make like bears and do our business in the woods. Or, because there aren’t any woods in our neighborhood, at one of the several public restroom facilities around town. None closer than a couple of miles away.

Well, I thought, at least there are those bushes out in the yard.

Eventually, the car was loaded and Sam, after a more extended goodbye than I thought necessary, was on her way. The first thing I did was check the refrigerator to see what there might be for me to eat,

and the second thing was make a trip to the Safeway. I knew that frozen dinners would seem like a big come-down from Sam's cooking, especially her cooking as guided by Julia Child's cookbook, but I figured I was going to be busy.

Before I picked up those frozen dinners, though, I took a turn through the neighborhood on the hill above Stanley Village, the shopping center where the Safeway was. It was a higher-end development, rather pricy by my standards, and one with houses of upwards of thirty years old. This meant that the landscaping was mature, something that pleased me, for Michael J. Decker had a house there and I needed to get into it.

My overseas work for the three-letter agencies had included all sorts of sneaky episodes, including clandestine searches of buildings of various kinds. Office buildings were the easiest, even those with 'round-the-clock guards, but residences were not far behind. Well, except when there was a family dog.

I knew, though, that a search of Decker's house would be of little use unless I could eventually use what I found as evidence, and that would require a search warrant.

So after I returned home and put my groceries in the freezer, I called Brad Winchester, explained my problem, and outlined the background on Decker.

"You found him in Swent's house twice? With the door kicked in? Seems like he ought to be in jail, estate executor or no," he said. "Tell you what. We've got a judge down here who's been really tough on the two looters we've caught so far. Send me your reports of these incidents and I'll see what I can get him to do."

"Outstanding, Brad. Naturally, the broader and more comprehensive the search I can do, the better. And it needs to include whatever office papers there may be. But I hope you can keep this between us and the judge. Estes Park is a small town and word gets around fast. We don't need Decker knowing about this, right?"

"Oh, don't worry about that. And, say, do you need help? Aaron Smithy is going to get up your way this afternoon—they got the Peak-to-Peak Highway open, finally. He's going to be my deputy in Estes Park for the duration."

"No, no thanks, Brad. I think I can handle this myself." Smithy's involvement, I thought, would be the last thing I'd need.

"OK, then, Mac, I'll fax you the warrant as soon as I get it. What's your number?"

I gave him the number of the fax service we used, which would forward the document to me as an email attachment.

That taken care of, I undertook a little trip into our crawl space.

Our house doesn't have a basement, but, unlike the house I'd owned in Florida, it wasn't on a concrete slab, either. Instead, under the main floor was a crawl space with somewhere between 4-5 feet of clearance between the ground and the floor joists. It had not been something that Sam paid any attention to when we were house-hunting, but it was a major attraction for me. I needed a location to store, in a very private and secure way, the tools of my trade—various and sundry gadgets and supplies that I'd learned could come in handy at unpredictable times, as well as my weapons and ammunition. It's not like I have a huge collection, but some of the weapons, in particular, aren't meant for civilian use, and they don't need to be out on the streets. I'd built several locking storage cabinets in the crawl space, all suspended from the floor joists and off the ground.

Good thing, too, because when I got down there I discovered that seepage from the days of rain the previous week had turned the ground into mud, sandy mud, given the soil in our area, but it was a good thing that nothing was sitting on it.

I found what I needed, probably way more than I needed, actually, locked the cabinets back up, and crawled out the little door into the garage. Then I went looking for the box fan I knew was stored somewhere, found it, and set it up to blow fresh air into the crawl space—and, I hoped, to dry it out.

At least we didn't have a basement full of water, like so many folks did. And, yes, Sam was right—the no-flush thing was a bit too third-world to be acceptable. Still, it was just an inconvenience rather than a tragedy. I resolved to shut up and deal with it, and not to complain.

With that in mind, I called Annette.

“Mac, how are you? Did I get the idea that Sam is coming over here all by herself?”

“Uh, I don't know about your ideas, but she is. She ought to arrive shortly. I'm up to my eyeballs in this Swent murder. And all the database searches paid off. That's what I called about. I'm going to need some CBI help.”

“I thought that Sheriff Winchester was on top of things.” She sounded puzzled.

“Yes and no. He's got more flooding in the eastern part of the county to worry about now. And the thing is, I'm pretty sure some of his personnel are compromised, maybe even part of what happened to Swent. Not Brad, and I wouldn't be surprised if he doesn't know anything about it all. But I can't really ask his office for help.”

“Oh. Well, what do you need?”

“Brad's getting me a search warrant for Michael Decker's house, and it would help to have a solid forensics team here to execute it, tomorrow morning. I'm told the Peak-to-Peak Highway is open, so they wouldn't have to come in through Fraser.”

“I think we can manage that. I'll have a team there by ten, how's that?”

“Perfect, Annette. Thanks.” As I disconnected, my thoughts turned to the few hours after dark, this evening.

\* \* \*

Michael J. Decker's name had turned up over and over again in my database search results in association with a variety of individuals, groups, and organizations. The combination of the various federal databases with what was on the State of Colorado computers was especially powerful in finding these links. For example, the 16-year-old girl whom Swent had been arrested for taking dirty pictures of was identified deep in one the Colorado databases as one Leah Grossman, whose divorced mother, Janice, was a client of Decker's. Apparently, they were doing nude modeling together for Swent's camera, but it was Leah's participation in these questionable photo-sessions that got Swent busted.

Of somewhat more interest to me, aside from the curiosity factor of the Grossman arrangement, was that one of the organizations in which Decker was involved, to the point of being a board member, was the outfit that ran the Center for Retreats of the Army of God, CRAG. Further, they held weekly meetings up at their retreat center in the Tahosa Valley every Tuesday evening. I figured this would keep him occupied for the better part of three hours, after dark.

I'd also learned that Decker was divorced but had kept the house, in which he now lived alone and maintained his legal office. It was therefore the perfect time to have a look through the place before the

CBI team executed the search warrant that Brad Winchester promised me. I thought there might be some information there that I wanted to keep to myself for the present.

The warrant came to my email box late in the afternoon, and to celebrate I heated up a package of frozen mac and cheese, adding to it some extra pecorino Romano for zing. Then I put together my kit for the evening and stashed everything carefully in the Jeep. Its previous owner had installed, in addition to the wealth of off-road gear, a locking strong-box in the back, and I filled it with a variety of useful gadgets.

Decker's house sat on a cul-de-sac on the hill above the Safeway, and I'd seen the signs of a national home-security company when I'd toured the neighborhood earlier. For me, that was good news, because it meant that Decker probably relied on that company's technology, rather than a dog, to secure his house. And, well, with all due respect, that technology was a piece of cake to defeat.

A bigger worry for me was where to park and how to avoid being observed by accident—if Decker didn't have a dog, others did, and they sometimes walked them in the evening. Running across a stranger all dressed in black and wearing camouflage makeup would likely make for interesting neighborhood gossip—after, of course, a phone call to the PD.

But all that mature landscaping, plus the rain that had started up again, did the trick, and within a half-hour after dark I was inside Swent's house with the security system disabled. He'd left several lights on, but all I had to do was to avoid walking between them and the windows. And in the unlit rooms, I had my blue-bulbed flashlight to show me the way.

I spent about fifteen minutes unsuccessfully looking for hidden closets or other storage areas, as at Swent's house but didn't come up with anything. That left me perhaps an hour and a half to examine Decker's office carefully.

It was an old-fashioned study, dominated by dark wood and leather furniture with plush, floor-length drapes covering most of the wall behind the desk. The only thing missing was the smell of stale cigars. I thought a second door would open into a closet, but it turned out to be a lavatory. It occurred to me that Swent's house was not in the no-flush part of town, and I decided to spend a few minutes taking advantage of the opportunity.

Feeling relieved, I stood in the lavatory doorway and surveyed the room. Aside from the desk, the most obvious thing in there, prominently displayed against the wall next to the desk, was a gun cabinet. That must make clients feel comfortable and secure, I thought, a lawyer with guns close at hand.

Against the opposite wall stood several file cabinets and bookcases, all of the same dark, polished wood as the gun cabinet and the desk. There were two comfortable-looking, leather-upholstered side chairs facing the desk, the surface of which was empty except for the usual accessories—an in-box, a fancy pen in a holder, a telephone, and a large, flat-screen computer monitor. Behind the desk was a throne-like executive swivel chair. Decker apparently liked to work an intimidation factor into meetings with clients. I turned to the file cabinets.

Decker's files were arranged more traditionally than Swent's, alphabetically by client, which suited my purpose perfectly. I found Swent's file easily, but it was too big either to read or photograph in the time I had, so I slipped the whole thing into the courier bag I'd brought. Janice Grossman's file included an unlabeled DVD as well as several pictures of her and Leah in what can only be called "compromising positions"—so much for my curiosity factor—and it occurred to me that these pictures made Decker guilty of possessing kiddie porn, "officer of the court" or no.

I spent all the time I felt comfortable with, collected three other files I found, and photographed key documents in several others. Decker's computer was sitting there, humming contentedly, beckoning, and I noticed that there was an external USB drive sitting next to it and a flash drive stuck into one of the

USB slots in the CPU box. I unplugged those without ceremony and put them into my courier bag, and, after some thought, decided to let the CBI team deal with the computer itself in the morning. After checking the room carefully to ensure that I'd left no trace of my presence beyond the stuff in my bag, I closed the lavatory door and turned to leave.

But just then I heard the click of a lock's being forced in another part of the house, and then there were stealthy footsteps headed my way.

I thought of the lavatory—it had another door leading into some other room—but remembered that its hinges had squeaked when I'd opened and closed it before. The only other option was behind the drapes, so I eased to the end by the gun cabinet and slid behind them, making as little disturbance as I could manage.

Between the gun cabinet and the corner, so close I could almost reach out and touch it, was a large, framed photograph of Decker posed with a bull elk he'd apparently shot, an impressive 7x7 specimen, and I noticed that there was enough light to see a reflection of most of the room off the glass in the frame. I could only hope that whoever was coming down the hall wouldn't see a reflection of me.

A few seconds later, that individual crept into the office, someone dressed not unlike I was, all in mottled black, but with a black ski mask instead of camo makeup. In his right hand, he—and the skin-tight black coverall made it pretty clear that it was a he—held a very large, long-barreled revolver that looked like a .44 magnum, maybe a Colt Anaconda, fitted with a suppressor. It was a huge piece of hardware, its size emphasized by his small, slender stature, on which a small backpack gave him a humpish look. He looked around the room and slipped over to the lavatory door, opened it, cringed when it squeaked, and stepped inside, closing it behind himself, but not all the way.

Stalemate, I thought, except he didn't know about my presence. As I was trying to figure out what to do, I heard a rumbling and decided it was the garage door opening. Decker must have arrived home from his meeting with the CRAG people.

Over the next several minutes I worked hard at breathing very quietly, mouth wide open, while I listened to noises from what must have been the kitchen—doors of various sizes opened and closed, ice cubes clinked, and a liquid was poured. Eventually, Decker walked into the room carrying a briefcase in one hand and a glass containing the ice cubes and an amber liquid in the other. He walked around the desk to sit down on his throne, about four feet from where I was standing behind the drapes, and set both the glass and the briefcase on the desktop.

"Stupid sons-a-bitches," he muttered, as he reached out to open the briefcase.

"What the..." It was the squeak of the lavatory door hinge that surprised him and caused him to freeze, and then he stood up when the small, black-clad figure emerged into the room.

"Who..." Decker stopped when he saw the revolver pointed at him. "Wait..."

But there was to be no waiting. The suppressor was only partly effective, and the report of that big gun reminded me of the time Sam had dropped a five-pound bag of rice on the kitchen floor when I was down in the crawl space. The first shot hit Decker almost in the center of his chest, between the sternum and the left nipple, and knocked him back into his chair. Beside me the curtain twitched and the window shattered. The second shot blew his head apart like it was a water balloon filled with Campbell's Cream of Tomato soup. The curtain twitched again, and the rest of the glass in the window fell to the floor.

The figure in black took just enough time to pull out a smart phone and take a couple of pictures of his victim before getting busy. First he tipped over the bookcases into the center of the room and broke up the chairs, adding the wood to the mess. After that, he walked around the desk and, with obvious effort, rolled it over on top of the books and bookcases, and hauled Decker's body onto the pile. Then he

opened the file drawers, tossed the paper around the room, and smashed the front of the gun cabinet, which gave him the opportunity to pitch ammunition boxes in with the debris. Finally, he removed his backpack and took out three liter-sized canisters. These he emptied onto the pile of paper, wood, and protoplasm, and the cordite smell in the room took on the aroma you'd expect from a mixture of kerosene and acetone.

He paused and took the time to survey his handiwork, then decided on a finishing touch, tipping the empty file cabinets onto the pile. That done, he took an old-fashioned cigarette lighter from a pocket, lit it, tossed it at the rubble, and dashed down the hall.

With a deep *ker-whump* that I could feel in my stomach, the room exploded in flame.

I hadn't noticed, but that window I was standing next to was really a French door, now missing its glass and open to the outside. But the explosion of flame had pushed the drape next to me out the window, and I was tangled in the rest of it, all wrapped up in soft, plush fabric that smelled dusty. It was quickly getting hot, and I noticed that I was beginning to have trouble breathing.

Just as I started to panic, and to my everlasting relief, the drape was sucked back in the window, and it untangled itself from me in the process. As I stepped out into the fresh air, I noticed two things—there was a stiff breeze into the house, no doubt the draft of the fire, and the rain was more intense than before. Even though I knew that more rain would cause only more problems, I was glad to see it. Maybe, I thought, all that mature landscaping vegetation would survive this fire.

\* \* \*

My first instinct, of course, was to get away from there post-haste. But as I was working my way back to my Jeep, listening to the ammunition in the fire beginning to explode and keeping to the shadows and bushes as much as possible, it occurred to me that I had law-enforcement credentials plus that search warrant. Maybe my makeup would be a bit suspicious, but I really didn't need to run. My instinct kept me moving, however.

Lights were coming on in the neighboring houses, and about the time I reached the Jeep, I heard sirens. Even though the local fire department comprised volunteers, it was on the ball, I thought. And a good thing, too, if the CBI search team was going to have anything to search in the morning. I expected the office to be completely destroyed, but I really hadn't inspected the rest of the house in detail. Maybe there would be something left to shed light on this whole thing.

Back at the Jeep, I used a towel I'd brought, along with some rainwater, to scrub most of the camo makeup off my face, and then I sat back to think. That hit on Decker had been about as professional as I'd ever seen, at least in the category of "make a big splash" hits. Of course, the Swent crucifixion was splashy, too, but it was both crude and sadistic. Decker was whacked by a professional, as far as I could tell. But why? And who was that guy with the Anaconda, anyway?

Maybe, I thought, I could use those databases I'd already searched to generate a list of CRAG members and see if any of them had the sort of background that would suggest the skill set I saw in action back there. That sort of professionalism came from training and experience, as I well knew. A three-pound revolver with the extra weight of a suppressor on its business end wasn't something that you shot accurately without lots of practice. And that guy's accuracy had been quite good, particularly the head shot.

When my breathing and heart rate finally calmed back to something resembling normal, I started the Jeep and, as quietly as possible, eased it down the street and out toward the main road. Because I had to pass Stanley Village, I pulled in there to try to blend in with the late-evening shoppers who were

picking up last-minute items from the Safeway. After a couple of turns around the parking lot, I headed out the other exit and pointed the Jeep toward home.

Part of me was repeating the “I’m getting too old for this…” mantra, and part of me was wondering what the hell I’d just witnessed. That second part, I knew, would be keeping me up for a while yet.

Just before my turnoff from South St. Vrain, my phone came to life, reminding me that I’d forgotten to turn it off during my little escapade in Decker’s house. As I pulled it out of my shirt pocket, I thanked my lucky stars that no calls had come in while I was hiding behind that drapery.

“MacQuarrie here.”

“Mr. MacQuarrie, this is Sergeant Alf Strzpyk, Estes Park PD. You asked us to keep an eye on Mr. Michael Decker.”

“I did, and thanks for calling.” I had a suspicion what this call was about.

“Well, I’m at his residence, which is on fire. There’s no sign of him, however.”

“Hmm. Well, presumably he’ll turn up at some point. How bad is the fire?”

“Looks like it’s pretty well confined to one wing, the east end of the house. They’re getting it knocked down, so it doesn’t look like the entire structure is going to be lost, but that end, whatever those rooms are, they’re gone.”

“Thanks for letting me know, Sergeant.” I thought a minute. “And, say, are you on duty tomorrow morning?”

“I clock in at eight for a day shift tomorrow. Let me know if you need anything.”

I was pretty sure I’d be calling him.

Back at home, I finished the job of washing that makeup off, took a shower, still allowed under those pesky no-flush rules, and poured myself a generous B&B on the rocks. Part of my brain had been busy processing Decker’s shooting ever since it happened, and a couple of questions were rattling around up there.

For example, it appeared as if the shooter was familiar with Decker’s house. He forced the lock and showed up in the office almost immediately, as if he knew where it was. And he headed right for the lavatory door, as if he knew to hide in there—although its squeaky hinge had surprised him. Maybe, I thought, the squeak was a recent development. Or maybe he hadn’t really been in the house before but had only a map or some such to go on. That would mean that someone who had been in the house had prepared that map—which meant that whoever set Decker up was a friend, associate, or client.

Then there was the question of the shooter’s identity. If this whole affair was a truly professional hit, then the shooter would not be someone local. A pro from outside would have been brought in. That assumption fits with the notion of a map, I thought. And it would also be better for all concerned if that were the case, because the last thing that Estes Park needed was an expert assassin on the loose. An outsider, I knew, would already be on the road out of town, even if that road was over Trail Ridge.

Then there was the muttered “sons-a-bitches” I’d heard from Decker, nearly his last words. They could only refer to people at the CRAG meeting. Yet the hit had clearly been planned well in advance—professionals like that guy in the black coverall, especially ones from out of town, don’t operate on last-minute instructions.

Finally, there was the splashy nature of the whole thing. I’m ashamed to say that my years working for Uncle Sam included several assignments that involved, as we called it, “wet work”—all authorized under various statutes and regulations, of course. But all of my jobs of that nature had been as

clandestine as possible, usually involving close-up head-shots using a suppressed .22 pistol. The only conceivable reason to use such a large-caliber weapon as shot Decker and then to set the fire would be to send a message to someone else. Who, I wondered, could that be?

Such message-sending would fit perfectly into the Chávez cartel's motivation for killing Swent, but I had seen no indication in all of the database search results that Decker was in their bad graces, nor was there any connection between them except Swent. Unless they knew Decker to be Swent's executor and had been turned down for a payment already. That possibility seemed worth exploring.

And a splashy hit would also be one possible means for revenge by the Iraqis who were so put out with Swent—except I'd dealt with that. Also, despite its brutality, Decker's death was just too quick for that Iraqi bunch. They'd want extended suffering and lots of it, just like the way Swent was actually murdered.

It was getting late, I'd neglected to call Sam as promised—a gaffe that I'd have to figure out how to make up for—and the combination of an adrenalin crash and the B&B had relaxed me into somnolence. There wasn't going to be any more computer database searching, using Loogie or anything else, tonight.

But I had one more chore. I had to go outside and check on the health of our bushes. When we bought our house, it had enough landscaping so that it didn't look barren, but, having spent almost all of her life in South Florida, Sam's idea of landscaping was far, far more lush than what came with the house. So we'd spent a pretty penny on both bushes and underground drip irrigation to nurture them.

My chore was to go out there and decide which of those new bushes needed nourishing in the form of various salts and uric acid.

It turned out that, given how heavy the rainfall had become, I didn't have to worry about providing those bushes with too concentrated a dose of that nourishment. That was the good news. The bad news was that I got good and soaked taking a leak.

\* \* \*

## Thirteen

Wednesday morning dawned gray, gloomy, and raining like cats and dogs.

Getting soaked the night before had revived me just a bit, and I had spent a while lying in bed trying to figure out an alternative to getting soaked again in the middle of the night. But then it occurred to me that showers were allowed, so whatever went down the shower drain was deemed OK. That meant that the key was sufficient dilution. *That* meant I could deal with the old-guy-getting-up-in-the-middle-of-the-night problem in any number of ways.

Having figured that out, I slept like a baby.

Because the CBI forensics team wasn't going to arrive until about 10 Wednesday morning, waking up at 6:30 meant that I had plenty of time to get a start on the day. That start included, of course, breakfast, but while I was eating my fried-egg, ham, and cheese sandwich, a home-made, gourmet version of the famous McDonald's creation, I was also working the databases for more information on CRAG.

As a tax-exempt non-profit, CRAG's directors, structure, and tax-returns were all public information. In addition to the connections I'd noticed previously, a new one jumped out at me: the

CRAG director's background. One of the more deeply classified databases told me that Lemuel Purdy, the current CRAG director and Elias Purdy's brother, had spent three decades working for the CIA, mostly as an analyst at Langley. But he also had some field time in South America. Now retired, he lived on the CRAG campus in the upper Tahosa Valley on the west slope of Twin Sisters Mountain, and apparently he was putting his career experience to work for the Army of God.

The implications of this were not all clear to me, but one thing was obvious: Lem Purdy would know all sorts of people with the skills I'd seen in action the night before at Decker's house—and he might well have some of those skills himself.

Because there was time before the CBI team arrived, I decided to take a quick look at CRAG headquarters.

That turned out to be more of an adventure than I'd anticipated. State Road 7, the designation of the Peak-to-Peak Highway just south of Estes Park, was once again officially closed, as I discovered in a conversation with a dripping-wet State Patrol officer at the base of the long grade out of the Estes Valley. He told me that the highway department had fixed the problems that had closed the road over the weekend, but there was concern that this second episode of rain would create new problems in the form of more mudslides, pavement undermining, and cave-ins.

My CBI shield got me past him only after he warned me to stay away from the edges of the pavement, and I hoped that the same would be the case for the CBI forensics team headed north from Black Hawk.

The drive up the grade was something of an anticlimax after that discussion. Yes, there were places that had clearly suffered considerable damage and others that looked ripe for new damage, and the eroded ditches made those I'd seen the previous week along Marys Lake Road look benign. But, with no traffic, negotiating the road up and over Wind River Pass was easy.

It was different on the other side, at the very upper end of the Tahosa Valley, though. The west side of Twin Sisters Mountain had undergone significant terra-forming over the past week, and it would never be the same again. Mudslides—or, more properly, because they included trees and rocks and Lord knows what-all, debris flows—down normally placid drainage gullies had wreaked havoc on the pastoral setting of the two guest ranches up there, and a truly massive one had, somewhat miraculously, stopped just short of the buildings of one of them.

But the highway had been cleared, and I was able to cruise past all the devastation to the entrance to the CRAG property another couple of miles south. The gate was shut, and there was nothing much to be seen from the highway, so I decided to gain a bit of elevation to improve my vantage point by ignoring the "Closed" sign on the county road up to the Longs Peak Ranger Station on the opposite side of the valley.

I'd noticed that the rain, although continuous, had been spotty, sometimes heavy and sometimes light. Although the heavier downpours blurred things beyond recognition, I could see the CRAG campus when the rain let up a bit. In the meadows in the valley, there were several buildings, all painted white with red roofs, that looked to be dormitories and meeting halls. Closer to the base of Twin Sisters Mountain, there were barns and corrals, with a small herd of horses loafing around under overhanging roofs. The whole property was landscaped in a way that didn't look landscaped, with stands of tall aspen mingled with conifers interspersed with meadows that still supported wildflowers. It was quite beautiful, and I could see how people who came for conferences from flat, dusty places to the east would find it inspirational.

I set my binoculars aside to get a big-picture view of the whole campus, and it presented a scene of pastoral elegance, albeit wet elegance, given the rain. And I noticed another building above the barns, on the lower slope of the mountain.

With the binoculars, I could see it was a remarkable house, probably, I thought, the residence of Lem Purdy. It looked like two houses, actually, built about fifty feet apart and connected by a large and complicated bridge/deck structure. Part of the structure, the bridge part, I supposed, was roofed over; the other, deck-like part had several chairs and tables on it. In good weather, that would be a spectacular place to sit and enjoy the view of Longs Peak and its neighbors, especially in the early summer when there would be a little brook running under that bridge.

Now, however, that brook was raging, and it looked dangerous. Using the binoculars, I scanned up the mountainside along the drainage and discovered evidence of slumping into the gully higher up, with the brook's spilling over part of the slump. Whether there was a new pond forming up there was something I couldn't tell from my vantage point, but seemed possible. Given that, to my decidedly un-expert eyes it looked as if that little brook over which the house sat was ripe for one of those debris flows. And if a big one got started, it looked as if it would take out not only the house but also the barns and much of the campus infrastructure in the meadow.

This presented me with something of a moral dilemma—should I try to warn Purdy and the CRAG facility's residents? This seemed like a responsible approach, what a good citizen would do under the circumstances. But, knowing what I knew at the time from my database searches, there was also a voice in my head that was urging me to just wait and see.

Resolving that dilemma was deferred for me when my cell phone buzzed in my shirt pocket.

“Mac MacQuarrie here.”

“MacQuarrie, this is James Levenger, CBI. I'm heading the forensics team you requested, and we're just passing Allenspark.”

My mental map of the Peak-to-Peak Highway was not quite what I would have liked, but it was at least fresh in my mind from the trip down to Black Hawk and back.

“Good to hear from you! I'm glad they let you come up the highway instead of sending you around through Granby. Turns out I'm about five minutes up the road from you, doing some recon. I'll be in a black Jeep with my flashers on, just past the turnoff for the Longs Peak Ranger Station.” A memory of my recent trip popped into my head. “Not the Wild Basin turnoff, the Longs Peak turnoff. I can lead you into town and to our search site.”

“That's the best news I've had all morning, MacQuarrie. Thanks. This whole thing with the flood you've had seems pretty on the edge up here.”

“It is, actually. See you shortly.” I disconnected.

\* \* \*

I hopped in the Jeep, drove back down to the Peak-to-Peak, and parked just north of and across from the road up to the ranger station, with my flashers on. A few minutes later, two cars appeared in my rear-view mirror, and the lead one flashed its headlights. I pulled out and headed back towards town with them following.

Decker's house was, as I expected, a smoky mess surrounded by yellow tape, but there was no one present when we arrived. The flooding, I decided, was a justifiable priority for the local authorities.

The CBI forensics team went right to work, and I, with nothing much to do, called Sam.

“*There* you are. About time you called.” She sounded more relieved than mad. “Were you out partying all night, or what?”

“Oh, yeah, sure. Nothing like having an all-night party with lots of hot babes and no working bathrooms.”

I heard a giggle. “That reminds me of when you found me at that cabin out in the Everglades. We were a bunch of hot babes, that’s for sure, but not really in a mood to party. Did I ever thank you for rescuing me?”

“Ever since. But you’re welcome to thank me more.” That memory made for sweet feelings for me, too. “Anyway, I’m sorry I didn’t call last night, but it just got too late by the time I had a chance. This case has kept me busy, what with my being the only person working it. How are things over your way?”

“Beautiful. Kinda chilly this morning, actually, but beautiful. Sunshine and late summer flowers.”

“Well, that makes me jealous. It’s raining again here, started last evening and hasn’t let up since. I think this flooding business is only going to get worse. They closed the Peak-to-Peak again.” It occurred to me not to be overly gloomy. “But our forensics team got through, so we’re making progress on the case. That’s something, at least.”

“Progress is good. And speaking of that, I’m making good progress on this panorama. I’m going to sketch it out in my usual style and then see how much detail I can fill in. That’ll keep me busy so I don’t worry to much. About you.”

“Don’t tell me you’re going all Bierstadt.”

“Huh? Who? Oh, you mean Alfred Bierstadt. No, no that’s too much detail. And he made his stuff up anyway, or so I read. I’m doing the real deal here.” She paused. “So when am I likely to see you?”

“I’m hoping this weekend. Like I said, the case is progressing nicely.” As much as I liked talking with her, I felt the urge to do something productive with the CBI team. “Listen, I need to say goodbye for now. The forensics guys need me for something. Talk to you later?”

“I sure hope so. Call me this evening, OK?”

The fib wasn’t really that far off the mark—the forensics team would surely appreciate some coffee, I decided. And there was a Starbucks just down the hill. Talk about being productive!

But they did appreciate it, especially the trio who were involved in the dirty job of sifting through the rubble of the burned-out study. Between the accelerants and the wood furniture, that entire wing of the house had been reduced to ashes, brass cabinet fittings, metal gun parts—and some teeth. I decided not to mention that they were Decker’s teeth, but rather to let the team find that out from dental records. My visit the night before was going to be my little secret, along with the documents and computer gear I’d made off with.

In contrast to the search of what had been the study, searching the remainder of the house was routine, although the smoke smell everywhere was annoying. James Levenger had brought seven CBI forensics experts with him, and three had spread out to examine thoroughly all the unburned rooms. Just as I was delivering Levenger his coffee, his radio crackled.

“Jim? Louie here, I’m in the master bedroom. I think I’ve found a safe behind a false set of shelves in the closet.”

Levenger pushed the button on the microphone on his lapel. “Good work. I’ll be right up.”

I managed not to spill any of the remaining coffee as I followed Levenger up the staircase, embarrassed at myself for not finding that safe the previous evening. But I kept that to myself.

The guy named Louie was in the biggest bedroom, staring out a window at the ashes of the study. “Gotta say, Jim, it sure looks like whoever set this fire was interested only in that wing that burned.”

“It was raining, I’m told, and the fire department got here pretty quickly. Otherwise the whole place would probably have gone. It’s frame construction with wood siding, after all” Levenger looked about the room. “So, what did you find up here?”

“In there.” Louie pointed at an open door and headed that way holding the cup of coffee I’d given him.

The door led to a large bathroom with another door in a near wall. Through that door was a walk-in closet with clothes on hangers along two of the walls and a set of shelves holding folded clothes on a third.

“Watch this.” Louie stooped and reached under the bottom shelf.

There was a sharp click, and the shelving unit and the wall behind it began to pivot. He stepped back and gave the shelves a pull, and a doorway to a hidden room appeared. There was a large safe immediately to the left.

Levenger was nodding. “*Very* good work, Louie. I wonder if we can get this thing open?”

“I’ll get right on it.” Louie looked eager to tackle the challenge.

I followed Levenger around as he wandered the house, checking with his other team members, but no one had found anything else of interest.

“Looks like the interesting stuff was in that study or it’s still in the safe, I guess.” He looked discouraged. “And I wonder what happened to Mr. Decker? Do you suppose those teeth we found downstairs are his?”

“Good question, Jim. But didn’t you set one guy to checking the yard?” I thought it best to change the subject.

We found the final CBI team member outside in the rain. He was studying part of the back yard, just uphill from where the study had been.

“Boss, I think I might have something here. The metal detector picked something up, two somethings, actually. I’m trying to get a good fix on their positions relative to the house before I dig.” He was wearing a full rain suit and so didn’t look too miserable.

I had retrieved an umbrella from my Jeep, so I wasn’t getting too wet, either.

But Levenger wasn’t so lucky. “We can figure that out later. Just dig, willya? I’m getting soaked.”

“OK, I already got pictures. But look at this.” He pointed to faint marks in the mud. “It looks like the rain has almost washed away some grooves or something, grooves pointing toward the house.”

A few minutes later, Levenger was holding two mis-shapen lumps of lead in his hand, letting the rain wash the mud off them.

He held them out to me. “What do you make of this, Mac?”

“They look like large-caliber slugs to me. Hollow points, maybe, although who knows what they hit in the ground there.”

“That’d be my guess, too. And I’ll want the lab guys to verify this, but they look pretty new. I bet they haven’t been in the ground for more than a day or two.” He put the wet metal into a plastic bag he’d pulled from a pocket. “And those grooves in the dirt we saw are probably the entry points. They’re not going toward the house, they’re coming from it.”

I knew that already, of course, and it occurred to me that as soon as Decker's teeth were identified, he'd be declared a victim of the fire, which was clearly arson. The question I had to confront was whether to bring up the fact that he was actually killed by those slugs the CBI guys found. And the answer to that depended on all the stuff I'd taken home with me the night before. With all the excitement and then my adrenalin crash, I'd not had a chance to look through it all—Swent's and the other paper files from Decker's cabinets, as well as his computer media—and it was clearly time to do so.

I made excuses and left the CBI forensics team to their work.

\* \* \*

As I headed for my Jeep, I thought about the portfolio of secrets that I was accumulating. Before too long, they'd turn into unwanted baggage, I knew. Much of my time with the spooky agencies had been spent operating alone, on my own in various sandy foreign countries, places where secrets were not only a way of life but also a way to stay alive. But it was becoming more and more obvious to me that working with a team of law-enforcement personnel meant that secrets could get in the way.

The trouble is, I thought, once you've got 'em, secrets are hard to let go of without raising everyone's suspicions about other things. Even Annette would probably be royally pissed at me.

But if I could pull a rabbit out of the hat of all that paper and computer gear I'd purloined, maybe that would help. So while I was waiting for Decker's safe to get cracked, I'd get cracking on some analysis.

I also thought about the rain. It had turned into an annoying drizzle, but it was still falling steadily. And that meant that the river through town was something to worry about. If the town wound up getting cut in half by impassable bridges, I'd be on the side with no groceries. So I decided to stop at the Safeway to stock up a bit.

Fortunately, it was still quite warm, so it didn't seem likely that Trail Ridge Road would get iced up permanently. The Park Service had a reputation for closing that highest through road when there was any sort of potential hazard—they'd already done it a few days previously, in fact. And that would mean the town would not only be cut in half, it would be isolated as well. Of course, the cut in half part would isolate my half anyway, given that my half was on the wrong side of the river to get to Trail Ridge, but maybe some fast talking could get me out of town via the Peak-to-Peak Highway, as it had earlier in the morning.

Judging by the crowd in the Safeway, I wasn't the only one concerned about the rain, nor, apparently, about isolation. Once again, the shelves were getting bare. But I found enough in the way of groceries, non-perishable ones at that, to last me for a couple of weeks.

And on the way home, I found that the river had once again begun to over-top the main bridge, and I had to pull strings to get across. At least, I thought, there's a liquor store over here on my side of town, and a hardware store plus a lumber yard, too, should the needs arise. And my refrigerator was pretty full, so, with all the new canned goods, at least I wouldn't starve.

Back at home, I put on a can of soup to heat up slowly, a bachelor lunch, and got down to work. I had previously scanned Swent's will into my combined database, but the other material in his file was still hard-copy, as was the material from the other paper files I'd taken from Decker's study.

Because I'd been scanning my personal financial paperwork—bills, statements, and so on—for the past couple of years, I had a routine, somewhat tedious but a routine nonetheless, so it went fairly quickly, pretty much on autopilot. With that complete, I added the contents of the USB and flash drives from Decker's study, and then ran my Loogie searches all over again while I ate.

After lunch, I discovered, for the second time in three days, new information that changed everything. I was trying to put all into context when my phone buzzed.

“Mac? Jim Levensger here. We got that safe open. Need any drugs? Money? How about a beautiful antique necklace?”

“Antique necklace?”

“Yeah. Looks really old, kind of primitive, in a very elegant fashion. There’s other jewelry, too.”

I thought for a minute. “Is that it? Money, drugs, jewelry?”

“Yep. Were you expecting something else?”

“I didn’t know what to expect, exactly. Maybe some paperwork of some kind. I guess all that got burned up with the study, though.” I paused again. “Did you guys figure out the combination to the safe? Or what?”

“We’ve got the combination now.”

“Outstanding. I guess the thing to do is inventory everything and lock it all up again. It didn’t look like that safe is going anywhere, it’s so big and heavy. And, if I recall, bolted to the floor. Please be sure to take pictures of the jewelry, OK?”

“Will do. We’ll take the info back to Denver and then email you copies, OK?”

“That’d be great. And good luck getting out of here. You might want to take Trail Ridge Road this time.” I disconnected.

It would take an expert to be sure, but I suspected that the jewelry was part of the haul of Iraqi antiquities that Swent had acquired. Why it had been in Decker’s possession was something of a puzzle, however.

Except, as I began to review the documents I found at Decker’s, it was really not so much of a puzzle after all. A Loogie search of “Decker plus jewelry” yielded, among other items:

*M.J. Decker, Esq  
Estes Park, CO, USA*

*Nellsworth Appraisers  
Denver, CO, USA*

*Gentlemen:*

*I’ve enclosed detailed photographs of the items I discussed on the telephone with Mr. Nellsworth, Jr. I trust that this will be sufficient for you to provide a rough estimate of the value of these pieces.*

*As I mentioned, this is in connection with an estate planning exercise I am conducting for a client, and there are many more such items. Our hope is that these representative examples will provide us with information—no matter how rough the estimates—to allow us to complete the exercise.*

*Sincerely,*

The response was interesting, especially the business about the “private market”:

*Dear Mr. Decker:*

*Thank you for the opportunity to provide you with our services. As we discussed, we cannot provide valuation using photographs as authoritatively as we can if the items in question are available to us. Accordingly, we hesitate to offer estimates on all of the items.*

*However, we are particularly impressed by the necklace. It appears to us to be of middle-eastern origin and is likely at least 1500 years old. If its composition is, as it appears to be, gold, and if the gemstones are of the quality they appear to be, the open market value of this necklace is inestimable. If our assumptions are correct, this is a museum quality piece that would probably fetch in the middle seven figures on the private market, should the provenance allow such an approach.*

*If we can broker this item on the private market for you, we would be happy to discuss terms. And if the other items are of the same provenance as our assumptions about the necklace, our terms will be most generous.*

*Sincerely,*

The dates on the letters were more than three years old, and it dawned on me that Decker was not simply involved with estate planning for Swent. He obviously had other plans for Swent's fortune, plans that went well beyond the terms of Swent's will, plans that fit right in with my conjecture that Decker was in the process of altering the will. After all, if one necklace would fetch something around \$5 million, well, the entire collection could rival the rest of Swent's assets.

That would run into real money indeed.

\* \* \*

## **Fourteen**

Like the cliché about being either the bug or the windshield, sometimes good fortune just shines. And given the dreary weather—it was still raining that Wednesday afternoon, a light, steady drizzle—for anything at all to shine was welcome. The weather forecast was for the system to move out, finally, and I'm sure that everyone in northern Colorado had their fingers crossed.

But because I was warm and dry, and under no particular threat from all the rain, I could revel in what I found on the USB drive that I'd taken from Decker's place. It turned out that it was a high-capacity drive of some three terabytes that Decker used for system backups. And the most recent backup, an incremental one, had taken place earlier Tuesday evening, before I'd broken in—er, I mean executed the search warrant—at Decker's house.

With that incremental backup and all the previous ones, I had everything that had been stored on Decker's computer.

I celebrated with a beer while I figured out how to recover the information there. It took a while—I had to look up some tricks on the internet—so I was into a second beer by the time I got the recovery process underway. While that was happening, I called Harmon Jameson.

“Mac! Good to hear from you! And, listen, let me thank you again for putting me on to that bunch out in Winter Park. What they’re doing is going to be of immense help in our national security efforts. We’re dealing with so much information from so many different sources that analysis is impossible without some super-fast system like theirs.”

“Quite some system, isn’t it? I’ve been using it on this thing I’m in the middle of, the one that involves the Iraqi stuff.” I heard a Hmm? of surprise. “In fact, that’s what I called about. There are two things. First, not all of the items in the collection are in the sheriff’s possession, or in transit or whatever. Swent’s lawyer—Swent, remember, was the guy who traded the Fed’s secrets, or supposed secrets, for the stuff?—his lawyer had several items in his own safe.”

I related the events of Tuesday evening, including what I’d seen while hiding behind the curtain.

His reaction was predictable. “Well, seems like you could get these additional items into the main collection in time for the President to hand it off. That’s going to take a while to arrange. And it sounds like this Decker guy got what’s coming to him. Any ideas about the shooter?”

“Just that he’s a real pro. And, speaking of that, I wonder if you could sort of bless some snooping I’m going to do. Seems that one of the people out here is ex-CIA, a guy named Lem Purdy. Used to work at Langley, but he also did some field work in South America. I don’t know if he has the skills to have been the shooter, and I haven’t met him so I don’t know if he fits what description I have. But his connections would surely involve people with those skills.”

“I can ask around for you.”

“Oh, no need for you to call in favors on this, unless you want to do it to help out the FBI. Swent’s murder is their case, but Decker’s murder is part of the arson investigation, a Colorado affair. I’m just trying to tie up some loose ends, is all.”

“Well, if you get caught snooping, I don’t think I’ll be able to cover for you. Or, wait, maybe I can, a little at least. If there’s a connection, or a possible one, between this Purdy guy and Swent’s case, then background on Purdy is justified. And since it’s a federal case and you’re cooperating with the FBI, your snooping is probably justified. But it’d be better if you don’t get caught.”

“Harmon, I’m pretty sure you know that’s been my motto for years.” I heard only laughter.

After the phone call, I checked and found that the computer file recovery was complete. The big USB drive had been only about 10% full, so I’d expanded the backed up stuff onto it and now had all of Decker’s files laid out in their original formats. And because a lot of them were files associated with particular applications—word processors, spreadsheets, email clients, etc.—there were a lot of formats. But the backups had been comprehensive, so I also had information about all of those applications, and it was simply a matter of matching up the data with the programs, many of which, being the usual suspects, I had installed on my own computer.

Somewhere during Hal’s briefing me about Loogie, he’d mentioned that the search algorithms were able to translate just about any word processor format and any email format into forms compatible with the search process. That left the spreadsheet files, including those associated with a checkbook program Decker used, as the most interesting unsearched data.

Follow the money, I thought.

The identifiable spreadsheet files had descriptive names, and none seemed very interesting. But a rather large file whose extension I couldn’t identify was called MJDAccounts. Fortunately, anything you need to find out is somewhere on the internet these days, and it didn’t take me very long at all to discover the name of the application for this big file. A few more clicks, and the application was installed; it opened the MJDAccounts file so smoothly I was almost disappointed.

Inside were separate account listings for Decker's banks and credit cards, and a couple of others called "CRAG Cash" and "CRAG Reserve." A quick look at the CRAG Cash account showed me that the organization was in serious financial trouble and had been for over a year—balances were chronically low and there were transfers into the cash account from the reserve account every other month or so.

I returned to Loogie for a search on "Decker plus CRAG" and discovered that not only had Decker been a board member, he was Secretary/Treasurer of that outfit, which was badly in need of a large infusion of new funds.

The thing was, Decker was also trying to get a rough estimate of the value of Swent's Iraqi hoard. And it sure looked as if he had been planning to alter Swent's will.

But then someone had him killed, in a most professional fashion—and, I realized, with that fire they'd done it in such a way as to destroy all documentation Decker might have assembled about his activities. Or so they thought.

The question was, had CRAG got itself into financial trouble because of Decker's handling its funds? In that case, the hit could have been retribution by Lem Purdy on behalf of CRAG. Or was the trouble because of some other issue? If the latter, I couldn't see quite why Purdy would have had Decker whacked.

It could be, I thought, that CRAG isn't involved at all, that Decker planned to get rich by altering Swent's will to somehow benefit himself and selling Swent's antiques on the "private"—which I took to mean at least gray, if not black—market. Of course, that would have written CRAG out of Swent's will, so there was motive there as well.

Curious, I checked the results that had turned up in the Loogie search Hal and I had done the previous Sunday and discovered once again that CRAG was one of the groups whose retirement funds had been wiped out by Swent's stock-trading strategies, along with those teachers and the hunting guides and so on.

Oh.

\* \* \*

For someone like me, someone who's spent his entire life operating with very limited information, much of it incorrect, and making life-or-death decisions without really knowing what's going on half the time, this ability to access and analyze such diverse data was both fascinating and eye-opening.

The process had held my attention most of the afternoon, as I sat in front of the computer in the extra bedroom we used as an office, blinds drawn to keep the gloom outside. I finally got up to stretch and, out in the living room where the shades weren't closed, discovered that the rain had stopped and the sun was shining! Maybe, I thought, this weather system has finally moved on, or dissipated, or whatever—that would sure be welcome. In any case, it felt like time to get out of the house.

About the time I was getting seated at a restaurant just down the road, Cables, a family-style Italian place—not in our no-flush zone, conveniently—my phone started vibrating in my shirt pocket. It tickled.

"Mac? This is Sandy Livingston."

"Hey, Sandy! How are ya? We heard from Annette and Hal that you and Angela were in Santa Fe. How's that going?"

I heard laughter. “It went about as well as it could have. But it’s a long story. Right now we’re headed up your way. We thought we’d cruise through Estes Park on the way home. Say hi to you and Sam. Check out that road over the top of the national park tomorrow.”

“Uh, well, where are you now?”

“On a scenic road called the Peak-to-Peak Highway, according to the little signs. We went past a bunch of casinos at some little town, and now we’re up higher. We just passed...oh, wait. Here’s another sign. It says ‘Nederland’.”

“Hmm. Does Angela have her credentials, her CBI shield?”

“What? Well, sure. Her piece, too, I think. Packed away somewhere. But no uniform, as far as I remember. What’s up?”

I gave him a brief run-down of the flooding situation. “I guess we can trade long stories when you get here. Ah, I’d invite you to stay at our house, except our toilets don’t work just now. You’ll be better off at a motel. The town’s pretty empty, so you shouldn’t have any trouble. And, let’s see, Nederland. I think that’s about an hour out, given the road conditions, maybe a bit more. Give me another call when you get into town and we’ll figure out where to get together this evening. OK?”

“Got any motel suggestions?”

“Well, how about a hotel? Best in town, the Stanley.” I chuckled. “They’ve probably got a john in the lobby I can take advantage of.”

“We’ll try it. Anj is a wizard with cell-phone reservations.”

I ordered a drink and an appetizer on the theory that I could have a full dinner with Sandy and Angela later. The Stanley Hotel, among its other amenities, offered arguably the best restaurant in town, and I didn’t want to miss the opportunity.

As I sipped and nibbled, I killed time by calling Sam, who was predictably worried about me, and the CBI guy, Levenger, to make a final check that the search of Decker’s house had wrapped up well. It had.

Then I called Annette, who was probably expecting me to call because I’d just talked with Sam.

“Hey, boss, I thought I’d check in. How’s things over your way?”

“Just fine. Sam’s a wonderful house guest—tonight she’s making *moussaka*. Smells heavenly.”

“Yeah, she told me. Didn’t like it when I asked how you cook a moose, though. Anyway, I’m jealous, but not too much because eggplant’s not my thing. And I’m going to eat at Cascades, in the Stanley, probably. I think that Sandy and Angela are going to stay there on their way through town.”

“So they must be coming back, then. Are they going to be OK with the flood and all?” She had a bit of worry in her voice.

“I think so. It’s stopped raining and the sun’s even out. And they must have eased up on the road restrictions, because Angela and Sandy are coming up the Peak-to-Peak Highway.” I thought popped into my head. “Say, something’s occurred to me. The Estes Park police and the sheriff’s people are pretty much occupied with the aftermath of this flooding, so our part of the Swent investigation is ours alone, for now at least. And so is the Decker arson. Now, I’ve got a fairly good path forward because of all the information that Hal’s computer search technique dug up. But I’m concerned about the end game.”

“How’s that? Oh, and how did the our search of that lawyer’s house go?”

“Jim Levenger just told me it went fine, although most of the relevant information got burned up in the fire.” I decided not to play my hand just then. “But they’re forensics guys and probably on their way back to Denver by now. And the thing is, I’m only a deputized part-timer. At some point, it seems like a full-fledged CBI person ought to be in charge of this thing. I mean, I’m happy to continue to help and all, but, well, you know me. I’m potentially a loose cannon. I’d hate to screw up something and have you lose this case.”

There was a pause during which I heard kitchen noises in the background.

Finally she responded. “I’m confident that you won’t screw anything up, Mac. But having another person working this case does make sense. Two heads are better than one, and all that. And you might just need backup at some point. Hmm. How about Angela? I could assign her to you.”

Now it was my turn to pause. “Well, only if you assign *me* to *her*. She ought to be in charge. She’s fill-time CBI, after all.”

Another silent interval. “That’s actually a good idea Mac. It’ll give her some valuable experience and boost her self-confidence. But, are you sure your ego will survive reporting to a five-foot, twenty-something *chica* like her?”

“Are you kidding? I saw her in action last summer, in that damned mine, remember? Besides, maybe I can teach her some clandestine technique she’s never been exposed to. I do have some skills, after all.”

She laughed. “Great, just great. Then I’ll have a five-foot, twenty-something *chica* with spook skills on my hands. Want me to call her?”

“How about if I raise the issue this evening and mention I talked about it with you? I think I better be completely and totally transparent with her on this. Wouldn’t want her to feel manipulated, y’know?” I had already begun pondering how much of the unwanted baggage that I’d accumulated on the case I could unload on Angela.

“Good idea. Tell her she can call me anytime.”

“Thanks, Annette. I’ll tell her.” I heard a beeping on my phone, which I’d figured out meant another call was coming in. A glance at the screen told me it was Sandy Livingston. “Oop, sorry, Annette, gotta go. Sandy’s calling.”

I pushed buttons. “Sandy! Did y’all get here yet?”

“Hi, Mac. We did and we’re checking in at the Stanley. Good suggestion.”

“Did you guys have dinner? There’s a great restaurant there where I could meet you in a few minutes.”

“OK, but not too few. We need to get settled in a bit.”

“Fine. I’ll see you both in the Cascades bar shortly.”

Now, I thought, I need to compose a little speech about how Angela is the perfect person to take over this case. Or both of ’em. Hmm.

\* \* \*

The speech I came up with in the subsequent twenty minutes, which included a quick explanation for Sam’s absence, turned out to be perfect, although Angela balked at first when she understood that she

was to be my boss. And Sandy seemed perplexed at the idea that he was irrelevant to the plan. But Angela came to the rescue, cementing her role as leader of the whole thing.

“But, Sandy, weren’t you involved with developing this search program, what’s it called?, ‘Loogie’? That means you can be invaluable here. I mean, with all due respect to Mac, you’re probably better with it than he is. Right?” She looked back and forth at both of us.

“I’m sure that’s spot on, Angela.” I was nodding so vigorously that I thought my teeth might come loose. “I’ve been fumbling around with Loogie and it’s amazing what I’ve come up with. But an expert user could do wonders, I bet.”

We were sitting at a quiet table in the corner of the restaurant after having ordered dinners and a bottle of wine. It seemed to me like the place should have been much busier, even on a week-day in the middle of September—that flooding was probably cutting into business everywhere in town.

“Well, maybe. Probably, I guess.” Sandy was trying to figure out his role, I could tell. “But, c’mon, we were headed home. How long is this going to take? I mean, are we going to set up shop here in the hotel? Or what? We’re running out of clean clothes. Again. And Hal has probably got a long list of stuff I need to be working on.”

“Oh, c’mon, Sandy. First of all, it’s only an hour, or maybe two, back home from here. And I’m sure that there are lots of alternatives to this hotel, nice as it is. I mean, think about all the condos and so on you can rent in Santa Fe. There must be places like that here in Estes Park. Right, Mac?” Angela shot me a “say yes, buddy” look.

I did. “With the weather improving, Trail Ridge Road will probably stay open for quite a while. It’s only mid-September, after all. And, yeah, you have lots of accommodations options now, especially with the town so empty. No doubt some of them have laundry facilities. Ah...just be sure you don’t wind up in the no-flush zone I’m in.”

“What’s that mean?” Angela now looked suspicious, so I had to summarize the situation I was living with.

“Basically, though, it means stay out of my part of town, the south end. There are several property management agencies that you can check with to find just the right thing. Um, stream-side cabins don’t seem to be indicated just now, though.” I wrote suggestions on a cocktail napkin. “Here. Call these folks, see what they’ve got. When Sam and I were looking for a home over here, we in one of their places, and it was all great.”

I handed her the napkin and changed the subject. “So, what’s the long story about your Santa Fe visit, anyway? Did it all work out?”

Sandy and Angela looked at each other and broke into laughter. Because Sandy was laughing harder, Angela spoke first.

“Work out according to whom? I guess that’s the best answer. My folks have known that Sandy and I have been shackled up, but they’ve been quietly ignoring it. When we got engaged, though, they sort of had to confront it.”

Sandy finally got control of himself. “I think I’m good with her family because last year I formally asked her father if I could marry her. He was pretty cool with it, actually, but I think he went through with the charade to make her mom happy.”

“Yeah, and Mama got all fluttery after Dad said ‘yes.’ And not only that, she immediately started in on wedding planning. I mean, I’m twenty-eight years old, for crying out loud, and she’s acting like I was

sixteen.” Angela shook her head in dismay. “She’s been at it for a year or so, and this trip was supposed to finalize things.”

“Thing is,” Sandy held up his left hand, revealing a gold band on the appropriate finger, “we actually got married already. She knows a priest in Santa Fe who’s pretty progressive, so we visited with him, explained things, and he offered to marry us right away, if we could get the paperwork together. Seems like he thought that would be the right thing to do so that we’d not be living in sin any more. So we did and he did.”

“But Mama is still going to demand some kind of formal ceremony, so I’m going to have to deal with her conspiring.” Angela grinned. “She’ll probably invite everyone in Santa Fe. That’s what’s taking her so long.”

I looked back and forth at the two of them. “I guess that means I should say ‘Congratulations!’ Uh, and I guess I’m sorry to interrupt your honeymoon with this business of the Swent case. And the Decker case. Maybe I can find a wedding present to make up for it all.”

Angela laughed. “Not a problem, Mac. We talked about a real honeymoon all the way up here from Santa Fe today, and it’s going to be next winter, somewhere in the Caribbean, probably. Besides, we’ve been having something of a honeymoon ever since we moved in together.”

Sandy actually blushed.

I decided to pretend not to notice. “How’s the house working out?”

When Sam and I had arrived in Winter Park the previous summer, we’d rented a house across the highway from the ski area as a temporary place to stay. Then we found something a bit more permanent, and Sandy and Angela had moved into the house we vacated by taking over our lease. Skiers both, it was a dream location for them.

“Extremely well. There was a neighborhood shuttle over to the base all winter, and it’s high up enough to stay cool in the summer. We’re discussing whether to make an offer to buy it.” Sandy’s complexion had returned to a more normal shade. “It’s big enough to accommodate guests, like Angela’s parents. No doubt they’ll want to visit. Uh, after the wedding, of course.”

“Sandy, if you can put up with having my parents as house guests, I’ll be truly, truly impressed.” Angela smiled. “Especially with Mama asking all the time about when she’s going to get a grandbaby.”

The look that passed between them made me glad to be too old to have to worry about that sort of thing, at least the parental nagging part.

Sandy, at least, seemed eager to change the subject. “So, maybe I can help with Loogie searches, but I have only my laptop. I guess I could use the MPARC systems, though, if we find a place with a good internet connection.”

“Maybe tomorrow you can check around for a condo with one. And the Stanley here probably has it available.”

“No doubt. I haven’t checked yet, though. But I like the idea of a condo, maybe one with a view. I’ll spend some time tomorrow checking out availability.” Sandy grinned. “You’re probably going to keep Anj busy anyhow.”

“Yeah, although tomorrow morning will be mostly with reading and questions for me. I’m going to be interested in how she sees this whole thing.” I looked at Angela. “You don’t know anything about it, right?”

“Not a clue. Annette insisted that I take a real vacation and not call in or use the computer or anything.”

“Well,” I had to smile. “You’re in for quite an interesting tale tomorrow, then.”

\* \* \*

## Fifteen

Thursday morning, I spent a couple of hours giving Angela a big-picture overview of the Swent and Decker cases while Sandy worked on finding a place for them to stay. Angela, quite sensibly, had suggested a two-bedroom rental condo somewhere convenient so that the extra bedroom could be used as a sort of CBI office. I would have volunteered my place, but the porta-johns hadn’t arrived yet—and I wasn’t sure it would do even if they had.

By check-out time at the Stanley on Thursday morning, Sandy had found a nice townhouse on West Moraine—well away from, and above, the river—that was fully furnished down to kitchen supplies plus a washer and dryer, so I helped them move in. The moving process, finished by shortly after noon, was made all the more pleasant by yet another day of sunny, blue-sky weather. Except for the river, which was still running perilously high, and the muck and destruction here and there, it could have been a normal September.

I ordered us an extra large pizza from the Domino’s just up the street—junk food was beckoning to me after all the French stuff Sam had been cooking—and I brought Sandy up to date on the cases while we waited for it and he was getting his computer on-line. Then I was able to give him access to my database of Swent & Co. information at MPARC. Because I’d uploaded them earlier, this database included all of Decker’s files.

After we polished off the pizza, Sandy went to work on his accumulated MPARC email, and, after making ourselves a big thermos of coffee to take along, Angela and I went out to look at the various crime scenes.

The closest, Decker’s partly burned house, offered me the opportunity to confess my presence when it all started up in smoke. And because I thought Sandy might figure out that the database he was searching included Decker’s computer, it would have been a good time to bring Angela into the information loop. But I just couldn’t do it. Instead, I told her a sanitized version, all about the relationships, the history, and our plans for the Iraqi antiquities as a way to persuade her to let me rifle Decker’s safe for those necklaces and other jewelry that were still in there. Conveniently, Jim Levenger had included the combination to the safe in the report he’d sent me.

“Wait. Go back. I’m confused.” Angela was shaking her head. “You say that some Iraqi guy was in Swent’s house, but you made a deal with him to get him those antiquities back? How come he’s not a suspect?”

I was busy with the rifling and a bit distracted. “Hmm? Oh, well, see, he’s an old acquaintance of mine, and, besides, I owed him one for not shooting me in Swent’s basement. And he was in Denver when Decker got killed. Anyway, we’re pulling off something of a diplomatic coup here, returning all these artifacts to Iraq.”

I held up one of the necklaces from Decker’s safe. “Sure are pretty, aren’t they?”

“Mac, this is nuts. You said the CBI forensics team opened this safe and found all this stuff. How are you going to explain its disappearance?”

“Well, now, you’re watching me take it all out of the safe, right? I’ll send it all off to Washington tomorrow. And I’ll arrange a special phone call from someone important in Washington to thank you for your help with this, you’ll see.” I tried not to sound too conniving. “Eventually, we’ll have to sit down with Annette and explain it all, but I’m sure she’ll understand.”

After that, Angela got a tour of Swent’s house, including the secret rooms where we’d found the interesting material. This time, I didn’t take anything, so she didn’t have any reason to get on my case. But I could tell that she was hugely amused by the cache of sex toys in Swent’s top-floor closet, although she tried to hide it. And when I told her that the ground-floor room had been packed with stacked boxes of the Iraqi antiquities, she began to see the wisdom of returning them to Iraq—so that got her on board with my returning the stuff from Decker’s safe.

Two-for-two, I thought—I’m on a roll!

It seemed appropriate at that point to show Angela the original crime scene, if not up close then at least from a distance. So we drove south to the northern end of the Tahosa Valley, finally ending up on the county road—still officially closed—to the Longs Peak Ranger Station. From the vantage point I’d found to scout the CRAG property on Wednesday morning, we could also see the clearing where Swent’s crucifixion had taken place. The view was much better without all the rain I’d stood in the previous time.

We both had binoculars, so Angela studied the clearing while I focused on the CRAG buildings, that interesting house on the hillside in particular.

“So, I guess I can see the ground disturbance in the clearing where that cross must have been.” Angela was playing with the zoom feature of her glasses.

“Hmm? Oh, well, it was more of a big X than a cross, and it had a third leg propping it up from behind. I remember three holes.”

“Yeah, that’s what I see. And this guy Swent was taped onto that X? And his lower half got eaten?” She sounded grossed out.

“That’s what seems to have happened. Whatever ate him couldn’t reach any higher, so it was just his legs, mostly, that were missing.” I scanned up the hillside along the little stream, which was now even more full than it had been the day before. Near its top, just below the clearing Angela was studying, there seemed to be a second new slump that was blocking its flow.

“It looks like there’s a trail over to the left a few hundred yards.”

“I’m pretty sure that’s where I came down, on horse-back. After the sheriff’s folks got all the evidence collected and so on.” As I scanned back down the hillside toward the house, my sense of foreboding increased. “Someone said it used to be the main trail up the mountain there, but the Park Service moved that to the north, up over that little pass up the highway to the left there. That old trail sufficed to get me down the hill, but it wasn’t in very good shape.”

I’d worked my view down to the house, where I saw movement through a window. “This was all before the rain started, of course, before that big debris flow above the ranch over to the left, there, by the pass. And that stream flowing down the hillside straight across, the one below the clearing, it was probably dried up when the murder went down.”

“And you’re sure it was murder, not just some kind of really weird accident?”

“Not with all that duct tape and the beating he got.” It looked to me as if someone inside the house was looking back at us. “Thing is, they could have made it look like an accident, if they’d wanted to. But

this was a pretty elaborate setup. Obviously thought through, well planned. Seemed like it was designed to send a message, although I can't figure out to whom."

I lowered my binoculars to flex my arms a bit and noticed that Angela was looking at the house.

"I don't know for sure who lives there, but it seems to be part of that CRAG property. Maybe it's the director's house, or something," I said.

"What the hell's he doing?" Angela sounded completely baffled, so I raised my binoculars and focused on the house, where I saw a guy lying on the deck behind a bipod.

"Ah, well, looks to me like he's settling down behind a sniper rifle that's pointed in our direction. I'm thinking we should probably get behind that big boulder over there." I nodded my head toward the woods on my right.

"Excellent idea." Angela's quickness surprised me, and I hustled after her.

Just as I was about to wonder aloud why anyone over there would even own a sniper rifle, let alone prepare to use one, there was a powerful smack on the other side of the rock and the unmistakable whizz of a ricochet, both followed a couple of seconds later by the echoing report of a large-caliber rifle.

"Well, that tells us something, doesn't it, Angela? And that was a big-bore gun, that's for sure. Not something that your everyday Colorado hunter has in his arsenal, unless he's after elephants. What the hell is he thinking, anyway?" I could tell by the way my mouth was running that the adrenalin was pumping.

Lem Purdy or whoever's over there, I thought, is someone to be very, very careful of.

\* \* \*

We both had our handguns, but the house across the valley was well out of their range.

I had my cell phone, and Angela probably had one, too, but there was really no one to call for assistance—at least no one closer than a couple of hours away—given how busy the rest of the local law-enforcement community was with the flooding and all.

I'd parked my Jeep a hundred yards or so down the road, around a curve, at a spot from which the hillside across the valley was hidden behind trees. That meant that we might be able to work our way carefully down to it through the woods in relative cover, compared to the exposure of using the road. But then I remembered that the road farther east, down closer to the Peak-to-Peak Highway, included a rather long, straight stretch from which you could see the hillside over there, with that house in plain view. Which, of course, meant that our shooter could see whatever was heading down that road. How lucky, I wondered, should I feel today?

The alternative was west, up toward the Ranger Station. Which was closed and no doubt empty. Or, of course, north or south, along the contours of the hillside we were on. But to what end? It would be a long hike to anywhere safe, and there would be exposed places along the way. And neither Angela nor I was really dressed for hiking, especially given the soggy conditions of those hillsides.

So, try as I might, I couldn't figure out anything better than the last resort—to shoot back.

Although our handguns weren't going to be much help, one of the items I'd stashed in the Jeep's lock box before heading to Decker's house the other night was my own sniper rifle, a McMillan TAC-50 that I'd liberated, high-power scope and all, from a hired gun who'd used it on a politician in Florida some months back. And, with careful persuasion of a SEAL squadron commander I knew, I'd managed to acquire some high-explosive rounds for the thing along with a large box of standard military .50

BMG rounds. The HE rounds meant that our antagonist across the valley was in for a big surprise, assuming we could get down to the Jeep and find a reasonably protected place to set up the TAC.

I explained my plan, and Angela was fine with the idea. “I hope you blow the fucker away. We’re standing here checking out the scenery, and he starts taking pot shots at us? Get him, I say.”

“Well, what I’m planning to do is to try to cut the legs off that deck he’s shooting from.” We were already sneaking downhill toward the Jeep, so I had to assume she remembered the scene over there. “If he’s still set up to take shots at us when I can see over there again, I’ll just fix that, and then we can beat a hasty retreat.”

It took her a little while to respond, as we were scrambling through a thick stand of trees, more work than I would have expected, and when she did she was breathing hard.

“OK, right. I have to amend what I said. We need to do whatever we need to do to get out of here, and then take legal steps. Whatever those might be. Although I still sure would like to shoot the fucker.” Her sentiment resonated perfectly with me.

It took us maybe five minutes to work our way down our hillside to the Jeep and then another five for me to get the TAC set up with a view of the hillside across the valley. I ended up lying on a blanket in a wet ditch just uphill of a driveway culvert, with the business end of the TAC at ground level. By raising myself a bit more than I felt comfortable with, exposure-wise, I could see that our adversary was still prone on the deck of that house over there peering in our general direction through his sniper scope. My first notion, to shoot out the legs of that deck from under him, seemed risky, as I would have to expose myself even more to get the right angle for the shot.

But a Plan B popped into my head. Rather than expose myself, I hunkered down into the ditch so that I could scan the hillside above the house through the rifle’s scope. About the point at which my chin was brushing the blanket, I could see that slump of mud just below the hillside clearing where the crucifixion X had stood.

I racked an HE cartridge, adjusted the scope’s various settings, and remembered Angela.

“Hey?” I was not quite whispering. “Stick your fingers in your ears, OK?”

Which reminded me to get out the ear protectors from my bag of gear and put them on before I gently squeezed the trigger of the TAC.

Back in Florida, I’d practiced with it a few times, but its recoil—despite its hydraulic mitigation system—and its report were still something of a shock.

Angela thought so, too.

“Holy crap!” As conversation, her reaction penetrated my ear protection easily.

“Yep.” I probably said that louder than I needed to, but, then, I was distracted by watching the effects of my shot through that wonderful scope. “Check out the stream just below the clearing, Angela.”

What I saw, one-eyed, was interesting enough, and I hoped that Angela had her binoculars trained on the spot so she’d be seeing it with both eyes.

At first, there wasn’t much at all. I saw just a little sort of splat where the round penetrated the mud of the slump I’d aimed at. But then there was a bulge, like the hillside was burping or something. And then all hell broke loose in the form of a new debris flow.

It started slowly. But I suppose there was some kind of pond up there that had been created by the slump, because suddenly there was a gush of water, followed by mud, more mud, and then rocks and

trees. And it accelerated as it went, so that it was shockingly fast by the time it reached the house on whose deck the shooter had set up.

And then the shooter, the deck, and the house were gone. Not “crushed” or “destroyed” or “obliterated.” Just gone. Disappeared. In an instant.

This time it was my turn.

“Holy crap,” I said, while I watched the slurry of forest parts ooze to a stop in the meadow below where the house had been.

I suppose I should have felt guilty about it all, but, hey, the guy was shooting at us. So all I could come up with was matter-of-fact.

“Oops.” I said. “My bad.”

“Yep,” she responded, as she pulled her cell phone out of a nicely-stuffed shirt pocket and began taking pictures.

“Know what, Mac? I’m thinking that we just got here, and this is what we found. It’ll make the paperwork a lot easier that way, don’t you think?” She kept an admirably straight face as she said this. “Besides, from the looks of that hillside, it was going to happen on its own anyway, right?”

“I hate paperwork, Angela, thanks. And I was thinking the same thing about that hillside over there, even yesterday when I was up here. It sure looked unstable. I owe you one. Or a dozen.” I scanned the debris with my binoculars. “But I guess we’ll never know for sure who that shooter was. Probably Lem Purdy, I imagine.”

“Seems like we ought to head over there and check out the mess. It would be a miracle if anyone survived that, but you never know.” She, too, was scanning the devastation. “Let’s get this cannon of yours packed away.”

We did just that, and then eased the Jeep down to the highway and north the half mile to the CRAG entrance. Somewhat to my surprise, the gate, although closed, wasn’t locked. Angela hopped out, opened it, let me through, and then closed it before climbing back into the Jeep.

She looked vexed. “Think this car’s high up enough? Sheesh. I’m sure glad you’ve got that step out there.”

She was referring to the rock rails that the previous owner had installed, which made convenient running boards to climb up on.

“And don’t say anything, Mac. If it was Sandy, he’d make a joke about how short I am, and I’d bop him for it. That’s probably not appropriate for us.”

I couldn’t help myself. “You mean the joking or the bopping?”

“Hmmp,” was all I got.

We drove down a well-kept gravel driveway that meandered across the meadow between little aspen groves, all quite picturesque, until we came upon the bottom end of the slide debris. I was relieved to see that the slide had missed the horse barn by 50 yards or so. The small herd was clustered in the corral next to the barn, looking nervous but unharmed. We pulled up to a garage that was by the barn.

“Maybe,” I said, “we can get an idea of who was in the house by what cars are here.”

The side door of the garage wasn’t locked, so I opened the door to look in. It was dim in there, the only light from three small windows and the open door, but I could see that there was a single vehicle inside. A Larimer County Sheriff’s SUV.

\* \* \*

“Brad? Mac MacQuarrie here. Got a second?” We had explored the grounds enough to have decided that there was no one around—no one alive, at least—so I’d decided to call the sheriff.

“This damned flood, Mac. I’m so busy I can’t see straight.”

“Well, sorry to do this to you, but I’ve got something up here that you may need to put high on your priority list.” I told him the story Angela and I’d agreed on and that I’d found a Larimer Sheriff’s Department patrol car in the garage at the CRAG facility. “And we’re not finding anyone on the premises. But I recall seeing a house on the hillside the other day, before this new debris flow let loose. It’s not there now.”

“What are you saying, Mac?”

“Well, either whoever’s car this is went off with someone else somewhere, or he’s probably buried in the debris of the slide.”

“Ah, shit. OK, listen. There’s a number on the right side of the trunk, or the rear hatch.” Winchester sounded more tired than depressed.

I went back to the garage and walked around the vehicle. “0532, Brad, 0532.”

“OK, thanks. Wait one.” There was some muffled discussion on his end of the call. “Yeah, I figured. That’s the car Aaron Smithy has out. And you think he’s buried in that slide?”

“Well, I think that’s a possibility. But, like I said, he could be off somewhere with someone else. There are no other cars here, and I think the house was occupied.”

“Oh. Well, all right. I’ll give his phone a call and see what happens, and if he doesn’t answer I guess we just need to wait a while and see if he turns up. Thanks for the call, Mac.”

Almost immediately, I heard an odd chiming noise and, after some puzzling, identified it as coming from inside the SUV. The passenger door was open, and there was a cell phone on the seat, chiming away. So I answered.

“Hello”

“Aaron? Brad here. What…”

“Whoa, Brad, whoa. It’s Mac. The phone was on the car’s front seat. And there’s a duty belt here, too, weapon and all. Looks like a Glock.”

“You mean he went off and left his piece in the car with it unlocked! Ah, crap.” I heard a distinct sigh. “Listen, Mac. Do me a favor? Pop the hatch and see what else is unsecured back there, OK?”

“Sure.” With the hatch up, I could see a jumble of equipment, semi-organized, including two gun cases. I opened the longer one. “Well, there’s a shotgun back here in an unlocked case.”

“Lovely. Well, could you lock up the car for me?”

“Will do. I think I’ll check to make sure I’m not locking the keys in, though.”

“Thanks, Mac. I’ll talk to ya later.”

I’d seen a ring of keys on a clip on Smithy’s duty belt, and I figured out which was the SUV’s ignition key and removed it. Then I returned to the jumble of equipment in the back and opened the smaller gun case.

There sat a Colt Anaconda. I stuck the car key in the barrel and raised it enough to be able to see that two of the rounds in the cylinder had been fired.

Maybe, I thought, it'd turn out for the best if Deputy Smithy really is buried somewhere in all that debris.

I locked up the SUV and went outside. Angela was walking around the base of the debris field, so I hustled to catch up with her to let her know what I'd just discovered.

"What?" Her reaction was predictably incredulous. "What you're saying, of course, is that, unless he shows up with whoever he might have gone off with, that was him shooting at us, right?"

"Yeah, I guess so. And, also, I guess I'm saying that the Decker case is cleared now. Uh, at least if we can get a ballistics match between that revolver in the SUV and those slugs that the forensics team found in Decker's back yard. If we're lucky, there'll be some traces of Decker's blood or something on those slugs, too." I shrugged. "Dirty cops exist out here in the boondocks, just like in big cities, I guess."

She thought for a minute and then fixed me with a stare that made Sam's look tame. "Mac, you said you wanted me to have the lead on the CBI parts of these cases because I'm full-time CBI and you're just a part-timer. And you said Annette agreed to that. But I think of it as a partnership, a collaboration. Don't you think it's time you told your partner everything? I mean, you said you owe me one, right?"

How, I wondered, could this diminutive young woman do such a good job of making me, at least twice her age with more than two lifetimes of additional worldly experience, feel seven years old with my hand in the cookie jar? Not that my hand *wasn't* in the cookie jar, metaphorically speaking, but I'd been an expert at all sorts of prevarication throughout my career, supposedly comfortable with being brazen in such circumstances. At least that expertise let me run through several snappy comebacks in a flash, all in my head, but in the end none seemed appropriate.

Still, I wasn't going to swallow my pride completely. "The briefing this morning was just the big picture, and, yeah, there *are* some details that will make more sense now that you've seen the territory. How about a cup of coffee? You think it's still hot?"

We found a reasonably dry place to sit by the barn upwind of the horses, who seemed to feel better for our company because they'd settled down quite a bit since we'd arrived, and found that the coffee was indeed still hot. And I told her everything in all its detail, even including how Raheem al-Muhammed had got the drop on me and the adventure at Decker's house. I couldn't possibly provide all the details of my Loogie searches, but I used them as needed to flesh out my own involvement as much as possible.

She took it all in with only a few questions for clarification of ambiguous pronouns I used. But when I was finished, I could tell she'd been saving some up. Just as she was about to start in with them, however, a car drove in, a Hummer H2 with oversized tires. Only one person got out.

He stopped in front of the garage, and stood by the car staring at the slide debris for a minute. Finally, he walked over to us.

"This is private property, folks. You're trespassing." He sighed, stuck his hands in the back pockets of his jeans, and nodded his head at the slide. "But I guess that's not the big story, is it? You folks know anything about all this?"

"We're with the Colorado Bureau of Investigation, and we saw the debris. We thought we ought to check to see if there was anyone needing medical attention. And the gate out by the highway wasn't locked." Angela showed the man her shield. "We haven't found anyone, but there's a Larimer Sheriff's vehicle in the garage. He's not with you?"

The man looked even more distressed. “No, I left him here, in the house, and went into town on an errand. Deputy Aaron Smithy. He’s not around anywhere?”

“If you left him in the house, then he’s probably around all right, somewhere under all that. Along with the house.” I nodded in the direction of the slide debris.

For the first time, the man looked up the hillside. Then he turned bone white and had to steady himself on a corral fence post. “Holy Mother of God! I was just looking at the mess down here before. Holy Christ. It’s gone. All gone.”

“I’m Inspector Angela Espinosa, and he’s Inspector Mac MacQuarrie, sir. Can I get your name?” She had her notepad and pen out.

“I’m...I’m...well, y’know, it really doesn’t matter now, does it? It’s all gone.”

“The house, yes, and its contents. But, look around, the rest of the buildings are still intact. And I’m sure that the insurance will let you rebuild.” I was feeling sorry for the poor guy.

“We had no insurance. And all of the business records were in the house. Membership and donor contacts. What cash we had. Everything. And it’s gone.”

“Sir? Your name, please? And are you the owner here? Or what?”

“No, no. The property belongs to a non-profit organization, the Center for Retreats of the Army of God, we call it CRAG. I’m the director, Lem Purdy, Lemuel on my driver’s license.”

\* \* \*

## Sixteen

We stuck around at CRAG, or what was left of it, long enough to help Purdy get his bearings and decide what to do next—he was going to stay in the apartment over the garage. And then, despite Purdy’s protests, we impounded the Larimer County Sheriff’s SUV for evidentiary reasons. We figured Purdy didn’t need to know, or at least didn’t need to know we knew, about that Anaconda in the back, but we needed it for both ballistics and fingerprint testing. I gave Angela the key, and she followed me down into town behind the wheel of the SUV.

As much as I would have liked to arrest Purdy based on the results of my database searches, we just didn’t have appropriate probable cause, and we certainly didn’t have a warrant.

I led Angela back to the condo that she and Sandy had found and, on crossing the Big Thompson, was glad to see that it had receded a bit more. Maybe, I thought, all this wet weather is over with—now if they can only get that sewer line fixed, I’ll be a happy camper.

The condo had a two-car garage, and Angela pulled the sheriff’s SUV into the empty half. It made Sandy’s Audi station wagon look short. I found a pair of gloves and began to search through the SUV’s interior systematically, looking for that suppressor I’d seen on the Anaconda at Decker’s house specifically and anything else of interest generally.

All afternoon, I’d been aware of a nagging in my head about the priceless Iraqi jewelry that was sitting in my Jeep—it was something I needed to get on its way to Washington as soon as possible. And the Anaconda and its suppressor needed to be united with the CBI forensics team in Denver. It looked like I was going to have to make a trip into the big city. But it was getting on toward dinnertime.

So, I waited until Friday morning for the expedition. The necessity of taking the Peak-to-Peak Highway added nearly an hour to the normally two-hour trip, but that gave me time to make various phone calls. Of course, given the spotty cell coverage up there, that took longer than usual as well, and I had plenty of time to enjoy the scenery and lovely blue sky.

I'd had dinner the night before with Sandy and Angela, during which she and I had brought Sandy up to date on everything and decided that Angela didn't really need to come with me to Denver. Given the circumstances, it seemed like a good idea to maintain a CBI presence in Estes Park. I was just as glad to have the Jeep to myself for the day, all-in-all.

Setting up an appointment at the forensics lab at CBI headquarters was easy, as I knew it would be. It turned out that, of the two remaining tasks, the most difficult was dealing with the FBI. I had no luck at all on my first attempt, so I gave up in disgust and called my Harmon Jameson instead. Fortunately, I was on a stretch of the highway with cell coverage.

I pushed the red button as soon as he answered. "Harmon? Mac MacQuarrie here. Got a minute?"

"Secure. I do, actually. What's happening in your neck of the woods?"

"Well, I'm driving through some beautiful woods just now, in fact, on my way to Denver. With the rest of those items I mentioned, the ones that your boss is interested in. I need to get them off my hands and into his. Any ideas?"

"Probably not a good idea to give them to FedEx, right?"

"Well, I expect the insurance premium would exceed my credit card limit, if you know what I mean."

"Right. And I'm hearing that the sooner they get here, the better. My boss has lit a fire under people, especially that Simpson guy. Not sure I've ever seen an archeologist move so fast before." He chuckled. "Maybe the best thing to do is for you to take them to an Air Force base, there must be one somewhere close. Let me call you back."

"OK, that's fine. There's something else, though."

"Oh?"

"Well, I thought that while I was in Denver, I'd have a talk with the new FBI agent assigned to the Swent case. I don't know if you remember, but the first one, Special Agent Reid, seems to have got himself killed during the flooding. So there's a new guy. And I haven't heard word one from him. I figured it'd be politic if I had a chat with him in Denver. I've got quite a lot of new information he ought to find interesting. Thing is, I can't make any headway with getting to him."

"Why should I be worried about that? I want you CBI people to handle this."

"But the FBI thinks that Swent's death is their case, and you know how they are. And the information I've seen shows no connections, none at all, to the circumstances you're concerned about. By cooperating, and being proactive about it, I think I can make sure that they stay well away from sensitive areas."

There was a long pause. "What's this information you're talking about?"

"I've been using that database query program you saw demonstrated earlier this week to examine anything and everything about Trevor Swent in just about every computer there is. And there's just no hint of any connection to the...to your concerns."

"Oh. *Oh.*" Another long pause. "So what do you want me to do?"

“An appropriate call to this new agent, and I don’t know his name or anything, telling him to meet with me today ought to be enough.”

“Hmm. I think I can manage that. I’ll call you back about the, uh, transportation matter and this, too, OK?”

At that point, I was just coming into the little mountain town of Nederland, where Sandy had called me from Wednesday, so I knew the cell phone coverage would continue to work. Good thing, too, because it didn’t take long for my phone to start demanding my attention.

“Mr. MacQuarrie? This is Special Agent Winifred Small. I’ve been assigned to the Trevor Swent case. I understand that you’d like to meet with me?”

A female Special Agent, I thought. About damned time!

“Thanks for calling, Special Agent Small, and I apologize for how you probably found out to call me. Thing is, I’ll be in Denver in a few hours and I just couldn’t get to you through the switchboard. Anyway, I’ve got some information about the Swent case that you should have. Can I stop by your office?”

She was most gracious about it all, even going so far as to give me careful directions. We exchanged contact information, including secure methods, and rang off.

It didn’t take long for the next call to come in.

“MacQuarrie. Secure.”

“Mac? Harmon here. I think I got the FBI thing taken care of. You should hear from someone shortly.”

“Already did. I’m all set, thanks.”

“Ah. A serious fire got lit. Good. And here’s the deal with the...ah...transportation. You’ll get a call from someone at Buckley Air Force Base, it’s out on the east side of Denver but not as far as the civilian airport. They’ll have you deliver the items directly to a pilot who’s going to courier them here to DC. There’s some concern about the size of the package, though, so I hope it’s small.”

“Hmm. Tell you what. I’ll stop somewhere and get some kind of compact container for it all. Got a name for the Buckley contact?”

“No, sorry. This is all happening on the fly. But I decided to have them use the nationality of the items as a sort of code, OK?”

“Roger. Thanks. I’ll let you know when they’re in the sky.”

\* \* \*

The phone stayed quiet until I was past the hamlet of Gilpin and just about to descend into Clear Creek Canyon. I pulled over to make sure I didn’t lose the cell signal and noticed that the phone’s red light was on again.

“MacQuarrie. Secure.”

“This is Colonel Skip Jefferson, I command the Air National Guard Wing at Buckley Air Force Base, Mr. MacQuarrie. I understand you have a package for me that’s to be couriered to Andrews. And I’m told to work the word ‘Iraq’ into the conversation.”

“Glad to hear from you, Colonel. I do indeed have a package, but I understand there’s concern about its size.”

“How big is it?”

“Well, right now it’s not what you’d really call a ‘package.’ But I thought I’d stop somewhere and buy a container of some kind. It’ll certainly fit into something like a normal computer briefcase, like they have at, you know, Office Depot.”

“That’ll be about right. When will we see you?”

“Well, I’m up in the foothills above Black Hawk right now, and I need to make that stop. I don’t know. Maybe an hour? 90 minutes?”

“Excellent. Plenty of time for us to deploy.”

“Great. And thanks loads for doing this for us.”

“Not a problem, Mr. MacQuarrie. Actually, it’s helpful. I’ve got guys who need time in the air above Mach 1, and it’s nice to be able to do that on someone else’s dime. The same applies to the mid-air refuel.”

I laughed. “Well, hey, glad we could be of help.”

He asked me what I was driving, gave me instructions about how to get to the north gate of the base, off East Sixth Avenue, and said he’d meet me there.

That taken care of, I descended into the canyon, past the Black Hawk congestion where I’d met the FBI team before the Elias Purdy search, and on down toward Golden. At the bottom of the canyon, when the cell signal returned, I pulled over and did a quick search for a place to buy a computer bag. That was easy enough, and, lo and behold, there was even a place to have lunch nearby.

It was about 1:30 when I pulled up to the guard shack at the base’s north entrance. Before I could start the vetting process, a tall African-American in uniform walked up to me.

“Mac MacQuarrie? I’m Skip Jefferson.”

“Good to meet you, Colonel. Hop in. Um, don’t I need a tag or anything?”

“Not with me here. And, anyway, I found out that you’re not only CBI, you’re also cleared so many levels above me that I can’t count ’em. Straight ahead, then left.”

The advantages of having the wing commander in the car, I discovered, extended to being able to drive right out onto the taxi-way, up to the airplane.

I’d forgotten how imposing an F-16 really is when you’re sitting right next to one. It’s not a very big airplane, but it sure looks mean.

I passed the pilot the now-bulging computer bag, backed the Jeep away a bit, and watched him taxi off and then, with the remarkable capability those jets have, climb almost vertically into the sky. When I called him, Harmon was glad to hear my confirmation of that phase of the transfer and told me he’d personally meet the plane at Andrews Air Force Base.

It was something of a relief not to have the responsibility of all that priceless loot any more. I certainly didn’t want all those jewels in my car while I was parked at the FBI building—you never know when someone will swipe something right out from under their noses.

That building was also on the east side of Denver, about half way between downtown and the Air Force base. I’d removed the TAC-50 from the Jeep the night before, and I’d put my Sig Sauer back in the lock box with all my other gear, so I felt reasonably secure.

Special Agent Winifred Small was waiting for me in the lobby, having already smoothed my entry at the guard gate and the main entrance. She took my upstairs to her office.

After another pleasant dinner with Sandy and Angela on Thursday evening, I'd spent several hours collating the relevant information about the Swent case I'd discovered using Loogie searches and emailed it to Reid's old FBI email, with the assumption that would be forwarded to the new Special Agent in charge of the case. That strategy worked, and it meant we had a good head start on our conversation.

"I want to thank you for all the information you sent last night, Mr. MacQuarrie. It's most impressive, and it fills several gaps in the evidence and other information we have." She smiled. "And, ah, I should disclose that I've done some background research on you as well. I have a pretty solid clearance, so that research revealed some very interesting history. I'm betting the CBI doesn't know quite who it's got carrying one of its shields."

I tried not to blush. "Well, see, I'm supposed to be retired. Fishing and stuff like that. But I got deputized by one of the CBI directors as a part-timer for a case, and she never asked for the shield back. And then she called me about the Swent thing. And *then*, rather to my chagrin, the sheriff up there, Brad Winchester, he got all wrapped up in that flood business up in Larimer County, so the local part of the case just sort of fell in my lap. Actually, I'm quite happy that you folks have the jurisdiction. And it's a good thing your predecessor had all the evidence shipped down here, because it wouldn't really be secure at all up in Estes Park."

"I need to ask about that evidence. I understand that the CBI executed a search warrant at Swent's house the other day."

I suddenly felt the need for caution. "Well, we had a CBI team go through his lawyer's house on Wednesday, the day after the lawyer, the guy named Decker, was killed in a fire there. And the sheriff's guys did a search at Swent's a week ago. But I think I'm the only CBI person who's been in Swent's house."

"Yes, well, based on what we knew before, and confirmed by your information of last night, we think there is a considerable amount of evidence missing." She maintained a pleasantly soft demeanor, but I could tell there was steel behind it.

"I guess it depends on what you consider to be 'evidence.' There's certainly a lot of Swent's stuff still in his house, including several file drawers full of papers."

Her demeanor hardened a fraction. "Please don't patronize me, Mr. MacQuarrie. I'm speaking of the artifacts."

"Ah, all the Iraqi stuff. I'm not sure it's really 'evidence,' but that's your call, of course. In any case, it's in Washington DC, or on its way."

Her eyebrows shot up almost to her hairline, and her voice went ice-cold. "Oh? And who, may I ask, authorized this?"

"Well, I guess that would be your boss's boss, the famous guy who lives in the mansion on Pennsylvania Avenue. See, the plan is for him to have something of a ceremony in which he'll turn it all over to the Iraqi ambassador for repatriation. Scoring diplomatic points in that part of the world is a priority, I guess." I shrugged. "There are pictures of everything, and we found some appraisal paperwork at that lawyer's house, so just about anything you need to know about it all is available. Like I said, I'm not sure how important it is as evidence."

Her obvious annoyance morphed into resignation. "I see. And I guess there's nothing to be done about it now. But are there any other surprises that you need to warn me about?"

“There are a couple of relevant things that are associated with the Colorado cases, CBI cases for now, I guess. First, the fire at the lawyer’s house, that guy Decker, that fire was pretty obviously arson. It looks like he died in it, so the arson makes it murder. And we, meaning the CBI, are working on some evidence that may connect a Larimer Sheriff’s Deputy to it. Meanwhile, it looks as if that deputy himself was killed in a debris flow—meaning a big mudslide—yesterday. You may recall that there are some hints in all that stuff I sent you that the deputy, name of Smithy, he might have been involved in Swent’s killing. But there were clearly other people involved as well, given the means.”

“Smithy. Hmm. Why does that name ring a bell for me? Oh! Wasn’t he part of the crew that the sheriff had on site, the day the body was discovered? So he was part of the team that gathered all the evidence we’ve got here?”

I remembered that Smithy had been the person who’d met me at the helicopter, when I got dropped off.

“He was, now that you mention it. Good thinking.” I smiled. “I guess that’s why they pay you Feds the big bucks.”

Her derision was clear from the snort I heard. “Right. But do you think it would be worthwhile to search that area again?”

“Oh. Well, I doubt it. It’s rained like crazy up there for about the past week. And most of that evidence was just Swent’s body parts and clothing, right?”

She was nodding as her phone rang. She picked it up, listened for a few seconds, and said “I’ll be right there.”

Then she stood. “Mr. MacQuarrie, I’m afraid I need to run to a meeting. But this has been very helpful. Let’s stay in touch, shall we?”

Control, that’s what FBI people are all about. Control.

\* \* \*

My final stop, at CBI headquarters in a big downtown office building, was much more collegial. I’d arranged for Jim Levenger to meet me at the parking garage entrance to pick up the Colt Anaconda and its suppressor, which I’d found loose in the back of Smithy’s SUV. He invited me upstairs to his office to review the case, and I spent an hour or so with him in a cordial exchange of information. I asked Jim if his lab had had trouble with the ballistics on the two slugs they’d found in Decker’s back yard, and he said they were still being processed but that they’d found some tissue in a crease of one of them. This was undergoing DNA testing along with hair they’d found in Decker’s bathroom. In turn, I filled him on developments from my end, including the final disposition of the Iraqi jewelry.

By the time that little errand was finished, it was getting toward late afternoon, so I headed west, just in time to get caught up in the midst of rush-hour traffic. But at least, I thought, that all went pretty quickly, and I can get home before too late. And it turned out that the congestion from downtown all the way out west to Golden gave me time to catch up on phone calls.

Sam was preparing dinner, another Julia Child recipe that took a while, and she didn’t have enough hands to cook and talk at the same time. But she missed me.

Annette was helping her to cook but had time to hear about my closing the Decker case and about how the FBI was still claiming possession of the Swent case. She liked both developments.

Angela's phone went right to voice mail, which seemed odd, but, then, they were still on a sort of honeymoon and young enough to be doing goodness knows what. Although I had an idea of what that might be.

Brad Winchester appreciated hearing that the remainder of the Iraqi artifacts were on a fast plane to Washington. He was looking forward to a trip back east for the White House ceremony.

Raheem al-Muhammed was also glad to hear about the rest of Swent's booty and its inclusion in the return of everything to Iraq—even though the ambassador was still a fresh pile of camel dung, to Raheem's way of thinking.

After the call to Raheem, which was just about the time I passed the Coors brewery complex in Golden, I realized that I was finished—quite a liberating feeling. The couple of hours' driving I had ahead of me were on one of the most spectacular highways in the world, it was nearing sunset, and the weather was lovely. I felt the accumulated tension of the day begin to melt away. What, I thought, could go wrong?

The answer turned out to be: nothing much, at least not for the next hour or so.

But about the time it was getting just past dusk, when I was headed up the grade north of the Caribou Ranch entrance, things changed.

The first hint was when a jacked-up pickup truck, one with those giant off-road tires and some kind of odd-looking camper on the back, pulled up on my tail and, with a roar of acceleration and a cloud of diesel smoke, passed me despite the double yellow line. Then it was a Boulder County Sheriff's patrol car, lights and siren proclaiming its right-of way. Although I'd held my ground for the pickup, I obediently pulled over for the patrol car.

I thought to call 911, just to be a good citizen and all, but discovered that I was in a no-signal stretch of the highway. So I tried to re-relax and just cruise on home.

But on the long downgrade into the Left Hand Creek drainage just north of the Gold Hill turnoff, where the highway is cut into the mountainside with a serious drop-off on the right, there were signs that something bad had happened. As I came around a curve, my headlights revealed deep skid marks across the wide gravel shoulder, a parking area from which a view of the fall aspen would be spectacular in a week or two. And there was something of a flickering glow from over the drop-off.

I slid the Jeep to a stop in the parking area and jumped out to see about that glow.

Because of the light bar, it appeared to be the patrol car, although it could have been just another white sedan with a ski rack—the fire damage made it hard to tell. It sure wasn't the pickup that had roared past me earlier. I checked my phone and found that this time there was a signal—must be from a tower over by Ward, I thought. I called the accident into 911 and said I'd be on scene, fetched the first-aid kit and the fire extinguisher from my Jeep, and then began to scramble down the steep hillside.

But I didn't have to go far to see that I was too late to be of any help. The fire had nearly burned itself out—fortunately, the woods were wet enough from all the rain that they didn't catch, but, unfortunately, all that was left of the car was a very hot, burned-out shell. And there was a well-roasted lump of something on the remains of the seat behind the steering wheel inside that shell.

Although I had my suspicions, I wasn't too keen to find out for sure what that something was, and the residual heat made it too dangerous anyway. So I took the opportunity to climb back up to the parking area and set some flares into the gravel, both to provide some guidance to the real first responders I knew were on the way and to protect the patrol car's skid marks as evidence. I was there and I was first, but I had no idea of how to respond.

It turned out that the first help to arrive was a Colorado State Patrol trooper who had been just finishing supper in Nederland. After making sure there was nothing to be done about the car over the edge, in terms of a rescue or anything, he took a statement from me and sent me on my way. But part of our conversation included his observation that it looked as if there was evidence of a rear-end collision on the burned car's back bumper, as if something had rammed it from behind and possibly shoved it over the drop-off.

That certainly gave me something to think about as I headed on north toward home. And it also motivated me to drive more carefully than I might have otherwise. The careful driving slowed me down, and going slower gave me time to think about it all. That pickup truck, especially, seemed worth some thought. I worked at recalling a mental image of it all.

Try as I might, I couldn't remember having seen a license plate. Maybe it was the surprise at being passed on that curvy upgrade; maybe it was the cloud of diesel exhaust. Or maybe the plate was just obscured by dirt. I just didn't catch it.

Then there was the odd-looking camper shell. Instead of a side window like most campers have, I was picturing in my mind a series of three smaller windows, each set in what looked rather like a door. Trouble was, the pickup zoomed by so fast that I really didn't get a good look.

But one thing that did come into focus is the image I'd seen in my rear-view mirror as the pickup closed in behind me. There was some sort of attachment on the front bumper, kind of like what I'd seen called a "bull-bar" in Jeep parts catalogs. The State Trooper had one of those on his car, I remembered. A very useful add-on for those times you needed to give another car a push from behind.

I ran through these thoughts several times as I progressed past Peaceful Valley, Allenspark, and Meeker Park. Then, as I passed the Larimer County line, I felt myself breathing easier, for some reason. But shortly after, just north of the Longs Peak Ranger Station turnoff, I couldn't help but notice that the garage and barn at the CRAG facility were lit up like an all-night truck stop. I immediately began to slow to get a better look but then thought better of it. Brake lights are surprisingly bright, especially on a deserted highway.

Instead, I let the Jeep coast and found that I didn't need brakes to make the right turn into the old trailhead entrance just north of CRAG. So I cut the headlights and eased up the gravel road to the closure gate, then pulled off into some bushes there. I switched off the overhead light before opening the door, then got out and walked around to see if I could get a good view of the CRAG buildings. Through the trees, I could just make out two vehicles sitting in front of the garage, which was completely alight inside, and some kind of well-lit, fenced-in area behind the barn. Angela and I hadn't noticed that the day before.

In the dark, getting the lock-box in the Jeep open was a bit of a fumble, but, once open, I was able to use my blue flashlight to find everything I needed for a quick night-time surveillance. The third generation night-vision device, one not available on the civilian market, would be useless in the vicinity of the buildings with all the light there, but it would help me get through the trees on the mountainside more quickly and quietly. The black coverall I'd worn for my search of Decker's house would be important in staying invisible in those trees, as would the tin of camo makeup. My Sig Sauer P226 Combat pistol would, at the least, feel comforting snugged into my shoulder holster, and the suppressed HK 417 Recce with the accurized barrel, 20-round magazine and infrared laser sight would provide me enough firepower to deal with whatever might be happening over there.

Not that I was expecting trouble, but a quick look through the trees with binoculars showed that one of those vehicles by the garage was a jacked-up pickup truck with a weird-looking camper on the back.

The car over there was a dark, generic-looking sedan of a make I couldn't identify from that distance, but it reminded me of the sedans I'd seen inside the fence at the FBI building in Denver. And it was blocked from leaving by that pickup parked close behind it.

\* \* \*

## Seventeen

I was about half way through the woods, working my way carefully and using the NVD to avoid pratfalls, when I heard a chain saw start up, go to work for a minute, then back to idle as there was the crash of a tree falling. It didn't sound like a big tree, but it was sizable enough to make a good thump when it hit the ground. Then it happened again, and following that the saw went to work bucking the branches off the two downed trees, it sounded like. Finally, there were three longer cuts.

I'd used the noise of the saw to make considerable progress through the woods on the hillside, and by the time the saw was shut off, I was nearly to the back of the barn. I settled behind a low bush that was growing between two lodgepole pines and tried to get comfortable. As I settled in, it seemed as if time was slowing down, at least compared to the earlier part of my day. Maybe I just needed some supper, or maybe it was the tension of all the sneaking around.

The fenced area behind the barn was another corral, but the usual wood post-and-rail corral fence, at least six feet tall, also had woven wire fencing attached to its inside, as if to contain much smaller animals than horses or cattle. A vehicle gate on the far side was open, and shortly I saw three people enter it, dragging logs. Two men had tree trunks about four inches in diameter and maybe twelve feet long, and a woman had a shorter piece that was about six feet long. They hauled them to the center of the corral and dropped them in the mud.

One of the men—I recognized Lem Purdy—went into the barn and came out with a single-bit axe and a bucket, then went to work making notches at about the centers of the longer tree trunks. These he fit together and, from the bucket, took some long nails and hammered them into the joined notches using the poll of the axe.

He stopped to catch his breath and scratched his head while staring at the logs. “Hey? Why don't we make life easy for ourselves and just lean these two legs up against the fence? I put these posts in, and they'll hold it for sure.”

The other guy pondered a bit, then nodded. “Well, brother—you've had a bright idea for once in your life!”

He pulled a roll of wire out of the bucket, and they proceeded to reinforce the nails by lashing the logs together. Then, with grunts of effort, they raised the logs and walked them over to the side of the corral nearest me and wired the thing onto the top rail to secure it. Finished, they celebrated by popping open some beers.

I couldn't help but be fascinated, even though I was dreading what might be next.

They seemed to know what they were doing in constructing the thing, but apparently they were a bit weak on just how to go about using it, because what came next was a beer-lubricated argument about how to proceed. At least it introduced me to the others.

“Look, Elias, without Smithy and his horse, we can't tilt the thing up with someone tied on there. It'll be just too heavy. Besides, it's already fixed in place.” Lem Purdy took a gulp from his beer can.

“Well, what the hell are we supposed to do? You think that either of them is going to climb up there willingly? Give me a break!” Elias Purdy, who the other guy must have been, threw his hands in the air, slopping beer in the direction of the woman. “Oh, sorry, Arlene. And, look, Lem, how are we going to get them tied on anyway, even if they do climb way up there? And what are they going to climb on?”

The woman spoke up. “Will you two boys calm down? You’re always so quick to argue. It’s all easier than you think. We threaten the woman and that’ll get the man to climb up there. Although he does need something to climb on, like ladder rungs across the legs there. And you can climb up on the fence behind him to get up high enough with the rope and tie him on. Right?”

It was her turn to take a slurp of beer, after which she belched in a most unladylike manner.

“You, Lem, go cut some rungs from the rest of those two trees you dropped, and Elias and I’ll help you wire them onto the legs.” She shook her head at the sorry state of the Purdy brothers. “C’mon, Elias, we better go tend to our guests.”

Lem Purdy picked up the axe and walked back out the gate and up toward the trees, and she and Elias went back into the barn.

I was about thirty yards from the uphill fence line and somewhat above the corral, and I took advantage of being alone to move closer and improve my position a little, both to be more well hidden and more comfortable. I found a log to support the binoculars I was using to watch the action down in the well-lit corral, and I made sure that my field of fire would include the entire corral if it were to become necessary. I also made appropriate adjustments to my laser sight to account for the new distance and the downhill trajectory I might need to use.

After some chopping noises well over to my left, Lem came walking back carrying three pieces of tree, all somewhat smaller than the main X but still sturdy looking. He got out the wire and a fencing tool and started lashing one to the two main legs of the X about a foot off the ground.

“Elias? Arlene? You gonna help me out here or what?”

He finished the first rung and started on the second just as Arlene and Elias came out of the barn. She was first, holding two ropes, the other ends of which proved to be tied around the necks of a man and a woman walking side by side, their hands bound somehow behind them. I didn’t recognize the man, who obviously had been beaten and was considerably worse for the wear, but the woman, despite the disheveled appearance and dirt, I recognized Special Agent Winifred Small. She still had a glint of steel in her eyes, although it was considerably dulled compared to my encounter with her earlier in the afternoon. The man, I thought, must be one of her team of agents.

Following her came Elias Purdy, holding a shotgun pointed toward the captives, about half way between them.

This confirmed for me that I wasn’t dealing with the sharpest knives in the drawer, as Elias would have killed his wife along with the captives if he had pulled that shotgun’s trigger. Still, it was a dire situation for Agent Small and her companion, probably more dire than they knew. But all I could do for the time being was to wait and watch.

The Purdys, however, weren’t completely incompetent. Exhibiting some expertise in rope handling, Elias and Arlene secured their captives to the corral’s fence, by the gate, in such a way that no escape was possible, and went to help Lem with the remaining rungs on the timber X. They wound up with three, each about a foot apart. And they must have decided to behave in front of the FBI agents, because this time their squabbling was kept to a minimum.

I was puzzled by how quiet the FBI agents were—after all, they, as I knew well, were all control freaks, and here were two who seemed totally cowed by the events. At least, as I could see, Small was taking interest in what was going on. Her companion, however, seemed oblivious.

As the Purdy clan was finishing up, Agent Small finally broke her silence. “Mr. Purdy! I don’t know quite what’s happening here, but I need to repeat what I’ve said already. Our office knows where we are, and they’ll come looking for us. Are you really planning to take on the Federal Bureau of Investigation? Really? Do you have some sort of martyr complex or something?”

Lem looked up from twisting wire around the timbers.

“Martyr complex?” His smile was somehow evil. “Martyr complex? Lady, you’ve got no idea where this is going. Remember Waco? The FBI looked like a lot of damned fools after Waco. And we’re going to make you look like complete idiots and, better yet, we’ll survive and prosper. You show up here without a warrant and start throwing your weight around, and all we’re doing is just trying to protect our privacy.”

“That does not justify your treatment of us, Mr. Purdy.”

“Hell it doesn’t, lady. I asked you to leave, and you wouldn’t. That makes you trespassers and home invaders. Colorado’s got a ‘stand my ground’ law that lets me protect my home. And that’s what I’m doing, protecting it.”

“Mr. Purdy. Colorado’s law is not like that, not what you’re thinking, not at all. We introduced ourselves as FBI agents and showed you identification, and that alone told you that we were not common criminals intent on invading your home. Moreover, we were outside, in the driveway out there for God’s sake. You don’t have a hope of using Colorado’s law in your defense.”

Lem Purdy looked straight at her, his face grim. “Well, I guess we’ll just have to see about that, won’t we?”

He turned to his brother. “We all set? Let’s get this guy up there.”

He then walked off into the barn.

Elias walked over to Winifred Short’s companion, untied his rope from the corral fence, and gave it a jerk. “Let’s go, pal. Over here.”

The agent stumbled in the only direction he could, the one the rope was pulling him in.

“OK, now here’s what’s going to happen. I’m going to take these cuffs off you,” Elias dug into a pocket and came up with a key, “and you’re going to climb up this ladder here and then turn around, right?”

The agent looked at the apparatus with a blank stare just as Lem Purdy returned from the barn with what looked to me like a fistful of zip-ties.

\* \* \* \* \*

“Charlie! Charlie! Don’t listen to him! Don’t do anything!” Winifred Small’s voice was in command mode.

“‘Charlie’ is it? And you introduced him as ‘Charles.’ Well, I like ‘Charlie’ better,” Arlene pulled a large combat knife out of her right boot and waved it about. “Charlie, you just do what Elias says or I’ll cut one of Miss Bossy-Face’s ears off, get it? And if that doesn’t work, there are lots of other possibilities.”

Charlie was obviously conflicted, but the knife was persuasive. As soon as his hands were free, he climbed up to the third rung of the X and turned around, wobbling a bit while trying to maintain his balance. Meanwhile, Lem had climbed up on the fence behind him.

“OK, good move, Charlie. Now, lean back a little and raise your arms.” Lem grabbed an arm and zip-tied it to the upper part of the X and then shuffled over and did the other arm.

After that, he took the tag end of Charlie’s rope and wound it around his waist and the timber, right at the middle intersection of the big X, just below the top rail of the fence. Lem looked satisfied and Elias was nodding. Charlie only looked confused.

