“The FFPI arson was over in Utah, so I can’t arrest you, not for that. Of course, I could tell the guys over in Utah about the motive and the note we found on you, couldn’t I? But what I really want is information from you about MEDL and those dead friends of yours. We know they all have some connection to MEDL, but the more details we have, the better the chance we’ll be able to find who killed them. And that’s what you want, too, no?”

“I sure do. A couple were close friends. So, what do you want to know?”

Hal had been listening passively, but now he leaned forward.

“Well, the first thing I’d like to know is what SCREW stands for. I’m mostly just curious.”

Rutherford looked smug. “Southern Colorado Radical Environmental Warriors. My idea, actually. Kind of clever, don’t you think? And there’s, I mean there was, only six of us, now there’s only five. Dave Wellington is the last name on this list.”

Annette nodded. “And the others in SCREW are you, Lolly, Aaron Felterson, Reid Tompkins, and my old friend Flip Chester. Which one of them was with you and Lolly at the mill?”

“Tompkins.” Rutherford had no reason to protect him. “Are you granting me immunity, or what?”

“Probably ‘what.’ We’ll see how cooperative you are. But I think you may be able to help us get a ways down the road of clearing all these cases, Steve. Maybe you can help me find a solid connection among all these victims.”

\* \* \*

Back in her office, Annette was assembling the information from Rutherford in context of what she already knew, when her phone rang. That meant that Sally, the receptionist, was putting a call through directly, per instructions. Not that Annette didn’t want to talk with Sally; rather, Annette was trying hard to change some of the culture of bureaucracy she’d run into at the office.

“Trieri, CBI.”

Her new greeting was coming more naturally, after about six weeks.

“Afternoon, Annette, this is Ralph Wertlinger over in Creede. Got some information for you.”

“Good to hear from you, Ralph. How are things up your way?”

Annette was glad she’d taken the day last month to drive over to Creede, to meet the Mineral County Sheriff, even though his county was in a different CBI district. For one thing, the personal connection would pay for the investment in time. For another, she hadn’t ever been to the spectacular valley of the upper Rio Grande, and she hadn’t realized what amazing country was on the north side of the San Juans.

“More interesting all the time, actually. You remember that guy that got killed here at our lumber mill back at the end of May?”

“You bet. One of what we’re calling our environmentalist portfolio.”

“Huh? Oh, yeah. We talked about that when you came over for the visit last month. Well, like I told you then, we have a couple lines of inquiry going, in cooperation with the folks in Alamosa. One of them is following up on some information we found at Wellington’s—he’s the dead guy—at Wellington’s place”.

“I remember your telling me something about notes concerning some meetings that Resources For Humanity was holding.”

“Right. Well, I called in a favor and got an informant to go to their next meeting, and he’s managed to get himself on the inside of what they’re doing. Seems that they have this tiered system, where the first set of meetings, like the one Wellington went to, is pretty open, but then they have a second tier, where only a select group is invited.”

“And that’s where things get interesting, I bet.”

“You got it. What’s happening in this second tier is that they’re talking about killing people in the Forest Service, the state Division of Wildlife, and other such organizations.”

“You mean talking about as in conspiracy to murder?”

“Pretty much. They don’t plan specific hits at these meetings, but they talk about it in general. Then they form small teams, local people led by someone from another part of the region, someone the team doesn’t know, to do a specific hit. My latest information is about a plan to kill a Forest Service ranger here. We’re going to prevent it, of course, but without showing our hand.”

“Good strategy. Maybe you can follow the information up the chain of command.”

“We hope so. And it should be pretty easy. My guy says that their plan probably won’t work anyway, because the team is sixty per cent losers. The leader, a guy from Cortez, is a little Napoleon, more strut than skill. But one reason I called is to alert you. They have some kind of exchange program. They brought in this guy from Cortez to lead the operation here, and they sent a local guy over to Cortez, or at least over your way, to lead another over there.”

“Any particulars?”

“Just that his name is Will Johnston, nothing about what the job is. I know Johnston, so I can send you a description and so on. But their system keeps the information about the different jobs compartmentalized, so my guy doesn’t know anything else.”

“You said they were going to hit a Forest Service ranger?”

“Yep, Virginia Adams. Nice girl. They’re going to try to rig a sort of accident, put her pickup into a creek so she’d drown, I guess.”

“Interesting. What started as hits on people in a pretty radical environmental group, hits by pros who were very careful, is expanding to hits on regular folks. Hits by amateurs, sounds like.”

“Good way to put it. And that means they can expand the operation by getting more people involved.”

“Right. Just what we need to deal with. What’s your next move?”

“Well, like I said, we’re not going to let anyone get hurt. But we want to watch these bozos and see what they try next. I think we have enough to get them on a conspiracy charge now, but I’d like to catch more than just the little fish.”

“Me, too. Let’s keep in touch. And if you send me information about this Will Johnston guy, we’ll keep an eye out for him.”

“Will do, Annette. Nice talking with you again.”

\* \* \*

The next item on Annette’s agenda was the weekly CBI status-report conference call. She called in at the appointed time and listened to everyone else saying hello and how’s it going and so on, then introduced herself one more time. Not everyone had become used to her new appointment yet.

After hearing several district reports, she had just finished a report on activities in the Durango office when Sally walked in and slid a note across her desk. “Todd Sweeney, FBI, my line, says it’s urgent.” With glee, Annette excused herself and punched buttons.

“Todd? You rescued me from a conference call. Good work!”

“If you think that’s good, wait ’til you hear this. We’ve got the Bug-Be-Dead van from the Boulder assassination attempt! It was parked at DIA, in the far reaches of one of the garages. It’s black now. And guess who owns it?”

Sweeney sounded triumphant.

“How in the world did you guys find it at DIA?”

“Well, it’s about time we got a break in this thing. I mean, the reporters beat us to several important tidbits of information, like that car wash, and the two primary suspects were apprehended, for crying out loud, by a bunch of college students, jocks, no less, the ones who called you.”

He took a deep breath and continued.

“But we really didn’t find the van either. It was the DIA parking security guards, rent-a-cops, who did. They noticed a black van parked in a normally empty section of the east parking garage, because one of its back tires was flat. It had picked up a nail and had a slow leak. It sat long enough, accumulating \$12 per day charges, that it finally got tagged and then eventually towed. The guards remembered the news reports about the wanted Bug-Be-Dead van that was seen entering a car wash in east Boulder. And they’re bored out of their minds, way underemployed, so they decided to play amateur detective and dust the steering wheel and gear shifter and door handles for prints. It puzzled them at first when they didn’t find any. Then they called us. We got a make and model ID from one of the Boulder witnesses and then went to work on the thing. It seems the car wash it went through wasn’t completely thorough. And neither was whoever wiped the thing clean. So we found some yellow paint that matches the Bug-Be-Dead color and some latents. And you didn’t answer my question. Who do you think owns the van?”

“It had plates?”

“Stolen ones, it turns out. But we traced ownership through the VIN.”

“OK, you got me. Whose prints did you find?”

“Not the owner’s but someone who probably works for him. Anthony J. Mercer and Senator Jarvis Schoenfield, respectively. Actually, the title is held by the X-S Ranch, Inc., J. Schoenfield, Proprietor. Must be dated before he divested himself of the place, and they forgot to transfer the title formally.” He laughed.

“Interesting. We knew about a connection between Mercer and Schoenfield, of course, but this cements it. But, look, Todd, a good lawyer will tie you up in knots. The paint is helpful but not enough. There’s no crime in parking in a parking garage, even for a long time with a flat tire. And maybe Mercer’s just an anal compulsive who likes a clean vehicle.”

“Yeah, we know. This is just another link in the chain, not the smoking gun or anything. But it does confirm what you’ve been telling me about Schoenfield’s possible involvement.”

“He’s still got deniability, though.”

“Sure does. But less than before. Anyway, since you got Mercer and David for us, I thought you’d like to know.”

“I appreciate it. We’ve got two possible tie-ins with a black van, one to a murder up in Norwood and one to another in Santa Fe, for which the only lead at all is an eyewitness report of a black van with New Mexico plates. And I think I told you the Norwood murder was connected to your murder on the Rez last September. So things seem interconnected. Anyway, look, we’re hatching a plan to get Schoenfield as well.”

Annette filled him in on the connection to Tim Langer’s skills with computers.

“What we need is information that we can put on a system that Schoenfield has clandestine access to, maybe the central CBI one, that will make him act. Got any suggestions?”

“Hmm. How about something related to the van? Doesn’t have to be true, of course. Something that connects him more tightly to it. And it to the NCAR thing.”

“Right. Of course, if he’s the owner, he’s tied to the van pretty well. But he can always claim that it was stolen, but he just didn’t report it. His prints and stuff like that won’t work, because he’ll know better. Hmm. Say, how are you holding Mercer and David? Can they communicate with Schoenfield?”

An idea was beginning to take shape in Annette’s mind.

“Indirectly, through their lawyers. But their lawyers are avoiding Schoenfield.”

“Didn’t you tell me that the rifle that took the shot at the President was radio controlled? What if we put an inventory of the van on the CBI computer and say that we found the radio controller, or least parts of such a thing? That would be a link to the assassination attempt that would scare Schoenfield.”

“I assume it got ditched somewhere, of course. Probably along with the stuff they were wearing and so on. But, look, he can still say the van was stolen, and so anything in it isn’t his responsibility.”

Sweeney was skeptical of her plan, Annette could tell.

“What if we say there are prints on the controller parts that we can’t match to the others in the van, but we’re trying to get a match through the NCIC?”

“I’ll see if he’s in there. If so, that could put a scare into him. But I think you need additional bait on the CBI computer.”

“I’ve got another idea as well. But for this one, could you write up a summary about this and e-mail it to me? I want to use as much of the truth as possible.”

“Glad to. What’s your other idea?” His curiosity was obvious.

“It’s not completely figured out yet, but it involves something completely different, a couple of things, actually. I’ll tell you about it when I get the i’s dotted and so on.”

“OK. I’m interested. See ya later.”

She hung up the phone and considered her next move. Should I get back on the conference call? I sure don’t want to. Let me think of one good reason I should... oh, yeah, I need to learn all I can about the CBI. Well, how about two good reasons? Nope, there’s not another one I can think of. Whew.

\* \* \*

She called Charles Shure's private line instead of returning to the tele-conference. It rang about six times and then she heard it transfer somewhere, so she stuck with it.

"UNELECO, Mr. Shure's office," came a professional-sounding voice.

"This is Annette Trieri, Colorado Bureau of Investigation. Mr. Shure gave me this number as a way to reach him."

"Yes, it's his direct line. Unfortunately, he's out of the country and we can't forward things automatically."

"Is there a way I can reach him for a short conversation?"

Annette was wondering if the voice would ask her whether the call was important.

"I have your number here, and I'll let him know to call you as soon as he can, that it's urgent. I'll send e-mail and leave a message where he's staying. I hope this helps? Excuse me a moment please?"

The line went into telephone limbo. Annette was impressed nonetheless—it had been a while since she had encountered this sort of efficiency.

"Ms. Trieri? You're in luck. Mr. Shure just called in with an answer to a question I sent him a while ago. I'll transfer you."

Before Annette could offer thanks, she heard clicking.

"Annette? Glad I happened to call in. What can I do for you?"

Shure sounded a long way away, unlike most long-distance calls in Annette's experience.

"I guess I'm lucky today, Mr. Shure. Can I ask where you are?"

"Indonesia. The phone system is, ah, less than completely modern. And, listen, this is our fourth or fifth conversation. Please, call me Chuck."

"Chuck?" Annette thought. He seems more like a "Charles."

"Thank you, I will. Indonesia? Geez, it must be the middle of the night there. Ah, Chuck, I'd like to ask if you'd mind a little subterfuge on my part. Involving information related to you. It's to try to catch whoever it was that killed Bill Campbell, the lawyer you saw murdered."

"You mean, catch Schoenfield?"

"Well, right, if it's indeed him. We've found out that he has a surreptitious computer login on the main CBI system. Those hacking attempts on your system were to have provided him with a similar login on your computers. What we want to do is to plant some false information where he'll find it, information that will make him do something, force him into action. Then we can nail him."

"What did you have in mind?"

"Two things. See, I'm going to set up a bogus file and have several false leads in it. One will have to do with an FBI case. And I'd like to use something related to Campbell's death, I don't know exactly what. But what I really want to ask you about is that Nazi prison camp journal you got. I know you've said in public, in that press conference, that there's nothing of use in there. But what if we pretend you were just lying for public consumption, that there's something in there that you're going to pursue actively, through your biomedical people, or something? That's what he wanted to happen, wasn't it?"

“That’s what he thought, yes. He gave me a bootlegged copy of the other volumes of notes for that purpose. But it’s all just garbage, of no scientific value at all. I see what your strategy is, though. What kind of results are you going to make up?”

“Well, I was sort of hoping you’d be able to suggest something. You’ve heard the pitch for this Aryan Rights thing, and I haven’t. What would push his buttons, make him act?”

“There was talk of cleaning up the gene pool. I guess that connects with the Nazi agenda of eliminating what they saw as inferiors. And, well, the latest biomedical research has to do with gene splicing, related therapies, and so on. Of course, a lot of this was simply not part of the body of scientific knowledge in World War II. But I guess that Schoenfield won’t realize that. Anyway, this Aryan Rights bunch, the doggie-noise outfit ARF,” he actually giggled, “seems to assume that they’re the ones with perfect genetic structure, or at least preferred structures. What if we pretended that the Nazi journals had information to the effect that the Aryans were actually inferior to the others, at least in some ways?”

“You mean, pretend something like the journal has information showing Jews to be, oh, I don’t know, say, the intellectual superiors of Aryans?”

“Yeah, or maybe that gays are genetically more artistic, or that Asians are harder workers. Genetically, I mean. Or that Africans are genetically more athletic.” She heard him giggle again. “Or, better yet, that Africans have more sexual prowess. You know, stuff that provides genetic confirmation of Schoenfield’s Aryan stereotypes. Think Schoenfield would buy it?”

“Maybe. Most of these racist types are basically hung up on various inferiority complexes. But what can we say that would make him act? So we can catch him, I mean.”

“How about something like this: UNELECO is seeking ways to introduce these qualities into dietary supplements, so that everyone can benefit from them. Of course, we would really never do this, but we could put that out there on our computers for Schoenfield to find.”

“Ah, well, I can’t guarantee that he won’t go public with this information. And it could put UNELECO in a bad light, you know, with horrible publicity.”

There was a long pause, almost long enough that Annette thought the connection had been dropped. It was Indonesia on the other end, after all.

“You’re right. But, look, it’s my company. And I have all these highly paid PR people who thrive on challenges. And I really, I mean *really*, want to get this guy.”

“So you’re OK with it?”

“Absolutely. Give me your e-mail address and I’ll send you something in writing, along with some specific ideas about wording. At least I will as soon as I can. The technology here is, um, strange. And, tell you what, I’ll also get in touch with Wendell Ellison, one of my senior scientists in the Biotechnology Division. I’ll tell him to help you with absolutely anything you need.”

“That would help a lot. Meantime, I’ll work on getting something going. And, thanks, Chuck. I’ll keep you informed. Especially when it gets fun.”

\* \* \*

Tim Langer was feeling liberated, more than he would have thought. Also, horny. He was feeling liberated because he was finally doing hacking with full authorization—is it still “hacking” if it’s authorized? he wondered. It was not as much of an adrenaline rush as his earlier, clandestine work, but it was a good feeling. And feeling horny was a puzzle he’d have to work on. A lot.

Jamie McFarland had been gracious in accepting his apology for piggy-backing on her login, but it didn't surprise him that she was still a bit distant. For one thing, she had a good five years on him. He usually didn't go for "older" women, but she was too much to ignore. Smart. A better systems person than he, although probably not a better hacker. Athletic, even, unlike most of the female computer jocks he knew. Sophisticated, too—she played classical music while she worked on code.

And then there were those cantaloupes she had hidden in her shirt.

Jamie had agreed to Hal's request to set Tim up with the necessary equipment, and access, to help Annette with her little scam, but Jamie had extracted some concessions. The main one, having Tim help with plugging all of Jamie's systems' security holes, was Tim's favorite. It required that they work together. So he'd apologized as abjectly and profusely as he could, and now he was trying to decrease the distance between them. But that was tricky, because he was sure she'd see through him and just laugh. And if she laughed at him, poof, no more horny.

For her part, Jamie was amused that Tim was acting like such a love-struck schoolboy. The fact that he was trying not to let her notice that he was staring at her chest was hilarious. She thought about wearing something that would show cleavage just to see if his eyes would actually pop out. As much fun as that would be, however, it would probably also lead to complications. For one thing, they'd have trouble working together as well as they had been.

But he was kind of cute, in a boyish sort of way. And so polite, and eager to please. Very different from the guys her age who tried to hit on her.

Plugging the security holes had actually been pretty easy, so Tim was now working on an automated program—what his computer world called a "daemon"—to put on the CBI computer. When Schoenfeld logged in, it would go to work and do two things. First, it would monitor and record all of Schoenfeld's activities, down to the last keystroke. Second, and simultaneously, it would download information—the entire directory tree, during its first activation, plus as many files from certain key directories as time allowed—from Schoenfeld's computer. Then it would transfer the information to Jamie's computer, clean up after itself on the CBI system, notify Tim, and the second part would modify itself to wait for Tim to decide what it should do next.

He also needed to figure out how to ensure that Schoenfeld would find the information that Annette wanted put on the CBI system. Schoenfeld, he knew, was pretty computer illiterate, at least by Tim's standards. Tim fully expected to find, probably on his second raid on Schoenfeld's computer, a file with all of Schoenfeld's logins and passwords, listed by what computer they worked on. This would be most helpful in discovering if Schoenfeld had anyone besides Tim setting up clandestine accounts. It would also be useful to Annette as evidence, he figured.

But with Schoenfeld being such a computer dolt, Tim was going to have to get cute. He wandered off to find Jamie.

She was in the middle of reviewing usage on the college's number-crunching computer when Tim knocked on her door. Here he is again, she thought, coming to practice his x-ray vision on me.

"Jamie? Got a couple of minutes?"

"Come in, Tim. What's up?"

He was staring at the screen of her new LCD monitor, not her. How different.

"Well, I want to see if you'll let me try out a new alias in the user list. A sort of simplified grep. Like, grep for dummies."

"Isn't there something called 'whereis' for that purpose?"

Oh, right. Her new screen saver, the three-dimensional hyper-cube drawing, had kicked in. And it did indeed look way cool on this new monitor. Hmm. Was that just a tiny twinge of jealousy that she felt because he was looking at it and not her? Get a grip, McFarland.

“Yeah, but this is for a different system, and I want a new alias so I can announce it and everyone will see it. I’ve got to get someone pointed at some information but have him think he found it himself.”

“So you just want to create a synonym, basically, for ‘whereis?’”

“Yeah, although I’ll simplify the syntax. I’ll call it ‘findme’ or something like that and have it search for filenames and directory names as well as file contents. And it will make a global search automatic, or at least a global search within the user’s permission space. And I won’t require logical syntax for the search string. I’ll announce it on the MOTD, with a pointer to a new man page.”

He was referring to putting a new page in the online user manual that described system commands.

“Why are you asking me?”

She shrugged and wiggled her shoulders. That did it. He was practicing his x-ray vision on her again. She felt an unexpected surge of pleasure. What is happening to you, McFarland? she thought. Leave the poor kid alone.

“Well, I’d like to try it out on the physics department server. It’s the same version of Unix that’s on the machine I need to use it on.”

“Use the physicists as experimental subjects? Experiment on the experimenters? Sounds like poetic justice to me. Mail me the code and a new man page, and I’ll put it up.”

She smiled and, just to have a little more fun, licked her lips. Almost! His eyes almost popped right out.

\* \* \*

Will Johnston, who had introduced himself as “Bill” to this little group, was on the very edge of losing it. They just didn’t want to follow the Plan.

“Now, look, Bill. We’re all from around here and you ain’t. We know most of the folks in these parts and you don’t. Let’s just go do it our way, and we can stop this stupid arguing.”

“I keep telling you, Jim,” Will suspected that “Jim” had another name on his driver’s license, “All I’m doing is following the plan we discussed at the meeting with the Reverend. He insisted that we do things his way, because it’s part of something bigger.”

“Well then, tell us about this bigger something so we can understand what this is all about and where we fit in and why we should do things your way.”

“It’s not my way, it’s the Reverend’s way. We agreed to this at our stage two meeting, didn’t you guys?”

“Sure, but we were talking about operations that were supposed to take out people. You’re talking about a little-bitty firebombing job. I think we should just shoot ’em all.”

This was from “Roy,” no doubt another stage name, Will thought.

“Guys, guys. I’m here on this exchange program, and some guy from here is over my way leading an operation over there. I have no idea what that is, but I hope he’s having an easier time than I am. What I understand about this is that we’re just supposed to put a serious scare into these folks. The deal is that they’re little more than hired guns. What the Reverend told me is that we’re saving elimination

for people who truly believe in what they do. He said that people like these lawyers just aren't worth the risk of a real hit. So we're just supposed to scare the shit out of them. Understand?"

"We understand, Bill, but, hell, there are other points of view in this thing. And since we live here, we know these people better and we know what it's going to take to be effective."

"Well, now, look here, uh, what'd you call yourself, 'Jim?'"

The fourth person there, a large, quiet fellow, had finally stepped forward.

"I agree with Bill here. And you know me well enough to know I know the people here at least as good as you do. And one of 'em is a pretty good guy, underneath it all. So I think we should just do things according to the Reverend's Plan. OK?"

Will let his face relax into a smile.

"Thanks, uh, well, thanks. I appreciate your support in this. I want to do things according to the Plan, that's all."

"You're welcome. And my name's Rudy. My real name."

He looked daggers at the other two.

"And, believe it or not, my real name's William." Will smiled even bigger. "So, look, Jim, Roy, this isn't supposed to be a democracy, the Reverend was real clear on that. But even if it was, we'd be tied. Doesn't that suggest we should go with the Plan?"

Jim and Roy were grumbling, looking at their shoes. But they were also nodding, reluctantly.

"So what is the Plan, anyway? I mean, the schedule and everything."

Jim was apparently going to make the best of it.

"Well, like I said, a firebomb in their offices. And that, of course, is where you guys are indispensable. Like you've been saying, you're from here and you know the turf and the people. I don't know squat, even where the offices are. Or much at all about them, for that matter."

Roy piped up, "They have offices, what they call a professional corporation, over on Fourth Street, a half block north of Main. In an old converted house. Kind of Victorian looking."

"Landscaping?"

"Lots of bushes, lilacs and so on. Big trees in the yard. Got some Mexicans who come and tend to it."

"They keep regular office hours? You know, nine-to-five sort of thing?"

"Seems like, except every now and then someone's there in the evening. Sometimes until late. Uh, see, I know about this because I drive by there a lot. And I notice things like this, especially about assholes like those folks."

"If it looks Victorian, it's probably wood siding, a frame house, right?"

Roy was nodding at Will's question.

"So that means we can torch it easily. I wonder if it's been upgraded with fire sprinklers inside and all that kind of stuff."

"Probably not."

Jim seemed eager to show off his knowledge now.

“The city code requires them for new commercial structures, but old buildings like this can be grandfathered in, so they don’t need sprinklers. Probably has alarms and all that, though.”

“So we want a fire that’s hot and fast, to burn as much as possible before the fire department can respond. I don’t suppose any of you have been in there?”

“I have.”

Rudy stepped forward again.

“Just offices, with office furniture. Wood, as far as I could see. Even the file cabinets. All very impressive, but wood. Probably burn like hell, if we get the thing started right.”

Will smiled again. “Well, I happen to have just the ticket. Any of you guys remember napalm? What we do is to set off several ignitions outside the house, around the base of where the wood siding is. And we get additional ignitions in through the windows, as many of the windows as we can. We set up the outside ones to ignite about fifteen seconds after the ones through the windows go off. The place will go up like a torch.”

“With four of us, how do we do more than four windows at once?”

“Got it covered, as long as you guys can throw a softball accurately. I mean, the house has only four sides, right?” Will’s smile was grim, now. “So tell me. What’s in this place that the Reverend’s so eager to burn up, anyway?”

“You don’t know? These people are an environmental law firm. They file lawsuits to stop logging operations and stuff like that. They’re funded by rich tree-huggers, so they’re like the hired guns the Reverend said they are.”

\* \* \*

## Sixteen

Jarvis Schoenfield couldn’t stand it any longer, so he finally opened up the armoire and turned on his computer system. Because the armoire was a family heirloom, he found a coaster for his glass of Jim Beam on the rocks.

“Timmy, you little son-of-a-bitch,”

Schoenfield had begun talking to himself in the days since Pickle and Mad Dog had been incarcerated,

“I sure I wish I knew where you are. And this thing better still work, or I’ll cut off your balls and fry ’em.”

The entire system was controlled through a surge-protecting power strip, so it all turned on and the boot-up process proceeded. Eventually, Schoenfield was looking at the familiar screen, a single instance of the X-S brand as wallpaper with several desktop icons superimposed. He found the one labeled “CBI” and clicked it, and then found the one labeled “Logins” and clicked it. While the computer accessed the CBI computer, the text file with his logins opened, and he reminded himself of the one for the CBI computer.

Eventually, a large window opened itself, and large block letters, formed by clever groupings of standard text, spelled out “CBI,” followed by “Colorado Bureau of Investigation, for official use only.”

This was familiar territory, so Schoenfield grinned with pleasure and took a long sip of his Jim Beam. Then there was the usual warning that was more explicit than the “official use only” declaration, how unauthorized users would be prosecuted and so on. Finally, and Schoenfield actually clapped his hands, there was the single word “Username:” followed by a pause. He typed in his name and then responded to the password prompt, holding his breath. He finally let it out when the system began printing lines of text on his monitor:

**Notice:** New filesystem protocols in effect. Evidentiary files to be cataloged in subdirectories via suspect last name and files with case. Restricted to qualified users.

**Notice:** New search utility in effect. Do “man findme” to learn about simple global searches.

After that was the thing Timmy called the “prompt,” a simple “CBIMain:” statement and a pause. Well, he thought, your wish is my command. He typed “man findme” as requested.

How convenient, he thought. It even gave clear examples, unlike some of the other man pages he’d tried, including an example on how to send the results of the findme command to a file for later printing.

He took a deep breath and typed “findme schoenfield”, and then set about finding Timmy’s instructions on how to move files from the CBI system to his own. Soon, the prompt was back, and, just to preview the results, he typed “more findme.out”, which would show the first several lines of the output file from the search on his name.

The files that began with labels like /etc/cases/evidence/schoenfield/bouldercase/... got his attention. And then the first of the login notices popped back into his head.

“Shit! This better not mean what I think it means. Now how the hell do I find that file? Oh, yeah, the change directory thing, ahh, ‘cd’.”

He tended to talk to himself more when under stress, and he drank more, too.

He changed to the bouldercase directory and found several files, including one called “van” and one called “radio”. “What in the world is all this? Jesus H. Christ, I hope Pickle didn’t get careless.”

The command “more van” produced a distressing result:

Boulder: cross reference Mercer files on same case.

Unsuccessful assassination attempt on the President (an FBI case) still open. However, vehicle used has been recovered and is linked to J. Schoenfield via hard evidence (ownership, among other things). Cross reference: .../schoenfield/bouldercase/radio.  
More to follow.

He was almost too afraid to look at the “radio” file, but finally did.

Boulder: cross reference Mercer files on same case.

Cross reference: .../schoenfield/bouldercase/van

Contents of van owned by J. Schoenfield suspected as used in assassination attempt included parts identified as radio-link components (rifle in attempt was radio controlled).

Several latent fingerprints suggest that individuals apprehended (cross reference: Mercer, David files) are not matched. NCIC search in progress. More to follow.

“Christ! Didn’t that idiot wipe the radio off? Did I even touch it? Oh, yeah, back in March or sometime, when he was putting it together.”

He could feel the sweat on his forehead.

“NCIC? What’s that? Oh, yeah, the national database for prints. Geez, am I in there? My Army record, maybe?”

If someone had asked him later, he would not have been able to recall his actions, but they were quite calm and calculated, under the circumstances. First, he returned to his home directory to download the findme.out results. Then he printed them on his home system and erased them from the CBI system. After that, he spent several hours systematically downloading each file that had his name in it, even the ones that referred to him only because of his role as Chair of the Senate Committee on Law Enforcement.

It was about 3 am when he was finished with this task, and then he faced a dilemma. Timmy had told him that he could erase anything he found on the computer. However, most things could be recovered from backup tapes, and erasing something would tell the CBI people that someone was hacked into their system. Files he created himself, of course, should be erased, like the findme.out one. But how could he just leave all of that damaging information there? But if he erased it, it would be recovered and they’d know.

Besides, this wasn’t evidence, it was information about evidence. What he really needed to do was to acquire and destroy the actual evidence. Maybe not the van, but surely those radio parts. But the FBI had the evidence. How could he get it from them?

The computer kept itself busy during his hours of work. Even if he had known to pay attention, though, he probably wouldn’t have noticed all the extra activity on his hard disk, or how slow his downloads were. He was just too distracted and worried. And drunk, toward the end.

\* \* \*

It was about 3:30 am when Steve Rutherford finally ran out of energy. He had driven over to Cortez, to Reid Tompkins’ office, and they had been discussing strategy, alternately arguing and agreeing, since about ten the previous evening.

About midnight, in need of strong coffee, they’d retired to the kitchen of the converted Victorian, now an interior break room used for coffee and snacks. Tompkins had lapsed into semi-consciousness an hour earlier and now was snoring peacefully, and Steve had retrieved a laptop computer from Tompkin’s desk so he could type up his version of the agreement they had hammered out.

Just as he finished up his notes and felt himself slipping into a nap, he heard a crashing noise from upstairs, like a window breaking. Then, in quick succession, there were a dozen more crashes. The commotion even woke up Tompkins.

“Huh? What’s that noise? What time is it?”

“Welcome back to the living. Sounds like someone, or several someones, don’t like the look of your windows.”

Steve walked to the nearest door and looked out.

“Holy shit! That office is on fire!”

He ran across the little kitchen to the other door and opened it a crack.

“The waiting room is, too! Move it, Reid, we’ve got to get out of here.”

He looked around the kitchen, frantic to find another exit. Tompkins remained seated, still too groggy to comprehend the problem.

“Reid! Get with it! The building is on fire and we’re in the middle of it.”

Steve spotted a fire extinguisher and grabbed it.

“Come on! I’ll see if I can put the fire down with this so we can get out of here. Come on, move!”

He took the extinguisher back to the first door and peeked out. The office, on one of the building’s corners, had two broken windows, and it was an inferno. He knew at once that escape through there would be hopeless. By the time he made it back to the waiting-room door, Tompkins was standing, but still clearly half asleep. He was looking helpless and confused. Steve had the distinct feeling that the temperature was rising.

Steve opened the waiting room door a crack and saw that the fire there was confined to an interior corner. Something had set the Victorian couch ablaze, and flames were creeping up the wall behind it. An end table, covered with magazines, was in flames, and the fire had spilled onto the floor as well. Steve readied the extinguisher and motioned to Tompkins to follow. He dashed into the room.

It was only when he reached the front door that he noticed its window was smashed. A thought flickered through his mind that this must have been where the fire in this room came from. He also noticed that the large covered wood porch was burning, flames licking up the columns to its roof.

He tried the door. The knob turned, but it wouldn’t open. Must be a deadbolt, he thought. Looking down, he saw that the locking mechanism required a key. He turned to Tompkins.

“What the hell kind of place is this? We’re locked in!”

Tompkins looked sick.

“We worried that someone would break the glass, reach in, and just unlock the door.”

He patted his pockets and looked ever sicker.

“Shit! My keys are on my desk. I remember leaving them when I came in earlier.”

He ran to a door in the wall to his right.

“Wait! Feel the door!”

Tompkins laid both hands flat on the door and jumped back as if shocked.

“It’s too hot to touch.”

“Then we’re not opening it.”

There were windows on either side of the door, and Steve could see the burning porch through each. But the one on the left appeared to have more fire showing, so he looked more carefully out the one to the right. Maybe, just maybe they could make it that way.

“Help me!”

He was struggling with a large easy chair. Tompkins hustled around to the other side of it and stooped to pick it up.

“We’re throwing it through the right-hand window, right?”

Steve was sweating not only from the exertion and stress—it was becoming downright hot in the little room.

“On three!”

They picked up the chair and swung it back and forth toward the window, letting it go with an extra heave. It broke the lower pane of the double-hung window, but it was far too big to fit through the opening and so it bounced back into the room, blocking access. Unbelieving, they both just stared at it for a few seconds. The fire had spread into about half the room, and their return to the kitchen was now impossible.

“Move that damned thing!”

Steve rushed to a straight-backed side chair and picked it up.

Tompkins, with more strength than he knew he had, heaved the easy chair aside, and Steve smashed the side chair into the window, shattering the remains of the bottom pane as well as the top pane and the wooden frame. Then he ran the legs of the chair around the frame, clearing out hanging shards of glass. The window was clear, but flames from the porch came licking inside the room.

Steve looked around for the fire extinguisher, found it by the door, and began blasting the flames on the porch outside the open window with its white fog. They responded grudgingly, backing away from the powder when it hit them, then recovering and regaining ground almost immediately. The noise from the porch included the whooshing of the fire and a considerable cracking and groaning of the structure itself.

“We’re going have to run for it. Follow me as close as you can!”

Steve blasted the flames just outside the window and stepped out onto the porch. As quickly as he could, he sprayed a path toward the side of the porch, where the flames were less intense. Just as he reached the railing, he heard a scream behind him.

Turning, he saw that Tompkins had broken through the burning and weakened floorboards. One foot had punched through, and he was up to his knee in the porch, fire licking at his crotch. He tried to pull free, but the weight on the other leg put it through, and he was suddenly up to his waist.

There must have been fire under the porch as well, because the draft created by the hole Tompkins made caused a chimney effect, and Steve was suddenly looking at a human torch. Even though Tompkins’ mouth was open, there was no more screaming. But Steve probably wouldn’t have heard it anyway, as he was mesmerized by the terror in Tompkins eyes.

He was staring in shock at his rival for Lolly’s affections, thinking that no one deserved this, when one of the roof beams gave way with a loud snap. His world went black.

\* \* \*

Tim Langer’s first task each morning was to check for messages from the daemon he’d installed on the CBI computer, and he was finally rewarded. Even though the message was coming from himself, and its contents were therefore no surprise, he felt a thrill when he read “bait taken, trap sprung.” He changed to the directory he had set up to receive the files from the Senator’s computer and was astonished to see how many there were. The Senator, it seemed, was using his computer far more than Tim would ever have thought.

Then it dawned on him. As an unsophisticated computer user, the Senator didn’t do computer housekeeping. Files were stored where the computer wanted to store them, and, because these were all simple text and word processor files, the computer wanted them all in the same place. So, instead of

differentiating among files by directories and subdirectories, the Senator was forced to use increasingly complex names. But that meant that it should be possible to find the interesting ones, or at least for Annette to. He decided he should call her, even if it was still early.

But Annette was in her office, having been roused out of bed about 5 am by a courtesy phone call from the Chief of Police in Cortez. A fast-moving fire, probably arson, had completely consumed some legal offices, and there were two casualties. Although they were both burned beyond recognition, the positions of the bodies suggested that they were killed trying to escape the burning building. And if the fire was found to be arson, the deaths would become murder. Identification of the victims would require dental records.

So when her telephone rang, she thought it would be more information from Cortez. Tim Langer's voice surprised her, especially because of the excitement it conveyed.

"Annette! You're in. I thought I'd be leaving a message this early. Guess what? Last night we scored! Uh, I mean, the Senator took the bait and now I have copies of lots of files from his computer."

"Good morning, Tim. Great work. Does this mean that he's found the information we wanted him to?"

"Um, I don't know yet. The first thing I looked at was what got downloaded to me, from his system. Ah, let me look—where is it?—at the activity log from his session. Here. Ah, yes, it looks like he took it hook, line, and sinker. He used the search alias I set up to find files involving his name, and then he grabbed all of them. I can replicate his actions exactly to see what he got besides the stuff we put there."

"And you say that you now have many of his files? I mean, files from his system? How did you know where to look? And what to look for?"

"A hunch. There are a couple of default directories where computers like his store things automatically. I figured he wouldn't be smart enough to save files in special places. So I just had your system get everything in these default directories while he was logged in and looking at the stuff we put there. There are lots of files, some with pretty weird names. Like this one, I'll have to spell it out: r-f-h-underscore-o-p-s-2, numeral two. Or this one: a-r-f-underscore-i-d. Others are easier to figure out, though."

"Is it easy to open these files and read them? I mean, easy enough to do one now?"

"Sure. They're mostly plain text files. He didn't like fancy word processors. But a couple are Word documents."

"How about that r-f-h whatever one?"

"Sure... um, it's a list. It starts out with a bunch of stuff under the heading 'priority,' then has another heading called 'chronology.'"

"What's on the 'chronology' list?"

"It says 'Cortez, law firm,' then 'Creede, ranger,' then 'Montrose, DOW office.' And more stuff like that."

"DOW office as in d-o-w?"

"Right."

"Tim, this is incredibly important. What information about these files did you get from Schoenfield's computer?"

"Well, the file contents and directory information, the usual stuff."

“One of my programs tells me when files were last modified, probably because I set it up that way. Do you have this information about Schoenfield’s files?”

“What I did was to capture a long listing of the complete contents of his hard drive. It’s listed one line per file, so it goes on and on and on, lots of pages. But it’s all there, including all the system files and the executables and so on for the programs he has.”

“But you downloaded only some of his text files, his data files.”

“Right. Why’s this so important?”

“First, can you tell me when the file you read from was changed last?”

“Ah... it looks like a couple of days ago.”

“Thank you. That particular file may just be evidence of Schoenfield’s being part of a murder conspiracy. That’s why it’s important.”

“What murder?”

“It’ll be in the papers tomorrow. Last night, it looks like someone torched a law firm’s offices in Cortez, and two people were killed in the fire. Don’t know who yet. But if it’s arson, the deaths are murders. And Schoenfield has it on what appears to be a planning list. And he had it there two days ago.”

“Wow. So we’ve got him?”

“We will have got him when he’s behind bars without bail. But this is another step in that direction. Can you bring all that stuff over? Or would it be easier to e-mail it to me?”

“If you’re using a CBI system, I’d rather not e-mail it. If he finds his own stuff somehow on a CBI system, it’s all over, and I bet I can find more next time if we don’t get him suspicious.”

“You’re right. Well, I’ve got one of those new, high capacity Zip drives on a system that’s not on the network. Will that work?”

“I’ll be over to see you later this morning.”

\* \* \*

Annette hadn’t told Tim the name of the law firm that had been burned, because it wouldn’t have meant anything to him. And, really, it didn’t mean anything to her, except that it connoted environmental law. EarthLegal Associates just didn’t sound like the usual small-town divorce and probate group. She knew that Reid Tompkins worked for an environmental law firm, but the connection was tenuous.

She’d just have to await the results of the identification process. Maybe the victims were the arsonists, after all. Sheriff Wertlinger had described the Creede operation as being composed of losers. Maybe the Cortez one was also. She made a note to call Wertlinger to let him know that his ranger was next on the list.

What did Tim call that file? She thought hard. Was it “rfhops”? “rfh” then “ops”. As in operations, no doubt. But the “2”? Did that imply a “1” on another such file? What would that have in it?

She was snatched from her musing by a knock and the appearance of Derek Petersen in her doorway.

“Annette? You wanted to spend some time on the budget today, right? Is now a good time?”

And it occurred to her that it was a better time than most, actually.

Two hours later, she was feeling much better about her understanding of the workings of the CBI budget process and how her office received its allocation. But, after two hours of budget minutiae, she was also ready for something else.

Tim showed up just in time. He waltzed into her office and, with a big grin and a flourish, pulled a Zip disk from his shirt pocket.

“Did you know that, way back when, twenty megabyte hard drive packs, the removable ones, were about the size of a sofa cushion? And that the gizmos you put them into, the drives, were about the size of an easy chair? Now we have more than ten times the storage on this little thing, and the drive itself is smaller than a portable CD player. Ta da.”

He laid the disk on her desk in front of her.

“Amazing. I mean, that miniaturization, plus it’s amazing how easy it was to get this information from Schoenfield. Um, where else is it? His computer and yours, I know. Any place else?”

“Well, I had the CBI computer erase all this from itself after it transferred the information to the computer that I’m using at the university. It’s not really my computer. And I found a file where the Senator keeps his logins and passwords, organized by what computer they’re for, and there aren’t any FSU computers on it. So, yeah, the only places where this information is are this disk and the two systems, his and the university’s.”

“How much have you looked at it?”

“Not much. That file with the logins. The file I read you. The directory with the file names.”

“I’d feel better if you didn’t look at it any more. In fact, it would be better to erase it from the university system.”

“Well, are you sure? Then there would be only the Senator’s computer and that disk. I know that people with systems experience like me are pretty paranoid about backups, but it’s for good reason. Computers die and stuff gets lost.”

“I’ll copy this disk onto my non-networked computer and then make a copy of it onto another Zip disk. Is that good enough?”

“OK. Just keep the two Zip disks in separate places.”

“OK. And you’ll erase everything from the university computer? Is this one of Jamie’s systems?”

“Yes and yes.”

“Look, Tim, I know you’re probably curious about all this stuff from Schoenfield’s computer. But as someone with systems experience, you should know that curiosity isn’t a good enough reason to go snooping into someone else’s stuff, even though you’re able to do it. And this particular stuff is like dynamite, it could blow up on you. Even though it’s just information, Schoenfield seems to have quite a network of operatives. You got lucky with those two a couple of weeks ago. The people in Cortez last night didn’t get so lucky. The less you know about all this, the better off you’ll be. So I want you to go back to the university and erase all of this, or at least all of it that isn’t needed to get more information next time. I guess you’ll need to keep some in order to look at the directories, huh?”

“There’s so much stuff and I’m so busy now that I really don’t have time anyway. But, you’re right, I do need some of it. I’ll erase the rest, promise.”

“And I’ll get right on examining this. You’ve done us a great service with this, Tim. I think Hal, that is, Dean Weathers, will consider you to be rehabilitated. Well, this along with the tutoring. How’s that going, by the way?”

“Great. Jamal’s a natural. Which reminds me, I’ve got an appointment with him. Got to run.”

Smooth kid, Annette thought. I think I’ll call Jamie McFarland and make sure that stuff really does get erased.

\* \* \*

It was not until mid-afternoon that Jarvis Schoenfield finally woke up. It had taken him another hour and an additional half-bottle of bourbon to get to sleep, but then his body’s defenses kicked in and kept him asleep for a good ten hours. He woke up groggy but, to his relief, not hung over. He also woke up worried. It took him only a few minutes to return to his computer and the problem of the information in the CBI files. He started making notes.

Four hours later he called downstairs for a meal to be brought up, and he also asked for the Reverend. Michael Oswald was down in Norwood, but he would be summoned and available within the hour, he was told.

Schoenfield was just finishing the food when there was a knock.

“Yeah?”

“You asked me to come up, Senator?”

Oswald looked peeved, but Schoenfield ignored it.

“Have a seat, Mike. Pour yourself a drink, and get me one, too. We’ve got trouble, real trouble. We need to talk.”

“Now what? And, say, I heard that the Cortez job went off great.”

“Yeah? That’s right, it was supposed to happen last night, wasn’t it? I was up most of the night and slept all day, so I haven’t heard anything. What happened?”

“Burned to the ground. I’ve heard they found a couple of bodies, not identifiable, but all our guys are accounted for. Cortez cops are clueless so far. Keep your fingers crossed.”

“Wonder who it was. Well, no matter. Anyway, we’ve got to talk about the information I got last night. Remember how Timmy set me up with a way to get into the CBI computer? Well, I’ve been staying away from it since Timmy got away from us. But last night I finally called it up. They have a new set of files with evidence information that I found. About me. It concerns that Bill Campbell hit and the thing in Boulder. For that one, it looks like the FBI has evidence implicating me.”

“How’s that possible?”

“They found the van and traced ownership. Some idiot forgot to transfer the title to the foundation. And there’s something about prints on parts for a radio controller.”

“Hmm. Well, the ownership isn’t any more of a problem than Pickle and Mad Dog are—you know, rogue employees and all that. They took the van and you didn’t know. But prints on controller parts are different. Did you ever handle any of Pickle’s stuff?”

“Hell, I don’t remember. I mean, sure, some of it. But I don’t remember about radio parts.”

“Well, look, we can take the same approach with this as with the van. It’s part of the ranch, you live here, you use it occasionally. One time there was this stuff in it and you had to move it to put, well, whatever you were putting, say furniture, in it. So you must have touched it without knowing what it was. Then these rogue employees went off and did all this stuff that you know nothing about. This isn’t really any worse than having Pickle and Mad Dog picked up.”

“Yeah, I thought of this angle, too. But the FBI worries me. Anyway, we’ll figure out how to get through this. But there’s other stuff I want to talk about, stuff I found on the CBI computer. For one thing, it looks like that bastard Charles Shure was scamming the public, and us, when he had that press conference about his great-uncle’s journals. According to what’s in the files, there’s valuable information in there after all. Information he’s going to use to make tons of money, the little weasel.”

“Like what?”

“Like, Heinrich von Scheuer discovered that there are certain genetic traits in different populations he was working on. The CBI information is sketchy, but apparently von Scheuer provides hints about isolating these traits. With modern technology, you know, gene cloning and all that stuff, it should be possible to develop pills to let people change themselves. Or for parents to custom-make their kids. Or for bureaucrats to put stuff in the water supply to control the population.”

“What was all this doing in the CBI computer? And what’s the connection to you?”

“Well, the connection to me is just that my name was there, because I gave, or they think I gave, Shure the journal. So I found the computer file by doing a computer search on my name. And why it’s in there seems to be that the CBI is concerned about misuse of these genetic supplements, or whatever they’re called, about unauthorized experiments and so on. It’s really an FDA problem, but CBI’s worried because it’s in Colorado.”

“So, what kind of genetic traits are we talking about here?”

“There’s not a lot of detail in the files. But, look, von Scheuer was at a prison camp and so he had lots of Jews to work with. One of the things mentioned is mathematical abilities. Everybody knows that Yids can do interest rate calculations in their heads. And look at all those physicists that invented the atomic bomb. And even Einstein was a Jew, right?”

“Well, I have to say, Jarvis, that it wouldn’t hurt the American people to have better math skills. I mean, I get the wrong change all the time in stores because people don’t know how to add and subtract, even.”

“And you want the government to go putting Jew genetic supplements in our water supply? I may have to shoot you right here, Mike.”

Schoenfield picked up his glass of bourbon and swirled it thoughtfully.

“I didn’t say that, Jarvis. Geez, you’re uptight these days. Look, all this sounds pretty speculative. It’s not clear that there’s anything to be done about it right now. We should probably just keep our eyes open. You’ve got access to the CBI computer, right? Well, if they’re worried about this, they will update their information regularly. So just keep up with their latest stuff, OK? Or did you have something more in mind?”

“Well, I was thinking about a stage two operation of some kind.”

“Against UNELECO? Whoa. They have security, good security, remember? And all we have are little groups of civilians who are playing out their ninja-wannabe fantasies.”

“Yeah, you’re right. Well, how about kidnapping Charles Shure again?”

“What would that accomplish? All we could do is get a ransom, and we don’t really need money.”

“What if the ransom was to make them go public with this gene supplement stuff?”

“Hmm. Now that has possibilities. Let’s think about this more.”

\* \* \*

## Seventeen

“Thank you for these breakfasts.” Annette was trying to be as sincere as she could, but she was sure it sounded corny, or silly, or just plain stupid. They were again sitting on the deck, basking in the glow of the late July morning sun and of *huevos rancheros*, among other things, finishing the papers, and waking up with the summer morning.

Hal looked up and smiled in his mischievous way.

“You mean, as opposed to that lovely pre-breakfast interlude, or to dinner, or what?” She wadded up her paper napkin and tossed it at him.

“No, I mean thank you because otherwise I’d be at the office already slaving away. And we both know I put in enough hours as it is, without going in early. Besides, I probably do better work this way.”

“Well, you sure did better work about an hour ago...”

She was looking around for something else to throw, so he continued in order to distract her from throwing her fork.

“I know what you mean. I figured it out for myself a long time ago. Aside from going to work more relaxed, starting mornings slowly gives me time to think about the day ahead, so when I get there I’m ready for action. I hate it when John or somebody else calls an early-morning meeting.”

“Sometimes, I guess like today, I also use it as an excuse to put off what I really don’t want to do. Today I get to talk with Lolly Markham.”

“Lollipop? She of the now-decimated SCREW? How is she, anyway?”

“I’m told she’s not so good. Her lawyer hasn’t called for some days, of course. I guess she doesn’t know that his was one of the bodies found in that arson fire last week.”

“So you get to tell her?”

“That’s the plan. And I also get to tell her about the other one, that FSU assistant Steve Rutherford we talked with a while back. Remember?”

“Rutherford? He was there, too? I guess I didn’t know that, or if you told me I forgot.” Hal looked shocked.

“I just found out yesterday. It took some time to ID the bodies. We’re talking very well done, here. Really crispy. But we know who’s responsible, except for some of the small fry. When we bring in the leaders, we’ll get them, too.”

“Steve Rutherford, damn. Well, I guess he just got himself in too deep. I wonder how they’ll take this in the sociology department. Maybe I should call someone.”

He shook his head and took a deep breath.

“So, yeah, you talked about that operations list you found on our esteemed Senator’s computer. I guess that’ll help you get them. What about that next job, the one over in Creede?”

A wide smile emerged on Annette’s face.

“It fell on its face, largely because we knew it was coming. They, I mean, another of these little bands of losers, were going to try to kill a Forest Service ranger by sabotaging a bridge. She was

supposed to drive over this weakened bridge, fall into the creek, and drown. Unlike the arson in Cortez, this was supposed to look like an accident.”

“A Forest Service ranger? Why?”

“Well, apparently she’s been pretty active in her spare time on behalf of preservation groups. So this bunch of crazies decided to make an example of her. Although if it had succeeded in looking like an accident, I don’t know how that would have worked. Anyway, that was the plan. The sheriff over in Creede, Ralph Wertlinger, had an informant planted, though, so he knew about it. And on the appointed evening, the ranger, her name is Virginia Adams, I think, just stopped her truck at the bridge and waited while the band of crazies was rounded up by the sheriff’s guys. I’m told that they were all wearing black hoods, and one of them, a short guy, started yelling ‘Shut up number one’ when one of the others started trying to explain. It seems they were calling each other ‘number one’ and ‘number two’ and so on. Talk about losers.” She shook her head.

“Sounds like what we used to call going to the bathroom when I was a kid.”

Annette burst into a fit of giggles, so he went with it.

“You know, stuff like ‘Excuse me number one, but I need a bathroom break.’ ‘You do? Number one or number two?’ ‘I’m number two but I need to do number one.’ ‘But I’m number one.’ Like that old Abbott and Costello ‘Who’s on First’ routine. Wish I could have been there.”

She finally got control of herself. “That’s why I love you so much. You make me laugh.”

“Yeah, well, it’s a good thing you’re a pushover. But I’m glad. So, you’ve got everything under control except for the Big Fish. What’s your strategy with them?”

“We’re letting some seeds we planted grow. Tim Langer’s been getting great information for us, and Schoenfield seems to be snapping up everything we put there for him to find. This means that he’s aware of the FBI’s interest in him, and our interest in him, too. Which means that he’ll be keeping his nose pretty clean, I expect. What we want to happen is for him to get interested in the UNELECO information we planted. It’s supposed to push his Aryan Rights buttons. We’ll see.” Annette shrugged.

“John and I have been talking about how to live without the guy, and we’ve decided it’ll work fine. He’s the ranking member of the Senate’s Education Committee, but the guy behind him is even more sympathetic to our needs. He’s from Greeley, and he thinks that the big schools, CU in Boulder and CSU, get too much state funding, that the small schools like UNC in Greeley, and us of course, should get more.”

“Should they?”

“Well, I’m not unbiased, of course.” Hal, in fact, positively oozed bias, and he grinned. “But I can tell you that we, and UNC and the other smaller universities, spend a lot bigger percentage of our state tax support on teaching, instead of subsidizing research so much. So if the taxpayers want instructional bang for their tax bucks, we’re a good choice for them. But do you think you can get both Schoenfield and the other guy, Tim’s uncle?”

“Oswald. Michael Oswald. Pretend preacher who’s really a lawyer, a defrocked lawyer it turns out.”

“You defrock preachers. Lawyers get disbarred.”

“Yeah. Whatever. But he’s been leading these Resources For Humanity meetings and planning sessions, according to an informant. And so far the plans coincide with the stuff on Schoenfield’s computer. And that is now murder one caliber stuff, as well as a lot of conspiracy stuff. Not to mention a link to the Presidential assassination attempt. Oh, and I bet I didn’t tell you. I finally figured something out from the information we got from Schoenfield’s computer. Tim told me about a file with a weird

name, RFHOPS2. It has that Cortez fire and the Creede thing with the ranger in it, along with lots of other things. But I figured that there should be an RFHOPS1 file as well, but there wasn't. So I kept looking at these files, there are hundreds of them, and finally ran across what I was looking for. It was called PHASE1OPS, and it hadn't been changed since late last April. It has a list of all the deaths in our environmentalist portfolio, plus a couple we didn't know about. It looks like those two guys, Mercer and David, who the FBI has on the assassination charge, were responsible for all of them, and that Schoenfield was the mastermind."

"Was there a file about the assassination attempt?"

"Oh, right. Called PREZOP. Plus a big long essay about why the President deserves to die. Plus other essays on how Aryans are superior; well, no, actually they're about how non-Aryans are inferior. He really slanders Latinos. This guy's way over the edge."

"So why don't you just arrest him? It sounds like you have enough information to charge him with all sorts of stuff."

"There's concern about the admissibility of the information. Even though Tim was the system administrator for Schoenfield's computer, it wasn't really formal, so it may not have been kosher for him to download all of Schoenfield's files. Also, because we got them over the internet, it's not clear that we can actually prove they're Schoenfield's. So we're going to try to catch him actually doing something. Hence the business with UNELECO."

"What's going to happen?"

"Good question. Right now, I've got to get off to work, finally."

\* \* \*

Along with the usual paperwork, Annette's main task for the day was the visit to Lolly Markham. Lolly, according to Annette's information, had been demanding to see her lawyer, but Reid Tompkins was, of course, nowhere to be found. Lolly had been offered the services of other attorneys, but she was set on Tompkins.

In order to make her visit with Lolly as productive as possible, Annette decided to have someone from the Durango Public Defender's office accompany her. She called Mimi Olive, whom she knew from an earlier case. Mimi was a good advocate for her clients, but she also had a pragmatic outlook. She briefed Mimi on the phone and they agreed to meet at the county lockup after lunch.

Mimi and Annette were waiting when the guards brought Lolly into the interview room. She looked, Annette thought, at least ten years older than she had just a month ago, when Annette first arrested her. But she also looked defiant. Kid gloves time.

"Lolly, you know the drill here. Everything is recorded and video-taped. I want to introduce you to Mimi Olive, from the Durango Public Defender's office."

"I don't want a new lawyer, I want my lawyer, where the hell is he?"

"I know you want to be represented by Mr. Tompkins. You don't have to be represented by Ms. Olive. I asked her to observe this interview to ensure that your rights are protected."

"Great. Fine. Really. But where's my lawyer?"

"As you know, I've talked with Steven Rutherford about the organization you folks formed, the thing called SCREW. It started with six of you. You know that David Wellington was killed back in the middle of June, right?"

Lolly, still looking defiant, was nodding, so Annette forged ahead.

“Well, now fully half of the original members of SCREW are dead. Both Steven Rutherford and Reid Tompkins perished last week in an arson fire at Reid’s legal offices. It appears that they were attempting to escape the fire but didn’t make it. Whether their deaths were intentional or accidental, in terms of the arsonists intentions, isn’t clear. This is why Reid hasn’t been to see you. Understand?”

Lolly’s defiance had evaporated, and she looked completely deflated, sagging, pale, slack. And even older. Then she collapsed in tears.

“Reid! Dead? N-noooooo...”

Annette and Mimi let her grieve, and someone on the other side of the one-way mirror had the empathy to bring in a box of tissues. Finally Lolly looked up, pleading.

“We were going to be married. I’m going to have his b-baby.”

Annette turned to Mimi. “I didn’t know this, FYI.”

Then she turned back to Lolly.

“Lolly, now that you know where things stand, I want to urge you to cooperate with us. Perhaps we can use information you have, even if it’s information that you don’t think may be important, to convict Reid’s killer or killers. Mimi, of course, will advise you to look to your own situation and your own defense first, and that’s appropriate advice. And you certainly don’t have to tell me anything. Also, Mimi doesn’t have to represent you. But she’s here if you’d like to talk with her. We can move you both to a private room—no cameras or windows or microphones—if you’d like to talk with her.”

“They were burned to death? Oh, dear God. Do you know who did it? Have you caught them?”

“We have an idea of some of the people involved, and we know where to find them. We’d like to get all of them at once. That’s where you might be helpful.”

“What do you want to know?”

Mimi jumped in instantly. “Now, Lolly, you don’t have to say anything at all, now or ever. Maybe it would be in your best interest for you and me to talk privately about this. Ms. Trieri has told me that you were originally charged in connection with a fire in Utah, and now that you’re here because of a minor marijuana charge while you were out on a recognizance bond. And for some driving-related charges. This is all small-potatoes stuff, and if she wants information from you, we should be able to get you immunity. At least it’s worth a try.”

She looked at Annette, eyebrows raised, questioning. Annette kept her poker face intact. Lolly’s face brightened perceptibly.

“Is this true? Could I get out of here if I cooperate?”

“I’m not empowered to make deals. All I can do is to put in a word with the right people, and they can try to influence the District Attorney.”

Annette was, of course, understating her ability to influence matters. Mimi knew this and just looked at the ceiling, shaking her head gently. But Lolly was not at all aware of how things really worked, so she took the bait.

“Please. I’ll do anything, I’ll cooperate fully. I need to be out of here. All I’ve got now is Reid’s baby, and I need to take care of myself, to get healthy, for him. Or her.”

She smiled and patted her tummy. Mimi, however, wasn’t finished.

“Ms. Markham. Your attention, please. There’s a right way and a wrong way for you to do this. If we do it the right way, your ability to be a good mother will be enormously enhanced. OK? First, you need to ask me to represent you.” She paused, waiting.

“Oh. Well, will you please represent me?”

“Yes, I will. Now then,” she turned to Annette, “Ms. Trieri, my client, Ms. Markham, will cooperate fully with you in return for full immunity for everything for which she is now charged, and for other matters in connection with these charges, and in return for her immediate release. She will agree not to leave the region and to be available to you for information and testimony if required. We need to reserve the right to protect her in the case of testimony that might lead to a dangerous situation for her. Also, if you find that she is not cooperating fully, you may consider this agreement to be abrogated. Further, this agreement does not apply to her future behavior. Because this is all on tape, I consider it as binding as a written agreement.”

Again, she raised her eyebrows in question.

Annette smiled. “You work fast. Lolly, do you understand all that?”

“I think so. Um, Ms. Olive, what do you mean by this agreement being abrogated?”

“I mean if you don’t hold up your end, by cooperating fully, the deal’s off and she can put you back here. It’s the price you pay for getting out of here and having charges and so on dropped.”

“Oh. Well, it sounds OK with me.”

“OK. Done.”

Annette looked up at the mirror and gave a thumbs up to the camera she knew was there.

“Let me ask one quick question now, and then we’ll get you out of here. You were driving a car in Monticello, Utah, the night of the lumber mill fire. Did Rutherford and Tompkins start that fire?”

“Yes, but it was Steve’s idea. Reid wasn’t in favor of doing something so drastic so soon.”

“Thank you. I’ll pass along to the Utah State Patrol and the San Juan County Sheriff’s office that we have eye-witness testimony that the fire was started by two individuals who are now deceased. That will let them close the investigation. We will, of course, have questions for you. One more question. Was that Flip Chester’s pot that was found in your car?”

“Absolutely, the scumbag. He must have ditched it when the sheriff stopped us. I’m never having anything to do with him ever again.”

“I thought so. We’ll deal with him appropriately. And, Lolly?”

“Yes?”

“Good choice going with Mimi. She’s top-rate, and she’s free. Anyone else would have charged you \$500, minimum, to make this deal.”

Amazing, Annette thought, how Lolly didn’t look quite so old any more.

\* \* \*

For completely different reasons, Tim Langer was also amazed. Astounded even, for Jamie McFarland had actually asked him out! They were going to walk downtown for dinner tomorrow.

But this meant he’d need a wardrobe upgrade. Baggy pants and over-sized tee shirts, with beat up tennis shoes, were OK for hanging out, even for his tutoring job. But this was different, it demanded

something more sophisticated. So he'd borrowed a car to drive down to the mall to go see what they had at Mervyn's.

The parking lot, as usual, seemed to be full, so he had to park on the wrong end of the mall and walk. But his mood was so ebullient that it didn't matter. He kept thinking to himself about how he should act—be very cool, was his mantra—and where a dinner date might lead. He was so absorbed that he didn't notice the car that had pulled up beside him as he walked through the parking lot.

"Hey, Timmy! Long time, no see. Where ya been lately?" said a sadly familiar voice.

He turned in surprise and fear.

"Un-uncle Mike! Ah, I've been around. Haven't seen you lately, either. What's happening?"

"We need to talk. Get in."

"Get in? Oh, well, I'm on my way to something important, so how about some other time?"

"Timmy, don't make me stop the car and get out. Just walk around here and get in. Right now!"

Even though his instincts were shouting at him to run, Tim went on autopilot and got in the car next to Michael Oswald.

"Good job. I could tell you were thinking of running on me, but this was the right thing to do. You understand why, don't you?"

"I wasn't going to run, Uncle Mike. Honest. I was just surprised to see you, that's all. I haven't seen you for a long time."

"Not since before you got caught trying to do that job for the Senator, I think. How did that work out? Did you get in trouble?"

"Well, um, yeah, of course, some. But it's OK. I told them that I was just curious about that company. UNELECO, that's it. Because they do so much stuff with computers and military stuff. They caught me because I was using a university computer. I had to, Uncle Mike, because my computer network connection at home was just too slow. The UNELECO computer security is really, really solid, and I needed a fast connection. So they caught me."

"What'd they do to you?"

"Aw, just a slap on the wrist. They made me promise not to do it any more and they're making me tutor this guy who needs help with a computer science course. An athlete who needs his grades up."

"Well, the Senator needs your help more than ever. Did you learn enough about the UNELECO system before that you can pick up where you left off? Without the university computer? This is really important to the Senator, Timmy. And to me. And you owe him, and me. Pickle and Mad Dog are in jail because of you."

"Hey, that's not fair, Uncle Mike. It wasn't me, it was the guys at the dorm. They didn't like the way Pickle was treating me, and they stood up for me. And Pickle and Mad Dog just got in over their heads. These guys are athletes, and they don't take shit from anybody. Say, where are we going? I have to go shopping and then do some other stuff."

"We're going to drive around until I decide to take you back to your car. Don't worry, I'll get you back there. But I need to get you to agree to help the Senator get in to the UNELECO computers. It's lots more important than it was before."

Tim knew he shouldn't agree too easily, but he didn't want to spend any more time than absolutely necessary with Oswald.

“But I’m out of ideas, Uncle Mike. That’s why I needed the university computer, for its fast network, so I could get into the UNELECO systems by brute force. That takes a lot of bandwidth.”

“Oh, I’m sure you can find some new ideas, Timmy. You’re a bright kid. That’s why the Senator’s been paying you so well. And keeping your little secret.”

“Uncle Mike, I wish you’d believe me. I didn’t have anything to do with that. Someone tampered with her saddle.”

“Timmy, Timmy. Who should I believe? My nephew, who I remember as a little kid always telling lies? Or Senator Jarvis Schoenfield, pillar of the Colorado Senate, owner of the biggest ranch in the Four Corners? Hmm?”

“I know, I’ve heard this before. So it’s do what the Senator wants or I’m blamed for her death, right? I don’t know if I can do it, but I guess I have to try.”

“Good thinking, Timmy. I’m sure the Senator will be most pleased.”

To Tim’s relief, he noticed that the car was headed back in the general direction of the mall.

“Well, all I can say is that I’ll try. Does the Senator have a timetable I need to know about?”

“This one is urgent, Timmy. As soon as possible.”

“OK, but you’ve got to buy me time. I’ll start the brute force attack and work some other angles also. But it’ll just be slower because I can’t possibly use a university computer again. OK?”

“Results, Timmy, that’s what the Senator wants. And you want to please him, don’t you?”

He slowed the car, in more or less the same place that he’d picked Tim up.

“I sure do, Uncle Mike. Can I get out now?”

“You bet, Timmy. Stay in touch. OK?”

The smile reminded Tim of a shark’s.

He breathed a sigh of relief as the car drove slowly away.

Then he headed for the nearest telephone.

\* \* \*

Bingo! was all Annette could think of when she and Tim were finished with their phone conversation. She immediately dialed Charles Shure’s direct line and was surprised to hear his voice after only two rings.

“Chuck? Annette Trieri. I think we got him. Schoenfield, I mean. He’s asking our guy, our computer hacker, to go back to trying to get into your computers. It must mean he’s fallen for that strange information we posted about the Nazi journal.”

“Ha! Wonderful, just wonderful. We’ll cooperate in every way we can. Hang on a second.”