“Ready to have some fun, brother?” Elias had a peculiar look on his face.

“Guess so.” Lem looked around. “How about I back the truck in here? Then you can handle ’em. You’re better at it. Oh. Arlene? You ought to get her outside the fence, for now at least.”

Arlene untied Agent Small and, carrying the shotgun, towed her out of the corral through the big gate. They took up a position between the barn and that gate, and Arlene tied off Small’s rope again. Over by the side of the barn, out of sight, a big diesel engine fired up.

Presently, the jacked-up pickup truck backed into the corral. The gate was wider than the truck, but the truck backed in so that the passenger side was right up against its gate post. And the truck stopped so that the passenger door would open outside the post. Elias Purdy opened the truck’s back gate, fumbled around, and came up with an old-fashioned buggy whip, or what looked like one. And he also found a fat stick of some kind, maybe more of a club. But then I zoomed the binoculars in and saw that it was some kind of electrical device, like a cattle prod, maybe. This he handed to his brother, who had taken a position between the truck’s driver’s side and the open portion of the gate.

That’s when Elias started opening the doors on the sides of that camper shell. He started on the front of the passenger side, opened all three there quickly, and backed around to the driver’s side. There he started from the rear and, with all three open, ended up standing by his brother. Nothing happened immediately, but then out from one of the doors jumped a very big dog. It took me only a few seconds to recognize it as one of Elias Purdy’s wolfdogs. The other five soon followed. They grouped up, sniffed at each other, and then made a circuit of the fence, pretty much ignoring Charlie. When they came to the Purdy brothers, Elias flicked his whip, and the wolfdogs whined and cowered. Purdy used his advantage to herd them to one of the far corners of the corral while Lem pulled the truck out of the corral and closed the gate.

Elias backed over to the side of the corral where Agent Small was tied and climbed up to sit on the top rail of the corral fence, leaving Charlie, tied to the big X, alone inside with the pack. His earlier lethargy had become replaced by obvious fear. Even I, outside the fence, 25 yards or so away, holding a fully automatic assault rifle, was scared.

The wolfdogs, though, were just curious. They spread out, sniffing the ground all over the compound, an especially big one with a white right ear carefully marking all of the fence posts. At first they continued to ignore the tree-trunk apparatus on the fence nearest me. Charlie, wisely, I suppose, remained as still as, well, death. Maybe he was just too scared to move.

The Purdys, meanwhile, were patient. Lem had returned from moving the truck and joined his brother on the top of the fence, and Arlene was standing near where Agent Small was tied, watching through the wire.

“I forgot. When’s the last time you fed ’em, Elias?” Arlene broke the silence.

“Tuesday, remember? After we got back from town. I reckon they’ll be getting pretty hungry about now.” His smile was not friendly.

Lem spoke up. “Taking them long enough, don’t ya think? Maybe we should have given them some blood to smell like we did with Swent.”

“Don’t worry, they’ll find him. Can’t miss him in this little space. Not like those coyotes we had to attract up there on the mountain-side.” Elias was watching his pack with great interest.

“Charlie? You’re doing great by holding still. You can also tuck your legs up high, very, very slowly. That might help.” Winifred Small’s voice was surprisingly calm and soothing, all things considered.

That, I knew, would offer only temporary hope. Charlie, even though he looked pretty fit, would quickly tire of using only his abdominal muscles to hold his legs up.

“Shut your mouth, bitch!” Arlene grabbed the hair on the back of Small’s head and, with a scrubbing motion, smacked her face-first into a fence post. Blood appeared on Small’s forehead, and immediately the wolfdogs’ noses poked up into the air, sniffing at the new scent.

That got them interested in the meat on the timber X. The big one with the white ear circled the two legs, sniffing at Charlie from the ground, and then he put his forefeet up on the second rung to smell Charlie’s feet. I could tell that Charlie was having trouble staying still.

It was about then that I powered up the laser sight on my H&K, still wondering how I should handle the situation. After all, the wolfdogs were only being themselves, following their instincts. And, really, they were magnificent creatures. Their behavior showed them to be both smart and sociable. If there was a villain in all this, it was the humans, Elias Purdy especially.

But simply letting them eat Charlie was obviously a no-go.

While the big one continued to sniff at Charlie, I picked up the binoculars and studied the Purdy brothers carefully. I’d seen Arlene set the shotgun against the barn, near where she was standing. But I was curious about where the FBI agents’ weapons might have ended up. Because the brothers were sitting side by side on the fence, at nearly a right angle to me, I couldn’t really tell if they were carrying, though.

Then I noticed that the wolfdog with the white ear was tugging at Charlie’s pants cuff, worrying at it with something between a whine and a growl. Time, I thought, to fish or cut bait.

But then the alpha wolfdog, as I’d begun to think of him, backed off, studied Charlie again, and began another circuit of the corral.

Elias, who was closest to me, must have become impatient, because he pulled a folding knife out of a pocket and turned to his brother.

“Maybe you’re right, Lem. I think they need some encouragement.”

I had a clear view of Elias’s right thigh. Before Lem could answer, I made sure that the H&K was set on single-shot mode and pulled the trigger just enough to put a dot of infrared light—which only I could see, courtesy of the sight’s lens system—in the middle of his right knee. A little more trigger pull produced a sort of fart from the weapon and an omnidirectional crack from the supersonic round just about the time that Elias Purdy’s knees shattered—the round penetrated the right one completely and took out the left one, too.

Elias screamed as he toppled into the corral, then screamed louder as he hit the ground, knees first. His whip went flying and landed in the mud near Charlie, which scared the wolfdogs gathered under Charlie’s feet. But it was only a few seconds before their attention turned to Elias.

Lem, meanwhile, had a grimace on his face, and his right hand was pushing on his right thigh. It occurred to me that the round must have passed through both of his brother's knees and imbedded itself in Lem's leg.

Arlene had begun shrieking "Elias! Elias! Get out of there. Climb out!"

But Elias only writhed on the ground in agony as the wolfdog pack gathered around him, deep, rumbling growls signaling their intent. Arlene looked around frantically and picked up the shotgun, pushing its muzzle through the fence toward the pack. I couldn't help but notice that it was also pointed toward Charlie.

"No! Arlene, don't! You'll hit Elias!" It seemed that Lem Purdy's wound was not serious enough to prevent him from being lucid.

"What are you, stupid? A little buckshot is better than getting eaten alive!" She was practically snarling as she put the shotgun to her shoulder and took aim.

But I was ready and had an infrared dot painted on the stock of the shotgun almost immediately. Before she could fire, I did, and my shot knocked the stock sideways into her right jaw. She crumpled like a prizefighter taking a clean right hook.

Lem looked in my direction, but I was still hidden. I saw him grit his teeth, swing his legs back over the fence, and drop to the ground on the outside. He landed with a yell of pain, then hobbled around the corner of the barn.

\* \* \*

He wasn't going to be running very fast, so I knew I could catch him. But then I remembered the truck, so I leapt up and hustled after him. About the time I reached the corral's fence, near Charlie's position, I heard the truck fire up, and when I got to the corner of the corral, where I could see it, it was starting to move.

I flicked the H&K's fire-mode switch to full auto, hit the ground, and let loose a several round burst toward the truck's rear tires. It worked. The truck's rear end slewed to the left, and it skidded to a stop. Because I couldn't see the driver's door, though, I couldn't tell what was happening for a minute.

But the sound of another engine starting made it obvious, and I remembered the sedan parked in front of the garage. Jumping to my feet, I ran in that direction, but by the time I got there, it was disappearing down the driveway. I watched, impotent, while it turned right at the highway and headed toward Estes Park.

There was no point, I could tell, in trying to follow in my Jeep, as it was parked a good five minutes away. Lem's Hummer was probably in the garage, but it wasn't going anywhere without keys. So I tried to congratulate myself on my successes—the two FBI agents and the wolfdog pack were all still alive. Elias, though, was not going to be so lucky, I thought.

Back by the corral gate, I found the combat knife Arlene had been waving about and cut a piece of rope to tie her up with. She was still unconscious but seemed unharmed apart from that.

As I started to untie Agent Short, she said, "Leave me. Go get Charlie out of there."

Because he was right next to the fence, and because the wolfdogs were completely ignoring him at that point, that turned out to be easy. I also spent a minute untwisting the wire that held the X to the fence and managed to shove it over—a way, I hoped, to keep the pack from escaping. Charlie and I walked back around and untied Agent Short, who was a bit woozy, and bloody, from her encounter with the fence post but otherwise fine.

During this activity, all three of us were studiously trying to ignore the action inside the corral, a stomach-turning feeding frenzy. It occurred to me that Elias had stopped screaming about the time I was chasing after the sedan. Given all that was going on, it took him quite a while to die.

“I didn’t recognize you at first, Mr. MacQuarrie, but I was sure glad to see you running out of those trees up there. And I was right this afternoon. The CBI clearly has no idea of who they have carrying one of their shields.” The steel in Winifred Short’s eyes had softened, and her smile was genuine. “If it weren’t for these stupid cuffs, I think I’d give you a big hug, unprofessional or not.”

“I’m afraid that one of them, Lem Purdy, got away in your car, Agent Small. But my car’s just down the road. We can get into town in that.”

“Maybe there’s some water inside the barn that we can wash up a bit with, first.”

I heard a cough and Charlie said, “I’ve got a spare key for the cuffs in my left sock. And I suppose it’s too much to hope that there’s some ice around here. I hurt all over. Mr., ah, MacQuarrie, was it? I’m Agent Charles McMullen, Charlie to my friends. And you, sir, are definitely my friend now.”

He held out a hand and we shook. “Please, call me Mac, both of you. It’s about all I answer to these days.”

Charlie managed a smile. “Will do. And, I hate to ask, but could you fish out the key? It’ll hurt like hell to bend down, I just know it.”

We got Winifred Small, who wanted me to call her “Winnie,” something I was going to have to work at, unshackled and, in a gesture of payback, put the cuffs on Arlene and tied her to a fence post. After that, we went looking for a water tap.

The one in the barn had a “non-potable” label on it, which made me feel sorry for the horses, but we did find a stash of belongings including personal and ID wallets, cell phones, and Winnie’s purse. No weapons, though. But in the garage we hit pay-dirt. The second-floor apartment, where Lem Purdy had been staying after the debris flow took out his house had not only *hot* water, but also towels and even a medicine cabinet. And ice.

Winnie’s bleeding had been due to a deep abrasion that had turned into an egg-shaped lump on her forehead. I got her cleaned up and bandaged, and fed her a couple of Advils from a bottle in the medicine cabinet. But she wasn’t going to be winning any beauty contests in the near future. Charlie, meanwhile, gulped down four of the things with several glasses of water. He also found a plastic bag and made himself an ice pack with it.

“Mac, I’m almost sorry you didn’t shoot that woman Arlene instead of just knocking her cold. What a sadist she is.” He sighed. “If you ever have the opportunity to get beaten with bamboo sticks, I recommend that you pass. I never would have thought something could hurt so much.”

“Well, assault and battery of a federal officer would seem like a nice complement to conspiracy to commit murder and assorted other felonies, right?”

Our final victory of the evening was the key to the Hummer that was hanging on a hook by the apartment’s door. But we still had one more job to do.

“Let’s get Arlene into the car, well trussed up, of course. Then we have to decide what to do about the, um, mess in the corral.” Winnie Short was back to being in control.

“And there’s also the matter of Lemuel Purdy,” I reminded her.

She looked at me, steel back in her eyes. “Oh, yeah. How could I forget him? Let’s do the easy stuff first. Where’s my phone?”

She proceeded to call her office and pass instructions for an armed-and-dangerous be-on-the-lookout for Lem, even giving a solid description of him and her FBI car in the process. She made it clear that the Estes Park PD and Park Service law enforcement needed to be high-priority recipients of the BOLO.

That done, it was time to fetch Arlene from outside the corral and decide to do about what was inside it.

We'd taken enough time to clean up and so on, however, that the feeding frenzy was about over. The wolfdog pack looked reasonably content, all-in-all, some asleep, a couple gnawing on larger bones that I didn't want to know more about. I'd been hungry earlier, but now I wasn't. At all. For anything.

We decided just to leave the pack inside the corral with some water in a big pan we found in the barn. Some outfit such as the county animal control group was going to have to decide what to do with them. And then we bundled Arlene, who was still out cold, into the Hummer, turned off all the lights we could find, and left.

They dropped me at my Jeep, and I put away my equipment and led them into town, first to the Estes Park Medical Center. There, Arlene got revived, placed formally under arrest, and shackled to a bed for further recovery, Winnie got her wound looked at and fixed a bit with a butterfly bandage, and Charlie, bruised from shoulders to ankles, got tsked-tsked over and given a strong prescription for painkillers. Fortunately, he had no broken bones or other serious damage, just lots and lots of bruises.

I steered Winnie and Charlie to a local motel that wouldn't completely blow out their *per diem* and had toilets that could be flushed, and let them have time to check in, then we all met at a local pizza joint in Lower Stanley Village for a late supper and debriefing.

"You two must have left Denver right after our meeting, right, Winnie?" I was puzzled by how they'd managed to get to CRAG before I did.

"That was the phone call I got, Mac. Time to leave. In all that info you sent me, I noticed that the person who interviewed the locals up there in the valley about the Swent case was Aaron Smithy. We wanted to talk with people again, and we started with Lem Purdy, as our bad luck would have it."

Charlie nodded. "And he was—how would you say it?—paranoid in the extreme. He was a clear person of interest for us, but it would have been just a routine interview if he hadn't over-reacted. He surprised us with that shotgun and called his brother."

"That explains the hurry." I related my encounter with the pickup truck and the circumstance involving the Boulder County deputy. "It'll be interesting to see if forensics finds traces of the deputy's car on that truck's bull-bar."

"Well, I think..." Winnie's pocket buzzed, and she pulled out her phone. "Agent Small...Yes, that was me...Oh! Well, that's interesting. Where?...OK, thanks. We'll be there soonest."

She looked at me. "Estes Park PD has found our car, abandoned in the parking lot of a grocery store. A Safeway, they said something about Upper Stanley Village. You know where that might be?"

"Let's go for a short walk," I responded.

\* \* \*

I made a triple-decker pizza sandwich to carry in one hand and held my big cup of Coke in the other, and we walked up the outside stairway to the upper part of the shopping center. There, with an Estes Park PD car sitting next to it, was Winnie's FBI sedan, looking none worse for the wear. The keys were even still in it.

After a bit of negotiation with the officer, Charlie opened the driver's door using a knuckle, reached inside, and popped the trunk. From there, he took out a roll of what looked like clear packing tape and proceeded to lift what fingerprints there were from the door handle, the steering wheel, and the car key. That done, he had the officer initial the backside of the tape, thanked him, and sent him on his way.

By that time I was finished with my pizza and feeling the effects of the long, stressful day. They were too, so we all agreed to meet first thing in the morning at a local breakfast place just across the parking lot and called it a day.

I went home, cleaned up, and was about to fall gratefully into bed when I remembered Angela. Although she'd missed all the excitement, she needed to be part of the next day.

So I called her, late as it was getting. Fortunately, I heard something like television news in the background, so she was still up. These youngsters, I thought, have more energy than they know how to handle. With a minimum of fuss, I persuaded her to join us for breakfast the next morning and to let me yank some chains a bit during the conversation.

And then I did fall into bed. This time, the message in my head wasn't that I was getting too old for this stuff, it was that I'd gotten too old some time ago.

But Saturday dawned bright and beautiful, and I felt rejuvenated, especially because the breakfast at the Notchtop Cafe was sublime. They didn't have a change of clothes, so both Winnie and Charlie looked a bit wrinkled, but that just meant that they fit in with everyone else in Estes Park.

The introductions went over swimmingly, and we spent most of breakfast reviewing, in terms suitable for a family restaurant, the events of Friday for Angela's benefit.

Over our second post-breakfast cups of coffee, Winnie finally broached the elephant in the room. "Well, I checked this morning, and there are no reports of stolen cars since last night. So where could he have gone? I mean, we still have possession of the Hummer, so even if he had extra keys, he didn't take off in it."

I'd slept well and, after a double serving of eggs Benedict, was feeling just fine, maybe a little too fine. "Well, you know, this is a big town for hiking. Maybe he just walked off."

I guess she saw the twinkle in my eye. "Yeah, right, with a bullet wound in his leg. What is it you're not telling us, Mac?"

She shot Angela a sort of "here we go" look.

"Well, I mean, that's really his only option, right? Your folks have the park entrances under surveillance and the State Patrol is watching the only other road that's open, the one we came in on last night. Unless he stole a horse. Or rented one."

She sat and stared at me, not especially steely-eyed, just patiently. Angela and Charlie kept quiet.

"Or he could be camping out, I guess. Weather's pretty nice, finally. Did you have equipment in your car that he might have walked off with? A tent or anything? There are lots of places to camp around here. Besides the camp grounds, I mean."

This got me a skeptically raised eyebrow. I noticed in my peripheral vision that Charlie was working very hard not to giggle. Maybe it was those prescription painkillers. And Angela was doing eye-rolling exercises, I guess.

“Or,” I continued, “maybe he’s decided to hole up somewhere until things cool off a little. Of course, even though this is a pretty small town, it’s kind of big for a real house-to-house search. And there are lots of crotchety folks up here, folks who’d insist on a warrant before they’d let you search. Even for someone like the remaining Purdy brother.”

Winnie started drumming her fingernails on the table.

“So, what you need is a strategy to search the right places first. The places he’d most likely be, right?”

She finally broke her silence. “Why, who would ever have thought of that, Mac? C’mon, man, can we cut to the chase here? Please? Is there something you want from me?”

I tried to look surprised. “Hmm. Hadn’t thought of that. But, y’know, maybe there is. See, if the story about last night gets out, I’ll be in very, very hot water with my, uh, my significant other. Is there some way to keep my role in that whole thing, you know, secret, just among us?”

I shot Angela my most serious look.

It was Winnie’s turn to look surprised. “Well...no, wait. Now that I think about it, I don’t believe that either Arlene or Lem got a look at you, not at all, let alone a good enough look for an ID. Hmm. Well, maybe we can. For sure we can downplay it to make your role appear passive.”

“‘Passive,’ huh? Hmm. Well, that should do it. I suppose that there should be *some* mention of CBI involvement, just to keep the local bureaucrats happy.” I held out my hand and got a handshake. “Now. Let’s pay the bill, and I need to get something out of my Jeep. Then we can take a short drive and another little walk.”

I retrieved my lock-pick set from the box in the Jeep, and the FBI agents followed Angela and me up the hill to the subdivision above the shopping center. There, we left the two cars at the end of the street and walked, to everyone else’s chagrin, through back yards to the house where I’d spent the previous Tuesday evening. It was still surrounded by yellow crime scene tape and it still smelled smoky. I led them on a round-about route that involved lots of bushes.

“Now,” I whispered, as we flitted behind a good-sized lilac, “if you were going to hide out for a while, you’d want someplace familiar, but someplace where you wouldn’t get disturbed, right?”

“Sounds good to me.” Winnie, I noticed, had her backup handgun, a Glock 9mm from her car’s trunk, drawn.

“So, this house with the burned wing is where Michael Decker lived, and where he died. Thing is, he was an officer on the board of that CRAG outfit, where Lem Purdy was director. So Purdy had probably been here on various occasions, and he knows it’s empty now.”

“Ohhhhh...” Comprehension dawned on her face, and on Charlie’s and Angela’s, too.

“I’m thinking that he won’t exactly answer the doorbell. And we should probably try to cover all the entrances, at first. Until we clear the first floor. Right?”

“Right.”

“*But*. But if we can make it seem like a routine follow-up to the search that the CBI forensics guys did, ah, last Wednesday I guess it was, then he’ll be less likely to be spooked into doing something stupid, right?”

“Oh. I see where you’re going.” Charlie was nodding, and I could see that Angela was, too.

“So I’ll go in the front door and make a bit of noise doing it, while you’re covering the back door and the side door on the garage and the hall that used to go into that burned-out study. I’m thinking that

if he opens the main garage door, we'll all hear it. After I'm in, I'll let you all in and we can clear the first floor. At which point, if he's in the house—and there's no guarantee he is—he'll be trapped on the second floor. OK?"

Winnie said, "And when you let us in the house, we'll make normal conversation about mundane things while we're clearing the first floor. To make it sound all routine."

"Perfect. But on the second floor, at some point we'll have to be stealthy." At that point, we were at the back door, so I left Winnie there, waved Charlie toward the end of the house where the study had been, and took Angela around the garage with me, leaving her at its side door.

I got around to the front and made something of a racket getting the door open, and things fell into place from there. We cleared the first floor with no surprises, and I managed to find a flashlight in a utility drawer in the kitchen. Charlie, Angela, and I cleared most of the second floor while Winnie guarded the stairs, after which we all eased into the master bedroom. I held my finger to my lips as I led them into the bathroom and then into its big closet. Under the shelves at the end, I found the latch, opened it as quietly as I could, and pulled the shelves out.

The flashlight lit up the little hidden room back there, where Lem Purdy was looking bewildered, all wrapped up in a sheet on a mattress on the floor next to that safe.

\* \* \*

He probably wasn't exactly happy to see us, but, then again, I think maybe he was relieved, at some level. For one thing, his leg obviously needed real medical attention. For another, there was very little in the way of food in the house—Decker had been an eat-out bachelor, it seemed—and, on that bad leg, a trip to the store was going to be almost impossible for Purdy to manage. When we surprised him in his little hidey-hole, he didn't even go for the handgun—Winnie's, it turned out—that he had in there with him.

Charlie cuffed him, and we dragged him out into the bathroom, where we could see the severity of that leg wound. That motivated Winnie to call an ambulance, and she rode in it with him to the medical center. As that was happening, Charlie and Angela searched the hidden room for additional bits of evidence, but it was clean except for the mattress that Purdy had been sleeping on. We concluded that, in addition to the safe, the room had been used for storage, and that the mattress had been in there all along.

After that, it was a matter of dotting "i"s and crossing "t"s. At the medical center, Arlene had awakened and was making a god-awful nuisance of herself, but because her jaw was broken and wired shut, it was mostly unintelligible and muffled. And it was easy to promise the center's staff that she'd be whisked off to Denver that afternoon—Winnie, after all, had called in reinforcements. Lem Purdy was hustled into surgery on arrival, and the anesthetic would keep him under full control at least until the FBI's ambulance arrived.

I'm sure that the Sergeant Alf Strzpyk of the Estes Park PD, who had pulled duty at the medical center to keep an eye on things, was eagerly awaiting their departure, in order to get these two felons—excuse me, alleged felons—out of his little tourist town as soon as possible.

Having wrapped up everything that I could think of, I was itching to get home, do a little packing, and head west over Trail Ridge Road. The prospect of seeing Sam for the first time in a week was beckoning. Also, the flushable toilets.

I mentioned this to Angela while we were sitting in the medical center's waiting room, and she agreed—she and Sandy had been away from their new home in Winter Park for a long time and wanted

to get back. So I suggested that she head out. I was planning to dictate as full a report as I could manage on my drive west, and she, I promised, would get the first draft. It didn't take my suggesting that a second time before she was out the door.

While I waited around to hear the results of Purdy's surgery, I thought over the events of the past 24 hours. It occurred to me that someone needed to call animal control. But what animal control? Larimer County's was based in Fort Collins, a good three-hour drive given the road situation. And on a Saturday, they'd not have resources to get up here. Gilpin County, the smallest in Colorado, might or might not even have one, I decided.

That left the county in between, Boulder County. Strictly speaking, the CRAG place was not in their jurisdiction, but it wasn't too far removed, only a couple of miles. And they, I suspected, would empathize with the plight of Elias Purdy's wolfdog pack. So I fiddled with my phone until I found their number and called them. I made sure to work into the conversation the tidbit that there had been an accident and the pack had eaten its owner, whatever relevance that might have. And I told nice person on the phone that the alternative to their group's involvement would be that those six magnificent animals would probably be summarily euthanized.

That got me the response that "OK, I know just what to do. Where is this, now?", and I knew that things would be taken care of.

Then I called Annette.

"Mac! Good to hear from you. How's the weather over your way?"

"Well, since Thursday afternoon, it's been perfect. And you'll be glad to hear, I think, that everything to do with those cases over this way is a wrap."

"Really? Already? How'd you pull that off?"

"Well, I guess I should probably make you wait for the report. See, I'm going to run it by Angela first. She's my boss, after all." I could hear a small groan. "But, but, hold on. I need to do that because she was involved in clearing our for-sure case, the arson at Decker's place and his murder. And our not so for-sure case, Swent's murder, is going to come out as an FBI success, with us getting credit as bit players. So I think it's all good."

There was a long pause. "No damage?"

"Ah, not to me or Angela. But the new FBI agents got dinged up a little. And, of course, the first set got themselves killed in the flood."

"Umm. Well, OK, that sounds about as good as it can be under the circumstances. But I'm going to be impatient to see a full report."

"Oh, you will, you will. But, I gotta warn you. It won't be fit for polite dinner-table conversation. Far from it, in fact." I tried to put a little lightness into my voice. "So, how are you and Hal and Sam? I'm planning to come over this afternoon. Can I pick anything up on the way in?"

"Oh, good. Sam will be thrilled. And, um, I think we're fine, because we'll be making a trip into town soon." She paused and I heard a chuckle. "And she's got a big surprise for you."

"Uh-oh. Does this mean I'm going to swoon again?"

"Ha! You'll just have to wait and see. But I think you'll find it...um...oh...adorable. Heartwarming. Just what you've never had and always wanted. What your life has been missing."

Oh, *man!*

**A Four Corners Mystery**

# Murder on the Rocks

## Prologue

Of all the bad things that could have ever happened to her, in her worst nightmare Lucy could never have imagined being stuffed into the pit of that outhouse.

It made her want to die.

This was a different wanting-to-die from the time she embarrassed herself two years ago, when she wet her panties in front of her classmates for fear of not getting that arithmetic problem right, and it was also different from those painfully uncomfortable times in the dentist's chair.

It was those put together and much more. Much, much worse.

At least that horrible man was gone, the one who had done those awful things to her. But now it was dark. And cold. Smelly, putrid, foul, too gross for words. Hard to breathe. Standing chest-deep in this...this disgusting glop was the worst, so bad she almost wanted the man to come back. Almost.

Her mother had told her, over and over, "Lucinda Smith, you must never talk to strangers, or take candy or anything from them. Never ever."

But he seemed so nice, she remembered. And he smelled good, like Daddy when he was cleaned up, with a whiff of that Old Spice I bought him last Father's Day. And he was good-looking, not all fat and sweaty like Daddy usually was.

And he even had a bit of a limp like me!

Lucy wondered if she would smell anything good ever again, if she would ever walk anywhere again.

That horrible man had taken her clothes, ripping them off her as she struggled, then done those awful things to her, the things that hurt so much. After that he stuffed her down this disgusting toilet, into the pit. At least she had been able to land on her feet and prevent her head from going under. That, she just knew, would have killed her in the most horrible way possible.

Then the lid banged shut, the door slammed, and she heard tires scrunching on the gravel, driving away. Everything got quiet.

The depth of the quiet put another scare into her, and she screamed for a time. But that made her breathe hard, and the putrid air choked her. So she tried to calm herself, and to listen. While she listened, she sang songs in her head, and hummed softly.

*"Jesus loves me, this I know..."*

The song put her into a different place, into a sort of trance where she was sheltered from her pathetic circumstances.

How long this went on, she had no idea. There was no day, no night, just the putrid darkness. And the cold.

*“Jesus loves me, this I know...”*

She had been shivering for what seemed to be an eternity when she imagined she heard tires scrunching on the gravel again, getting closer this time. But they stopped and nothing else happened—the deep quiet returned.

So she went back to her little song, slipping back into her trance, trying not to breathe too deeply, wanting to die.

Soon. Maybe she would die soon.

## **Part I**

### **One**

I went so far as to look it up. The original version of Robbie Burns’ contrite musing about that mouse included the stanza

*But Mousie, thou art no thy lane,  
In proving foresight may be vain:  
The best-laid schemes o' mice an' men  
Gang aft agley,  
An' lea'e us nought but grief an' pain,  
For promis'd joy!*

All I can say is, our scheme had been laid quite carefully indeed, and I thought it was foolproof. But then in the winter another big stock market “correction” happened while I was too busy to notice, along with a hiccup in housing values, and it all went extremely *agley* for us, far more so than I would have ever thought possible. It just didn’t seem fair, even to an old cynic like me. On top of that, the early September flood added actual injury to the financial insult, although we came through it relatively unscathed.

And all that financial turmoil, and the disruption of the previous fall’s flood, was immediately followed by the hugely annoying, official inquiry into what had happened in that investigation of mine during the flood. At least Angela Espinosa stuck resolutely with me through it all, despite some risk to her career with the Colorado Bureau of Investigation. Annette Trieri, too. But, rather quickly, actually, it came out in my favor, which helped all of us feel vindicated. It soured me on working with the CBI, though, despite my friendships there.

I guess one characteristic of us folks of Scottish descent, especially the MacQuarrie clan, must be perseverance, because I soldiered on, and, stalwart companion that she was, Sam soldiered with me. Although my stocks, the ones I’d picked so carefully for their supposed balance of income and stability, had tanked, my two pensions still provided their monthly checks, for what that was worth. And even

though our house lost some of its value, the market in Estes Park wasn't hit as hard as some places. In fact, the aftermath of the flood was probably a bigger hit overall. But because our house wasn't affected, it did well on the market, at least as well as I could have expected, and sold right away. It helped, I'm sure, that it was springtime, when people thought about moving to Estes Park. I guess we should have asked more for it—but we just didn't want to push out luck.

We had paid for it with cash, mostly Sam's cash, and we were still able to sell it for a tidy sum and buy a townhouse, all in a whirlwind of activity, and have quite a bit left over. We wanted to travel the Rocky Mountain West, and the lock-and-leave nature of the townhouse was just a better fit for us than that detached house on the big lot with all its upkeep—and its higher taxes. Besides, the townhouse was within walking distance of downtown, so we could wander down there on summer evenings for ice-cream cones.

So we made plans to hit the road.

I knew right away we couldn't possibly do that in my restored '66 Shelby Cobra racer, nor would Sam's pink Volkswagen Beetle convertible work. So we sold them both—I was flabbergasted at what that Cobra brought, which helped the overall financial situation quite nicely, and the VW did pretty well, too, despite (or, I suppose, possibly because of) its pinkness. We kept my Jeep, though, to use when we were staying "at home" in Estes Park.

A bit of research put me onto a company that built and sold all-wheel-drive, ruggedized conversion vans, including full-sized ones with big turbo-diesel engines and twin 25-gallon fuel tanks, adjustable suspensions, transfer cases with a low range, and oversized, knobby off-road tires, all of which would be able to take us just about anywhere the Jeep could. We found one in stock that would let us sleep and cook in it, and it even had a way for us to avoid having to do in the woods what bears do there.

I was just too old for that sort of thing, and, though Sam had taken to life in the Rocky Mountains with gleeful enthusiasm, she hadn't quite embraced that level of outdoors-woman proficiency. Besides, having put up with an out-of-commission sanitary sewer from the flood, after it had washed away the pipes down in the valley, we both deserved some creature comforts.

What with the inquiry, selling the house and moving, selling the cars and finding the van and getting some custome work on it done, it took us a year to be ready for an expedition. We finally managed to get our act together in early October for our first tour, planned for the weeks before the transition to winter hit the mountains, through northwestern Colorado, into the Uintah mountains of northeastern Utah, and then toward points south, where we hoped we might see the very last of the changing aspen.

We were going to make a big, counter-clockwise loop and return to Estes Park by Halloween, or perhaps a week later if we decided to stretch things out. By then, we figured that Trail Ridge Road would be closed, so we started off on it to the west while it was still open.

It took a week or so to shake things down—a week of glorious fall sun and blue skies, during which we cheated and stayed in a couple of motels—but by the time we made it over to Flaming Gorge, we were settled into a comfortable routine in our home on wheels. The aspen in the high Uintahs were mostly bare, so we wandered the back roads seeking out places with interesting scenery for Sam to sketch and streams in which I could torment the trout, or at least try to.

That back-road wandering was how we came upon the little picnic area and campground at the Bald Mountain Trailhead. As nice as the van was—captain's chairs with lots of adjustments; stereo with a Bluetooth connection as well as satellite radio and navigation; cold drinks within arm's reach—it was not what you'd call roomy. After only a couple of days into the shake-down week, we had discovered the therapeutic value, both physical and psychological, of day hikes to exercise our legs and to stave off

the incipient cabin fever. The Bald Mountain summit, it appeared, might offer a good view of the surroundings.

We were standing in the gravel parking area, stretching and listening to the cooling engine tick and play a counterpoint to the wind sighing through trees, when Sam looked puzzled.

“What’s that?” She cocked her head sideways.

Her hearing, I had discovered, was much better than mine, so I just tried to keep quiet and listen harder.

“It sounds like someone singing.” She listened some more. “Humming, maybe. And I think it’s coming from over there.”

She was looking toward the privy.

\* \* \*

It took us about a half hour to get that poor child even to tell us her name. By then, we had her out of there and pretty well cleaned up, wrapped in a sheet and several big towels that I doubted would ever wash completely clean. We made her some hot cocoa and soon she stopped shivering, although her lips stayed blue for a while longer.

But it took me only about ten seconds to decide what to do with the motherfucker who put her in there, if I ever got him alone for long enough. It seemed like the same treatment he’d given the little girl would be a good start, except he’d go in head first, inch by slow inch.

Lucy Smith was ten, she told us, and, as you’d expect, scared witless. Sam’s presence helped, I’m sure, as did the cocoa, the warm sunlight, and the sponge bath Sam gave her. It was pretty clear that she’d been sexually abused, so I tried to stay in the background as much as possible and let Sam go into her mother/nurse mode.

Fortunately, we’d invested in a satellite phone—our experience with spotty cell phone coverage in the highly civilized town of Estes Park had suggested that something more reliable would be worth having in the real outback. I called the 911 service, and in a blink was routed to the Summit County Sheriff’s office in Park City. I summarized the situation and, in the process, told them about my Colorado Bureau of Investigation connection and suggested that they call Annette Trieri, the CBI Deputy Director with whom I’d worked a lot, for verification. Given the circumstances, that was sufficient for me to persuade them to let us bring Lucy in rather than send an ambulance out for her, which would save time, and for someone from their office to meet us at the medical center.

Although it was only about 45 miles, the road was such that it took me a bit over an hour. I suppose I could have made it faster—certainly so in that Cobra I’d sold, or even Sam’s Beetle—but I had a couple of people rattling around in the back of the van and I wanted to make it easy on them. For the whole drive down, I listened to Sam’s voice murmuring in reassuring tones about things I couldn’t quite catch.

My GPS navigation system, along with a couple of very obvious signs close in, guided me to the emergency entrance of the Park City Medical Center, where I found a sheriff’s patrol car, a white SUV with decals all over it and a light bar on top, waiting. As soon as we pulled up, a team of people in scrubs emerged with a gurney.

I swiveled my captain’s chair around. “We’re here, Sam. It’s a hospital. Ready for a bit of excitement?”

“Nope. Not at all. No excitement. I’ll step out and talk to them.”

Sam and I had met a few years before down in South Florida on an assignment I was involved with for a special group operating out of one of those three-letter agencies in Washington DC that doesn't want you to know what they do. At the time, I was recently retired, so they hired me back as a consultant, and it was because of my efforts, with indispensable help from a variety of very highly competent people, that a serious threat involving special nuclear materials was contained. Sam, more by coincidence than anything, was on the fringes of it all, and that's how I'd met her. At the time, she was a Miami Beach working girl, but as our relationship evolved, she gave that life up in favor of being an artist with remarkably marketable skills as well as being my Significant Other, or whatever that's called now.

But one thing her working-girl days had taught her was how to be assertive when it was warranted. Of course, she could also be submissive, too, almost on demand if needed—but that situation at the Park City Medical Center called for assertiveness. And even I, who'd been living with her for the past few years, was impressed. It made me so proud of her that I almost burst.

I watched in the right outside mirror as she opened the big sliding door of the van just enough to slip through, and then she stepped carefully down. No hurry, no rush, just dignity. Then she gathered the scrubs and the sheriff's deputy together into a little scrum, which lasted for almost five minutes. By the end of that, everyone was nodding, and all of the scrubs disappeared into the hospital pushing the gurney ahead of them. Almost immediately, one of them reappeared pushing a wheelchair. And the sheriff's deputy sat back down in her SUV, the passenger side, so I inferred she had a partner.

Sam then helped Lucy, talking softly to her all the while—the passenger-side window was open, but I couldn't hear what she was saying—out of the van and into the wheelchair. Lucy was looking pretty good, actually, alert, curious, staring around at the surroundings with interest. Then they disappeared into the emergency entrance.

I got out, walked over to the passenger window of the sheriff's patrol car, and flashed my CBI shield. She lowered her window, and I got a glimpse of another officer behind the wheel, a thin middle-aged man, fit looking and hidden behind the cliché of mirrored aviator sunglasses. I told the deputy I was going to park the van legally and be right back. She looked suspicious, but I suppose that was to be expected, part of her personality, even. When I returned to her window, it eased her suspicion, and we walked into the waiting room together as her partner remained in the SUV. Sam and Lucy were nowhere to be seen.

I spent the next while establishing my identity with her, first by repeating what I'd told the 911 operator, then by referring to my CBI credentials, and then with new information: what Sam and I were doing in northeastern Utah in the first place. Being tourists. And tourism, after all, was something that Utah was trying to encourage, despite some odd cultural issues. The deputy recorded my entire recitation, so it was official.

I decided not to reveal anything about my rather remarkable federal credentials unless it seemed absolutely necessary. I knew that Utah was one of the fifty states that scored low on the trust scale with respect to the federal government—I'm not sure but what that low score worked both ways, actually—and I figured my connections in Washington might not be all that helpful.

But, fortunately, what I told her was good enough to make Deputy Lisa Hamilton, according to her little name badge, relax a bit. We even made casual conversation, during which I learned that she was an immigrant from Wisconsin who found the local culture a bit mystifying.

Sam, bless her soul, was one of those people who took interest in whatever woo-woo therapeutic marvels came along, and, much as I hate to admit it, some of that had rubbed off on me. Turns out that it was actually helpful, in situations such as that one in Park City, to be able to put myself into something

like a meditative trance whenever there was idle time to be passed. It sure beat watching the Fox News feed on the TV in the waiting room.

But even a deep trance wasn't enough to allow me to ignore the commotion that blew in about 45 minutes later.

First, there was a screeching of tires trying to make a turn they weren't really able to, and then those same tires complained loudly about having to stop the car so abruptly. Right outside the ER door. Almost immediately, the automatic door opened just barely in time for an obese, frazzled-looking woman, probably in her early 30s, to burst in, disheveled and hysterical and sweating, and run up to the admitting desk yelling at the top of her lungs, "WHERE'S LUCY, MY DAUGHTER LUCY? OHMYGOD WHERE IS SHE?"

Deputy Sheriff Hamilton leaned over my way. "There was a state-wide Amber Alert out for that little girl."

"Ah. I guess that means that, when the kid is found, the parents are notified as part of the process?"

"Pretty much. Law enforcement would look bad otherwise. Even when it's maybe not the best idea." She was shaking her head.

I sighed a huge sigh. "Well, it sure would be in Lucy's best interest right now for that woman to calm down. Like, a lot."

"I agree completely. And, you know what? I think the absolutely best thing we could do here would be for her to have a talk with the heroic person who rescued her daughter." I could see just a hint of a smile on Deputy Hamilton's face.

"Well, Sam's inside there somewhere. She did all the rescuing. I just drove the van."

"Yeah, but you're here and Sam's not." She stood up and walked toward admitting.

Oh, shit.

Shit. Shit. Shit.

\* \* \*

Even though I prayed a little prayer to the Vacation Gods to save me, they didn't listen. Assholes.

Then Mr. Smith showed up, followed by a noisy pack of seven children who were being herded by the oldest, a girl of perhaps twelve. He was about twice as rotund as his wife, which gave him the physical presence to get her under control. A bit. But not completely.

Anyway, I don't want to talk about it. Suffice to say that I was indeed able to get her calmed down even more than her husband had, and so when the staff decided to let them see Lucy, it probably wasn't too traumatic for the poor kid.

And Sam managed to escape the entire thing. She was upset at having to leave Lucy in the hands of such obviously questionable guardians, but, then, it wasn't as if Lucy was up for adoption like a stray puppy. Thank you very much. Maybe the Vacation Gods were listening after all.

But that didn't mean we were through. Deputy Sheriff Lisa Hamilton, in a most polite fashion, suggested that we needed to spend some time at the Sheriff's Office there in Park City to be interviewed, in order to help them apprehend the kidnapper. And, well, it was hard to argue with that, no matter how much Sam and I wanted only to be on our way. So Deputy Hamilton rode with Sam and me as we followed her partner over to the station. I was careful to signal all turns and lane changes.

To be fair, even though they interviewed us separately and I heard some shouting coming from the room where Sam was, it wasn't completely unreasonable. And I learned some things, such as the little tidbit that Lucy's disappearance wasn't the first to have happened in recent months. Law enforcement all over Utah was trying to work together to deconstruct the circumstances involving at least six other such missing little girls. Who, if anyone, was behind the whole thing was, of course, a priority, and theories ran the gamut from simple accidents with no body found—all of the girls had disappeared in pretty remote rural areas—to international child prostitution rings. At the same time, Lucy's case was the first with any evidence at all of a kidnapping rather than a mysterious disappearance. But because we'd found her where we had, the kidnapping was confined to Utah, and Utah law enforcement was still in control of the whole situation.

One thing that triggered my intellect more than just a bit was a comment about how Lucy limped because of a genetic defect manifested in her left foot. I'd noticed the limp up at Bald Mountain, but I'd put it off to her condition, just plucked from an almost frozen-over version of hell, at the time. But the defect seemed important somehow. I just couldn't place it.

We were finished about dinnertime. The sheriff's people thanked us and, because we'd given them contact information, let us go our merry way, even to the extent of leaving the county and Utah altogether if we wanted to, although Deputy Hamilton expressed her hope that we'd continue our visit. Strangely, we didn't see her partner after our arrival at the station.

It took Sam and me just a simple exchange of looks to decide that we weren't going to pick up where we left off—to drive back northeast to that Bald Mountain picnic area and its campground. Nope. Time for some comforting rewards, we both agreed.

So we found a room at something called Hotel Park City, a place with suites, Marriott amenities, and a spectacular view. For us, it was a budget-buster, but, then, we were heroes who deserved some luxury, at least for one night.

Maybe not best of all, but a really Good Thing was that the hotel had an amazingly fast internet connection, something that we had just begun to learn to live without on the road. So we ordered dinner from room service and hunkered down in front of our respective computers.

When we were in the downsizing process and planning for extended time on the road, I gave quite a bit of thought to our communications needs. The satellite phone I mentioned was only one part of it all—an emergency link to civilization when we might need one. And it had already paid off. But I also got rid of my desktop computer and bought one of those new combination tablet-laptop gadgets, the kind with a detachable keyboard and a solid-state hard disk, and got another for Sam as well. Mine was all tricked out with lots of memory and a fast processor, and hers was not quite so fancy, but they both had cell-phone capability in addition to the usual Wi-Fi networking. Because the van also had a built-in cell-phone link and a Wi-Fi router—one of the bells and whistles that we had installed—I shopped around and got a 5-phone family plan for the van, the two computers, and our two phones. Expensive on a per-call basis, given how little we used any of the things, but a good investment in flexibility. At least that was my rationale for it all.

At the Hotel Park City, of course, we were able to use our computers in Wi-Fi mode, which, being much faster than the cell-phone link, helped with catching up on a backlog of email and so on. Our week in the Uintahs had been almost completely off the grid.

We ate and answered email and read news and other communications. I was just about to stick a fork into the carrot cake I'd ordered for dessert, when I heard a little sigh from Sam.

“Oh, no. My Aunt Rebecca died.” She was staring my way, eyes glistening, when I looked up. It took me a minute to recall a Christmas card we’d received the previous winter, when we were still living over the mountains from Estes Park, in Fraser.

“Well, that’s too bad. I’m sorry. Didn’t you say she was getting pretty old?”

“Yeah, 92. She and Uncle Dean are in an assisted living facility in Fort Meyers.”

“Y’know, until we got that card from her, I didn’t know anything about your family.”

“We just never talk about things like that, do we?” She sighed again. “Anyway, Uncle Dean—he’s 90 but still sharp, uses email and everything—he says they’re having a memorial service on Sunday. I think I’d like to go.”

It took me a few seconds to remember that it was Friday evening. “Uh, sounds like there’s time to get there if we hustle. Want me to come?”

“No, that’s OK. I’m fine to go by myself.” She frowned a little. “I mean, it’d be great to have you there, but that would involve a lot of explaining to Uncle Dean and my cousins and whoever else shows up. And I don’t want the focus to be on me and you. If you come, I bet it would be.”

I was feeling guilty for feeling relieved. “Oh. Yeah. Hadn’t thought of that. Well, OK, at least we’re pretty close to a big airport. I seem to remember that Delta has a hub in Salt Lake City, so Salt Lake to Atlanta to Fort Meyers is probably your best bet. Want me to see what’s available?”

“Thanks. I’ll see about a place to stay. I guess I should plan to come back Monday. No, let’s make it Tuesday. That’ll give me an extra day to spend time with whoever’s there. Especially Uncle Dean. He’s such a cool guy.” She looked at me again. “You, my love, should be so cool when you’re that age. And I intend to keep you around for at least that long.”

We spent the rest of the evening on travel arrangements, which turned out to be fairly straightforward. The plan, much to my relief, was for me to proceed south, rather than stick around the Salt Lake City area for four days, and we could figure out how to get back together when I found out where I’d be. Given the time change, Sam could get back to Salt Lake or somewhere appropriate pretty early on Tuesday, and she’d have time to catch a regional flight to Durango or St. George or Flagstaff, or maybe she could even fly directly to Phoenix, where I could pick her up. She’d have to change her west-bound flight to get to either Durango or Flag easily, but we would work that out in the days to come.

The last thing we did—well, no, the second-to-last thing we did—was to sit together in the oversized tub our suite had, which we filled with hot water, and to turn on the water-massage jets. Not something we’d be doing much of in our home on wheels, I was sure. And it helped erase most of the tension of the day.

The last thing we did erased it all.

\* \* \*

## Two

When I spend a night in an expensive hotel, I always like to check out as late as possible—I figure if I’m paying all that money, I should get as much out of it as I can. But Sam’s flight Saturday morning was bright and early, so we had to get up well before dawn and head down to Salt Lake City International

Airport. Fortunately, the Saturday morning rush hour wasn't too bad at that time of day, and it was almost all interstate anyway.

I dropped her off at the third Delta departure door, and I could tell she wasn't happy to be leaving me. She didn't want to let go of our goodbye hug, and she hid her tears behind a little domestic advice.

"Be sure to stop somewhere here in the metro area and get a sheet to replace the one we tossed, and four new towels, too." And she turned and marched inside to check in.

We'd disposed of the linens we'd used to clean up poor Lucy rather than try to launder them—some Forest Service maintenance guy was going to have an unpleasant surprise when he emptied the Bald Mountain trash cans. But her advice was a good thought. I'd not have remembered otherwise.

On my own again—Sam and I had weathered the worst of the Estes Park flood on different sides of the Continental Divide the previous year—I contemplated what I'd planned the night before. After helping Sam sew up her travel arrangements, I'd spent a while with online maps considering my route south for the next several days. It would be easy to pick and choose in real time with the GPS navigation in the van.

But first, of course, I had to find a place with sheets and towels for sale. Trouble was, it was only about six-thirty in the morning.

I hadn't had breakfast yet, and I was in possession of all that communications gear, so while I was sitting at the airport's departures curb I turned to my laptop and started searching. I was looking to find a suitable breakfast place with access from the southward interstate I'd be taking through the city. A long, leisurely breakfast there could well kill enough time for me to find some sort of linen outlet farther south.

The airport, I'd discovered with my maps the night before, was on the north end of a very stretched-out metropolitan area. The world seems to think of Utah as mountains, desert, and slick-rock with some small towns and farms, but that applies only outside of the long north-south valley that starts almost at Idaho and runs at least 150 miles south, well past Provo.

But, conveniently enough, there was a Denny's just east of the airport, although it involved negotiating a spaghetti-plate of roads to get there.

Spaghetti or no, I found it, and settled into a booth with a local paper I bought from a machine at the entrance and with my laptop. I ordered a carafe of decaf coffee—having a rest-stop on wheels made it easy to do things like that before a day of driving—and settled in. And then my phone vibrated in my front shirt pocket. I could tell from the screen that it was Sam.

"Hey kiddo. You finding breakfast at the airport? Everything OK?"

"Hi, Mac. Yeah, a really good breakfast, in fact. But I miss you already."

"Well, yeah, me, too. But we're sort of committed to this. And you'll like seeing your uncle and going to that service tomorrow."

"I know. I just wanted to say that I'm sorry I gave you an errand and walked off."

"Huh? Oh. Well, I'd have forgotten if you hadn't mentioned it. I'm going to sit here at this Denny's until they throw me out or until the nearest Bed, Bath and Beyond opens up. Listen—I hope security isn't too much of a hassle. And you have a good flight."

She probably wanted to talk, but I figured that it would only deepen her loneliness. I think she understood, because we didn't keep talking for much longer.

When my server came back with the decaf, I told her that I'd start with a glass of grapefruit juice, that I wasn't in a hurry and hadn't figured out what I wanted to eat, and that if the place filled up I'd get a move on. She liked the last bit and strolled off.

The newspaper, the *Salt Lake Tribune*—I just couldn't bring myself to buy the *Deseret News*—had a small piece on Lucy Smith's reappearance. It referenced the Amber Alert that had been out for her and how she'd been found, abandoned, at an undisclosed site in the Ashley National Forest. This was the first clue for me, because I knew we'd been in the adjacent forest to the west of Ashley, the Uinta-Wasatch-Cache National Forest. The second clue was that there was no mention of any rescuers, let alone Sam or me specifically. It was all passive sentence construction—Lucy was found... and so on—with no other information. Someone was trying to keep this kidnapping, and perhaps news of all the other disappearances, low-key, seemed like.

That could be a clever strategy, or it could be part of a cover-up, I thought.

My grapefruit juice came, and I ordered a breakfast that would last me for days and went back to the newspaper. All I found, though, was that the University of Utah Utes, the football ones, at least, were expected to do better in the Pac-12 conference this year; given their fast start, that the Utah Jazz professional basketball team had high hopes for the season; and that there was a big sale, four pages worth, at Macy's. That last was the most helpful, by far, and I fired up my laptop. The Denny's, to their credit, had Wi-Fi, and I quickly found a Macy's not too far off my intended route out of town. Macy's sold dry goods, as I remembered, and this one opened early, at eight, for the sale. All of a sudden I was motivated to accelerate the pace of my leisurely breakfast.

Aside from a mention on the *Salt Lake Tribune* web site, a summary of the print article I'd already seen, I found nothing else recent about Lucy Smith on the internet, so I moved on to other things. Road conditions on my intended routes—I still had some decisions to make—were something of interest, both the weather and construction activities. I hadn't had time the previous evening to look into that sort of thing.

About then, my breakfast showed up, three plates worth, and I got busy. But all the while, that business with Lucy's foot was nagging at me. So, after I'd polished off the big plate of breakfast meats, eggs, and potatoes and the smaller one of toast, and was starting on the medium one of pancakes, a sort of dessert in my mind, I called Special Agent Winifred Small, FBI Denver.

Winnie and I had worked that case in Colorado during the flood the previous fall that resulted in the inquiry about my conduct during its investigation. She wasn't involved in the inquiry—she was FBI and the inquiry was Colorado politicians—and she and I had worked quite well together. I figured she might be able to provide information about regional alerts for missing children and more details about how the FBI approaches such cases. At that point, my laptop was telling me it was 7:30AM, and even on a Saturday that seemed to me to be late enough for an FBI Special Agent to sleep.

"Small." It was hard to tell, but her voice sounded crisp, not groggy from sleep.

"Winnie, this is Mac MacQuarrie. Hope I didn't wake you up."

I heard a sharp intake of breath. "Mac? Well, damn. Mac MacQuarrie. How you doin'? I heard about that inquiry thing last winter. And, no, I'm sitting here reading the papers online and drinking coffee."

"Ah, good. I hate to wake people on weekends. And that inquiry, ugh. Anyway, I hope all's as well as it can be at FBI Denver."

"Y'know, Mac, I wasn't asked to be part of that inquiry, or I would have testified in no uncertain terms about how full of shit they all were. But I guess it all came out OK?"

“Yeah, it was some kind of political witch-hunt. The CBI Deputy Director who first enlisted me, Annette Trieri, she almost resigned in protest over the whole thing, she was so pissed. Even the CBI Director wasn’t happy with it all. But there were some political powerhouses behind it that he and Annette couldn’t just dismiss. So I got used as a piñata for a couple of weeks. Kind of like I was a scapegoat for the rest of the organization to the people behind the whole thing. Like you said, though, it all came out fine for me. But it was a sort of catalyst for what I’m calling about, I guess.”

“What’s that?”

“Well, one thing that I decided to do after the inquiry wound down was to get out of Dodge for a while. Go on the road. So over the last six months or so we managed to sell our house, buy a townhouse, and gear up for travel. I bought a conversion van and have been touring the intermountain west. I’m in Utah now.”

“Ah. The Beehive State.”

“Oh, yeah. And they’re busy like bees. Except I’m not sure at what.” I gave her the soundbite version of the last 24 hours in my life.

“Uh, so. Six girls disappear, the seventh is found, although she wasn’t supposed to be found, by you. And your lady. Girl seven has a gimpy foot. Do you know anything about the other six?”

“Nothing. I expect there were Amber Alerts when they first disappeared, though. I haven’t looked them up.”

“OK. Well. Now, don’t take this the wrong way, but why are you calling me?”

“Like I said, I’m curious about how the FBI handles these things. Apparently law enforcement here in Utah is making an effort to coordinate local investigations, but it seems kind of behind the scenes. I’m not looking to get involved, or at least not more involved than I have been. My plan is to go fishing.”

“Fishing? In Utah? Good luck with that.”

“Yeah, I’m spoiled by Colorado. But I bet there’s some fish somewhere. There are mountains, after all.”

“Mmm. Anyway, look. I probably shouldn’t tell you this, but you are CBI.”

“Sort of.”

“Well, that’s good enough. See, one of the hats I wear is as head of a confidential regional task force concerned with child prostitution, and kidnapping related to it. So what you’re telling me is *very* interesting. I didn’t know about some of it.”

\* \* \*

On the other hand, there were things that she did know about, such as several unexplained disappearances over the past several years of middle-school-aged girls in Colorado, Wyoming, and Idaho—far western Colorado, southwest Wyoming, and southern Idaho. And the ones in Utah as well, of course. All girls of Anglo descent, all from Mormon families who lived in rural, even remote, locations. The first had happened eight years ago. And the girls had all just disappeared—no bodies, no ransom demands, nothing.

I repeated my intention to just be a retired guy looking for interesting fishing spots but promised her to let her know if I heard anything else related to her task force’s interests.

By then, my pancakes were pretty cold, but that just meant they needed more syrup. After polishing them off, I left Denny's a little after eight, comfortably stuffed and ready to do battle with the other shoppers at the Macy's sale.

But, despite my aversion both to shopping generally and to crowds anywhere, it turned out to be fine. For one thing, Google found me a Macy's at a mall a few miles south of the Denny's, right on the interstate that I was already headed south on. For another, being in a mall, it had easy parking—that van we bought is big. And the crowds weren't really gathered in force yet. It all made me feel better and better about those Vacation Gods. I was on the highway again by about 9:30 with a bag full of replacement linens. Whew.

Interstate 15, Utah's north-south thoroughfare, seemed busy for a Saturday. Maybe, I thought, everyone is headed to Las Vegas for an afternoon and evening of debauchery—something hard to find in staid Salt Lake City. But I cranked up some favorite tunes, got in the right lane, and cruised along right at the speed limit to watch almost everyone flashing by me in the passing lane.

I knew I would have to make a decision at Spanish Fork—would I go southeast, on US-6, toward Moab, or southwest on I-15 to St. George? After thinking about it for forty miles or so, I finally decided to stay on the interstate. It seemed like the maps I'd studied the night before showed mountains more likely to include trout streams down toward Cedar City. Any place with a ski area, I figured, must also have some streams.

By time for a late lunch, I was at Cedar City, but after all that breakfast more food didn't interest me. So instead of stopping, I left the interstate behind and headed up State Road 14, toward Cedar Breaks National Monument and the mountains where that ski area was.

It was a pretty enough little road, and it ran beside a stream for the first several miles. But there wasn't enough water there to keep a guppy alive. Maybe it had been a dry summer in those parts, or maybe that was just how Utah streams behaved; I couldn't tell. Then the road left the creek and began a serious climb up onto a high plateau, which looked ever drier. I began to think that Winnie Small knew what she was talking about.

After a bit more than an hour, during which I passed through something called Duck Creek Village, a place with no creek to speak of, not much of a village, and a definite paucity of ducks, I came to the stop sign at which SR-14 ended. US-89 north, I remembered, ran more or less parallel to the mountain range I'd just crossed to the east of the interstate I'd left an hour earlier, so I turned south.

Just under an hour and several hamlets later, I passed through Kanab, kept on straight onto US-89A, crossed into Arizona, and shortly arrived in Fredonia, on an arid plateau. Even what irrigated fields there were looked parched.

How ridiculous is this? I thought. I'm trying to find some place to go fishing and there's no water anywhere. So I stopped to top off my fuel tanks and took advantage of the local cell service to check some online maps. I suppose I could have fiddled with the van's GPS system to do this, but I tend to keep that set on a zoomed-in map with about a mile radius around the van, rather than zoom out to anything regional. The screen's just a bit small to do a wide-area search anyway.

But what I found online reminded me that I was not very far from Jacob Lake, where the road down to the north rim of Grand Canyon National Park began, and maybe an hour and a half away from Marble Canyon and Lees Ferry.

Lees Ferry! Southwestern trout fishers' Mecca! Colorado River access and huge fish in the tail-water because of the exceptional cold-water habitat maintained by releases from the Glen Canyon Dam just upstream. With a campground to boot. Why didn't I think of that before?

A boat, I knew, would be the best way to fish that part of the river, but, what the hell, casting from shore might just produce some takes, too. And a little voice in my head suggested that there just might be boats for hire, anyway.

Best of all, it would keep me in Arizona. Out of Utah.

I shortly discovered that Marble Canyon, the settlement, was a little bump in the road with a lodge, a couple of gas stations and restaurants, and an airstrip, all on the north side of the Colorado River at Navajo Bridge. There's a new bridge now, circa 1995, but they left the original one from the 1920s up next to it and made it into a historic site with a visitors' center and everything. The two of those steel-arch bridges, each about 900 feet long with the arches of girders under the roadbed and railings on each side, are quite a remarkable site, out there in the middle of nowhere almost 500 feet above the river.

After checking it all out, I turned upriver on the road toward Lees Ferry, about another five miles across the desert. I was hoping that the campground would have a vacancy, and I was pleased and a bit surprised to find it only about half full, even though it was Saturday and getting on toward five in the afternoon.

With our sleep-in van, putting up camp was especially easy—set the parking brake and mess with the air suspension to level it, if needed. We'd gone a step further and acquired a fairly cheap, self-standing picnic canopy, basically a tarp with poles, to put up at a campsite in order to claim it as ours. Then we could drive away in the van for the day and have at least some hope that we'd have a site upon our return. And if the thing was stolen, well, there was always a Walmart somewhere, and we could just get another one.

So, after picking out one of the empty sites, one at the uphill end of the campground, I pattered around, put up the canopy, walked down to the river and back just to have a good look at it, and then drove up to the restaurant at the Marble Canyon Lodge for supper. And to call Sam. There was cell service by the highway there, and Wi-Fi as well, but not over at the campground.

As I sat down at the restaurant table, I felt thirsty, and stupid. I'd grown up in the Middle East, yet even living in the dry Colorado climate I'd forgotten the desiccating effect of real desert—and there was certainly an abundance of rocks and sand for ground cover around Lees Ferry. So I drank the first glass of water, and when the server came with a refill, I drank that, too. And then I ordered two margaritas, rocks, each in a tall glass. And more water. And I tried Sam's cell phone.

It went immediately to voice mail, which told me that she'd probably forgotten to turn it on after her flights. Or that she was still in the air somewhere, poor kid.

But that gave me a chance to gather information that I wouldn't have access to over in the campground. I'd brought my laptop, too, so I got busy downloading everything I could think of.

Full-resolution satellite pictures seemed like a good idea. The Google ones were pretty good, but, because I had access to a number of encrypted databases from the secret Eyes-in-the-Sky people, I was able to pull up even better images than are publicly available. It took a while, but by the time I was finished with the first margarita, I had screen-captures of the campground-side riverbank for a couple of miles upstream. It looked as if there were several spots that had shallow sand bars to accommodate a wading fly-fisher.

My internet feeding frenzy was interrupted when I was asked to order dinner, but that was easily handled. My request for a medium-rare New York strip steak with a baked potato and a double-sized dinner salad, to be accompanied with a bottle of the medium-grade Cabernet Sauvignon they offered—plus more water—only took a minute. And then I started looking for web sites of local fishing guides—a particularly easy search, it turned out.

After the long day of getting Sam to the airport so early and then driving most of the length of Utah, this was just what I needed. I called Sam again after I finished the steak, successfully this time, and we had a nice, long, intimate conversation. Then I drove back to the campground with the remaining half bottle of Cabernet and settled in for the night.

Tomorrow was going to be the first day of battles with big trout. Or so I hoped.

\* \* \*

Despite the indulgence of the night before—I'd finished the Cabernet while sitting under an unbelievable array of stars overhead in all directions—on Sunday morning I woke up refreshed and ready to go. No doubt the much lower elevation than I'd become acclimated to helped, all that extra oxygen and so on.

At the campground, I ate a hearty breakfast, packed a bit of lunch along with my backpacker water-filter kit, and, after some thought, put together my strongest and longest fly rod (a 9½'—6-weight, for you fly-fishers; I had two spools for the reel, a tapered floating line and a sink-tip line), and headed out for the day. My plan was to start at the river's edge below the campground and work my way upstream as far as I had energy to. Online, I'd found several interesting hints about how I might fish from shore, including casting out to the center of the river, or at least as far out as I could, with a big, delicious-looking streamer to imitate some kind of minnow or other, on the sink-tip line; and casting upstream, right next to a vegetation-covered stretch of bank with some kind of terrestrial imitation—grasshopper, beetle, big ant, cicada—on the floating line.

And both strategies worked well enough to keep me interested. But what was really interesting was when I ran into a pair of guys doing the same thing. I was working upstream faster than they were, and protocol dictated that I leapfrog around them by getting out of the water and taking the shore-side trail to a point well upstream from them. As I was doing this, I heard their conversation, and it became obvious to me that one was a guide and the other a client, what's called a "sport". So I stopped to watch. And when they took a break I asked the guide if his Monday had any openings that I might be able to sneak into. Turned out that he was doing a float trip with the same guy, up to the dam and back down. After some discussion, I weaseled my way into the boat—it was big enough for four, at least, and two sports would make it less expensive for each of us. More fun, too.

So I spent the afternoon working my way farther and farther up the river while anticipating Monday's float fishing. And even catching a nice trout now and then.

The hike back downriver at the end of the day was a lot longer than I remembered walking upriver. But I had plenty of water—the Colorado River in Marble Canyon there is really too big to drink it all—and I had the motivation of next day's excursion.

Another pleasant dinner at the Lodge—I tried their trout, and it was, well, a bit of a disappointment—and a chat with Sam closed out the day. I didn't indulge as much because I wanted to be extra-sharp for Monday's fishing trip. Guides are supposed to, well, guide, meaning to be helpful and instructive as needed. But I wanted to be as sharp as I could to impress him. To impress him so I could pay big bucks and add a big tip? Huh? Well, anyway, I wanted to be sharp.

And we had a great day. So much fly-casting that my arm got really tired, and then when I'd get one on, it would be so big that it would tire my arm out more to bring it in.

I'd become hooked—pun intended—on fly-fishing in Florida when I tried it with a guide and caught a tarpon—a really, really big fish. But then I'd taken up bone-fishing. It's sort of like trout-fishing, but the fish are faster, smarter, and stronger.

Fail.

So my move to Colorado was rewarding in that the trout in the streams were easy pickings by comparison.

That day in the boat on the Colorado in Marble Canyon somehow did it for me—it erased the frustration of failure in Florida, it showed me that catching big fish was just a matter of being in the right place at the right time with the right gear (and the right amount of money, if needed). I guess it persuaded me that I didn't have anything to prove, either to myself or anyone else. Ever since, I've been comfortable in my own waders in my own streams, so to speak. Fly-fishing is a wonderful thing to do, but it doesn't need to feel competitive.

Our guide, having done all this before, of course, timed it out perfectly, and had us back at the Lees Ferry boat ramp at four in the afternoon, exactly eight hours from when we'd left. It was just right—I had time to get cleaned up before supper. Even better, I had time for a celebratory drink at my campsite before getting cleaned up.

That was when the otherwise perfect day got strange.

The campsites had little wind-breaks sheltering the picnic tables, and, as I mentioned, I'd put up our canopy to use as a campsite-holder. But the weather was so spectacular that I set my folding chair to look north, with the shelter and my canopy behind me. Because I was at the north end of the campground, I had a great view of rocks—the wall of red sandstone providing the southern buttress for the Vermillion Cliffs National Monument.

And, as I was contemplating the scenery and reviewing the day in my head, across my field of view walked a young woman. Although tired-looking, she was pretty, wearing a simple, ankle-length cotton dress, a kerchief on her hair, and, oddly, running shoes, not unlike the Mennonite women I recalled seeing at the Safeway in Estes Park. Except this woman's dress wasn't as nice, and she was carrying a big bag over her shoulder and what looked like a long-handled pooper-scooper. She was just outside what I guess would be considered the boundary of my campsite, about 50 feet away, staring at the ground, and picking up things with that pooper-scooper. I knew she'd seen me and still could, in her peripheral vision. But she just stared at the ground.

Normally, I tend to leave people to their own little worlds, to avoid interrupting whatever they're absorbed in. But I was feeling especially good after the successful day on the water, and no doubt the gin-and-tonic I'd just finished was helping with that. So I cleared my throat loudly enough that she couldn't possibly miss it.

“Evening! Beautiful day, isn't it?” I smiled my most friendly, megawatt smile.

She peered around nervously with a deer-in-the-headlights look.

“You probably spend a lot of time here, if this is your job, but for a first-timer like me, well, this is sure a spectacular place. Sorry to interrupt.” More big smile, but this time I turned down the wattage a bit. Why, I wondered, was she so nervous?

Then it occurred to me that we were on the edge of the campground with no other campers around, she was alone, and I looked, after all, pretty scruffy, having not shaved in a couple of days, and I probably smelled fishy, literally. But I was sitting still, at least fifty feet away from her. Not making any moves at all.

She looked all around again and then went back to pooper-scooper duty. But she sort of eased in my direction. And then I heard a quiet voice.

“Mister? Mister, could you do me a favor? I need a letter mailed, but I need it mailed in someplace like Flagstaff. Not here, not Page, but someplace big and far away. Could you do that?” All the while she kept her head down and concentrated on picking stuff up—what I decided was litter.

My thought processes have become pretty well honed over the years, particularly in bizarre situations involving transfers of information with other operatives, operatives who are both unskilled and possibly under surveillance.

“Sure,” I said in a lower tone than she’d used. “Why don’t you pretend that your picker-upper gadget there is messed up somehow and bend down to fix it. Then you can put the letter under a little rock for me to pick up. I’ll do it soon. And I’m going into Flagstaff tomorrow. Will that work for you?”

She bent down, reached into her bodice and plucked out an envelope, fiddled with the scooper, and at the same time made a little pile of sand on top of the envelope.

“Thanks, Mister. And please, please don’t tell nobody.”

“It’s safe with me, I promise. And you take care, hear?”

As she worked her way around the periphery of the campground, past the other sites to my left, I sat there for a while longer, staring at the rocks, and crunching on the ice cubes in my glass until they were gone. After she’d disappeared down the hill, I got up, stretched, looked around, and began a seemingly aimless stroll around the premises, peering at the sparse plant life, kicking the occasional rock, and looking around in all directions at the scenery. She was well down by the bathrooms by then, and there was no one else in sight except for a few people at their campsite picnic tables. At one point, I dramatically twisted my ankle, bent down to give it a bit of a rub, and, in the process, slid the envelope from under the sand and into the top of my hiking boot, which was covered by the cuff of my jeans.

I said it got strange. But all that was before I had a chance to read the envelope. There was a Forever stamp on it, but no return address. And the main address was not up to the Postal Service’s standards, but I thought it might work anyway. It was written in school-girl block letters:

Federal Bureau of Investigation  
Washington DC USA

\* \* \*

### **Three**

I figured that I now had two phone calls to make, one to Sam and one to Special Agent Winifred Small, FBI Denver. I was confident that Winnie would not want to wait for me to mail the letter in Flagstaff on Tuesday and then for it to get to her via Washington—surely she’d ask me to repackage it with her address—so I made an executive decision. I opened it. Carefully, and I didn’t touch it again with my fingers, instead putting on gloves for the entire procedure.

Part of the electronics gear that I’d assembled for the van included a portable scanner/printer gizmo. Not super-fast, black-and-white only printing, and designed for only a page at a time, it was still high-resolution and easy to use. I figured that if we ever needed to print out a whole book or something, we could find a Kinkos.

So I slit open the envelope with a my Swiss Army Knife, unfolded the sheet of paper that was inside, and scanned it to a file on my laptop. And, of course, there was no way that I was not going to read it. It was written in the same block letters as the envelope.

Dear FBI,

I hope this letter reaches you. I am risking all to write and send it.

When I was a small child, my name was Melissa Alcott. I was taken from my parents in Fruita Colorado when I was 10 years old and given the name Esther by the man that married me, Levi Templeton. So now I am called Esther Templeton. I am 16 years old now, and I have two children, ages 4 and 2 years old. And I think I'm going to have a third.

I don't know where I live now, exactly. But it is probably in Utah somewhere near Arizona. When we go to our jobs, I always see a sign about Arizona, and then one about Utah on the way back to the farm. And the road goes over a big bridge next to a dam with a deep canyon on one side and a lake on the other.

The other girls with me are Rachel Templeton, Naomi Templeton, and Leah Templeton. They are younger than me, and Naomi also has babies. But those are not the names they used to have which I don't know. But I do remember the name I used to have. Melissa Alcott.

The first two years I was here at the farm, I was locked up. And then I had a baby and couldn't escape. With two babies now, and one on the way, I think, I'm stuck here. But I don't want to be stuck here. I just need some help to get me and my babies away. Is there some way you could help?

Sincerely yours,

Esther Templeton (Melissa Alcott)

You want strange? I was suddenly swimming in it.

Another thing I did when we took possession of our new ruggedized van was to equip a place for some of the equipment I'd previously kept stashed in secret, locked containers in the crawl space of our house. Some of that was now in storage in our townhouse, but other things were squirreled away in special compartments in the van. These included a couple of automatic pistols, my fully automatic, military assault rifle, and my .50 caliber sniper rifle with its incredible scope.

And after reading that letter, it was all I could do to restrain myself from getting that weaponry out, heading across the bridge—no doubt the one I'd had a view of the underside of earlier in the day—below the Glen Canyon Dam and into Utah, and finding where Melissa was being held. Someone, as far as I was concerned, needed shooting at.

But it's big country up that way, and I knew better than to just go running off on a fool's errand. So I took my laptop, with the file of the scanned letter, and made plans to head up to the restaurant for dinner.

The request by Melissa (and I made a vow to myself to call her that) that I mail the letter somewhere far away stuck in my head. It meant she was afraid that it would get intercepted if mailed locally, even in Page. So, after I got cleaned up, I made sure to take both my CBI shield and my Sig Sauer 9 mm, in a shoulder holster under my windbreaker, with me up to the Lodge.

This time, I asked for, and got, a table well away from the other customers—the place was only about half full at that point, about a quarter to six. I ordered the Monday night spaghetti special with a glass of their house red and, like before, a double house salad.

Alone again, after getting my laptop connected in a secure mode, I called Winnie.

“Small.”

“Winnie, Mac MacQuarrie again. Sorry to bother you this late in the afternoon, but I’ve got something you’re going to want to see. I assume you can access your secure email from wherever you are?”

“I’m still in my office, Mac. No rest for the wicked.”

“OK, I just clicked the ‘send’ button. And I’m going to put the original paper into the real mail to you tomorrow, when I go into Flagstaff.” I sketched the background, my encounter with Melissa Alcott, for her.

“Hmm. ‘Melissa Alcott,’ eh?” There were keyboard noises in the background. “Well, here she is, on that list of missing little girls I told you about the other day. Disappeared six years ago a few miles west of Grand Junction. Never came home from school one day. You saw her where?”

I filled her in on my location and activities.

“Well, at least you got some fishing in. Oh. Here’s your mail.” There was a two-minute pause. “Jesus. Jesus H. Christ. Three other girls, too. And it’s too bad she doesn’t know their real names. All these are Biblical names that this Levi Templeton dirtbag has given them, no doubt. But I guess they’re probably not allowed to talk about their pre-kidnapping lives. Got any ideas where this ‘farm’ might be?”

“Try ‘Page, Arizona’ on Google maps, and pull back a bit. You’ll see the Glen Canyon Dam, with its bridge. That’s probably what she’s referring to, because the Hoover Dam, below Lake Mead, is something like five hours away from here. And you’ll see where I am, Marble Canyon, if you pull back enough and move Page over to the right side of your screen. And a place called ‘Big Water’ that’s in Utah due north of where I am, although you can’t get there from here directly. I figure the other girls she mentioned work at the Wahweap Marina on Lake Powell, and Melissa gets taken around to Lees Ferry here. They probably work under some kind of Park Service maintenance contract.”

“Man, there’s nothing much out that way, is there? You think this ‘farm’ is in Big Water?”

“Maybe. Or over by Kanab, or in between. Hell, I suppose it could be north of Kanab, even. She didn’t say how long their drive is.”

There was another long pause. “Well, I guess that this is as good a place as any for my task force to start on some real work, instead of just meetings. Say! I bet this explains why you found that girl in the outhouse, what was her name? Lucy?”

“I’ll bite. Why?”

“Well, someone is kidnapping these little girls and giving them, or selling them, to polygamous Mormons, there’s a bunch of them scattered around southern Utah. I remember a famous case in a town called Hildale a few years ago. In fact, there it is, on the map I’m looking at, west of Kanab. Anyway, these people are isolated, and they need new blood for their extended families, to avoid more inbreeding and so on. And they’d want only perfect specimens who would tend to comply with their cultural, ah, peculiarities, or at least be easy to brainwash. Remember I said the missing girls were all from Anglo, Mormon families?”

“Yeah. I meant to ask you. Aren’t all Mormon families Anglo?”

“Well, most, yeah. But the LDS Church has opened its doors to non-Anglos, too, so there are some other folks. But not in those fundamentalist sects. They’re lily white. The thing is, Lucy had that gimpy foot. I bet she got kidnapped but then rejected because of that.”

“And raped and sodomized in the process, not to mention being left there to die.” I sighed. “But at least she’s not part of somebody’s harem now.”

“Yeah, well, like the frying-pan or the fire. Each pretty awful. So, listen, Mac. You know I had you checked out thoroughly last year, right? And your credentials are stellar, with the CBI appointment just the icing on the cake. I’m going to want to get you on board with us at the FBI for this thing.”

\* \* \*

I managed to avoid bursting into hearty laughter, but not to contain a hugely audible snicker. “Winnie, I guess I should be flattered, but if you’d ever heard what all I’ve said about the Bureau over the years, you’d never, ever suggest such a thing. And your boss would have a stroke.”

“Meh, I’ve always felt that a little inter-agency rivalry is a good thing. Keeps people on their toes. Besides, I’m sure that Harmon Jameson would want this.”

I was speechless for a few seconds. “What? How did you know about him? That’s supposed to be unknowable.”

Harmon Jameson was my super-secret, very-high-level contact in the White House.

It was her turn to snicker. “C’mon, Mac. The FBI does have *some* capabilities. Why don’t you plan to stop at our Flagstaff office tomorrow when you’re in town and pick up a package of stuff? And I’ll think I’ll arrange for a video conference.”

“Aw, geez.” Something occurred to me. “Do I get a ball cap?”

“A ball cap?”

“Yeah. For my collection. I’ve got CIA and NSA and CGIS and DNI. How about an FBI one? I prefer the trucker style with the deep crown. Stays on better when its windy. You pick the color.”

“Are you always this much of a wise-ass? Oh, yeah. Now I remember from last month. Incurrable.”

“Hey, I’m not even getting started yet. But I’m serious about the ball cap. And, yeah, OK. If you’re going to pull rank by invoking Harmon, I guess I’m stuck. When he sends you my consulting statements to pay, though, be sure to be sitting down when you read them. I’m expensive.”

“Mac, these are little girls. Aren’t you going to do this *pro bono*?”

“Ha! You haven’t seen my pension checks. And I just about got wiped out in that stock market thing last winter—I need the money. I’ll call you if anything else comes up. Meanwhile, there’s not much in the way of cell-phone coverage out here. I have a satellite phone, but it’s too expensive for me to use except for emergencies.”

“Well, consider this a 24/7 emergency. Keep it turned on and charge it to us. We need to stay in touch.”

“OK, that works for me, but you’ll be surprised at the bills. Anyway, so, say you get me some kind of official credentials. What is it that you want me to do?”

“We’ll talk about that tomorrow. Let’s see. You’ll probably be there in the afternoon. How about I arrange the video conference for two in the afternoon?” She disconnected.

Cool, I thought. I can get Uncle Sam to cover expenses now. Mileage. Satellite phone. Lodging and food. Now, how do you suppose I can charge him for the cost of fishing guides?

On the other hand, I knew I was going to be getting involved in a rat's nest of nastiness. But, given the topic, maybe Sam wouldn't be too upset this time.

Thinking of Sam reminded me to call her.

"Mac! Hi! How's your day?"

"Hi, darlin'. Good. I'll tell you all about it. How was yours? Did you spend time with your Uncle Dean?"

We chatted for quite a while, ending with a confirmation of her scheduled arrival. She'd managed to switch her return flight to Phoenix and then get a one-way up to Flagstaff that was supposed to arrive at seven pm.

"But it's all going to be way expensive, Mac. The changes and the extra ticket, on top of that last-minute ticket we got last week." She sounded worried. "And we talked about trying to save money and all."

"We did, and we should. But just now it's not an issue, because I got another job. Uncle Sam is hiring me again."

"Oh, no. Does that mean what I think it means? Guns and bad guys and I don't see you a lot?"

"Well, it's sort of related to our little adventure with Lucy Smith last week. So I figured you'd be OK with the whole thing." I held my breath waiting for her reaction, but it didn't take long at all.

"OK with it? Hell, I want to help. Got an extra gun? I never told you this, but I know how to shoot handguns. And long guns, too. I'm even pretty good." Her enthusiasm didn't surprise me. She wanted to find Lucy's kidnapper, I knew—and I didn't want to think about what she might do to him if she caught him.

"I'm thinking we'll be doing some driving on Wednesday, so we can figure it all out then. So far, I don't know what my role is going to be. I'm supposed to find that out tomorrow afternoon. I figured we'd stay in Flag tomorrow night, so I got us a room at the Springhill Suites. For old times' sake." I'd been living in a Springhill Suites in Florida when Sam and I first became a couple. It seemed like an easy solution to me when my house got blown up by a pissed-off Arab.

"So, is this another job for that guy in Washington?"

"No, it's for the FBI, some kind of kidnapping task force out of Denver. But there's probably a connection at the office in Flag."

"FBI? Really? I don't think I've ever heard you say a good word about the FBI. Why would they hire you? And why would you want to work for them?"

"Yeah, well, that was my reaction, too. But they made me an offer I couldn't refuse. And I'm wanting to get Lucy's kidnapper, too. Besides, it'll pay my consulting rate plus all of our expenses."

"Well, OK. Especially if it will give us a chance to get that guy who did that to Lucy."

"And that isn't the half of what he's done. Wait 'til you hear the rest. Now. You asked about my day." I launched into a fish tale, but it was all true—the day in the boat was so good I didn't have to embellish anything. And after I wound down, I could tell that Sam was happy for me—up to a point.

"So, I'm glad you caught all those fish, but how much did all this cost?"

“Well, let me think. I guess it would add up to about two hours of my consulting rate on this new job I got. So I’ll just work a couple of extra hours to make it up, OK?” I hurried on. “And one thing that it did was to get me over the hump of feeling like a real fly-fisher. I mean, you know I could never do that in Florida, where those bonefish were always smarter than I ever was. And in Colorado, yeah, I was having a fine time, but there was this nagging thing about how the fish and the stream and everything were small and easy, and so I didn’t really have it figured out. But it’s figured out now, and I can go back to dumb fish in small streams.”

“What?”

“Well, OK, maybe that didn’t make a lot of sense. Tell you what. I’ll see you tomorrow evening and we can talk about it over the next few days. As I said, I think we’ll be doing a lot of driving around.”

To my relief, that let me escape without any further questions, and I paid the dinner tab and packed up. I was going to head back to the campground, take down the canopy, and hit the sack in preparation for a big day on Tuesday.

Except there was this little hoop to jump through out in the parking lot.

From long years of experience, I’m pretty good at what’s called “situational awareness.” And I quickly became aware of a potential situation involving the three large young men in the vicinity of my van. So, I walked past it and around the passenger side, quickly unlocked and opened the passenger door to put my laptop on the seat, closed the door, and walked around the back. As I rounded the left-rear corner and started toward the driver’s door, the three guys were standing between me and the restaurant, blocking the way between the van and car parked next to it. They each looked a bit smug, as if they’d caught me. What they didn’t know was that I’d planned it that way. Situational awareness is always a big help, no matter the situation.

The largest, and oldest looking, seemed to be the spokesman. “We need to have a chat, little buddy.”

I’m sure that they expected me to retreat, but I didn’t. “Oh?”

“We want to know what was going on between you and that girl in the campground.”

That was quite interesting to me. I’d surveilled both the campground and the area around it, with bare eyes only, of course, as I was taking that little stroll around the premises. There was nobody watching that I saw. That implied someone pretty far away using a very good set of binoculars. Or someone intentionally well hidden. My response was intentionally vague.

“Huh?”

“The more shit you give us, the more trouble you’re in, sport. What was that interaction between you and the girl in the campground?”

“I have no idea what you’re talking about. Now, any further trouble from you will not be in your best interests. I know that sounds hollow, but I have to say it.”

He rolled his eyes. “Go around, Jared.”

One of them made the same circuit of the van I had to get behind me, which was something I’d hoped for.

I sighed, shook my head, reached into my jacket, and pulled out the Sig, holding it carefully with thumb and index finger by the end of the handgrip. “I’m going to put this in the van here, because I don’t want it to be damaged in what’s about to happen, OK?”

Their eyes got big. Jared didn't see this, as he wasn't around behind me at that point, but the other two took a step back. Then, when I started to open the driver's door, they took two steps forward, right into position. So I opened the door hard, knocking both of them onto their butts, spun around and delivered a heel kick to Jared's jaw—he'd arrived right on schedule—and then turned back to the two sitting on the asphalt. I dispatched the smaller of them with another kick, this one to his chin, and then grabbed a leg of the bigger one, the spokesman, and broke its knee with yet another precisely aimed kick. I held onto his foot and bent down.

"You *boys* need to learn not to mess with folks you don't know." And I gave the foot a good shake for emphasis. He got the message, or at least I think he did. For sure, he screamed and passed out.

I got in, started up the van, and left them lying in the parking lot.

\* \* \*

Going back to the campground, it seemed clear, was a non-starter. Even though I was annoyed to have to leave that nice little canopy behind, well, that was its purpose, in some sense. So once out of the parking lot I kept on straight, across the new Navajo Bridge to points south. It was just after seven in the evening, mountain standard time because it was Arizona but toward the western side of the time zone, so it was just after dark. That was both an advantage and a disadvantage. The boys in the parking lot would be out of action for quite a while, but I didn't know what other potential threats lurked out there. And I didn't want any interactions with law enforcement, either. So I cruised south at a respectable eighty when there were no other car lights visible and my radar detector wasn't warning me about anything.

And I poked at the GPS navigation screen until it was zoomed out to a more wide-angle setting than I usually employed. No way did I want to stop and look at paper maps.

I was on US-89A, and about fifteen miles south was the junction with US-89, which was the road from Page. About another forty-five miles farther south was the US-160 junction, which came in from the east via Tuba City. Then, after fifteen more miles, there was a turnoff to the west on State Road 64, which became the east entrance to Grand Canyon National Park after about thirty more miles. I knew these estimates were very rough, but they translated into well over an hour of fast driving, so I put it at ninety minutes or a bit more, say, 9:00 pm latest. I decided that if I could get into the National Park without being caught, I'd have a better chance of surviving the night. And there might well be side roads where I could park the van overnight, unseen. I had no idea of how many sets of sympathetic eyes those guys had out there.

The drive gave me time to ponder the situation. That the Templeton clan, as I decided to call them, watched the work of their women so closely, at least when they were out in public, was unexpected. It meant that there was both organization and at least some expertise to be dealt with.

The big guy with the broken knee wasn't going to be a problem, but the other two would probably have a fight to pick with me, if I ever ran into them again. And they'd probably bring weapons the next time.

But the real question was the brains behind it all. It wasn't those three guys—they were just muscle. Maybe this Levi Templeton person was someone to be reckoned with. Or maybe there was someone else. Winnie had suggested that there had been a dozen or more of these Mormon kidnappings, and Templeton's little harem seemed to account for only four.

And then there was the van. Whoever was watching the campground had seen me with it, and all three of those guys had seen me with it in the restaurant parking lot. Even if I'd killed them, there was a good chance that they'd already passed the information along to someone else. And I had seen only a

couple of other vehicles on our entire trip that looked remotely like it. As wonderful as it was for our road trip, it was also distinctive. And I really didn't want to be distinctive if I was going to get involved in an investigation.

Between staying on the alert for anyone following me and for cops with radar and a directive to increase their monthly ticket counts, on the one hand, and considering the overall situation from every possible angle, on the other, the miles flew by. It was just after eight-thirty when I finally reached the park entrance.

Before our trip, I had bought an annual pass good at every federal "fee area," but it requires identification to be presented as well. That always means at least a little interaction with the park employee at the entrance.

"Good evening, sir." She leaned out her little window and looked over the van. "Desert View and the South Rim shuttle buses are closed for the night now. Do you have a reservation at the campground or the trailer village? If not, I'm afraid they're full. And unauthorized overnight parking is not permitted anywhere in the Park."

I smiled a friendly, disarming smile. "No reservation in the Park, although I wish I did. No, I'm just passing through. I've got a room in that little village that I can never remember the name of. At the other entrance."

"Ah, Tusayan, of course. Well, please drive carefully and watch for wildlife. Enjoy your stay in Grand Canyon National Park."

I'd seen no lights behind me on SR-64 at all for the past half hour, but that didn't mean I was in the clear. I thought about stopping at one of the view points and waiting to see if anyone came looking for me, but that carried the possibility of a shoot-out, something that just seemed not to be appropriate in the Park. So I cruised the highway west toward the main South Rim visitor area, keeping my speed down to something reasonable. The last thing I wanted to do was hit a deer.

Forty-five minutes later, I eased through the village of Tusayan, its hotels, restaurants, and other attractions all lit up like a miniature Las Vegas, and kept on south. It took me another 45 minutes to get to Williams, on I-40, a town big enough to offer a variety of lodging. I drove around for a while, looking for someplace well off the interstate and on a side street, and finally found a Best Western on the far west end of town where I could park the van in a reasonably hard-to-spot place. It was just after ten in the evening, and I was bushed—that long day on the water had been both exhilarating and tiring, and then I'd driven for quite a while under stressful circumstances.

Another nice, hot shower, though, helped me relax, and I fell asleep when I hit the bed.

Tuesday morning, I awoke feeling better than I had for quite some time. Sam and I had spared no expense on the bedding for the van, including the mattress, but it still didn't measure up to a real bed. I checked the time and Sam's schedule, and it looked like she'd be in the air to Atlanta at that point. So food beckoned. The Best Western's room rate—a tad high, by my lights—included breakfast, so I wandered downstairs and loaded up a plate-full to take back to my room. Then I went back and got more, including a couple of cups of real coffee. The stuff offered for the in-room coffee maker was, well, not so good as what they had downstairs. It all felt iconoclastic, not to be eating in the dining area, but I wanted to take advantage of the motel's Wi-Fi to spend the morning on research.

I didn't know what Winnie Small had in mind for me, but I suspected that it would be some kind of undercover assignment, maybe acting as an advance scout and checking out the lay of the land where Melissa's farm might be. We'd have to figure out a different vehicle for me—us, actually, as Sam was coming—of course. And we'd have also to figure out cover. Sam was a natural—she could be an artist painting the rocky scenery. I'd have to pose as something other than a fly-fisher, though. Birdwatching

occurred to me, although I was betting the bird life up in that high desert was pretty sparse. Lizard-watching? Hmm. Maybe photography? Yeah, nature photography.

We could transfer our own equipment into the new vehicle easily enough, but we'd need some additional gear. And that would depend on the vehicle we got. An SUV of some kind, which meant car-camping? A tent came to mind. Water containers and a wash basin. A portable camp stove. Oh! Air mattresses. And then, of course, there was the whole sanitary situation. It was something of a relief to see all the options available, though, compared to how it used to be. I speculated whether Sam would insist on a camping toilet with its own little tent.

Car-camping, I realized, would be an entirely different world from ours. I wondered where I'd find all the stuff we'd need, and then I discovered an REI store in Flagstaff. Bingo!

Based on what Melissa had said, it seemed that the farm might be somewhere in the vicinity of US-89 to the north and west of Page. That road ran more or less along the southern boundary of, and partly through, the Grand Staircase – Escalante National Monument, which I discovered was some 1.9 million acres of protected federal lands managed by the Bureau of Land Management with a few private inholdings scattered here and there. Depending on just what all Winnie needed me to do, I decided that camping in and exploring the Monument to paint and take artsy pictures would make a pretty good cover for us.

My last task for the morning was to figure out if my satellite phone could be used as a data link for the computer. That took me most of the time until check-out, but I finally decided it would be possible if I could find a couple of bits of hardware. Radio Shack stores, I knew, were far less ubiquitous than they used to be, if they existed at all, but maybe the FBI techs could help.

Late Tuesday morning, after figuring out as much as I could, I packed up and set out east on I-40 for Flagstaff and the FBI meeting. And, of course, Sam.

\* \* \*

## **Four**

The drive east to Flag took a bit more than half an hour, and on the way I called Winnie to find out what I should do when I got there. It had occurred to me that walking in the door of an FBI regional office and announcing myself as if I were someone important might be taken the wrong way. After all, I thought, that's how people must turn themselves in, if they choose to, when the FBI is out to arrest them.

She understood and told me to ask for an Agent Rothstein instead. He was Flagstaff office representative on her task force and, naturally, would be quite interested in what I'd stumbled upon. I figured he'd be even more interested in my encounter with the three not-so-tough guys the previous evening.

Seth Rothstein turned out to be an interesting character study. I'd spent enough years working the drugs beat for the NYPD that I knew a New Yorker when I encountered one, and that's what he was. And he knew it, too, as he launched into a little explanation of his being in Flagstaff.

"See, when I was growing up in Queens, I was fascinated with the west. Not the west coast, but the west of Cowboys and Indians. So after I got past my FBI rookie try-out, I specifically requested an assignment somewhere out here. And this is probably the best place ever, for me, because we have a lot

of involvement with what goes on in the Navajo Reservation. And what's so cool is that they actually like me, the Navajos. Except I talk too much for them, and I think they think I'm sort of nuts."

Truth be told, he talked a little too much for me, too, and he did seem a little nuts, but we connected because of my experience in the City and because of our shared interest in this latest business of all the kidnappings of little girls.

I had arrived at about 11:30AM, and he was already gearing up for the 2:00PM video conference and wasn't going anywhere for lunch, so I used the time to broach the issue of my need for a different vehicle from my van.

"I don't really know what I'm going to be asked to do, but I expect it'll involve scouting around southern Utah to see the lay of the land with respect to what we've learned so far. And, of course, trying to learn more. But that van of mine is not even close to anonymous."

He passed the little test I'd set up by not offering me the usual black, full-sized, FBI sedan or some other vehicle with FBI decals all over it. On the other hand, that's all they had available. So instead he provided me with the paperwork necessary to rent an RV of my choice at a local outlet, at Uncle Sam's expense. And then he truly earned my respect by offering to store our van in the FBI lot, and for it to be covered with a big tarp to keep it out of prying eyes and help maintain our cover.

After dealing with such wonderful competence, I felt a little guilty for all the bad-mouthing about the FBI I've done over the years. But just a little. And even that waned when I went off to find an RV at the rental place. The experience made me appreciate our van that much more, but at least I wound up with something serviceable that Sam, I hoped, would find to be acceptable. Based on one of those Mercedes-Benz Sprinter commercial-van platforms, it was almost as small as ours—small being relative to the highway-bus-sized behemoths they also had—meaning it would be pretty easy to drive as those monsters go. Although it was far, far less off-road capable than what we were used to, it sported graphics on the sides that loudly proclaimed us as tourists, something that would enhance our cover. I thought it would do, just.

The FBI office in Flagstaff was out by the airport, in a retail wasteland, so I took the opportunity to say goodbye to our van by whipping up a quick lunch and a huge, flavored-up mug of coffee to take into Winnie's video conference. That took place in a big room with theater seating and various cameras and microphones pointing this way and that.

Right on time, the very wide screen at the front of the room lit up, and there was Winnie, filling the left half of the screen, bigger than life, staring at us. A couple of seconds later, Seth and I were there kind of scrunched onto the right half of the screen, staring back at ourselves. I blinked and watched myself blink several milliseconds later. Then the half of the screen we were on split in half, which unscrunched us but made us smaller on the upper quarter, and the lower quarter came to life showing another group, eight people sitting around a conference table. Finally, Winnie's side of the screen split in half, and a group of six around a table appeared.

"OK." Winnie's voice thundered, but it was instantly throttled back. "Looks like we're all here. I see the St. George contingent and the Salt Lake City people around tables. And a couple of people in Flagstaff in theatre seats. If anyone is having trouble with the feed, you should know whom to call on your end. So I'd like to get started. Let's introduce ourselves. I'm Special Agent Winifred Small, Denver office, the chair of the task force you all know about. SLC?"

The people around the table on the bottom half of our half of the screen introduced themselves, and I wasn't able to keep up. But then I recognized Summit County Deputy Sheriff Lisa Hamilton as she was introducing herself as a task force member. How about that? I thought. The St. George group, on Winnie's side of the screen, were next, and once again I couldn't keep up.

After that, Winnie took over again. “Before the Flagstaff duo gets started, let me introduce its newest member. You got an abridged file on him today. Mac MacQuarrie is going to be working with us in an undercover role that I’ll explain more in a few minutes. I’m sure you’ve seen that his credentials are impeccable, and I’m certain that his experience in the Middle East will be useful as well, given the similarity of the landforms. He knows deserts. And I can tell you from personal experience that he’s just the right person for what we need to accomplish. He saved my life, and the life of another agent, last year under truly menacing circumstances. Wave at the camera, Mac.”

I was so startled that I did, and I could see a few smiles. I decided Winnie must have pulled other stunts like that now and then.

While I was recovering from my embarrassment, Seth introduced himself, and we got on with the agenda.

I was glad to have brought a notepad and a pen, as there was a remarkable amount of information presented. Perhaps most relevant for me, Melissa’s letter had been thoroughly deconstructed, and the location of Levi Templeton’s farm compound popped into view on the screen, relegating Winnie to a little box in the upper left-hand corner. The compound turned out to be just south of the National Monument and a bit north of the hamlet of Big Water, at the end of a long, private access road off of a gravel BLM road.

“Those of you with need to know will be receiving classified satellite pictures of the location.” Winnie maintained an inscrutable poker face. “We’re in the process of obtaining a federal warrant for the premises on the basis of that letter you’ve all seen. When we get the warrant, and it’ll be a federal warrant because of the fact that Melissa Alcott was kidnapped in Colorado, we’ll set a schedule for serving it. And we’ll need a tactical plan, of course, which I want you folks in St. George to work on. I’ll fly down for executing the plan, but I’m not going to micro-manage this.” She smiled. “Yet, at least. Questions?”

I waved my hand. “Win—er, Agent Small, can you pull that map back? There’s a little track, or a road or something, headed west from that compound. I’d like to see where that goes.”

The map zoomed back in little steps, until the faint road-like feature I’d seen began to disappear, then it zoomed in a step. Whoever was in control of the picture proceeded to pan the view to follow the road. I couldn’t tell distances, what with all the zooming, but shortly a greenish, flat-looking field appeared, with a barn or something next to it. I knew I was going to have to get some of my own satellite imagery and study it in detail.

“Thanks, Agent Small. The planning people need to look that over carefully.”

“I’m sure they will, Mac.”

Rothstein had a question. “Winnie? What kind of tactical plan do you have in mind? We surely don’t want another Waco or anything close. And those people might be pretty well armed. Plus, they might have sympathetic neighbors, like that deal in Nevada that the BLM people ran into a couple of years ago.”

“I thought of that. But it seems that on Mondays and Thursdays a good-sized group of Templetons leaves to get to maintenance work they do for the Park Service. They all formally work for something called ‘Templeton Enterprises, LLC,’ and it’s contracted to an outfit called ‘Big Water Services, LLP,’ which has a Park Service janitorial contract at Wahweap and Lees Ferry. We haven’t sorted out all the partners yet. Anyway, if we intercept that vehicle, we would get some of them out of the action before we go in. You’re right, though.” She emphasized her comment with raised eyebrows. “The plan needs to avoid any hostilities.”

What they didn't know was that hostilities had already begun, the night before in the Marble Canyon Lodge parking lot.

\* \* \*

I fixed that by calling Winnie on the phone and pulling Rothstein into the call right after the video conference adjourned. They both understood the implications of my little altercation for planning how to serve the warrant.

"At least you seem to have put one of them out of commission, Mac." Winnie was quick to see how it changed things. "But you don't know his name?"

"No. He was the biggest and was calling the shots, but the only name I heard was when he called one of the others 'Jared'. But no last name."

"Hmm. Based on what we learned in records searches, that's probably Jared Templeton, Levi's third-oldest. Apparently, there's quite a brood out there, some twenty offspring, by various wives, according to their tax returns. The three oldest are boys in their late teens, so that's probably who you encountered." She shuffled some papers. "What's interesting is that there's been no mention of that little fracas in any news or police reports. But a Jeremiah Templeton was admitted to emergency at the Page hospital with a broken leg. They set it, put him in a cast, and he left with relatives, apparently."

"With a cast, he may be able to get around on crutches, but that's about it." I knew I'd done considerable damage to his knee.

"OK, well, I'll pass this along to St. George so they can take all this into account when they plan. And, Mac, you're good with the business of scouting around?"

"Yep. We'll get my cover firmed-up this afternoon. Oh, and you'll be getting *per diem* statements for two. Hourly consulting for one, but *per diem* for two. Part of my cover, and necessary for my sanity." I got a muffled "Hmmp" in response, which I took for assent.

Rothstein and I spent the rest of the afternoon getting me organized. Rather than try to modify my satellite phone, he gave me another gizmo that was a satellite computer link with a small, magnetic antenna to stick on the roof of the RV and plug into a USB port on my laptop plus a twelve-volt port in the RV when needed. And he also provided a hand-held radio with a little stick-on outside antenna for me to use if I needed it in the field.

I made a quick trip to the REI store to pick up some of the gear we'd need for the RV, including a picnic canopy to replace the one I'd left at Lees Ferry, but I suspected that Sam would be wanting her own trip before we left Flagstaff for points north the next day. And I spent a couple of hours transferring gear and personal items from our van to the RV as well. I also pulled all of the perishables from the van's refrigerator and put them into the cooler in the RV and a big ice chest I'd bought.

Rothstein and I also spent some time going over satellite photos. We sat down at a computer console, I figured out how to log in to some sites he didn't have access to, and what I downloaded surprised him.

"I didn't think these birds were supposed to be imaging over the U.S. That's why we contract those small planes to follow people around with high-resolution gear. In fact, there's a fly-over scheduled for the Big Water area tomorrow." His indignation was evident.

"Yeah, well, these pictures aren't admissible in court, that's for sure. But they can help in situations such as this. And there's no way I know of to target specific domestic scenes, like we can overseas. You just have to get lucky with the automated imagery."

And we did get lucky, finding several scenes with the Templeton compound in view taken at much higher resolution than anything that Rothstein was able to find. And then he surprised me by loading three of them, taken from different line-of-sight angles at very different times of the year, into software that combined them into a strange-looking three-dimensional rendering of the place. That, we agreed, would be extremely helpful, despite its odd, multi-season mix, no matter what operational plan emerged. I made a point of emailing all of the images to myself, especially the ones showing more details of that road I'd asked about in the meeting earlier.

We spent the entire afternoon with all this, plus the paperwork I needed to deal with in order to earn my FBI ball cap and windbreaker—neither of which I'd be using in my undercover role, I was sure—and I managed to get to the airport to pick up Sam with only a few minutes to spare. She hadn't eaten either, so we stopped at the first place that looked acceptable, a chain restaurant with unlimited salads and all sorts of other stuff. Not fancy, but reliable.

We managed to stick to superficial chit-chat until the entrées came and we knew the server would leave us alone for a while—except for the mandatory “how's everything?” visit—before getting down to business. Her first question was whether we would need to find someplace to buy her a handgun the next day. That told me she was serious about helping with the investigation.

“Well, we probably need to go shopping, but not for a handgun. I've got a Glock you can use, a 9 millimeter. Same ammo my Sig Sauer uses, Parabellums, which we have a lot of. Maybe we can find a range so you can try it out.”

“Which Glock?”

“Uh, a Glock 26. The small one, but it has a ten-round mag.”

“OK, that'll work. I used to have one. I can try yours out and get used to it again once we get out in the boonies. You've got that automatic Heckler and Koch?”

As I was nodding, I realized that this was a side of Sam that I'd not seen before, and it took me several bites of dinner to get adjusted to it.

“So,” she was two hours ahead of me because of the time change, and she was shoveling dinner down, “what other shopping do we need tomorrow?”

That opened the flood gate for me to tell her about what Winnie and I had figured out about the case, my attempts to make the RV as well outfitted as our van and what was still needed in that regard, and the still-vague plan for our participation in the next couple of days of FBI activity.

“Sounds like we get to wing it.” She looked up and smiled, her eyes twinkling. “But that's probably the best way. I seem to remember that winging it is what you're especially good at.”

I wasn't sure whether I'd just had a long, tiring day or I'd been transported to the Twilight Zone. This sort of talk had always been something that Sam had carefully avoided. So I decided simply to ask.

“I've never heard you talk like this, Sweetie. Are you OK?”

“I'll be OK when we get the gob of phlegm who kidnapped Lucy Smith. Meantime, I'm motivated.” She looked up and smiled again. “Mac, I'm certain that you're way better in the field than I am, but I think I just might surprise you. I mean, I've been careful to learn how to protect myself over the years, and I've practiced. A lot. I just never mentioned it. I don't especially like the idea of guns, let alone going after people with one, but, well, when there's no alternative that's what you've got to do. Right?”

I just stared at her. “Did something happen in Florida? You seem, um, different.”

“No, I'm not. Except I've had a lot of time to think about this. I mean, look. From what you've told me, there's some guy on the loose who's kidnapping little girls and selling them to dirty old men so that

the girls become, essentially, brood mares. And when the kidnapper isn't satisfied with one he grabs, he rapes her and stuffs her into an outhouse pit, for God's sake. In America? This is just...well, it's simply intolerable. Even in...in Afghanistan it would be intolerable. But it's here in the United States!" She finally noticed her voice level and looked around before lowering it. "And it's something we need to stop."

I could only shake my head. "You're right, you're absolutely right. And the FBI thinks so, too. So I guess we're all in on this, huh?"

"Damned straight we're all in on this. Now." She looked around for our server. "What do you suppose this place has for dessert, anyway?"

\* \* \*

I'd fetched her from the airport using our van, so our first errand the next morning was to swap it for our temporary home-to-be, the RV I'd rented and, with Seth Rothstein's help, outfitted, partially, at least.

As I'd expected, Sam found a bunch of stuff in our van that I'd not thought to transfer, so the RV got quite a bit fuller before we drove off in it. And we hadn't even been shopping yet.

But because it was somewhat bigger than the van, with surprisingly more interior space, I didn't think that would be a problem. On the other hand, its size, and its generic, rental-vehicle quality, meant that it handled like a pig and that it sure wouldn't be doing much in the way of real off-road wandering. Bumpy gravel, sure, but not really off-road.

After the repacking and the shopping, we finally managed to hit the highway north out of Flagstaff just before noon. We'd had a late, and large, breakfast, so our plan was to have eat-on-the-go snacks for lunch and see what we might run across for dinner.