Annette heard various computer-generated telephone noises, and then a new voice came on the line.

“Peters, computer security.”

“Phil, this is Chuck Shure. I’ve got Annette Trieri, Colorado Bureau of Investigation, on the line with me. Annette, Phil is head of our computer security group. Phil, remember that hacker we caught using the Frémont State computer systems trying to brute-force his way in a while back?”

“Sure do, Mr. Shure. As I recall, you told us not to worry about it because it would stop, and it did.”

“Yep. Annette was involved at the time, and she’s why it stopped. What’s happening now is that it’s going to start again. But this time, Phil, I want you to work with Annette, or whoever she has talk to you, her computer person, and let the hacker succeed this time. Maybe we can even help him out. OK?”

“Uh, Mr. Shure? This is pretty irregular for us, and raises lots and lots of questions, particularly with respect to our classified systems. Can we talk about this?”

“Mr. Peters? You and I should talk about this first, because I think there’s far less here than you may imagine. And I bet there’s nothing for you to worry about. Then you can take up Chuck’s time if you really think it’s really necessary.”

Annette wondered if her use of Shure’s first name would have any effect on his employee. But she didn’t have the chance to see.

“She’s right, Phil. I’ll give her your number and you can expect to hear from her. Thanks.”

“Yes, Mr. Shure. Uh, nice talking with you, Ms. Trieri.”

And he went away. At least, she thought, he got my name right the first time.

“Annette? I’m sure that Phil will cooperate. His job is to be paranoid, though, and he’s good at it. Being paranoid, that is. Well, his job, too.”

“He’s also right, especially because of your classified systems. But I think all we need to do is to set up a way for Schoenfield to snoop around in a little area we set up for him. He doesn’t need access to the whole system, like he has on our CBI computer.”

“He has access to your entire system? Geez.”

“Well, it got set up in the real hacker mode, with a login with root privileges. That’s jargon I’ve learned, and I’m rather proud of it, thank you. It means that the login has system administrator powers. They’re turning me into a computer nerd. Anyway, we don’t need that for your system. All we need is a login that gets Schoenfield where we want him to get. And Phil can set that up quite easily. In fact, I bet that Phil has an old, stand-alone workstation or something that he could set up to look like the main UNELECO system and fool Schoenfield completely. Then he wouldn’t be getting into your real systems, just a dummy one. A dummy system for a dummy.”

“Damn, you’re devious. And good. How much are they paying you, anyway? Want a job? Oh, let’s talk about that some other time. We’ve got to get Schoenfield first.”

Annette was surprised at this offer of employment and almost tempted to talk about it now. But he was right—nailing Schoenfield was the first priority.

“We will. We know he downloaded those genetics clues we gave him, so he’s motivated to get into your systems. And because he’s never been into your systems before, he doesn’t know what to expect, so it should be pretty easy to set something up to fool him.”

“Then what?”

“Well, he gets in, looks around, and finds things that yank his chain. Your guy Wendell Ellison gave me some great ideas, so we should get him in on this. He seemed amused by the whole thing, quite ready and willing to help.”

“Wendell’s a good guy. I think he was pretty disgusted by that journal. Which probably motivated him to be helpful. And so we’ve got Schoenfield’s chain rattling. Then what?”

Annette could see why his company was so successful. The guy at the top liked to think things through.

“At some point we have to start playing it by ear, and this is probably that point. If we put the right stuff on your systems for him to find, then we should be able to motivate him to act, and to act in a way we can predict. I mean, suppose we put information there that talks about specific ingredients needed to produce the dietary supplements we talked about. Then he might try to hijack shipments or corner the market or something. Uh, that sounds pretty lame, but do you see what I mean?”

“You’re right and I do. But his real weapon against this supposed dietary thing would be publicity, wouldn’t it? So we should make it clear in the bogus information that UNELECO considers this a top-secret project. Seems like that would really push his buttons. Maybe he’d try blackmail or something.”

“And you said I’m devious. Welcome to the club. He’s already blackmailing at least one person, our hacker, actually, so it’s in his genes. Or something. Anyway, it sounds like a plan to me. And if you think of anything more devious, be sure to let me know. I’ll call Phil as soon as I can.”

“You know, this is all great fun, more fun than I usually have at work, I can tell you. Is this what you do all the time?”

“This is what I do for fun. All the time is paperwork. I’ll be in touch.”

\* \* \*

Late the next afternoon, just as he was getting primed for his date with Jamie, Tim Langer’s phone rang. Oh, no, he thought, she’s calling to cancel.

“Tim Langer? This is Phillip Peters. I’m the head of computer security at UNELECO.”

Tim suddenly knew the physiological meaning of the “fight or flight” syndrome, and his immediate reaction was to do the latter. Even the guy’s deep voice was intimidating.

“Uh, yes, Mr. Peters? What can I do for you?”

His voice just barely worked, and he noticed he was trembling.

“I’ve been talking with Ms. Annette Trieri.”

That helped Tim relax a little.

“She tells me that you’re under instructions to resume trying to hack into our systems again.”

That didn’t.

“Uh, well, it’s been requested of me, yes. I talked with her and she put me on hold. Told me to wait a day.”

“That’s what I’m calling about, to get you off hold. She and I have a better idea than having you try to hack in again. I have to say that it probably wouldn’t work anyway, and if it did, we’d find out and come and get you.”

Tim’s trembling made it hard to hold the phone, and his voice failed completely. But it didn’t matter, because Peters was continuing.

“I’ve got a login and one-use password on a special system for you. Got a pencil?” He rattled off codes and a telephone number. “Now, this system is stand-alone, and I’ve set it up specifically for you to be able to access. Its start-up screens look exactly like our main UNELECO systems do, so, if I wasn’t telling you this, you’d think you were into our central system. Also, I’ve cloned parts of our web

site onto it, and it has a network address.” He rattled off more numbers. “It’s set up so that you can create special web pages available only via that dial-up number, pages that will look just like our regular web site, our insider web site. And the login I gave you has admin privileges, so you can set things up to do whatever you need done.”

“I think I understand. And it sounds like it’s just what I need. So I won’t be trying to get into your real systems again. OK?”

“OK indeed. I must say, before you tried the brute force attack the other time, your attempts were most sophisticated. We were all impressed. I understand you’re in your second year of college. Let me know when you get your degree.”

“Uh, thanks, and I will. Um, can I ask a couple of questions?”

“Ask away.”

“Well, I don’t know how much Annette talked to you about. What I’ve been asked to do is to set up a login on your systems so someone can poke around for information he’s interested in. This stand-alone system is perfect, because I was real worried about your classified partitions. Anyway, he’ll probably expect to see a UNELECO network, with at least different systems for different divisions. I think he’ll be most interested in your biotechnology division. What I need to know is whether it’s OK for me to set up this stand-alone system to look like a network, and if I can grab stuff from your other systems to make it look authentic.”

“No sweat. This stand-alone system is all yours. And I’ve heard about the biotechnology angle, too. We have one of the scientists in our division, Wendell Ellison, working on some material for you. He’s going to e-mail it to this login, so don’t be surprised when you get something from him.”

“That will help a lot, because I really don’t know enough to invent that sort of material. And, uh, it would help if I had another login to your real network. I mean, to get first pages and so on that the public doesn’t see. To make it authentic. If I have to make it up, it won’t be, I don’t think.”

There was a long pause, and Tim began to tremble again.

“I understand. But I don’t think that would be a good idea. However, I can tell you that all of our first pages, the login startups and so on, are identical with one exception. When you access the system, you’ll see a screen with text symbols and so on, and one line says ‘UNELECO Gateway.’ All of our other systems are identical, except they say stuff like ‘UNELECO Biotechnology Division.’ See what I mean? Oh, and the classified systems have a line in big letters that says ‘Classified Use Only’ and ‘Need to Know Codes Required for Access.’ So you could create some dummy systems on your dummy network to make it look to this guy as if he’s found us for real. I can’t imagine that he’d expect you to hack into our real classified partitions.”

“Well I can probably persuade him that I can’t go there, and he wouldn’t want to himself because it could bring the CIA down on him, or something.”

“No comment. Do you need any help setting this dummy network and so on up?”

“No, I think I can manage. I like this sort of challenge.”

“I thought as much. As I said, we were quite impressed with your creativity.”

“So, were you serious about calling you when I graduate?”

“Absolutely. In fact, if you were in school here at Colorado Springs, I’d be talking with you right now about an internship. But Durango’s a little far away for one of those, I’m afraid.”

“I understand. But what if I transferred to the University of Colorado there in the Springs next year?”

“Then we can talk about this again. Let me know.”

“Thanks again. I will. Is there anything else I can do for you?”

“Just keep your nose clean. You need a Top Secret clearance, at least, to work for us.”

“How do I get one of those?”

“Oh, we’ll get it for you, but you’ve got to have a clean nose.”

After hanging up the phone, and unconsciously rubbing the dirt off the tip of his nose, it took Tim quite some time to regain his equilibrium. An almost job offer, no less. And a way to deal with the Senator. He looked down at himself. And I didn’t even wet my pants. Man what a scare that guy was.

He heard a thup-thup-thumping on the wall of his cubicle.

“Tim? About ready? I’m starved.”

Her voice came from right behind him, and he nearly jumped out of his chair.

Damn, he thought. Almost a job offer, a way to deal with the Senator, and a date with a real woman, not just one of those college girls. All in the same evening. Tim, old buddy, don’t make a fool of yourself. He turned to her with a big smile.

But when he saw that Jamie was wearing a tank top, he knew he was in big trouble.

\* \* \*

## **Eighteen**

It was finally time to brief Rod Andersen about the whole thing, so the next morning Annette took the early flight to Denver. She promised Hal she’d be back in time for dinner.

The short ride was actually smooth, because the daytime convection hadn’t become established yet. After negotiating the DIA terminal—it helped not to have to wait for baggage—she found a taxi willing to take her downtown. By 10 am she was in the CBI office, waiting for Andersen to finish up a telephone call. Finally, Sandy McStain’s telephone buzzed. She listened to it and told Annette that the Director would see her now.

“Annette! Good to see you, sorry I took so long. Sometimes I can’t get away from the telephone. That was Senator Jarvis Schoenfield, wanting to talk about some new, exotic security systems he thinks the state needs. Strange call. He doesn’t usually get involved in such things.”

The mention of Schoenfield’s name naturally put Annette on alert, all warning lights flashing.

“Um, Rod, I wonder if I can ask for more information about that call? You’ll understand in a while, I promise.”

“Huh? Well, sure. You know he’s the Chairman of the Senate Committee on Law Enforcement, that he controls, or at least has strong control of, our budget. So I’m always nice to him when he calls. Like I said, this was strange. He said he heard that this company in the Springs has developed some new, high-tech security system components that he thinks we should look into. I didn’t want to say that we really don’t have a need for high-tech security, well, not much. So I encouraged him. I even volunteered one of

our experts to look into details, but he said he'd do it for himself. He just wanted to run it by me, to sound me out. Something about having a way to verify that he's serious if he needs to make an appointment with the CEO of the company."

"What company, may I ask?"

"I think I remember talking with you about it. UNELECO. Oh, yeah, Charles Shure, the CEO wanted to talk with you a while back. I never heard how that went. Anyway, Senator Schoenfield is going to look into these security gadgets. What's your interest in all this?"

"Well, that's actually what I came up to talk with you about. I need to brief you on an extremely sensitive issue that involves Senator Schoenfield. And, interestingly, Charles Shure. You said that the Senator may be trying for an appointment with him? I'd like to call Mr. Shure, if I may."

"Annette, that's fine, but what's this all about?"

"That's what I'm here to talk to you about, but there's a timing issue. Let me make a call first, please."

He nodded, and she headed for his desk.

"Is the outside line nine?"

He nodded again and she poked buttons.

"Chuck?"

She was amused when Andersen's eyebrows arched in surprise.

"Annette. Listen, this is quick. I just found out that Schoenfield may be calling you for an appointment, on the excuse of talking about security equipment for the state government. He may suggest you call my boss, Rod Andersen, for confirmation... Right. Why don't you tell him that you'll be in Durango and offer to meet him there, at some public place. Maybe a restaurant? ...OK. Let me know... Yeah, I think this may be it. Talk to you later, bye."

She smiled at Andersen. "Now I bet you're really curious."

"No kidding. 'Chuck?' Nobody else I know calls him 'Chuck.' And you just dialed and got him? Even the Governor can't do that."

"Uh, right, well, we're working together on this thing. It involves, like I said, Senator Schoenfield. Um, is this room secure? From eavesdropping, I mean?"

"Tighter than the Oval Office. Pray proceed."

"Well, it also involves that environmentalist portfolio that we talked about when you were recruiting me, remember?"

He was nodding yet again.

"And, believe it or not, the assassination attempt up in Boulder the Friday before the Fourth."

If he looked surprised at her relationship with Shure, now he looked flabbergasted.

"And, um, it also involves the arson fire in Cortez last week. Did you hear about that?"

She thought his head might come loose from the nodding. Time to let him say something, she thought.

"Ahh, that's all? No plans to nuke Denver? Are you telling me that Schoenfield's involved in all this stuff? I sure hope you've got all your ducks lined up straight."

“I’ve been waiting to brief you until we do. Now, we aren’t ready for a collar yet, which is why Schoenfield was able to call you. But his appointment with Shure is probably just a way to trick Shure into meeting with him. For a different purpose. But let me start at the beginning.”

“Please do. I’ll take notes and try to save as many questions as I can for the end. And, um, let *me* make a call.”

He walked over to his desk.

“Sandy? Listen. Cancel the rest of my morning and that lunch appointment... Yeah, I know, there will be hell to pay. But I’ve got to do this other thing. And please get the deli downstairs to bring us some sandwiches around noon.”

He looked a question at Annette.

“Ham and cheddar on rye, mustard, no mayo, no onions. Chips. Diet cola.”

He repeated it to Sandy McStain and continued, “And I’ll have a tuna salad on wheat toast, Coke, chips. Take it out of petty cash, this is definitely a working lunch. And, Sandy? Absolutely no interruptions unless the building’s on fire. Thanks.”

He looked up at Annette, took a breath, and walked over to the conference table where she was sitting.

“So, you were going to begin at the beginning.”

“I will. You know about the environmentalist portfolio. The next thing, chronologically, is where Shure came in...”

It took until 2 pm for her to tell it all and for him to get his questions answered. Somewhere in there, lunch happened, then coffee. He personally drove her back to the airport, and she even made it home in time for supper.

Aside from questions, all pointed and pertinent, his only comment was, “I’ve always wondered if that son-of-a-bitch wasn’t crazy as a loon. Of all the stupid reasons for wanting to kill the President of the United States, this one’s the stupidest I’ve ever heard.”

\* \* \*

The trouble with politicians, Annette thought, is that they’re by nature gregarious. They meet people and remember them for the next time. The fallout from this was affecting her now, for she had been forced to come up with people who had never met Schoenfield or been present at small gatherings with him.

She needed the help, because Shure had taken her recommendation literally. Too literally, now that she thought about it. He’d suggested, when Schoenfield called for the meeting supposedly on security devices, that they have lunch at Oliver’s, in the Hotel Strater, on Main Avenue in downtown Durango. Fortunately, there was a three-day lead time, so Annette was able to find people whom Schoenfield would not recognize, mostly from the police force in Durango. She was also able to work with the restaurant staff and reserve about half the restaurant for her help. The other half was already reserved by the public, and she couldn’t risk so many cancellations. The resulting scene would tip off Schoenfield. But she would be able to treat much of the Durango Police Department to an elegant luncheon, at least by PD standards.

She decided to wait in the kitchen, with a view out the door to the dining room, because of the probability that Schoenfield would remember her from their brief meeting. Besides, the radio headset

she was wearing would look suspicious. Charles Shure was wired for sound, playing his role with glee. With a room full of cops backing him up, what could go wrong?

They had ordered lunch and were making small talk over drinks—an iced tea for Shure and a large, probably a triple, Manhattan for Schoenfield. Then Annette spotted trouble. There were Tim Langer and a young woman she recognized—Jamie, Jamie McFarland—trying for a table. Annette grabbed a waiter, pressed a five dollar bill into his hand, pointed out Tim, and had the waiter tell him to meet her in the back of the lobby. She worked her way through the bustle of the kitchen to the other door, all the while listening to the insipid conversation on the headset.

“Annette! What are you doing here?”

“Getting you and Jamie the hell out of here. Schoenfield’s in there, having lunch. It’s all going to go down shortly, and you two don’t want to be here, I promise.”

“The Senator’s in there? Well, they told me they were booked. I was trying to pay Jamie back for dinner the other night with a fancy lunch.”

“Well, there are other choices. Get out of here and pick one. I’ll call you later.”

She worked her way back through the kitchen to the dining room door. It sounded as if lunch was arriving at the table she was eavesdropping on. She peeked out, and saw Shure and Schoenfield in quiet conversation, arranging food, responding to the waiter’s questions.

Then, out the street window, she noticed Tim and Jamie in conversation with someone she didn’t recognize. It appeared forced, out of kilter somehow. Then the three walked off together. She returned her attention to the dining room. The meeting was about to begin.

“Now, Senator, I believe you wanted to talk about some of our new security gadgets?”

“Well, Chuckie, I can call you Chuckie, can’t I?”

He was smiling, and his voice seemed lower than Annette would have expected. He continued in the same menacing tone.

“Just keep smiling, Chuckie, because if you don’t, I’ll blow a big hole through you, just below the table here, with this beautiful antique derringer I’m holding. It’s not much for accuracy, but you’re close enough. And it’s a .60 caliber soft lead ball, which would punch quite a hole in your guts. Maybe even get that poor bastard sitting behind you. So keep calm and keep smiling.”

Shure’s voice was surprisingly steady, under the circumstances.

“Smiling I can do. Calm I can only try for. I guess I should have brought some of our new gadgets with me, hmm?”

“No smart remarks, you Jew-loving son-of-a-bitch. What’s going to happen is that we’re going to walk out of here best of friends. I’m going to leave a fifty dollar bill on the table, and we’re going to just walk out quietly and calmly, OK? And this lovely little derringer is going to be on you the whole time.”

“Um, we walk out of here, OK, then what?”

“We keep being best friends, of course, and we get in a car together. Got it?”

Annette could see the smile was strained, but intact. The two diners arose, and Schoenfield laid a bill on the table. She could just make out the snout of the derringer concealed in his large right hand.

She keyed her microphone. “All personnel. Schoenfield’s got a gun. No one move.”

The conversation in her headset resumed as they walked out, with Annette following as discreetly as she could.

“So tell me, Senator. What in the world does my affinity in your mind for people of the Jewish faith have to do with anything?”

“You know damned well what. You want to pollute the pure genes of good, red-blooded Americans with your filth.”

“Huh? Excuse me? You think I’m trying to pollute people’s jeans? You mean, like Wranglers?”

“Don’t goad me, Jew-lover. And keep smiling. Here. Get in.”

Suddenly Annette’s reception waned markedly. Must be in a car, she thought. But Shure’s voice still came through.

“Lovely vehicle, Senator. And it even comes with a driver.”

“Let’s go, Mike. Oh, well, hello Timmy. And a little chickie, too. Well, maybe we can have a party. Move it, Mike.”

She reached the sidewalk just in time to see a large SUV turn the corner and disappear down the side street. But the voices in her ear didn’t disappear.

“Annette? I sure hope you’re still getting all this. We just turned north. White Ford Expedition. Uhh.” There had been a slapping noise.

“You wired? You bastard. You BASTARD. I’ll probably have to kill you for this. Where is it? Ah, got it.” There was a crunch and the sound stopped.

It occurred to Annette that a chase wouldn’t happen. The single car outside watching the restaurant was facing the wrong way in traffic, and her contingent of officers was still in the restaurant. Well, she thought, I guess they won’t get lunch after all.

\* \* \*

“Too many civilians.” Annette was explaining once again her decision not to prevent the kidnapping, this time in a conference room at her CBI office the next morning. Rod Andersen was hearing it again, this time in person. Todd Sweeney from the FBI was there, as were Fred Winders, her replacement, and Walt Jankowski, her previous boss at the Durango PD. Representatives of various sheriffs’ offices from neighboring counties were also present, with Jim Nettleman, from San Miguel County, conspicuously absent. Even Hal was there. His computer systems person and one of his students had been kidnapped, after all.

“Too many civilians, and he had a cannon. A short-range one, to be sure, but it was too dangerous to move in at the restaurant.”

“And you didn’t have the street covered.” Sweeney wasn’t trying to be nasty, but it came out that way.

“We did, actually, but we weren’t expecting that vehicle. Schoenfield arrived in a cab. I expect that the driver of the SUV escape vehicle was Michael Oswald, Schoenfield’s second-in-command, or something like that. But he wasn’t familiar to any of us. And our observer was not able to deal with the traffic and follow them. Of course, most of the PD was in the restaurant. I called the State Patrol, and they set up roadblocks to no effect. We have a report from local air traffic control of a helicopter taking off from a field on the north side of town and heading north, so that was probably them. There’s a white Ford Expedition parked at a car parts store close by, a rental.”

“Where’d they go?” Walt Jankowski was ever practical.

“I’m certain they went to the X-S Ranch headquarters, a cluster of buildings and cabins southwest of Norwood called Raven’s Roost. It’s where Schoenfield lives and the only place he’d feel comfortable and safe.”

“Well, then, hell, let’s just go get ’em.”

Ralph Wertlinger, Mineral County sheriff, was still put out that Schoenfield and company had tried an operation on his turf.

Rod Andersen stepped forward.

“We will, sheriff, but we’ve got to be careful. The hostages are our main concern at this point. Schoenfield isn’t going anywhere, and this other guy, Oswald, is not as much of a concern. We’ll get him sometime. As far as I’m concerned, Ms. Trieri handled this thing entirely appropriately. We’re just dealing with a very clever individual who was willing to expose himself rather than maintain his previous façade of innocence. I never would have predicted that Senator Schoenfield would have behaved this way. So this is still Annette’s case, as far as the CBI is concerned.”

“The FBI has a call in this too, Director Andersen. We want to question him about the assassination attempt.”

“I understand, and you’ll get your chance. But that was an attempt, and we want to question him about something like a dozen actual murders. I suggest that this will work best if we all work together. And, like Ralph said, let’s just go up there and get him.”

Wertlinger, no wallflower, spoke up again, “Say, where’s Jim Nettleman? It’s his turf up there. Shouldn’t this be his show?”

“Ralph, there is information that Jim isn’t entirely objective when it comes to dealing with Jarvis Schoenfield. On orders of the Governor, the State Patrol is relieving him of duty, temporarily, for the duration of this operation, as we speak.”

Rod Andersen was trying to be diplomatic about Wertlinger’s friend and colleague, but it was a thin attempt.

“Annette?”

She stepped forward again.

“This may be my show, but I need all the help I can get. And it’s clearly in all our best interests to work together. Furthermore, the last time I tried a collar out in the woods, I almost ended up dead.”

She looked at Hal and smiled.

“Fortunately for me, Superman there came along and saved me.”

Everyone turned to look at Hal, and he blushed scarlet.

She continued, “But it seems to me that all we can do is to marshal forces and truck up there with the appropriate warrants. If they decide on a stand-off, well, then we use standard hostage-situation procedures. Now, let me show you some pictures. Can someone hit the lights?”

She stepped back, turned, and pulled down on the cord of a screen, yanking at it several times in the eternal hassle of getting the thing to stay down without rolling up with a snap.

“This slide is an aerial photo of Raven’s Roost. We took it yesterday afternoon, late, as you can see by the shadows. We used a search-and-rescue helicopter and got shot at for our trouble. This large building is a two-story log cabin, Schoenfield’s house. These out-buildings are the usual sort of thing for a ranch, garages, barns, equipment sheds and so on. Over here is what we think is a bunkhouse, and out

here by the gate is another house, probably for a gatekeeper sort of person. The property, of course, is much larger than the area in this photo, but it should be possible to drive up to this gate without incident.”

“A ranch this big has staff. Where are the hands?”

It was too dark for Annette to see who was asking, but it sounded like Sweeney to her.

“On furlough just now, at least the ones we know of. This morning, we got records from the business office, down in Norwood, and contacted everyone we could. It turns out that relatively few employees live here at Raven’s Roost. There are at least two housekeeper/cooks and a sort of major domo type person. Two other people who used to live there are, fortunately, being held in the sumptuous accommodations of the FBI. They’d be dangerous to encounter, so I’m glad you guys have got ’em, Todd.

“What we’re planning to do is to move in with a contingent of State Patrol SWAT officers and set up for a siege. We have phone numbers for the place, so we’ll be in contact with whoever wants to talk with us. I think, because there are only a few hostiles in there, that we can move some people under the cover of darkness, if need be.”

“Where are the hostages?”

This sounded like Walt Jankowski to Annette, and she asked for the lights to be turned on.

“We’re not sure. Most likely in the main house, where Schoenfield and Oswald can keep an eye on them and where the staff can feed them. But maybe somewhere else, like the bunkhouse.” She paused. “Any other questions? ...No? Fred?”

“You said someone took a shot at the helicopter. Any idea where it came from?”

“We think it was the main house. It was some kind of large rifle, probably. We got lucky, because it hit only one of the landing struts. Blew a big hole in it, too. This wasn’t your average high-powered hunting rifle. Any more questions? ...Well, thanks for coming, especially you folks from around the region. I know you’re all interested in getting these guys behind bars, and we’re going to do it. And we’re going to do it without hurting any of these hostages. I know all of them, they’re friends of mine. We’re going to get them out safely.”

\* \* \*

Hal tried not to pout, but he was certainly disappointed.

Annette finally persuaded him that he had no business being part of the assault team. He argued that he’d been there to save her once, a year ago, and maybe he should be there to help again. But he had to agree that she made a valid point that this time there would be a couple dozen State Patrol officers with her and reinforcements could be called in as needed.

What really worried him was that there would be no cell phone availability up there. Raven’s Roost was out of range of any cell towers. This meant that Annette would have to use a radio patch through the State Patrol office in Norwood in order to talk with Schoenfield. And, if she got in trouble, she would have no way to call home.

So, after Annette’s morning briefing, Hal went to work and tried to accomplish something besides fiddling nervously. He knew he had failed, when, on about his sixth trip out to Alice’s front office, she looked up at him, over the top of her reading glasses, with that quizzical expression that meant she was wondering what was going on.

“Is something wrong, Dean Weathers? You seem, may I say, not your usual calm self this morning.”

He sat down and explained what was going on and was surprised by how much better it made him feel.

Annette, meanwhile, had assembled her team and was approaching Raven’s Roost. She had six State Patrol officers with her for visibility, all looking sort of bulky due to the Kevlar vests under their uniforms. Another twenty had been deployed earlier, SWAT team members dressed in camouflage, around the perimeter of the Raven’s Roost compound. There were warrants galore, so, technically, no one was trespassing.

Annette, riding with the lieutenant in charge of the Norwood office, was leading the column of six patrol cars, all with lights flashing, up the gravel road to the compound. As they came around the last curve, they saw the gateway, a huge, imposing structure made from logs at least two feet in diameter bridging the road. The gate under it was closed.

Someone was standing behind the gate, dressed in jeans, a long-sleeved white shirt, and a western hat.

“I believe that’s Jim Nettleman. What do you suppose he’s got himself into?” Tom Ayala, the lieutenant, knew the local law enforcement community well. In fact, he had the sad task yesterday of relieving Nettleman of duty.

The little caravan of patrol cars rolled to a stop spanning the road in front of the gate three abreast, two deep. Annette and Ayala got out while everyone else remained seated. She and he had agreed to let her do the talking.

“Mr. Nettleman, I believe? I’m Annette Trieri, CBI. I’m in possession of warrants for the arrest of Senator Jarvis Schoenfield and Mr. Michael Oswald, and for complete searches of all buildings on this property.”

He ignored her completely, not even looking at her. His gaze, full of disdain, was on Ayala.

“Hey there, Tom. Thought I might see you today. Sure y’all know what you’re doing out here?”

“Talk to him.”

Annette was surprised at how calm she was.

“Morning, Jim. Sorry about yesterday, but you know it was just orders. I do what the Governor says. And, like I said, it’s only temporary. That is, unless you got yourself into something here that will make it permanent. We’ve got lawful warrants, Jim. You know you can’t interfere and come out of this clean.”

Nettleman shifted the chew in his mouth, turned his head aside, and shot a long stream of brown spittle onto the dust. At least it was on his side of the gate.

“Yeah, I know that. And you’ll notice I’m not armed, or anything. Unlike the people in the houses, I might add. The Senator asked me to come up as a mediator. I’m going to be as neutral as I can. First thing is, I want to see the warrants. In fact, we’ve got a lawyer here, at least he used to be, who wants to look ’em over. That’s got to be step one, they say. By the way, is this all the help you brought?”

Ayala looked at Annette—good man, she thought—and she shook her head.

“Mr. Nettleman, you are impeding our lawful performance of our duties, I’m sure you know that. Because of your status, we can be flexible. But please don’t jeopardize your future by aiding and abetting.”

“Lady, I don’t really know who you are or why you’re here. But I do know Tom here, been playing cards with him for years. So if I’m talking to anyone, it’s him. Got it?”

To Annette’s amazement, her sense of calm only deepened.

“Now, Jim, she’s my boss in this operation. It’s her show. No point in antagonizing her.”

“Lieutenant Ayala, I want to settle this as peacefully as possible. I’ll defer to Mr. Nettleman’s wishes. Feel free to consult with me as needed. Here are copies of the warrants for him. Let’s give them an hour to look them over.” She rummaged in her briefcase, handed the copies to Ayala, and returned her steady gaze to the man behind the gate. This fellow, she thought, is on very thin ice if he wants a future in law enforcement. But maybe he can be helpful in this situation. She watched Nettleman walk back up to the main house.

An hour later, she used the radio patch to call the house. After four rings, the telephone was answered by a woman with a heavy Spanish accent.

“This is Annette Trieri, Colorado Bureau of Investigation. Who am I speaking with, please?”

“I am Consuela. I work here, I cook.”

Consuela, Annette could tell, was quite nervous.

“Consuela, I’m sure you can tell that things are a little strange just now. But I don’t think that you have anything to worry about. I need to speak with Senator Schoenfield. Is he there, please?”

“He said that he is not going to talk with anyone.”

Annette heard a voice in the background, and Consuela resumed.

“Oh, he is not talking with anyone yet. I guess maybe later.”

“I see. Consuela, I need to know something else. Are there three people there, two men and a woman, one of them is Tim Langer, Michael Oswald’s nephew, and are they all right?”

“Si, they are fine. In the basement.”

Annette heard a roar of outrage in the background.

“Oh, I cannot talk any more.”

The phone went dead.

Annette looked at Ayala.

“Well, it sounds like our hostages are doing OK. At least we know that much. Let’s deploy, and then we can go to work on that chain on the gate. It looks sturdy.”

There was backing and filling of the cars to create a semi-circle around the gate, and everyone put on radio headsets. Annette and the officers positioned themselves behind the cars, and one officer, probably the most junior, Annette thought, crept forward with large bolt-cutters.

When he got halfway to the gate, a hefty chunk of wood was blasted loose from the right post on the gateway almost simultaneously with a booming report of a large-caliber rifle. The junior officer duck-walked, apparently without really touching the ground, back to a position behind the cars. If the situation had been different, it would have been quite amusing.

“Well, that sets a tone, doesn’t it?”

Annette was wondering just what she should do next.

“Lieutenant, that was quite some weapon. Kind of sounded to me like one of those antique Sharps buffalo rifles. .50 caliber maybe. Probably from the Senator’s collection.”

One of the older officers seemed to know his firearms.

“I bet you’re right, Larry. And that means it was a warning shot. If there’s someone with a Sharps in the gate house there, they’re ready for a fight. Damn.” Ayala looked worried.

Annette switched on her radio and said into the headset, “Trieri. I need two snipers at the gate, quietly.”

“Already here, ma’am,” came the quiet reply. “One on either side in the trees. If you can see us, we screwed up. I was watching the gate house and saw the shooter. George, it’s the upper left window. See how it’s open just a crack?”

“Got it,” came a second voice.

Neither had screwed up, for Annette had no idea where they were.

“Look, up the road.” Ayala was pointing toward the main house. Jim Nettleman was walking toward them, hands aloft.

“I’m coming out, OK? I’ll climb the gate.” He still had his hands up when he reached the gate. Over he came, and then he scurried around to the back of the cars with the others.

“I heard the shot. Oswald’s in the gate house, with an closed-circuit phone link to the Senator. They’ve been discussing the warrants. Oswald saw your guy, and the Senator ordered him to hit the gatepost as a warning to you. He said to Oswald that the next one should be for real, and to aim for the head. Oswald’s a crack shot.”

He was breathing hard, not from exertion, Annette thought, but from nerves.

He looked at her. “Listen, ma’am, like I said, I was just being a mediator. As a favor to the Senator. But if they’re shooting, I’m done with that. Also, he, I mean the Senator, he’s been drinking a lot, and I’m a little worried about his judgment. Hope it’s OK with you if I just sit this out.”

He stared at the ground, rather like a four-year old caught with a mess in his pants. Annette was thinking that he had undergone a remarkable attitude adjustment.

She switched on her radio again.

“Snipers, we’re going to try the gate again. If you see that rifle poke out that window, or anywhere, lay down steady fire at it.”

She took a pair of small binoculars out of her briefcase and trained them on the window.

“OK, let’s see if we can get that gate open. You’ll be covered.”

As the officer duck-walked, zig-zagging, back toward the gate, Annette peered at the window, periodically scanning the others. When he was about half way to the gate, she noticed movement behind the upper-right window, and it opened a crack. She switched her radio.

“Upper-right window opening. Protect the officer. Fire at will.”

She couldn’t quite tell what was happening behind the window, but she knew that the snipers’ telescopic sights had better optics than her binoculars.

A shot rang out, from the woods to her right.

“Shooter down, head shot,” came a voice in her ear.

“You sure you got him?”

Annette was looking at the junior officer lying flat in the dust of the road, trying to burrow beneath the gravel.

“Absolutely, ma’am. We’re using hollow points. I saw his head explode.”

\* \* \*

## Nineteen

It took about five minutes for Ayala’s car radio to crackle, “Telephone call patch for Trieri.” She switched her radio to the other channel.

“Trieri, CBI”

“I seem to recall meeting you briefly, maybe back in May or June, Ms. Trieri. In Denver.”

The voice, slightly slurred, was smooth and pleasant.

“Yes, Senator, you did. Just before I joined the CBI.”

“And, let’s see, you were with the police department in Durango before that?”

“Correct. Senator, surely you realize that your situation is hopeless and is not going to improve. We came here to serve the warrants that you have seen, and we’re doing things legally and properly. You’re not. Shooting at us will not make this any easier.”

“Speaking of shooting, that last shot wasn’t the Sharps that Mike’s using. What was it? And where’s Mike? He’s not answering the phone.”

Annette’s mind raced. No point in telling him things that could make him mad.

“Well, Senator, he fired a warning shot at us, and we fired one back at him. At least he’s got some sense. He came out with his hands up. He’s lying on the ground in front of the gate house, waiting for us to come get him. We will, as soon as we get the gate open.”

She heard a slow chuckling noise.

“Well, I’d sure hate for Mike to lie around on the ground too long and get all mussed up. He’s really fussy about his clothes. You go ahead and open the gate and get him. But if I see anyone come closer than the gate house, you’re going to have a dead hostage. I think I’ll start with our industrialist here. I’d hate to disappoint Mike by killing his nephew, and I have some ideas for the chickie.”

“Senator, I’m sure you know that our first priority is to ensure the safety of the hostages. So we won’t be doing anything to endanger them. But we also need a plan to resolve this. Do you have any suggestions?”

She realized that if this were to continue, they would need to call in an experienced negotiator.

“Well, I reckon I’m just fine here. Got food, water, booze, and women. That should last me for as long as I need.”

His recurring references to the women began to bother Annette.

“Senator, if you’ll excuse me a minute, I’ll tell my people to go and get Mr. Oswald. You said you didn’t want him lying on the ground too long.”

You didn’t say anything about him lying in it, though, she thought.

She switched the radio channel and it occurred to her that Schoenfield could have a police-band scanner. She hoped he hadn't heard the news about Oswald.

"Trieri. Move to gate house, but no farther. Hostages well so far. Radio silence. Out."

She motioned to Ayala and turned her radio off.

"Lieutenant, let's wait until dark to remove the body. I don't want Schoenfield to know that Oswald is dead, OK? Thanks. Oh. And see how quickly we can get a real negotiator up here. I'm not really well trained for this."

She switched back to the channel with the telephone patch.

"Senator? Thanks. My people will go no farther than the gate house."

"That's a good idea, because I've got another Sharps, an even better one, up here with me. Longer range, with a tripod. Much longer range than anything you folks have. And, of course, I've got the three hostages. Plus others on my staff, who really have no role except as additional hostages."

"Senator, are you interested in negotiation, or what?"

"Well, I suppose that depends on the definition of 'what.' But I'll talk, if you'd like."

"Thank you. Now, the longer this goes on, the more attention it will draw. And even if you have some agenda that needs attention, that kind of attention isn't what you need. For one thing, the FBI is going to want to get involved. If they put pressure on the Governor, I'll lose control of things and it will be downhill from there. One thing that could help me retain control, and to do things the way you'd like them done, is for me to establish that you and I have a credible negotiation going. Understand?"

"Sure. And you're probably right. It's far more pleasant talking with you that it would be with some federal storm-trooper. Why don't you come on up here for a drink with me?"

"I'm afraid not, but I'm glad you're comfortable talking with me. So, something that would help establish the credibility of our negotiation would be a gesture on your part."

"A gesture? Like what, not shooting that cop I've got in my sights just now?"

"Well, any shots by either side will prove to anyone who's interested that we have no negotiation and then the feds will take over, probably. So not shooting is fundamental. But a gesture of trust would be an additional step. The best thing you could do would be to let some of the hostages go. Send them walking down the road, just like Jim Nettleman did."

"I'll think about it. Got to keep my cook, though. Man gets hungry during a negotiation. But which of the others would you suggest?"

"Ms. McFarland is the least involved in all this. She was just along for lunch with Tim. Completely removed from the whole thing. Why don't you send her out?"

"Well now, I just don't know. Letting a pair of tits like that get away is just something I'm not sure I want to do. Like I said, let me think about it."

Focus, Trieri, she thought. Don't let him get to you.

"Senator? Please reassure me that they are safe and unhurt. That's also fundamental to our negotiation."

"Oh, they're fine. Consuela was right. They're in the basement. There's an apartment down there, with a bathroom and everything. They're locked in, of course, but Consuela's feeding them and they're fine. Hell, I don't even have the key—I gave it to Consuela. Look, I'm getting bored with this. I'll call you back later this afternoon. Got some thinking to do. Don't you folks try anything now. This Sharps

has quite a range, and I've practiced with it. Got an elk in the head, aiming for the head, at 500 yards once. Nearly a third of a mile. And you folks are only about half that far. So don't try anything foolish. And don't call me, I'll call you."

\* \* \*

It was a long afternoon. They set up a base of operations in the gate house, and Oswald's body was zipped into a body bag. Annette called Hal on the radio patch, just to let him know she was fine. Word came that an experienced negotiator was on the way. Food and drink arrived. Annette had messages sent, by runners and hand signals, to the SWAT officers in the woods to ease their way in toward the house on all sides except the front, but to remain concealed.

And they waited.

Annette had brought a laptop computer with the most revealing of Schoenfield's files on it, so she spent time re-reading them. She also noticed that Lieutenant Ayala was keeping very busy, busier than he needed to be. Time for a chat, she thought.

"Excuse me, Lieutenant. Can we talk? And I'd like to be informal, so please call me Annette."

"Uh, OK, that's fine. Call me Tom by all means. What's on your mind?"

"Well, you don't know me very well, but people who do think of me as a straightforward person. It's all just out there. So here's some of it now. It seems to me that you're uncomfortable about something. Of course, I don't know you at all, either. But it seems like you're fidgeting. Are you OK?"

"Uh, well, Annette, this is your operation, and that's fine with me. You know the background and so on. But, well, it seems like you ordered that guy shot awfully quickly. I mean, with hostages and all, we usually go very, very carefully. At least that's what we're trained for. And he wasn't shooting, he was just opening a window, right?"

"Oh, he was going to shoot, I have no doubt. I saw the rifle barrel come out the window. And I had to assume that your guy Larry was right about the rifle's being a Sharps. And Schoenfield confirmed it after the fact. But given that, and given the history of these guys, I wasn't going to take any chances. Also, I'd heard that the hostages are up at the main house, and I figured that some action here wouldn't necessarily endanger them. It was a little risky, for sure. And I think that you're right, in general. I moved quickly, more quickly than you learn in training, that's for sure. What do you bet that the negotiator will be upset, when he gets here?"

"Well, it turned out all right, so far at least. But you sure surprised me, there."

"You may not know these guys the way I do. Remember that lawyer, Bill Campbell, the guy that got murdered back in June down by Norwood?"

"Sure do. Still open."

"These people were behind that. They probably weren't the shooters, but they were the masterminds. And Schoenfield planned the assassination attempt up in Boulder earlier this month. And they're behind that fire down in Cortez that killed those two guys a little more than a week back. Have you heard about what CBI's calling the 'environmentalist portfolio'?"

"I did hear something, but no details. Bunch of people have been killed here in Colorado, some down in New Mexico. No leads."

“These same people are behind all of them. A dozen murders. And they have plans for lots more. Kind of a militia movement thing. And, here, read this.” She had opened one of Schoenfield’s files that she remembered. It would be especially interesting to someone named “Ayala,” she thought.

He began reading from the screen of her laptop, and she decided to take a little walk. Evening was approaching, and at home she’d be eating dinner. What do you suppose Hal would fix tonight? she thought.

More to the point, where is that negotiator? And even more to the point, why hasn’t Schoenfield called? It’s been almost four hours. What’s going on up there?

He said don’t call me, but I think I’d better, she thought. She returned to the gate house.

As she was figuring out how to use the closed-circuit phone system, so she wouldn’t have to go through the radio patch again, Tom Ayala walked into the room, a look of serenity on his face.

“Thanks for showing me that, Annette. And thanks for handling this the way you are. If you ever need me, especially if there’s anything like a board of review hearing about this, just call me. OK?”

“I will, although I hope it doesn’t come to that. But, look, you live here, right in the Senator’s home town.”

“But I had no idea. Now I do. What can I say? He had a secret agenda that none of us knew about. If we had, he wouldn’t be dog-catcher, let alone a senator. Anyway, where do things stand? Any word on the negotiator?”

“Haven’t heard a thing. So I think I’ll call up there, if I can figure this out. It says ‘house phone’ on it, so let’s just try old reliable, zero.”

It rang twice and then was answered. Annette recognized Consuela’s voice.

“Consuela? This is Annette Trieri, calling from the gate house. Are you OK?”

“Si, I’m fine. And your friends downstairs are fine, too.”

“Can I speak with the Senator?”

“No, I’m afraid not.”

“He won’t speak with me?”

“Oh, I don’t know. Probably. But not now.”

“Maybe later?”

“I don’t know. Maybe. If he comes back.”

“Comes back? Where did he go?”

“I don’t know. He went through the—how do you say?—tunnel.”

“When?”

“Oh, about an hour ago, I guess.”

“Can we come up to the house?”

“I don’t think he would like that.”

“But is there any danger if we do?”

“No, I don’t think so.”

“Thank you, Consuela. I’ll be seeing you shortly.”

She looked at Ayala in exasperation.

“Schoenfield slipped out through a tunnel or something about an hour ago.”

She switched her radio on.

“This is Trieri. Move in, move in. There should be no resistance. There isn’t really any rush, I guess. And be nice. Schoenfield has escaped.”

She and Ayala started up the road toward the main house at a brisk walk, and the others followed. Around her, she saw shadowy figures emerging from the landscape, the SWAT. She had no idea that they were so close.

They entered through a side door, into what turned out to be the kitchen, a large, elaborate kitchen at that. A short, round woman was singing to herself and peeling potatoes. She looked up when Annette and her retinue crowded through the door.

“Yes? Oh, you must be Señora Trieri. I am Consuela. Have you had supper?”

Annette looked at Tom Ayala, puzzled.

“This is unworldly. Do you speak Spanish?”

A rapid-fire conversation in Spanish ensued, and Annette had the remainder of the officers spread out through the house, carefully. At last they were going to be able to execute their search warrant. Apparently, the arrest warrant would have to wait.

Finally the Spanish waned, and Ayala turned toward Annette.

“All she knows is that the three hostages, she calls them your friends, are downstairs and the Senator’s gone. The other cook and the housekeeper, who’s the boss, are off today, it turns out.”

“Where’s downstairs?”

More Spanish led to Consuela’s pointing at a door at the back of the kitchen. Annette led Ayala through and down a flight of narrow, steep stairs. More of a cellar than a basement, Annette thought. At the bottom, there was a locked door, with a key in the lock. Annette unlocked it and opened the door slowly, carefully.

There was a light on in the room, and the first thing she saw was carpet, Berber carpet in an off-white with darker tan flecks. As she continued to push the door open, she began to see furniture, a couch against the wall, a lamp, and finally the legs of a dining room chair. Then there was someone’s back, someone with no shoes on, hunched over a table. As she opened the door farther, two other chairs, with other people hunched over the table, became visible. And she began hearing a strange conversation.

“So we take the high-voltage capacitors and their power supply from the TV tube and rig them to the reading lamps, right? Like this circuit here.”

Annette recognized Tim Langer’s voice. So, she thought, that must be his back. So that means the one on my right is probably Shure and the other one is Jamie McFarland.

“Right.” It was Shure’s voice this time. “It’ll be tough to get solid connections without tools, but at least you’ve got your fingernail clippers, so we can strip the insulation from the wires. And I bet there are some wire nuts inside the lamps or the TV or somewhere that we can borrow. Anyway, the connections only have to last for a couple of milliseconds, long enough to energize and blow out the light bulbs in the lamps. The flash and pop, and the glass shrapnel, should be enough.”

“Do you guys really think that will be enough of a distraction for you to jump Schoenfield?”

To Annette, Jamie sounded highly skeptical.

“All we can do is try, Jamie. We can’t rig the door, because we don’t want to hurt Consuela. So we’ve got to see who comes through it before we can do anything. And this will blind him and disorient him long enough for us to jump him. C’mon, there’s three of us. I’ll conk him on the head with the lamp base, and then we’re outta here.”

Shure, Annette could tell, was looking forward to the conking part.

She cleared her throat, in a way that she hoped would be authoritative.

“So, I hate to break this up, but does anyone want to be rescued?”

The three prisoners practically hit the ceiling coming out of their chairs before they recognized Annette. Wow, Annette thought. Talk about kids with their hands in the cookie jar. Shure was, predictably, the first to recover.

“Annette! Whew—I sure am glad it’s you and not Senator Shithead. Although I would have liked to try out our little plan on him. Did you hear?”

“Senator Who?”

“Ah, well, we made up a new name for him. But did you hear the plan?”

Shure was looking pleased with himself.

“Just enough to know it’s a good thing I got here when I did.”

“So have you got him?”

“No, he seems to have vanished. We still have some searching to do. But we can get you three out of here and home. That’s the first thing I’ve been worried about. Get your shoes on and come on upstairs.”

She left the door open, and she and Tom Ayala returned up to the kitchen.

\* \* \*

By the time the former prisoners made it upstairs, Annette and Tom Ayala had related their find to the others, and a series of jokes was in progress, none very flattering to Senator Jarvis Schoenfield. The “conking” part, and his new name, received extra attention. Annette finally decided it was time to get back to business.

“OK, look, this is all healthy. Really. We had the shoot-out earlier and then we waited and tension built. And now we can all breathe a big sigh of relief. We actually needed something like this. But we still have a bad guy to catch. And he’s got more than an hour’s head start and he knows the territory. Anybody have any suggestions?”

Annette wanted get things back on track soonest.

“Well, we’re really not set up for a search in these mountains. Let’s have our guys here search the house and the buildings, and maybe Consuela can tell us where the tunnel is. The SWAT guys outside have some wilderness experience, so maybe they can help with strategy. But I don’t think we ought to run off into the woods chasing this guy tonight.”

Tom Ayala was still grinning, but he was serious now, too.

“I agree. Gentlemen, the search of the house is on. Go for it. Consuela, would you be so kind as to make a big pot of coffee? Oh, and do you know where this tunnel is?”

“Si. Under the basement stairs. I do not know where it goes, just outside somewhere, I think.”

“Well, Tom, are you game for a little expedition? Maybe we should get a couple of the SWAT guys in here.”

She switched on her radio.

“Trieri. We are going to check out this tunnel, Tom Ayala and I. Please send in two SWAT members. Out. Oh. No, not out. Can someone in communications please call whoever is sending the negotiator? We won’t be needing him. Out. Oh, wait, one more thing. If anybody has a set of those night vision goggles, they’d be useful in this tunnel, I bet. Out, for real.”

It took only about 30 seconds for two of the camouflage-covered SWAT members to arrive, one carrying a bulky set of goggles. Conseula began to look very nervous, so Annette figured they should just go look at the tunnel without any more delays. They followed her down the stairs.

With the door to the suite left open by its former occupants, there was enough light on the base of the stairs that Annette could see a small passage to the side of the staircase and a door underneath it.

“Want to draw straws, or what?”

She was being flip, but she also really didn’t want to go first.

“Excuse me, ma’am.”

The smaller of the two SWAT guys eased past her toward the hidden door, goggles on his face. He motioned Annette and the others aside and, protecting himself as much as he could, he jerked the door open.

The darkness of the empty tunnel stared at them, and then it seemed to exhale with a cool, earthy breath. The SWAT officer took the goggles off, and then he reached into a cargo pocket and came up with a flashlight, which he pointed down the tunnel and turned on. It showed more tunnel, a passageway about five feet tall and three wide. It seemed maintained, because the roots that hung from the ceiling were trimmed. There were post and beam supports about every five feet, and they receded past the reach of the light. It appeared that the floor began to climb on a gentle slope after about fifty feet.

The SWAT guy reached into another pocket and produced a compass.

“Ma’am, please have someone upstairs sight along a heading of 098 degrees. If there are no turns, and if that slope down there is steady, this thing should surface a couple hundred yards out. Is there a building out about there, or something?”

Annette heard the other SWAT guy taking the stairs two at a time. I really need to get their names, she thought.

He was back in a surprisingly short time, hollering into the tunnel,

“Looks like the hay barn, Al.”

“Thanks, Rafe,” came the response.

Well, she thought, that takes care of that.

“Ma’am, Tom, with all due respect, you folks aren’t really dressed for this. It’s not only dirty in there, we really don’t know what we’re going to find. He may be holed up. Excuse me.”

And Rafe eased his way into the tunnel after Al.

“He’s right, Tom. Let’s go have a look at that hay barn.”

She switched her radio on as they started up the stairs.

“Trieri. SWAT please converge on the hay barn east of the main house. We think it’s where the tunnel surfaces. Out.”

“Hay barn, eh?”

Alaya was thinking out loud as they walked toward the barn.

“Annette, did you grow up on a farm, or ever visit one much?”

“We used to visit my uncle in downstate Illinois in the summer, for Labor Day. Big family reunion. He raised corn and soy beans, some hogs.”

“I grew up on a ranch, cattle and a hay operation. Sometimes, we used to make tunnels in the hay loft, using bales like bricks, you know? All sorts of passage ways, little rooms. We used to play hide-and-seek.”

“Yeah, we did that, too. I think that’s where I got hay fever, from breathing all that dust.”

Just thinking about it made her sneeze.

“Bless you. So, what do you suppose we’ll find out here, in this barn?”

“Are you thinking that the tunnel surfaces in some kind of cave in the hay?”

“No idea. It just occurred to me, about my childhood and hay lofts.”

“Trouble is, it’s getting dark.”

“Yep. If we have a real search, it’s for tomorrow. But maybe we’ll find something here that will help tomorrow.”

When they reached the barn, there was a cluster of camouflage-clad people standing around, talking with one another. They came to a sort of casual order in Annette’s presence. She supposed that her handling of the Oswald situation was getting around. Alaya took charge.

“Guys, what Annette said over the radio is about all we know, until we hear from Al and Rafe. They should be under us somewhere, I guess.”

“Not quite, Tom, we’re here.”

It was Al, walking around the corner of the barn.

“Come look at what we found. The group followed him.

On the east side of the barn, a car-sized sliding door had been rolled back, revealing a little room made out of hay bales. In its center was an open trap door. The room, about the size of a small garden shed, was empty.

“Look at this.” Al was pointing at tracks in the dust, from the knobby tires of an all-terrain vehicle, leading down the hill toward the forest.

\* \* \*

Back in town, Annette showered and washed her hair before calling home.

“He must have waited us out and rolled the ATV down the hill after the SWAT guys had closed in past the barn. They searched it, of course, but not well enough to find this hide-away. The sliding door was locked, from the inside, when they tried it earlier.”

“So the Senator gave you the slip. But Jamie and Tim are OK and on their way home?”

“And Chuck Shure, too. They should be there by now. Tomorrow, they’re supposed to see you and tell you all about it. Please try not to laugh too hard. They need the Stern Dean look on this one.”

“Stern Dean look?”

“You know, when someone needs an authority figure to clamp down on them. Discipline. That sort of thing.”

“They need discipline?”

“Oh, not really, but it would be better if you acted like it. They were concocting a hair-brained escape scheme, not something we like hostages to do. They’re supposed to sit quietly and await their fate. At least that’s what the book says.”

“What are you talking about?”

“You’ll see. And nothing, really. I’m just tired. The yo-yo day I described has me exhausted and babbling. I’ll call you tomorrow.”

“You be careful out there.”

“I will. Superman isn’t around to save me.”

“Right. But those SWAT guys can, right?”

“You bet. Good night, sweetie. I miss you.”

“Me, too. The house is too empty. Hurry home, OK?”

She felt lucky to have found room at a bed and breakfast down in Norwood. Tom Ayala was across town at a motel with some of his officers, and most of the SWAT officers were still at Raven’s Roost, having taken over the bunk house as well as the gate house. Someone had pointed out that one tunnel with hidden entrances could mean more, so they had all-night guards posted.

The next morning, a Saturday, dawned gray and gloomy. It appeared that the southwest monsoon might pay the Four Corners a visit, just in time to wash away whatever tracks Schoenfield had left. Annette and the entire team gathered at the gate house for a morning briefing and strategy session.

As they were assembling, Jim Nettleman, forgotten in yesterday’s action with Oswald, walked in. Yesterday, he had borrowed a ranch pickup he found by the gate house and driven home at the first opportunity.

“Here’s the keys, Tom, Ms. Trieri. Uh, my car’s up by the main house. I’d get it but it doesn’t look like you got much further with this thing than yesterday.”

“You can go on up there. We got the house searched, but Schoenfield got away through a tunnel to the hay barn. We found some ATV tracks leading down the hill over to the southeast there.”

Tom Ayala was pointing in the general direction of Lone Cone Peak.

“Got any idea of where he might have gone, Jim?”

“Well, now, I reckon that the more I work with you folks as a civilian, the more temporary that civilian status is likely to be, hmm?”

Nettleman looked Annette in the eye for the first time.

“I’m just in charge of this operation, Mr. Nettleman, not your future. But the more you help us, the more I can help you. And I’m perfectly willing to overlook our bad start yesterday, to begin all over with you. You didn’t do anything that had any real effect on yesterday’s events. It didn’t all turn out the

way we would have liked, but I don't know how we would have got anywhere at all without your presence at the start. And you climbed that gate at exactly the right time."

She smiled, trying to be as disarming as possible. He actually smiled back, a sort of half smile that twisted his moustache around, and nodded.

"Well, thanks for that. Now, as to the Senator... Say, I guess I'll have to learn to stop calling him that, won't I?"

"Oh, I imagine that his new friends at the state pen will continue to call him that, and have a lot of fun in the process." Ayala was grinning.

"You're probably right about that. Anyway, if he headed off toward Lone Cone, he's probably making for his hunting cabin. He usually goes in there on horseback, but in the past he's had people take supplies in with four-wheelers, and groups sometimes go in using off-road pickups. It's about three, three-and-a-half miles southeast, on a saddle between a couple of little draws, near a spring. Hidden away pretty well, but not too hard to find because there's an old logging road. It's part of a network of old roads in there. Got a map?"

They unrolled a USFS quadrangle and Nettleman pointed out the location and approaches. Annette noticed the dashed-dotted line first.

"Well, isn't this ironic. Mr. Nettleman, you're off the hook anyway. If he's gone to this cabin, he's out of your jurisdiction. This is Dolores County, isn't it?"

"Just barely, yeah. I've been down there several times on hunting trips with the Sen... with Schoenfield. Uh, y'see, ma'am, he's a community leader here and being invited to hunt with him, or to come to his parties, or anything like that is a real honor, or has been in the past. So I've been there. And I always figured that because it was in the next county, I could take off my badge and kick back, if you know what I mean."

"What's the cover like?"

"Ponderosa forest, mixed with aspen and some spruce. Lots of rocks. We grow rocks good in these parts, as they say."

"You know, Annette, it won't do to have civilians along on this operation, and Jim's a civilian. Maybe he would benefit from reading some of the stuff you showed me yesterday."

Ayala wanted to give his friend the perspective he'd seen.

"Wait 'til you see this, Jim. Some of Schoenfield's thoughts written down. Surprised the hell out of me, I'll tell you."

"Good idea, Tom. I'll leave you with my laptop computer, Mr. Nettleman, and you can get educated about Senator Jarvis Schoenfield's political philosophies, his private ones. Meantime, we'll see if the ranch vehicles sitting around here can negotiate these old logging roads."

\* \* \*

It was bumpy, and several times even the high clearance of the pickup Annette was in scraped something, but they worked their way down the roads. There were three pickup trucks, with the beds full of the SWAT officers, wedged in and hanging on. Tom Ayala, driving the lead truck, seemed to have a global positioning system in his head, for he made turns onto connecting roads at seemingly random intervals, all the while managing to maintain more or less the same heading.

Eventually, he stopped the truck in a clearing, and the other two pickups pulled up beside.

“I think we’re close enough that we need to do the rest on foot. Let’s see that map, Annette.”

“If we’re not lost, you’re in the wrong line of work. You should be a navigator.”

Ayala looked embarrassed.

“Well, to tell the truth, I’ve been here, once. I couldn’t have put it on the map like Jim did, but I did remember the trick to getting here. There are marks on trees where you turn.”

She handed him the rolled up quadrangle, thinking that it had been a wise idea to wear sensible outdoor shoes today. He opened the door and stepped down, amid the SWAT members, who were stretching and rubbing spots that had gone to sleep. He unrolled the map on the hood of the pickup next to his, and everyone gathered around.

“I think we’re about here.”

He was pointing to a spot on a dashed line to the west of where the cabin had been marked.

“It’s about a half mile away from the cabin here. By road, it’s half again that much, probably, because you can see how there are these sort of switchbacks. If we fan out, we should be able to cover any additional escape attempts, at least on the road and uphill toward us.”

“You think he’s still got that Sharps?”

George, one of the snipers, was well aware of the potential of that weapon.

“We didn’t find one in the main house, so we have to assume he does. Also, there was an arms cabinet left open, and there appeared to be handguns missing. Can’t say what they are, although the only ammo left was large-bore. So I think we’ve got a heavily armed crazy person on our hands.”

“What’s the drill?”

Everyone, even Ayala, looked at Annette. She tried to think fast.

“We’d like to take him in, of course. But he may not let us. So, first and foremost, protect yourselves and each other. I’m hoping we can get close enough to the cabin to hail him, give him a chance to surrender. We certainly can’t just go in blasting.”

She paused to gather her thoughts, and before she could continue, Ayala held up a hand.

“Listen. Is that a horse?”

The familiar sound of a horse at full gallop caused the SWAT officers to melt into the landscape, and Annette and Ayala, along with the uniformed officers, took up positions on the opposite side of their pickup. Presently, the horse appeared, running flat out down the road, carrying Jim Nettleman. He pulled the horse up short at the trucks and swung easily down.

“Tom, ma’am. I know you don’t want me here, but I need to say something to both of you. I mean, I had no idea. Schoenfield helped get me elected and re-elected, and I owe him for that. That’s probably why the Governor suspended me during this operation. But, honest, I had no idea. Tom, after reading that garbage, I have to tell you I’m ashamed. Ashamed to be associated with the man, and, well, just ashamed. And Ms. Trieri, well, I had the wrong idea about you altogether. I guess I figured there was some kind of political vendetta at work, but I can see how wrong I was. If there’s anything I can do, just say the word.”

He was breathing hard from the ride and this speech, so he stopped to recover.

“Well, tell you what. You can show us where we are on the map and give us more details about the cabin and the layout. And, hell, I guess you could help by guiding us down there. I thought to cut off the next big curve by bushwhacking through the woods. Does that make sense?”

Ayala, who knew Nettleman well, was convinced, and Annette decided to follow his lead.

So they gathered around the map, and the SWAT members re-emerged from their concealment.

Twenty minutes later, they were in position. Annette could see the front of the cabin from her position amid a cluster of large granite boulders. The boulders were high enough above the cabin to provide a clear view, and they were large and numerous enough to provide cover for her, Ayala, Nettleman, and two uniformed officers.

In front of the cabin was an eighteen-inch ponderosa pine, standing like a sentinel with long, jagged stubs of two broken-off limbs about street-sign height pointing both right and left along the logging road. She knew that, to her left, downhill slightly from the cabin, the road was blocked by one of the pickup trucks. It had been moved into position quietly by letting it roll with its engine off for the last two hundred yards to the road's low spot.

She could just make out the remnants of a long-unused road heading straight away from her on the left side of the cabin. It wasn't likely to be Schoenfield's choice for a quick exit, as it was blocked by deadfalls. To the right, the logging road swept upward and away from them around a curve. There was a group of SWAT officers at about the apex of the curve, where they had cover. Because that direction led away from the ranch buildings, everyone thought it would be Schoenfield's first choice for flight. But even this would be difficult, as the old road, while serviceable, was eroded badly. Near the stately ponderosa in front of the cabin, there were several deep ruts completely across the road, and she could see erosion channels running down the hill as well.

On the porch of the cabin sat an ATV, and the view through binoculars suggested its tires were candidates to have made the tracks leading away from the hay barn.

Annette was not looking forward to what had to happen next. Megaphones were not her favorite method of communication. For one thing, she thought they were just flat obnoxious. For another, she didn't like the way her voice sounded through one. But there was really no alternative, and she was in charge. She took it from the officer who had carried it down from their truck, and turned it on.

"Senator Jarvis Schoenfield! You are surrounded by officers of the Colorado State Patrol and the Colorado Bureau of Investigation! We have lawful warrants for your arrest on felony charges. We order you to surrender to us. Exit the cabin through the front door, keep your hands on top of your head, and lie face down on the porch. Do it now!"

She paused to take a breath. Why, she thought, couldn't her voice sound like, say, Melissa Etheridge, instead of like Britney Spears with a bad sinus infection?

"Senator, we know you are armed. You should know that I lied to you about Michael Oswald. He's dead. The shot you heard was not a warning shot, it was a kill. He pointed that rifle our way, and we used deadly force. We're prepared to do the same with you. And despite the power of your rifle and your skill, you are outnumbered and outgunned. So please don't do anything foolish. Surrender peacefully and you will be treated well. So come out with your hands on top of your head. Now!"

And, after a tense minute of waiting, he did.

The front door of the cabin opened part way, and Annette could see a cowboy boot kick it fully open. Then Schoenfield was standing in the doorway, hands on top of his head as ordered. He began walking out onto the porch, slowly, looking around, up and down the road, at the boulders up the hill toward Annette and company. He walked to the ATV, and then he began the process of lying down. He lifted his hands off his head, fingers splayed, and extended them in front of him while beginning to bow from the waist.

Annette realized that she had been holding her breath, and she exhaled in relief. So did everyone else.

But when Schoenfield's hands were about waist high, he moved. Instead of lying down, he leapt sideways, onto the ATV. He grabbed the handlebars, pushed a button, and it roared to life. It lurched off the porch, and then it turned left up the road, in the direction everyone had expected Schoenfield to flee. Annette switched on her radio.

"Trieri. Subject bolting, on an ATV up the road toward the SWAT. No weapons seen, and as long as he's got hold of the handlebars, he won't have any. Hold fire. Guys, get out your ropes."

But they must have shown their hands too soon. When he was up the road 100 yards or so, Schoenfield twisted the handlebars and spun the ATV completely around, and then he accelerated back down the hill toward the cabin, standing on the foot pegs and leaning forward on the handlebars to absorb the rough road. As he approached the first of the ruts across the road by the cabin, he squatted and then suddenly jerked the handlebars upward, gunning the engine. The ATV hopped across the rut.

But the second rut got him when the ATV's front wheels landed squarely in it. Because they were turned slightly to the left, the handlebars were wrenched from his grasp. And because the suspension had compressed on landing, the ATV bounced, and Schoenfield was thrown clear while the ATV did a somersault.

It is said that victims of accidents such as this always see things happening in slow motion. Certainly, Schoenfield had time to scream while flying through the air. But he didn't have time to twist away from the ponderosa. It caught him head-on, and his body looked like a rag doll as it smacked squarely into the trunk. His arms and legs wound up wrapped completely around it in the sort of embrace small boys use to shinny up trees.

But he didn't fall. This puzzled Annette and her team, until Jim Nettleman pointed out that the sentinel's right-pointing branch was nowhere to be seen.

Except, suggested Tom Ayala, for the bump under the back of Schoenfield's jacket.

"That," someone said, "has gotta hurt."