It didn't take Sam very long to get bored. Although the Painted Desert north of Flagstaff has its scenery—scenery that I thought she could do a marvelous job of depicting, in fact—it's large-scale scenery and takes a long time to change at highway speeds. Then she discovered the satellite link that Seth Rothstein had fixed up for us. By alternately poking at the laptop and looking out the window, she was able both to watch the scenery creep by and scout out our route.

"So, you said we're going to this Big Staircase Monument place, right? Oh, wait, it's Grand Staircase – Escalante National Monument. Well, whatever it's called, it says here we need an overnight permit for camping. There's an office in a place called Kanab where you can get those. Ah...it looks like it's about three and a half hours from Flagstaff to Kanab, if we go through Page."

"The route through Page is also through a town called Big Water, right?" I was trying to recall the maps I'd seen. "That's good, because we can check out the turf there. And I wonder if parking this thing by the side of a back road and sleeping in it counts as 'camping'?"

"Good question. I'm not seeing a whole lot in the way of RV parks, you know, those places with electricity and water. There are some by Lake Powell, looks like."

"If we get to Kanab by three, we could get back to the lake by dinner-time, easy. That way, we'd get a second look at Big Water, and maybe we could detour a little up the side road that the FBI is interested in."

"Yeah. It's only about an hour from Kanab to a place on the lake called 'Wahweap.' And that's in Arizona. I'm a little creeped out about Utah just now."

I nodded. "Yeah, me, too, although I'm thinking that there's not a lot of difference between the two in the part of Arizona north of the river where we're headed."

At least the RV was made for American highways, and we were able to lumber northward at the speed of the rest of the traffic, which, thankfully, was pretty sparse. At Bitter Springs, we stayed on US-89, instead of taking 89A back to Marble Canyon, and shortly passed Page just before we crossed the river on the bridge next to the Glen Canyon Dam. Then there were a couple of turn-offs to the Wahweap Marina, with a road to a lookout in between, a little built-up area, and the state line. The “Welcome to Utah” sign wasn’t very welcoming, but it did verify the contents of Melissa Alcott’s letter.

Big Water, I’d found out from the internet, was originally called “Glen Canyon City” and had been built for the workers on that big dam back in the ’50s and ’60s. But in today’s world, it was really more like “Little-Bitty Water”, three of them, in fact, separate clusters of dusty, weathered buildings strung out along several miles of the highway. It was a good thing we hadn’t planned to eat or stay there, as nothing looked remotely hospitable.

We’d just passed the third when Sam, having been absorbed in her poking at the laptop, spoke up. “Big Water Utah, renamed by one Alex Joseph in 1983 when he and his wives took over the deserted settlement of Glen Canyon City and he named himself mayor. Wives, plural. Geez. This whole part of Utah is like some other planet.”

By then, we were off across the desolate high-desert and slick-rock country.

An hour later, Kanab turned out to be somewhat more inviting, and, when we got deep enough into town to come to the 89 / 89A intersection, I even remembered it a little from my earlier trip through in the other direction on Saturday. We turned south on 89A toward the Monument Headquarters, and I stopped at a gas station to top off the RV’s gas tank, because, in addition to handling like a pig, it drank like one as well. And, having had a close look at the countryside we were going to be out in, we bought three extra cases of bottled water.

At the gas station and its convenience store—where water sold for the about price of a good Chardonnay in California—and at the Monument Headquarters, it seemed to me that our cover was working. We played the role of dumb tourists, successfully as far as I could tell, and got various bits and pieces of not-quite-condescending advice, even a semi-formal lecture by the BLM person who gave us our overnight permits. About half-way through that lecture, I realized that its intent wasn’t so much to keep Sam and me safe and healthy as it was to decrease the chances that a search team would have to be sent out to look for us. It even made sense. If I were in their position, I’d sure not want to get rousted out on yet another search for clueless tourists lost in the slick-rock country.

After a last quick stop to get more ice—I really didn’t want to be running the generator unless necessary—we headed back east. Our plan was to take a little side trip into the Monument and then continue on to Wahweap for a civilized overnight in the RV park there. That rental RV was a new vehicle for us, and it seemed like a good idea for a shake-down night in a relatively civilized place.

Remember the Robert Burns poem I quoted way back?

\* \* \*

## Five

With our satellite phone, now being paid for by the FBI, and that satellite computer link that Rothstein had set up for me, I was surprised when the cell phone in my shirt pocket began demanding my attention. We’d just cleared what passed for the eastern city limits of Kanab, but the towers were still

able to find me. Rather than try to keep the pig on the highway while I talked, I pulled over to the nice, wide shoulder.

“Mac MacQuarrie here.”

“Mac, it’s Winnie Small. Looks like you’re headed east out of Kanab.”

We were, but it took me several seconds to process the implications of that statement.

“Shit. So Rothstein put a tracking device of some kind on me? Geez. No wonder I don’t trust you guys.”

“Hey! Calm down! He didn’t tell you? Well, I didn’t know that. Sorry. I’ll deal with it. But it’s useful anyway. Our plan for tomorrow needs you for a critical backup.” She coughed, softly. “I’m sorry, but there’s no way can we have you going in with us. You understand? It has to do with credentials and so on. And your history. If the locals found out that a new FBI agent who’s an ex-spook was part of our contingent, it would really hit the fan in a big way. But we do need you to watch the end of that road that you noticed during the briefing yesterday. Those satellite pictures you found, and I really don’t want to know all the details, they show a faint track going past that barn by the field and then eventually joining the BLM road, just inside the Monument boundary, it looks like. It could work as a back-door escape route, and we need it covered tomorrow.”

In looking over those satellite images, I’d noticed the continuation of the track I’d mentioned during the briefing and was curious about it as well. That Winnie was onto it made me feel better about her leadership.

“Ah, OK, I think I understand. But don’t you dare let him put a tracking gadget on my own van, OK? Anyway, what’s my role tomorrow specifically?”

“Any vehicles come out that way, you detain them however you need to. Although I hope you don’t have to shoot anyone.”

“Timing?”

“We’re going to wait for the van with the people going to work at the Park Service units to get out to the highway. That should be around six-thirty or seven. After we get them secured, we’ll go into the compound and execute the search warrant. We’re going to use a delivery service truck, or something that looks like one. So if anyone tries to get out the back way, it’ll be after seven tomorrow morning, probably closer to nine, actually.”

“Got it. If you’re tracking me in real time, you’ll see in a little while that I’m going to head up that BLM road past the compound turn-off and keep going at least until I pass the back entrance you want me to watch. Or try to. I don’t know how the road is relative to what this RV can do. Then we were going to head back to one of the marinas on Lake Powell, but I expect we’ll find some place to park this pig of an RV we’ve got up there for the night, by that road you want watched. That way, we’ll be on site bright and early.”

She laughed. “‘Pig of an RV’, huh? You saying you don’t like the RV lifestyle?”

“No, both of us do, actually. But this particular vehicle is just not up to our standards. We’re spoiled.” At least I left her laughing.

About an hour later, we turned off the highway at the middle of the three Big Water clusters of buildings and headed north toward a state fish hatchery. The gravel road was in reasonable shape up to the hatchery, but then it bisected and began to deteriorate. It wasn’t long before I was wishing for our off-road-capable van. But the road had been graded at some point, so various potholes and washboard sections were the worst. We took it slowly and carefully, playing intimidated tourists, which was easy.

From the highway, it took us about fifteen minutes to pass a turn-off to the left, clearly marked with multiple “No Trespassing” signs, which had to be the entrance to the Templeton place. Another ten minutes passed before we crossed the Monument boundary, where we were greeted by several signs reminding us of all the rules and providing a warning about being prepared for unexpected road conditions.

Somewhere in the next few minutes, we passed the back road out of the Templeton lands, the place we were to guard the next morning, without seeing it. So as soon as I could find a spot where I could get the rig turned around, I did, and we crept back the way we’d come, watching the roadside carefully for signs of a track coming in. Once we found it, of course, it was obvious, but just as obvious was the fact that it was not used very much, perhaps not for more than a year. With that task taken care of, we once again reversed direction and headed deeper into the Monument to look for someplace to park the RV for the night.

The farther north we got, the more the road deteriorated, so I didn’t wait too long before taking advantage of a nice pull-off that would be in the morning shade of a bluff to our east. I managed to get the RV parked on a flat spot, so we didn’t have to use the self-leveling jacks, something I was glad for in case a hasty exit was in order for some reason.

We were not quite at the top of a broad mesa, having climbed out of the dry wash a ways back, in almost completely barren rock and sand country. There was the occasional small juniper trying to eke out a living and some other very woody bushes with leathery leaves I couldn’t identify. I remembered something about “greasewood,” so maybe that was it. And, of course, everything was desiccated.

But as the sun began to set and the air to cool, it was actually quite pleasant—a little breeze was stirring and whispering among the rocks, but otherwise the silence was complete. Sam and I didn’t do much talking, just so we could listen to the nothing.

But I did have a mission—I needed to see just how well Sam could handle those guns of mine. Miles from anywhere, no one around, it seemed like the perfect place for some target practice.

To avoid disturbing the peace and quiet as much as possible, I screwed suppressors onto the small Glock and the HK assault rifle and put a full magazine in each. Then I paced off fifty- and hundred-yard distances and set up piles of rocks at the end of each. She watched all this with some amusement, sitting in a lawn chair under our new picnic canopy, sipping an iced tea.

“What? You don’t trust what I told you about my experience handling firearms?”

“Oh, I do, I do. But I’m thinking it’s been a while and, well, you know, people do get rusty. Besides, I want to see how good a shot you really are with this rifle. Also, you probably don’t have much experience using a weapon with a suppressor.”

She rolled her eyes theatrically, finished her iced tea, and got up. I handed her the Glock, and she expertly popped out the magazine, checked it, put it back in, and racked a round, almost all in one motion.

“You’re right. It feels different with this thing on the end. Out of balance, or something.” She was hefting the piece, trying to get a feel for it.

“You get used to it, but then it feels funny without it.” I pointed downrange. “Try that closer pile of rocks.”

She stood in the classic shooter’s stance, braced herself, aimed, and squeezed off a round. With the suppressor, the noise of the gun was barely audible, but fifty yards away there was a sharp crack as the topmost of the rocks I’d stacked exploded. Then she let loose with the rest of the magazine, and the pile

of rocks flew apart into smaller pieces of gravel and dust. I was busy picking up shell casings for a minute.

“No rust on you, I’d say. Nice shooting.” I looked up to see her grinning. “What I’m thinking about tomorrow is that the best approach will be for you to cover me with the HK if I need to stop any vehicles. So let’s see how that suits you. I expect that prone would be best.”

“You want me to lie down in all this dust?” She gave me one of Those Looks.

“Mmm. Good point. I’ll get a ground cloth.” I rummaged around in the RV, came up with a six-foot square of some kind of high-tech material, and spread it out for her.

After I showed her the various bells and whistles of the HK—and there were several, as this was the military HK417 Recce, with an accurized barrel and an infrared laser scope—she lay down and snuggled up to it, almost making me jealous. After checking to be sure it was set to single-shot mode, she let a round go at the hundred-yard pile of rocks, with the same result she’d had with the Glock—no noise to speak of but for the exploding rock at the top of the pile combined with the muted sonic boom of the bullet.

“Oooh! I *like* this rifle.” Her next two rounds also picked individual rocks off the pile. “Those rocks are too close, though. See anything out at 400 yards or so I can try?”

\* \* \*

As I’d been the previous evening, I was dumbfounded at seeing this side of Sam’s personality—not to mention her ability with an unfamiliar rifle.

“OK, I guess I understand how you came to be proficient with a handgun. Self-protection and all that. But where’d you learn to shoot a rifle?”

“Well, c’mon, Mac. This one’s easy. Especially with the scope. That old thirty-thirty my Dad took me deer hunting with was a whole different thing. But the principle is the same, right? Aim and squeeze.” She snuggled it even closer. “And this thing gives you the range and adjusts the scope. Too cool.”

I was staring at an outcropping a long way past that rock pile she’d picked apart, when chips started flying off it. “OK, well, that’s pretty far. Did you hit what you were aiming at?”

“Seems like. I think it needs just a little correcting up, though, at that distance. Maybe the suppressor is the issue.”

“OK, well, keep that in mind. Having you as a quarter-mile backup tomorrow makes me feel a lot better. Want to try full auto? See if you can hit a target with a spray?”

She looked over at me and shrugged. “Well, OK. I think I’ve got another dozen rounds in the magazine.”

That made me fall even more deeply in love with her. She counted her shots!

As I was reveling in this latest surprise, there was a second-long brrring sound. I didn’t even have to tell her where the auto switch was. Wow.

“Mmm.” She sounded critical. “It really lifts on auto. I’ll have to remember that.”

“Yeah, it does. Remember, those rounds are like thirty-ought-six rounds, lots of energy. On auto you’ve got to hold it down with force. How’s your shoulder feeling?”

“Good. This has great recoil absorption. You think we’ll see the kidnapper tomorrow?”

“No idea. And, look. You can’t just go shooting people, OK?”

“Well, then, what’s the point?”

“Tomorrow, I may need you as backup if we have to intercept a vehicle coming out of the back road we found, right? And the trick will be for you to stay invisible and use that thing to intimidate whoever might try to make trouble. Only not to shoot him. Or her. You know, hit a rock or something to let them know you’re there. Thing is, we don’t know who’s going to be in this hypothetical vehicle we may need to intercept. Right? Besides, I’m pretty sure we won’t be running into Lucy’s kidnapper. These Templetons just don’t seem to have the abilities to pull that off.”

During that little speech, she’d sprung up and begun picking up brass. “Twenty. Was that what I started with?”

“It was.” A woman not just after, but already in possession of my heart. “I’ll show you how to load that mag later this evening. You getting hungry yet?”

She was, and, just a day out of town, we had plenty of possibilities on ice. We decided to try out the new portable charcoal grill on some steaks with a baguette we’d found at the grocery store, and a salad. And, of course, a bottle of wine, a Bordeaux we’d been saving for a special occasion.

We ate outside, under the new canopy in the last of the day’s light, and discussed whether our situation fell into the category of “roughing it” or what. Sam, with much less outdoors experience than I, was leaning toward roughing it, while I decided on the “what” option. After all, the mattress in that RV was better than the one we had in our van.

And that nice mattress gave me such a good night’s sleep that I woke up before dawn. I suppose it had something to do with the time of year—that far south, with just a hint of fall in the air, sunrise was rather late—and going to sleep early. Out there in nowhere-land, when it got dark, there wasn’t much else to do, after all. Although we did manage to find something interesting to keep ourselves awake for a bit.

Having parked to take advantage of morning shade, I couldn’t see the eastern horizon when I rolled out of bed, but it wasn’t completely dark out, either. Once I got myself dressed and outside, it instantly became lighter—I hadn’t realized that the windows on that RV were so darkly tinted. I walked up the road—or what passed for the road—far enough to get out of the shadow of the bluff and watch the sun ease its way up over the horizon. With the long shadows and the color of the early morning light on the rocks, I began to get a feel for why this part of the country had been designated as a National Monument. It was strikingly beautiful. And the cover we’d concocted—Sam as artist, me as photographer, an ersatz photographer, but I did have a pretty fancy camera—became all the more credible because of that striking beauty.

I was going to have to remember to carry the thing around, though, to be credible.

Back at the RV, Sam was up and had coffee ready—it smelled quite homey in there, to my surprise. We dawdled over breakfast, and, a little after 7, the satellite phone tweedled.

“Mac? Winnie here. Surveillance tells me that a van just left the Templeton compound and is headed into Big Water. We’ll intercept it when it’s out on the highway, probably ten minutes or so. Then we’ll set things up to move in and serve our warrants.”

“Got it, Winnie. We’ll get organized here and be set up at the end of that back exit road in a half hour or so. We can’t move this thing very fast on the BLM road up where we are.”

“That should do it. I’ll let you know when all the dust settles. Good luck. And, um, be careful out there, hear?”

Careful was going to be my main consideration, given that Sam was involved with it all. I'd like to think that I was always careful, but her participation made me really think about it. It was in that frame of mind that, after we cleaned up from breakfast and packed for the day, I drove the RV carefully down to the end of that faint road, more of a mere track, we'd found the previous afternoon.

Our BLM road was descending just slightly at that point through a gap in the slick-rock, and I decided to park the RV across the entrance of that track so that it would not quite block it off and pretend to have a flat tire. I made sure the RV was positioned so that the bumper jack I planned to put under the left rear bumper would be visible from the track. Uphill, there were plenty of places for Sam to set up with the HK, places where she would have both cover and visibility.

We found an excellent perch for her, behind a sandstone boulder that gave her a view of where any vehicle coming up that track would have to squeeze around the rear of the RV. I helped her sight in the scope to compensate for the slightly downward trajectory involved.

Then, back at the RV, I got out a shovel and the tire-changing tools and set up what I hoped would be a persuasive, albeit false, scenario of a hapless tourist trying to change a tire.

Just about the time everything was in place, the satellite phone tweedled again.

"Mac? Winnie. We're in the house with no resistance to speak of. The only people here are Levi Templeton and two women, late twenties, I guess you'd call them 'senior Templeton wives.' They're mum about where the kids are."

"You got the van thing under control?"

"Right. Stopped it just south of Big Water, after they crossed into Arizona. Two guys, one in a leg cast, and four young women, dressed for their custodial duties. It's weird. I'm thinking that not only were these girls kidnapped to become wives for this Templeton guy, but they're also *de facto* slaves for him, working so that his operation can have some cash flow. I have to say, this farm compound doesn't look all that prosperous."

"Seems like maybe those kids could be up the back road at that barn, or something. Maybe that's where the child care operation is."

"Good thinking, Mac. I'll send someone up there. But that might flush someone out your way, so heads up."

"Got it, Winnie. But wait. Well, send someone that way anyhow, but they may not find anything. Here comes something up that track we're watching. Gotta go."

\* \* \*

Sam and I had a set of walkie-talkies, the kind that hunters and other outdoors people use, so I let her know what I was seeing. She verified, using her scope, that a vehicle was headed our way, but the wind was up the slope toward us and there was too much dust for her to see what it was. By walking around the front of the RV, where the wind direction was less unfavorable, I was able to see a farm tractor, driven by a teenager who looked a lot like Jared Templeton to me, pulling a flat-bed wagon full of children and one adult, a woman in one of those long, cotton dresses, toward us. They weren't moving fast at all, but the several tires on the four-axle rig, combined with the desiccated soil, were raising quite a cloud of dust.

Because I expected that Jared would recognize me, I decided to stay hidden until the last second. It wasn't clear that the tractor and trailer would be able to make it onto the BLM road, given the way I'd parked the RV, but I was betting that Jared would try it.

I let him squeeze the tractor between the RV and the boulder that was sitting just past the track's exit, and, as he slowed to maneuver the wider trailer through, I walked up to him while he was looking the other way.

"Well. It's Jared. How's your jaw?"

That startled him so much he almost fell off the tractor's seat. But then he recognized me and started for something in his belt. I had my Sig Sauer leveled at him, though, so he thought better of it. When I flashed my FBI shield, he jumped to the ground, on the opposite side of the tractor from me, and took off running back down that track, back toward the farm.

I got on the walkie-talkie. "Let him go, Sam. I think we're going to have our hands full with all the kids on that trailer. Why don't you come on down?"

"Yeah, I see 'em. I hope that woman will be helpful. At least they're sitting tight, for now."

I put the Sig into my belt in the small of my back, but kept my shield out, and walked around to the back of the RV, where the trailer was sort of wedged in between the vehicle and the rock. The kids, about a dozen of them, from infants to high-schoolers, were getting squirmy, and the woman was looking bullets at me.

"Ma'am." I held up my shield so she could see it. "My name's Mac MacQuarrie, and I'm with the FBI. I'm part of an operation that's serving Federal search and arrest warrants at the house back down there a ways, but I don't know if you're aware of that. My role is to make sure that no one that no one escapes this way. I don't think that applies to you, exactly, but it did to Jared. It looks like he's headed back for the barn, though."

"How dare you defile God's special place with your blasphemous presence!" Her tone set some of the smaller kids to crying. "This is private property, and there's no trespassing allowed."

"Well, actually, ma'am, right now we're standing inside a Federal reserve, the Grand Staircase – Escalante National Monument. The boundary is about fifty yards down this road here. But even so, the warrants legally allow us to be on the farm property. I'm hoping that you'll cooperate, ma'am. It'll sure be a lot easier for the kids if you do."

Some of her bluster faded. "What's going to happen to us? Am I under arrest?"

"The children are definitely not under arrest. As I said, I'm hoping you'll cooperate with us, and if you do I won't arrest you, although I can't speak to the other FBI agents who are part of this. The arrest warrant was only for a Levi Templeton, no one else, but people who interfere with serving that warrant can also be arrested. As I understand things, at least. And what I'd like to see happen is the reuniting of these kids with their mothers, at least the four that left for work this morning. Those women seem to be minors, meaning they're under eighteen, so their status is a bit nebulous. In any case, they're in FBI custody now, along with the two oldest Templeton boys. Their van got stopped just past the state line, over in Arizona. I guess if we get their kids back to them, you and the two other women at the house, being legal adults, are not really part of all this, unless you want to be."

"Huh? What? What does that mean, 'unless we want to be'?" She was clearly surprised to be consulted.

"Well, I guess that depends on how long you've been in the household and how you got there. And the same applies to your adult-age, uh, co-wives. Or whatever you call yourselves."

"We think of ourselves as sisters."

"Ah, right. 'Sisters' who alternate in Levi's bed, along with those underage girls, huh? I'm thinking that DNA testing is going to be able to sort this all out, and that Levi is going to prison for a long, long

time for his treatment of those young girls. Not to mention how he acquired them in the first place. Were you also kidnapped and imprisoned when you were middle-school age?" I shot her a hard look, sitting up there on the farm wagon with crying children draped all over her. But she was staring at her shoes.

About then, Sam walked up, and I turned my back on the wagon. "Glad to see you, but where's the HK?"

"I left it up there. It didn't seem necessary here now. That guy ran away around the curve down there. I'll go get it when we get this all sorted out."

"Excellent idea. And sorting is what we need to do." I turned back to the wagon and introduced her. "Ma'am? This is my friend, Samantha Winslow. Everyone calls her 'Sam.' And, like I said, I'm Mac. What should we call you?"

She looked up from staring at her shoes and sighed. "I'm Ruth, Ruth Templeton. And, well, before, so long ago now, it seems, I was Roberta Ludlow. Back when I still lived with my parents up in Ogden. I haven't seen them in eighteen years. I don't even know if they're alive."

And she began to sob, which had the odd effect of shutting all the kids up. Instead of continuing their clamor, they huddled around her as if to offer comfort, as if they knew just what to do. The Templeton household, I decided, must be a sad, sad place.

"Well, Roberta, if they're still alive, maybe we can find them and get you reunited. And you can introduce them to their grandchildren." I looked at Sam and lowered my voice. "I'll go retrieve the HK, and then we can figure out how to get all these folks into the RV, so we can get out of here. Maybe you could do a head-count?"

She grinned. "You just want to get away from all this weirdness, I know. The HK's up by those rocks I was behind. Hurry back."

After I'd recovered the rifle and stashed it back in the RV, I called Winnie rather than interrupt Sam's herding the kids, plus Roberta, into it.

"Winnie? Mac here. Listen, we've got a dozen and a half or so kids plus one adult here. Jared, the youngest of the guys I ran into the other night, ran off, back in your direction, at least if you're at the house. Where should we take everyone?"

"Thanks, Mac. We'll keep an eye out for Jared. Is he armed?"

"Not sure, although he looked like he might be. But he's just a teenager, Winnie."

"Don't I know that. And, well, I guess the thing to do is to take all the kids over to the Wahweap Marina. That's where we took the other van and the young women. And Jared's two brothers. They're all at the Park Service office there. For now. We're going to take Levi and the other two women we found here at the house over there, too."

The extra half-ton or so of people from the trailer, even though many were small people, crammed into the back of that RV sure didn't do anything for its handling. I had to be extremely careful creeping my way back down that BLM road, although things improved a bit once we got to the fish hatchery and the grading was more recent. Then it was a matter of cruising southeast on the highway, into Arizona and down the road to the marina. The National Park Service offices had their own private area, but the signage plus the GPS display made it easy to find.

And if the signs weren't enough, the contingent of official-looking vehicles, including several of those dark, full-sized sedans that might as well have had neon "FBI" signs on them, didn't hurt, either.

It appeared that the entire St. George office plus several agents from Salt Lake City had driven over for the take-down, as there were almost as many FBI people as Templetons, putting the entire contingent

at about 50, not quite half children. But it eventually got sorted out—the children were grouped with their various mothers, Levi Templeton, in shackles, was eased into the back of one of the sedans and his sons into others, and, when a large passenger bus finally showed up and everyone was on board, a motorcade to Salt Lake City set off.

Melissa Alcott, the last person to get on the bus, gave me a big hug before boarding.

\* \* \*

## Six

“Now what happens?” Sam, whom I’d introduced to Winnie after the bus departed, still had her mind on Lucy Smith’s kidnapper, I could tell.

Winnie sighed. “Well, the women and children get the kid-glove treatment, and Levi gets the book thrown at him. We’ll have to work out what to do with those teen-aged boys. We picked up Jared, by the way.”

“Roberta, that older woman who came in with us, she told me she’s been on that farm for eighteen years.” I shook my head. “That’s probably like two-thirds of her life. At this point, she doesn’t know anything else.”

“Sure would be nice to get that kidnapper.” Sam’s single-mindedness wasn’t going to let go of that notion.

“That’s our next priority. Maybe we’ll find some information when we process all the stuff from the farm. And we’re going to be questioning Levi with some urgency to find what he knows about that guy. As well as where the other missing girls might be.” Winnie smiled in a way that made me glad to be on her side. “The agents he’s riding with have some special instructions about his trip up to Salt Lake. We may know more soon.”

“Well,” I said, “we’re glad to have been able to help. I’m thinking we’ll head down to Flag and trade this RV back for our van. It’s really more our style.”

“Then what?” Winnie tried to make her question sound innocent, but I wasn’t buying it.

“Hmm. Good question. I don’t know. Maybe we’ll come back up this way via the Grand Canyon South Rim. I don’t think that Sam’s ever seen it in person. And I drove by Monday evening, but it was after dark, so I’d like to really see it, too. Maybe after that we’ll check out the North Rim and some of those National Parks in Utah, west of here. Bryce Canyon, Zion. What do you think, Sam?”

She squinted at me, suspicious, looked at Winnie, then turned back to me. “So that’s it? We just walk away and let that kidnapper keep on kidnapping?”

Winnie was engrossed in fiddling with a hangnail or something, so I was on my own.

“Uh, well, Sam, see...um, I mean, what can we do? We more or less blundered into finding Lucy Smith last week, and then I blundered into this Templeton business. It’s not like we can expect to go blundering about and find this guy. We might as well continue on our way and leave the whole thing to the FBI and the other professionals. Don’t you think? Winnie? Isn’t that right?”

But Winnie was completely absorbed in picking at a bit of peeling nail polish.

Meanwhile, Sam had assumed her truly annoyed pose, weight on one foot, the other tapping impatiently, arms crossed under her breasts—something I found extremely sexy but didn't dare say so—all in support of a steely gaze that seemed to slice right through me.

“Ah, geez. Look. At least we need to wait to see what Winnie's people learn from Levi Templeton and whoever else they question. Right now, nobody has a clue about the next steps. And while we wait, we might as well do some sight-seeing. Besides, it's more likely that whatever next steps there are will be up here in Utah somewhere. So let's go down to Flag, get our van, and then head back this way to check out the South Rim. Winnie knows how to get 'hold of us. Right, Winnie?”

She blew some flakes off the peeling nail and looked up at me with a hint of a smile. “Sounds like we can count on you if we need you, Mac. And we just might at that. Thing is, Sam, he's right. It'll be a couple of days before we figure out what our next steps are, at least. We're going to have to work this carefully, because there's bound to be some publicity about the women we rescued today, probably a lot. That'll put the kidnapper and whoever's got the others on high alert. I think if y'all just do the tourist thing for real, maybe at those parks west of here in Utah, you'll be in place to help us out when we need you to.”

Her switch from “*if we need you*” to “*when we need you*” didn't escape me or, apparently, Sam.

“Well, OK then.” Sam stuck out a hand toward Winnie to seal the deal. “That makes me feel better. Hope to hear from you soon, Winnie.”

We climbed into our big RV for the trip south to Flagstaff, and Winnie took off in the last of the FBI sedans toward Salt Lake City in pursuit of the convoy that had set off earlier.

It wasn't until late afternoon that Sam and I had finished the process of returning all of our stuff back to our van and turning in the RV. On the way south from Wahweap, Sam had used the computer satellite link to find us accommodations in Tusayan—the hotels at the actual South Rim were completely booked, as usual, as were all the campgrounds. Because the deal that Sam and Winnie had sealed put us on call, I decided that the FBI could continue underwriting our expenses, so the cost of the motel in Tusayan, even worse than the one in Williams, didn't bother me.

Instead of heading west to Williams and then north to the South Rim in a reverse of my Monday / Tuesday route, we took US-180 north from Flagstaff and were rewarded, for the first part, with a meandering drive through the foothills of the San Francisco Mountains—much more scenic. After the last straight shot across the desert, Tusayan finally came into view at about suppertime, so we checked in and found food.

Having accepted the notion of sight-seeing for the time being, Sam threw herself into planning, and over supper we discussed strategy. Then, for the rest of the evening, she used the motel's Wi-Fi to make arrangements. The North Rim, it turned out, had closed for the season earlier in the week, despite the fine weather, so that was out. That motivated Sam to wangle a second night's stay in Tusayan so we could have a full day on the South Rim. Then, on Saturday, probably after lunch, we would head north to Bryce Canyon, where she'd secured a spot for a couple of nights in an RV park at a famous old place called Ruby's Inn. She did not, she said, want us to become overly accustomed to motels.

We hit the sack early, with a plan to arise before dawn and see the sunrise over the Grand Canyon, a plan that worked to perfection. That success began a run of three days of consummate tourism that included a day of walking on the South Rim trail, a drive along the South Rim road, in the opposite direction from my previous one, with stops at all of the viewpoints, a beautiful, late afternoon and evening trek back north on US-89 up to Bryce Canyon, and a day of hiking among the astonishing hoodoo assemblage in Bryce itself. These weird pink and orange rock formations, formed by frost and

rain erosion of a very soft mudstone layer, stand like sentinels overlooking the valley of the Paria River to the east.

Although Sam and I had planned to continue our roles as artist and photographer—hers as a professional, mine definitely amateur—we were both just so overwhelmed by the scenery that we didn't know where to start with either pursuit.

Ruby's Inn, which started as a way-station for travelers to Bryce Canyon in the early 1900s, presented itself to us as a veritable tourist village, and we were glad that our RV site was on the opposite side of a little lake from the main buildings. That made for a bit of a trek to and from the restaurant, but we were getting used to longer walks, what with all the hiking .

It was late Sunday evening, after a day of such hiking and then dinner, when we were just settling in for the night, that Winnie called on the satellite phone.

\* \* \*

“Mac? Oh, good, glad I caught you. Where are you folks?”

“Mmm. I guess you wouldn't believe me if I said ‘Outer Mongolia,’ huh?”

“Now, now, don't hurt my feelings. I've been nice to you guys—I even told Rothstein not to put a tracking device on your van, after all. But that means I really don't know where you are.”

“OK, OK. We're just outside of Bryce Canyon National Park, at a place called Ruby's Inn. In the RV park there.”

Winnie purred in appreciation. “Sure. I've stayed there, a couple of years ago when we did a car tour out that way. Beautiful area. Out in the middle of nowhere, though, right? But isn't there a little airport close by?”

“Uh, an airstrip, yeah, but I don't know anything about it. Probably not much in the way of amenities. And, for sure, there isn't much around here. A little town called ‘Tropic’ a few miles east, I guess, but I don't know anything about it. Why?”

“We need to talk. I'll see you both at eight tomorrow morning, for breakfast over at that buffet place in the hotel, OK?”

I relayed the message to Sam, and she smiled. “Oh, good. I was getting tired of this tourist business anyway.”

Monday morning, bright and early, we transformed the van from its house-on-wheels configuration to its travel mode, packed up at our site in the RV park, and drove around the lake to the main lodge. It was about 7:55AM when we got there and found Winnie in a booth addressing a plate overflowing with breakfast from the buffet and sitting across from a uniformed police officer of some pedigree or other who was nursing a cup of coffee.

She looked up and blushed. “I can't seem to control myself when there's so much to choose from. Folks, this is Garfield County Sheriff Paul Ronson. He was kind enough to give me a lift over from the airstrip this morning. And he's quite interested in our upcoming conversation. Paul, this is the civilian couple I mentioned, the ones who were instrumental in the rescue of that passel of kids down in Kane County last week. Couldn't have succeed without them. Mac MacQuarrie and Sam Winslow.”

The large, well-fed man under the big, silver western hat touched its brim and nodded. “Good to meet you, folks. And thanks for doing your part last week. Beyond the legalities, it's personal with me. Uh, see, in addition to being sheriff in these parts, I'm an LDS Church...ah, official here. All the

publicity over this thing had the potential to really make us look bad, even though those people aren't part of our church. But the way it was handled, with your help, made it turn out fine."

"Publicity?" I looked from one to the other of them.

"You mean you don't know?" Winnie looked amused. "Well, get some breakfast, and I'll fill you in."

Sam wound up with a small plate of fruit and a bowl of oatmeal, but I followed Winnie's example. No way was I able to get that much bacon in one sitting at home.

Back at the booth, the sheriff had disappeared, so Sam and I sat on the side where he'd been. Winnie leaned forward toward us, almost putting her blouse in her breakfast.

"He's off for more coffee, or whatever. Although I didn't think Mormons drank coffee. Hmm. But, quickly, let me say that he's got a reputation as a straight-shooter and should be trustworthy. That may not be the case with the Kane County Sheriff, so I'm glad we're up here. Oh, here he comes now." She scooted sideways to make room for the sheriff, who, I couldn't help but note, was carrying something that resembled pearl-handled Colt .45 six-shooters in low-slung western holsters, one on each hip. All he needed was a horse.

Winnie swallowed another mouthful of eggs and hash-browns and daintily picked up a crisp piece of bacon to nibble on. "Publicity. Right. See, Mac, Sam, when that bus full of kids got to Salt Lake City, there was a contingent of TV news cameras waiting for it. My doing. I figured there'd be a firestorm anyway, so doing it our way seemed like the best approach to maintaining as much control as we could. It's been an ongoing story ever since, kind of like those mass shootings around the country we've had. Interest will fade, especially if something else comes along, but the message is out."

"And that message is?" Sam, I could tell, was curious about this strategy.

"We broke up a kidnapping ring and rescued the kids." Winnie smiled. "And, as we've been saying, we're relieved and happy to celebrate this success. Full stop. We're meeting questions about further arrests with a sort of blank stare."

"Mmm. I don't know what I'd do without decaf coffee. It's cheating, but just a little." Sheriff Ronson smiled as he set down his cup. "So, the thing is, behind Winnie's blank stare is a plan for phase two of all this."

Winnie nodded. "Right. Remember I said I put Levi Templeton in a car with two fully briefed agents? Well, what I didn't say was that they're both LDS Church members and that they both have middle-school-aged daughters. Of course, I emphasized that it was crucial that Levi arrive in Salt Lake alive and healthy. But I also mentioned that they were free to take their conversation wherever they wanted to. And apparently they took that conversation in the direction of introducing Levi to the parents of those kidnapped girls. It didn't take much of that kind of talk to get Levi to cave completely. We also got quite a bit of interesting information from that youngest teenage boy, Jared Templeton."

"Did they say who's been doing the kidnapping?" Sam was literally on the edge of her seat.

Winnie's pained expression answered for her. "Unfortunately, no. It seems like neither one really knows. Levi told us that he got the girls from his brother Obadiah Templeton. Levi wasn't clear how they came to be part of Obadiah's family."

Sheriff Ronson spoke up. "And that's where I come in. Obie Templeton—nobody calls him that to his face, though, not even me—he lives down in Kane County, but his access is on county and BLM roads that head southeast off Highway 12 a few miles east of Escalante, meaning his access roads are here in Garfield County, for the most part. Obie owns a good-sized chunk of private land within the

Monument, a fertile valley with a good water source. He's got quite a productive farm operation over there, from what folks say."

It was Winnie's turn. "Jared told us that his job last week was to ferry all those kids, with the woman Roberta, up to Obie's place. I guess there are BLM roads from Big Water up to there."

"Part of the way." The sheriff was shaking his head. "The other part is serious jeep trails, and that would have been a long, very rough trip for all those kids on that farm wagon I heard about. It would have amounted to child abuse, if you ask me. That's why Obie uses the roads in my county for his access. They're maintained. His valley is a lovely place, but the rest of the country over that way is slick-rock, desert, or cliffs, mostly. Rough, rough country."

Winnie smiled. "And that, Mac, Sam, is where you come in. But we probably shouldn't talk strategy here. Too insecure, too public."

\* \* \*

Ah, the good old days, when I worked for this or that three-letter agency and my middle name was "Security." For good reason, I was obsessed with OPSEC—operational security—on a full-time basis. After all, it was what kept me alive.

And I was glad Winnie had thought of it. If Sam and I were going to become involved in the next phase of her operation, we didn't want our role bandied about in public. Where such bandying might be secure, however, was not clear.

She first suggested the airstrip. The only thing there was her helicopter, she said. But I asked "what helicopter" and she said the FBI one she was using. The one with "FBI" in big black letters on the side? Oh.

Ultimately we settled on another public place, but one outdoors where it would be all but impossible to eavesdrop on us and where we wouldn't worry that equipment would already be set up to do so. Pretty good OPSEC, all around.

Sunrise Point, on the rim of the main amphitheater of Bryce Canyon National Park, was set up for tourists, with parking, put-in-a-quarter telescopes, and sturdy fences to keep the kids from falling off the cliff. Next to the attraction of the point itself was a walkway along the edge that almost no one frequented. The four of us made a point of arriving separately and casually meeting up, as if by coincidence, for our conversation. The view, of one of the main regiments of those pink and orange hoodoos, was much better than the topic of the discussion, what Winnie wanted Sam and me to do next.

"What I'd like to do, Mac, is to put to use one of your best skills, surveillance."

That wasn't what I wanted to hear. "Oh, *man*. Of all the skills I've acquired and put to use, that one is my least favorite. Calling it 'boring' is understating it by a lot."

I looked at Sam. "But, given that you don't want me involved in any real action and that Sam's here with me, I suppose surveillance is not unreasonable. What do you want us to surveil?"

"It'll make more sense in the context of our plan." Winnie looked around for eavesdroppers, but the nearest people, tourists who were herding a covey of kids around, were a good hundred yards away.

"So, what we're going to do is based on a federal search warrant we obtained today. We got that because of statements from the women—the *mothers*, actually, insofar as some of them are still girls because they're not eighteen yet—the mothers we rescued from Levi Templeton's place down by Big Water." Winnie looked down at her hands and sighed. "Thing is, no one seems to know much about Obadiah Templeton's place, at least no one here in Garfield County. So we need some surveillance.

Apparently, Obie and his clan live almost off the grid. I guess there's a propane truck that goes in there now and then, but it turns out that one of Obie's sons drives it. They use the propane for who knows what, but it could be running a generator as well as providing fuel for other household needs. The company's records, which we've managed to get 'hold of, show that it's quite a lot of propane, though."

She drummed her fingers on the railing. "We can't just go busting in there, however. And the trick we used at Levi's place won't work. What will work is going to depend on what's there, which is why we need the surveillance."

"Seth Rothstein mentioned that y'all were using small planes with imaging gear for pictures of Levi Templeton's place. Isn't that possible here, too?" I knew I'd be grabbing more satellite pictures, but real-time imagery seemed like a good idea as well.

"We're doing that, but about all that gets us is a couple of pictures per day. Too many fly-overs is likely to get us shot at. Real-time eyes on the place, especially when we're executing the warrants, will be critical." Winnie looked around at all of us. "Oh, and I should say that we need to get on with all this. The longer we wait, the more likely that Obie and company are going to hear about it and get prepared to mount a defense."

My heart sank. "Ugh. 'Defense' implies an offense to defend against, which implies bad things, as far as I'm concerned. Uh, presumably, sheriff, you've got that access road of his covered?"

Sheriff Ronson looked sheepish. "Well, not us. See, first of all, the private road into Obie's valley starts across the county line. Everything he uses up here in Garfield County is public roads. And there's no real point in covering them, because they get lots of other traffic. And, second, well, I'm not sure my department is the right group to do such covering anyway. I imagine that quite a few of my folks actually sympathize with Obie, or would if they knew the score."

Winnie was nodding. "Yeah, we talked about this. I've got a couple of guys watching Obie's road, but they're not blockading it or anything. Far as I know, there hasn't been any real traffic in or out since we started that."

Sheriff Ronson stole a glance at his watch. "Folks, I'm sorry, but I've got a court date up in Panguitch I need to get to. Winnie? Can I give you a lift back to the airstrip?"

She thought for a few seconds. "Thanks, Paul, but I think I can manage. We'll stay in touch, OK?"

"For sure. And if there's anything my office can do to help your operation, let me know." He turned toward the parking lot and walked off to his car.

Winnie leaned over toward Sam and me. "Recall I said that he *should* be trustworthy, at least compared to the Kane County Sheriff. That doesn't mean he really is, though. So I'm glad to have a chance to talk with you alone. What say we head for your van and hit the road?"

She began to herd us toward the parking lot.

"Ah, sure. But is it wise for the van to be seen over by that helicopter of yours?" OPSEC was still on my mind.

"Nope, at least not in this part of the state. I'll call Curly, my pilot, and tell him to meet me in St. George. We'll have a couple of hours to talk in the van on the way there."

My mental map of southwest Utah was still pretty fuzzy. "Uh, can you get there from here?"

Winnie looked surprised. "Well, I assume so. Maybe not in a straight line, but there must be a way."

Sam looked smug. “Not to worry. I’ll get on the internet and find the best way before you know it. But what’s in St. George, anyway? I thought that this Templeton place we’re interested in is the other direction.”

We reached the van and took a couple of minutes to get ourselves comfortably settled inside. Winnie sat in the front passenger seat with Sam just behind me on one of the benches in the back normally used to sit at the little fold-down table. She had it folded down and the computer set up in a jiffy.

As we set off north out of the national park, Winnie answered Sam’s question. “We’ve got a satellite office in St. George, Sam. And I’ve made arrangements for some gear you need there. See, one thing I didn’t mention when Paul Ronson was with us is that there’s a BOLO out for this van down in Kane County.”

Sam was puzzled. “A ‘bolo’? Isn’t that a kind of western necktie or something?”

Winnie laughed. “‘Be-on-the-lookout’. An old cop term. Levi’s sons must have given the description of the van to the sheriff down there. To make matters more interesting, this is an armed-and-dangerous BOLO.”

“But our little altercation was in Arizona!” I couldn’t see how a Utah sheriff could have anything to do with that.

“And that’s relevant how?” Winnie’s cynicism was evident.

“Well...the Kane County Utah sheriff has no jurisdiction in Arizona! I mean...uh, well. OK, I see.” Reality had dawned on me. “So what’s this gear?”

“Mac? You want to turn west on Highway 12 and then north on 89, OK?” Sam, busy with route finding, must have found one.

“The BOLO includes the fact that you’ve got Colorado plates, but not the number, and a mention of the van’s color.” Winnie started ticking things off her fingers. “So you need new plates, which means a different registration, and that means an ID to match it. Seth got the VIN on the van when it was in Flag, and we’ve put together a package. New Utah plates and registration, and a Utah driver’s license that says you live in Ogden. That’s a bit north of Salt Lake City. It’s got your real name on it, because we’re assuming you didn’t introduce yourself to those guys. The BOLO doesn’t mention it.”

“OK. What color? It was pretty dark in that restaurant parking lot, and I don’t know how those guys could have seen its real color.” I couldn’t remember how close I’d parked to any flood lights.

“Tan, close enough to what it is. And they mentioned the body lift and the big, off-road tires. The BOLO is for a tan, full-sized van with Colorado plates, a body lift, and off-road tires. It pretty much nails you.” She smiled when I glanced over at her. “In fact, I’m glad that you made it up here from Arizona. You had to drive through Kanab, which is the county seat, and across the whole north-south extent of Kane County to get here. They must have been asleep that day. But I’ve got a plan.”

“Uh-oh.” It was a shark’s smile that I’d noticed.

“Naw, it’s all good. We’ve arranged for you to get a body wrap, it’s called. Uh, not for you, but for the van. Vinyl sheets custom cut to cover the outside. It’ll have advertising on it, for an off-road van conversion shop in Ogden, where you supposedly live now. And it’ll completely disguise the color. Best of all, when this is all over, it can be stripped off with no damage to the paint job.”

“Ah, geez, Winnie. This sounds crazy. Is it really necessary? I mean, this is a Kane County BOLO, not Garfield.”

“Yeah, but, thing is, you need to get to where we need the surveillance by going in through Kane County. Northeast from Big Water on those BLM and jeep roads into the Monument.”

That little tidbit persuaded me of the wisdom of letting her put a GPS tracking beacon into the van this time.

\* \* \*

## Seven

Sam’s route to St. George took us north through Panguitch, then west on a short, curvy stretch over a mountain range to the interstate, and back south. Definitely not anything close to a straight line, but I pushed it a bit and we made it in a couple of hours. Somewhere in there, Winnie called her pilot and arranged to meet him after lunch at the St. George airport, and we reached the FBI office about 11:30.

The van went immediately into the motor pool’s garage for its makeover, and, curious, I went with it. What I saw there—the raw sheets of vinyl for the forthcoming wrap—was both encouraging and horrifying. The garish color pattern, orange racing stripes on a green background, with a variety of huge graphics advertising the conversion shop in Ogden, would, I was sure, disguise us from the BOLO. But, geez, what a thing to be driving around in. It reminded me of my life in South Florida, where I was continually exposed to the colors of the U of Miami—a van with that on the outside was not going to go un-noticed in Southern Utah.

So, for surveillance purposes, some way to tone it down was going to be critical in the backcountry. With Winnie’s help, I made arrangements to borrow one of their vehicles, and Sam and I set out to find an outdoors shop that sold camouflage tarps or nets or something.

That errand accomplished, we returned to find our billboard on wheels ready to roll, picked up the new identification papers for me and the license plates, and headed out. Ninety minutes or so later, we pulled into a familiar parking lot at the headquarters of the Escalante – Grand Staircase National Monument in Kanab. We’d agreed with Winnie’s suggestion to stop there to discuss the conditions of the BLM roads on our route with the people at the information desk. We could also, we decided, ask some questions about how challenging the jeep roads might be up that way.

During our previous visit, when the pig of an RV had been our home, I’d been the one asking questions of the BLM lady behind the counter. This time, behind the counter was a volunteer of some kind, a large, balding fellow whose belly was overlapping his belt by several inches, and it was funny to see him try to suck it in as Sam walked up to him to do the questioning. I held back and pretended to be browsing the various pamphlets they had on display in the lobby, but I heard snatches of conversation about the roads, the challenges of the jeep roads, and, ultimately, what kind of vehicle we were driving?

Sam mentioned that we had a camper van equipped for off-road travel, and it got my attention when he said that maybe he ought to have a look at it to see if it would handle the jeep roads. At that point, Sam ramped up the charm by a factor of ten or so, and he sort of pranced around her like a puppy on their way out the door. I watched through a window as he strolled around the van, taking a long look at the license plate as if trying to memorize it and trying not to be too distracted by Sam’s attention. Or her curves.

We still had most of the expensive bottled water from our previous visit to Kanab, so our only other stop before heading east on US-89 was to top off the fuel tanks. It was about 45 minutes later that we

slowed to turn off to the north at our favorite almost town, Big Water. Our plan was to head north on the same BLM road as we'd used before, the one past Levi Templeton's place, until we were well into the Monument. Then we could turn east and, we hoped, not have our dust plume visible from the highway.

The van's GPS navigation system showed the BLM roads on its map, but there were no smaller roads, jeep or otherwise, no matter how closely we zoomed the thing in. I'd come prepared for that, though, with a separate GPS receiver that plugged into one of the ports in my laptop and software with honest-to-goodness USGS topo maps that would show our position among all the detail of those high-resolution, 7.5° renderings of the topography, including jeep roads galore.

As nice as that was, even nicer was the way the van handled that lousy road. Where the RV we'd been in previously wallowed, bottomed out, and felt tippy, the van just took it all in stride. We not only made better time, we made it in far more quiet and comfort. A bit later, when we hit the real jeep roads, I had to slow down and crawl along—even using the low range for several stretches—but the off-road package performed even better than I expected.

It took us a couple of hours, almost until dark, to work our way north and east onto and across the mesa just south of Obadiah Templeton's valley. We searched around and found a scraggly juniper next to a house-sized rock where we could park the van and put the camo net we'd found to good use. By the time that was all ship-shape, it was too dark to do any real exploring in such unfamiliar territory, so we settled in for the night, keeping our use of lights to a minimum.

One of those minimum lights was my laptop's screen, which provided a shifting glow inside the van as I downloaded all the satellite images I could find showing our location and the layout of the Templeton place in the canyon, just to the north of us below our mesa-top. A sprawling ranch house was complemented by several out-buildings, some with corrals attached holding a variety of farm animals—hogs, goats, a few sheep, and at least two cows, it looked like. Of particular interest to me was the contrast between an eight-year-old image and a contemporary one. Sometime in the last eight years, a new out-building, looking more industrial than agricultural, had been added just below our location, almost against the canyon's south wall. Between that building and the rocks of the canyon wall was the biggest propane tank I'd ever seen, one at least the size of five normal tanks of the domestic variety. This fit with the comment that Winnie had made that morning.

Before I shut things down for the night, I also caught up on my email and found several additional images from Winnie, close-ups by comparison, obtained by the small-plane flyovers from the past couple of days. They confirmed the information in the satellite imagery and, because of the different angles overhead, also showed an additional building, far-removed up the canyon to the west of the main ranch compound. It had something resembling a bell tower, so I decided it was either a schoolhouse or a chapel.

Sam was outside, wrapped in a blanket and sitting in a lawn chair, staring upward at the universe. The stars, and the Milky Way especially, were even more overwhelming than they had been during our overnight near Big Water the previous week. But the quiet wasn't so pervasive—there was a purring hum of some kind that disturbed the silence. Still, it was so nice out there, if a bit chilly, that I dug around and came up with the other lawn chair. And a jacket.

“Could be worse, huh?” I said quietly.

“Unbelievable. I suppose it gets lonely, though, living way out here.” She reached over and squeezed my hand. “What do you suppose that noise is?”

“Yeah, I'm wondering that, too. Maybe a motor of some kind, like a propane generator. Well sound-proofed, but the exhaust is bound to make a little noise. Maybe we'll find out more tomorrow.”

“Is there a plan?”

“We’ll probably wake up fairly early, because the sun rises right over there.” I waved my other arm in a general southeasterly direction. “As soon as we get fed, we can take a little hike northward, see if we can find a good observation post on the rim of the canyon overlooking Templeton’s place down there. The satellite pictures I just checked out seem to offer several possibilities.”

“Sneak around like spies, huh?”

“Yeah, well, that’s what I’m supposed to be good at. I can’t wait to see what you look like with your face all smeared with camouflage makeup.” I squeezed her hand back.

“Yuck.”

\* \* \*

It turned out, though, that with the cloudless sky the next day and the colors of the rocks we’d be among, the best thing to smear on our faces was high SPF sun-block. As I’d predicted, we awoke quite early, for a couple of retired people on vacation, at least, and I even got some credible sunrise photos. After a hearty breakfast and carefully considered loading of my day-pack, I was ready a little after seven. Sam, though, was still puttering around, trying to decide what to carry with her.

So I took the broom and walked back down our route of the previous evening, erasing what tire tracks I could find to where we’d turned off the jeep road. Although we’d left fresh tracks in the sand of that seldom-used road, we’d turned off it while on solid rock, so our presence wasn’t too loudly advertised. And I verified that the van couldn’t be seen from the road at all.

Back at our cozy little campsite, I found Sam ready and waiting to head out, and we started off north across the mesa. This turned out to be somewhat tougher going than I’d imagined, but a hand-held GPS kept us going in the right direction despite the need to make various twisting detours among the rocks. We managed to accomplish these detours by staying almost exclusively on solid rock, so we weren’t leaving footprints to speak of. And I made certain to record numerous waypoints on the GPS unit so we’d be able to find our way back to the van, even in the dark.

What with the route-finding and all the meandering, it took us an hour and nearly two miles to progress the straight-line half mile or so between the van and the canyon rim. It occurred to me that more route-finding later in the day might be a good idea. Surely we could cut that two miles at least in half.

But find the canyon rim we did, and once there we became extra careful to avoid exposing our silhouettes against the sky. The rock layering must have been much the same stuff that composed the Bryce Canyon amphitheater, a hard cap-rock formation overlying some kind of mudstone, I’d read, because the canyon rim dropped off into a small cluster of hoodoos. Below them there was a sloping bench of rubble that ended in cliffs extending to the canyon floor, where several buildings sat. I recognized the ranch house from the photos I’d examined the previous evening. We explored a little and eventually found a spot just to the west from which we could see all of the buildings, even the schoolhouse, or whatever it was, with a minimal chance of our being seen. After a bit of housekeeping—picking up sharp rocks, mostly—we settled in a little past nine to see what life on an isolated ranch in the Utah slick-rock country might be like.

I guess it shouldn’t be surprising that, to us, from our vantage point a half-mile or so from, and a few hundred feet above, the buildings, it seemed pretty boring. Once in a while, someone, usually a young man but on a couple of occasions an older one, would walk from one building to another. I used the binoculars I’d brought to examine them and took notes on their appearances. In the meantime, the

animals got fed, bit by bit. And the motorized humming we'd heard the evening before and all night was louder, probably due to our proximity.

But there were no women or children to be seen.

Time passed, slowly, as it does in such situations. Sam took a nap; we had lunch; I took a nap; we took turns standing up and walking around—out of sight of the canyon—to work out the kinks. We had a couple of conversations about how boring it was and whether we could stand very many days of it.

But at about four that afternoon, two things happened to stir our interest. First, we saw the door to the building we thought might be a school open, and a long file of children, with a few taller women included, walked out and headed for the ranch buildings. When they got there, the children dispersed in various directions, some entering the buildings, others that we could see going to work on various garden plots over by the canyon's north wall.

And there must have been a wind shift. What breeze there had been all day was from our left, from the west, blowing down-canyon. But all at once we began to smell the farm animals down there. And there was something else, an out-of-place odor, a sort of industrial smell. The words "volatile organic compound" popped into my head. What, I wondered, could that be?

Sam's voice, a loud-ish whisper, seconded my opinion. "Eww. What's that smell? That's not what farms smell like, even old horse barns."

I shrugged and went back to watching.

At 5:30, there was a second motor noise, and I noticed a two-person all-terrain vehicle descending some switchbacks down a less-steep section of the north wall, well down-canyon from us. That, I thought, must be the entrance road. The two people, both young men, climbed out of the ATV after parking it in front of the ranch house, dusted themselves off, and went inside.

At 6:00 sharp, a bell rang, and everyone working outside put tools away and converged on the ranch house. The children all lined up for what looked like an inspection, after which some went inside while others washed up in a large trough by the barn. After they went in the house, four other people dressed in protective coveralls and full-face breathing masks came out of the newer building, the industrial-looking one by the big propane tank. They shed their coveralls and masks, revealing themselves as three men and a woman, stashed them in an outside locker, washed up in the trough, and entered the ranch house. We waited another two hours, getting increasingly restless and hungry, and finally headed back to the van without seeing any other activity.

After an interesting exercise in reverse route-finding, in the dark through all the rocks across the top of our mesa, we reached the van about an hour later, relieved to have found it in the dark. Because the generator at the ranch had run all night, I assumed it would again, so I took advantage of the covering noise to start the van's engine to keep the batteries topped off while Sam cooked dinner. As that was happening, I called Winnie to report on our first day's observations.

"So," she summed up my report, "something like ten men, all but one pretty young, a half-dozen women, and a whole bunch of kids, right? Two of the men came in at the end of the day on an ATV, three men and a woman were in that newer building. Hmm. What do you make of all that, Mac?"

"Presumably the older guy is Obadiah Templeton and, I guess, at least some of the younger ones are his sons. I'm thinking the women are his wives, but that's maybe a stretch. Did your guys out at the end of the entrance road see that ATV?"

"Nope. All was quiet out there, except for a group of jeeps headed south into the Monument, presumably for some recreational off-roading."

“Then maybe the two guys on the ATV were out there in a sort of observation post, or a guard shack or something. Keeping watch for trespassers. But I’m really more interested in the four people who came out of that building wearing what looked a lot like hazmat suits. What’s that about?” I had an idea. “Say! Can you get an imaging spectrometer with good coverage in the infrared bands onto that airplane you’re taking the pictures from? Maybe an instrument like that could pick up a chemical signature of what we were smelling.”

“Good question, Mac. I’ll have to look into it. What’s your plan for tomorrow?”

“Get a really early start and check out their morning routine, then find an easier route between here and that observation post we established. There’s got to be a better way. Are you going to serve that warrant you got?”

“Let’s give it another day at least. I want to know as much as I can about that place.”

\* \* \*

I told Sam she should sleep late, and, next morning, got up before dawn and made my way carefully back to the canyon edge in time to see the sun coming up over the horizon. Over the next hour or so, I watched the reverse of the previous evening’s activities—two guys heading up those switchbacks on the ATV, kids filing off toward the schoolhouse, four people suiting up to enter the industrial building. It all seemed quite normal, somehow.

I then spent an hour finding us a better route between our campsite and the canyon, finally managing to get the time down to about 20 minutes for the half mile. It had a bit more up-and-down but nothing truly strenuous, and it would be far easier to follow in the dark.

Sam had a sumptuous breakfast waiting for me—a good thing, as I was starved—and we both returned to our viewpoint on the canyon rim for another boring day of watching the gardens down by the base of the north wall grow.

We did have one interesting episode, though. A little after noon, a small plane, what looked like a single-engine Cessna, made a pass over the valley at a low enough altitude that we could hear it over the hum of the generator down there. Almost immediately, two of the men we’d been seeing ran out from the ranch house with binoculars and tracked the plane as it flew off to the west.

I had the satellite phone with me, so I made a call at once.

“Winnie! Listen, a small plane just flew over the Templeton ranch here. If that’s yours, get in touch with them *now* and tell them not to make a second pass. They were watched carefully, and I’m sure they’ll will be recognized if they make another pass.”

“No kidding? OK, hold on for a minute, will ya, Mac?” She was gone for only about thirty seconds. “I think that’ll do it. At least I hope so. Tell me exactly what you saw.”

I related the events in detail. “Anyway, it’s clear that the folks down there are pretty suspicious of flyovers. Was that just more photographs?”

“No, I managed to get your spectrometer on there, Mac. I don’t know if that one pass will get any readings, but it seemed worth a shot. Are you smelling the chemicals?”

“No, but the wind hasn’t shifted like it did yesterday. That happened late in the afternoon.”

“Well, call me tonight. Maybe we’ll have some data from the plane.”

Sam and I hung around the canyon rim long enough for the wind to shift, and, once again, there was the distinctive odor of some kind of industrial chemical mixed in with the farm smells. Given that we'd seen the evening routine the previous day, we started on our way back to the van well before dark.

As we walked, Sam let me know she was discouraged by our experience. "Mac, is this what you used to do when you were assigned in the Middle East? Sit around and watch the shadows change?"

I turned around, stopped, and wrapped her in a big hug. "Sometimes. It can be long periods of tedium with brief events interspersed. Occasionally very exciting events. Maybe tomorrow you can stay back by the van and paint. Or pick a spot half way over here—I seem to remember some interesting rock formations."

I recalled my earlier conversation with Winnie as I set off again, this time behind her. "And maybe, just maybe, tomorrow will be the last day we're needed here. Hanging around too long would be pushing our luck anyway."

"It doesn't seem like we're getting any closer to identifying that kidnapper, out here in nowhere-land." She turned and shot me a cynical look.

"True. But, I've gotta say, I don't know what we *should* be doing to get closer. The best lead I know of is this other Templeton guy, don't you think?"

"But Winnie's people questioned that other bunch all weekend. Don't you think they found out something?"

"As if she'd tell us. I mean, the last thing she wants is for us to do is to act like vigilantes and go chasing off after somebody."

I thought I heard a big sigh, and the tone of her voice confirmed it. "Well, I guess you're used to operations like this, where you don't know what all is going on. But it's pretty strange from my perspective."

"Just as long as Winnie keeps us in the loop about stuff that concerns our safety, that's all I ask. And don't give up hope. We may get a line on this kidnapper yet."

Our new, shorter route was both quicker and easier, and we arrived back at our campsite well before dark. I made us drinks, and we sat and watched the day fade into evening for a while. Then Sam started on some dinner and I bent to the task of emails and so on.

The most recent email was from Winnie. It included a list of complex chemical names and some numbers, along with a note to call her at my first opportunity. So I did just that.

"Oh, Mac. Glad you called. Did you get that email I sent?"

"Yep, but I haven't figured it out."

"Yeah, well, that makes two of us. And I have to say, that was a brilliant idea of yours, to put that spectrometer on our plane. Anyway, I had to have the results translated, so I emailed them to a friend of mine at the DEA. Seemed like I'd barely pushed the 'send' button before he called me, all excited."

"That airplane must have measured something interesting, eh?"

"To him, yeah. He says that the various combinations of chemicals that thing saw provide *prima facie* evidence of a meth lab down there. And he's getting a warrant to bust the place. Tomorrow."

"Uh, won't that screw up your operation?"

“I’ve had time to think about it. And cool down a bit. At first, I was pretty pissed, I’ll tell you. But, thing is, if they go in, then they’re really just doing my job for me, without real risk to me or my people. So it’s all good.”

“Well, OK, if you say so. Anyway, I’m surprised. But a meth lab in the back-country of Southern Utah? I thought all these Mormons were teetotalers.”

“Just because they don’t use the stuff doesn’t mean they don’t make it for others. And Utah has been a hotbed of meth for some time. It was one of the last states to outlaw uncontrolled sales of the ingredients. They finally did, and there are fewer labs than there used to be, but consumption is still pretty high, up in the Salt Lake metro area especially, and it’s got to come from somewhere. And apparently DEA hasn’t figured out where the stuff showing up in Denver and the rest of Colorado is coming from. Maybe these Templetons stockpiled ingredients just before the restrictions kicked in. Or they’ve got a supplier somewhere.”

“They do seem to have quite the operation there. Like I told you, that propane tank is huge. And the building I saw the people in hazmat suits coming out of is, oh, maybe forty by a hundred feet. What’s that? Four thousand square feet of meth lab?” Put that way, I even surprised myself. “So what’s the plan? You said DEA is doing a raid tomorrow? Can Sam and I get the hell out of here?”

There was a pause, and when it ended, Winnie sounded apologetic. “I’m afraid I let slip about your surveillance, Mac. My DEA friend wanted to know how come we put the spectrometer on the plane, and I told him about what you were smelling. So he asked if you could stick around and provide support.”

“Support? Our observation post is a long way from any action that’s going to happen. All I could do is shoot in their general direction, and I probably wouldn’t hit anything anyway.”

She sighed. “Yeah, I know. But have you got that nifty H-and-K 417 that you saved my ass with a year ago? I figure that if you sprayed a full magazine, or several, at them, on automatic, that’d get their attention no matter if you only hit dirt. And that could be all the DEA guys really need.”

I did, of course—that was the rifle that Sam had smuggled up to so closely during target practice. And Winnie didn’t know it, but I also had my McMillan TAC-50, sniper rifle extraordinaire, and various loads, some decidedly illegal for civilians to have. Together, Sam and I would be able to provide serious tactical support, of the long-range variety at least.

“Uh, so, you want me to shoot up the place if the DEA guys get into trouble? Or what? I thought you wanted me to stay in the background for all this, with my history in the agencies and all.”

Another big sigh. “I did. And if this were my show, I would. But the DEA guy specifically asked for tactical support if it should be needed.”

“When’s this all supposed to go down?”

“Just before noon, is the plan.”

“Well, at least all the kids and most of the women will be in the school. It’s far enough up the canyon to be away from the action, probably. This could get very, very nasty.”

“That’s what I’m afraid of. And, without your help, it could get even nastier, at least in terms of casualties on our side.”

“I understand. Let’s see. Did you tell your DEA friend about your two watchers, and about the Templeton people I saw on the ATV?”

“My observers have orders to stay out of any action. Their job is to watch and report. And, yeah, DEA knows they’re going to run into some kind of gatekeepers on the road in.”

“OK, tell you what. Let’s set up a sort of sat-phone conference call tomorrow, with your observers, me, and you. Then we can all be on the same page with what’s going down, and you can tell me if it’s OK to shoot. I mean, I might accidentally hit something or somebody, and I want legal cover.”

“Good idea.”

“And, look, your part of this still relates to the kidnappings, right? So are you going to have resources available to deal with the women and kids? They may just need to be evacuated if this all really hits the fan like I’m afraid of.”

“Mac, gotta say, you’re on top of things. And the answer is ‘yes’. We’re going to follow the DEA in, after you and my watchers give some kind of all-clear, with vehicles to get those folks out of there.”

“Well, all righty then. Let’s talk some more first thing tomorrow, OK Winnie?”

“Absolutely. Have a good evening, Mac, and best regards to Sam.”

\* \* \*

## Eight

“She wants us to *what?*” The notion of tactical support for the DEA team clearly wasn’t what Sam had been thinking about for the next day.

“That, sweetie, was precisely my reaction. We’re here to watch and report, not to spray bullets around. But, look, the DEA has a warrant to go in and bust that place for being a meth lab, and they might need our help. Seems like the least we could do is to provide a little backup in case something goes south. No?” I shrugged not only with my shoulders but with my arms, too. “And Winnie says she’s going to send in a bus or something to pick up the women and kids. That way, there will be more people who can give us leads to the kidnapper, right? So by helping out, we get closer to catching the guy who snatched Lucy Smith. And all the others.”

“Well, I guess that’s something in the way of an incentive.” She looked over at me while scrubbing at a sauce pan. “Is there a plan?”

I was drying the last of the flatware. “She said the DEA raid is supposed to happen late morning, just before noon. So I figure we can get over there after breakfast and set up on the rim. You seemed to like that HK rifle when you tried it out the other day. I’ll use the other one.”

“I did like it. But what other one? You mean the TAC-50? How big an arsenal do you have, Mac?”

“Uh, well, just that one other one, in terms of rifles. Yeah, it’s that, um, ‘bassoon’ of mine, remember?”

The reference was to a little, not-so-effective, subterfuge I’d tried on her when I’d first acquired the TAC-50, back in our South Florida days. Broken down, in its case, it resembled a bassoon. Or maybe a contrabassoon. If you used your imagination.

“The one I saw set up on Hal and Annette’s balcony that time down in Boca, yeah. I’m still not quite sure what that thing’s really for.”

“It’s a military sniper rifle, big caliber. And I’ve got some special rounds that will magnify its effectiveness if we need it tomorrow.” I held my breath, because I had no idea what her reaction would be.

“So, I get the full-auto H-and-K, probably near the limit of its range, and you get a slower but more accurate long-range rifle? Hmm.” She tapped the slicing knife she’d been washing against a pot lid. “I guess we might be able to help out, if we have plenty of ammunition.”

Once again, I wondered who this person was. The Sam I’d met in Florida and moved to Colorado with just didn’t fit.

“We’ll take as many full mags as we have for the HK. I think there’s a dozen or so. And I’m pretty sure I’ll need only a few shots with the TAC.”

“TAC-50. Hmm. Does that mean fifty caliber? As in, a half-inch?” She watched me nod. “Jesus. And I bet I know what you meant by ‘special rounds.’ I guess we really are in the armed-and-dangerous category, huh? Just like that BOLO says.”

“Bonnie and Clyde had nothing on us, Sweetie.”

Wednesday morning, we ate a leisurely breakfast and then proceeded to assemble our assorted gear, the amount of which wound up to be a bit daunting even though we cut back on the creature comforts we’d taken the day before. This time, our food was limited to some high-energy protein bars instead of a serious picnic lunch, and I decided not to take my camera equipment—our cell phones would have to do, if it came to that. But I did remember an empty mesh bag and a small roll of duct tape.

I also went about the task of prepping the van for a quick departure, should things go all to hell over at the canyon. I’d decided that, if any shooting got started, we weren’t going to be sticking around very long afterward.

At least the walk over to the canyon rim, despite its ups and downs, wasn’t too long or strenuous. We arrived at our perch around 10:30, spent a while to get things arranged, and settled in to wait. Without knowing what might actually be needed, I sighted the rifles in as best I could on a spot at about the middle of the canyon floor in front of the main house. And I used duct tape to fasten the mesh bag over the ejection port of the HK so that we wouldn’t have to spend time picking up brass, should Sam have to let fly with the thing.

After we got organized, I put on my headset and called Winnie on the satellite phone.

“Morning, Winnie. We’re here and all set up. ‘Armed and dangerous,’ as Sam put it.”

“Good to know, Mac. From what I’m hearing, things are on track at our end as well. Although it sure would be nice if we had better inter-agency communications. The DEA guys are playing their cards pretty close.”

“Do you know their tactics?”

“What they told me is that they’re going to drive in there in two or three vehicles full of agents and take the place down. They’ve got all the intel we have, including your reports. And my guys out by the main road will be able to see the first part, at least, when they confront Templeton’s people who are manning the gate, or whatever it is.”

“Hmm. Sounds like a dozen or so agents, then. If it were me, knowing what I know, I think I’d want more. Winnie, I sure hope they’re not setting themselves up for a disaster.”

“Me, too, Mac. But, hey, they’ve got you and Sam watching their backs, don’t they? I mean, what could possibly go wrong?” Her voice betrayed her amusement. “I’m going to patch in my observers so that you and I can hear what’s going on in real time.”

I heard some clicking noises, and another voice joined the call. Winnie introduced him. “Mac, you know Seth Rothstein. And his partner is Henry Runninghorse. I brought them both up from Flagstaff because, well, I’m not by nature a trusting person and I’m not sure I trust the Utah people for this.”

“Seth! Glad to know you’re on this, man. And, Agent Runninghorse, are you on the call?”

But Rothstein jumped in. “Hiya, Mac. And, yeah, Henry’s right here and listening, but he’s one of those silent, noble, Indian types.”

“Huh.” A fourth voice, low and rumbly, joined the conversation. “Noble, maybe. But silent only because this paleface I’m teamed up with talks enough for at least ten people. *Never* shuts up. *Never*. Anyway, please call me ‘Henry’, Mac.”

After a few more jibes, I had Seth give me a careful description of what he was seeing. As he was talking about the daily routine of the gate guards, he stopped.

“Wait one,” he said. The pause was brief. “I’ve got a vehicle entering the side road, stopping at the gate. Hmm. An SUV, with a law-enforcement decal. ‘Kane County Sheriff’ it says. The Templeton guys are at each front side window, having a conversation with whoever’s inside. They’re generally smiling.”

“Any indication of how many people in the vehicle?” Winnie voice had changed to command mode.

“Can’t really tell, because the windows are pretty well blacked out. OK, arms sticking out the windows, waving, and the SUV proceeds toward the ranch. Mac, you ought to be able to see it coming down those switchbacks soon.”

I checked the time on my watch and responded. “And just how soon will be useful to know. I’m timing it.”

We all waited. I remembered to breathe and hoped the others did, too. Finally, after about four-and-a-half minutes, the SUV appeared over the rise across the canyon, at the top of those switchbacks down to the ranch.

“OK, they’re here, or at least at the top of the hill, heading down. Give it another minute plus for reaching the bottom and it’ll be about six minutes, gate to house. I’m not sure if that’ll be helpful to know or not, but there it is.”

“It could well be, Mac,” Winnie said. “Although it seems like they weren’t in a hurry. The photos make it look like only a couple of miles.”

“OK. That might be important to keep in mind.” I studied the scene by the house through the scope on the TAC. “I guess the people out at the gate have radios, because there’s a greeting party coming out of the house. An older man and another guy.”

“They do have radios, Mac. We’ve seen them using them,” Rothstein chimed in.

“Ah, yes. Old home week. Two people in uniform getting out of the SUV, handshakes all around. A powwow of sorts. Everyone’s headed back into the house together.”

“Interesting,” Winnie sounded thoughtful. “I guess now we wait some more.”

“Not for long, Winnie.” Rothstein’s voice had a tinge of excitement. “Here comes the cavalry.”

\* \* \*

“What the hell?” Rothstein was obviously taken aback. “Two big, black SUVs, Chevy Suburban sized, with several antennas each. Real clandestine, guys, sheesh. But, thing is, the Templeton guards each have some kind of...well...shoulder-held device, and they’ve blocked the road, the side road, before and after the two black SUVs. Oh. And here come a half-dozen other guys out of the rocks and what bushes

there are carrying what look like M-16s. The DEA guys are surrounded. I wonder what those shoulder-held things are?”

“Anti-tank weapons, probably M-136s, looks like. Those dudes have got serious firepower, folks.” Henry’s deep voice sounded impressed.

I jumped in. “And out of the house come running the two Kane County law enforcement people. They must have had a radio call. They’re into their patrol car and headed up the hill. Mark the time, Seth. This trip will be faster.”

As I watched, two Templetons also came running out of the house, the young one heading toward an out-building that, because it had no front wall, I could see sheltered a tractor and other pieces of equipment. He jumped onto the tractor seat and fired the thing up.

As he was backing the tractor out of the shed, Seth said, “Here they are. Just a bit over three minutes this time. But the Templeton guards aren’t lowering their weapons. What’s up with that?”

“What’s up with that is that they’re all pals, remember?” A grim note had crept into Henry’s voice. “I, my friends, have a bad feeling about this.”

Seth, with an occasional comment from Henry, proceeded to narrate the scene for Winnie and me. Weapons drawn and with the assistance of the bevy of civilians helping, the two Kane County people disarmed and took captive the fourteen occupants of the black SUVs—the DEA crew, if the big yellow letters on the backs of their jackets meant anything—and bound their hands using plastic zip-ties. Then they loaded the captives back into the SUVs, and the two sheriff’s people got into the drivers’ seats. A little convoy of the two DEA SUVs, the sheriff’s car, driven by one of the M-16-armed Templetons, and two ATVs started back toward the ranch. It was only at that point that the two remaining Templetons stowed their anti-tank weapons and resumed their usual guarding routine.

Meanwhile, back at the ranch, the fellow on the tractor had been busy. I hadn’t noticed before, but the tractor was equipped with a front loader bucket, which was now being used to dig a trench between the hog pen and the far canyon wall. I mentioned this to the others.

“A trench? Huh?” Winnie was dumbfounded.

“Yeah. And, like Henry, I’ve got a bad, bad feeling about all this. I’ve gotta talk to Sam, so I’m going silent for a bit.” I poked my phone’s mute button, and ignored the conversation in my ear-piece.

“Hey, kiddo, looks like we’re going to have to provide that backup we promised.” I racked a round into the TAC. “Don’t know if we’ll need to use these things, but we need to be ready.”

Sam took the hint and followed my lead with her HK. It made a reassuring, well-oiled *ker-chunk*, and she settled in behind its scope.

“And do you have those earplugs I gave you? Put ’em in good and tight. You’ll be glad for them if I have to fire this thing. Wait for me to fire off a round—you’ll hear it, for sure, and I’ll yell a warning first anyway—and then lay down a full magazine without hitting anyone. Just get their attention with the first mag. Then shoot to kill if I keep shooting, OK?” I smiled my most encouraging smile before I poked my phone’s button again and started listening.

“...and Henry? Can you put some of your old Ranger skills to use and get those two gate guards out of action?” Winnie, I could tell, was going to take charge.

“Winnie? I’m back. Sorry to butt in. Before anyone leaves, though, I’d like them to hear you explicitly authorize me to use force, if necessary deadly force, as I believe to be appropriate. Even with all my law enforcement credentials, including yours, I’m basically a civilian, after all. You need to tell me to use my discretion to shoot, or something else that clearly protects me from liability, especially as I

may need to shoot a sheriff's deputy or someone like that. Right?" I decided on the fly that I'd pretend that I was using both of our rifles and that Sam was just a spotter for me. That way, she would be an accessory at worst.

"You are so authorized, Mac. Let's see if we can keep those DEA guys healthy." Winnie took a breath and I felt relieved. "Henry, what about those guards?"

"Fast, boss? Or quiet? Don't think I can do both."

"Fast. Seth can take one, you the other."

"Then no way will it be quiet."

"Hey!" Seth, I could tell, was trying not to laugh. "I can hear all this, you know."

"Just don't try to talk him to death, Seth. We need to be quick. I want to get in there, or at least be ready to."

I'd been watching the road, so when the first of the black SUVs came into sight it didn't surprise me. "That convoy is on its way down the hill, Winnie. Here we go."

"OK, Mac, keep us informed. Henry and Seth will be able to hear us, but I don't think they'll be talking. Except maybe Seth."

"Hey!" His indignation was a stage whisper this time.

"Got it Winnie. Good luck, you guys. What's happening here is that the vehicles are coming down those switchbacks. The guy digging the trench down at the bottom of the canyon has a hole about the size of a car dug. Hmm. Maybe they're going to bury those DEA SUVs or something like that. And Old Man Templeton is watching him...no, he's turned his attention to the approaching vehicles."

"Old Man...huh?"

"You know, Obadiah. I can't bring myself to call him 'Obie', and all four syllables just give him too much cred. OK, so he's waved the vehicles over to where he's standing by that hole the guy on the tractor is digging."

"Mac, is there some kind of diversion you can create?"

"Winnie, I can create God's own havoc down there, believe me. But only briefly. Which is what a diversion is supposed to be. Thing is, what happens after that? Unless you or someone else is on deck to show up pretty quick with more firepower, it'll just make a lot of noise and smoke."

"Shit. You're right. How come you're always right?"

"Don't know if you noticed it, kid, but I'm older than you by a long shot. And I was doing this sort of thing over there in Sandland for a long time. Experience is what I have, along with the wrinkles." I managed not to laugh at myself.

"Oops. Well, here's Act One Scene Two—the vehicles are down on the canyon floor by the hole in the ground, and Templeton's people, including the sheriff's uniforms, have got the DEA guys lined up standing more or less at parade rest—that's what it looks like with their hands bound behind them.

"And Templeton's hollering at them. Walking up and down the line, shouting and gesturing. The two sheriff's guys are standing off to one side, and the seven other Templeton guys, the six with M-16s and the guy from the tractor, are in a line more toward the house.

"Uh-oh. Templeton's walked over to his guys and grabbed an M-16, or whatever it is, from one of them. At least he's got it pointed at the ground. Uh, more or less. Ah, shit. There's a quick burst at the

feet of one of the DEA guys. Crap. Oh, by the way, those weapons are full automatic, it would appear. Yeah, there's the report. Six or so rounds, full auto."

"Mac! Do something!"

"Yes, ma'am."

\* \* \*

I had the left side of Old Man Templeton's upper torso in my scope's reticle, a sure kill-shot. But as I relaxed before firing, I lowered my aim to his left hip.

"Sam! Brace yourself!" I knew the earplugs were designed to allow normal conversation.

Then I exhaled part way and gently squeezed the TAC's trigger. As my ears were ringing, Templeton jerked as if hit by a baseball bat and landed a few feet farther away from me than he'd been, at an awkward angle that showed his pelvis to be completely shattered. Out of the corner of my eye, I saw Sam sort of levitate a couple of inches and turn to look back at me.

"Holy crap!"

I think that's what she said. Her mouth moved, at least, but I didn't really hear anything as my ears were still complaining about the report of the TAC, despite the earplugs. Then she turned back to her HK, settled in, and let fly the 20 rounds from her first magazine. I hardly heard them, but I saw them stitching a ragged line of divots in the ground between the DEA guys and Templeton's assembled troops.

At that point, things got pretty busy. Sam, I noticed, changed magazines immediately and more quickly than I would have expected, to her credit. Down on the canyon floor, everyone but Old Man Templeton scattered—the DEA guys had the good sense to dive, despite not having hands available to break their falls, into the new hole behind them; the sheriff's people scurried to hide behind their patrol vehicle; the younger Templeton guys bolted for the house, leaving the patriarch sprawled in the dust.

I quickly put a round from the TAC into the radiator of the sheriff's vehicle—the poor thing immediately started to bleed pink goop onto the ground—and another into one of the posts holding up the roof of the porch on the house, causing a minor collapse just before the Templeton crowd got there, which gave them pause. That, per my earlier instructions, provided Sam her signal, and she emptied another magazine into the general area where those young fellows with their M-16s were. One of them fell to the ground. Then she reloaded and did it again.

All the while, I was trying to keep talking to give Winnie a play-by-play, sketchy as it necessarily was.

"Even if they start returning fire, Winnie, I doubt we're in any danger. We're maybe three hundred feet higher and a half-mile or so away from them. But it's really a stand-off, because there's no one on the ground to take over. All we can do from here is to plink away at them."

"Yeah, Old Man Templeton's behavior forced our hand before we were really ready. I'm in that helicopter you know about with an assault team, but we can't land safely until those M-16s and whatever other weapons they may have are out of commission. Those M-136 things they have out at the gate worry me. Any ideas?"

"Oh, yeah, for sure. That 'diversion' you wanted. Big medicine, as Henry might say."

"Hey!" This time the indignation was in a deep, rumbly voice.

“Henry! Glad you’re still with us, my friend. No offense intended. Winnie? If you can get that chopper someplace where you can see the ranch, then do so and watch what happens. That way, you’ll be able to tell when it’s safe for you to land, I think. And if you can do it up-canyon from the main compound, up by that schoolhouse, you should be OK, I think. Hold onto your hats.”

During this conversation, Sam had fired off at least two more magazines on full auto and graduated to more carefully aimed two- and three-round groups on semi-auto at specific targets. The people in the valley were pretty well pinned down. Just for the hell of it, I put a round from the TAC into the motor blocks of each of the ATVs. The second one must have been a little off, because the gas tank exploded.

Then I reached into the bassoon case, where my stash of ammunition for the TAC was. I’d used up the five-round mag I’d started with—match-grade sniper rounds for accuracy—so I needed a re-load anyway.

With a little fumbling, I found one of the green-tipped rounds that I’d managed to acquire, well outside the law, from a friend of mine in the military. I won’t risk getting him into trouble with further identification.

The .50 caliber Mk211 round is a versatile sucker, having high-explosive, armor piercing, and incendiary capabilities. It works quite well for targets such as armored personnel vehicles and light-to-medium battle hardware.

And I knew it would work even better for what I had in mind.

Before I let fly with the thing, I got Sam’s attention and had her stand down and clear all her stuff out to a safe spot behind a big rock, away from the edge. As she was doing that, I picked up my five spent shell casings and other gear and moved it all well away from the canyon rim to where I directed her.

Then I went back, racked the Mk211 round into the TAC, and put it into that big propane tank.

I didn’t see the real-time effects in action, because as soon as I fired I grabbed the TAC, rolled with it away from the rim, and, after five feet or so, hugged the ground.

Propane needs oxygen to ignite, so the contents of that tank, which I presume was fully ruptured by the high-explosive nature of the Mk211 round, didn’t explode as would, say, a barrel of nitroglycerine. But it did ignite as it mixed with the ambient air, and in the process expanded mightily, in a sort of slow-motion explosion. The noise, through my earplugs, at least, was rather like thunder echoing down across a mountain range. And then there were several secondary explosions, which I later decided, after I was able to have a look at the rubble, must have come from flammable materials stored in that industrial building down there.

That building had completely vanished, and the ranch house and the various farm buildings were all flattened as if by a tornado. The vehicles were tossed about like the toys of a child’s sandbox tantrum.

It was a good thing, I realized, that the DEA team had had the good sense to dive into that new hole in the ground. It probably saved their lives. I mean, it would have been horribly embarrassing if my diversion had killed the people it was supposed to protect. As it was, I learned later on from Winnie, only Old Man Templeton, who was in critical condition from his wound, and one of the sheriff’s people, the sheriff himself it turned out, had survived, along with the women and children in the schoolhouse. It was built so sturdily that it withstood the shock wave and protected its occupants as well as a storm shelter would have.

My assessment, of course, took some time to assimilate; the more immediate aftermath of my shot at the propane tank was Winnie’s exclamation in my ear-piece.

“Holy Mother of God, Mac! Did you do that?”

I was still hugging the thin layer of sand that overlay the rock of the canyon rim about five feet from the edge, and I could still feel the heat of the fireball, so I didn’t move.

“Who, me? Uh, what did I do? I’m in hiding just now.”

“Well at least you’re talking. I thought you might have gone up with everything else down there. Jesus!”

“I’m thinking you might be able to land pretty soon, up by the schoolhouse. There’ll be some fires, but the main fireball will burn out quickly, I think.”

“Yeah, it is.”

“Winnie?” I recognized Seth Rothstein’s voice. “What the hell happened? The ground shook a little, we heard what sounded like thunder, then a big orange cloud, like a fireball, popped up from the direction of the ranch. Is everyone OK? Oh, and I should say that we, I mean Henry and me, we’re the new gate guards out here.”

“Great work Seth, Henry. Great work. And I hope the good guys are all OK. Don’t know about the bad guys yet. Uh, that little excitement was the diversion I talked with Mac about. Remind me in the future that he doesn’t scrimp on the special effects, OK?”

About that time, Sam crawled over to me. She had tear tracks down the dust on her face, and she was quivering. I grabbed her into an all-enveloping hug and just held on.

“Mac? Is it over? Can we go home now?”

\* \* \*

## Nine

That was the best idea I’d heard all day, so she didn’t have to ask twice.

We quickly undertook to gather up everything. I had to hunt around a bit for the casing of that explosive round, so I was especially glad for that stuff sack I’d taped onto the HK—tracking down her hundred or so bits of brass would have been truly tedious. Then we struck out for the van. As our home, it beckoned, and when we got there after the ups and downs of the route across the rocks, home never felt so good.

Better yet, it was mobile. I checked my watch and found, to my surprise, that it was still a little before noon, so a brief consultation between us concluded that we could easily skedaddle and eat those protein bars when we got hungry, instead of making an actual lunch before departing.

Because I’d made preparations for a fast get-away, and because I’d driven the jeep and BLM roads before, we made it south to Big Water in half the time the north-bound trip had taken. Or I suppose I might have been extra motivated. In any case, I may have abused the suspension components somewhat, but our van performed wonderfully. Then we headed southeast toward Arizona and past Page, where I stopped at a self-service car wash to get the dust off the van, and by three in the afternoon we were back at that campground at Lees Ferry. Arizona. Whew.

And waiting for us was the campsite I’d used ten days before, accidentally held in reserve by the portable picnic tarp I’d left behind. The fact that we now had two of those useful little things didn’t bother me in the least.

When we'd first set out, we were both too amped up to talk much, and then I had to concentrate on those lousy back roads. But once on the pavement and out of Utah, we both relaxed and were ready for some mutual debriefing. The miles between Page and Lees Ferry were just the ticket.

"OK, so what happened back there, anyway, Mac?"

"I blew up that big propane tank, remember it? The one between that newer building and the canyon wall? And I think there were some other explosions from whatever was in that building. It wasn't there anymore when I looked."

"I think I killed a guy."

"I saw one of the Templetons hit the ground after one of your bursts, but he was moving after he fell. Anyway, that explosion, or all of them, probably killed everyone down there anyway. Don't beat yourself up about it. Overall, good shooting, by the way. The two of us kept nine—no, ten, counting the old man—people, armed, pinned down." I'd buried a little white lie in there to make her feel better. That Templeton guy hadn't moved at all after he hit the ground.

"Why'd you shoot the propane tank?"

"Winnie, she was in her helicopter, she told me she was ready to land with an assault team, and we were going to run out of ammo at some point. I warned her, and I think she landed about the time we got out of there. No doubt we'll hear all about it from her eventually."

"Well, I'm not sure I'm cut out for that sort of thing." She reached over and patted me on the thigh. "Anyway, what's next?"

"I suggest we head for a campground I know about and take advantage of its bath house to get cleaned up. Then we can take the van up to a restaurant nearby and have a drink or two and dinner. The food there's pretty good. Uh, I stayed there when you were down in Florida."

"Ah! *That* place, with the fishing. Where you got all your questions answered, or whatever." She grinned and reached over to poke me in the ribs.

"Probably it was 'whatever.' Anyway, it's a nice place. Maybe we could hang out there a couple of days and decompress. Take some long walks. You could do some drawing."

"I'd like that. And a shower, a couple of drinks, and dinner, even if it's early, sound perfect right now. Do you suppose there's a laundromat up by that restaurant?"

It was my turn to grin. "Had your fill of back-country sand in your undies, eh? Well, we'll check it out before dinner."

At Lees Ferry, we took our time getting cleaned up and organizing our camp. With two of the picnic canopies and the window-shade awning on the van, we had something of a mansion under the stars to stay in, and we almost decided to skip the restaurant dinner. But not having to cook or clean up, for the first time in a while, won the day. And the trip up to Marble Canyon Lodge was worth the effort—there was indeed a laundromat up there, and Sam was pleased that she'd be able to have the chance to get our dirty clothes clean.

We spent all of Thursday, Friday, and Saturday at the campground, decompressing and, finally, relaxing. Long walks along the river, up toward the dam, which Sam really didn't want to see, and down to the bridges, which, although magnificent, were something of a blight on the landscape as viewed from the river, took up two of the days. We also hiked north, out into the desert, where Sam spent some time sketching rock formations and I, having carted along my laptop, put the finishing touches on a report of my actions as the DEA team's backup at the Templeton ranch. Sam's role, as I'd planned, was downplayed as far as I could bury it. I emailed it to Winnie around noon on Saturday.

During our long walks, we spent time discussing where our journey should take us next, and I was a little surprised to hear that Sam was ready to head back to Colorado. She regretted having lost the motivation to continue the hunt for the Lucy Smith's kidnapper, but that shoot-out episode at the ranch had pretty much exhausted her yen for adventure. So we agreed to pack things up and head out east, across the Navajo Reservation on US-160 toward the Four Corners and Colorado, on Sunday morning. As a sort of celebration, we decided on one last dinner up at the Marble Canyon Lodge on Saturday evening.

But it turned out to be yet another case of best laid plans going all to hell. When we walked into the dining room, there, off in a corner, was Special Agent Winifred Small, sitting with her colleague Seth Rothstein at a table set for four.

I was trying to be the suave gentleman by gently guiding Sam using my right hand on the small of her back, and when Winnie and Seth came into view I could instantly feel her tense up. I probably tensed up as well. I know for sure I mumbled some rather grumpy—and only marginally printable—things under my breath.

But we were trapped. They saw us right away—I think they were expecting us—and waved us over their way. So we stitched polite smiles on our faces and sat. Sam and Seth had met briefly in Flagstaff, but I made sure to re-introduce them to each other. After we put in our drink order, Winnie took the floor.

“Mac, thanks for that report, especially for the electronic version. I'll file it away in my personal files and include a carefully edited version in the official files. It needs to match what information has been released publicly.”

I knew better than to argue, but that didn't mean I was happy. “We've been avoiding keeping up with the news, so I don't know the public story. Sorry if the truth in my report didn't match it.”

“You know how these things work, Mac. Can't be helped. I'm sure this has happened to you before.” She shrugged. “Anyway, the changes downplay your role. Such as, in the public report, the meth lab blew up accidentally and set off the propane tank, killing everyone except those in the schoolhouse. This happened a bit before the DEA team arrived to serve their warrant.”

“Did those explosions really kill everyone?”

“Not the DEA people—that trench saved them. And, like I said, the women and kids are OK. And Obadiah Templeton survived, but in really, really bad shape. Someone seems to have shot him in the left hip with a very large caliber weapon. Oh, and the Kane County Sheriff, who's pretty beat up himself, he survived, too. But everyone else by the house was killed. Templeton and the sheriff have been, ah, detained at a facility we have for when someone needs to disappear. And the two young Templetons who were out at the gate are in custody as well.”

Sam, seated to my right at the little square table, looked startled, but covered it by picking up her glass of water.

“Presumably, you rescued the kids and their mothers. I hope you're getting coherent stories from them. That kidnapper still needs to be caught.” I stole a glance at Sam's face and saw her nodding.

“We did and we have been. It should help our investigation, because a description of him is emerging. But there's more information on that score, and that's why we're here to see you.” Winnie looked down at the table and tapped a fingernail on it. “See, it looks like he's struck again. Three girls, ages 10 to 14. And this time it's not just kidnapping. It's murder.”

\* \* \*

She told us that, on Thursday afternoon, hikers had run across the bodies stuffed into a crack in a rock formation near a jeep road off Highway 12, in the vicinity of Red Canyon just to the east of Bryce Canyon National Park. Three little girls, the youngest of them sexually assaulted, all strangled. Garfield County Sheriff Paul Ronson, who was now on the warpath, had immediately called Winnie. Times of death were established as a bit more than 24 hours earlier.

“My working hypothesis is that our perp called Templeton’s place Wednesday morning to let him know he was on his way, and Templeton warned him off because he knew, from the Kane County sheriff, about the DEA raid. Seems that the DEA informed the Kane County Sheriff’s Department in Kanab that they would be conducting the raid, as a courtesy.” Winnie shook her head in disgust.

“That would explain the presence of the sheriff and his deputy at the ranch on Wednesday morning.” That puzzle piece fell into place for me.

“Right. And, like he didn’t have any use for Lucy Smith, he didn’t have any use for those three little girls. So he disposed of them. That tells us that Templeton was his only, uh, ‘client’.” Winnie made quote marks with her hands.

“Any forensic evidence?”

“Two things. DNA, from semen—which we also got from Lucy, by the way, so we’re hoping for a match. And tire tracks, interesting ones. The tread pattern is for a specialty brand of off-road tires. And the guy would have needed a serious off-road vehicle to get to where the bodies were found.”

“Did your people check carefully for new scrapes on rocks? Paint flakes would be helpful.”

“We did but didn’t find anything. Just the tracks.”

I sighed, looked at Sam, and shook my head. “So, what do you want from us? Even with three days of R&R, we’re pretty burned out on this whole thing.”

“Well, one of the girls was from Colorado, north of Grand Junction, up by Rangely. And, see, the Colorado Bureau of Investigation, whose credentials you hold, would like to have a representative to be part of this investigation. Uh, it seems they’ve suggested you.” Winnie looked almost apologetic.

Sam spoke up. “What do you need us to do, Winnie?”

Winnie looked over at Seth, who cleared his throat. “If it makes you feel any better, Mac, I’ve been drafted, too. And Henry. Seems the boss here doesn’t quite trust the people in our offices in St. George or Salt Lake. And I suppose that she’s got a point.

“Anyway, from the interviews with the women at both of the Templeton ranches, all of whom were kidnapped at one time or another, we’ve concluded that this guy operates out of the mountains east of Salt Lake, the Wasatch Range. We don’t know exactly where yet, but we’re hoping to track down vehicles with the specialty tires. It’ll help that we have the wheelbase and track-width, too, along with the tire identification whose tracks we found. Because we don’t want to use any of the Utah FBI contingent, though, we’re way shorthanded. If we bring in FBI personnel from other states, like lots of me, the locals would find out and start raising questions. But you’re an unknown and already have a good cover to go driving around the back roads in those mountains and check out possibilities.”

“What’s your best guess about the model of the vehicle?” I was wondering how many matches there would be—a Ford F-150, for example, would be way too many.

“Hummer H2. The combination of wheelbase and track width is unique, as far as we can tell. And the tires are, from the tread, something called Dick Cepek Extreme Country tires. I’ve got a file for you with a picture of ’em.”

The server, a wholesome-looking young lady carrying a few too many pounds, finally decided it was time for us to have dinner, so she came by with order pad firmly in hand. We made her effort well worthwhile because Rothstein, it seemed, had an appetite stimulated by the desert air, or something, and I ordered their most expensive wine.

After she left with our order, Sam took advantage of the break in the conversation to jump in. “So, I’ve got a question. Mac and I were on that canyon rim watching that ranch, and we smelled a strange chemical odor, right? And based on that, the plane flew over with some kind of instrument that I don’t quite understand. But, whatever, based on the instrument’s results, the DEA decided there was a meth lab there and planned a raid, and, in the process told the Kane County Sheriff’s Office about it. They told the ranch owner, this Templeton guy. And he called the kidnapper and told him to stay away, so the kidnapper killed those little girls.” She paused and took a deep breath.

“So, can someone tell me why I shouldn’t feel responsible for getting those little girls killed?” By that point, tears were beginning to flow, and she was sniffing.

Rather than even try to respond, I took a very long drink from my second gin and tonic.

Rothstein opened his mouth to say something, and then shut it and just stared at the tabletop.

Winnie sighed. “It wasn’t your fault, Sam. It was the DEA that screwed up first, and then, of course, the sheriff was dirty. If the DEA hadn’t made that courtesy call, and that was a major breach of operational security, *or* if the sheriff had been honest...well, who knows what would have happened? But the kidnapper wouldn’t have killed them. You can’t blame yourself.”

I leaned over and rubbed Sam’s back. “She’s right, Sweetie. When you do the right thing and the next person does the wrong thing and creates bad consequences, you can’t put the blame on yourself. Believe me, I know. Been there, done that, many times.”

Rothstein looked up. “Good way to put it, Mac. Why, I remember once...ouch!”

His glare at Winnie, following the *thud* from under the table, was not at all friendly, but she shut him down with a single lifted eyebrow.

Sam excused herself and headed for the Ladies’ Room. She came back quickly, though, eyes dry and no hint of sniffles, just in time for the server to bring our salads.

The rest of dinner went as well as could be expected, all things considered. I was proud of Sam for using her emotions as the basis for motivation to identify the kidnapper. It became clear to me that we weren’t going to be heading east the next morning, but rather north toward the Salt Lake area.

Although we tried to be sociable and avoid shop talk, we didn’t really succeed, and I’m afraid that I was the main culprit. The trouble was that wandering around the Wasatch looking for Hummers with that odd tire brand didn’t seem like a productive use of my and Sam’s time.

“Uh, can I assume that, even though you don’t trust any of the locals, you do have access to the Utah car registration database? So you know where the Hummers are registered?”

“We do.” Rothstein’s grin was slightly evil.

“So your plan is for me, us, I mean, to take the list, find which of those Hummers has those particular tires, and then knock on the door and ask whether the owner would be willing to have us take a DNA sample?”

Rothstein’s grin faded. “Uh...”

Winnie spoke up. “The first sample doesn’t have to be voluntary, Mac, or even legal. If we can get a match with an inadmissible sample, then all we have to do is to watch the guy until he slips up enough

for us to take a legal one. And if you find the car, well, this is a federal crime, given that one of those girls was from Colorado, and we should be able to get a warrant from a federal judge I know. And trust. A careful search of the car would probably turn up more DNA, his and maybe some from those girls, which then would be admissible.”

“Hmm. OK, another question, completely different subject. Do you have access to the Utah law-enforcement alerts? I’d like to find out if the BOLO that was out for us in Kane County is still active and especially if it’s active up in the Salt Lake area. See, I’d like to get that wrap off our van.” I looked back and forth between the two FBI agents.

Winnie looked embarrassed. “Um, well, the BOLO has gone state-wide, so it would probably be better if you kept that wrap on. And for sure continue to use the Utah plates. The Kane County folks, and by extension the rest of Utah law enforcement, are a little stirred up just now. Somebody seems to have poked a hornet’s nest with a stick.”

\* \* \*

As much as I detested that orange-and-green advertising all over the outside of our van, nice clean and shiny orange-and-green advertising, thanks to the car wash in Page, discretion triumphed. From Marble Canyon, we had to drive through a big chunk of Kane County—including the county seat—and then an unknown number of other counties and municipalities to get to Salt Lake, nor did our risk end there. It occurred to me that we might need to wait until we crossed back into Colorado to peel the thing off and get the van back to its original beige-gold color. And we’d already pushed our luck once with the previous trip up to Bryce Canyon.

So, Sunday morning, bright and early, we set off west on US-89A, toward Jacob Lake and the intersection with the road down to the North Rim, and then toward Fredonia, Arizona, Kanab, Utah, and other points north. We made it without incident to Hatch, across the county line into Garfield County, before noon, and I began breathing a little easier with Kane County behind us. No doubt the high rate of Sunday morning church attendance in that part of the world made our passage a bit less risky. We stuck with US-89 north through Garfield County all the way to its intersection with I-70 and headed west on it for the few miles to I-15, where we turned north to Salt Lake, joining the stream of traffic returning home from the Saturday-night debauchery of the Nevada casinos.

We could have taken I-70 east and north just as easily, but I didn’t want the temptation of just staying on it all the way to Denver. Even with the disguised van and identification, I was nervous hanging around in the presence of that state-wide BOLO, so the temptation would have been pretty strong. But the opportunity to catch up with the guy who was kidnapping those little girls motivated me to soldier on.

Sam spent the time navigating, watching the scenery—and it was worth watching—and eventually searching for a place to stay with the mobile internet link. The cornucopia of choices in the Salt Lake City area, though, gave her pause.

“We’re going to be spending time in those mountains to the east of the city, right? The Wastash or whatever they’re called. Should I try to find something up there? Or what?”

“Wasatch. It’s an old Indian name, I think. How about that place we stayed at before, in Park City. What was it called? The Park City Lodge or something like that?”

“Uh, Hotel Park City, I think. Wasn’t that awfully expensive?”

“Yep. But we’re on an expense account now, and I’m an expert at manipulating expense accounts. We can even pig out in their fancy restaurant. Hmm. How do you think their wine list is?”

Before I knew it, she had a reservation—Sunday night in mid-October didn't seem to be their prime season—and all we had to do was to spend the rest of the afternoon cruising along in the stream of northbound traffic without attracting attention. At least there were plenty of other vehicles of all shapes and sizes sporting garish advertising, so it was easy to blend in.

After checking in and spending a couple of hours in the restaurant over the best meal we'd had in two weeks—and their wine list was just fine indeed—I picked up the Sunday papers on our way back through the lobby. Each of them had long articles about the events of Wednesday morning down in Kane County, and both articles repeated the “public” version that Winnie had related to us as well as plenty of background on the problem of methamphetamines in the greater Salt Lake metropolitan area. Buried in the stories was the tidbit that both the Kane County Sheriff and Obadiah Templeton were missing and presumed dead, completely cremated by the explosions and ensuing fires. And it was the Drug Enforcement Administration that received all the attention; the FBI was not mentioned in either article.

Chalk one up for Winnie.

I decided to call her to see if congratulations were in order.

“Mac! Good to hear from you. Looks like you got to Park City. I hope you're not calling from the Sheriff's Office.”

I reminded myself to find the GPS tracker that Seth had stuck on the van—maybe not to remove it, but knowing where it was would make me feel better.

“No, we're spending your expense money as lavishly as we possibly can. Were the articles in today's papers up to your expectations?”

“Pretty much what I was hoping for. No mention of my involvement or the sex trafficking. DEA got all the play. And nothing about you at all. Does that work for you?”

“Well, I'm not sure how it could have been better. And, of course, since you know where we are, sort of, you know that we made it here. It may be that they're Being On the Look Out everywhere, but I guess that today they were being in church instead. Or something.”

“Sort of?” Ha! Looks to me as if your van is parked at the Hotel Park City. You know that place is a Marriott, right? Founded and run by Mormons? Who are probably out to get you?”

I paused long enough—maybe for a couple of seconds—to think up a couple of snappy come-backs, but then I changed the subject instead.

“So, I got the list of Hummer owners you want me to check out, and I'm thinking we should rent a plain-vanilla car to do the checking. Our van's going to attract attention. You know, suspicious neighbors and stuff like that.”

“Not a bad idea, Mac. Please make it a cheap rental car, though, OK?”

“Plain-vanilla usually means cheap, in my experience. And I've got another question. Is there anyone at all that you trust? A member of that task force, maybe? Thing is, I'd feel a lot better if there were additional contacts I could call on in a pinch.”

“Well, the only person on the task force up your way who isn't with my office or a Utah native is Lisa Hamilton. She's a Summit County Deputy Sheriff. My information is that she moved to Utah to be with her boyfriend, whom she met in college. At, um, I forget. Colorado State, maybe? He's a Park City native. Anyway, she seems pretty outside of any local conflicts of interest.”

“Right. She was part of that conference call we had a while back. And I met her on the day that we brought Lucy Smith to the hospital here.” I made a snap decision. “OK, I'll get in touch with her and let

her know what's going on as far as the search for the Hummer goes. Um, that means disclosing the forensic evidence of the tire tracks and so on. Is that OK?"

"Yeah. Hmm. Y'know, there's trust, and then there's *trust*. I guess I'd feel better if you told her as little as possible."

"How about the Levi Templeton take-down?"

"Oh. She knows about that. I held another conference call, while you and Sam were hanging out at Lees Ferry, and told the task force about it. They also know about what the Templeton women told us, how it seems like our kidnapper operates out of the Wasatch somewhere."