It took only a couple of minutes for Schoenfield's arms and legs to go slack, and for his head to sag back.

But he still didn't fall.

\* \* \*

Sunday morning was much better for Annette than Saturday had been. For Hal, too, but most certainly for her. She'd managed to get home late Saturday night, and sleeping in her own bed, curled up with her favorite Dean, was an antidote to the previous 48 hours.

Breakfast, a quiche Lorraine, on the deck in the late July morning sun, was the finishing touch to her recovery. It also helped that she could tell the story to someone who really listened rather than merely to a computer file. She'd have to do that later, for her official report, but for now talking helped.

"So you're telling me that Jarvis Schoenfield, who was so set against the environmental community that he plotted to kill them off, with considerable success for a time there, actually died hugging a tree? Talk about irony. What's going to happen to his empire?"

Hal was working on his second piece of quiche.

“Well, of course it’s too soon to tell, really. But it was interesting. When we got back to Norwood yesterday afternoon, there was this committee wanting to talk with me, most of the directors of the foundation that now owns the X-S Ranch. They had already voted, unanimously, to change their name to something besides Resources For Humanity. It seems that Jim Nettleman is an enterprising sort of guy. After he read Schoenfield’s stuff on my computer, he figured out how to use the ranch phone to e-mail a bunch of it to the directors of this foundation. So they were falling all over themselves to point out how the X-S had no real connection to any of Schoenfield’s other activities and on and on. I guess that the foundation will now figure out what to do with itself, presumably something constructive.”

“And what about those two hit men? The ones that the FBI thinks tried to kill the President?”

“We’ve got ’em dead to rights. The material we found in Schoenfield’s house, found with valid warrants, means they’re going to be tried and convicted for several murders and for attempting to assassinate the President. And the same goes for several other unsavory individuals as well. The guys who burned the law offices in Cortez, for example. And a bunch of people who were in line for other operations like that. The whole Resources For Humanity thing is simply over with. Especially since its so-called spiritual leader, Michael Oswald, is dead. Say, that reminds me. He was Tim Langer’s uncle. And Tim and Jamie were supposed to come and see you yesterday. When I told them to, I forgot it would be Saturday. Did they?”

“Indeed they did. Along with Charles Shure, industrialist nonpareil and all-around pretty good guy. And not a bad schemer, from what they told me.”

“So they told you?”

“Yeah, all about how they were fed up and were trying to concoct an escape plan when you showed up. Shure took responsibility. He also offered Tim a job, which Tim said he knew about from Shure’s computer security guy, and almost offered Jamie a job, too. But I changed the subject before he could, because I want to keep her at the U. And now the real question here is your experience with the CBI. You were doing this as a try-out, last I heard.”

He arched his eyebrows and looked the question right at her.

“Well, I think I’m hooked. Hmm. It feels like anything I say will imply bad things about the Durango PD. And I really like those guys, all of them. And the connection to the people in town, serving the citizens and all that, is really rewarding. But I guess I’m ready for a change, new challenges.”

“Well, this first case, I mean all the cases in that portfolio and the other stuff, up to and including a Presidential assassination attempt, that’s indeed a change. But how can the CBI, or anyone, top that?”

“I don’t think that’s necessarily what I’m looking for, I mean big, high-visibility cases. But variety is good.”

She paused to chew, and to think.

“Even though I was working with the counties in the region when I was with the PD, the CBI offers more, on a broader scale. And the connection to the feds is tighter. The FBI takes a lot of flack, but they never get much credit for all their good work. And that’s interesting to be involved in. But one thing worries me a little. CBI is a state government operation, and they like to move people around. What happens if they want me somewhere else?”

“Well, as long as it’s west of I-25, I don’t think there’s anything to be concerned about. Say the word and we’ll move there.”

“West of I-25?”

“You know, in the mountains. I mean, I’d hope that they would offer you some choice. You’re going to get a lot of points for solving this case. Er, rather, clearing it. Surely they won’t insist on sending you to, oh, some place like Julesburg.”

“I’d hope so too, the choice, I mean. And, hey, I do my best work in the mountains. But what about your job?”

“Alice is going to retire before too long, and I’m ready for a sabbatical. I’m about burned out on this Dean stuff. Like I said, say the word.”

A Four Corners Mystery

# Head for Murder: A Four Corners Mystery

## One

I heard it was the *Alamosa Valley Courier* that first used the term “Burma Shave Murder” to describe what that poor guy found down by Capulin, west of La Jara. Then the Associated Press picked it up, and the name stuck. Later, of course, it became plural.

I’ve wondered whether the *Valley Courier* reporter who coined the name realized that she had dated herself back to the middle of the last century. Her reference to those sets of little roadside signs with doggerel advertising shaving soap must have been lost on anyone under about 50. I had to ask Hal what it meant before I understood it.

Poor Ron Hufnagel was so rattled by what he found that he forgot he was actually in Conejos County, and he called the Alamosa County Sheriff’s Department by mistake. But it didn’t take long for them to call the State Patrol, who relayed the information to the correct sheriff’s department down in the hamlet of Conejos. Eventually, the Patrol also filed a report with the Colorado Bureau of Investigation, and I heard about it through the routine of the weekly conference call. By then there were additional details.

It seems that Hufnagel was on his way home from a Friday fishing trip up in the southeastern San Juans, and he decided to take a short-cut by way of a back road. He was driving along and noticed a little sign on a metal fence-post in the ditch. It read:

*To Help Protect*

Then, in what he estimated to be about tenth-mile intervals, he passed three more signs that read in succession:

*The Shy And Meek,  
Eliminate  
A Jerk A Week.*

Hufnagel, who admitted to having been an English literature major in college, was considering the iambic meter of this little couplet, when he came upon a fifth fence post with a human head impaled on it and a sign reading “*One Less Jerk.*”

What rattled Hufnagel so—to the point of hysteria, in fact—was that he recognized whose head it was, that of the wrestling and football coach at Monte Vista High School, Frank Scharmatz. Or, as Hufnagel corrected himself, ex-coach.

Hufnagel can be excused for his hysteria, because primates, humans included, seem to have an instinctive fear of severed heads. The Hollywood crowd that makes those slasher films knows this and exploits it at every opportunity. I've heard the tape of the call that Hufnagel made from his cell phone, sitting in his car staring at the head, and the poor guy could hardly talk.

At least the fear made him sit tight and not get out and track up the scene. The Conejos County sheriff's deputy who arrived first found Hufnagel in his car, whimpering.

The second Burma Shave Murder, or at least the first evidence of it found a week later, was on a county road east of Gunnison, and the person who called it in was nearly as hysterical as Hufnagel had been, despite not knowing whose head it was. The second victim was identified by the sheriff's deputy first on the scene, who recognized the head from having seen it, attached to its shoulders, around the Gunnison County courthouse. The poem for this one was a little different, more personal:

*If You're a Jerk  
Like This Poor Sod,  
We'll Send You Off  
To Meet Your God.*

But in all other respects the *modus* was identical. In both cases, the decapitations were extraordinarily clean, so much so that they'd be described as "professional" if there were still such a profession. And the killer had drained the blood from each head prior to its immersion in a 15% formalin solution, that formaldehyde-based preservative used in museums and mortuaries.

In the second case, the victim was a lawyer from Crested Butte, and the only thing the two victims had in common was the cause of death and the assertion via the poems that they were less than upstanding citizens. This assertion was verified during the follow-up interviews with family and acquaintances—it turned out that neither victim had much in the way of friends. The interviews with the two wives, in particular, were highly instructive regarding the victims' characters.

It probably affected the subsequent conduct of the investigation that the State Patrol officer who interviewed Bonnie Scharmatz the morning after her husband's head was found had recently completed a training course for law officers involved with domestic violence investigations.

Officer Candice Garcia immediately became suspicious about Bonnie's black eye and the brace on her left arm. At first, Bonnie tried to protect her husband with the standard explanations of running into a door, falling, and spraining her wrist. But Candice reminded Bonnie that Frank was dead and didn't need protecting, and, moreover, the truth would help in the investigation. So the story of years of abuse poured out—he'd caused the recent injuries when he twisted her arm into a hammer lock and shoved her into a wall, as punishment for a less than stellar meatloaf. This had happened five days before the interview, and Frank had disappeared shortly after that, walking off, leaving his car at home. Bonnie had assumed that he was staying a few blocks away with his mistress, Crystal Stafford, a third-grade teacher in Monte Vista.

Under ordinary circumstances, the fact that Bonnie had been battered and knew of her husband's infidelity would have made her a suspect in his death. In fact, a spirited discussion of just this topic was in progress during a Friday conference call between the courthouse down in Conejos and the State Patrol office in Alamosa when the evidence of murder number two was reported.

Based on the conversation with Bonnie, the Gunnison County authorities had Sarah Robinson, wife of headless Crested Butte lawyer Martin Robinson, interviewed by a deputy with credentials like

Candice Garcia's, and a similar story emerged. Sarah had no recent injuries, though, because she had learned how to protect herself enough to avoid them. Marty, she said, had left home after a shouting match about four days before. His car was eventually found twenty miles away in Gunnison, parked on a side street.

It therefore appeared that, if the definition of "jerk" included "wife beater," the poems were accurate.

Forensic evidence was somewhere in that gray zone between thin and none. Nothing obvious, such as fingerprints or tire tracks, was found. The fence posts were third- or fourth-hand, old and rusty, of slightly different designs and ages, which suggested that they had been scavenged from various sites around the region. Although the soil in the ditches where the signs stood was fairly soft, whoever had put in the fence posts had been careful not to leave footprints. The signs themselves were quite professionally done, but anonymously done as well, printed with some kind of laser printer and enlarged to 11x17 size on a copier somewhere. The paper had been laminated onto plastic sign-board, the weatherproof kind that political campaigns use. We found the manufacturer easily, but in the process we discovered that this particular sign-board could be purchased at literally hundreds of retail outlets, including many copy shops.

It was as if someone had a routine: they went out to these remote country roads; put in nine fence posts, the steel ones with the T cross-section, spread out evenly over a mile or so; attached signs so that drivers traveling in both directions could read them; and then pulled a severed head out of a bucket of formalin and thumped the thing onto the top of the middle post—always facing the road.

One curiosity was the expressions on the faces of the two heads—both appeared utterly terrified, as if they knew what was about to happen to them. My first look at these expressions was in photographs that were sent around to the various CBI field offices with other documentation, but the pictures really didn't do them justice. When I finally saw one of the heads in person, the terror visible in its expression made the hair stand up on the back of my neck.

And there were no signs of either body. Just the heads.

It was the third one—discovered exactly a week after the second—that dragged me into the whole thing. A rancher from north of Pagosa Springs lost his head, which was found way south, down on Coyote Park Road close to the New Mexico state line. Three murders with the same MO, in three different counties, the last one fairly close to my office in Durango—I got the call from CBI headquarters in Denver that the whole business was now my case, on the Governor's orders. And with all the publicity it was getting, well, it wasn't going to be a back-burner case, either.

\* \* \*

At first, it just didn't seem fair. I'd recently finished clearing the first case of my relatively new Colorado Bureau of Investigation appointment, a high-profile series of murders of over a dozen environmental activists in the Four Corners region. The mastermind, a Colorado State Senator who moonlighted secretly as an ultra-right-wing rabble-rouser, had been killed in an accident while trying to escape capture, and his hired killers were in custody awaiting trial—for which we had evidence enough to consider conviction a foregone conclusion.

So even though I'd been on the job for only a couple of months, they had been stressful months. I wanted a week of breathing room, some personal time with Hal before classes at Frémont State began so that we could go off fly-fishing somewhere. But I'd no sooner finished the paperwork on the environmentalist murders than this new file got dumped in my lap.

At least I couldn't complain that it was going to be routine. Even the name made it sound lurid—the *Frémont Free Press* immediately picked up on “Burma Shave Murders” and had way too much fun proclaiming that the third victim had received a “really close shave.”

Well, what else can you expect from a bunch of college students running an independent campus paper?

Hal, that is, Harold Weathers, Dean of Natural Sciences at Frémont State University here in Durango, and also my husband, called me with that particular tidbit. Being married to a dean means that I have to go to lots of campus cocktail parties and sports events, and he makes it up to me with information. He called from home just after I finished the Saturday morning phone call with Rod Andersen, my boss in Denver, when I got assigned to the cases, so I wasn't in the best of moods. But that ridiculous quote from the *Free Press* cheered me right up.

“‘Really close shave’? They actually said that?” I was trying not to laugh.

“I don't think they're at all sympathetic to these guys, the dead ones. I mean, you know, the *Free Press* is quite radical, politically. And this business about domestic abuse has got their editorial juices flowing.” I could hear Hal turning pages of the paper. “Did you hear the latest poem?”

“All I know is that I got assigned to do the investigation. But if the poem's in the paper, I'm already way behind. How's it go?” Sometimes I'm more curious than is good for me.

“Ahem. Let me use my recitation voice:

*The Jerks Who Shove  
Weak Folks Around  
Are Bound To Wind Up  
Under Ground.*

Not, I would say, literature-quality poetry.” It sounded as if Hal's rubbing shoulders with his colleagues in the English department was influencing his literary tastes. “Same meter as the others, though—same basic message, too.”

“Yeah, and Rod told me that the reports he got from the sheriff and the State Patrol suggest it's the same MO. So we've got another serial murderer to find. The Governor's office told Rod to make sure the CBI doesn't let all these sheriffs flounder around on their own. I'm kind of ticked off, though, because I wanted to get away with you for a week, before classes start and you get busy.”

“Well, now there's a good idea. Hmm. Say, wasn't one of these things up by Gunnison? Maybe you'll have to go up there and do some investigating. Seems like we could drive up there tomorrow so you could get started Monday morning. Then we could drive home the long way, through Alamosa and Pagosa Springs. Even if you have to work, we'd be together.”

“Yeah! That's why I love you so much—you're a great creative thinker. Listen, I've got to go, but I should be home in time for dinner, OK?”

“And I thought you loved me for my body. Oh, well. I'll take out my disappointment on something interesting to eat. See you later.”

“Well, that, too. Later, 'bye.”

Truth be told, I do love him for his body, along with everything else. He has this middle-aged insecurity complex that guys in their fifties are prone to getting, but it's a breeze for me to boost his ego

whenever he seems to need it. He returns the favor by showing me off at those campus cocktail parties—they're one of my few opportunities to get dressed up and strut a little. It's out of character for me, but I can't help but have fun with it.

People are always mistaking me for a trophy wife, because I'm a lot younger than Hal, and I love the looks on their faces when I mention my job. I used to surprise them with my title of Lieutenant in the Durango Police Department, and now that I'm the Director of the Durango Office of the Colorado Bureau of Investigation, it's even better, with all those extra capital letters.

Sometimes those campus parties, especially the ones involving graduate students, get a little loose, and the Lieutenant comment actually motivated someone to eat a joint—a lit joint—one time. It was hilarious. I offered the poor kid my drink to help wash it down.

Hal and I met a few years ago, back when I still worked for the PD, after one of his chemistry professors had been killed on the campus. When the students who found the body reported it, Hal, as the university official closest to the victim, got involved right away, and I got involved because that was my job at the time. He told me later that he was smitten with me immediately, and it didn't take me long to fall for him as well. I wound up moving in with him, and we got married last spring, just before the environmentalist murders broke.

In addition to being a wonderful husband, he's interested in my work. He's an earth scientist at heart—being a dean is just a temporary distraction, he says—and he seems fascinated about how solving the puzzles associated with crimes is similar to solving scientific problems. But in this case, I couldn't help but think that his scientific problems wouldn't have much in common with the beheadings.

I spent the rest of that Saturday on the phone, coming up to speed on the three decapitations and making plans for visits to the three locations. As I talked with various people, Hal's idea became more and more intriguing—we could make a tour around this part of the state so I could check out the places where the heads had turned up and put in some face time with all the people in the three investigations. Each of the county sheriff's offices was baffled, even though they retained responsibility for the investigations, and the State Patrol people were looking to us in the CBI to coordinate things and to make the big breakthrough. That's our job, of course, so we do what we can. But it's not like we're miracle workers.

The longest conversation I had was with Ron Grange, the Archuleta County Sheriff, the lucky guy whose department had responsibility for the newest Burma Shave Murder. He didn't feel at all lucky, though.

"Y'know, if you made me choose between a poke in the eye with a sharp stick and dealing with this beheading, well, I'd have to think about it for a while. I mean, that thing I worked on with you last month, where we picked up those tree-huggers who were smoking dope, that's more my style. We just don't get very many murders over here, let alone bizarre ones like this. We can probably handle it, but it'll be a stretch."

"By now, you've seen the reports from Conejos and Gunnison, right?" I wanted to be sure he knew he wasn't alone.

"Yeah, and I talked to a couple of the guys in the Alamosa State Patrol Office, too. They know lots more than the people down in Conejos. Seems like we've got the same thing, not just a copy-cat. So you're going to coordinate our investigations, huh?" The tone suggested he was grateful for the help.

"That's what Denver told me. But what I really want to do is stay in the background. I mean, if whoever's doing this is going to continue, he'll feel better, more bold, maybe, if he thinks that you various county sheriffs are all working separately."

“Yeah, we’re just hick backwoods cops with our bellies hanging out over our belts. Don’t know crap about how to do real investigations and all that. At least that’s what we want him to think. Maybe I can come up with some dumb quotes for the newspaper, enhance that image.” I was glad to hear him laughing while he said all this.

“Do you have any insights about your victim? Does he fit into the same mold as the other two?”

“You mean, as in, was he as big a jerk as they were?”

“Yeah, that’s one way to put it.”

“Well, now, Hollis was one of those guys who wanted things his own way, I’ll say that. And he didn’t have a very high opinion of women, except as sex objects, no offense intended, Annette. People around here say he worked his wife to death, and since then he hasn’t been able to keep a housekeeper around for more than about a month. The last one got a lawyer and filed a civil suit for sexual harassment. It was settled out of court with big bucks for her, I hear.”

“Is there any family?”

“A daughter, lives here in Pagosa. She told me yesterday that she hadn’t spoken with him in months, actually used the word ‘jerk’ in our conversation to describe him.”

So, I thought, Hollis Henry fits into the same category. Someone is indeed freeing the world, or at least our little corner of it, from jerks.

\* \* \*

We left the next day, a beautiful mid-August Sunday, for Gunnison, where I had my first appointment on Monday morning. Our route started to the north through the San Juan Mountains, beginning a big clockwise circle that would take us up through Ouray, Montrose, Gunnison with a side trip to Crested Butte, Saguache, Alamosa, Pagosa Springs, and finally back home to Durango. I didn’t have Sunday appointments, so we left early to give ourselves time to fish the Lake Fork of the Gunnison River before heading to the B&B in Crested Butte that Hal had booked us into.

We have this great division of labor for our road trips—he makes the travel arrangements, loads the car, and drives. And, at least when the road is straight enough, I sleep.

I knew that the twists and turns of the Million Dollar Highway up to Ouray wouldn’t allow sleeping, though—Hal’s mild-mannered college dean persona goes into hibernation whenever he gets behind the wheel of his Audi S4. This is one of those first-generation S4s, the ones with the twin turbochargers, so it’s nearly as happy at 10,000 feet as it is at sea level. Even climbing a grade in the thin air up in the high country, the car can make your head snap back when you ask it to accelerate.

And on a Sunday in the height of the summer tourist season, this ability is useful, at least if you want to travel faster than the twenty miles per hour or so that the flat-land RVs manage up there.

Hal knows the road north well enough that he’s patient, waiting for the next straight stretch to pass. He peeks around the offending aluminum box, and I get a warning if he downshifts or a reprieve if he grumps about oncoming traffic. It’s actually quite fun, because he doesn’t tailgate and people behind him do, thinking he’s just some old geezer out for a Sunday drive in his Audi sedan. But then, when he launches into passing mode, the tailgaters recede in the mirrors, and we never see them again. Hal seems to take genuine glee in this when the tailgater is driving another German car, especially a BMW. I suppose that it’s some sort of guy thing at work—he’s middle-aged, but there’s a teenager still lurking in there somewhere.

That Sunday, we managed to get over to Ouray, down in the Uncompahgre River Valley, in about an hour and a half, and then I promptly went to sleep. The next thing I knew, we were bumping along a dirt road beside a beautiful stretch of water.

“So, are you going to fish or just sleep?” He patted my leg.

“If it’s like this, I’ll fish.”

I’m not what’s known in fly-fishing circles as a power wader, preferring shallow streams with gentle currents instead of big water. Years ago, before I met Hal and learned to fly-fish, I would have been reduced to a fit of giggles by the mere notion of putting on Gore-Tex pants and felt-soled boots to splash around in a stream so I could wave an eight-foot stick trying to catch trout.

But I’ve found that it’s something that brings me a special kind of peace—the sounds of the stream and the wind in the trees, the smells of the pine woods, the scenery. Catching a fish disrupts all this with a few minutes of pandemonium, but that part’s OK, too. I use hooks with the barbs flattened down and release all the fish I catch, trying to handle them as little and as carefully as possible. I’d like to think that I’m helping educate them in the finer points of what not to eat, but on more than one occasion I’ve caught a fish with a second fly in its lip—a fly that I had broken off only minutes before. As graceful and as elegant as they are in the water, I’m afraid that trout just aren’t very bright.

We spent a couple of hours trying to figure out which flies the trout might be interested in, but it must have been their day off—I had a few half-hearted strikes and Hal actually brought an 8-inch brown trout in, but fishing was slow. I think we were both glad to pack it in and head to Crested Butte for dinner and our B&B.

Crested Butte is one of those little Colorado mountain towns that has made the transition from mining and logging to high-end recreation—skiing in winter and a variety of things, notably mountain biking, in summer. It’s remote enough that it hasn’t completely succumbed to the problem of “Aspenization” that its neighbor across the Elk Mountains to the north gave its name to. But Crested Butte has “succeeded” enough that it’s begun to lose some of its identity and funky charm. For example, they no longer have their semi-official “ski naked” day every spring—not that it really concerns me. When I ski, I hardly ever fall down, but just the thought of taking a spill in bare skin makes me cringe—never mind the cold air and, um, exposure.

An advantage of these gentrified mountain towns is that they have figured out how to separate tourists like Hal and me from our money, and to do it with class. This means elegant places to stay and truly fine dining, and we’re happy to take advantage of the chance to enjoy ourselves.

Monday morning, I was due at the sheriff’s office down in Gunnison and after that at Sarah Robinson’s back up by Crested Butte. Hal was discouraged enough from Sunday’s slow fishing that he decided to accompany me, so I appointed him the informal expedition photographer. At least this would let him play with his new digital camera, giving him something to do so he wouldn’t get too bored.

I hadn’t met Sheriff Scott Lister before, as his county was part of the area under the responsibility of the CBI Montrose office. They had notified him of my assignment, though, so I was expected. This is important to me—maybe it’s because I’m still new to the CBI, but I worry about being seen by county law enforcement as some kind of outside interloper. Consequently, I always try to operate the way I’d have liked someone in the CBI to when I was still with the Durango PD—and this means that I don’t want to just show up unannounced.

But even though I was expected, it quickly became clear to me that I wasn’t really welcome. I left Hal at a diner on Gunnison’s Main Street, engrossed in a local fly-fishing guidebook, and walked a block to the sheriff’s department. That part was fine. When I flashed my shield and told the clerk at the front desk my name, though, I could feel the chill begin. And it continued while I waited and deepened

when I finally was shown into the sheriff's office. He just nodded at a chair and stared at me. Something, I could tell, wasn't right. So I took the offensive.

"Sheriff, I don't know what you've heard about me that's making people act the way they are, but perhaps you could make a phone call. Do you know Ralph Wertlinger, down in Mineral County? Or Ron Grange, in Archuleta?" Given the close-knit nature of law enforcement on Colorado's Western Slope, I figured he must know one of them.

He cocked his head sideways a little and stared at me even harder than before.

"Ralph's an old friend. Why would you want to bring him into this?"

I stared back, not blinking, and waited a full ten seconds before answering.

"Perhaps you could call him and ask him about me. I don't know what's going on around here, but maybe that would help move matters along. If you'll excuse me, I'll find a restroom while you call him."

And I walked out into the hall, hoping he wouldn't notice the steam coming out of my ears. On my way out, I told the front desk clerk that the sheriff could find me at the W Café over on Main Street when he was ready. Ralph Wertlinger, I knew, would give me a great introduction, because we had worked together on those serial murders earlier in the summer. We had shared information, I stayed out of his way, and he got the credit he deserved.

In the diner, Hal was seated in a back-corner booth with his nose in the guidebook. He was surprised to see me so soon, but when I told him what was happening, he just waved to the waitress for more coffee.

It took about twenty minutes for Sheriff Lister to find us. He clomped into the café in his western boots, cowboy hat in his hands. Tall and rail thin, his uniform sharply creased, he looked like the perfect stereotype of a modern western sheriff. Except, I noticed, he wasn't wearing a sidearm on his belt—it must have been under his jacket.

"Ms. Trieri?" He was clearly uncomfortable, but Hal came to the rescue by standing and pulling out a chair.

"Sheriff Lister? I'm Hal Weathers, Annette's husband and official amateur photographer for our little expedition. Have a seat. Coffee?" He looked around and waved at the waitress again. "So, I'm the photographer, but I'm really going to sneak off and do some fishing. Would you know anything about the Taylor River? How's fishing below the dam this summer?"

Lister had to shift gears to deal with this, but he looked relieved to be able to make light conversation. He and Hal talked trout until the coffee came. But then it was time to talk business.

\* \* \*

"So, I just wish I'd called Ralph before you came. But I didn't know you knew him." Lister was working up to an apology.

"Y'see, we got this fax from the Montrose office telling us you'd be here today. Thing is, they said you were in charge of the investigation, that we need to cooperate, blah blah blah. And they have a history of acting this way, like they're in charge of my office." Huge sigh.

"So, anyway, Ralph says you're not like them at all." He looked at me with a kind of sick grin.

I looked around the café and decided that we were isolated enough to talk privately, but, even so, I lowered my voice. "Sheriff, what I'm doing is touching base with all the jurisdictions who have these

beheadings to deal with. From the reports I've seen, they're all virtually identical. What I'd like to do is to talk with your investigator and with the victim's wife, gather information, and be on my way down to Monte Vista. And finally Pagosa. I plan to make sure everybody gets copies of everything. Information sharing is a way to figure this out, make breaks for ourselves, right?"

"Well, it's not like we're not talking with each other, you know." He wasn't going to give up too easily.

"Of course you're talking with each other. But look at it this way. There are three county sheriffs, plus the State Patrol Office in Alamosa, plus medical examiners. That's where we are now. And given what's been happening, I wouldn't be too surprised if there are more of these murders. That'll be even more people to keep in touch with. What I want to do is to be the central information archive, the way for everyone to share what they know. That way, you won't have to spend so much time at it—it'll give you more time to get real work done, no?"

Lister scratched the back of his neck and finally nodded. "Yeah, you're right, I guess. So what can I tell you?"

"Do you know anything about this lawyer who got killed?"

"Marty? Can't say I knew him personally. But he was a familiar figure around the courthouse. He liked to file what I'd call nuisance lawsuits, and he didn't make a lot of friends that way. See, people around here try to be tolerant of each other, mind their own business, that kind of thing. But Marty wanted them to behave his way, and he used lawsuits to try to make that happen. Basically, I guess most people thought of him as a real pain in the ass."

"Did he win any of these cases?"

"Not the ones that went to trial. Juries around here hated him. Mostly, he intimidated people into some kind of settlement." He took a sip of coffee, becoming more comfortable with this whole thing.

"So he wasn't making money doing this."

"No, I don't think so. I've heard he made a lot of money in a big east coast law firm—New York and Washington, I think—and in the stock market. Moved out here a few years back and didn't need to work. So he took up this hobby of hassling people by using the law, or at least his idea of it."

"What sorts of cases?"

"Stuff that usually gets ignored here, like building code cases or zoning violations, dogs on the loose, petty stuff. We all kind of thought he was just bored and looking for something to do. It would have been funny if it hadn't been such a pain."

"And he made a lot of enemies doing it?"

"Yeah, but it doesn't seem like anybody would have killed him this way over this stuff. Shot him maybe, or at him, that's more the style around here. But decapitation? Not hardly." He shook his head.

"The signs, though, I mean the poem, it was right on the money, huh?"

"About sending him off to meet his God because he was a jerk? Yeah, well, that's what happened, all right. Although most folks around here probably would like him to go to the other place, if you know what I mean." He was smiling as he took another sip of his coffee.

"I'm told you followed the lead of the State Patrol down in Alamosa and had his wife questioned by a deputy with domestic violence training."

"Yeah, although I'm not sure it was really relevant in this case. Are you going up to talk with Sarah?" He looked at me and I nodded. "So you'll understand. I expect that at one time she was a real

looker, maybe a fashion model, tall and thin and beautiful. And you can still see some of that in her face. But she's not thin any more, probably outweighed Marty by fifty pounds, and Marty wasn't a little guy. If he'd tried anything physical with her, she'd probably have snapped him in two."

"But domestic violence can be non-physical, too."

"True. And if he treated her like he treated everyone else, well, that would probably have qualified. But she didn't suggest there was anything of that nature going on, and it wouldn't surprise me if she could hold her own in that department, too. I think they probably didn't have much in the way of a relationship at all. But you can ask her."

"Any indications if she's going to stay in the area? Or move back east?"

"Oh, I'm pretty sure she'll stay here. She's raises llamas, got quite a business. Can't hardly do that in New York City." He chuckled.

Hal had been idly fiddling with the camera, trying to stay out of the conversation, but this was too much for him to ignore.

"Llamas! Really? I've always wanted to go on one of those llama treks, you know? Where you walk and the llama carries your stuff. And its own food, too."

"I think Sarah has some she rents out, as well as some breeders and show animals. Maybe you can talk her into letting you take one of 'em for a walk. I've heard people do that. Seems kinda strange to me, though, when you could just ride a horse." Exotic pack animals seemed to offend Sheriff Lister's sense of western dignity. At least he was still smiling.

I decided that too many questions the first time would run the risk of alienating him again, that we could always stop back with more on our way out of town the next day.

"Sheriff, thanks for your time. I hope it's all right if I come by tomorrow morning if I have more questions. We should probably get back to Crested Butte and see Sarah Robinson now. Oh, and I'd like to talk with your medical examiner, too. Do you suppose this afternoon would work for that?"

"Possibly, but you ought to give her a call. She'll either be in her office or her lab at the morgue. Here's my card, and my office can connect you to her number." He passed a business card across the table. "You know how to find Sarah's place?"

We must have looked blank, because he went on to provide directions, with Hal taking notes.

"So, again, Ms. Trieri, I'm sorry about getting off on the wrong foot. I hope you can find out what you need while you're here."

I knew it was time to be gracious. "Whatever I do find out, you'll know about. Not only what I find out here, but down south also. Maybe we can put this all together quickly."

"I sure hope so. This thing isn't something we want to leave hanging out there. So have a good trip. And a word of advice? At Sarah's, pull up to the house, but stay in your car until she comes out, she'll either be in the house or the barn, probably, at least if her pickup's there. You'll want her to get Lion under control before you're out of your car."

Hal looked surprised. "Uh, 'Lion'?"

"You'll see. Just stay in the car." Lister's enigmatic smile left both of us wondering.

\* \* \*

## Two

We took a turn around Gunnison before heading back north. Hal wanted to see the campus of Western State College, and I always like to get some idea of the locale of crimes I'm trying to untangle. I had him drive past the spot where Marty Robinson's car was found—about a diagonal block off the intersection of Highway 50 and Main Street. It wasn't a spot you'd pick to park for any obvious reason, yet it was close enough to various stores and bars that, parked there, it would be unobtrusive—just another car on the street.

We took the opportunity to circle the Western State campus, and Hal got nostalgic.

“This reminds me of how our campus used to look, back before we got our heads all swole up. A small, liberal arts college atmosphere. A constructive relationship with the legislature. Students we actually taught. Ah, for the good old days.”

He's never quite bought into the change that created Frémont State back in the '80s, when an ambitious, ladder-climbing president persuaded the trustees to grow Durango's regional liberal arts college into a research university—and to change its name as well. Then the federal research funding boom went bust and the ambitious president left for greener pastures, leaving Frémont State to struggle with its second-tier status and chronic budget shortfalls. Worse, the guy for whom they renamed the place has since become somewhat politically incorrect, having mapped the west during the 1840s and helped open it to the Anglo settlement that followed.

Eventually, Hal got us back to North Main Street and on our way to Crested Butte. State Road 135 heads generally north, up the pastures of the Gunnison River Valley, and various county roads branch up the side streams and tributaries. After a few miles we passed the road up the Taylor River, Hal peering wistfully in that direction. A little farther along, the old settlements of Roaring Judy, now a fish hatchery, and Jack's Cabin sparked a brief conversation about whether Jack and Judy were a mining-era item and how she got her name.

Sarah Robinson's place was outside of Crested Butte (the town) past the airport on the county road that wound around the east side of Crested Butte (the mountain). A long driveway led us toward a cluster of buildings nestled at the base of the mountain, just where the trees begin their climb up the slope.

It was apparent that Marty Robinson had arrived in the area with plenty of money—instead of the usual decades-old weathered ranch buildings you expect to find, the Robinson spread was new with one of those trophy homes presenting walls of glass to the south and east.

Hal pulled up in front of the house and parked on the circular drive.

“What do you suppose the sheriff meant about ‘Lion’?” He was swiveling his head around like an owl.

I saw a flash from the side of the house and pointed. “Maybe that. What do you suppose it is?”

“Oh! Got me. But, tell you what, I think maybe we should just sit here. You know, watch for a while. Maybe we'll figure it out.”

The creature bounded across the yard and skidded to a stop about ten feet from Hal's door. It sat down and proceeded to bark, suggesting to us that it was some kind of dog, a really, really big dog. But what kind of dog was something of a mystery, because neither of us had seen anything quite resembling it before. The best we could do was to guess it to be a combination of Golden Retriever and some kind of Mastiff. It had the Golden's tawny, flowing coat and the stocky build and jowly face of the huge

slobbery dog in that old Tom Hanks movie. And it was loud. Plus, every time it barked it snapped its head back, and a spray of spittle flew toward the car.

“Yuck, my car!” Hal flinched as his window got slimed.

“Well, look at it this way. At least it’s trained well enough to be sitting over there and barking instead of jumping up and scratching your car. Better you should have to get a car wash than to get it repainted, no?”

It didn’t take too long for a door in the barn across the parking area to open, at which point the dog began running laps around the car. It continued barking sporadically, and eventually a big blob of spit went splat on my window and oozed slowly downward. Equal opportunity slobber.

The person emerging from the barn must have said something, because the dog broke off doing laps and ran over toward her—we assumed it was Sarah Robinson—and fell into heel. What looked like a kid, of the baby goat variety, had followed Sarah out of the barn, and it proceeded to bounce playfully around the dog, occasionally butting it. That the dog ignored this persuaded us that it was very well trained. But we still didn’t make any moves to get out of the car.

With the engine running and the air conditioning on, we didn’t hear what commands the woman was giving the dog, but they sure worked. When she was about fifty feet from the car, the dog sat down and watched us. Given a stationary target, the kid proceeded to bonk into the dog repeatedly, but it was still ignored.

As the woman approached the car, I saw Hal pointing in my direction, so I lowered my window, stopping at the spit mark. She headed toward my side.

“Can I help you folks?” Her voice had raspy edge of a heavy smoker. “And it’s all right to get out now. Lion will stay put. He’s really a big sweetie, although I’m sure you don’t believe me.” She reached out with a towel she had draped over her shoulder and wiped the spit off my window, leaving a big smear. I opened the door and got out.

“Ms. Robinson?” She nodded. “I’m Annette Trieri, I’m with the Colorado Bureau of Investigation. I know you’ve been interviewed a lot about what happened to your husband, but I’ve recently been assigned to coordinate the county investigations of these cases. Have you heard that there’s been a third one? Over by Pagosa Springs?”

She nodded again, licked a finger and stuck it in the air, and moved downwind of me to light a cigarette from the pack she pulled out of a shirt pocket.

“Yeah, it was in the paper. Another ‘Burma Shave Murder,’ they’re calling them.”

“So, because I just got started on all this, what I’m trying to do is talk with everyone I can. I’ll probably be going over all the same ground again, but it could help me to coordinate things, get to the bottom of all this, you know?”

“I’ve gotta tell you that I’m not real motivated. My opinion is that you folks should find whoever’s doing this and give them some kind of award. A plaque signed by the Governor, or a medal or something.” She took a long drag and exhaled a huge cloud of smoke downwind.

I had to smile. “I hope you told the sheriff that only after he’d eliminated you as a possible suspect.”

She laughed, a deep rumbling laugh that degenerated into coughing. “Yeah, I expect I ought to keep stuff like that to myself, huh? So, would you folks like to come in for a cup of coffee? About the only good thing I got out of this awful marriage was a lot of great toys. I’ve got an espresso machine that makes a mean latté.”

I waved at Hal, and we both watched as he got out of the car, keeping an eye on Lion the whole time. But by then the dog was lying on the drive, asleep with the kid curled up next to its belly.

“Ms. Robinson, this is Hal Weathers. He’s my husband, but on this trip he’s the CBI photographer. And he’s expressed an interest in llamas, too.”

She wiped her right hand on her shirt and stuck it out in Hal’s direction. “Llamas, huh? Well, the vet’s out in the barn right now, midwifing. Not that she’s likely to be needed. Sophia’s an expert at dropping babies by now.”

Hal was floored. “Now? A llama birth. Can I watch? I’ve never even seen a baby llama before.”

“Sure, in through that door I came out of. And baby llamas are called ‘crias.’ You can impress Maureen—she’s the vet—if you work the word into the conversation.”

“Will Lion be OK with me wandering around?” Hal was still looking a little nervous.

She whistled and almost immediately Lion was at her feet, sitting expectantly. He watched as she shook hands with both of us again, and followed Sarah and me into the house. Hal headed for the barn, the kid prancing along behind him.

\* \* \*

Ten minutes later, Sarah Robinson and I were sitting in a breakfast nook off the kitchen, watching the clouds forming over the mountains across the valley. As million-dollar views go, this was one of the best I’d ever seen. Between the view and the espresso—made with freshly ground beans she took out of her freezer—I was having trouble focusing on the business at hand.

“I guess that after you live here a while, the distraction of this view fades.”

“Yes and no. One thing I’ve learned to do is to stop and enjoy it frequently. And its changes throughout the year make that easy. I guess this place is another thing I should thank Marty for, but I learned a long time ago that material stuff isn’t what makes for a good relationship, or life, for that matter.”

“One thing I’ve heard is that victim number one beat his wife up a lot. And victim number three seems to have had similar tendencies.”

“Yeah, well, if victim number two had tried to beat his wife up any time recently, I’d have broken his scrawny neck. Saved the Burma Shave murderer from having to do the job for me.” And she looked as if she could have done it. At nearly six feet and weighing close to 250 pounds, she was not someone to antagonize.

“It wasn’t always this way, though. When we got married, I wasn’t as big as I am now, not by about 125 pounds or so. And Marty, for all that he treated me like a queen at first, he also pushed me around some. We moved out here and I decided to get my life under my own control, so I ate a lot and worked outside a lot and also took some self-defense courses over in town. We developed an uneasy truce by going our separate ways, as much as we could, at least. I’ve actually been able to immerse myself in my llamas. And I just got some Angora goats, too. There’s a fairly strong demand for high-quality fleece, from the goats and even from the llamas. I just ignored Marty, mostly.”

“So this has been going on since you moved here?”

“It developed over time into what it is now, or, rather, where it was up to the point he got killed. Now, of course, I’ve got the whole place to myself. The only thing I have to worry about is getting the

property taxes paid each year. And the investments will take care of that, even with the stock market in the tank.”

“I guess the big question is whether you’d know of anyone who could have killed him this way. From what Sheriff Lister told me, there were plenty of people with motivation, but beheading and the display of his head on the fence post, well, that seems a bit much for most folks.”

“True, but I also think of it as quite inspired. Word gets around, these guys will start being nicer to people, including their wives.”

“I’m getting the impression that you don’t feel any grief about Marty’s death.”

“Like I told the deputy sheriff, just relief. He’s out of my life. Good riddance.”

“So, I don’t want to seem like I’m prying, but it’s relevant for me to ask if you had a real marriage, in terms of marital relations.”

She laughed that deep smoker’s laugh again, and once again it set her to coughing. “Sorry, but that’s just funny. We were so far from having sex that even the distant memories have faded. Different bedroom suites and everything. He stopped finding me attractive years ago, and that was my intention. From what I’ve heard, he was getting his on the side, had a girl down in Gunnison.”

“Do you…” I started, but stopped when I saw she was already shaking her head.

“Don’t know, don’t want to know, don’t really care. Y’see, if I knew, she’d probably know I knew, and things would be awkward. But this way, I guess it’s blissful ignorance. If I run into her, there won’t be any of that awkwardness, at least not on my account.”

“Any idea how I could find out? I really should speak with her, too.”

“You might try the Stockman’s Saloon, on South Main. I think Marty was something of a regular there, and maybe the bartenders would have seen him with someone they could identify.”

Although I didn’t really know where the Stockman’s Saloon was, it occurred to me that it could be within walking distance of where his car was found.

“Thank you, Sarah, that will help. And only one more question, not a question really. Just a verification of a hunch—no children?”

She laughed again. “No, thank God. He wanted them, right away, but I still had some career goals, so I managed to avoid getting pregnant. By the time I would have been ready for children, I’d figured out his true character. And he was adamant that we weren’t going to divorce—that was his religious background talking. So I’ve substituted my llamas and now the goats for children, I guess. Which reminds me, I may have a new cria out there by now. Want to come see? If you’re done, that is.”

I stood up. “Sure. And I hope baby llamas are ugly or something. I’d sure hate for Hal to insist on taking one home.” Then I saw Lion, who had been lying asleep in front of the door, open an eye and look at me. I froze.

“Oh. Lion? Here, boy.” She made a kissing noise, and he jumped up and stood at her feet, looking up. “Annette? Hold out your hand and let him smell the back of it. And say his name and tell him he’s a good dog.”

I did as instructed, and he looked up at me, stuck out his tongue and panted. I took that as friendship, and reached out and scratched the top of his head and behind his ears. This produced a sigh of contentment and one of those low groans that dogs make, so I knew our relationship was cemented.

“Good job. He likes you. Now, when we get outside, the first thing he’ll do is shake his head and irrigate the porch. So let him go out first and give it a second.”

“You’ve trained him not to shake in the house?”

She reached down and patted his flank. “As weird-looking as this guy is, he’s smart as any dog I’ve ever known about. Eager to please, understands a lot of different commands. Let’s go, boy.” She opened the door, and he went out and, as I was warned, shook his head. Spray flew, and I was glad to still be out of range.

About half-way across to the barn, Sarah stopped, looking surprised.

“Say. I just thought of something. As glad as I am to have Marty out of my life, I understand that it just won’t do to have someone going around beheading people. So maybe there *is* something that will help you.”

“Sarah, at this point, any leads at all will be helpful.” I took out my notepad.

“Well, a couple of years or so ago, Marty got it into his fool head that he wanted a pair of crossed swords and a plaque with his family’s coat-of-arms to mount on the rock chimney of that fireplace in the main room. So he checked around and found a collector in Pagosa Springs who deals in antique weaponry. Swords and stuff like that. Authentic stuff, with documentation, supposedly. And he also engaged the services of a genealogist to create a family tree, to see what kind of swords would be appropriate, you know, French, English, Scandinavian, or what. So, to make a long story short, there was a dispute about the swords the collector supplied. Marty took delivery, got them independently appraised, and decided he’d been taken. So he sued the guy. It got real messy, and finally the judge made Marty return the swords and the guy give Marty his money back. But the collector claimed he was out a lot of money for his efforts and made comments about how this wasn’t over yet.”

“Do you remember the guy’s name?”

“Hard to forget. It’s Kristof von Stier. Claims to be a Prussian count, or some such ridiculous thing. It’s probably a front he maintains to help his antique business.”

“Sounds as if I shouldn’t call him ‘Kris,’ then. Maybe I’ll take him a little box for his monocle.”

“Hey, don’t joke. He really has one, along with a huge handle-bar moustache. I’ve never seen him wear one of those red sashes, though.”

\* \* \*

The barn door opened into a tack and feed room, and Sarah led me through it into a series of small stalls. Hal was perched on the top rail of one of them, about five feet in the air, staring down intently. He must have seen us in his peripheral vision, because he turned our way, talking.

“Sarah, if I knew you better, I’d congratulate you on being a new grandmother. You’ve got a bouncing baby girl here. Well, maybe not bouncing yet, but pretty soon.”

“That’s great news!” Sarah had a huge grin.

And her voice got the attention of the stall’s occupants, because the tops of two more heads appeared. The human one had dark red hair peeking from under a Colorado Rockies ball cap and wide-set, green eyes; and the camelid one had perky gray ears, one sticking straight up and one folded forward, and huge brown eyes with the lashes of a mascara advertisement. The llama blinked, twitched the folded ear, made a humming noise, and then disappeared, obviously preoccupied with something down there.

The human was less distracted. “He’s right, Sarah. Sophia’s given you a beautiful little female. Everything seems fine.”

“And she’s OK? Sophia, I mean?”

“Sophia’s a trooper. And she’s learned to bond quickly. I’m impressed.” She had the trace of a lovely accent, not quite Irish, not quite English—in between. I wondered if it might be from a childhood in Northern Ireland.

Sarah led me around to the door to the stall, which was open, and I peeked in to see a full-sized llama standing next to a wobbly miniature. The woman with the red hair was rubbing the baby down with a towel, and mama was sniffing at it with interest.

I couldn’t stop myself from turning into an idiot. “Awww...that’s just the cutest thing I’ve ever seen. Look at her. Truly precious.” I looked up to see Hal beaming at me.

“Sure is. But, no, I’m sorry, we can’t take her home. City zoning won’t allow llamas in the back yard. Besides, she’d be lonely, with the two of us at work all the time. And just think how crazy she’d make the neighbor’s dog.”

At least I wasn’t going to have to worry about him. He smiled and nodded toward the redheaded woman.

“Annette, let me introduce you to Maureen Downey, llama midwife and large-animal veterinarian. She just taught me more about llamas than I ever thought I’d know. Maureen, this is my wife, Annette Trieri.”

The red-headed woman looked up from rubbing the baby llama and smiled from under her cap. “Call me Maureen, please. None of that ‘Doctor’ stuff, OK?”

“And I’m Annette to everyone except criminals.” I meant it nicely, but it produced a startled reaction, quickly suppressed. Lots of people, I’ve learned, have these little guilt demons in their conscience that even innocent comments on my part can tickle.

Hal must have noticed it, too. “Annette’s with the Colorado Bureau of Investigation,” he said to Maureen, grinning. “She keeps me in line.”

Maureen went back to rubbing the cria with great concentration. “I suppose that means you came here to talk with Sarah about her husband. Or what’s left of him.”

“Yes, and I think we made some progress. She gave the name of someone down south to talk to. And we have more people to meet with tomorrow, in Gunnison. I’m just getting started on this thing, so it’s still pretty opaque to me.” I shrugged.

“From what I hear, the killer’s doing us all a favor.”

“That’s what he wants us to think, at least.” But this really wasn’t the conversation I wanted to be having. “So, anyway, I thought mothers always licked their babies clean, or something like that. But it looks like you’re doing the job with that towel.”

“Some animals do, but llamas don’t. Their tongue isn’t made for licking, and they’re rather independent critters anyway. Friendly, but not particularly affectionate. Sophia’s done enough nuzzling that I know they’ve bonded, though. Sarah? Want to weigh her?”

“I’m already on it.” Sarah’s voice came from the tack room, and she emerged holding a balance-beam scale. Maureen quickly wrapped the confused baby in the towel, picked her up, put her in the basket of the scale, and Sarah got a reading. They’d obviously done this before.

Maureen unwrapped the cria and set her on her feet, in the general vicinity of lunch. Sophia bent her long neck around and gave her baby a gentle nudge in the right direction, and just like that, the little one was suckling away.

“You two make quite a team. I don’t think she even knew what happened there. Or if she did, she’s forgotten it already.” I could feel a huge smile stretching my cheeks—the whole thing was just too cool.

And Sarah looked like she felt that way, too. “Maureen has had lots more practice than I have, and with lots of different animals. But the two of us have helped about a dozen of these little critters into the world.”

“So what are you going to name her?”

Sarah looked me up and down, and her smile gradually took on a mischievous glint. “Hmm...maybe I’ll call her ‘Annette.’ Haven’t had an ‘Annette’ in my flock, so I think it’ll work just fine.”

This time I could feel myself blushing scarlet. But Hal came to my rescue.

“I think that’s wonderful! Just think, Annette, we could have been here for, oh, I don’t know, say, the birth of pigs. But you got lucky and got this sweet young thing named after you instead!”

“I do feel honored.” A little flustered, too, but I didn’t want that to show. “So, she grows up and then what? You breed her, sell her, what?”

Sarah considered this for a minute. “It depends. If she takes after her mama, I’ll get fleece from her for sure. Maybe I’ll be able to show her, if she matures well and has the right disposition. And eventually, I’ll breed her, yeah.” She grinned. “Got a pasture full of horny males back there, just waiting.”

“I’ve heard that they can be used as pack animals.” Hal likes to sneak up on things a little.

Sarah looked up at him. “They can’t carry as much as a horse, of course, but, yeah, they’re great on pack trips. Low maintenance, good companions. And they don’t bust up the trails as much as horses, because their feet are softer.”

“We probably won’t have time to go for a walk this trip, but that sounds like something I’d like to do, someday.” I could tell he was hinting at something.

“Come back in a month or so, and I’ll send you off for a day with Sophia here and Annette.” Sarah looked at me and grinned again. “Both Annettes, I suppose. There’s a great day-hike, a long day, for sure, but only a single one, up Crested Butte behind the ranch here. Takes you up and around a little, for a great view of town and the Elk Mountains to the northwest.”

Maureen had been packing her things. “Sarah, I’m going to have to dash off. Got a four-o’clock appointment back home.” She looked at her watch and at me. “Long drive. Nice to meet you, Annette, Hal. Sarah, be sure to call me if anything doesn’t seem right with little Annette here.”

But it looked as if little Annette was about as perfect as she could be, and, with her first meal filling her up, happy, too.

\* \* \*

I discovered that the medical examiner in Gunnison wouldn’t be able to see me until the next morning, so I decided to relax a little. It was beginning to look as if the next few weeks might be hectic.

We spent the rest of the afternoon and early evening trying to persuade the trout in the Taylor River that our imitation bugs were worth tasting. Like so many of the famous trout streams in Colorado, however, the Taylor’s fishery receives enough attention from guides and their clients that the trout are hard to fool. Although they were interested in what we were presenting to them—in the clear water, we could see good-sized fish swimming up to look over our imitations, occasionally even nudging at them

with their noses—we just couldn't entice any strikes. Two days without significant action would make Hal grumpy, I knew, but I don't mind such lack of success at all. Just being out in the air is enough of a pay-off for me.

The next morning we got an early start so that we could be at the medical examiner's office in Gunnison when it opened. Once again, I left Hal in the W Café—I knew there was no way he'd want to be part of my visit to the ME. He's rock-solid for me when I need him—one time, he rescued me when I was injured and alone in the wilderness—but like most civilians, he's squeamish enough that morgues just aren't comfortable places for him.

For me either, as far as it goes.

The Gunnison County Medical Examiner's office was in the basement of the county building, the place I'd walked out of in a huff the day before, and, as I thought, the ME was there when I arrived. Belinda Edwards wasn't exactly what I was expecting—late twenties, perfectly made up and elegantly dressed, she came across as a young corporate executive in the fashion industry rather than the coroner of a Western Slope county. But I soon found that she knew her stuff—and she also knew about me. It seemed the sheriff had briefed her.

“You'll have to excuse Scott. He's been burned a couple of times by your colleagues in Montrose, so he just jumped to conclusions.” We were sitting in her office drinking coffee. Excellent coffee. The Gunnison County ME and coroner was a clothes horse and coffee connoisseur.

“I can't blame him too much. I've been a little put off by the behavior of some of the CBI people on conference calls. Like most state bureaucracies, I guess, we have our bad apples. But I've been working hard to develop good relationships with the counties in my area, and it's succeeding. He called Ralph Wertlinger down in Creede, who must have given me a good reference or something.”

“Something, indeed. Scott said that Ralph dressed him down for mistrusting you. He's embarrassed, Scott, I mean.” She was smiling and shaking her head.

I smiled, too. “He was a little embarrassed when he finally found me. But that's OK, I think we're all on the same page now.”

“And you're here to learn what you can about these Burma Shave killings, huh?”

“Yeah, I'm trying to pull together all the information from here and Monte Vista, and now Pagosa Springs, too. If I could, I'd like to see the victim. Guess I'm going to have to check all of them out. But maybe you can fill me in on what you learned from your post-mortem. Your report was thorough, but maybe you have additional impressions.”

“We don't have many homicides out here, and I suppose that's true in Monte Vista and Pagosa, too. Most of my work involves accident victims, unattended heart attacks, stuff like that. This one is strange, I can tell you.” While she was talking, she pulled a file folder out of a cabinet beside her desk. “White male, 41, decapitated, only the head recovered. I don't have to tell you the circumstances of that. Victim identified as Martin Robinson, lived on a ranch up near Crested Butte. He had plenty of people who would be considered ‘enemies,’ but I don't think any of them would do this.”

“That's what the sheriff said. He figured that maybe someone would have been motivated to take a shot at him, but not this.”

“Right. Especially as there's really more to it than just a beheading. Very high quality work, for example. And also quality post-mortem work.”

“The formalin?”

“Right. But not only the formalin, also the fact that they drained his head, the blood, I mean. And it’s as if the formalin was pumped into the circulatory system—some kind of pump was hooked to the carotid arteries and formalin was forced in until it saturated the tissues. And meanwhile the blood would be draining out the jugulars.” She was pointing at places on her neck.

“Is that significant somehow?”

“I don’t know for sure. But it’s puzzling. Maybe it was done this way just to preserve the head, so it wouldn’t decompose on that fence post too quickly. But it has the side effect of preventing us from doing any blood toxicology tests.” She shrugged.

“Couldn’t you do tests on brain tissues and so on?”

“Maybe, but the formalin would probably mask anything else, at least in the equipment we have.”

I saw an opening. “Maybe that’s something we can help with. I have connections to a very sophisticated analysis system at the university in Durango. And if I get samples from all three victims, at least we’ll be able to tell if the formalin is all the same. And possibly identify the source.”

“That could help. Especially if you can detect traces of other things in there. I mean, I’ve been thinking about how this could have happened. It’s like, someone with an extremely sharp sword comes up to these guys, or my guy, at least, and he sees it coming. This scares the crap out of him—have you seen the pictures?” I nodded. “So that produces the death mask on the victim. But why doesn’t the victim duck, or dodge, or something? Maybe he was drugged.”

“I saw that in your report and didn’t quite understand it. What makes you say that Robinson was attacked this way?”

“Huh? Oh, I guess I didn’t describe it very well. It’s subtle—has to do with the entrance and exit wounds from the blade that was used. You can see from skin indentations, and, at the exit, a little flaring, that the blade must have entered first right about here…” She was pointing at a spot just under the point of her left jaw. “…and exited about here.” She pointed to a spot behind and below her right ear.

“Did this happen to the other victims?”

“Don’t know yet. I called the other MEs, told them what I’d found. But I haven’t heard back.”

“I can ask them. I guess that means I should have a look at what’s left of Mr. Robinson. But maybe there’s one more thing you can tell me. Sheriff Lister talked about how Robinson made a lot of enemies, and you mentioned it, too. And I’ve talked with his wife, Sarah, and it’s clear that they didn’t have much of a relationship. She said he was having an affair, but she intentionally didn’t try to learn anything about it. Do you know anything else about all this that might be relevant?”

“It wasn’t me he was having an affair with, that’s for sure. Not that he didn’t try. I think he hit on every woman he ran into. And he spent enough time at the courthouse that he ran into me on several occasions. What a jerk.” She smiled. “As the signs said. But I really don’t know anything else. Wouldn’t surprise me if he slept around, based on his interactions with me. And I’ve never met his wife.”

“I’ve got a lead on how I might find this girlfriend, so maybe that’ll work out. But it’s interesting to hear you verify what everyone else has said about his character.”

“And the character of the other victims, too, from what I hear. As if the murderer knows what he’s doing. So, do you really want to go over to the lab and see this head?” She rose and turned to a rack of lab coats.

“Well, I guess I need to. But you’re wearing such an elegant suit. You go into the lab with it?”

“When I’m getting down and dirty, I change. There’s a shower here and everything. But for what we need to do, these coats and rubber gloves will do. No cutting today, you know?” She smiled, and I felt a little better.

I don’t know what I was concerned about. I had been in the La Plata County morgue on countless occasions—the ME there, Lester St. Clare, is an old friend and colleague from my days in the Durango PD. But even though the temperature in the morgue wasn’t all that low, I felt a chill as I went in through the air-seal doors. It was a relief that it didn’t have any of the usual smells, but something was bothering me. Belinda Edwards, though, was completely at ease.

“So you want me to send you tissue samples, eh? Better I should send them than you should take them with you, I guess. Hmm. A little muscle, some fat, maybe from under the chin, and some brain tissue, I guess. But I’m sure they’re all going to be heavily soaked in that formalin solution.”

She had made her way over to a wall of what looked like very large file drawers. “Let’s see. I’ve got Marty stashed in number 13 here. I’ll tell ya, if everyone came here in his condition, we wouldn’t need so much storage space.” She pulled open the drawer and took out a box, like a large hat box.

“Let me take him over to the table.” She set the box on a stainless steel table and hit a switch. Ceiling lights over the table illuminated everything without creating shadows, and an exhaust fan started up.

“Now, brace yourself. It’s not pretty.” And she lifted the cover off the box.

Even with the warning, and even having seen the pictures, it was still a shock for me. The hair on the back of my neck stood up, prickly, and I felt my knees giving way. I steadied myself by leaning on the table a little and took a deep breath. The familiar morgue-smell of formaldehyde, strangely, settled me down a bit.

“Good Lord! Those pictures don’t do him justice. What in the world could have scared him so? Something evil caused this.”

\* \* \*

### Three

I retrieved Hal from the W Café, where he was working on a second breakfast and what appeared to be every newspaper available in Gunnison—the local ones as well as both Denver dailies. After the interesting, and even educational, interlude at the morgue, I wasn’t in the mood for food. Mostly, I just wanted to hit the road, but we had one more stop to make first.

“Well? Learn anything?” He had gladly stayed behind rather than accompany me, but that didn’t mean he wasn’t interested.

“The real thing is way worse than the pictures I showed you, remember them?”

He rolled his eyes. “That’s what I figured. I’m glad I didn’t go with you.”

“But I learned something important. It looks like whoever did in Marty Robinson did it by walking up to him with a sword or something. It has to do with the cut marks on the skin.” I explained the entrance and exit signs that Belinda Edwards had discovered and shown me in detail. And she was right—the signs were clear, once you looked carefully. But her theory of the crime didn’t impress Hal.

“Oh, come on. That’s hard to believe. Some guy with a sword walks up to the victim, who sees him and freaks out, explaining the expression on these faces, and then just stands there and gets his head cut off? C’mon. That just doesn’t work.”

We were walking south on Main Street, headed for the Stockman’s Saloon, the place where Sarah Robinson had told me Marty used to hang out. It was only a little after ten in the morning, but I was hoping they’d be open already.

“You’re right, of course. This is a working hypothesis until a better one comes along. Thing is, they do have these terrified expressions, and the cut marks on Robinson’s neck are pretty clear about the angle of the slice. Also, it had to be something quick and clean, done with an extremely sharp blade, because there wasn’t any splintering of the vertebra. His head was sliced off cleanly.”

“Something that requires not only the right equipment but also strength. Like hitting a home run in baseball, or something, except with a quality sword. I guess you’ve got to have a hypothesis, and that’s as good as any. But I’ll be surprised if that turns out to be the answer.”

“Me, too. Oh, here’s the place I’m looking for.”

We’d come to a prosperous looking storefront, brick that had been cleaned recently, with a massive oak door. An understated, Victorian sign reading “Stockman’s Saloon” spanned the lintel, and there was a bronze plaque by the doorknob that read “Members & Guests Only.”

“Hmm. Got your membership card? I forgot mine.” Hal grinned.

Being a dean, you’d think he would have this tendency to want to follow rules, but I’ve discovered that’s not necessarily the case. But this time I was able to help out—I fished out my shield.

“Right here. You can be my guest.” And I pushed open the door.

I don’t know what I was expecting—leather, wood, and the smell of cigars, maybe—but I was surprised by the well-lit foyer inside. There was wood, but it was light oak, and there wasn’t a hint of any kind of smoke. A maitre d’ looked up from behind a podium and turned on his greater smile.

“Good morning, folks. I’m sorry, but this is a private club. I’m afraid I don’t recognize you.”

“You’re right. You don’t. I’m Field Office Director Annette Trieri, Colorado Bureau of Investigation.” I showed him my shield and ID. “And this is Hal Weathers. I came in to talk with your staff. I’m coordinating the investigation of the death of Mr. Martin Robinson. I understand he was a frequent customer here.”

“We don’t comment on our membership.”

“Mr. Robinson was the victim of murder. If he spent time here, perhaps one of your people could tell me who he spent that time with. There’s no reason to think anyone who’s a member here would be a suspect, but it could be helpful to the investigation to talk with them. You do understand that it’s in everyone’s best interest to capture this individual who’s going around beheading people, don’t you?”

He blinked several times, obviously torn between civic duty and club rules. “I’m sorry, but I really can’t help you.”

“Mr., ah, Peter Ryan.” I had noticed he was wearing a little name badge. “If I have to come back here with a warrant and with subpoenas for your staff, I’ll do it with reporters and members of the state liquor board and the county health department in tow. I’ll make your life, your own life, a living hell. I’ll close this joint down. You don’t seem to understand that the Governor assigned me personally to this case and told me that I have the full weight of his office behind me and that I shouldn’t waste any time. He doesn’t think we should have someone going around beheading people, either, apparently. Believe me, you don’t want me to walk out of here without the information I came for.”

I'd watched his eyes get bigger and bigger while I was making this little speech, and when I was finished, he swallowed several times.

Then he took a deep breath. "Ms., uh, Treery, you have to understand, I just work here, and I follow the rules, that's all. Can I call the manager? Please?"

I made a show of looking at my watch. "I understand your position, Mr. Ryan. But let's do get on with it. My time is limited." I turned to Hal and winked. "Hal, could you please call Denver and tell them we may be running late? Tell the Governor I'll explain when we finally get there."

I could see he was having trouble keeping his smile suppressed, but he managed. He couldn't keep the twinkle out of his eyes, though.

"Surely." He pulled a cell phone out of his jacket pocket. "I'll be just outside."

When I turned back to Ryan, he was on the phone, talking in a stage whisper. "OK. I'll tell her."

He looked up at me and beckoned toward a door to the right. "Mr. Salem will be right down. He told me to ask you to please wait in the lounge."

The lounge was more along the lines of what I expected a place called "Stockman's Saloon" to look like—darker woods and leather. Dim lights, even in mid-morning. But, thank you very much, there was still no lingering smoke odor. It occurred to me that they must have a very good air handling system, because being a member of a club like this must involve a lot of cigar smoking.

I waited about two minutes, trying to decide whether to pump the bartender—even though it was barely 10:30, there was a guy behind the bar polishing things—but I remembered Ryan's comment about only working there. Finally a door at the other end of the room opened, and a well-dressed, middle-aged man strode in.

Just about the time he was finished introducing himself as Gregory Salem, the Saloon's manager, the door I'd come through burst open, and Hal bustled in, followed by a worried-looking Peter Ryan, wringing his hands. Hal walked up to Salem and me.

"Excuse me." Hal turned to me just enough so that the others couldn't see the big wink. "The Governor needs to talk with you." He handed me his cell phone and excused himself to Salem again.

This time it was my turn to suppress a smile.

"Yes sir?" I had no idea what to expect, but a possible charade began running through my mind.

"Annette?" I recognized the voice of my second-in-command in the Durango CBI office, Derek Petersen. "Hal called and said I should pretend to be the Governor. Is this OK?"

"Yes, sir, it is. I'm afraid we'll be delayed a little in getting back to see you. I know you're eager for our report, but we've run into a snag. One of the victims belonged to a private club, apparently, and it's probable that the staff have information pertinent to the investigation. But they're not cooperating. So, I'm sorry, sir, but we're going to be running late."

"Ah...I see. Well, you probably don't want me to talk with whoever you're playing to. That would be pushing this too far. Besides, you can never tell, he might recognize that my voice isn't the Governor's." Derek is sharp, and I'm glad to have him working for me.

"No, sir, we don't. Warrants and subpoenas are the next step. But I'm hoping that I can persuade them to cooperate. I think they're mostly concerned about the privacy of their members."

"Tell you what. I'll gradually raise my voice, and when it gets loud enough, hold the phone away from your ear. Whoever's there will hear a rant, and maybe it will help motivate him." And he gradually started to talk louder and louder.

When it got uncomfortable, I held the phone away a little and heard Derek hollering about cooperation, catching the killer, public safety, and various other gubernatorial-sounding things. And I noticed that the effect wasn't lost on Salem and Ryan. Once again, it was Hal's turn to work hard on his poker face.

Finally, Derek ran down.

"Yes, sir, I understand. And thank you for emphasizing this. I'll pass your message along."

"Hope it works, Annette."