"OK, and the Hummer's old enough that it could have been used in some of those kidnappings, so I can pretend that we know about it that way, too."

"Mac, you're a genius. And I bet if you tell Lisa about how you ferreted out the whole thing via that note from, um, Melissa, was it?, she'd be on your side in a flash. I got the impression that she's majorly pissed off about all this kidnapping stuff."

"Yep. And Sam would like any news about Lucy Smith, too. Maybe Lisa will have something about that. We were, well, a bit concerned about how competent her parents would be to take care of her after all that trauma."

"Oh, yeah. Speaking of Lucy, I bet you don't know that we've had time to carefully debrief her, using a top-notch child psychologist. She a remarkable little girl, smart, grounded—despite her parents, about whom I agree with you—and with a first-rate memory. I'll send you the report."

"Really? Interesting. Anything I should know?"

"He limps. Lucy identified with it and it helped him to get her guard down so he could grab her. He also smelled like Old Spice, which reminded her of her Dad. There may be other inferences that the shrinks will come up with, but, so far, that's it."

"Interesting. Let us know if you hear anything else of interest. Meantime, Sam and I will get on with trying to find that Hummer."

\* \* \*

## Ten

Monday morning, in the middle of an overly indulgent room-service breakfast, Sam and I had a mutual crisis of conscience about living in such luxury at the expense of the taxpayers. We didn't send the breakfast back, mind you, but we did resolve to find accommodations a bit more modest than the suite we'd taken at the Hotel Park City.

But that turned out to be easy. Even more than our home town of Estes Park, Park City offered plenty of alternatives—in particular, condominiums galore, most empty because we were there during the lull between the fall aspens and the upcoming ski season. The groves had shed most of their leaves with those left turning brown, and the weather was deteriorating day by day—gray and cloudy with occasional flurries of snow—and going outside was generally unpleasant. The locals, of course, were hoping for snow and even doing little snow dances. But that kind of weather just made us visitors depressed.

After breakfast, we packed up and spent the time until check-out looking for just the right place to stay, and there were so many possibilities that we may just as well have thrown darts at a Park City map.

As amusing as that all was, though, it didn't get us any closer to that Hummer with the particular tires that we were supposed to be looking for. By lunchtime, we'd reserved a condo, on the top floor, right in the middle of old downtown, with a view of the still-bare ski slopes, found a suitable rental car—small, white, anonymous—and were ready to dig in.

But dig into what? Yes, we had a list of Hummers that were registered to addresses in the mountains to the east of Salt Lake City, but that didn't count the ones registered down in the city itself to people who might have second homes in the mountains.

It occurred to me that this would be the perfect job for that software that I'd used back during the flood, the "Loogie" search engine developed at the Middle Park Advanced Research Center run by my friend Hal Weathers. It could correlate information from diverse databases and come up with the most interesting conclusions almost instantly. But I didn't have access to the databases I needed for this Hummer business.

In any case, I needed more nuanced information, so I called Winnie.

"Small, FBI."

"Winnie, it's Mac. Got a minute? I need to explore some of the background you've got."

"How can I help?"

"Well, Saturday night at dinner down at Marble Canyon, Seth said that your interviews with the Templeton women led you conclude that our kidnapper was operating out of the Wasatch somewhere. But he didn't say why you concluded that. What'd they tell you?"

"Ah. Right. Well, each of their stories was a little different, of course, but they all matched up in two respects. First, none was sexually assaulted. I guess that the perp was supplying only virgins to Obie. At least they were all young enough, and religious enough, that we can assume they were virgins. Probably. Hmm. In this day and age, maybe. Second, the mechanics of the kidnappings. They were all snatched, had a hood or a bag or something like that put over their heads and their hands bound, and then were forced into a vehicle and driven somewhere for a while. Now, some of the whiles were quite long, some not so much. Relative to where they were snatched, the various times of the whiles all seem to point to somewhere in the vicinity of Salt Lake. Then they were put into a basement room, or something like that, a sort of suite with a bathroom and everything, but no windows, and kept there until they were taken to the Templeton place, Obie's place, with bags on their heads again. Some of them were in this basement room all alone for the whole time, and some others were there with other girls. Anyway, an important point that most of them remembered is that it was pretty quiet, hardly any house noises, even, but the early part of the subsequent ride—not the very first part but the early part—sounded to them like a city, with lots of traffic. A big city, because the traffic noise lasted quite a while. Oh, and they said that the driveway to the house is gravel but the local subdivision streets are paved, and there's some kind of gate that needed unlocking. They heard all that."

"So you're saying that the girls from Utah towns close to Salt Lake had relatively short initial car rides while the girls from farther away, like Melissa, from over in Colorado, had longer rides? And, taken together, it all looks like a destination somewhere near Salt Lake? With a gravel drive?"

"Exactly. All the initial rides were different, but the later rides, after the stay in the basement room, were all pretty much the same, the way they described it. And the entire initial trip was on paved roads except for the very last, slow part. The driveway. The later trips all had quite a bit of gravel, bumpy toward the end, which is consistent with the road into Obie's place. Oh. And a couple of the girls talked

a bit about how the pavement noise was different on the initial and later rides. The later rides were noisier, so it may be that two different vehicles were used in each case.”

“And the girls all stayed in this basement room, or whatever it was?”

“Right.”

“OK, so that means one of two things. Either this guy is single and has a place up here in the mountains, maybe where the Hummer is registered, where he keeps the girls. Or, he may not be single, but the place up here in the mountains is a second home, a vacation home or something, where he can go alone when he’s keeping girls there. Meaning that it’s not just Hummers registered to mountain addresses we’re interested in, but ones in the city also. Right?”

“Hmm. Well, yeah, Mac, I guess that makes sense.”

“So, is there some way to find out the marital status of these Hummer owners? I mean, Hummers registered to addresses in the mountains that are home to a family, or even just a couple, probably aren’t what we’re looking for.”

“OK, I’ll buy that. Conversely, Hummers registered to addresses down in the metro area might be. At least if the man of the house has the sort of job that allows him plenty of unquestioned time away from home.”

“Right! Good thinking, Winnie. So if we can correlate addresses with marital status and occupation, we’re in business. And there’s another thing. The woman I brought in from Levi’s place, she was with all those kids on that farm wagon. She said her name is ‘Ruth Templeton,’ but she also told me her real name was Roberta Ludlow, a long time ago. She said hadn’t seen her parents in eighteen years. So the perp, assuming it’s the same one, and, I guess, assuming he hasn’t moved his operation, he’s been at this for nearly twenty years, seems like. So, well, maybe it’s a stretch, but continuity at a given address might be a good thing to look for, too.”

“I remember that from her statement, Mac, but I didn’t put it together with the rest until just now. Jesus. This motherfucker has been snatching little girls for almost *two decades*? I come across him, somebody needs to relieve me of my sidearm or I’ll just shoot the son-of-a-bitch on the spot.”

“I’ve got a better plan, actually, which I’ll tell you about over a drink sometime soon. But first we’ve got to find him. And the more we can narrow down the computer search, the more likely we’ll get what we need to find him. So. Registrations in the greater Salt Lake area, including the Wasatch, of Hummer H2s, longevity, marital status, occupation. Anything else?”

“Not that I can think of offhand.”

“Then let’s see what we can uncover.”

“Sounds like a plan, Mac. I’ll get Seth on it. He’s quite the computer whiz.”

“OK, good. And Sam and I will cruise around having the time of our lives in this cramped little car we’ve rented and checking out the low-hanging fruit, meaning the Hummers here in the vicinity of Park City at houses with gravel driveways. But, look, Winnie. I can’t imagine that it’ll really be that simple.”

“Probably not, Mac. But we have to start somewhere, right?”

\* \* \*

So we got started on those low-hanging fruit.

We still had most of the FBI gear that Seth had equipped us with, plus my separate GPS system with its USGS topographic maps, so we took it out of the van and set it up in the living room of our condo. We used the condo's internet connection and typed in the addresses we were interested in to see them both on the street grid shown on the topo maps and in satellite images on Google's mapping program. Unfortunately, the satellite images weren't quite good enough to tell us which of the driveways were gravel.

Having exhausted those possibilities, we put the gear into the rental car. With Sam behind the wheel so that I could operate the laptop and other gadgetry, we spent the afternoon driving around the Park City area narrowing our list of addresses with Hummers registered to those that also had gravel driveways. There were four, but none of the cars was visible in those driveways.

What was visible, though, was a large number of those Neighborhood Watch signs, at least in the residential subdivisions that we were searching. That bothered me, so I suggested to Sam that we find a coffee shop or something and stop to discuss tactics. At that point, we were up by the interstate, well north of Park City proper, maybe in a place called Snyderville although it was hard to tell where one community stopped and another began, given the sprawl everywhere. Sam pulled into a commercial area, a sort of shopping center.

"I noticed a Starbucks back a little...oh, but look, here's a place called 'Park City Coffee Roaster.' Local is better, don't you think?"

"Hmm? Oh, sure." I looked up from studying the computer screen, which told me that we were near someplace called "Kimball Junction" and discovered that there was actual, three-dimensional scenery out there.

She found they had tea as well as coffee and ordered something exotic-sounding. I stuck with a regular decaf, which turned out to be surprisingly good.

"It feels good to get out of that cramped little car." I took a careful sip—despite the elevation, the coffee was quite hot. "Now, what are we going to do about this Neighborhood Watch thing? With all this snooping around, sooner or later we're going to come to someone's attention. And the last thing we need is to be stopped by a local cop."

"Yeah, we need a cover story." She grinned at me. "But that's what you're supposed to be good at, right Mr. Spook?"

I held up my right hand, making a "V" with my two middle fingers. "'Live long and prosper.' No, wait. That's Mr. Spock."

Her grin faded to that blank "Huh?" look.

"Sorry, dated reference. Probably before your time. Or in a different universe. But, yeah, we need a cover story." I thought for a minute. "Y'know? Seems like we've been seeing a lot of 'For Sale' signs in all these neighborhoods. Could it be that we're house-hunting?"

"Now there's a good idea. Like, we're driving around to check out what some of the places we found on-line look like in person. Before we make a list to tour. Before we even hook up with a Realtor. Right?"

"Exactly. I'll go and fetch the laptop. How about getting me one of those scones over there? Please?" I put the nicest whine I could summon up into the request, but she still looked skeptical. "Tell you what, I'll split it with you."

"Just what I need." But she stood up and headed for the counter as I went out to get the computer.

I fiddled briefly, found the coffee shop's Wi-Fi, and was soon looking at a listing of Park City residential real estate for sale. There were pages and pages of the some thirteen hundred homes on the market, topping out in the low eight figures. I picked one more or less at random from that last page.

"Oh, here's a nice little cottage. Six bedrooms, seven bathrooms, fourteen thousand square feet, only nineteen million. Sounds cozy."

"What? That's nuts! Who needs seven bathrooms to clean?"

"Use 'em each only once a week and they don't get very dirty. Makes life simple."

"Ewww. That's gross."

"Yeah, well, maybe a housekeeper, or a team of them, would be appropriate. Anyway, if seven bathrooms are too many, here's one with only five. And it's a bargain at twelve million. Oh, wait. Only nine thousand square feet! A hovel."

"C'mon, Mac, surely there are normal houses for sale. I mean, when we were looking for our new place in Estes, there were some real mansions available. But mostly it was the usual three, or four, bedrooms and so on. The house we sold, it was something like two thousand square feet. Right? And it seemed plenty big, at least for the two of us."

"Of course. But what fun is that? If we're going to pretend to be looking, we may as well pretend big." A new thought occurred to me. "Seriously, though, this business of a gravel driveway is something to think about. That might suggest a house on a big lot, acreage, even. Maybe I can figure out how to sort these listings by lot size."

That trick wouldn't work, but I did figure out that only a bit over 400 of the nearly 1300 listings were detached, single family homes and that nearly 600 were condos like the one we were staying in. I fiddled with the web site filters a bit.

"No, it won't let me do that. But here's something interesting. It says that the median price for condos downtown, where ours is, runs to just a bit over a megabuck. Seems that we're in a high-rent district."

"Median? What's that?" She had her face scrunched up in concentration.

"Um. Statistics. Kind of like the average, but it takes out really big, or little, single data points. In this case, it's the middle of the price range, in the sense that if you count up from the bottom and down from the top, it's where the two counts meet." *Finally*, I thought. Those tedious agency training sessions about such stuff that I'd managed to sit my way through had paid off. "I bet that during prime time ski season it rents for five times what we're paying. Or ten."

"Oh. I think I understand. Not that I'm that interested in statistics, mind you. But I sure hope that our place is in the low end of the range. I sure wouldn't pay a million for it."

"Me, neither. But we don't ski, nor do we care, or at least I don't, about being seen in the company of the Beautiful People who spend time here." I reached over the table and patted her hand. "But y'know, Robert Redford has that film festival of his around here each year. I bet you'd like to be seen with him. How much would that be worth?"

She actually blushed. "Oh, give me a break, Mac. He's too old for me. Besides, he just reminds me of you."

\* \* \*

On that note, and as a way for me to escape gracefully, I started to gather up our cups and saucers to leave. It looked to me as if the coffee shop's culture was bus-your-own-table.

Sam stood up as well. "Well, what's next, fearless leader? More cruising the neighborhoods?"

"Oh, yeah. I need to check my email and see if Winnie has sent any more addresses." I sat back down and so did she.

Because I hadn't disconnected my laptop from the coffee shop's Wi-Fi, that took only a minute. "Nope. No new information. Tell you what. I'm kind of burned out on this for today. How about we head home—I mean, you know, the condo—and decide about dinner and so forth?"

So we started back downtown. Because she had the car keys, she naturally got in the driver's door and, a bit to my surprise, didn't waver in her sense of direction toward our destination. Despite having driven all around the Park City area all afternoon, she seemed to know just where to go to get 'home.' I hadn't realized that she had such a good compass in her head.

As we crossed from the suburbs into Park City proper—I noticed the little sign this time—she said, "I remember a pharmacy around here, by an Albertson's supermarket. I need to stop for a few things, OK?"

I suppressed a groan. I always tried to do my drug-store errands on my own, shopping for deodorant and shaving soap and so on without her looking over my shoulder. Partly, I did that to be able to avoid tagging along on her similar errands. I mean, I usually avoided even walking down certain drug-store aisles, let alone doing shopping in them. Some things I just don't want to know about.

"Well, it looks like we're getting close to home. And it's just after five. How about you drop me off and come back? Then you won't have to worry about being in a hurry, and I can go get some take-out dinner from that sushi place I saw across the street from us."

"Sushi? In the Utah mountains? Really?" As someone who grew up near the ocean, her skepticism was understandable.

"Yeah, I know. But, look, a lot of that sushi you got in Florida was from the Pacific. They flash-freeze it and ship it all over. And a hoity-toity place like Park City—pretty close to the Salt Lake airport, remember?—I'm sure they have quality stuff here. Really, it depends on the chef and the restaurant rather than the city. And here the competition is probably pretty stiff, so I think it ought to be OK."

During this little speech, I'd noticed that we were passing an Albertson's off to our left, so I decided I'd been persuasive enough. A few minutes later, she pulled into the parking lot of our condo building and let me out. I unhooked the loose computer equipment, not wanting it to disappear overnight, and sent her on her way.

"Don't rush, because I've got to take all this stuff upstairs and then go over there and place our take-out order. It'll be at least forty-five minutes, I expect. Maybe I'll walk around the block in the meantime to stretch my legs." I blew her a kiss and off she went.

Once upstairs, I plugged the computer back in and made sure it acquired the condo's Wi-Fi signal, then decided on a quick shower. All that sitting in the car had made me want a change of clothes. Then I grabbed a couple of twenties from my wallet and my room key, put on a warm jacket—the air was cooling quickly as the sun was going down—and went down the stairs and across the street to the sushi place.

Given the season, how empty the town was, and the fact that it was a stay-at-home night—Monday Night Football was coming on in just a bit—it didn't surprise me that the place was pretty empty. Still, they were open and had a list of daily specials on a chalk board.

I ordered a pint of miso soup—the microwave in the condo would revive its spirit, I knew—a chef’s selection for two of nigiri sushi, a sashimi appetizer, and, because I couldn’t help myself, a double shrimp tempura appetizer. Although I was tempted to sit at the bar and have a drink, I decided that the short walk I mentioned to Sam would be the better part of valor, so I told them I’d be back in twenty minutes or so, paid for the order with my twenties, and strolled off.

Park City was one of those old-west mining towns that had successfully reinvented itself as a modern destination ski resort. In doing so, it managed, from my naïve perspective, to preserve plenty of its old-time charm. In downtown, for example, it appeared that buildings were limited to three or four stories, a restriction that helped considerably with our own view. And, although there was quite a bit of new construction, there were also many buildings that seemed to be updated versions of much earlier architecture.

I’d turned south on Main Street and crossed Heber. A couple of blocks later, I turned left on Fifth and again on Swede Alley, intending to head back to pick up the sushi order and to see if I could talk them into selling me a bottle of wine to smuggle back to the condo. I hadn’t bothered to figure out where the state liquor stores were.

But, just as I was about to turn left on Heber to get back to Main, I noticed, across the street in a public parking lot, a black Hummer H2. It wasn’t one of the gravel-drive Hummers that Sam and I’d been looking for—all their registrations listed other colors. But...

What the hell, I thought, might as well check it out. Couldn’t hurt. So I turned right at the crosswalk to get over to the parking lot. Even though it was only a bit before six in the evening, the lot was almost empty, just a few cars and no people hanging about. In the summer or in ski season, I thought, I bet this place is bursting at the seams.

The Hummer was parked behind a screen of conifers of some kind, small pines or big junipers, I guess, and that, with the fading light, made it hard to see the tires. I circled the big vehicle, looking for the best light, and in the process noticed an accumulation of dust, of a much lighter color than the black truck, on its rear bumper. I used the tail of my tee-shirt to wipe up teaspoon or so and carefully folded it into the fabric. Unfortunately, the license plate was obscured by that same dust, but I could tell that it was a Utah plate.

On the right front fender, just forward of the tire and about half-way up the wheel well, there was an odd scratch in the black paint, the kind that just might “buff right out.” I looked carefully at it and noticed an odd loop shape at its aft end—as if the driver had contacted a hard surface, proceeded a few inches in contact, hit the brakes causing the nose to dip, then backed up. I ran my fingers over it and memorized its shape. And since I was already squatting down, I picked the right front tire as a good one to inspect—all the better, it was closest to the trees and not as exposed as the left side of the car to the empty part of the parking lot. As I peered at the letters on the sidewall, I was wishing for my cell phone so I could take a picture of the tread. And, using its flashlight app, to read the lettering better.

It was just as my eyes finally adjusted to the fading daylight, and I could make out the raised letters proclaiming the tire to be the Dick Cepek Extreme Country model, that fireworks exploded inside my head and then everything went dark.

\* \* \*

## Part II

## Eleven

It wasn't until about midnight that Mac finally showed up. By then I was so worried that I had forgotten about being mad that he'd left his cell phone in the condo.

My little trip to get toothpaste and dental floss was about as uneventful as could be—what “rush hour” there was in Park City had long passed. Because the pharmacy was next to a supermarket, I stopped in there to pick up a few items I knew were running low, so the errands took me 45 minutes or so.

Then, not finding him in the condo when I returned, I assumed he was across the street picking up our dinner from the sushi place. I waited around another 45 minutes and began to wonder where he might be, so I went looking. The young Asian woman at the cash register remembered him and said he'd gone for a walk while they were preparing our order. But he never came back. And she said the order was paid for, so she went into the kitchen to fetch it for me, out of the refrigerator. But she hadn't seen which way he'd gone, when he left for his walk. Oh, she said, just heat up the soup in the microwave.

As you can imagine, this information started me tumbling down the slippery slope of panic. It was close to eight in the evening, and we'd not eaten much in the way of lunch, so I was hungry. But even the delicious smell of that armful of Japanese food couldn't tempt my clenched-up stomach.

After about another hour, during which I'd found Mac's phone and his wallet—I couldn't help but think it odd that he'd go out to buy something without his wallet, but he'd apparently managed it—I decided I was going to have to eat something, so I re-heated the miso soup and drank it down like tea.

That actually helped calm me down a bit. I thought of calling the police, but then remembered that adults didn't really go “missing,” from the law's perspective, for at least a day. And I had the notion that I'd probably just be condescended to and called “little lady” if I explained my worries to them.

Finally, I found some local news on the condo's TV and settled in to wait. The news segued to the late-night talk shows, which, at least, helped me feel less alone.

Then, just before midnight, the door opened and Mac walked in, looking bedraggled and worn out. “Hi there, beautiful. Geez, I'm famished. We got anything to eat around here?”

After a long, snuggly hug, I told him I'd picked up the sushi order.

“That'll do. How about putting the tempura into the oven on foil or something to heat it up while I shower? I don't think it would survive the microwave.” And he kissed me again and headed for the bathroom.

Fifteen minutes later, he emerged, all clean and in fresh clothes. “There's a tee-shirt in there, a dirty one, folded up. Please don't wash it. It has extremely valuable dirt folded up in it.”

And then he hugged me again. Eventually he leaned back and kissed my nose. “Well, I can tell you one thing. I'm getting too damned old for stuff like this.”

“Are you going to tell me what happened, or what?” I was so overjoyed to see him in one piece that I couldn't really be mad, but I figured he owed me some explanation.

“Absolutely. While I eat, and you can eat, too. I got plenty, if you didn't already.”

“I just drank the soup.”

“OK, then there's that tempura, shrimp and vegetables, some nigiri sushi, you know, the kind with rice, and some sashimi. Man, I'm hungry.” He licked his chops. “And, well, is it OK if I call Winnie and tell her the story, too? She really needs to hear it, and there may be a time factor.”

I set the food out, and Mac laid his phone on the table and poked the speaker button. As the connection to Winnie went through, he snarfed down a piece of salmon and another of tuna, both with lots of pickled ginger and wasabi.

“Small. This better be good.” The voice was in that jerked-out-of-sleep mode.

“Yeah, sorry, Winnie. It’s Mac, and I’ve got something important. And maybe time-critical.” He chomped the end off of one of the pieces of shrimp tempura. “I guess I should say that I’m a little embarrassed to have to tell you about this. I must be losing my edge.”

“What happened?” Winnie’s sleepiness had vanished.

“Well, what *didn’t* happen is that I didn’t get killed and dumped in the slick-rock somewhere nor did I get sold to some dirty old man and his family. But I did find out where our perp kept his kidnapping victims before he did those things to them.”

“How about starting from the beginning?”

“Yeah, but one more end result first—I did not see the perp, and all I learned is that his Hummer is black. Anyway, here’s the story.

“Sam, who’s here, the phone’s on speaker, by the way, took off on an errand, and I went across the street to get take-out for dinner. While they were preparing the order, I went for a walk here in downtown Park City, the old part. I noticed a Hummer, a black one, in a public parking lot and thought, why not?, I’ll check out its tires. But while I was doing that, I got cold-cocked by someone. No idea how he managed to sneak up on me. I’d swear there was no one around.”

“You OK now?” Winnie sounded worried.

“Sore neck and I’ll probably have a doozy of a headache tomorrow, er, later today. Anyway, before the next part, there are three important points from this first part. The tires on the black Hummer were the right ones, those Dick Cepek whatever’s. There’s a distinctive scratch in the paint on the right front fender. And there was quite a bit of dust accumulation on the rear bumper. I managed to collect a good bit, which I have wrapped in a tee-shirt here. It can be analyzed and compared with the dust from that road where the three girls’ bodies were found last week. It seems like it might be that reddish sandstone they have down there, something that I haven’t seen a lot of up here in the Wasatch.”

“Did you get the license plate number?”

“No, it was all dusty. I was going to brush it off and memorize it as my last thing, but I got jumped first.

“So now the next part. He didn’t hit me very hard, I guess, because I came to lying in the back of a vehicle. My hands were bound in front of me with a zip-tie, and there was a bag over my head. Shortly after I woke up, the vehicle took some sharp turns, ascended a pretty steep bit of road that turned to gravel after a turn-off and then ascended some more. We stopped, the vehicle jockeyed around a bit, and the lift-gate opened. I heard that and felt the fresh air. There was some clanking and a rusty-sounding rumbling, and I was dragged out of the back and across some gravel, then across what felt like carpet. He had me under the armpits and my feet were what was dragging. I pretended to be still unconscious. Then there was more rumbling and clanging and things got quiet, very quiet.”

“This is all consistent with the stories the Templeton girls told us.”

“Yep, it is. And this dude must have thought he was dealing with another little girl instead of me. He’d secured my arms in front of me, so getting the bag off my head was easy. I fumbled around for a time in the dark and finally found a light switch, and it took me only a few minutes to get the zip-tie off my wrists. Then I looked around the place for a short while. It seems to be a series of shipping

containers with doors cut into the sides and joined up somehow. Turns out that they're all underground, in an old mineshaft, I guess. There's electricity and plumbing, with a refrigerator. And it sure didn't look like the guy's an obsessive housekeeper, which is why I think there may be some time sensitivity here. See, I bet there are all sorts of DNA samples in there, hair especially. But when he returns to get me for whatever next thing he has in mind for me, I won't be there and he may panic and clean the place."

"So you know where this is."

"Well, sure, Winnie. I let myself out and walked home. Got back about, oh, a half hour ago. Sam's told me she was getting worried."

I couldn't help myself. "*Getting* worried? Ha! I was going nuts here. He didn't even have his cell phone with him, Winnie!"

Mac patted my hand. "Yeah, I was just going across the street for the sushi, didn't think I'd need it. But it's a good thing I left it here. He'd have found it. As it was, all I had was our room key, which he didn't bother with."

"What do you mean, you 'let yourself out'?"

"Like I said, this time he wasn't dealing with just another little girl. I may be getting old, but I do still have some skills. And, better yet, I carry some clever gadgets in my shoes and my belt, which he didn't even look for. I mean, we're not dealing with a criminal mastermind here. So getting out was pretty easy. Didn't they ever teach you how to pick locks, Winnie?" He winked at me, ever the conspirator.

\* \* \*

"So, where is this place?" By now, Winnie's voice, although tinny on that little speaker, sounded like she was ready for action.

"Up at the end of a dead-end road just outside of town, in an old, locked-up and abandoned mine. It was dark when I got out, but that's what it must be. Maybe five miles from here in downtown. It's not on a road to one of the ski areas, but rather a narrow, local road. The houses along it are quite modest, obviously residents, working folks. And most of the cars parked up there are old beaters. I didn't get an address, though. Sorry."

"So what's your recommendation, Mac?"

"Well, if it were just me, and if I weren't so exhausted plus maybe concussed a little, I just might go back up there and do some clandestine evidence-gathering. Like, now. Before he comes back. And if I had the manpower, I'd set up surveillance and maybe grab him when he does finally come back. I mean, it seems like my little adventure gives you probable cause to go in without a warrant. Particularly if you've got a good lock-picker available."

"Sounds like a plan, Mac. And it just so happens I do have the manpower available, including the lock-picker, although I guess they won't like getting waked up any more than I did. Uh, but I don't know where this place is, really. Can you manage a car trip up there to show us? Then you could get back and sleep the rest of the night away."

Mac stuffed another piece of nigiri sushi—one of those eel-with-sauce things that I'm scared to try—into his mouth and looked at me with his eyebrows lifted. I nodded and whispered "Yes, but I'm coming, dammit!" That made his eyes squint in thought, but then he nodded back.

“Dang, Winnie. I thought you’d be back in Denver by now. If you’re here, well, great, but you get to sit in the back seat of our cramped little rental car on the way up there. Your guys can follow. Deal?” Now Mac was smiling.

“All right. How do I find you?”

Mac told her, and she said it would be an hour or so. That gave us plenty of time to finish the food. I’m glad Mac had ordered a lot, as I found that I’d become quite hungry. Reviving the tempura in the oven had made it crisp again, and I discovered that sushi at 12:30 in the morning turned out to be quite tasty, even if we were a thousand miles from the ocean. Yum!

Ninety minutes later, Mac, Winnie, and I were crammed into our little car, and Mac was driving us up a canyon on a narrow, paved road. He had only his parking lights on, so he was taking it very carefully. The two black SUVs following us also had minimal lights showing. The first several blocks, on downtown city streets, had been deserted, and up there in the canyon, almost all of the houses were dark. In the last half of October, Park City seemed to roll up its sidewalks on week nights.

Eventually, Mac turned sharply right, and the hill became steeper and the road changed to gravel. After another hundred yards or so and one more curve, it came to an end at something resembling a parking area with old, ramshackle mining buildings up against the mountainside.

We all piled out, the six FBI agents in the two SUVs as well, and Winnie introduced everyone. Seth Rothstein was there, and Mac and I both met Henry Runninghorse in person. He was looking quite bemused at the whole thing. Three of the new agents were wearing coveralls, and Winnie introduced them as forensics specialists.

“OK, behind that collapsed building over there,” Mac gestured off to his right, “is a gate made from iron pipe and corrugated sheet metal. It has a padlock and chain on it. That’s how I got out. Inside that, and the gate is set pretty much into the hillside, is what seemed like to me to be the end of a shipping container. It also has a lock on the door you’ll see. A surprisingly well-oiled lock. Pick them both, and you’re in. Got it?”

He looked around at the little group. “If you don’t mind, Sam and I will be on our way. Oh, here, Winnie, that tee-shirt I mentioned. Don’t unfold it until you’re somewhere you can capture the dust it’ll release. And, listen, if I see anything odd on the way down—you know, like a black Hummer headed up this way—I’ll phone you.”

Fifteen minutes later, we were back in our snug condo and just a few minutes after that, in bed. Mac went right to sleep, and, with him beside me, it didn’t take long for me to as well.

We both slept late, and, true to his word, Mac woke up with a headache. But it wasn’t so bad that aspirin, coffee, and a hot shower couldn’t fix it. Although a dusting of snow had fallen overnight—I’d thought it was cold up there by that old mine—it was quickly melting in the morning sunlight, so we decided to go foraging for breakfast in downtown Park City.

Mac and I have a wonderful relationship, even better than I ever imagined a relationship could be. But, I guess because of the connections he still has and what they expect of him, it’s punctuated by episodes of, well, adventure. Or maybe terror. Like that shootout the previous week, where I think I killed a guy and Mac blew up that propane tank and the meth lab.

It goes back to when we first met. There he was, gun in hand, standing next to a date of mine who was dead and bleeding all over the kitchen floor. It wasn’t like I was upset about the guy getting killed—it was a professional date, after all, and I didn’t even know his real name. But it was spooky.

And it keeps happening. Ever since, there's been one thing or another. To make matters worse, I'm certain that I don't know about everything. Mac has this habit, long ingrained from his days overseas, I suppose, of keeping things to himself.

But, for sure, I've never been happier. Hell, I never expected to be this happy.

That morning, foraging for breakfast in a quaint little town in the mountains, was a really good one. We wandered for blocks—some walking wasn't going to hurt us a bit, given how much time we'd been sitting in cars—and finally ran across a likely-looking diner. It looked clean and reasonably modern, but it also seemed like it must be a fixture of the community. And the menu they had posted in the window offered both breakfast and lunch. Because it was about 10:30, that meant we could choose.

The cliché about Chinese food is, of course, that you're hungry ten minutes after you finish a meal. For me, Japanese food isn't quite like that, but, still, I was ready for something hearty. And I could tell that Mac was, too. Maybe all that excitement the night before had something to do with it. In any case, we had the biggest breakfasts they offered, he a breakfast burrito and me a full order of eggs Benedict. And then we shared a Belgian waffle for dessert. It occurred to me that the walk back to the condo was going to have to be just the introduction to some real exercise if I was going to be able to maintain my girlish figure. Well, maybe that's a bit too optimistic.

Even so, that walk was helpful in settling all those calories. We detoured up the hill to Empire Avenue for a few blocks, which was just enough to get us breathing hard and to give us a bit of a view.

We were discussing how to spend our afternoon when we reached home, the condo building on Main Street. But it appeared that the discussion was going to be moot, because sitting there was one of the big, black, FBI SUVs that had followed us to the mine site the night before.

\* \* \*

About the time we came into view, the driver's door opened and Winnie stepped out. I thought that she was looking pretty chipper, given that she'd spent most of the night on that investigation up at that mine site.

"Morning, Winnie." I beat Mac to the punch.

"Sam, Mac. Glad to see you made it back OK last night." And she sounded chipper, too. "Had breakfast yet?"

Mac groaned and patted his stomach. "We sure have. Too much of it. But I could probably manage another cup of coffee. Sam?"

"Sure. Tea, though. And maybe only a half cup."

"Well, I haven't and I'm starved. Hop in. I know just the place. And we can talk there, too."

She turned north on Main Street and wound up taking the same route I'd used to get to the pharmacy the day before. And when she turned into the same parking lot, it was *deja vu* all over again for me. But then we stopped next to the Doubletree there.

"I'm staying here, and I can charge breakfast to my room," Winnie offered by way of explanation.

After a little haggling on Winnie's part, we were shown to a table offering a spectacular view of the mountains as well as privacy. We put in our beverage orders, and Winnie picked something from the menu with just a glance.

“So, Mac. That old silver mine you showed us to turned out to be a gold mine for our case. You were right. All sorts of interesting DNA floating around in there. Although I guess I’ll be surprised if any of it is the perp’s.”

“Have you got samples from the kidnapped girls we liberated?”

“We do. And I’ve got my guys watching that place twenty-four / seven now. When our kidnapper shows up to get you, we’ll get him.”

Mac scratched his chin. “Presumably, that will be fairly soon. I’ll be really pissed if he doesn’t show for a couple of days. After all, I’m supposed to be in there, all tied up. I mean, hell, that’s no way to treat me!”

“Well, I’m not so sure, Mac. See, I had plenty of time to think about all this while my techs were going over those shipping containers in there—and you were right, that’s what they were. It was boring as hell—well, except for the little excitement with the deputy.”

“Huh?”

The server came with our coffee and tea for me, took Winnie’s order, and scurried off.

“What do you mean, Winnie, ‘excitement with the deputy?’” Mac had picked up on that phrase.

“Oh, about forty-five minutes after you left, a Summit County sheriff’s car pulled up. He was shining a spotlight around, and it found Seth standing with both hands visible and his shield displayed. And Seth keeps his shield well-polished, so it positively sparkled. The deputy couldn’t miss it. Anyway, they had a little conversation and the car left. Seth told me it was a sheriff’s deputy on routine night-shift patrol who saw some lights where there shouldn’t be any. So he came up to check it out. Other than that, it was just a matter of waiting around for the techs to finish. We locked everything back up when we left.

“Anyway, what I was thinking about was our perp. Could be that he intended to just leave you there, let you starve, or whatever. Thing is, he knows that someone’s onto him now—you for sure, and, to him, you’re out of the way. But he doesn’t know who else is with you on this, if anyone. He can’t afford to take the chance that you were working alone. And he’s lost his only client for those girls anyhow. I’m thinking he may just shut down his whole operation. Never go back to the mine. Maybe even get rid of the Hummer.”

“You think he’s that smart? I mean, he did a crappy job on me, remember?” Mac looked doubtful.

“Yeah, but like you said, he’s used to dealing with ten-year-old girls. And he’s obviously good at careful planning, given the complexity of some of those snatches he pulled off. Anyway, I’m going to keep my guys up there for a couple of days and see if he shows. If he doesn’t, well, then we need to figure out where to go next.”

“Winnie? How long will it take for the DNA analysis?”

“Well, Sam, not as long as it used to. I’m pulling out the stops to expedite this. We ought to know later this week, probably Friday.”

“OK. And I expect you’ve got samples from those three dead girls from last week as well as the kidnapped ones? And Lucy?”

“We do. And if we can connect this guy—assuming, of course, we can catch him—to that mine site, then he’s in a helluva lot of trouble. Three murders, a whole bunch of kidnappings, Lucy Smith’s abuse, human trafficking. More federal and state felonies than you can count.”

The server came with Winnie's breakfast, a mound of food comparable to the ones Mac and I had put away earlier, and refills for us all. Winnie shoveled it in, Mac sipped his coffee, and I stared at the scenery for a while.

Finally Mac came back to life. "Well, let's see. We've made a little progress. We know the Hummer is black. We can stop looking for houses with gravel driveways. If the dust I got you is a geological match with the dust down in Red Canyon where those girls' bodies were found, that puts the Hummer there. If the DNA all matches, my testimony will put both him and his Hummer at that mine site where some of the girls' DNA was found.

"Now." He drummed his fingers on the table. "Suppose you're right about his shutting the whole operation down and just leaving me there, the rat. Unless he sells the Hummer for cash on the black market—meaning independently of a valid title transfer—it ought to be possible to find out where and to whom he's sold it. And I think, unless Utah is way different from other places, that'll give us our perp's name and maybe address, too. Also, we can filter your Hummer data for black ones and see what turns up. His address ought to be in there already. Oh, and then there's the mine site. Who owns it? How did our perp get the control to build that bunker in there, with plumbing and electricity? Is he pirating the electricity? And this all points to his being local to this part of the mountains. I can't see someone who lives in Salt Lake getting all this organized way up here."

He stopped to take a breath.

"Got anything else for me, Sherlock?" Winnie's tone was as dry as the desert we'd been living in the previous week.

Mac grinned. "Uh, well, since it seems like he was just going to leave me there to starve, I guess it's getting personal with me. And I think it's been personal with Sam ever since we found Lucy Smith in that outhouse, so that makes the two of us. I don't think that either of us wants to miss any potential leads."

Winnie nodded and swallowed the last of her breakfast. "On the other hand—and don't take this the wrong way, Mac; you either, Sam—you're not really full-time FBI and there's this statewide BOLO out for you. With what you discovered for us, I'm now in the position that I can call in help that I trust. You talked about being burned out on this thing, and I'd think your little adventure last night would only emphasize that for you."

I felt a little surge of hope, but Mac frowned. "It sounds like you're going to fire us."

"More like get you out of the line of fire. Or try to. I've been looking at maps, and it turns out that we're only about sixty miles from Evanston, Wyoming. No BOLO there. I'd feel a lot better if you and your distinctive camper van were somewhere safe, at least as far as Utah law enforcement is concerned. I think I can get that thing rescinded, at least outside of Kane County, but it'll take a few more days." She grinned. "Besides, I'm tired of hearing you bitch about that nice rental car I'm paying for. Maybe driving your van around will make you feel better."

My little surge of hope turned into a tidal wave.

Now Mac was nodding. "Actually, that does make sense, Winnie. Time for us to depart quietly and with some shred of dignity. And if you're going to call in FBI reinforcements, do you really need us?"

"Good question. Let's think about it. I can tell that Sam's relieved at the prospect of getting away from all this nonsense. But, really, wouldn't both of you like to be around when we catch this guy? Play a role in the take-down, maybe?"

\* \* \*

## Twelve

As Winnie was driving us back to our condo after her breakfast, I was marshalling arguments to just keep on driving east when Mac and I got to Evanston. We could be home by evening, it seemed like. I didn't have a good map of the intermountain west in my head at that point, but I did remember that Interstate 80 went through Laramie and that you could get to Fort Collins from Laramie—and then to Estes Park easily.

I, for one, was done with all this. Let the FBI do their thing and get the case cleared. And, as for being part of the kidnapper's take-down, well, a week or so back I'd have been jumping at the chance. But now? Let's just say that the take-down's entertainment value for me had taken a serious dive in the days since.

The first step, I knew, would be to pack up and get all of our stuff from both the condo and the rental car into the van. Then, after we turned the rental car in, there wouldn't be any excuse to return to Park City in another rental car from Evanston. I figured I could do the packing even if Mac and I were involved in a discussion about the whole thing. I was pretty sure he wouldn't actually argue about this, but he has a way of being persuasive without really arguing, something I was going to have to resist.

Winnie dropped us off. I said good-bye to her, and Mac mentioned that we'd think about further involvement. To my surprise, he didn't sound very enthusiastic, though. Maybe, I thought, there's hope.

He watched her drive off, then turned to me. "So, I reckon we should pack up, huh? I think I'm ready to get out of Utah."

I started toward the building's front door and tried not to sound relieved. "This seems like a good opportunity, what with Wyoming so close and all."

Upstairs, I began the packing process while he sat down behind his laptop. After about fifteen minutes of fiddling, he said, "Winnie's right, Evanston isn't far, and after we clear Park City, it's all interstate. Seems like we could call her from there and decline further involvement in all this."

My heart leapt. "You mean just keep on going east for home?"

"We could. It's not quite noon, and we'd probably get to Estes Park this evening some time." He poked at the computer a bit more. "Or, we could finish this road trip in a bit more style than heading straight home with our tails between our legs. Get east far enough to be north of Colorado, head south, and make a loop through the San Juans down to, say, Durango before going home. Avoid drifting west into Utah, of course."

I hadn't thought of that possibility, and, as I did, I was surprised to find it attractive. The times we'd lived in the van, before finding Lucy and then together at Lees Ferry, were among the best I could recall. Perhaps there was something about the enforced togetherness that I found comforting. God knows that, in my previous life, genuine togetherness was something lacking—artificial togetherness on the basis of a business deal I'd had plenty of, but that's something completely different.

"That's an interesting idea. I don't have all the roads memorized, so how do we do it?"

"Well, if we don't go into Utah at all, it looks like we need to get pretty far east, then head south to Craig. Meaning Colorado. We drove through there on US-40 a couple of weeks ago on our way to Flaming Gorge. It looks like it's not quite two hundred miles past Evanston on Interstate 80 that we'd turn south. I think that's all high plains, rolling pasture with not much in the way of trees. Then it's quite

a ways down to Craig, but I seem to remember that there were several places to stay once there. And some restaurants. Oh! That reminds me. When we get to Evanston, I want to stop at a bank and get some serious cash. I'm running low. Maybe there's a Wells Fargo branch. And, y'know what? Maybe we could find a car wash in Evanston, get that hideous wrap off the van, and get her cleaned up. Anyway, that seems like enough for today, get to Craig and crash for the night."

"OK. What after that?"

He poked at the computer again. "Well, south from Craig there's a state highway that splits near Meeker. One branch keeps south and intersects Interstate 70 at Rifle. The other branch heads west through, let's see...not much. It follows the White River. There's a state wildlife area and eventually a town called Rangely. That's familiar somehow—oh, yeah—one of the Templeton girls was kidnapped from there, or maybe it was one of the dead ones from last week. Anyway, at Rangely we'd turn south toward Grand Junction, and then keep going south to the San Juans. That's probably a morning's drive, if we get an early start from Craig. Then we can have lunch somewhere, maybe Montrose, and plan the afternoon. The weather could be a factor in where we go after that."

"Sounds good to me, Mac. Look, I've got most everything ready to go. Why don't we get the van and turn in the car? Then we can load the van here, OK?"

It took most of an hour to deal with the two vehicles, get the van loaded, and check out of the condo. It was about 1:30 in the afternoon when we crossed into Wyoming and cruised into Evanston at milepost 5. I think we both felt liberated not to be under the cloud of that stupid BOLO any more.

Mac said he'd found out that there was a Wells Fargo branch just north of the interstate on Front Street just past Seventh, and Front Street turned out to be at Exit 5, so we were in business.

Mac pulled the van into the bank's parking lot, which was right next to a Chevrolet dealership with a lot full of shiny new pickup trucks along with a few sedans and SUVs. He went inside and I got out to stretch my legs. I took a good look around, although all there was to see were parking lots, a few low hills off to the east, and the bank building, the most impressive structure in view.

And there was a black Hummer H2 sitting in one of the customer parking spots in front of the dealership next door, not 100 feet from me. Two guys were squatted down examining something on the right front fender, one rubbing at the paint. I pretended to ignore them while continuing to stretch. Eventually they stood up and, after a short, but animated, conversation, they shook hands and went inside the show room. I wasn't sure exactly what to do, but then an idea occurred to me. I found a notepad and pencil in the van's glove box, slipped under the little railing separating the bank's parking lot from the dealership's, and wandered around looking at the prices and features of the cars in the lot.

In the process, I copied down the Hummer's license plate number—the thing had apparently been washed—and verified the scratch on the fender. I didn't worry about the tires, though, figuring that a close look at them might be too obvious. Then I returned to the van, locked it, and went into the bank to find Mac. He was just coming out the door.

"Hold up, Mac. We need to talk strategy a little." I looked around, but no one was paying any attention to us. "There's a black Hummer H2 in the Chevy dealership next door, in one of the customer parking spaces. It's got a scratch on its right front fender. I wrote down the license number, so that's taken care of. I guess I saw its owner and one of the dealer's sales guys looking it over, maybe for its trade-in value. They finally shook hands and went inside."

He looked surprised and kissed me on the forehead. "Bless you, my child. Can you see the Hummer from our van?"

"Maybe, through the back window. Or the door back there if it was opened."

“Good. And, ya know what, Sam? I think that Winnie was spot on about this guy getting rid of his Hummer. Makes sense that he’d do it in another state, too, because the information won’t get into the Utah computers so quickly. That handshake makes it sound like he’s got himself a new car. Maybe we can hang out and get a look at it. She’ll be interested in that, I’d think.”

“Why not? If we’re going to duck out on her, maybe we owe her that favor.” At least, I thought, we can help with the pay-back for that dirtbag. “Should we just sit and watch?”

“Well, first thing, let’s find the binoculars, and I’ll check out the scratch, just to be positive, and see if I can identify the tires. Then we can wait and see what happens. Did you get a good look at the guy?”

“Yeah, but he was unremarkable. Not fat, not thin; not short, not tall. Dark hair. Mirrored sunglasses. Jeans and a red-and-blue flannel shirt, with a green windbreaker. He limped just a little when they walked inside.”

“Excellent. Let’s just see what the binoculars reveal and settle in. I think I’ll turn the van around so we have a better view.

\* \* \*

The binoculars revealed that the scratch I’d seen was also the one Mac saw the previous evening and that the tires were those special off-road ones that made the tracks where the little girls’ bodies were found down in Red Canyon. So we settled in to those comfortable captains’ chairs to wait. Mac had the computers all ready to go anyway, so he started composing what he said was a report to Winnie, and I got online to see about a reservation for us in Craig. I thought I’d then see what I could find about the route into the San Juans that Mac had described.

We were still focused on our laptops’ screens about a half hour later, when we heard a rumbling noise coming from the dealership across the railing. We both looked up in time to see a silver-gray coupe coming around the side of the building toward the front. About the same time, our perp and the sales guy came out the front door, and the car pulled up right next to them.

“Will you look at that? The guy’s bought himself a muscle car, must be a Camaro.” Mac picked up the binoculars. “Oooh! A Z/28 no less. I’m betting the dealer is glad to get that thing off his lot—it’s surprising that he even has one. Our perp must have issues about his manhood.”

“Is that some kind of hot rod?”

“Oh, yeah. Serious hot rod. I forget, but it’s probably 500 horsepower, or something like that. But, geez, why in the world would you want to have one of those in a ski town? Even with snow tires, it’ll suck in the winter. Too much torque, rear-wheel drive. Dumb, dumb, dumb. Oh. Got that other license plate number? Here, write this down with it. It’s his Wyoming temporary tag.” He rattled off a string of numbers and letters, then put down the binoculars and picked up his laptop.

After a look at my notepad and more typing, he poked the touchpad’s button with a flourish. “OK. Done. Winnie should appreciate that. I think I’ll call her to warn her.”

He pulled his phone out.

“Hey, Winnie. You’ve got, as they say, mail. And you were absolutely correct this morning. Our perp has ditched his Hummer. Also, you can have your guys at the mine site stand down, he’s not going to be there. I expect he’ll be back in Park City in an hour or so, assuming that’s where he goes from here. And I’d suggest that you get your techs on their way over here to Evanston. Have them take Exit 5 and go north on Front Street to about Seventh. There’s a Chevy dealership there. It just took the Hummer in as a trade...Hmm?...Ah. Good idea. We’ll wait ’til he leaves and then go over and let them

know. I've got my shield here, that shiny FBI one you gave me, so that ought to do it...Right. New car info, plus the Hummer's tag, is in the email. Happy reading."

"She wants us to hang around, eh?"

"Yeah, but that's better than asking us to follow this dude. I doubt we could keep up anyway—he'll probably give his new ride a little test run, whichever way he goes."

By that point, both the sales guy and our perp were inside the Camaro, and we watched the various lights blink on and off. Once again that rumbling noise told us that he'd started the engine. Eventually, the sales guy got out the passenger door, stuck his hand in the window for what must have been another handshake—the window tint was too dark to really see—and the car pulled away sedately. Out at the street, its left-turn signal blinked at the stop sign for a minute, and then it pulled away toward the interstate with considerably more authority, its tires giving us a couple of good-bye chirps as he went through the first two gears.

Mac looked at me and grinned. "Well as long as Winnie and her team aren't involved in a car chase with that guy, they ought to be able to get him, given all the information they have. Let's go talk with the dealership about that Hummer before they detail it for sale."

I was surprised at how well that went. It must have been that the FBI shield that Mac flashed, along with his reassurance that it was only a delay in their processing the Hummer for its next life that was needed. An FBI forensics team was on its way, he said, and they'd go over it and release it for re-sale. Given Mac's solemn pronouncements about all the dastardly things, both federal and state crimes, the Hummer had been involved in, I think the dealership's manager was overjoyed that it wasn't going to be confiscated.

We celebrated by peeling that orange-and-green wrap off the van and then giving it a good cleaning at a car wash down the street. Mac mentioned something about its needing a thorough detail job including a clay-bar treatment and hand wax as soon as possible, but allowed that what we were able to do was sufficient for the time being. After all, he said, we'd probably just get the thing all dirty again in the next few days anyhow.

And, by about 3:00 that afternoon, we were on our way east on I-80, Utah and all of the Templeton crap behind us and receding in the distance.

A little over four hours later, we pulled into Craig and, first thing, found a place for dinner. We had our doubts that anything would be open fashionably late. That worked as well as we could have expected, and we were in our room at the Hampton Inn by nine, then up and on the road at seven the next morning. It was liberating to be on our own again, with no commitments or deadlines to worry about. Or BOLOs, either.

Because we'd driven clear across northwestern Colorado on US-40 at the beginning our road trip, we were not expecting much in the way of new and different scenery on this leg, at least not until we began to get into the San Juans. But we were pleasantly surprised. To the south of Craig, the grasslands that we'd driven through the day before alternated with stands of trees as the elevation of the highway rose and fell in response to the topography. It was still big country, mostly empty, with ranches, a few small towns, and evidence of oil-and-gas development just about everywhere. The morning passed quickly, and we reached Montrose, about an hour southeast of Grand Junction and an important regional center of commerce, for a late lunch. We found a diner with Wi-Fi, and Mac took his laptop in.

We ordered lunch, a soup and salad for me, and a burger and fries for him, he got the computer connected, then looked up and smiled. "So, what's today? Tuesday? No, Wednesday, right?"

"Wednesday, I think."

“Meaning the last time we didn’t stay in some kind of commercial accommodations was, what, last Saturday night at Lees Ferry? Well, three days in a real bed isn’t too bad, especially as our expenses were all paid. But it’s time to start roughing it again, don’t you think?”

I had to smile back at him. “If you call staying in the van ‘roughing it,’ then I’m just fine with that. I’ve come to like it, even.”

“Good! Exactly what I wanted to hear. This weather report I just pulled up makes things look encouraging for the next few days, at least in terms of what weather is generally like this time of year. So let’s find a supermarket after lunch and stock up on food for, oh, let’s say four nights. Then we can go down to a place called Yankee Boy Basin, I read about it somewhere, just south of Ouray, which is an hour or so south of here. It, the basin, I mean, is up an old mining road. We may see other people up there, but not many. We can spend a night or two there, do a little hiking and some serious relaxing, and figure out where’s next.”

“How do we figure out where’s next without the internet? I mean, this place up an old mining road is not in cell-tower range, is it?”

Mac grinned. “Oh, dear. That’s right. But, y’know, I seem to have forgotten to return all that satellite internet gear that Winnie loaned us. I must be getting old and senile.”

\* \* \*

Even with the grocery stop and another to top off the diesel tanks—Mac keeps bugging me to think “diesel” instead of “gas”—we made it to Yankee Boy Basin by a little before 3:30. And all I can still say is “wow. Just wow”—and this comes from someone who lives in Estes Park, not such a shabby place for mountain scenery. It was a good-sized, well, basin, not big or flat enough to be called a “park,” in Colorado terminology. About half way between Ouray and Telluride, but accessible only from Ouray, it sat between tree-line and about 12,000 feet surrounded on three sides by ridges and peaks above 13,000 feet, with Mt. Sneffels, at a little over 14,000 feet, dominating the skyline. Wow. I couldn’t see the sky, that deep-blue Colorado high-country sky, without risking a crick in my neck. We stopped at just about tree-line, plenty high for me, as I discovered on getting out of the van to walk around. A dozen steps and I was dizzy, even with a lot of extra breathing.

I’m glad we’d had those jeep trails in the National Monument down in southern Utah to get me used to the idea of off-road, or really-bad-road, travel in our van. I suppose that you could get up to Yankee Boy Basin in a regular car, as long as it wasn’t too low-slung. I bet my VW Beetle would have made it. Hmm. Maybe. But it was a lot easier in our properly equipped conversion van, that’s for sure. One interesting thing about the road in was that, long after it stopped being a “regular” gravel road and started being more jeep-like, we came upon a working mine, to which, I guess, workers commuted up the mountain each day. Amazing.

When we got up there, Mac explored around a little, looking for the perfect spot to set up our little camp site. He settled on a promontory above a bend in Sneffels Creek, overlooking a meadow and a wall of rock that ascended to the 13,700-foot Gilpin Peak, or so the topo map told us.

Then we got the bad news.

It was about five in the afternoon, after we were settled in for the evening, we thought, that we heard a faint call of “Hello the van!” shortly followed by a knock on the door.

Tyler French, as he introduced himself, was an outfitter and, this time of year, a big-game-hunting guide. It seems that we’d set up our little camp in an area in which he had not only brought clients with

elk licenses but also, by local custom, had first rights of refusal for his clientele. It seemed that, at the least, he wanted us to move, and, if we were there to hunt, to get the hell off his turf.

I had started to work on supper, so I wasn't interested in arguing with him. Besides, Mac is a better negotiator—his experience in the Middle East, in fact, turned him into a master haggler by my standards.

So he invited Tyler French in for a drink and a chat. That raised my hackles, but, at some level, I saw the wisdom of the approach. Besides, the young, strapping, handsome, and still reasonably clean Tyler French was quite decorative, from my perspective, at least. When Mac introduced him to me, I made sure to be as welcoming as I could manage. But I tried not to flirt.

There were two issues. If we were there to hunt elk, the turf thing was going to be problematic. But we were just sight-seeing, so that wasn't a problem. However, French had come up with a group of sports, paying clientele, with several vehicles full of equipment. It turned out that we were camped right next to the only spot that would hold his party. In point of fact, he was warning us that we were in for a boisterous night, should we elect to stay where we were. Proximity to his camp would guarantee that. On the up side, it would also, most likely, mean that we wouldn't be getting any stray rifle shots in our direction, but you never really knew.

Mac was great.

“Oh. Y'know, we're sort of new to Colorado, and we live in Estes Park, where there's really no hunting conflicts because of the national park. So I just forgot about hunting season. Is this one of the rifle season weeks?”

“Yes it is, Mr. MacQuarrie. And, of course, those of us who depend on these weeks for our year's livelihood take it most seriously.”

“I bet you do, Tyler. I remember seeing all sorts of blaze orange hats and so on where we stopped for fuel down in Ridgeway. Guess I should have bought one of everything. Need a refill?” Mac poured before French answered. “Anyway, I understand the problem. And I know how your clientele can get, um, keyed up the night before a hunt. Have you any suggestions about where we could move to? I mean, around here, out of your way, and so on, of course.”

He sent us back down the “road” we'd come up and then back up another, well, a track that didn't deserve to be called a “road” that ended in a aspen grove. The bare branches still allowed us a good view of everything, so it turned out to be an even better spot. All I could hope for is that no one would mistake our van for an elk.

The night outside was cold and a bit blustery, judging from the rocking of the van, and in the morning the outside temperature was 15°. That wouldn't have discouraged us from staying, but the presence of a camp full of guys with high-powered rifles intent on out-drinking each other did. After breakfast, we decided to move on. The question was, to where? The only parts of the Colorado back-country off-limits to hunting were the national parks and monuments.

I found that I couldn't do much in the way of an internet search for where next on our way back down to Ouray—the jostling of the van on even the better parts of that sort-of road was just too much for the signal to hold. And in Ouray, the box canyon's walls blocked the satellite. Still, we needed to decide which way to go—south to Durango, or back north toward Montrose.

Mac pulled onto a side street in Ouray and parked the van to give us a good view—although there really weren't any bad ones in that little town.

He took off his ball cap—his FBI one that day—aand scratched his head. “If I remember correctly, there are five national parks and monuments here in Colorado. Colorado National Monument, up by

Grand Junction. In fact, I remember passing a sign for it yesterday, on our little section of Interstate 70 up there. There's Mesa Verde National Park, south of here and west of Durango and Great Sand Dunes, uh, I guess it's a National Park now, way east of Durango in the San Luis Valley. Black Canyon of the Gunnison National Park, east of Montrose, where we had lunch yesterday. And, of course, Rocky, up by home. What's your pleasure?"

"Well, Mesa Verde is ancient ruins, cliff houses, right? It's in the wrong direction, though. The Sand Dunes are, well, you know, just big piles of sand. I hear they're beautiful in the right light, but... What's at Black Canyon? At least it's close. And it's on the way toward home, right?"

"What's at Black Canyon is a big canyon with walls of black rock, I think. And probably some hiking trails. I wonder if they're open for camping this time of year? Tell you what. We can head north and, as soon as you can get a satellite signal, you can check to see if it's open. No, wait. There's a cell signal here, right? Let's try the van's cellular connection." He reached over for my laptop, fiddled with it, and handed it back with the Black Canyon web site showing. "I knew that would come in handy at some point."

It turned out that they did indeed have camping, so we turned north, back toward Montrose, and then east on US-50. After a few miles, there was a sign, and we took a side road that climbed onto a plateau and then onto another. Up there, the vegetation was scrub oak, I think it's called Gambel oak, growing ten feet tall or so in wide-spread thickets. It actually worked quite well to provide a surprising amount of privacy in what would otherwise have been a very public place. In the summer, I expect it would have been better, but even in late October, the little trees, or bushes or whatever they are, clung to brown leaves, which rattled in the breeze. (Hmm. Do the trees cling to the leaves, or do the leaves cling to the trees? I picked the former, as the leaves are dead but the trees are not.)

Anyway, it was so private, and quiet, that we spent three nights there, in the process doing just about everything there was to do. We hiked, Mac fished—there was the steepest road I've ever been on down to the river—and I sketched, getting some good ones in the process.

Finally, having run out of new things to do—the trails were just fine, but we felt no urge to hike them twice—and eaten most of our food, we decided to declare victory. We'd been on the road for over three weeks, after all.

Sunday morning, we packed up and headed east, toward home.

\* \* \*

## Thirteen

Our three weeks on the road had included a range of hotels, in terms of quality, a condo, a rental RV, and, of course, the van, so we were used to variety. But it was good to be home. Our queen-sized bed was not only comfortably familiar but huge, compared to the mattress, merely full-sized, we had in the van. And having elbow room while making breakfast seemed almost decadent.

The new home we'd bought, or maybe it just amounted to switching around in a fit of downsizing and making a profit at it, was a townhouse, technically a condominium, but not in the usual sense. Most people think of condos like the one I owned on Miami Beach—an apartment in a big high-rise—or like the one we had stayed in the week before in Park City. What we found in Estes Park was actually a

small, detached, single-family house, but one built on almost no lot. In fact, the land was all part of the association, so we didn't have any outdoors maintenance responsibilities.

And the association was limited to the houses on the same piece of land, ours and seven others. Yes, there were rules, but they were just fine with us, especially the one that prohibited short-term vacation rentals. All the members of the association were owners and more-or-less full-time residents of their houses. And they all were in favor of low association fees.

With two bedrooms, one of which we used for an office, and two bathrooms plus a double garage big enough to fit the van and the Jeep into—although the garage door just barely cleared the van, so we always lowered the air suspension as much as possible—we had just what we needed. And the location was an improvement as well. Instead of being three or so miles from downtown, we were within walking distance. After-supper trips for ice cream cones were possible on foot, meaning that the walk home helped with the calories of the dessert, especially that little hill we had to walk up.

With no yard responsibilities, we could up and leave for any sort of vacation—which isn't to say that retirement is not a permanent vacation anyway—with no fuss or special arrangements. To make this work even better, just before we moved we changed our mailing address to one of those package / mail / office-supply stores here in town that offered post office boxes. They took our mail *and* our packages and would hold them for as long as we were out of town.

Of course, that meant that, after a trip, we needed to make sure to pick up mail and packages as soon as possible. Mac was just about to do that Monday morning, in fact, when his phone, hooked up to a house-wide system, started all the extensions chirping in their annoying manner. He picked up the most handy one.

“Yes?...Oh, hi, Winnie...News?...Oh. OK. Um, let's see. Yeah, this thing I've got here has a speaker button. Let me get Sam and we can all talk.”

I'd been cleaning up after breakfast, so I dried off my hands and walked over to where Mac was on the other side of the great room, as it was called—the combined kitchen / dining / living areas. We sat down next to each other on the couch, and Mac poked a button on the handset he was using.

“Sam, are you there? Can you both hear me?” Winnie's voice was more clear than it was on Mac's cell phone speaker.

“Hi, Winnie! Good to hear your voice. How's everything?” I was actually happy to hear from her. I'm sure Mac was even happier.

“For me, everything's good. I'm back at home in Denver, for one thing. Travel to all those exotic places like Flagstaff and Page and Bryce Canyon and St. George and Park City, you know, it's all well and good, but home is better. For another thing, we got our guy, thanks to you folks. I wish there was some way to really recognize your contributions.”

Mac laughed. “Hell, Winnie. All you need to do is to pay the consulting invoices I'm going to send you today.”

“Ha! I've already figured that part out. Most of it is going to get billed to the DEA. I'll pick up your Park City expenses, of course, but everything else is on their dime. Make sure you charge double for that explosive round you used on Obie Templeton's propane tank. I mean, you've got overhead just like we do.” Then she laughed. “Do you guys want to hear about our kidnapper?”

“You bet!” Even though I tried, I couldn't keep the excitement out of my voice.

“I just I wish I had some time alone with him. But, sure, whatcha got for us?” Mac winked at me.

“OK, let’s see. Your tip about his new car and his old license plate gave us everything we needed. We used the plate to find his address and set up surveillance, and we grabbed him when he finally came home late last Tuesday evening. It seems he’d been driving around all afternoon and had put almost six-hundred miles on his new Camaro. Lots of very fast driving, if you do the math. Turns out he’s one Michael Young, no less than a deputy with the Summit County Sheriff’s Department. Moreover, he was the deputy who showed up at the mine site when we were there that night—uh, a week ago, I guess. Meaning, of course, that he really, really knew that someone was on to him. And, oddly enough, he’s been the usual partner for my contact there, Lisa Hamilton. She, of course, was blind-sided by all this but has since been able to provide considerable insight into his activities, things she never paid attention to before but remembers. Oh. And my forensics techs came up with all sorts of interesting things from that Hummer he traded in. Mac, this was just about a perfect take-down.”

“Yeah, well, we helped, but remember that it was your idea that we get out of Utah by going over to Evanston and that the guy might be shutting his operation down and getting rid of that Hummer. The fact that we found him there really comes down to your insight, Winnie, and the coincidence that we bank at Wells Fargo. I’m just sorry that I won’t be able to do to him what he did to Lucy. He deserves some time upside down in a vat of liquid shit, as far as I’m concerned.”

She laughed. “Well, it’s all good, Mac. He’s in a really serious vat of *legal* shit for the foreseeable future. By now he’s all lawyered up, of course, but both the state and the federal prosecutors are positively giddy about what we’ve got on him. Interstate kidnapping, murder, child-sex trafficking, hell, being a general bad-ass. It wouldn’t surprise me if the Utah people push for capital punishment for this guy. They’ve talked about how the girls he killed and left in Red Canyon constitute aggravated murder one. And they’re really, really pissed about Lucy Smith, although what he did to her is actually not a capital crime in Utah.”

Mac nodded, and I was nodding, too. He said, “Keep digging, Winnie, especially into the statements of all those Templeton women. There may be more there. Meantime, I’m happy to help out with this stuff, and I can sure use the consulting fees. Let me know if you need help in the future, OK?”

There was a noise from the phone that sounded like a snort. “Yeah, well, I’ll wait until I see your invoice before I decide on that. You guys take care, now.”

The phone extension went dead, and Mac looked up at me. “Well, I’m sure glad that’s over with. And that the good guys won. Whew. So. Where were we? Need anything in town? I’ll go get our mail.”

But before he could stand up, the phones all started jangling again.

“Hello?...Ah...OK...Oh, hello Chief...Well, I was just about to come down to Stanley Village to pick up our mail—we’ve been out of town for about three weeks. Can we stop by?...OK, will do. About, oh, 45 minutes. See you soon.”

He looked at me. “Odd. That was Estes Park police chief Val Walker. He needs to talk to us about something. So let’s go get the mail and then stop by the town offices.”

\* \* \*

The Estes Park town offices, including the police department, were on Elkhorn, normally a gridlock of tourist traffic with no parking available anywhere. But, on Monday of Halloween week, it was pretty empty. We easily found parking in the municipal lot next to the police department.

Chief Val Walker’s front-desk person kept us waiting only briefly, until, he said, a phone call was completed. Then the Chief, a compact, trim-looking, grandfather type with a crew-cut that made his bald spot seem less obvious, came out to greet us and lead us into his office.

Once we were all seated, he stared at the ceiling for a time that started to become uncomfortable, and then looked back and forth at us.

“Sorry, I’m trying to figure out how best to begin.” He looked at Mac. “You, sir, are Hamish MacQuarrie, whom everyone calls ‘Mac,’ and who has a very interesting background. Suffice it to say that you’re now affiliated with the Colorado Bureau of Investigation, right?”

Mac nodded.

“And you, ma’am, are Samantha Winslow, a local artist of, may I say, remarkable talent and a growing reputation?”

Surprised as I was, all I did was nod.

“I’d like very much to have the opportunity to talk with you about your paintings, Ms. Winslow. Some other time, however, because today I’ve something else more important. Just to be clear as a start: last spring, the two of you sold a home on the south side of town and bought a condo up on the bluff above the west end of Elkhorn, more or less?”

“Yeah, that’s us, Chief. What’s going on?” I couldn’t help but wonder what he wanted to know about my paintings.

“This.”

And he passed to Mac a document encased in a clear plastic envelope. At first glance, it appeared to be word-processed in a generic fashion and printed in a large font on some kind of computer printer, maybe a laser printer. I leaned over to read it along with Mac.

*Hey, there, Little Buddy –*

*You probably thought that breaking my leg and then getting my brothers and me all arrested was the end of your involvement in this. But what you don’t know is that we are part of a support network that takes these kinds of things personally. So now you’re in deep, deeper than you ever expected. Your treatment of us, not to mention my father and the rest of his family, has earned you and your whore the sentence of death and eternal damnation, from...*

*The Army of God*

As Mac and I read and re-read this a few times, I felt the hairs on my neck stand up. Finally, Chief Walker cleared his throat.

“The thing is, this note, and you can see the slit in the paper if you look carefully, it was found on the front door of that house you sold, held there by a good-sized, fixed-blade knife that was stuck nearly an inch into the wood. Now, the new owners actually moved here only recently, because they had some work done on the house over the summer. And they made a last trip back to Iowa to get a final load of belongings just last week. When they returned here a couple of days ago, they found this note. As you can imagine, they’re a little spooked. They told me they didn’t even read the thing but just called us when they saw the knife.”

Mac nodded. “Certainly can’t blame them for being spooked. Let’s see. As I recall, they moved here from Council Bluffs, and he’s retired from his job managing some kind of big store. I think he said something about a Macy’s at a mall there, when we were chatting at the closing. Point is, it doesn’t seem at all likely that this note was meant for them.”

“Which means,” the Chief said, “that it was meant for you.”

“Mmm. You have the knife?” Mac had on his poker face.

Chief Walker looked surprised, then opened a desk drawer and took out a plastic bag with a knife visible. It looked to be about eight inches long and resembled a sort of hunting knife. He handed the bag, gingerly, over to Mac, who inspected it through the plastic.

“Says here ‘Made in China.’ And it looks like a cheap imitation of a Ka-Bar combat knife, Chief, a sort of miniature one. No doubt you’ve dusted it for prints and so on?” Mac handed the bag back to the Chief as he was nodding.

“Well, Chief, I guess I could try to weasel out of this by trying to persuade you that these bozos just made a mistake, but that doesn’t seem very neighborly. So. Because you know about my CBI connection, I’ll assume that you’ve read all the reports about that business with Trevor Swent last year, and about the death of the lawyer Michael Decker. What wasn’t in those reports, because it just happened over the past couple of weeks, is that I also have this now.”

He’d reached into an inside pocket—I’d wondered why he was wearing a sport jacket—and taken out the wallet with his FBI shield, which he handed to the Chief. Walker looked at it, and the accompanying identification card, carefully and handed it back.

“CBI *and* FBI? What are you, some kind of super-cop?”

Mac laughed. “Too bad I don’t have my old NYPD shield. That’d *really* impress you, I bet. No, I’m definitely not a super-cop. But I do have a lot of experience, and some connections at a much higher level, which I really can’t talk about, but which these folks like to tap into now and then. So they’ve put me on a sort of stand-by as a consultant. Anyway, Sam and I were over in Utah for the past few weeks, and we got all wrapped up in an FBI investigation. It seems to have made some folks mad. And, based on the language in that note, I know exactly who. But I doubt that he’s the one who stuck the knife in the door, because he has a broken leg and may still be in jail. It sounds like this Army of God is acting as his surrogate over here in Colorado.”

“Ah...OK. I guess that’s a beginning.” Chief Walker obviously wanted more.

“I understand, Chief. And, to be candid, I’m a little surprised. I thought the Army of God was over with after that business with the Purdy brothers and that lawyer Decker, last year, the whole Swent thing. Maybe the thing to do is for us to have a little conference call with my FBI contact. She can decide how much information she’s willing to pass along. And she’ll definitely be interested in the circumstances of this note. Is there a scan of it I could email to her?”

\* \* \*

I tried to be patient while Mac and Chief Walker dickered about who should email what to whom. It finally worked out that Mac realized that the Chief needed Winnie’s email address anyway, just on general principles, so the Chief might as well email the scan of the note, which they had on file, to both Mac and Winnie. And, because the Chief’s desk phone was set up for conference calls with a high-quality speaker, he also got to call her.

But she was on another line. We were assured that she’d call back with a few minutes.

“Actually, Ms. Winslow, I’m glad for that. Can I ask about your art work?” The Chief’s official manner changed completely.

“Call me Sam, Chief. And, sure, ask away.”

“Well, I’ve taken up painting, especially landscapes, as a way to relax. My doc says I need to get my blood pressure down. And if I could paint even just a teeny bit like you do, I bet that would do the trick. What’s your secret?”

I was pleasantly surprised. I knew my stuff was popular, but no one had really asked me for advice before. “Well, I majored in art in college, Chief, so I learned some basic technique there. Probably any kind of quality art lessons would do that for you. But I think what makes my style so distinctive, and maybe unique, is how I try to minimize what I put on the canvas. And I do it in a way that a book I read talks about. ‘Sensory Awareness’ it’s called. If you Google it, I bet you find a lot of information.”

“Thanks very much, Sam. I’ll...” But his phone rang, and he poked a button as he picked it up.

“Chief Walker.”

“Chief, this is Agent Winifred Small, FBI. I believe I missed a call from you. Sorry.”

“Thanks for calling back, Special Agent Small. I’m here, on a speaker phone, with Mac MacQuarrie and Samantha Winslow. Do you have a few minutes?”

“I’ll make a few minutes. Hey, Mac. Hey, Sam.”

I jumped in first. “Hey, Winnie. We’ve got to stop meeting like this.”

“Hi again, Winnie. Did you get that email from the Chief here?” Mac jumped in second.

There was a little pause before she responded. “Oh, yeah. Just now. Uh...give me a minute...What? What’s this ‘little buddy’ stuff?”

Mac tried not to laugh too hard. “That’s what the Templeton kid whose leg I broke called me, in that parking lot down at Marble Canyon. What was his name? Jerold? Oh, yeah, Jeremiah. Jerry. And, of course, the other stuff makes it clear that he, somehow, wrote most of that note, or dictated it. So one question is, where is this guy? If he’s out free, well, then I can understand how he passed this message along to whoever these Colorado people are. But I thought you had him incarcerated.”

“Yeah, well, turns out that all three brothers are juvies, Mac. We had to release them to relatives. But they’re on a short leash.”

Mac looked at both me and the Chief, with an “it figures” eye-roll.

No one spoke for a few seconds, so I jumped in again. “Winnie? I feel really bad for these people who bought our house. They come by, new, proud owners, and find this stupid note stuck into their front door with a big knife. I know that it’s not our fault, but I feel bad. Isn’t there something we can do to get this Army of God bunch off their case?”

“Well, Sam, life isn’t always fair, as I’m sure you know. And as long as these vigilantes have their sights on these poor folks, they’re not really likely to find you and Mac, are they?”

“C’mon, Winnie! That’s bullshit. Yeah, I know that life isn’t fair, but, geez, we need to try to make it as fair as possible. Do you know where this Templeton kid is? Could you let him know that we don’t live there any more without giving up where we do live? Maybe he’d pass the word along. Especially if you could make some kind of deal with him about his, um, legal exposure.”

There was a long pause, during which Chief Walker nodded at me and winked. “Good going,” he whispered.

“Sam, you’re right.” Winnie had finally made up her mind, I guess. “And maybe I can find out how, and with whom, Jerry communicates with this Army of God.”

It was Mac's turn. "Well, you remember, right, that the Purdy brothers, whom we took down that evening up at their ranch, and that lawyer who got killed earlier, Decker, they were all part of the Army of God? I'd thought that was the end of it all, but I guess there are more of those scumbags. We just need to identify and go after them."

"I agree, Mac, except for the 'just' part. I don't think it'll be that easy."

"Yeah, well, it never is. But I've got an idea or two. Why don't you see if you can get Jerry Templeton to call off the dogs, in terms of these poor folks from Iowa who bought our house, and I'll see about Army of God members who might be involved here?" Mac looked at me and winked.

"That sounds like a good start."

I felt a little better. "Thanks, Winnie."

"OK, at least we have something of a plan forward...Oh, wait. Hell. Chief Walker, my apologies. This was your phone call, and Mac, Sam, and I seem to have hijacked it. I'm sorry. No doubt you have some questions of your own." As Winnie waited, the Chief broke into a big smile.

"I do, Agent Small, I do. I've been taking notes, and each of them ends with a question mark. Those, of course, are on top of the questions I had going in. On the other hand, I think I'm able to infer some things I didn't know before, so some of those questions are getting answered. One thing I'm wondering about—and this is sort of idle curiosity, because so far I don't see a direct bearing on matters here—is whether all that stuff I read in the papers recently about a DEA raid on a meth laboratory in Utah, a place associated with the name 'Templeton,' has any relationship to the Templetons that Mac mentioned just now."

"Mmm. As you said, Chief, that was a DEA raid. We federal agencies are, unfortunately, not very communicative with each other about things like this. And, I don't really know, but I'd be willing to hazard a guess that 'Templeton' is a fairly common name over there in southern Utah."

The Chief's smile turned into out-loud laughter. "An exceptional non-answer, Agent Small. I think I owe you at least a cup of coffee for that. If you're ever up here in Estes, look me up, and we'll go across the street to a very good local roaster. At the least, we can swap yarns about this fellow MacQuarrie who's sitting in front of me."

Mac actually blushed.

"I'd like that, Chief. The son-of-a-bitch saved me from being eaten by that pack of wolves, or wolfdogs or whatever they were, the ones the Purdys kept, did you know that? Anyway, I'll do all I can to get this Templeton kid to tell his Colorado associates to call off the hit on the people who bought Mac and Sam's house. Seems like that's a high priority in all this."

"Thank you, Agent Small. That's what's been worrying me the most. Of course, there's also the welfare of the two fine, upstanding, Estes Park citizens who are sitting right here, but I kind of have the idea that they can take care of themselves."

"It all depends, Chief. Give them guns and they seem invincible. But I'm not sure you want old-west-style gunfights in Estes Park these days. Maybe that would add historical authenticity, but I bet that eventually it would scare away the tourists. Or kill 'em off. Not good for commerce."

The Chief laughed some more. "Too true, Agent Small, too true. Thanks for your time. And if you get any sort of confirmation about calling off the Army of God, please don't hesitate to let me know. I'm going to worry about these Iowa folks in the meantime."

"I'll do that for sure, Chief. Anything else?"

“Not just now. And thanks again.” The Chief poked his phone and it went silent. Then he looked up at us, back and forth to each of us.

“Yeah. Well. First and foremost, assuming we get these Iowa newcomers out of danger, I want you both to know that I’m really, *really* not in favor of gunfights in my little town. Right?”

“Especially not with the firepower that Mac would bring to the show.” I saw Mac wince out of the corner of my eye. “Chief, we really are in the business of being the kinds of citizens you just described us as, believe me.”

“She’s right about our attempts at good citizenship. But I don’t see how this Army of God will not eventually find out our new street address. So it seems like we ought to go after them before they come after us, don’t you think?” Mac, I could tell, had an ace up his sleeve.

“I do think that. From what I’ve gathered from reading all the reports on last month’s excitement, it looks like the murder and fire at Decker’s house was Army of God related, as were reports of significant gun-fire up at the headquarters of that conference center in the Tahosa Valley where the mud-slide was. And that wolfdog pack that Agent Small referred to somehow disappeared. I sure don’t want them loose, either, especially if this Army has them.”

“Don’t worry about that, Chief. I talked Boulder County animal control into sneaking over the county line to rescue them. They’re probably in some plush wildlife sanctuary by now, lapping up specially prepared carnivore smoothies. After all, it wasn’t the animals’ fault that they were that way, it was Elias Purdy’s fault. He got what he deserved, as far as I can tell.”

Chief Walker looked both relieved at this news but also distressed. “But, c’mon, Mac. They ate him, for crying out loud, ate him alive, if that report of yours is accurate.”

“Just goes to show, Chief, how karma can come back to bite you.”

The contrast between Mac’s grin and the Chief’s look of dismay was precious.

\* \* \*

## Fourteen

Mac was quiet on the short drive home, obviously deep in thought. I could tell he was formulating some kind of plan.

He had this way of withdrawing into himself whenever there was a problem that he had to confront, partly, I guess, because that was how he had operated for years and years in his assignments in the Middle East and partly because he was trying to protect me from having to worry about all the risky things he got involved in. Of course, that just made me worry all the more. No matter how many times I told him that, it didn’t seem to take.

This time, though, I knew we had to be in this together, so, as a reminder, I took a stand on it while we were eating lunch, a couple of sandwiches I whipped up using what was left from the cooler in the van.

“What’s your plan, Mac?”

“Hmm?” He tried his usual trick of looking innocent. “Plan for what?”

I put on my not-quite-mad face. “Don’t try to pull that one on me again, pal. You know exactly what I mean. What are you going to do about this ‘Army of God’ outfit? We’re in this one together.”

He stared at me, drummed his fingers on the tabletop, and finally sighed.

“I guess you’re right. This once.” He smiled and winked to take to let me know he was teasing, something he does a lot of. “But my first move is going to disappoint you. I need to do more computer work.”

“What? And wait until those goons find out where we live now and stick a knife in our brand new front door? Really?”

“Somewhere, stored away from when we unpacked, is one of those high-capacity external hard drives. I made off with it from Michael Decker’s house last year, the night he was killed, when you were over in Fraser with Hal and Annette, you know, when we couldn’t flush the toilets because of the flood. I swiped it just as the Decker house was burning down. No one but me, and now you, knows about it. Thing is, Decker was secretary and treasurer of that conference center the Chief mentioned, CRAG, the Center for Retreats of the Army of God. The one that part of got wiped out in the mud slide from the flood, along with that Larimer Sheriff’s deputy—what was his name? Oh, yeah, Smithy. Aaron Smithy. Anyway, maybe, just maybe, there are names on that thing of Army of God members, or something else useful like that. I really never looked at it.”

He shook his head. “With that deputy’s having been a member, I wonder about other people, both in the sheriff’s office and on the police force here. Although, really, that’s hard to imagine. But it’s a worry.”

“Oh. Well, I guess, dig it out and see what’s on it, that hard drive.” Then I discovered that his worry was contagious. “Do you really think we’re up against local law enforcement in addition to this Army of God bunch?”

“I sure hope not. I think it’s in a box in the study closet, so I’ll look there first.”

“OK, and I’ll finish with the laundry. Oh, boy—what fun!” I’m certain the sarcasm wasn’t lost on him.

It was about a half-hour later that I heard a loud “Aha!” from the hall, and then Mac showed up in the kitchen holding a small metal box. “Got it! It was out in the garage.”

I was in the middle of folding stuff from the dryer as he disappeared back down the hall. After I finished that, I found him busy at work on his computer.

“Finding anything of interest?” I looked over his shoulder and kissed his ear.

“Just started. Fortunately, the directories on this thing don’t seem to be encrypted or anything like that.” He turned his head to look up at me, and looked back at the screen. “Oh, hey, what’s this?”

It was hard for me to tell—I was standing a little too far back to be able to read the small text on his screen—but it looked like a directory listing of some kind. Lots and lots of sub-directories. I leaned in closer and saw that the names of those subdirectories all took the form of Abernathy\_John\_G.

“Looks like it might be a gold mine. Want some coffee? I think there’s some left from the trip. Beans, I mean. Uh, we need a real trip to the grocery if we want dinner.”

“Hey, thanks! That would be great. This could take a while, and it doesn’t look all that exciting.” And he clicked open the first of those subdirectories.

Fifteen minutes later, after the coffee maker had finished its cycle, I took a big mug of coffee into the study. “Find anything else?”

“You were right—it’s a gold mine. Decker must have arranged all this information to be used in some kind of database program. Not a real one, but one that uses these plain text files, which helps, because they’re all easy to read. But there are all sorts of cross-references and just about anything else you’d need to figure out everything about the Army of God. Like, they’re organized in a para-military fashion, only their hierarchy doesn’t use military titles, like sergeant or major. They use church terminology. Deacon, bishop—titles like that. And they seem to have a variety of church affiliations, although none of them seems mainstream.”

“Can you tell where they are?”

“Looks like all over, at least all over the big square states out west here. I ran across a map that showed something like Congressional districts—fewer and bigger, but they’ve got the states divvied up with units in each. We’re in a northern and western Colorado unit, a big rectangle with a dividing line sort of along Highway 34 out east, but a little south of it, including about everything north and west of Glenwood Springs. Big area with only something like fifty or sixty members.”

“And, apparently, some here in Estes Park.”

“Actually, not that I’ve found, at least none except the guys involved with that CRAG center, who are all out of commission. So whoever’s after us now must be a bunch from either east of here on the plains or out west somewhere.” He remembered something. “Oh, yeah, look at this.”

He clicked on a couple of things and that directory of names popped up again, the one with Abernathy\_John\_G at the top of the list. Then he scrolled down to the Ts, and there were the two Templeton brothers, Levi and Obadiah, along with several more Templetons whose first names didn’t ring any bells for me. Levi’s sons weren’t there, though.

“It all fits together, doesn’t it?” Mac looked satisfied with the information he’d found. “All we have to do now is to identify which of these yo-yos are the ones looking for us here in Estes. And deal with them somehow.”

“I don’t suppose there are pictures on that hard disk somewhere? Have you looked through the whole thing?”

I was still looking over his shoulder, and he turned his head just enough to see me from the corner of his left eye, a disgusted squint if I ever saw one. “Think I’m a dummy, don’t ya? Well, I am. I’m sure I saw a directory somewhere called something like ‘PhotoIDs’.”

It took him all of thirty seconds to find it, and then he said, “OK, but how are these pictures going to help us? We’ve got names and faces, but how do we match any of them up with the people who are looking for us?”

I was as stumped as he was. But at least, I thought, he’s including me in his research on this. I couldn’t help but remember the previous time the issue of our working together on such things had come up, last spring when we were unpacking. I had needed to come on lots stronger.

\* \* \*

Mac had been at work on getting the garage organized. I remember it had high stacks of packing boxes lining the garage walls, with our new knobby-tire shod, off-road-ready Jeep and my cute Mary-Kay Beetle squeezed between. At that point, the van was still a gleam in Mac’s eyes.

The master bedroom (our clothes and bathroom stuff) and the kitchen (more this-and-that than I would ever have thought) were unpacked and, pretty much, put away. That left the boxes in the second bedroom, the study, all unpacked thanks to Mac, and the boxes of books in the living room. There were

dozens of shelf-feet of empty bookcases awaiting those books. And, although the book boxes worked nicely as footstools, we really didn't need that many footstools. So I decided to pretend to be a librarian and do my best to ignore all the odd noises coming from the garage.

Because I was only pretending to be a librarian, my effort at organizing all the books we had—a surprising number—was limited to putting tall books on tall shelves and short ones on short ones. So, about an hour later, I had a pile of flattened cardboard boxes and full, if not very well organized, bookcases. It sure looked impressive, but I was not at all confident that either of us could find anything we might be seeking. “Tall or short?” didn't seem like a very effective search method.

But it was done, so I went out to the garage, only to discover that Mac had moved both vehicles outside and created a mound of full packing boxes in the middle of the emptied space. He was assembling a storage shelf against the outside wall.

“Wow. This is going to be some job, looks like. Can I help?”

“Oh, hi. And, yes, you can. I've got this first shelf done. I can put up the second one next to it while you fill this first one up. That sound doable?” He gestured in the direction of the mound of boxes. “I got them organized, a little bit at least, so if you start on the end here by the shelves, those boxes are what goes here.”

“Uh, I can't possibly reach those top shelves.”

“Neither can I, without a ladder. If you put heavy stuff on the bottom shelves, then the step-ladder will let you put the light-weight stuff on the upper shelves.” He grinned. “Hey, you asked if you could help, right?”

I looked everything over and steeled myself. “OK. Where are my garden gloves?”

He grinned again. “Found 'em already. Over there in the corner on top of those small boxes. I thought you might ask.”

Out of excuses, I decided I should just pitch in. “Ah, good, thanks. Um, one more thing. What if I run across something of yours that needs to go into your Secret Place? Is that ready yet.”

“Huh?”

“You know, like those cabinets you had in the crawl space of the south-side house. Where should I put the stuff that was in those, if I find any of it?”

Remembering the next part was still fun for me because at the time I wasn't supposed to know about any of that, crawl space, cabinets, secret stash. He didn't understand that I'd known well all the nooks and crannies of our house. Hell, *my* house, at least if you count whose money paid for it. Sheesh!

“What?” The Mr. Innocent persona tried but failed.

“Oh, *c'mon, man!* You think I didn't hear you clunking around down there in the crawl space months ago? And you think I never went down there to figure out what was happening, to see what all that stuff you were hiding was? The rifles, the handguns, everything else? I live here too, you know. Give me a break, will ya?”

To my amusement, and gratification, he opened and closed his mouth three times before answering. And his face got all red, not the red that I'd seen so much of when he was stressed but the red of embarrassment. I bit the inside of my lower lip hard enough to keep me from breaking out in laughter. I loved the guy more than I've loved anyone else, ever, but now and then he needed a little spanking. I figured that I could make it up to him later. God knows I'm an expert at that.

“Uh. Oh. I guess I never thought of all that. So, what do you do with such things, you ask? Well, I’m hoping that you won’t run across any of it, starting from this end with the finished shelves. See, I haven’t quite figured out what to do with it all, or the rifles. No crawl space. I’m pondering the space up there through that little door,” he pointed up at the ceiling, where there was an access door, “but I bet it’s all full of blown-in insulation up there. Messy.”

“No Plan B? Where are the rifles?”

“Um, I put them in the Jeep with, uh, the other stuff while we’re sorting all this out.”

“Really? In the Jeep? Outside? And I bet it’s unlocked out there. Mac, I’m disappointed in you.”

“Oh. Well, shit.” And he walked over to the wall by the door to the house, slapped one of the buttons there, and the garage door on the Jeep side started its way up. “Good point. Very good point. Even without a good hiding place, they’ll be safer in here than out there.”

Shortly, he returned with the two rifle cases, the one he’d tried to pass off on me as a “bassoon” case once and another one, less bulky, for the smaller rifle.

“I’ve got second trip for a few more things,” he said as he set the cases down.

By the time he returned with a duffel bag and another hard-sided bit of luggage, I’d worked things out.

“Where’d they go?” He looked completely bewildered.

“See? Hiding things in plain sight is sometimes the best approach. Let’s see how many more of these shelves we can get done before supper.”

So he assembled shelves, and that was slow-going enough that it was easy for me to keep up. I unpacked some of the boxes—they held yet more labeled boxes of garage stuff like electrical parts, plumbing parts, parts for other parts—and some I just set on the shelving without unpacking. The pile of flattened boxes grew little by little and then had a growth spurt when I fetched the ones from the books in the living room and from the assorted office stuff in the study.

I found Mac looking carefully at what I’d stowed on the shelves. “So, where’d you hide those rifle cases, anyway?”

“You mean that ‘bassoon’? And, oh, what does it look like? That ‘bass clarinet’?”

“Yeah, yeah. OK, I’m sorry for jerking you around before. Truly. I was just trying to keep you from worrying.” He really did look repentant.

“I appreciate the thought. But you have to know, lover, that all it did was to make me worry more.” I made a show of a big shrug. “Anyway, since you don’t seem to have recognized the cases, maybe we should talk about what better idea you have for them.”

He stared at me, blinked several times, and caved. “Uh, good point. But it would probably be a good idea if I knew where they were.”

“Point taken. But I need to understand some things. Like, did you really think that those crawl-space cabinets in the other house were completely secure? And secure from what? Search warrants? Burglars? Why all the hocus-pocus?”

He’d caved before, but it must have been about just the rifle cases. Now he sat down on a still-full packing box, slumped his shoulders while staring at the floor, and heaved a huge sigh. Then another as he looked up at me.

“Well, hell, Sam. I’m just doing the best I can. Keeping all my professional tools out of sight and out of mind, and out of the hands of everyone else, that’s just in my nature.” He smiled at me and shrugged again. “I’ve been trying to keep you out of the loop on all that stuff in my world. Not because I don’t trust you or anything like that, but to keep you from worrying.”

“Don’t you understand that I’m going to worry all the more when I don’t really know what’s going on? How many times to I have to tell you that?”

“Oh.”

“Maybe you just never thought this through. You met me a few years ago, when you were involved in that business about the nuclear materials stuff. But, c’mon, think about all of my years before that. It’s not like I’m completely naïve about the gray—even the black—side of the law. Your spook stuff, I’ll admit, is another level for me. But it’s really all the same. I spent—well—lots of years immersed in that same stuff, just not so international. And consider this: all those years and years I spent doing what I was doing, you don’t think that a whole lot of that wasn’t done in some clandestine fashion or another?”

“Ah. Good point.”

“I’m pretty sure that you don’t really think of me as just a dumb, blonde bimbo, but sometimes you seem to treat me that way. It’s like you picked up bits and pieces of Middle Eastern culture over the years, or something, and think of women, well, like they do in those Sandland places. But I really do have a brain in my head, y’know? Like now, with the gun cases. Why don’t we just get a gun safe big enough for them and all your other stuff? The kind that can be bolted to the cement floor out here. Seems like this space in the garage is big enough. And that would be secure, I’d think.”

He stared at me, using his poker face, for quite a few seconds before breaking into a grin. “You’re right. Good idea, actually. I never did like that crawl space anyway, and I’m sure I wouldn’t like the attic here. And, in fact, I used to have a gun safe, although I kept it in a secret closet. Until my house got blown up.”

“OK, well, end of lecture. Sorry. And I’ll show you where the rifle cases are when the safe arrives. Unless, God help us, we need them before then.”

\* \* \*

From the perspective of twenty-twenty hindsight, I now understand that the episode in the garage last spring was a sentinel moment in our relationship. Ever since then, Mac has been far more transparent with me about his “consulting” activities, even bringing me into them whenever I could reasonably play a role. He seems to need reminders occasionally, but maybe that speech of mine, in which I unloaded on him more than he really deserved, probably, took root. Whatever, we’ve been happier together ever since, and I haven’t worried so much.

Remembering all that made me laugh at myself—a South Florida girl who moved west and somehow became assertive. Where had that come from? I’d been a South Florida resident for almost all of my entire life. Mostly, when people asked me how many South Florida years that added up to, I gave them a steely look and said something about “enough to know better.” But it was a lot.

As much as I was terrified at first of Colorado—the terrain, so different from the South Florida flatness, the very concept of winter, and even summer nights with lower temperatures than I’d ever encountered before—it all clicked for me. And our move from over on the west side of the Front Range to Estes Park, on the east side, made it all seem like I’d been searching for such a place forever. And now, moved into this nice cozy townhouse near downtown, it truly felt like home.

It was both familiar and different. Familiarity came from the legions of tourists that over-ran the town, but in Colorado during the summer and early fall instead of the Florida invasion in winter and early spring. One thing that made it so different from South Florida for me was the preview I gleaned about my own possible future. I realized that, instead of pretending to stay young with radical cosmetics, plastic surgery, and clothes even more stupid than I had worn on the street, I could simply age gracefully. That, after all, seemed to be the approach of the other full-time residents older than I was—natural aging plus comfortable shoes, jeans, and, mostly, flannel shirts. And it gave me valuable suggestions: from what I was seeing, short gray hair could be way, way more attractive than long gray hair. And, no doubt, easier to take care of.

Although its alarm wasn't going off yet, that inevitable biological clock was ticking away inside me, and I was keenly aware of it. Mac, I was convinced, would much prefer the natural approach, and I was going to make sure that my experience would trump any potential trophy's attractions. It occurred to me that all the gun-related stuff we'd been through over in Utah would only add to my credentials in that regard, although it wasn't how I really wanted to spend my time.

As crusty an old buzzard as he was, I was determined to make sure that he was stuck with me. Together, I thought, we'll figure out how to deal with that Army of God.

I pulled his chair back—it was on castors—swiveled it around, and sat down on his lap, then grabbed him into a hug. The chair squeaked in protest, but he just hugged me back.

\* \* \*

## Fifteen

That hug of ours was one of those from which one thing leads to another, and, quite a while later, we both realized that it was time for dinner, that we were somewhere beyond being merely hungry. But the cupboards were still pretty bare. We'd forgotten our intention to do real grocery shopping somewhere between examining that stupid hard drive and the later distraction.

"No food in the house? Woman, what am I ever going to do with you?" We were wrapped together in a tangle of sweaty sheets, and he was not at all successful in looking stern.

"Hmm. Seems like you just did, sir. But I do understand the problem here. I'm famished. How about we go out and find someone to prepare something for us?"

"Ah. Good plan. That's why we moved to this part of town, after all, to make foraging easier. We can walk downtown. I remember a place down the hill called the Big Horn. Uh, Grill. Restaurant. Inn. Something like that." His eyes lit up. "They have barbecue!"

"Oh, yeah. That tasty, low cholesterol, health-food stuff, eh? The kind of thing I'm trying to feed you to keep you alive and healthy?" I flicked my eyelashes at him a couple of times.

"How about if I don't order the French fries with it?" He looked so hopeful that it made me giggle.

"Barbecue, huh? Y'know, now that you mention it, that does sound good. Yum, ribs. And if we walk, we'll be smelling it for a couple of blocks. I'll probably be drooling by the time we get there." I tried to look thoughtful. "Suppose it's cold out? Do I need a warm coat?"

"Well, you need more than what you're wearing just now." He smirked and dove for my chest, but I wriggled away.

“Food! I need food, and so do you. We can start over later.” My wriggling wound up with me on the floor, but that only made scrambling to the bathroom, to a quick, hot shower, all the easier.

Our walk down the hill to West Elkhorn was almost a connubial strut, partly resulting from the previous hour or so, but mostly from the steepness of the hillside—we seemed determined to walk arm-in-arm despite the grade. We quickly made it down the hill and then up West Elkhorn a couple of blocks to the Big Horn and its siren call of smoking meat. Late October, a Monday; it took us no time at all to get a table, put in our orders, raid the salad bar, and commence eating.

Mac was still gnawing at bones when he lifted an eyebrow and asked, “So, you do realize that we need to walk back up that hill to home, right?”

Trying to be lady-like, I smothered a belch, but with only partial success. “Yes, we do. And, as I recall, it was a pretty steep hill. I’m glad I’ve had those three big glasses of wine to fortify myself for the task. But there are a couple of flat blocks first to get our legs going, no?”

“There are, and to figure out how to put one foot in front of the other without tripping as well.” Mac tucked some bills under the tab and stood, somewhat more steadily than I thought I could.

But he gave me confidence, and, after bundling into our jackets, gloves, and so on, we tottered out the door and turned left down the main drag, Elkhorn Avenue, to head home. I was proud that my eyes were able to focus on the street sign.

The brisk air and walking didn’t take long to yank me out of my half-hammered cocoon, and by the time we turned left again to head up the hill, I was feeling much less fuzzy. I’m certain that, if we’d been able to keep walking up that hill and on to home, I’d have been pretty sobered up by the time we got there.

But it didn’t happen that way. Oh, eventually I got home sober, but it was much later than I’d thought it would be, and it involved considerable excitement in the meantime.

Although the street seemed deserted, it was full of parked cars, something pretty common in our part of town, what with all of the old cottages rented out for short-term vacationers. About half-way up the hill, a car up ahead pulled out of its parking place into the center of the street, flicked on its high-beam headlights, and waited, stopped in the middle of the street.

It was the sound of its engine, more than its lights, that told me another car was doing the same thing behind us. We were lit up like it was noon, and boxed in to boot.

“Shit.” It surprised me how calm Mac’s voice was. “And it doesn’t even look like there’s anywhere to run.”

“Tell you what, lover. If I ever, ever object to your carrying heat, ever again, you remind me of this situation. OK?” I could feel the adrenaline pumping.

“OK, well, thanks. But this doesn’t look like a very auspicious time and place for a shoot-out anyway. We’re out-gunned, no doubt. And collateral damage could be pretty bad. The Chief wouldn’t like it at all. Let’s show ’em our hands.” He took his hands out of his jacket pockets and held them out, with fingers spread. I did the same.

Derisive laughter filtered up the hill from behind us. “Good to see we’re dealing with people who have at least a bit of brains. You two just hold that pose for now, don’t move even a little bit, and you won’t get hurt. Yet.”

The “yet” part didn’t sound good at all.

Footsteps came closer and closer up the hill behind us, and then I noticed in my peripheral vision that Mac's arms were yanked behind him. I heard a scratching noise that I recognized as that of a zip-tie being tightened. Then it was my turn. Whoever was back there did it so tight that it hurt.

After that, Mac got frisked, and so did I. Except my frisking really fell into the category of a whole-body grope. At least I had long experience with such treatment, so it wasn't too traumatic for me.

"Damn. I'm amazed that you're walking around clean, MacQuarrie. It sure makes things easier." There was a little push in the small of my back. "We're all going to stroll up to that car up there now, OK? Nice and easy. This piece I have has a silencer, so I don't need to worry about noise. And I've got a full, 15-round clip in it. Get me?"

I didn't notice Mac's response, but I nodded gently.

As we walked up the hill toward the blaze of light, the guy behind us must have made some sort of signal, because all but the parking lights were suddenly extinguished. As my eyes adjusted, I could see several figures standing by the sides of the vehicle, with what looked like baseball bats on their shoulders. And either those were toy baseball bats or those were very large humans holding them.

Our captor's eyes must have adjusted, too. "Ha! Reckon we won't be needing the persuasion just now, boys. Let's stash the bats for later. We'll put these two in the back and pull the cover over them."

The vehicle turned out to be a boxy, full-sized SUV that I didn't recognize. True to his threat, our captor marched us up to its rear and shoved us into the luggage space after its hatch magically opened. So I was left wondering about what full-sized, boxy SUVs have remote-control hatch openers.

As the window-shade rear cover was pulled out over us, and everything went dark, I was thinking how nice it was that the luggage space had carpeting. At least it was a little soft.

\* \* \*

Lying there in the dark, hands bound behind me, I could feel Mac wriggling around. Eventually his breath tickled my right ear.

"Sam," he was whispering, "can you hear me? I think I can tell if you nod. We need to be pretty quiet."

I nodded.

"Good. So, I'm going to narrate what I think our route is. If you disagree, shake your head, and I'll guess again. But if you understand, keep nodding. That way, we'll both have some idea of where these bozos are taking us, OK?"

Another nod.

"Wup, here we go." His nose bonked the side of my head as the SUV started to move.

It eased down the hill, and shortly I felt myself rocking to the right. "That's the left-hand curve at the bottom...Here's the stop sign, and...we're turning left, eastbound on Elkhorn. So far, good...Um, that little roll must have been the curve into downtown...and now we're stopping at the light at Moraine...and turning right."

It all felt correct to me, so I kept nodding. Mac tracked us south on Moraine, around the deceptively sharp curve onto the west-bound stretch, and then was silent for a time during our progress toward the National Park. But then there was a little roll to the left.

“Ah! That must have been the slight right turn onto High Drive, by the Domino’s. We’re going up into the High Drive area somewhere. That narrows things down a lot!” The glee in his whisper got me smiling as I nodded. “Must be that they’ve rented a place up here, given that they’re probably all from out of town. But there are lots of vacation rentals hereabouts.”

A long straight stretch, a right and then up a hill on gravel, another right, then some jockeying around finally brought us to a halt. I couldn’t have told you an address, but I did have a good general idea of where we were.

Then it was time for the next thing. I heard a garage door closing and the click of the hatch unlocking and a hum, probably the motor that raised it. The cover over us retracted, and I was grabbed by the feet, turned, and pulled so that my lower legs cleared the back end of the SUV. Then one of them grabbed my shirt front and, as he groped me, lifted me into a sitting position. There were lights in our faces, but I could tell that the same thing was happening beside me with Mac.

“OK, folks, end of the ride. Now, what’s going to happen is that we’re all going to walk into the house together and down a hallway, right? No funny stuff from you or we’ll have to get rough. There are five of us, we’re armed one way or another, and the two of you can’t use your hands, can you?”

The lights were flashlights, and were wavering around. I could tell, between wavers, that the speaker was not at all like the other four but rather more my size—several inches shorter than Mac, and maybe a foot shorter than the other goons.

I decided to offer at least a little push-back. “Do you really want us to get gangrene in our hands? These zip-ties are seriously tight. My hands stopped tingling on the way over here and feel dead now.”

“We’ll take ’em off when we get inside. Let’s move.”

And they actually did take the zip-ties off, just before shoving us onto a couch in what was a rustic, mountain-cabin living room. Mac and I both rubbed our hands and wrists to get the circulation going again. At least it had been only fifteen minutes or so that the zip-ties had been in place.

Because that first little push-back had worked so well, I decided on a second. “So, you must know that we were at a restaurant just before you grabbed us. Can I make a trip to the bathroom, please? Before we get started on whatever next thing you have in mind? I don’t really want to embarrass myself.”

The Twerp, as I’d decided to call him, scratched his chin. “That seems reasonable. Tommie, take her into the first bedroom down the hall and let her use the john in there. Keep the door open a little so you can see if she tries to get out the window. And don’t screw up.”

I put phase one of my plan into play as soon as I could. The first step was to walk toward that bedroom, with the young fellow called Tommie following, putting as much sashay in my hips as I could manage without being over the top. I could feel Tommie’s eyes watching every motion. The bedroom in question, apparently occupied by one of them, was a mess, and my expectations for the bathroom plummeted. I did notice, however, a new-looking Louisville Slugger standing in a corner.

Tommie, who seemed to be a football-lineman-sized teenager, was polite enough to let me close the bathroom door to a crack, so, despite the bathroom’s fulfilling my plummeted expectations, I took the opportunity to recycle some of the wine I’d had for dinner before I made the appropriate flushing and hand-washing noises.

Then it was time for phase two of my plan. I scrubbed my face with a clean towel—at least there were a couple of those—to get some color into my cheeks and unbuttoned my top two shirt buttons. With some subtle adjustments of my bra and a tight tuck of my shirt-tail in back, I made The Girls pop

to front-and-center. With enough cleavage showing to hide that SUV in, there was no subtlety there, none at all.

I sashayed back out to where Tommie had sat on the bed to wait for me and knelt on the floor in front of him, all the while wiping my hands on that clean towel.

“Tommie?” I made my voice a throaty whisper. “That was very polite of you. Thank you. And I’d like to *really* thank you for it. Can you stand up for me?”

“What? What are you doing?” His whispered response told me what I needed to know—he was not ready to shout for help. “Uh, wait, we don’t have time to fool around!”

As he stood up, I fumbled with his belt buckle and then the button and zipper on his jeans. He seemed to have figured out what I was doing, because he didn’t ask again.

“Oh, don’t worry. I’ll be quick.”