"Thank you, sir. And we'll report to you as soon as we return." And I pushed the 'End' button.

"I'm sorry for the interruption, Mr. Salem." I looked up at him. "I'm sure that you can tell we need to talk."

\* \* \*

Hal and I laughed about it all the way to North Pass.

After the phone call, the interview with Salem had been much easier. Unfortunately, there wasn't a lot to be learned from either him or Ryan, or the bartender for that matter. None of them knew anything about a girlfriend that Marty Robinson may have had. He did spend a lot of time in the Saloon, for lunches and afternoon drinks, but, true to character, he alienated most everyone he came into contact with. There were even complaints about him to the board, which was considering suspending his membership. I asked various questions and, somewhat to my surprise, Hal chimed in with a few, but we really didn't make much progress.

So we kept it as short as we could, stopped at a grocery store to pick up a picnic lunch, and hit the road.

North Pass, on State Highway 114 south of Gunnison, marked our crossing of the Continental Divide, over to the east side, to the Rio Grande drainage. Hal found a likely-looking side road, and we had lunch in the Rio Grande National Forest, sitting in a meadow ringed by aspens shimmering in the breeze, surrounded by late-season wildflowers. A herd of suspicious range cattle watched our every move, just in case we might conjure up horses to chase them around with, I guess.

After lunch, the road south took us through the little town of Saguache and straight down the bottom of the San Luis Valley toward Monte Vista and, eventually, Alamosa. The Valley is a broad alluvial plain about the size of Connecticut, a basin full of gravel washed down from the Sangre de Cristo Mountains to the east and the La Garita Range of the San Juans to the west.

Cruising down US Highway 285, we passed truck after truck after truck full of potatoes. Hal kept me awake with a lecture about the history of the Valley, its evolution into an agricultural powerhouse, and its vulnerability to the water-grabbing schemes of various cities over the mountains to the east, cities in the growing Colorado Front Range region.

We came to the town of Monte Vista at about two that afternoon, and Hal, who seems to have a digital navigation system in his head, had no trouble finding Crystal Stafford's house. Derek, I knew, would have called to set up an appointment for us. He's good.

Crystal Stafford lived in a little bungalow, obviously old but well-preserved, about three blocks off Main Street, the highway through the center of town. We found her on her front porch awaiting us with a pitcher of iced tea.

In her late twenties, Crystal would be politely described as “zaftig,” someone at whom the diet-plan and exercise-machine ads on TV are aimed. Yet there was an attractiveness and innocence about her that explained why Frank Scharmatz would have wanted her as a mistress. She was grieving his loss only marginally.

“I was sorry that he got killed, of course, especially that way. I guess I wasn’t too surprised, though. He had lots of people that didn’t like him. And, well, I’d been trying to figure out how to end our relationship. But I was afraid of him, a little, and I didn’t want to just dump him.”

“And you’d been seeing him for some time?”

“Ever since my fiancé and I broke off our engagement, about four months.”

“I’m afraid I’m going to need to pry a little. What caused the end of your engagement?” I hate these interviews. They’re necessary, but they make me feel like one of those slimy tabloid reporters, or an ambulance-chasing lawyer.

“Oh, well, it had to do with money. See, one of my aunts died, one of my mother’s sisters. I was her favorite niece, and she left me a small inheritance. Billy wanted to use it to invest in his business, but I wanted to put it into savings. We had a big fight and he started saying things that hurt too much. So I gave him back his ring.” She looked glum. “Between him and Frank, I guess I’m not picking my men very well.”

“What’s his business? Billy’s, I mean.”

“He’s a martial arts instructor, has a dojo over in Alamosa. He teaches a bunch of things that I can never keep straight, karate, kung fu, aikido, kendo, all that stuff. What he wanted to do with my inheritance was to buy the little building he’s renting for his dojo and remodel it. But he’s been struggling for clients, and I just didn’t think that the investment would pay off. He took it personally, though, said he didn’t think I believed in him. And I guess I’m not sure if I did, really. I loved him, maybe I still do, but, well...”

“Do you suppose he could have blamed Frank Scharmatz at all for your break-up?”

She turned white. “Oh. I never even thought of that. I met Frank while Billy and I were still engaged—I was on the steering committee that Frank was also on, for the teachers’ union. And there were meetings in the evening. And that’s when Frank started, you know, showing an interest in me.”

“I think I know what aikido, karate, and kung fu are. What’s kendo?”

“I get those three confused, but kendo’s the one I remember, it’s ‘the way of the’...Ohmygod...‘the way of the sword.’ No, it’s not possible, not at all. Billy and I had a fight and broke up, but it wasn’t that kind of fight. He’s the kindest and most gentle guy I’ve ever met, really. Not at all like Frank.”

So here was another connection between a victim and a guy who knew about blades. I made a point of getting information about how to contact Billy and tried to reassure her that he didn’t really qualify as a suspect or anything, but that I simply had to check out every possible lead.

I don’t think she believed me.

\* \* \*

Our next stop was down the road in Alamosa, where we were spending the night as well as interviewing people. Like Gunnison, Alamosa is the home of a small state university, what used to be called a “teachers’ college,” Adams State, and Hal would again have a chance to look around on a small, intimate campus and get all nostalgic about the good old pre-Frémont-State days.

I planned to drop him off to talk with people there the next morning, while I looked up Billy Abernathy, the kendo master, and drove back to Monte Vista to see Bonnie Scharmatz. Our plan for the remainder of the afternoon was to check in with the State Patrol office and talk with their investigators.

The State Patrol and the CBI are both part of the Colorado Department of Public Safety, so I knew I wouldn't have to deal with the turf-related issues I'd encountered up in Gunnison. True to form, they were cordial and helpful, and it surprised me that they were even a little relieved to have my office involved. But everything they had to offer was included in the reports I'd seen, so all I was able to do was to put faces together with the names on the reports and to reassure everyone that we were working hard on the murders.

There's no fly-fishing around Alamosa, at least none that meets Hal's high standards, so we spent the evening driving up to the dunes after dinner, the Great Sand Dunes National Park just northeast of Alamosa. For some reason, and Hal tried to explain this in meteorological terms that I didn't quite understand, the winds in the San Luis Valley dump their loads of wind-blown dust and sand in a specific place just on the west side of a little gap in the Sangres, and there are several square miles of fantastic dunes. Someday, I want to go back there with a car that will negotiate the back road. You need high clearance, and Hal's S4, while good for most things, just doesn't qualify for that.

My main task for Wednesday morning, one that arose because of the interview with Crystal Stafford, was to find Billy Abernathy and see if I could get a feeling for him without warning him that he was as much of a suspect as anyone.

To do that, of course, I had to meet with him, identify myself, explain that I was investigating the notorious beheadings, and ask him about his expertise with swords. Without tipping him off.

It didn't surprise me at all that I failed.

Billy's martial arts studio—the place that Crystal had called his dojo—was in a shabby little building that reminded me of a rundown garage. No wonder, I thought, that he wants to fix it up, and no wonder that Crystal didn't want to invest in it.

I arrived at about 9:30 and found Billy in the middle of teaching a class full of what looked to me like eight-year-olds, assembled in rows, kicking straight out and hollering all together. When I saw this, I went back to the car to make phone calls.

Eventually a gaggle of tired-looking, but still excited, children emerged from the little building, and I took that as my cue. I wandered in the front door and began looking over the various props and decorations on the walls, including a crossed pair of those two-handed Japanese swords with the curved blades and black handles. It was clear that Billy was taking his business seriously, and it was also clear that he needed an infusion of capital.

“Can I help you with something?” Billy emerged from wherever he had disappeared to after his class.

I introduced myself and tried to work gracefully into the subject of beheadings and swords.

“...so it seemed to me that I should ask you, as a local expert, about other people in the area who might know something about handling swords.”

He smiled and shook his head, but, to my relief, he didn't seem to be agitated.

“Of course, if you're assembling a list of possible suspects, I'm certainly at the top, right? And that only makes sense. What do criminal investigators and crime writers talk about—motive, means, opportunity? Well, I guess I've got 'em.”

“You’re right, of course. But you’re also obvious, too obvious, really. So I thought you might have some other ideas. Since you mentioned it, though, why do you say you had the opportunity? Motive and means I know about.”

He sighed. “I’m not sure I should explain this, because it could incriminate me, I guess. Or maybe I should explain it, because you haven’t Mirandized me so anything I say won’t be admissible.”

He smiled again, bigger this time.

“Oh, if you want to confess, that’s OK. I’ll file it along with all the other bogus confessions we’re getting. I’ll never understand why these high-profile cases bring the weirdos out of the woodwork, people who are looking for publicity with their false confessions. What I want are leads to solid forensic evidence.” I smiled back. “That’s why I was wondering if you know anyone else with real proficiency with things like those.” I waved in the direction of the swords.

He laughed. “There’s a guy over in Pagosa Springs who I fence with, you know, the Olympic thing. Masks, padded gloves, practice sabers. Whacking away at each other.”

“But you don’t have advanced kendo students.”

“No, that’s too much for Alamosa. I manage to have pretty full kids’ karate classes, during the summer at least, and some adult things. Kung fu once in a while. But kendo is way too advanced for the folks around here. I’m afraid it’s just me and Kristof, if you’re looking for swordsmen.”

“Kristof? You must mean Kristof von Stier?”

He looked startled. “You know him?”

“Never met him, but I’m going to look him up. I heard his name in a somewhat different context.”

“Ms. Trieri, have you ever seen depictions of those medieval executioners, the guys with the black hoods and the big axe? Or pictures of a guillotine? There’s a reason the axe is so big, that the guillotine blade is this big slab of sharp steel with an angled edge. It’s actually fairly hard to decapitate someone, not at all like, say, slicing through a potato with a kitchen knife. Not that I’ve decapitated anyone, you understand, but I’ve learned a lot in my studies. Anyway, whoever did this was really, really skilled, at least if the newspaper accounts have been accurate. They can call them the ‘Burma Shave Murders’ all they want, but those of us who know our business are amazed at the guy’s skill. I participate in a computer chat room, so I’ve seen a lot of opinions on this.”

“Aside from professional amazement, what’s your impression of Frank Scharmatz’ death?”

“A while back, couple months, say, I’d have been ecstatic. I had a dark time of it there, for a while, and I would have gladly done it myself. I was sure he stole Crystal away from me. But I’ve come to realize that it was all my fault—I got dollar signs in my eyes when she got that little bit of money. When she wouldn’t give it to me, I turned into a real jerk.” He laughed. “At least I was a jerk who didn’t lose his head. Anyway, I guess that now my feeling is more along the lines of relief, that he won’t have any hold over her any more. I don’t think that was a good relationship she was involved in. I’ve been trying to decide whether to give her a call.”

“Send her lots of flowers first. And just to close the book on this, you never explained the opportunity you mentioned.”

“Opportunity to kill Frank? Oh, there were plenty, but it would have been back two or three months ago, back when I was really pissed with him. He used to walk over to Crystal’s house, stay a while, and walk home drunk. I don’t want to know what happened in between. But I could have picked him up on his way home and done anything I wanted.”

“It sounds like you were watching him, or them.”

He sighed again. “Yeah, I was. And I think I’d better just shut up. I can tell this is beginning to sound too strange.”

\* \* \*

Back in the car, I was trying to decide whether to stop for coffee and organize my notes or to head to Monte Vista to see Bonnie Scharmatz, when my cell phone played Hal’s tune. Of all the stupid gimmicks built into my new phone, the ability to program particular rings for particular numbers is actually quite handy. This rendition of Eric Clapton’s opening riff to “Layla” is tinny and dumb, really, but it’s identifiable and it tells me it’s him.

“So how’s the campus? Serene?”

“Oh, very nice. Serene, quiet, and green. Are you on your way to Monte Vista yet?”

“Just about to leave.”

“Good. I mean, good that you haven’t left yet. You may not want to. There’s a panel discussion here at a conference you might want to come to instead. Bonnie Scharmatz is supposed to be there, although I don’t understand exactly. You said you have an appointment with her.”

“I do. What’s the panel discussion about?”

“Domestic violence, battered women, how to fight back. Um, it’s being moderated by Madge.”

“Madge?”

“Maybe you don’t know her. Professor Madge Glendon, head of the Women’s Studies Program at the U. She must be over here for the conference, or something. In some circles, she’d be called a ‘femi-nazi,’ just to give you one perspective on her politics.”

“And Bonnie’s going to be there?”

“That’s what the flyer says. But maybe they’re just using her name to draw an audience. That kind of tactic would be right up Madge’s alley.”

“I’ll try calling Bonnie, but if she’s not at home, where can I meet you?”

“Where you let me off. There should be parking around there somewhere. The panel discussion isn’t until one, so we can wander around and find a place for lunch. You already made progress today, right?”

“Oh, yeah, and I’ve got a ton of voice mail to catch up on.”

I called Bonnie and got her answering machine. This could have meant that she was only at the grocery, or something, but it didn’t seem worth the trip all the way back to Monte Vista if she might be coming to the conference. So I left her a message that I’d not be able to make it to our appointment and drove over to the campus to find Hal waiting where I’d left him earlier. He got in the car and guided me to a place to park, and, after I turned the engine off, he handed me a fluorescent purple sheet of paper.

**Womyn’s Defense League presents**

*“Burma Shave” Murders: Homicide or Grass-Roots Justice?*

Professor Madge Glendon

Womyn’s Studies Program

Frémont State University

leads a Panel Discussion  
with  
\* \* \* **Bonnie Scharmatz** \* \* \*

The typeface was huge, as big as could be fit onto the page, and the font was boldface in big block lettering.

“Womyn’s Defense League? Haven’t heard of that one. I called Bonnie and got an answering machine.” I handed the paper back and opened my door; he opened his and got out.

“Yeah, Madge formed it after that little adventure with the Silverton. She used the publicity over Stephanie Boudreau’s death to sensitize the university community to women as victims. And she hasn’t stopped blaming the administration for it. Waddle is one of those thorns in the paw that John Martin gets to limp around with.”

“Uh, ‘waddle’?”

“WDL. Gotta say it somehow—I’m sure Madge always spells it out, but John and I and just about everyone else call it Waddle.” I knew John Martin, the Frémont State Provost, to be the consummate campus politician with a wicked private sense of humor.

“I’m a little surprised that she’s able to blame the university. Stephanie’s death didn’t have anything to do with you folks.” Stephanie Boudreau, a concert violinist in town for a summer music festival, had died from excessive partying, as best we could tell. “So what do you suppose that this Waddle group wants Bonnie for, anyway?”

“Not to be too cynical, or anything,” Hal smiled, “but I expect it’s just to use her to draw a crowd. If Madge sticks to her usual approach, she’ll have a couple of local faculty members that she’s got on her side on the so-called panel, and they and Bonnie will get to listen while Madge harangues the audience. Why don’t we see if we can find some lunch first?”

Finding lunch proved more challenging than we had thought, and we wound up running behind. The WDL panel discussion was in an old auditorium in the heart of the campus, one of those ornate, high-ceilinged rooms with semi-circular rows of folding wood theater seats. The entrance doors were on either side of the stage, and, because we were a few minutes late, we had to enter the theater facing the audience. Fortunately, the side-lights were down, allowing us and several other late-comers to sneak in and not be noticed.

But this entrance arrangement also allowed us to see the audience. The theater, designed for perhaps a hundred people, was about a third full, mostly young women. They were sitting in groups of two and three, scattered about the room in random patterns. The exception was a line of seven women, dressed in what looked to me like military camouflage fatigues, sitting side-by-side front row center.

We walked up the side aisle to the last row, and sat in the shadows on the end. Even though we were a few minutes after one, nothing had happened. Hal has mentioned on several occasions the academic tendency to run everything except regular classes on a relaxed schedule, so this wasn’t too surprising.

On the stage, five women were sitting behind a long table, facing the audience. Just about the time we got seated, one of them, a short, stocky person dressed in loose jeans and sweat shirt, stood and walked over to a podium. She cleared her throat into the microphone and began speaking.

“Good afternoon, women of Adams State! I’m Professor Madge Glendon, head of the women’s studies program over in Durango, at Frémont State. Thank you for coming to the Womyn’s Defense

League's panel discussion on grass-roots justice as an answer to domestic violence. With us today are three members of the faculty here at Adams State, Professors Alicia Finney," a woman behind the table nodded and waved briefly, "Rhonda McWilliams, and Beatrice Toon." The other two also waved.

"And with us as well is Bonnie Scharmatz. I'm sure that many of you know about Bonnie's horrible experience at the hands of her misogynistic spouse, and she has kindly agreed to speak to us today about her experience. My Adams State colleagues," she turned and nodded toward the table, "will be providing their perspectives about recent events that freed Bonnie from her oppression and also freed the region from the clutches of other misogynists. These so-called Burma Shave Murders may be cause for concern in the good-old-boy law enforcement establishment, but to the WDL and oppressed women everywhere, they are cause for celebration."

At this, Prof. Finney looked up, clearly surprised, and Bonnie Scharmatz looked down at her hands.

"In fact, the WDL believes that more of this type of justice is sorely needed. The good-old-boy establishment won't protect women, so we have to do it ourselves. Protecting oppressed women is the business of our WDL action squad, here in the front row. The justice meted out to the three Burma Shave dirtbags in recent weeks is just the beginning of our plan to end the oppression of women everywhere!"

Now the other two professors were beginning to squirm in their chairs. Madge Glendon, apparently, hadn't briefed them fully. But Glendon was too wrapped up in her rhetoric to notice their discomfort.

"But before I introduce our action squad and outline our plans, let me introduce a true hero, a woman we can all be proud of, Bonnie Scharmatz!"

One time, when Hal and I were out fishing, I watched a coyote catch a rabbit. He did it by cornering the poor thing in a niche in a rock wall, cutting off its frantic attempts to escape, moving in for the kill inch by inch. Finally, the rabbit was too tired to keep trying, and it just gave up. It just sat there quivering, awaiting its fate.

The way Bonnie looked reminded me of that rabbit.

\* \* \*

## Four

I think we were both glad to hit the road again, the more so for having sat through the WDL embarrassment.

After the "discussion" ran down—meaning that Madge Glendon had finally recognized that she was losing the attention of her audience—and the panel dispersed, Hal stopped at the stage on our way out.

"Madge! How nice to see you here! Great presentation! I'm sure Provost Martin will be delighted to hear that you're reaching out to colleagues over here at Adams State."

At that point, it was Glendon's turn to look uncomfortable. Women's Studies isn't part of Hal's College of Natural Sciences, but a dean is a dean is a dean, I guess.

We were headed west, on US Highway 160, about half-way between Monte Vista and Del Norte, when my cell phone made its chirping noise—the generic ring for a number it didn't recognize.

"Trieri, CBI."

“Annette? This is Ralph Wertlinger.”

“Ralph! Say, let me thank you for putting in a good word for me with Scott Lister the other day. It helped, a lot.”

“Oh, yeah, my pleasure. He needed setting straight. Listen, though, you shouldn’t blame him too much. He got really burned by your Montrose office on a couple cases last year.”

“Whatever you said fixed it, for me at least. What’s up?”

“I called to let you know about something that I just heard. Like everyone else around these parts, I’ve been following those Burma Shave Murders and wondering who would be next. You know, three of ’em in three weeks. It’s been making me nervous.”

“You and me and everyone else. Especially, I bet, guys who haven’t been real nice lately.”

I heard a bitter laugh. “You got that right. Anyway, I called because we’ve got a missing person. Someone who just might fit the category of ‘jerk.’ Doc Whiler. No evidence he’s a victim, or anything, but he’s been reported missing.”

“Who reported it?”

“His office staff, the receptionist called it in. I talked with his nurse practitioner, and she said she was the one who told the receptionist to call us. He hasn’t been in the office for two days, neither yesterday or today, and that’s just too unusual for them to ignore, she said.”

“What’s the jerk connection?”

“About like the others. Treats his women badly, throws his weight around in the community. He’s the long-time town doctor up here in Creede, so everyone has been cutting him a lot of slack. But I’ve heard more than I care to about his bad behavior.”

“If there’s nothing more than he’s missing, there’s not a lot to do, is there?”

“Naw, I just thought I’d let you know. Scott told me you’re coordinating the investigation. If it is another Burma Shave thing, well, I guess we’ll find some evidence somewhere on Friday, if the pattern holds.”

“Right. Meaning that whoever is doing it will be out Thursday night, probably, putting up little signs and so on. What’s your intuition of where? Could we catch the perp in action?”

“Maybe up here in the upper valley, but they’re kind of spread around, aren’t they? I mean, the Monte Vista guy was found down in Conejos County somewhere, the Pagosa guy way down south, or something. We’ve got only a few back roads up here, but east of South Fork there’s miles and miles of ’em.”

“Too bad we can’t have somebody in Washington DC turn on a spy satellite tomorrow night to watch things for us.”

“Yeah, well, maybe, maybe not. I guess that could help us catch this Burma Shave guy, but I know lots of people here who would hit the ceiling.”

“Right, in Durango, too. Remind me to tell you my black helicopter story sometime. I guess we’ll just have to wait and see. But thanks for letting me know.” I disconnected.

Hall looked over at me. “Another one?”

“Not yet. Just a missing person. But if his head turns up somewhere, this will be useful, because he was missing yesterday. And getting a lead time established for however these things are being done could be very helpful.”

“Where is it this time?”

“That was Ralph Wertlinger, up in Creede.”

“So it’s Gunnison, Monte Vista, Pagosa Springs, and now Creede. Hmm. Western San Luis Valley and places next door to the west.”

“Assuming that this Doc Whiler person doesn’t just turn up.”

“Doc? I heard you ask about the jerk connection.”

“Town doctor, but not a nice guy, according to the sheriff. But there’s nothing much to do until he turns up, or at least his head.”

“So, that was Del Norte we went through while you were on the phone. We can head up to Creede, when we get to South Fork, if you want.” Another thing I love about Hal is his flexibility. I thought for a minute.

“No, let’s just head on over to Pagosa. If this is another one like the three others, there won’t be anything more happening until Friday. At least not that we’ll know about. I wouldn’t want to be in Doc Whiler’s shoes right now.”

So when we reached South Fork, we stayed on Highway 160, which runs along the South Fork of the Rio Grande until the climb up to Wolf Creek Pass, our other Continental Divide crossing on this trip. I’m not sure why, but I always feel better when we’re back on the west side—I guess it’s what I think of as “home.” And Wolf Creek Pass is easier than it used to be, because the highway department has finally added uphill passing lanes on the east side. Once again Hal had fun playing with his turbocharged car, zipping around RVs and big trucks that were laboring up the grade.

Just before the pass is Wolf Creek ski area, and Hal slowed down to scout the new lift. Although Wolf Creek almost always receives the most snow of any resort in Colorado, it’s a small place, attracting mostly locals. Of course, it aspires to be a destination, like Vail and Aspen, and so every now and then they invest in new equipment. The new high-speed chair would make the drive over from Durango worth it, at least after new snowfalls.

The long grade down the west side of Wolf Creek Pass provides spectacular views of the upper San Juan River valley, which the highway follows for the few miles into the little town of Pagosa Springs. The town grew in the valley, centered around the hot springs by the river, but new development on the plateau to the west is turning it into just another example of Colorado sprawl.

But sprawl or no, it still has trout streams nearby. We checked in to our B&B, and Hal took us west and then north on a county road to a place he knows about on the Piedra River, a good-sized tributary of the San Juan. Unlike our other two attempts on this trip, we succeeded in fooling the trout in the Piedra into thinking that our little fur-and-feather-covered hooks were edible.

In fact, at one point mayflies began coming off the water in waves—what fly-fishers call a “hatch,” although it’s really a mass metamorphosis of the larval stages into the adults—and the fish were literally boiling around our legs in their frenzy to eat. I even got bumped into a number of times. Because it started slowly, there was enough warning that we were able to figure out what kind of mayflies they were and which imitation would best mimic them. The term “catch-and-release” takes on new meaning when your fly is on the water for only seconds before a fish takes it.

After handling dozens of fish throughout the late afternoon, we decided on an Italian restaurant for dinner.

\* \* \*

Ron Grange, the Archuleta County Sheriff, told us where to find Toni Henry, the daughter of headless Hollis Henry, on Thursday morning. Ron also warned us that Toni might not be as cooperative as we'd like—he told us of reports that she was spending all her evenings celebrating her father's demise. I dropped Hal off at a likely-looking spot for trout on the San Juan just above town and went looking for Toni Henry.

Ms. Henry worked as a clerk in an alternative music store, one of those places where you wish you'd brought earplugs and you know instinctively that it just won't do to ask about what Frank Sinatra recordings they have in stock—or even Bruce Springsteen, probably, unless you want one of those sneers of death from the help.

I walked into Tongue Whip Tapes & CDs, a little storefront just off the main drag in Pagosa Springs, and felt physically assaulted by the wave of sound. The band, whatever they were called, seemed to be playing the usual three-chord song by using all three chords simultaneously while braying unintelligible lyrics in another key. This was accompanied by a random thumping noise that I finally decided was the drummer. It was an outstanding example of White Guys With No Rhythm—I saw a CD sitting on a little rack on the stereo amplifier, with the prominent title “Snot.” I decided it was appropriate: it did seem to make my nose run.

I don't keep up with these things, but I believe that Antoinette Henry would be appropriately described as a “Goth.” Her short, spiky hair was dyed flat black, she was wearing all-black clothes with high-contrast black and white makeup, and she had enough bits and pieces of pointed jewelry stuck through various body parts to set off metal detectors without even going to the airport.

I decided that conversation would be impossible, so I walked up to Toni, stuck my shield in her face, sidestepped around the counter to the stereo amplifier, and poked the on/off switch.

“Hey, bitch, you can't do that!” She tried to shove me aside and reach for the power button, but I intercepted her in route by grabbing her right thumb in an interesting immobilizing hold I learned in an FBI course.

“Toni, you'd be surprised what I can do. For example, I can get the sheriff in here to take this place apart, looking for pirated CDs and tapes, and whatever other contraband you may have sitting around. I can arrest you right now for assaulting a police officer and for selling drug paraphernalia, based on that stuff in the window. I can break your arm if you don't hold still. Or, of far more interest to me and much less stress to you, I can get some questions answered. What'll it be?” And I gave her thumb an extra little twist for emphasis.

I knew that it hurt because of her breathing, so I kept up the pressure. Finally, she relented. “OK, OK, cop lady. Jesus! You're killing me, here.”

“You have one chance to get me to trust you, so when I let go, you need to be very, very polite, right? Otherwise, we'll have our conversation down at the sheriff's office, while his guys take this place apart. Understand?” I got a reluctant nod in response, so I let go and stepped back, ready for her to attack.

But she didn't. Instead, she massaged her right hand and sulked. It was then that I was able to get a better look at her and to classify her face. Beneath the makeup and sullen expression, I saw someone I recognized, someone I had seen only recently. It took a minute, and the face of one of Madge Glendon's WDL action squad members, the girl second from the left in the front row the day before, clicked in my head.

“Ah. I almost didn't recognize you without your camouflage fatigues. Maybe it's the makeup.” This produced even more of a pout.

“So what? What do you care?”

“Well, now, that’s actually a good question. I’m not sure, to tell the truth. I’ll have to think about it. Look. Your father got murdered, right? In a bizarre way, right? And a couple of other guys also got killed the same way. I’m doing the investigation, coordinating things among all these county sheriffs that are involved. I understand that you and your father weren’t getting along, but I can’t believe that you think that it’s OK for someone to be going around beheading people. I mean, c’mon.”

“Why not? From what I hear, they all deserved it. My old man sure did, asshole that he was.” Her defiance was unyielding.

“Are you telling me that you think it’s OK for this phantom beheader to be on the loose? Seriously?”

“Oppressed women need someone like this, to look after us.”

“Really? Maybe you’ll get lucky—maybe whoever’s doing this will do it only to people you don’t like. So, what was the problem with you and your father, anyway? What made you hate him this much? And don’t tell me it isn’t any of my business, because it is.”

“So maybe it’s your business, but why should I tell you? I don’t even know you.”

“Look. I’m trying to understand this jerk thing better. I mean, I was over in Alamosa yesterday and heard Madge Glendon, just like you. And that was all just bullshit political rhetoric, you know it as well as I do. Just because Madge doesn’t like somebody, that’s no reason to decapitate them. And I haven’t heard what was so bad about your father to justify this.”

“How about getting into my pants since I was fourteen? That enough?”

“Ah...I see.” I paused and took a breath. “Thanks for telling me, and I’m sorry to be so pushy about it. And as a cop, I still have to try to catch the killer. But as a woman, well, I’m inclined to agree that he deserved it. I did hear that he had to settle a lawsuit with a cleaning lady, or someone like that.”

“Right, but even more than that, I think his hitting on me killed my mother, essentially. She found out, I think, and she just couldn’t take it.”

“Hmm. What’s done is done, and I suppose you can make a good argument that what happened to him is for the best. But I still need to catch whoever’s doing this. And regardless of what Madge was saying about your action team yesterday, I can’t imagine that you or your friends are doing this. So who is?”

“Wish I knew, so I could give him a medal.” Her defiance was back.

“Other people have said the same thing. Do you know a guy around here named Kristof von Stier?”

“That clown? Naw, it couldn’t be him. He plays with swords a lot, but I think it’s because his dick is tiny, or limp, or something. I don’t think he could ever actually kill someone.”

“Anyone else you know of that could?”

“If I think of anyone, I’ll let you know.” I didn’t really believe her. She was finally smiling, but the sarcasm was obvious.

\* \* \*

Kristof von Stier had an antique shop up on the hillside above town, and the sign on the door said “Open.” I went in, but he wasn’t anywhere I could see. His inventory was on display, though, and I’d come to see it almost as much as I’d come to see him.

It was quite remarkable. Lots of pointy, sharp metal things, swords of various designs, lengths, degrees of deadliness. Suits of armor. Shields. Battle axes. All sorts of other strange weapons. I tried to pick up a mace, a spiky iron ball on a chain attached to a handle, but I could barely lift it. As I worked my way back through the shop, I became aware of a strange sound from the back, from outside, it sounded like. An occasional grunt, and a soft noise, like *swok*.

When I got to the back door, I looked out to see a tall, nearly emaciated man, shirtless, with a huge handle-bar moustache, wielding a long two-handed battle sword, the kind with the big cross-shaped hand guard like the one Mel Gibson used in that movie about the Scots. Around the patio, there were several pedestals, more than a dozen, apparently made from 4x4 posts, each with a melon on the top. Based on what Sarah Robinson had told me about the moustache, I decided that this had to be von Stier.

He swung the sword around in a circle over his head and brought it around at about chest level, swinging through one of the melons with the *swok* I'd heard before. The melon didn't move. It was all so strange that I couldn't help myself.

"I've always found it easier to cut my cantaloupes on a cutting board on the kitchen counter." I said softly, as he leaned on his sword between melons.

He looked up, startled. Then he lifted the sword with an effort and touched the tip of it to one of the melons. The top half fell to the ground with a thud.

"Yes, and it doesn't involve so much setting up, does it, then?" Despite the name, the accent was strongly British, overlain with a hint of what sounded like acting-lesson German. "May I help you?"

I found my shield and showed it to him. "I'm Annette Trieri, Colorado Bureau of Investigation. I'm helping the county sheriffs around the region with what's being called the 'Burma Shave Murders.' I expect you've heard of them."

He leaned the sword against one of the posts and picked up a towel. "Oh, yes, they've become quite the talk of the town, what with a local victim. Nobody liked Hollis very much, but they sure are having fun talking about him now."

He put on a shirt, pulled a monocle out of the pocket, and screwed it into his right eye.

"No doubt. I've heard similar things about the other victims as well. I'm wondering what you can tell me about your sales in the last couple of years or so."

"You think maybe I sold someone a murder weapon? Goodness. I guess I should be flattered. Based on what I've read, it would take a very high-quality blade to have done this, the best."

"Like this one, perhaps?" I waved toward the sword he'd been swinging around, and he picked it back up.

"You know, heads, or, rather, necks, are considerably tougher to cut through than these cantaloupes. I suppose a very skilled swordsman could use this for beheadings, although it could be a bit messy, probably not as clean as the papers have reported our local ones to be. He'd have to catch the victim at just the right place," he pointed to a spot on his neck about half-way up, "about here. And he'd have to catch it with the sweet spot of the blade, about here." He pinged his index finger on a section of the sword about two-thirds of the way to the tip, and it rang like a chime.

"Most of my sales are to people, other collectors, who don't live around here, not even in Colorado. The internet has made it possible to reach collectors world-wide, and I do my buying and selling by Federal Express, for the most part."

"Why the shop, then?"

“I have to store my inventory somewhere. And I do get the occasional walk-in visitor, like you. But as far as I can recall, the only sale I’ve had to someone face-to-face recently was to a fellow from over in Alamosa. A beautiful antique katana. He said it matched one he already had, and he wanted to make them a set. I think buying it was a big stretch for his budget.”

“‘Katana’?”

“A two-handed Japanese sword with a slightly curved blade. Beautiful ebony handle. About a meter long altogether. Light and fast, in contrast to this monster I’ve got here. These were made to hack through armor with brute force. The katanas are more finesse oriented.” He had walked into the shop and set the battle sword on a rack on the back wall.

“Why would someone stretch his budget for a sword?”

“I have two sorts of customers, generally. There are the serious collectors, and there are the other guys who are massaging their egos somehow. They want something to hang on a wall to prove to the world that they’re real men, I guess. I’ve had people order special swords to hang with their coat of arms. Hmm.” He looked around. “You said your name is Trieri? Sounds northern Italian, at least at some time in the past. So you’d get a set of rapiers, what people generally think of as ‘Three Musketeers Swords,’ only the Italian design, like this one.”

He had walked to the front wall where there was an ornate, four-foot sword with an elaborate, full basket protecting the handle.

“I seem to recall something like this in the big-budget movie version of *Romeo and Juliet*. They were dueling with those in one hand and a long dagger in the other.”

“Precisely. You have a good eye, and memory. After years, centuries, even, of hacking at each other with those big broadswords like I was slicing the cantaloupes with, someone figured out that with a little skill you could slip a blade between the cracks of your opponent’s armor with a well-placed thrust. Changed everything. The battle sword is too heavy and unwieldy to use in a true sword-fight, at least as we think of swordfights now.”

“So your local and regional sales are limited. Had any break-ins, stuff stolen, anything like that?” As interesting as the history was, I wanted to try to stay on topic.

“Never. That’s one reason I’m here. Low crime rate.”

“It doesn’t sound as if you think these murders are being done with any of your equipment.”

“It doesn’t seem likely, although I guess you never know.”

“Is there anything you can tell me about any of the victims?” I usually give people a couple of chances to tell me what I already know.

“Hmm. What I know about Hollis Henry is probably common knowledge. He was a cattle rancher, had a big spread up Piedra Road north of town. His family has been in the area for several generations, but his daughter will probably sell the place. She doesn’t seem like the type to run a ranch. But she’ll make a ton of money from selling it, so I guess she has a motive for wanting him dead.” He shot me a meaningful look, although what he meant and what I took from it were probably quite different.

I didn’t say anything, so he continued.

“Other than that, I guess I’ve heard that Hollis wasn’t very popular around town. Had a reputation of being hard to get along with. I suppose that’s the basis for this jerk business, in his case. And if the other two victims fit the same mold, that’s something you can look into.”

“Did you know either of the other victims?” Third time, I thought, is the charm.

“Don’t think so. I don’t get up to Gunnison much, and the news was pretty sparse about that one. The one over in the Valley, though, got some space in the paper. That guy was a high-school teacher, right?”

I decided to raise the stakes. “One thing about these high-profile cases, the politicians want results. Like I said, I’m involved to coordinate the investigation in the different counties. The Governor’s office put it in my lap, and they’re impatient. So, what happens is, my boss, the CBI Director in Denver, gets pressured by the Governor and he pressures me. And it turns into a little game of find the killer before he kills again, and if a few citizens’ lives get disrupted in the process, well, that’s the breaks. It gets easier and easier to get obstruction of justice warrants, because the Governor also puts pressure on district attorneys and judges.”

He cocked his head sideways a little and looked puzzled. “Nice speech. But what’s it got to do with me?”

I had to laugh. “Very perceptive question, Mr. von Stier. I guess we’ll just have to wait and see. Do you have travel plans in the near future? I may need to talk with you again.”

“It sounds like you suspect me of something.”

“That’s my job. I suspect almost everybody of something. I’ll be in touch if I need to talk with you.”

\* \* \*

I found Hal sitting on a rock by the river, near the spot where I’d left him. He was staring off into space with a truly goofy expression—even the crunching of the tires on the gravel didn’t snap him out of his reverie. So I got out and sat down beside him.

“Hey there, tiger. Where are ya?” This got a response—he leaned over and kissed me on the cheek.

“Playing the tape over again. See that big rock out there?” He pointed toward the middle of the river, at a boulder in the midst of the main current.

“You mean the one with the eddies this side of it?”

“Right. And the nice little current seam on the far side. Well, it turns out that just where that seam peels off the rock, there’s a dead spot just to this side. I was casting around the near side of the rock, over here, and I thought I was seeing things—a big nose kept poking up into the edge of the seam. So I watched for a while, and, sure enough, there was a fish sipping whatever was floating around the far side of the rock. I got out my little bug net and figured out that he was eating caddis emergers. Then I had to figure out how to cast to that spot—with the currents on this side, it was going to be hard. Anyway, to make a long story short, I got lucky and made a perfect cast and found out that what was eating those caddis emergers was a two-foot brown trout. Biggest trout I’ve caught in a long, long time.”

“Two feet! But you’ve got your light outfit.”

“Yep. Three-weight, with a 7x tippet. I had no idea what I was getting into. But he cooperated, mostly. Didn’t swim up around the far side of the rock. Just kind of pulled and made a couple of runs. My, my.” His grin was as goofy as ever.

“You don’t have your net. How’d you manage?”

“Oh, I got him in to about arm’s length and intentionally broke him off. He was getting tired and I didn’t really want to handle him. He’s probably down there sulking somewhere. Hurt feelings,

embarrassed, whatever big fish feel.” He shook himself, kind of like a dog would. “So, anyway, how did things go with you? Ready to head home?”

I was. It was our fifth day on the road, and I’d been working most of the time, either running around interviewing people or thinking about it, trying to sort through the discrepancies.

He hadn’t bothered to take off his waders, so I drove. It gave me a chance to play with the car’s power. On the long uphill grade west out of Pagosa Springs, I downshifted and pulled in to the center lane to get around an 18-wheel gravel truck. He asked again about my progress as the acceleration pushed us back into the leather seats.

“More puzzles. It would be nice if one of these guys who likes to play with swords knew all of the victims, but that doesn’t seem to be the case. It would also be nice if everyone was obviously telling the truth, but that’s not the case, either.”

“You’ve always told me that everyone’s got something to hide. Except me, of course.” His goofy grin was gone, replaced by a triumphant smirk.

“Oh, I’ve got a whole dossier on you, buddy.” And I reached over and patted his Gore-Tex covered leg. “But, yeah, it does seem that everybody’s got something they’re afraid to have made public. And it just gets in the way. I mean, I don’t really care what web-sites people visit in private, you know? Or what they do with their tax forms.”

“But even if they’re not trying to hide stuff like that, I think most people are just too private to open up to you right away. I mean, people don’t like to answer a stranger’s questions. Especially a stranger with a badge.”

“When am I ever going to get you to call it a *shield*, anyway? Can’t take you out in public, or the company of my colleagues, if you don’t know the jargon.” I looked over at him and winked.

“Oh, right. Shield. It’s a *shield*. I keep forgetting. But if you’re concerned about jargon, just be glad that I don’t insist you learn mine. Quasi-geostrophy. Biogeochemical cycling. Catalytic ozone destruction.”

“Hmm. ‘Quasi-geostrophy.’ Sounds like a useful relaxation mantra.” I repeated it several times, and finally tripped over it. “Well, maybe not. Too much like sneezing.”

He laughed. “In graduate school, it was the stuff of nightmares. We all knew we’d have to explain it on our oral exam. And with math, it’s easy. But in words it’s a nightmare.”

We had crossed the Piedra River, just past the restaurant at Chimney Rock, and were headed across the flats along Yellowjacket Creek, when Hal saw the signs. I was about to zoom around a vacation trailer meandering along well under the speed limit, but Hal put his hand on top of mine on the gearshift.

“Whoa, there. Let’s stay in this lane for a couple of minutes. There’s a grade with a passing lane about a mile ahead, and I see some little signs coming up.”

“Huh?”

“‘Womyn must not,’ and it’s ‘womyn’ with a ‘y’, uh, ‘tolerate,’ stay with me here, uh, ‘men whose psyches,’ ... ‘only hate.’”

I slowed the car as fast as I could without skidding on the gravel on the shoulder.

“Where’s my phone? Think we can get a signal here?” I looked around the ridge tops for a tower as I fumbled in my purse.

“Don’t get too excited, now. I didn’t see a head, just the four signs. And they were hand-lettered, it looked like. The ‘y’ in ‘womyn’ is a dead give-away, no pun intended. This is Madge’s handiwork, I’m certain of it.”

I was nodding at him while listening to Derek’s office phone ringing. He finally picked it up.

“Derek? Annette. Listen, Hal and I are on our way west toward town, and we just passed a little Burma Shave type poem on four signs. On the flats just west of the Piedra crossing by the Chimney Rock Restaurant. We’re going to walk back and check them out, but how about getting someone over here to dust them and so on? Just signs, no heads, so there’s no evidence of a crime, beyond littering, I suppose.”

As usual, he was on the ball. “You’re still in Archuleta County, if you haven’t gone over Yellowjacket Pass, so I’ll call Ron Grange. Maybe he can send out the same people who investigated his crime scene last week.”

“Good idea, thanks.” I put on the emergency blinkers and began backing slowly and carefully down the shoulder, toward the last sign. About the time I got close enough for comfort, about 50 yards, my phone chirped.

“Trieri, CBI.”

“Annette? Ron Grange here. Your guy tells me that you found another poem.”

“Yep. But Hal, that’s my husband, he works at FSU in Durango, says it looks like the work of a radical women’s advocacy group there, outfit called the Womyn’s Defense League, WDL.”

“You looked at the signs closely yet?”

“I was just about to.”

“We found another set east of town, positioned for east-bound traffic to see, this morning. Haven’t been out west yet. The ones we found have got a ‘WDL’ stamp on them, so I bet it’s the same people.”

“Another set? My goodness. Bad poetry all over the place. What’s your poem?”

“I’ve got it here in my pocket. Uh, let’s see, well, here goes:

*Women Must  
Not Tolerate  
Men Whose Psyches  
Only Hate.”*

“Aw, how disappointing. That sounds like ours here. I’ll double check, but I think that’s what Hal read out as we went by.”

“So, your Mr. Petersen said you’re on the flats by Yellowjacket Creek. I’ll send someone right out, see if there are prints. We got loads from the other set of signs this morning.”

“I expect that this Waddle outfit will put more of ’em out. I saw a speech yesterday, lots of political rhetoric. They’re on a roll.”

“Waddle? What’s that?” When I told him, he laughed until he got hiccups.

\* \* \*

## Five

Friday morning, I went into my office early. I had four days' worth of mail— electronic and paper—to deal with, a staff meeting to lead, and an unknown number of phone calls to return. I also suspected that it just might be a busy day with new poems, the WDL kind and otherwise.

After getting off the phone with Ron Grange Thursday afternoon, I'd asked Hal to dig out the digital camera and document the signs. Like the ones that Grange had found east of Pagosa Springs, these also had a "WDL" stamp on them. And, though they were on the same type of sign-board as the murderer's signs, these were hand-lettered, rather neatly, and posted on 1x2 pine furring strips, pounded into the soft dirt of the ditch. It didn't take too long for one of Grange's deputies to arrive, and he confirmed that "our" signs matched those found east of town, almost exactly.

The rest of our trip home was uneventful, at least in terms of my investigation. Hal took me out to dinner at a steakhouse up by Vallecito Lake, and he even invited me to drive on the way there. I put the S4 through its paces on the hills and twisties of Florida Road and felt myself falling even more in love with its handling and fun-factor. But I let Hal drive home—with my rib steak I had a half-bottle of a lovely Napa Valley cabernet from Oakville, just enough to make me feel a little dreamy. Being married to a full-time designated driver has its advantages.

The next morning I caught up on my email and looked over the paper mail before my staff arrived, and then I convened the staff meeting. I caught them up on my week and how the investigation was proceeding, or not, and then they filled me in on what had been going on. Fortunately, there wasn't much.

When the phone finally rang for me, I discovered that I'd been holding my breath, figuratively speaking. And when Sally told me it was Ralph Wertlinger over in Creede, I was actually relieved.

"Ralph! I guess I was sort of expecting to hear from you. Any news?"

"Well, it's Friday. And Doc Whiler turned up, at least the top part of him."

"Aw, hell. Another one, huh? I guess you'd better tell me about it."

"In a way, I'm off the hook, although I don't know what we're going to do without an experienced doctor around here. The new guy still seems a little green. Anyway, they found Doc up toward Lake City, in Hinsdale County. One of Steve Phillips' guys found him on the South Clear Creek Road, up past Browns Lake State Wildlife Area. Saw the signs, braced himself for what he figured he'd see, but it still scared the crap out of him."

I'd grabbed a topographic atlas from my bookshelf and found the side road he was talking about. Past the wildlife area, there wasn't much of anything along it. It stayed in a little valley while the highway climbed up to Spring Creek Pass.

"So it's across the county line from you, huh, but still on your side of the Continental Divide? Are the remains going up to Lake City?" Hinsdale County has very little in the way of towns or people, and Lake City is the only community of any size at all.

"Yeah, Steve almost tried to talk me into taking this one on, I guess he figured that it's my doctor, after all. But he came to his senses." He chuckled.

"Steve Phillips. I guess I don't remember ever meeting him. Ralph? Do you suppose you could pass along a suggestion? It might be good for the overall investigation if he called Belinda Edwards, up in Gunnison. Not to do the Hinsdale investigation, just to be there for the post-mortem. She could tell if the

MO is identical and so on. Belinda's the ME up there in Gunnison, and she explained some details of the second murder to me." I hate to meddle in other people's investigations, but this was too important an opportunity to pass up.

"That's a great idea. I'm sure Steve will think so, too, and he can probably persuade his coroner to go along with it."

"Ron Grange has had some copy-cat signs put up, and I want to be sure that we don't wind up with copy-cat murders. Are all of the other things the same, you know, the signs and so on?"

"I went over to check it out, and, yeah, as far as I can tell they are. Same type of signs, same steel posts, same spacing. Except this time, there was only one set of signs, not the usual two sets. Steve and I talked about it, and we figure maybe it's because there's not likely to be any traffic coming down the road that didn't go up first. Past the wildlife area, there's a fishing camp, but not much else."

"Hmm. Suggesting that the perp knows the territory, eh?"

"Yeah, or else he was pressed for time. I had more guys out on patrol last night, and maybe the perp saw some of them and got spooked. In fact, Steve and I were speculating that maybe the guy went across the county line because of seeing my patrols. Uh, you said that Ron's had some copy-cat signs?"

"Right. Put up by a feminist group from the university here in Durango. One set of signs on each side of Pagosa, but they were hand-lettered and stuck on pine boards instead of on fence posts. Hal and I found the set on the west side of Pagosa on the way home yesterday."

"I'll tell you mine if you'll tell me yours."

"Huh? Oh, the poems." I had to laugh, and then I recited the WDL doggerel.

"'Psyche'? Sounds rather high-toned for our murderer. That how you ID'd the poets?"

"They also spelled 'women' with a 'y' instead of an 'e,' which is almost a trademark for them. And close-up, you can see a stamp of their logo." I could almost see him rolling his eyes. "So, I'm waiting."

"Yeah, yeah, I'm working myself up to it. You know, it's weird. I still remember, back in high school, back in the last century and all that, one of my worst experiences ever was in English class, I had to recite a poem. *Rime of the Ancient Mariner*, that classic by, uh, Coleridge, I think. You know, 'water, water everywhere' and all that. Didn't have to memorize it, thank God, just read it. Scared the living bejesus out of me, almost made me wet my pants, standing there up in front of the class. I've never liked poetry since."

"Ralph, this is only a short little couplet. Not an epic, or anything. And it's just me, not a class." I was trying not to laugh at the poor guy.

"I know, I know. OK." I could hear him take a breath. "Here goes:

*It's Really Quite  
A Simple Task,  
A Jerk A Week,  
That's All We Ask."*

I was writing as quickly as I could, so I didn't respond immediately.

"Annette? You there? Was it that bad?"

“No, no Ralph, it was fine. I was writing it down. And thinking, a little. It seems, I don’t know, different from the other three. But the ‘jerk a week’ thing was in one of the others, so it’s the same basic message.”

“Right, I saw that, too.”

“So, you said that Doc Whiler fit the jerk profile. Any specifics? People I should talk to? I need to come back your way and finish up some interviews in the Valley, so I might as well come up to Creede, too.”

“I expect there’s lots of folks who’d be able to talk about Doc. You’ll be wanting to find out about enemies and so on, I’d guess.”

“Right, and if there’s anything I can put together about him and the other victims.”

“Let me know when you’re going to be here, and I’ll get something arranged. I reckon you can start with me.”

“Well, sure, but why?”

“Oh, I’ve got some amazing stories for you. A couple of years ago, my sister JoAnne finally wised up enough to divorce the jerk. But before that Doc was my brother-in-law.”

\* \* \*

About the time I finished the conversation with Ralph Wertlinger, Sally Brigman, my receptionist and all-around person Friday, whom I’ve learned I couldn’t function without, brought in more telephone messages. One was from Hal and said “called about lunch.” The other was from someone called “Naomi,” and it had a strange prefix. Since it was only about 9:30, I decided to make Hal wait. If things kept up at this pace all morning, I’d be ready for another big steak for lunch.

“Valley Women’s Center. Can I help you?” So the prefix, I thought, was back over Wolf Creek Pass, on the east side of the continental divide somewhere. Around here, when people say “Valley,” they usually mean the San Luis one.

“This is Annette Trieri in Durango—I’m returning a call from Naomi.” I had to wait only for a few seconds, and I found myself listening to a valley girl—of the California variety.

“Ms. Trieri? Thanks so much for calling back? I’m Naomi Winters, I’m the director of the Valley Women’s Center? We offer different services for women, including safe-houses for victims of domestic violence, shelters for homeless women so they can have a place while they get back on their feet, health services, things like that?”

“It sounds familiar. I think there’s probably something like it over this way. Part of the county’s social services department, or something. What can I do for you?” I was hoping that this wasn’t some kind of solicitation, and she didn’t disappoint me.

“I heard from the sheriff’s office that you’re coordinating the investigation of these murders, you know, the ones where the guys are getting their heads cut off? And, well, Bonnie Scharmatz has been to see us a bunch of times? So I feel kind of connected to the whole thing?”

How does she not drive her staff crazy? I thought.

“Anyway, I thought you might be interested in something? See, we also have a phone bank, with telephone counseling for domestic abuse, crisis intervention, that kind of thing? And for the last week, or week and a half or so, our phone calls are way down, you know?”

“Ah, when you say ‘way down,’ how much way down do you mean?”

“Like 90% way down, I mean, we’re only getting about a tenth the calls we usually do? It varies from month to month, of course, holidays are the worst? But this is also a bad time of year because school will be starting soon and for some reason people are under a lot of stress? But for the past, say, ten days, the calls are way down?”

Does she practice that inflection? I wondered.

“It sounds to me as if you think this is somehow connected to the murders I’m investigating.” I promised myself not to ask questions, not directly, at least.

“Well, I thought you might be interested? I mean, maybe it’s working? These guys, these jerks who are getting killed and the poems and all the publicity, maybe other guys are paying attention and being nice?”

“Of course, in the past ten days, we’ve had two more of these murders.”

“Two?” This was a gasp in addition to a question.

“Right. Last week south of Pagosa Springs and a new one last night, which hasn’t hit the papers yet. So maybe your calls will stop altogether.” My intuition in situations like this—where a civilian seems to be getting involved in an investigation without invitation—is to downplay their role, to get them to ease off. But a plan began to take shape in my head.

“Say. Maybe you can do something for me. These cases have generated a lot of publicity, all around Colorado and even in other states. Both the Denver papers have been on a feeding frenzy, and the publicity in Colorado is just huge. If you’re right, I mean, if the publicity is really suppressing domestic violence, then I bet that phone banks or whatever in other parts of the state would also be having fewer calls. See what I mean?” Nuts, I thought. I blew it. I asked a question.

“Sure I do, you know? Maybe I could call around?”

“Exactly. See what you can find out. I’ll be interested to hear. And I bet that you’ll find that other places are having fewer calls, just like you. If that’s the case, there might be a newspaper story in it, or a TV story. I know a guy at the *Durango Herald*, Randy Fredericks, and I can have him call you. Randy’s reported on other cases I’ve had, and he’s a straight shooter.”

“You think publicity is a good idea?”

“If you get interviewed, it will certainly give your Valley Women’s Center great visibility.” I resisted the compulsion to add “Right?”

“And from my perspective, it has certain advantages as well.” I rambled on before she could ask another question. “We’re going to catch whoever’s doing this, but I can’t say when. And in the meantime, publicity about this might persuade the killer that he’s converted all the jerks out there to nice guys, and he’ll ease off. We really don’t need more dead people.”

This would have to do for now—I didn’t want to tell her my real plan.

“Oh, so I get free publicity and you get the killings to stop, right? Great idea!”

Finally! I thought. She actually ended a sentence without that question mark inflection, short sentence though it may have been.

“Right. I’ll let Randy know about this and give him your number.” And I was able to escape.

I called Hal back and discovered that he wanted to have lunch, not a romantic lunch for the two of us, but rather a working lunch involving Provost John Martin. I’d known Martin for a couple of years

because he was peripherally involved in a couple of my cases when I was with the Durango PD. To me, he was a stuffed-shirt academic—not the easy-going kind of university administrator that Hal managed to be, but good example of a bureaucrat. Smart and effective, yes, good sense of humor, but also a stuffed-shirt bureaucrat. Going to lunch with him wasn't my idea of a social occasion.

“Does this have anything to do with that Waddle rally we saw in Alamosa?”

“Yep. That, plus those WDL signs we found along the highway yesterday. John's political sensitivities are finely tuned, and he worries about a lot of things, like the U's exposure on things like this.”

“I don't think that's anything to worry about. Waddle didn't obstruct anybody. I mean, it was obvious that their signs aren't the same as the perp's. And I'm not going to worry about littering or anything like that. There's free expression, after all.”

“Yeah, I know. But I also think he's interested in getting something on Madge, something he can use against her. She's got tenure, so she's untouchable unless there are legal issues of some kind that would show her to be unfit as a professor. So how about meeting us downtown? My treat.”

There isn't any place to eat in the office park where the CBI building is anyway, so being taken out somewhere nice was an opportunity not to be missed. I knew it would be nice because Hal wouldn't take his boss anywhere else.

“Tell you what. I'll come up to campus and meet you guys at your office. I need to talk with Gil Taylor anyway, and I'll go find him after lunch.”

“Gil? I think he's probably around, but you should call him, to make sure. What's that about?”

“Sample analysis. I want to see if he can tweak up his equipment enough to pick anything out of the formalin background in the victims' tissue samples. This business of these guys all getting walked up to bothers me. Maybe they were drunk or something.”

“Or drugged, huh?”

“Right. The fact that they all had their blood drained also has me puzzled. Maybe the perp is trying to hide something. But Gil might find it in the brain tissue.”

“Ugh. And here we started off talking about lunch. Let's not go into this with John, OK?”

\* \* \*

Because we all were on campus, we decided to walk over to the faculty club rather than navigate the traffic and parking downtown. That was just fine with me, because I don't get up to the campus very often, and, especially in the summer, it's a beautiful place. Compared to my dreary office park, it's positively uplifting, what with the landscaping and the views.

We had lunch, and I was mulling over the provost's comments on my way to the chemistry building, where Gil Taylor runs the department's analytical laboratory. Hal had it right—Martin was looking for information about Madge Glendon that he could use to question her continued tenure. And it was more than simply the responsible interest of a provost—I sensed there was something personal in it, so I pushed back on him a little.

“But John, surely there's such a thing as academic freedom on top of the usual constitutional freedom of expression, no?”

“Of course, of course. But here at FSU, first and foremost we strive to be a community of scholars. Our women's studies program is a scholarly program. Faculty members are free to engage in political

activism, but that should be secondary to their scholarship. Professor Glendon seems to have made political activism her main focus, and that's just not appropriate. Of course, it's for her department chair and dean to decide whether it's in the way of her duties. But it's for me to be concerned with legal matters." And he actually looked down his nose at me when he said this.

"But weren't a lot of university faculty involved in the civil rights movements—didn't some of them get arrested in those demonstrations? And what about Vietnam? As far as I've seen, Professor Glendon isn't even coming close to that level of civil disobedience."

"That's what I'm trying to verify. If she's just in the protest mode, that's fine, assuming she's fulfilling her normal responsibilities. But if she's connected to these murders, well, that's something else altogether."

It took some doing, but I had finally persuaded him that we had no reason to think that Glendon was connected to the murders. Now, I was having trouble not resenting his attitude.

But that was interrupted when I came around the corner of the student union building and ran smack into a demonstration of some sort. It didn't me take very long to figure out that it was connected to my cases—in groups of four, young women were parading around with protest signs displaying the WDL stamp and the three poems that had been in the papers as well as the new one, the one that Ralph had read to me over the phone only a few hours earlier. The whole thing was rather nicely choreographed, actually—the girls were chanting their poems, each reciting the line on her sign, taking turns with the poems. They were even reciting them in the right chronological order.

Someone, I thought, had put some effort into this—someone with the connections to have found out about that fourth poem quickly. It wasn't too surprising that the fourth poem was public—with the internet and continual AP updates, news has become truly current—but there was the inevitable time lag with getting the signs made, getting the fourth group of girls integrated with the choreography of the other three and so on. It almost seemed as if the whole thing was planned in advance, as if the WDL had advanced knowledge of the fourth killing. I began to wonder if maybe Provost John Martin had a point.

Other than the sixteen college girls parading around in their little groups, the only people at the demonstration appeared to me to fall into the category of curious on-lookers—a few college students, the boys trying not to ogle openly and some groups of young women whispering among themselves; various adults standing under trees in the shade, including a couple of men in suits and four women in professional office attire; various groupings of three, which I figured must be new students and their parents. And then I noticed another person, standing in deeper shade almost behind some bushes, watching the whole thing as if it were a freak show. I walked over his way, coming up to him just out of his line of sight.

"Dino! Dino Papandrea! Haven't seen you in—what?—nearly a year? What in the world are you doing here?" When I said his name, Dino had jumped about a foot, and I swear that when he landed I could feel the ground shake.

Dino—his real name is Dionysus but everyone calls him Dino—is an extremely large fellow. He put himself through graduate school by acting as the chauffeur, bodyguard, and all-around muscle for an art dealer in Santa Fe. The dealer was a crook, and Dino helped me make the case on him when he was in Colorado stealing antiquities, so we're friends.

"Oh! You startled me. Annette! Annette Trieri, it's great to see you." The rumbling of his voice had barely faded when he swept me up in a hug that squeezed my breath out. When he set me back down, he was positively beaming. "I wondered if I'd run into you sometime, and I meant to call, but I've just been swamped."

I finally got my breath back. “What are you doing here, anyway. I mean, watching this little circus, sure, but why are you on campus?”

“Well, I finished my Ph.D. last winter, and then I went to Europe for a few months. Saw the family home in Thessalonika, bummed around a while. I came back and managed to get a position here as a philosophy instructor. Not a tenure-track faculty job, but it’s a start. I taught two summer courses. What have you been doing with yourself lately?”

I’d come to know Dino well enough that he wasn’t as scary to me as he usually is to others. I mean, he’s nearly seven feet tall, weighs a good 350 pounds, has a single black eyebrow, generally sports a three-day growth of beard, and rides a Harley and dresses the part. Some people are just intimidated by the guy. What took me a while was getting used to the idea that he reads philosophy books for amusement, the way most people read, say, mystery novels.

So I told him about getting married last spring and my new job at the CBI.

“CBI? As in Colorado Bureau of Investigation? So, the papers say that the cases with these poems are yours.” His single eyebrow had a complicated double arch in it.

“Technically, each case belongs to the sheriff of the county where the body—er, the head, we haven’t found bodies—where the head was found. But I got handed the job of coordinating all the investigations. And the sheriffs seem to like the idea, I think.”

“So that’s why you’re here? Checking up on these demonstrators?”

“No, I just blundered into them. I was on my way over to the chemistry building.” I shrugged.

He was nodding. “Me, too. I got the final syllabus for my fall courses finished, and I was going to grab a late lunch in the student union here. It’s been a long time since I saw an actual campus demonstration. Takes me back. But what’s the deal with these women? How come they’re chanting these poems?”

I explained about Professor Madge Glendon and her Womyn’s Defense League, and how they seem to have latched onto the Burma Shave Murders as a *cause célèbre* to get publicity for domestic violence issues.

“Madge Glendon? Oh, I remember her. She was on the committee that was interviewing for new instructors in the humanities. She asked me how I felt about women, women’s rights and so on, and all the other people on the interview committee rolled their eyes and shook their heads.”

“How’d you answer?”

“I asked her for a context, tried to be philosophical, and tried to be very, very politically correct. I could tell it was a loaded question. So this WDL business explains a lot. But surely you don’t think she’s behind those murders, do you?”

“No, I don’t see how she could be. But I do need to ask her a couple of hard questions.” That fourth poem was still on my mind.

\* \* \*

I’d expected to find Gil Taylor in his laboratory, because I had called ahead as Hal suggested. But when I got there, the door was closed and a note was taped to it. I read “Abducted by Aliens—Check Chem. Dept. Office.”

The tone fit perfectly with Gil’s sense of humor. He and I have worked together on several cases, beginning with the one that introduced me to Hal. The City of Durango and La Plata County cooperate

on various law enforcement matters, and they have a joint facility for analyzing drugs and other strange substances. But Gil runs a state-of-the-art research laboratory for the university's faculty and students, and his equipment is far more sophisticated than what local law enforcement has. So I had managed to get him on contract for the city, and his equipment has provided crucial information on more than one occasion.

The office of the chemistry department—down the hall and one floor up from Gil's lab—was completely remodeled since the last time I'd been there. That time I was there to do a search for evidence of the department chair's involvement in a murder case. She wound up dead herself, in an avalanche on Red Mountain Pass, and so it shouldn't have surprised me that a new department chair would have changed the look of the place.

Gil was sitting in the office, at the desk facing the door where you'd normally expect to find someone like a receptionist. Gil's a tall, skinny guy, and it looked as if he was sitting at a kindergarten desk. The strange picture was completed by the telephone headset Gil was wearing. He blushed when he saw me come through the door.

"Hey, Annette, glad you found...oop, 'scuse me...FSU chemistry, may I help you?...No, he's not in just now, can I...Oh, hi, Alice, this is Gil Taylor...Naw, they talked me in to filling in here in the office while Bucky took everyone to the Waddle demonstration over at the student union...He needs to talk to Bucky now? All I can do is deliver the message. And, Alice? Tell him that his wife just walked in and I need to talk to her. 'Bye."

He tore off the headset and threw it on the desk. "This damned thing is going to make me crazy. I don't see how she puts up with it."

"Who's Bucky?" That was about the only part of the conversation that I hadn't figured out. "Alice" was undoubtedly Alice Swan, Hal's administrative assistant, and, of course, I knew about the demonstration.

He pointed over his shoulder with his right thumb, and I saw the little plaque by the inner door that said "Buckman V. Thorndyke IV, Chair of Chemistry." Vague recollections of Hal's mentioning a recruitment last spring flitted through my head.

"So the new chemistry chair and his office staff are at that Waddle demonstration I ran across? What's up with that?"

"Well," Gil was shaking his head. "Don't get me wrong. Bucky's a great guy, and he's already earned his stripes in the department. We were lucky to get him, after that scandal with the previous chair and Ralph's murder and all the disarray. He came to us from DuPont with a stellar research record and exceptional management experience. And he's loaded, family money, we think, so salary wasn't an issue like we were worried that it might be. But there's this one thing. See, he has this overwhelming crush on Madge Glendon. So he wanted to go to the demonstration to see if she'd be there, but he didn't want to go alone. So he got the staff to go with him, and they talked me into doing this."

The phone rang. "Oh, crap, 'scuse me again...Hal? Um, it's like I told Alice...Oh. She's right here." And he handed me the receiver.

"Hal? Don't pester my friend Gil."

"Hi, darlin'. I'm not, really. I'm sure the message will get to Bucky. But since you're there, I thought I'd ask if you have any insights from lunch. We didn't have a chance to talk without John."

"I do, I think, but they can wait 'til dinner, OK? Did you know that Madge Glendon's people are having a demonstration?"

“Alice told me. She’s the fount of all knowledge, at least as far as the campus grapevine is concerned.”

“There are some interesting things about that, too, things that you can tell John tomorrow. See you later.”

I turned back to Gil. “Y’know, it seems to me that Madge Glendon might not be—how do I say this?—Bucky’s type? I heard a speech by her on Wednesday, and some of her remarks suggested to me that her tastes might not run to men, exactly.”

He sighed. “Yeah, we’ve told Bucky this, it’s almost a running joke. ‘Thorndyke chases the other...’ anyway, I’m sure you can figure it out. And if you’ve seen her, you’ll know that she’s not exactly what we guys call a ‘looker,’ right? That doesn’t bother him, either. He keeps mumbling about pheromones and how they’re irresistible and there’s no point fighting it. And he’s going to win her over, he says. I suppose that if anyone can do it, he can. But this little soap opera isn’t why you came up to campus to see me.”