All this wasn’t something I’d never done before, and it took just seconds for me to get his jeans and underwear—a grungy pair of plaid boxers—down around his knees. Out of practice, it did take me quite a bit of self-restraint not to gag at the disgusting odor, something resembling stale mushrooms and old horse sweat, that I was confronted with, however. If I’d been planning to do what it was that he was expecting me to do, and no doubt fervently hoping for, I’d have insisted on washing him up first.

Making sure that my head was tilted back enough for him to be able to see, I licked my lips as I slid my hands up the inside of his thighs and said, “Ooh. Impressive package, Tommie. Very impressive. I’m going to really enjoy this, and I hope you do, too.”

His breathing told me that he was planning to enjoy it a lot.

But, alas, it didn’t work out that way. When my hands reached his crotch, I grabbed that package of his, as high up as I could, in a death grip with my right hand. Then I pounded on the bottom of my right fist and his parts below it, those extremely delicate parts, with the palm of my left hand, like in the countdown for rock-paper-scissors, only much harder, and began to yank, twist, and tug without mercy, pounding all the while.

I’m no musician and certainly don’t have perfect pitch, but it wouldn’t surprise me if that scream of his was a high C. And he held it for maybe fifteen seconds, during which I continued to yank and pound, until I began to hear sounds of a ruckus coming from the front room.

After one final smack, I left Tommie, still screaming, on the bed in a fetal position, arose, and picked up the Louisville Slugger I’d seen, the one in the corner. I pretended that Tommie’s head was a low, outside pitch that I needed to bunt down the first-base line. Besides stopping his annoying screaming, putting him out just seemed like the humane thing to do.

Then, despite the sounds of the ruckus in the other room, I washed my hands. It was an important priority for me.

\* \* \*

When I was in high school down in South Miami, I tried out for girls’ fast-pitch softball and wound up making the varsity team. That success earned me a full-ride scholarship at the University of South Florida, where I even helped win a championship for the softball team in addition to getting my combined journalism and art degree. And this despite the fact that all of my coaches, with some disgust, proclaimed that I threw like a girl.

But for some reason, I was a wonder with the bat, so the position I played was Designated Player, like the Designated Hitter in the American League but able to bat for any of the defensive players, not just the pitcher. The coaches gave up on trying to teach me to throw and let me take batting practice almost full time, so I got really good.

That fateful day, by the time I'd finished washing my hands and wiping down the handle of the Louisville Slugger, the front-room ruckus had calmed down a bit. The reason, I discovered when I walked back down the hall with the bat on my shoulder, was that two of the large fellows were lying comatose on the floor, one of them with a leg at an extraordinarily impossible angle. He wasn't going to be walking any time soon, if ever.

The third large fellow I'd left with Mac and the Twerp had his back to me, and Mac, struggling with his arms pinned behind him, was not quite in view, most of him hidden behind that broad, muscular back I was confronted with. The right arm attached to the massive shoulders above that broad back was cocked to throw a haymaker at Mac, but his struggling made the target difficult.

"Hold him still, willya? I don't want to miss and hit you instead." The deep rumble of the command only made Mac struggle harder.

I wasn't clear on how the Twerp was at risk, because he was invisible behind Mac. But that really didn't matter, as the delay was all I needed. I took my stance and treated the goon's right kidney as if it were a letters-high fastball right down the middle. The relatively soft tissue compressed enough that the bat contacted something harder, which I could feel crunch. Then, because the opportunity presented itself, I switched to leftie—my full-time batting practice had allowed me to become a switch-hitter—and knocked his left knee out of the ballpark.

After that, it was trivial to subdue the Twerp.

Mac was still breathing hard when he winked at me. "Good work, Sam. Two for me and two for you. We make a pretty good team! What did you do to the guy in the other room, anyway? I've never heard that noise before."

I wasn't really breathing hard, but my adrenalin level was sure high. And I was sober as a judge.

"Let's just say that his future as a biological father may be in some doubt." I took a couple of deep breaths and looked around. "I think I see a badly broken leg on one of these guys. What happened to the other one?"

"Crushed larynx, maybe a broken neck. I'm a little worried about him, actually."

"Ouch. But it's hard to feel sympathy for bruisers who come after you with baseball bats." I shrugged. "Anyway, what now?"

"Not sure. I'm, er, a bit distracted." He was staring at my chest, and I noticed that the Twerp was, too.

I'm certain I blushed a little, but I didn't take the time to worry about it. Instead, I turned my back, buttoned up, and readjusted The Girls into a configuration more presentable for uncertain company.

"OK, can we be serious now?" I turned back to Mac and gave him a dirty look.

"We can. How about you watch shorty here while I get the other four trussed up? His piece is on the table by the door, unless you want to stick with the bat." The gleam in Mac's eye showed his amusement. "After that, he and I need to have a little chat."

I chose the pistol, the suppressed Glock that the Twerp had pointed at us earlier. That way, I wouldn't have to stand so close to him. Apparently, he had soiled his pants.

Shortly, the four unconscious big guys, thoroughly immobilized with their belts and other sundry means of tying them up, were lined up in a row by the fireplace—Mac had dragged Tommie in from the bedroom and even, in a fit of decorum, pulled his pants up. The Twerp was sitting in one of the straight chairs that had been at the dining table, arms zip-tied behind him and to the back of the chair, legs zip-tied to the chair legs. Mac was across from him in an arm chair, gently cleaning his fingernails with the tip of a large chef's knife he'd found in the kitchen. The contents of the Twerp's wallet were on display on a side table next to Mac's chair, the table on which the pistol had been sitting, along with a cell phone.

“Eustus Winters' it says here on this Colorado driver's license. Address in Rifle. Tell me Eustus, are all these other fellows from Rifle as well?”

The Twerp was sulking. “I'm not telling you shit.”

“You'd rather sit in it than tell it, huh?” Mac grinned at his own joke. “Well, let's see. Perhaps I ought to provide you with a bit more about my background than you probably found out already. I expect, knowing my name and all, you also know that I have experience working for some interesting agencies, with many assignments in the Middle East. I can't imagine, however, that you know much about those assignments, so let me fill you in a little. See, one thing I ran across over there were techniques for making people cooperate, techniques that make our tricks, such as water-boarding, seem like punishing a boisterous kindergarten kid by sitting him in a corner. A lot of folks here in the U.S., being pretty civilized and all, think of water-boarding as torture. The fighters I ran into in the Middle East, those on both sides of the conflicts over there, they laugh at that notion—they're not so civilized, I guess. You'd be amazed at what they can accomplish with nothing more than a simple kitchen knife. Care to find out?”

The Twerp continued to sulk, but Mac had his full attention. “You wouldn't dare.”

“You saw what I did to your two friends there. You saw what Sam did with her baseball bat. And I don't think that either of us would have wanted to see what she did to poor Tommie. What makes you think I'll be nice to you?” Mac paused for effect and stabbed the knife through the Twerp's driver's license into the tabletop, where it stuck, quivering from the impact. “So, one more time. Are all these other fellows from Rifle as well?”

The Twerp's eyes were locked onto the chef's knife. “Not exactly. Out that way, yeah. But why don't you just look at their IDs?”

“Just trying to establish rapport, Eustus. That's a useful interrogation tool, especially as a prelude to the real stuff. So you're saying that all of you are from the western part of Colorado District 3 of the Army of God, that right?”

The Twerp looked startled. “What do you know about all that?”

“More than you might think, Eustus. For example, it's pretty clear that you're in charge of this little operation, disaster though it may be. Does that mean you're a Deacon? Or what? And who's your Bishop?” Mac gave the handle of the knife a little sideways nudge that made it sway back and forth. “More to the point, where'd you get your orders to harass us? And from whom?”

“I never know where orders come from. That's the way our system works. All I know is that we were supposed to capture you and your whore and be ready to turn you both over to someone else. Who and where and how weren't specified. Yet.” The Twerp was beginning to sweat, little droplets forming on his forehead.

“Tsk, tsk. You should be nice. One more hint of disrespect, to either me or the lady here, and I’m going to smash your right hand with that baseball bat. Absolutely pulverize it. You’re right handed, aren’t you?” Mac, voice still calm, had fire in his eyes. “And you notify these folks of our capture how?”

“Uh, text message.”

“Good. Maybe we’ll send that message. Can I assume that further instructions will arrive to your phone the same way?” Mac picked up the cell phone that was on the table. “Your phone? Oh, look, it wants a password. What’s the password, Eustus?”

The Twerp’s eyes were on the still-swaying knife. “Uh, it’s my zip-code.”

“Now, isn’t that clever! Who would ever think of trying that?” Mac glanced at the driver’s license and poked at the phone’s screen, nodded, and continued poking. “Oh, look. ‘Deacon Winters.’ I was right! How gratifying...Ah, yes. Email. Hmm... ‘Send text “Pickup completed” to my number when ready for transfer.’ Now, whose number might that be, Eustus?”

The Twerp’s sweat was heavy enough to begin running down into his eyes, which still watched the knife. “OK, look. I’m cooperating, right? I told you my password, and it worked, right? So you’ve got to believe me when I tell you that I don’t know who it is. Yeah, the phone number is there, but I don’t know whose number it is. Honest to God. All I know is that he’s an Archbishop.”

“Your Archbishop?”

“I don’t know for sure. Probably not, because my Archbishop knows me and he’d just call me and we’d talk about this all. But I really don’t know. Honest to God.”

“Let’s see. 435 area code. Wonder where *that* is. Sam? Do you know how to look up area codes on your phone? Here, I’ll take the Glock.”

It took me a couple of minutes of poking to find it. Without a phone app, I had to get to the internet and do a search, always a more cumbersome process.

“Oh, here it is. Southwest Utah. Where we were a couple of weeks ago, right?”

“Yeah, when we were...ah, well, when we were out that way. Goodness me.” Mac scratched the back of his head. “How depressing. Looks like we’re going to have to call Winnie. But first, we have to deal with our friends here. Eustus, how do you think we should proceed here? Go off and leave y’all like this? Or what?”

I could tell that the Twerp didn’t know whether or not to be hopeful. “Well, uh, it would sure help if you could cut me loose. So I could, you know, get cleaned up and help the others.”

“Then what are you going to do?”

“Uh, we’ll get in our cars and head home, I guess. Or I’ll get them in the car somehow. That is, if you bring the one you take back here. Or else, you could just leave it parked somewhere. I don’t think any of the guys can drive anyway.”

“And how do we know that Sam and I will be safe in the future? You do still have those orders, after all.”

“Are you nuts? You took out the four best Army of God operatives in the State of Colorado. You’re radioactive, man. We’re staying far, far away from you in the future.”

\* \* \*

## Sixteen

We talked it over and finally decided that the Twerp's suggestion was the most reasonable course of action. It meant that we'd have to trust him, of course. But it also meant that he'd have to trust us not to press charges for the kidnapping. And, after all, we knew his address now. I made a point of getting pictures, using my phone, of their drivers' licenses, and we took fingerprints from each of them as well. And, because he was still zip-tied to the chair when we announced that we were going to take his cell phone with us, the Twerp couldn't really put up too much of an argument. We promised to mail it back to him when we were finished with it.

So there was a sort of uneasy truce, with Mac and me holding the trump cards. Just to be polite, we even gave him back his suppressed Glock, minus its magazine and ammunition, of course.

The SUV was the obvious choice for the Twerp and his crew to ride home in, so Mac and I left in the other car, a several year old Honda Accord. At home, Mac stripped it of its personal property and identification, except for the vehicle identification numbers, and I followed him in our Jeep across town to a parking lot that seemed to be a likely place to leave it indefinitely.

Much to my surprise, we were finished with everything by 9:30. I guess we'd had an early start on dinner, and everything else went more quickly than it had seemed. It felt good to get home.

This time the big hug was one of relief, and it didn't go anywhere. I was glad for that, because, after the interlude with Tommie, I wasn't feeling sexy at all, not a bit. Even though I'd washed my hands, I still had a sort of icky feeling all over, especially in my stomach, and I don't think it was from bad coleslaw. I was just very out of practice—but I guess that classifies as a Good Thing. Sure beats being *in* practice for that sort of activity.

Anyway, we pattered around a bit, took showers—separately—and retired earlier than usual. Our respective dosages of adrenalin had worn off, and we were both exhausted.

The next morning, I slept in. Mac, per his usual routine, got up early, made coffee, and sat down behind his computer, which was where I found him when I finally managed to greet the day. Still bleary-eyed, I hastily set down my cup of coffee when he jumped out of his chair to give me a morning hug.

“Aha! Sleeping Beauty awakens just in time for some amusement. I'm about to call Chief Walker.”

“Er, fine with me. Except don't expect me to contribute much, at least not until some of this caffeine kicks in.”

But the Chief was in a meeting, so Mac had to leave a message. Then he tried Winnie.”

“Small, FBI.”

“Morning, Winnie, it's Mac, and Sam's here with me. How's everything?”

“Good as can be expected, I guess. Except when you call, there's always the chance that things will go downhill.”

He laughed. “Yep, that's me. The guy with the dark cloud. But maybe this time it's not so dark.”

He filled her in about our little Army of God encounter and its outcome and managed to send her email with the drivers' license photos I'd taken all at once.

“It's early yet, but so far I've found out that the 435-area-code number is for an anonymous, pre-paid cell phone with no other information. 435 is southwest Utah. And, as far as I can tell, there were no emergency-room visits here in Estes Park last night by guys with broken legs or bruised balls. I guess they just headed west for home.”

“Sam, did you hurt that poor boy?”

I quickly swallowed the sip of coffee I’d just taken. “I heard that his church choir needs another soprano, Winnie.”

As the only guy in the conversation, Mac didn’t even try to hide his wince.

“And, man, did she ever succeed. In any case, I think that these Army of God fools are out of our hair now, the Colorado ones at least. And out of Chief Walker’s hair, too, what there’s left of it.” He paused to take a sip of his own coffee. “Trouble is, it’s not clear that whoever has that Utah phone will be satisfied with all this.”

Winnie’s voice sounded depressed. “Yeah, probably not. And, what’s worse, I’ve got my own little dark cloud this morning. Seems that last night, Michael Young got sprung from where we were holding him by an unknown group of masked gunmen. Nobody got hurt, but they got away clean.”

“Really? Where were you holding him?”

“A county lockup, down in Utah County on the south side of the metro area. It was supposed to be hush-hush. From what I’ve heard, it seems that the locals may have looked the other way while it happened. It’s hard to explain how no one got hurt otherwise.”

Mac paused for long enough that I could tell he was thinking carefully about something. Winnie wasn’t so patient, though.

“Even though it wasn’t an FBI screw-up, Mac, I feel responsible somehow. I know how much you two wanted to see Michael Young prosecuted for everything we could find on him.”

“Not blaming you, Winnie. Just thinking.” Mac reached a decision. “I’m going to send you a batch of text files, computer files, that I have. It would be better if you didn’t ask me how I got them, for now at least. But I can tell you that they’re legit, as far as I know. It’s the database of Army of God members. And I’ll also send a couple of executables that probably assemble the text files and let you do searches and so on. I’m afraid to run them on my computer, but your computer guys should know how to deal with them.”

“But you don’t want me to ask you where you got these files?”

“It would be better to wait until I can get a couple of drinks into you in a social setting, when you’re in a good mood.”

“Shit.”

“Yeah, well, don’t fret about it just now. Just see what you can figure out from the files, OK?” He’d been fiddling with his keyboard, attaching files to a new email, and he finally clicked the “send” button.

“Wherever this came from, I bet there’s more. Lots more. That you’re not telling me about.” Winnie sounded like she might be getting mad.

“Not that’s pertinent to this thing now. And you’ll be the first to know if something I have becomes pertinent.” Mac winked at me. “Not to change the subject, or anything, but what’s your plan for Michael Young?”

This time it was a long pause from Winnie’s end, but finally she spoke up. “How hard did you look at all this information you just sent me, Mac?”

“Not very. Just enough to verify that there are no Army of God members living in Estes Park. Like I said, the guys we beat up were all from western Colorado.” Mac looked a question at me. “So, what are you finding, Winnie?”

“Well, there’s this sub-directory with all the names as sub-sub directories, right?”

“Right. We found the senior Templeton brothers in there.”

“Did you happen to notice the one labeled ‘Ronson-underscore-Paul-underscore-D’? Or the one labeled ‘Young-underscore-Michael-underscore-M?’”

\* \* \*

We hit the road in the Jeep about eleven that morning, after hearty breakfasts and a quick job of packing that included both of Mac’s long guns and other sundry equipment. Winnie had talked us into joining her in St. George, where she was meeting Seth Rothstein and Henry Runninghorse, who were driving up from Flagstaff. The four of us, she said, were the only people she felt she could trust for what had to be done. She didn’t really elaborate on what that was, though.

I was a little surprised that Mac just seemed to assume I’d be coming with him. Maybe, I thought, he was accepting me as a full partner than as a protectee.

Our mapping program told us that it was a bit over ten hours of driving time, but Mac pushed both the Jeep and the speed limit enough to make it in nine. We saved time by nibbling in the Jeep rather than stopping for meals, and staying on the interstates helped a lot. It was a bit before eight in the evening when we pulled into the parking lot of the FBI office in St. George, the same place where that hideous wrap had been installed on our van some two weeks before. Seth and Henry, with a much shorter drive behind them, were already there, in a conference room with Winnie, a pile of topo maps, and several empty pizza boxes.

“Henry, Seth—long time no see.” Mac was still working out the kinks of the long drive as we walked into the conference room. “I see that Winnie charmed you into being part of this little shindig as well.”

Seth rolled his eyes as, uncharacteristically, perhaps, Henry spoke up. “You’re the ones charmed, Mac. We’re here on orders. Although, you know, when I heard what’s up I think I might just have volunteered anyway. And it’s good to see you again, Sam.”

I smiled and nodded at his greeting.

Winnie finally jumped in. “Glad you made it in such good time, Mac, Sam. Find a place to stay yet?”

“I made us a reservation from the road, using one of Mac’s sets of fake IDs. Just in case our real names are still mud over here in Utah.” I’d found a small, comfortable suite at a La Quinta for us, something I thought Winnie would approve of when our travel expenses got to her.

Winnie could only shake her head. “As much as I have to officially disapprove of fake IDs, this time it really does seem smart. You guys are a pair of real cowboys, though, I’ll say that.”

“Yippee-ki-yay, as a famous movie star once said.” Mac grinned. “Anyway, got a plan yet?”

“I dug around in that mystery database you sent me and discovered that Ronson is an Archbishop in this Army of God bunch, looks like the senior member in all of Utah. That doesn’t mean he’s a party to anything that’s been going on, of course, but it’s sure suspicious, given what those Colorado guys told you.” Winnie shrugged. “But we’ve got no probable cause to arrest him. And he is a county sheriff, after all. Elected official and all that. We can’t go off half-cocked on this one.”

“OK, sounds brilliant. Plan A: don’t go off half-cocked. I’m also kind of hoping for a Plan B.” Mac held up his hands in a “surrender” gesture. “Sorry, sorry. I’m a little burned out and cranky from all the

driving. That Jeep of mine is a horrible high-speed road car, is all. Let me try again: you're right about having a solid reason to take Ronson down. Any ideas?"

"The best thing we've come up with is to use you as bait, Mac. From what you said, Ronson's most likely the guy that put that Colorado Army of God bunch after you. How about I invent some reason to meet him up in Red Canyon, where those girls' bodies were found? New evidence or something. And I can let slip that you'll be with me."

Mac scratched his chin. "That's his county, isn't it? So he'll be interested in any new evidence. But I'm not sure about the idea of my being bait."

"Me, neither. I mean, he's my bait, and I don't want him eaten." I tried not to sound too whiny.

"We can get there early and set up Sam, Seth, and Henry in the rocks with rifles around the parking area up at the end of the road, where you have to turn around, and plan to meet Ronson there. Then we'll all be covered."

"Unless Ronson shows up in force and we're outnumbered."

Winnie smiled. "I seem to remember that you two managed to deal with being outnumbered up on the top of that canyon wall at the Templeton meth lab."

"Not my cup of tea, Winnie. I don't want to go through that again." I was shaking my head. "But if you can get only Ronson to show up, maybe that would work, with the three of us in the rocks and you and Mac waiting to talk to him. Assuming he didn't know we were there."

"Then we'll set it up that way. It'll take us a few hours, maybe two or a bit more, to get up there, so I'll see if I can get Ronson to meet us around noon. That sound OK to you?"

"I need a good night's sleep first." Mac was yawning.

"Works for me, Winnie. I'm not sure that all five of us will fit into the car we brought up, though." Seth was looking dubious about the prospect.

"Sam and I will drive up in our Jeep and meet you there, by the highway, how about?" Mac, I knew, wasn't about to let the FBI team see his rifles.

"Let's plan to get there way early, so we can find good positions up in the rocks." Henry was thinking ahead, it seemed.

"Ah, man. I've got all sorts of ideas. But I'm beat. Can we talk about this while we're driving in the morning?" Mac yawned yet again. "I've still got that satellite phone, Winnie. Have you got one, too? We could have an all-morning conference call on the road."

"Good idea, Mac. Let's plan on that." Winnie looked even more relieved than Mac did. I guess he wasn't the only one who wanted a good night's sleep.

We were on the road by 7:00 Wednesday morning, after a quick bite at the La Quinta's free breakfast bar. The phone didn't ring until we reached the turn-off for Panguitch several miles north of Cedar City, a good thing because the lower speeds on that curvy state highway across the mountain range quieted the rumble of the Jeep's tires somewhat, making it easier to hear the conversation. Mac had figured out how to run the satellite phone through the Jeep's Bluetooth system, so we were able to do a real conference call on our end.

"Morning, Mac, Sam. Is this connection working?" Winnie's voice, while friendly, was all business.

"Five by five, Winnie. You're on our speaker system." Mac nodded at me.

"Morning, Winnie. Hey Seth, Henry. You guys just getting started out?"

“We’re a bit north of St. George at this point. We’re turning at Cedar City to take State Road 14 over to US-89. It’s a bit longer than the way we came back from Bryce a couple of weeks ago, but I don’t want this SUV being seen in Panguitch. Too obvious.”

“Ah. Good idea, Winnie. We’re taking that quicker route, the one we used before. But Jeeps are a dime a dozen out here, even ones with Colorado plates.”

“Just don’t get popped for speeding, Mac. We’ve got plenty of time. I sent email to Ronson last night, and he agreed to meet us at the end of that road in Red Canyon at noon.” Winnie paused and took a breath. “So, Mac, you mentioned ideas last night. Want to tell us?”

“The best one I’ve come up with is that throw-away phone I’ve got the number of. How about if I call it when we’re meeting with Ronson? Call it and see what happens. It could be a hoot.”

“I didn’t mention that you’re going to be there, Mac. Thought I’d save that tidbit for extra persuasion if Ronson balked at the evidence ploy. But he bit on it right away.”

“Hmm. Well, I don’t know the exact layout of the place where we’re meeting him. In particular, I don’t know if we can hide our Jeep up there. If not, he’ll see it and know something’s up right away.”

“As I remember, there are a couple of turn-offs up near the end of the road that might work. We’ll have to play it by ear, though. Anyway, I like the idea of calling that phone. And, you’re right. If he pulls it out of a pocket and says ‘hello,’ it would be a hoot. And maybe, just maybe, enough evidence to arrest him then and there.”

“For what?”

“Oh, conspiracy. Interstate racketeering. Maybe something with the word ‘terrorism’ in the title.” She chuckled. “I’m sure I’ll think of something. Or maybe Seth or Henry will. Use your imaginations, fellas.”

“OK, sounds like we have a plan. Sam and I are well ahead of you, so rather than wait out by the highway, I’m going to drive up to that parking lot you talked about and get Sam set up to cover us. When you get there, Seth and Henry can do the same, from other directions, and we’ll be ready. And I’ll see about hiding our Jeep, or at least disguising it a little.”

“Sounds like a plan, Mac. See you up there.”

\* \* \*

After turning south on US-89, Mac was very careful with the speed limit through the little town of Panguitch. A few miles later, we turned east on State Road 12, and, after a few more miles, Mac turned left onto a gravel county road. He pulled over to the shoulder as soon as there was a wide spot.

“Disguise time.” He winked at me and jumped out. “How about you find this road on the maps, then call Winnie and verify that it’s the right one?”

As I was fiddling around with the computer and its various maps and then the satellite phone, I heard Mac digging around in the back and then doing something at the rear end with a power screwdriver.

He appeared a few minutes later, dusting his hands off. “I just put that Utah plate Winnie gave us for the van on the back. It’ll get all dusted up going up the road here and look realistic wherever we park this thing. All we have to do is park it nose in, so the front plate doesn’t show.”

“Or,” I tried to look cheery, “you could just also put on the front Utah plate, too.”

My cheery look was answered with a dirty one, and grumbling ensued. But the front plate got put on.

Meanwhile, my computer fiddling, which included the Google mapping utility, showed me that we were on a county road that appeared to be all gravel, headed northward for a couple of miles, that ended in a large cul-de-sac that was apparently used as a parking lot, if the several cars there in the satellite image were any clue. There were several off-shoot roads, or maybe wide trails, to the west and one to the east, into what looked like slick-rock territory. They all sort of petered out instead of ending with parking or anything like that. And Winnie, via a quick phone call, had verified that we were on the correct county road.

So when Mac climbed back behind the wheel, dusting his hands off all over again, I was ready with the information he was wanting. Computer research sure beat screwing on license plates.

“Ah, excellent. It must have been one of these little side roads up by the end where they found the bodies. Winnie was talking about how difficult it looked to get that Hummer in there. But we can go and park in this lot and pretend that we’re hikers.” Mac put the Jeep into gear, and we started up the gravel road.

“And what then?”

“Well, what I’d like to do, and you need to weigh in on this, is to walk with you and the TAC up past the lot and into those rocks to the north. See if we can find you a nice, cozy niche to hide in that will allow you a clear field of fire at as much of the parking lot as possible. We’ll all use those headsets we had before, so we can all talk to each other. You get a comfortable one. Winnie and I get the uncomfortable ones, the ones that are pretty invisible. Good thing I need a haircut.”

“So I’m supposed to set up with the TAC and be ready to shoot someone?”

“Yeah, well, not just any someone. There’s no telling what Sheriff Ronson is likely to do, and Winnie and I might need some help, and fast. If he threatens us in any real way, I’m hoping that you’ll shoot him, kill him if necessary.”

“Shit.”

“Yeah, I know. This isn’t your cup of tea. But if it’s him or me, what’s your choice?”

“I’ll blow the motherfucker’s head off.”

“That’s my girl. And with the TAC, you can do just that, if necessary. But I’m hoping it won’t be. We’ll just have to play it by ear. And, remember, Seth and Henry will be on your flanks, with the same operational plan.”

Mac accelerated the Jeep on a couple of straight stretches to generate dust, and shortly we arrived at the end of the road with its big, circular parking lot. Mac backed the Jeep into a parking place next to a large boulder—I refrained from mentioning my advice to put on the front plate—and we got out to unpack a bit.

He was trying to be solicitous and provide me with an array of creature comforts, but I insisted on traveling light. Still, we wound up with the TAC, in its case, a backpacking sleeping pad, one of the slick-rock camouflage tarps we’d bought for our trip in the van, and several bottles of water. Plus the radio equipment, ball cap, sunglasses, and other such stuff that I wore.

“What if we have to get out of here in a hurry?” That was my main reason for wanting to travel light.

“Leave everything but the TAC and any brass that gets ejected from it. Pack it up pronto and hustle down to the Jeep.” He gave me a rather stern look. “You’re way more important than the sleeping pad or the tarp. But they’ll help you be comfortable and invisible.”

And then he gave me a big smooch.

He strode over to the other side of the parking lot, and raised his voice. “Let’s do a radio check...”

And he lowered it to verify that my system worked. Once satisfied, he waved at me, and we started up the hill toward a likely-looking set of rocks.

It took 45 minutes or so for us to find an effective spot and for me to get situated, adjusted, and settled in. I was in the morning shadow of a big boulder, so it wouldn’t be too hot, at least until after noon. After Mac set up the TAC and screwed its suppressor onto the muzzle, he let me look, and I could sweep the TAC on its bipod across the entire width of the parking lot. The tarp blended in with the rocks even up close, so I knew I’d not be spotted from down there.

Finally, after puttering around and fretting about every little thing, Mac had no excuse not to leave me. But he seemed reluctant to. That made me feel a lot better.

Winnie’s SUV, though, arrived in the parking lot, and he had to scurry off. He made several more radio checks on his way down the hill, and with the last one told me that he was going to leave his microphone on full-time so I could hear all the conversation.

I watched through the TAC’s scope as Winnie, Seth, and Henry piled out of the SUV and the two guys started unpacking their own equipment, and I listened to their greetings.

The conversation was mostly social until I heard Winnie ask, “Where’s Sam?”

I could imagine Mac’s grin as he waved his hand in my general direction and said, “Up there, hidden away. Pointing a big-bore rifle at us. Careful up there, Sam.”

Henry immediately fumbled in the SUV, came up with a pair of binoculars, and began scanning the hillside in my general direction. Eventually those big lenses settled directly on me, and I almost waved at him.

I could see his grin as he said, “Man, you guys are good. She’s really, really hard to spot. Hope I can do that well.”

And he headed off into the rocks on my right. Seth stared in my direction for a while, shrugged, and headed off toward the rocks on my left, a series of boulders reaching to maybe thirty feet before topping out. Radio checks all around verified that we could all hear each other and be heard.

Mac finally got around to tactics. “So, Winnie, I’m parked there to look like I’m off hiking for the day. Notice the Utah plates? That’s my disguise. People come up here to hike all the time, I’m sure. For that matter, I hope we’re not interrupted by civilians out for a day hike when things start happening. How about you park your SUV over there, kind of haphazard like? So it doesn’t look like you’re a hiker. Whatever that means.”

She did, and came back to where Mac was standing. “I can’t figure out how to handle this exactly, Mac. He doesn’t know you’re here. At least I don’t think so.”

“How about if I wait behind that rock over by your SUV, listen to your conversation with him, and give him that phone call at some point? If he has the phone and answers, well, I can come out on his flank and surprise him. If he doesn’t, you can mention that I’m here, off taking a leak or something, and I’ll walk in.”

Winnie didn't have time to answer, because a deep rumbling, which I heard in my headset as well as felt in my innards, had become loud enough to be a distraction. Shortly, a large SUV with "Garfield County Sheriff" decals pulled into the parking lot, casually coming to a stop in a way so as to block Winnie's SUV in. Mac had disappeared.

Showtime.

\* \* \*

## Seventeen

Sheriff Paul Ronson, with his big western hat, pointy-toed western boots, embossed, low-down, leather holsters with the two pearl-handled six-shooters, and general air of western-ness overall eased himself out of his SUV and stood to stretch. I couldn't really tell, but it seemed like there was a sort of buzzing noise in the background. But the conversation soon drowned it out. I could hear Ronson through Winnie's microphone, I guess.

"Winnie! Good to see ya again. Hope things are going OK?" Ronson seemed genuinely happy to see her.

"Oh, you know how it is, Paul, working for the Feds. Two steps forward and one back, or one-and-a-half. But getting that whole meth lab thing taken care of was sure a happy ending. For us and the DEA, at least. I hear the Templetons took a big hit, though."

"I heard through the grapevine that you caught and lost the suspect for those kidnappings."

"Yeah, that's a real shame, but I'm sure we'll get him back at some point. With this new stuff we're finding up here, we've got even more on him for the three murders, too, so he'll become a higher priority."

"Well, I wish you luck finding him. Again. First time is always the easiest, of course. Now, what's this new evidence? I've got some meetings." He pointedly looked at his watch.

"Right. Remember where the bodies were found? Up that last side road and stuffed among those rocks, right?" Winnie gestured toward my left, where Seth had hidden himself.

"Right. I, ah...oh, hell. Sorry, I've got to take this." And Ronson reached into his left front pants pocket and retrieved an old-style flip phone. "Yeah?"

Mac's voice said, "Archbishop Ronson! How nice to speak to you again."

And he walked out from behind the boulder he'd been using to hide. "I'm sure you immediately understand the implications of my calling you on your phone. So please don't do anything stupid."

Of course, he did. But it was so smooth and fast that there was nothing to be done at that point. He dropped the phone and did an amazing quick-draw of both of those six-shooters, pointing one at Mac and one at Winnie.

"These are .45 hollow-points, folks. Please don't mess around here, because they'll be fatal almost anywhere I hit you. And I'm a good shot."

The Mac-Ronson-Winnie angle was only about 30°, so he could easily see both of them. And the distances were less than fifteen feet, so if he was any good at all with those revolvers, they were dead meat. I settled in, switched off the safety on the TAC—having previously racked my own hollow-point,

one a tad bigger and far more powerful than what he was sporting—and settled the scope’s cross-hairs on a point just under his lifted right arm. He was standing at about a 45° angle to me, and Mac, the target of his left hand, was clear of my field of fire.

“Mac, Winnie,” I tried not to whisper but kept my voice quite low, “if I have to shoot, I’ll try to do a count-down from three and fire on zero. I suggest you hit the dirt at about one, or maybe a half.”

“Good deal, Sam.” Henry’s voice surprised me. “I don’t have a good angle.”

“Yeah.” This time it was Seth. “I’ll probably hit Winnie without a truly remarkable shot.”

“Click, click.” I whispered, not wanting to move my hands off the TAC.

That entire exchange must have taken only a few seconds, during which Ronson continued to keep his pistols pointed at Mac and Winnie. It occurred to me that he was going to get tired of that pretty quickly—those were large weapons—at about the time he must have noticed the problem.

“Now, you folks saw how fast I got these babies out and up and aimed, right? I’ve actually won a couple of fast-draw competitions with them. So don’t go screwing around. I’m going to lower them, but remember, they’re cocked and ready for anything. OK?” He looked back and forth as his two captives.

“I can’t speak for her, but I’m holding quite still, Sheriff.” Mac had his poker face on. “You got a plan here?”

“I think so. Those girls were found by hikers because their bodies weren’t hidden well enough. But there are better places up here. We’ll use one of them for you two.

“Mike! Hey, Mike! You up there yet?” He’d shouted this last.

A voice came from the rocks to my left. “I am, Paul. Up here. And lookee what I found!”

Two figures appeared at the top of the boulders, one with his hands on his head being covered by the other’s handgun.

“I found me a New York Jew-boy FBI agent hiding in our rocks. How about that!”

“Ah, shit. Seth’s between me and the perp. I’ve got no shot. Anywhere.” Henry’s voice was completely disgusted. “Sam, you need to stay on Ronson. If you don’t mind a little friendly advice.”

“Gotcha,” I whispered.

Mac’s voice was a snarl, a loud one. “Kidnapped and raped any other little girls lately, scumbag?”

Michael Young laughed. “Just the dead one. Oh, yeah, and the crip. But I’ll tell you a little secret. I never kidnapped anyone. Ever. I *bought* those girls, fair and square, all of them, from their fathers. They each cost a bundle. So, Paul, what should I do with the Hebe here?”

“Good work, Mike. Shoot him.” Ronson lowered his voice. “There’s plenty of room in these rocks for three. Unless there’s more? Winnie? Would you be holding out on me?”

As Ronson raised the pistol in his right hand, there were two loud pops from the rocks on my left, and out of the corner of my eye I could see Seth’s body jerk, sag, and then fall the thirty feet or so into the parking lot, bouncing off a rock on the way down.

“You son-of-a bitch!” Winnie’s voice cracked as she said it.

“Whatever you say, nigger whore.” Ronson raised the pistol in his left hand. “I think I’ll do you both at once. Nice, clean ending.”

My temper had come to a boil, and, starting on Ronson’s “nice”, still keeping my voice low, I began counting, “Three, two, one...”, and gently squeezed the TAC’s trigger on zero.

\* \* \*

I hadn't fired the TAC before, and my first time was quite the surprise. The headset I'd been using, combined with the suppressor Mac had put on the thing, damped the sound down to something like a close-by thunderclap, and I'm sure its recoil absorption system helped. But, geez, what a kick I got.

It took me a few seconds to regain my equilibrium, and so I missed what had happened in the parking lot. But Mac and Winnie were getting up and dusting themselves off while Ronson was lying in a crumpled heap a couple of yards from where he'd been standing. It appeared that a big section of his chest was missing. I had to fight to keep my breakfast down.

There was also a consistent popping noise from over on my right, which I decided was Henry shooting at Michael Young, or at where he'd been. I sure didn't see him up there to my left.

"Sam? Thanks very much. Good shot. Let me suggest you pack up and hustle down here. Michael Young is still around somewhere." Mac's voice had that deadly calm he managed to adopt in tense situations.

"Yeah, Sam. Thanks. Oh, God. Seth!" Winnie voice was shaking with emotion.

"I'm packing up now. And, Winnie, I'm so sorry about Seth. That was just awful. And I feel awful about shooting Ronson, too." I tried to keep my voice steady.

"*You're* sorry?" Henry's voice was bitter. "I'm the one who's the sorry SOB here. Shit. I couldn't do anything. What a loser. I'll be down in a minute, Winnie, to give you my shield."

"I'm going off the air. I'll be down there in a minute. With the TAC, Mac. Don't worry." And I tossed my headset into the TAC's case, picked it up, and headed down the hill.

On the way down, that strange buzzing I'd heard before started up again. It took me a minute to realize that it was a two-cycle engine of some kind, like a heavy-duty chain saw.

I started running.

By the time I reached the parking lot, I'd swear that that bassoon case and its contents had tripled in weight. And I was gasping for breath. Sam, old girl, I thought, you need to get to the gym more.

Mac had fiddled with the Jeep to set up one of its split back seats—I've since found out that they were a custom addition by the first owner, quite convenient—and pulled it out of its parking place. He grabbed the TAC's case from me and put it carefully in the back.

"Sam, could I ask you, please, to sit in the back? It wouldn't surprise me if Young tries to shoot at us from that motorcycle of his, at least if we can catch up to him, and I'd feel better if you were behind me. Please?"

How could I object to that? Besides, it occurred to me that Winnie would be better riding shotgun, should the need to shoot back arise.

But Winnie and Henry were having a little argument.

"Henry! Attention! You can't possibly resign now. You need to secure the crime scene here. Call in reinforcements from St. George. Tell them to use my helicopter. I think this parking area is big enough for them to land in, although it'll be dusty as all hell."

"Boss, I'm no good for anything right now. Hell. How can you trust me?"

"Prove to me that I can, Runninghorse. We've got to get going." And she jumped into the Jeep's front passenger seat as Mac sprayed gravel all over Ronson's SUV.

“Henry? You still have that earbud in place?” Mac still had that deadly calm voice going. “Oh, good. Listen, could you do me a favor? After you get things squared away down there, in whatever way you need to, and you get help on the way, how about a little cleaning up? There’s a chunk of sandstone missing from the boulder on the left of the parking lot entrance, facing downhill. Maybe you could ram that Sheriff’s SUV into it, to obscure its cause. I picked up Sam’s slug from the ground there, but that chip of rock might give people ideas. I’d rather not have anyone know what kind of weapon Sam had...Well, I guess I can tell you. A McMillan TAC-50. Nice little pea-shooter.” Mac paused and laughed at Henry’s reply as he disconnected and pulled out his earpiece.

“Mac, you never stop being clandestine, do you?” Winnie was shaking her head.

“Sam? Did you remember the brass?” Mac was looking at me in the rear-view mirror as I pulled the four-inch cartridge case out of my shirt pocket. “Thanks, Sam. Winnie, I guess I’ve been at it for so long that clandestine is just second nature for me. Although Sam’s talked me out of a bit of it, with her at least.”

“Yeah, but I’ve got special leverage.” I winked at him in the mirror. “Think you could take these curves any faster, sport?”

We had been racing down the gravel road doing four-wheel drifts through the curves and accelerating on the straight stretches. Hair-raising. I thought I was seeing a dust plume over the road in front of us.

“All I want to do is see which way he turns at the highway. That engine sounded like a little two-banger, not a lot of power for high speeds on the road. And he’s had to slow for the curves more than I have. This gravel is pretty loose.”

A stop sign appeared at the end of a short straight stretch, and Mac slid the Jeep to a halt at the edge of the pavement.

“I vote left.” Winnie said and pointed. “See that dust track on the asphalt just there?”

“My thinking exactly,” Mac responded, and off we went up the hill toward Bryce, or wherever Michael Young was headed.

Although the region is a hotbed of tourism, mid-day on the Wednesday of the last week of October didn’t seem to involve a lot of traffic. Mac ignored the double yellow line a couple of times to pass very slow pickup / vacation trailer combinations, but we really weren’t impeded. Eventually, at the top of the grade where the curves gave way to an arrow-straight few miles across the mesa, we could see, far ahead of us, a motorcycle, its rider leaning far forward over the handlebars to minimize wind resistance.

“Now all we have to do is not lose him,” Mac muttered, as he held the gas pedal to the floor. “Any thoughts on this road after it passes the Bryce Canyon turnoff, Winnie? I’ve never driven that part.”

“Oh, man, I should know this. I think there’s a long grade down off this mesa, and then it sticks to the valley over there as it goes through several little towns. Escalante, the place that Ronson talked about, is some miles yet.”

“Well, that dirt bike he’s on could eat this Jeep’s lunch off road, but I’m thinking we may be able to catch him if he stays on the pavement. Especially if there are more hills to climb. Where do you suppose he’s going?”

“No idea, Mac.” Winnie thought for a bit. “Maybe somewhere he’s familiar with, somewhere he thinks he can lose us? Hmm. Maybe the Templeton place. DEA found an arms cache there, down-valley from the main compound.”

Mac slowed for the curves on the downgrade off the mesa, and then sped up again for the few miles into the village of Tropic, hardly slowing for its speed limit signs. As we came through them, Cannonville's and Henrieville's speed limits were treated with similar disdain. Between towns, I noticed the speedometer hovering just over 100 mph on the open sections of road, and barely less elsewhere. Meanwhile, the motorcycle was steadily losing ground.

After Henrieville, there was a long, empty stretch of road with no towns or, except for a truck or two, traffic. We gained significant ground when the highway climbed up another mesa, as the motorcycle was too underpowered to keep up the pace. And, after we flew through Escalante, with Mac marveling at the lack of law enforcement anywhere—a good thing under the circumstances—we saw for the first time the motorcycle's brake light.

"Finally. I've been expecting him to head off on a side road for a long time now. Wonder what's special about this one?" Mac took a hand off the steering wheel to scratch his left ear.

Winnie nodded. "I thought so. I do believe that this is the county road that Ronson talked about. The one that Obie Templeton used to get to his ranch."

\* \* \*

Mac braked hard to make the turn-off, and then we were back to the gravel-road method of four-wheel drifts and hard acceleration. The dust plume in front of us grew thicker as we continued to gain ground. I didn't want to know about the plume behind us—no doubt the big, knobby tires on the Jeep were creating a regular dust storm that could be seen for miles.

Although it seemed like quite a distance, I expect it was really only a few miles before Mac slid the Jeep almost to a stop and turned onto a much-less-maintained side road.

"Points for you, Winnie. That mailbox said 'Templeton' on it. And hang on, both of you. This is going to be rough. But we've almost caught him."

"Rough" was more than Mac's usual understatement. The Jeep had plenty of hand-holds and grab-bars, but I found the best approach, in the back at least, was to brace my feet against the back of Mac's seat, push myself into the back of my seat, and use my arms on the Jeep's roll bar to push myself down as well. I noticed at one point that Winnie was doing something similar up front.

We crested the rise I had seen from the opposite side of the canyon, such a long time ago, it seemed, and started down the switchbacks to the valley floor, where the ranch had stood. Michael Young was a full set of switchbacks below us all the way. But at the bottom, instead of turning toward the remains of the ranch house, he turned onto an even worse road, more of a track, really, down the valley.

"Toward the arms cache it is. Won't he be surprised when he finds it empty," Winnie chuckled.

"He knows we're behind him, of course. But he probably also knows the terrain down here and thinks there's a way out that he can manage but we can't. Those dirt bikes can do amazing things, so he may be right."

"Then we've got to catch him as soon as we can."

"I'm trying, Winnie, I'm trying. Hope you're hanging on."

The track actually improved a bit as we worked our way down the valley, and soon we were almost back to the gravel-road tricks. But on one deceptively sharp, left-hand curve, it all fell apart. We were only a hundred yards or so behind Michael Young's motorcycle, when, entering the curve, the cycle went into a sideways skid, hit some larger rocks on the outside edge of the curve, and flipped sideways,

sending him flying with the bike following but on a lower trajectory. Mac skidded the Jeep to a stop just in time to avoid hitting those same rocks.

We couldn't see what had happened to Young at first, or his motorcycle, because of a small berm, but, mounting it, all was clear. Well, clear as mud. For Young was stuck in a foul-smelling pit of some muddy substance, a thick gooey glop that showed a film of oily slicks on its top here and there. Perhaps fifty feet across, it was impossible to tell how deep it might be, but Young was submerged to his armpits, and his motorcycle was on its side, slowly sinking. As we watched, one of the oily slicks burst into flame from the heat of the engine block. As the cycle continued to sink, slowly, more of the oil flowed into the depression it was making, and the fire gained strength.

"What *is* this place?" I couldn't help but be curious despite my revulsion.

Mac was standing, watching Young slowly recover his wits, thinking. "I do believe it's the cesspool for the ranch. Sure smells like that. With some industrial wastes from that meth lab included, probably—that would account for the volatiles that are burning. Um, I'd say our boy there is in a bit of trouble."

As Young started shouting for help, Winnie recognized the danger. "Mac, have you got a rope? We need to get him out of there."

"A rope? Yeah, I think so. A brand new one, spanking clean. Not sure I want to throw it in that crap. It'd be ruined."

"*MAC!!*" Winnie and I were almost in unison.

"Oh, all right. But remember who this is. The sheriff's deputy, a sworn law enforcement officer, we just saw murder Seth Rothstein, back there on those rocks in Red Canyon. The guy who murdered those three little girls, put Lucy Smith in that outhouse pit, bought all those other girls to be used as sex-slaves." He opened the back of the Jeep, looked in, and scratched his chin. "Now, where did I put that rope?"

Despite his reluctance, Mac got a loop tossed out to Michael Young, who put his head and arms through it, and tied the other end to the Jeep's front tow hook. Then he eased the vehicle slowly away from the pit, pulling Young toward the shore. I don't think we could have done it ourselves, because even the Jeep was laboring a bit.

Unintended consequences, though, have a way of being sneaky. I guess it was the stickiness of that goop in the cesspool, because there was a sort of wake created by Young's body, a deep depression in the goop behind him. And, about half-way to shore, it burped, or something like that.

I saw a video of the mudpots in Yellowstone once, burping and bubbling away, and this was sort of the same, although I can't imagine that the Yellowstone pots smelled that bad.

Mac told me later that the burp must have been methane, because it immediately flashed into a fireball. Young screamed as his hair caught on fire. And it kept burping, and exploding, as Mac continued to pull Young toward shore, so he finally stopped. The oily substance on the surface of the pit near where Young had landed flowed into his wake and ignited as well, and he continued to scream in agony as he was boiled in a pit of burning sewage sludge, finally going silent only when it flowed into his mouth's grimace of death.

I'm not sure I'll ever forget the last look in his eyes. As much as I'd come to loathe the guy for what he'd done, I can't really say that he deserved to die that way.

"Jesus. No one should have to die like that." Winnie agreed. "Not even a dirtbag like him."

Even Mac was dumbstruck, at least for a few minutes. "I guess that didn't turn out so well. Although I'm not sure that there's anything we could have done."

Mac cut the rope a few feet from where it had been in the cesspool and began wrapping the cut end around a football-ball-sized rock. When the wrapping almost reached the dirty part of the rope, he heaved the whole thing as far out into the pit as he could. Then he untied the other end from the Jeep, coiled it up, and stashed it in the back.

“Winnie, if you or your bosses want to come back here and retrieve the body, that’s OK by me. But I’m done with this. And I’m pretty sure Sam is, too.” He looked at me and I nodded.

“Sam killed Sheriff Ronson.” Winnie looked grim.

“Yeah, about a half-second before he was going to kill us. I saw his index finger begin to move. It’s a good thing the triggers on those Colts had a long pull.”

“You’re right. Last year it was you, this time it’s Sam. Saving my life, I mean.”

“What kind of rifle was Henry using?”

“AR-15, I think, why?”

“Full-auto?”

“Of course, but he was using single shot there, after Seth got killed.”

“Maybe a big full-auto burst could explain the damage to Ronson’s body. Then Sam and I weren’t there. Nor here, if we all get on our merry way soon enough.” He gestured at the pit, into which the motorcycle, Young’s body, and the rope had almost disappeared. “Nothing to see here, folks, might as well move along.”

The ride back to the Red Canyon parking lot, where we found Henry Runninghorse in charge of a bustling forensic operation involving only FBI personnel, was a relief.

Not exciting at all.

\* \* \*

### *Epilogue*

At a time when print newspapers were struggling against a tide of on-line content, which in turn struggled with its own credibility, both reporters and the public found only frustration in their attempts to understand events in Utah that October. The DEA was engaged in a game of know-nothing concerning the events at the Obadiah Templeton ranch in southern Utah, and the FBI investigation of the deaths of popular Garfield County Sheriff Paul Ronson and FBI Agent Seth Rothstein smacked of cover-up.

Evidence presented to a special grand jury convened in Salt Lake City by the U.S. District Attorney exonerated FBI Special Agent Henry Runninghouse in the Ronson/Rothstein matter. Because that evidence was sealed and withheld from public review despite several Freedom of Information Act lawsuits, it all cast a permanent shadow on Ronson’s involvement in the matter.

The shadow only became darker when a story appeared on a website, short on credibility but long on readership due to its penchant for publishing salacious celebrity news, about a shadowy “Army of God” that operated as a domestic terrorist group intent on overthrowing the federal government. It went largely un-noticed in Utah that, in the weeks following the story’s appearance, large numbers of sworn officers in police and sheriffs’ departments around the state, along with a surprising number of city

counsellors and county commissioners, resigned, ostensibly for health or family reasons. No one anywhere paid attention to the fact that these resignations extended to many of the other states in the intermountain west.

In other legal news, or lack of it, the FBI case against Levi Templeton, who was eventually charged with sex trafficking involving minors, statutory rape, and related crimes, plodded along at a snail's pace, the lawyers for both sides trying to out-do each other with grandstanding tactics, obfuscation, and delays.

And then there was the mysterious, yet official-sounding, leak of the information that the kidnapping and disappearance of numerous young girls over several years around the region, of which the Levi Templeton case was but one example, was not kidnapping at all, but rather, in every case, a financial arrangement in which the fathers of the girls had sold them to an unknown individual who, in turn, sold them to various fundamentalist (and polygamous) Mormon sect members, including the Templeton brothers.

This rumor spread like wildfire, and an epidemic of domestic violence episodes followed, in some cases involving murder, in all cases involving violence done to a husband by his wife (or, in some of the cases, one or more of his wives). For example, one Edgar Smith, of rural Summit County, was castrated by a serrated-blade bread knife at the hands of his wife Dora. The connection of this crime to the supposed kidnapping of the Smiths' daughter Lucy, who was later found abandoned in the pit of an outhouse, was never established clearly, but it seems to be beyond coincidence that many of the domestic violence cases involved couples whose daughters had been, purportedly, kidnapped.

Meanwhile, in a small, tourist-oriented mountain town in the foothills of the Colorado Front Range, a middle-aged couple spent their winter evenings warming their toes in the glow of the fireplace in their new townhouse. They sipped various *après-ski* concoctions while savoring memories of their last ice-cream cones of the season, eaten on the unseasonably warm Halloween Night the previous autumn, along the town's main street, amidst the annual downtown trick-or-treat celebration with its costumed children, spooky decorations, and general gayety.

A Four Corners^Mystery

# Lilies of the Valley

## Prologue

Timmy Greenwood would forever be haunted by the fact that it was *his* rock that filled up the canyon and dammed up the stream down there.

The *Las Cruces Sun-News* quoted his mother, Louise Greenwood, as saying that it wasn't really Timmy's fault, and, anyway, it was only an obscure side canyon up there in the middle of nowhere. But that didn't make little Timmy feel any better.

After all, Louise had scolded him, "What if *everyone* threw rocks in there? Do you want to fill it up?"

And when his rock, or perhaps it was the noise of it or something, or maybe just coincidence, whatever, when it triggered the massive debris flow down the cliff on the far side, well, he couldn't help but wish he'd listened to her. As it was, he burst into tears and ran for the car as his Mom and Dad stood there by the roadside, staring in wonder at the snow and rocks and trees and mud rumbling into the stream below.

Fortunately, it was too early in the spring for anyone else to be around. Timmy and family had been on an early-season scouting trip for possible campsites later in the summer, and, when they pulled over so that Timmy could get out and pee, they were the only people within miles. Still, as good citizens, they stopped at the Forest Service office in Alamogordo on their way home to report what they'd seen.

Maybe, in the scheme of things, Timmy got off lucky—he was merely haunted by it all. My friend LeRoi Sandováł, on the other hand, knowing what he knew, wound up in shock, an incoherent, babbling-idiot sort of shock. That set in right away and evolved into denial, then anger, and eventually a black depression. LeRoi was just never the same again.

And that was a shame, really, because he had been one of the premier fly-fishing guides in Northern New Mexico. We used to go on expeditions to his various favorite stretches of water on days when he couldn't scare up any clients, "sports" as he called them. The Chama, the Pecos, and the Rio Grande itself, especially up north around Taos, they all had pools and pockets that he considered his private territory, and he was generous enough to share their secrets with me.

Until, that is, that big chunk of mountainside in Nogal Canyon southeast of Carrizozo slid, and he went all to pieces. I don't think that anyone who knew about it was very surprised to read, a couple of weeks later in the *Santa Fe New Mexican*, that his body was found at the bottom of the Rio Grande gorge, under the Taos high bridge. That was a favorite regional spot for despondent teens and desperate adults to end it all—there was the occasional murder that involved involuntary attempts to fly as well—and LeRoi's depression made it an obvious finale for him.

I thought that was the end of the entire sad matter, but then came a telephone call one spring day while I was wrapping up my affairs at the institute, in preparation for the move to Colorado I've come to be so glad I made.

"This is Sandy."

“Mr. Livingston? Sanford G. Livingston III? This is Humberto Garcia, I’m the attorney settling the estate of LeRoi Sandoval. You’re named in his last will and testament, and the reading is Wednesday afternoon at two.”

“You mean I’m getting a bequest or something?” I knew that LeRoi had been single, and the notion that he would even have a will was a surprise, let alone name me in it.

“That’s the purpose of the reading, Mr. Livingston. We’re on the Plaza, I hope to see you Wednesday.”

And that’s how I got involved in the whole thing. I suppose I should think of it as a fitting climax to my dozen or so years in Santa Fe—that’s what Angela has been urging on me, at least. And it did fit in with some of the other strange things that happened there.

\* \* \*

To most people in the rest of the world, the mention of Santa Fe conjures up images of a dusty desert town with connections to food, celebrity, and, maybe, high art. Tombstone with smothered enchiladas and Georgia O’Keeffe, perhaps. Few realize that, in the winter, it’s a ski town, or that its location in the foothills of the southern Sangre de Cristo range of the Rockies makes it more like Colorado than Arizona, climate-wise.

And as with the Colorado ski towns, spring is the down time in Santa Fe. Summer, fall—the changing aspen draw crowds, it seems—and, of course, winter are all quite busy. But after the resorts close in late March and before the summertime activities spin up toward the end of May, everyone in town draws a deep breath of relief and takes a well-deserved break from servicing the visitors.

That role, though, has never really applied to me, beyond my doing my civic duty to be nice to them. Patience, tempered with polite amusement, goes a long way in helping people who are unfamiliar with Santa Fe’s peculiarities to get around. I don’t have to do that much, given the sheltered corner of town that I stick to, but it does happen. One such episode led to my involvement in the investigation of the death of Senator O’Malley’s daughter and to my meeting Angela.

Usually what I spend my time investigating is the nonlinear behavior of complex systems such as the climate or the economy. My position at the Santa Fe Institute has led me in various interesting directions of that nature. That other investigation—what turned out to be murder, cleverly disguised—came along by accident. It’s not as if I go looking for crimes to solve. Life’s just too short for that.

Anyway, that Wednesday I left the institute in time to get to the Plaza for a leisurely lunch with Angela and make it to the reading of LeRoi’s will by two. She, of course, was all questions.

“I thought LeRoi was just a fishing guide, Sandy. How could he have enough of an estate for a will and all that?”

She was using a tortilla to soak up bites of the Plaza Restaurant’s “medium” green chile stew. As a native to the area, she could eat that stuff with impunity. Most everyone else, including me, had taste buds that cringed at it.

“You’ve got me there, Anj. I know that when we went fishing together, he appreciated it when I’d drive. It saved extra miles on that ancient Suburban he kept alive somehow. I guess he saved his tips, or something.” I was having the meatloaf, far more lunch-like for anyone with a normal palate.

“I checked all the reports. The Taos County Sheriff did the investigation, and it’s a pretty clean suicide, looks like. They found his car at the end of the bridge, at the parking area there, and there were no signs of prior violence. The fall, of course, messed him up some.” She was able to take violent death

in stride by virtue of her position as an officer with the New Mexico Bureau of Investigation. “I remember you told me he was depressed for some reason—that slide into the canyon somewhere down south, right?—and that’s what depressed people around these parts do sometimes, jump off the Taos bridge. But why would a slide into an obscure canyon down there in the middle of nowhere get him so depressed, anyway?”

“I talked with him about it a bit, but it didn’t make sense to me, either. He seemed to know the terrain down there like, well, like I’ve come to know the lovely terrain underneath your blouse.” I leered; she blushed and kicked me under the table. “There must have been something in that canyon that he was very attached to for some reason. Not a fishing hole, though. That little stream is just too small for him to have bothered with.”

When we had first met, Angela wore an NMBI uniform all the time, but a recent promotion had put her back into civilian clothes, something I appreciated. Sure, she looked fine in starched and pressed kakis, but she looked even better in civvies. That day’s silk blouse was a great example.

“Well, from what I’ve heard, you’re not likely to be going in that little canyon any time soon. The state geologist has the entire area closed off. It’s filling up with water behind the debris pile, but it’s leaking. No one knows when the whole thing is going to let go, and everyone downstream is extremely nervous.” She looked around and waved to the waiter for more coffee, which she asked for in a to-go cup. “Anyway, I’m sorry I can’t come to the reading with you. I’ve got a meeting with the new boss in an hour. Even though we’re not long for Santa Fe, I have to keep him happy while we’re still here. Gotta run.”

“Hey! Wait!” The usual question had popped into my head. “Where are we tonight?”

“Oh, right. Hmm. Well, I’ll be done about six. How about your place?”

“OK. I’ll think up something for supper, something light. See you later.”

Angela’s family, a traditional Santa Fe Hispanic clan, were able to overlook our “visits” with each other, but as much as we wanted to, there was just no way we could actually move in together, not without a huge, formal wedding at the cathedral first. Even Angela’s younger brother Jaime would have frowned on our shacking up. And keeping Jaime on my list of friends was a high priority for me. He was just not the sort of individual you wanted to be enemies with.

That, along with career opportunities, was why we were working toward the move to Colorado, where we’re now happily settled in together, finally married, even. But back then we bounced between her place and mine. Fortunately, we both lived on the same side of town, so the commute was easy.

Besides, we were both motivated. There was just something about the chemistry.

\* \* \*

After killing twenty minutes or so, sitting on a park bench on the Santa Fe Plaza watching the tourists bickering about what souvenir shop to visit next, I made my way to the office of Garcia and Garza, LLP, a suite above the Starbucks franchise on San Francisco. The coffee smell was strong enough to keep you awake all night, never mind drinking the stuff. I handed my business card to the receptionist and was shown into a small conference room full of well-dressed, somber-looking people.

The most well-dressed of them, seated at the end of the table, looked at my card. “Ah, yes. Mr. Livingston. Finally. We’re ready to begin.”

“Oh, yeah, one of LeRoi’s fellow fudgepackers.” An early-thirties man with a huge Zapata-style moustache sneered at me.

“Hector! Behave yourself!” The woman seated beside him swatted his leg.

The reference was to something of which I was aware, if not part of. LeRoi—originally plain old Leroy—had made something of a name for himself as the area’s first gay fly-fishing guide. It wasn’t something he advertised, although he was able to tap into an extremely lucrative clientele through his connections in that world. Rather, it was something that he had to compensate for by being absolutely the best guide on any of the local rivers. And he had succeeded so well that his colleagues, those of them aware of his orientation, had long ago lost any of their attitude problems in favor of respect for his abilities and knowledge.

I decided not to rise to the bait but took my feelings about it out on the lawyer instead. “You said two, Mr. Garcia. My watch, which is correct to the second because of its radio link to the atomic clock at NIST, tells me it’s one-fifty-five.”

“Yes, well, we’re all here and we can get started. Mr. Livingston, your bequest is the simplest, so let’s begin with you. Hmm.” Garcia covered his unease by shuffling papers and clearing his throat. “This is LeRoi Sandoval’s last will and testament, dated a week before he died. Given his manner of death, this could have caused problems, but it was properly witnessed and filed, and now it’s been successfully probated. Much of the actual text is commentary for his family here, so I’ll skip over it for now. Mr. Livingston, he has left to you several of his fishing poles and this envelope.”

He held out a standard business envelope to me and gestured over his shoulder. “The poles are all in that carrying case over there in the corner. The language is a bit peculiar, specifying as it does that the case, the poles—he calls them “rods”—the tubes they’re in, and their entire contents are to be yours in perpetuity. And that concludes your part of this, Mr. Livingston. I believe it would be appropriate for the family’s part to be conducted privately.”

“You’re undoubtedly right, Mr. Garcia, and I’ll be on my way. But first I would like to say something. LeRoi was a remarkable fly-fishing companion, one whom I miss already, and the season hasn’t really started yet. Regardless of how any of you may feel about his lifestyle, you should all be very proud of his accomplishments in the world of Northern New Mexico fly-fishing. He was the best.” Feeling fortunate that they didn’t start an argument or even say anything, I took the case of fly rods and turned to leave.

On the walk back to my car, and then on the short drive home, I analyzed and re-analyzed my behavior at the lawyer’s office. As far as I could tell I’d maintained a perfect poker face the entire time, hiding the elation I had felt when Garcia had told me about the fly rods. The fact that he referred to them as “fishing poles” told me that he had absolutely no clue about them. And I hoped that the family didn’t, either. As the outsider, keeping a very low profile was the best way for me to avoid trouble.

What they all didn’t know, but I sure did, was that I was in possession of a matched set of five custom bamboo fly rods, hand-made by Mike Clark at South Creek, Ltd., up in Colorado, all in perfect condition, together worth somewhere in the vicinity of fifty large as a set. They had been LeRoi’s pride and joy, and he had loved showing them off to me on our excursions. And if those yo-yos in that conference room had any clue, I’d probably never have seen them. The tubes would be full of something made out of graphite, or, worse, fiberglass.

It occurred to me that perhaps that was what the tubes were actually full of, so I hurried home to check things out. Or tried to.

My experience in Santa Fe was that it runs on some kind of weird time. The physicist in me has wondered about Einstein’s Theory of General Relativity and how it might relate to the phenomenon. Maybe Santa Fe attracts gravity waves from distant black holes, or something.

What used to happen, to me at least, was that whenever I'd be in a hurry, events would conspire to slow me down. If I was in a car, there'd always be a big traffic jam, or an accident blocking all lanes, or a construction project, or something else unexpected. It happened repeatedly. On that particular Wednesday, as I recall, it was a school bus letting kids out—and stopping all traffic to do so—every half block. I finally got home at about a quarter to three, a good half hour after I might have, except for that weird time thing.

Quality fly rods are stored in soft cloth bags inside aluminum tubes, and the five tubes in LeRoi's set were all packed into a ballistic-cloth carrying case, made with five long, skinny pockets for the tubes to slip into. As I unpacked it, I recognized the South Creek logo on the tubes, a hopeful sign. Shortly, I had five glowing bamboo rods, some in three and some in two pieces, each with an extra tip piece, laid out on my dining table. They were beautiful, true works of art. Beyond that, though, they were extraordinarily functional, well balanced with action—springiness—designed to match their five different purposes. From short and quick, for small streams with lots of willows that confound casting, to long and powerful, for big rivers on windy days, they composed a collector's tool kit for expert-level fly-fishing.

I stared at them for a while, then put the 8-foot, three-piece, 4-weight together and waved it gently to feel the flex, being careful not to whack anything with it. It felt wonderful. Reluctantly, I disassembled it and began to pack them all away. The rivers were still running too high to contemplate fishing, unfortunately.

When I picked up the tube for the third rod, it was upside down, and a little piece of plastic fell out onto the carpet. It turned out to be one of those miniature memory cards that are used in digital cameras and other such devices. What, I wondered, could that be about? Then I remembered the envelope.

It had my name, as "Sandy," on the front, and LeRoi's initials were scrawled across the seal on the back. I slit open an end with a steak knife and slid out the single sheet of typing paper.

*Eventually you will discover you need this: the name of the hole you fell into two years ago, when I had to pull you out, spelled right. Please burn this after you read it. All the best, LS.*

It appeared to be computer-generated using an ink-jet printer, in black. Despite feeling foolish, I did as requested, outside in the charcoal grill.

The incident came back to me. LeRoi and I had been fishing a run on the Rio Grande up north in the gorge, deep slots interspersed with pocket water, and I had tried wading beyond my ability. A foot slipped, and in I went. Icy cold, the water was fast enough that it carried me down a little chute into a big pool, where my waders quickly filled with water and some kind of strange downwelling began to suck me under. LeRoi, laughing merrily the whole time, stripped off his wader belt and threw out an end to me; I caught it and he pulled me in. Too embarrassed to want anyone to know, I bribed him to be quiet about the whole episode with a bottle of twenty-one-year-old Glenlivet.

But I didn't know the pool had a name or why I might need to know it, let alone how to spell it right.

\* \* \*

The why I might need it part became apparent when I stuck the micro-diskette into my computer's multi-disk slot. The disk's contents appeared, one file named "diary.pdf" and a separate folder. When I tried to open the folder, a password box appeared, haughtily informing me that access to the contents required me to provide the correct response. But the diary was readable, and I began to see the method in my late friend's madness. He knew I'd either forgotten or never known the name of that pool I fell into, but he undoubtedly had it noted, along with my foibles, in the log book he kept religiously—his fly-fishing diary. It occurred to me that, while not as valuable as the set of bamboo fly rods, any number of local guides would pay handsomely for LeRoi's diary. His family was probably better off not knowing what they missed out on, all-in-all.

It took me several minutes to find the right trip, and then I couldn't help but read about my little spill. LeRoi had captured the events quite faithfully, downplaying his role and noting with some glee my promise of the Glenlivet if he'd not gossip about the accident. He also noted that he accepted the Glenlivet "reluctantly," for stories as good as that were hard to come by.

And I discovered that I'd fallen into Don Juan's Pool. On impulse, I searched through the document for other occurrences of this name, and found that it was one of LeRoi's favorite spots, and a very productive one at that. He always caught fish there, and one time he'd landed a twenty-eight-inch rainbow, a veritable submarine of a trout.

With a sneer almost like Zapata-man's, the computer rejected my attempt to use "DonJuansPool" as the password to the micro-diskette's folder, and, rubbing salt into the wound, it informed me that I had used up one of my three tries. I didn't really expect it to work, given LeRoi's note, but I had to try it—although I wouldn't have if I had known about the three-tries limit.

To people in the real world, the name "Don Juan" evokes romantic notions of the Spanish libertine, smooth and irresistible to the ladies; opera buffs know him as Mozart's Don Giovanni. In California—and there will be those who might debate whether California is part of the real world or not—many people associate Don Juan with Carlos Castañeda's books and the various mind-bending chemical substances discussed therein.

But in Northern New Mexico—and there's just no argument about whether *that* region is part of the real world, it's so far removed—Don Juan is definitively Don Juan de Oñate Salazar, the sixteenth century conquistador, arguably the last of those Spanish explorers and conquerors. He founded Santa Fe, revitalized Spanish culture in a region that had been seriously back-sliding since the death of Coronado—that is, Francisco Vázquez de Coronado y Luján, the Southwest's original European explorer—and subdued the natives in a most uncompromising fashion.

For example, when the people of the Acoma Pueblo, west of what is now Albuquerque, demurred at kowtowing to Oñate's dictates, he had the right feet of all of the adult males amputated, which, in those times, meant chopped off with broadswords. That memory still rankles today, and there are often angry demonstrations at the annual celebrations of Oñate's achievements. And up by Española there's a statue of Oñate that goes through about a right foot per year.

With two tries left at figuring out the password, I had two obvious possibilities to choose from, the more obscure but easy-to-spell "Salazar," and the well-known "Oñate," common usage of which almost always reverts to the English "n." But using the correct spelling as a password would involve a computer keyboard trick that not everyone knows—one that does not work in many circumstances, depending on the proclivity of the software in question. On the off chance that this particular software—it was some third-party password scheme, I could tell—might lock up if the keyboard trick were attempted, I tried "Salazar." This time, the sneering message box told me that I was down to one more attempt, after which the directory in question would be permanently locked.

I was therefore quite relieved when “Oñate” worked. The first thing I did was to copy everything to my computer’s main disk and verify that it wasn’t read-protected by that same software any more. My own password system, I knew, would be quite sufficient.

The relief I felt surprised me—somehow, I didn’t want to lose the opportunity to follow up on my friend’s wishes. Looking at the files, now readable on my own computer, I found one titled “readmefirst.pdf,” and I had an idea about where to begin.

It was another note from LeRoi.

*Sandy – Given the medium, the delivery method, and the password, I figure there is a 99.99% chance that you’re the person reading this file first. I certainly hope so. And I should say that I’m sorry for all the hocus-pocus with the will, the rod set, and the files on this little diskette. The thing is, I don’t trust my family to do the right thing. If I’d just given you all this stuff, it wouldn’t surprise me—well, I guess nothing much is going to be surprising me, but you know what I mean—if they made some kind of trouble for you. But I think it’s all cool this way, or at least my lawyer says it is.*

*The purpose of this note is to provide you with the background for the other files here. Aside from the diary, which is just my professional flyfishing log book, everything else is related to a sort of hobby I’ve had for several years now, chasing the legend of Coronado’s great treasure. I knew going in that it was supposed to be just a legend, but I was still curious, so I looked into it. And years of research in libraries all over the Southwest and interviews with at least two dozen people have led me to the point that I thought I had all figured it all out. But then two things happened—that landslide down by Nogal and a diagnosis that I’ve acquired HIV. I just don’t know how that happened. I’ve been so careful all these years.*

*Anyway, put those together, and I’m done with it all. But you’re not, and maybe this material will provide you with the same level of amusement and challenge that it has me.*

*So sit back with a few hours and a bottle of something—sorry, but that Glenlivet you gave me is all gone—and read the file called “lilies.pdf.” It’s a transcribed version of one of those interviews I did, one of the last ones, edited just a bit to remove redundancy and unnecessary detail, and to make it more readable.*

*It turns out to be a remarkable story. I heard it from an old fellow called William White at a nursing home down in Alamogordo. He’s undoubtedly passed on by now, but when I talked to him several years ago, he was as sharp as a brand-new #10 streamer hook. The story is so fantastic that it’s hard to know how true it all is, but one thing’s for sure. I discovered on a scouting trip that his description of the canyon above Carrizozo, up by Nogal, the one that’s now filled in, is spot on. True or not, it’s quite an amazing tale, as you’ll see.*

*And let me say that you should know that our friendship is something I’ve truly cherished. You’re the best fishing companion ever. Take care, LS.*

\* \* \*

No one's asked me about Coronado's great treasure ever since, well, ever since it all happened, pretty much. I don't know how you found me or why you think I know about it, but since you did, and you do, and I do, I guess I might as well tell the story. Don't see why not, after all these years. I don't think you're going to believe it, but, then, I'm not sure I care. You can be certain of one thing, though. Whether you believe me or not, everything I'm going to tell you is God's own truth.

It was what turned out to be the year 1941, when Bucky disappeared, that my suspicions—and my sense of adventure—began to grow and the whole thing really got started for me.

I was a few weeks shy of thirteen at the time, and Bucky was a couple of years younger. Among all of the other boys, in the school and not, he was my best friend, despite the crooked way his teeth had grown in and his lousy eyesight, because he was funny as well as smart. Looking back now, from the perspective of the all the additional decades, I can see that his continual cut-ups were his way of compensating for his less-than-perfect smile and his need to squint to see the pages of the books he was supposed to be reading. He was the only boy anywhere near my age like that. But he was great fun to be around.

And then, one day, he disappeared.

I asked about him, but none of the other boys knew anything—they didn't seem to care very much anyway, even the other boys in the school, so they dismissed my questions as just dumb. And either the Matrons didn't know or they weren't saying anything beyond "Oh, he got sick and had to go away." Actually, as I learned since, there was a lot the Matrons weren't saying. A whole lot.

Maybe it would all make more sense if I backed up a little and explained where we lived. My situation and all.

Before Bucky disappeared, my entire world was the Cave and the Yard, along with the other boys there. Oh, we all knew there was something beyond the high palisade enclosing the Yard, because we could see, over its pointy top, treetops and the mountainsides of the Valley ascending up and up to the sky. And in the sky there were birds, stars and sometimes the moon at night, and very occasionally some odd sort of flying machine. But what was out there just on the other side of that imposing wall was something of a mystery, a mystery that we all speculated about despite the Matrons' admonitions not to. Boys, being the curious creatures they are, don't generally listen to such admonitions, and our speculation ran wild. Even the boys who had been moved out of the school and into the various other training programs the Matrons had going wondered about what was out there, on the other side of that wall of logs.

We could get a little better view by climbing the rocks on either side of the entrance to the Cave, getting up higher and looking out there. But all that did was to let us see lower on the mountainsides and the trees out there, not the ground, really. That was because we could never get high up enough—the Matrons always caught us, and punishment followed. Several of us did get quite good at climbing fast, though. All that curiosity of ours was a powerful motivator.

That school was not at all like schools out here in the real world, I have to say. They started us boys in school when we were five, and to stay in school you had to be smart and work hard at it as well. Those too lazy or not smart enough were moved into the other programs, and from what I heard those other programs were not at all as interesting, fun, or comfortable as school. Some even sounded dangerous. And the standards to stay in the school were pretty high—when Bucky disappeared, there were only three of us older than him still taking the classes out of more than three dozen boys altogether.

But he didn't disappear into one of the other training programs, because the boys in those programs still lived in the Cave and the Yard. And, being only eleven years old, Bucky didn't move on to wherever the older boys went. That, of course, was another thing we all speculated about—where did

you go when you turned fourteen? The question became more and more important to me as I got closer to that age.

Anyway, I learned, when I got out into the real world, that the education the Matrons provided was quite good, all-in-all, assuming they let you stick with it. When I finally quit, just before I turned fourteen, I wound up with the equivalent of what real-world kids got high-school diplomas for, although my knowledge of history was severely distorted. And the quality of the Matrons' education also explains some of the things I was able to pull off during my teen-aged years—they instilled in us both initiative and what's now called critical thinking. Of course, what they wanted us to think about critically was pretty restricted.

But I was talking about the Cave and the Yard. They were our little world, the Yard an expanse of packed dirt, mostly, a couple of acres or so in a tight V-shape, with rock walls—high cliffs—on two sides and that tall palisade on the third. A little waterfall spilled over a cleft in the south cliff out near the logs, so we had a place to take showers, really cold showers, especially in the winter months, which the Matrons forced on us at least once a week and at other times when they noticed that we were extra dirty.

At the other end of the log wall, there was a row of outhouses for us that, with periodic filling of old pits and digging of new ones, were slowly making their way along the base of the cliff. There was also a fenced-off garden area, placed where it would catch the most sun, for the boys who were in training to be, well, gardeners, I guess. The Cave's entrance was at the point of the V, opposite the log wall and sheltered by the cliffs that we'd climb if we thought we could get away with it. I found out later that it was an old mine entrance.

And inside, the Cave was quite mine-like in shape, as I learned when I found out about mines. A long, narrow room, where the Matrons had set up a big table for meals and so on, ran into the mountain and slightly upward, and there were side rooms off it at about twenty-foot intervals or so. Some of these were sleeping rooms of various sizes, including a special one with a door—the only door in the Cave—for the Matrons on duty; other rooms were used for the school and the first stages of the other training activities. The Matrons arranged the sleeping rooms by age and by assignment, with boys eleven and up in separate rooms from the younger ones and with those of us in school segregated from the boys in the training programs. They also moved us around to different sized rooms whenever the sizes of the various groups required it. This turned out to be a huge bonus for me.

Meals were cooked outside on two woodstoves in the Yard, under a little shelter there, by the Matrons with help from the boys in training to be cooks. Firewood, food, and other supplies were passed into the Yard through a small door cut into the palisade. Or maybe it was more of a window, as it was only about four feet square, set about four feet off the ground. Anyway, we boys had tried it on numerous occasions, only to find it securely barred on the outside somehow. The fact that the Matrons made all of us stay inside the Cave when the door was opened only increased our speculation about what was out there.

Although I'm calling it the "Cave," mostly out of habit, it was really quite cozy, because there was a hot spring trickling out of the far end of the main room, its water channeled through metal pipes that heated the whole place. Once outside, the hot water was used in the cooking area for clean-up, and the excess continued through the pipe along the base of the north cliff and under the palisade. And there were even electric lights, in the main room where we ate and in the classroom and the training rooms. At the time, I knew about electricity from science class, but it didn't occur to me to wonder what the source was, how it was generated. Later, I learned that the Matrons had steam generation, an engine that powered a generator, using an underground heat source that eventually turned on them, as I'll describe eventually.

Now, I've come to understand that all this must sound really, really strange to people, like maybe we boys were abused or some such thing. That's what it would be called today, probably. To us, though, it was just our reality. And we were well-fed, provided with comfortable, if used, clothing, kept warm, except for those showers, educated, and treated pretty well, for the most part. Once in a while, someone would get a good caning for some transgression or other, but that happened in the real world, too, back in those days.

What I didn't know, at the time that Bucky disappeared, was what happened when you turned fourteen. Or, of course, what had happened to Bucky. The answers to both of those mysteries turned out to be much worse than merely strange.

\* \* \*

"Boy!" The eight of us in the classroom looked up to see who was being addressed.

The Matrons never used our names; in fact, they probably didn't even know them. Hell, we didn't even *have* names, really, just what we came up with for ourselves. Bucky was Bucky because of his teeth. I was Whitey because of my blonde hair. Another kid was Spots because, naturally, of his freckles. And, in a similar way, the Matrons didn't have names either. They were all just "Matron" or "ma'am."

I asked about it one time, after I'd read a book where the boys had names—two names, actually—and was told only that things weren't done that way in our community. We'd just have to wait to get our names when we turned fourteen. Another mystery. And I decided then and there I'd probably be better off if I just didn't ask about the things in the book, all with two names, called "girls."

This time, it turned out that the Matron was looking at me, so I was the boy she was addressing.

"Yes, Matron?" I'd learned from bitter experience that being polite and being nice about it was the best way to minimize whatever trouble there might be.

"Come up here, please." She was sitting at her little table at the front of the classroom, dressed in the clothes they all wore, a plain, loose, neck-to-floor, long-sleeved cotton dress—light cotton as it was almost summer, as I recall—with a kerchief covering her head.

As I walked from my place near the back of the room toward the front, she returned her gaze to the papers on her table, and Booger—you can guess how he got his name—stuck out a foot to trip me. He was almost fourteen and had barely squeaked into the school again for his last year with the rest of us. I saw his foot just in time and hopped over it.

But then I made the mistake of turning around and walking backward for a couple of steps to make a face at him, and I tripped over my own feet in the process, winding up landing hard on my butt. Everyone laughed with gusto.

"Boys!!" This time we all knew she was addressing all of us. Her tone of voice made that clear.

I got up and dusted off the back of my pants, ignoring the pain at both ends—I'd also bitten my tongue—then turned and walked to the Matron's table, standing at a sort of parade rest, wondering what I'd done wrong this time. Getting called to the front of the room was generally not a good thing to have happen to you.

But her tone was a relief. If you were in real trouble, Matrons would always speak loudly enough for everyone to hear. This time, she kept her voice down.

“Boy, this essay you wrote on King Arthur is very, very good, so good that I want to show it to my sisters. However, it has a number of spelling and grammar errors. I’m sure you’d like to have those fixed before other Matrons read it, wouldn’t you?”

That question was what people today would call a “no-brainer.” In fact, when a Matron asked you just about *anything* with the words “wouldn’t you?” at the end, it was a no-brainer.

“Yes, ma’am, it would be an honor, ma’am.”

“Oh, good. Then why don’t you stay in here after class and make the corrections before supper? I’ve marked them with a light hand so that you can find them and erase my marks.” She smiled sweetly, at least as sweetly as her puckered-up old face could manage.

That was another thing about the Matrons in the Cave and the Yard: they were all old-looking. Wrinkled, for one. We had no comparisons to make, of course, with what young Matrons might look like, although I suspected that the girls in the books I’d read were young Matrons, but the ones we interacted with sure didn’t look like any of us.

Puckered-up smile or not, this was about the best news I could have had that day, with my butt smarting and my tongue bleeding in my mouth. Having to stay in the classroom during what was normally free time—free to goof around outside or whatever—wasn’t the best news, of course. But I figured I could make the corrections during the remainder of the school day, as I’d already finished the evening-study work she’d assigned. Then I could read during the free time. There were still a couple of books in the long bookcase against the west wall that I hadn’t gotten around to.

See, along with a good education, the Matrons gave us books to read. Looking back, it’s clear to me now that they were carefully selected books, and some seemed to be missing a page here and there. But they believed in what are now called the “classics,” and we were encouraged to read as much as we wanted to. That’s how I came to write the essay about King Arthur, because I read a book written by a guy named Thomas Malory.

So I went back to my place at the last row of worktables and spent the rest of the school day erasing and correcting my mistakes and erasing her faint correction marks. By the time everyone else was dismissed for free time, I was finished. But I knew not to give the edited essay back to the Matron—she’d have just found something else for me to do. I decided to wait until right before supper to ask her when she wanted me to give it to her.

While I was contemplating whether to try reading *The Journals of Lewis and Clark* again—the first time, I gave up because it was too boring—it occurred to me that the Matron who’d assigned me the task of fixing my essay might not be around at supper. They had a mysterious way of disappearing every couple of days, to be replaced by others who appeared just as mysteriously. We boys had speculated on that, too—it just didn’t seem reasonable that they’d climb in and out through the door in the log wall. Too undignified, and some of them were pretty fat along with being old.

Thinking about the vanishing Matrons made me remember the map, and the fresh air.

As cozy as the Cave was, it had a tendency to get stuffy at times, especially the sleeping rooms full of semi-washed boys. But the classroom stayed much fresher. And I remembered one day when I’d seen the map covering the wall behind the Matron’s table moving a little, like the tops of the trees outside the palisade when they swayed in the wind.

It was a big map of the world, one that we used in our geography class, with a second, pull-down map of North America for when we needed more detail. Where our Valley was located was discussed only in general terms, but the two maps came in quite handy for all sorts of things. We’d used the North America map to talk about and trace out the Lewis and Clark expedition, in fact.

And it swayed in the wind, a wind that kept the classroom's air fresh.

I remember that it took twelve-year-old me a while to screw up my courage. As I said before, Bucky's disappearance had boosted my suspicions and my sense of adventure, and here I was, alone in not only the classroom but also in the back end of the entire cave—everyone else was outside, preparing supper or goofing off. But I was still scared, because the idea that had popped into my head was so outrageous as to be unthinkable. I knew, though, that I had to find out if it was correct.

My first move was to the classroom entrance, really just a missing wall where it joined the main room. I peeped around the corner as carefully as I could, but no one was around. I could see some activity out in the Yard, but that was to be expected. The interior of the Cave was empty, as far as I could tell. The door to the Matrons' room, out by the Cave entrance, was closed, but that didn't really mean anything. They always kept it closed, and locked, even. Good thing, too. We curious boys would no doubt have figured out how to poke around in there otherwise.

With no one around, there was nothing to do but to go for it, so I tiptoed quickly up to the left side of the map and eased my way behind it, nose rubbing the heavy map paper, fingers feeling along the wall behind me. The light from the room penetrated the paper, so it wasn't completely dark back there, but I still couldn't see much.

About a third of the way across, right behind Mexico, the wall behind me vanished, and I almost fell down backward onto my butt again. But I managed to catch my balance and stepped to the right, where my hand caught the corner of the vanishing wall. Turning around, I could see in the feeble glow a corridor running gently downward ahead of me. It was hard to tell, but it looked for all the world as if there was a door about ten feet in.

My unthinkable thought was correct!

\* \* \*

If I'd been scared before, now I was petrified. I'm surprised I didn't wet my pants. The first thing I did, instead, was to ease back to the edge of the map and peep out. I fully expected to see all three Matrons who were on duty that day standing at the entrance to the classroom, hands on hips, looking bullets at me. But, no, all was quiet and empty.

Despite a heart rate that would have killed a hamster and hyperventilation so extreme that my head was spinning, I eased back behind the map toward the corridor. I just had to see about that door, and then, I vowed, I'd get back out to my place in the classroom and apply myself to that boring Lewis and Clark book.

When I felt the wall disappear, I turned and stared down the passage for a minute or two, getting my eyes adjusted to the dimness. The floor was smooth and even, though, so I could have walked with my eyes closed, except I'd have bumped into that door.

I don't know what I expected to find, but it was just a door, not unlike the one to the Matrons' sleeping room. I tapped very gently and decided it was solid, rather than hollow, and it had no window or any kind of ventilation grate. I could feel a draft on my ankles from under it, though. There was a simple latch and, because I could see the hinges, it opened toward me.

After a little internal debate, I gently turned the handle on the latch, carefully, trying my utmost to anticipate any noise and stop. But it seemed well-oiled, as there was only a slight click, and the air pressure on the other side pushed the door my way. That, of course, scared me all over again, and I caught it when it was open about an inch. Peeking through the crack, all I could see was blackness.

Pushing firmly and slowly, I closed it and got the latch to catch. Then, with deep breaths of relief, I walked carefully back to the map and slid behind it back into the classroom. Once again, no one was waiting for me, and I thanked my lucky stars that I hadn't been found out.

*The Journals of Lewis and Clark* was as boring as ever, and I gave up trying to read it after about a page. I suspect that even one of my favorite stories wouldn't have held my attention, though, because I was too fixated on the implications of my discovery.

For one thing, I now knew how the Matrons switched places without our knowing. It would be easy for them to come and go after lights out or when all of us boys were out in the Yard. For another, it was obvious that I now had a way out of the confinement of the Cave and the Yard, should I choose to make use of it. It wouldn't do to just go blundering through that door and down the black passage, though—some exploring was a first order of business. And for that, I was going to need a light of some kind.

But it wasn't if I could find a Matron and ask to borrow a lantern or something, so the problem brought me up short. And I couldn't do anything right away because I was stuck in that classroom for a while anyway. I tried to start the Lewis and Clark journal again, and, briefly, even considered something I would really enjoy, such as re-reading *Tom Sawyer* once more. Of course, just thinking about that book reminded me of the cave adventure that Tom and Becky had—they'd used candles, I recalled. Maybe, I thought, I could stockpile lots of candles and lots and lots of matches. The breeze that puffed through that door when I'd opened it would be tough on candles and matches, after all. And even though I knew the Matrons had candles, stealing enough for my exploration would undoubtedly raise questions. Besides, where would I stockpile them? Our personal possessions were limited to our clothes and a toothbrush, all of which we kept in footlockers by our beds. A stash of candles and matches might be hidden under the clothes, but a Matron would be sure to find it during an inspection. That wouldn't do at all.

I pondered the matter while waiting for the supper bell to ring, but the idea didn't come to me until the next day.

The Matrons, whose jobs were to educate and train us, and to keep discipline in the process, were remarkably versatile in their abilities, teaching, as they did, the full range of elementary- and high-school curricula as well as various practical skills such as carpentry, plumbing, electrical systems, metal working, and various others. Not all Matrons taught everything, so there was some specialization, but they all taught more than one thing, unlike the teachers I encountered years later out in the real world. And they tried to impart their versatility onto us boys, even those of us who remained in the school, by requiring us to take once-a-week classes in one of the practical skills. I'd picked wood-working, what I took to be a sort of artistic carpentry.

The next day must have been a Tuesday—that's when the wood-working class was, as I recall—when it occurred to me that I could fabricate a false bottom for my footlocker and hide candles and matches under it. The space needed to be only one candle thick, and if the wood I used was thin enough, it wouldn't make the footlocker look too shallow and raise any suspicions. At the time, I was working on a pencil box for one of the Matrons—the one who liked my essay so much had become the lead candidate for recipient—and the false-bottom idea emerged as a much larger version of that.

I knew I couldn't use one large, thin plank for the bottom, because there weren't any pieces of raw wood the right size, so I'd have to make a number of smaller planks. They could sit on stringers placed a candle-length apart. The hard part would be rounding the corners to match the footlocker, so that the false bottom would fit closely. First, though, I'd have to look carefully at the locker's real bottom to see how to match it.

Lying in bed the night before, trying to go to sleep with a zillion ideas zooming around in my head, it had dawned on me that, in addition to the candles and matches, I was going to need some other

equipment if I was going to explore successfully, and without being caught. A mirror on a long handle for peeking around corners, for example, would be very helpful. And some kind of box to protect a lit candle from drafts would make things lots easier. No doubt, I knew, other things would come to me.

The notion of a wood box with a candle in it didn't seem very smart, though. And, obviously, wood wouldn't do to make a mirror. So I cleaned up my workspace carefully and walked up to the Matron's desk there in the carpentry shop.

"Um, excuse me, Matron? Can I ask a question?" Again, being polite and nice worked best with them.

"Yes, boy?" She didn't even look up.

"Well, see, I'm working on a project that is kind of in between a wood project and a metal project. It needs both. Do you suppose I could also take some metal-working classes? They meet tomorrow, I think, so it would not interfere with this class."

This unorthodox request—generally we boys in the school grumbled about having to take any shop classes at all—did make her look up. "What project?"

"Um, well, it's a surprise. Uh, for another...er, one of your sisters. A present." That produced a puckered-up smile, this one a bit less prune-like than the one the day before.

"Well, how nice. And you need both metal-working as well as wood-working? I'll have to see how your progress in the school is, but if you're doing well, I think we can arrange it."

"Thank you, Matron." And I went back to my scheming.

I spent the rest of that class creating a make-shift ruler from a long, pencil-sized wood scrap that I could take with me to measure my footlocker. The tools in the class were carefully monitored, so borrowing anything was impossible. The ruler went down my pants, along my thigh and held in place by my belt, a bit uncomfortable but a good hiding place, as long as I didn't have to sit down, until I could get it back to my bed.

I was doing just fine in school, as I knew well, so the next day I was sent into the metal-working shop. I wasn't going to be doing real metal-working, welding and so forth, just ornamental stuff, and, quite reasonably, the Matron in charge wanted to know what I had in mind.

"Well, ma'am, I'm making a present, a pencil-box. And I thought I'd make some shiny hinges to dress it up."

"Hinges? *Hinges* as your first project? My, you do have ambition. Tell you what. How about making a fitted lid in wood shop and ornamental, as well as functional, corner braces here? As a first project, corner braces will be far less likely to frustrate you. And if you use the right material, you can polish them to a high shine to dress up the box."

That was just fine with me, especially the high shine part. Unless I could get my hands on a piece of real mirrored glass, that was going to have to do.

It took me until about my birthday to get the pencil-box finished, along with all of the other, clandestine, parts I was putting together. It seemed appropriate that I was going to begin my explorations just as I was beginning my fourteenth year.

Or at least it was going to be sort of close to the beginning of my fourteenth year.

\* \* \*

The thing is, all of us boys had birthdays on one of two dates, July first or January first. We didn't really question this, but I think we all knew it was just another strange thing about that place. Of course, it was quite convenient for the Matrons to do it that way, because with three dozen of us altogether, there would have been almost a birthday a week to deal with. And that many parties were just not in the cards.

But by lumping everyone into one of those two dates, there needed to be only two parties a year. Actually, I guess we were lucky to get those two parties, because there weren't any other holidays, not even Christmas.

Anyway, my birthday was on July first, along with about fifteen of the other boys. And it was also a good-bye party for the four of them who were turning fourteen—including Booger and another boy named Red who was in the school, too. The rest of us knew we wouldn't be seeing them the next morning. And it dawned on me that I'd have a sleeping room all to myself, for at least a couple of years. Unless the Matrons changed the rules. Again.

Of course, there are parties and then there are *parties*. Given the kind of place it was, ours was one of the former, quiet and staid by comparison with what we would have preferred, with gifts of clothing for the birthday boys. In fact, now that I remember it, that was the only time we ever received clothing, unless something got completely destroyed somehow and was replaced with a ragged, thrice-used item. Everyone did get sweets, though, as a treat. I guess that twice-a-year-only candy was one of the reasons that most of us had perfect teeth.

The festivities, if that's what you can call them, were watched over by a double shift of sharp-eyed Matrons for about an hour, and then it was time, as usual, for evening study and then bed.

But ever since my discovery of the passage behind the map, bedtime for me had become a new and very interesting part of the day. At first, I practiced staying awake and trying to tell when the other boys in my room finally fell asleep. When I got that figured out, I began trying out short excursions to the outhouses in the Yard, which was permitted, to see if anyone would wake up and notice.

With the departure of Booger and Red, none of that mattered so much, because I was going to have my own room. Even better, I knew they'd move me to the smallest of the sleeping rooms, which was back by the classroom.

Having my own room also meant I'd be able to modify my footlocker without having another of the boys notice, and I pushed ahead with that project. Soon, I had a place to hide a supply of candles and matches, along with my other paraphernalia, and the problem became how to acquire those candles and matches.

I finally decided I didn't really need candles. I could make a metal holder, like a lantern box, and use wax with some kind of wick in it—a home-made candle, of sorts. Of course, that just meant I'd need wax instead of candles. And matches. Wouldn't it be nice, I thought, to find some strike-anywhere matches?

It seems like it took me a couple of months after my birthday to pull everything together. I managed to snare matches from the outdoors kitchen one day, when the Matrons out there ran off to break up a fight in another part of the Yard and all the cooking trainees went with them to watch the fun. I'd been paying attention to their activities for a couple of weeks and figured out where they kept their extra boxes. A whole box of kitchen matches seemed at the time like the pot of gold at the end of the rainbow to me, and I hid them away under the false bottom of my footlocker.

The wax took a little more creativity. For a while, I kept a sharp eye out for candle-drippings—the Matrons would usually take a candle with them when they went out to their special privy in the evening, and every now and then a piece of a drip would break off. That, however, quickly proved itself to be far too slow a way to accumulate enough wax to be useful. Then, one day I noticed that one of the

classroom Matrons was polishing the bookcases in the classroom, using some kind of goop from a little can and rubbing to beat the band.

“Um, Matron?”

“Yes, boy?”

“Well, I’d like to polish the wood on a project I’m making. If I finish the bookcases for you, could I use that stuff on my project?”

“Project? What project?”

“Ah, well, it’s a secret, actually, a present for, um, someone. Ma’am.”

This wasn’t the Matron I had in mind for the pencil-box I was making, so I could have told her. But I thought she might be jealous or something and not cooperate.

“A secret, eh? I’m sure that you know that secrets among the boys are not allowed.”

“Oh, yes, ma’am. And none of the other boys knows about it, just me. I want it to be a surprise.”

She stopped rubbing and shook her wrist. “This beeswax polish does get a bit tiresome, so it would indeed be very helpful if you could finish this for me. I’ll tell you what. Finish up here and you can take the wax to the wood shop when you go. I’ll show you where we keep it.”

“Um, I see that you’re putting some on that cloth and then rubbing it in. Does it need more than one, er, coat?”

“Ah! Good observation, boy. A second coat is always a good idea. But you have to let the first one harden up for a while, say, overnight. And these bookcases have been polished many times. Your wood project probably needs several coats to be truly sealed and polished.”

“Thank you, ma’am. I’ll finish the bookcases today and do them again tomorrow when I have a chance. And I’ll put several coats on my pen ... er, my project. Thank you!”

As I said, being polite and being nice about it went a long way with the Matrons. This sort of groveling, though, was a struggle for me, and I was glad that none of the other boys saw me at it. I’d have been accused of brown-nosing for sure, and that was always grounds for a fight. The last thing I needed at that point was to get into trouble. Besides, post-fight caning always hurt more than the fight itself.

Finally, the day came when I was ready for a little night-time exploring. I had my candle-lantern with a hardened pool of beeswax in it and a wick made from twined together threads from an old sweatshirt, and the mirror I’d made was polished to a fine sheen. It was just a matter of screwing up my courage.

That short excursion into the passageway behind the map with my gear was both terrifying and exhilarating. I was worried about time—with no watch, I couldn’t tell how long I was out of bed, and bed-checks were always a risk. I was worried about making some noise that would alert someone. I was worried that someone would see my light in the first part of the corridor, before the door, shining through the map. I was worried that I would run into Matrons coming or going. I was worried that I would have a heart attack.

But it turned out to be easy.

\* \* \*

## Two

I spent the next ten months or so exploring. At first, it was every night, not so much from a sense of urgency as from a sense of curiosity. It did turn to urgency more and more as I approached my fourteenth birthday—but I'll get to that later.

It took me a couple of weeks to develop a routine that I could sustain. The first few nights weren't the problem—on each of those little explorations, I was so nervous about being discovered that I spent no more than an hour or so in the tunnels, tunnels that turned out to be so complex that I began thinking of them as the Labyrinth.

But I got away with it, so I quickly became braver and increased the time I spent at it. Those longer, every-night explorations, however, soon caught up with me, and I started dozing off in class, a serious transgression if there ever was one. I'm pretty sure that the only reason I didn't get kicked out of the school was that I had become their star student. For a while, I cut back to every other night, and then just to make sure I'd get enough sleep, every third night. As my explorations continued, I probed deeper and deeper into the Labyrinth behind that door, so each trip took longer. Those two nights of sleep became more and more important.

I discovered that the network of tunnels was quite extensive and on several levels. Some were obviously used more than others, and some seemed never to have been used at all, at least recently. It didn't worry me to walk the used tunnels, but it made me nervous to explore the unused ones, as it was easy to spot my new footprints in the dust. I eventually solved this problem by fashioning a crude broom to obscure my tracks.

One time, my excursion lasted almost until dawn, because I got lost. I'd come to realize early on that behind that door was a complex of nearly identical tunnels, mostly straight but intersecting at all angles in a bewildering maze. I thought about creating a map, but knew that, should such a thing ever be found, it would be about the most damning evidence of my transgressions possible. I finally did create one, but I found a place to hide it in one of the unused tunnels, and soon transferred my supply of wax and matches, along with the other stuff, there as well.

The time I got lost, I'd intended to re-explore some familiar ground, so I didn't take the map with me. Naturally, I took a wrong turn at some point and wound up somewhere in that maze that I didn't recognize. Panic set in—I knew that not showing up for breakfast would be the end of the world as I knew it—and I was fortunate to finally blunder into a corridor I recognized.

That experience got me to thinking, though. How, I wondered, do the Matrons not get lost in there? On my next excursion I began a systematic inspection of the walls and ceilings of the corridors, especially in the vicinity of intersections. It took a while before I realized that each corridor had subtle labels in the form of symbols at about shoulder height that had been chiseled into the rock walls, mostly triangles with notches cut in them. At first glance, they weren't distinctive, but when you learned what to look for, they jumped right out at you. The main corridor, from behind the map and through that first door, was labeled by upward-pointing triangles with a single notch cut into the right-hand side. Corridor Up-One-Right, I started to call it. Once I'd transferred those various symbols onto my map, the Labyrinth began to make more and more sense—there was a pattern! Triangles with vertices pointing up were main, through corridors; those with vertices pointing down were connectors, cross-streets, as it were. And the few rectangles I'd found signified sloping tunnels to other levels.

And then came the big epiphany, where it all fell into place for me. The tunnels all had smooth floors that weren't quite flat—there was a low point right down the middle of the corridor as if water was supposed to drain there. Also, the corridors were mostly straight, except for the sloping ones, which

were gently curved. And those all curved to the right as you were descending. The labeling triangles and rectangles were all placed at easy-to-find spots, once you knew what to look for and where to look. And, because they were chiseled into the walls, you didn't really have to look at them, all you had to do was feel them. *So you didn't really need light in there!* The chiseled symbols would tell you where you were, and the shape of the floors kept you walking down the middles of the corridors.

When I figured that out, I felt so smug that I almost got myself in big trouble at the school. At that point, it was October and I was becoming increasingly aware that my fourteenth birthday was just over the horizon. Not only was I the star pupil, I was also the oldest. Humility and the associated obsequiousness expected of us boys were becoming harder and harder for me—and the Matrons knew that.

To put me in my place, I suppose, the Matron that day assigned me what she no doubt thought was an especially difficult math problem, one of those “story problems” where you have to figure out the right equations to describe the question in the story and then solve them. The details escape me, but I do remember that the problem was indeterminate—either you'd have to divide by zero or there just wasn't enough information available, something like that.

But, silly me, I made the mistake of telling her, in no uncertain terms, that it was indeterminate. Bad mistake. Not only did it get me an extra turn cleaning the privies—and if you know anything about boys, you know that's a really disgusting job—it also got me extra time in the classroom, where I had to *prove* that the problem was indeterminate. That turned out to be harder than I'd thought, and I lost a night of exploring because of it.

Anyway, where was I? Oh, yeah, gloating about having figured out that you could get around in those tunnels in the dark. That made it a lot easier, believe it or not, because, before, exploring around with my home-made lantern, I lived in fear that someone else in there would see its light. Or that I'd open a door to a dark room and they'd see the light. Operating completely in darkness made life a lot easier, once I got used to it.

The thing is, now that I've talked about how I managed to explore around, my tools and schedule and all, I still haven't said anything about where those corridors went. When I worked up the courage to find that out, well, a whole new world opened up for me.

\* \* \*

Ironically, it was my favorite thoroughfare, Up-One-Right, that got me started. In retrospect, I suppose that this shouldn't be a big surprise—after all, the Matrons used it all the time to come and go from our Cave, so it only made sense that their route would be as simple as possible. Simple, in this sense, would suggest that the other end of Up-One-Right would be where they came from.

But I didn't know that or, really, think it through that far. All I knew was that I had to start somewhere, and finding the other end of Up-One-Right seemed like a good idea at the time. So one night, after I'd learned to navigate with confidence in the dark, I followed it. As a through corridor, I expected a door at its far end, but it actually ended at an intersection with an upward-sloping corridor with its gentle leftward curvature. That corridor, I discovered, ended at a door, a door just like the one behind our schoolroom map, as far as I could tell. The gentle draft I felt on my ankles was outward, under the door, and I hoped that my feet didn't smell too bad.

It took me some time to persuade myself that there was likely to be a bit more corridor beyond the door and then a curtain of some kind (although probably not a map) before any opening to a room, just like at the school-room end. The clincher was that I could see no light at the bottom of the door, where the draft was going, despite the fact that my eyes were well acclimated to the dark at that point. Still, I

had my fingers crossed as I carefully turned the knob and eased the door open. I found that my suspicion was correct—there was more corridor ahead, plus a very faint glow. Whatever was over the end of the corridor wasn't completely opaque.

As I approached, I began to hear the murmur of soft voices, which nearly made me gasp with alarm. If they pulled back that curtain, or whatever it was, I was a cooked goose! But the conversation had already grabbed my attention.

“Louisa told me that 8H9 is getting more and more arrogant in school. That he not only knows he's smart, but he seems to think he's smarter than she is. I mean, this happens a lot with the thirteens, but he's a bit over the top.”

The combination of “school”, “smart”, and “thirteen” made me realize that she was talking about me. It took me only another second to understand that I was called “8H9” as well.

“It sure makes him a pain in the ass to put up with, doesn't it? But he's just the kind of seed-bearer that we need. Smart, assertive, good-looking, or he will be as he ages, and a strong physical specimen. We've heard nothing but good things about him from Mother Elaine and the geneticists.”

I was so shocked by her crude language, language that would get us boys whacked a couple of times, that her compliments about me almost didn't register. And what was this about a “seed-bearer”?

“Yeah, I guess she knows best. Oh, crap, look at the time. We'd better scoot. Where's that lantern?”

The mention of a lantern suggested to me that they were coming my way, so I beat a hasty retreat, back through the door, down to the end of Up-One-Right, and into the first cross-corridor I came to. I hid around a corner until they passed by, and then, as much as I tried not to, I couldn't help myself but to follow them.

I think that's when I first got the idea of camouflage. They were easy to follow, carrying their lantern and all, but I kept thinking, what if I make a little noise that they hear and they turn around? They'll see me for sure, with the light reflecting off my white skin and blonde hair and all. I made a vow then and there always to use something to make me black, like the darkness of the surrounding tunnels, in the future. Charcoal, from half-burned logs, seemed like a possibility, for my skin. And I needed a black cloth for my hair.

Even with worrying about being seen, though, I had to keep close enough to listen to their conversation.

“Y'know, I think that Mother Elaine is right about 8H9. He's going to be a real man. It'll be too bad when he gets gelded.” She giggled. “He's almost enough to make me want to be on the milking team.”

“Eww, that's gross! I know what you mean about it's too bad, though. I have to say that I feel even worse about the culls. I mean, sure, they've got their imperfections. But so what? All that's needed is to keep them from being seed-bearers. Like that poor kid with the bad teeth last spring. And the bad eyes. He was a great kid! Smart, happy, funny, a good influence on the other boys. What a waste.”

“As much as I agree with you, I also have to agree with Mother Elaine's decisions about these things. It's for the good of the community, after all.”

“Oh, sure, I know that. And I'm not trying to go against her decisions. It's just that...well, it's just that there seems to be so much waste of the potential of these males to help with securing our future.”

“But that's part of doctrine, surely you remember that. To the extent that there's waste of that nature, it balances the havoc that too many of them would create for the community. That's one of our founding principles. All they're good for, ultimately, is their seed. Oh, here we are. Ready for your shift again? I wonder what we'll hear in the debrief this time.”

I knew what a “cull” was, from the flock of chickens the farmer-trainees kept. And it sure sounded like they were applying the term to Bucky. The description fit, and so did the timing. I could feel myself getting mad.

But I was confused about the word “geld.” We were taught additional languages in the school, and I’d become fairly fluent in both classical Spanish and German. And “geld” in German, I remembered, meant “money.” But that didn’t make any sense to me at all, the way she’d used it. I made a mental note to check the big dictionary the next time I had a free minute in the classroom.

It was the business about the “waste of potential” and the “havoc of too many of them” that really got me to thinking, though. What kind of community was this place?

\* \* \*

The comment about a debrief reminded me that these two Matrons would be joining the three already in our Cave, in their own sleeping area, I supposed, talking things over, and then the two coming off-shift would be headed back into Up-One-Right. And then the new ones would undoubtedly then do a bed check.

With that hint, I had no trouble getting into my bed in time to be counted. But when I found the time to look up “geld” in the dictionary the next day, I had trouble keeping my temper, that’s for sure. It only compounded the anger I felt about Bucky having been culled. Whatever attitude problems the Matrons had been having with me before took on another flavor altogether after that. Gelded? Really? That’s what happened to boys after they turned fourteen?

I suppose that it was a good thing that the Matron in the classroom was the one who had stayed over, the one with the double shift. I think I just might have confronted the others, I was so mad. But thirteen-plus years in that place had taught me the value of self-control and patience. And at that point I made a vow to myself to channel my anger and energy into using my next eight months preparing for escape, just before my fourteenth birthday.

Escape to where wasn’t clear, but escape it would be. Maybe, I thought, I could also figure out how to rescue some of the other boys from that awful fate as well. Fantasies of becoming a champion of the downtrodden filled my head for days.

Now, for all that I’ve been saying good things about the quality of the schooling I got at the hands of the Matrons, I need to emphasize something I hinted at earlier—it was, compared to a comprehensive education in modern terms, spotty. History, as I suggested, was somewhat biased toward what the community saw fit to teach. And, relevant to my motivation to escape, any discussion of human physiology and, especially, sexuality was not only ignored but actively suppressed. Further, those farmers-in-training had a little flock of chickens to take care of but no other farm animals at all—no mammals, in particular. So we boys didn’t even have the rudimentary knowledge that all real-world farm kids get from watching the behavior of the stock. To us, the notion of sex was about as meaningful as quantum physics would be to a gopher.

In fact, I was so uneducated about all that stuff that after I looked up “geld” in the dictionary, I had to look up “testicle” to see what the hell that was. (Oh! *That’s* what they’re really called, was my reaction.) Then I had to look up “sperm,” and gradually the notion of a “seed-bearer” dawned on me. Eventually, after tracking down all sorts of definitions, a blind-person-appreciation-of-color understanding of sex began to emerge for me. It seemed to explain, at least, why there were both roosters and hens in that little flock of chickens and, maybe, why they had that peculiar style of “fighting” with each other, as the Matrons insisted on calling it.

That understanding, meager as it was, also helped me cope with those “stirrings,” to use a polite term, that I was undergoing and, apparently, the other older boys were, too. But we all knew not to mention them to each other and certainly not to the Matrons for fear of punishment. Looking back on it, I have to say it was quite bizarre when my body decided to head into puberty without my really knowing what it was all about. When hair started growing out of my face, I was totally freaked out, for example. But, as we’ll see, all that worked itself out before too long.

In any case, the outcome of my having overheard that conversation was that my motivation to explore, with a particular goal of finding a way out of there, snowballed. I changed my schedule back to skipping only one night for sleep, and I began opening more and more of the doors at the ends of those upward-triangle corridors.

In class, when I knocked off my daily assignments before anyone else, I spent a lot of time thinking about the design of the Labyrinth and the rest of the community. All of the corridor-end doors had a draft blowing under them, outward, from the dark corridors to whatever was on the other side. That meant an air source of some kind, and, like in *Tom Sawyer*, that meant a possible route to the outside. It also motivated me to keep myself extra clean—any odd smells coming from the Labyrinth could well raise suspicion, I thought. I even got hygiene points for my cleanliness during inspections.

As I opened more and more of those doors, I also explored beyond them a little. It took all the courage I could screw up for the first such exploration, and I chose my old favorite, peeking past the curtain behind which I’d heard that conversation about my being gelded someday. I picked a day just after a Matron shift change, on the theory that no one would be in there, unlike on a shift-change day, and, when I peeked out, the room was blessedly empty. I studied it for a while and finally decided it was a changing room for Matrons going on and coming off shifts in our Cave. There were benches and rows of pegs along the walls, from which hung the sorts of dresses that the Matrons wore as well as other garments that I didn’t recognize.

After some careful thought, I picked the “in for a dime, in for a dollar” approach and slipped out into the room. An opening led to what turned out to be showers, and there were several toilet stalls as well. And a closed door led somewhere that I didn’t, at that point, have the courage to check out.

The other garments reminded me of something like an over-large shirt, almost knee length, with a cord running through loops about where a waist would be. The material was a wonderfully smooth, fine fabric, not at all like the dresses that I was used to seeing the Matrons in. And these silky shirt-like things were in a variety of different colors, bright, cheery, and not at all like the drab dresses I was used to seeing.

Another time, I opened a door and, when I got close to the curtain over the opening to whatever the next room was, I was assaulted by the most delicious aromas I’d ever smelled. A peek showed me that there was a kitchen in there, and several Matrons, dressed in those silky outfits I’d seen before, were making bread. But it sure didn’t smell like the bread we had to eat in the Cave.

A couple of those bakers in there were young, not like the old and wrinkled Matrons we boys always dealt with. I could see actual legs from the knees down, and interesting wobbling motions under the fabric covering their chests. When one of them leaned over toward me to pick up something she’d dropped, I could see a lot of what was causing that wobbling, and I was surprised to discover a clear connection between young, pretty Matrons and those stirrings I mentioned before. I still didn’t quite understand it all yet, but I did understand that having old, wrinkly Matrons in the Cave with us, dressed in those long dresses with their hair covered, was meant specifically to keep us older boys from noticing what I was noticing at that point.

At the time, I was too stirred up to recognize the importance of finding that kitchen, but it turned out to be one of my most critical discoveries.

Another critical discovery happened when the curtain I came up to hit me with another class of smells. I didn't quite place them at first, but they were much less pleasant than the kitchen smells had been, more earthy, pungent. It turned out to be an entrance to an animal husbandry facility, a sort of big stable. There were animals I recognized from pictures—horses, cattle, goats, sheep; all the farm stock that we boys didn't have access to. But more importantly, there were tools there, tools of all sorts. Because the stalls and aisles between them offered plenty of places to hide, I explored the stable at length and made mental notes of all the equipment that might come in handy for my escape plans.

But the biggest discovery, the most critical of all, was when I opened a door at the end of a corridor and found myself in a library, a small one about the size of my single-person sleeping room, but one with shelves and shelves of more books than I ever imagined existed.

\* \* \*

As much as I wanted to devour every book in that library as soon as possible, caution held me back. I realized that, first, I needed to prepare a place where I could do my reading. What if, I reasoned, one of those old biddies couldn't sleep one night and came into the library looking for a book? It wouldn't do for me to be in there. Also, I couldn't find a second door to this library. As I discovered later, that was because it was the restricted library, one hidden from all but the most senior and trustworthy of the Matrons. This, of course, made it all the better for my purposes.

But the most important thing was my escape plan, which hinged on my finding a way out of the underground Labyrinth, maybe through that air inlet I'd deduced must exist somewhere.

As I marked my discovered rooms—the stable, the kitchen, the library, and so on—on my map, I also studied it for reading-room possibilities. It became apparent that there were sections of the unused part of the place that I'd not fully explored. That became a priority, but first the footprint problem needed solving. I managed that by borrowing a real broom from the stables one night and sweeping as many of the unused corridors as I could, figuring that beyond where I'd swept, no one would go looking for more dust.

It was when I was sweeping one of those dusty corridors that wasn't being used by the Matrons that I discovered the source of the fresh air, that breeze that blew outward under all the doors. At the end of a long ascent that included more than a full-circle curve, which I had to crawl the last fifteen yards through because the ceiling had lowered to three feet or so, it opened up into a little room with a window. A window to the world outside.

The window had a grating of bars over it, and no glass, and it was an irregular shape about four feet square that had a view that seemed endless. The grating was hinged and held closed by a simple latch, albeit one that couldn't be reached from the outside. The first time I began to pull it open, it made a God-awful screeching that echoed down the corridor I'd come up. But I fixed that with some of the beeswax I'd purloined for my home-made candle lantern. And I did an experiment: I left my lantern lit in the little room and crawled then walked back down the curving corridor to where it branched off from the main hallway that was in use by the Matrons now and then. As I left the little room at the top farther and farther behind, the candle's light became fainter and fainter until it was no longer visible at all. Nor, as the incoming air diffused, could I smell the burning wax.

So I had my reading room, an aerie in the side of the mountain with a window looking out over a desert. Oh, it took more work to make it truly hospitable—several wool blankets, which smelled of horses, that I borrowed from the stable were especially helpful—but it served me perfectly over the next few months as a private, hidden place in which to read to my heart's content. And some of those books

from the library I'd discovered turned out to be just what I needed to flesh out my education, at least as far as my background was concerned.

I can't possibly describe all of them here; hell, I've probably forgotten more than I remember. But there was one, I think it was called something like "History of the Oscura Colony", that helped me understand a lot of stuff that was just completely opaque before.

It seems that at the beginning of the Mexican War, in about 1846, the United States Army of the West formed something called the "Mormon Battalion," which set out on the Santa Fe Trail for California. It included not only soldiers, but family members as well. The ordeal, however, was just too much for many of them, and at Santa Fe several fell out sick and many of the women and children were sent back north to Colorado. Three of the soldiers plus their wives—they were early Mormons and seriously polygamous—and children headed off on their own, to the south. Apparently, the men had heard of gold or silver or something in the Sacramento Mountains, and they were going to get rich, or so they thought.

For whatever reason, maybe placer signs in the creek, they staked a claim in Nogal Canyon, southeast and over the mountains from where Carrizozo is now. And they started digging. But after many months, they decided the hole was barren, and, anyway, winter had come and, even that far south, it played havoc with their plans. Two of the men died, or maybe they killed each other, and several of the women and children died, too. To complicate matters, the third man turned sickly. I think those three soldiers started with something like twelve wives altogether and fifty-one children and wound up with nine women and forty or so children for the one guy left after that first winter. So he, now the clan's patriarch, gave up on the Sacramentos and headed west. They all crossed that hellish lava flow just west of where Carrizozo is now—not a trivial accomplishment—and wound up staking a claim, or, I guess, several claims, in the Oscura Mountains just north of Oscura Peak. The west side of their property was an amphitheater-shaped escarpment down to the desert of what's now called White Sands, the *Jornada del Muerto*, and the east side was a Valley carved into the more gentle eastern slope of the Oscuras there. They must have found signs of minerals for them to have staked the claims, and there were also a couple of robust springs that made the land in the east-side Valley suitable for ranching. So they settled in.

Well, to make a long story short, two things happened. First, the nine women decided somehow that their communal husband was irrelevant to their future, so they eliminated him. The details are obscure, but it seems clear that he didn't die of natural causes. Their leader in this was a woman who began using her maiden name exclusively, Lily Hobbes. They switched from being a patriarchy to a matriarchy, and they started calling themselves "Lilies."

Sometime about then, the Lilies rejected Mormonism and, apparently, all other modern religion, too. And because they'd already had experience with mining, probably from their time in Nogal Canyon, they, the women, I mean, kept at it. And that led to the second thing, the even more amazing thing.

You see, in the process of the mining, they ran across some natural caves, one of which contained what turned out to be the great treasure of Francisco de Coronado, the sixteenth-century Spanish conquistador. By that time, and we're talking somewhere in the early 1850s here, that treasure had passed into legend. But those women who'd started out from Colorado with the Mormon Battalion found it. That, of course, gave them the resources to prosper. They must have had some genuine US gold coins, because they made molds, melted down some of the Coronado gold, and made their own coins. Counterfeiting, sure, but it was real gold in the same amount as the original US gold coins, so it was both ethical, from their perspective, and undetectable by the methods of the time, at least out here in what was no-man's land at that point. After that, it was a matter of figuring out how to get northwest to Socorro, the closest real settlement back then, and setting up a connection for supplies and so forth.

It seems that they prospered for several decades in this way and raised cattle in the process, which provided a legitimate cover for their overall operation. In the meantime, a governing structure developed that, probably from books they bought, took an interest in the so-called science of eugenics. I found in their library there an old book by some guy named William Goodell, who advocated castration to prevent procreation by men with inferior traits. And I found some other writings by members of the Oscura Colony who discussed their problem of having a limited gene pool from which to draw and how to avoid inbreeding as much as possible. They seemed determined to remain as independent of the outside world as they could, so inbreeding was a problem for long-term success.

Somehow, these ideas took firm hold in the Colony, and years later, when I came along, they'd evolved into the system that I was born into, where male children were segregated and eventually either culled or gelded to be used as, well, slaves.

Now, you've got to understand that, for me, reading all this was both eye-opening and, well, quite reasonable, in a way. It was what I'd implicitly been force-fed all my life. It felt like home, somehow. But it still made me even madder than I'd been when I'd first heard about the gelding business.

Fortunately, among all those books—and, remember, this turned out to be their version of a “classified” library, for there was another, bigger one with a huge variety of books in it that I eventually ran across—among all those books were others that provided useful information about the day-to-day workings of the Colony, maps of the surrounding region, and, of more than casual interest to me, a comprehensive map of the Labyrinth, that cave/tunnel system I'd been mapping for myself. Including the location of the Coronado treasure room.

But all of that became of secondary interest to me the night that I, quite unexpectedly, bumped into Clarisse.

\* \* \*

### Three

They say that hindsight is twenty-twenty, and, in hindsight, I guess I should have expected that I would not be the only curious and adventuresome young person in that place. Naturally, there would be others who accidentally discovered the secrets of the elders and who decided to investigate those secrets. I suppose that, if I'd thought of it at the time, I'd have expected such an investigation to involve one or more of the other boys; but, then, we boys were pretty much kept in a state of submission, cowed into obedience for fear of retribution from the Matrons. If I'd known about the lives of the girls there, which involved much more freedom and encouragement toward independence, up to a point, I probably wouldn't have been surprised to run across one in the Labyrinth.

As it was, though, I'm not sure who was more startled—and scared—when she opened the door to that restricted library and found me in there.

In retrospect, I have to give her credit for not bolting and hollering for help. But, then, she wasn't supposed to be in there, either, and I think she had some of the sense of arrogant superiority that most of the other women seemed to have, certainly the Matrons I was familiar with.

I have to say, I remember that encounter like it was yesterday. I was in there, way toward the back, using my lantern to look at the titles of the books on the shelves on the last row, trying to find something

good to read next, when the ceiling light—one of those electric ones they had here and there—came on. I blew out my lantern, but that must have made a little noise.

“Hello? Anyone there?” The voice was not one of the boys’ voices, nor did it sound like a Matron.

I stayed perfectly still and, through gaps in the shelves, could see someone over by the door, someone who began to move toward one of the side walls and then past the ends of the rows of shelves toward the back of the room. As she—and I saw she was wearing one of those shirt-like garments with the rope belt—eased past the rows, I could tell I was trapped. If I tried to circle around the other end of the rows, I was sure that she’d see my movement. So I slowly crouched and, on hands and knees, crawled to meet her when she finally came around the end of the last row, where I was. I’d risen, so that when she peeked around the corner, she was looking at my chin.

She squeaked and jumped back, but I was expecting something like that and had set down my lantern in anticipation. I therefore had both hands free to grab her, with one hand around her waist and one on her mouth, just as she turned to run. I was a little busy to be paying attention, but I did notice she felt different from the boys I’d grappled with in play wrestling. Softer.

“Ssshhh! Now hold still! I’m not going to hurt you, I promise. If anyone hears you, we’ll both be in trouble, because you’re not supposed to be in here either.” I was whispering, but forcefully, and I think that last bit got her attention because she relaxed and stopped struggling.

I carefully took my hand off her mouth, ready to clamp it back if she screamed, but she didn’t.

“Who are you? What are you doing here?” She still looked terrified, but at least she was whispering.

I smiled and remembered how well being nice and polite worked with the Matrons. “Well now, I’ve got the same questions for you. But, look, first we ought to put out the ceiling lights and use this lantern I’ve got. It doesn’t make so much light under the door, you know?”

She nodded, and I put my index finger to my lips in the “sshh” gesture as I lit my lantern again and then tiptoed back to the light switch. We settled into a back corner that was well-sheltered by the shelves to continue our conversation.

“So, you asked first. Here’s the thing. I’m White ... uh, I’m William White, and I’m here to find something interesting to read.”

Just in time, I’d realized that “Whitey” wasn’t how I wanted her to know me, and I remembered “William” from some book I’d read. “White” as a surname just seemed logical.

“Oh, well, I’m Clarisse, and I’m here for the same reason. Our other library has lots of books, but these are way more interesting.” Her forehead crinkled and her eyes got squinty. “Hey, wait a minute. How old are you?”

“Almost fourteen. And, even if you don’t, I know the implications of my next birthday.”

She scooched away from me a few inches. “You’re one of *them*!”

I guessed what she meant and nodded. “Yeah, but if I don’t figure out a good plan, I won’t be much longer. Don’t worry, though, I’m not going to hurt you or anything. You’re the first girl I’ve met, and I don’t want to scare you off. How old are you, by the way?”

“I *am* fourteen, almost fifteen, in fact.” Her look of superiority was unmistakable. “But you’re not even supposed to know about girls.”

“I know, but I do. And I also know a lot of other stuff I’m not supposed to. This little room here is full of forbidden knowledge. As I bet you’ve figured out.”

She blushed a little.

“Well, yeah, that’s true. That’s what’s so interesting about it. And you were right. If the Sisters found me here, I’d be in big trouble. I’m not even supposed to be in this section of the Colony. It’s off-limits to everyone except council members.” She cocked her head sideways a bit. “So, what are you training to be?”

“Training? Oh. No, I’m not one of those boys. I’m still in the school we have.”

Her eyes got wide. “Oh. You’re a seed-bearer, then. You must be smart.”

“Mmm. Smart enough to have found this library, at least. But listen. I was here for quite a while before you came in. And I have to be back before first light.”

She looked surprised, fished into a pocket in her garment, and pulled out a metallic disk, which opened in half. “Oh! Goodness! It’s late. I’ve got to get back, too.”

“What’s that thing?” Curiosity got the better of me.

“This? A pocket watch, silly. See?” She held it out to me, and I saw a little clock face there, familiar to me because of the clock at the back of the school room.

“Wow! I’ve never seen such a tiny clock. Very amazing.” I was envious, but too proud to let it show too much. “So, can we get together and talk again soon?”

She smiled. “I’d like that. Not tomorrow night, though. How about Friday night?”

“Uh, does that mean that tonight is Wednesday night? Or, I guess Thursday morning? See, we don’t have a calendar or anything like that, and it’s hard for me to keep track.”

“Yes, it’s Thursday morning, quite early. But dawn’s coming, and I’ve got to get back.”

“Want me to guide you? I’ve got my lantern.”

“Guide me? Do you know where I’m going?”

“Uh, not exactly, unless it’s to that changing room that our Matrons use. Or ... well, or somewhere else I’ve been. I don’t know what they’re all called, though.” I’d realized that it might not be a good idea to tell her about every location I’d discovered.

“Hmm. We can go faster with the light, I expect, so, yes, let’s go together. But I’ll have to show you the way.” She gestured toward the door. “Let’s go, and pay attention so you don’t get lost. You need to find your way back. Oh, and we need to be quiet out there. Sound travels a long way in the Colony.”

We closed the library door carefully, and she turned toward the opposite direction from which I’d come. So, I thought, all I have to do is to remember how to get back here from wherever we’re going, and then I can find my way back to the boys’ part of the caves.

It turned out to be fortunate that I’d become adept at remembering my way around in that Labyrinth, because her route involved several unfamiliar turns at intersections and some ups and downs to different levels. And she didn’t hesitate but rather walked fast enough to keep me breathing hard.

When we came to a closed door, she turned to me, finger on lips, and whispered softly, “OK, see you back in the library, two nights from now.”

“Um, right. Nice meeting you, Clarisse.” I could see a hint of a blush on her cheeks as she gestured for me to blow out the lantern.

As soon as I felt the door close, I re-lit the lantern and hurried back the way we’d come. At the library, I fished out my map to refresh my memory about how to get back to my school room and practically ran all the way. Her pocket watch had read 4:26, and morning, I knew, was imminent.

\* \* \*

I was generally well-practiced at daydreaming in the school room, at least when the Matron's attention was on the other boys. But the day after meeting Clarisse was the first time I'd ever daydreamed about a girl.

And what a girl I had to daydream about! Of course, because she was the only girl I'd ever met, I didn't have any standard of comparison, but, still... Soft flaxen hair, blonde like mine, falling to her shoulders in a slight wave; sparkling blue eyes alive with intelligence and, once she stopped being scared, humor; a cute little nose with just the right bit of upturn at its tip; full, red lips over a mouth of perfect white teeth; and a well-proportioned chin with just a hint of a dimple in it. The picture was burned into my memory, and I spent the day focused on it while trying to avoid thinking about the very interesting, and more than a bit mysterious, curves I'd noticed under that shirt-thing she was wearing.

But reality intruded when the Matron made her little end-of-school-day speech.

"Now, boys, remember that July first, a birthday for some of you, is coming up soon. In just about two weeks, in fact. You need to be on your best behavior so that you'll be eligible for the treats we have for you at the party."

As usual, there was no mention of who was turning fourteen—me alone, this time. But I didn't need to be reminded.

So my escape planning took on a new urgency. But it had evolved since I'd first had the idea of escape. I'd found the kitchen, after all, and my reading room appeared to offer useful shelter from the elements, although I decided it would be a bit windy and cold in the middle of winter. But those blankets would be helpful for that.

"Escape" now meant something more like escape from the boys' Cave and Yard, but not necessarily from the Colony altogether. Before it made sense to venture out into the real world, it seemed like a good idea to do some exploring from a familiar base, and the Colony seemed to be as good a base as any.

Really, I decided, all I had to do was to take my clothes and toothbrush and, probably on the night before July first, simply disappear into the Labyrinth. There would likely be some kind of alarm raised, at least within the little group of Matrons, but the other boys wouldn't really notice anything, or at least they'd pretend not to, like we always had. And I could sleep, or read, by day and explore outside by day and inside by night.

Best of all, using the Colony as a base would let me continue to see Clarisse. We had, I realized, lots to talk about.

One of those restricted books I'd read discussed how the Colony managed its future population by selective breeding, carefully planned. In recent years, they had changed an earlier practice by requiring girls, for long-term health reasons, to wait until their eighteenth birthdays before becoming mothers.

For some reason, that made me feel better when I thought of how the future might treat Clarisse.

That night, even though I'd been up almost all of the night before, I went back to the library and found the book with the comprehensive map. I made a point of doing this while I still remembered the route that Clarisse had taken to the door where she'd left me, and I copied that part of the map onto mine. I wasn't going past that door without good reason, but it was nice to know where it was and how to get there. It was also interesting to see what was in that part of the Labyrinth—it appeared to be the girls' and Matrons' living areas, including some large rooms meant for meetings and so on.

When I finally got to sleep, I was dead to the world until a Matron woke me up on Friday morning by banging a metal pot with a metal spoon right next to my head. Still, the first thing I thought of was that I was going to meet Clarisse again that night.

The every-other-night pattern with her continued for the next two weeks while I used the “off” nights to stock up on various borrowed items for my transformed reading room. Slowly, it began to accumulate enough gear to become a sort of apartment. I knew I couldn’t shut off the air flow through the opening in the mountain, but I built a sheltered area off to the side that, I hoped, would help me to stay warm in the winter.

Drinking water and toilet facilities puzzled me for a while. But then I realized I could use the changing-room toilet stalls, assuming I could figure out the Matrons’ shift-change schedule. And I could use their showers, too, and started doing so right away so that I’d be nice and clean for my meetings with Clarisse. Ultimately, I solved the drinking water problem the same way I solved the food problem—raiding trips to their kitchen at night.

Clarisse, bless her soul, solved a couple of problems for me as well. On our third meeting, she brought me presents—a pocket watch, the one she’d been carrying on our first encounter, as a matter of fact, and a multi-year calendar, with the date marked, yet. For the first time in my life, I really knew what day it was and I could keep time without counting seconds or days or phases of the moon. I almost felt civilized.

The calendar she brought me must have been copied by hand from another source, but how she could give me her watch was hard for me to fathom. When I asked her, she just shrugged and said she’d told the Matrons, only she called them “Lilies”, that she had lost hers and needed another.

It seemed that the Colony had resources that I couldn’t quite get a grasp of.

As the first day of July approached, Clarisse became more and more concerned about how I was going to avoid the fate of all the other fourteen-year-old boys on that birthday. Without telling her of my specific plans, I tried to reassure her that I’d be fine. As much as I wanted to trust her completely, a little portion of myself, a portion with an out-of-proportion amount of influence on my decision-making, persuaded me to keep specifics a secret from her. We would, I decided, continue to meet in the restricted library while I lived in my reading-room aerie. Maybe, someday, I would show that retreat to her, but not right away.

There was just a part of me, no doubt associated with all those years in the clutch of the Matrons, that was too paranoid of the Colony women to trust her completely. I mean, she was going to become just as much of a Matron—or a Lily, to use their word—as all the others as she grew into a woman.

I pretty much worked myself to a frazzle during the last two weeks of June that year. I’d left the calendar and watch, along with everything but my change of clothes and toothbrush, in my reading aerie so they wouldn’t be discovered by a Matron, and I made sure to cross off the days faithfully so I’d know when my time was up. All the preparations, and the meetings with Clarisse, kept my nights busy, and I made sure to apply myself diligently to school work during the days. I guess I was running on pure adrenalin the entire time.

But the last day of June finally arrived, and even though I was pretty much of a nervous wreck, the time passed somehow, although I was sure that the classroom clock had slowed down. At supper, an especially tasteless concoction involving, if I remember correctly, corn and chicken, I didn’t have much of an appetite, but I knew I needed to eat just for the fuel. It might be some time before I could manage a meal with real calories, I thought.

At long last, though, the after-supper study period passed and the daily pre-retirement muster was called. The Matrons, of which there seemed to be a double shift on duty, were pleased that everyone was present and accounted for. Then it was lights out, and things got quiet.

Except, I couldn't help but notice, there was still a faint light coming into my sleeping room from the main room, the one with the big dining table. As the minutes dragged by, I noticed that it flickered occasionally, and now and then I heard a murmur of voices, not whispering exactly but talking in very subdued tones.

After what seemed to be an eternity, I decided I had to check out what was going on, so I settled on a trip to the privy. And, I'm pleased to say, I discovered that my brain was still functioning, because I had a new idea—a diversion. I put on my clothes, including both shirts, and, rubbing my eyes as if I'd been asleep, wandered out into the main room. Sitting across from each other at the inside end of the table—the end by the classroom entrance—were two matrons, an older one I recognized and a younger one who I didn't. And the younger one was big and obviously quite fit—she looked as if she could take on about six of us boys and not even breathe hard. A real bruiser.

What was most distressing was that they were sitting with two candles and enough reading material to make it look as if they were there for the duration.

\* \* \*

As distressed as I was, I knew I had a part to play. “Oh! Sorry, uh, ma’ams. I need to use the privy.”

I turned toward the entrance, and the younger one, who was on the far side of the table from me, said, “Why didn't you go before, boy?”

Between her size and her deep voice, she could have been a man in those Matron's clothes she was wearing.

“Uh, well, there was a line, ma’am, and I didn't want to be late for lights out. Sorry.” I crossed my legs and did a little hop to emphasize my urgency.

“I see. OK, then, but hurry up.” Although not nearly as old as most of our Matrons, including the one with her back to me, she'd already perfected the sourpuss look.

I scurried outside, taking my second shirt off as soon as I was out of their view, then dropped it and kicked it along ahead of me. Before doing my business, I walked all the way to the corner where the palisade met the rock wall and stuffed the dusted-up shirt into a chink of the logs, where there was a little stump from a branch sticking out. I made sure the shirt was a bit torn and hooked onto the stump. Then I headed back toward the cave entrance, stopping at the privy on the way.

All the while, because my brain had kicked back in, I was getting madder and madder. Matrons *never* stayed up late in the main room like that. And could it have been a coincidence that the first time, *ever*, that they did that was the day before my fourteenth birthday? Obviously, they were watching me. Didn't they trust me? I was their star pupil, after all—surely I deserved some trust!

At the time, the irony of that line of thought completely escaped me.

Maybe I think well when I'm mad, though, because I also had another idea. Inside the cave, I walked all the way to the back, where there was a little sink that took advantage of the hot water spring.

“Where do you think you're going now, boy?” The sourpuss voice was almost threatening this time.

“To wash my hands, ma’am. We're taught always to wash up after using the privy, ma’am.”

“There's a sink outside, you know.”

“Yes, ma’am. But you said to hurry, and I didn’t want you to think I was dawdling outside, ma’am.”

And what was she going to say to that, I thought, as I let the water run as long as I could get away with and splashed it about noisily.

I was back in bed for only a few minutes before I heard the sourpuss voice again, this time more quietly.

“Oh, fiddle. Now *I’ve* got to go. I shouldn’t have had that second cup of tea. Back in a minute.”

I expected to be checked on, and I was, but I had arranged my position so that I could just peep through my almost-closed eyes to see her depart for the cave entrance.

That, I knew, might be my only chance. I quickly arranged the bed-clothes, including an extra blanket from my footlocker, to make it appear as if I was lying there, grabbed my remaining clothes and toothbrush, and stepped as quietly as I could to the entrance of my room. The familiar, more elderly Matron, whom I knew to be somewhat deaf, was still sitting with her back to me, bent over and concentrating on something on the table in front of her.

The next few seconds were at least as nerve-wracking to me as was the first time I stepped behind the classroom map, and, in hindsight, just as unremarkable. She didn’t hear me sneak behind her into the classroom, and, by that point, I’d had enough practice to be able to slip behind the map without touching it. It took until I had that first door latched behind me for me to let out my breath, but then I was able to use my familiarity with the tunnels, along with those chiseled sign-posts I’d figured out, to do what I’d planned, disappear into the Labyrinth.

I’m certain that I set a personal record getting from the classroom to my personal reading aerie. Once there, I slept better than I had for months.

I awoke to sunshine outside my window and smelling, I could tell, somewhat horsey, from those blankets from the stable I’d slept on. I was going to need a shower before meeting with Clarisse that night.

As the events of the previous evening came back to me, I couldn’t help but wonder what was happening in the boys’ compound. I could tell that the sun was high enough that breakfast was well over—if there had been any breakfast at all—and that I’d turned up missing. If I knew anything about the Matrons at all, and I was pretty sure I did, they’d be taking it with a calm determination, calm so that none of the other boys would realize that there was anything wrong and determined to find me if it was the last thing they did. I suddenly wished that, instead of hanging it on the palisade, I’d tossed my other shirt into the privy, just to make one of them poke around in there to look for a body.

Despite having stuffed myself the night before, I was hungry, so I ate a little of the food and drank some of the water I’d swiped in preparation while I thought over a plan for the day. I’d been so preoccupied with getting away from the boys’ compound that I’d not really thought of what I’d do once I succeeded. For one thing, I could now explore during the day, I realized. For another, I needed to think ahead about more food.

Between reading, exploring the Labyrinth, and, more recently, meeting with Clarisse, I hadn’t really looked outside much. It had always been pretty dark anyway, except for the days when the moon was in the right phase to illuminate the mountainside and desert out there, and I’d been busy. But now it was daytime, and exploring the Labyrinth seemed risky when the Lilies community was awake.

So I opened the grating, without noise, thanks to my application to its hinges of the beeswax, and was confronted with my first decision: should I leave it open or close it behind me somehow so that I could get back in? It came to me after some thought that closing it would not serve any purpose,

because, with all of the gear I had stashed in there, my presence would be obvious. So I tied it open with some rope I'd acquired in order that it not, for some unforeseen reason, slam shut behind me.

Then I leaned out as far as I could for a good look, and discovered that it took only about five seconds before the exposure got to me and I had to pull back into the room. Sure, I'd climbed the rock walls of our Yard, to a height of maybe fifteen feet. But outside that window was a sheer cliff that extended downward, in my first wild estimate, maybe fifteen *hundred* feet.

I sat, leaning against the wall, breathing deeply to stop my head from spinning—no matter that the hyperventilation probably just made the spinning worse for a while—and tried to screw up enough courage to look out there again.

It took, I suppose, about five minutes, and that gave me the time to plan a little experiment. I found a reasonably round rock, or maybe you'd call it a big pebble, on the floor of my little aerie and held it as far out the window as I could, then dropped it. By focusing on its fall—and lots and lots of bounces before I lost track of it—I was able to avoid the sense of vertigo that my first look had given me. And, because the rock fell only a couple of feet before it bounced off a little ledge perhaps three inches wide, and then it bounced again almost immediately, I realized that the cliff out there wasn't really vertical, it sloped. As I looked more closely, I saw the little ledge repeated, in various widths, almost endlessly. Further, the three-inch ledge just below my window widened to at least a foot just a yard or two to my left. Maybe, I thought, I can get out there and find a way to the top.

But the mere thought of going out there to climb scared me enough that I had to sit back down and breathe some more. I then tried the experiment again with a much bigger rock, so I could track its fall down that not-quite cliff. And the second experiment worked—I watched the bigger rock fall much farther, and farther, and farther, and faster all the while until I actually got dizzy. Once again, I had to take some minutes to recover.

Despite my reactions, seeing the real world was a powerful motivation for me. One possibility, which seemed both easier and safer, would be to find another way out. There could well be, I thought, multiple air vents such as this one, maybe even one not cut through the side of such a cliff. My thoughts returned to the full-Colony map in the library. It also occurred to me that other air vents might allow me to block this one off during the winter. Fresh air was nice, but I knew well how chilly the winter winds could be.

There were so many plans of that nature swirling around in my head that it seemed like a good idea to start writing them down, and I spent the rest of the day doing just that. The first draft was just a jumble of ideas, but it gave me the start I needed to develop priorities and the beginnings of a time-line for the future. Even if I had to climb up the cliff outside my little window, the outside world beckoned more than ever, and one way or another I was going to heed its call.

\* \* \*

Although I was doubly keen to get to the library to study that map for other exits, I knew I needed a shower before I met Clarisse. So I waited until just after a Matron's shift change, cleaned up, and, somewhat later than usual, made my way to the library.

By that point, Clarisse had procured her own lantern, and I found her sitting behind the back row of shelves sort of cowering in a corner. When she saw me, she jumped up, ran to me and threw her arms around my neck, and clinched me into a huge kiss, our first ever. Although it surprised me, it didn't take long—maybe a second—for me to get into its spirit. After quite a while, during which I discovered the importance of breathing through my nose, she pulled back.

“Oh, William! I’ve been so worried! You’re late, and I thought ... well, I thought something bad had happened to you.”

I smiled. “Mmm. Yum. Come back here. I was just figuring out how to do that.”

She giggled and pulled away more. “Now, stop. I shouldn’t have acted that way. It’s forbidden. We just can’t.”

“Hey, c’mon, everything we’re doing is forbidden. A little more forbidden-ness won’t hurt.” And, because I had hold of her hands, I was able to pull her to me.

The second time, although not so vigorous, was definitely better.

She wound up a little out of breath after that one. “Now, where have you been, anyway?”

“I wanted to get cleaned up, and I had to wait until no one was around. But here I am, all squeaky clean and healthy and, now, very, very happy.”

“You got away!”

“No, they caught me and threw me in the deepest, darkest dungeon. This is all just your imagination.” And I hugged her again.

“Well, see, I was worried because of all the fuss going on today. Things were pretty crazy there for a while, this morning.”

I had to laugh. “You mean that someone noticed that the birthday boy was missing?”

And she laughed, too. “Did they ever. Just before lunch there was a grand assembly, with mandatory attendance, where Julia and Louisa got dressed down in public. They’re going to be assigned to cleaning the bathrooms for a year, and they’ve lost all privileges.”

It took me a minute. “I see. They must be the two Matrons that were supposed to be watching me last night. Boy, for a minute there, I didn’t think I’d be able to get away. I had to sneak past the old one.”

“They said they found your shirt on the log wall, and that you must have gone over it. Somehow. There’s a search party out in the Valley now, on horses.”

“Clarisse, I’m sorry I gave you such worry. But I got away as planned and even had a long sleep last night. So everything’s fine. And, well, I spent the day today making plans for the future.”

“And?”

“What do you say that we, slowly and carefully, figure out the best way to get away from this awful place, go somewhere far away, like one of those places in one of the books we’ve read? You know, like Paris or someplace. Leave all of this behind, like a bad dream. It might take a while, but I’m sure we can do it.”

Even scared, she looked beautiful. “Oh.”

“I don’t mean now or next week or even next month. To do this right might take a couple of years. And I’m not expecting an answer now, either. I just wanted you to know my idea, that’s all.”

“I like your idea. I’m not sure I want to spend my whole life in this place. It’s ... it’s too unfair, somehow. And too structured, rigid. But I need to think about this, you know?”

“I understand. We need time together to build trust along with friendship. Also,” I grinned, “I’m sure that more kissing practice would be worthwhile, too. I know I could use some, to get better at it, I mean.”

“It scares me.”

“You don’t like it?”

“No, it scares me because I like it so much. Too much.”

I made a growling noise, deep in my throat, that I thought might sound like a bear or something. She giggled and melted into my arms, and we practiced for a bit.

Those stirrings of mine went crazy.

But before things got out of hand, we both came to our senses. We realized that we really didn’t know what we were doing and that, besides, that dusty old library floor just didn’t seem like the place. And what if a Matron, or a Lily, as I was learning to call them, walked in on us?

So, once again, we parted ways at the library door, only, this time, feeling a little guilty, I returned for more time there. I needed to study that map.

Looking at it with familiarized eyes, it dawned on me that it was drawn the same way that the big map in our classroom had been, with North up. I found my reading aerie and its air vent, sort of, although its corridor wasn’t connected all the way and it was marked “impassible.” It was on the west side of the Labyrinth.

There were three other such corridors that ended in air vents as well, another on the west side and two on the east, and none had that “impassible” notation. And there were several things labeled “gates” on the east side, too, one near the sleeping area that was behind the door I’d followed Clarisse to, another near the stables, and a third, what looked like a large one, by the kitchen I’d found. There were also several things labeled as “gates” in the tunnels themselves, including one that separated the parts of the Labyrinth I’d explored, plus that Coronado treasure room, from what appeared to be more traveled areas.

Out of curiosity, I examined the shelf where I’d found the map more carefully and discovered that it was one of three copies. Well, I thought, I reckon these good ladies don’t really need *three* copies, and that’s how I ended up with a complete description of the Labyrinth and its eastern Valley to study at my leisure.

\* \* \*

## Four

Now, I’m aware that any account like this would be a lot more dramatic if there were a close call, or maybe several, in which I, the young man who escaped from the evil Lilies, was nearly apprehended and escaped (again) only by the skin of his teeth. Or maybe if I were caught, thrown in an oubliette, which, of course, would have at least an inch of cold, slimy water covering the floor, in the deepest part of the Labyrinth and fed only moldy bread and water until I managed, miraculously, to escape (again). But I’m afraid that nothing like that happened to me. And, to tell the truth, that was fine with me at the time—even teen-aged boys can take only so much excitement. And excitement I had aplenty over the years of this tale, even if it seems like I had it easy. But, as is obvious from my being here to tell the story, I made it through.

During my time in the Labyrinth, either I was good, or I was lucky, or they just weren’t equipped to deal with someone like me. Over the years, I’ve pretty much persuaded myself that it was the last of those possibilities—having one of their boys escape their control just wasn’t something that happened often enough that they knew how to handle it. Of course, I was careful with everything, especially for

my first week of freedom, but I think they just didn't know what they were doing, at least in my case. I don't mean to give the impression that the Lilies were a bunch of dim bulbs, although I'm certain that some of the low-level workers among them weren't what you'd call rocket scientists. Rather, I think it was probably their mind-set—they lived in such a structured community, each with an assigned role, that they didn't think independently, and they couldn't handle much in the way of new or unique situations. So I was able to avoid detection, as long as I was careful.

Clarisse told me that their search of the Valley to the east lasted only a day, and then the whole subject was swept under the rug—they all pretended it never happened. She said that the official finding was that I died trying to cross the desert over there, and the wind buried my body with blowing sand. It seems that the search party went down the Valley on the main road, which they assumed I'd taken, and found that the wind was so strong that it would have covered any new footprints, so they gave up. And, although it took her a while to tell me, just like it took me a while to really begin to trust her, she would have known this stuff, given her place as a sort of junior council member, a leader in training.

But I'm getting ahead of myself.

Immediately after my escape from our Cave and Yard the day before my birthday, and then, after my first make-out session with Clarisse—the Best Birthday Present Ever!—when I absconded with a copy of the library's map of the Lilies' entire place, I made a point of just settling in. It was the first time in my life that I felt free—free of the Matrons' rules, free to decide what to do with myself whenever. It was quite liberating.

One of my first realizations was associated with the copy of the map I took from that library. Not just a folded-up piece of paper with the Labyrinth on it, it turned out to be a whole map portfolio of not only the Labyrinth but also its locale and the surrounding region as well. My first decision as a revolutionary was to take from that library the other two copies of this portfolio as well—hey, I figured: archival copies of the maps of their little world aren't something I need to let them continue to have access to. If they don't have their own copy, well, tough.

At the same time, I realized the need to continue to be careful. It wouldn't do, for example, to walk off with foodstuffs and other commodities that they could count easily. Even with sloppy inventory control, they might well notice. When Clarisse had given me her watch with the excuse that she'd obtained another, that was a message that they had ample resources. But I had no way of knowing about the precision of their keeping track of things.

Anyway, where I'm going here is toward this: for the next couple of years, I spent my time exploring the Labyrinth more fully as well as the region outside. Nothing truly dramatic happened, beyond a few almost-encounters with Lilies in the tunnels—all of which I managed to dodge by slipping into a convenient side-tunnel to avoid being discovered. And somehow I managed to avoid running into anyone at all once I got outside.

Yet, there were significant developments in my overall strategy. One of my first explorations involved those other air-vent tunnels I found on my map—by which I mean the map I swiped from the library, *their* map. It turned out that one of the east-side tunnels was not only an air-vent tunnel, it was also, pretty obviously, an emergency escape route. Unlike the tunnel to my aerie with its notation on the map as “impassable,” the other one was a thoroughfare. This northeastern air-vent tunnel had a ceiling at least six feet high and a smooth floor, and the eastward-looking opening was full-height, a true door in the mountainside covered by the same sort of grate as mine, right down to the latch. But—the most significant difference—outside was a walking path that appeared, on my first look, to head down toward the Valley's floor. Upon finding all this, I decided that the climbing to be done from my aerie qualified it as my own emergency exit and that this northeastern vent was my main highway to freedom.

And some day, I resolved, I would get out there and explore.

As a prelude to a real exploration, one night when the moon was full I did a little localized exploring via that northeastern portal. At first it made me nervous—the only other time I'd ever been without a roof over my head was in the old Yard, but that felt protected by the rock walls and the palisade. Outside in the Valley, it was totally different and took some considerable getting used to. And I found that the trail led not only down to the road in the Valley, but up as well, over the top of the Oscuras—and over the top of the Labyrinth. At that point, I didn't follow it to wherever it was going, but it was clearly meant to connect with something, as it was well-used. In fact, it looked as if the trail out of the northeastern portal was a little-used side trail that was carefully disguised near its intersection with the main trail, which was some kind of highway for foot traffic, and maybe horses, between the Valley and somewhere to the west, up higher.

That excursion, during which I'd walked down to the road in the Valley, got me thinking about the concept of distance, because the walk back up from the Valley seemed like a very long haul that just went up and up forever. The thing is, having been raised in that confined space for fourteen years and then having experience only with the somewhat greater distances within the Labyrinth, I had no real notion of what, say, a mile was. Yes, I knew it was 5,280 feet (although, never really having counted that high, I really didn't *know*), but until you've walked that far in a straight line, you can't really grasp it intuitively. And because my regional map had a scale on it, I discovered that it was some thirty-five straight-line miles northwest to Socorro and perhaps twenty-five just south of east to Carrizozo—not that I knew anything about either of those places, but they were towns marked on the map. To make it worse, it looked as if the terrain between the Valley and Carrizozo wouldn't allow for straight-line travel, so getting there would undoubtedly be lots farther.

Another of the maps in the portfolio was a local area map of the Valley and the mountains just to its west, and it, too, had a scale. I was dismayed when I deduced that I'd walked about a half-mile on my little excursion, a quarter-mile down to the Valley floor and the same back up.

That meant that one or another of those towns was sixty or seventy times as far as I'd walked, what seemed like an unimaginable journey to me. And, although I didn't know the lay of the land to the east, toward Carrizozo, I could see from my aerie's window to the west that what the map called the *Jornada del Muerto* looked like it might live up to its name—crossing it would indeed appear to be, as my classical Spanish told me, a journey of death. But that fun experience, of course, would depend on my being able to get down there in the first place—that fifteen hundred feet of not-quite-vertical cliff outside my aerie's window presented its own challenges.

Whatever the lay of the land to the east, Carrizozo looked better and better, even if it turned out to be farther because of the topography.

Comprehension of distance spawned in me the realization that I needed to be in better physical condition to do what I wanted to do. If I couldn't walk up even a gentle trail a quarter of a mile without getting winded, how could I ever think about getting to Carrizozo or anywhere? And it also made me realize that I was going to need some kind of mechanized transportation if my long-term plans were going to have a chance of succeeding. Of course, first I'd have to get somewhere that such a thing was available. It occurred to me that maybe I'd have to steal something from the Lilies.

My physical conditioning program started out by my turning myself into what I thought of as the world champion of jumping jacks. That was the only callisthenic exercise I knew of, given that it was a favorite of the Matrons, so I embraced it. Boring as they were, I found jumping jacks to be both useful for conditioning and for losing myself in thinking, at least after I truly mastered the physical part.

I also took to actually *running* down and back up the trail from the northeastern portal to the Valley, at least when there was enough of a moon to do so safely. And before too long, I extended those runs

down the Valley road, which helped me understand more fully some of the notations I'd seen on the map.

\* \* \*

If the jumping jacks were boring, well, that fit in with most of my existence for those next couple of years, at least in terms of story-telling.

As my confidence in exploring outside into the Valley increased, so did my exploration coverage. As soon as I'd increased my wind—what's now called “aerobic capacity”—I decided that a walk *up* the trail outside the northeastern portal was in order. And so up I went.

It didn't take too long for me, walking up that trail, to discover that it indeed was used by horses—evidence of their use became clear in the aroma, the road apples, and the damage their shod feet had caused. I had become sufficiently familiarized with the part of that trail from my northeastern portal down to the Valley floor—about a quarter-mile—that I could estimate distances by comparison. And it seemed to be about four times that far—a mile or so up—with switchbacks and a couple of long traverses across the eastern side of the Oscura ridge, to the top. Most of the landscape there was covered with the usual New Mexico piñon-juniper scrubland, trees, if you want to give them the honor of that word, up to fifteen, occasionally twenty feet high spaced widely enough that they could eke out a living in that harsh, dry environment. Occasionally, in a little draw, there'd be a stunted Ponderosa pine, a struggling relative of the more healthy trees that grew down in the Valley in the vicinity of the springs down there.

What I found at the end of that trail was interesting. Just at the crest of the ridge under which the Labyrinth sat was a cleared area with what I learned was a long-distance radio antenna. I learned this by subsequent research in the Lilies' libraries, both the restricted one and the other, which I'd found using that map I'd swiped. When I first discovered it, the antenna was pretty clearly a receiver, a multi-band (including short-wave) antenna that would be able to listen to signals from anywhere and everywhere. Some months later, as I'll get to, it changed.

The antenna had its cleared spot, but it was apparently meant to be disguised by the piñon-juniper scrub, because there was evidence of careful pruning of the trees. That, I decided, along with the long time-scale for regeneration of the landscape, would explain the evidence of both horse and human traffic on the trail up there.

So, I realized, despite their isolation and the care they took to enforce that isolation, the Lilies could hear what was going on in rest of the world.

I mentioned that the Valley had water enough to grow healthy Ponderosa pines. Those, it turns out, were what I'd seen swaying in the wind from my vantage point inside of the Yard, when I'd still been confined there.

I figured this out one full-moon night, when I was running up from the Valley floor back to the northeastern portal. I'd learned the trail well enough that I didn't have to stare at my feet and so could look around a bit—I didn't say I ran that trail *fast*, after all—and noticed a cleft down there with a log wall across its Valley end. My Yard.

The revelation made me stop, and I stooped, leaning my hands on my knees and breathing hard, while I inspected the scene.

It all looked so small. And as I increasingly caught my breath and thought more carefully about it all, my sense of indignation grew and grew. *That*, I thought, is where I spent the first fourteen years of my life, along with about three dozen other boys? That little-bitty place?

Even including the inside rooms of the old mine-shaft, it was pathetic.

The Lilies, quite obviously, thought of us humans of the male persuasion as nothing more than animals, like dogs, to be caged and trained and used for their purposes, whatever those purposes may be.

There had always been a simmering resentment within me about my childhood, but I think seeing our little world from above, how tiny it was, and how confined, catalyzed a new attitude in me, one that suddenly didn't care quite so much about how I might have to treat some of them to effect my goals of escape to the real world. I was suddenly ready to kill my way to freedom, if that was going to be necessary.

As my full-moon runs down to the Valley and on down from there took me farther east, I eventually came across an important piece of the Lilies' defenses. Later, when I was able to match up where I'd been with my maps, it jumped out at me as something I should have noticed previously. But at the time, it was something of a surprise.

As the Valley floor sloped to the east, the walls began to converge, at first little-by-little, and then more dramatically. It wasn't too long before, on this first run so far down-Valley, I discovered myself in a true canyon, with cliffs for walls that continued to converge more quickly. And then I rounded a somewhat more abrupt curve in the canyon floor and found myself confronted by a familiar sight—a tall, pointy-topped, palisade.

"Tall", of course, is relative, and these logs were probably no more than fifteen feet out of the ground, whereas the palisade of our Yard had extended at least twenty feet upward. But this one wasn't just a single wall, it was a set of them. I explored a bit and decided that, with their maze-like layout, they were meant to slow to a crawl any group that might attempt to make a dash up the Valley toward the various gates into the Labyrinth. There were several places with evidence that cars or trucks, or something with tires, at least, had needed back-and-forth jockeying maneuvers to get through.

The thought popped into my head that this place could well explain the location of the Labyrinth's southeastern air-vent. That portal, as I recalled, was oddly positioned, a bit farther east, lower, and past a number of strange twists and turns of its tunnel. I made a mental note to examine the map of the Labyrinth and compare it to the map of the valley quite carefully. It didn't seem possible that there was an underground route to that set of log walls in the Valley's narrows, but maybe the southeastern portal opened onto a path for lookouts or something.

It didn't surprise me that the Lilies seemed to be defending their privacy in a most serious fashion, but what I saw in that east end of the Valley appeared to be over the top. It was like they were taking a militaristic approach to that defense. I thought about that as I huffed and puffed my way back up the road in the Valley and then the trail up to the northeastern portal.

I guess I should say a few words about the Valley itself. It included the Yard, of course, but that was just a very small enclosed area. One day, I ventured outside onto the northeastern portal trail and made a careful visual survey of it all, even to the point of making a sketch. From my vantage point well above the Valley floor, it appeared as a bucolic agrarian scene, one that might have been lifted right out of one of those dioramas that I saw a few years ago up in Mesa Verde National Park. There were gardens, several corrals, and quite a lot of what looked like irrigated pasture-land. Roads led to several spots at the base of the cliffs on the west end of the Valley, and I discovered later that those spots all corresponded to the gates into the Labyrinth.

So, putting this altogether, especially in the context of the local area map, I began to see a picture of an elaborately planned and executed haven from the world outside, one that would allow complete control of its inhabitants for generations, at least as long as its secrets were kept.

At least that was what I put together at the time. It wasn't too much of a stretch for me to see myself as the one who might well let those secrets out. If I were to be able to rescue Clarisse, after all, then my ties to the place would be completely broken, and whatever needed to be done to save the rest of the boys from their grim fate could be done without any regrets on my part.

Yes, I wanted to escape. But maybe, I thought, I could also send help in the process.

\* \* \*

If the southeastern portal, the one with the good view of the log-wall maze in the Valley's narrows, was meant as a look-out post, it didn't work on me. The night I'd run all the way down the Valley to the narrows wasn't a truly full moon, and there were intermittent clouds. I'd either not been spotted, or they ignored me as someone already inside their little domain. But, even so, it meant to me that I'd need to find another way out of the place. This set me to exploring the trails more fully.

Up at the top of the ridge, where the radio antenna was installed, I discovered three other trails leading away from the clearing in addition to the one I used from the northeastern portal. I followed them, one per night, when the weather and the moon cooperated, and found that one worked its way down toward the southeastern portal, one went off in a direction that I interpreted as the southwestern portal, and the other circled to the north and descended into the next valley out to the desert to the east, a long hike but one that avoided that narrows section of the main Valley. Eventually, I discovered that the trail off toward the southwestern portal bypassed it, with a disguised access spur similar to what I was using from the northeastern portal, and descended into a valley farther to the south, another long hike that avoided the main Valley entrance maze. And it turned out that the southwestern portal wasn't cut into the sort of cliff that my aerie's northwestern portal was—it was far more accessible. I made a mental note to find it from the inside some night.

Based on this network of trails, a plan for my ultimate escape began to form in my head. I could borrow one of the horses and ascend to the top of the ridge using the northeastern trail from the Valley, and then I could take the trail that bypassed the southeastern portal around to the next valley to the south and on out to the desert. If I got an early start—meaning just after dark—I'd have all night to cross as much of the desert as possible.

The flaw there was that I knew absolutely nothing about horses, not what they ate or how much water they needed, and certainly not how to ride one. From the looks of the horses I'd seen in the stable—very large animals that peered at me through squinty, suspicious eyes—I could tell that flaw needed fixing somehow.

I tackled that one pretty much like I tackled all the other challenges I ran into—with plenty of reading up on the topic first and then slowly, methodically, and mostly in the dark using lots of trial and error. It turned out, though, that the Lilies kept a set of low-level background lights on in the stable, maybe to keep the stock from spooking in what would have been the total darkness of their space otherwise. That lighting helped me see to get around and, I think, it helped the horses to see me and not be too fearful. I discovered that almost all of the horses were suckers for a handful of grain, so I made friends that way with as many of them as I could while I tried to figure out which one was the most gentle. I've learned since then that they were all quarter horses, mostly mares (surprise, surprise) with a few geldings, too. The one I picked was a chestnut mare, not that I knew that at the time. It was only after I got to know her better that I noticed she was missing some equipment. She didn't shy from me in her stall, and when I finally got up the courage to sit on her, she just stood there and looked back at me as if to say "Now what?" Lots of nights sitting on her, and feeding her a handful of oats now and then, got me to feeling almost confident that we could make it across that eastern desert together.

I don't know what I would have done without those libraries. They helped me with the horses—how else would I have figured out a saddle, I don't know, or even a bridle—and so much other stuff, too.

Food, for example. I've since learned that teen-aged boys are chronically hungry even in the best of homes, but at the time I thought I was going to starve to death just about every day. As I've said, I didn't want to abscond with too much in the way of food, because I worried that someone would notice. But I couldn't take food ingredients—flour, for example, was pretty useless to me, and what was I going to do with raw meat?—and what prepared foods I could find didn't seem to provide much real food value. One time, I remember looking in one of their coolers and finding a leftover cured ham. It was irresistible, but I also was pretty sure that someone would miss it if it just disappeared. I stared at it for a good five minutes and actually drooled for the last two or so. Then I caved in and grabbed it, taking big bites all the way back to my aerie. It turned out to be a *salt-cured* ham, so that meant I was horribly thirsty the following day, all during the time I needed to lie low so as not to be discovered. Live and learn was just part of my existence during those years.

Eventually, with the help of some of the library books, I realized that I could take ingredients outside and cook them over little campfires, if I was careful. Although that turned out to be more time-consuming, and it involved additional trial-and-error, emphasis on error, it also improved both my diet and my self-confidence considerably, especially when I contemplated the journeys ahead.

The books were also helpful to me in understanding what it would be like to live in a town such as Carrizozo or Socorro. Or Paris, for that matter. The concept of money was completely new to me, although once I figured it out I realized I had, potentially at least, a source of it in the Coronado treasure. That motivated me, one night without a moon, to use the map of the Labyrinth to find my way down to that room. And, when I finally found it, it was quite revealing for several reasons.

For one thing, it was clearly a part of what I'd come to think of as the hidden part of the Labyrinth. That hidden part included the restricted library and the hallways to three of the four air-vent portals. Only the northeastern portal, that emergency exit, was part of the main corridor system. For another, its door was locked. From my perspective, all that did was to present me with another challenge, another puzzle, one that I solved without too much difficulty, although it took me quite a bit of fiddling. The thing is, if I, a fourteen-year-old boy with the help of only some books and a bit of wire, could get past that lock, it meant that the Lilies in charge weren't too worried about internal thievery. There was a pretty trusting community.

What was really interesting, though, was what the room held. In some ways, it was much like a library, with shelves of holdings carefully arranged, in this case by weight, as I discovered. The heavy items were on the bottom shelves. And the lightest stuff—bundles of paper money—was on the top shelves. From what I'd read, it would be far easier to fit in when I got to civilization if I had paper money rather than gold. Some of that was coming with me, I decided.

I remembered reading that the treasure had been discovered in a natural cave when the Lilies were digging their mine tunnels, but it was clear that they'd moved it to this new location. The locked door I'd unlocked was the only entrance and exit, and it wasn't at all natural. But, I realized, that wouldn't make the task I had in mind all that much more difficult.

\* \* \*

During those two years or so, before I'd organized myself sufficiently to set off across the desert, all that time I spent exploring and learning as much as I could about the world at large, Clarisse and I continued our regular meetings, although toward the end of that time their frequency declined.

Because she was being trained for a leadership position within the Lilies community, her responsibilities grew during those years, and she had increasing amounts of difficulty getting away to see me at night.

Another thing that increased in difficulty was my ability to understand her explanations of certain things. There had been hints that she was changing, but it really came to a head in early June of 1944—that calendar served me well, as I checked off days religiously—when I mentioned that I’d been seeing more and more airplanes flying over the *Jornada*, many at low altitude.

“Oh,” she opined, with a recently adopted air of superiority that I was having trouble getting used to, “I’m sure that’s part of the war effort here, as feeble as it is.”

As I’ve mentioned, I was a smart young fellow with a better-than-average education, so I responded appropriately. “Huh? War effort?”

“I guess you wouldn’t know about it. It’s a long, long story.”

“I’ve read about the Great War, but I thought that was over, uh,” I did some quick math in my head, “something like twenty-six years ago.”

“Yes, well, since that time the treatment of Germany and Japan by the rest of the world became so unfair, so unjust, really, that they had no choice but to fight for their rights, their destiny. America was pretending to stay out of it until about two-and-a-half years ago, but then they got involved when the Emperor’s Japanese forces struck a blow for freedom in Hawaii, Pacific islands that Japan has a valid claim to. I’m afraid, though, that the Americans and their friends don’t have much of a chance. The Führer and the Emperor will prevail, I’m sure. Even this latest attempt by the Americans to re-take France is futile, and it will be crushed.”

My upbringing in that place, with only the other boys, had lacked a lot of things, one of which was patriotism, for either the USA or any other country. Still, it was very odd to me to hear Clarisse refer to our country as “they.” And who, I wondered, was this “Führer” person?

“How do you know all this, Clarisse?”

“We’re not exactly aborigines here, William, we have modern conveniences. Radio, for instance. We hear both the American propaganda as well as all the news from abroad. I just hope that this war is over quickly and not too many more people get killed. Although, I have to say, this is a pretty efficient way of improving the gene pool. I think it’s going to be quite effective over in Europe, because some of the Führer’s efforts are aimed at just that.”

“So, radio news from America is propaganda, but radio news from overseas, like, say, Germany is not? How can you be sure?”

She actually looked down her nose at me. “It’s obvious, silly. The Führer and his people have no reason to lie to anyone. Their message is taken from the Führer’s own writings, which are the unvarnished truth about the world and its future. All that the Americans and the others can do is to respond with lies and their own foolish propaganda.”

I found myself unable to think of a constructive counterargument, one that would avoid turmoil between us, so I let it slide. But I stopped asking her about news of the world after that.

Her comments about improving the gene pool bothered me as well, but they didn’t surprise me quite so much. After all, that seemed to have been the Lilies’ way of dealing with Bucky, and it was their excuse for gelding all the boys when they turned fourteen. Their leadership had written extensively about it, as I’d discovered in their libraries.

Those libraries, though, didn’t hold a clue about this “Führer” guy, at least not that I had ever found.

Between our infrequent meetings and her new arrogance, what had started out as a nice relationship, with, I had thought, great potential, went downhill quickly. I even became worried that she'd break what degree of trust we'd established by giving me up to the rest of the Lilies.

Fortunately, I was just about ready to head out on my own, across the desert to the east.

\* \* \*

## Five

The mare in the stable that I'd made friends with, at least that was what I was hoping, had a little sign on her stall reading "Honey." And, I'd found, when I soothed her with that name, quietly, sometimes whispering, she seemed to twitch her ears in a responsive way. I was too scared to whisper random words at her, though, so I didn't actually test her name-recognition skills. I really wanted her to be my friend—it was a matter of life or death for me.

It took me until the end of July to complete my preparations, and I didn't have a final get-together with Clarisse to say good-bye. I left her a note, though, saying that I'd probably be back some day and she could check in our usual place now and then for future notes.

Now, it might seem that crossing the desert in August is setting out for disaster, especially one whose neighbor is called the *Jornada del Muerto*. For the previous two summers, looking out the window of my aerie, however, I'd discovered that, in August, there was often the kind of weather that would make such a journey possible. I've since learned about what weather people call the "Southwest Monsoon," a regional climate phenomenon that often provides clouds for shade and sometimes even rain. Of course, that rain can be too much now and then, causing flash flooding, but that wasn't something I'd seen, so I wasn't concerned about it.

So I got as well-organized as I possibly could, including hiding all that I was planning to carry—or, rather, have Honey carry—outside the Labyrinth near the trail up past the northeastern portal, and waited for what looked like a good opportunity, weather-wise. I'd read everything I could find in the library—most of what I needed was in the big one—about horses, especially how much they could be expected to carry, what to take for food (I chose some hay and oats, and hoped that there would be some grass along the way) and how to handle the tack. I'd even practiced saddling Honey several times, each experience eliciting from her that "Now what?" look that she'd given me when I'd first sat on her, bareback.

The first time that the weather looked like it would cooperate, the moon was new. I really didn't want to chance the first part of the journey in the dark, so I, reluctantly, postponed my departure. But about ten days later, the weather again took on that appearance of monsoon clouds for a few days, and I decided to set out.

As soon after dark as I thought it was safe, I hid all my possessions, the ones I wasn't taking, in the aerie as well as I could—this after considerable planning—and made my way to the stable. Getting Honey into her bridle and putting on her saddle, with careful attention to making her exhale before tightening the cinch strap, took only a few minutes, I'd practiced so many times. And then, for the first time, I opened her stall and led her out. This time, her look said "Well, it's about damned time!"

The gate out to the Valley, the hinges of which I'd carefully waxed in advance, opened without a sound, and we were out in the open air. I'm not sure who liked it more, Honey or me.

Rather than try my first attempt at actual riding in the Valley, I led her down the hill to the point where the northeastern trail joined the Valley road, and then up the trail. She balked just a bit when I turned her left toward the trail, as if to say “What? Really? Are you kidding?”

But a gentle tug on her reins got her to follow me. The monsoon clouds had almost dissipated by that time of the evening, and we had plenty of moonlight to find our way. I got the impression, after only a hundred yards or so, that she knew the trail better than I did. That helped my confidence considerably.

When we came to my cache of supplies, I loaded her up with everything I’d packed—in two sets of saddlebags, getting some grunts of dissatisfaction at the weight—and then realized I didn’t know how to get into the saddle.

All of the time I’d practiced sitting on her, with or without a saddle, I’d just climbed on the rails of her stall and swung a leg over her back. But now, standing on the ground next to her, I discovered that my nose was just about at the level of her back, and I was looking straight at the seat of the saddle where I needed my butt to be. I’d noticed I’d undergone something of a growth spurt in recent months—my raids on the storage room of boys’ clothes had increased accordingly—but that wasn’t nearly enough to get me up there.

Realizing that I needed a better solution for the long run, at that time and in that place—at night on a trail on a mountainside—I opted to find a rock beside the trail to help me up. That took about a quarter-mile of uphill walking, with me still leading her, but finally I was sitting in the saddle, not exactly tall in the saddle, as I was slumped over a bit to keep my balance, but in the saddle nonetheless.

And it worked fine, at least for a while. We made it, going at a slow walk, to the top of the ridge and the clearing with the radio antenna without incident. But then I brought her to a stop to have a look at the thing. It was different somehow—bigger and with a different configuration of all the little rods and so on that stuck out from the main mast.

I was pondering this change when I leaned to the side just a bit to get a better look, and Honey *really* exhaled—apparently, she’d been faking it in the stable. The saddle slipped in the direction I was leaning, and before I knew it, I was on the ground in a heap, having crashed, hard. I hadn’t realized that hitting the ground from eye level would be such a traumatic experience, either. So I lay there for a couple of minutes, during which I noticed that Honey hadn’t moved—something I was thankful for, because she might have stepped on me—taking stock of my condition.

Eventually, I felt a soft, breathy nose nuzzling the exposed side of my neck, and I managed to roll around to be able to get up to my knees. I don’t know if Honey was laughing at me or apologizing, but I decided to accept whatever her intentions with the nuzzling as something friendly.

The cinch strap, which I’d fastened securely, was just as tight as it had been before, although the saddle was nearly upside-down. I noted where it was fastened and resolved to make the thing even tighter when I got the saddle upright. That took a little doing, but I was finally satisfied—I’d managed to get it at least two notches tighter.

And then I had to get back up on her. There weren’t any big rocks around, and I couldn’t remember any on the first part of the trail I was going to head down. So it seemed that my better solution for mounting my horse needed figuring out right then and there. At least the ground was flat and the moon was out.

Although I’m sure I’d read somewhere about the correct side from which to mount a horse, at least one that had been trained in the traditional fashion, I forgot it at the time. So, initially I happened to choose her right side, and, naturally, she shied away from me. The first time that happened, I already had a foot up in the right stirrup, and so as she shied, I had to hop along next to her to keep up. The

second time, I managed to lever myself up enough to avoid that, but my full weight on that right stirrup made her shy even more emphatically, so I realized that something was wrong.

It all went perfectly well from the left side, however, and shortly I was back in the saddle again and sitting even taller this time.

Then I saw that her reins were dangling onto the ground in front of her.

As frustrating for me as that was, I realized it just meant that I needed practice, so I dismounted, took the reins, and mounted again, all quite smoothly, and felt accomplished. But then she looked back at me with a new expression—“You done fooling around, Bub?”

\* \* \*

I checked my watch and discovered that it was just after eleven, meaning we had six or seven hours before the sun became a factor—plenty of time to get beyond the observation posts of the Lilies. We started out at a walk down the southeastern trail, which I’d scouted carefully several times, to take that next valley to the south down to the desert floor. My plan was to let Honey walk the entire way at her own speed, so as to avoid tiring her unnecessarily and, of course, to keep me in the saddle. She seemed to know this trail as well as she’d known everywhere else we’d been to that point, so I just let her have her head. The only place I needed to steer was where the trail joined the road down the valley—and this was well east of where the Valley’s narrows were—and she wanted to turn for home.

She balked enough that I finally dismounted and fed her a small handful of oats and some water, and I talked to her quietly about my plan. That seemed to remind her of our friendship enough that she was then willing to keep on toward the southeast.

There was what passed in those years for a road in those parts, two parallel tracks with weeds growing in between. And Honey felt comfortable enough on it that I let her walk with the reins slack. It gave me a chance to begin to enjoy the night, and to appreciate what was happening.

Despite the nearly full moon, the stars were just incredible, with the Milky Way a wide streak of sparkling dots on a background of white mist across the sky and various constellations crying out for my recognition. Of course, they never look like they do in books, but I did manage to recognize several, including, importantly, the Little Dipper and its Pole Star. And, from that, I knew that we were on the correct road, heading southeast between a couple of small mountain ranges for now. I was hoping that it would still be night when the road turned east, so I could tell.

And what was happening? Well, I was out on my own, away from the Lilies for the first time ever. It was a little scary, but mostly it was exhilarating.

As the night wore on, of course, the exhilaration faded and eventually turned to boredom. My hip and knee joints began to complain about the time spent in that unfamiliar, spread-legged position atop Honey, and the gentle surging motion I was subject to became practically hypnotic. I began to worry about falling asleep and then falling off. That fall up by the antenna had hurt, and I didn’t want to repeat it, even for Honey’s amusement.

Just as the sky was beginning to reveal hints of the coming dawn, I made a point of relocating the Pole Star and found, to my surprise, that the road had slowly been turning to the east and even just a bit north of east, meaning we’d rounded the range of mountains between the Lilies’ Valley and Carrizozo. Maybe, I thought, I can make it there today. I began to experiment with Honey’s gait a little, having become accustomed to keeping my balance as she walked.

It took only a little encouragement for her to break into a trot, as I've since discovered it's called, and I spent several minutes banging up and down on the saddle before I decided that was too uncomfortable for me. With a bit more encouragement, she sped up into a lope, which seemed smoother to me, so I let her stick with it for quite a while—and I was amazed at how much ground we covered during that while. But even though it seemed smooth to me, it sloshed my insides around quite a bit, so before too long I needed to stop and pee. I took the opportunity to stretch my legs and work my creaky hip joints, and to feed her a bit of hay and water, and then we started off again, this time back to the familiar walk.

It was somewhere about mid-day, and the monsoon clouds were forming up, when we came to the *Malpais* lava flow. Of course, I didn't know what it was at the time, just that it looked impossible to cross. Impossible for me, let alone Honey. Because we'd been traveling for more than twelve hours at that point, it seemed like a good time for a rest, anyway, so I explored around a bit and found a dry arroyo with some grass growing in it for Honey and some shade for me. I even un-saddled her and took off her bridle so that she could graze. Reluctantly, I hobbled her—she seemed to trust me, but that didn't mean she wouldn't run off—and settled in for a little nap. I felt hugely guilty about the “Aw, c'mon—you're not *really* going to put that thing on me, are ya?” look she gave me when I hobbled her.

Rain, just a sprinkle, really, and thunder woke me up, and my watch told me I'd slept for three hours. And there was a little creek running in the bottom of the arroyo. Honey had wandered about a hundred yards off and was grazing contentedly, so everything seemed fine. But that little creek bothered me.

I walked over to Honey, put on her bridle and took off the hobble, then led her back to where I'd set her saddle on the ground. This time, the saddling went smoothly, and I managed to get the cinch as tight as it had been before. As I looked around to make sure I wasn't leaving anything behind, I couldn't help but notice that the little creek had trebled in size, at least. So, remembering the reins this time, I mounted, and Honey and I made our way out of the arroyo—and just in time, as the flow by that point was covering nearly the entire bottom of the little waterway, and the water itself was full of all sorts of debris.

It hardly rained at all where we were, just enough to be refreshing. But somewhere it must have rained hard, as that arroyo was running almost full at one point. I could only sit there and marvel at my first flash flood. Honey was patient with me, even when the thunder got closer—it was never right over us, though, so she didn't panic.

We'd climbed out of the arroyo on its northeast side, and near the edge of the lava beds it made a turn to the southwest, along their edge. I hadn't noticed it before, but we must have crossed it a ways back, as the nearest mountains were just a little west of north relative to our position. But even as I watched, the water level began to recede, so it was clear that these floods were short-lived events. The road we'd been following had turned northeast, along the edge of the lava beds, so we followed it—I knew that Carrizozo was in that direction anyway.

Nowadays, there are a couple of crossings of the *Malpais* in the vicinity of where Honey and I were, a very rough one to the south and the main highway northwest from Carrizozo to the north, but then there was just the highway. It was shown on my regional map—you can bet I brought one of those map portfolios with me—but the western side of its *Malpais* crossing looked to be several hours northeast. Still, the alternative of trying to cross that forbidding terrain, especially without knowing how far it would be, didn't seem attractive at all.

So we kept following that old road we'd been on. Honey had chowed down on fresh grass for several hours, and I'd eaten a bit during our rest stop, so we were able to make good time. It wound in and around some low hills, and now and then I could see the black rock and knife-edge texture of the lava

beds off to my right. But it wasn't until just about sundown when we reached that main highway, what I found was called US Highway 380.

From what I could tell from my map, it looked to be about five or six miles southeast to Carrizozo, and I was faced with my first hard choice, the first truly hard choice of my life, really.

Those five or six miles sure would be easier, I reckoned, if I could ride Honey into town. But she was branded, a stylized sort of "S" on top of a little circle on her right hip. And I'd read enough about the American west to know that horse thieves were considered to be the worst sort of outlaws, at least back in the nineteenth century. Because it was nearly the middle of the twentieth century, it might be that things have changed, I thought, but can I take that chance?

Ultimately, I opted to be careful. I found a protected place, near the lava beds and a ways off the highway, to spend the night and settled in. A hot dinner, made over a little fire, for me and a night of rest and more grazing for Honey—and there were even water sources around there, from another flood, probably—put us both in good shape the next day. I stashed the horse tack in a hidden place where I could find it another day if I needed to, took off the hobble from Honey's front legs, pointed her in the direction of home, and gave her a slap on the rump. She looked at me with a "Really?" look and then trotted off southwest on that two-track road, back toward the Valley.

I was truly on my own in the real world for the first time ever, and I picked up my two saddlebags and started toward the highway, the only way I knew into town. I was actually glad to find it deserted, though, because it took me at least a half hour to stop crying.

\* \* \*

My first experience with Americans was about as pleasant as I could have imagined. That highway wasn't much in use—I discovered soon after that rules about wartime rationing of gasoline—but people in the cars that passed me going the other way waved at me, and the first car, actually a small truck, headed my way stopped and I climbed in the back. It took only about fifteen minutes, and I found myself standing on the town square, what's now a historical marker, I think, in the middle of bustling Carrizozo, New Mexico, USA.

Well, maybe "bustling" is a stretch.

I picked a park bench at random—the town square had several—and sat down to take stock. First off, I'd made it to civilization, real civilization, not that contrived one that the Lilies had fabricated. Second off, I didn't have a clue about what the hell to do next. Those two saddle bags plus the rest of my gear were pretty heavy to carry around all day as I explored the town. But I knew I couldn't just leave them lying somewhere, especially the one with all the cash I'd borrowed from the Lilies' Coronado treasure room. It was only about nine in the morning, so it seemed early to find a place to stay for the night—I didn't want to raise suspicion about myself.

I happened to be facing southeast, at least that's what it seemed like from where the sun was, and I found myself looking at a building with a sign that said US Post Office, and next to that was a much smaller building with big posters in all the windows. One said "US Army" in big letters and, below that, "Recruiting Center." Another had a cartoon picture of an old guy with facial hair who was wearing a top hat and pointing right at me that said "I Want YOU for US Army!" I decided that I ought to interpret that as a message about what the hell I should do next, so, after resting a bit, I picked up my gear and headed across the street.

Inside the little building, which was still cool from the night air and the fact that the windows faced northwest, there was a man in a crisp, khaki uniform sitting behind a desk and working on a pile of paper. He looked up at me when the door hinges squeaked.

“Morning, son. What can I do for you?” His appraisal of me made me a tad uncomfortable.

“Uh, well, sir, I saw that sign in the window where the guy’s saying that he wants me. I thought I’d find out for what.”

He squinted. “You fooling with me, son? That’d be a bad idea.”

“No, sir, not at all, sir. See, I’m new in town, new to any town, actually. I’ve, uh, I grew up on a ranch out in the desert and haven’t been anywhere else until now. I have no idea of much about anything here in the world. Although I did hear something about a new war. Is that what he wants me for, sir?” I could tell that the “sirs” were helpful.

“You heard something about a war, huh? Well, that’s understating things a lot. Yeah, there’s a war on. And Uncle Sam, there, he needs people to join the fight against the Japs and the Nazis. But, first, how old are you, son?”

“Sixteen, sir, last month.” I could tell he was both impressed and disappointed.

He nodded. “Son, you’re the first young man to come in here who hasn’t told me he was eighteen, even if he looked only twelve. Thanks for the honesty. But, see, you’ve got to be eighteen to enlist. Now, be honest again. If you’d known that, what would you have told me?”

“Uh, I don’t know, sir. Do I look eighteen?” I tried to look old, thinking maybe I could find a different recruiting office somewhere.

“Smart question.” He looked me over some more. “I have to say, almost. I reckon if you’d shaved that fuzz off your upper lip, maybe you would.”

I mentioned before how strange it was for me when hair started growing out of my face, and that fuzz was the first of it. I’d been trying to ignore it up until that point, but it was definitely there. I rubbed at it.

“Oh. Well, I guess I thought it would make me look older.” I looked around the little office. “Uh, sir? Since there’s no one here, do you have time to tell me a little about the history of this war? See, I really don’t know anything about it, except, I guess, Germany and Japan have teamed up to fight America and some of the countries in Europe. It sort of sounds like the Great War all over again.”

“‘Great War?’ Oh, yeah, you mean what we now call World War One. What we’ve now got going we’re calling World War Two. But you’ve pretty much got it right, except that Italy was on the other side, too. Italy surrendered last year, though. Anyway, a guy named Adolph Hitler took over in Germany and has stirred up what he calls National Socialism—also known as Nazism—there. He invaded countries to the east of Germany and then to the west, including France. And his airplanes tried to bomb London into oblivion a couple of years ago.”

“Is he what’s called the ‘Führer’?”

“Yep. He calls himself that. It means ‘leader,’ although we here in the US think of him as an evil dictator.”

“And I heard something about the Emperor of Japan and Hawaii.”

“Oh, you did, did you? Well, see, two, no, it was three Decembers ago, he had his navy, I mean the Jap Emperor did this, he had his navy use airplanes to make a sneak attack on our navy base in Hawaii. Sank a bunch of our ships and killed lots of sailors. Completely unexpected and, from a military point of

view, unprovoked. Cowardly, even. But since then, our guys have started to make real progress toward defeating the Japs. The Nazis, too, for that matter. In fact, just a couple of months ago, there was a big invasion by us and our allies into France. This may disappoint you, but I think everyone should be hopeful that it's all over before you turn eighteen."

I thought for a minute. "I guess you're right—the shorter the war, the better. And I guess I should count my blessings if I don't have to go off to the end of the world to fight. But, uh ... Oh! How rude of me. I never introduced myself. I'm William White."

"Why thanks, son. They must have raised you right on that ranch or wherever you've been." An eyebrow shot skyward in skepticism. "I'm Master Sergeant Stephen Jennings. Sergeant Jennings, or 'sir' to recruits. But you're not a recruit."

"I hope I can call you 'Sergeant Jennings' anyhow, sir. It would be a privilege." That, I could tell, pleased him—the old lesson from the Matrons about being nice and polite, in action. "And, say, if I'm too young to join up, is there any other way I could help? Are you here all by yourself?"

He looked me up and down again. "Well, now, you look like a healthy young man. With all the boys just older than you off fighting, there are plenty of jobs around for young men your age. Got any skills?"

"Skills? Hmm. Well, mostly book-learning, I guess. I speak Spanish. And German, although I don't think I'll go advertising that."

"You speak Spanish? Do you write and read it, too? What kind of Spanish?"

"Book-learning Spanish, sir. Probably the kind in Spain, although I really don't know. And, yes, I can read and write it, too."

"Well, I don't know that I need someone full-time, but having a translator on call would sure be a big help to me. I get locals in here nearly every day who speak only Spanish, and I don't. Stupid Army didn't post someone here who does, when at least half of the locals do."

"I'd be glad to do that, sir. At least, if I'm around. I've got to find a place to stay, and I guess I should look for a full-time job."

"Well, now, let me think. There are some other things I could use help with, too. Like cleaning up around here. And running errands. And, say, making courier runs over to Socorro during the week. That'd be a big help."

"'Courier runs'?" I wasn't sure I wanted to run anywhere.

"Trips with packages of paperwork and so on. There's a bigger office over there that this office is a branch of. You know how to drive a motorcycle?"

"A motorcycle?" I wasn't even sure what that was. "Uh, well, no but I bet I could learn. I've taught myself all sorts of useful stuff. And I had some classes on how engines work."

That was true—one of the school-boy training courses I'd taken from the Matrons dealt with internal combustion engines.

"Hmm. I don't think I can pay much—my office budget is miniscule—but you could have a free room here, if you don't mind sleeping in the back. There's even an indoor bathroom."

"Sergeant Jennings, I'd be proud to work in your office, sir. If I'm not old enough to fight, at least I can help out in other ways." I stood at what I thought might be attention.

\* \* \*

He showed me the back room, which even had a cot, and I put my two saddlebags and other stuff in a little closet back there. Then my first task for him was to run across the street to the diner there for some coffee and doughnuts, which he proceeded to share with me.

The doughnuts were just unbelievable—like the treats we used to get on birthdays, only much better. I decided that I was going to be spending lots of time at that diner.

Then, after he worked on his pile of papers some more, he showed me the motorcycle. A three-wheeled model with what Sergeant Jennings proudly called a “sidecar,” apparently a hard-to-get add-on, it had, in addition to US Army insignia all over it, a label on its gas tank that said “Indian” and a smaller one that said “841,” both painted over, along with the rest of the machine, with that inescapable Army greenish color.

And it wouldn’t start. Sergeant Jennings allowed as to how it had been misbehaving worse and worse for about a month, but the Army never sent anyone to fix it. So he’d been using a car he’d borrowed for his courier runs, and the Indian had just been sitting.

That training course I’d taken wasn’t the full-scale training for mechanics that the Matrons put some of the boys into, just a short version for those of us in the school, like my woodworking and metal-working classes. Still, they were serious about it. The final exam involved starting a little engine to be sure it worked, then taking it completely apart, so that it was in pieces, which the supervising Matron put into a basket and scrambled, reassembling it, and starting it. If it didn’t start, or if you had leftover pieces, you were punished and had to do it all over again. It took me two tries.

Even though that test engine hadn’t been attached to a motorcycle, much of the Indian’s engine looked familiar. So I volunteered to try to fix it. It took me all afternoon, and I got incredibly gunked up in the process, but I finally figured it out—the magneto assembly hadn’t been cleaned recently, and it was packed with gooey dirt, so the thing wasn’t getting electricity for a spark. I decided that Sergeant Jennings just wasn’t mechanically inclined.

When he heard the thing start up, he came running out of his office with a look of astonishment and glee on his face. He didn’t want to shake my hand just then because I was too dirty, but he did run over to the drug store to get me some heavy-duty soap. By dinner-time, I was all clean, and he treated me to supper at the diner. Mr. Apodaca, the owner, served us a delicious meatloaf with mashed potatoes and gravy. And I got cherry pie for dessert—my first ever. What a treat that was!

The next day, I spent most of my time cleaning and arranging that back room so that it would be suitable as both storage and a place for me to live. That meant, essentially, cleaning and arranging things more efficiently, and that effort, on top of my having fixed the motorcycle, put me in good graces with my employer. And because the Indian worked, he decided to show me the ropes for those courier runs.

He usually did one every weekday late in the afternoon, he said, and on the Friday one he stayed over. It took him about an hour and a half each way, and the route was easy. He wanted me to do the Monday through Thursday runs, and he’d continue to do the Friday one—he had friends in Socorro he visited on weekends. As I was to discover, some “friends” those were.

That day, we closed up the office a little early, and he gave me a pair of goggles and put me in the sidecar to accompany him—he wanted to introduce me to his boss in Socorro. And he also told me to pay attention, as I could learn a lot about how to operate that motorcycle by watching him carefully.

Well, now, that little ride over to Socorro was something, let me tell you. My heart was pounding with excitement the whole way. Mostly, I watched the road ahead rushing toward me at an unbelievable

speed, because watching him, to learn how to drive the thing, only mattered for starting and stopping, as far as I could tell.

It had been interesting to urge Honey up to a lope—as I mentioned, that long stride of hers ate up the miles. But compared to that Indian, it was like she could have been standing still. And I was going to learn to operate the thing! This business of being in the real world was becoming more and more interesting.

Compared to Carrizozo, Socorro was a real city, and I was a bit overwhelmed when we got there. My job was going to involve finding the Army office building, but I was quite lost after only a couple of turns. I knew I'd have to get Sergeant Jennings to create a map for me.

Meeting his boss was an interesting experience, a little window into Army life. Captain Jonas Walker, a short, rather soft-looking, middle-aged fellow in a wrinkled uniform, elicited a remarkably formal manner in Sergeant Jennings. I saw clearly that what I'd thought was standing at attention was more like loafing around. When Sergeant Jennings entered Walker's office, he was ramrod straight and saluting to beat the band.

“Sir! Sergeant Stephen Jennings reporting with today's portfolio, sir.”

“At ease, Jennings. Anything new?”

“Sir, no sir. At least no recruits, sir. But I do have someone for you to meet, sir.”

“Who might that be, Jennings?”

“Sir, may I present Mr. William White. He's offered to assist my office, sir, and I respectfully would like to request that he be allowed to, sir. Ah, by way of example, he fixed my motorcycle yesterday, sir. I'm certain he'll be making himself invaluable in other ways, sir. I thought he could make the courier run during the week, sir.”

On hearing my name, I stepped forward and tried to stand as straight as Sergeant Jennings was.

“Nice to meet you, White. Where are you from?”

“Here in New Mexico, sir. I've been on a ranch west of Carrizozo all my life, sir, and I'm now off to make my way in the world. Because I'm too young, I can't enlist, sir, but I thought I might be able to contribute in other ways. For one thing, I can act as Sergeant Jennings's translator, sir. It seems that many people in these parts speak only Spanish.”

The Captain looked surprised. “That, Jennings, is the best idea you've had this year. Permission granted.”

“Thank you, sir.”

Sergeant Jennings was still standing at attention, so I was, too. I noticed that it became old quickly.

“William White, did you say? William, translating for the recruits would be extremely helpful, I think, but you know what would be even better? Classes, English classes. For the recruits before they ship off to basic training. If they had some English going into basic, we might have more success with them.” Walker was looking at me with a question, I could tell. “Do you suppose you could teach some English classes? In Carrizozo, I suppose, but also here. And maybe my colleagues down in Alamogordo would also like to be part of such a thing. We could make up a simple vocabulary for the recruits to help them in basic.”

“Well, sir, I suppose I could give it a try. I'm not a real teacher or anything. And my Spanish is the kind from a book, probably Spanish from Spain rather than New Mexico. But I guess it could work.

Meantime, I'll be glad to make the courier runs and help out how I can. Uh, I think I better get a map of Socorro here, though. It's such a big city that I'm afraid I might get lost."

Walker burst into laughter. "Socorro? Big city? That's rich, Mr. White. But, sure, we'll get you a map."

As we walked out of that Army office, Sergeant Jennings slapped me on the back, knocking the breath out of me. "Great job, son! He likes you. And those English classes are a great idea—I know some of our recruits have an extra tough time in basic training without any English. Now, let's get some supper before the trip home."

Because it was a Wednesday, he wanted to return to Carrizozo that evening, something I couldn't object to. So we had a quick supper at a little cantina he knew, and where some of the staff seemed to know him. It was quite congenial, and I even had the chance to exercise some of that Spanish I was becoming so proud of. Except, I couldn't help but notice, my Spanish wasn't what the locals spoke at all. I could manage it, but those translations and classes I'd promised were going to be a chore.

On the way out of town, across the railroad tracks on the south end, we passed a street corner at which a small group of young women were gathered, and I discovered that Sergeant Jennings had more friends in Socorro than merely those at the cantina. The women yelled greetings and waved, and one of them noticed me and asked who his new friend was. He only smiled and waved back, enjoying it all, but I was a bit embarrassed.

"Who are those women?" My curiosity got the better of me.

"Oh, friends. Maybe I'll introduce you to them one of these days."

I didn't know it at the time, but my education was about to take a decidedly more practical turn.

\* \* \*

## Six

I settled into a routine that was both easy to handle and easy to like. Because the recruiting office was less than a block from a busy main-line railroad—Carrizozo had been founded originally as a railroad town, I learned—that had a five-in-the-morning daily through town, I had an alarm clock whether I wanted it or not. But that gave me time to wake up, get myself and the office clean, and have a cup of coffee and a doughnut on Sergeant Jennings' desk when he arrived about seven thirty.

He liked that a lot.

Then I could go back to sleep if I wanted to, or, assuming I could be available for translating duties, I could just goof off. That, however, quickly became stale, so I began looking for other stimuli.

But I didn't need those right away. The day after my first trip in the sidecar to Socorro, I had my first lesson on how to drive that motorcycle. After the lesson, Sergeant Jennings sat himself down in the sidecar—he looked kind of uncomfortable, all folded up in it—and told me to drive him to Socorro. I was a little un-nerved at first, but it worked out fine. And when that gaggle of girls waved at us on our way out of town, I couldn't help but think they were really waving at me.

My second lesson was off the road, in case I ever needed to handle the thing with gravel underfoot. Sergeant Jennings didn't know it, but I had that very thing in mind, so I found that lesson most useful. The best piece of advice was not to try to take corners fast.

On that first Friday I spent in town, Sergeant Jennings took off for Socorro earlier than we had done the two previous days, telling me that I was on my own for the weekend—he'd see me Monday morning. At first, I wasn't sure about that, but it took only a few minutes for the freedom of it all to sink in. I started by having dinner by myself at the diner, surprising Mr. Apodaca, who'd come to recognize me, and pigging out on desserts.

Saturday morning, I walked over to the drug store and hung about looking at stuff until the owner there, a tall man wearing both a white jacket and a large amount of hair on his upper lip, asked me if I needed some help.

“Well, sir, I think I need to shave. But, see, I grew up without a father, so I really don't know how to go about it.”

He looked me over with interest.

“Hmm. Well, now, I guess you're about ready to shave. It'll make you look more handsome, I expect. You've got a ways to go before you can hope to grow one of these.” He stroked his huge moustache carefully. “One option is to get a barber shave, just down the street at the barber shop. And you could get a haircut, too. That'd help you look more cleaned up.”

I hadn't thought of a haircut. While I'd been in the Cave and Yard, the Matrons gave us rough haircuts now and then, and, since, I'd sort of chopped at it with a knife I had borrowed from the Lilies' kitchen.

“But, you know, barber-shop shaves will run you into money, especially if it turns out you need one every day. So I'd recommend one of these safety razors and a package of blades.” He'd steered me over to a counter with several odd-looking thingamajigs inside a glass case.

“I forgot about my hair. I bet a haircut would be a good idea. Do you have any idea how much that costs, sir?”

“I think about a half-dollar, maybe, including a shave.”

“How about I go over to the barber shop this first time, get all cleaned up, and then get one of your safety razors for future use. Uh, that is, if you'll show me how to use it.”

“A good plan if I ever heard one. Need anything else, son?”

“Well I've got a toothbrush. And soap and so on.”

“Tell you what. Stop by here on the way back from the barber shop and get some tooth powder along with the shaving stuff. It makes your teeth cleaner, and your breath sweeter, and the girls will like you better for it.”

I promised to do so and made my way down the street. Looking back, I have to say that I'm glad I didn't know the traditional barber-shop symbol, that candy-cane striped pole, derived from the old blood-letting practice that barbers used to offer. If I'd known, I think that my first time in that chair would have been too much for me. I mean, even without knowing that, it was pretty traumatic.

It started well, however, when a short, stout, dark-haired man, also with a large amount of hair under his nose, but this time with its ends twirled up into big curls, addressed me as I came in the door. He was working with a pair of scissors on another fellow who was mostly covered by a striped sheet.

“Good day, sir. Can I help you?” He smiled at me while he snipped at the sheet-covered guy. “I am Luigi, the barber.”

I didn't quite know about his accent, which came across so strongly that I had trouble following him, but I thought it might be English derived from Spanish, so I tried Spanish on him. "*Thank you for asking, sir. I'd like a haircut and a shave, please.*"

He looked dumbfounded. "Ah, I'm sorry, sir, but I'm don't speak the Spanish. I wish I did."

"Oh. Sorry. It's just that your English is a little different for me. I was asking for a shave and haircut."

"Ah! Yes! I unnerstand. My, er, speaking is a little bit, ah, different because I'm from the old country, Ee-taly! And shave and haircut I can do, as soon as I'm done with this gentleman." He smiled under that glorious moustache, and I was relieved.

While I waited, I amused myself with an odd booklet called the *Police Gazette*, which had an interesting—to me, at least—picture of a woman scantily clothed and tied up with ropes on the cover. Her clothing, such as it was, covered more obvious versions of all those curves under the Lilies' dresses that I'd wondered about. But just as I was getting interested in the associated story inside, Luigi summoned me.

The relief I'd felt before vanished as I sat down in that chair, he looked me over, and then started in on me. From where I was sitting, those scissors he pulled out first looked like instruments of death. And, when he was done with my hair and he'd lathered up my face with some kind of soapy goop, he pulled out his razor.

I couldn't help but remember Sergeant Jennings' comment that "... Italy was on the other side, too..." I don't think I really fainted, but it seems like I went into some kind of catatonic trance.

But then it was over, and he'd slapped some kind of mildly stinging stuff on my face, stuff that I couldn't help but smell. It was odd.

He handed me a mirror.

I looked carefully at it, twice, and then said "Who's this a picture of?"

I'm not sure I've ever seen anyone laugh in such a delightful way. "You like?"

"I sure do. What do I owe you. Oh! And I've got a question."

"Four bits. And no charge for a question."

"OK. Two questions, though. What's 'four bits'? And the real question is this. I don't think I can come here for shaves all the time. Should I get myself one of those things," I gestured toward where his razor was now awaiting the next victim, "or what do you suggest?"

"Ah ... four bits means fifty cents. And, no don't buy yourself one of these." He'd picked up his razor and was slashing it about in the air. "You might cut you nose off. Get one of those new, ah, safety razors. OK?"

Well, I thought. Convergent advice from competitors. Good deal. I stopped at the drug store on my way back to my room and bought a safety razor, some shaving soap and a brush to apply it with, and a supply of blades. Tooth-powder, too. You can't underestimate the importance of clean, fresh-smelling teeth.

\* \* \*

The following Monday morning, Sergeant Jennings found his coffee and doughnut waiting for him, as usual, and he also found a little group of local people sitting in his office, awaiting his arrival. I'd found them outside, asked about the reason for their visit, and let them in, early.

"White! Where are you?"

I came scurrying out from the back room. "Here, sir."

"Who the hell are you? Where's my usual guy?" But I could see a glint of humor in his eye.

"It's me, sir. I got a haircut. What do you need, sir?"

"You got refreshments for me, but you forgot these folks?"

"Oh! Sorry, sir!" And I scurried out to the diner to get more coffee and doughnuts.

I amused myself during the errand by imagining the interaction, or, more likely, the lack thereof, between my friend the Sergeant and his visitors. I'd asked them, in Spanish, their reason for their visit, and learned, after some negotiation about how fast they were going to talk at me, that Mr. and Mrs. Esqalo Gomez were delivering their only son, Humberto, for enlistment in the Army, as was their responsibility on Humberto's eighteenth birthday.

Actually, as I'd discovered during my brief association with the recruiting office, it was Humberto's responsibility to report on his eighteenth birthday, but it seemed that parental oversight was strong in that part of New Mexico.

When I returned, with ample refreshments, they were all looking at each other, not even trying to speak, but trying to maintain polite smiles.

After that, it was pretty cut-and-dried. Naturally, the Gomez family tried hard to negotiate the best deal possible for Humberto—like, could he take my place as the assistant at the Carrizozo recruiting office, please?—and Sergeant Jennings, with me as the intermediary, assured them that Humberto would be placed in the best possible situation relative to his skills and the Army's needs, and the Army would certainly consider their request carefully.

Even after only a couple of days there, I knew that what he meant was that poor Humberto would probably wind up in the mud of some South Pacific island as a practice target for Japanese troops hidden in the undergrowth. If the enemy sharpshooters didn't get him, some kind of exotic tropical disease, or a stray mortar shell, probably would.

But, for the Gomez family, the assurances worked—so much so that, as I walked them outside, they invited me to dinner at their home. I told them that I had to work—true, because of the courier runs all week—but then they asked about Friday. And, with no good excuse, I caved.

So dinner with the Gomez household, Friday evening, was on my calendar. In retrospect, I wish they'd warned me about Alejandra.

The week passed quickly. I helped with several other recruitment interviews—with much the same probable outcome of an untimely and nasty demise far overseas awaiting the new recruits in each case—and made the courier runs without incident. Well, without incident except that each time I had more fun than I ever deserved to have driving that motorcycle. I can honestly say that the fun of that never wore off.

Then Friday afternoon arrived, and Sergeant Jennings departed for his weekend in Socorro. And I, remembering my commitment, made preparations for my dinner with the Gomez family.

That included my first attempt at shaving with the new safety razor I'd purchased after my haircut. The drug-store owner had given me something of a lesson in its use, but that had been nearly a week

ago. The brush-and-soap part was easy, but that razor felt clumsy and I was worried to death about cuts. Then I remembered that a blade needed to be put in it, if I was going to scrape that little bit of stubble off.

But somehow I managed and got to dinner on time. On the way, I stopped and purchased from the grocer a little bouquet of flowers for my hostess, and carrying that to the Gomez house made me feel sophisticated. That their household was on the southeast side of the railroad tracks, where the houses were of a distinctly different character from those on the northwest side, escaped me at the time.

My first hint of a difference was on the street in front of the Gomez house. A small group of young men, my age and a bit older, it appeared, was awaiting me.

*“Oh, look, the gringo, he has flowers!”*

I wasn't sure what a “gringo” was, but it didn't sound like a compliment. Looking them over, however, I recognized Humberto.

*“Good evening, gentlemen. I'm here to have dinner with Humberto here and his parents. Thank you for welcoming me.”*

Appropriately, Humberto looked embarrassed, and then everything changed when the front door opened and Esqualo appeared. The young men, who had surrounded me at the edge of the yard by that point, suddenly vanished into the twilight, leaving Humberto and me standing there.

*“Hello, papa, I'm just bringing our guest inside.”* Humberto's voice was not much different from how it had sounded in his recruitment interview.

When I'd purchased the shaving equipment at the drug store and Mr. Erickson gave me a lesson on how to use it all, he also tried to counsel me into purchasing other things, something he called “sheaths,” in particular. Young women, he suggested, sometimes tried to trap young men into marriage by seducing them into fatherhood.

From my perspective now, I understand exactly what he was talking about. At the time, though, I didn't have a clue. To me, back then, sex was just not something I had the faintest notion about—although those “stirrings” should have perhaps given me a hint.

Anyway, I didn't buy any of his sheaths, and I began to wonder after we all sat down to dinner whether maybe I should have.

We sat around a very nicely crafted dining table, with me between Humberto, on my left, and his sister, introduced to me as Alejandra, on my right. The parents were across from the three of us. Alejandra, who seemed to be about my age, was something of a distraction, as she was wearing an alluring perfume of some kind, and the bodice of her dress was cut quite low. Her plump, ruby-red lips, her big, brown eyes, and her coal-black hair, pulled back into a pony-tail, only added to the overall effect.

All the conversation, of course, was in their New Mexico Spanish, and I was having trouble keeping up. And then, just as Mrs. Gomez placed a big dish of what they called *enchiladas con queso* on the table, I felt a hand on my right thigh, and it began creeping toward my crotch.

It was hard to concentrate on trying to augment my Spanish vocabulary with new, local culinary terms with that hand working its way upward, so I managed a determined, and very squirmy, change of position. That helped, at least until the *enchiladas* were served. I tried one and found it to be delicious, but, a couple of minutes after I'd eaten it, I felt little beads of sweat on my forehead, and my mouth was suddenly burning. But, somehow, it all felt good—quite tasty despite the heat. And when the hand grabbed my thigh again, that felt pretty good, too.

Once again, I managed another position-changing squirm.

The next course was something called *carne adovada*, pieces of meat, which I decided might be pork, marinated in a very red sauce of some kind, a sauce that turned out to burn my mouth more than the *enchiladas* had. But, even so, it was wonderful, somehow. At that point, I was beginning to sweat uncontrollably, but it felt as if I was glowing.

And, the now insistent hand on my thigh felt better than ever.

This time, in addition to squirming away, I started asking my hostess questions, recipe questions. She was delighted to respond, and I couldn't help but notice, out of the corner of my eye, that Alejandra seemed disappointed.

Ultimately, it all worked, and I learned about New Mexican home cooking, including the importance of chiles, and also about exactly what Mr. Erickson was talking about. Perhaps best of all, my behavior at the dinner table didn't give Humberto and his friends a reason to beat me up on my way home.

\* \* \*

The next day, my second Saturday in Carrizozo, offered several possibilities, but many of them meant I might run into Humberto Gomez and his friends somewhere, something I really wanted to avoid. Time, I thought, to get out of town. And there was an idea I'd first had in the Labyrinth that needed checking out.

By then, I'd spent several hours wandering the streets of Carrizozo, on both sides of the tracks, and one place that intrigued me was a livery on the far southeast side of town. "Horses," the sign said in big letters. And I missed Honey. So, early that Saturday morning, I wandered over there, where I found the owner to be less than trusting, although it started out pleasantly enough.

"Help ya, sonny?" Mr. Levesque, as he introduced himself, was a little, bent man of indeterminate age who had an unlit cigar clamped in his teeth.

"Yes, sir. I'd like to take a ride up into those mountains over there," I gestured in a generally eastward direction, "and I'd like to ask about hiring a horse for a day. Or maybe a couple of days."

"You don't want to just buy a horse?"

"Well, sir, I don't really have the ability to take care of a horse, at least not the way I think it should be done."

"You know about horses, then?"

"Certainly not as much as you do, sir. But I recently arrived in town after riding over from the Ocuras on a horse. I learned a lot on that little trip."

"From the Ocuras? How'd you get over there?"

"Well, that's a long story that you don't have time for, I'm sure. And, anyway, for me it was all a bad experience, with worse memories. But compared to how I got there, the ride over from there was easy." Somehow, lying while not really lying had begun to come easy to me.

"You need just a horse?"

I thought about the tack I'd left hidden about seven miles northwest—maybe next time, after I picked it up on a motorcycle run. "No, I need tack as well. But I can pay. You need a deposit?"

I think that was what got his interest. No doubt my haircut and shaving had made me look older than I had a week prior, but there's just no doubt that money talks.

He kept grilling me in his crotchety way and watched while I saddled the horse he led out of his corral for me. I'd asked for a gentle one, and it looked like Pepper, a gray and white gelding, who was a few inches taller than Honey, met my needs. Eventually, after about an hour of fooling around, plus a hefty payment of cash, I had my horse. I decided to show off by loping off to the southeast, and somehow I managed to keep my seat.

I hope I didn't look too dumb. My desert crossing, the first part at night, went just fine, but the day I spent out there had made me wish for a good hat. And riding Honey for all those miles gave me an appreciation for riding boots with heels. So, during the week before, I'd made the owner of the General Store in Carrizozo very happy by spending some of the Lilies' cash on a western wardrobe with special attention to the hat and the boots. Based on my readings, I knew I'd have fit right in fifty years earlier, but, with cars driving by on the highway, I felt a little odd. But, what the hell, I thought, I'm off on my own to another little adventure. Life is good.

The main highway east, or, really, east-southeast, from Carrizozo ascends toward something called Indian Divide, but I was going to turn south toward the hamlet of Nogal several miles before that. One of the maps in the Lilies' portfolio showed a section of Nogal Canyon, marked with the original mine that the three Mormon soldiers had started. That would be, I knew, too far for one day, but an initial scouting trip of the first part of that route seemed like a good idea.