I had to stop laughing to talk. “No, but I seem to have walked into something almost as interesting. No, what I wanted to talk about is more analysis work. Have you followed the news stories about the Burma Shave Murders?” He nodded. “What we have are tissue samples from the victims, but they’ve been soaked in formalin. I’m wondering if there’s some way to analyze those samples in spite of the formalin, to see if there are traces of anything else there.”

He looked thoughtful. “The papers said the blood was drained.” This time I was nodding. “So the tissue samples are from the heads? Well, brain tissue will have whatever the blood had in it. I can probably use some computer processing to filter out the formalin results, and as long as that doesn’t filter out the other stuff, it’ll show up. So it’ll depend on what you’re looking for and what’s there.”

“One of the medical examiners is convinced that the actual decapitation was somehow done while the victim watched—it has to do with the cut marks. How do you get four guys to stand still, or sit still, while you walk up to them with a sword? Only thing I can think of is drugs, maybe a strong tranquilizer. Even if they were tied up, tied to a chair or something, you’d think at least one of the four would have moved his head and the stroke would have hit him funny.”

“Did you say four?” So I told him about the morning’s news. He looked surprised but took it in stride while he thought about the problem of the drugs.

He scratched his head. “I guess it will depend on the tranquilizer, or sedative or whatever. I’m sure I’ll be able to see everything in samples you bring me, and it’ll just be a matter of figuring out the molecules.”

“But that’s what you do, right?”

“Yes and no. Complicated molecules are hard to figure out, and it’s easiest if we have samples of what we’re looking for, to calibrate the equipment. I do have samples of a lot of things, from all the testing of street drugs I’ve been doing, so maybe we’ll get lucky. And of course if the same results show up in all three—I mean four—tissue samples, we’ll have something, won’t we? Even if we don’t know exactly what it is, that’ll be significant, right?”

I nodded. “And maybe we can get some idea of whether it’s possible to trace the formalin, too?”

“Hmm. More research, I expect. But I wouldn’t count on it. Formalin is just formaldehyde dissolved in water, and formaldehyde is CH<sub>2</sub>O, essentially water with a carbon stuck to it. So formalin is fairly innocuous stuff, identification-wise. But I suppose there could be impurities in different brands. I’ll look into it, do some research. You’re with the CBI now, right? Say, I bet you have lots more money to spend than the Durango PD does! I may just have to put in some overtime on this one.”

He grinned, but I knew that his results would be worth every cent.

\* \* \*

## Six

Having talked with Gil, I was ready for a conversation with the CBI Director, Rod Andersen. I had left him a message before lunch, warning him about murder number four—I sure didn't want *him* to see it first on the internet. He was probably going to lean on me a little, because I was almost sure that the Governor would be leaning on him a lot. I mean, if these once-a-week beheadings went on much longer, just think of the jokes our poor Governor would have to put up with at meetings of the Western Governors' Association and such—Colorado tourism: Come lose your head in the mountains!

But Rod was really quite low key about the whole thing. I'd been sending him email reports day by day, and the only new information I had was about murder number four and about the comparative analyses that Gil had planned. I promised him an update on Saturday, either from Creede or wherever I wound up in the late afternoon. I could tell I was going to have a busy weekend.

While I was making phone calls and setting up appointments, I kept feeling distracted by something running through my head. Every time I noticed it enough to try to concentrate on it, it faded away, but when I tried to concentrate on something else, it reappeared.

It was when I was organizing my notes from the morning and I ran across the poem that Ralph Wertlinger had recited for me that it hit me. I had been having this ta-TA ta-TA ta-TA ta-TA thing going through my head ever since after lunch, since I'd run across the WDL demonstration on the campus. Something about those poems was bothering me, and it had to do with having heard them recited over and over.

So I dug them out of my notes, including the WDL one, made a computer file of them, and stared at them for a while. Eventually, I got up and shut my office door and began reading them out loud, reciting them. I thought I was reciting softly, but apparently the walls in our offices are thinner than I thought. It was when I was starting on my fourth time through the set that the interoffice phone line rang.

"Yes?"

It was Derek Petersen. "When you get tired of that, let me know and I'll spell you."

I felt a blush creeping up my neck, but the embarrassment was stifled by the idea.

"I hadn't thought of that, but that's what I need. Come in here and read these damned things to me, will you please?"

"Aw, gee, boss, I was just teasing you. No offense intended, or anything."

"No, no, it's fine, really. I didn't mean for anyone to hear me, but I think what I need is to have them read to me." I explained the problem, and he finally agreed.

Good sport that he is, he ran through the four murder poems six times, and I finally had the heart to let him stop.

"I don't know. Something's bothering me about this, but the only thing I can come up with is that the second one is written in second person while the rest are in third. The second one is a warning, an

admonition, while the rest are sort of declarations of war. But I don't know why that should bother me so much."

"Sorry, Annette, but at this point I don't think I can tell you much. I must be overexposed, or something." Derek was indeed looking a little bleary-eyed.

"Don't worry, and thanks. I actually figured out the second person thing while you were reciting. And maybe no one else heard this—your office is the only one next to mine, after all." I grinned. "Of course, Sally could probably use someone to read Mother Goose to her kids in the evening, you know?"

Derek looked surprised, and then composed himself with quiet dignity. His voice was calm as he said, "Excuse me while I go outside and scream."

Steve Phillips, the Hinsdale County Sheriff, called me shortly after that, and I was relieved to find that the poems were no longer bothering me so much. I could at least concentrate on talking with him instead of the ta-TAing.

"Ms. Trieri? Ralph Wertlinger down in Creede suggested I call you. He says you're coordinating the investigations of all these decapitations." Sheriff Phillips managed to sound both agitated and hopeful.

"The Governor dumped it in my lap. And, please, call me Annette. What I'm trying to do is gather as much information as possible about these things and make it available to everyone. I've been to visit Scott Lister up in Gunnison, and I think he trusts me now. I haven't been down to Conejos, but they don't have anything that the State Patrol in Alamosa doesn't have. And I know Ron Grange and Ralph from a previous case. I'm glad you called."

"Ralph told me that the ME in Gunnison ought to see my victim."

"Belinda Edwards, right. I suggested that because she noticed some interesting indications on the head of her victim, things that suggest—let's see, I don't want to prejudice you in advance—things that suggest something about the mechanism of the decapitation. If she sees the same things on your victim, it will verify that we don't have a copy-cat murder, and it may help us get at the bottom of this whole thing."

"I see your point. I'll have to sweet-talk my coroner into agreeing to this, but just having her in to consult shouldn't be too big of a deal, I guess. Are you planning to get up this way?"

"I'm going over to the Valley tomorrow, and I thought I'd get up to Creede and talk with Ralph and with some civilians about this Doc Whiler. I hate to make other people work on weekends, though."

"Well, y'know, I was going to go fishing tomorrow, but if I do that, I bet I'd never hear the end of it. And I have an election coming up. I bet the paper here would just love to run a headline like 'Sheriff fishes while heads roll'."

I had to laugh. "Tell you what. I'll come straight to see you after I'm done in Monte Vista, and catch Ralph and the other folks on the way back. Say, about lunch time. Got any good diners over your way? I've got an expense account from the Governor."

"Can't pass that one up. Let's meet in my office, and we can walk to lunch."

"And since I'll be driving by, maybe I'll stop off and have a look at the crime scene, on South Clear Creek Road, was it?"

"Right. You take the road, it's graded gravel with a lot of potholes this time of year, past the two lakes of the Browns Lake wildlife area about another half mile. There's a straight stretch, and the signs are in the left-hand ditch. We've still got a crew working the site."

“Will you be through with things there by tomorrow? I mean, will it mess anything up if I walk around some?”

“My guys have been on it all day, with fine-toothed combs and everything else you can think of. Including video galore. They’ll remove the evidence, but they’ll have the site marked with crime-scene tape. So go ahead and walk around. Remind me and we can get a footprint impression when you’re here, just to document it.”

“Right. Anyway, see you tomorrow for lunch, then. Thanks for calling.”

“Left-hand ditch” he had said. Ralph hadn’t mentioned that. Of course, the other three crime scenes had involved two sets of signs, for traffic in both directions. And therefore one set would have been in the left-hand ditch for one direction of traffic. But it seemed strange to me that with one set of signs for one direction of traffic, the left ditch would have been used. Another puzzle to file away, I thought, along with the fact that only one set of signs was used this time.

\* \* \*

Hal made one of my childhood favorites for dinner, spaghetti with sweet Italian sausages, which he grilled first and then simmered in the sauce. The red sauce was something he calls his secret recipe, which he is steadfast about refusing to divulge. I think it’s just one of those boutique-label jars with some extra herbs added to jazz it up, but I can’t be sure. I’ve never looked in the trash for an empty jar to check—I decided a long time ago that the way to stay happily married is to play these little games and learn to enjoy them.

With garlic bread and a tossed salad, I was in comfort-food heaven. It helped, because I knew that Saturday was going to be long and full of miles—miles in the CBI vehicle I’d been given, an underpowered SUV. I would have tried to talk Hal out of his car for the day, except I didn’t know the condition of the road to the Browns Lake crime scene.

I was glad that he let me work my way through about half of my pasta before restarting the conversation we’d begun on the phone earlier.

“So, if you’re going off investigating tomorrow, I’ll go up to the campus. And up there I’ll run into John, probably. What am I supposed to tell him about Madge’s demonstration?”

I talked around a mouthful. “I’m puzzled by the time line. Ralph called me a little after nine this morning, and I think he called me pretty soon after he saw the crime scene west of Creede. A little after one that afternoon, I stumbled into this demonstration, where Madge’s people were parading around with the poems on signs, chanting them. All four poems, including the one found that morning. Seamlessly, I mean, with the new one worked into the routine perfectly. Like they had time to practice. How could all that have happened so fast? I mean, it looked like the demonstration had been going on for a little while, because there were lots of people watching. So the Waddle girls did all this in well under four hours, finding out about the new murder, finding out the new poem, making signs of it, and working it into their routine.”

“I didn’t know that they were reciting all four poems—Alice said something about chanting, but I just assumed it was that poem of their own, the one we found on those signs along the highway.”

“That one wasn’t part of it, in fact, at least not when I saw them.” I reached for another piece of garlic bread.

“You’re making it sound as if you think Madge has some kind of in with the murderer. Like she got the poem beforehand, or something.”

“It sounds like that, doesn’t it? But that’s what’s puzzling me. I think I’ve figured out Madge’s politics, but I just can’t see her as the murderer, or even in cahoots with the murderer. Say, did you know that your new chair of chemistry has a crush on Madge?”

He groaned. “I don’t want to hear about it. Yeah, Alice told me. I guess I figure that everyone is allowed a foible or two, and this one is Bucky’s. But, geez, why me, Lord?”

“Hey, look at it this way. If he can persuade Madge to get interested in him, maybe she’ll mellow. I don’t think he’s on one of these ‘conversion’ missions or anything—from what Gil said, it sounds as if he’s really taken with her. There’s no accounting for taste, I guess.”

“Hmm. Maybe I can devise a way to get them on some committees together. The fall semester has lots of committee work to do. If this was high school, I could put them on the prom committee. That’d do the trick.” He grinned.

I was wiping the last of the secret sauce up with the last piece of bread. “So, the other thing that happened to me today was that I got obsessed with these stupid poems.”

“Obsessed?”

I told him about my and Derek’s recitations and my realization that the second one was a little different from the others.

“Are you asking me if I’ve noticed anything weird with any of them? I guess I haven’t really studied them.” He shrugged. “Not that I’d be likely to see anything subtle if I did study them. I’m not very good with literature, let alone poetry.”

“The second-person thing with number two jumped out at me when Derek was reciting them, but that hasn’t made my nagging sensation go away completely.”

“So there’s something else? Do you think they’re written by different people?”

The idea was a bit startling. “Maybe. I hadn’t thought of that. I guess I need to look at them again. Will that ruin your evening?”

“Tell you what. Get the poems and come upstairs to the study. I’ll tie flies and you can read ’em to me. That way, I’ll focus on them indirectly, and maybe some flash of intuition will happen. Who knows?”

I went through the four poems twice before he stopped me.

“Know what? It’s interesting. All the rhymes are different. Let’s see if I remember them. ‘Meek’ and ‘week’; ‘sod’ and ‘god’; ‘around’ and ‘ground’; and ‘task’ and ‘ask.’ To me, ‘sod’ is rolled up grass ready to unroll and make a lawn. But this is some kind of slang usage that I’ve also heard. Wonder what the origin is?” He was winding thread around the shank of a little hook, so it was obviously up to me to find a dictionary. I went looking.

“Says here, ‘vulgar English slang’ from ‘sodomite’; ‘bugger’; more generally ‘guy’ or ‘poor fellow.’ Hmm. Maybe that’s it! All of the rest of the poems are completely American English, but here’s this ‘sod’ reference. It sticks out.” I could feel a surge of excitement.

“And it’s in the second poem, the one you noticed for being in second person. Suppose a different person wrote it?”

“Or else the same person, but his background is showing. I mean, if you’re writing these little couplets, you look for words that rhyme, that fit the meter, and that send your message. It could be tough to get all three, so you’d cast about to find things that work. And words would come to you intuitively,

even from, say, your childhood. And if that childhood was in a different country with different slang, well...”

“So you need to look for someone with an English accent, from childhood?”

“I might have found one, I think. Somebody who also knows swords.”

\* \* \*

Saturday morning, I needed to get an early start, because I had told Bonnie Scharmatz that I’d come by her place in Monte Vista at 9:00—and it’s well over two hours getting there from Durango, unless the traffic cooperates fully. And that almost never happens around here anymore.

Even though I knew Saturday was going to be a long day, I stayed up late Friday night working various computer databases I have access to, including the NCIC one, trying to find out what I could about Kristof von Stier. But there really wasn’t much to be found. He existed, but not in a way that made it look as he’d existed for as long as he seemed old. It was as if he’d been invented about a decade ago. So I left email for Derek to start a thorough search for everything that could be found about him, including via Interpol.

Hal, bless his dear heart, got up early with me, fixed me a thermos of strong coffee, and also badgered me into eating a good breakfast. With his help, I managed to get on the road by a little after six, and that got me to Monte Vista on schedule.

Bonnie Scharmatz had told me that her house was on the southwest corner of town, and she gave me detailed directions. For some reason, I just assumed that she lived on a normal city street, so I was a little surprised when I found her house to be truly on the edge of town, the outside of the edge. She lived on a farm of some kind—or perhaps a ranch. The sign out front advertised Shetland ponies.

Later, during the two-plus hours it took me to get to Lake City, I had plenty of time to go over our conversation, except that there just wasn’t that much to go over. Yes, Frank had been abusive. No, they never had children, because he wouldn’t allow it—in fact, he’d bullied a reluctant town doctor into a vasectomy just after they were married. So the ponies were her substitute, and now, she thought if she succeeded with her diet and found someone soon, she just might be able to beat the biological clock and realize her dream of a real family, with ponies as a bonus for the kids. She held no particular grudge against Crystal—in fact, she appreciated the fact that Crystal had diverted Frank’s attention from herself. Just like Sarah Robinson, she was relieved to be through with the guy she’d married.

And, no, she had never heard anything about Frank’s ever getting interested in family coats of arms or swords and shields or anything like that.

I managed to stretch my thoughts about this conversation to Creede, and then I let the scenery take over. Ralph had told me it was about 15 miles to the South Clear Creek turnoff, so I just soaked it in. I’d been as far as Creede before, but the Rio Grande Valley above that little mining town was new to me. No wonder, I thought, that Hal speaks about it with such reverence. A broad, flat river valley between snow-capped mountains, even in August, with perfect trout water meandering in wide oxbows—that’s his idea of heaven. Even the vacation-home subdivisions almost everywhere on the flats couldn’t ruin it.

On the road in to the Browns Lake State Wildlife Area, I finally came to appreciate the SUV I was driving. Climbing up Wolf Creek Pass on the long grade eastbound had been pure torture, and even in the little ups and downs of the highway between Durango and Pagosa Springs, the transmission repeatedly shifted up and down, searching for some elusive optimum. But the South Clear Creek Road, although nominally a graded gravel county road, had a full summer’s ration of wear and tear from people driving too fast in pickups and SUVs, and from people in oversized, overweight motor homes.

Combined with the July and August rains, from which I was spared on that particular Saturday, this had made a real mess of the road. Hal's S4, despite the all-wheel-drive, would have been scraping bottom almost continually.

The crime scene was easy to find, a half-mile section of ditch with rectangles of yellow plastic tape every 200 yards. As Steve Phillips had mentioned, it was on the left-hand side of the road, reckoned heading west, going away from the highway, and this was also the downhill side. It was easy for me to discover that the soil there was much softer than it was on the uphill side. If the perp was in a hurry, I thought, this would be the position of choice—the fence posts would go in much easier. I used Hal's digital camera, borrowed for the day, to create my own documentation of the scene, and, for Steve Phillips' benefit, I even took a picture of one of my own footprints with a ruler beside it.

Because there wasn't really that much to see, it was easy for me to make it to Lake City by lunch time. I pulled into a gas station for a fill and got directions to the sheriff's office.

Steve Phillips—how do I say this delicately?—was a knock-'em-dead, eleven-on-a-scale-of-ten, absolutely beautiful, western-sheriff hunk of a guy. If I'd been ten years younger and single, I hate to think what a fool I'd have made of myself, especially because of his naked ring finger. He was sitting at the front desk of the department, and at first I took him to be the duty officer. But he introduced himself and flashed a smile that would make Robert Redford jealous, and I could tell he knew exactly what effect it would have. So I just gave myself over to it, thinking what fun it would be to have lunch in public with him.

But he mentioned that Belinda Edwards had come down from Gunnison earlier and should be finished with the coroner in time to join us for lunch. As I remembered, she was about ten years younger than I, and apparently single. Maybe, I thought, I would get to watch her make a fool of herself.

To give credit where it's due, she did a respectable job of hiding her foolishness—in fact, she did a better job, because he was just about as taken with her as she with him. After a while, I began to feel like I should charge them for match-making services—it had been my idea, after all, for her to come down to Lake City.

Somewhere during lunch we actually got Steve's case discussed.

"It's the same, exactly the same. I even reviewed my notes this morning and took another look at Marty Robinson's head before I came down. This one—Whiler, you said?—is identical. And the post-mortem work is also the same, as far as I can tell, blood completely drained and all." Belinda didn't seem to have any problems talking about decapitations while eating a chicken sandwich, and I was used to the idea by then—besides, it had been a long time since breakfast.

But Steve Phillips turned a little green and carefully set his BBQ pork aside.

She was oblivious to his discomfort. "I'm still surprised by how clean the slice is, even through the vertebra. And it's nearly at the same point on the two necks. It's as if a machine is doing this."

A vision of von Stier's cantaloupes popped into my head.

"Is the facial mask similar, too?" I needed to verify that detail.

"Oh, yes, it's horrible, just like Robinson's. Pure terror, as if he was screaming."

Steve Phillips groaned and dashed for the men's room.

Belinda stared after him. "Oh, dear, I hope I didn't offend him."

"I think he's not used to the notion of decapitations—he's just the sheriff, after all. Belinda, I'm beginning to put together a solid picture of these murders, except for one thing, the issue you brought up, in fact. I'm still having trouble, and other people agree, with the idea that someone is killing these

victims while they are able to see him, and they sit still while he swings this sword, or whatever it is. I'm sure you're right about the cut marks and the skin and all, but I just don't get it." But I'd lost her attention.

"I wonder if he's all right? Maybe we should call 911."

"I'm sure he's fine, or will be shortly. Just to be clear, you're certain that the entrance and exit angles are the same on this one as the other?"

"Mmm. Huh? Oh. Well, yes, absolutely. Did you have those lab tests done that you were going to arrange for? The sensitive ones? I still think there may have been drugs involved. Let's see. I sent samples by UPS on, let's see, last Wednesday."

"It's all arranged, but we haven't got the samples yet. When they come in, I'll have them taken right to the lab. The technician is pretty confident, though. I guess we'll just have to wait."

Steve Phillips emerged from the men's room, looking a little better. He was embarrassed, though.

"Guess I shouldn't have suggested we have lunch for this discussion, Annette." He grinned at Belinda. "I deal with car accidents all the time, but this one's different for me. I saw Doc's head earlier—he was a fishing buddy of mine, and, well..."

She started apologizing, they started making eyes at each other, and I felt like a third wheel on a bicycle. It was easy to excuse myself and hit the road for Creede.

\* \* \*

Ralph Wertlinger had arranged for me to meet with several people, and he was going to chauffeur me around to do it. That would give us time to talk about the interviews as well as for me to hear Ralph's own perspective on his ex-brother-in-law. His sister was second-to-last, after various people around town.

Elise Wertlinger—she had dropped her married name after the divorce—ran a small gift shop on Creede's main street, just down the block from the courthouse. The place was crammed with every type of tourist doo-dad you can imagine, and on the last weekend before Labor Day, the place was busy. But she was able to turn things over to her help, and we went out back, to a pleasant patio by the stream through town, to talk.

"You know, Doc didn't have friends, but he was a doctor, so he really didn't have what you'd call 'enemies,' either. People were a little afraid of him, but they needed him. Now, everybody's worried that the new guy, he came here about a year ago, that he won't be able to handle the patient load."

"Your divorce was final a couple of years ago, Ralph told me. What's your reaction to Doc's death?"

"Y'know, it's interesting. I surprised myself. I don't really feel much of anything. Maybe a little relief, maybe a little sadness. Thing is, with Ralph being the sheriff, I never had any problems with Doc after the divorce. His checks were always on time, and he never bothered me. And now the life insurance policy that was part of the settlement will get paid off, and I'll be completely on my own, finally. At some level Doc was a good person, but that level was hard to find. Mostly, he was a grade-A son of a bitch."

"Do you suppose he could have made enemies in the past couple of years?"

"You'll have to talk with Amelia about that. That's Amelia Dent, Doc's girlfriend. She lives out at his ranch. Haven't seen her in town since Thursday."

Ralph spoke up. “She’s next on the list. We’re due out there shortly.”

“She used to be his office nurse, but I imagine there’s been hanky-panky going on for years. I didn’t really know about anything until the divorce, and they started being seen together. She moved in with him about a year ago. I don’t know what she’s going to do, now.”

It turned out that her plans were to stay on.

Amelia Dent was about ten years younger than Elise, making her about my age, and she was clearly in control of her own life. As Ralph and I drove up to the ranch house, at a beautiful spread in the valley above town, she was standing by a corral near the barn, feeding carrots to several horses vying for her attention.

She took us in the house and offered coffee. Inside, it was what you’d probably picture a man’s western ranch house to look like: leather, decorations running to old horseshoes, dark mission-style furniture, a huge rock fireplace. I wondered how long it would continue to look this way, with Doc gone.

“Ralph, I don’t know if I ever told you this, but I always felt sorry for your sister. I think she’ll be all right now, though, with that life insurance policy. At least I think it’ll pay off. This sure wasn’t suicide. Thing is, she couldn’t handle Doc. I figured out how to do that years ago, shortly after he hired me. But she just never did.”

Ralph opened his mouth and then thought better of it, taking a sip of coffee instead. He’d told me that these interviews were my show.

“Anyway, one thing I did before I agreed to move in here was to make him re-write his will, so I’d be taken care of. And I’ve come to love the horses, they’re registered quarter horses, so I think I’ll see if I can make a go of ranching. If not, I’ve already had two offers on the place, and I could always go back to nursing.”

“Ms. Dent, one thing I’d like to find out is whether you know of any enemies Doc may have made in the past couple of years. New enemies, I guess you’d say.”

“You probably know he didn’t have much in the way of friends, and lots of people didn’t like him. But he was the family doctor in town, so people needed him and they just put up with him. So...oh! There was one thing. Happened last summer.” She blew on her coffee to cool it, gathering her thoughts.

“See, Doc always took a week in early September and went camping, backpacking, up in the Weminuche Wilderness somewhere. It’s a big place, and over the years he’s been all over it. So, last year, he came back a day early. This was just a month or so after I moved in here, and I was actually glad he came back early, because I wasn’t used to the work load yet. But I’ve never seen him in such a foul mood, and I’ve seen a lot of his moods. He finally told me he’d run across another hiker up there and they’d got into an argument about a camping spot— something about how the other guy was too close to a lake or something. He said the other guy had finally pulled a big knife out, a really big knife, like a small sword, according to what Doc said.

“Well, Doc, he always carried a .45 automatic with him, because of bears, so he pulled his gun and disarmed the other guy and chased him off. But he was still really, really mad about the whole thing when he got back. Said it spoiled the whole trip.”

“Any description of this other guy?”

“Not too much. Let’s see. I recall Doc said something about breaking his, I mean this other guy’s, his scrawny neck, like he was really skinny, and Doc was also griping about how the other guy talked funny, like a Brit, Doc said.”

I'd noticed on my way back from Lake City that my cell phone wasn't getting a signal, so I asked Amelia if I could use her house phone. She directed me to the kitchen, to where a phone was hanging on the wall in the middle of a bulletin board covered with notes and cards. It was obviously the center of household's social and business activity.

Despite its being Saturday afternoon, Derek was in the office.

"Hi, Derek. Listen, I'm up in Creede, and I just heard a little story that suggests animosity between our newest victim and von Stier. How's your trace going?"

"Just fine, actually. I found out who he used to be—it's interesting. I'll have a full report by Monday morning."

"Great. Take tomorrow off. That's an order, OK?"

"I like your orders, boss."

I was glancing over the business cards while I talked, and learned that Creede offered various services, including an emergency clinic, several car repair specialists, a tavern that delivers pizza, and just about every home and ranch fix-it repair person you can imagine. Maureen Downey's large-animal vet clinic was represented, too. And there were cards for other things from as far away as Walsenberg and Gunnison, almost none of which I recognized. But there was Billy Abernathy's card for his martial arts instruction. What's up with that? I wondered.

\* \* \*

## Seven

There was plenty for me to think about as I drove home, but it was Ralph's parting comment that grabbed my attention.

"Y'know, Annette, what I don't understand is, why Doc Whiler. I mean, I could make a list of a dozen guys, easy, who are much bigger jerks than Doc was. Not that I want to defend him, you understand, but it seems like he was picked for more reasons than that. I wonder if this applies to the other victims as well?"

Why *were* these four guys picked, anyway? I thought about what I knew of them. Because he had raped his teen-aged daughter, I decided that Hollis Henry was probably the worst of the lot—assuming that none of the others had such things in their sordid pasts. Frank Scharmatz had abused his wife, and so had Marty Robinson at one time. Doc Whiler had fooled around on his, and, from what a couple of the other people I'd talked with hinted, possibly done so with patients. All had been disliked and barely tolerated in their communities.

But something was missing, something to tie them together and put them into the category of people worthy of being made examples of.

Unless there was another motive for the killings, I thought, and the public nature of the heads-on-posts and poems was just a smoke-screen.

Which brought me back to Kristof von Stier. Amelia Dent's story about the argument in the wilderness showed that von Stier had probably met Doc Whiler, and he also had connections to two of the other victims—Robinson directly and Scharmatz indirectly, through Billy Abernathy—and he lived

in the same community as Hollis Henry. That stuff Derek had said he'd found on von Stier would make for an interesting Monday.

But ever since I was a rookie detective in Chicago, before I moved west years ago, I've tried hard to avoid drawing premature conclusions. I learned the hard way that it limits your perspective and colors your judgment. Kristof von Stier was becoming more and more of a fully fledged suspect, but in some ways he was just too convenient.

And that line of thinking brought me full circle: why were these four guys picked for murder? Maybe, I thought, I'll have Derek see what he can dig up on them. He seemed pleased with what he found about von Stier. I made a mental note. That's the thing about driving out here in the southwest—it's big country, and you have lots of time to think and rethink everything.

I finally arrived home in Durango about 6:30 that evening, after putting in more than twelve hours on a Saturday. I vowed that on Sunday I'd follow the order I'd given to Derek Petersen—to take the day off.

Hal was busy puttering around in the kitchen, working on a batch of chile. He taught me early on that what I grew up eating, what we called "chili" back in Chicago, is really just hamburger soup with tomatoes and beans and some spices.

He makes it from scratch, using a bag of dried New Mexico red chile pods. By soaking the dried chiles and stripping out the seeds, then running them through the blender with some water until they're emulsified, he winds up with a rich, red base that gets simmered with beef stock, and, depending on his mood, onions, garlic and/or cumin. It can become either a sauce or a meal, made by adding some browned beef and pork and some beans. No tomatoes at all.

The first time he made it for me, he used medium-hot chiles, and it nearly took my head off. I've lived here for long enough to get used to some amount of zing in my Mexican food, but that was way too much. Since then, he's used mild ones, and I'm much happier.

In addition to the usual mouth-watering aromas that this process creates, there was something a little different this time.

"What's that I smell? I'm starving and this smells extra good."

"Lamb, ground lamb in about a one-to-four ratio with cubed sirloin. With extra garlic. How was your day?"

I gave him a quick summary and promised details at dinner, then jumped in the shower.

Dinner was a bowl of the lamb chile—and even though it was mostly beef, the lamb was evident, as a little goes a long way—with warmed tortillas and a diced tomato and cucumber salad. As usual, Hal was patient. It wasn't until I was about half-way through my second bowl that he finally asked me to keep my promise.

"I found out more connections to von Stier. Apparently he and Doc Whiler had a fight once. So he's connected, more or less, with three of the victims. And he knew the fourth by virtue of living in the same community."

"But it doesn't sound as if you've settled on him as the prime suspect."

"There's still too much that doesn't make sense." I reached for another tortilla. "Why would he be making examples of his victims, for instance? And the elaborate preparation with the formalin, that doesn't fit von Stier at all. But maybe I'll find out something Monday to change my mind. Derek said he found some information on von Stier's background."

"Did you learn about any other connections among the victims?"

“I thought about that all the way home. They all lived on ranches, or almost, and they were all prominent in their communities. A doctor, a high-school sports coach, a lawyer, and a well-known rancher.”

“That would fit with the business of their being made examples of.”

“Right. And it also fits with the fact that there seems to be a decrease regionally in domestic violence.” I told him about the call from the Valley Women’s Center the day before.

“You mean it’s working? Assuming that the killer really has the intention of stopping domestic violence and all that. Hard to believe.” Hal had his spoon suspended half-way to his mouth.

“Don’t drip on your shirt. That stuff stains something fierce.”

“Huh? Oh, yeah.” And he set it down. “But this is interesting because it has an impact on what happened today, up on campus.”

“Let me guess. Something involving the WDL, right?” I was mopping up chile molecules with the last bite of tortilla.

He sighed and looked at the ceiling. “Remember last August, in the middle of the Boudreau case? When Madge was acting up during new student orientation? Or did you miss all that?”

“I guess I knew that there was lots of noise made about whether women would be safe on campus, but I didn’t know Madge was part of it.”

“Oh, yeah. John told me that she even disrupted one of the sessions for parents that he led. I think that’s why he has it in for her. Anyway, the WDL got started shortly after that, and naturally they’re using your new case to make all the political hay they can.”

“So what happened yesterday?”

“We’re in the middle of orientation again, with first-year students and their parents all over the place, trying to get used to things, figure out the lay of the land up there. The parents are worried about their eighteen-year-olds’ leaving home, and the kids are eager to do just that, most of them. So they’re already kind of stressed and really don’t need the kind of stuff that Waddle is doing. There was the demonstration you mentioned Friday, and then yesterday there was a protest march, right through the orientation picnic we organized. They had that bunch of girls in camo fatigues—what did she call them, the ‘Action Squad’?—marching in formation with other girls carrying signs with the poems and chanting them.”

“You mean ‘womyn with a ‘y’” carrying signs, don’t you?” I was teasing and he knew it.

“Oh, absolutely. No girls on our campus, no sir, ma’am. Anyway, I was sitting at this table full of parents, and, man, did the questions fly. And I could see the same thing was happening at the other tables, too—including John’s, so he’ll add this to his list of things to hate Madge for.”

“But these murders have no connection to the U at all!” I wasn’t exactly a member of the Madge Glendon fan club, but my sense of fair play was offended.

“Nope, except for what Madge and her crowd are making out of them. Like I said, political hay.”

“And domestic abuse isn’t mainly a college women’s issue, is it? I mean, most of the women at the U aren’t married, right?”

“I’m sure that Madge would say that raising their consciousness is one way to help prevent it when they finally do get married. As much as she’d hate to admit it, I’m certain she knows that most of them will marry, after all.” Now he was mopping up the last of his chile.

“So what happened yesterday? How do you handle a disruption like that?”

“We try to take it in stride. I explained to all the parents at my table that their kids would have new opportunities to think about things they’d not experienced before, and this political demonstration was one example. That we value free expression and even encourage it, so demonstrations and parades are almost expected. That the campus is the perfect environment for it, because it’s sheltered from the real world. Most of the parents these days were in college during some stage of the Vietnam war, so they understand demonstrations—and the ones we have these days are lots less dangerous than what many of them went through. So it works out.” He shrugged.

“I just want Madge and her bunch to keep things on your campus. There’s enough going on out in the real world to keep me busy.”

\* \* \*

Monday morning, I was actually looking forward to going down to my office—I wanted to see what information Derek had found on von Stier. Plus, my Sunday was just the type of R&R I needed to be ready to go back to work. I’m sure that Hal had enjoyed our trip around this part of Colorado the week before, but I spent most of the time either working or thinking about working. Sitting around loafing for a day was just the thing.

So Monday I got in early and found Derek’s report sitting on my desk, a folder about a half-inch thick. I started a pot of coffee, worked on email until it was ready, and settled in to see just what Derek had found.

It took me a minute to realize that Derek had arranged the folder in reverse chronological order—it started with the present day and worked backward. Although what I was really interested in was information about ten years old, I skimmed the current biography anyway. It confirmed what I already knew and added one interesting tidbit—someone knowledgeable had looked over the inventory that von Stier had in his shop and estimated its worth at well over a million dollars. But the source of this information wasn’t clear—the markings on the document showed that Derek had obtained it from the FBI as a faxed copy of an original with source markings blacked out.

Why, I wondered, would the original source be considered so sensitive?

The apparent censorship continued as I worked my way back in time, and eventually I began to suspect I knew why. My earlier, quick search of the usual databases had turned up Kristof von Stier beginning about a decade ago, and before that he simply didn’t seem to exist. Derek’s documentation showed that it was because he really didn’t—before that he was Christopher St. James.

And what a background Derek had found for Mr. St. James. Most recently, just before the name change, he had been a mercenary, a soldier for hire with experience in eastern Europe, southern Africa, South America, and Indonesia. That activity extended back to the early ’80s, before which it appeared that he had a shady role in Vietnam, working for a foreign intelligence service. The paperwork speculated it was the British, as that was his country of birth. And his current attempts to pass himself off as Prussian nobility—at least that was what Sarah Robinson had said, and what his fake German accent hinted—were rooted in his family’s close connections to the British royal family. Apparently he had a brother in the House of Lords.

And now he was living in Pagosa Springs, selling antique weapons and, it seemed quite likely, hiding out. Why else would he have changed his name?

I spent an hour and a half or so combing the file for information that might provide connections to the four victims but didn’t have much luck. By the time I was finished, the staff had begun to arrive, and

a new week was officially underway. The first real indication of this happened just as I was finishing my email, when Sally buzzed me.

“Director Trieri? There’s a gentleman here to see you. A Mr. von Stier.” It took some doing, but I’d finally persuaded Sally to use my formal title only when there were civilians present. And, with this particular civilian, I was glad she did.

I went out to the foyer and fetched him, got both of us coffee, and shortly had him seated in my office across my desk from me. I wanted the formality of the furniture between us.

“Do you mind if I close the door, Ms. Trieri?” He didn’t wait for an answer. “I’m afraid I need our conversation to be highly confidential.”

I noticed that his German accent had vanished, but the British one lingered.

“Mr. von Stier, you should understand that everything in this office is considered confidential, but I’m certainly willing to accede to your wishes. What can I do for you?”

“I’d like to talk to you about the information you gathered about me over the weekend. Now, before you worry, let me assure you that your office is secure—the fact that I know about this didn’t come from here. It came from the other end.”

“That’s reassuring, I suppose. But I didn’t do the computer search. My Deputy Director did.”

“Oh. Well, would it be possible to include him, or her, in this conversation? It would save repeating it.”

I considered this briefly and asked Derek Petersen to step in. After introductions and a brief explanation for Derek, von Stier continued.

“So you both now know my background, and I thought it might be helpful to you if I explained some things. The fact that you called in whatever favors you did to get that information means that your interest in me is more than casual. And the only possible reason for that I can imagine is that I’m a suspect in the Burma Shave Murders.”

I glanced at Derek and saw that his expression was as blank as I hoped mine was. After a brief pause, von Stier decided we weren’t going to say anything, so he went on.

“I have some experience with solving puzzles such as this, as you now know, so I have to say that if I didn’t know better, I’d suspect myself.” He smiled.

“For one thing, as I told you, Ms. Trieri, beheading people cleanly is not a trivial thing. And I do have both the skill and equipment. For another, as you’ve probably discovered by now, I’ve had contact, and not always the most friendly contact, with the victims. So…” He shrugged. We continued to keep quiet.

Finally he sighed. “You’re not really helping, here, are you? Anyway, what you’ve discovered about my history is information that was supposed to have stayed buried. It’s not as if I’m in a witness protection program, or anything such as that, but the information wasn’t supposed to have been released under any but the most dire circumstances. This is both for my protection and for the protection of my neighbors, wherever I am, but right now in Pagosa Springs. There are people in the world who would pay handsomely to have me eliminated, and they wouldn’t care how many others went with me.”

I cleared my throat gently. “It appears that you’ve retired from your earlier activities. Was this because of these people?”

“Quite the opposite. Because I retired, they want to eliminate me. It’s one of those cases of knowing too much. You see, some of my more recent commissions were from organizations that did not have

access to, um, governmentally sanctioned resources, if I may put it delicately. I'm afraid that I have one attribute that disqualifies me from certain activities of this nature—a conscience—and I finally decided that I needed a change. Also, my health began to deteriorate. My indiscretions in Africa have come back to haunt me. So I put some effort into inventing my current persona and did my best to disappear.”

He looked at Derek and smiled again. “I must say, Mr. Petersen, it's to your credit that you've been able to discover so much about me. One thing you both should know, in a general sense, is that I built some protections for myself. If something bad happens to me, there will be information released implicating my detractors. Not you, of course; rather, the people I'm avoiding.”

After a pause that began to become uncomfortable, I decided it was my turn.

“So...I guess what I'm hearing is that you're here to tell us that you know that we know about you, and that you'd prefer we not spread this information around?”

“Yes, that certainly. But also that you're barking up the wrong tree, if I may borrow a Yankee expression.” He was obviously amused at his own cleverness. “I recognize that I do indeed fit the profile of a suspect in these murders, but I hope I can persuade you that I'm not the murderer—nor do I know anything about the murders beyond what's been in the papers. If you concentrate on me, you're going to waste time. And even though it's Monday, well, Friday is only a few days away, isn't it?”

\* \* \*

His point was well taken. And what's worse, it had been the previous Wednesday that Sheriff Ralph Wertlinger had called me, concerned about Doc Whiler's disappearance. If the same time line were to hold this week, it meant that someone was going to turn up missing soon, possibly on Tuesday. Tomorrow. Unless I cleared the case before then.

Not that there was any pressure on me, or anything.

Derek and I resolved the situation with Kristof von Stier, née Christopher St. James, by making arrangements with him to be accounted for throughout the coming days. Then, if another headless—or, more properly, body-less—jerk turned up Friday, von Stier would have an alibi and be off the hook, presuming the new victim fit the existing pattern. If the murderer was kidnapping the victims in the middle of the week, then killing them and making the rather elaborate preparations—the formalin and all—necessary for the heads to turn up the way they were, it would be fairly easy for von Stier to prove that he wasn't the perp.

All this isn't to say that Derek and I were persuaded of von Stier's innocence—I'm a suspicious person by nature, and I've come to learn that Derek can be positively paranoid.

“Maybe we should just put a tail on him, Annette.”

“You don't think someone with his background would spot a tail in a flash?”

“So?”

I've said that Derek is sharp. Before I took over the Durango CBI office, he had been their chief field investigator. At the suggestion of the CBI Director in Denver, I put Derek to work running the administrative side of the Durango office, to give him the experience. But every now and then his street-smart field history shines through and provides me with just the perspective I need.

“Right, you're right. What resources do we have? Can we put two people on it?”

“I’ll set it up. Got just the people, a retired couple on call. Used to work for the FBI in New York City, tailing UN delegates who were behaving strangely. I bet you didn’t know such things went on.” He grinned.

“Know what? That UN delegates behave strangely, or that the FBI tails them? Anyway, maybe it would be a good idea to tell them that getting made by von Stier wouldn’t be the end of the world. I guess I kind of like the idea of putting some pressure on von Stier, of letting him know we haven’t forgotten him.” I was still new enough to the CBI that the occasional surprise popped up, and the existence of on-call surveillance teams was a new one for me.

Derek left to set things up, and about two minutes later the intercom buzzed.

“Yes, Sally?”

“Annette? I’ve got the Denver office on the line for you.”

I had been expecting to hear from my boss in Denver—in fact, I was planning a preemptive call to him, but he just beat me to it. I poked the button.

“This is Annette Trieri.”

“Please hold for Director Andersen?” I recognized Sandy McStain’s voice. She ran the Denver office like the boss of a Formula-One pit crew.

“Annette? I’m afraid we’re going to need to keep in very close touch from now on out. Did you see the Denver papers over the weekend? The Governor called me.”

Hal and I had spent our Sunday morning in our usual summer mode of a leisurely breakfast on the deck with the combined Denver newspaper, what Hal calls the *Rocky Mountain Post*. Rod was referring to a special investigative report that began on the front page and was spread out on about four pages of the A-section, as well as the lead editorial. The story included unflattering biographies of the victims with praise for the heroic suffering of the women in their lives, interviews with three of the four sheriffs involved in the cases, and an anonymous interview with a “CBI source.” Also, there was speculation, no doubt fueled by comments from Naomi Winters at the Valley Women’s Center, about the effectiveness of the murders as a tool to discourage domestic violence. The editorial condemned both domestic violence and vigilante justice, and, with no little sarcasm, it urged law enforcement—meaning me—into action.

“I’m not surprised he called you. Too bad we didn’t talk first. And, yeah, I read the papers. At least they weren’t directly on our case, although I didn’t much like the comments from the CBI person they talked with.”

“That’s one reason we need to stay in close touch. I have the suspicion that someone’s trying to set you up. You’re still new to CBI politics and I think some people feel threatened. Especially after you brought the Senator down.”

“That’s weird. I mean, the only CBI job I could reasonably aspire to is yours, and I don’t.”

“But others do, and to the extent you’re successful, they’ll see you as competition. But if you keep me up-to-date on everything, I’ll be in a position to prevent this back-stabbing, or help to, at least.”

“I appreciate that, really. And information sharing isn’t an issue for me, either, although sometimes things happen in ways that make perfect communication hard. For example, this morning.” I told Rod about the unexpected visit from von Stier and our plan for keeping tabs on him.

“So, you didn’t exactly call this guy a ‘suspect,’ but you’re putting a tail on him.”

“It’s hard for me to think of him as a suspect. He seems to have a good reason to keep a low profile, and he’s too well-connected. Derek was astounded that he had found out about our computer search. It means either that he has sources at very high levels in Washington, or that he set up some kind of automatic notification system on secret computers that he shouldn’t have access to. Also, he’s a little too obvious.” I had already reported on von Stier’s weapons collection, so Rod knew about this.

“If it’s not him, who is it? I’ve got to tell you, Annette, the Governor is wanting some results, like, yesterday.”

“And I can understand that. But remember, I didn’t get brought in to this thing until after the third victim turned up, and it was only four days later that the fourth victim disappeared. And you know everything I’ve found so far. I don’t want to make excuses, but unless we get a big break, I’m afraid this is going to be the usual slow, plodding investigation.”

“I understand. And I think at some level the Governor does, too. I mean, he’s no dummy. But he’s also a politician, and he’s feeling the heat. So he likes to share it.”

“I appreciate your shielding me from it, Rod.”

“Yeah, well, let’s just hope we don’t wind up with another victim this week. Or if we do, let’s hope he’s a Democrat. Maybe then the Governor won’t be quite so upset. Apparently this Doc Whiler character was a big contributor to the state Republican party and to the Governor’s election campaign.”

“And he was killed for being a jerk. Hmm. I guess I’d better just shut up and get back to work.” I heard laughter as I hung up the phone.

\* \* \*

Sally must have been watching the lights on her phone, because it was less than a minute later that she appeared in my doorway, arms full of packages.

“UPS came while you were on the phone, Annette. Four packages, from all over.”

“All over Colorado? Maybe it’s my samples.”

A look at the labels verified that the boxes were from Gunnison, Lake City, Pagosa Springs, and Conejos. The phone calls I’d made the previous week had worked. My next task was to get them up to Gil Taylor’s analytical laboratory on the campus. I called Gil to let him know I was coming and asked Derek to hold down the fort, then I gathered up the packages and dashed out the door.

And dashed straight into the middle of one of those summer-in-Durango traffic jams from hell.

Looking back on it later, I understood perfectly. It was the first day of fall semester registration at the U, so there were both the new students and their parents from last week in town as well as the returning students. And there was also the first day of the final summertime festival that the Chamber of Commerce organizes—and this last one, during the week before the big Labor Day weekend, seemed to have drawn a greater than usual number of people.

But in the middle of it, I didn’t have a clue, and, being in a hurry, I was doubly frustrated. I really didn’t get enmeshed in the traffic jam until I was past the last alternate route to the campus, so I was trapped. Traffic crept along at about a car length per minute, in the late August mid-day heat. And, of course, I was in my CBI Explorer, the one without emergency lights or siren. The one with the anemic air conditioning.

After about an hour, I finally discovered what was going on. Someone driving one of those huge, probably-not-legal vacation rigs—this one was a very large motor home towing an SUV, which in turn

was towing a good-sized boat—had managed to jack-knife the thing at the main intersection just south of downtown. Five of the six north-south lanes were blocked. There were two tow trucks working on righting the boat, which had turned on its side. A third was trying to hook itself to the SUV, the front left fender of which, in an act of automotive miscegenation, was getting intimate with the motor home's left rear fender. A Durango PD officer was standing in the shade of the motor home, writing on a clipboard and talking to an extremely harried looking man in shorts and a tank top.

I couldn't help but notice the license plate on the motor home—it was from out of state. For a crossword puzzle, you'd try to think of states that are five-letter words starting with "T."

At least I had my cell phone, so while I was sitting in the traffic jam, I called Gil to let him know what was going on, and I returned several other calls that I hadn't had a chance to get to.

By the time I got through all that and found a place to park on the campus, it was after noon. And then—I guess I shouldn't have been surprised, but I was—I blundered into another WDL demonstration, one that had attracted a large enough crowd that I had to figure out a detour to get to Gil's lab. Carrying those packages didn't help.

But finally I got there, into the air conditioning that Gil had cranked up high to protect all his delicate equipment. When he saw the packages, he was like a kid at Christmas.

"Presents! Four of 'em! And the best-looking Santa ever!" He took the packages and set them on a lab table. "And I bet you missed lunch, sitting in that traffic."

"Now that you mention it, yeah, I did. But it's too hot to go out there again—I want to sit here and cool off for a while."

"I figured you might. How does ham and swiss on rye sound? With some Dijon mustard." He walked over to a small refrigerator with "Food Only!" labels all over it and opened the door.

"Don't worry, it'll all go on your bill." He grinned at me.

"Sounds great, but I'm not sure I want to be eating when you unwrap this stuff. It's going to smell weird, isn't it?"

"I'll do it in the hood, so don't worry. Go sit over there, that's where I eat lunch. No chemicals or anything." He waved at a far table. "I want to give you the rundown on what I've got so far. What to drink? I've got Pepsi, Perrier, ginger ale...oh, here's some orange soda."

"Huh? Perrier, thanks. But what do you mean, what you've got so far?"

"I spent the weekend doing some background studies. I analyzed all the brands of formalin I could find on campus and some archived tissue samples I borrowed from one of the biology labs. Tissue with and without formalin contamination. I've got it all worked up for baselines, which we can measure these new samples against. The mass spec shows some differences between formalin-soaked and natural tissue, but there's no distinguishing brands of the formalin."

"Already? I'm impressed, Gil. You've outdone yourself. Find anything interesting?"

"Well I found more brands of formalin on the web than I found on campus, so I can't be sure that I've analyzed what your tissue samples here are in." He had begun unwrapping my packages, in the fume hood across the lab from where I was sitting. "But I'm not sure that will matter too much, because from the formalin I've analyzed, it looks like formalin is formalin is formalin. What differences I'm seeing are almost down in the noise level and can probably be put down to the type of container it's been stored in. Even supposedly inert laboratory containers can leave traces, at least at my detection sensitivities."

“What about the tissue samples you ‘borrowed’? Don’t tell me that people here on campus keep body parts around preserved in formalin. Uh, *please* don’t tell me that.”

He turned around, grinning. “OK, I won’t. What I got are tissues from pigs and mice. Some fat samples, brain tissue, muscle. Turns out that they’re almost identical, and it’s easy to separate the tissue from the formalin, with computer analysis. By centrifuging the samples, the solids get separated out and there’s just the liquids, formalin, which is mostly water, and whatever’s dissolved in it. Just for kicks, I ‘contaminated’ one of the formalin-soaked pig samples I got with just a tiny, trace amount of valium, what I calculated, roughly, would be in the sample from a normal dose. And it sticks out like a sore thumb in subsequent analysis, because compared to the other liquids in the sample, valium is a big molecule. Also, it has a chlorine and so some of the fragments that get created in the mass spec jump right out. So if there’s anything like that in your samples, I should find it. And I looked up some other drugs, tranquilizers and sedatives, and they, at least some of them, they have big molecules, too.”

“You lost me with the ‘fragments’ business.”

“Oh. Sorry. Well, see, I separate the liquids from the solids in the centrifuge, and I run the liquids through the equipment. They get vaporized and bombarded with electrons, and this breaks some of the big molecules up into fragments, molecular pieces. Finally, everything gets sorted by its mass, by its molecular weight. Although different big molecules can have the same molecular weights, the fragments generally don’t so they help in identifying the original molecules.”

Visions of Hal’s chile recipe were swimming around in my head, and I had to yank myself back to the laboratory.

“I guess I see, and if I don’t it’s probably OK. Um, I don’t mean to sound ungrateful for all the work you’ve already done, but do you have a time estimate?”

He looked up at the clock. “Not before midnight. There’s only so much I can do in parallel. And the first two packages here each have three samples, so it looks like there’s twelve altogether. And an hour apiece is pushing things. I guess you really need these results, huh?”

\* \* \*

## **Eight**

Gil and I agreed that he would call in results as he got them, in groups of four—all the brain tissue samples first and so on. He thought he’d have the first group by the end of the work day.

I went back out into the heat, over to the natural sciences building to see if I could find Hal. But getting there from the chemistry building meant I had to go by the student union again, where the demonstration had been drawing the crowd earlier. On the way, I allowed myself the little fantasy of thinking about how gratifying it would be to arrest a demonstrator or two—that would teach them to clog up the campus and make me walk farther than I needed to!

While I really had no intention of doing this, I could have. As a State of Colorado official, the ranking one in the area, in fact, I had ultimate authority over law enforcement matters on campus—more authority than the FSU provost or the Durango police or the La Plata County sheriff. As a state university, it occupies a special niche in law enforcement jurisdiction, and that niche is ultimately the CBI’s turf. Mine wasn’t authority that I had ever exerted, nor did I want to. But I could have.

Stupid, loud-mouthed, inconsiderate femi-nazis—grump, grump. Just thinking about the possibility of arresting them made me feel better. So when I got to the student union and found the demonstration still in full swing—the late-lunch crowd seemed entranced—I couldn't help but burst out laughing, louder than I intended.

This made some of the onlookers turn toward me in surprise, and, because my laughter happened to coincide with a pause in the verbal action, some of the demonstrators turned as well.

Next thing I knew, Madge Glendon had marched up to me and was in my face. I hadn't seen her in the demonstration, but she must have been in the crowd.

“You got a problem with this?”

Her tone was somewhere between a snarl and a growl, and she needed a friend to offer her a breath mint. I decided that the best defense would be a good offense.

“Madge Glendon?” I pulled out my shield. “I'm with the Colorado Bureau of Investigation, and I'd like to talk with you about the serial decapitations that people are calling the Burma Shave Murders.”

I said this loudly enough that the nearby onlookers gasped, and one of the demonstrators dropped her sign.

But Madge reacted more calmly. I suppose that she felt in charge because she was on the campus, on her turf. I've learned that most university people think of the campus as a protected enclave in which normal rules of behavior don't apply.

She took a step back, narrowed her eyes, and so quietly that I think I was the only one who could hear her, she said, “You've got to be kidding.”

So I lowered my voice, too. “Not at all. I know an office near here that we can use.”

I waved my arm in the direction of the natural sciences building. “Shall we?”

By now the entire crowd was quiet, so it was easy for her to turn to her demonstrators and say in a normal voice, “Carry on. I'll be back as soon as I can.”

And we walked over to Hal's office.

His administrative assistant, Alice Swan, was at her desk in his ante-room, and she looked up at me with a smile when I walked through the door. Then she saw Madge and switched to her anonymous bureaucrat expression.

“Ms. Trieri, how nice to see you. Professor Glendon. What can I do for both of you?”

“Alice, I need to borrow the dean's office for a half hour or so. I hope he's not in the middle of something?”

“As a matter of fact, he just stepped out. Please go in. I'll let him know that you're in there when he returns.” I could tell she was dying to know what was going on, but she did a good job of keeping it to herself.

Madge and I went in, and I closed the door. Without being invited to, she sat in one of Hal's side chairs, and I took the other one. I really didn't see the need for putting his desk between us.

“Professor Glendon, I had planned to call you for an appointment this week, but since you approached me out there, this seemed like a good time to have our talk.”

“I hope you understand the gravity of your actions. To have a faculty member, a full professor, arrested while she is involved in exercising her freedom of expression, surely you realize that this is going to have serious repercussions.” Her voice was level, even pleasant, but her eyes were steely.

“Professor, I’m not going to be confrontational. You’re the one who started down that path, and I took advantage of the situation to talk with you. But you know as well as I do that you haven’t been arrested. You also know or should know that, first, as the Director of the Durango CBI office, I have law enforcement jurisdiction here on the campus—it’s a state university, after all. And, second, you, as a State of Colorado employee, have as a condition of your employment that you cooperate with official state investigations. I can assure you that this particular investigation is the single highest priority of the state government just now. The Governor is watching it more closely than he watches the Broncos’ football games. My only purpose here is to talk with you, to see if there’s anything that you know that could help us apprehend this killer.” I paused and held up my hand so she wouldn’t interrupt.

“And there are a couple of things you may not know. First, the university’s administration isn’t especially happy with you just now. And your not cooperating with a state investigation will give them ammunition you don’t need them to have. And, second, you may know this, one of the women in your action squad, Toni Henry, is the daughter of one of the Burma Shave victims.”

I don’t know what kind of reaction I was expecting—at the least I thought I’d get a little rise out of her. But she just shook her head.

“What do you think, that I’m stupid? Of course I know all this stuff. That’s why I didn’t make trouble out there—I don’t want Martin to have anything he can use against me. And Toni’s been confiding in me for a couple of years, ever since she was a student here. I defy you to tell me that her father didn’t deserve what he got.” Her eyes were as steely as ever.

“I suppose I need to maintain an official stance, here, so I’ll just say that it would have been more appropriate to handle that situation through the justice system.” I held up my hand again. “And I say that recognizing that the justice system might not have worked. But that has to be my official position.” I took a deep breath.

“What I’m more interested in, however, is last week. I was the one who found the WDL signs, the ones with your poem about hateful psyches, on the west side of Pagosa Springs; Sheriff Ron Grange’s people found the other ones. They’ve both been traced to your people, and they’re not being confused with the real ones. You’re not under suspicion. But there’s one thing I really do need to know. At your demonstration here last Friday, the students were chanting all four of the real poems, the poems found with the victims’ heads. The students were doing a good job, like they’d rehearsed. But at the time that I saw the demonstration, the fourth poem was only about four hours old, in terms of its having been discovered with the victim’s head. And it, I mean the poem, it wasn’t public until a couple of hours after it was discovered, in terms of its being in news reports or on the internet. I need to find out how you and your people found out about that fourth poem so soon. The one that starts, ‘It’s really quite a simple task...’ That’s the one thing I really need to know from you.”

“And if I choose not to tell you?” She looked defiant.

“You asked before if I think you’re stupid, and I didn’t get to an answer. So, for the record, no, I don’t. But even the smartest people can occasionally do stupid things. If you choose not to cooperate here, this will be one of those times for you.”

\* \* \*

When we walked out of Hal’s office, he was sitting in his waiting area, across from Alice’s desk, reading a sheaf of papers. He looked up at me with a puzzled expression.

“Ah, Dean Weathers. I’m glad you returned, I need to talk with you next.” Madge had her back to me, so I winked at him. His jaw dropped. I turned slightly and winked at Alice Swan, and she almost giggled.

“Professor Glendon, thank you for your time and your cooperation. I’ll be sure and keep you informed of developments as appropriate.” Madge turned back to nod at me and walked out.

I turned to Hal. “Is now a good time?” And I gestured toward his office. This time, Alice giggled out loud.

When we were inside with the door closed, I walked up to him, grabbed his face, pressed myself against him all the way down to our toes, and kissed him so hard it felt like it might suck my fillings out. A slight pelvic grind provided an interesting finish.

When I pulled away, he was standing there with one of those goofy looks of his—not the trout one, though.

“That’s for being so nice about my using your office. Sorry I just took it over like that.”

“Oh, any time, any time at all. Want to use the computer or anything? The phone? Hell, use ’em all, then we can do something really interesting.”

“Sure, and really give Alice something to gossip about.”

“Either that or give me a heart attack. Whew. OK, so, you and Madge borrowed my office. No problem at all. Anything I should know?” His goofy look had mellowed to a dreamy smile.

“What I wanted to talk with her about was how she and her girls—I mean, her womyn-with-a-‘y’—how they knew about poem number four so soon last Friday.”

“What did she say?”

“I have some checking to do, so for now let me just say that she cooperated more fully than I would have expected. OK?” I was watching him closely for a reaction.

“All right. Can I tell John that she cooperated?” He had his head cocked to the side a little, a sign that he didn’t understand what was going on.

“Absolutely. She knows she had to cooperate, and she did. Oh, and Gil’s working on the tissue samples for me. They came this morning, and I took them over to him. That’s how I ran into Madge. I was on my way over here from the chemistry building, and they were having yet another demonstration at the student union.”

He sighed. “Yeah, I heard about it. I’ll be glad when classes start up and these students have something else to keep themselves occupied with. Maybe I’ll suggest that everyone assign extra homework.”

“How’s registration going?”

“Fine. Better than last year, actually. That problem with getting into courses needed for graduation—the problem Jennifer Mason had last year, remember?—it got fixed with some new rules we implemented. So things are smoother. And I don’t think we’re going to be so overbooked this year, so there won’t be quite such a housing crunch.”

“I…” But I was interrupted by the intercom.

“Dean Weathers? Provost Martin is here.” Alice had stopped giggling and was her usual formal self.

I grabbed a tissue and wiped a smear of lipstick off Hal’s mouth, and straightened his tie. When he looked professional again, we went out to fetch the provost.

After five busy minutes of pouring cups of coffee and finding napkins and so on, we were seated back in Hal's office.

"So, Annette, I saw you and Madge Glendon walk off together, from her demonstration. After you flashed your badge. What was that about?" Martin sipped his coffee and leaned back in his chair.

"I needed to have a chat with her anyway, and it seemed like as good a time as any. She just left here a little while ago, in fact. Very cooperative, after a little persuasion." I smiled, hoping it was mysterious.

It must have been, because he reacted by squinting a little and sitting forward.

"Hmm. Well, I guess that's good. Maybe between you and Bucky Thorndyke, we'll make a solid citizen out of her yet. Anyway, I've got bigger problems today."

Hal looked surprised. "Don't tell me that Bucky's succeeding."

Martin looked up at him. "I don't know about 'succeeding,' but they were out together, in public, Saturday night." He smiled at me. "Like you, Annette, I have my sources."

"I have to say, she was reasonable today. But, listen, you two probably have some university business to conduct, so I'll be on my way." I stood up and edged toward the door.

"If you have a minute, Annette, perhaps you should hear some of this. I expect you will sooner or later anyway. Might as well be now."

So I sat back down.

Martin took another sip of coffee and sighed. "If it's not one thing it's another. This time, it's a threat of a job action, a strike."

That surprised me. "A strike? Here? I didn't know you had any unions up here."

"We don't, but we're close. The adjunct faculty and the graduate teaching assistants have been discussing the possibility of organizing, and, of course, there's no shortage of groups, real unions, who are just drooling over the possibility of getting a foothold on the campus."

"I thought there was some rule, a state statute or something, about state employees' not being allowed to go on strike." Hal looked confused.

"There is, but so what? In fact, their not being unionized makes it easier for them to strike, because there's no organization that we could take legal action against. Just a disorganized bunch of people. And the worst we could do is to fire them. But we really can't do that, because we need them. Adjuncts and TAs teach over half our courses. Also, we emphatically don't need all the bad publicity that would generate."

"What? Over half your courses? I thought that's what the professors were for." It offended me a little that the university I thought of as "my" state university, where I imagined my state income taxes to be going, would not have its premier faculty members teaching its students.

"Oh, they do, Annette. Our faculty have higher teaching loads than at Colorado State or CU in Boulder. But enrollments have been rising, due to demographics, costs always go up, of course, and the legislature has been decreasing its support of all the state universities and not letting us increase tuition. So, unless we want to let class sizes get out of hand, the only way we can meet the student demand is to hire cheaper labor. That's adjuncts and TAs." Martin looked glum.

"Except that because you're treating them as cheap labor, they're threatening to strike." Once I get offended, rational arguments don't always work.

“Actually, Annette, the issue isn’t money, it’s working conditions, at least as I understand it. They want better benefits, job security, and, believe it or not, office space.” Hal shrugged. “But, of course, all those ultimately translate to money in the end, from John’s perspective, at least.”

“Hmm. I guess I’m not clear on why you think this is relevant for me.”

Martin sighed again, clearly depressed. “I hope it’s not. But if there is some kind of job action that gets disruptive, at some point the State Patrol would be called in, and your office is linked to that part of the state government, isn’t it? I mean, wouldn’t you handle any investigations that might arise?”

I thought for a minute. “I suppose that’s right. And if it’s a real possibility, I guess it would make sense to have as much information going in as possible. But right now, I have the bigger problem of these serial murders to deal with. You should feel glad that they’re all way east of here, not your problem.”

Martin finally smiled, in a grim sort of way. “I guess that’s true, Annette. Sometimes my little academic problems just don’t measure up to your real-world ones, do they?”

\* \* \*

Hal and his boss needed to discuss their academic problem more, and I was finally able to escape. In some ways, thinking about dealing with a faculty strike was a relief, even amusing, but I really did need to get back to the main issue at hand.

As soon as I was outside, I checked for voice mail and learned that I needed to call Derek.

“Annette? Oh, good, glad you called in. Two things. Where are you?”

“I’m up on the campus, headed for my car.”

“Oh. Well, you might want to go by that chemistry lab first. I got a call from your guy Gil Taylor. Said he has a result. Just one sample, he said, but it’s interesting.”

“Good, I’ll go see him. What else?”

“And we got a first report from our intrepid couple, the Berensons. The people we put on von Stier, remember?”

“Already?”

“Already. Although it’s not much. They live over that way, so it was easy for them to get going. They actually had his shop staked out before he got back from here and went to it. And what happened is that he went to his shop and almost immediately closed it and went down the hill, to a record store, a place called Whip Tongue Tapes, or something like that. I may have written it down wrong, though.”

“Tongue Whip Tapes and CDs. That’s where I met Toni Henry, the daughter of the Pagosa Springs victim, Hollis Henry. She works there.”

“So there’s some kind of connection between them, her and von Stier?”

“Either that, or von Stier has a really bizarre taste in music, given his age group and all. Let me think about this while I go find Gil Taylor. Anything else?”

“Rod Andersen called again. He wants to have two conference calls a day, one in the morning and one in the afternoon. He apologized about it, but it sounds like he’s under lots of pressure from the Gov.” Derek sounded as if he was apologizing, too.

“He is. And we can call him later to give him an update. I can tell him a couple of things and you can tell him about the Berensons’ report. I think the thing to do is to tell him every last detail, and that way he’ll feel more confident that we’re doing something. And I’ll let you know if I find out anything at the lab. Thanks, Derek.”

When I reached Gil Taylor’s lab, I saw a bright red light on the door and, under it, a little sign, which I hadn’t really noticed before, that said “Do Not Enter When Red Light Is On!!” Under that was a smaller sign that said “Please push buzzer→” and pointed toward a doorbell button on the door frame. So, feeling a little like Dorothy when she and her friends were trying to get into the Emerald City, I pushed it.

There was a scratchy squawk, and Gil’s voice, more or less, came from a little speaker. “Gil Taylor here. What can I do for you?”

I leaned in the direction of the speaker and responded. “Gil, it’s Annette Trieri. I’m told you already have some interesting results.”

“Annette! Just a minute. Be right there.”

And after a few seconds, a hand reached out the door holding what looked like ski goggles, and Gil’s voice, for real this time, said, “Here, put these on. Eye protection. Then you can come in, but please don’t leave the door open long.”

So I put them on and found myself looking through almost clear glass, or plastic perhaps. I scooted in through the door and closed it behind me.

Inside, Gil’s equipment was humming merrily, and an electrical device near the fume hood was flashing and making a snapping noise.

“Glad you came over, Annette.” He was sitting at a computer console with his back to me. “The goggles are because of that laser over there. It isn’t eye-safe, and the goggles filter the light from it. Old laser operators like me have this saying, ‘Never look at a laser with your good eye.’ That’s a sort of an in joke.”

A joke that I didn’t get, so I plunged ahead. “Derek told me you’d called my office about some results. I was still here on campus, so I decided to stop by. Hope I’m not interrupting.” The place was a buzz of activity, even though Gil was the only person in there.

“I’ll take a minute to show you. Things aren’t quite automated, but this is something you should see.” He walked over to a desk that was covered with sheets of paper and picked one up and handed it to me.

“This is an example of the results I’m getting. It shows the compounds in a sample that I’ve analyzed. Each of these spikes corresponds to a compound or one of its fragments, and I’ve hand-labeled what are probably the main molecules.”

A graph on the paper was a horizontal line with several large, vertical spikes in it, and there were little notations by some of the spikes, handwritten numbers.

“Now, all these are computer processed, so they’re scaled the same. This means that if you take two and hold them up to a light on top of each other, identical samples will have the results right on top of each other. Differences will be obvious.” He handed me another graph, and I did as he suggested. The spikes were in the same places, but some of them were taller on the second graph.

“I can also have the computer do this, do it mathematically. Subtract one result from the other, in a way. So if I take a pure formalin sample and subtract it from a formalin-soaked tissue sample, I get

something like the original tissue, or at least the liquids from it. Like this.” He handed me two more pieces of paper, and the spikes on them were nearly identical. I nodded that I understood.

“So, here are three spectra on the same page, just offset a little. Pig blood, mouse blood, and Gil Taylor blood.” Again, the spikes matched about as closely as my eyes could tell.

He explained. “The purpose of this is to show that the mouse and pig tissue are close to human tissue. I didn’t want to cut a piece off of myself, so I used blood. But the research I’ve done says it should work with fat cells or brain cells, too.”

“OK, I think I’m following you.”

“Be sure to stop me and ask questions if you don’t. Now, what I’ve done is this. I have spectra from the pig and mouse brain cells, both natural and pickled in formalin. What I showed you a minute ago is the result of a pickled pig brain spectrum minus the formalin spectrum. And it compares almost exactly with the natural pig brain. Therefore, if I take the spectrum of one of your pickled human brain samples and subtract the formalin spectrum, I’ll have the natural human brain spectrum, including whatever drugs might be in it. And, except for the drugs, that should look like the natural pig brain, or mouse brain, because, first, the blood samples look alike, and, second, the research says the brains should, too. You with me?”

“I got sidetracked on the ‘pickled pig brain’ part, but that’s OK, that’s just me. I think I see where you’re going. How do the victim’s brains compare with the pig’s—the spectra, I mean?”

He picked up two pieces of paper and handed them to me. “Here is the Pagosa Springs victim, and here is the pig. See where the peaks are missing in the pig sample?”

There were indeed a few additional spikes in Henry Hollis’ brain spectrum. He handed me another piece of paper. The same differences were there, although they were slightly taller.

“This is the Gunnison victim. Same result. I should have the Lake City victim in a few minutes.”

“What is this? I mean, what substance makes these extra peaks? And how come they’re taller in this Gunnison sample?”

“Different amounts of these particular molecules, meaning that there were slightly different amounts in the tissues of these two victims, that explains the different heights of the peaks. From different dosages, or time since ingestion. But what the drugs are is something I haven’t got to yet.” He pointed to a pair of large spikes. “But whatever they are, there seem to be two fairly big molecules with weights of about 237 and 249, these spikes here. But I’ll have to do some more research to figure out what they are.”

One of the computers made a chiming noise, and a piece of paper slid out of a laser printer.

“Here’s Lake City.” He walked over to the printer. “Looks like the same result.” And he passed the paper to me.

“What you seem to have here, Annette, are victims that are being given the same substance, or substances, before they’re decapitated. That’s how the stuff would get into their brain tissue, through the bloodstream. They get an injection, the stuff circulates, they get their heads chopped off. Whoever’s doing this probably thought that by letting the blood drain, it wouldn’t be possible to get this information.”

“Meaning?”

“Meaning that the murderer is well-educated but not recently enough to be up on the latest analytical techniques. And meaning that this person is very, very clever nonetheless.”

\* \* \*

I finally returned to my office about 3:00. It was tempting to hang around Gil's lab and see the results as they came out, but it was a slow process—and the first three, being identical, provided enough information to confirm my suspicions about the victims' having been drugged. Given only molecular weights, however, I could tell it was going to be a challenge to identify the drugs. But at the least, I thought, this should make Rod Andersen feel good about our progress.

Derek told me that another report from the Berensons had come in. Von Stier and a young woman dressed all in black had emerged from the music store in Pagosa Springs and headed off together in a black BMW sedan. They drove west up the grade out of town and then turned north on Piedra Road, and the Berensons tailed them to the entrance of a ranch about 15 miles up the road.

Why von Stier and Toni Henry would be visiting her father's ranch—now her ranch—was something I was going to have to remember to ask von Stier.

The Berensons also reported something that might or might not be important—it looked for all the world that they weren't the only ones tailing the black BMW. They had driven up Piedra Road two cars behind it until the pavement stopped, and then they had fallen back because they knew they could track it using its dust plume. As they came down from the woods on a ridge into a large meadow, they saw the BMW turning into the ranch entrance and the car between them and the BMW crossing the meadow below them.

When the second car reached the ranch entrance, it slowed, drove past, and turned around. The Berensons stopped to watch as the other car, what looked like one of those jelly-bean shaped, anonymous white rental sedans that every airport has, stopped and parked. Its driver emerged, carrying what looked like a camera bag, climbed the fence, and began to walk through the pasture on a course parallel to the ranch driveway. Because it was a long driveway, it took him about 15 minutes to disappear over a rise.

The Berensons had driven down into the meadow and written down the white rental car's license number, noting its little "Hertz" label and the fact that it was a Ford Escort. Finally, they turned around and were now, they said, parked well off the road at the edge of the trees on the ridge, watching to see what would happen next. They were driving a black Jeep Grand Cherokee, one of probably two or three hundred in Pagosa Springs area, so they were confident that their car would be taken for that of someone local out for a walk in the woods.

Derek was in the process of finding out who had rented the white car.

While I was speculating on the meaning of all this, my intercom buzzed.

"Annette? It's that Mr. von Stier on the phone. He sounds grumpy." So I poked the blinking button.

"Ms. Trieri? Kristof von Stier here. I must say, I'm terribly, terribly disappointed in you. I wondered if you might put a tail on me, but I thought surely it would be someone more professional than this. I mean, really. You know my background now. Don't I deserve someone more professional?" He did indeed sound grumpy.

"I'm afraid I'm not entirely clear on what you're talking about."

"I've run out on an errand, out to a rather obscure destination, and I was followed, followed rather clumsily at that, by someone driving a white Ford Escort. Looks like one of those cars that the airport rental agencies have by the dozen. Impossible to miss. Really. I'm just plain disappointed in you."

“How strange. I have to tell you, Mr. von Stier, I have to tell you *emphatically* that it is not one of my people who is following you in that white Ford Escort.”

There was a pause. Then he said, in a voice that was not quite as grumpy as before, “Why should I believe you?”

“Because we agreed not to lie to each other when we talked about your accounting for your time for the next few days, remember? And I’m keeping my end of the bargain. But, listen, there are a couple of things we need to talk about. Eventually, I want to discuss this errand of yours, why you’re out at some ‘obscure destination,’ as I believe you put it. That sounds as if it might break our agreement. But there’s something more pressing first.”

“What’s that?” Now he just sounded curious.

“You pointed out to me this morning that Friday is approaching fast. But perhaps you’re not aware that all four of the victims to date disappeared earlier in the week, on Tuesday or Wednesday. And Tuesday is even closer than Friday. I don’t know whether you really fit the profile of the other victims, because I don’t know the killer’s frame of mind. But, well…”

“Surely you can’t be serious!”

“Another thing we’ve discovered is that each of the victims appears to have been drugged at some point in the abduction and decapitation process. So all I can say is that you should watch out for people with tranquilizer dart guns.”

This time, the pause went on for quite a while.

\* \* \*

## Nine

A little later, it occurred to me that I may have just placed the white Escort’s occupant in mortal danger, given von Stier’s background. That wouldn’t do at all, I thought. I walked down the hall to Derek’s office.

“Derek? Can you get hold of the Berensons? I mean, do they have a cell phone or something?”

“That’s what they’ve been reporting in with. So, sure, I can call them.”

“Good, please do, and find out what’s happening right now. I’ll be right back.”

I went back to my office and fetched my cell phone. When I returned to Derek’s office he was talking on his phone.

He put his hand over the mouthpiece and said, “Yep, all’s quiet. No change. What should I say?”

“Tell them I’m going to have the sheriff arrest the guy in the Escort for trespassing, which will get him out of their hair. So when they see the sheriff show up, they shouldn’t worry. I’ll also let the sheriff know about them, so they shouldn’t worry about that, either.” By then I heard Sheriff Ron Grange’s phone ringing in my ear.

“Archuleta County Sheriff. This is Zelda. How can I direct your call?”

“This is Annette Trieri, CBI over in Durango. I thought this was Ron’s direct number.”

“Oh, it is, Ms. Trieri, but he’s on the other line. I can let him know you’re holding.”

“Please do, Zelda, and, before you do that, what I’m going to need is for someone to go about 15 miles up Piedra Road, to the Henry ranch, and arrest someone for trespassing. It’s for his own protection, but I’ll want to come over your way and question him about what he’s doing there, before you release him. It may be connected with the Burma Shave Murders. If you have an idea of how Ron would handle this, you can get things in motion while he’s still on the phone. There may be a time issue.”

“I can find out if we have anyone up that way. Send him in that direction. That’s probably what Sheriff Grange will do.” She sounded both hesitant and matter of fact.

“Great! And he can wait for Ron’s go-ahead before he makes the arrest. So now I can hold for Ron without worrying.”

Derek was still on his phone, and when he noticed that I’d stopped talking, he gave me a thumb’s up. He put his hand over the mouthpiece again and asked, “What’s going on, anyway?”

“I may have over-played things a little. Von Stier called me and complained about the white Escort. He thought it was our tail. I suggested it could be the Burma Shave murderer stalking him, and now I’m afraid of what he, that is, von Stier, might do. Don’t want our white Escort guy dead before we can talk to him, do we?”

“It’s always easier to talk to guys while they’re still alive.” I recognized the voice in my ear as belonging to Ron Grange.

“Absolutely, Ron. That’s why I wonder if you can have one of your guys arrest him for me?” I filled him on where and for what reason and how I was going to handle it.

“How should we do this? Find where he went in that pasture? Follow him? Or what?”

“I imagine that he’s watching the house. Von Stier was with Toni Henry, so that’s probably where they went. If your guy hangs around the rental car, maybe like he’s writing it a parking ticket or something, this other person will show up sooner or later. Then he can be arrested and taken in, and I’ll come by and talk to him. If it happens soon, I’ll be over this afternoon.”

“Sounds like a plan. Zelda told me something about getting things rolling already, so this won’t take but a minute. Hang on.” He put me on hold.

I’d noticed that Derek was waving at me, trying to get my attention.

“The Berensons tell me that they’ve heard a couple of shots. Booming, like a rifle...there’s two more, different. Not quite so loud.”

“Damn. I sure hope that’s not von Stier shooting at the Escort guy.” My nightmare is starting to happen, I thought.

“With him shooting back, maybe? They said it sounded like two different guns.”

“I’ll have to warn Ron’s deputy about this, that’s for sure. I don’t want to send a single officer into that situation.”

“There’s two more shots, with a third gun. Louder, sharper. Sounds like a war’s going on, Annette.”

“There are three people out there, von Stier, Toni Henry, and the Escort guy. Be sure to tell the Berensons to lie low.”

“Don’t think that’s necessary, Annette. They asked me not to have them go in there.”

“Reassure them we won’t...Ron?” What we really needed, I thought, was a conference call. “Glad you’re back.”

“Got a deputy on the way, he was up the road a piece and will be there shortly.”

“Better warn him that our other observers are hearing shots. They’re ex-FBI, and they’ve reported six shots, two each from three different weapons. All rifles, they say.”

“Oh, hell. Be right back.” And I was on hold again.

I got Derek’s attention. “They said that the Escort guy was carrying what looked like a camera bag?”

“Right. I asked them about it just now, and they say it’s a small camera-type bag. They can’t see how it could contain a rifle, even a really sophisticated one that breaks down into small pieces. The bag was just too small. But they said all three weapons had the characteristic boom of a rifle that not even a big-bore handgun would make.”

“And two shots each. Hmm. This is very, very weird. Oh, hi, Ron.”

“OK, we’re set. Red, that’s Red Collins, my deputy who’s up that way, Red isn’t going into this thing until we have a better idea of what’s going on. He’ll wait by the road, by where that Escort is parked. I’m going out there myself to provide backup. I’ll call you from the road in a few. OK?”

“Right. I’ll be here. No, wait. Call me on my cell phone.” I got him to write down the number and disconnected just as Derek’s intercom buzzed.

“Is Annette in there, Derek?” Sally’s voice had a tinge of panic. “Rod Andersen is on the phone and I can’t find her.”

Executive decision time. What was more important, keeping the boss informed or keeping in continuing touch with people on the scene of the Piedra Road melodrama?

I looked at Derek. “Tell the Berensons to call if anything happens and that we’ll get back to them soon. And push that blinking button there and turn on your speaker.”

“Rod? This is Annette, I’m in Derek Petersen’s office in the middle of some excitement—you’re on his speaker phone.”

“Excitement? Damn. The Governor called me again, and I don’t know how much more excitement I can handle today. What’s up?” Rod’s voice was tinny through the speaker, but I could tell he was tired.

I warned him that I might have to take another call and filled him in. In doing so, I realized just how complicated the situation was—he kept asking questions that I thought I had explained already.

“So, you’re telling me that you have some people, people with experience, tailing this von Stier character, and they’ve discovered that they’re not the only ones tailing him? And the other guy seems to be in shooting war with von Stier and the daughter of one of the victims? What the hell is going on out there?”

“We don’t know about the shooting war part, Rod, just that our people have heard shots. And the Archuleta County sheriff and one of his deputies are on it.”

“But you told me this morning that this von Stier guy isn’t really a suspect.”

“Right. Still isn’t, although I have some new questions for him, like what he’s doing out at Toni Henry’s ranch, the one that used to belong to her father, victim number three.”

His questions went on long enough that I completely forgot to tell him about Gil Taylor’s results.

\* \* \*

Ron Grange finally called back, from the entrance to the Henry ranch up on Piedra Road. He and his deputy, Red Collins, were going to wait and see if our Escort driver walked out on his own. No more shots, rifle or other, had been heard since the first six.

He reached me in my car, just about the time I passed the US 550/160 intersection on the way south out of town. Having cell phone towers almost everywhere in southwestern Colorado has cluttered up the landscape some, but it has sure made my job easier.

Another thing that's made my job easier is having a permanently packed overnight bag in my car. Hal doesn't meddle in my work, but he did nag me into taking care of myself, thinking of myself first in high-pressure situations. That way, his argument went, I would be in better shape to do a top-notch job and come out of it healthy, both physically and mentally. Because I have to dash off to strange places in a hurry, with no idea of when I'll be able to return, the overnight bag is a mental-health insurance policy. And because it was Hal's idea, more or less, he can't really put up much of a fuss when I call and tell him I won't be home for dinner, or breakfast either.

After the briefing with Rod Andersen, I dashed out the door to get to Pagosa Springs as soon as I could. Maybe it wasn't necessary, but the more we talked about it, and we talked about it a lot with all of Rod's questions, the more it seemed like a good idea for me to be there. If those folks really were shooting at each other, there was no telling what would come of it. In the end, I was persuaded by Rod to go find Ron and Red and see what was going on first hand. Rod and Ron and Red. Thinking about it made me nostalgic for those old-fashioned, distinctive names like "Aloysius."

After I was finished talking with Ron Grange, I called my office to have them get a radio message out to the state patrol cars on Highway 160 between Durango and Pagosa Springs to please ignore a white Ford Explorer with State of Colorado plates if it seemed to be playing fast and loose with the speed limit. To emphasize the official nature of the trip, I borrowed a magnetic emergency light and stuck it on the top of the car. At least it would be almost official.

This let me cut about 15 minutes off the hour's drive to Pagosa Springs, and when Ron Grange called again, I was just turning north onto Piedra Road.

"Annette? We've got a guy walking back toward us across the pasture. He saw us when he came over the rise, stopped and looked for a minute, but now he's walking toward us again. He's carrying what looks like a camera bag. No guns that I can see, though."

"Looks like I should be there in fifteen minutes or so. Maybe we can get things all straight without your having to take him in. But be careful with him, OK?"

"You bet. And if he was watching things at the ranch, they might be about to leave, too. Should we stop von Stier and Toni?"

I thought for a minute. "No, why not just smile and wave? I'm sure von Stier is just as curious about this guy as we are. And if you just smile and wave, that'll drive him nuts. He might even stop to ask what's going on."

"Yeah, it will drive him nuts. And if he stops, I'll just tell him it's police business. That'll really set him off. I know this guy well enough to know that. But I don't know if we're allowed to have this much fun, Annette."

"Tell you what, I'll authorize it. Just this once. See you in a few minutes."

On the way up Piedra Road, I stopped to say hello to the Berensons to let them know what was going on. Although they were in almost continual touch with Derek, they were pleased to meet me and find out the latest. And I was glad to meet them, too. I like to know the people who work for me, even if only occasionally.

They were an interesting couple, late sixties, fit. They looked as if they were out on a bird-watching expedition, with binoculars, day packs, and a camera with a very long lens.

When I got to the ranch entrance, Red and Ron were talking with a chubby, middle-aged man who was sweating rivers. It looked as if the walk through the pasture at 9,000 feet or so had given him quite a workout. Either that or it was all the arm-waving and stomping around he was doing. Apparently, Ron Grange's "police business" wasn't making him very happy.

I turned around in the ranch's driveway and parked in the little caravan that was forming up—two Archuleta Sheriff's Department SUVs sandwiching the white Escort, and now with me at the front.

I was barely introduced to the chubby guy—Ron told me he was Charlie Stevens, a private investigator out of Los Angeles—when he started in on me, waving his arms around and stomping about. And sweating.

"Lady, I don't know what the hell's going on here, but I've got half a mind to sue the crap out of you people."

I looked him up and down and turned to Ron, while Stevens continued his rant.

"Ron, I recall you said that he was walking through the pasture, inside the fence, when you and Red saw him. Is that correct?"

"Sure is, Annette. On the south side of the ranch road, there." He pointed to the left side of the driveway.

I turned back to Stevens. "Mr. Stevens. Attention."

I used about level two-and-a-half of my Voice of Authority, as Hal calls it, and it worked as I hoped it would. He looked surprised and stopped talking—and he even stood up a bit straighter.

"Mr. Stevens. Can you read me that sign over there, please?" I pointed to a sign on the fence a few feet from where he must have crossed it.

"Uh, well, it says 'No Trespassing. No Hunting. No Fishing. Violators Will Be Prosecuted.' Yeah, OK, look, I was just walking..."

"Mr. Stevens. Please. Stop." I eased back to level two, and that still worked. "You were introduced to me as a licensed private investigator. Licensed in another state, of course, but still, I would think that California PIs would know what 'no trespassing' means."

"Sure I do, but..." I held up my hand, and he stopped.

"Perhaps what you don't know is that we here in Colorado take trespassing quite seriously, particularly around here. You see, there have been a number of incidents of sabotage of various kinds of equipment, as well as fences getting cut and so on. In fact, one thing we'll need to do is to search your car, to see whether you're carrying any equipment that could be used for such purposes. Ron, Red—would you take Mr. Stevens' keys and see what's in his car?"

Ron and Red, standing behind Stevens, had been elbowing each other and working hard not to laugh out loud. Red Collins took the keys to the Escort, and they began rifling through Stevens' car.

"Mr. Stevens, the sheriff reported hearing gunshots. Would you know anything about that?"

He squinted at me, obviously suspicious, obviously trying to detect any traps that I was laying for him.

"Target practice, as far as I could see. Up by the house."

"And you haven't fired any weapons recently? We'll be testing your hands."

“No way, lady. Like I said, I was just out for a walk.”

“Observing target practice, yes. Now, Mr. Stevens, I see that you have a camera. May ask if it has film in it? I could open it to find out, of course, but that seems impolite.”

“Of course it’s got film in it. You think I’d lug around an empty camera?”

“Good. We can get it developed and see what you’ve been taking pictures of. If it’s scenery and so on, well, good for you. If it’s infrastructure, dams, bridges, equipment, of course that will be another matter. The magistrate will be most interested in which of these two it is.”

“Magistrate? Look, lady, uh, Ms. Treery or whatever your name is...” I only had to raise my hand half-way this time—it was nice to know that he was getting trained.

I looked at my watch. “Yes, magistrate. And I’m afraid it’s probably too late to catch him this afternoon. Isn’t that right, Ron?”

Sheriff Grange pulled his head out of the Escort’s trunk. “Huh? Sorry, I missed that, Annette.”

“I was just saying that it’s probably too late to catch the magistrate this afternoon, don’t you think? It’s after five.”

“Huh? Oh. Yeah, sure. Right. He never hears new cases after five.”

A barely audible snicker escaped Red, who was in the front seat looking at the rental car’s paperwork.

“But I expect we should be able to get in to see him first thing in the morning, right Ron?” I looked at him and he nodded vigorously. “So if the pictures on this film back up the story you’re going to tell me when we get back to town, I’m pretty sure you’ll be on your way by mid-morning. Find anything, guys?” Ron and Red had emerged from Escort, empty handed.

“Not me. Rental paperwork looks legit.” Red shrugged.

“And all I found is luggage, a couple of days of clothes. Nothing out of line.” Ron was dusting off his hands after closing the trunk.

“All right. Good. Why don’t you guys take Mr. Stevens into town, and I’ll see you at the county building. He and I need to have a leisurely chat.”

“Now, just hold on a minute...” Stevens had finally realized what was really going to happen. But I raised my hand again, and, dutifully, he stopped.

“Mr. Stevens. You’re being placed under arrest for suspicion of trespassing. You’ll be read your rights on the way into town. And, as I’ve said, if your story checks out, that is, the story you’re going to tell me, then it’s quite likely that you’ll be on your way in the morning. Meanwhile, a part of your rights, of course, is to keep quiet, because anything you say can be used against you. So I’d suggest you and the sheriff here talk about baseball or something on your way into town. I’ll see you there.”

\* \* \*

I waved to the Berensons on the way back into town and called Derek.

“Hi, Derek. You talking with the Berensons? I just passed them and I thought I saw him on the phone.”

“Good to hear from you, Annette. He’s on hold. What’s happening over there?”

“We’re taking the guy in the white Escort into town. He’ll be spending the night in the luxurious accommodations of Archuleta County. I’m betting he’s out of here by mid-morning.”

“What about our friends?”

“Still at the ranch, we think. Tell the Berensons to keep their eyes peeled.”

“Will do. When should we expect you?”

“I’m going to talk with this guy Stevens, the Escort guy, tonight, and tomorrow I want to talk to von Stier and Toni Henry. So if nothing else comes up, mid-afternoon, maybe.”

“Hope you called home.”

“Yeah, but it was just a message. I’ll call again later this evening, though, so don’t worry. Besides, I’ve got Hal trained better than you.” I heard laughter.

On the way into town, I stopped at a likely looking motel and got lucky. Sometimes finding rooms without advance reservations this time of year is tricky, but it probably helped that it was Monday. Even though it was getting on toward six, I decided to postpone dinner until after my conversation with Charlie Stevens. That way, I could get dinner recommendations from the people at the Sheriff’s Department and have something to look forward to later in the evening. Besides, I wanted to hear Stevens’ story.

I found him waiting for me in an interview room at the Sheriff’s Department. The desk sergeant told me that Sheriff Grange had decided on the interview room as a holding cell for Stevens because the normal holding cell was full of drunks, something associated with a bowling league rumble. When I got the door unlocked for me and went in, Stevens was polishing off the last piece of a take-out pizza.

“Ms. Treery, ya found me. I have to say, these hicks are treating me better than I thought they would. But I’m still gonna sue their asses off, and yours, too.” He wiped his mouth on a sleeve.

“Really? For what? False arrest? I thought I explained how seriously we take trespassing here, and the sheriff and his deputy both saw you in that pasture. Was there some mistreatment? You just said they were treating you well, and I’m sure you know that everything in here is recorded. I think I can assure you that no lawyer in this county would take on your lawsuit. And the out-of-pocket cost of a big-time Los Angeles lawyer who’s admitted to the Colorado Bar would be steep, I’d think.”

He lapsed into a sulk, so I decided to plunge onward. “I don’t know if they mentioned it to you, but they put you in here so that you wouldn’t be in the middle of some kind of fracas that’s got the drunk tank full. So you’re being treated reasonably well, I’d say.” I paused, realizing how hungry I was. That pizza smelled good.

“Now, it’s looking like there’s no way for you to avoid a night in jail here. Bail won’t get set tonight, but tomorrow I think the local magistrate will just dismiss everything, if I ask him to. Which I intend to do, provided you work with me.”

“Work with you how?”

“They told me out front that they took your film to the one-hour developing service at the supermarket, so it should be ready soon. In the meantime, I’d like to hear just what those pictures are of, and what you were doing at that ranch, and why you’re in town in the first place. Because you’re a PI, I bet you’re going to tell me that you’re working for a client, and that’s confidential, and so on. But that’s not going to cut it. I need to know everything. Furthermore, I’ll be checking your story any and every way I can before tomorrow morning. OK?”

“OK? Are you nuts? No, it’s not OK. But I do understand that you’re holding all the cards here. And as long as *you* understand that I’m not in the habit of talking about my clients, I think I can give you enough information to get me out of here tomorrow.”

“We’ll see. But please don’t try to con me. It just makes me mad.”

“Right.” He took a deep breath and let it out. “The first thing is, what you’ll find on the film are pictures I took this afternoon of Toni Henry and some skinny, bald guy she went out to her old man’s ranch with.”

I interrupted him. “You don’t know this other person? And it was my understanding that it’s now Toni’s ranch.”

“Never saw him before. And I know her only from pictures. But, see, it really isn’t her ranch, yet. And what I’m here for is to represent my client’s interests in seeing that it doesn’t become her ranch, at least not automatically.” His smirk told me there was more.

“Oh. Let’s back up a minute. It sounds like you know that Toni’s father is dead. What do you know about that?”

“Just what’s been in the papers. He was murdered, decapitated. Say!” He sat up straight. “Are you investigating that? The report I read just said that there was more than one of these murders and that some state agency was doing the investigation.”

“Now perhaps you understand more clearly why I’m so interested in people trespassing on the Henry ranch. And, I hope, you understand why it’s so important for you to cooperate.”

“The heat’s on, huh?” He grinned. “So, anyway, Toni’s old man gets offed and it’s not suicide. So there’s life insurance, investments, and this ranch. I’m told the real estate around here has become incredibly inflated and this ranch has development potential. Worth millions.”

“I guess I would understand where you’re coming from if you told me about your client. I’ll keep it to myself, believe me.”

“What about all the recording equipment and so on?” His skepticism was evident.

“I’ll get the recordings, don’t worry.”

I could almost see the wheels turning as he thought over his options.

“The only reason for secrecy has to do with timing. See, my client is Toni Henry’s older half-sister. I don’t think Toni knows about her. Deborah Henry, Deb, to her friends. Daughter of Hollis and his first wife, Winona, who’s now in a nursing home with early-onset Alzheimer’s.”

“So this has to do with the estate and the will and probate.” I was beginning to understand.

“Sure does. See, when he and Winona divorced, it was back when the courts were sympathetic to the wife, and the facts in this case made the court doubly sympathetic. He was fooling around, he had beat her up, and all sorts of other bad stuff. But at that time, he was land-rich and money-poor. So the decree included language about including Winona and her heirs in his estate, an irrevocable bequest. It’s expressed as a percentage of the estate. Winona was pregnant with Deb before the divorce, although it’s not clear that Hollis knew it, but she’s part of it anyway. Together, Winona and Deb get half of everything.” He rubbed his right thumb against his middle and index fingers in the universal sign for money.

“And this is a Colorado decree?”

“You got it. I don’t know what his current will says, but it’s not supposed to supersede the decree.”

“But that’s an issue for the courts. What’s your role?”

“Watching out that Toni doesn’t do things to deplete the value of the estate before it’s all settled.”

“Such as?”

“Such as making off with and selling assets. Hollis was a collector. Coins. Stamps. And guns. He had a huge gun collection.”

A light-bulb went on over my head. “Would that be related to the shots we heard today?”

He looked puzzled. “Shots? Oh, yeah, the rifles, the target practice I mentioned before. Say, don’t tell me that’s why there were two cops waiting for me at my car! What did you think, I’m some kind of sniper?” He burst out laughing.

\* \* \*

“What it sounds like is that von Stier was testing some of the rifles in Hollis Henry’s gun collection.” I took another bite of pizza.

“That would explain why there were two shots per rifle and why they were in that particular sequence. What you described, two shots from A, two from B, two from C, doesn’t sound like people shooting at each other.”

Hal sounded relieved. He didn’t like the fact that I’d rushed to Pagosa Springs, possibly into a shooting situation. That I was away from home like this on short notice was bad enough for him, but the rifles were over the top.

The aroma from Charlie Stevens’ pizza had stayed with me, so, rather than hunt out a restaurant, I found the place that had delivered to the jail and had them make a take-out one for me. I took it back to the motel and called home, to make sure that the message I’d left earlier got through and to talk over the day. My evening conversations with Hal, whether I’m at home or on the road, often clarify confusing situations for me.

But the events of the afternoon seemed straightforward. The pictures taken by Charlie Stevens showed von Stier pointing rifles at a tree behind the ranch house, as well as the house itself and its layout with the out-buildings. And it would make sense that von Stier would know something about collectible guns, even though his specialty was antique armor. In a small town like Pagosa Springs, he could be the only person with enough knowledge to do appraisals.

“Yeah, that’s one of the things that was bothering me while I was driving over here. I concocted all sorts of scenarios, like, person A shoots twice and misses. Person B shoots twice at person A and kills him. Then person C shoots twice at person B and kills him. Leaving person C alive. Testing the guns from the collection makes much more sense.” I don’t know why I was surprised, but the pizza was actually quite good.

“So, does this business of Toni Henry’s having a half-sister mean anything? I mean, to your investigation?” Hal was also in the middle of a late supper, and I could hear him chewing. Meals together over the phone, however, just aren’t the same as being there.

“I’ve wondered a little about that myself. At some level, we’ve almost eliminated the women closely connected with the victims from being suspects. But it could be that one of them is doing it, with the idea of using all of the killings except the one—her own, I guess you’d call it—as smoke screen. And Toni Henry would be the prime candidate there, as she’s the one who will benefit most from the death, in terms of an estate and so on. The others all are getting something, and some of them are getting a bundle. Sarah Robinson, for example. But Hollis Henry was the richest of the bunch, it seems. If Toni

didn't know about her sister, she would have assumed that whole estate would be hers. That, plus the abuse in the past, sounds like motive to me."

"Hmm. Well, she probably had any number of opportunities. That leaves means. And if she hired von Stier to appraise the gun collection, do you suppose she could have hired him for something else, too?" Hal may not be the most suspicious natural sciences dean in the world, but sometimes I think he comes close. Dealing with students proffering excuse after excuse is probably not that different from dealing with suspects.

"When Derek and I talked with him this morning, he was persuasive. It just doesn't make a lot of sense for him to be involved in these murders. But, of course, that could be what he wants us to think." I have a suspicious nature of my own, of course.

"What? You mean he might have been trying to mislead you? Gracious! But, look, from what I've read and from what you've told me, these murders aren't just your run-of-the-mill hits. They're carefully planned and executed, and then advertised afterwards. Seems like an elaborate smoke screen."

"But there are millions involved, potentially, at least. And the more money there is, the more planning would go into it, seems like."

"And there's also the issue of the skills necessary to pull these killings off. Who is this guy von Stier, anyway?"

"Long story that's supposed to stay secret. But suffice it to say that his real name isn't von Stier and he definitely has the skill set necessary to have done this. A very colorful individual, who's trying to hide out from his sordid past. But, see, that's one reason why this doesn't make sense. If he's hiding out, and it seems like he really is, why would he do something high-profile like this?"

"You answered that yourself. Millions. But there's also the fact that it isn't high-profile as far as he's concerned unless you arrest and convict him. Then he's got bigger problems than his past, I'd bet."

"Even if I just arrest him, though, he's going to get tons of publicity. And that's something I'm sure he doesn't want. Even if his appearance is different, I get the impression that there are people out there who would figure it out and come after him."

"Oh. One of those kinds of sordid pasts. Still, there's the skill set and the millions."

"I'm going to have a nice, long chat with him tomorrow. He agreed with a proposition Derek and I put forward this morning—that he would make sure he has a solid alibi all this week. If someone else disappears and gets dead, that'll exonerate Mr. von Stier. But I'm not sure spending time with Toni Henry constitutes an alibi."

"You mean conspirators can't provide alibis for each other? Guess I'll have to make a note of that."

"Right, smart guy. So, anyway, how did the rest of your day go?"

"Oh, *my* day was mostly fine. I don't know if I can say the same thing for John, though. The talk of a strike got louder as the afternoon wore on. In fact, he sent out one of his 'official provost' memos to us deans, warning that we might have to figure out how to start classes without the adjuncts and TAs."

"Is that a big deal for you?"

"Not as much for me as for the social sciences and humanities dean, Bill O'Leary. I don't have any adjuncts, and our TAs are pretty independent, being physics and chemistry graduate students. They'll probably continue teaching. It's those radical leftists over in SS&H who want the union." He chuckled.

"Commie pinkos, huh?" I was starting to laugh as well.

“Absolutely. And I hear that the EPA is going to declare them an endangered species, so we have to take care of them. Maybe this strike business is really just a government plot to give them something to do.”

\* \* \*

## Ten

Tuesday morning, the first order of business was getting Charlie Stevens on his way.

He had cooperated fully, even going so far as to let me keep his photographs—he got the negatives, however—and providing a signed, written statement about his activities while in Archuleta County. In return, we had a deputy take him to his motel, where he was able to shower and change in anticipation of his appearance in court.

This turned out to be to his advantage, because the magistrate that usually handled arraignments and so on was on vacation, and his cases were being handled by the judge—the same judge that would likely be presiding over the probate of Hollis Henry’s estate. Charlie needed to make a good impression.

I helped out by meeting privately with the judge before court convened to explain things. Charlie had as much as admitted to trespassing in his written statement, so that couldn’t be ignored. But the judge understood the situation and was as interested as I in justice for the Burma Shave murderer, so he used his discretionary powers to get Charlie off the hook.

In court, he had Charlie rise and listen to his ruling.

“Mr. Stevens, we have here a trespassing charge, to which you have admitted. However, I understand that it was a call of nature that caused you to walk out of view of Piedra Road, across that pasture on the Henry Ranch. Now, I’m getting to the age when I’ve learned that such calls of nature can take on a level of urgency that demands immediate action, and there have been times when I have been grateful for the hospitality of strangers in an urgent situation. And I surely don’t want anyone to think that we here in Archuleta County are inhospitable. Therefore, I’m inclined to be lenient in this case. So I’ll only suggest that next time, you find some trees that don’t have a fence around them. Case dismissed. Next?”

Charlie almost screwed things up by standing there like an idiot with his mouth hanging open, until I grabbed his arm and dragged him out of the courtroom. Just to be nice, I personally drove him out to get his car and promised to keep him up-to-date on the progress of the murder investigation. If it turned out that Toni Henry was somehow involved, it would be likely that her sister would receive even more of the estate than the divorce decree required. Charlie liked that idea.

After my morning phone call with Rod Andersen in Denver, I had planned to find Kristof von Stier. But when I got back into town, there was a note on the door of his shop that said he was in Alamosa for the day, at Billy Abernathy’s. It also listed a phone number, which matched the one on Billy’s card.

Perhaps, I thought, this was how von Stier was providing himself an alibi today—at least for the time he wasn’t on the road between Pagosa Springs and Alamosa, close to two hours each way.

So I was more or less forced to find Toni Henry. I’d hoped to talk with von Stier first, because his perspective on yesterday’s outing to the ranch would be useful in interpreting what she had to say. I wasn’t sure I could trust her version of things.

When she saw me walk through the door of her shop, the first thing she did was to turn down the volume on the stereo. My previous visit, apparently, had made an impression. But her attitude was still in need of improvement.

“Well, if it isn’t the cop lady. Heard another one happened since you were here, some other jerk lost his head. How many more before you figure it out?”

Her expression was either a true sneer or false bluster trying to hide a bad case of nerves. I couldn’t quite tell which, so I stared at her for a few seconds while I considered the matter. It didn’t take long for the bluster to fade, exposing the nerves.

“OK, OK, that was rude. Sorry. What can I do for you? Need help finding a CD or something?” She was fiddling with some of the metal stuck through her right ear.

“I’m trying to think of a good way to describe it to you. You see, when you’re investigating a complicated case like these Burma Shave serial murders, you automatically catalog anyone who has any possible motive for any of the killings in a special way. Not as a real suspect, just as someone with a special interest. Then, when one of those people does something else that’s out of the ordinary, they get put into another special category, sort of one step closer to being a real suspect. These little steps can eventually add up to somebody who actually becomes a real suspect and perhaps even gets arrested and tried. I guess what I’m trying to describe is a way that perpetrators get caught without the cops getting the ‘big break’ in the case that so many movies and novels depend on. Rather, it’s lots of little things that add up, you know?”

“I can’t say I’ve ever given it much thought, really. Does this have something to do with me?” Now she was fiddling with the little silver ring through her left eyebrow.

“Each of the victims so far has had one or more women in his life who had a clear motive to see him dead. Each of the victims was an abuser, of a spouse or daughter or girlfriend, a serious misogynist. In your case, there’s the additional matter of the several million dollars that your father’s estate is worth.” I tried to maintain as low-key an approach as I could, but this startled her.

“You think I chopped all these guys’ heads off for my father’s money?”

“I didn’t say that—if I did think that, you’d be under arrest on suspicion of four murders. I said that all of these things add up to more and more special categorization. You’re getting pretty special. For example, there are these.” I placed two of Charlie Stevens’ photographs on the counter, turned around so she could see them easily. Her eyes fairly bugged out.

“What the hell’s this? Where’d you get these? What right have you got to sneak around taking pictures of me, anyway?” The bravado was building again.

“I was actually kind of surprised to see you with Mr. von Stier, after the way you talked about him the last time I was here. But I think I’ve decided that he’s the only person you know whom you could ask to provide a value estimate on your father’s gun collection. To provide an appraisal of some kind. Care to comment?”

“So what if I did ask him? I mean, yeah, my father got killed and now I’ve got this stupid ranch to deal with. I sure don’t want the damned thing, let alone all the crap in the house. But I’ve got to do something with it—I can’t just let it sit there and rot. For one thing there are estate taxes to be paid. If it matters to you, I’ve also had his other collections appraised, the coins and the stamps, even some old baseball cards. What else am I supposed to do? Take up collecting all that crapola myself? No thank you!” Now she was building up to righteous indignation.

“As I was saying, it’s a series of little steps that raises investigators’ suspicions under some circumstances. This, for example, seems rather hasty, insofar as your father’s will hasn’t gone through probate yet.”

“Yeah, but I understand that estate taxes are part of that process—they become due right away. And there’s no other family, so I’m getting everything, and I’ll have to figure out how to pay the taxes. I talked to a real estate guy, and he says that selling ranches the size of my father’s takes time. So I’m going to need cash. What’s suspicious about that?”

“If this were the only thing, it wouldn’t be. But you do have the other motive, the rapes, for killing him. And there’s something else. I had an interesting conversation with Professor Madge Glendon about poetry.”

I had thought that she was slathered in pure white makeup, so it surprised me when her face went even whiter.

\* \* \*

I needed to talk with Kristof von Stier, in person, and about the only thing I could do was to drive over to Alamosa. The trip gave me another couple of hours to think things over. During our phone conversation earlier, Rod Andersen had pointed out that it was Tuesday and asked if he should begin preparing the Governor for another abduction and, later in the week, another head on a fence post.

This got me to thinking about the abductions. Last week, Mineral County Sheriff Ralph Wertlinger had called on Wednesday to tell me that Doc Whiler’s office staff was reporting him missing. Three weeks before that, Bonnie Scharmatz had been aware that her husband wasn’t at home for several days before his head turned up. She told the police that she assumed he was with his mistress, Crystal Stafford, so she hadn’t reported anything. The next week, Sarah Robinson hadn’t reported anything about the absence of her husband, either, being used to his extended absences. And Hollis Henry was living alone at the time, so no one knew that he wasn’t on the ranch.

Why hadn’t Doc Whiler’s live-in girlfriend, Amelia Dent, been the one to report his absence?

Was there some pattern that I was missing, something I should be seeing that would lead me to the next victim while his head was still attached to his shoulders?

How was it that the poem that Toni Henry had originally written for the WDL, the one used with Doc Whiler’s head, could have wound up in the hands of the murderer?

The obvious answer, that Toni or someone in the WDL was the murderer, just didn’t fly for me. And for serial murders such as these, a conspiracy within the WDL didn’t seem possible, either—for one thing, Madge Glendon would have told me a different story and Toni would never have admitted to being the poem’s author. For another, it wasn’t the WDL style.

Toni, when confronted with her poem, had caved in completely, losing all resistance to my presence and my questions. But she really didn’t have any helpful ideas. At one point, she said, the poem had been on the WDL web site, so anyone could have seen it. And she had written it some time ago, in a completely different context. The WDL was on a crusade to convert male chauvinists into more politically correct beings, and Toni’s “jerk a week is all we ask” line was meant to set a goal for the campaign.

\* \* \*

She told me this without prompting, and it was also what Madge Glendon had reported. Both were appalled that the poem had been adopted by the Burma Shave murderer. That the WDL demonstrators were using it on the Friday that Doc Whiler's head was discovered was a coincidence—they knew the other three poems already from the newspapers and this one, which they thought was still theirs, seemed like a fitting coda.

As much as I tend to be skeptical of coincidences, I have to admit that they do happen sometimes. So all that meant was that the murderer had access to the WDL web site—along with the millions of other internet users.

It occurred to me that this line of reasoning implicitly assumed that Toni Henry, and, by extension, Kristof von Stier, were innocent, and I almost turned around toward home. But verification is one of those things an investigator thrives on, so the conversation with von Stier would still be worth the drive.

I got to Alamosa in time for a late lunch and then drove to Billy Abernathy's dojo. Inside, in the main room with the crossed katanas on the wall, I found two people, wearing padded clothes and protective headgear, pounding on each other with bamboo sticks. I watched from the doorway for a minute and soon found that their movements and strokes were clearly choreographed and highly ritualized. It even began to look graceful—for two guys pounding on each other with bamboo sticks, at least.

Eventually, they stopped pounding and bowed to each other, and they took off their headgear. I resisted the urge to applaud.

Billy Abernathy noticed me first.

"Kristof, look here. A visit from the CBI. We're honored." His expression wasn't as sarcastic as his words.

"She's come to check up on me, I bet." Von Stier was smiling in my direction.

"I just need to be able to tell the Governor I'm doing something besides sitting in my office waiting for another head to roll. I found the note on your door, Mr. von Stier, and thought I'd come by to fill you in on what was going on yesterday. That white Escort you noticed."

"It seemed abandoned later in the afternoon. Was its occupant hiding in the ditch somewhere?"

"No, he was in the company of Sheriff Grange. There was this matter of trespassing. I'll give you the whole story if you'll tell me your side of things." I smiled back.

"Trespassing? Well, it's good to hear that our fine sheriff earns his keep now and then." He laughed. "My story? Let's see. I'm not particularly gregarious by nature, so keeping my end of our bargain is something I haven't quite figured out completely. Which is why I'm here today. Right, Billy?"

"Kristof called me last night and asked if he could come over to watch my classes and get in a workout." Abernathy was nodding.

"Anyway, it happened that yesterday afternoon, after I got back to Pagosa, I did have something that would let me keep my end of the agreement—an appointment to do an appraisal. It seems that Toni Henry is trying to figure out the value of her inheritance, and it includes some esoteric items. Her father collected antique firearms, for example. Although my specialty is armor, I also know something about guns. So we went out to her father's ranch together, looked over the collection, and I made lots of notes. We even took a couple of the rifles outside and fired them, because for the older ones, working order is critical to their value. I nearly dislocated my shoulder with one of the buffalo guns."

"And you spotted the Escort on the way up Piedra Road to the ranch?"

“Right.” Now von Stier was nodding. “I got suspicious in town, but it was hard to miss him way out there. The guy must be a city fellow, he didn’t have a clue about tailing people in the country. So who was this clown?”

I dismissed the question with a small wave. “Nothing for you to worry about. But do you know if Toni Henry is an only child?”

“I don’t really know. But yesterday it appeared that she’s under the impression that all she has to do is figure out how to pay the estate taxes and everything left is hers. So she seems to think so. What’s all this about, anyway?”

“What other contact have you had with Ms. Henry?”

“None to speak of. We both live and run small businesses in the same small town, so we run into each other at Chamber meetings and so on. I have to say that before she asked me to do this appraisal, she’d always been unfailingly rude. But that seems to be the way she treats most everyone. She certainly cultivates the image, with the black clothes and so on.” Von Stier shrugged.

“Wait. Don’t tell me. Is this the woman who runs that music shop, where they sell CDs and so on? Uh, Tongue something. I stopped in this little store in Pagosa once to get some music for the drive home, after I was over there to see your place, Kristof. Almost had my eardrums imploded and got cursed at when I asked if she had any Stevie Ray Vaughan.” Billy Abernathy was shaking his head in disgust.

I was having trouble not laughing. “Sounds like Toni Henry to me. But, really, she’s a sensitive, gentle soul under that veneer of toughness. She even writes poetry.”

They looked at each other and at me, dumbfounded. Then I started laughing, and it broke the spell.

\* \* \*

As I said, verification is good. If Kristof von Stier, Toni Henry, and Madge Glendon and the rest of the WDL were conspiring to be the Burma Shave murderers, I thought, I’d have to find a hat to eat.

Which conclusion put me almost back at square one. And it was Tuesday afternoon and, somewhere around this part of Colorado, there was a good chance that some poor jerk was being abducted, in preparation for his fifteen minutes of posthumous fame when his head would be found on Friday.

Once on the road, I called my office.

“Derek? I’m headed west from Alamosa. Von Stier is over here today, working on his martial arts skills, if that’s what you call whacking people with sticks. I talked to him, and his description of yesterday fits with both Toni Henry’s and the PI’s, Charlie Stevens.” Derek had been part of my earlier conversation with Rod Andersen.

“So the shooting yesterday wasn’t in anger?” He sounded relieved.

“Just testing some antique rifles. Von Stier was doing an appraisal for Toni.”

“So you talked with her as well?”

“Right. And she and Glendon are saying the same thing about the fourth poem. Scared the hell out of her, in fact, when I brought it up. So this consistency among Glendon, Toni Henry, and von Stier seems to rule out a conspiracy involving them, from where I sit at least.”

“I think I have to agree. It’s a big stretch to think that Glendon’s organization, that Waddle thing, would be involved in the first place. Toni Henry and von Stier could be in on it together, to get at her father’s money, but it’s hard to believe they’d go after the other three victims as well.”

“I keep thinking there’s something I’m missing. For example, the abductions bother me some.” I told him about my thoughts on how they hadn’t been reported by the most closely involved people.

“You’re not suggesting some kind of conspiracy involving the wives of the first two victims, are you?”

“I don’t know what I’m suggesting. It just seems strange. I’m going to stop off in Creede and talk to Doc Whiler’s girlfriend. She didn’t say anything about this the other day. So, what’s happening over your way?” Every now and then I remember that I’m the boss, and I need to keep up with everything.

“Got a call for you from the lab guy, Gil Taylor. He says he has more results. And a *Denver Post* reporter, says she’s researching for the guy who wrote the big article in last Sunday’s paper, she called Jennifer Mason.” He rattled off a number, and I scribbled on a note pad. Thank heavens for hands-free phone sets in cars.

“Jennifer? I know her, from when she was a student at FSU. Maybe I’ll make an exception and talk with her.”

“And there’s a weird story coming out of Saguache, from the sheriff over there. Something about stoned cattle.”

“Stoned? Cattle? You mean as in high?” We have our share of dope-smoking hippies out here in the mountains, but they’re usually people.

“Apparently a rancher in the San Luis Valley southwest of Saguache reported that some of his steers were acting strangely, staggering around, doing lots of rubbing up against trees. Even humping each other—and I’m talking *steers*, here.”

“Ordering pizzas? Giggling a lot? Stuff like that?” I heard him laughing.

“I don’t know. Maybe the herd wandered into someone’s marijuana patch. There’s some of that scattered around. Anyway, I’m just filling you in. Have you got a schedule?”

“I’m heading for Creede, and I’m hoping to be back in time for dinner. I’ll keep in touch. And I’ll figure out how to call Rod later this afternoon. There isn’t cell service up there.”

I wanted to touch base with Gil Taylor before the phone gave out, so I called him right away. I commented that he sounded tired.

“Yeah, been up most of the night doing these samples, the comparative analysis, I mean. Not sure I’ve got anything much that I didn’t have yesterday. But all the results are consistent.”

“Same chemicals, ah, I mean, same molecules in all the samples?”

“Not exactly, but they’re all consistent. See, different things will concentrate in different kinds of tissue. But all the fat samples are similar, all the muscle tissue is similar, and so on.” I heard a yawn.

“Any idea of what this stuff is?”

“That’s what I’m working on now. It may be a combination of things. I haven’t found one single drug that explains all the stuff in these spectra. And the drugs I have calibrated spectra of don’t match what’s in these samples. So it looks like some combination of things I haven’t seen. That just makes it harder to puzzle out.” He yawned again.

“Gil, you sound exhausted. Why don’t you let this rest for a day, catch up on your sleep? Getting away from it for a while could give you a new perspective.”

“Good idea. I’ve probably racked up enough overtime anyway. Don’t want to send you guys a bill that’s too big.”

By this time, I was coming into Del Norte, the last little town before the turnoff to Creede at South Fork. Because there was still cellular coverage, I called Jennifer Mason.

“*Denver Post*. This is Jen.”

“Jennifer, this is Annette Trieri returning your call.”

“Oh! Ms. Trieri! Thanks so much for calling back. I don’t know if you remember me, I was a student at Frémont State when you helped me with a story I did on the death of Steffanie Boudreau, the violinist?” It was the same, almost breathless Jennifer that I remembered.

“Of course. And it must have helped you graduate because now you’re at the *Post*.”

“Sure did, although I’m constantly reminded that I’m at the entry level. But every now and then I see a paragraph I’ve written in the paper, which is exciting.”

“I hear that you’re doing research on the Burma Shave Murders.”

“That’s what they have people like me do. Background interviews, verifications, things like that. I sit here wearing a telephone headset all day and talk to people I’ll never meet. It’s nice to talk to someone I can picture in my head. So thanks for calling back!” She still had that first-job enthusiasm.

“I thought I’d say hi. But I’m afraid I can’t really give you much, mostly because there’s not much to give. The article on Sunday covered the ground. Have you talked with Naomi Winters, at the Valley Women’s Center?” I thought I might steer her toward the human interest side of this whole thing, away from my investigation.

“That was one of my parts of the story. And it’s happening all over the state, even the neighboring states. Domestic violence reports are way, way down everywhere. Do you have a comment on that for me?”

“For the record, I’ll say that domestic violence is a shameful part of our culture. Any time that it’s on the wane, we can all celebrate. But in this case, um…” I paused to consider what I should say. I think of Jennifer as a friend, someone whom I mentored as a student. But now she was a newspaper reporter, and I knew whatever I said could appear in print to come back to haunt me.

“In this case, we’re dealing with something completely different—a cold-blooded murderer, who abducts his victims and slaughters them. Just as justice will prevail in this case, it should also in cases of domestic violence. This Burma Shave sicko will be caught and brought to justice.”

“When?”

“It’s not appropriate for me to comment on details on an ongoing investigation. And, Jen, off the record, I’m sure you know that anything about the investigation that gets in the papers could impede it, right? I know that you and the other people on the story want to get on the front page and get picked up by the wire services, but I can’t jeopardize our investigation for that.”

“Do you think it’s a lone vigilante or group of people that is doing this?”

I felt a surge of disappointment and sadness. Yes, Jennifer had a job to do. But she was trading on our friendship to do it, risking permanent damage to our relationship.

“I’m afraid I can’t comment. I guess I need to refer you to the CBI office in Denver for any future questions, Jen. Sorry.”

“You said ‘his victims.’ Does this mean you think the murderer is a man?”

“Sorry, Jen, I’ve got to go now.” And I disconnected.

Even the scenery on the way to Creede didn’t cheer me up.

\* \* \*

I knocked several times but didn’t get any answer. This was confusing, because there were two vehicles, a sedan and a pickup truck, parked by the house. Then I heard a gunshot over behind the barn.

I hustled back to my car and got my Glock, and I made sure the magazine was full and there was a round in the chamber. After checking as much of the area as I could see, I worked my way around the side of the barn that didn’t have the corral.

In movies and in cop shows on TV, you see characters with drawn handguns sneaking around in these highly choreographed moves, both hands holding the weapon, which gets snappily pointed skyward when a buddy walks across its field of fire. Somehow the good guys always have the more graceful moves, while the bad guys look at least a little clumsy. Most of the individual moves seem designed to let someone show off his, or even her, muscles and balance. It’s all so mapped out that you expect to see “Choreography by Alvin Ailey” in the closing credits.

Even though I’ve been exposed to the real version of that stuff in various training courses, it hardly ever works out that way. This time, for example, I had about 75 feet of barnyard to traverse. It wasn’t the corral, so I wasn’t worried about stepping in something fresh, but there were thistles. And I was wearing a skirt and walking flats.

So instead of gliding around semi-sideways in that sort of half crouch you see a lot, with my Glock held in front of me scanning for bad guys in all directions, I minced my way past the side of the barn, trying not to get stuck too many times. Even then, it didn’t work completely, and my lower legs itched like hell when I finally came to the corner of the barn.

Then, instead of poking my nose out in quick, jerky glances around the corner like you often see, I crouched down, getting stabbed in the bottom for my efforts, and slowly eased an eye around the corner. Quick movements are easily detected by peripheral vision, and I really didn’t want to attract attention.

But I saw that I didn’t need to worry. Someone, probably Amelia Dent, I figured, was standing with her back to me, hands over her face, sobbing. There was a brown and white horse flopped on the ground in front of her, and I could see a red hole in the white, diamond-shaped patch between its eyes.

I flipped the safety on my Glock, stuck it in the back of my belt and stood up without making any noise. I thought I’d give her a few minutes before announcing my presence.

Eventually, she took a deep breath and wiped her eyes on one sleeve and her nose on the other. Then she stooped to pick something up. It occurred to me it might be the gun she’d used.

“Wait, please. Stop!” Command-voice level two froze her in mid-stoop. “I’m sorry to intrude this way, but I heard the gunshot. And I’ll feel better if you don’t pick that up just now.” By then she had turned, and I recognized Doc Whiler’s girlfriend and former office nurse, Amelia Dent. I could see the glimmer of recognition in her eyes.

She took another deep breath and stood up. “It’s all right, I only put one round in it. Goddammit, I sure hope I never have to do that again.” Yet another deep breath.

“I’m a little surprised. I guess I thought horses got put down with drugs these days.”

“Sometimes. But this is so much quicker. And hunting horses, like Patches was, they’re used to guns, so they’re calm right to the end, especially if you talk to them. The drugs usually freak them out, and they die freaked out.” She looked down at the horse, and I could see her eyes fill up with tears. “Aw, shit, Patches, why’d you have to step in that god-damned prairie-dog hole?”

I walked over and picked up her gun, an old Army-style .45 semi-automatic, and saw that the magazine wasn’t in it. She must have put the single round in the chamber.

“Why don’t we go into the house and have some tea, or something?” I didn’t know quite what to do to help her, but getting her away from the dead horse seemed like a good start.

“Tea, hell. You can have some tea or coffee or whatever, but I’m for some brandy. A Courvoisier toast for Patches, I think. C’mon.” And she led me back around the barn toward the house. This time we went wide, avoiding the thistle patch.

In the house, she put on a kettle of water to boil, so she could make me a cup of coffee, and found a snifter and poured herself a generous tot of brandy. Finally she turned my way.

“So, what brings you back to see me, Ms. Trieri? Any progress on your case?”

“I do want to talk about that, but I’m curious about something. Obviously, you don’t just leave him out there. What happens next?”

“Huh? Oh, with Patches. Well Doc might get the tractor with the loader on it and dig a big hole, and move the carcass into it. But even that’s got its drawbacks. You’ve got to dig a really deep hole or it’ll get dug up. Coyotes. So I called Maureen earlier, when I knew this was going to have to happen. She’s on her way with her hoist and a trailer with sides but no top. We’ll lift him into the trailer, and she’ll take him back to Del Norte, where her office is. She’s got a crematory for just this purpose.”

“Maureen? Oh, I bet you mean Maureen Downey—I met her up in Gunnison. She seems to have clients all over this part of the state. And I guess that’s right, cremation has got to beat burial, for creatures this big, at least. I love horses, but I never had to deal with anything like this. Don’t think I could handle it. I admire your fortitude.”

“Well, you do what you have to do.” She shook her head and sighed, and she took another hefty draught of the brandy. “But this isn’t why you came to see me.”

“No, I came to ask you something about Doc. Last Wednesday, the sheriff called me to tell me that Doc’s office staff had reported him missing, for Tuesday and Wednesday morning. He didn’t come in and he didn’t call, which they said was unprecedented. But you must have known he wasn’t keeping his usual routine, and I’m wondering why his staff called this in and you didn’t.”

“I didn’t know he was missing. I just knew he wasn’t here. See, Monday night the son of a bitch got drunk and abusive, so I kicked him out. Told him to walk the five miles into town, sleep it off, and not to come back until he sobered up and was ready to apologize. Again. That’s the standard way I’ve learned to handle him. And it always worked, until this time. This time, he never came home.”

She didn’t seem nearly as choked up about Doc as she was about Patches.

\* \* \*

My coffee was nearly gone, and Amelia was well into her second snifter of brandy when we heard the noise of a heavy-duty diesel engine and a tap on a horn.

“Um, that’s probably Maureen. Damn, I’m afraid I’m getting too drunk to help much.”

Amelia stood up, a little unsteady on her feet, and walked carefully to the door. I saw her waving at someone, making a “come in to the house” gesture. Maureen Downey arrived at the door a few seconds later. She looked surprised to see me.

“Maureen, glad you got here. Patches is out back of the barn. I’m afraid that I’m not going to be much help. Uh, have you met Annette Trieri? She’s investigating these Burma Shave Murders that have been happening. Oop. ’Scuse me.” And she tottered off down a hallway.

“Good to see you again, Maureen. Sorry it’s not as happy an occasion as the other one, though.”

“Well, for me it’s pretty much one or the other, birth or death. In between, there are drugs to deal with most everything else. I do an occasional surgery for a cancer or something, and I set bones that will heal, but mostly it’s births and deaths.” She smiled weakly.

“This death is really sad. She put Patches down just as I got here, I heard the shot. She’s been quite upset.”

“Yeah, I could tell when she called. Patches was her favorite, and she’s blaming herself some. She said she was running him in the pasture when he hit the hole.”

“But he’s out by the barn. How’d he get back here?”

“Oh, she probably babied him in, leading him carefully. But she knows horses enough to tell that it wasn’t going to be possible to fix it. And I offered to put him down, but she said she wanted to do it herself, get it over with. He was hurting, apparently.” She looked at me with just a hint of defiance. “I have to admire that, taking responsibility for something and doing what’s right, no matter how hard it is.”

“Do you need help? I think she’s unlikely to do much good out there.”

“No, I’m set up to handle it by myself. If she wanted to help, she could, but I really don’t need anything. Part of dealing with large carcasses is using machinery to assist, and I’ve become fairly good at it. Glad to have you watch, though. You can tell me a couple of things that are hard for me to see alone.”

So we went outside, Maureen got in her pickup, which was towing a large trailer, and I guided her around the barn to where Patches was lying in the sun.

The trailer had a thick electrical cable running from the truck, far more robust than the usual brake-light hook-up. I soon saw why.

Maureen left the diesel running and opened a panel on the side of the trailer. Inside were switches and a joystick. She flipped a switch, and the top of a box running the entire length of the trailer’s left side opened. She flipped another switch, and a metal contraption began to unfold itself from the box. It reminded me of an adult-sized version of an erector-set crane that my brother built when we were kids. After about two minutes of whirring and a couple of firm clicks, everything stopped. Then Maureen manipulated the joystick and a cable lowered itself from the top end of the contraption. The whole thing was shaped like an upside-down L, and the cable, with a hook on the end, was lowering itself toward Patches.

Maureen saw me gawking and said, over the whirring, “Two-ton hoist. I designed it and had it built especially for this purpose. Could you let me know when there’s about two feet of cable on the ground?”

I walked around to the other side of the trailer, where Patches was lying, and, when the cable had settled a couple of feet onto the ground, I raised my hand and clenched my fist—something I’d seen construction workers do. The cable stopped, and I saw Maureen digging into another box of some kind. She came up with long leather gloves and a small roll of wire, the kind you use to splice fences, and cutters. She also had some kind of wide strap draped over a shoulder.

With this gear, she went to work on Patches. First, she gathered his feet and wired them together—it reminded me of a slow, laborious version of what rodeo cowboys do to the calf’s feet after they rope it. After that she worked the strap under Patches’ neck, near his head, and used another piece of the wire to hook the ends of the strap together and to the wire binding the feet. Finally, she hooked the end of the cable to the wire wrapping the feet.

Now I was able to see that she had parked the trailer quite deliberately, with Patches on the side opposite the hoist and with his feet pointing away from the trailer. As the cable lifted him, it would raise his feet and roll him onto his back next to the trailer. From there it would be easy to lift him up and into the trailer itself.

Obviously, she had done this before—and, I realized, with the owner watching. The neck strap would prevent the horse’s head from flopping back and dragging his nose on the ground as he was lifted, something that could be upsetting to an owner.

She was back working switches and the joystick, and I walked over to talk.

“I’m curious about something.” As I talked, I was watching Patches being lowered into the trailer. “Amelia told me you have a crematory for these carcasses. That must have been a chore to get environmental permissions for. My husband tells me that every time the university wants to burn anything, it’s a nightmare of paperwork.”

There was a flash of the nervousness I’d seen before, but it was quickly suppressed with a laugh. “I thought all I’d be doing was having the equivalent of a heavy-duty barbeque. But, no, the county and the town considered it to be something else altogether. I don’t know about ‘nightmare,’ but it was really, really tedious getting the paperwork through. Fortunately, my clinic is on the east, or more like southeast, side of town, so I stipulated that I’d use the thing only when the winds are from the west or northwest, which they are a lot of the time. Also, I got the state on my side, because I made a deal with the highway department to help them dispose of big roadkill, like elk and deer.”

“And it’s not as if you’re incinerating toxic substances.”

“Right. There’s even very little smell, as hot as the furnace is. But...”

Maureen was interrupted by Amelia, who burst out of a door of the barn, carrying a horse blanket. It was fortunate that Patches was already inside the walls of the trailer. I don’t think she would have liked seeing him dangling there.

“Maureen! I’ve got a blanket here that I always used on Patches, and I’d like it to go with him, OK?”

“Of course. Is it all right for me to cover him with it in the trailer?”

“Please. It will make me feel lots better. Sorry I wasn’t up to helping. If it had been any of the horses but him...” And she started to sniffle again. “Sorry. I’m going back in the house.”

When she was gone, Maureen turned to me. “I’ll cover him up with the blanket, but I can’t burn it. It’s wool, but the dyes in it might violate my permit. That’s what I was going to say, that there’s not much rationality in the rules for the incineration business.”

I saw Maureen off toward the east and went back in the house. Amelia was on the phone.

“Oh, she just walked in the door. They must be finished out there. Annette? Phone call.” And she handed me the receiver.

“Trieri.”

“Annette, it’s Derek, and Rod Andersen’s on the line, too.”

“Hi, Derek. Rod, can you hear me? I don’t know how good the phone service is here, even if it is a land line.”

“I’m here, Annette. You’re in Creede?”

“Yes, accidentally learning how dead horses are dealt with. And talking with someone close to last week’s victim. Did you talk with the Governor?”

“Yes, and he understands like before, but that doesn’t lessen the political pressure on him or us.”

“At least he understands. I have no reason to think there won’t be another missing person soon, although we may not hear about it.” I wasn’t going to give anyone, let alone my boss, false hopes.

There was a big sigh, from Andersen, I knew. Derek wouldn’t do that in a conference call.

“Yeah, I figured that. And there’s no hint of who it might be?”

“Someone in southwest central Colorado, most likely someone relatively prominent in his community. Someone who beats his wife, probably, or something like that. But that’s about all I know.”