Except for one thing.

I'd not managed an early start because of a surprise I'd had that morning, one related to the dinner that Mrs. Gomez had fixed me the evening before. The chile that she made went in hot enough to make my mouth feel like it was on fire, and, well, the next morning it came out elsewhere in a similar fashion. I thought I'd dealt with that earlier, before heading over to the livery, but about fifteen minutes of loping on Pepper made me realize I hadn't completely.

I don't think Pepper was surprised with I turned him around and we headed back to town—he was even galloping on one stretch—but he might have been when I kept him going past his stable, across the tracks, and into the back yard of the Army recruiting center. I didn't even have time to tie him properly, but rather just dashed right inside. He was well-trained, though, and so waited patiently with his reins hanging down until I came back outside. I think he was glad to see me, maybe, because I didn't just leave him standing there all day, even relieved. And if he wasn't, I sure was.

After that second surprise, I wasn't about to set out on any long trips of any nature, so, after walking Pepper around town a bit, I returned him to the livery. Mr. Levesque looked him over suspiciously but didn't find anything amiss, and I think he was happy with me. It was hard to tell.

When it came time for supper, I walked over to Mr. Apodaca's diner. Somewhere I'd read the old aphorism about when you fall off a horse, get right back on, and I decided that maybe that applied to food, too. And besides, the next day, Sunday, I didn't have anything better to do than, er, sit around.

Mr. Apodaca's menu, however, didn't have anything but American-looking foods like the meatloaf I'd had a few days before. But then I noticed, at the bottom, a little suggestion to "... ask about our daily home-made special!"

I was sitting at the counter, so it was easy to get his attention. "*Mr. Apodaca, may ask about your home-made special today?*"

He responded in kind, "*Yes, today we have green chile stew, with chicken and potatoes in it. It's delicious, because the new green chiles are coming in.*"

Then it hit him that I'd spoken Spanish to him, and he was floored, staring at me with his mouth open.

*"Hmm. It sounds good, but is it very hot?"* I used the word for spicy, *picante*.

Still with his mouth open, he nodded, then seemed to realize his gaffe and shook his head. *"A little hot, maybe, but not too much. I have some hot green chile sauce I could add to your bowl, though, if you like it that way."*

I laughed and shook my head. *"No, no. I'm afraid I'm not used to truly hot chile just yet. Maybe I could try a taste of the stew?"*

He brought me a very small bowl with only a couple of tablespoons of the stew in it, and a spoon. I tried a bite, waited for it to take hold, and then tried the rest. It was just hot enough to make me notice it, but not to burn so much as Mrs. Gomez' concoction, and it had a very interesting, and unique, flavor. I decided to go for it.

*"Ah, that's wonderful. A bowlful, please. And a refill on my water, please."*

*"It comes with two tortillas. Would you like corn or flour?"*

I remembered that Mrs. Gomez had served corn tortillas with the *carne adovada*, so I decided to try the flour ones.

When he brought my stew, Mr. Apodaca said, in his barely accented English, "I didn't realize before that you speak Spanish, *señor*. You speak it quite well, classically."

"That's one of the things I'm doing for Sergeant Jennings, translating for men who want to enlist or need to register, if they don't speak English."

"That, I think, will be a great help to many of my people, *señor*. All of us want to help defeat this *diablo* Hitler and the Japanese, too. They are evil."

"Maybe you can tell me something, Mr. Apodaca. The Army people have asked me to offer English language classes to new recruits, to help them when they begin their basic training. Do you think that might be worthwhile?"

*"Excelente, señor, exquisito!* I think that would be a great help to them. I have heard that many who speak no English have great difficulty with their training." He looked thoughtful. "And, you know, there may be others here in town who would like to learn some English, as well. Maybe they could take your classes, too."

I laughed. "Well, the Army's idea is to have a very simplified vocabulary for the recruits to learn. I don't know how many people here in town need to learn about 'Attention,' 'Parade rest,' 'Clean the latrine,' and that kind of thing."

That got him laughing along with me.

\* \* \*

The next day, Sunday, having learned my lesson on Saturday, I didn't want to stray too far from home, so I kept myself busy with more organizing chores. Even though I had that little closet for my possessions—both those I'd brought from the Valley and the increasing pile of new ones—I was concerned about all that cash I still had in one of the saddlebags. I'd read about "banks," and there was a building with such a name just down the street, but some of that reading had to do with bank failures some years back. I wasn't sure I wanted to trust such an institution, if it might go belly-up and lose my money.

I was relieved, in more ways than one, when Saturday night's green chile stew didn't have the same effect on me that Mrs. Gomez' food had. It meant that I could enjoy those recipes—I certainly found them more tasty than the other menu items at Mr. Apodaca's diner.

It was about mid-morning, and I was trying to decide what to do next, when the telephone on Sergeant Jennings' desk rang. I'd seen him talking on it and asked about it, so I had an idea of how to use it. Because I was the only one around, I picked up the handset.

"Hello?"

"Son? Glad you're there. And, hey, listen, you should answer the phone like this: 'Carrizozo Recruiting Center, US Army, William White speaking. How can I help you?' That makes it more official."

"Uh, OK, I'll try to remember that. Is it OK that I answered today? We're closed, after all."

"It's fine. If it rings on a weekend, it's probably me wanting to talk to you, anyway. And that's why I called. I wanted to make sure that you're there."

"Yeah, I'm here. Uh, 'How can I help you?' Sir."

He laughed. "Well, don't wander off, too far at least. I'm coming back this afternoon with someone who needs to talk to you. See you in a couple of hours."

"Did I do something wrong?"

"Not at all. Say, is the diner open? I haven't been over there on Sunday for a long time, and I don't remember."

"I had lunch there, but I think they close early on Sunday. Three, maybe."

"Ah. Glad I asked. Tell you what. Run over there, it's only two-thirty, and get him to make up a plate of sandwiches or something you can take out. So we'll have food for supper this evening. Enough for three people, and, remember, I eat a lot. I'll pay you back."

"OK. Does that wood stove in the main room work?"

"That's how I keep warm there in the winter."

"Good. There's some wood out back. We can heat up coffee or something if we need to."

"Good thinking. See you in a couple of hours."

He was making a special run back from Socorro so someone could talk to me? What was that about?

But I didn't have time to think about it, because I had to go get our supper. Mr. Apodaca, having become my friend the evening before, was most accommodating and made us more food than we could possibly eat. I didn't know what either Sergeant Jennings or the new guy would like, so I got a variety of sandwiches, and Mr. Apodaca loaned me a big cooking pot that he filled with some of that green chile stew. I planned to keep it warm on the stove. And he also gave me everything we'd need to eat with, down to the napkins.

I fidgeted around, tried to amuse myself by making a fire in the stove—which was a bit of a disaster because I didn't know what to do about the damper while the front room filled up with smoke—and generally fretted until Sergeant Jennings and his passenger showed up about four-fifteen. The passenger, a smallish man in uniform but sporting a moustache and neatly trimmed beard, who looked somewhat shell-shocked, introduced himself as Major Saul Bernstein, US Army Counter Intelligence Corps. I

watched him suck at his teeth while Sergeant Jennings introduced me, in such glowing terms that I felt myself blushing.

“That’s all well and good, Sergeant, but it’s also what we’re here to find out, isn’t it?” Bernstein turned to me. “Now, Mr. White, you and I need to have an interview, a special one. It will determine the extent to which you will work with Master Sergeant Jennings here on a special assignment. He’s being given a new Counter Intelligence Corps assignment, and he’s specifically requested your assistance.”

“Yes sir. May I ask what the Counter Intelligence Corps is, sir?”

“Whether I can answer that question, my young friend, will depend on how our interview goes.” He smiled in a surprisingly gentle fashion. “In wartime, William—well, other times, too, but especially in wartime—the Army needs to deal with certain matters in a confidential manner. A secret manner. For some things, a *top* secret manner. We need to be able to trust the people who are privy to the secrets involved in these matters. One of my jobs is to decide whom we can trust in that way. So, this interview we’re about to have is designed to provide me with the information to decide about you. It’s a standard set of questions, lots of them and some of them repeated using different phrasing, to check for consistency in your answers. That will tell me whether you’re trustworthy, from our perspective. Understand?”

“Ahh ... well, probably as much as you want me to, sir. I get the impression that there are things you’re not telling me.” I shrugged. “First, though, wouldn’t you maybe like to get cleaned up first? My rides in that sidecar always leave me dusty, and with bugs in my teeth.”

Bernstein looked at Sergeant Jennings. “I see what you mean.”

But he took my suggestion and visited the little bathroom in the back room.

While he was in there Sergeant Jennings grabbed my arm. “Now, listen, son. Here’s the deal. The Major is one of the Army’s smartest guys, and this interview of his is like a test. But the only way you have a hope of passing the test is to answer his questions with the absolute, complete truth. Every time. The test is designed to find out if you’re lying, and if he thinks you are, he’ll be like a shark after blood. Just remember. Tell. The. Truth. I told him already that I want you working with me on this new assignment, but you’ve got to pass this test first. OK?”

“Yessir,” I was saying as Bernstein walked back into the front room.

“Sergeant, let me suggest that you go get cleaned up at your place. I’m sure that Mr. White and I will be fine here.”

Like the “suggestions” that the Matrons used make to me, I realized that “suggestions” from officers like Major Bernstein were automatically taken by people like Sergeant Jennings.

\* \* \*

### *Seven*

“Let’s start at the beginning, Mr. White.” Major Bernstein’s smile was as gentle as ever. “Is your true name William White?”

He had us sitting facing each other, only about a foot apart, and he had a clipboard with a stack of paper on it on his lap. I felt my insides do a flip-flop, as I knew this was going to be complicated. This first question set the tone.

“Ah, well, that’s what I call myself, sir. And, when I was younger, all the guys called me ‘Whitey.’ But I don’t know for sure what my real name is. Or my ‘true’ name. Or if I actually have one.” I shrugged. “I mean, Shakespeare asked ‘What’s in a name?’ And I’ve asked myself that many times.”

He blinked, obviously surprised, and took a deep breath. “Is it appropriate for me to continue to call you ‘Mr. White?’”

“Sure, sir. Or ‘William.’ Or even ‘Bill’ or maybe ‘Will’ I guess, although no one’s called me those names so I don’t know if I’d recognize them.”

He paused and stared at me for an uncomfortable number of seconds. “This, Mr. White, may take a while.”

The “test” was in the form of many, many questions, some of them of the simple “yes” or “no” variety, but others open-ended, which required explanations from me—in some of those cases, long, complicated explanations. It didn’t take me any time at all to see the wisdom of Sergeant Jennings’ advice to stick to the truth. Eventually, we got through his list, and I watched as he made notation after notation on the sheets of paper those questions were listed on. Some of those notations seemed more like he was writing essays.

One of the first things I admitted to was not telling Sergeant Jennings every little thing about my background, and, as that background emerged in response to Major Bernstein’s questions, I saw that he was getting more and more excited. And, yes, there were a number of questions that he repeated, only phrased differently. At one point I realized that if I’d been trying to lie, I would have undoubtedly become so confused that I would have given myself away. So I stuck to the truth, even when it was painful.

“Have you ever had contact with anyone who is associated with the National Socialist Party, the Nazis, or is a Nazi sympathizer?”

So I had to tell him about that conversation with Clarisse. At that point, he already knew about where, and how, I’d been raised, so the admission about Clarisse probably wasn’t too damaging. And it was fascinating to me to watch his reactions to various answers I gave. At one point, I mentioned the radio antenna and how it had been altered, and he actually dropped his pencil in astonishment.

It occurred to me, after quite a while of the grilling, that one of the strategies of the test was simply to wear down the person being tested. That thought, at least, gave me a little boost, but it didn’t last long.

When he was finished, he looked around as if expecting to see Sergeant Jennings waiting. “Now, where do you suppose he went?”

“Sir, you told him to go home and get cleaned up. He’s certainly had time, so maybe he’s in the back room.” I gestured toward the connecting door. “If I know him, sir, he’s probably hungry. Hmm. Or maybe not. The sandwiches are back there. Or were.”

“Ah, yes. Supper. Good thinking. I’m hungry, too. Don’t tell me he ate everything, please don’t tell me that.”

“I’ll check, sir. Cross your fingers.” I stood up, stretched and rubbed my butt, which was all tingly from having sat on that hard-backed straight chair for so long, and walked to the back door of the front room.

Sergeant Jennings was sitting in there, looking nervous, and I couldn’t help but notice that there were fewer sandwiches than I’d brought from the diner.

“How’d ya do, son?” He had his hands clasped together, twitching.

“Got me, sir. You’ll have to ask the Major. But he wants supper now. If you’ve left him any. The green chile stew is hot on the stove, though, so maybe that’ll satisfy him.”

Sergeant Jennings leapt into action, organizing things for an informal supper in the front room, with his meager furniture put to use in an efficient, if unusual, way. Despite my jibe, there were plenty of sandwiches left, especially because I was going to eat more of that stew.

Although it wasn’t up to the burn-your-mouth-out standards of Mrs. Gomez’ recipes, I thought I should warn Major Bernstein. “Major, sir? Are you from these parts? Have you been here long?”

He looked up from tallying my test answers. “Hmm? From here? Oh, no indeed. I’m from New York City originally, although I’m posted in Washington, DC just now. And I arrived out here last Tuesday, in Albuquerque. I’m part of the detail that’s setting up this CIC activity here.”

“CIC” registered with me as “Counter Intelligence Corps” quickly enough that I felt part of the club.

“Well, sir, what’s in this pot on the stove is some of the local style of food. I’ve come, pretty quickly, actually, to like it. But, well, let me warn you that it has its spiciness.”

Sergeant Jennings snorted. “Got that right, son. Major, I’m still trying to get used to it. It’s not at all like what I grew up with in Kentucky. Or like what the Army serves. Watch yourself, sir.”

Bernstein scribbled for another minute, then looked up. “Sergeant, Mr. White, I’ll have you know that New York is the center of the culinary universe, at least on this side of the Atlantic. And, even compared to Paris, it’s far more diverse. Moreover, I’ve sampled just about everything it has to offer. I’m sure that the local cuisine here in central New Mexico will be a wonderful new experience. I’m interested to see how it compares to the Puerto Rican cuisine that I’m so familiar with.”

I’m not sure if he was comparing it with that Puerto Rican food after his first big spoonful of the green chile stew or what. But, after the five seconds or so of delay for the chile to kick in, he sort of turned all red and puffy and managed to blurt out a muffled “Holy crap!” before retiring, in a bit of a hurry, to the back room.

Sergeant Jennings sported a huge grin. “Like I said, son, I’m still trying to get used to it. You really like it?”

“This stew, yeah. I got my first taste in the Gomez household—remember last Monday morning’s recruit?—on Friday night. This is bland by comparison—I had a little trouble with Mrs. Gomez’ cooking. But even this milder stuff still has that surprise for you the next morning. Or, I guess, that evening if you have it for breakfast. Hot going in, hot coming out.”

He looked at me for a minute then burst into laughter. “That’s my experience, too. But, hey, it keeps you regular, right?”

It wasn’t too long before Major Bernstein returned.

“That, gentlemen, was not like anything I’ve ever had. Definitely spicy hot. But also an interesting flavor in there somewhere. White? You said you got this across the street at the diner?”

“Yes, sir. Mr. Apodaca is quite proud of it. But, I should say, it’s pretty mild compared to some of the food around here.”

“Mild? Really? Ah, well, it must be an acquired taste. Jennings? Are you ready for a return to Socorro tonight?”

“Ah, yessir, if that’s what you’d like. Um, if I may suggest, sir, there’s a hotel down the street a couple of blocks that might have a vacancy for the night. It’s another couple of hours in that sidecar to get back to Socorro. And it gets chilly at night.”

“Good thought, Sergeant. How about calling them for me? I need a word with Mr. White here.” He nodded toward the front door as Sergeant Jennings got on the phone.

My two servings of the stew had resulted in beads of sweat on my forehead, and that comment made sweat pop out all over the rest of me. I followed Bernstein out to the street, wondering what would be next—which turned out to be watching him fish around in his pockets for his pipe.

“White, I have to say, that interview with you was unique in my experience, and I do have quite a lot of experience.”

He fished around more and came up with a little tobacco pouch and matches. I fretted.

“But, I also have to say, it was perhaps the most refreshing interview I can remember, in terms of your candor and consistency. Thank you for being truthful with me. And you should believe me when I say that I would have known if you weren’t.”

“So. I have three points to make here. First,” he pointed the index finger of his right hand skyward, “Army CIC needs good men. Good men are hard to find stateside just now, because of the big pushes we’re making in both Europe and the Pacific. So when we find someone who we think can help us, we jump at the chance. Master Sergeant Jennings’ endorsement of you is a big plus here as well.”

“Second,” his middle finger poked up beside his index finger, “your test results are stellar, demonstrating a high degree of both innate intelligence and a solid education. Those are important attributes for CIC. We need people who know how to think.”

“And third,” his ring finger joined the others, “your answers are sufficiently consistent that you passed our security test. With flying colors. I couldn’t find anything that would suggest that you won’t be a useful asset for the CIC activities we have going here in New Mexico. And, especially for someone your age, your answers, especially the long explanations, were thoughtful, lucid, and quite clear.”

That was very good news to me.

“Now,” he puffed to get his pipe lit, “one of the things you told me is that you believe yourself to be sixteen, plus a month and a half or so by now, but that you don’t really know exactly when you were born, right? No birth certificate or anything, right?”

I found that my mouth was too dry to talk, so I just nodded.

“I think what that means, and this will be in my report, I think that you were really born on the third of August, 1926. Which means that your eighteenth birthday, as far as the US Army is concerned, was, let me think, a week and a half ago. This is a highly unusual step, but yours is a highly unusual case. I’m staking my considerable reputation that I’m making a good decision here.” He grinned. “Congratulations! Have you registered with Sergeant Jennings’ office yet? Eighteen-year-old young men are required to do that, you know.”

“Uh ... ”

“Joking, son, joking. As far as I’m concerned, and that’s what counts here, you’re cleared to work with Jennings on his CIC assignments. Unless he hears otherwise, he’ll be authorized to read you in to whatever information comes his way—and by ‘whatever’ I mean everything, even classified material—and to assign you to whatever roles he thinks you can help with. He’ll have paperwork documenting all this tomorrow. Understood?”

I found my voice, or at least a bit of it. “Yessir. And thank you sir.”

“What we’ve got happening out here in this Godforsaken place, White, is something so big that even I have trouble believing it. And we’re worried sick about Nazi spies and saboteurs. CIC’s job is to ferret them out and stop whatever plans they have. And I’m not exaggerating when I say that the outcome of the entire war may well depend on your success.”

Not, I thought, that there was going to be any pressure on us, or anything.

\* \* \*

The next morning, bright and early, Sergeant Jennings sent me off to Socorro with Major Bernstein folded into the sidecar. It was a little early for the daily courier run, but Bernstein needed to get back, he said. My instructions were to get the major there in one piece and then wait until he had a package ready for me to carry back on the return trip.

At first, I waited patiently in the Socorro Army office building, then I got called into a back room. There, a lady sat me on a stool, told me to look at the “camera,” and was surprised when I asked her what that was. A very bright light flashed, making me see spots for a few minutes, and she told me to go back outside and sit.

So I did, for what seemed like a long time, now and then wandering around to read whatever I could find. There was a wealth of material in a sort of picture frame on a wall, which material turned out to fall into two categories, either the familiar “I want YOU” sort of thing or various admonitions about not discussing sensitive information in public. “Loose lips sink ships!” was especially amusing to me.

Finally, I told the soldier at the front desk—he wore fewer stripes on his arm-patch than did Sergeant Jennings—that I was going to stretch my legs and would be back by lunchtime. Because I wasn’t in uniform, I think he decided he couldn’t really tell me what to do, so he just said he’d let the Major know.

The Army building was located in downtown Socorro, at least that’s what it seemed like to me, surrounded by other business buildings. Down the block was a town square, which reminded me of the square in Carrizozo, except the Socorro one had more trees. And there were more, and a wider variety of, stores. I might have gone on a shopping binge if I had not been given my new job as a CIC employee—I didn’t even know what color clothes I should buy.

Our early start meant that I’d had an earlier breakfast, so I reasoned that an early lunch would be appropriate. Something called a “cafeteria,” with pictures of food in the window, looked interesting, so I went in. And I found that “interesting” was an understatement. It turned out that you took a tray, walked along a counter, and picked out what you wanted to eat from the offerings. It was early enough that I was one of the first customers of the day, for lunch at least, and that was a good thing. I was so overwhelmed by the choices that I would have held up the line, if there had been one. I was totally stuffed when I got back to the Army building.

At that point, there was a different soldier at the front desk, and, as I walked in, he asked, “Can I help you?”

“My name is William White, and I’m waiting for Major Bernstein.”

“Ah, White, yes. I’ve got a package for you.” He held up a large, fat envelope.

When I walked over to pick it up, he handed me a clipboard and said, “Sign there.”

“Huh?”

“Your name. Sign your name on the next blank line there. What are you, stupid?”

So, for the first time, I wrote “William White” and knew, somehow, that my name had become official.

That, plus the friendly—overly friendly, actually—greeting from the young women on that street corner on my way out of town, put me in a cheerful mood as I pointed the Indian down the highway toward Carrizozo. At first, the road ran north-south, more or less parallel to the Rio Grande, with green, irrigated fields on my left and a barren stretch of hills on my right. Then it turned east at a little town called San Antonio, where it crossed the river before climbing out of the valley through some of those barren hills before heading straight as an arrow across the *Jornada*.

When Sergeant Jennings had taken me on the courier run the first two days I was working for him, he’d opened the Indian up, although, in the sidecar, I really couldn’t see the speed gauge. On that return trip, without the Major sitting nervously beside me, I noticed that I managed to get the Indian going eighty-five for a stretch, at which point I backed off the throttle.

*Eighty-five miles per hour?* I didn’t want to think about what would happen if a tire blew.

By the time I returned to the recruiting center back in Carrizozo, there was an Army truck in front of the building, and Sergeant Jennings was sitting in a chair out on the porch, leaned back, enjoying the afternoon.

“That Major Bernstein works fast.” He saw me walk around the side of the building after I’d parked the Indian out back.

“Yeah, what’s this all about, Sergeant?”

“New phone. I’m supposed to be getting orders about it. Got ’em?”

I handed him the fat package I’d brought.

“Hmm. Looks like lots of reading. Tell you what. Until those guys in there are finished, we might as well sit out here. Go get a chair and we’ll talk.”

I went inside to find a crew of telephone workers, only these were Army people, fiddling with the phone on Sergeant Jennings’ desk. In the bathroom, I cleaned the dust off, then came back and took a chair outside.

He started in even before I’d sat down. “Major Bernstein told me that he was going to clear you to work with me on CI. Is that what he told you?”

“CI” could mean only counter intelligence, I thought. “Basically, yes. I guess this is some kind of extra assignment for you, eh, sir?”

“Well, I’ve got to read these orders carefully, but I’m thinking it may turn out that recruiting is the extra assignment. But first things first.” He tilted his chair back upright and turned it to face me. “We’ve got to get our names straight.”

“Huh?” When I wanted to, I could be positively loquacious.

“Right. First thing. When we’re not here, being regular Army people, I mean, there will be times when we need to seem to be civilians. So. You’re going to need to learn to call me something besides ‘Sergeant’ and ‘sir’ all the time. And I can’t keep calling you ‘son’ all the time, either. That means, unless there are other Army people around, especially officers like Major Bernstein or Captain Walker, you need to call me ‘Steve.’ That’s what my folks called me, except it was ‘Stevie,’ but don’t you call me that, and ‘Steve’ is what my friends call me. OK?”

“Uh, OK, sir ... I mean, Steve.” It felt funny, but I figured I’d get used to it.

“And I need to call you by some first name, but ‘William’ seems too formal and I don’t know if you like ‘Bill’ or what. I won’t suggest ‘Billy,’ though.”

“Oh. Hmm. I never really thought about it much.” I scratched my head. “Say! How about ‘Will’? I read somewhere that Shakespeare was called that, and he’s one of my favorites.”

His jaw dropped. “You read Shakespeare?”

“Yeah, we had a book of his. I like the plays better than the poetry, though. The language takes some getting used to—they really talked funny back then—but the stories are just fascinating. Some are funny, some are sad, and others are full of murder and treachery. Amazing stories.”

He shook his head as he found *something* amazing. “OK, then, ‘Will White’ it is. Now, second thing. I haven’t read everything here, of course, but there’s a note from Major Bernstein telling me that your test results, I guess those are his notes from that interview, your test results are in here and I need to read them. Is there something you want to tell me about that?”

“No sir ... I mean, Steve. I just did what you said and told him the truth about everything. There’s stuff in there that you haven’t heard, though, stuff that I never had the opportunity to talk about with you. Maybe that’s what’s he’s referring to.”

“Anything you’re embarrassed about? Or ashamed of?”

I shrugged. “Well, I didn’t have control over how and where I was brought up, so whatever’s there, it wasn’t my fault. I guess it’s true that I had a pretty strange upbringing, though. Maybe the best thing would be for you to read it and ask me questions about it, if you want.”

He nodded. “That makes sense. What did the Major tell you about our CIC assignment?”

“Well, he said that, first, the Army had some big project around here that was so big that even he couldn’t believe it and that, second, we’re supposed to find and stop Nazis from messing it up. Do you know what this big project is?”

“Not exactly, and it may all come to nothing anyway. What I heard is, the Army needs to test some kind of new weapon, and they’re looking for possible test sites. Somewhere over there in the *Jornada* is a candidate. If they decide to do the test there, well, that’s where keeping spies from sticking their fingers in the pie comes in.”

“Oh. I guess that makes sense. The Major said that the outcome of the entire war might depend on our success. With preventing sabotage, I mean.”

Steve blinked several times as he stared at me. “Must be some helluva a new weapon they’ve got.”

\* \* \*

He didn’t seem inclined to rush off, so, while we were sitting on the porch waiting for the phone guys to finish up, I took the opportunity to ask about some things I’d been wondering about ever since talking with Major Bernstein.

“Steve, one thing in that packet, at least I think it’ll be in there, is that the Army now thinks I’m eighteen. Uh, the Major, see, he decided to change my birthday by a couple of years. Anyway, does that mean I’m in the Army now, since I’m working for you?”

He looked surprised. “You’re eighteen now? My goodness, doesn’t time fly? Kinda young-looking for eighteen, seems like, although it’s better now that you’re shaving. And you were looking old for sixteen, so it’s probably fine.”

“Now, then.” He scratched his chin. “I don’t know what’s in these orders, but I doubt they’ve put you in the regular Army. You haven’t been through any kind of basic training. And I doubt you’re going to be sent there, because if you’re assigned to this CIC job, there’s no time. Hmm. I guess I should provide you with at least some. We can call it ... ahh ... ‘rudimentary’ training. But not right now. Tell you what. Go get us some coffee, a couple of cups for me so I can stay awake while I read all this.”

I walked over to the diner and had a fun conversation with Mr. Apodaca about our New York visitor’s reaction to New Mexico green chile stew.

Back at the office, or on the porch in front of it, I found Steve absorbed in the contents of the envelope I’d brought from Socorro. He looked up as I came back with the coffee.

He seemed relieved. “Ah, thanks. I’m going to need that. Oh, and here ya go. Don’t lose it. And you were right. The Army thinks you’re eighteen.”

He handed me a little card with my picture on it and a bunch of information including my name and the birthday that Major Bernstein had given me.

“I never saw a picture of me before. Where’d they get this?”

“Didn’t they take your picture? You know, with a camera?”

“Oh. Was that what that thing was for? Never saw one of those.”

“I’m reading your interview, and now I see why. It explains a lot about you, why your background knowledge is full of holes.”

“Yeah. I know some stuff, but there’s lots I don’t know. I’m learning, though.”

“I’ve noticed. Oh, and did you see what it says on that card? Where it says ‘designation’?”

“ ‘Special Agent – CIC.’ That’s me? A special agent? Gee.”

“Yeah, well, don’t let it go to your head, sss ... uh, Will. And here’s a pen. The card needs your signature.” He watched as I carefully wrote my name just the way I’d written it in Socorro.

“So, uh, Will, I never asked before. Have you got a driver’s license?”

“A what?”

“Ah, crap. A driver’s license. You’re supposed to have one to operate a motor vehicle—and our Indian is definitely a motor vehicle—on public roads. I’m glad you didn’t get stopped by the sheriff on any of those trips to Socorro or back.”

“How do you get a driver’s license?”

“Hmm. Don’t know. Mine’s from where I used to live, Kentucky. It’s probably different here. But, look, now that you have that ID card, it should do the trick. Just be sure to have it with you on those runs, OK?”

“Why would I get stopped?”

“Oh, I don’t know. Going too fast, maybe. Maybe some cop’s just bored. Who can tell? But if you *are* stopped, just show the cop that card and tell him that you’re on top secret business for Army Counter Intelligence. That ought to get you out of trouble. And if it doesn’t, have him call me.”

He went back to reading the file of paper for a while as I admired my new card. “Who’s this ‘Clarisse’ person? Your girlfriend?”

I felt a blush coming on. “Well, sort of yes and sort of no. I thought she was, or maybe she’d become my girlfriend someday, but then she started talking about ‘Führer this’ and ‘Führer that’,

meaning Adolph Hitler, of course. And she seemed to think that the Japs did the right thing when they bombed Pearl Harbor. So when I left, we weren't on the best of terms."

"Is that how they all think in there, all those women?"

"I got that idea, but I don't know for sure. She probably didn't just make it up, though. And I do know that she was in training for their leadership, whatever that means. So she had access to inside information. There's no doubt that some of the crap I've been reading in the papers about Hitler fits right in with their approach to managing, you know, babies and who gets to make them."

"Ah, geez. I gotta say, we're hearing some real horror stories out of Europe these days. We're beating the son-of-a-bitch, but not before he's committing some real atrocities. Anyway, you got any maps of this place, Will?"

If the doughnuts and coffee in the morning were making him happy, that map portfolio put him in seventh heaven. He was sitting when he first looked at the maps, and then he stood up and paced as he paged through them. Eventually he stopped, and it turned out he'd found my map, which I'd put into that copy of the portfolio.

"Here's a different one." He showed it to me.

"Oh. That's mine. I made that when I was exploring around in there, before I found that portfolio of the other maps. The maps the Lilies made."

"Lilies? What ... OK, never mind. What's this place labeled 'Coronado room'? Sounds like a fancy restaurant."

"No, ss ... Steve, it's not. It's their vault, sort of. It's got some cash," less, I thought, than it did, "and shelves and shelves of things made out of gold. I read in a history of the place, one of their restricted library books, that they'd run across what they thought was Coronado's great treasure early on, while they were still mining. Ah, Coronado the early Spanish conquistador, I mean. That's why I called it the 'Coronado room.' Seems they broke through into a natural cave, and there was all this gold in the form of artifacts, mostly. Pots, bowls, what's called 'fetishes', whatever those are, statues, lots of things. I read about Coronado in school, but I didn't know that he really found gold."

"Wait. I couldn't have possibly heard that right. You're saying there's a room full of gold in this place? Really?"

"I saw it. And, um, well, I borrowed some of the cash they had in there before I left. I didn't know how long it would take me to find a job out here in the world."

He looked at me, an eyebrow cocked up in a funny way. "You going to pay that back?"

I grinned. "I don't know. I'm still trying to figure out how much they owe me for all those years they kept me captive there. Maybe I need to borrow some more."

He laughed. "You sit still. I'm going to check and see if that phone's ready yet."

Turned out that it was, and he called me in for the briefing. The Army, in a rare stroke of genius, had decided that Steve's office needed a scrambled telephone, in case there were CIC-related conversations he needed to have with someone, somewhere. Apparently, they were taking seriously their mission of preventing possible sabotage of whatever might be a target for sabotage, out there in the middle of nowhere.

So on Steve's desk sat a new telephone set, one slightly bigger than the regular set and with more buttons and a little light. It seemed that, to make a secure call, you dialed up someone with a similar telephone set, pushed some buttons and waited for the light to come on, and proceeded to talk. In between, through the miracle of telephone science, the signal was all scrambled up, and no one could

listen in. I didn't have much of an idea of what they were talking about until someone explained how easy it was to listen in on normal telephone calls.

The crew chief—he wore sergeant's stripes a little less elaborate than Steve's—explained that just about all Army outposts all over New Mexico were getting one of the scrambled units, just in case.

Just in case of what wasn't clear, until Steve and I talked about it when the phone crew had departed.

“Sounds like the *Jornada* is a short-list candidate for testing out that new weapon, whatever it is. If not, I'd sure like to know what the Army's gearing up for.”

“So, does that mean that the business about sabotage is going to get more important?”

He laughed, but it wasn't a happy laugh. “Probably. Probably so much more important that they'll bring in all sorts of new people who don't know the area. And what they'll do is to barge around like bulls in a china shop and make our job all that much harder.”

He picked up the handset of his new telephone. “Now, let's see if this thing really works.”

He dialed, spoke to someone, pushed buttons, and waited. “I figured this wouldn't be easy. Damned Army. Remember Captain Walker? He's been my boss as far as recruiting is concerned. Right now, I'm calling his boss, Colonel Wright. Lieutenant Colonel Thomas Wright, CIC in Socorro. He reports to a full Colonel up in Albuquerque, who's the big cheese here in New Mexico, and *he* reports to a General up in Denver. I ... Yes, sir, Lieutenant. I need to speak right away with Colonel Wright on scramble.”

He waited another minute and pushed two buttons. Then he stood at attention. “Master Sergeant Stephen Jennings, CIC, here, Colonel. Sorry to bother you, sir, but I have urgent information.”

I heard an odd-sounding voice coming from the desk-top telephone set. “What is it, Sergeant?”

“Sir, have you seen the file on my new, ah, protégé, William White? The file from Major Bernstein, sir?”

“I saw it earlier today, Sergeant.” The voice was weak and tinny. “Is there a problem?”

“On the contrary, sir. Mr. White has just provided me with information, a first-hand observation about that underground facility in the Oscura Mountains, the facility from which he escaped. It's just east of the main Alamogordo range. And he's told me that, in there somewhere, there is a room full of gold artifacts. A significant find. Given the attitude of the inhabitants there, it would seem that protecting those assets from foreign hands could be a priority. I thought you should know at once, sir.”

“How fast ... no, never mind. Master Sergeant, I'll see you at your office in ...” There was a short pause. “ ... two hours. Be available.”

“Yessir. And, because of the time, I'll have a light supper ready, sir. See you soon, sir.”

He sat down and wiped his forehead. “Whew. I never called a colonel on the phone before, even a light colonel. Will, my friend, I hope you're right about that gold. Colonel Wright seems *very* interested in it.”

\* \* \*

A little over ninety minutes later, a tan-colored car, one with four doors, slid to a stop in front of the Carrizozo recruiting center. In the meantime, both Steve and I had walked over to Mr. Apodaca's diner and eaten ice-cream sundaes while Mr. Apodaca and his kitchen staff put together that “light supper”

that Steve had promised the Colonel. It was good-old American food, nothing New Mexican that might upset the Colonel's innards.

As he heard the car arrive, Steve ran out the front door and held himself at attention as the Colonel stepped out of the back door of the car. It took him a minute, as he was quite rotund, obese, even, with saggy jowls and a belly hanging over his belt, and getting old. I, acting on instructions, stood as straight as I could, but I didn't salute when Steve did.

"Sir. Master Sergeant Stephen Jennings. Welcome to Carrizozo, sir."

The Colonel saluted. "At ease, Jennings. Smoking lamp is lit. This must be Mr. White."

Steve kept quiet, and I had to find my voice. "Ahem. Yes, sir. William White. Um, we have some supper inside for you, sir."

"And I understand you have some information for me as well, White. Let's retire to the office there and get on with a briefing." He looked at a watch he had on his wrist. "And the food is a good idea, too."

He leaned down to the driver's window. "Corporal, there's a diner across the street. Let me suggest you see what they have to eat. We'll be returning shortly."

Inside, Colonel Wright sat at Steve's desk, using it like a dining table, and Steve and I sat with plates on our knees, watching him eat—and eat he did, quickly, efficiently, and unashamedly. I think that Steve was as glad as I that we'd had those ice cream sundaes at the diner. The Colonel vacuumed up almost all of the food we'd provided.

And, between bites, he asked me questions about the Labyrinth, questions that required long answers, which gave him the chance to stuff himself. When we finally came to the part of my explanation that concerned the room with the gold and cash in it, the focus of his attention changed from the food to me. By the time I finished, the food was gone and he wasn't chewing, so he started in with the questions.

"So, White, you say this room is in the lower reaches of this, this Labyrinth place?"

"Yes, sir. And I couldn't help but notice how hot it was down there, sir. I suppose that must be related to the hot water springs in the place. Even the floor, solid rock, was hot."

"And how big is this room again?"

I looked around at the recruiting center's front room, where we were sitting. It seemed to be about fifteen by twenty feet or so.

"I'd say a little bigger than this room, sir. With a slightly lower ceiling, maybe eight feet instead of nine or ten, or whatever this is."

"And there were shelves...?"

"Shelves all around the walls, except for where the door was..." I tried to picture the room in my mind, "...six shelves high, I think. And, ah, three rows of six shelves in the middle of the room, probably fifteen feet long each. But all the top shelves had packages of some kind, box-like packages wrapped in brown paper. That probably wasn't gold."

Colonel Wright fumbled in Steve's desk drawer and took out a pencil, then scribbled on the blotter.

He looked up and asked, "Were the various items packed closely on the shelves? Or were the shelves sort of empty looking?"

"Oh, they were crammed full, sir."

“Hmm. Gold’s heavy stuff, so those must be very sturdy shelves.” He scribbled some more, and then his voice got excited. “I’m probably overestimating this, but it wouldn’t surprise me if there’s a fortune in gold in there. Not even counting the historical value—and that’s probably highly significant, given how ancient some of that probably is—we’re talking probably four million dollars at the official government price. Four *million* dollars!”

Steve and I just looked at him.

“What I’m thinking of, naturally, is how this could be used against us in the war, if it fell into the wrong hands. And given the politics of those people there—what did you call them, Lilies?—that could happen. We need to make sure it doesn’t.” He had managed to get hold of himself, apparently. “Sergeant, I’ll need to consult with my superiors about this, but I think we need to secure that gold. I’d like you to prepare a tactical plan to do that, emphasis on clandestine, and I’ll get back to you when I have appropriate orders. The fewer people who know about this, the better. Need to know only, and all that.”

He popped a last bite of one of the desserts into his mouth and walked out to his car, where he found that his driver had returned from the diner. With a spray of gravel, they sped off.

“Will, my friend, I’m afraid I don’t trust that fellow. We’re going to have to be on our toes with this.”

“I’m glad he didn’t ask about those top-shelf packages. He probably would have drooled all over your desk.”

\* \* \*

## **Eight**

Although neither of us trusted Lieutenant Colonel Thomas Wright farther than we could throw him—which wouldn’t have been very far at all—it was the Army and orders were orders. Steve began thinking about a tactical plan to raid the Labyrinth, and, of course, he needed my help, given that he didn’t know the place from our closet. The matter was formalized with both a follow-up telephone call, scrambled, from Wright and then written orders in one of the packages I brought back from Socorro a couple of days later. Two sets of orders, actually. One for a reconnaissance visit and another for emptying the Coronado treasure room.

Steve pointed out to me that Wright’s was the only signature on those orders.

The more complex operation would be the theft—and that’s all you could honestly call it—and the plan he came up with, which he called a “straw-man” plan, designed to be knocked down and burned if need be, was constrained by the amount of gold involved. He pointed out that the government had set the price of gold at \$35 per troy ounce, which meant that a ton of gold was worth about a million dollars. Therefore, Wright had been talking about four tons of gold or so. It wasn’t as if we could just pick it up and carry it away.

“Well, not all at once, Steve. But maybe little by little. Suppose we figure out how to carry, oh, a hundred pounds per load? There are two of us, so that would mean, what, forty loads?”

He looked surprised, did some scribbling and said, “Yeah. Forty loads. What are you? Some kind of human calculator?”

I shrugged. "I can do simple math like that in my head, so maybe I am. Anyway, the trick would be to minimize the distance over which we have to carry those loads, and especially how much climbing there is."

"You said that gold room is in one of the deepest parts of that place. That sounds like out means up, too."

"Afraid so."

"Maybe we can figure out something like a cart. But it has to fit in there." He shook his head and heaved a sigh. "I suppose that's the point of a recon trip. Is that possible?"

"If I got out, I expect we can get back in."

"Can we get close with the Indian?"

I thought about it for a minute. "I think so. The road is good enough, as far as I remember. But it would be a wise to figure out how to get the thing to run more quietly. Even if it's not working hard, it's pretty noisy. And it's quiet out there on the desert. They could hear us coming from a long way."

"Good thinking. And, say, do you suppose we could get into that gold room on our first trip? I just had an idea."

"I picked the lock before, and I guess I can do it again. I'll have to remember to take some wire."

"Wire? Hell, I've got a lock-pick set. Will that do?"

"Better, probably. What's your idea, Steve?"

"You don't trust Wright any more than I do, I bet. And I was thinking we might give him a little test. Swipe some gold artifact, something small, and show it to him, give it to him and see what happens. See if he turns it in. If so, well, maybe he's honest. But ... " He saw me nodding and stopped.

"Yeah. If he *doesn't* turn it in, we'll know we have a crook for a Colonel. But what do we do then?"

"I know just the thing. We'll have to call in some heavy guns, so to speak, but we can bring him down, I'm sure. Now. When should we go out there? Do those women have any kind of schedule we need to worry about?"

"No real schedule I know of. The way I figure to do it the first time is on a night with a full moon, or close. There's a way in and out that they can't really watch, although it's longer than straight in. But I expect they watch the straight-in approach. If we can get the Indian quiet, we can drive right up to the end of an access trail and take it up to the ridge-top and in. Pretty easy, really."

"How wide is the access trail?"

"Ah, geez, let me try to remember. I came down on a horse, so it was wide enough for that. Without the sidecar, the Indian could get up it, I bet. Hmm. But the trail goes close enough to one of the portals that someone might hear it."

"Portals?"

"That's what I call their air vents. As opposed to the actual gates into the main tunnels. I got out one of those from the stable, with Honey, the horse I rode. Anyway, one of the portals would be where we actually enter the Labyrinth. And the one near the access trail might be used to watch the main access road, so someone in there could hear us. Would for sure, the way the Indian sounds now."

"I'm confused. Let's get out your maps."

The maps helped clear up his confusion, and they also gave us an estimate of our task in hauling that gold around.

“Will, I’m thinking the thing to do is to get us a cart of some kind, one we can take down in there, load up, and wheel out. It’ll make those forty trips a lot easier. And maybe fewer trips, if we can load it up more.”

I nodded. “We’ll have to measure the width of the tunnels, especially turns and so on, to see how big a cart we can fit. But that’s a good idea. And maybe we can create an intermediate cache somewhere between the gold room and wherever we need to get the gold to for transport, so we can do a couple of trips, or more, a night.”

“Say! I read in Major Bernstein’s report that you saw a radio antenna up on the ridge out there. Do we get anywhere near that?”

I pointed to the local area map. “Yep. It’s right about here. We have to go right by it every trip.”

“Hmm. That gives me a chance to have a good look at it. That could be important.”

It turned out that the next full moon was only a couple of nights away, so we took the Indian to a local garage that afternoon to see what could be done to muffle its engine noise. The mechanic there, after admiring the machine, was dumbfounded that we’d want it quieter. Weren’t motorcycles *supposed* to be noisy? he asked. But after some persuasion, he allowed as to how he could weld a small muffler made for a car onto the exhausts. It spoiled the Indian’s looks, and Steve and I agreed to have it removed when our operation was completed, but it did the trick.

That’s how, two nights later just before dark, we turned off the highway west of Carrizozo onto the dirt road I’d come up on Honey. We stopped to check, and the saddle and bridle were still where I’d hidden them, so we planned to pick them up on the way back. Then we headed out across the desert toward the Lilies’ place with the dirt track lit by what Steve called this year’s early Harvest Moon.

Although I was both nervous and keyed up about the whole thing, it turned out to be routine—almost as routine as all those trips to haul the gold out wound up being. But more on that later.

We found a place to hide the Indian at the point where the southeastern access trail joined the road across the desert, and hiked in. Up on the ridge top, Steve had a long, careful look at that antenna, and then, after I showed him around, we headed down the northeastern trail to the access portal I’d used so many times. Nothing had changed, and, well before midnight, we were inside the Labyrinth’s northeastern portal, the one with the big door that I thought of as the Lilies’ emergency exit.

It surprised me that, after only a month or so, it didn’t feel like home any more.

\* \* \*

If it didn’t feel like home, it did feel familiar to me, but not, of course, to Steve. After about fifteen minutes of winding our way toward the gold room, I felt a tug on my waist, so I stopped.

“You actually lived in this place?” He was whispering.

“For a couple of years, yeah. You get used to it.”

We’d brought what Steve called “flashlights,” hand-lanterns powered by batteries, but we were trying not to use them so as not to attract attention. I was therefore guiding him in the dark most of the time. I’d tied a short length of rope to my belt for just that purpose, and he hung on for dear life.

Down several of those curved corridors we went, and, as I had on other occasions, I noticed that it was getting warmer and warmer. I could feel through the soles of my shoes that the floor was getting

hot. Eventually, we came to a locked door, and Steve took out his lock-pick set and went to work. It took him almost as long as it had taken me with my piece of wire, something that pleased me greatly, for some reason.

Once inside, we used our lights only briefly, to look for the stack of burlap bags I'd seen before. By putting a rolled-up bag at the base of the door, we had the room sealed off from light, so I used the switch on the wall. Steve gasped as he saw all of the artifacts.

"Holy Mother of God!" He was still whispering. "And here I thought you were exaggerating. Forgive me."

Neither of us wanted to hang around very long, so Steve quickly found a small golden eagle, one of those fetishes, I've since learned, and I hauled down a package of currency, one the size of a big book—it reminded me of the dictionary in the Lilies' classroom—from a top shelf. It had a big "20" written on the outside, meaning, as I'd learned from my previous experience, when I'd taken a package that said "10", that it contained packets of twenty-dollar bills, each tied with a bit of string. If the other package I'd borrowed was any indication, there were about four thousand of those bills in there. There were many such packages, even some with "50" or "100" on them, and some of the packages were larger in size. I learned later that despite the standardization of currency into its smaller size in 1929, there were still larger-size notes in circulation—and the Lilies seemed to have a significant number of them.

After that, I put the burlap bag back on the pile and we found our way out to the northeastern portal. The moon was lighting up the Valley in a most lovely fashion, and the fresh, cool air tasted good, especially to Steve, I could tell.

"So, we get to do that forty times, only carrying a hundred pounds each on the way out? I just can't wait." He sounded intimidated.

"Maybe we can carry a hundred pounds each and put another two hundred on a cart. Then it's only twenty trips."

"Oh. Well, then. Let's get right at it." But he slapped me on the back to let me know he was just joking.

Back up on the ridge top, he inspected that antenna again, this time even more closely, and then we headed back down to where we'd hidden the Indian. It started right up, quietly, and we motored back to the highway. There, we retrieved the saddle and bridle I'd stashed, and we cruised back into town about three in the morning.

I was tired but too excited to be sleepy. Still, my cot felt wonderful.

Another thing that felt wonderful was that I had another \$80,000 of currency to augment what was left, which was most of it, of the \$40,000 I'd borrowed previously. Somehow, though, my increased indebtedness to the Lilies didn't bother me at all.

We both slept late, and, when he came in about ten, Steve took me across the street and introduced me to the concept of "brunch." It felt quite civilized, and I even offered to pay. He, though, suggested that we check out that currency first.

The Bank of Carrizozo was just down the street, and he took me there, along with three of the new bills plus three of my older tens. At the bank, he asked for the manager and was introduced, instead, to the owner, a Johann Schmidt, who'd founded the bank some years before. Steve gave Schmidt a little song-and-dance about getting the bills from a suspicious character to whom he'd sold a car and said he was worried about authenticity. Mr. Schmidt took the bills and us into his office, pulled out a magnifying glass, and looked them over carefully before pronouncing them genuine. And then, of course, he proceeded with a pitch about opening a savings account.

On the walk back to our building, Steve was thoughtful. “You know, I’m glad you didn’t mention those packages of cash to Colonel Wright. I didn’t take an inventory, but I wouldn’t be surprised if there’s as much cash there as that gold is worth. How much do you think there is in that package you got last night.”

He whistled when I told him. “That means that the packages of fifties are worth, what, two hundred Gs and the packages of hundreds are worth four hundred Gs. And there were lots of those packages. Will, I try to be a good, honest citizen, but I have to tell you, there’s an awful lot of temptation there.”

I offered to share my bounty, but he demurred. “No, that wouldn’t be fair. You’re taking what you figure you earned, or what they owe you, is what you told me. If I took their money, that’d be stealing. But, tell you what. I’ll be glad to let you buy me lunch and dinner now and then.”

“Happy to, Steve. And, you know, I really don’t need to get paid by CIC.”

“Oh, yes, you do. That’s part of the fairness thing. You’re working for CIC and they need to pay you what you’re worth. I’d say, actually, that’s a lot, so far. So, given what your paycheck is going to be, you’re a real bargain for our dear Uncle Sam.” He slapped me on the back again, and I was glad I’d done all that physical exercise to get in shape. “Now, the next thing is for us to get that little fetish I swiped over to our friend Colonel Wright, to see what he does with it. We need a plan.”

The plan turned out to be that I’d take the fetish over to Socorro on my afternoon run along with Steve’s report on our recon mission, give both to Wright personally, and suggest to him that he send the fetish up to the Albuquerque CIC office for testing. Steve knew a guy there who would watch for it, and if it didn’t show up then we’d know that Wright was a crook. It sounded good to me.

I made the courier run a little early that day, so that I could get back to Carrizozo before too late. Returning with new orders, mail and so on after office hours worked for Steve, but sometimes he needed to interact with other offices that same day. So the earlier I made my return run, the better, it seemed. That, in fact was the beginning of a discussion between us about the timing of those runs, although, for reasons that will become clear, that discussion sort of faded out.

Anyway, that day, after delivering the fetish and the report to Colonel Wright as we’d discussed, I got back about four-thirty. It was a good thing, too, as there was important news in the mail. It seemed that the *Jornada* site had been selected for whatever that important, and super-secret, test was going to be. Our CI role was suddenly ramped up significantly.

And that also put the pressure on us to get Colonel Wright’s other orders completed, moving that gold. Orders being orders, those came first unless countermanded. But because no one else seemed to know about them, there was no one to countermand them, and it was going to make for conflicts if new orders with respect to that test-site decision came through. The sooner we could get that gold moved, the better.

“We’ve got some work to do, Will. Hope you’re up for a few long nights.

\* \* \*

It took us a week. If those physical conditioning workouts I’d developed for myself before—the jumping jacks and the running and all—were strenuous, moving that gold was downright punishing. Steve took my suggestion, which I wished I’d never thought of, and on each trip had us each carry a hundred pounds in Army rucksacks while we put another two hundred onto a cart he came up with from somewhere. I pulled, he pushed, and all the while the gold on our backs tried to squish us into the dust. I was glad for those burlap bags—we wrapped the artifacts in them for the transfer and used them over and over. If I could manage the trails and corridors in the dark before that, well, afterwards I could have

done it in my sleep. And that was our routine—work all night, eat a huge breakfast, sleep, and eat a huge dinner before going back for more hauling.

But we got it done. After the week from hell—or, given the heat down there, maybe *in* hell—the entire contents of that Coronado treasure room were hidden carefully in a jumble of rocks out near the desert dirt road, awaiting pickup somehow.

Meantime, we'd neglected the Socorro courier runs and just about everything else. I didn't have anything to take to Socorro the first time after we were finished with the gold, but I sure had a lot to bring back. Among it all was a note from Colonel Wright to the effect that he'd meet us in the agreed place, meaning that desert road, with a truck three nights hence. We were under his orders to be there.

Orders being orders, and the Army being the Army, that's what we did. We took the Indian out there and arrived near the place where we'd cached the artifacts and the currency—I *said* we cleaned that room out—and hid ourselves as best we could to await the arrival of the good Colonel Wright. We made a little bet about whether he'd bring a crew or just himself—and we had to flip to see who wound up with the 'crew' option.

It was around ten-thirty when we finally heard an engine noise in the distance, one that evolved to a combined rumble and whine of gears as it approached. Its driver had the lights all off, so we could see only a shadow in the dark as it crawled along the road. When it came close enough, Steve signaled it with a flashlight, and it stopped to let him approach.

"It's over here, Colonel," Steve announced, as the driver's door opened and a blob-like figure climbed down to the ground.

The truck, what Steve later described to me as the Army's G535 prime mover cargo truck, a six-ton six-by-six, was huge. Then again, it had some four tons of cargo to haul. Except those four tons first had to be loaded.

Steve, who had won the coin flip and didn't have to take "crew," also won the bet. That fit with the fact that Steve hadn't heard from his friend in Albuquerque about the fetish that was supposed to have been sent there for testing. In any case, we were going to have to load the stuff ourselves.

Fortunately, the truck had a winch that allowed the cargo to be lifted, somewhat unceremoniously, over the tailgate. That made it all much, much easier, and, in a couple of hours, we had it all on board, carefully packed away. Still, Steve and I were sweating hard despite the cool night air, and Colonel Wright, who had been operating the winch and packing the artifacts, was beginning to melt into a puddle.

Then Steve sprang his surprise.

"Colonel, we didn't mention it before, sir, but it seems that the people who run the show here must have sold off some of the gold in the past, or maybe they've got the most successful ranching operation in all of New Mexico. Or something. It seems that the room inside there with the gold also had packages of what turn out to be cash. Lots of it. We assumed that you would want to pass it to headquarters along with the gold. Would that be correct, sir?"

"Huh, er, did you say bundles of cash, Sergeant?" Wright was dripping wet and bedraggled, breathing hard and all red in the face.

"Yessir. The individual bundles are about the size of, oh, big books, maybe like big family Bibles, wrapped in brown paper, but there are lots of them. Some, apparently, with big bills. We piled them all up, separately from the gold, and the pile of currency is about the size of a big bale of hay."

Wright was panting, trying to get his breath. “A hay bale of cash? Big bills? Sergeant, we need to load that onto this truck. Let’s get to it.”

So Steve and I started carrying the cash, several of those packages at a time, from where we’d stashed them in the rocks to the truck, and I followed Steve’s lead of handing them up to Wright over the truck’s tailgate. On one of our trips, when he passed me going the other way, Steve told me to hurry up. So we really got moving there for a while.

We were almost finished when I understood Steve’s strategy. I’d just handed Wright an especially large armful of those packages, many with the “100” label.

“Looks like hundreds, Colonel.” I tried to be casual about it.

He took the load I’d passed to him and then tried to lift and turn it enough to see the numbers, which he’d figured out by then.

And he made a sort of gurgling noise, dropped the armload, and grabbed one of the truck’s canopy supports with one hand and his chest with the other. His panting grew louder, and faster, and he looked at me in terror.

His next noise wasn’t gurgling, but an exhalation of pain, and he pitched off the tail end of the truck onto the ground, four feet or so, landing on his head a bit off kilter. I heard a snap.

Steve came up with his next load of packages, dumped them in the back of the truck, and looked at Colonel Wright, lying there on the ground. I noticed an unpleasant smell.

“Damn, Will. What did you say to him?”

“Just that it looked like I had an armful of hundreds. Geez, I’m sorry. What happened?”

“I guess it was just too much excitement for his overloaded heart to take. If the heart attack didn’t kill him, the fall sure did. I heard the snap of his neck.”

“He’s dead? Geez! What’s that smell.”

He looked at me in a funny way. “Oh, yeah. I forget. You have holes in your knowledge. Ha! A knowledge-hole about an ass-hole! What happened is that his sphincter let loose.”

“His what?”

“His sphincter. That’s the muscle that holds your asshole closed, so you can control when you go, as long as you’re alive, at least.”

“Eww.”

“Yeah.” He looked around and paid special attention to where the truck was parked relative to the rocks we’d hidden the gold among and in, and I picked up the dropped bundles of cash.

“Will, it looks to me like, if we dig a shallow grave about right here,” he waved at a patch of ground next to the rocks, “we could roll him into it, pile the dirt onto it, and then move some of these rocks onto the top. I can’t imagine that anyone would ever notice.”

“You mean just leave him here?”

“Buried, yeah. Can you think of anything better? We need to get his uniform off, though, and all identification. His dogtags.”

“His what?”

He flipped out from under his shirt a couple of little metal tags that were hanging on a chain around his neck. “These. You don’t have them, but he probably does. ID tags.”

“And we have to undress him?”

“Just his uniform. Not his underwear.”

“Well, still. Eww.”

\* \* \*

It didn't take us very long, and I didn't mind digging because Steve handled the other business, the uniform thing. Dead people weren't part of my young experience at that point, and I was having a lot of trouble with it all. Still, the guy had dropped dead from, basically, greed, so I couldn't be too upset about it.

We finished that little chore in time for us to get back to the office in Carrizozo by about three in the morning—Steve drove the G535, I the Indian—but our night was not yet over.

“We're going to see if we can get this stuff into the back room before the town wakes up,” Steve announced. “We can trade off with the unpacking and the moving.”

We gave it our all, and we just made it. It was actually becoming light in the east, and there were early-riser waking-up noises here and there in town, but we moved that entire truck-load into the back room of the Carrizozo recruiting center by dawn. Before we both collapsed, Steve managed to maneuver that huge truck out to the street in front of the center, making it look more like a normal Army thing, rather than a late-night delivery. Everyone in that part of New Mexico was pretty used to Army things that would, in any other time than war-time, seem extremely weird, so a huge truck in front of the Army building was no big deal just then.

And we both went to sleep, then and there, me on my cot, Steve just sprawled out on the floor.

Hey, *you* try moving four tons of anything *twice* in a night and see how you feel.

We woke up a bit after noon and, first thing, at least after we'd washed up a bit, we walked over to the diner and had both breakfast and lunch, back-to-back, as Mr. Apodaca watched in amazement. I was more than happy to leave him a twenty dollar bill for it all without even asking for change.

“OK, Will.” We were back in the office, and Steve was sitting at his desk, ready to be a Master Sergeant again. “I don't think I want more nights like that one. Shooting people and getting shot at, maybe. But the pack horse thing, no way.”

“I don't know about you, Steve, but I'm sore all over. What now?”

“We're doing the courier run, you in the Indian and me in the truck. The story is that Colonel Wright showed up here, discovered that he needed to be in Albuquerque soonest, ordered me to return the truck, and jumped on a north-bound train.” He smiled. “Last night, I found paperwork in it that says the truck is from the Socorro motor pool. I'm just a lowly sergeant, and I do what officers tell me. I don't know what happened to Lieutenant Colonel Thomas Wright after he walked off in the direction of the train depot.”

“Sounds like you've got it figured out.”

“I hope so. The trip west is going to be slow, because that truck isn't meant for speed. You need to watch me in your mirrors and not run away from me, OK? Or, better yet, just follow me.”

“Maybe I should drive it.”

He broke into laughter. “No offense, Will, but you’d be a disaster in that thing. It’s a beast. Maybe you’d do OK after a couple of days of lessons, but not if you just jumped into it. Hell, making the transmission work practically needs an advanced college degree.”

“So, we convoy over to Socorro, you turn in the truck and act innocent, and we bring back the mail and so on. What about everything in the back room there?”

“I gave that a lot of thought on that long, slow drive across the desert last night. And that’s why we worked so hard to unload the stuff before dawn. See, this is an Army building, signs all over it and so on. Also, there have been other Army deliveries at odd times of the day. And everybody knows it isn’t an ammo depot or anything that might house interesting stuff, it’s just a recruiting center. All that’s here are enlistment forms. So I’ve persuaded myself that the gold and cash are really quite safe here. Hidden in plain sight, so to speak.”

I thought about that carefully, and, even though it seemed risky, I couldn’t think of a better idea. Well, not one that we could implement right away.

“If you say so, Steve. But you aren’t planning to have it here forever, are you?”

“No, no. I’m going to figure out who to call and have come and look at it and decide what to do. Some officer or other. See, even though I’m a Master Sergeant, I’m just an enlisted grunt. It’s the officers who make decisions about stuff like what to do about four million in gold and maybe that same amount in cash.” He stared off into the distance. “However, I do think that all that work we put in this week and especially last night deserves a bonus over and above the Army pay scale. And it’s not possible that anyone will miss a couple of packages of that cash, is it?”

Impeccable logic, I thought, impossible to argue with. And I was actually glad to hear that he was going to reward himself, although I really didn’t want to know with how much. I certainly had all I needed already, but, when it turned out that he urged a package of fives on me, I couldn’t turn it down.

He did his best to catch up on what paperwork there was, including what had been in my last courier run, and then we set out for Socorro, at a much slower speed than I was used to. It turned out that we were supposed to drive slowly, or at least the civilians were, to conserve fuel and especially tires. My zooming around on that Indian was decidedly unpatriotic, I learned later. But I’d become so used to higher speeds that the trip to Socorro behind that huge truck seemed to take forever.

\* \* \*

## Nine

Finally, after what seemed an interminably slow trip to me, we completed the west-bound run to Socorro, turned the truck in, and headed back east, with me in the sidecar once again. It actually felt like old times. And the girls on the street-corner on our way out of town were especially enthusiastic with their greeting when they saw that Steve was driving.

I thought for a minute and remembered that it was Thursday, meaning that Steve would be making the run alone tomorrow. I wasn’t sure, but, I thought, maybe that explains their enthusiasm. I had no idea why that would be.

Back in Carrizozo for the evening, he allowed as to how he wasn’t going to worry too much about all the mail and so on, but he was going to scan it over first, just in case. And nothing really got his attention except for one set of papers.

“Will, looks like we’re going to be moving over to Socorro.”

“Huh?”

“New orders here. Because the *Jornada* site was picked for this big test of whatever they’re planning, they think that Socorro is going to become a hotbed of spies, or something like that. Something about how the roads out there make it easier to get to Socorro than to here, so all the personnel will use Socorro for leave. They’re consolidating CIC activities there.”

“But Lieutenant Colonel Wright is in command there. Oh. Wait. Er ...”

“Correct. But they don’t know about the ‘Er’ part yet. When they do, though, they’ll just replace him, and probably with someone higher up. And the town is going to get full of civilians and Army people, and housing is going to be tough to find. I think you should come with me for the weekend tomorrow, and we’ll see what we can rustle up.”

“But, well, what about ... ?” I pointed toward the back room.

“Same plan. Leave it here until I can figure out who to get here to deal with it. I did my part, based on orders from my superior at the time, Colonel Wright. Written orders that I can show anyone who asks. Now I’m passing the buck. So to speak.” He grinned with mischief.

Even though reading Shakespeare had taught me to appreciate puns, I almost missed that one. After a minute, though, it dawned on me.

“Did you really say that?”

“Say what?” His look was pure innocence, so what could I do?

After making sure to lock our building up as tight as we could, and closing all the blinds and so on, we left for Socorro that Friday afternoon a bit early. I’d packed a weekend bag, probably more than I needed, but, then, I didn’t know where I was going to sleep. Steve seemed already to know about his situation, though. He told me he’d send me back for more of my, and his, possessions if need be.

And even though we’d been to Socorro the day before, it seemed busier than ever that Friday. Maybe I was looking at it with new eyes, or maybe it *was* busier. There certainly were plenty of “No Vacancy” signs on the rooming houses. And because the place was a sort of college town—the New Mexico School of Mines had been there since 1889—there were plenty of those.

Naturally, we stopped in at the Army building. Steve had labored hard all afternoon to catch up on paperwork that he’d been ignoring for several days, and, with all the changes in the works, he needed several briefings as well. I was invited to join a couple of those, in which I learned that Major Bernstein’s report on me was making quite the impression at CIC. People were getting the idea, particularly in light of the *Jornada*’s selection as the test site, that the Lilies might be worth scrutiny.

It wasn’t until after six that we were finished with all that, a time that I normally contemplated supper, but Steve insisted that we find a place to stay first. And, oddly, he was nervous about it. Instead of heading out somewhere on the Indian, he guided me over to the town square, where he had us sit down on a bench for a chat. Why, I was wondering, couldn’t we chat in the cafeteria with big trays of food in front of us? So I asked him.

“Not a bad idea, Will, but I need this conversation to be between us. With nobody eavesdropping.”

“Why? Is there some CIC thing involved with where we sleep?”

“Not at all. It’s just ... OK, well, see, I’m not sure how much you know about this. But when I come over here on weekends, I stay at Effie’s.”

“Is that one of the boarding houses we’ve been seeing?”

“Not exactly. Uh, remember those girls who always wave when the Indian goes by that corner south of town?”

“Sure. They wave at you and at me, too. They probably think it’s you, though.”

“That’s quite possible, as I’m friends with most of them. *Good* friends, if you know what I mean.”

I thought for a minute. “I don’t. Know what you mean, I mean.”

“Ah, crap. OK, well, those girls are what we call ‘prostitutes.’ They sell their bodies. They have sex with people for money.”

“So?” I still didn’t really know what sex was, but I had no reason to think of it as a big deal the way that Steve seemed to be implying.

He looked surprised. “Well, that’s the way I feel about it, actually. But most people, civilians in society, I mean, they don’t think of it that way. They think that it’s some kind of sin. There are even laws against doing it. It’s an important thing to a lot of them.”

“Oh. So those girls are outlaws?”

“Sort of. Around here, thankfully, the police sort of ignore it, though. Anyway, the girls work at Effie’s. Effie’s is what’s called a ‘brothel,’ a place run by a ‘madam,’ and that’d be Effie in this case, where the girls ply their trade, selling sex.”

“Oh. And you stay there. It sounds, well, busy.”

He laughed. “Sometimes it is. And sometimes it’s real quiet. You’ll see.”

“You’re taking me there?”

“The Army thinks you’re eighteen, and if you show your ID card at Effie’s, and they’ll probably ask you to see it, they’ll think you’re eighteen. So, as far as everyone is concerned, it’s quite OK for you to be there.”

“Oh. I didn’t know that would be an issue, but if it’s OK, it’s OK. The thing is, though, it’d probably help if I knew what sex really is. I’m afraid I don’t. Does it hurt?”

His jaw dropped and he stared at me for what seemed like a full minute. Then he groaned as he slapped his forehead, stared at the sky, and whispered, “Why me, Lord?”

\* \* \*

Steve decided that he needed to think things over, and, besides, it was time to eat. So we walked over to the cafeteria, where we made a point of getting our money’s worth. Unlike my late-morning lunch visit previously, the place was crowded, and I could tell that we’d never have had the possibility of a private conversation. I certainly overheard what all the people around me were talking about.

As we were polishing off second desserts, Steve, sitting across the long table from me, looked up. “I know what. I won’t tell you about it. Instead, you can just learn by doing.”

“Doing what?” I was so absorbed in the dish of ice cream that I’d forgotten the pre-supper conversation.

He leaned far out over the table and beckoned me to do the same.

“Sex.” He used what I’ve learned is called a “stage-whisper.”

So I stage-whispered back, “I can learn by doing sex with you?”

He looked hugely surprised, shocked, even, and sat back into his chair, except it was a bench and he almost fell off backwards. When he re-established his balance, he looked around nervously at our neighboring diners. None seemed to have heard, however, and he seemed relieved.

“No. Not on your life. Are you finished eating?”

I was, so we took our trays of dirty dishes to the window into the kitchen and left.

“OK. You can learn by doing with one of the girls at Effie’s. Definitely not me. See, Will, sex is a thing between men and women. At least for most people. It certainly is for me, and it probably is for you. We’ll see what you think in the morning. Let’s go find the Indian, and we can get over there.”

Effie’s was a large, nondescript house, although one with fancy decorations on the outside that I was told are called “Victorian,” on the south end of town, near that street corner where the girls had been waving at us. Inside the front door was an old-fashioned parlor, which led to a sizeable living room. The parlor had a stand-up desk on one side, and at it stood a woman with what looked to me to be a lot of paint on her face. Her hair, a sort of reddish brown, was piled high on her head, which helped disguise the fact that she wasn’t very tall, about to my chin. She was probably about Steve’s age, which was a lot older than I, and obviously a good friend of his.

“Ah, my hunk of real man! I was wondering what had happened to you.”

“Oh, I’m here, Effie. Just a little late this week. Busy tonight?”

“It seems to be getting busier and busier these days. But that just lets us raise our prices.” She smiled, showing white teeth behind the wide slash of red paint on her lips.

“Well, I hope you can accommodate a friend of mine. He needs a place to stay.” Steve turned my way, and I knew that was my cue.

I’ve said how being nice and polite worked so well with the Matrons, and with other people, too, so I used that tactic with Effie. She ate it up.

“Good evening, ma’am, I’m William White, Will to my friends, and you look like a friend to me. Steve tells me you have a nice place here, and I’m hoping I’ll be able to stay. We’ve been reassigned over here in Socorro. And, well, ma’am, the rooming houses all seem to be full.”

Effie sashayed out from behind her little stand-up desk and over to Steve, where she put her arms around his waist.

“Well, now, you didn’t tell me about that, big man. Oooh! Does that mean I get you *every* night now?”

“I think you know how I’d feel about that, Effie.” As he kissed her on the forehead, he looked over her scalp at me in a perplexed way. “And that was the next thing I wanted to talk about. We need to live here now. In Socorro, at least.”

“Oh, I wouldn’t want you living anywhere else.” She stood on her tiptoes and kissed his chin. “Now, Will, what are we going to do with you?”

Steve whispered something in her ear and her eyes got big.

“Really? It’s been a long time since a virgin came through that front door. But I think I know what to do about that. Will, tonight’s taken care of, but in the long run, you’ll need a room of your own. I’m afraid about all I have is space up in the attic. It’ll need some cleaning up, but it should work.” She looked me up and down. “My, but you’re a tall one. You’ll have to watch your head up there, except in the middle.”

I turned on the charm, wondering what was in store for me that first night. “I’m sure it will be fine, ma’am. I’m just staying in the storage room of Sergeant Jennings’ office in Carrizozo now. I’m sure I can make whatever you have quite cozy. And I think that, most of the time, Sergeant Jennings and I are going to be pretty busy, ma’am, so we won’t be making a nuisance of ourselves around here.”

She giggled, a sort of little twitter. “Oh, I can’t imagine you’d ever be a nuisance. Now, come in here with me. I want to introduce you to Hannah.”

In the living room there were a half-dozen young women—too old to be ‘girls’ really, but much younger than Effie—sitting around in house robes in various colors with all sorts of ruffles. One was staring out a window and smoking a cigarette, a couple were reading, two were involved in a card game of some kind, and one was sewing, darning a sock. They all looked up as Effie walked in, and in a subtle way they shifted around to pose in what looked like rehearsed positions.

“At ease, girls. An old friend just brought in a new friend. Hannah, let me introduced you to Will. Will works with my friend Steve, and both of them are going to be here quite a bit now.”

Hannah turned out to be the young woman who was darning the sock, and she put it aside and stood up. She was a bit older than I, but not much, and almost my height. I could tell, despite the robe, that she was considerably curvier than Clarisse had been, with much longer legs. And, under a head of wavy blonde hair that fell to her shoulders, she had her face painted up, too, but not so much as Effie did. She cocked her head sideways, looked me over, and smiled.

“Pleased to meetcha, Will. You like girls with blonde hair?” She was chewing on something, I could see, as Effie leaned over and whispered in her ear.

Just as Effie’s had, Hannah’s eyes got big. “You don’t say! I’ll be damned. Will, I think we’re going to have a very pleasant time. Want to come upstairs with me?”

She deposited the wad of whatever had been in her mouth into an ashtray and took my hand, pulling me gently toward the staircase. For some reason I couldn’t fathom, I felt those old stirrings acting up.

“Hey, Will?” Steve was standing with an arm around Effie’s shoulders. “It doesn’t hurt.”

\* \* \*

Except for my right arm, I woke up the next morning sometime after dawn, yet still early. My arm was still asleep, almost numb, because Hannah was lying with her head on it, snoring softly. I couldn’t tell the time because I could see my pants, with my watch in a pocket, on a chair across the room. And I had to pee.

I managed to slip out from under Hannah, get out of the bed without having it squeak at all—and certainly not like it had squeaked almost all night—and dress without waking her. I remembered the door squeaked, too, so I applied pressure to the hinges as a way to minimize that.

My business taken care of in the bathroom down the hall, I descended to the first floor, where wonderful smells were coming from a room off the living room. There, in the kitchen, were Effie and Steve, plus three of the young women I’d seen the evening before.

“Morning, Will.” Steve was in high spirits, it seemed. “Hope you slept well.”

“Not much, but well.” I couldn’t hide a bit of a grin.

Effie spoke up. “I hope you enjoyed yourself, then.”

“Well, ma’am, if I’m going to stay awake most of the night, I’d rather be doing that than playing pack horse and hauling tons of stuff around, that’s for sure.” I looked around and made sniffing noises. “Boy, something smells *good*. I’m hungry enough to eat a whole cow.”

That got the attention of the young women, who began fussing over me like mother hens. I was poured a cup of coffee almost immediately, then seated at the table where Effie and Steve were, and, miraculously, a plate of eggs and sausage, with green chile on the side, and tortillas appeared. I ate for a while.

About the time I’d cleaned my plate, into the kitchen came Hannah, yawning and stretching, but composed-looking, more beautiful, to me, at least, than ever. And, in the daylight, as in the candle-light the night before, she looked much better without her face paint, what she’d told me was called “makeup.” I’d asked her to scrub it all off after it got smeared early on.

I then watched an interesting little pantomime. As the three young women looked at Hannah, she raised both hands with all but her thumbs spread wide and mouthed at them “eight times.” One of the women pointed at me and mouthed back “him?” And Hannah shook her head, pointed at herself, and mouthed “me.” And they, almost all together, squealed and burst into giggles as I tried not to blush.

Blushing about such things was something I learned quickly wasn’t worth worrying about in that household. Even my first night, when Hannah asked me if I was indeed a virgin and then had to clarify for me what that meant, she worked hard to overcome my natural shyness.

“Will, it’s nothing to be ashamed of. I mean, everyone starts out that way. Everyone has a first time. The trick is to have a *good* first time. We have a saying here about that: Virginity is an illness that everyone is born with, but its cure is easy, foolproof, and, if properly administered, great fun.”

“But I don’t know what to do.”

“Just look at me.”

And, wearing nothing under it, she’d dropped her robe on the floor. Those stirrings of mine kicked into high gear, and my cure was soon underway.

Although Hannah sort of latched onto me at breakfast when she came down, I didn’t want to be rude. “Ladies, Effie introduced me last night as ‘Will,’ and that’s short for William White. I’m very pleased to meet all of you, but I’m afraid I didn’t get names.”

The shortest of the three, a plump young woman with remarkable curves, said, “I’m Paula, and this is Cindy and Kathy.”

The latter two nodded at me in turn, then Kathy spoke up. “Does this mean that you want Hannah to share you with us?”

It took me a few seconds to understand her meaning, and my brain went into overtime trying to concoct a suitable answer. Finally, I thought of something.

“Well, Kathy, as attractive and intriguing as that sounds, I think I’d like to make sure that Hannah has, er, completed my lessons first and that it’s OK with her.”

It must have been a good answer, as Steve raised his coffee cup in a kind of toast. And Hannah, who had taken my arm somewhat possessively, squeezed harder.

Steve broke a brief silence. “Will, I’m happy to report that Effie and I have agreed on a suitable role for us here. It will help keep our costs down, and it will help Effie with an issue she has to deal with sometimes.”

His mention of costs recalled to my mind one of the conversations I'd had with Hannah several hours earlier. I'd decided I wanted to settle up whatever financial matters there were as soon as I could—Steve, after all, had told me that these girls did this for money.

“Hannah, I don't want to offend you, but no one explained to me about prices here.”

She looked surprised and a little sad. “Well, all night is twenty-five dollars. I hope you're going to stay all night?”

I got up, walked over to my pants, and took five tens out of my wallet.

“I'm curious. How does this work? Do you keep all twenty-five?”

“Oh, no. Only half. The rest goes to Effie, for room and board and everything. She sometimes calls it 'overhead.' So I get half, unless you give me a tip.”

“What's a tip?”

“Something extra because you think I've been really good. I don't keep all that either, it gets split up among all of us. The other girls get a share of my tips, and I get a share of theirs.”

I laid the five ten dollar bills on the bedside table beside her.

“Wow, Will, that's a huge tip. Usually, for a night, it'd be a five or maybe a ten at the most.”

“OK, I'll remember that. But this first time is extra special for me. And, besides, I'm not done with you yet.” I dove under the sheet, making her squeal.

I tried to remember if that had been time number three or number four.

“Here's the plan.” Steve's voice pulled me back to reality. “You're going to make a place to sleep for yourself up in the attic, and I'll be staying down here somewhere.”

Effie poked him in the ribs. “Whattaya mean, 'somewhere'? You going roaming around, big boy?”

He grinned and looked at her. “OK, I'll be staying with Effie. But we don't get charged the usual rates, because we're doing some on-call work for her. As muscle. See, now and then a customer will get rowdy, maybe making trouble with other customers in the living room or maybe treating one of the girls badly. Our job will be to, ah, persuade that customer to behave himself or, perhaps, punish him for his transgressions if he doesn't learn the first time. With any means necessary. Make sense?”

I thought about it for a minute. “I guess you can't just call the cops, huh, Effie?”

She laughed. “Not on your life. They leave us alone, but, well, that leaves us alone. I suspect that if the house caught on fire, the fire department would come, but that's because they wouldn't want the fire to spread. Most folks in this town would be fine if the place burned down with us in it.”

“Steve, I'm fine with that arrangement, especially if you can give me some lessons. Don't you Army guys know hand-to-hand combat or something like that?”

Steve looked at Effie. “He skipped basic training, but I can fix that. You're going to have the two best bouncers in the southwest, Effie dear.”

By then it was getting on toward time for the Army office to start its day, so Steve and I got cleaned up and headed downtown. We had a brief opportunity to talk on the walk from where we parked the Indian to the office.

“Steve, I need to tell you about last night.”

“Will, c'mon. Gentlemen don't kiss and tell.”

“Huh? Oh. No, I don’t mean tell you about Hannah. I mean about something else. See, I went to the bathroom down the hall from Hannah’s room at one point, fairly early, and I overheard a bit of a conversation in one of the other rooms. And it got my attention, despite all the other noises up there, because they were speaking German.”

That brought him up short. He stood and stared at me.

“Did you catch what they were saying?”

“Not much of it, because I didn’t want to stand in the hall in just my pants and eavesdrop. But what I heard was a man’s voice and a woman’s voice, and something about a new, uh, installation, I think the word means, and new customers that might be able to provide information.”

“Man, Will, you’re a regular counter-intelligence bloodhound. Do you know which girl’s room that was?”

“I know which room, but I don’t know which girl. But she speaks German.”

“Yeah, but I bet she keeps that quiet from everyone else. Oh! That reminds me. Don’t tell anyone we’re living at Effie’s. It’ll just make for trouble if you do. If anyone asks, be vague about it. If they push, be offended. We can use the Army office here as our mailing address and so forth.”

“It’s too bad that Effie’s is so unrespectable. I like that place.”

He slapped me on the back again, something I was getting used to even if it did almost knock me down every time. “I feel that way, too. Anyway, we’ve got to deal with CIC now. We’re going to need to talk to an officer about that German conversation. I wonder if CIC has replaced our dear, departed Colonel Wright yet?”

\* \* \*

The answer was “not exactly.” Instead, Colonel Wright’s boss, (full) Colonel Granger Sherhold had arrived from Albuquerque for the duration. Duration of what wasn’t clear, but that he’d arrived and taken over was.

As we walked in the door, the front-desk corporal flagged us down.

“Sergeant Jennings? You and Mr. White are to report to the Colonel immediately.”

“Corporal, I heard that Colonel Wright has turned up missing.”

“Yessir, that’s true. He still is. I meant that you need to report to Colonel Sherhold. He’s come down from Albuquerque, Master Sergeant.”

Steve was straightening his tie as we were ushered into the Colonel’s office.

“Sir! Master Sergeant Stephen Jennings reporting, sir! Welcome to Socorro, sir. This is my aide, Mr. William White, Special Agent, sir.”

“At ease, Sergeant, and good to meet you, Mr. White. Take seats, both of you.”

He rummaged in an “Out” box on the top of his desk and pulled out a folder, opened it, and read for a couple of minutes. Then he looked at Steve.

“Sergeant Jennings, what do you suppose happened to Lieutenant Colonel Wright? He seems to be missing.”

Steve sat up extra straight. “Yes sir. I just heard that, sir. And all I can tell you is that the last thing I heard from him was that he was going to catch a late train to Albuquerque. Then he walked off toward the depot. This was in Carrizozo, sir.”

“And you drove the six-by-six he checked out from the motor pool back here the next day, I understand.”

“Yes, sir.”

“And what do you suppose he was doing with a *six-ton six-by-six* in Carrizozo, Sergeant?”

“I’m afraid I wouldn’t know, sir. It puzzled me, too. I’ve got an order from him, right here, sir.” Steve pulled out a folded piece of paper from an inside pocket.

The Colonel unfolded it and read. “What’s this ‘agreed place,’ Sergeant?”

“In Carrizozo, sir. We’d spoken on the telephone, a new scrambler unit that was installed for me, the day before. Or maybe it was two days before.”

“And that’s all you know?”

“Yes, sir. It’s very odd to me. For one thing, officers don’t generally drive around in G535s, sir. It’s not very dignified, and it takes special training. For another, I doubt there’s six tons of anything in Carrizozo that the Army wants. Sir.”

“Well, if you hear anything more, you be sure to let me know. Me, personally, understood?”

“Yes sir.”

“To clarify matters, Master Sergeant, I’ve assumed command of this office. Captain Walker has been reassigned to recruiting duties in Albuquerque, and we are now a purely CIC operation. You’ll be reporting to me directly and assigned to special projects for CIC. As you know from experience, such an arrangement is not traditional, but CIC is operating in a non-traditional fashion in non-traditional times. Clear?”

“Yes, sir. Sir. We have information for you this morning, sir.”

“Oh?”

“Yes, sir. Permission to speak freely, sir.”

“Granted.”

“Sir, the request was mostly on behalf of Special Agent White here. He’s unfamiliar with much of Army protocol, sir. I’ll provide some background, sir, and I hope that you withhold your judgement until Agent White is able to finish what I start, sir.”

The Colonel took on a look of skepticism but said, “I’ll do my best, Sergeant.”

“Thank you, sir. Sir, we were recently reassigned from Carrizozo to the office here in Socorro and arrived late yesterday afternoon. We discovered that the town is essentially full up, and so we were forced to spend the night at, ah, a local establishment of ill-repute called Effie’s.”

“You’re telling me the two of you spent the night in a whore-house, Sergeant? This had better be good.”

“I hope you think so, sir. I truly do. Anyway, Mr. White arose during the night to use the facilities and overheard a conversation in one of the other rooms, he’s told me. Will, why don’t you pick up the story from here?” He looked over at me.

I was already sitting as straight as I could, so I just started talking. “Colonel, sir, this normally wouldn’t be of any interest at all. I wouldn’t have even noticed the conversation, sir, except it was in German.”

That got the Colonel’s full attention. “German? How do you know?”

“I speak German, sir. Learned it in school. Once you know it, of course, it jumps right out at you. It sounds funny compared to English, so just about anyone would notice something odd, but when you understand the words, it’s attention-getting.”

“What did you hear these people say? And who were they?”

“It was a man and a woman, sir. I assume that the woman was one of the girls working at the brothel, but I don’t know which one. And I don’t know the man. And I was just walking by in the hallway so I didn’t listen to the full conversation. But I heard something about potential new customers, for her, I think, from a new installation somewhere. Sir.”

I stopped talking, and we all sat quietly while the Colonel stared at the wall over my head for, maybe, two minutes. It seemed like a long time.

“Well, shit.” Colonel Sherhold’s first comment seemed to me to be entirely fitting. “But this is what we’ve been expecting, I guess. German spies, trying to find out what the hell is going to happen out there.”

“Sir?” Steve’s voice was tentative. “I’ve heard that the Army plans to test some kind of super-weapon out there, that the *Jornada* has been chosen for the test site. That’s all I know sir, not what the weapon actually is. May I request to be read in on that, sir? If we here at CIC are to do our jobs, it might help us if we knew what those jobs are really about. With respect, sir.”

“Jennings, your record is as clean as a whistle. And White, I’ve read Major Bernstein’s report on you and was extremely impressed. Because you’re both CIC agents, you have our highest security clearances, pending such things as need-to-know. Jennings, you seem to be suggesting that you and White have a need-to-know here, is that what I heard?”

“Again, with respect, yes, sir. I feel hampered in my ability to perform counter-intelligence operations that involve another military program of which I’m ignorant. I’m deathly afraid I might miss something out of my ignorance. Sir.”

“What do you think, White?”

“Well, sir, my experience is too limited to have an informed opinion, sir. But what he says makes sense to me. I mean, if there are German spies out here in the middle of Nowhere, New Mexico, there must be something they’re interested in. If we knew what that was, maybe we’d have better luck catching them. Sir.”

“You’re persuasive, both of you. OK, what I’m about to tell you is to go no farther than the walls of this room. Besides the people actually working on the project itself, only I and my adjutant in Albuquerque know about this. And now you.

“For several years now, there has been an activity code-named the ‘Manhattan Project.’ A group of scientists and engineers, physicists, mostly, somewhere northwest of Santa Fe at a place called Los Alamos, an old boys school on a mountainside, they have been working to use the power of the atom for military purposes. Atomic power has far, far more potential than chemical power, which is what traditional bombs use. They’ve developed a new technology to integrate atomic power into a bomb, and the first one is going to be tested out in the *Jornada*. Assuming it works, it will dwarf anything else ever

used in warfare. And, naturally, there are plenty of people working for the other side who'd like it very much if this test failed."

"Thank you, sir." Steve was nodding. "I don't know anything about the technical aspects of this, of course, the physics, and I'm sure I don't need to. But if it really will dwarf anything else, it's going to attract serious attention from our enemies, sir. Obviously, we're going to have to increase our vigilance, sir."

"That's why we're all here, Sergeant. Now. What are we going to do about this whore who speaks German?"

\* \* \*

## Ten

"Well, sir, I haven't had time ..." Steve had barely begun when Colonel Sherhold held up a hand.

"Let me state some obvious things, Sergeant. First, I said before that you better have something good to tell me to justify your having spent the night in a whore-house, or at least for having told me so. Well, check that off. It was indeed something good. And, as a result, I have to say that I'm quite happy that you spent the night in that whore-house, although maybe not as happy as you are. In any case, I hope you're able to continue to stay there. Obviously, we need to watch this woman, after, of course, finding out who she is. Clear?"

"Yes, sir." Steve and I said it almost together.

"So. First order of business. Find out who she is. That ought to be easy. It may not be so easy to find out who the man was, though, but that's a high priority. After that, I'm open to suggestions."

"Watching her is a good idea, sir. That may be the only way we can find out who the man is, after all. But if we watch her, perhaps we can also compile a list of all her ... ah ... clients to see if any of our people visit her. If any do, we'll need a plan for them, obviously."

"Good thinking. And any such plan would depend on what they talk with her about, I suppose. I'd hate to get CIC into the business of punishing people merely for having an active sex life. The old biddies in the Women's Christian Temperance Union might like that, but our ability to attract new recruits would go down the toilet."

"Sir?" I didn't know quite how to join in the conversation, so I'm sure I sounded quite timid. "Could we put some sort of microphone, like a telephone handset has, into that bedroom? Then we, I mean CIC, not necessarily me or Sergeant Jennings, we could listen to the conversations in there."

Sergeant Jennings jumped on the idea. "Exactly, sir! And if we had a wire recorder, or one of those new tape recorders, we could have a record of the conversations."

"And lots of grunting and moaning and squeaking bed springs, I suppose. How gauche." He was shaking his head. "But, I have to say, this is all a good idea. Instead of just arresting that German-speaking whore and whoever is with her the next time we hear a conversation in German, we can use them for information. Excellent idea. What's the access?"

"We'll have to see about that, sir. It's possible that we could get a microphone into it from the attic. We can let you know tomorrow. Uh, when do people for this big project start showing up? Do we have some time here?"

“I think we do, but we can’t put it off. Now, since we’re talking about electronic gizmos, let’s talk about radio antennas.”

“Ah. Yessir. You must be referring to the one that’s on top of the ridge over the facility where Will here grew up, sir.”

“Exactly. And, White, I have to say that that description of your upbringing I read is one of the most remarkable stories I’ve ever run across. That place needs to be shut down before they kill any more boys.” He sighed. “But that’s not why we’re here just now. We’ve got bigger fish to fry. What do you know about that antenna, Sergeant?”

“Looked to me like a big short-wave antenna, sir, probably with radio wave receive capabilities, too. And if that test is going to happen where I think it might, they’ve got a birds-eye view of the preparations.”

“We’re going to start monitoring on all frequencies and use triangulation to see what they’re transmitting. But it’ll probably be code of some kind. If not, it’s unlikely to be sending out anything too sensitive. But eventually we may need to go up there and destroy it.”

“That was my thought, too, sir. Although I suppose they could just replace it. Any chance of aircraft surveillance?”

“It’s a bombing range, so we can fly over there whenever we want without raising suspicions. But instead of bombs, the planes can carry cameras. How is it that you saw the thing, Sergeant?”

“Well, sir, Colonel Wright ordered us out on a clandestine, night-time recon mission, sir. We drove out there as far as we could and then took trails that Will knows about up to the ridge-top. This was about, ah, a week and a half ago, I think, sir.”

“Is there a report of this recon?”

“Couriered over here for Colonel Wright’s eyes, sir. The next day.”

Colonel Sherhold stared at the wall over my head again for a while.

“If that SOB ever shows up around here, he’s in deep shit. Sergeant, is there a copy of that report?”

“Yes, sir. The carbon is in my office over in Carrizozo. Uh, somewhere. Sir, is that office going to be closed? If so, I could make a quick trip over there to pack up my files—not the recruiting files, the CIC files—and bring them here, including that report. And, well, sir, I have personal possessions in my rooming house there that I didn’t bring yesterday. Um, it’s a men-only rooming house, sir, if that will make you feel better.” Steve had a glint of humor in his eyes.

“Er, sir?” I was again in my timid mode. “And I have some things there as well that I’d like to bring here. A quick trip over there and back, a half-day altogether, would be quite helpful, sir.”

“Sergeant, are you telling me that your orders to relocate here were not clear?”

“Well, in point of fact, sir, they were somewhat ambiguous. I don’t mean to be a suck-up, sir, but it seems obvious to me that you didn’t write them. I really couldn’t tell if the move was temporary or permanent. All I saw was the urgency. So we didn’t pack up, we just got the hell over here. Sir.”

“White, what do you say about those orders?”

“I didn’t read them, sir. Only he did, and when he said we were being transferred from Carrizozo to here, I didn’t really know if it was temporary or permanent, either. I mean, I follow his lead. And we packed only what we needed right away, so we could get right over here right away. Er, he’s my Master Sergeant, and I’d like to keep him. Sir.”

“Tell you what, Sergeant. Get your ass over to Carrizozo and bring me back the copy of that recon report. And whatever else you need to base here. And shutter that office for the time being, as far as its being a recruiting center goes. It can sit and gather dust as far as I’m concerned. CIC is no longer a presence in Carrizozo, and I’ll write up orders to that effect. When you’ve got everything CIC-related, and what personal stuff you want, get your ass back here in time to reconnoiter that attic in the warehouse where you’re staying here. And report to me about all this in the morning. Clear?”

“Ah, yes, sir. Except for one thing. My transportation is a motorcycle with sidecar. I doubt that will be sufficient for the transport of material involved, sir.”

“What? You got a lot of uniforms or something, Sergeant?”

“No, sir. But there are more CIC files over there than the Indian can handle, sir. Perhaps a telephone call to the motor pool could procure me a more appropriate vehicle, sir.”

“Fair enough. Dismissed, Sergeant. You too, White.”

Steve stood, saluted smartly, executed a snappy about-face, and marched out. I managed to sneak out behind him while the Colonel was studying something on his desk.

\* \* \*

The motor pool’s offerings were slim, but the Colonel had made a phone call that provided us *carte blanche*. We chose a sedan, perhaps the very sedan that Colonel Wright had used for his trip to Carrizozo during which he’d eaten all the food we’d obtained from Mr. Apodaca, including most of ours. We hit the road for Carrizozo about mid-morning.

“Will, I have to tell you that I was a bit nervous there. I thought that Sherhold was going to have some crew of recruiting grunts clean out the Carrizozo office. Including the back room. Wouldn’t they have been surprised?”

“Actually, I was a bit surprised that the subject of what’s in there didn’t come up with Colonel Sherhold.”

“He’s not the right person to handle it. I’ve been thinking about it, and it’s possible that even the Army isn’t right. Maybe the US Treasury should be responsible. They’re the part of the government responsible for the country’s gold reserves. So I haven’t figured it out yet.” He seemed strangely evasive, but I wasn’t going to press the matter.

That car was sure more comfortable than the Indian, either its main seat or the sidecar. We cruised over to Carrizozo in style. Steve stopped at a residence a couple of blocks over from the Army center and parked on the street.

“I’ll be just a minute, gotta get my stuff.”

“What’s this place?”

“Oh. You’ve never been over here, have you? My rooming house. Why don’t you walk over to the center, let yourself in, and get all your things organized? That’ll give us a head start over there.”

I did, and a few minutes later he showed up with the car. What CIC files there were on site filled less than a filing cabinet drawer, so getting them into the car was easy. I’d carried out a load and, when I came back in, I found Steve deep in thought, staring at the huge pile in the back room.

“Will, what I’d like to do is to get all of the bundles of cash into the car and then find some sheets, or ground cloths, or some other kind of big covers and put them over the gold. It won’t hide it, but it will make it less obvious as something attractive. I don’t think our supply of burlap bags will work, though.”

“Maybe the hardware store down the street has something.”

“Good thinking. Let’s see. Enough to cover the floor of this room ought to do it. Say, fifteen by twenty altogether. It’ll probably take several sheets of whatever they have. Take some bills from here and go see what you can find, OK? I’ll start loading the car.”

As I walked down the street, I tried to imagine what Steve’s strategy was, but it escaped me. And, although I trusted him, there was this little nagging voice in my head that said he was behaving strangely, not unlike the behavior we’d seen in Colonel Wright.

The hardware store had just what we needed, so I returned with five large canvas tarpaulins, more than enough to cover the pile of artifacts.

Before returning to Socorro, we stopped for a last lunch at Mr. Apodaca’s diner, and I realized that I was going to miss the place, particularly the daily specials. They had been teaching my taste buds to be more tolerant of New Mexico recipes, even to learn to like those recipes.

Because I’d purchased what turned out to be an extra tarp, we were able to cover the stacks of currency packages in the sedan’s back seat. Between the car’s trunk and back seat, all of those packages fit, but it was a close thing.

On the way back to Socorro, I raised an issue I’d been thinking about. “Steve, all that gold back there is supposed to be Coronado’s treasure. And I remember reading about him some. He was one of those early Spanish explorers who wandered all over the southwest. I think he was the first European to see the Grand Canyon, for example. And he did all sorts of bad things to the Indians, like all those guys did. Presumably, in all that wandering, he ran across gold in various forms here and there and just confiscated it all. But we’ve moved all that stuff, twice, now, and it’s a huge amount of weight to deal with. I can’t figure out how the hell he managed to haul it all around.”

He laughed. “Yeah. It’s not like he had one of those G535s, is it? Well, let’s see. A pack mule can carry three, possibly four hundred pounds. But I don’t know if they had mules back then. Horses carry heavy people, so they can manage two hundred pounds, for sure. By your human calculator numbers, that sounds like a string of forty pack horses could have done it. And they didn’t get all the gold at once, I’m sure, so they could have added horses as they needed to.”

“That must have been some expedition, all those soldiers and pack animals. Lots of dust and everything. And they had to carry water, too.”

He nodded. “I’ve wondered about that. They undoubtedly stuck as close to water, like the Rio Grande and other rivers, as much as they could. So why they’d side-track east across the *Jornada* to the Oscuras to hide the stuff is beyond me. I guess they wanted it hidden *really* well.”

“So, why are we taking the cash to Socorro?” I was hoping that the abrupt change-of-subject might get the truth out of him.

“Basically, to separate it from the gold. The Treasury Department guys who will be interested in the gold will be different from those interested in the cash. And, besides, we may be able to use the cash for CIC operations. The Army is pretty stingy with money, and we need all the help we can get for this business of protecting that big test they’re planning.”

“What are we going to do with it? Put it in Colonel Sherhold’s office?”

“Actually, I was thinking of Effie’s attic, where you’re going to be staying. You can guard it.”

“Yeah, right.”

“No, really. I haven’t been up there—I don’t even know how to get up there—but if it can be done with reasonable privacy, and there’s room, it seems like a good hiding place for a while. I think we’ll

have to let Effie in on the secret, of course, but not all the girls. And if you sleep up there, that will discourage anyone from sneaking up there at night and stealing any of it. When we get back, I want to stop off to give Sherhold the copy of that recon report he wants, and then we can go check out the attic.”

“You’re not going all Colonel Wright on me, are you?”

He looked surprised, and laughed. “Not hardly. Remember I already rewarded myself with one of those packages? I don’t know if you noticed, but it was a package of fifties. I’m set for life, at least by my standards. No, I’m not going to be greedy. It’s like I said. It could come in handy for CIC operations, and we can always turn it in later, if we don’t need it.”

The attic turned out to be dusty, but it had good access. Effie’s old house had a back staircase that ended on the second floor near the bathroom at the rear of the house. And the attic staircase went on up from there.

I spent what was left of the afternoon cleaning the attic up for my own purposes and, in the process, we figured out where the bedroom on the second floor from which I’d heard that German-language conversation coming was relative to the attic floor.

Except for the dust, the attic was fairly empty, with just a few pieces of excess furniture stored up there. That helped me, because there was a real bed—and mattress—that I could use. The cot I’d had in Carrizozo was better than the floor, but the mattress was a big step up. There was also an armoire for my growing wardrobe—new clothes caught my attention all the time—and an easy chair. After moving the bundles of cash up there, we arranged my furniture near the top of the stairs to make an obstacle course, behind which, at the other end of the attic and under the eaves on the sides, we stacked all that currency, which we covered carefully with extra sheets.

And we left a big bare spot over the suspect second-floor bedroom.

I was set up in, what was to me, a real bedroom in a real house, a house full of willing, pretty girls, no less. What young man could complain about that?

\* \* \*

Life settled in to a routine in Socorro. Every now and then we’d hear that there was going to be some big activity out there on the desert somewhere, but none of those materialized. There was plenty of activity in town, however, with merchants and others apparently gearing up for lots of new business in the near future.

Colonel Sherhold assigned a small group of radio technicians to set up surveillance of the German-speaking girl, whose name was Rachael, downstairs, but my involvement was minimal. I made it a point to be there when they invaded Effie’s house to plant the microphone, which they kept calling a “bug,” and run wires. Neither Steve nor I wanted them poking around in those rows of packages under the sheets in the attic toward the front of the house and under the eaves. But the wires were routed to a house next door, which Steve and I discovered had been rented to CIC for the time being. That was where the listening post was set up.

The same radio technicians had me make sketches of the antenna that I’d seen atop the Oscuras, on the ridge over the Labyrinth. I told them I had to make two sketches, because I’d seen two different antennas. The original one didn’t impress them, but the second one got them all excited. Steve verified the accuracy of my second sketch, and they went away happy.

We also let Effie in on the secret. She didn’t believe it at first, but we took her upstairs and showed her the big pile and even opened one of the bundles. That sizable a pile of cash was too much for her to

grasp, I think, but we made sure to give her a bundle of twenties for the use of her house for Army CIC purposes.

Although we had jobs at Effie's as "bouncers," as Steve called us, in return for rooms and breakfast (fringe benefits were negotiated separately—although, because he stayed in Effie's room all the time, I expect Steve's were implied), that cash paid any reasonable rent that she might charge for a long time. Still, we took our duties seriously and didn't hesitate to give the bum's rush to anyone who misbehaved. It helped that Steve gave me hand-to-hand combat lessons, which left me bruised all over, and firearms training. And those fringe benefits kept me busy in my spare time.

Weeks passed, and during the fall of 1944 we heard sporadic reports of progress on preparations at the test site out in the *Jornada* and construction of a base camp for test personnel at an old ranch house about ten miles away from the site. No one, other than project personnel, was allowed to visit the place, however, so we really didn't know what was going on.

One thing we did know was that the antenna on top of the Oscuras was transmitting every now and then. Colonel Sherhold's radio crew had triangulated Morse-code strings to that point and a decryption team was hard at work. The codes, however, seemed impenetrable.

One day in late December, Colonel Sherhold called us into his office along with a half dozen other CIC agents.

"At ease, men. I've heard some news I thought I'd pass along. This, as is usual with everything going on out there, is need-to-know only. The base camp for the test firings of new weapons out on the *Jornada* is complete, and there is a security team in residence. MPs. That means that our job is to deal with potential problems everywhere else, but we don't need to be so concerned with what's going on out there in the desert.

"Now, I'm hearing that there are going to be two tests. The first one, sometime in the spring, probably, is going to be conventional explosives, a huge amount. Its purpose is to have a dress rehearsal for the real thing and to calibrate some of the measurements to be made on the real thing. My information is that the first, conventional test will be the largest explosion ever detonated. And the real thing, probably next summer, will be *much* bigger, if everything goes right."

"Sir?" The question was from the other side of the room, someone I hadn't met. "How big are these tests? I've heard that we use one-thousand pound bombs in various configurations, and there was a rumor about a two-thousand pound bomb. Do we know what's going to happen out there, sir?"

"Two thousand pounds is a ton, right? So, if there's a two-thousand pound bomb, it's a one-ton bomb. Well, I was told—and, again, this is extraordinarily sensitive information, but I do think you all have need-to-know status here—I was told that the first test is going to be one *hundred* tons, the equivalent of one hundred of those one-ton bombs, all detonated simultaneously."

There were expressions of surprise from around the room.

Sherhold held up a hand, and things got quiet. "But, remember, this is only the rehearsal, the calibration shot. What I was told is that they really don't know what kind of yield is going to come from the real test, the July one, if that schedule holds. No one has ever detonated this type of weapon before. But, in terms of measurements and so on, they're planning on being ready for as much as *five-hundred times* the calibration shot."

This produced an appropriately more surprised reaction from the gathered CIC agents.

"Now, I expect you've all been hearing the news out of Europe. The big German offensive into northeastern France and Belgium looked pretty dismal at first, but our boys have been fighting back. And in the last couple of days, the weather has allowed our airplanes finally to get off the ground, so

we're gaining the upper hand. Word is, Hitler put everything he had left into this offensive, and if we can beat them back, we're on track to win the war in Europe this spring. So this big, new weapon probably won't be used there unless the Krauts pull off something completely unexpected. If it ever *is* used, it'll probably be in the Pacific. Still, our concern here is mainly with espionage by the Germans—but they'll be sharing information with the Japs in any case. So our CI efforts are more important than ever. That's what I have, men. Jennings, White, I need you to stay. Dismissed!"

As instructed, we waited while the others filed out.

"I've got more information for you two. At ease, and have seats up here by my desk." He shuffled some papers. "Two things. First, our listeners heard a conversation in German in that room underneath you last night. White, did you hear anything?"

I'd been involved in a somewhat rambunctious discussion, among other things, about fringe benefits with Hannah, so I hadn't. "Uh, no, sir. Was it very late? I'm a pretty sound sleeper, sir, and that place can be noisy. I've learned to tune stuff out, sir."

"Good thing we've got listeners next door, then. The conversation was a man and a woman, and it's troubling that he passed along to her the same news I told you about just now—that the base camp out there is ready. If any of those MPs end up in her room, she's supposed to find out as much about it as she can without raising suspicions."

Steve cleared his throat. "Sir, as we've reported, that's Rachael in there, and her English is clean, no accent. So that will help her quiz any MPs from the base. Perhaps we should warn their CO of possible security risks here in Socorro without being too specific."

"I'm meeting with him personally, Sergeant, and you can be sure that will come up. Anyway, we were able to observe the man who was with Rachael when he left last night, and we have him under surveillance. You don't need to be concerned with him, because I have another job for you both. We need to put the radio that's inside that mountain out there out of commission. And we need it to look like something besides sabotage by us."

"Mmm. Well, sir, anything that looks accidental is likely to be pretty easy for them to fix, sir."

"Do I remember that your report said that the cable was along the ground?"

"Yes, sir. The antenna itself is on the western side of the ridge, fairly close to an escarpment down to the *Jornada*. The cable leads eastward from the antenna along the ground among the trees up there, they're the piñons and junipers we have around here, a good mix on that ridge, as I recall, and it disappears into a hole after about a hundred yards. I don't know if there's a conduit for it or not, sir."

"You're probably right about accidents just getting fixed."

"And they would probably be able to transmit before we could create another accident, sir, even if we were in the vicinity. Also, sir, even sabotage could be fixed. And in either case, they might start posting guards."