\* \* \*

“There’s something about a dead horse that’s just pathetic. Heartbreaking. Amelia was the one who was really hurting, so I sort of internalized my own feelings at the time. And I had the conference call with Denver to deal with. But it hit me on the way home. I cried from South Fork to Pagosa Springs.”

Hal looked up, concerned. “Crying over Wolf Creek Pass? Gee, I’m glad you made it home in one piece. Here, have another couple of raviolis.”

My mother used food as a tool for dispensing comfort, too. The fact that Hal does it is therefore doubly comforting to me—and he’s actually better at it, because he doesn’t try to make me feel guilty if I decline third or fourth helpings.

He had dinner waiting for me when I finally got home, and, after a shower and a glass of wine, I was beginning to feel whole again.

I had to smile at the memory, it was so out of character for me. “I took it slow. On the way up the east side, I stayed in the right-hand lane. I’m sure that there were plenty of those people who passed me wondering what the hell this woman in a CBI vehicle was bawling about. Probably figured I broke a nail or something.”

“It sounds like your day consisted of eliminating possibilities, instead of getting the goods on someone, though. This negative progress is helpful, but are you getting anywhere positive?” He was mopping up sauce with his garlic bread.

I stuck my tongue out at him. “No. Thanks for reminding me. But it’s funny. The more I eliminate the obvious things, the more something is nagging at me, at my subconscious, I guess. I just feel like there’s something I’m not noticing.”

“Well, the *Free Press* had an article today about bringing in a psychic, somebody named Sybil Starflower, I think it was. If anybody notices things, I bet she will.” He flashed an impish grin.

“Really? Cool! We need all the help we can get! And maybe she can tell me where I put those Kokopelli earrings you gave me. I can’t find ’em anywhere. Except she’ll probably charge extra for that. Might be cheaper just to buy a new pair.”

He snorted. “Cheaper and a lot more likely to produce results, I bet.”

“No doubt. So, what happened in your little corner of academia today?”

He looked thoughtful. “Things seem moving inevitably toward a strike of some kind, and the other deans are in a dither. Hmm. ‘Deans in a Dither.’ Sounds like a good title for a novel.”

“Right. Or a geezer rock band.”

“Yeah! They could play covers of old favorites. An acoustic version of ‘Stairway to Heaven,’ stuff like that.” He popped the last of the bread into his mouth. “Anyway, classes start tomorrow, and Bill O’Leary in SS&H and Jacques Ament in Fine Arts just don’t know what they’re going to do. But the rest of us who aren’t particularly worried about that are having fun with gossip. Alice is in her element, and I get the benefit of her connections. Bucky Thorndyke and Madge Glendon have quickly become an item.”

“Already? John mentioned yesterday that they’d been out over the weekend. I guess Bucky works fast.”

“Or she does. She’s not exactly a guy magnet, and he’s smart and rich. And, apparently, sensitive enough that she feels comfortable with him. They’ve spent most of the past couple of days together, it seems. I guess they cooked up some ad-hoc committee thing to try to resolve the issues surrounding the strike.”

“Er, not that I’ve given it too much thought, or anything, or that it’s really any of my business, but I guess I had this idea that Madge wasn’t attracted to men.”

“Indeed. So did just about everybody. That’s what’s been making the gossip so juicy. Are they ‘just friends’? Has Bucky successfully ‘converted’ her? Stay tuned. But, speaking of Madge, whatever happened about that conversation you had with her?”

“Oh, yeah. I didn’t tell you. It had to do with that fourth poem I was wondering about.” I filled him in on the poem’s author and how she and Madge were terrified because it had been used by the murderer.

“So the murderer got it off the WDL web site?”

“That’s what it looks like. And, of course, that means it could be just about anybody.”

“Well, now, not so fast there, pilgrim. Think about it. The internet is so huge, with so many zillions of web sites, that people seldom blunder into anything anymore. I mean, there’s that ‘I feel lucky’ option on Google, which, supposedly, takes you to sort-of-random places, but I bet even that is programmed somehow. Advertising fees, or something. People who see the Waddle web site probably have some connection to it, somehow. I’m not trying to implicate Madge, mind you. But it can’t be just anybody.” Hal is valuable for lots of things, and his computer expertise is something I consider to be a bonus.

“So, you mean it’s a Waddle member, or something?”

“I don’t know if they have official ‘members,’ beyond the action team people. But maybe they do. If it’s an official organization, I mean, a registered charity or something, maybe they take donations. Do you suppose that Madge would have a list?”

“If she did, do you suppose she would give it to me?”

He frowned. “Hmm. Not a couple of weeks ago, but maybe we’re dealing with a ‘new Madge’ now. And if it bothers her enough that the murderer got one of the poems from the Waddle web site, maybe she would. Would it hurt to ask?”

I considered that one for a minute. “Only if she says ‘no,’ and she warns everyone via the Waddle web site that I asked. That could tip off the murderer about what we know, and that would be another setback.”

“On top of all the innocent almost-suspects, you mean?”

“Innocent, I’m not sure. But certainly not-so-suspicious almost-suspects. Kristof von Stier was looking pretty circumstantial there, for a little while at least. But if he keeps himself in alibis for the next couple of days, I guess I’ll have to write him off. Thing is, I have to wait for something to happen, rather than make it happen. That’s tough.” I shrugged.

“Interesting. That’s almost exactly what John Martin said today about this strike business. He’s used to being in control, and having to wait for someone else to decide what to do is hard for him to stomach.” He laughed. “I suggested giving the adjuncts and TAs what they’re asking for, and he got all huffy. Talked about ‘principle’ and so on. He doesn’t seem to understand that the other side has more than mere principle motivating it.”

“Sounds like the opposite of my situation. I’m motivated by very real issues— I mean, it’s just not civilized for someone to be going around beheading folks. And the other side seems motivated by principle—that certain guys who abuse women need to be made examples of. If I could give the murderer what he wants, I would.”

“You said ‘him.’ You sure it’s a ‘he’?”

“Oh! I didn’t tell you. Jennifer Mason called me—remember her?—and I finally called her back. She works at the *Denver Post* now. A cub reporter, I guess you’d say. And she asked me exactly the same question. I disconnected instead of answering.”

“So?”

“So I’ve been assuming it’s a ‘he,’ because of what a couple of people have told me about how hard it is to decapitate someone. It takes quite a bit of strength, apparently, on top of the right equipment and the skill.”

“Hmm. Maybe. At least before the guillotine was invented, it did.”

There it was again, that nagging sensation in my subconscious.

\* \* \*

Wednesday morning, I was prepared for the usual avalanche of voice-and email that accumulates when I’m out of the office for any period of time. I went in early, hoping to have some time to myself to catch up before the rest of the staff arrived. Although Derek had passed along the more important voice messages when we had talked on Tuesday afternoon, there were some that he underestimated as well as several new ones. The one from Belinda Edwards, Gunnison County Medical Examiner and, as far as

I'd last seen, looker of moon eyes at Hinsdale County Sheriff Steven Phillips, appeared to be especially interesting. I knew she arrived at work early, so I called her first.

"Belinda? Annette Trieri in Durango, returning your call. How are things up your way?"

"Annette! Thanks for calling back. Things are as fine as you'd expect, I guess. Especially because I'm not the one the public seems to expect to clear this Burma Shave case. How's that going?"

"It's not, basically. I think we're all waiting for another shoe to drop, another abduction to happen." I was resigned to the probability at that point.

"The reason I called was to make sure that the tissue samples I sent you got there."

"Monday, yours and all the others, and I took them to the lab around noon. And my lab guy had done his homework. It didn't take much time at all for him to find stuff other than formalin and tissue. But he hasn't quite figured out what the other stuff is. Yet, or at least as of yesterday afternoon. But there's something there, and it's consistent across all four samples."

"What's he using? I mean, the analysis, what equipment is he using?"

"I don't know the details, but it's a whole bunch of things. He keeps talking about 'mass spec' when he refers to his most sensitive equipment. I think that's what his main gadget is." I hoped she would know what that meant so that she wouldn't ask too many technical questions.

"That'd be a mass spectrometer. Tell him to be sure to check out street drugs as well as standard anesthetics. Some street drugs were originally developed as tranquilizers or sedatives."

"I'm sure he'll check those, because he's been providing an anonymous screening service for students, to help keep bad stuff off the streets. So I expect he's got samples of just about every street drug under the sun. But what about the anesthetics? Are there lots of those?"

"Quite a few. But they're listed in the PDR, so he'll be able to recognize molecular weights and so on from that."

"Uh, 'PDR'?"

"Physicians' Desk Reference. Big book, or computer CD. It has lists of prescription and over-the-counter drugs, indications, counter-indications, formulas, everything about them. He's probably got one or can get one easily."

"Thanks, I'll give him a call. Anything else?"

"No, not really. Just good luck. Let me know if I can help somehow."

Whew, I thought to myself, we didn't talk about Sheriff Phillips. Good luck to her with that, but I really don't want to know.

Based on her suggestion, I called Gil Taylor, thinking I'd leave him a message. But he answered.

"Gil? Annette Trieri here. I thought you'd be asleep at home."

"Hi, Annette. I was. But I wasn't sleeping, so I came in early. And I think I've figured out at least one of these mystery drugs. PCP, phencyclidine. Also known as Angel Dust. Very minute quantities, though. That's why it took me so long."

"You said one of the drugs. So there are others? What next?"

"I'm going to get some PCP and make a calibration sample, then subtract it from the spectra like I did the formalin. And dose a pig sample like I did with valium, just to see if the results look like the

tissue samples. After that I'll tackle what's left. And I think I'll send you an intermediate bill. A big one." He yawned. "So, why did you call?"

"I called with a hot tip for you to check out anesthetics, hospital ones."

"Hey, that's an idea. I've almost eliminated street drugs. Who thought of it?"

"Medical examiner up in Gunnison. She sent us one of the sets of samples. She said they're all in the PDR."

"I'll get one and see what I can find. Thanks."

About that time, I heard my staff arriving, and I knew the day would really get started. It wouldn't be long before the morning call with Denver, a task that was already starting to get old. But first, all hell broke loose.

The receptionist, Sally Brigman, had no sooner stuck her head in my office to say "good morning" and "welcome back," when her phone set went nuts. I could see three blinking lights on my phone.

"I'll take number two," I hollered at her as she raced back down the hall.

"Trieri, Durango CBI."

"Annette Trieri? Gee, I'm impressed that you answer your own phone. This is Hank Allen, I'm the sheriff over in Saguache."

"Good morning, sheriff. We seem to be having a phone call overload just this minute, and I happened to grab you. Um, I sure hope you're calling me about stoned cattle."

"Stoned cattle? Huh? Oh, yeah." I heard a laugh. "Yeah, yesterday, we got a call from a rancher down towards Del Norte, said his steers are staggering around, like they're drunk. But they're also doing other things, rubbing against trees and fence posts and each other. There were even a couple on the ground, out cold. But I called him this morning already, and he says they're all fine. So, no, I'm afraid it's something else. Probably not something you want to hear."

"Let me guess. Missing person?"

"Yep. Mayor of Kharma, Sam Milstead. I just got off the phone with his wife, she was getting hysterical."

Sally was in the door to my office gesturing for my attention, so I asked Sheriff Allen to hang on a minute and covered the mouthpiece with my hand.

"Sorry, Annette, but I may have an emergency. There's a Gwen Milstead on the phone, she's pretty hysterical. Line three. And, just so you'll know, Director Andersen is on one." She looked exasperated, and at 8:00 in the morning, yet.

"Tell Rod I'll call him back shortly—tell him we have another missing persons report. And I'll take Ms. Milstead in just a second." I went back to the sheriff. "Uh, Hank—I hope I can call you Hank—Gwen Milstead is calling here, and I'm about to talk to her. What did you tell her? We should have our stories straight."

"I told her that we'd send someone out to talk with her and that I'd notify you."

"Could you send someone with domestic violence training?"

"Yeah, good plan. And is there anything else I should watch out for or do?"

"I'm afraid I don't know Saguache County very well. I think it's in the Valley, right? And up to the northwest? You got lots of back roads?"

“I think I can tell where you’re going. We should be alert for suspicious activity involving fence posts on Thursday night, right?”

“Yeah, and Friday morning be ready for the fun to begin. The press will descend on you like you’ve never seen.”

\* \* \*

“Ms. Milstead? This is Annette Trieri, I’m the director of the Durango CBI field office.”

“Oh, yes, my God I thought I’d never get through to you. My husband’s missing. You’ve got to find him!”

“When you called I was talking with Sheriff Hank Allen. He told me you called him.”

“Yes and he said to call you, that you’re handling missing persons. But you’re way over in Durango. How are you going to help me?” The pitch of her voice was rising as she spoke.

“Ms. Milstead. I need you to be as calm as you can be if I’m going to be able to help you at all. And Sheriff Allen will be sending someone over to talk with you in person. Because you’re upset, you may find it strange that we both, the deputy and I, will want to ask you similar questions. But this is how we get our information and make progress on investigations. OK? Now please try to calm down so we can talk.”

“Yes, yes, I understand. What can I tell you?”

“If your husband is ‘missing,’ that means to me that he’s not where you expect him to be and that you first discovered this at some particular time. Where was he supposed to be and when?” Sometimes, dealing with hysterical people works best by posing complicated questions to make them think. I had my fingers crossed in this case.

“I guess I see what you mean. I haven’t seen him since last night, yesterday evening about, oh, eight. But I expected him back by now, by this morning. So I guess he’s been missing for about twelve hours, in one sense.” She seemed a little more calm.

“It’s only eight in the morning. What makes you expect him back by now?”

“That’s the way it’s always worked in the past. We have a fight, he takes off, and he’s back around dawn.”

Even though Kharma is on the west side of the Sangre de Cristos, I took this to mean before seven, this time of year. They probably don’t see the sun itself until mid-morning or later, but it would get light early.

“So this is a pattern that’s changed in this case. Do you know where he goes for these nights when he takes off?”

“Yes and no. He’s got a hunting cabin up higher in the mountains—sometimes I think he goes up there. Sometimes he first hits a bar here in Kharma, the West Wind. Sometimes I have this feeling that he just sleeps in his pickup truck.”

“What makes you say that?”

“He leaves, I hear the door slam, and nothing else happens. I mean, the truck doesn’t start up or anything. Last night, it started up and left, though.”

“I see. Well, that makes sense. Don’t be offended please, but I need to know if he was drinking last night before he left.”

“Of course. I mean, he always does in the evening. It would be unusual if he didn’t.”

“You said you were fighting last night. Does this mean shouting and so on, or does it mean actual physical combat?” I was taking notes as fast as I could and making up questions as well. It was draining.

“I guess I don’t know quite what I should say. I don’t want to get him into trouble. Or me, either.”

“Ms. Milstead. You called your sheriff, and he said you were hysterical, but your husband is only an hour or so overdue. Why the fuss?”

“Well, you should know. Sheriff Allen said you’re the one doing the Burma Shave investigation.”

“Does this mean you think that your husband may be the next Burma Shave victim? Think about the trouble that implies versus the trouble you’re worried about with my question.”

“Oh. Good point. Well, see, our fights usually start out with his drinking and my asking him to stop. He pushes me around a little and I slap him sometimes. Stuff gets broken—I mean household stuff, not me or him. Used to be that these fights would end up with us, um, going to bed together to make up. But lately he’s been taking off.”

“OK. I need to ask a personal question. How old is he? Has he been having, uh, trouble performing in bed?”

“Only when he’s drinking too much, and, of course, that makes him drink more. That’s what happened last night.”

“Did you call the West Wind last night? I guess it’s a little early this morning, isn’t it?”

“I just went to bed last night. I mean, I assumed he’d be back by now, and we’d kiss and make up, like we usually do. He’s never been this late before.”

“And his truck is gone, you said.”

“That’s right. That’s why I thought maybe he’d gone up to his cabin. He’d never drive on the public roads when he’s drunk. But the road up to the cabin is one of those jeep roads where he couldn’t hurt anybody. You know?”

“Perhaps he got himself stuck, or had a flat or something. I’ll have the sheriff send someone up that way to look. And, like I said, there will be someone coming by to talk with you, maybe with the same questions. Please cooperate, because that’s the only way we’ll have a chance to help you.”

“I sure will. Do you think I’ll ever see Sam again? Alive, I mean?” The pitch of her voice was rising again.

“I hope so, Ms. Milstead. Just don’t *you* give up hope.”

\* \* \*

## Twelve

It looked like I ought to get to Kharma, and that, I knew, was a good hour past Alamosa, at the speed limit, at least. After I made my obligatory phone call to Rod Andersen in Denver, a three-hour drive wouldn’t get me there much before noon.

But that’s why Rod’s the boss, to make the hard decisions. I warned Derek to be ready to pick up the line and called Denver. It took only a few seconds to be put through.

“Rod? Sorry I had to put you off before. We had the Saguache County Sheriff on one line and a missing person’s wife on the other.”

“Who’s missing this time?”

“The Mayor of Kharma, Sam Milstead. And it sounds as if he fits the pattern, although his wife seems more interested in him than any of the others were about their husbands.”

“Kharma? Where’s that? Can’t place it.”

“Oh, I guess about five, ten miles north of the Great Sand Dunes, up in the foothills on the west side of the Sangres. Northeast of Alamosa. Has a reputation of being something of a New-Age hangout.”

“Saguache County, you said?”

“Right. We’ve added the fifth sheriff to the case, or at least we will be if this guy Milstead doesn’t turn up.”

“Damn. Well, maybe he’s a Democrat, and the Governor won’t mind so much.”

That was the last wisecrack I heard during the entire conversation.

\* \* \*

We talked about whether I should get over to Kharma sooner or later and decided the political sensitivities of the case dictated the sooner the better. I reminded Rod of the big spaces we have here in the southwest and the three-hour drive. He thought for a minute and suggested chartering a plane or a helicopter, and Derek finally had a chance to speak up.

“Director Andersen, I’m afraid we just don’t have the budget for something like that. We managed the extra expenses associated with the Schoenfield case, because most of them came in at the beginning of the year in July, and we’re expecting more this month. But chartering a helicopter, I don’t know how we can do it.”

“I’ll authorize it, and there will be some additional funds sent your way. Somehow. I’m certain that the Governor will provide what’s needed for this case.”

We looked into the matter and discovered we wouldn’t need a charter, because the State Patrol’s souped-up Bell Ranger was in Cortez on some kind of public relations tour. Sally and Derek made the necessary contacts, going over the heads of the State Patrol PR people, and I found that I needed to hustle to get ready for the trip to Kharma. Fortunately, I’d repacked my overnight bag—with enough for three days—from my trip to Pagosa Springs. Some time back I discovered the hard way that repacking is a priority task.

I’ve seen parts of Colorado from a small plane, and the views you get while flying a few thousand feet over the ground are truly remarkable. But you’re still looking out a little window. If you really want to see things, sitting in the cockpit of a helicopter is the way to go. It’s noisy, and turbulence can make the ride interesting, even exciting, but you just can’t beat the ability to see the scenery.

Like most helicopter pilots, State Patrol Sergeant Mike Wiegand learned to fly in the military—his service in the Marines was reflected in his haircut, the set of his jaw, and his square shoulders. When he took off his sunglasses and smiled at me with those deep blue eyes, I decided there are advantages to maturity—that little flutter behind my rib cage, I knew, wasn’t some kind of transcendental message.

On Derek’s suggestion, Sergeant Wiegand had arranged to pick me up in the parking lot of the mall across the highway from the CBI offices. It was still early enough that the lot was almost empty, and it

saved me the drive to the airport. It also set a tone that Rod wanted us to project, that we were pulling out all the stops for a high-priority case.

Sergeant Wiegand took the same route I'd used the day before, only several hundred feet higher. The valleys of the upper San Juan and the Rio Grande's south fork, divided by Wolf Creek Pass, are some of the most beautiful landscape in Colorado. I kept wishing I'd brought a camera.

Then, when we got past South Fork, we made a beeline for Kharma, straight across the San Luis Valley's pastures and fields, cutting diagonally across the grid-work of roads. I began to understand the reason for all of the potato trucks we'd seen on Highway 285 the week before, between Saguache and Monte Vista—there were irrigated, cultivated fields everywhere. As the east side of the valley approached, the wall of the Sangre de Cristo range loomed closer and ever higher, with the jagged ridges and mountain tops of the crest looking menacing above our flight level.

Sergeant Wiegand had given me a headset in Durango, so I'd been listening to all of the radio exchanges. It took a bit of negotiating to arrange a place to land in Kharma, and when he had one, he relayed the information to State Patrol Officer Candice Garcia. She was assigned to be my driver and State Patrol liaison for my time in Kharma. Because she had been the first person to interview Bonnie Scharmatz, about a month ago when the whole Burma Shave thing started, I thought she was an outstanding choice for the assignment. And it wouldn't hurt to have at my disposal a State Patrol car with emergency lights, siren, and driver trained in high-speed pursuit, I thought.

As we approached the landing area, a school yard, empty because school started after Labor Day, we didn't see Officer Garcia's car. Sergeant Wiegand took the opportunity to show me a little extra scenery, the crest of the Sangres. One of the most challenging high climbs in Colorado, the Crestone Needle, is just above the town, and we flew around it. I could tell that Wiegand was enjoying the opportunity to show off his toy—the high-altitude version of the Ranger was able to handle the thin air above 14,000 feet better than I was.

When we descended to the school yard, we saw Officer Garcia's car waiting, the dust from its arrival still settling. She had the good sense to remain inside, windows up, until the helicopter let me out and its little dust storm abated. With the rotor idling, I was able to dash to the car and shut myself in while staying almost clean. Wiegand revved the thing up and took off, and I was glad to have made it to the car—the dust was almost opaque, it was so thick.

Officer Candice Garcia surprised me—she was tiny, barely five feet tall, it appeared, with very small hands. But her handshake was like iron. I was glad that the car was one of those hot-rod State Patrol Ford Mustangs, with separately adjustable front bucket seats.

“Director Trieri, glad to meet you, and I'm double-glad to be involved with this case again. We've got to catch this guy.”

“And I'm glad you've been assigned to this, because I want to talk some more with Gwen Milstead. You're just the person to take the lead on that. Oh, and please call me Annette, at least when it's comfortable for you.”

“Will do, and I'm Candice. Where to first?”

“I don't know anything about Kharma, but I'd like to find a place called the West Wind Bar, or something like that. Maybe Lounge or Tavern, I don't know for sure. I expect it's in the phone book, though.”

“I think I drove by on my way into town, but I'm not sure it's open yet.”

“Even if it is, the people I want to talk to may not be there until a later shift, but let's check it out.” I looked at my watch and saw that it was not quite 11:00. “But, tell you what, it's possible that they don't

open until eleven, so why don't we take a turn around town first? I've never been here and I'd like to see how things are laid out."

She started the car, the big-block V-8 emitting a satisfying rumble, and rummaged in a folder beneath her feet before putting the car into gear.

"Here's a local map, with the Milstead residence marked." She handed me a folded piece of paper. "We're at the school on the right edge, about half-way down."

The map was a photocopied page from a detailed atlas of the region, and it showed the town streets as well as various jeep roads leading up into the Sangres.

"This is perfect. Gwen Milstead told me that her husband sometimes goes up to a hunting cabin of his, on one of these jeep roads. Maybe we can go up there and see if we can find him."

"Good plan, although we'll have to find another vehicle. This thing doesn't like being off pavement very much. Graded gravel works, but barely." She grinned. "But on pavement, it's quite the machine." She put the Mustang into drive and we eased out of the school yard.

\* \* \*

We took a turn around town before driving down the hill to the West Wind. Kharma is one of those intentionally funky places that doesn't have much in the way of zoning. As a result there are nicely kept homes with flower boxes and crystals hanging in the windows side-by-side with falling-down shacks, and yards that are someone's pride and joy next to old rusty cars on cement blocks. You have to really want to live in Kharma to put up with living in Kharma. I think they keep things the way they are to discourage developers.

It was a little after eleven when Candice pulled into the parking lot of the West Wind Tavern and Grill, as the sign said.

"These weren't here when I came by earlier." She was referring to a row of motorcycles, all parked with their front wheels cocked at the same angle. Most of them were Harley-Davidsons that had been modified in various ways, but there were a couple of Indians mixed in as well.

"I bet it's a bunch of retirees here for brunch. You know, the quiche crowd. I probably won't be long." I was getting out of the car as I said this.

"If you're not out in five, I'll be in." She was looking the place over with a suspicious eye. "At least come to the door and give me a wave, OK?" I nodded.

Inside, it was dark and smoky, and it smelled like tobacco and stale beer with more than a hint of Lysol. As I walked into the main room, the motorcycle crowd looked me over as if I were a cut of prime rib, and the bartender turned his back on me to polish some glasses. I didn't turn and wave to Candice.

"Excuse me." At the bar, being polite didn't seem to be the way to get the bartender's attention, so I walked around behind it and up to the guy polishing the glasses.

"Excuse me again. I need to ask you a couple of questions about a report of the mayor's disappearance."

He looked up, surprised to see me at such close quarters. "Hey, what the hell are you doing back here, lady? You can't come back here!"

"You were deliberately ignoring me, and that just won't do. Were you on shift yesterday evening?"

“What’s it to ya, lady. And get out from behind my bar!” He began to reach for a sawed-off baseball bat that was sitting under the counter.

I flashed my shield below the level of the bar, where only he could see it. “You really don’t want to do anything to make trouble, I promise. I’m only looking into this report about the mayor. I’m told he’s sort of a regular here, and you can help him by talking with me.”

“What’s the matter, Curley? Having trouble with the little lady?” A sneering fellow wearing a bandanna on his head and badly in need of a shave and a bath had taken a seat on a bar stool behind the bartender.

Curley, whose head was shaved, looked startled. “No problems, Mouse. What can I get ya?”

“I think maybe a little piece of pretty-girl tail would be nice. Only reason I can think of she’d come in here would be for a little action.” He ran his tongue, an amazingly long, gray-ish thing, around his lips in a most obscene fashion.

“You know, I believe in starting out with the polite approach. And I think it was going to work with Curley here. You, Mr. Mouse, weren’t invited into the conversation, and I suggest you take your previous seat with your friends.” I could feel my Glock nestled comfortably in the small of my back, and it was a most reassuring feeling.

“You know, for a middle-aged broad, you’re feisty. Me and my buddies like ’em feisty. Wonder how many of us you can take on? Last girl, she serviced all of us. Little sloppy, there, toward the end, but she managed. How do you like it, baby? Two at once? Three?” By this time, several of Mouse’s friends had drifted to sit beside him at the bar.

I looked at the bartender. “Curley, I’m sorry to have to do this. I’ll try to minimize the damage, I promise. Sit, now!”

I reached under the back of my jacket, grabbed my Glock, and put a round through the ceiling. I’d noticed that the building had only a single story with no windows on the ends of the attic, so it seemed safe enough.

“Now, there are fourteen more rounds in this thing, and I’m very, very good with it. If any of you gentlemen so much as twitches, you’ll find out just how good. You, Mr. Mouse, and your friends here at the bar need to be especially careful. I’d like to see your hands on the bar, now!”

I’d started with Voice of Authority level one and finished with level two. But only a couple of the guys at the bar had their hands showing.

Then from the doorway, there was the unmistakable sound of a 12-gauge Remington being pumped. “She said *now*, gentlemen!”

Candice used her version of Voice level three, and it worked to perfection. Seven pairs of hands were sitting palms-down on the bar, fingers spread, and no one else was moving.

“You can probably stand up now, Curley. And if you know of some way to make these guys behave, now would be a good time to roll it out. Otherwise, well, I think maybe Officer Garcia over there by the door is just itching to improve the decor in here. Were you here last night? Were any of these guys?”

Curley scanned the crowd nervously. “Yes, ma’am, and some of them, ma’am.”

“You work long shifts, Curley. I hope you get overtime. Do you suppose there’s a way to have the guys who were in here last night move over to one side of the room? I’d like to ask them some questions. Non-threatening questions so I can try to help Sam, whatever’s happened to him, although I’m not sure they’ll believe me.”

“Lady, I sure hope you and your cop friend like it rough. Me and my pals are gonna have to show you just what kind of good times a babe can have with real men.” Mouse was positively leering.

There was an icepick next to the bin with the cubes, so I shifted my Glock to my left hand, grabbed the icepick with my right, and stuck it into the top of the bar, just half-way between Mouse’s right index and middle fingers. He was watching the barrel of the Glock, pointed at his nose as it was, and didn’t see the icepick until it was stuck there, about a half-inch deep into the surface of the bar. Then he flinched and his right hand began to shake a little.

“Mr. Mouse, please. I just can’t believe that even slime like you thinks that this type of language works as a pick-up line. That means you’re deliberately being insulting. And, really, it’s most rude, and I’m getting tired of it. Next comment like that and I’ll just pin your hand to the bar while I figure out exactly which charges to file. Now, Curley, got any answers for me?”

Curley, whose bald head was white all over, had his eyes on the icepick.

“Uh, well, ma’am, uh, I suppose I could ask the fellas who were in here last night to move over to the right side of the room here.” He was waving his hand in a general way, but no one moved.

Candice stomped her left foot, shod in a cowboy boot, and it made a surprisingly loud thunk for a woman of her size. “You heard the man, anyone who was in here last night move over by the juke box!”

They must have been afraid to move until her command, because about half of the crowd moved off in that direction and sat back down, hands on the table tops. I noticed that Mouse was looking at the icepick and chewing his lip.

“Mr. Mouse, were you in here last night? If so, please join your friends.” I tried to be inviting, rather than commanding, and he complied, along with three others who had been seated at the bar. I yanked the icepick loose and put it away.

“Now, gentlemen, listen up! All I want to know is whether Mayor Sam Milstead was in here last night. Anyone who saw him please raise a hand.” Curley and five others raised hands.

“Thank you! Maybe this will be easier than any of you expect. Curley, was he with anyone?” Curley shook his head. “Did he leave alone?” Curley nodded. “When?”

“Well, ma’am, I think it was around eleven last night, just after he got a phone call. On his cell phone.”

\* \* \*

“Annette, I hope it was OK that I butted in like that. I heard the shot and thought you needed backup.” Candice, behind the wheel of the Mustang, was working her way toward the Milstead home.

“It was perfect, Candice. I really didn’t want to have to shoot any of those bozos, and you and your Remington helped a lot. Really. And we got the information we were looking for, although there’s some cell phone company records that will need to be subpoenaed. This is the first really useful information we’ve had, in any of these cases. And we should check to see if any of the other victims had cell phones as well.” I made yet another mental note to myself.

“I really didn’t want to have to fire that damned thing. It hurts my shoulder. But I figured it might get some attention, just pumping it like that.” She was smiling.

The Milstead house was one of the ones you wouldn’t want to live next to. It was run down, with a wheel-less pickup truck in the yard, and there were several goats wandering around on the bare dirt.

Their odor was almost overpowering. A Saguache County car was sitting in front of the house, so I called Sheriff Hank Allen.

“Hank? Annette Trieri. I flew over to Kharma and I’m sitting outside the Milstead residence. One of your cars is here.”

“You flew over? What are you, Superwoman? Damn! Let’s see, that car will be Linda Forbes, the deputy I sent to talk to Gwen Milstead. Linda’s our resident domestic violence expert.”

“Hmm. I don’t really want to interrupt her. I mean, it wouldn’t be polite, horning in on her show. And it might also upset her flow, bias some of the answers she’s getting.”

“Since when does the CBI worry about stuff like that?”

“Hank, I’m finding out that I do things differently from some of my colleagues. I hope you haven’t had the same experience with us that Scott Lister up in Gunnison has.”

“Scott’s more thin-skinned than me. He takes stuff too personally.” His answer also told me that he had been burned by my organization.

“Oh. Well, listen. I was assigned to this Burma Shave thing by the Governor to coordinate the efforts of the various counties involved at the time, two weeks ago when it was only three counties. Now that it’s five, five counties with victims but two more if you count where the victims resided, I figure that coordination is needed more than ever. But I want you and your fellow sheriffs to call the shots as you see fit, and you also need to get the credit for whatever turns up. Right?”

“That’s what Scott told me you’re doing. So I’m happy. And I don’t think it’ll be a problem if you interrupt Linda.”

“Actually, there’s something else that needs doing. We need to get up to this hunting cabin where Milstead’s wife said he goes sometimes, to see if he’s there. But the car I’ve got isn’t equipped for that. Oh. And we got a tip about a phone call that Milstead got last night, when he was in the West Wind Tavern up here. He left right after the call.”

“The West Wind? I’ve been trying to close that place down for years. It’s not the kind of dive I want in my county. If the call was to the bar, I guess I don’t know if there are records of it, though.”

“It was to Sam’s cell phone, I was told. Would you like me to put the CBI onto finding the records?” I thought he might welcome the help, and he did.

“And as to a car, if you flew to Kharma somehow and now have your own car, I’m confused. But you can borrow Linda’s SUV if you want. I’ll call her and ask her to meet you outside. That won’t be too much of an interruption, I expect.”

“We also need to know which jeep road to start up. Gwen Milstead may know that.”

But we really didn’t need the SUV. After meeting outside the Milstead house with Linda Forbes, and then going in to be introduced to Gwen Milstead at Linda’s suggestion—she thought it would be comforting to Gwen to know that interest in the case was high—Candice and I drove in it to the beginning of the jeep road that Gwen had indicated on the map. About ten yards up the road was a battered, red Chevy pickup truck with the vanity plate “MLSTD,” and just beyond that was a tree across the road. It appeared that the tree was a blow-down, as the base was snapped off rather than sawed.

Candice and I, it seemed, were going for a hike.

First, we went back to the Milsteads to get the Mustang back and to get an estimate of just how far up the road the cabin was. When Gwen told us it took about an hour in the truck, Candice and I looked at each other and at our shoes and decided not to walk. Even though I was wearing slacks, my penny

loafers were only a slight advantage over her cowboy boots for walking, and neither would handle the kind of hike we knew was waiting for us.

Gwen was delighted to hear that her husband's pickup truck was sitting at the bottom of the jeep road, but I tried to quell what could be false hopes. The truck was empty, so it might be that Milstead had started walking, but there was still the phone call to be reckoned with. I didn't tell Gwen about that.

"Gwen, if he's the mayor, there must be a town public-works department, or something. Could we get them to remove the tree so someone can drive up there and see if Sam's at his cabin?"

"Public works? Oh, I see. Well, we call Sam the 'mayor' around here, but, see, it's sort of a joke. There really isn't a mayor or real town government here. We get the full-time residents together every now and then to decide things, but it's government by consensus, more or less. I'm sure you've noticed that the streets are in bad shape. Trash pickup is done by subscription—a couple of guys with trucks go around and do it for folks who pay for it. I guess Slim, one of the trash guys, probably could remove the tree, although he'll charge for it."

"Why is Sam called the mayor?"

"At those town meetings, he sometimes takes charge. He has this loud voice that carries, so when someone gets out of line, as he sees it, at least, he shouts them down. So people started calling him the mayor behind his back. Of course he found out about it eventually, and now he likes it. It gives him an excuse to swagger around town and order people around. Mostly they ignore him. But his reputation has gotten around, and all over this part of the Valley, down in Hooper and Moffat and even in Alamosa, they think of Sam as the Mayor of Kharma."

"So, how is Sam employed?"

"He works for the school district. Used to drive a school bus, but his drinking got in the way of that. So now he drives the snow plow. Usually he's sober in the morning when the roads need plowing. The school district gets some of the streets plowed so they can pick up the kids. Otherwise, it probably wouldn't get done. And he's also the janitor at the elementary school here in town. I manage to help out with a little income from my goats. Except for the vet bills, they're nearly self-sufficient, and I sell the milk to a guy who makes cheese and yogurt."

She was painting a picture for me that was consistent with the Burma Shave murderer's choice of victims—someone relatively prominent in the community who was, to put it kindly, difficult. Fights at home, chronic drinking, shouting down people at town meetings, hanging out at a biker bar—these all fit with what the murderer seemed to judge to be the qualities of a jerk.

"I guess just one more question from me, Ms. Milstead. You called the Saguache County Sheriff's Office this morning, right? Is this because there isn't a town marshal?" That seemed to fit with the local anarchy, but I wanted to be sure.

"Right. The issue of incorporating into a real town has come up several times, but it always gets defeated in meetings. Ever since the local new-agers forced the vote on changing the name years ago, from the old mining town name of Dry Shaft to Kharma, ever since then Sam's been going to the meetings to keep things from changing any more. He's a big guy, and so he shouts people down and intimidates them into backing off their ideas. But the idea of incorporating is gaining momentum, and one of these days it'll probably move ahead. And maybe we can get the streets fixed and hire a town marshal." She shrugged.

Maybe, I thought, the next town meeting will be the one where it actually passes. It's looking as if Sam won't be there.

\* \* \*

Slim the trash guy allowed as to how making the two saw cuts necessary to re-open the jeep road, plus hauling out the ten-foot section of tree, would cost \$150 if he could keep the log—an obvious case of highway robbery, but I didn't want to take the time to get bids. The CBI financial officer wouldn't approve, I knew, but I agreed to pay it anyway. I'd figure out how to get petty cash to reimburse me later. Candice and I saw him get to work, and we went off in search of lunch.

Fortunately for us, the West Wind Tavern and Grill wasn't the only place in town offering food. If the West Wind represented one aspect of the town's culture—bikers and other guys who liked to spit instead of bathe—the Dream-catcher Diner represented the other, vegetarian offerings and faux-spiritual decor. I expected to see salads made with free-range lettuce on the menu, but all they offered in that vein was goat cheese topping made from the milk of free-range goats. The goats I'd seen ranging about in the Milstead yard hadn't looked so free to me, though.

I called Sheriff Hank Allen again to update him and see if he wanted his people to go search the cabin, and he jumped on the chance. He had suspected for some time that there was something strange going on up there, possibly a meth lab, and this gave him the excuse he needed to check it out.

With all that settled, Candice and I had a chance to eat and talk in relative peace. I wanted to find out from her more about her domestic violence sensitivity training and what she had learned from interviewing Bonnie Scharmatz.

“The basic thing is that we emphasize, carefully, the idea that there's nothing to be ashamed of and that it's not the victim's fault. If your husband knocks you around, it's his problem, his fault, his mistake, and he needs to be the one to change. But the problem in the Valley is that there's so much poverty, people living on the margin, that most women in situations like that are totally dependent on their men. Welfare is their only alternative. And people are proud, too proud to want to go that route.” She was trying various toppings on individual bites of her grilled veggie-burger (made locally from organic vegetables who were spared unnecessary suffering, the menu had said), and so far catsup, mustard, and, strange as it was that they had it, A-1 Steak Sauce had failed her standards.

“Frank Scharmatz, of course, was a high-school teacher, so he had both a paycheck and benefits. Was Bonnie in this dependency mode?”

“Y'know? It was funny. She didn't seem worried about her future. Maybe Frank had life insurance through the teachers' union, or something. And she has those ponies. But when I talked with her, she didn't seem to be grieving or even surprised. She seemed relieved, or...or maybe *complete*, somehow. As if something she was expecting had finally happened.”

“Strange. That's the impression I got from Sarah Robinson, too—she's victim number two's wife. Not surprised or in shock or anything, and definitely not grieving. But not trying to hide anything, either. Just matter of fact about the whole thing.” My salad was actually quite good, and, based on the crumbles of cheese, Gwen Milstead's goats seemed to produce fine milk despite their confinement.

“‘Matter of fact.’ Right. I guess I can understand it—if you're trapped in a relationship without love, one that's even dangerous on occasion, and you don't feel too dependent, any way out would be a relief. You'd probably not celebrate, but you'd not be sad, either. Except that's not what they taught us to deal with in the training. So I kind of winged it with Bonnie.”

“It seems a little different with Gwen Milstead. She was frantic on the phone early this morning, expressing the kind of worry that you might expect. Although I have to say that it was a little strange that she was nearly hysterical when her husband was only a couple of hours later than his usual pattern.”

“With these abductions and murders happening each week, people are a little on edge.” She had finally settled on the side of dressing I’d offered her. I don’t really like bleu cheese that much, so I just put lemon juice on my salad. Besides, I recalled from the menu that it had touted “bleu goat cheese dressing,” and I didn’t remember any bleu goats in the Milstead yard. But Candice liked it.

“I wonder if that applies extra to people who might, subconsciously at least, kind of wish victimhood on someone? If Gwen falls into that category, she fits with the other wives. Hmm. Although I guess that my husband would say that our sample is rather small.”

“Huh?”

“Hal Weathers, my husband. Hal’s on the faculty at Frémont State in Durango, he’s Dean of Natural Sciences, in fact. And he’s always telling me that trying to use statistics on small samples, meaning small groups of numbers or whatever, is always risky. It’s like flipping coins. They don’t always alternate, heads-tails-heads-tails. Sometimes there’s a run of one or another. It takes a big sample, he told me but I forget, something like a hundred flips, before the half-and-half distribution stabilizes. So with only three wives, one of whom is a girlfriend, we’re dealing with a small sample. But they’ve all behaved nearly the same. And the other victim’s closest woman relative, I mean victim number three, Hollis Henry and his daughter Toni, well, she had a better reason than the others to wish her father dead.”

“I’ve been reading your summaries. I’m sure glad that didn’t happen to me when I was a teenager. I had the boys in the neighborhood after me, but not my Dad.”

“Me, too. That would have been truly a nightmare. But this business with the wives and significant others, girlfriends, daughters, and so on, this is interesting. Gwen Milstead is the only one who called in the missing persons report herself. The others were either reported by someone else entirely or not reported at all.” I summarized the puzzle of this for her.

“Interesting. Have you talked with many people about it? It’s almost as if Gwen got instructions to break the pattern, or something.”

“Candice, I never thought of that. I wonder... Well, it’s still the small sample problem. Maybe it’s just a coincidence.” I smiled. “But, of course, we cops are...”

“...not supposed to believe in coincidences.” We said it together and wound up laughing.

But then the next logical thought popped into my head. “That implies some kind of almost-conspiracy, where these wives and so on knew what was happening to the victims. In advance, or at least in real time.”

“Conspiracies are hard to believe in, because the secrecy needed is almost never possible. But these people all have their motivations. And what we’ve been talking about fits, their matter-of-fact reactions, for example.” Candice cocked her head sideways. “Could it be?”

“Hard to believe, as you said. But, look, we’ve got heads impaled on fence posts. Lots of things in this case are hard to believe.”

\* \* \*

## Thirteen

Having a driver is wonderful, especially one as skilled and smart as Candice. It lets you get around while accomplishing other things. On the way to lunch, I'd called Derek Petersen and started the process of checking cell phone records to see who called Sam Milstead Tuesday evening. And after lunch, I called Hal to let him know where I was and that I might not be home for dinner. He was, as always, concerned about my welfare.

"You're where? Kharma? Got a place to stay?"

"I don't know if I'll need to be here overnight. If the sheriff's guys don't find our missing person up at his hunting cabin, I expect that I'll need to go over to Saguache, to the sheriff's office. He'll want some ideas about what to watch for on Thursday night."

"But you'll be home before then?"

"That's the plan, but you never know. I think we'll get some points for flying over here and using a State Patrol helicopter to do it. And for commandeering a State Patrol car with driver to get me around." I winked at Candice. "I mean, we'll get points for effort and all that. And we've got an interesting lead, the first one we've had, really, that may give us some information. But I would like to get home this evening, or tomorrow, if possible."

"I'll leave a light on for you."

"How's the first day of classes going?"

"Pretty smoothly. The strike didn't come off, partly because of that effort Bucky and Madge put together. They persuaded the adjunct and TA leadership that negotiations with the administration are making progress. And somehow they persuaded them as well that there's no faculty-administration conspiracy to hornswoggle them. So things are working today."

"Say. Speaking of conspiracies, Candice, that is, Officer Candice Garcia, she's my driver, we were talking about this case and how all the wives of the victims, and the girlfriends, they all seem kind of matter-of-fact about the whole thing. Not upset like you'd think. Almost like a conspiracy."

"But that means they'd have to have been communicating with each other before some of the killings, right?"

"That's what a conspiracy is, I guess, communications." Where, I wondered, was he going with this?

"And they live some distance apart, spread all over this part of the state. So most likely they would have been communicating by phone. Hmm. Unless there's also some kind of internet chat room. I mean, by US Mail doesn't seem likely in this day and age. And you'd think there would be at least some phone calls."

"Sounds as if you're suggesting that I check the phone records of all of the people close to the killings." Why, I wondered to myself, weren't we doing this already? Trieri, sometimes you're a dolt.

"The long distance records, and cellular calls. But most of the calls between places would be long distance, I guess. Anyway, that would provide a way to verify, or disprove, your conspiracy theory."

So I called Derek Petersen again and had him start the process of checking phone records on every person I could think of who was connected with the victims. Some of the records would be hard to get, but some would be easy. We had the Governor on our side, and his political clout, I knew, could be useful if judges needed leaning on.

"Candice, I guess we're going to check on the possible conspiracy. At least maybe that'll put to rest one of the things that's been nagging me." I was going to continue, but my phone chirped for attention.

“Trieri, CBI”

“Hi, Annette, Hank Allen. My guys made it up to Sam Milstead’s hunting cabin, and there’s no sign he’s been here recently.”

“Anything at all of interest?”

“Not at Sam’s cabin. We used the missing persons excuse to check out a couple of other places in the area, though, up that same road, and one of them sure looks like a meth lab. We’ll be going in there when we get a warrant. So it wasn’t a complete wild goose chase.”

“That’s something, at least. Are you going to keep Gwen Milstead up to date on what you didn’t find?”

“Yeah, I’ll have Linda do it, she’s still there with her. What’s your next move?”

“I thought I’d head over your way. Maybe one of the leads we’re pursuing will turn something up, but there’s nothing I can do about that, others are working on it. Seems like a good thing for me to do would be to look at some of your detailed maps of the county and see if any obvious places leap out at me. Places where a head might turn up Friday morning.”

“So, if you’re still in Kharma, I’ll see you in about an hour or so.”

“Maybe less. We’ll see what Officer Garcia can make this car do.”

“Oh. One of those State Patrol speed runs, eh? I’ll warn my guys on enforcement to cut you some slack.” He laughed. “But be sure to drive carefully in Saguache County.”

Candice had overheard my half of the conversation, so she guessed that our destination was changing.

“Sounds like we don’t need to head up to that jeep road, huh?”

“No, they didn’t find anyone up there. They do have some suspicions about another cabin though, something about a meth lab. But they’re going to get a warrant for that, and it’s not really our problem. You probably heard me talking about going over to Saguache.”

“That’s what you meant. And it sounded like you don’t want to waste time.”

“Oh, I can’t justify it as an emergency. But it seems like the roads can be empty around here. And they’re sure straight.”

She eased out of town and down to the flats of the Valley, and then she turned on her lights and put on some speed. After we reached State Road 17, a short-cut for folks north-bound from Alamosa, she let the car run, and when there wasn’t traffic we doubled the speed limit. At Moffat, she turned west, onto the county road toward Saguache, and we had to take it easier. The road followed section lines, and it seemed as if almost every mile there was a right-angle curve. Candace got into a rhythm of braking, turning, and accelerating; braking, turning, and accelerating, while I held on.

Then, coming out of a left-hand turn, she accelerated as usual but braked early and hard, coming to a stop next to a pair of men working at setting fence posts along-side the road. One guy was operating a small auger mounted on the back of a tractor, and the other was pounding on a post about 50 feet away, using one of those cylindrical fence-post setters.

“I don’t think this means anything, Annette, but what do you think?”

“They’re the right kind of posts, but everyone uses those. Thing is, these are set like they’re really putting in a fence. Closer together than the 200 yards or so that our perp uses. Also, it looks like they’re back at the fence line, not in the ditch.”

It must have been that the State Patrol Mustang in the middle of the road with its emergency lights ablaze was distracting, because the two had stopped what they were doing to watch us. I couldn't imagine why.

It didn't take long for the guy on the tractor to climb down and walk toward the car, in the direction of my window.

"Want me to just go?" Candice looked ready to punch the pedal.

"Oh, hell, I guess I should talk to him. Wouldn't be polite to just zoom off. Don't know quite what to say, though. Hope I can keep a straight face." I rolled down my window.

"Help you, officers?" He was around sixty, or long years working out in the sun made him look it, at least.

"Well, yes, Mr...?"

"Gilchrist, Lendon Gilchrist. Got a ranch over yonder." He twitched his head to the northeast.

"Mr. Gilchrist, if you've been following the news, you'll know that we in law enforcement are taking special interest in new fence post placements these days."

"Huh?" He looked confused for a few seconds, and finally enlightenment dawned. "Oh, yeah, geez..."

"And even though it's only Wednesday, we're just paying attention to these things, you know?"

"You don't think..."

"No, I guess I don't. Looks like you're making a real fence instead of sign-posts. But maybe you can tell me something. I notice you're drilling holes for these posts, then he's pounding them in. That must make it easier for him. But how hard would it be for him if you weren't drilling the holes?"

"Harder, some. Ground here isn't too bad, so he could do it. Mainly, I'm just laying the line, so he'll put 'em in a straight row the right distance apart."

"Ah. I see. Well, thanks and have a good day, Mr. Gilchrist." Candice took the hint, and we roared off.

\* \* \*

We were still laughing about it when we arrived at the Saguache County Sheriff's Department. Candice pulled into a visitor's parking space, and, just as I opened my door, my cell phone started chirping.

"Trieri, CBI."

"Annette? Derek. Listen, got a minute? I've got some results for you on the backgrounds of our victims. Also, another little tidbit. The Berensons lost von Stier last night."

"Last night? Is he still missing?"

"Hasn't returned to his shop, which they have staked out."

"That's interesting. I wonder when he'll turn up. If he does turn up alive, I wonder if he'll have an alibi for last night. So, anyway, what about the victims?"

"Results came back just as I got all those phone traces started. Interesting. All sorts of stuff about prior jobs, schools, and so on. And it seems that three of our victims to date were part of a Colorado National Guard outfit that was deployed to Kuwait during the Gulf War in 1991, some transportation

detachment out of Camp George West over in Golden. And while they were there, they got in some trouble, our victims and two other guys, an altercation involving some of the locals, local women.”

“Let me guess. Even though, as I understand it, women in Kuwait are not sheltered quite as much as in Saudi Arabia, they’re still treated the same way, for the most part, at least they were back then. So this altercation was a big deal, probably, huh?”

“Especially because one of the women was the daughter of a local big shot, a deputy minister in the government, which means he’s related to the royal family. Our guys appeared in a military court and got off, though.”

“You said three of the victims?”

“Right. Scharmatz, Henry, and Whiler. Along with two others, one who still lives here in Colorado and another guy who seems to have disappeared completely.”

“The other Colorado guy wouldn’t be Sam Milstead, would it?”

“No, as a matter of fact, it’s not. It’s some guy named Roland Endsley. He has a Fort Garland address.” Fort Garland, a hamlet about 25 miles east of Alamosa, was in yet another county, to the best of my recollection.

“Hmm. Well, first, we need to see if he needs protection.”

“Unless we want to use him as bait.”

“Oh. Hadn’t thought of that. Tell me about the altercation.” I wanted to stall for time to think.

“They were accused of kidnapping and raping three Kuwaiti women, girls, really, they were in their teens, and leaving them in the desert. I guess they underestimated how tough the girls were, though, because they walked home. But our guys got off on a kind of technicality, because the victims didn’t appear in court to identify them. Or their families wouldn’t let them, or something. And here’s the best part. Guess who their military lawyer was?”

“Oh, shit, don’t tell me.”

“Yep. Captain Martin Robinson, Army Judge Advocate General’s office, in Kuwait with a National Guard unit from Washington DC.”

“That tears it—this Roland Endsley guy really needs our help. Get the State Patrol to his place right away, will you? I know, I know, we’ll miss the opportunity to use him to catch our perp, but protecting him is more important.”

“You’re the boss, Annette.”

“How do you suppose Sam Milstead fits into this?” I wondered if Candice and I had trucked all the way to Saguache for nothing.

“Maybe he doesn’t. Or maybe there’s some other connection, I don’t know. What about von Stier?”

“All I can say is that he better have proof he wasn’t anywhere near either Kharma or Fort Garland last night. I mean, if one of the Kuwaiti victims was the daughter of some important guy over there, he might have put out a contract on her rapists or something, offered a bounty. Given his background, our friend von Stier would seem to me to be a capable contractor, no?”

“I was thinking the same thing, Annette. I mean, you’ve talked about how von Stier was looking less and less like a suspect, but this changes things.”

“Sure does. Combined with the fact that he had direct or indirect connections to all four victims to date, it *really* changes things. So. You’re going to send the Patrol to check out and protect this Endsley guy. How long do you think our phone traces will take?”

“End of the day, early tomorrow. Are they still relevant?”

“Absolutely. If von Stier is our guy, it would make it much easier for him if all the wives and girlfriends and so on were helpfully conspiring. It’d make it easier for anyone, for that matter. Maybe he’s even sharing some of the bounty with them. I’m a little puzzled why Bonnie Scharmatz isn’t a little more worried about money, for example. And all of these women, all of them except Gwen Milstead, they’ve all been so, unsurprised. So matter of fact.”

“I’ll call you as soon as I have something.”

“Right. And, listen, is there a phone number for this Endsley guy?”

He gave it to me and I punched it up immediately.

“Hello?”

“I need to speak with Mr. Roland Endsley, please.” I had my fingers crossed.

“Sorry, I’m afraid Rollie’s not here. Can I tell him who called?”

“This is Annette Trieri, I’m the Director of the CBI Field office in southern Colorado.” I decided on the fly that Durango was too far from Fort Garland to make sense to Ms. Endsley. “Who am I speaking with, please?”

“CBI? What’s that?”

“Colorado Bureau of Investigation, ma’am. We’re the investigating arm of the State Police.” Sometimes simplification is best, even if it’s a little inaccurate.

“Oh! Well, I’m Nedra Endsley, Rollie’s wife. Can I help you?”

“I need to speak with Mr. Endsley as soon as possible. Do you know where I can reach him?”

“Well, he left yesterday morning on a three-day business trip. I don’t expect him back until tomorrow night. Um, I think today he’ll be in the middle Arkansas Valley, Salida and Buena Vista. Tomorrow he comes back down through the Valley, hits all the towns here.”

“Do you know where he’s staying? And, if I can ask, what is his business?”

“He’s a feed company rep. Takes orders from feed stores and sets up big deliveries. He never knows in advance where he’s staying, so he always calls me when he finds a place. What’s all this about, anyway?”

“Mrs. Endsley, I don’t want to alarm you, but I’m afraid I have to. If you’ve been reading the papers, you’ve heard about these Burma Shave Murders. And we have reason to suspect that your husband may be the next target.” I didn’t know quite what reaction to expect, but my conversation with Derek about a possible conspiracy had put me on the alert. Still, she surprised me, by laughing.

“What!? Oh, that’s just nuts. Why would anyone want to hurt Rollie?”

I decided to ignore that. “Mrs. Endsley, I’m going to come to visit you, and we can talk about that when I get there. Will you be home today?”

“Oh, sure. I don’t go anywhere when Rollie is out of town. I have to stay here and do the chores, feed the stock and so on.”

“I’ll be seeing you later this afternoon, then.” And I went looking for Candice, who had disappeared.

\* \* \*

I finally found Candice by using the undignified expedient of looking at feet under the stall doors in the ladies’ room—her black snakeskin boots gave her away.

While looking for her, I called Derek, filled him in on the itinerary of Roland Endsley, and had him call off the State Patrol protection in Fort Garland. Instead, I had him run Endsley’s car registration and put out a quiet notification to the Chaffee County Sheriff. I also had him run von Stier’s registration and put out a not-so-quiet notification on him.

After a brief meeting with Hank Allen, where I disappointed him by telling him that we weren’t going to be focusing on Sam Milstead and cheered him up by telling him why, Candice and I hit the road for Fort Garland, retracing some of our earlier route.

Along the way, we discovered that Lendon Gilchrist and his helper had called it a day without putting in any many more posts. After negotiating the county road zig-zags, we got back on State Highway 17, southbound, and Candice let the car run. There wasn’t any real emergency, but the distance involved and the fact that it was already mid-afternoon motivated us to hurry. I think we both wanted to get home that evening.

Although the San Luis Valley is big and empty, it’s also flat and open, so cell phone reception is reasonably good. As we approached Alamosa, I decided it was solid enough to try the afternoon conference call with Denver, so I called Derek again. I figured he would be able to patch together a conference call easier than I could.

By the time Candice and I passed the hot springs pool on the north side of Alamosa, Derek and I were bringing Rod Andersen up to speed on the latest information.

“So, you’re telling me, I guess, that you think this week’s victim will be this Roland Endsley guy?” Rod instantly understood the implications of the other victims’ association during the Gulf War.

“Unless we find him first, although it may already be too late. As I said, he’s been out of touch for a while. I’m on my way to see his wife now, and we should be there in a half hour or so. Maybe he’s called her this afternoon, but I’m not holding my breath.”

“But it sounds like that means Endsley will be the last victim.” Rod’s hopeful tone, I thought, was nearly desperate.

Derek jumped in. “That’s our hope, Director Andersen. You see, our current theory is that these serial murders represent a vendetta of some kind, possibly financed by someone in Kuwait, a member of one of the victims’ families. I’m leaning toward the idea that all the showmanship with the heads is just a deliberate attempt to mislead us.”

“And you’re back to suspecting this von Stier character.”

“Right, Rod.” Derek and I were taking turns, and it was mine. “Not only does he have the skills and background to be a hit man, but he’s broken an agreement we made by disappearing. I’ve got the Chaffee County authorities on the lookout for him and Endsley both.”

“So what am I supposed to tell the Governor?”

“I’m afraid that we may not be able to stop one more of these hideous killings—it may have already happened, in fact. But what we’re hoping is that that will be the last one.” Derek sounded resigned to the inevitable, yet hopeful, somehow.

“And you said there was another guy involved in the incident in Kuwait who’s disappeared?”

Derek had to take this one, even though it was my turn. “Right. No sign of him for about a decade, Director Andersen. And he just disappeared. Information about him just stopped. I guess for us, this means that we don’t need to worry that he’ll be the victim next week.”

“He didn’t go into the witness protection program and turn into this Sam Milstead character by any chance?”

“No sir. I ran a quick check on Milstead today and found complete records back two decades. I don’t think Milstead’s involved in this at all.” Derek’s comment produced a sigh of relief from the Denver connection.

“Great! This is progress, even if there’s one more to deal with. I’ll fill the Governor in and have him keep things quiet until Friday, at least. But at that point I think we’ll have to go public with the Kuwait story. See if you can find this von Stier by then, OK?”

Candice had turned east in Alamosa, and we were now on our way toward Fort Garland. During my telephone call, she’d been talking quietly on her radio, and now she told me she’d been briefed on the location of the Endsley’s ranch. Apparently the stock that Nedra Endsley referred to was a herd of registered Black Angus cattle.

“So, now that I know how to get there, what do I need to know about our plan?” Candice was still making good time, but the heavier traffic on US 160 was slowing her down to an average of about 80.

“I’m glad we’re together, because your domestic violence training will be critical. I’m more and more suspicious of a conspiracy of some kind among these women, and Nedra Endsley is likely to be part of it. She just laughed when I suggested her husband could be the next victim.”

“Does that mean I should push her?” She punched the throttle, and we flew around a semi that was going only a little over the speed limit.

“Maybe you should be the good cop. I’ll push her, and you can push back on me, win her sympathy a little. I’d like to find out how her relationship with her husband is. Maybe she’ll open up to you.”

“OK, but just remember later that if I’m pushing back on you, it’s because you’ve told me to. I don’t want you to think that I’m insubordinate or anything. Right?” She looked nervous when she glanced at me.

“Right. The good-cop, bad-cop routine works only if we remember we’re play-acting. Besides, I owe you one for bailing me out up in that tavern in Kharma. That was good work. So, you said you found out where the Endsley’s place is. How much farther? Are we there yet?” The slight whine I put into my voice made her laugh.

“About another ten miles to Fort Garland, then we go south and back west for another five miles or so.”

“Good. Just enough time for me to call home.” I found Hal’s private office number on my phone’s directory and called it.

“Weathers, natural sciences.”

“Hate to say this, lover, but I’m headed the wrong way. East.”

“Oh, man! And it’s getting close to four-thirty. Where are you?”

“Almost to Fort Garland. We’ve got another interview just south of there. It should be finished by five-thirty, six, latest, but after that I don’t know.” And it was true: I didn’t have a clue about what to do after we were finished with Ms. Endsley. Without a car of my own, I wasn’t my usual independent self.

“Hmm. If I remember correctly, there’s less than nothing in Fort Garland, in terms of either food or lodging. So figure out how to get back to Alamosa somehow. Then I won’t worry so much, OK?”

“Maybe I can hitch a ride home to Durango. There seem to be lots of west-bound trucks.” I winked at Candice’s look of surprise, and she laughed.

“Yeah, well, if you’ve got your Glock, I’m not going to worry. Just tell ’em that our street is really narrow before they turn up it, OK? I don’t know if one of those highway trucks would fit.”

“I’ll call you from wherever I’m staying, I promise. Don’t work too late.”

Candice was shaking her head when the phone call was over.

“You must have an incredible relationship. I’m encouraged to see that such things exist in real life.”

“He’s a dean at Frémont State, so his life is hectic in a different way from mine. He worries some, but he doesn’t cling. Or expect me to cling. In fact, if I did, if either of us did, I don’t think we’d be together.”

“That’s so different from the guys I grew up with. They expect women to be completely dependent on them and to have no interests besides having lots of babies. One reason I took the domestic abuse training was to try to understand that better. And it helped. But understanding it doesn’t make me like it.” She looked disgusted.

\* \* \*

The Endsley ranch was one of those places where you open a section of fence, a barb-wire gate, to get in and then close it behind you so the cattle don’t wander off. A half-mile of bumpy not-quite-gravel driveway, which the Mustang’s suspension didn’t do very well with, brought us to a run-down, double-wide trailer next to a modern, well-kept barn. There was no one in sight, not even the cattle. Candice and I walked up the steps of a rickety combination porch and deck that fronted the trailer.

Repeated knocks on the door of the trailer eventually got a response. It was opened by a worn-out looking woman smoking a cigarette and holding a jelly-jar glass half-full of a golden liquid with ice cubes. Even with the cigarette smoke, the smell of bourbon was unmistakable.

“Help you?” She was leaning unsteadily on the door frame.

“Mrs. Nedra Endsley?” I tried to be both friendly and official at the same time. She nodded. “I’m Annette Trieri, with the Colorado Bureau of Investigation. We spoke on the phone earlier.” I showed her my shield, and Candice, in uniform, was unmistakably official.

“Oh, yeah. You were asking about Rollie. He’s not here.”

“Yes, I recall you said he’d be in Salida or Buena Vista tonight. Has he called?”

She looked surprised and confused. “Called? No, now that you mention it, he hasn’t. Wonder what that’s about. He usually calls by now. Strange. Anyway, what can I do for ya?”

“We’d like to talk with you, Mrs. Endsley. This is Officer Candice Garcia, Colorado State Patrol. She and I are working together on a case. As I mentioned on the phone, we’re worried that your husband might be in some danger.”

“Oh, yeah. I remember you said that. But that’s just nuts. Who’d want to hurt Rollie? He’s just a cattle feed salesman.”

It was awkward standing at the door, but I really didn’t want to sit inside with her smoking up such a storm. There was a crude bench built onto the railing of the deck, however, and it looked as if it might serve the purpose. There was a background scent of barnyard in the air, but that would be better than smoke, I figured.

“Mrs. Endsley, that’s just what we’d like to talk about with you. Why don’t we sit out here on the deck and talk this over? If Mr. Endsley is really not in any danger, it would be a great relief. Perhaps you can explain things to us.”

It was a beautiful late-August afternoon, with just enough high clouds to keep the sun from being too scorching. Nedra Endsley peered out, looked up at the sky, and considered my suggestion.

“Kay. Let me get my sunglasses. Be right out.”

Candice and I went to sit in a corner of the deck, where the right-angle of the bench would make conversation easier.

“Candice, I think we’ve found ourselves a real challenge here.”

“Yep. She’s half in the bag already. What do you bet she comes out with a full glass? Still want to do the good-cop, bad-cop thing?”

“Yeah, but I’ll go easy, at least until I see if she’s a belligerent drunk. Maybe she’ll open up easier this way. We can hope.”

It took about five minutes, but Nedra Endsley finally appeared, with sunglasses, a pack of cigarettes in addition to a new one in her mouth, and, as Candice had suggested, a full glass. She sat down across the corner from the two of us and settled herself in. We had thought to sit upwind, so the smoke wasn’t much of an issue.

I decided to plunge right in without small talk.

“Mrs. Endsley, may I ask how long you’ve been married to Mr. Endsley?”

“Why, sure, uh, lessee, I guess a little over seven years. Why?”

“I was wondering if you knew that Mr. Endsley used to be in the National Guard. He was in Kuwait, during that first Gulf War in 1991. Did you know that?”

She nodded. “Oh, sure, he’s talked about it. He quit the Guard shortly after he got back, he told me, but he sometimes talks about being over there in the desert. Says that one reason he doesn’t mind living here is that he’s seen a real desert, and this is paradise by comparison. ‘Specially the view. Says there’s nothing over there like old Blanca Peak here.” She waved at the mountain that dominated the view to the north. It was indeed quite spectacular, particularly in comparison to the pool-table flat, greasewood-and sage-covered sand everywhere else.

“Mrs. Endsley, you mentioned earlier that you wouldn’t be going anywhere because you had to feed the cattle. What cattle?”