"We're not quite ready to take that whole place down, Sergeant. Those are American citizens in there, and they have rights we need to respect. But we would very much like to get that radio out of commission. Let's all give it some serious thought. White, you know your way around inside there, correct?"

"Yes, sir. Not everywhere in there, however. The living areas and so on were places I didn't get to, for example."

"And that probably includes the radio room. Did you go anywhere that there was electrical power?"

The Coronado room popped into my head, but I didn't want to bring that up. "Probably, sir, although I can't be specific. I tried very hard to stay clandestine, and that included no lights. But there's obviously power in there."

"Let's make sure this serious thought we're giving this business includes the possibility of jamming their transmissions, OK? Anything else? No? Dismissed, then. We'll be talking about this again soon."

\* \* \*

"Good grief." Steve was frustrated, I could tell. "First he wants a clandestine sabotage operation that looks accidental, then he wants a jamming device installed. Right. *That* would look accidental. Sheesh."

"I guess I don't know what it takes to put a radio like that out of commission."

We were sitting in the phone-booth-sized office they'd given the two of us, and he was busy with some paperwork. It seemed as if that was about all he ever did. But my comment made him look up at me.

"Now, there's a thought. I know some ways. A sledgehammer, for example. But maybe there are other ways that are more subtle."

"We learned a little about radios in one of the classes I had, but I'm not sure any of it would be useful here. Especially because we can't get to the real radio, just the antenna and its cable."

"Will, I have to say, the last thing I want to do is to go back into that Labyrinth and look around for the radio room. I never told you this before—I didn't want you to worry—but I'm not real happy in small, confined, dark spaces."

"The Labyrinth being a big, wide-open, well-lit space, after all." I grinned at him. "Did I ever tell you about the first time I looked out the portal I was using as a hideaway? It was just the opposite of your reactions to that place—the view across the *Jornada* and especially way, way down to it from where I was way, way up there scared the crap out of me. So it's all what you're used to."

"You know, for a sixteen-year-old kid—and don't fool yourself, I remember that birthday switcheroo that Major Bernstein pulled—you're pretty sharp sometimes. But I'm still not going to suggest to Colonel Sherhold that we go back in there."

"Didn't I hear that this entire part of New Mexico, I mean over there, the *Jornada*, the *Oscuras*, and the desert to the east all the way over to Carrizozo, practically, isn't all that federal land? Part of the Alamogordo Range, or something?"

"It is, and almost everyone else has moved out. There used to be a couple of ranches in the *Jornada*, in fact. But the Lilies are hold-outs. The land on top of their Colony there is federal land, but they still have mineral rights and so on underground, so they're allowed in there."

"Seems like we could make a trip to the ridge-top, tear out the antenna and its cable, and fix it somehow so they couldn't rebuild it easily. And the Air Force could watch, from airplanes, to make sure they don't. Wouldn't that solve the problem? It wouldn't be clandestine, but maybe it doesn't need to be."

"Like I said, you're pretty sharp, Will. I guess all they could do is take the Army to court to try to get a judge to let them put the antenna back up. But that would take a long time, and all we're worried about is the next six or seven months. Hmm." He drummed his fingers on the desk while he thought about it. "Tell you what. Let's march right back in there and propose this. We could get that antenna down this week, and, with surveillance, keep it down, even if they post guards. *We are* the US by-God Army, after all."

I discovered that the art of persuasion, when it involves enlisted personnel persuading officers, has its nuances but that it can work. Steve presented the arguments in favor of what we'd discussed with what seemed to be an extra dose of "sirs" and maintained a proper demeanor—which is to say, he didn't get mad or raise his voice—even when the argument ran against him for a little while. But he prevailed.

And that's how he and I led a squad of engineers to the top of that ridge over the Colony on New Year's Eve, 1944, a cold, blustery night on which I'm sure we'd all rather have been celebrating at Effie's.

Because the antenna was used for transmitting in addition to receiving, its cable was powered, and any interruption would be noticed immediately by anyone in the radio room below. So we needed to plan accordingly. On the other hand, we weren't disassembling the thing nondestructively for cold storage and later use, so we didn't need to be too careful, as long as no one got electrocuted.

We spent an hour or so scoping out the installation, and Steve showed the engineers where the cable went underground—into what seemed to be a disguised conduit, we discovered. A little digging eliminated the disguise, and a couple of the engineers pulled up hard on the cable and were able to pull it a foot or so out from the conduit. Another engineer took an axe that had its handle wrapped with rubber tape and chopped the cable about an inch above the conduit's top, with the result that the live end of the cable slid a foot or so down inside the conduit. All the while, a fourth engineer had been preparing some sort of semi-liquid concoction, which turned out to be concrete made from cement with iron filings and copper shot as aggregate, and that got poured, with some sparking, into the top of the conduit until it overflowed. Then we put rocks and dirt on top of the thing, in effect re-establishing the disguise.

After that, it was a matter of chopping the above-ground cable, now disconnected, into pieces and disassembling the antenna, then throwing everything over the edge of that escarpment. All-in-all, a good night's work.

There was a bit of excitement at one point, however. Apparently the power interruption that the first cable chop had caused was indeed noticed inside, for, about the time we were finishing up, one of the guys noticed a flashlight working its way up the one of trails through the trees. Everyone went quiet and took up positions on either side of the trail, making a trap to ambush whoever it was.

When the trap was sprung, we discovered that it was one of the Lilies, the bruiser Matron whom I'd had to outwit the night of my escape, in fact. I tried to stay in the background so she wouldn't see me.

The engineers thought of themselves as builders rather than fighters, but they had all the training and experience they needed to subdue Big Bertha, as they took to calling her. The ensuing discussion, guided by my suggestions to Steve, who was the highest rank present, wound up with our taking her back down the trail we'd used, the southeastern trail, and a couple of miles east in the troop carrier we'd brought, then letting her out and pointing her west toward the Colony's main entrance, that log palisade maze I'd observed so many times. Before we let her go, Steve wrote a note, including a greeting that I finally decided was a nice touch, to send with her:

*Dear Lilies – By authorization of the President of the United States of America, under the War Powers Act, your communications antenna has been permanently disabled. Any attempts to reconstruct it will be met with overwhelming force. MSgt. S. Jennings, US Army CIC.*

\* \* \*

It took Steve more persuading to calm down Colonel Sherhold when he reported in the next morning. That note had not been part of our orders, and, apparently, initiative by enlisted personnel was not always appropriate.

“My belief, sir, is that, first, by addressing them as ‘Lilies,’ I sent the message that we know about their secret society, which we do, and that we are watching them, which we are to some degree. And, second, I did not accuse them of anything; rather I merely stated that their antenna would not be tolerated under provisions of the War Powers Act. My understanding, sir, is that this approach is being used widely all across the nation to curtail questionable activities. And, of course, they now have had fair warning that any rebuilding attempts will be prevented. None of this violates their rights in any way. I don’t see the problem, sir.”

“The problem is, Jennings, that you exceeded the scope of your orders. You looking to become an officer or something?”

Steve was horrified. “Sir, no, sir. I’m proud to be a Master Sergeant of the US Army, sir. In that sense, I’ve achieved my ambitions, sir.”

I suppose that the dressing down constituted nothing more than a slap on the wrist, from Steve’s perspective, but I was intimidated by it. However, life went on with no further repercussions.

The question of the German fellow with whom Rachael was conversing—and he returned to Effie’s quite regularly—remained open. He was being closely watched, and the conversations in Rachael’s bedroom were being monitored and recorded, but Colonel Sherhold seemed to want more, so, under the guise of furnace repair and ventilation improvement, a listening vent was cut through the floor of my attic—and the ceiling of Rachael’s bedroom—so that I could hear better. Just what I needed—more squeaking bed springs and gasping and moaning and giggling all night.

But it paid off. In March, I overheard a conversation that included a reference to “Trinity,” and when I reported that to Colonel Sherhold the next day he looked startled and then positively vexed.

“That’s the new code name for the testing project. Both tests, the site, everything. And it’s about two days old. What was the conversation about again?”

“Sir, it was similar to the others, about how Rachael should quiz her guys about the project. Before it was references to what’s going out in the desert, and now she’s to use the word ‘Trinity’ when she thinks it might help.”

“As I suggested, I heard about it a couple of days ago, and I was planning to keep it to myself to see if it came out in other ways. But I didn’t think it would come out this fast and from this source. This is extremely disturbing.”

“He, the man who’s speaking German with Rachael, I mean, he’s being watched, though, isn’t he, sir?”

“He is, but we haven’t found anything else that’s suspicious about him, besides these conversations in German. His name is Robert Schmidt, son of a Carrizozo banker named Johann Schmidt. Robert, who’s a second-generation New Mexico native, works as assistant district attorney in the county offices here in Socorro and has ever since he got his law degree from the university in Albuquerque. He’s married and has four children all under age twelve. His wife is a local woman whose maiden name is Rosella Garza. He’s a pillar of the community who happens to like to get some on the side, not an uncommon proclivity, given how well Effie’s does. That’s it.”

As I was contemplating how that last bit implied that the Colonel was having Effie's watched, too, Steve spoke up. "He heard the name 'Trinity' from someone, sir. Attorneys have all sorts of private conversations in their offices, which are nearly impossible to monitor, of course, but they have conversations elsewhere, too. Have our folks, the ones who are watching him, seen him talking with unidentified people?"

"That's the problem. They haven't. And we can't reasonably monitor everyone who comes and goes from the county courthouse, where his office is. Jennings, I haven't liked some of your ideas in the past, but so far they've turned out well. So if you have suggestions, I'd like to hear them."

"With respect, sir, this is wartime and anything that prolongs the war is going to cost American lives. And, as far as that goes, put the outcome at risk. If we have a new weapon, one that needs testing but that could end the war, *anything* that impedes that testing is going to cost American lives and put the outcome at risk. Seems to me, sir, that whoever does that impeding is committing treason. I say we pull this guy in and ask him where he heard about 'Trinity,' who his contacts are, both up and down the line, sir. And if he doesn't cooperate, sir, we lean on him as hard as necessary." Steve's jaw was set, so I knew he wasn't going to back down unless directly ordered to.

"Hmm. You know, Jennings, I've been in the Army a long time, West Point, First Infantry, now CIC. And I have to say that I don't ever recall, among all the men who've served under me, having had a Master Sergeant who's as much of a hard-ass as you are. Oh, for the most part *all* Master Sergeants are hard-asses. But you take the cake. And, I have to say, I'm beginning to think that I'm quite proud to have you in my command.

"But enough of this girly talk.

"The down side of pulling Robert Schmidt in is that we'll lose the thread we're trying to follow with him—who he reports to and so on. What about that?"

"There's no indication it's Rachael, the girl at Effie's, sir. And if he's not talking to anyone else or using dead-drops or any such spy tricks, then it's who he's talking to in his office, sir. Isn't there some way we can find out who his appointments are with? Look at his appointment book? Ask his secretary if he has the same casual, drop-in visitor every week or something?"

"Jennings, the orders I have for running this office are long and complicated, and they include an entire section about maintaining cordial community relations. Can you imagine maintaining cordial community relations with a district attorney whom we're accusing of treason?"

"Sir, Schmidt is not the district attorney, he's one of the assistants. And surely the DA himself would like to be informed about a German spy in his office. Sir."

"Mmm. Point taken, Jennings. I'll have a conversation about this with the head of security out at the Trinity site and see what he thinks. Dismissed, gentlemen."

On the short walk back to our office, I asked, "So, are you going to be in a bad mood now? Should I skeedaddle? Or what?"

He heaved a big sigh. "See, what happens when you start dealing with a new CO is that you have to get used to him. And, to be fair, assuming he's fair, he has to get used to you. The Colonel and I, well, we're in the getting used-to period. He chews me out, but he also grabs onto my ideas and, maybe after some argument, takes my advice.

"And if I know the guy out at the Trinity site at all, and, here's a secret, I know him pretty well from past assignments, tomorrow at this time, we'll be in a little room having a very interesting conversation with Mr. Robert Schmidt, Assistant District Attorney, Socorro County, New Mexico, USA. And the first question I want to ask that son-of-a-bitch is: Mr. Schmidt, whatever made you, a second-generation New

Mexico native whose family has done quite well here in the USA, become a traitor to your country in time of war?”

\* \* \*

Turned out, it wasn't the next day, but two days later. And I got to hear Steve ask that very question of a civilian dressed in a business suit, a middle-aged guy who had initially been full of bluster and defiance, but was at that time sitting uncomfortably in a straight-backed chair in a tiny, stifling room in the Army building, a windowless room with a sturdy lock on the door.

It wasn't exactly Steve's first question—there had been a series of backs-and-forths associated with our forcibly bringing in Mr. Schmidt for the conversation, during which he asserted various rights and privileges associated with being a US Citizen, to no avail.

But it was the question Steve had mentioned to me that really got Schmidt's attention. Maybe it was the word “traitor.” Or maybe it was when Steve pushed the “Play” button on the wire recorder and Mr. Schmidt heard his own voice, speaking German, discussing how Rachael should subvert Trinity site employees.

His defiance and bluster vanished like a balloon that's been stuck with a hat pin—only a little, wrinkled husk remained.

I think that perhaps one of Steve's most effective tactics was walking out of that little room, and taking me with him, after he played that recording, to give Schmidt some time to think. We went out for coffee and a doughnut—even though the Socorro doughnuts weren't nearly as good as Mr. Apodaca's over in Carrizozo.

After a relaxing break, perhaps forty-five minutes, we returned to Mr. Schmidt's little room to see how our guest was faring. As I recall, “poorly” is an appropriate description, despite the return of some of his earlier bluster and defiance. But before he could say anything, Steve held up a hand to stop him and launched into a speech.

“Now, Mr. Schmidt. As a prosecutor, I'm sure you know the law in cases involving treason in wartime and the potential penalties. And I'm also sure that you can guess how the publicity associated with being the defendant in such a case would be hugely embarrassing and damaging, especially to a prominent member of a small community and his family. And, of course, in your case this would be in addition to the embarrassment of a public discussion of just where that recording was made and with whom. The good news here, if there is any, is that I'm just a CIC investigator who has no particular connections to the Judge Advocate General Corps or to the US Attorney's office. So you have an opportunity, quite possibly, to avoid dealing with those sharks. The way you can do that is to cooperate with me by answering my questions. In addition to wondering how you managed to get mixed up in this, I'll want to know with whom you're dealing, in both directions—who you report to, and who reports to you, and about what. Clear?”

Schmidt drummed his fingers on the table for a minute and then cleared his throat. “Ahem. Can I ask how the war is going? Is the information in the papers accurate?”

Steve looked puzzled. “I don't see how that bears on my interests here.”

“Indulge me, please.”

“Well, as far as I know, the news reports are reasonably accurate, although a few days out of date, I suppose. I think it's fair to assume that Germany will surrender within a month or two, three at the most. Can't really say about Japan, though.”

Schmidt kept drumming his fingers on the table and stared off into space. “I guess that means they’re out of danger. If it’s that close, then the authorities over there will be busy with all sorts of other things.”

He let out a big sigh. “Sergeant, the answer to your question, about how I got mixed up in this, is, in a nutshell, that I’m being blackmailed. There’s a long story behind that, however.”

“Will here and I have all day. Oh. This is Will White, CIC Special Agent, and I’m Master Sergeant Stephen Jennings, CIC. Army Counter Intelligence has the job of keeping enemy spies out of the Army’s business around these parts, business that we have evidence that you’re meddling in.”

Schmidt nodded. “Let’s see if I can stick to the high points. My grandparents, that is, my father’s parents, immigrated from Germany, along with a group of other Germans from their district, just after the War Between the States back in the 1860s, landing, like so many others, in New York. They all traveled west together, pooled their funds—and they seem to have had plenty—and, after a couple of false starts, bought land around what’s now Roswell. My father was born over there. Eventually, my grandfather, who was a hard worker and crafty businessman, bought out all his compatriots and became something of a land baron in the community. My father, on the other hand, had no taste for hard work, but he did learn business, so when he inherited everything, he sold it off and decided to open a bank, but over this way in the new railroad town of Carrizozo. He and his bank are still at it today. I was born in Carrizozo.

“That’s just background. Here’s the main point. Before I went off to college, my parents, who had taught me German from the start, probably at the insistence of my grandfather, decided to send me on a trip to Europe, to visit Germany and the family we have back there. Well, it was toward the end of the roaring twenties, and, a young man by myself, I did some serious roaring of my own. One result of that, as I found out some months after I got home, was a set of twin girls. Their mother is now a respectable matron in the city where I met her at a beer hall, Munich, and the girls are probably in Hitler Youth or some such travesty. Just so you won’t think too badly of me, I’ll mention that I’ve been sending Gretchen money ever since she first sent me a picture of the girls. *And*, if you’re as suspicious an investigator as I am a prosecutor, I’ll mention that the picture she sent shows twins who are spitting images of pictures of me at the same age or so.

“Anyway, a couple of years ago, I was contacted by someone who turned out to be my worst nightmare. To make a long story short, he told me that, unless I cooperated with him, the *Gestapo* would put the girls, along with Gretchen, into a concentration camp, where they’d all undoubtedly become playthings for the guards. I’d heard just enough about the *Gestapo* to know that they’re no joke, so I really didn’t have much choice. But if the war’s about over, there’s probably not time enough for information to get back there before things change, and I can come clean.”

He pulled a handkerchief from an inside pocket and mopped his forehead, which had started to glisten.

Steve had been taking careful notes. “I’m betting this nightmare person of yours started you out easy and gradually asked for information of greater and greater sensitivity, right?”

“Exactly. Only recently has he become interested in the activity southeast of here, what seems to be called ‘Trinity’ now. I think his interest in all that started about late last summer.”

“A couple of loose ends. Does your wife, Rosella, know about your German family, I mean the girls and Gretchen?”

“I told her about them even before we were married. I think it made her trust me more.”

“And does she know about your visits to Effie’s?”

“She knows about them, too, because I’ve told her about the blackmailing. And about Rachael, although she’s a little suspicious that I’ll be tempted.”

Based on the night-time noises I’d heard coming from the room below my attic bedroom, it seemed clear to me that he’d succumbed to that temptation. I began wondering what other parts of his story weren’t completely accurate. But, then, he hadn’t actually denied succumbing.

“One thing we do in CIC, Mr. Schmidt, is to make lemonade out of lemons at every opportunity. In this case, that means to persuade you to help us by providing us with information and, indeed, gathering new information. In other words, by turning you into what’s called a ‘double agent.’ You keep on with what you’re doing, but you tell us everything, and we feed you false information for you to pass to whoever you’re reporting to now. By helping us you can make things easier on yourself.

“I suppose that we’re not that different from your nightmare person, in a way. It’s just that instead of threatening the life of your girls and of Gretchen, we’re threatening *your* life. Treason in wartime is, as I’m sure you know, a capital offense.

“That’s been on my mind, yes.”

“We can start by having you tell me who you’re reporting to and who this nightmare person is. Or was.”

\* \* \*

It was easy for me to persuade Steve that I really didn’t need to be part of Schmidt’s full interrogation—the remainder of that day was enough for me. The question was, what would I do with myself in the meantime?

My first suggestion was that the Army recruiting center building over in Carrizozo could use an inspection, to make sure it hadn’t burned down, or something. Steve’s reaction, a forehead slap of embarrassment that he’d forgotten all about that place, being so busy and all, solidified my argument.

Just in case I might need it, I packed an overnight bag that included plenty of cash, and the next morning I set out for points east. In addition to checking on the building, I planned to finish up the scouting trip that had started on Pepper the rental horse but had been so rudely interrupted by the effects of Mrs. Gomez’ chile. It all seemed a long time ago, especially the idea that had motivated the scouting trip. But if Steve was going to keep forgetting about all those gold artifacts, I thought, there needed to be a backup plan. And maybe that old idea of mine would work.

I didn’t get an especially early start, and I didn’t hurry once on the road. It was just too nice a day not to enjoy it. The highway down the river was alive with birds and the insects they were after all the way to San Antonio. It was so beautiful that I stopped in a couple of places to explore the river bank. Once eastward up onto the desert and across to Carrizozo, I felt right at home, I’d made the trip so many times.

A quick inspection of the Army’s old building showed that it was in fine shape, with no hints of disturbance. Across the street, Mr. Apodaca was offering an interesting new dish, for me, as his lunch special, pork *tamales* in a red chile sauce, but I decided, given I was going to be sitting on that motorcycle seat for several more hours, to go easy on my insides.

If the morning was familiar, the afternoon was a new adventure. I’d spent a good bit of time the evening before studying the regional scale maps I had, and I’d decided to make a run all the way over to Capitan, a little town on the main highway to the east of Carrizozo. From there, I would head south to a place called Angus, then back northwest, toward the hamlet of Nogal. Except, before Nogal, I planned to

turn southwest up Nogal Canyon. If the map I had of that locale was correct, I would be looking for a place about six miles up the canyon, about a half-mile before the road curved to the west.

I missed it the first time and, after I realized that I was heading almost due west, had to turn back. I wound up creeping along so I could watch the hillside across the creek carefully—at least there was no traffic on that dirt back road. But the map was correct, there it was, an abandoned mine-shaft with a crude but effective, and locked, cover over the entrance. Several “No Trespassing” signs emphasized the owners’ wish for privacy there.

The owners, though, were the Lilies, and they weren’t around, nor was anyone else. Still, I maneuvered the Indian off the road and behind some bushes so I could explore less obviously.

The creek was flowing, but not especially full—what snowpack there was hadn’t begun to melt into its spring runoff yet. Across the creek, I found the remains of an old path, what now looked like a seldom-used animal trail, up to the mine entrance, and Steve’s lock-pick set made short work of the lock there. I’d been worried that it might have rusted solid, but it yielded after a bit of vigorous encouragement.

This time, I didn’t care if the hinges squeaked, but I did care if I was seen. So I opened the cover just enough for me to slip inside and let it shut behind me. Using the flashlight, I found myself inside a long, littered tunnel that sloped down into the mountainside. It was much more rough, and, of course, not used at all, compared to the tunnels in the Labyrinth, but it felt familiar to me, somehow.

I worked my way downward and, after forty yards or so, found just what I needed, a side room, this one with an entrance that wasn’t visible from the mine entrance behind me because of a rock outcropping. It would be perfect, I thought—the right size, hard to spot, yet pretty close to the main entrance. Some cleaning up would be needed, as the litter of rocks up to about melon-sized would make for hazardous walking. But all the rocks would come in handy when it came time to close the room’s entrance off.

Back outside, I locked the main entrance cover again and made a mental note to see if I could find a newer used padlock with which to replace it. Having a key would make the whole business I had planned much simpler.

On my way back northeast and then west to Carrizozo, I watched the Indian’s odometer carefully to keep track of the miles. The mine entrance was just under six miles from intersection with the highway, right at the south end of the hamlet of Nogal. From there, it was another twelve miles or so to Carrizozo; the entire trip took me a half hour.

Then it was just a question of how much weight the Indian’s sidecar could handle. Steve and I had managed four hundred pounds a trip when we were lugging all the gold out of the Labyrinth. Maybe, I thought, the Indian could do that, too.

Cruising back to Socorro on the main highway, I mustered various arguments in favor of moving the gold as soon as possible. After all, if Steve ever remembered to get someone from Treasury to come look at it, they could look at it in the mine almost as easily as in the Army building. And surely it would be more secure in the mine. Further, if I didn’t have to do it all by myself, Steve might be able to weasel some kind of truck—any kind, it wouldn’t have to be that G535 monster—from the motor pool. The trouble was that he had so many other things on his mind at that point.

I knew it wasn’t really my problem, but, even then, I felt a sense of responsibility for it. I’d been the one to find it and tell him about it, after all.

I checked in at the Socorro Army building when I returned, to find Steve in our cubby hole in his usual paperwork mode.

“I’m back and everything’s fine over in Carrizozo. Mr. Apodaca says hello.”

“Y’know, I miss his cooking. And everything’s fine here, too. More than fine, actually. We’ve got a wealth of information from Robert Schmidt. He seems eager to redeem himself, and he’s chock full of interesting insights into the Germans’ intelligence network, and not just out here in the sticks.”

“Did he give up his next up the chain?”

“Yeah, but it’s someone we’ve never heard of, a guy in Albuquerque. He makes rounds every couple of weeks, here and at several other stops that we’re checking out. And Schmidt also has—or had, because we’ll probably shut them down—some underlings who are supposed to do what Rachael’s supposedly doing, quizzing people who work on Trinity for what they know.”

“Well, that sounds like success, then.” I gave him a salute of respect.

“I think so. And there’s another interesting thing, one that I wasn’t too happy to hear about. Apparently, there’s a document in that Labyrinth we need to go fetch. It’s in that restricted library you’ve told me about, I guess.”

“Really? What could that be?”

“It seems that the German intelligence establishment has been working on contingencies in case Germany wound up invading the United States. They, I mean the *Abwehr*, as they’re called, they started a process here in the US of setting up organizations of sympathizers, groups who meet in secret and plan how they can help the German invasion, if it ever happens. Turns out that the *Abwehr* has had some success in various places scattered around the country. And, the thing is, each organization needs to know there are others just like it and that it’s not alone, and, critically, they need to know how to contact each other. So, the *Abwehr* made up a little address book. Needless to say, it’s as secret as secret can be for them, and each organization keeps theirs in the safest place they have.”

“So...it sounds like you’re saying...” I was surprised but, then, maybe not, when I heard him say it.

“Right. According to Schmidt, the Lilies are one of those groups.”

\* \* \*

Not only, it turned out, were the Lilies one of those groups, they were the central bank for all of the groups in the country. Apparently, that cash we’d made off with was the property of the pro-German underground in America, and the gold, of which Schmidt had heard but a rumor, was their reserve.

That news made both Steve and me feel better about having stolen it all from the Labyrinth—he began saying “liberated” rather than “stole.”

But he was obviously not happy about the need for another trip in there to find that address book. After stalling around for a day or two, though, he finally ran out of excuses.

The trouble was, we didn’t know exactly what we were looking for. Schmidt had not seen the address book, so he couldn’t describe it, and I recalled that the restricted library housed a huge number of a wide variety of books. To look at each one might take days, and the more time we spent inside that place, the riskier it would be.

Steve was philosophical about it, though. “At least we can use the lights in there, and that’ll make it feel like a real room instead of such a confined space. We’ll take some tape to seal the door.”

It took us two tries.

For the first one, we put together gear for two nights and the day between in the Labyrinth, rode the Indian out to the end of the southeast trail, hiked up and over the ridge to the northeast trail and down, and discovered that someone had locked that emergency escape door over the northeast portal. From the inside. On reflection, we decided that it wasn't surprising that they were taking security more seriously, after Big Bertha's adventure with us when we took down the antenna.

Without a backup plan, we turned around, hiked out, and headed back to Socorro on the Indian. For me, if not for Steve, that was a lot of hiking in one night, and I slept most of the day.

The next night, we reassembled our gear and added to it two hundred feet of climbing rope. Steve was determined to get in there, and he decided that rappelling down to the window of my aerie might do the trick. I warned him about the steep pitch of that escarpment and its height, but he shrugged it off.

"We can tie off an end of the rope to a sturdy tree up top, and descending will be trivial. Getting back up will take a bit of muscle, but I'm sure you're up to it. And I've done this a lot, starting with basic training. You told me at one point that you'd closed the grating over that window but you didn't lock it. So it's probably still not locked."

And Plan B worked. I was nervous about the descent, but he showed me how, using what seemed to be a foolproof clamp and a climbing harness to sit in. Finding the window involved a little trial-and-error, but the map turned out to be quite accurate, all-in-all.

It must have been about midnight by the time we managed to climb inside my aerie. Steve looked around and nodded approval, but then he wasn't so happy when he saw the cramped tunnel out of there into the main Labyrinth. I discovered I'd grown a bit since I'd last used it, so it was awkward to get through. Steve, still bigger than me, had to work hard at it, but he finally made it through with considerable wriggling and squirming.

Then it was a matter of sneaking down to the library and sealing the door behind us. The room, though relatively small, had enough air for us to last quite a while.

It was boring, looking through all those books, but at the same time fascinating in a morbid sort of way. I'd picked through them previously, but at that point I was looking for interesting things to read for information about the Lilies and especially their Colony and its Labyrinth. Most of the books I was able to skip over with but a glance. This time, though, they all needed a close look, as it didn't seem likely that there would be a title on the spine like *The Nazi Underground in North America: Names and Addresses*.

We tried various strategies by looking for small books, address-book-sized books that would fit in a pocket easily, looking first at titles in the letters of the alphabet that seemed like a priority, looking for relatively thin, pamphlet-type books. The idea to look at thin books evolved when we discussed how many addresses, meaning how many of those underground groups, there might be. Even if there were hundreds, Steve suggested, it wouldn't take many pages to list them all.

Finally, though, we just had to start looking at the books one-by-one, riffling through each in case there were extra pages inside one. That, after all, would be the most effective way to hide the address list—inside another book whose name only the top leadership of the Lilies knew.

All the while, we didn't really know that what we were looking for was actually in that library, so the hours dragged by as we became increasingly frustrated.

After twelve hours or so of futility, Steve decided we needed a break, so, despite the time—it was a bit after noon—we turned off the lights, removed the tape sealing the door, and peeked outside. It was as dark as ever out there, and we didn't hear any noises, so we crept back up to my aerie. This time, as he

wriggled through the tight part of the tunnel, Steve moved some of the offending rocks out of his way to make his passage a little easier.

Even though I'd come to like my little aerie with its view out over the *Jornada*, it never seemed so welcoming as it did that day. There was a nice breeze coming in the window, and, outside, the sun was beginning to warm up the west-facing escarpment.

And our climbing rope was patiently hanging there, outside the window, waiting for its chance to assist us up. I had my fingers crossed that it would still be there when we were ready for it. A climb up to the top without that rope wasn't something I wanted to attempt.

After a nap, we ate, drank, and, as much as I hated to do it, relieved ourselves in a corner. I showed Steve my cache of possessions from the time I'd lived in there, and he complimented me on my resourcefulness.

But eventually, we needed to get at it again. So we made our way back into the darkness and down to the library. It seemed to have aired out a little, at least, so it didn't seem so stuffy when we sealed ourselves inside it again.

Then it was back to leafing through every single volume in there. The place was organized alphabetically, so, previously, we'd started at opposite ends, each working his way toward the middle. And, after several more hours, Steve finally found what we were looking for in the "L"s—"L" for "Ledger." The list of addresses was stuck into the banking ledger the Lilies kept. As they say, hindsight is twenty-twenty, and, after we found the list, that seemed like the logical place for it to be.

Of the two of us, I had the emptier pockets, so after tearing out a large number of pages from the ledger, Steve folded them up with the list and handed it all to me for safe-keeping. We doused the light, unsealed the door again, and headed back toward the aerie. Flushed with success, we crept silently through the dark toward our route out of there.

But about half-way, a light flashed on us from behind. Steve, in one of those stage-whispers, told me to GO, and I didn't hesitate. Then we heard shouts and at least two voices yelling "Stop!" All we could do was to take off at a run, Steve, in his unfamiliarity with the Labyrinth, trying desperately to keep up with me.

\* \* \*

## Twelve

They had lights, but we had adrenalin. Despite Steve's inability to run full out like I could, we held our own as we dashed for the aerie, and, as we pounded up that long spiral tunnel toward it, we probably gained on our pursuers.

At the narrow, low spot in the tunnel, I dove right through, practically without touching rock. Steve, however, was grunting and straining his way through as I turned back to look at him in the remaining light filtering in through the window.

"Go! Get out there and up that rope as fast as you can! I'll be right behind you."

I hated to leave him, but it occurred to me that perhaps he could climb faster than I, and I didn't want to hold him up. So out the window and up the rope, like a monkey, I went. When I reached the top,

I lay on the ground to look down at the rope trailing down the escarpment. My heart leapt when I saw him come out the window—he'd made it through that narrow place!

But, just as he turned with the rope in his hands to start climbing, there was an explosion inside the aerie, a partly muffled boom that echoed for a few seconds. Instead of climbing, Steve let out an "Ooof!" and clutched his chest.

And the rope slipped from his other hand as he toppled backward into space.

It was getting into dusk out there, but I could still see quite a way down that escarpment. Just like the experimental rocks I'd dropped so long ago, Steve's body didn't fall down; rather, it fell and bounced and bounced and fell until it was swallowed by the darkness below.

About the time I couldn't see the body any more, a hand reached out the window and grabbed the rope. I was undoubtedly in some sort of shock, but I did have the presence of mind to give the rope a hard jerk up and sideways, then to pull it up. The jerk made the hand let go, and, with the rope on top of the ridge where I was lying, I doubted that anyone would be following me up that way. But because other ways seemed possible, I bolted down the southeastern trail toward the Indian without looking back.

By the time I was riding the thing down that two-track road across the desert, I was probably getting dehydrated due to all the water loss from my tears.

Once at the highway, I wasn't sure what I wanted to do. Part of me wanted to turn west, toward Socorro and the comfort of what I'd come to think of home at Effie's. Another part of me wanted to turn right, to head out on the road and just keep going, to find someplace new and start over.

But then I remembered the folded-up list I had in my pocket. That, I realized, needed to get to the CIC office in Socorro as soon as possible—it would be a waste of Steve's entire existence if it didn't.

And then there was the revenge factor.

So, at the highway, I headed west for home. I decided I'd turn in, get a good night's sleep, if I could, then clean up and meet with Colonel Sherhold in the morning to deliver the list and report on Steve's death.

For the hour-plus back to Socorro, I second-guessed myself mercilessly, thinking up all sorts of ways I could have prevented what had happened. I was the one who knew the Labyrinth, so I should have led us up to the aerie by another route, a route that would have lost whoever was chasing us. I should have pulled Steve through that narrow place to get him onto the rope sooner, so that bullet through the window wouldn't have hit him. Looking back at it, I'm impressed at all the ways I managed to beat myself up during that ride across the *Jornada*.

When I finally got home, it was still early enough that Effie's was jumping, but I was in no mood to join in the fun. I knew, however, that I couldn't just sneak up to my room and hide—Effie needed to be told. So I got cleaned up a bit and went into the parlor, where she was greeting customers from behind that stand-up desk of hers. I'd thought I would get her away from there to somewhere more private, sit her down, and explain things. But she took one look at me and knew something was terribly wrong, so she reversed the roles—she sat me down in her room and asked.

I managed to tell her through a new round of tears, and we held each other until we were both cried out. I'd lost my best friend, ever, and she'd lost someone who she was hoping to spend the rest of her life with. As the news filtered to the girls via their incredibly efficient rumor mill, they came by to console the both of us and wound up sharing our grief—I just hope that Steve knew, somehow, how much all those fine people loved him.

I managed to get to sleep that night, although it's still something of a mystery to me—I suppose I was just exhausted, both physically and emotionally—but I did. And the next morning, I spent a good two minutes feeling rested and ready for the day before I remembered what had happened. Then I got mad.

My first order of business after breakfast was to report to Colonel Sherhold and get that list to him. It took me what I thought was an absurdly long time to get in to see him, so I wasn't as timid as usual.

“Colonel, Special Agent White reporting, sir. I need to tell you about our operation, sir.”

“Successful, I hope? Where's Master Sergeant Jennings?”

“Here's the list of Nazi underground groups, sir. Also, there are pages from their accounts book, sir. I'm afraid that Master Sergeant Jennings didn't make it, sir.” Even at the time, I was surprised that I was able to keep my voice steady.

He, of course, wanted details, so I went over the events as thoroughly as I could remember them, twice. Then he asked enough questions that I essentially told him everything a third time.

The first action he took was to make a phone call that, as best as I could tell from hearing only one side of it, involved getting the Trinity MPs to drive over to the base of the escarpment and retrieve Steve's body. There also seemed to be a discussion of whether to clean out the Labyrinth by force. They couldn't seem to agree on whether aerial bombing or a ground invasion would be more appropriate and effective, though.

Colonel Sherhold mentioned in there somewhere that he was going to recommend both Steve and me for Bronze Stars, maybe Silver, Steve's posthumously, naturally. At least, I thought, the Army understands the importance of our operation and how dangerous it was.

I think to give me something to do, to keep me occupied and my mind on Army business, the Colonel assigned me to write up the report I'd given him verbally and to make sure to include whatever new information I thought of. Steve had always done his reports on the typewriter on his desk, so I decided I'd do mine that way as well. Because all I'd done was to watch him at it, though, I really didn't know what I was doing. Perhaps that was for the better, as I'm sure it took me much longer to complete that report than it would have otherwise. At least it gave me some practice on the thing.

Because I was learning to type as I wrote it, the report took me several days to finish, and when I met with Colonel Sherhold to give it to him, he informed me that Steve's body had been found by the Trinity MPs and given a burial at Trinity headquarters that included full military honors. And he once again expressed his condolences, which I couldn't help but appreciate. It helped me close that chapter of my life.

Then, however, the Army seemed to forget about me.

\* \* \*

At that point I'd been working with, or maybe for, Steve for long enough that he'd put through the paperwork for me to be a real Army person, albeit with no rank other than “Special Agent,” and to get paid and so on. When I say that the Army forgot about me, it wasn't with respect to all that bureaucratic stuff. Instead it was the day-to-day stuff in Socorro. I came into the office each day, that same little office that Steve and I had shared, and took care of what paperwork I could, scribbling an illegible signature when one was called for. And, because I heard about them from others there, I attended the all-hands meetings that Colonel Sherhold called now and then to fill us in about significant developments. The first one of those, the one where he told everyone about Steve's death and made me stand to accept

congratulations for having completed the mission anyway, was the only one at which anyone paid attention to me. Otherwise, I was almost invisible.

It's not as if I didn't have anything to think about. The cash and especially the gold preyed on my thoughts daily. It was about mid-April when I finally decided to do something.

I'd been giving serious consideration to moving the gold by using the Indian, even though it would take a large number of trips. Eventually, though, a light-bulb turned on in my head, and I realized that all I had to do was to purchase a truck—maybe not a six-ton truck like that G535, but one that would allow me to cut the number of trips down.

Anyone who knows anything about that time, though, knows that “all I had to do” is a phrase that, when applied to buying a vehicle, was so naïve as to be foolish. By early 1945, cars for sale were becoming like hen's teeth, only less plentiful. On the other hand, it wasn't clear that I needed actually to *own* a truck. Just like I'd hired Pepper for a day, maybe, I thought, I could rent a truck from someone, for, say, a week or ten days.

I certainly had plenty of money. And, as it happened, I had a typewriter and access to official US Army stationery. Plus, I had a CIC ID card that put me in a category of people who needed to work undercover at times. I finally settled on a scheme that involved an incentive for the vehicle's owner: I'd use my Army connection to purchase new tires for the truck and offer the owner a ridiculous amount of money to use it for two weeks. The truck would go back to the owner with the new tires, and he'd be a happy camper.

It took some doing, but I worked it out. Although none was new, there were plenty of trucks in town to choose from. I walked around until I found one that looked to be in good shape but was resting on two flat tires. A closer inspection revealed that the tires were far worse than merely tread-bare; there were spots where the inner-tubes were showing through. So I simply told the owner that I needed a truck for a special Army mission and how he'd benefit. He jumped at the opportunity for new tires—especially the heavy-duty Army tires I mentioned to him—and some cash.

The motor pool had plenty of those heavy-duty tires, but getting a set for that civilian truck required appropriate authorization. That didn't worry me, however—I had the stationery and the typewriter, after all. Those, plus one of my illegible signatures, gave them the cover they needed at the motor pool in case questions arose. Naturally, they tried to talk me into using one of their trucks, but my CIC ID card persuaded them that my special mission—which I had declared top secret by that point—required a civilian vehicle.

Then I went AWOL. I didn't know it was called that at the time, and I ended up getting away with it—I *did* come back, after a while—but that's what it was. I guess I could have argued that, because I stayed at the Army's shuttered office in Carrizozo and because I had orders that were orders, despite the illegible signature, I wasn't *truly* AWOL. But I never did. I just took the eventual tongue-lashing and hung my head. Colonel Sherhold went easy on me, I think, because he knew I was still upset about Steve.

I *did* let Effie know that I was going to be away, though, because I didn't want her to worry. And because it had forgotten about me, I knew the Army wouldn't worry, at least not too much.

Although I'd rented that guy's truck for two weeks, I didn't need it that long. Over in Carrizozo, I had time to visit everywhere that Steve Jennings had been, in order to let them know that he'd died in action, plus time to load up that truck I'd rented and cart all that gold over to the mine just off Nogal Canyon Road. The truck did fine with only three trips, because it was a tough piece of machinery. I, however, worked my butt off moving all that stuff again, twice. That, I decided, was the last time. So it's been there ever since, except for a couple of times early on that I took special pieces to pass to special

people as gifts. Last I heard, which was years ago, Effie still adores the solid-gold grizzly bear fetish I found for her.

Moving the artifacts from the building in Carrizozo into the truck, and then from the truck into the old mine, was exhausting physical work, but it was actually less difficult for me than all the visits I made in Carrizozo. Everyone I'd met in town, including Mr. Apodaca, banker Johann Schmidt, the hardware store guy, the Italian barber, and even the crotchety old livery owner, Mr. Levesque, had known Steve somehow, and they were all devastated by the news of his death. I suppose it helped them all a little when I told them about the pending Bronze, or maybe Silver, Star, but they were still saddened by the news.

With the Carrizozo building emptied, I felt better about what had been dumped on me in the way of responsibilities, and it was a much less stressful trip back to Socorro in that rented truck than the eastward drive had been. The truck's owner was overjoyed with his new tires, and, candidly, I was glad to give the thing back to him. It just wasn't the sort of road vehicle I'd become accustomed to after driving the Indian around.

And, back in Socorro, that was when I had to confront Colonel Sherhold about having been nowhere to be found. AWOL. He ranted and raved, and I stood there at what I thought of as "attention" and took it. But he made the mistake of asking what I might have to say for myself.

"Sir. Thank you for the opportunity to speak freely." I'd heard Steve use that phrase, so I was going to take advantage of it. "I was in Carrizozo, sir, providing information about his heroic death to those who knew him there, sir. Some of them were hard to track down, sir, so it took a few days. You should know, sir, that he'd established himself, while he was involved with the recruiting office there and more recently, as something of a community leader, and those folks needed to know about his death, especially because of its important service to his country. Civilians need to know about military heroes. I believe that you mentioned to me the importance to you of community relations. Sir."

He stared at me and blinked at least a dozen times. "I won't argue with that, Mr. White. But you need to understand that, as an employee of Army CIC, you are not authorized to wander off on activities of your own, no matter their, uh, worthiness. And this one was worthy, I'll grant you that. But you need specific orders from your superior officer, and in this case it's me, before you do things. Understand?"

"Yes, sir. Do you have new orders for me, sir?"

"I will. You need to stand by for them. Understood?"

"Yes, sir."

That, of course, meant that I was just being put on the shelf for some unspecified activity, unless the Army totally and completely forgot about me again. Which they did, for a while.

Still, there were some things I could accomplish.

The civilian from whom I'd rented the truck was most appreciative when it was returned to him in better condition than he'd provided it to me, as well as with a full tank of gas, so he gave me a suggestion about a local car mechanic who could return the Indian to its original specifications. I'd cleaned its magneto out, impressing Steve in the process, but, really, a good overall tune-up seemed like a good idea, and getting it washed and waxed was a nice touch on my part. And having that extra muffler removed was something I'd neglected. When I offered the mechanic cash, instead of an Army purchase order that could take months or even years to be paid, he jumped at the opportunity.

And, speaking of cash, there was still that pile of it in my bedroom, Effie's attic.

\* \* \*

I reckon that most people think of cash as something they'd like to have more of and something they know how to dispose of easily by buying things they want. And while that may be true for normal amounts of cash—whatever that means—it's just different for huge amounts, far more difficult.

The first thing I did was to count it, not bill-by-bill but rather using the amounts written on the outsides of the packages and my earlier estimate of how many bills there probably were per package. Including the packages that Steve and I had set aside for ourselves, for we'd been keeping them with the rest of it once we'd moved it out of the Coronado treasure room, I figured out that there was about five-and-a-half million dollars there—and, remember, this was a long time ago, so that'd be worth over *eighty million* in today's dollars.

Now, almost all of that cash was packed tightly into those approximately dictionary-sized bundles, sixty-five of them altogether, each package with four thousand or so bills in it. I knew I wasn't going to be able to just walk into a bank anywhere and put it all into an account, at least not without having to deal with more questions than I wanted to deal with.

The first time I had a free day, a day during which I could do anything without worrying about the AWOL business, I packed up a several of those bundles and rode over to Carrizozo. There, I looked up all of Steve's old friends, except the banker, Johann Schmidt, who was already swimming in money, and gave them bundles of cash in various large amounts under the guise of bequests from Steve's will. It was all a lie, of course, but it made everyone happy they'd been a friend of his. Naturally, many of them had questions, but I just played dumb.

That took care of five of those packages, leaving sixty more. This was about when I first realized the difficulty of dealing with such a large amount of cash.

My next step was to have a sit-down with Effie. She was, even three weeks later, still pretty broken up about Steve's death—I was, too, for that matter—so our conversation was an odd mixture of sadness, nostalgia, and business. What I wanted to do was to give each of her girls a big nest egg—Hannah, I'd decided, was going to get a double one—so that they could each find better lines of work and to give Effie about ten of those nest eggs. When she realized the implications—that her girls wouldn't need to work lying on their backs anymore and that she herself could retire—she expressed mixed feelings.

“Will, I appreciate what you want to do, but it worries me some. Not all of my girls are ready for such a big chunk of money. I'm afraid it'll just get them into trouble.”

“Well, first, it's not going to get *you* into trouble, is it?”

“No, I know just what I'm going to do. I'll close this place down, sell the building—and it will be easy to sell, I think—and move somewhere else where people don't know my past. Maybe Santa Fe. I visited up there once, and it's beautiful. I want to learn to paint. And some of the girls will do fine. But a couple of them aren't very worldly, except for what they do here. I'm afraid they'll just blow the money and end up where they are now, only some place that doesn't treat them so well.”

“Any ideas?” I scratched my head.

“I heard about something called a ‘trust fund’ one time, where a big chunk of money is managed by a bank or somebody and the earnings go to the owner of the trust fund. But they can't touch the money in the bank. So it goes to them little-by-little, steadily, over time. Keeps them on a budget.”

“I guess I could look into that for them.”

“Say, one of our steady customers here is a banker in town. Maybe I'll ask him about the idea. I may just set one up for myself.”

“Hmm. Maybe I should do that, too.”

We really didn't know enough about high finance to know what we were talking about, but, slowly, we converged on the idea of trust funds for everyone.

It was a little awkward when it came time actually to hand the money over to the bank, but it helped that I decided to set up one fund at a time, which meant that I had to deposit only one nest egg at a time. And I started out with the smaller ones and, gradually, built up to Effie's and mine. All this was before the present-day banking regulations about reporting big cash transactions, anyway, so that made it a lot easier than it would be today. And it sure didn't hurt that, as Effie had said, the banker we dealt with was a customer of hers. He certainly didn't want to make any waves, and he was delighted to have the new business. He even gave us better than usual rates of return.

Anyway, that was how I managed to get that pile of cash out of Effie's attic and into the banking system. My own trust fund has kept me comfortable ever since, although I've never shied away from interesting jobs that came my way. I lost track of Effie years ago—she's probably passed on by now—and the girls all disappeared soon after Effie's closed. I just hope that all those trust funds I set up for them have helped them out over the years.

As for Coronado's gold, well, as far as I know it's still in that old mineshaft over there in Nogal Canyon, east of Carrizozo. I haven't been back there since, oh, I guess the Korean War, and I don't think that anyone else has found it, either, in the past seventy-odd years. I'm pretty sure it would have made news if someone had.

So that's the story. It was a long time ago, but the details are burned into my memory.

What's that? The Lilies? I thought you were just interested in the story of the treasure. Coronado's gold. The Lilies' part in that was over a while ago.

Well, if you want to hear about what happened with them, you'll just have to listen some more. That thing still recording?

\* \* \*

Now, by the time I got all those trust funds set up, it had turned into early May in 1945. Every day there were rumors that the war in Europe was about to end. In the Pacific, though, it wasn't so positive. Our forces were well on their way to re-taking the Philippines, but everyone was worried about how bloody an invasion of Japan itself would be.

Like I said, the Army had mostly forgotten about me, but I heard from other people about important meetings and so on, so I made a point of attending.

Early in the first week of May, Colonel Sherhold told us two interesting, if unrelated, things. The first was that Hitler had committed suicide on April thirtieth. We cheered. The second was that there'd be the first of the Trinity test firings that week, on the fifth. But then a couple of days later he told us that the first test had been postponed to the seventh, a Saturday, and was to happen about an hour before dawn. Our orders were to tell anyone who asked afterward that it must have been thunder a long way from Socorro.

Turns out, I slept right through it. Effie's was still hopping in those days, although Effie herself was making plans to close down little by little, to fade away gracefully, I guess, and I'd been taking advantage of my fringe benefits late into Friday evening. A couple of people mentioned later that they'd heard far-off rumbling, though. From what I heard, the test went off without a hitch, and the early July schedule for the second test, the real thing, looked solid.

The real excitement that day, of course, was the signing of the first surrender agreement between the German high command and the Allies, in Reims, France. The news flashed through the state-side Army installations as fast as gossip spread among the girls at Effie's. By Saturday evening, everyone was celebrating in the streets. And the celebration went on for a second day with the news of a more formal surrender agreement signed in Berlin on Sunday.

But even though the Nazis surrendered, our anti-spy operation didn't let up. Robert Schmidt, at that point a devoted double agent by all accounts, was under close observation twenty-four hours a day, seven days a week—what you youngsters call “twenty-four / seven” now—and he was providing us with all sorts of useful information. Apparently the Japanese were paying the North American Nazis well for anything they could pass along, given the difficulty that people of Japanese extraction would have had being incognito in the general population.

Because Trinity didn't close down after that first test, interest in what was going on out at the site on the *Jornada* heightened, not only among members of the Nazi underground but among the newspapers and just about everyone else. That only made the Trinity security team clamp down on information, which put pressure on us, and it also led to all sorts of outrageous rumors. It seemed that the good citizens of central New Mexico were quite susceptible to stories of the most unlikely nature, not a few of which involved a variety of supernatural overtones.

Although I was mostly the long-forgotten Special Agent at CIC, Socorro, there were a few times that Colonel Sherhold remembered my existence and called me to a meeting of some kind. Most of those were related to the problem of what to do about the Lilies. I was by far the most knowledgeable person they had on that subject, so he and his staff used me as a resource in their discussions with the Trinity MP team.

As far as I could tell, the main problem was two-fold: the Trinity MP team just wasn't big enough to take down the Colony, given all the other things they were concerned with; and the Trinity MP team was not about to have any other unit trespassing on their special turf, which meant anywhere within about fifteen miles of ground zero at the Trinity site.

In that sense, the Trinity MP team had created their own unsolvable problem, but they still wanted to argue about it with us. So I sat in as part of a number of interminable discussions about what to do. In the process, I was read in on some of the details of what was going on out there, and it didn't take long for me to appreciate the difficulty of their dilemma.

The main issue was that the Lilies had a front-row seat. Ground zero was about five miles west of the escarpment down which Steve had plunged after being shot. And the two west-side portals were some fifteen hundred feet up. Anyone with a good telescope could have read the newspaper over the shoulder of ground-zero personnel.

But there was also the point of view, strongly expressed, of “So what?” The Lilies hadn't tried to rebuild their radio antenna, and CIC was monitoring all radio and shortwave frequencies thoroughly, so they couldn't communicate what they were seeing with anyone that way. And the spies on the ground were under control because of Robert Schmidt's cooperation with us, so if anyone attempted to pass information that way, we'd know.

Some went further, arguing that even if whatever the Lilies, or anyone else, might see at the Trinity site, it didn't matter who knew about it as long as there was no sabotage of activities there. It might even be the case, that argument went, that information leaked out in that way could provide a deterrent to further Japanese hostilities. Maybe they'd surrender!

I did my best just to listen and avoid expressing an opinion. I'm certain that no one would have listened to me anyway. I knew about the Lilies, sure, but I was a nobody in every other way.

While the discussion became more and more extended, and nothing happened in the meantime, activity in Socorro ramped up in connection, we all assumed, with a ramping up of activity at the Trinity site. We in CIC knew that it was all associated with the upcoming full-scale test, but nobody else was supposed to know about that. Still, even the civilians knew something big was up.

What all the discussion missed was just how paranoid, and crafty, the *Abwehr* had been in setting up the underground network in the US and how they didn't trust any single contact for their information-gathering efforts. Basically, they didn't trust Robert Schmidt not to turn, the *Gestapo* and concentration camp threats to his daughters and their mother notwithstanding. Put simply, they had a back-up plan.

And even though Germany had surrendered, the network and the information-gathering lived on. The Japanese were desperate for information and paid handsomely for the continuation of the old *Abwehr* infiltration.

We didn't stumble onto all that until a couple of weeks after the initial, massive, conventional explosives test. After plenty more ego-driven discussion about what to do about the Lilies and how everything, besides them, was under control.

My best friend Steve had said it on another occasion, when I'd overheard Effie's girl Rachael and who turned out to be Robert Schmidt having a conversation in German: I was like a CIC bloodhound. I surely can't think of another reason why I would have been the one to uncover the remaining connection for the espionage, even if it was accidental.

\* \* \*

## Thirteen

It was ten days after that first, conventional, explosives test, a Wednesday. The Army once again seemed to have no need for me, and I'd taken to walking the couple of miles from Effie's north to the Army building downtown without worrying too much about when I got to my office. The walking was good for me, I could tell, and no one seemed to care about the timing.

If I recall correctly, that morning I was contemplating which activity I was looking forward to more eagerly, the scheduled reminder briefing by our health and safety officer—who was merely a strutting non-com instead of a real officer—about various trivial aspects of safety and, his favorite subject, the health risks of taking up with “fallen women,” or the next episode of that ongoing squabble about what to do about the Lilies. Safety was just a bore, and I'd become burned out on what to do about the Lilies. But I found that health topic hilarious, given that I lived in a house full of such women, and no one there had any health problems. They were scrupulous about that. Maybe he'd start with the health thing, I thought, and I could sleep through the rest.

As I approached the downtown area, I heard from across the street a car horn honk-honk-honking, so, naturally, I looked up. It turned out not to be a car but rather a venerable, well-used farm truck. And even from across the street I could see that the tires had patches on the patches. I couldn't imagine what the inner-tubes looked like. And I couldn't see who was making all the noise, as the sunlight was reflecting off the windshield and the cab was in a dark shadow.

Imagine my surprise when out of the cab jumped a young woman, who proceeded to run across the street, dodging several cars that started their own honking, and up to me, finally throwing her arms around my neck while saying “Oh, William, William, I found you! William!”

She was wearing farm clothes—overalls covering a flannel shirt and sturdy boots—including a wide-brimmed, floppy hat, so I hadn't seen her face. But with her clutching me, I could smell her.

And she smelled like Clarisse.

When that hit me, my knees buckled, so I grabbed her to support myself, and we stood there in a mutual hug for at least a minute. When she pulled back to look at me, her eyes were all teary.

“Oh, I found you! I was so afraid I'd never see you again. And it's been so very long. But I found you!”

Now, I've said how we'd parted on much less than the best of terms, and, of course, I'd learned, since that parting, of the Lilies' perfidy. And I'd also had my share of experiences with various women—experienced women at that—since then, so I wasn't the naïve young boy who'd never seen a girl before.

But she smelled just right, like Clarisse. And then she kissed me, and the memory, the physical memory, of our nights so long ago of make-out sessions overwhelmed me. Hannah, whom I'd actually come to be quite fond of, evaporated from my consciousness.

Eventually, reality came back to me, however. She'd pulled the truck off to the side of the street, at least, but we were standing on the sidewalk in the sort of clinch that was just not seen in public in those days. So I offered a suggestion.

“Clarisse, I can't tell you how good it makes me feel to see you, and to hold you. But, look, let's go up the street to the plaza, where we can sit under a tree and talk, catch up, you know?”

She nodded happily, and we turned north, toward the plaza.

My brain's analytical abilities were returning quickly, and I realized that, in some sense, I was suddenly consorting with someone who classified as a Nazi spy, or at least her compatriots did. I needed to deal with that.

“Hey? I was on my way to my office, I've got this job now. I ought to call my boss and tell him I've been delayed, so he won't worry about where I am.” I thought of that because there was a pay telephone, a new amenity for the dusty town of Socorro in those days, on the corner. “Maybe you ought to park your truck more carefully while I make the call. The police here just love to give parking tickets for anything they can think of.”

The subterfuge worked. She ran off toward the truck, and I called Colonel Sherhold's number. “Colonel, sorry to interrupt whatever you're doing, sir. It's Will White, and I've got a bit of an urgent request here. I've met one of the Lilies I know on the street downtown. She and I are going to walk up to the plaza, sir, and talk. If you have someone who could follow her after we're through, well, sir, we might make some progress on what's going on. Did you know Lilies were coming into town, sir?”

“Jesus Christ! I didn't know that, White. I'll get someone out there to follow her, just give me a little time, say, fifteen minutes. I'll see you when you get here. Good work, White!”

I hung up the phone set just as Clarisse walked back across the street, this time without eliciting motorists' anger.

“He's fine if I'm a bit late, no problem.” I smiled but inwardly felt like a hypocrite, the first of many such feelings.

A couple of blocks north, we found ourselves a nice park bench under a tree on the little plaza. At that time of day, we were the only people there, for which I was glad. Around lunchtime, we'd have had to share our bench.

“So you have a job?” Her euphoria under control, she was now searching for something to talk about, I sensed.

“Yeah, it’s no big deal. Out here in the real world, you’ve got to have money to eat, and that means a job.” I tried to be casual, offhand. “But what’s been happening with you? It’s been, like you said, a long time.”

That seemed to embarrass her. “Oh, I guess I’ve been growing up more. I’ll be eighteen next month, you know. And, um, that also means that I’ve been doing a lot more thinking lately, thinking for myself.”

I wasn’t sure where she might be going, so I tried to remain noncommittal. “I guess that’s what people do. I know I have time to do a lot of thinking.”

“What I mean, William, is that I’ve given a lot of thought to the last conversation we had. Do you remember it?” Her look was pleading, as if she truly wanted me to remember so she wouldn’t have to repeat it.

“Sort of. We talked about the war, I think. It was a lot different back then, of course.”

“And I was talking nonsense, William. I’ve since learned more about everything, and I was talking nonsense. I’m so sorry. It’s bothered me ever since.”

That made me feel better about our having met again. “These days, it’s looking like it may be over soon. Anyway, what are you doing here in town? I didn’t think any of you, I mean, you or your sisters, were allowed to.”

“Supplies. I came in for supplies. That’s one of my tasks now. And, um, for some other business. But, listen, I’d like to stay and talk all day, but I have to get back. I’ll get in trouble if I’m too late. They expect me back around noon.”

“Supplies? Interesting. I thought you folks were self-sufficient. And supplies cost money.”

“Oh, we have lots of money. I get what I need for these monthly trips from the treasurer. She seems to have a whole box of it. Hmm. But I guess I don’t know where it comes from.”

“I’m sorry you have to go. I was hoping we could spend the day together.”

“Not this time, William, I’m sorry. But next month I could. You see, I came over yesterday and spent the night last night, at a rooming house that ... that we use. Over on the west side, north of the campus. Mrs. Hale’s. It’s run by, you know, by someone we trust. Next month, when I make my supply run, I could spend all day with you and then leave the next day in time to get back without creating suspicion. Could we do that?”

“Clarisse, I’d like that very much. I’ll figure out a day of fun things to do. We could meet here, at, oh, nine in the morning. Uh, four weeks from today?”

“Perfect!” She kissed me again, thoroughly, and jogged back south toward her truck.

I watched carefully but didn’t see anyone following her. Colonel Sherhold’s tail for her hadn’t shown up, apparently.

At least, I thought, I know when and where to meet her next month, so we ought to be able to get something arranged.

I also decided that I was going to need a new ID card that said: William White, Hypocrite First Class.

\* \* \*

I sat on that bench in the plaza until I saw a guy I recognized from one of Colonel Sherhold's meetings approach. He must have recognized me as well, and, because I was alone, I guess, he walked right up to me.

"Where is she?"

"Gone. For now. You didn't get here in time."

"Ah, crap. Sherhold is going to be furious."

"C'mon, let's walk over there together. I'll tell him what happened, and you'll be covered. She said she had to leave, and she's on her way back to their place in the mountains now. So you would have needed a car, and you would have found yourself almost all the way to Carrizozo before you knew it." I borrowed Steve's trick of a shoulder slap. "Besides, she's coming back next month. Four weeks from today. I'm meeting her here in the plaza at nine. In the morning. You can follow her then."

"At least there's that. Any new information?"

"When she comes into town, she stays overnight at a place on the west side, north of the campus, she said, a place called 'Mrs. Hale's.' We ought to check it out."

"Good deal. Maybe Sherhold won't pitch a fit. He's sure on edge these days."

"I'm thinking that it's only going to get worse, up until that test in July. Six weeks, or whatever, ugh."

Colonel Sherhold wasn't real happy, but he did see the bright side of having time to prepare for next month. He also assigned someone to do a thorough background check on Mrs. Hale's right away.

And I went back to being invisible again, as far as the Army was concerned.

But that lasted only for a couple of weeks. About the end of May, I was summoned to the Colonel's office.

"White, have a seat. I want to show you some very interesting material we've come across. It's the first concrete evidence that your Lilies are actually involved with the old *Abwehr* network."

The reference to "your Lilies" made me flinch. "Uh, you mean beyond shooting Steve ... I mean, Master Sergeant Jennings, and having that bank-book and list of groups in their possession? Sir?"

"Right, right, of course. What I'm talking about is real-time information gathering and transfer. Have a look at this."

He passed me a photograph, rather grainy, of something sitting on the desert floor, something I couldn't identify. It appeared to be a large cylinder sticking out of the ground with its top end rounded. It was four or five times as tall as the human standing next to it, and the whole thing was surrounded by a tower made of steel beams that was in turn four times the height of the cylinder.

"Uh ..."

"That was my reaction, White. Turns out that it's a picture of what the Trinity people call 'Jumbo,' a big steel container that they were going to use for the main test. I guess they're not, now, however, so it's just sitting out there at the site." He reached a hand toward me, and I gave him back the picture. "Now to get to the point. I got that picture from Robert Schmidt, who said he got it from one of his network contacts. And there was a message with it that he saw. The people in the network think this is what is going to be tested out there, that it's the bomb. Never mind that it's obviously too big to go into an airplane, it still scares the hell out of them. Further, from the angle and so on, the Trinity people say

that the picture must have been taken from a spot east of the site. And, because it's grainy, it's probably a blow-up of a section of a bigger picture taken with a very long lens. It looks as if your Lilies took it and passed it to someone in the network."

"First, sir, with respect, they're not 'my Lilies.' I know something about them, and I met one in town a couple of weeks back, but they're not mine by any stretch of the imagination." I shrugged. "And if it scares them, so much the better, I'd say, sir. Did Schmidt give you any information about this network contact he got the picture from, sir?"

"Turns out that it's a new guy, someone we didn't know about before."

"I wonder if he has any connection to that rooming house, Mrs. Hale's. If the Lilies are taking pictures and getting them to the network, that would be an obvious pathway. Sir."

"Our thoughts exactly, White. And we've now got this new guy under surveillance. Much more of this and we'll be watching everybody in town." He shook his head in disgust. "Anyway, I wanted to ask you about where this might have been taken from. In your report about Jen ... Master Sergeant Jennings, you talked about a window-sized 'portal' that you'd used for ingress and egress."

"Yes, sir, but there's also another portal on the west side of that ridge, farther south, one that, on the maps I've seen, looks as if it has better access from inside. Remember my comments in that report about the narrow spot in the tunnel where Sergeant Jennings almost got stuck, sir?"

"Where's this other portal?"

"About a half mile south of the one we used, sir, meaning a half-mile south, or so, of where the Trinity people found Sergeant Jennings' body, sir. I'm not sure how high up the escarpment wall it is, though."

"Hmm. I'll have to discuss this with the Trinity people first, but I'm thinking that maybe there is an artillery unit around here somewhere that could use some target practice. Thanks for the information, White.

"Second thing. There's this next meeting between you and the Lily girl. When is it, in a couple of weeks?"

"Yes, sir. Two weeks from, ah, yesterday. I'd planned to spend the day with her, a long date. Of course, what I'll really be doing is watching her. If she has appointments or anything like that, I'll be able to report on them, sir."

"And there will be others keeping tabs, too." He shot me a sly grin. "Hope that doesn't spoil your fun, White."

I grinned back. "I'll keep it in mind, sir. We may, uh, disappear from sight some, but I'll make sure that we don't try to give anyone the slip for real, sir."

"You do that. And I'll tell our watchers to cut you some slack."

"Thanks, sir."

"White, I know you've been at loose ends lately, but every time I need you, you come through like a champ. I'm glad to have you on my team. And if we handle this thing in a couple of weeks right, we may be able to roll up this part of the network we didn't know about before. Keep up the good work, White. Dismissed."

Well, I thought, at least I'm good for *something*.

\* \* \*

While waiting for Clarisse to return to town, one thing I had to do was to deal with Hannah. My relationship with her was complicated. As I've mentioned, I was quite fond of her, and she of me, too, I think. We'd spent enough time together that all of the other girls at Effie's had been leaving me to her, once their initial curiosity was satisfied. After Hannah's pantomime that first morning, there was no way they were going to let me slip through their fingers without at least a one-nighter. To tell the truth, those experiences were good for me as well—my curiosity about different shapes and sizes of girls also was satisfied, along with my teen-aged libido.

But Hannah was decidedly a working girl, so I couldn't think of her as "mine." On the other hand, feelings about such things aren't entirely rational, so I was always just a little jealous when she took one of the customers up to her room of an evening.

Similarly, I expect she'd begun to have some feelings of possessiveness about me, because after my reunion with Clarisse, she noticed the change in me, and she didn't seem altogether happy about it. I expect that some of the problem had to do with the fact that I was counting the days until Clarisse came back to town, and Hannah noticed my distraction.

Eventually, she asked me who this person was and whether we were going to Do It. Unfortunately, I didn't hear the capital letters correctly, and so naturally I asked her what it was that we might do that she was asking about. This earned me a look that informed me, in no uncertain terms, that I was the biggest nincompoop in the history of the world, if not of the entire universe. Then, to compound matters, when I figured it out I said something about how I didn't think Clarisse was that kind of girl. Big, big mistake.

But we managed to work things out. After all, she was still earning money on her back, the extra-generous trust I'd set up for her notwithstanding. She really couldn't be too jealous. Like I said, these sorts of feelings are never fully rational.

Finally, about mid-June, Clarisse turned up on her monthly trip for supplies for the Lilies. As we had agreed, we met in the town plaza, and I couldn't help but notice that she was dressed more attractively this time. Perhaps she'd seen enough examples provided by the women in Socorro to give her ideas about how to improve her wardrobe beyond the farm clothes she'd been wearing in May. My ego, naturally, assumed that she'd done it for me.

Although she was definitely dressed better, her greeting was considerably less enthusiastic this time. That was perhaps a good thing, as we were once again in public, and making a scene would not have been a wise idea.

"I've figured out a way we can spend most of the day together, William, but we won't have transportation. I need to leave the truck at a garage so it can be serviced." She looked more worried than such a simple statement would seem to warrant.

"The transportation is easy, because I have some." I smiled. "And I know you're used to calling me 'William,' but it seems so formal. Everyone I know calls me 'Will' now. I'd like it if you call me that."

"You mean, like Will Shakespeare?"

"Exactly. Tell you what. Let's get in your truck, and we can go pick up my ride. Then I'll follow you to the garage, and we can take off for the day. How about a picnic down by the river? It's green and cool with lots of birds. And, of course, the water."

"Sounds perfect. We need to talk."

I'd learned the hard way that "we need to talk" was often female code language that stood for "you're in trouble now, buster," but I tried not to worry. I was determined not to let anything spoil that day.

At first, she was surprised by and perhaps a little nervous about the Indian, but once she was tucked into the sidecar along with the lunch we assembled at the grocery store, she really started to enjoy herself. I was almost disappointed that we were going only the few miles to a place on the Rio Grande I remembered. But, I thought, we would have plenty of time for long rides in the future.

Our picnic spot was on a dry sand bar at the river's edge, one completely secluded by the riverside *bosque*, which, at that point was a dense thicket of willows set under a towering canopy of cottonwoods. We had our choice of sun or shade, and the down-river breeze kept the insects at bay. I'd borrowed one of the blankets I had at Effie's, and, with it spread on the sand, we had a perfect picnic site.

Once we got ourselves unpacked and organized, Clarisse sat down and patted the blanket beside her for me to sit as well.

"Now, uh, Will, I've got a little story to tell you. It's something I've been thinking about ever since last month when I found you in town."

Uh-oh, I thought, here it comes, whatever I'm in trouble about.

She heaved a deep sigh. "I've thought about this a lot and even rehearsed what I'd say. But now ... well, it's like I'm not sure where to begin. And some of it's going to be embarrassing. For me and maybe for you. So I need to work up to that part. I guess it starts, though, with the fact that I'm turning eighteen soon. Later this month, in fact."

"Is your birthday on July first? Like mine?"

"Huh? No, it's June twenty-fifth. Why?"

"Just wondering. See, all the boys have their birthdays on either July first or January first. I sort of figure that the Matrons did that to make things easy for themselves. But never mind. It's not important. Sorry, I didn't mean to interrupt."

"Huh. I never knew that. But I guess it fits with a lot of stuff I've heard about." She flipped her hair out of her eyes and took a breath. "Anyway, here's the thing. Lilies, and I'm one, like it or not, have their first babies when they're eighteen. That means we get impregnated pretty close to our eighteenth birthday, within a couple of weeks of it. That part has to do with fertility cycles. It's complicated."

At that point in my young life, I'd been living with a houseful of un-self-conscious women for quite some time, and I'd learned a lot about the mysteries of the female body and its cycles. So I just nodded as she continued.

"Now, the older Lilies don't just spring this on us younger ones like some big surprise. We learn all about it and even observe the procedure on older girls, so we know what it's all about in advance. I'll spare you the details, but it's like some kind of medical exam. All very clinical. And I'm scheduled for it next month, about four weeks from now, in fact."

I kept nodding. "I remember when you called me a 'seed-bearer'."

She looked surprised, and pleased. "Right! I never did find out if you really are, but that doesn't matter now. Now you'll understand, though, because what happens is that the impregnation procedure uses seed-bearer seed chosen by the council. They'll actually vote on whose baby I get to carry."

"I've learned a lot out here in the real world, Clarisse. And I can tell you that regular people manage it all quite differently. The Lilies have their own particular way for all this."

“I’ve figured that out, from reading and from, uh, watching the farm animals we have.” She grinned, trying, I think, to hide the embarrassment that was sneaking up on her. “And, so, well, see, I don’t want it to happen to me the Lilies’ way, all that clinical medical procedure stuff. I want it to happen the *real* way.”

By the time it all soaked into my muddled brain, she had arrived at her punch line. “And I don’t want any bunch of old ladies voting on whose baby I get. I want yours, Will. I want *your* baby.”

\* \* \*

Needless to say, I was blind-sided. I’d thought I was in some sort of trouble, and it turned out to be something completely different. But as I thought about it more, the possibility that this was just a different sort of trouble occurred to me. And that spawned the question of whether I really wanted a baby I’d fathered to grow up in the Lilies’ world. I mean, what if it was a boy? So, as soon as I could find my voice, I responded to her with my usual eloquence.

“Uh ... ”

“And, well, the thing is, today’s the right day to make it happen. I mean, the best chance this month. And if I’m already pregnant with your baby next month when they do that medical procedure, well, ha! It won’t matter what they do or whose seed they choose. See?”

“Er ... ”

“Now, I’m pretty sure that people don’t go about this the way that our farm animals do, but I expect we can figure it out.” As she said this, she stood up and began fumbling nervously with the buttons on her blouse, starting with the top one. “It seems like, though, the first thing is to get out of our clothes.”

Things were spinning out of control almost too fast for me. I jumped up and grabbed her hands just as she was getting to an especially interesting button.

“We’ve got all day, you know.” I kissed her knuckles one by one. “No rush. And I need to know something. Something I asked you a long time ago. What do you think about my idea of getting away to somewhere? I think I mentioned Paris before, but it could be anywhere. Anywhere but here. See, I don’t want to father a child, especially not a boy, who’s going to grow up with the Lilies.”

“When you brought that up before, it scared me and I said I’d have to think about it. And I have. And I don’t want to stay with the Lilies, I want to get away, too. But I have to go back and get through that procedure, because otherwise they’ll come and find me. It’s happened to other girls who ran off before their procedures. But after the procedure, they let us alone for a long time, assuming that it works and we’re pregnant. I can get away then and no one will notice for long enough that we could *really* get away.” Her smile almost made me melt.

“I like that idea. It will give me time to figure out a strategy and put it into motion. Hmm. It sounds like we should plan to disappear in two months, assuming things work out. Then they’ll know your, ah, condition, and they’ll start ignoring you, right?”

“Right!” She cocked her head to the side. “You learned about this stuff.”

“I’ve learned about a lot of stuff, Clarisse. You’d be surprised.” I grinned. “Maybe you will be, in fact. Now, I know I said that we have all day, and we do. But I have the idea that we might want to try this more than one time. I mean, that would seem to increase chances of success. Right?”

“Oh.”

“Mmm-hmm. And you know, it might just be fun if *I* undid those buttons of yours.”

“Oh.”

I took my sweet time by starting at the bottom and working my way up her buttons to the one I'd interrupted. And when that was undone, it was her turn to grab my hands.

“I'm a little scared.”

“Clarisse, there are millions and millions of people in the world, and each and every one of them, almost, was conceived in the old-fashioned way. That means that what we're going to do is something that virtually *everyone* has done.” I smiled. “Let me tell you a joke I heard.”

The “virginity is a disease ...” joke, after she thought about it for a minute, cracked her up. And that was all it took to overcome her case of nerves.

Somewhere in there we had lunch, splashed in the river's shallows, and acquired ridiculous, all-over sunburns. And, given our teen-aged enthusiasm—and stamina—I was pretty sure that our chances of success were going to be high indeed.

It was late afternoon when I got her back to the garage where her truck was being worked on, and they had it ready. Parting, per *Romeo and Juliet*, was indeed such sweet sorrow, but it was buffered by our mutual promise to meet again in mid-July, after she had her little date with the Lilies' medical people over and done with.

The day with Clarisse had pretty much erased from my head the bigger picture, the one in which the Lilies were Nazi spies now working for the Japanese and in which Clarisse was a courier of their information. But I was rudely reminded of it when I stopped at an intersection so a pedestrian could cross in front of me—we still were polite about such things in those days—and a guy in a suit hopped into the Indian's sidecar. I recognized him, but only sort of. He didn't even say hello.

“Colonel Sherhold wants an immediate debriefing. Go there now.”

That was something I couldn't really argue with, so I took both of us to the Army's offices downtown. Inside, even though it was getting on toward dinner time, I was ushered right in to the Colonel's office.

“Afternoon, White. You have a good day, did you?”

“Sir. If your watchers have debriefed you, sir, I'm sure you know the answer to that question already. Sir.” I thought I just might be able to “sir” him to distraction.

“Don't get snippy with me, White. I told you that I'd have them cut you some slack. All we know is that you and the girl spent the day down by the river. Getting sunburned, from the looks of you.”

“Yes sir.”

“So what have you learned, White? Anything helpful?”

“Well, sir, all I learned is that she is disaffected with the Lilies and wants out. And she left her truck at a garage for service. I hope that your people saw that and have it under observation, sir.”

“We do, and it appears that the truck was being used to pass the information from the Lilies to the network. Your girl may not even know what's happening. The information was apparently concealed in the truck, and one of the mechanics at the garage was the recipient. He knows to look in a hidden compartment.”

“That's good news to me, sir. I hope she doesn't know what's happening with that information. But it sounds as if you had a productive day, sir.”

“We did, White. And it was productive because you were able to occupy that young lady’s attention all day while we made our moves. Good work, White.”

“Thank you, sir. A question, sir?”

“Yes?”

“I’ve been out of the information loop a bit, sir. Is there any word on the timing of the upcoming test next month?”

“Mmm. Trinity is being very careful about that information, White. And I don’t think you have need-to-know just yet. But they’re still talking next month.”

“Yes sir.”

“Next month” echoed in my head as I thought about the mid-July meeting that Clarisse and I had planned.

\* \* \*

## Fourteen

After reporting to Colonel Sherhold, I discovered I was hungry, no doubt from all the fresh air and sunshine of the day by the river. Or something. I stopped at the downtown cafeteria and loaded up on calories before heading home. While eating, I pondered two lessons I’d learned that day: that sex on a beach is sexy indeed, but the sand tends to get into places where it shouldn’t; and that men possess body parts that do not do so well with a sunburn. At least, sitting on the cafeteria bench as I ate, I managed not to wriggle around too much as I tried to get comfortable.

At home, I discovered that I was exhausted. So, after checking in with Effie to make sure she didn’t require my services as a bouncer that evening, I went upstairs to my attic to sleep.

Sometime in the middle of the night, after the sounds of revelry in the house had evolved to the usual night-time grunting and gasping, someone slipped into my room and into bed with me. I barely woke up, but I did notice that someone was there, because she cuddled. It felt good.

Imagine my surprise in the morning when I discovered that it was ultra-curvy Paula who was in bed with me. Under normal circumstances, I think that discovery would have motivated me to enjoy some fringe benefits, the morning version, but the circumstances were far from normal. Overnight my sunburn, especially the burned part of me that doesn’t usually see the light of day, had matured. I was wondering how I was going to be able to wear pants.

And I was also wondering what Paula was doing in my bed, so, when she awoke, I asked.

“Hannah told me it was OK. She seems upset with you, and, besides, she was busy last night. And I wasn’t.”

“Why is she upset with me? I always treat her like a princess.”

“You’ve got another girl now, she said.”

“And she was busy last night doing what? Playing cards?”

“It’s different. She says you’re in love with this other girl. She’s not in love with her guys, she just pretends to be. That’s her job.”

“She’s not worried that I might be in love with you, I guess.”

“Well, you’re not, are you? I mean, that’d be sweet, but really we’re just friends, right?”

I had to sigh. “Paula, before I came here, I spent a lot of time reading books. Lots and lots of books. Many of them talked about ‘love,’ but, try as I might, I could never really figure out what love *is*. Anyway, all this must mean that Hannah loves me but doesn’t think I love her. But I’m pretty sure I do, at least in some way.”

“What about this other girl?”

“I probably love her, too. But not in exactly the same way as Hannah. I hate to have Hannah mad at me, though. And I wouldn’t want you mad at me, either.”

That made her flutter her eyelashes at me. “Well, I know one way you can keep me from being mad at you.”

“Uh, well, see, I got a pretty bad sunburn yesterday. All over.”

“Really?” She stripped the sheets off us and began inspecting me, all over. “Ooh, is my little man sunburned? Mmmm, well, look at this! I guess he doesn’t care if he is.”

My friend Steve had assured me, before my first experience, that sex doesn’t hurt. The experience that morning with Paula taught me that it can, if sunburn is part of the deal. On the other hand, I found out that my sunburn wasn’t nearly as bad as I’d thought.

At least there wasn’t any sand involved.

That conversation with Paula got me to thinking about how to tell Hannah that I was going to be leaving. She’d want to know why, of course. And, despite my wish to be truthful with her, I didn’t see how it would do any good to tell her that I was planning to run off with Clarisse. One option, not a good one, but an option, would be to avoid telling Hannah anything. Just disappear. Trying to figure that one out was one of the things that kept me busy for the next month.

Another thing that kept me busy was due to the fact that Colonel Sherhold didn’t forget about me again. In fact, it was just the opposite—he actually put me to work by making me his principal advisor about Trinity issues. He discovered that I was a fast reader with good comprehension, so he introduced me, first, to the concept of triage and, second, to all his Trinity paperwork. My job was to sort that paperwork into an “ignore” pile, an “immediate action” pile, and a “re-read carefully and decide” pile. As I got things sorted and had the time, I was to start on the “re-read” pile and write suggestions on each document.

I expressed concern that I, not even a ranked Army person, a young pup, really, was being given all this responsibility, but he wasn’t having any of it.

“White, I’m certain you can do this and do it well. Remember when I called Master Sergeant Jennings a hard-ass who I was proud to have in my unit? Well, just put on your best hard-ass hat and do what you think your friend Steve Jennings would do.”

That was encouraging and made me feel better, but it was also my introduction to the notion of job-related stress.

One part of it that turned out to be of help in my personal life was that I suddenly had access to everything that Colonel Sherhold did. I felt flattered when I realized that this meant that he considered me to have the same need-to-know as his.

It was early in the first week of July when I discovered that the date for the Trinity test had been recently changed from July thirteenth to the sixteenth, to occur an hour or so before dawn, meaning

about four-thirty in the morning. That gave me a benchmark to base plans on, finally. And it also gave me just a bit more flexibility.

Clarisse came to Socorro every four weeks for supplies, on Wednesdays. The trip on which she'd found me was on May sixteenth, and her June trip, with our romp on the beach, was on the thirteenth. The July trip was scheduled for the eleventh. Her procedure, she'd told me, was scheduled for the morning of the tenth. Our tentative plan was to run off together sometime shortly after her August trip, on the eighth, by which time the other Lilies would know of her pregnancy, although not the father.

I was glad to have my calendar, because it let me circle important dates well in advance instead of trying to remember them. July eleventh got two circles, and the sixteenth got one.

My first few days of paperwork triage were learning days, something that Colonel Sherhold was smart enough to insist on—I think I would have insisted if he hadn't. It surprised me how much of the paper that crossed his desk he consigned to the “ignore” pile, and when he began asking me why he'd done that to a particular document, I began to understand why. So much of the Army's paperwork was either gobbledygook or worthless information on various irrelevant topics that such triage was the only way to find the important things.

On the other hand, the documents appropriate for the “immediate action” pile were pretty obvious, even to me. Even some of those weren't truly important, just from a superior officer and required some sort of timely response.

It turned out that it was the “re-read carefully and decide” documents that were the most interesting. And it was in that category that I discovered one that shot down the tentative plan that Clarisse and I had made.

It seemed that higher-ups had decided that, sometime shortly after the Trinity test, whenever it was going to be, there was to be a full-scale assault on the Lilies' Colony. The evidence of their traitorous activity, in part due to my work, had persuaded the Army that the Lilies were sufficiently dangerous to the war effort that they had to be put out of business.

\* \* \*

Reading all those documents as quickly as I could, in order to make the effort “triage” rather than full-scale reading and analysis, wouldn't accurately be described as boring, but it was definitely soporific—I quickly learned how easy it was to fall asleep at my desk. One thing that would always wake me right up was a mention of my name, or Steve's, or something about the Lilies.

All three of those wake-ups were in that memo about the assault on the Colony. What *wasn't* in there was a specific date; it just mentioned that the assault would happen sometime soon after the test.

Consequently, it became an imperative for me that I figure out how to get Clarisse out of there before the test. After all, they could decide to move in on the seventeenth. And getting her out on the sixteenth didn't seem like a smart strategy—who knew what would actually happen when the new type of bomb detonated?

At least, I thought, we had our July eleventh meeting to make whatever plans we would need. Obviously, if the Lilies were going to be put out of business, they wouldn't be out looking for Clarisse when she vanished. We wouldn't have to wait for August to make our move.

All of this circled around and around in my head as I read through the documents that came to Colonel Sherhold. Little by little, amid the circling of my personal situation, a fourth wake-up word soaked into my head, “Gadget.” It seemed that the people at Los Alamos were using that term to

describe their new bomb, although I couldn't tell if it was an official code word or just a nickname. When I ran across a memo mentioning that the Gadget, without some of its critical components, was supposed to show up at Trinity during the first week of July, I knew to watch for increased tension on the part of just about everyone. And that tension would undoubtedly increase significantly when the missing critical components showed up. That, I learned, would be on July twelfth.

Meanwhile, as June turned to July and the firm date for the Trinity test was set, more and more people came to work at the Trinity site. Along with all of the various merchants and service providers in town, Effie's had more business than they could handle. That helped me, actually, because it meant that everyone, Hannah in particular, was too busy to bother about me. I could come and go without anyone noticing. And, with all the hubbub, even Colonel Sherhold's attention was too distracted to really pay attention to me, at least on a day-to-day level.

All that made my July eleventh meeting with Clarisse easy. As usual, we met at nine in the morning at "our" bench on the plaza, and, as in June, she was right on time. And this time, she was dressed in her overalls, flannel shirt, and boots again. I guess the better clothes in June were part of her agenda to seduce me. And, to tell the truth, I guess they worked.

She was even more reserved than before, almost shy—our hug of greeting was proper enough even for that public place.

"I'm so glad to see you again!" I was trying to break the ice.

"Oh, me, too, Will. I've missed you. And it's been a tough month."

"But you're here now, and you can let go and relax."

"Yesterday was pretty horrible. I'd hate to think that's the right way to make a baby." She looked like she might cry.

I took her hand, stroked it, and smiled. "You liked our way better, huh?"

That made her blush. "Did I ever. But, well, I don't know about today. Um, I'm not feeling like ..."

I interrupted her as gently as I could. "I wasn't thinking of anything like last month. For one thing, we've got some planning to do."

"I'm sorry I don't feel like it, but after yesterday, well, I think I need some time to recuperate."

"Did they hurt you?"

"Oh, no, it's not that. I just feel sort of violated. Like a laboratory rat or something. I'll be fine after some time with myself, I'm sure." Then her expression cheered up, and she looked around to make sure we were alone. "But the bright spot here is that I think our plan might have worked. I think maybe I'm already pregnant, not from yesterday, I mean."

I hadn't thought about how I'd feel if she told me that, so my reaction was un-premeditated—I had to work hard not to burst into tears, for some reason I still don't understand. Maybe that's what happens to all guys when they hear they're going to be a father.

I think that it was appropriate for me to grab her into a somewhat better hug. It sure seemed as if she liked it.

After a while, I leaned back and kissed the tip of her nose. "I didn't really make plans for today. I thought we'd talk about the future and maybe have lunch at a place I know close to here. Do you need to do anything? Like last month with the truck?"

"Well, I'm supposed to have the truck serviced each month. It's old, and we want to keep it going as long as we can. But I drove by, and they're closed today, for some reason. I guess it'll be OK."

“Well, that makes things easy. Is this a comfortable place to sit and talk?”

“I like it here. We don’t have trees like this at home.”

“All I remember, from when I was little, was looking over a tall wall of logs at the tops of pine trees. Nothing like this. Nothing like those trees down by the river, either.”

“That was so beautiful, by the river.” She poked me in the ribs. “For lots of reasons.”

“Glad to hear you think so. I’ve been thinking of that as the best day of my life. Ever.”

“I want more days like that.”

“Well, you know, so do I, but I’m also concerned that too many of those days might just kill me. Whew!”

She poked me in the ribs again. “Baloney. You loved it, just as I did.”

“Yeah, well, sure I did. But I’m going to have to stay in shape to do all that again.” I leaned over to kiss her cheek. “Anyway, we need to talk about our plans. See, they need to change.”

“Change? How?”

“I’m not sure how I can explain it. Partly, maybe mostly, it has to do with my job, which I really can’t explain to you. And I hate to say it this way, but I’m afraid you’re going to have to trust me, if things are going to work out for us.”

“Trust you about what?”

“You told me that you needed to wait until next month to get away, so that the Lilies would have started ignoring you and not come after you. Right?”

“Right. They’re very concerned about runaways at this point in my, er, development.”

“What if I told you that I know for sure that by next month they won’t be in a position to worry about you? That you can get away now, or in the next few days, with no worries about them?”

“What are you talking about?”

I shrugged. “This is the part where you have to trust me.”

“Oh.”

“I know some things that I can’t explain to you, or anyone, for that matter. But those things mean that the Lilies won’t be coming after you. So you can get away sooner than next month.”

“Um, OK. So, suppose I do trust you. What’s your plan?”

“Can you still disappear into the Labyrinth like you could when we first met?”

“Sure. It’s not quite as easy, but it’s still easy enough.”

“So, what I’d like you to do is to disappear into the Labyrinth and then find your way to that outside gate on the northeast quadrant, the gate that seems to be a sort of escape route. You know where I mean?”

“Sure. In fact, we found it unlocked for some reason and locked it back up. But it’s easy to get out of there from the inside.”

“Good. So, if you get out that gate, you can follow the trail to where it meets the trail up the hill. I’ll be waiting for you there. And then, off we go.”

“Wow. Just like that?”

“Just like that.”

“When?”

“This next Saturday night. Bring whatever stuff you don’t want to leave behind. And wear good walking shoes.”

\* \* \*

It was a huge relief to me when she agreed. I’d worried that she would balk and need persuasion.

But she just looked at me, smiled, and said “OK. I’ll be there.”

That allowed us to spend the rest of our day together talking about future plans. Paris got a lot of attention. And I took her to that cafeteria I’d come to like so much for lunch, her first experience at such a place. She declared that she had an excuse to eat for two now, and put away more food than I ever could have imagined. I began wondering if she would turn into a taller version of Paula.

We spent the afternoon walking and talking. Our wanderings took us all over town, including to the School of Mines, a park-like campus that was mostly deserted due to summer break. That was my first look at the place, and I fell in love with it. Some years later, I managed to enroll there, by taking advantage of the GI Bill and passing some entrance tests, and I eventually got a teaching position for a while, teaching a course I called “Mining Shakespeare.” It seemed to be popular even with those engineering students, who were definitely not English majors.

The day had to end, of course, and I saw her to her truck, in which she headed off to Mrs. Hale’s for the night. She was to pick up supplies in the morning and head back, so I wouldn’t see her until early Sunday morning. We set our meet-up for one-thirty, so she’d have plenty of time to sneak away into the Labyrinth and then outside, and so we’d both have time to hike to the Indian and drive across the desert before daylight.

Then it was a matter of my figuring out what we were going to do when we got across that desert. I really didn’t want to go AWOL again, especially not with someone I needed to take care of, but finding housing in Socorro had become harder than ever. If everything went according to plan, we’d arrive in town before dawn on Sunday, so we’d have all day to get that sorted out. And I had three days, or most of three days, to decide how to go about that sorting.

My first order of business, though, was to report to Colonel Sherhold on my day with Clarisse. He’d agreed to call off his watchers if I reported faithfully.

I was surprised, pleasantly, when I didn’t have to wait long to see him.

“Sir. Special Agent Will White reporting, sir.”

“You have a good day today, White?”

“A fine day, sir. I hope your people had a chance to find whatever messages might have been hidden in her truck, sir. She mentioned that she was bit perplexed to find the garage closed, sir.”

“That’s what we intended, White. And you did a good job of keeping her away from it all day. We found the package that the truck was supposed to deliver.” He smiled like a shark might smile then laughed. “We’re going to substitute some faked-up photos for them. Maybe if the Army and Navy can’t beat the Japs in battles, we can scare them to death with fake photos of what’s happening at Trinity.”

“I hope you still believe that Clarisse, that’s her name, sir, that she doesn’t know about this information delivery, sir.”

“White, I have no reason to think that your girl is complicit in the spying activity. She’s a Lily, yes. But I believe her to be innocent of willful espionage.”

I could tell that my knees were wobbly. “Colonel, may I please have permission to sit down?”

He looked surprised, but waved at a side chair. “Of course, White. What’s the problem?”

“Thank you, sir.” I tried to decide where to begin. “Sir, you’ve read that interview I did with Major Bernstein, I believe. And, well, there’s one part of it that’s not completely true.”

“What? Really?”

“Yes, sir. The fabricated part concerns my age. You see, when I first approached Master Sergeant Jennings, when he was the recruiter in Carrizozo, it was in early August of last year, 1944. I tried to join up, but when he asked me my age, I answered as honestly as I could, and I said ‘sixteen’.”

He stared at me, no doubt doing math in his head, and he looked surprised.

“Yes, sir, you’re correct. I’m now just a few days over seventeen, and I’ve already been an Army CIC Special Agent for a year. You see, Major Bernstein, after our interview that you’ve read, he decided to sort of reset my birthday for me to be eighteen last year. Sir.”

“Mmm. All I can say is that I’m very glad that you haven’t been wounded in action or anything like that, White. The paperwork, assuming that it was discovered that you’re a minor, would have been horrendous. But what does this have to do with anything now? The Army thinks you’re eighteen, and that’s good enough for me.”

“Well, sir, you’ve read my history. Master Sergeant Jennings was the closest thing I ever had to a father. I consider him to have been my best friend as well. And, ah, without him now, I’ve been trying to serve my country and figure out how to grow up at the same time. And part of growing up has to do with women. What I’m getting to, sir, is that I need to rescue that young woman, Clarisse, the one that I saw today, from the Lilies Colony before the assault that’s in planning happens. So I need to be over there this weekend. Sir.”

“You know that the big test is on Monday morning, about an hour before dawn?”

“Yes, sir. That’s why we’ve planned to meet on Saturday night. Late. Who knows what the test is going to do to that place? Sir.”

He nodded and spun around in his desk chair to look out the window that was behind him. I could tell that he was thinking about it all.

After at least two minutes he turned back to me. “Right. White, I’m going to write you an order to provide us with critical recon over there on the east side of the Oscuras this weekend. You get over there Saturday evening and stay until you’ve seen enough. Write me a report. You’ll have written orders to this effect in the morning.”

“Thank you, sir. Sir, from what I’ve seen in your correspondence, it appears that I may be—I’d probably *better* be—stopped by the Trinity security people. We’ll see. I’ll be sure to report on that as well.”

“Good thinking, White. I have to say, you’re the finest seventeen-year-old agent I’ve ever had working for me. Let me know what happens, White.”

“I will, sir. But what’s *going* to happen, sir? When they detonate that new type of bomb, I mean?”

“Excellent question, White. And, as far as I’ve heard, no one really knows. There’s one theory that has been discounted, that it will set the atmosphere on fire. I kind of doubt that myself, although I’m no scientist. But what they say is, assuming you’re not next it and get vaporized, that there will be basically

three things you'll notice. The closer you are, the more you'll notice them, if they don't just kill you. First, a bright flash of light, lasting a few seconds, I guess. Then, second, some ground shaking. Not a real earthquake, but what they call a 'seismic wave' in the ground as it passes by. And, third, noise. A big bang or rumbling, depending on how far away you are. It'll happen this way because light travels fastest and sound slowest. The seismic waves are in the middle."

"How far is far enough? You know, to be safe?"

"White, you're just full of good questions, aren't you? No one knows, White. But some of the scientists and other big-wigs who are going to be there will be something like five miles or so away, maybe a bit more, in what they call 'shelters.' And these are important people. So that should be far enough."

"Thank you, sir." I couldn't help but remember that the Lilies' escarpment was only a little farther than that from ground zero.

\* \* \*

Colonel Sherhold was true to his promise of orders, and, when I picked them up the next morning, he told me that he'd called over to Trinity and warned the head of security there about the importance of my mission. I should, he said, be able to get access to wherever I needed to.

I also had a chat with Effie, to warn her that I would be bringing an outside guest up to my attic apartment for an unspecified time. It took some explaining, but it seemed that Hannah had decided to move on anyway and had disappeared. The income from her trust would follow her, of course, so she was set financially. It hurt a little that she didn't say goodbye to me, but, then, I can't complain too much. I'm sure she felt betrayed.

Then it was a matter of cooling my heels until Saturday night, and I had another experience with clocks that seemed to slow down almost to a stop. But eventually my departure time arrived, and I set out for points east on the Indian with a couple of blankets for Clarisse and food and water for the two of us in the sidecar. And a handgun. It felt odd carrying one, but I wasn't going to take chances. If the Lilies shot at us like they had Steve, I was darn sure going to shoot back.

I planned my approach for late in the day Saturday, so that, if I were stopped by Trinity security, it would still be light and it wouldn't seem so suspicious to them. I'm glad I did, because they stopped me and were hugely suspicious, but, fortunately, they'd been briefed. My ID and orders got me past their checkpoint. I arrived at the desert end of the familiar southeastern trail shortly after dark, and hid the Indian carefully away. Because I didn't want to spend any more time on the mountainside above the Valley than necessary, I settled in for a short nap before my hike in.

I woke a few hours later, with the nearly quarter moon just about to disappear over the Oscuras, and thought I'd screwed up and slept too long. But the watch that Clarisse had given me said it was only eleven-thirty, so I had a couple of hours to get up and down the mountain to meet her, plenty of time. It was about a quarter after one when I hid myself in the rocks near the junction of the northeastern trail and the spur to the portal there. And then I settled in to wait.

And wait, and wait some more. When dawn finally lightened the eastern sky, I knew something was wrong, but not what. Before sunrise, I crept to the portal's gate, only to find it locked, and there were no new footprints in the dust outside it. So she hadn't made it out.

Maybe, I thought, she just got the day wrong. Maybe I'll see her tomorrow morning at one-thirty, Monday morning.

Or maybe she changed her mind. Or maybe she got caught. Or maybe ...

It was a long, long day for me. Fortunately, I'd brought the food and water I had, but that really didn't help me pass the time; it just made it less hungry and thirsty time to be passed. At least I managed to catch up on some of the sleep I'd missed while waiting the night before.

Sunday night, the moon was a little bigger and the sky, at first, was as clear as ever, but it began to cloud up around midnight. I was a nervous wreck as it approached one-thirty Monday morning. But, as before, the time eventually passed, and I finally realized it was getting on toward two. At that point, my case of nerves gave way to the shakes—probably partly from lack of food and water, as I'd been stingy on myself—and I had trouble getting them under control. But still no Clarisse.

I must have dozed off, because I came alert just as the sky was beginning to hint at dawn. One of those piñon jays that inhabit the scrublands in those parts was sitting in a juniper tree over my head and squawking at me. My watch told me that it was a twenty past five. But the big test, I recalled, had been originally set for four-thirty or so. Surely that would have wakened me. Later, I found that they had postponed it an hour due to weather, but at the time, I was totally confused as well as increasingly panicked that Clarisse hadn't come and anxious about why.

All my confusion was cleared up, though, a few minutes later, when there was a remarkably bright flash that lingered in the western sky, not lightning but something even more dramatic. A few seconds later the ground vibrated enough to have knocked me down, I think, if I hadn't already been lying down. And, more seconds later, there was a thunderclap followed by rumbling echoes for almost a minute, all the while with the ground shaking. When a rock from up the hill where I was hiding bounced past my head, I jumped up and gathered my things.

I started down the spur trail toward the portal, but rocks bouncing down the hillside made me hide behind a big boulder, hoping that *it* wouldn't be displaced. And still the ground movement continued, even though the other phenomena had faded. I couldn't help but remember my friend Steve's comment, so long ago, that it must be a helluva weapon.

From my protection in the shelter of the big boulder, I could see the Valley floor, and it was beginning to fill with avalanche debris. The last I saw of the stable gate, where I'd led Honey out so long ago, was an odd glow, as if molten rock was oozing out of it. Then a new slide covered it over. From where I was sheltering just downhill of the big boulder, I could see the northeastern portal's gate, and the same thing happened there as well. Apparently, the entire Labyrinth had filled with lava, and a good part of the mountain was crumbling into the Valley.

I remembered the hot floors in the lower levels of the Labyrinth and the hot springs, and wondered whether there would be an actual volcanic eruption. But that never materialized—the lava just sort of oozed out and was buried by the landslides.

I don't know how long the seismic activity went on, but when it finally stopped, I realized that I wouldn't have to walk up over the ridge and then back down to the Indian to get out of there. And I also realized, with a sharp flash of pain, that Clarisse and my unborn baby were buried inside the Labyrinth somewhere, probably encased in cooling lava, lost to me forever. And I thought of Honey, which made the pain all the worse. Of course, all the other Lilies were in there, too, but I couldn't seem to get worked up about them.

I've read, since then, about the phenomenon of "shell-shock," and I'm sure that I was suffering from that, on top of my previous thirty hours of anxiety, as I walked out through the remains of that log-palisade maze, scrambling over slide debris on my way.

But get out I did, and I found the Indian waiting for me and ready to start up and ride out of there. I must have been operating on some sort of automatic pilot to be able to get back to Socorro and find

Effie's. Everyone there, first thing in the morning as it was for them, was still groggy and wondering what that big noise had been, and I had the presence of mind to remember orders to describe it as an accident at a big ammunitions depot out in the desert.

And then I slept for two days.

Hannah, it turned out, hadn't gone far—she'd just left Effie's and found a room for herself at, ironically, Mrs. Hale's. It was easy to find her. And, bless her soul, she listened to my sorry tale with sympathy and took me into her embrace forever after. When I finally lost her a few years ago, after more than fifty years, it was even worse for me than when I lost Clarisse and the baby. We, Hannah and I, had a wonderful and full life together, and, now that I'm coming to the end of mine, I'm glad to have been able to tell my story without worrying about what anyone might think.

Regrets? Well, not really. Maybe it would have been nice to have had children. And grandchildren. But Hannah couldn't, because of something to do with her, ah, job before I met her, I guess. But she wound up teaching elementary school kids, and, as I mentioned, I wound up teaching at the college. So we both had lots of contact with young people.

And, y'know what? That God-damned treasure that I lugged around so many times can just sit in that old mineshaft and rot, as far as I'm concerned.

## Epilogue

In his last letter to me, my good friend LeRoi's characterization of Will White's narrative as a "remarkable ... fantastic ... amazing tale" certainly resonated with me, both as I was reading it the first time and every time since. But I'm a theoretical physicist, not a historian, so telling fact from fiction is not something I have real expertise for. However, a couple of interesting things have grabbed my attention.

You see, when I first moved from Cambridge, after my post-doc at MIT, to New Mexico to join the Santa Fe Institute, I became interested in southwestern history. That got me started on the early years of the Spanish conquistadors and so on. And when I accepted an invitation to serve in an advisory position to the Theoretical Physics Division at the Los Alamos National Laboratory and got a security clearance, I used that clearance to satisfy my curiosity about more recent aspects of southwestern history by reading various World War II era documents about the Manhattan Project and Trinity that were still classified.

Imagine my surprise when I found various bits and pieces of information in White's narrative that I knew to be true from those classified documents but that were not in the public domain. It's like he must have been there, just as he described. And if those bits and pieces hang together so well, perhaps, just perhaps, all the other parts are also true, including the business about Coronado's great treasure.

And there was a second, completely unrelated, hint that Will White's story might just have credibility.

I mentioned that Santa Fe has a reputation based on its arts community, and that includes both the museums and a wide variety of galleries—maybe more galleries per capita than anywhere else in the world. Many of them, of course, cater to the tourist trade, but many others cater to people who come to Santa Fe specifically to purchase true collectables, pieces running to five, six, and even seven figures.

Now, I was fortunate enough, in my twenties, to have used some of my skills as an expert in nonlinear systems to play the stock market successfully. I quit that game after I realized that there were events so unpredictable—the attack on the World Trade Center in New York City was an example—that my system would not always work, and since then I’ve been carefully investing in, among other things, art work that seems to have lasting value.

One day, fairly early in my Santa Fe experience, I was walking east up Palace, down by the El Dorado, and I saw in the window of an up-scale gallery a remarkable piece, a four-inch long sculpture of a grizzly bear, a Native American fetish of some considerable vintage, apparently done in gold. At the time, I assumed it was a reproduction in plate, but on inquiry I discovered it was an original artifact from a collection. The sales person, who told me that it had been appraised as being hundreds of years old, let me hold it, and I was surprised to find that it weighed at least three pounds, so it wasn’t hollow. I asked about its provenance and was told that it had been on the market for a while, originally offered from the estate of an Efigenia Williams, a long-time Santa Fe philanthropist and artist of some repute. Would I like, she asked, to see some of Efigenia’s original pieces?

At the time I was too new to Santa Fe to invest so much in an unfamiliar genre, but now I wish I’d bought it.

I can’t help but think that it’s no wonder the debris flow in Nogal Canyon had my friend LeRoi so upset.

\* \* \*

When Angela and I moved up here to Colorado, the first thing that happened was that we were thrust into an investigation of a wildfire in a remote area that she called the Valley of Death, a wildfire that had killed two dozen people. We’d not even had time, really, to get settled.

It was some time before I had a chance to go fly-fishing with Hal Weathers, my boss at the Middle Park Advanced Research Center, where I had taken the job of Chief Scientist. He and I had met in Santa Fe during that investigation into the death of Senator O’Malley’s daughter I mentioned before, and when he needed help up in Colorado at the new institute he started, he called on me.

When we finally did make the time to head down to Parshall and fish the Colorado River there, I made a point of showing Hal my bamboo rod set, and he practically fell over himself in envy. I let him fish one for a while, but I think he really didn’t get into it, probably because he was afraid he’d break it. I worry about that, too, in fact, every time I fish one of them. And I’m positively paranoid about getting one caught in a closing car door. That may be the number one nemesis of fly rods, but it’s not going to happen to those beauties LeRoi left me.

All that gold may be buried forever, but LeRoi’s legacy to me, that remarkable set of bamboo fly rods, deserves tender loving care, and I’m going to make sure they get it.