“Huh? Oh, they’re in the barn over there. We’ve only got a few right now, Rollie sold a couple dozen head just a week or so ago. Got our bull and breeder cows out in the barn.” She smiled at some private thought.

“I also noticed that there’s not a car here.”

“Oh, yeah, well, that’s the other thing that keeps me here. We’ve only got one car, Rollie’s pickup, and he’s got it now. So here I am.”

Candice saw this as her cue and spoke up. “It must get lonely out here when he’s away. And I’d think it would be difficult, not being able to go into town for groceries and so on.”

“Oh, we stock up on stuff every Saturday, we go into Alamosa. But, yeah, it’s kinda isolated. But I don’t mind too much. And there are visitors. I talk with the mailman out by the road almost every day. And our vet comes by to check on the cattle every now and then.” She grinned. “And ever since we got the computer, I’ve made lots of new friends in those chat rooms. I don’t think Rollie knows much about that, though. Not sure he’d approve.” There was mischief in her voice.

“Approve?” Candice had just the right inflection of curiosity and surprise. “Why not? And does it matter? I mean, what does he care if you discuss things with friends on the internet?”

“Oh, I think he’d get really pissed if he knew I was spending so much time talking with folks out there on the internet. He doesn’t like me talking on the phone—whenever the long-distance bill comes, I catch hell. But the computer calls the internet with a local phone call, so it doesn’t show up.” She looked smug and took a long drink of her bourbon.

“Sounds to me like he wants to keep you all to himself.” I decided to try a little nudge, just to see how she’d respond. “Doesn’t seem exactly fair.”

“Maybe not, but he takes care of me, y’know? And I’m not exactly country-club material, if you know what I mean. So I’m fine here. It gets a little lonely sometimes, but I manage.” She shrugged. “What’s this all about, anyway?”

“Mrs. Endsley, it’s like I said. We’re worried about your husband. You see, we’re investigating these Burma Shave Murders. And every Friday for the last month, we’ve found a victim. It’s Wednesday afternoon, and we’re wondering what’s going to happen this Friday. And we’d like to be able to find your husband, just in case he’s next on the list.” I decided I was going to drop the bomb on her.

“Yeah, you keep saying that. But I don’t understand. Why him? Who’d want to chop off his head? This is nuts.”

“I know it must seem like that. But, you see, we learned something today about the other victims. They were all friends during the Gulf War in Kuwait, and your husband was one of the gang. And now he’s the only one who is still alive. All the others have got their heads chopped off. We think maybe your husband could be next.”

It seemed to take several seconds for this information to filter into her alcohol-soaked brain, and when it finally did, she looked surprised and dropped her glass on the deck.

Fortunately, the deck was wood, and the jelly-jar was sturdy, so we didn’t have to worry about her bare feet getting cut up.

\* \* \*

## Fourteen

“Conned. I think we were conned.”

Candice and I were back in the Mustang, headed west toward Alamosa for dinner. She had a decidedly jaundiced view of Nedra Endsley's attitude and wasn't hesitant about expressing it.

I was more thoughtful. "I've been wondering. At first I thought her reaction to the bombshell was slow because she was drunk. But maybe it was just bad acting. At least she did give us the names of the motels where Endsley's stayed in the past. We can have the people in Salida and Buena Vista check them out, see if he's there."

"What do you bet he's really shacked up with some other woman? Nedra said he makes this trip weekly. Hell, maybe he doesn't even go on this Walsenburg-Salida-Monte Vista loop she thinks he does. Maybe he just heads up the road a bit to his other piece of tail. Could even be married to her, too. The way he keeps Nedra isolated, he could be doing that to someone else and no one would be the wiser." She snorted her disgust.

I couldn't help but smile. "If he's doing that, he fits the 'jerk' description perfectly. I wonder what his poem is going to say."

Her laugh had a tinge of bitterness.

Hal's advice that I get back to Alamosa for dinner and lodging was better than he knew. He was right about there not being much of anything in Fort Garland. But what he didn't know was that Candice was based in Alamosa and knew that town quite well, both the restaurants and, by local reputation, the motels. She offered to put me up in her apartment, but I insisted on staying at the nicest place she knew of. I figured that the Governor could pay for all the extra time away from home I was having to put up with.

She insisted on having dinner at Trujillo's Steak House, partly out of local pride, to show off one of Alamosa's better restaurants, and partly because of the new-age lunch we'd had in Kharma. Her green-chile-smothered rib-eye was so big I didn't see how such a small person could manage the whole thing, and my traditional filet mignon with black peppercorn sauce was done to perfection. She was right—a hefty dose of high-cholesterol protein made up for the rabbit-food lunch.

Over dinner we talked about the case, mostly, and its complexity. The inter-tangled relationships among the probable contract hits on the Gulf War rapists and their defender, the possible conspiracy of the women close to the murder victims, and the role of the WDL and its sympathizers were becoming confusing. The fact that the likely hit man was missing also complicated the issue, and the whereabouts of Roland Endsley in this context was a matter of some concern. And there was also the missing "mayor" of Kharma, Sam Milstead. Under normal circumstances, his disappearance would probably not even have been reported yet—he'd been gone for less than a day, after all—but the circumstances were anything but normal.

After dinner, Candice dropped me at the hotel, a grand old affair on Main Street that had seen better days, where I'd checked in earlier. Our plan was for her to pick me up in the morning and take me to the State Patrol District Headquarters, where I could make the morning conference call with Denver and then decide what to do next. I had a vague notion of renting a car to drive home, unless there was something compelling to keep me in the Valley for another day.

I decided I was homesick.

Even though I'd slept at home Tuesday night, I'd been on the road in recent days more than I care to be, and the circumstances weren't exactly relaxing. I needed a good shoulder rub—something I found out after I fell for him that Hal has an extraordinary talent for. A bonus, relationship-wise.

So I called home. It's not the same as being there, but it sure helps.

Hal was in the middle of fine-tuning budget estimates for the fall semester, a task he would prefer to delegate but simply cannot. When enrollment figures finally come in, as they had now that registration was complete, the juggling required to make all of his departments stay in the black was something only he could do. He told me that he had delegated it to one of the financial office people one time—it seemed like a good idea, because accountants, after all, are trained for just this purpose. But the ensuing food fight at the department chairs' meeting, where the accountant discussed the budget adjustments that she had made under Hal's instructions, was enough to persuade Hal to do the adjusting himself in the future.

He solved the problem by, in essence, communizing his college. Revenues from all went into one big pot of money, and the departments drew from that pot according to what they needed. Rich departments subsidized poor ones—with the proviso that no department was allowed to be "poor" for more than a couple of years.

No one, including Hal, liked the system, but it worked. The other colleges at FSU had different systems, none of which worked as well, and the provost tried every year to get them to adopt Hal's approach, with no success.

The only real down-side was that Hal had to do the budget adjustments himself, in order to keep his department chairs happy. Bean-counting isn't Hal's favorite pastime, especially on late summer evenings when he could be out fishing.

So he was grumpy when I called.

With his grumpiness and my homesickness, the phone call could have turned out to be a disaster, but it actually worked just the other way. I think that one reason we have such a good relationship is that we're tuned into each other's feelings, and we always try to turn bad ones around. So I cheered him up and he made me feel less lonely. After I filled him on the interesting discoveries of my day, he brought me up to date on the situation on campus.

"One thing that's got me annoyed with this budget stuff is that John Martin is telling me that my surplus may have to be used to help out social sciences and humanities. They're always on a tight budget, but with this adjunct strike settlement things are really going to be tough for them. It's one thing for me to borrow from chemistry to pay biology, but sending money from my college elsewhere is going to cause a riot by my faculty."

"So they settled this threatened strike business?"

"Yeah, they got it worked out. Madge and Bucky enlisted a new instructor— instructors are full-time employees, unlike TAs and adjuncts, but they have credibility with that crowd because they're not tenured professors—and this new guy actually made things work. I think you know him, Dino Papandrea?"

"Dino saved the day?" I couldn't help but laugh. "Did it have anything to do with his intimidating appearance?"

Now he was laughing, too. "I don't think so. He just reasoned things out with everyone. But his appearance has caused some comment, even in our eccentric academic world. What's funny is that he got the highest ever student evaluations for his summer courses. Nobody, not the philosophy chair, who considers himself a friend of students, or any of the other faculty or instructors has ever received such high marks. I think they're going to assign the new assistant professors to audit his courses as a way to improve their teaching skills."

"So he's succeeding. That's wonderful! Maybe he'll get turned into a professor—I think he's hoping for something like that. I've always thought that he'd never have problems with discipline in his

classes, but that's not what wins teaching awards. Maybe they're so intimidated by him that they actually pay attention. And he's really a very engaging guy."

"Maybe you're right. And it's possible that a real faculty position could open up, if he continues to get great evaluations."

"I think that's what the U needs more of. The biker crowd on its faculty. That'd draw the students, don't you think?"

\* \* \*

Thursday morning, I was feeling chipper, all things considered. The late evening chat with Hal had improved my outlook immensely, and I slept better as a result. And the hotel was surprisingly quiet, its shower worked and didn't chintz on water, and their breakfast was excellent.

I was determined to sleep at home that evening, as preparation for what might be a tough weekend, but I still wasn't sure how I was going to get home from Alamosa. Maybe, I thought, Candice will have a suggestion.

She picked me up at 7:30, and we went straight to the local State Patrol office. Because the staff there had first reported Burma Shave Number One, as they were calling it, they were taking a keen interest in the entire series of cases. There was a heightened level of excitement, because Fort Garland is in their district, and there was the possibility that they would be getting involved again. I was almost sure that their interest was such that they really didn't want to find Roland Endsley's head around somewhere, but from some of the comments I overheard I couldn't be positive.

At the morning briefing, I was embarrassed to be the focus of everyone's attention. As the first priority of law enforcement state-wide, the cases were at the top of everyone's to-do list, and as the person assigned by the Governor to handle things, I was the superstar.

Candice, I discovered, had been assigned more-or-less permanently to me, and she had even packed a week's worth of clothes and stuff to carry around in her car with us. Barring other distractions, her plan was to run me over to Durango for fresh clothes and so on and to be at my disposal for whatever came up. She and I and the Mustang, it appeared, were going to be spending some time together.

Although the morning briefing was the district captain's show, I got called on to say a few words and took the opportunity to give everyone a little pep talk and to offer my opinion that Burma Shave Number Five, should it happen, would be the last. When I explained why I thought this, they all nodded in understanding and looked relieved. And when I explained who I thought was behind the whole thing, I could tell that Kristof von Stier was going to have to hide himself very carefully or surely be caught.

Given my comments, the rest of the briefing concerned, first, strategy and, second, tactics. The latter were really not my concern, so I borrowed the captain's office to use the telephone.

Derek, as I expected, was in his office and, as I hoped, full of new information.

"Annette, the phone records came in. We have calls between some of the women involved with the victims of the case. Not a lot, but a couple. And there's no reason to expect even one, unless they're conspiring somehow."

"We have to be careful with this, Derek. There could be various reasons these people would talk to each other. Even though they're spread around the region, they may have common interests. Besides the beheadings, I mean."

"Right. Maybe needlepoint? Let's see what you think when you hear this: Bonnie Scharmatz called Sarah Robinson three days after Frank Scharmatz' head was found, on Monday. Sarah called Toni

Henry on the Monday after Marty's head was found, and she also called Amelia Dent the Monday after Hollis Henry's head turned up. Hmm. I guess Toni Henry wasn't seen as reliable to make the call, or something. Anyway, Amelia called Nedra Endsley last Monday."

It occurred to me that Sarah Robinson's call to Amelia Dent would have been the same day that Hal and I were at Sarah's ranch, when Annette the llama was born.

"That does sound, let's see, what's a good cop word...how about 'suspicious'? As if a warning is being relayed, like 'I'm done, you're next.' Are there any numbers that all of them called, like, maybe von Stier's?" I can hope, I thought.

"Not all of them. Toni Henry called him, late last week, though."

"That was probably to ask about the appraisal of her father's gun collection. None of the others?"

"Nope. Bonnie Scharmatz received a number of calls the week before Frank disappeared, but none of them seems out of the ordinary, except for a couple from a pay phone in Del Norte. No telling about that."

"Pay phones are getting more and more rare these days. Maybe I can put someone from the office here onto it, have someone question people who might have noticed something." I thought for a few seconds. "Also, maybe we can match up the pay phone call dates with times that von Stier went over to visit Billy Abernathy. They seem to get together to bop each other with sticks every now and then."

"Huh? Oh, right, the martial arts thing. Thing is, the pay phone calls were over a month ago. But, you're right. Hardly anyone uses them anymore, so maybe it would have been noticed, and if it was von Stier, he's hard to forget. Anyway, like I said, this seems like evidence of some kind of conspiracy. I mean, none of these women mentioned anything to you, did they?"

"No, and they probably would have if there were innocent connections, like a needlepoint club or something. So at least we have something we can tell Rod this morning. But, look, one phone call from each-to-each, or so, is thin. I mean, wouldn't you think there'd be more communications?" That was a question that I knew Rod would ask me.

"Yeah, I've wondered about that, too. What about a computer chat room or something? They could do most of their discussions there, group discussions, even. The really important calls would be the ones I've found, the 'it's gonna happen' calls."

I felt the excitement of real insight, of a possible breakthrough. "That could well be it. Yesterday, Nedra Endsley mentioned that she spends a lot of time on-line. She said she's made lots of new friends in chat rooms, she seemed kind of proud of it. How do you suppose we can find out where these virtual discussions take place?"

"Could be anywhere out there in computer-land. From what I've heard, none of these women classifies as a computer weenie, though, so it's probably a third-party chat room. Something already in place where they met more or less by accident. I guess that would be a place where each of them would surf to individually."

"Meaning someplace that's concerned with something they'd have in common. How about an abused spouse site, or something to do with domestic violence?"

"I'll look into it. Uh, Annette? Sally just handed me a note that Rod Andersen's on the other line. Should I patch him in?"

He did, and, given the information about communication among the women who were the victims' various next-of-kin, we managed a reasonably successful morning conference call. Derek had done more homework and was able to report no new news concerning the whereabouts of Roland Endsley, Kristof

von Stier, or even Sam Milstead. We'd almost stopped being concerned about Milstead, but he was still missing as far as anyone knew. In the end, Rod was satisfied that he could keep the Governor under control. There was the issue of yet another Friday morning head-on-a-post to worry about, but that was still a day away. Anything could happen.

\* \* \*

The Mustang was beginning to feel like home. Of course, it couldn't begin to match up with Hal's Audi, at least in terms of interior comfort, given that the State Patrol buys its chase cars to chase cars rather than to give its officers cushy rides. But Candice and I managed to fit into its confined interior quite comfortably, and the thrum of the big V-8 cruising at 95 had begun to feel familiar, homey.

We idled out of the parking lot at about 8:45, and by 9:05 we were in Del Norte. Derek had told me the location of the suspect pay phone, so I had Candice cruise by it slowly. It was at the main intersection in town, next to a filling station where people coming and going would be commonplace. I began to think that Derek was right—no one around would remember who used it a month ago.

After that it was US 160 westbound for all of the places that I was beginning to find familiar—South Fork, Wolf Creek Pass, Pagosa Springs, and finally home. About the only thing I remember about the trip was the car. It did just fine except near the top of the pass, where it seemed to lose its eagerness to go. Unlike Hal's turbocharged S4, the big-block Mustang had normal fuel injection, and in the thin air it just plain slowed down. I didn't mention any of this to Candice, though. I think she would have made me walk if I'd maligned her pride and joy.

We pulled into a parking place by my CBI office in Durango at about 10:30, certainly a record for me—under two hours from Alamosa, about 150 miles including several towns. I decided I wouldn't tell Hal. It wouldn't do to have him trying to beat that time.

On the drive into town, at about the airport road intersection, it had occurred to me that I needed to have something for Candice to do. Sure, she was driving for me, but she couldn't just sit around and wait for me to want to go somewhere fast. I had errands to run and laundry to do, but it would clearly be inappropriate for her to do them for me.

But I need not have been concerned. When we walked into the CBI office, Derek pounced on me with news about various possibilities for the conspiracy chat rooms, and we put Candice to work reading the public parts of those sites.

We thought that her domestic violence training might give her some insight about who would be users; perhaps she would even recognize one of our conspirators.

With the two of them occupied, I decided to sneak home for fresh clothes. Hal was up on the campus, of course, but on the kitchen counter I found a rose with a cute note from him saying that all the laundry was done and he hoped I'd be able to be home tonight but he wouldn't be surprised if I couldn't and that he missed me. It almost made me cry.

Candice had told me she had clothes for a week, but I decided to be more optimistic and put together just enough clothes for the long Labor Day weekend. If I wasn't home by next Tuesday, I thought, I may as well not bother.

I called Derek, but he said nothing much was happening, so I decided on a side-trip up to the campus. I hadn't talked with Gil Taylor since I'd passed on Belinda Edwards' suggestion that he look for anesthetics in his tissue samples. Maybe, I thought, he'd have something new for me. Besides, Hal's office was up there.

Being a regional CBI Director provides me with a certain amount of miscellaneous clout, which I mostly try not to use. But one thing that's been quite useful is the gate-card for the parking lots at the U and the "park anywhere" dashboard parking pass. I got them by visiting the campus security people one day, pointing out that, technically speaking, I was their boss, and suggesting that it would be helpful to everyone if I could have easy parking access. Bureaucrats that they are, it took some patient persuading before they decided it was in their best interest to provide me with the gate card and an omnibus pass. I had to promise not to let it out of my sight, especially not to let Hal use it, and not to abuse it.

And it's been a godsend. Parking on the FSU campus is probably not any worse than any other university campus, but that doesn't matter—if it's relatively normal compared to other universities, it's absolutely horrific. I fully understand why Hal walks to work, even in bad weather.

So, despite the fact that it was just after 11:30, about the busiest time of day in all of the parking lots, I was able to breeze in and find a place to park. The fact that the spot said "Reserved for Provost Martin" on it didn't faze me in the least. My pass said "Police Business Parking" on it—to me, it was like the trump-suit ace in your hand. Besides, I figured Martin was probably out at a Chamber of Commerce luncheon or something that would take until 2:00.

I made my way over to the natural sciences building, glad to see no demonstrations of any kind this time, and up to Hal's office. To my surprise, Alice wasn't at her desk, but Hal's door was open about half way. I tapped lightly and stuck my head around it.

"Yeah?" He was focused on what looked like a spreadsheet of numbers on his computer monitor.

"Are you still fooling around with that budget stuff?"

"Huh?" He looked up, startled to hear my voice. "Oh, hi! Not anymore!"

And he jumped up, ran around his desk, and grabbed me in a bear hug, which went on for a while. Finally he pulled back just a little and looked at me.

"So what brings you here, anyway? I'm glad to see you made it back to town, at least."

"I'm thinking today may be the calm before the storm. I think we may find another victim tomorrow."

"That guy you flew off to find yesterday? The Kharma guy?"

"No, this would be the Fort Garland guy, like we talked about last night."

"I'm glad you called last night, by the way. I was driving myself crazy with that budget stuff, and talking with you made it all better."

"And talking with you made me feel less homesick. And now that I've been home and found your note, that's even better. Why I'm up here is to see you and to see if Gil has any new results for me. There's nothing special going on at the moment, so I thought I'd touch base."

"He called me yesterday afternoon, late, to find out where you were, but I didn't know. It sounds as if he's got all the analyses done, and now he's just trying to interpret the results. Um, I say 'just trying', but really that's the hardest part, I guess."

"I called him yesterday morning with a hint someone had passed along to me, so maybe he's made some progress. But what it looks like to me is like finding a fingerprint on a murder weapon for which you have no matches in your fingerprint data base. You know you've got something, but you just don't know what it is."

"I suspect so. What time is it? Have you had lunch?"

“It’s just before noon. Where’s Alice? I don’t think I’ve ever been here when she’s not sitting out there.”

“She’s off at some kind of President’s Staff Appreciation Luncheon. She’s been here so long that she gets an automatic invitation to all sorts of such things. She apologized and said she wouldn’t be back before one.”

“Hmm.” I reached in my purse and turned off my cell phone while walking over to the door.

“Uh, what are you doing?”

“Locking your door.”

“Oh.”

My darling husband, the one with the Ph.D. and dozens of scholarly research papers who’s also a dean at an almost-major research university, can get looks on his face that are positively stupid. Not the goofy ones he gets for me and, sometimes, for trout, but outright stupid.

“Uh, now what are you doing?”

“What does it look like?”

“Well, it looks like you’re unbuttoning your blouse.”

“Very good. You get an ‘A’.”

“Oh...uh, are you sure that’s a good idea?”

“Alice won’t be back until one, you said.”

“Oh.”

“And she and John Martin are the only two people I know of who would dare come in here past a locked door.”

“Oh.”

“And I know for sure that John won’t be around—I parked in the very last space in the parking lot, the one with his name on it.”

“Oh.”

“And Gil can surely wait.”

“Oh.”

But he finally got the idea and, as I was hoping, picked me up and carried me over to the couch.

\* \* \*

Sometime later, after an inordinate amount of fumbling and giggling for two mature professionals, we finally managed to get our clothes on and adjusted and our hair reasonably well untouled.

Almost as soon as I turned my cell phone back on, it chirped and blinked its message light. Derek needed me to call him as soon as possible. I kissed Hal goodbye and headed for my car.

“Derek, it’s Annette. Your message sounded excited. What’s up?”

“Annette! Good! The Berensons called in and reported that von Stier’s back at home.”

“In Pagosa? At his shop, or what?”

“They’re watching his shop, but they called it home. Maybe it’s both.”

“Good. Tell you what. Call Ron Grange and have him stake the place out. If von Stier tries to leave, they need to arrest him for some reason they can make up. I’ll get down there as fast as I can, so have Candice get the Mustang warmed up. No, wait. Give her directions to my house and have her meet me there. I’m on the campus, and we’ll probably get there about the same time.”

“Will do. I presume you’re headed to Pagosa Springs?”

“As fast as we can get there.”

And that was very fast. Candice worked some magic with her radio and somehow got several of the usual bottlenecks on the highway cleared for us, and we made the 62 or so miles to Pagosa Springs in just over a half hour. It was 1:35 when we pulled to a stop down the block from von Stier’s antique shop. Ron Grange was leaning against his Sheriff’s Department Blazer, microphone in hand.

“Hey there, Annette. Say, I got this strange report of someone exceeding the speed limit, eastbound from Durango. Goin’ so fast it was a blur—no one could make out what kind of car or the license plate. You wouldn’t know anything about that, now would you?”

I watched as Candice blushed scarlet and decided to play along with him. “Gosh, no, Ron. Didn’t see a thing. Maybe you guys need to put out some radar enforcement. Catch those scofflaws.”

“I dunno, Annette. Soon as we do that, sure as shootin’, some state bureaucrat would come along and let ’em go on a technicality. Hardly worth the effort.” His face turned serious. “So, anyway, your guy’s supposed to still be in there. No sign of him, though. Your people went home for lunch and new clothes. They said they’ve been on watch for two days. What’s your plan?”

“I’m going over there to talk to him. He broke an agreement we had, and I want to know why. I don’t think this is a dangerous situation, or anything. I just wanted to make sure that he didn’t disappear again, Ron. That’s why I called you.”

“What is it you’re not telling me?” He didn’t look angry or suspicious, just curious.

I thought for a few seconds. “I’m not sure. Where we are is that von Stier is back to being a suspect, although there’s no probable cause for an arrest yet. He was going to keep his nose clean by having a continual alibi until tomorrow morning, at least, but he disappeared Tuesday night. Meanwhile, another potential victim is missing. So I want to talk to him.”

“Oh. Well, how about we wait around in case you need backup?”

“That sounds fine to me. And, Candice? Ron, this is Candice Garcia, she’s been assigned to assist me in this Burma Shave investigation. She also knows something about driving. She’ll fill you in on anything you ask, if we know the answer. Got your cell phone? Good. I’ll call you on the way over there and leave the connection open so you can listen for trouble.” And I walked down the block toward von Stier’s shop.

The front door was opened slightly despite the prominent “Closed” sign in the window. I rapped hard on the door, pushed it open some more, and went in.

“Mr. von Stier? The door was open. This is Annette Trieri, CBI. We need to talk.” I used Voice level one-and-a-half or so, just enough to get his attention.

A door on one end of the room was part way open, a door that I hadn’t noticed on my earlier visit, and through it I heard cursing and coughing. He finally got things under control.

“Right, right. Ahem. Have a seat, Ms. Trieri. I’ll be right there.” And he trailed off into more coughing.

I sat in a comfortable chair with a view of that door and waited.

It took about five minutes, during which time I assured the folks listening on the cell phone connection that all was well. Finally, the door opened fully, and von Stier wobbled into the room. He was pushing and leaning on an IV stand on wheels, one of those things you see sick people pushing down hospital corridors, and he had a tube stuck into his left arm. He looked like death, not quite warmed over.

“My apologies, Ms. Trieri, for not offering you refreshment. But I’ve only recently returned home from a rather difficult couple of days.” He adjusted the IV stand and sat down heavily in a chair across from me.

“That’s why I’m here, Mr. von Stier. We need to talk about those couple of days. You broke our agreement.”

“Ahem. I beg your pardon. I did no such thing. I evaded those two old geezers you hired to watch me, yes, but my time is well accounted for, I assure you. Too well, as far as I’m concerned.” He waved at the apparatus he was hooked to. “What’s your concern? Has Endsley disappeared?”

I’m sure I looked as astounded as I felt, despite a well-developed ability to maintain a poker face.

“You know about him, then. Good. I think I can tell you what’s going on and you’ll believe me. First, I’ve been at the hospital in Durango. Their records will be, I’m sure, a sufficient alibi. As I said, I just got back, and I feel somewhat lucky to have made it. The drive took more energy than I anticipated. I was there for more chemotherapy, and this gadget is its last course. I was feeling fine a couple of days ago, remember in Monte Vista? But this chemo was scheduled ahead of time and now I feel like shit.”

His coughing fit took a minute to get under control. “You see, Ms. Trieri, I’m dying. It started with AIDS, which I got in Africa some years ago, long before it became so common an ailment. Then, possibly because my immune system was so depleted, I developed testicular cancer. They operated, both sides, hence my pseudonym, but it had metastasized. It’s now in my lymph system and it comes and goes. This latest round of chemo is supposed to make it go, but I’m not terribly optimistic.” He stopped to breathe and cough.

I took a deep breath. “I’m very sorry to hear this, Mr. von Stier, very sorry. I guess it explains some things, though. But how do you know about Endsley?”

“He’s one of six people with prices on their heads. Yes, six. The missing one, a fellow named Jeffers, was killed ten years ago overseas. He’s the one your Mr. Peterson couldn’t find. I had my computer with me in the hospital and watched Mr. Peterson’s work, just as I watched it before when he was uncovering my background. He’s quite talented, by the way. Anyway, because I’m dying, and because it was overseas, I think I’m comfortable with telling you that I killed him—Jeffers I mean. The other five, of course, were here in southwestern Colorado, and someone has killed four of them. I said it before, and I’ll say it again, that someone is not I. And I don’t know who it is, but I must say I’m filled with admiration. Whoever it is, is very good. If Endsley’s disappeared, I’d guess that you’ll find his head on a fencepost somewhere, along about tomorrow morning.”

“Because you know so much about all this, you must be in a position to help us find the killer.”

“Maybe. Possibly. But why would I be motivated to do so? As far as I’m concerned, the killer is doing the world a favor. If you know the story behind this whole thing, and if you’ve discovered anything about the character of these individuals, some part of you must believe this also.”

“It doesn’t matter what I believe, Mr. von Stier. As an officer of the law, it’s my duty to apprehend this killer. And if you believe in a civilization of laws, if you benefit from living within such a civilization, it’s your ethical duty to assist, if you have relevant knowledge.”

“With all due respect, Ms. Trieri, I suggest you refrain from entering into a philosophical debate on the nature of ethics with me. You’re outgunned.” He managed a weak smile. “I’m afraid I’m fading. I need rest. But I’ll give some thought to how I might help your investigation a little. You know where to find me.”

\* \* \*

## Fifteen

“No suspect, I guess, is better than the wrong one. But it’s frustrating when you have to start over.” I was feeling, well, frustrated.

Candice and I were on our way back to Durango, at a somewhat more responsible speed.

“True, but we’re not quite starting over. This business of a conspiracy among the women might lead to something.”

“Maybe. But they’ve become martyrs in the eyes of the public. The papers are treating them as if they’re the victims, more so than they’re treating the dead guys. We’re not going to be able to question them, let alone arrest them, without risking extremely bad publicity. Hell, even with compelling evidence, the publicity will be unbelievable.” I was staring at the scenery zipping by, trying not to be too glum.

“That’s for sure. And we’re not going to find evidence that the women are doing the murders, I’m certain, because they’re not. At worst, they’re passive conspirators, I bet, staying out of the way and keeping quiet about what they know.” At normal speeds, she drove one-handed, I noticed.

“And if they’d just tell us what they know, that’s all we need for them to do. But I expect that’s not in the cards. But we really need help on this one, now that von Stier’s out of the picture.”

“Maybe we can get him to help. He must know something. Sheriff Grange had his phone plugged into a hands-free speaker, so I listened to your conversation with von Stier.” She looked as if she had been caught eavesdropping.

“So you must have heard him scoff at the notion of ethical duty. But maybe if he thinks about it, he’ll come around.”

“Actually, I heard him tell you that you weren’t a worthy debating opponent, in terms of discussing ethics. And that he is going to think about it.”

“You’re right, that’s what he said. Didn’t really hurt my feelings, because he’s right. I’m a lousy debater, and I really don’t know much about ethics, in a formal sense at least, anyway.” I felt a light bulb go on in my head. “But I know someone who does, and maybe he can debate, too.”

“Huh?”

“A guy at the university. I’ll call him as soon as we get back into cell-phone range.” We were still east of Bayfield, in a coverage shadow.

“Want me to speed up?” She looked eager.

We had been motoring along at just above the speed of the traffic, passing people whenever there was an opportunity, without our lights. The trouble with using a marked State Patrol car is that everyone

slows way down when you come up behind them, as if driving ten miles per hour under the speed limit makes up for exceeding it when the cops aren't around. Go figure.

“Don't worry too much about it. We'll get there. Tell me about what you and Derek have learned about these chat rooms.”

“We found a zillion of them, nation-wide, and several in the region. So we had to decide how to narrow the search. Derek mentioned that one of the Burma Shave poems, I think the fourth one, was originally published on a web site run by some women's group at Frémont State. So that suggests that the killer has been reading that site. How else would he know about that poem?” She punched the Mustang around an RV-boat combination doing fifteen under the speed limit, and we sped away from it.

“I know the one. It's the 'womyn-with-a-y' site, the Womyn's Defense League, WDL, right? You know what they call it up on the campus? Waddle.” I watched her puzzle it out and break into laughter.

“‘Waddle,’ eh? That's great. I'll remember it. But, yeah, that's the one, and they have several chat rooms, including a members' only one. I signed up for it, but there's a waiting period between signing up and joining in. Something about how the webmaster has to approve the login.”

“There ought to be a way to get around that in our case, but it would mean some kind of official thing, a search warrant, maybe. And the person who runs Waddle is just a tad belligerent. I'm sure she'll insist on protecting her clientele. Did you sign up under your own name?”

“I thought about a pseudonym, but I decided to be myself and join as a domestic violence expert. They have a 'why are you interested' question on the form. Say, that reminds me. What did von Stier mean about his pseudonym, anyway? When he was talking about his cancer.”

“Huh? Oh, I know what you mean. Von Stier isn't his real name. He's really Christopher St. James, and he's hiding from a dangerous past using a pseudonym, pretending to be descended from German nobility while he deals in antique armor. And I think that the word 'steer' is the same in English and German, except for the spelling.” I watched as she puzzled this out and enlightenment dawned.

“Ohhh, I guess I see. Ouch. Geez. I'm sorry I asked.”

“Yeah, he said it so fast that it went right by me, and I figured it out a little later. Made me wince. Must be that the guy has a dark sense of humor.”

“With AIDS and spreading cancer, I guess he'd have to just to get along. He said he killed someone?”

“Apparently, there were six people involved in this incident in Kuwait, and five of them are, or were, here in southwestern Colorado. Von Stier said he killed the sixth, a guy named Jeffers, a decade ago, overseas. Which makes me wonder if he moved here to go after the other five, given that all of them have had prices on their heads.”

“But someone beat him to it, looks like. How does that work, anyway? Some guy in Kuwait puts up 'wanted: dead or alive' posters, or what?” She was shaking her head.

“Must be some kind of word-of-mouth, maybe in the mercenary community, such as it is. Von Stier is plugged in with that bunch. Hmm. I suppose that means the perp might be, too.”

My phone beeped, telling me that it was awake. We were coming into Bayfield.

It was time to call Dino.

\* \* \*

Having a personal driver was a new experience for me, and I was a little unclear on the concept. Even though I'd done just fine in the hotel in Alamosa the night before, I had this overwhelming urge to have Candice stay at our house. It just didn't seem right for her to have to stay in a motel. But it occurred to me that she'd probably be more comfortable in commercial lodging than at my house, with both her boss and a strange man wandering around at all hours. I realized that I sure would.

So I compromised by asking her to come to dinner—I'd been on the road so much that I wanted to put on an apron and actually cook something, make a real meal myself, from scratch. And I pulled strings and got her a room at the General Palmer Hotel downtown. That expense would give the CBI accountants fits, but I didn't care.

Earlier, my call to Dino Papandrea had lasted about as long as it took for us to roll into town. Fortunately, he had arranged his fall teaching schedule so that all of his courses were Monday-Wednesday and Tuesday-Thursday extended classes, and his Fridays were free. He was more than happy to do a little errand for me, and he was also coming to dinner so we could discuss the details.

At my CBI office, Derek was working hard to come up to speed on everything he could get to on the WDL web site, and he had even enlisted Sally Brigman for the task. He had tentatively identified two of the women we were interested in from their use of the public chat rooms, available for the world to see. "Angus-Girl" and "LlamaLady" participated in all sorts of discussions, and they were both designated as "senior members" because of the large numbers of contributions they had made. But the topics discussed in the public chat rooms were decidedly generic. Derek was delighted when Candice arrived, because it was possible that her membership login would have been approved. When I sent her off to check in at the hotel and change into civvies for dinner, he positively sulked.

"She'll be right back, Derek, don't worry. She has to take me home later, and she deserves a shower, after the way she drove me over to Pagosa Springs. Besides, I need to brief you and Rod Andersen on what happened over there. Von Stier isn't on our suspect list any more, with or without alibis. I take it that no one in Chaffee County has seen anything of Roland Endsley?"

"Not a thing, not even his vehicle. And he drives a very distinctive pickup truck, all tricked out with lights and big mirrors and stuff, one of those 'dualies,' the kind with big rear fender flares and dual wheels on the back. We found that out from one of the feed stores on his route."

"So he actually does have a sales route that includes the Arkansas Valley?"

"Right. And the guy I talked to in Buena Vista seemed to suggest that Endsley also has a honey there. But he didn't know who it might be." He shrugged.

"That would fit the profile. Maybe his pickup is in her garage, or something."

"Or else off on some obscure back road somewhere, parked."

It was time for the afternoon conference call. I felt fortunate to be able to report some progress twice a day, even if it was only in the form of eliminating suspects. Naturally, Rod wanted more.

"This von Stier guy must know something. Can't we put some heat on him?"

"I've got that all worked out, Rod. It'll happen tomorrow. I'm betting he cooperates with us. And you're right, he probably does know something."

That seemed to satisfy him. But the idea that there would most likely be another head on a post in the morning didn't make him happy at all, even though I think he was expecting it, too.

After letting Rod rake Derek and me over the coals for a while, we were finally able to escape. I think that Rod needed the outlet more than anything, so we just took the abuse.

As soon as we disconnected, Sally rushed into my office with a note. "He said it's triple urgent."

It was from the Chaffee County Sheriff, so it was urgent indeed. I called right back.

“Chaffee County Sheriff, Danielle speaking.”

“Danielle, this is Annette Trieri of the Colorado Bureau of Investigation. The sheriff called me a few minutes ago with something urgent.”

“I’ll see if he’s available.” And she put me on hold, the kind that plays really, really annoying music. I think I heard “Lawrence Welk plays Barry Manilow,” or some such thing, for about three minutes.

“This is Herm Schneider. Ms. Trieri? Sorry to keep you waiting. I’m trying to deal with a hysterical young woman here.”

“Sheriff, it must be that you’re calling me with some information about Roland Endsley. I can’t imagine any other reason.”

“That’s exactly right. See, here’s the deal. This young woman, her name is Babette Thurl, everybody calls her Babs, she came to us with a missing persons report. It seems that Roland Endsley is missing. Of course, we knew that. But, see, it’s complicated. Endsley and Babs have a sort of standing arrangement. Whenever he comes into town, he pulls his pickup into her garage, and then he goes next door to the bar, the College Peaks Saloon, to wait for her to get off work at the prison. She works in the office there. When she gets off work, they, well, I reckon they have dinner or something.”

“Probably ‘something.’” I couldn’t resist.

“Yeah, well, I reckon so. Anyway, see, last night he did his usual thing, put the pickup in her garage. But when she looked for him in the bar, he wasn’t there. And he hasn’t turned up. The bartender says he left at about five with a blonde, a real looker he’d never seen before. They were being real chummy, he said.”

“And this Babs person is hysterical because her two-timing boyfriend three-timed her? Endsley’s got a wife in Fort Garland, you know.”

“Really? No, I didn’t know. Wonder if Babs does. Anyway, Babs is hysterical because the pickup’s in her garage and she doesn’t have the key to it, the truck, I mean. Y’see, her husband is due back later this evening, around nine, she says. Seems that every week he goes out of town to Denver, and that’s when Endsley comes to see her. ’Course, if her husband finds that pickup in the garage, I reckon there’ll be some issues.”

“Hmm. I wonder whose garage he parks in when he’s in Denver. Oh, never mind. Sheriff, do you have a good fingerprint tech?”

“Sure do. Used to work in Philadelphia. Moved here for the outdoors and so on, but he’s the best.”

“Tell you what. Have him dust the crap out of that pickup in Babs’ garage, then you can get it towed out of there in time for her husband to get home. We wouldn’t want to upset her little world any more than necessary, would we?”

“Not sure I really care that much about her little world, but that’s a good plan. Maybe it’ll shut her up. That’s my main concern just now.”

“And, just to be clear, you don’t have any additional information about Roland Endsley beyond his voluntarily leaving the bar, you said it was the College Peaks Saloon, with a good-looking blonde at about five yesterday.”

“Right.”

“Is there some way to get more of a description from the bartender? An artist’s sketch, maybe? Soon, before the bartender’s memory gets fuzzier? This could be the key to the Burma Shave Murders, and if your department provides that key, you’ll be getting lots of very good press, I promise.”

“I can do better than a sketch. We got some federal grant money, and one of the things we bought is one of those new computer gizmos that constructs faces from parts on disk. Uh, or something like that.”

“Outstanding. Sheriff, thank you. I’d come up there and shake your hand tonight, but it’d just be too late by the time I got there. Don’t want to keep you up. I’ll be looking for the fingerprint report and the computer mockup of the blonde.”

“Anything I can do to help, I will. This business of heads on fence posts is just not something we can put up with.”

“You’ve got that right. Thanks again, sheriff. I’ll be seeing you some day, I’m sure.”

Derek was looking at me, so I looked back and said “Bingo.”

\* \* \*

It looked for all the world as if Roland Endsley was going to be Burma Shave victim number five, and there didn’t seem to be anything we could do to prevent it. But it was looking more and more as if we *would* be able to do something to catch the killer.

The fingerprints and the computer mockup would take some hours to get to us, and it turned out that Candice’s chat room membership on the WDL site wasn’t activated when she returned to pick me up. There didn’t seem to be anything else we could do, so I sent Derek and Sally home, and Candice and I headed for the grocery store.

I decided I would make an old Trieri family favorite, a variation on the dinner Hal had cooked for me the week before, sausages and peppers, with a side of pasta and *my* special red sauce, which for certain didn’t come from a jar. Unlike the sausages in red sauce that Hal had made me, this version of essentially the same ingredients keeps the flavors separated, more distinct.

I remembered seeing Candice put away the big steak the night before, and I also how Dino likes to eat. So at the store I got two packages of sweet Italian sausages; bell peppers in red, green, and yellow, three each; a dozen Roma tomatoes; a package of fresh linguini; and a loaf of Italian bread. The sausages would get grilled to medium rare, cut into bite-sized pieces, and sautéed with the chopped-up peppers until everything browned. The Roma tomatoes would get a magic wand waved over them to turn them into my sauce. Or at least that’s what I tell Hal.

I sent Candice off to the bakery with instructions to find us some dessert.

Candice and I got home shortly before I’d asked Dino to come by—this was an accident related to our staying later at the office than I’d intended. But it worked out well, because I put him to work grilling the sausages. Of course, he first had to figure out how to work Hal’s grill, but with the help of Candice and a bottle of Beck’s, this turned out to be a snap.

And something else happened that I hadn’t intended. By the time that Dino brought in the medium-rare sausages—I told him to rescue them before they stopped spitting—he and Candice were stealing little glances at one another.

Actually, I suppose I should have seen it coming. Candice had changed from her uniform into jeans, wonderfully tight jeans that I knew Hal was going to stare at, let alone Dino, and one of those western blouses with lace around a scoop neck. When I said she was tiny, all I was referring to was her stature, and that neckline was going to be a real distraction, I could tell.

And I'd seen Dino in his biker clothes and his chauffeur's uniform, but never dressed like a normal person. He's a big guy, but there's no fat on him, and he carries clothes like a fashion model. Plus, he'd shaved and had his hair cut. The big lug actually looked delicious.

First it was Steve Phillips and Belinda Edwards, now it was beginning to look like Candice and Dino. Just call me Annette the Matchmaker. Maybe I'll get cards printed up.

Hal got home about the time that everything was coming together. I'd called him earlier to warn him about a real dinner with company, so he knew what to expect when he walked in the door. After introductions, all I had to do was to put the pasta in the boiling water and dress the salad. I had Hal open the Zinfandel I'd chosen, and a few minutes later we sat down to eat.

Our guests were nervous. Candice, I think, was in awe of the guy I was married to, because of our conversations in the car, and, of course, I was her boss's boss, in some sense. And Dino, a mere first-year instructor, was having dinner with an honest-to-god *dean*.

"Dino, I've heard reports that you got the highest-ever student evaluations for your teaching this summer. Congratulations, and what's your secret, anyway?" I couldn't tell if Hal asked this as a way to get Dino loosened up or for Candice's benefit. He, too, had noticed their attraction to one another right away.

"Uh, well, uh, sir, I'm thinking it might have been a sort of fluke, because of the novelty. See, I doubt that many of the students in my classes have ever been taught philosophy by an outlaw biker. Or, for that matter, anything else." Dino had a weak smile stuck on his face.

Hal, I could tell, was going to play a little.

"Hmm. I see. So, what you're saying is that we administrators should buy everyone on the faculty a Harley and require them not to shave?" He finished this with a grin and wink at Candice, but Dino didn't see it.

"Uh, well, of course, then it wouldn't be a novelty, would it, sir?"

"Oh, man, Dino. If you're going to call me 'sir,' I'm going to feel guilty for goofing you. Please, call me 'Hal'. But you're right. I'm betting that your evaluations weren't all based on novelty, but it probably didn't hurt, either. And if everyone did it, it wouldn't be novelty. Meaning that everyone needs to invent their own novelty to succeed like you have. And if you use the words 'new and fresh approach' instead of 'novelty,' this begins to make real sense."

"Well, s...uh, Hal, I expect part of it is also appropriate preparation. In fact, I think I was probably over-prepared for those summer classes. They were my first ones, and I was scared I wouldn't be able to answer some question or other. I'm thinking that the ability to say 'Gee, I don't know, but I'll look it up' with confidence is something you learn with experience. And saying that gives the students confidence to ask questions. A kind of 'stump the teacher' thing, which is good. I think."

"So your plan is to get even better." Hal looked at me. "Why didn't I hire this guy? Oh, that's right, I don't have a philosophy department. Oh, well."

Candice watched this exchange with something resembling awe, and I could tell she was falling for Dino in a big way.

Dino turned to me. "Annette, what's this errand you want me to run tomorrow? I'm glad to do it, but you didn't describe it very well."

"Nothing much. Just run over to Pagosa Springs and engage in a debate on ethics with a guy I know." I smiled. "I'm goofing a little, too, but that's really what it comes down to."

"You mean, like, a formal debate in front of an audience?"

“No, no, just a conversation. See, there’s a guy there who probably has information we need about a big case, this Burma Shave thing. And I tried to appeal to him by saying that because he lives in a civilized society, he’s bound ethically to help me by providing information. But he told me that I was out-gunned in an ethics debate with him, and I think he’s probably right. On the other hand, I bet you wouldn’t be. The thing is, I think you’d probably be interested to meet him, especially to see his collection. He’s an antique armor dealer, swords and all sorts of stuff like that.”

“You must mean Kristof von Stier. We’ve known each other for a couple of years, I guess. You’re right, he’s an interesting guy.”

My jaw almost dropped into the spaghetti on my plate. “How in the world do you know him?”

“He’s an antiques dealer. I used to work for an antiques dealer, remember?” He grinned. “One thing I can say is that von Stier’s merchandise is legitimate, unlike my former employer’s. So, I can probably persuade von Stier to tell you what he knows without much of a debate. But if he wants to duke it out over ethics, I’m your man!” He thumped a fist on the table, gently.

“Um, Annette, if he’s going over to Pagosa Springs on police business, well, perhaps I should drive him over and observe the discussion. It might be a good idea to have someone official taking notes, you know?” Candice, I was certain, had other motives besides the police business, but the idea did have merit.

“Dino, would a uniformed officer get in your way with von Stier?”

“Hmm. Maybe. But a plain-clothes one wouldn’t. And she’s right, an observer would be helpful, because I could concentrate on the discussion instead of remembering important things he might say. And I probably wouldn’t know what’s important anyway.”

Dino’s motives probably go beyond that, too, I thought.

“Hmm.” I felt as if I had to render a Solomon-like decision. “If you’re driving the Mustang, Candice, you need to be in uniform. But if you take another vehicle, you’ve got some flexibility, and you can go plain-clothes. On the other hand, if you go over on Dino’s bike, you’d better *not* be in uniform. I mean, what would John Q. Public say if he saw a uniformed State Patrol officer on the back of a Harley? Anyway, you guys figure it out. But I think an observer is a good idea.”

I was pretty sure I knew how they’d be traveling to Pagosa Springs together.

\* \* \*

“So, did we make sparks like that when we first met?”

Hal and I were finishing up the kitchen. Candice and Dino had mysteriously become tired at just the same time and pointed out they had a big day tomorrow, etc., etc. Strangely, the Mustang and the Harley roared off in the same direction.

“Sure. Don’t you remember that pizza we ate together in your office, that first day, when I came up to the campus to start the investigation of the Stiller murder?”

“Absolutely. Barbequed chicken. The time you were so confused by Alice and how she was able to anticipate our every need.”

“Right. If I’m not mistaken, we’re still quite good at making sparks in your office.” I batted my eyelashes as innocently as I could manage.

“Sparks? I’d call that a bonfire. Whew! But I sure had a good afternoon. Anyway, what was this ‘errand’ business? The thing with Candice going is clearly bogus, but you really do want Dino to do something, right?”

“Right. And the thing with Candice is probably about ninety percent bogus, the other ten being real. What’s happening is that von Stier’s playing coy. He was my number-one suspect until today. Now he’s out of the picture. But he knows things that I need to hear, and maybe Dino will be able to weasel those things out of him. I didn’t know that they were acquainted—maybe that’ll help.”

“So, tomorrow’s Friday.”

“Yep. And we’re anticipating another head on a post somewhere, probably farther east than the others. This guy was last seen in Buena Vista. And we got a description of who he disappeared with. A first. Maybe a major break.”

“How did the telephone records searches go?”

“Pretty well. There’s been some contact among the women.” I told him about the chain of post-killing calls and our current focus on the WDL chat rooms.

“You know, it’s interesting. The smart money on campus is on Madge’s giving up on Waddle and moving in with Bucky. At least that’s what Alice told me this afternoon. But about the chat room thing. I can probably see what’s there, if you need me to. I mean, after our other little computer-related adventures, John’s delegated me authority for monitoring suspicious activities. I farm most of it out, but I have broad computer authorities for all, and I mean all, campus machines.”

“So you can log in to the chat rooms and see what’s been talked about?”

“In a back-door sort of way. See, everything they have is in files, and I can see the files. Not by using their usual user interface, where there are lists of topics, which chat rooms call ‘threads,’ with responses nicely laid out and so on. But if they’ve archived it, I can see it. Do you remember the Waddle computer’s address?”

“I think it was just w-d-l-dot-fremontstate-dot-edu. And the chat room was a link on that page.” I was having trouble grasping the implications of this conversation.

“Thanks to the after-dinner sleepiness of our guests, or horniness or whatever, it’s still early. Want to see what we can find?”

It didn’t take me long to grasp those elusive implications. Hal logged into a server on the campus through his machine in the study using some kind of special secure linking program. Then he started jumping around on the other campus servers until he found a list he was looking for. That told him the real computer name of the WDL server. The next thing I knew, we were looking at a directory listing of the members-only chat-room archive.

“Hal, are you sure this is legal to be doing? This is a members-only directory.”

“We’ve been over this before. You’re the ultimate law-enforcement authority for the campus, right? At least when Rod Andersen isn’t in town. The campus policy, and it’s clearly stated and people sign paperwork agreeing to it, is that campus systems are for official university use only and that they’re subject to inspection at any time by appropriate authorities. I’ve got a letter in my desk at work from John naming me as one of those authorities. You’ve got authority over him. This particular use by Waddle of a campus system is indeed university business, so they’re generally clean. But they’re still subject to inspection. We have reason to believe that there is information on this system pertinent to your investigation of the Burma Shave Murders. That’s certainly reason enough to do some inspecting.”

“OK, OK. But it feels a little unethical.”

“I guess we need Dino to be here to tell us whether it is or not. But I expect he’s busy just now, gazing into the large, dark brown eyes of a little cop we know. From my perspective, whatever we see that isn’t pertinent to your investigation goes in one eye and out the other, so to speak. We just forget we’ve seen the irrelevant stuff. Right?”

“Right. I guess. Oh, just go, let’s do it.”

So we spent the better part of three hours working our way through the WDL chat room archives, just what Derek wanted to be doing all day but couldn’t.

There we found LlamaLady and Angus-Girl, and their discussions with Indigo, Shetland, Equus, and someone we couldn’t readily identify, Redeemer. A lot of it was innocent support-group talk. Some of it seemed to be in a kind of code, in which certain words appeared to be substituted for what was really being talked about, but there was reference to “we’re all in this together” and discussions of meetings. And some of it was damning. LlamaLady, for example, on the day that Martin Robinson’s head was found, put up an announcement that read simply “I’m free!!!” That could be considered innocent enough, but in the ensuing discussion, she also mentioned to the others that they would “see how freedom feels soon.”

Prior knowledge of a crime among a group of people is generally considered by the courts to be *prima facie* evidence of conspiracy, a crime in itself. And conspiracy with respect to a capital crime is a capital crime in itself.

I didn’t sleep very well Thursday night.

\* \* \*

## Sixteen

On Friday morning, Hal reassured me over and over that I looked fine, beautiful, even. But I had the unshakeable notion that I looked as bad as I felt, which was terrible.

It was partly that I’d slept badly and partly, I’m sure, the anticipation of what was going to hit the fan and get sprayed all over me.

Friday morning, head-on-a-post morning.

I went in to the office on my usual schedule, beating everyone else by a half hour or so. Even though I knew it was just postponing the inevitable, I was relieved that there were no urgent phone messages or faxes. What email there was looked like the kind of thing I could ignore for a while.

Thinking he would probably be in early, I called Rod Andersen in Denver. At least I could tell him about our computer search and the conspiracy we uncovered.

“Andersen, CBI.” He had given me his direct number for calls at odd hours.

“Morning, Rod. I don’t know how it looks from where you’re sitting, but it isn’t looking particularly good from here.”

“That seems like a perceptive assessment, Annette. Even my view of the Front Range is gloomy today. Any news of interest?”

“Nothing exciting this morning. Yet. I fully expect the top part of Roland Endsley to turn up somewhere today, though. And there are some developments you should hear, things that happened after

we talked yesterday afternoon. I'm sure the Governor will be calling you, and he may need to hear this." I filled him in about the call from Sheriff Schneider in Buena Vista and our expectation of a picture of the woman Endsley was last seen with. After that I talked with him at length about the chat-room files.

"So, you're telling me we have solid evidence of conspiracy to murder?" He sounded as if his next directive would be to arrest them all.

"Yes, in the sense that they seem to have known in advance that these things were going to happen. Not in the sense that they were doing it, however. And I think we need to be very, very careful here, Rod. We still don't know who the killer is. It may be this 'Redeemer' person in the chat room, but maybe not. Even if it is, we don't know that person's identity. And if we arrest all of these women without arresting the killer, we're really going to get shredded by the media, torn to pieces. The women have become celebrity victims. We simply have to arrest the killer first."

"I understand. Furthermore, to amplify what you just said, arresting the women now would tip off the killer that we're getting close, and that could mean we'd never catch him. So if they don't know how close we are, we should just let things be. But. And I want to emphasize this. But we need to get them eventually. Maybe the first one, the Scharmatz woman, maybe she didn't really know what was going to happen. But all of the others had to know that their husbands, or father or boyfriend or whatever, that he was going to be decapitated and have his head displayed on a post. And they went along with it. That's simply unacceptable in a civilized society. We've got to prosecute them."

"I think so, too, Rod. But prosecuting them is ultimately going to have to be the decision of the State Attorney General. And if he decides not to prosecute, for political or whatever reason, I think we should think twice about arresting them. In fact, I think we should get the Governor and the AG to sign on to prosecution before any arrests. Otherwise, we take the fall. You've been reading the papers, I'm sure. These women are heroes. There's a good chance that the AG will duck the whole conspiracy thing, even if it's handed to him on a silver platter."

There was a long pause.

"Annette, when I hired you last spring, I knew I was getting someone good. And you proved it with the Schoenfield case. And you're proving it now. And, I've got to say, it pisses me off that you're right. Don't get me wrong—I'm not mad at you. I'm mad at politics and the media." He paused and took a deep breath. "OK. What we do is to get the whole silver platter thing together and hand it to them. Then it's their decision whether to proceed."

"I think that's the wise approach, Rod. But, look, I don't want to confuse this with apprehending the killer. We find out who that is, we make an arrest. Right?"

"Absolutely. And I hope the son-of-a-bitch fries."

"With the murder-for-hire angle, there's a very good chance of that."

"Good. So, now what?"

"So, I still feel like shit, boss, and I think all we can do is to wait for the other shoe to drop. When I hear something, I'll call right away."

Derek must have been watching the lights on the phone, because the minute I disconnected he walked into my office.

"Sorry, Annette, but I overheard you say that you don't feel so hot, so to speak. Me, too. I didn't sleep very well last night. I think it's going to be a long day. Was that Rod Andersen? I mean, is the conference call over? Did I miss anything?"

I pushed a large pile of paper across my desk at him.

“Here. A present. Hal and I generated it last night. It’s the WDL chat room archive files. There’s some interesting stuff highlighted. It seems that Hal has authority to look on any and all university computers whenever he’s got a good excuse to. The telephone calls you found were just such an excuse. And I didn’t sleep either. The other shoe hasn’t dropped. Yet.”

“I don’t think I’m going to be able to concentrate on reading this, Annette. I’m not really awake, and there’s this thing hanging out there. That other shoe. What’s in this stuff?”

“Evidence of conspiracy to murder. They knew in advance what was going to happen, they went along with it. There’s some stuff that looks as if it could be coded, and if we decode it, it’ll probably show more, maybe even how they helped somehow. It’s depressing, I’ll say that.”

“Any indications of who the killer is?”

“Probably one of the people highlighted, ‘Redeemer’ is the login. But who it is, we don’t know. Now, here’s the deal. Rod and I discussed this. We’re going to put together as much of a case as we can make in a nice, neat package. When it’s ready, we’re going to give it to the AG to decide what to do. It’s a political hot potato, because these women are media darlings, heroes. We make the case, we let the politicians decide what to do. Uh, this is just the women. The killer, we go after all out.”

“Ah, yes. Don’tcha just love this job, Annette?”

I had to smile. “The city politics was sometimes worse, actually. The PD would get some big-shot in its sights and the mayor or someone on the council would call us off. I remember that vice once had this SOB nailed for soliciting a minor for prostitution, aggressive soliciting of a thirteen-year-old girl, Derek! And the city fathers decided that this asshole was too important in the scheme of things to go down. So it’s all in a day’s work, I guess.”

“Say, I know. While we wait for the other shoe to drop, how about some really good coffee. Starbucks, say?”

“I’ve got to stay here. But if you want to make a Starbucks run, I hereby authorize you to use an official vehicle. Bring back a couple gallons.” I found my purse and handed him a twenty.

“Sorry, Annette. This’ll only buy a pint of Starbucks.” He laughed, and then I did, too. The first of the day.

\* \* \*

For some reason, my entire staff wasn’t in much better shape than either Derek or I. No one had slept well. Everyone was on edge. I had no idea that everyone else was as tuned into the other shoe dropping as I was.

When there was a tapping on my door, I thought Derek was back with the coffee, so I got up and opened it in case he had his hands full.

But it was Candice. Her usually assertive posture and demeanor had regressed to about tenth-grade level—she looked like a shy, scared teenager.

“Annette? Can I come in and talk?”

Oh, no, I thought. Not trouble with Dino already.

“Absolutely, Candice. And I’ll shut the door. But I’m going to tell Sally to have Derek interrupt us when he comes back. He’s on a major Starbucks run, and I need some, OK?”

“Oh, sure, Annette. And, if this is a bad time…”

“Not at all. We’re all sort of waiting to hear the Friday morning news, if you know what I mean. And any diversion from waiting is welcome. What’s up?”

“I’m supposed to go with Dino to Pagosa Springs this morning, remember? Uh, we decided to go on his bike. The plain-clothes approach.”

My suspicions of the night before were borne out—although her definition of “plain clothes” was a little different from mine. It made her outfit of the evening before look demure. Dino, I was sure, was going to delight in having this little honey snuggled up to his back, arms around him all the way to Pagosa.

“Sure I remember. And if he wears his usual biker outfit, you’ll fit right in with him. You go, girl!” I really didn’t know what else to do than encourage her.

“Annette, I don’t know what to do. I mean, last night, after we left your place, Dino and I went for a drink and talked about how to make today work. And he was the perfect gentleman, mostly business, but also nice as you can imagine. A delightful conversationalist. Didn’t come anywhere near to hitting on me or anything. But, really, uh, this is embarrassing...” She stopped and took a deep breath. “Really, all I wanted to do was to rip all his clothes off and ravish him. I came this close to asking him up to my room. I mean, I never felt this way before. What’s wrong with me?”

Ah, yes, I thought, the perils of twenty-something hormones. How very nice to have all that way behind me. Of course, yesterday in Hal’s office was something completely different, wasn’t it?

“Candice, we very have different backgrounds, you and I, and I don’t want to offend you. So I apologize in advance if I do. But as much as I hate to say it this way, there’s nothing wrong with you that a good roll in the hay won’t cure. Sorry, but it’s true.”

She looked stunned. “Oh. Thanks. I guess. Um, I’ve got to go...” And she left in a daze.

A few minutes later my phone rang.

“Trieri, CBI.”

“This is Weathers, of natural sciences, also of the lonely hearts advice club. Babe, have you seen your driver this morning?”

“She just left.”

“Hmm. Well, her driver for today, the big philosophical guy, was just here. He’s got it bad for her.”

“Really?”

“Absolutely. Said he felt dumb as dirt asking my advice, but he didn’t know who else to turn to. Wanted to know whether it was appropriate to ask her out, for Christ’s sake.”

“What did you tell him?”

“I wanted to tell him just to jump her bones, gently, and see what happens, but that didn’t seem appropriate, coming from a dean and all. So I told him that they’d probably be having lunch together anyway and why not make that into a nice date. I suggested that maybe it could lead to dinner and a movie.”

“Oh. That sounds like good advice to me. But that’s not what I told her.”

“She was asking about the same thing? Oh, man. Young love in action. So, what did you tell her.”

“That she should jump his bones.”

He started laughing. “What!?”

“Hey, she said she had this overwhelming urge last night to rip his clothes off and ravish him, so I said, in essence, that that’s what she should do.”

He was laughing harder, which got me started, the second time that day. It felt good.

\* \* \*

Derek’s idea for a coffee run was brilliant. The stuff we usually have around the office is grim, industrial strength high-test, and the Starbucks was a treat. It gave us all a reason to get together and laugh about our collective lack of sleep and our unease, which made us all feel better. I gave everyone a little pep talk about our progress and how, even though we expected another victim to turn up, we also expected to be able to catch the killer based on new information that continued to emerge.

By the time we all had our mugs topped off and dispersed to our separate offices, there was a pile of paper in the fax machine. Sally handed it to me, and I carried it into Derek’s office. Despite his earlier reservations, he was plowing through the pile of computer printout that Hal and I had generated the night before.

“Find anything in there yet?”

He looked up at me. “About what you were saying. Here’s something that you didn’t highlight—a discussion of investment strategies for financial independence. It’s dated a little over four weeks ago, just after the Scharmatz murder. ‘Shetland,’ which I guess must be Bonnie Scharmatz, asked about tax shelters for her insurance money and all the others joined in. As if they were each expecting a financial windfall. Do you suppose the killer is sharing the bounties with them?”

I nodded. “Good question. But even if he’s not, an expectation of a windfall adds to the case for prior knowledge and conspiracy. When I next talk to von Stier, I’ll ask him what the bounties are. I bet he knows. And maybe the killer isn’t greedy, who knows? One thing we can do is put together a case for getting at bank records. If the killer is part of von Stier’s international mercenary community, he’s probably using a bank in the Caymans or something. But these women are probably not that sophisticated. And if we find big deposits in their accounts, that would be heavy-duty. At some point, even the politicians won’t be able to sweep it under the rug.”

“Better yet, if there’s enough of this, especially money, the papers will feel betrayed. They’ll realize that the people they’ve made into heroes and martyrs are part of this murder-for-hire business, and they’ll turn on them. At that point, the politicians will cave, and we’ll have a case.” He grinned.

“Speaking of cases, we got the stuff from Chaffee County. Just came in on the fax. I haven’t looked at it yet.” I set the new pile of paper on his desk and pulled up a side chair. “Hmm. Fingerprint reports from the pickup truck in Babs’ garage.”

“Who?” Derek looked confused, so I had to explain the cast of characters in the Buena Vista soap opera for him. I’d provided only a brief sketch yesterday.

“Wait a minute. Let’s see if I understand this. We’ve got someone named Babs Thurl, whose old man travels to Denver every week, and when he’s gone our guy Endsley puts his pickup in her garage, both literally and figuratively, if you know what I mean, nudge, nudge, wink, wink. But Endsley disappears, leaving his pickup, I mean his truck, in the garage and now Mr. Thurl is coming home to Babs. So Babs, seeing a train wreck about to happen, goes to the cops, who dust the pickup for prints and question the bartender who last saw Endsley. And this is how we break this case? Because of a small-town soap opera? Christ. I think I need a drink.” He was shaking his head.

“Don’tcha just love this job, Derek?”

The fingerprint reports were not very useful. Endsley, it appeared, took enough pride in his truck that he kept it sparkling clean, and most of the prints were from one person, presumably him. This was borne out when Derek rummaged around on his computer and came up with an image of Endsley's prints from his military records, and they matched those from the truck. There were also two other discernable individuals' prints, a whole hand on the dashboard and on the passenger window, and some partials from the driver's side outside door handle. Both of these were smaller, and the notation "female?" was hand-written on the images.

"Probably his wife on the dash and the window, and probably our friend Babs on the handle. I bet she opened the door to look for a key, before she went to the sheriff." Derek looked up at me. "I'll call up there and verify Endsley's prints for them. And I'll see if they've submitted these others to the NCIC. What's that?"

I was looking at a picture, taken with a digital camera and electronically turned into fax material, of a little box. There was a ruler in the picture, which showed the box to be about an inch square, too small to be one of those hidden-key boxes people use. Typewritten on the page was "Magnetized, stuck to frame inside front bumper. No prints. Homing device?" I handed it to Derek.

"Hmm. Could this be from the killer? He'd have to know Endsley's movements to know where to find him, after all. And Endsley moves around a lot, unlike the other victims. When I call them about the prints, I'll ask if they've taken this apart yet. Now what?"

I was mesmerized by the picture I had in my hand, the final image of the bunch. It was the computer mockup of the person with whom Endsley had left the College Peaks Saloon. It showed the face of a woman in her early 40s, perhaps, maybe late 30s, with shoulder-length blonde hair, parted in the middle, and wide-set, large eyes. Dark eyebrows, but that didn't really mean anything because of makeup. Full lips and a wide mouth. Round face with fairly high cheek-bones, but not the southwestern Hispanic/Indian look. I tried to imagine the face with darker hair, but it still looked European.

The picture held my attention because I recognized it. But the recognition was somewhere down in my subconscious, and I couldn't put a name to the face.

I handed it over to Derek. "I know who this is, but I can't come up with a name."

"Let's make a copy, and you can carry it around and look at it every now and then. Maybe it'll come to you. I don't have a clue." He cocked his head sideways. "Could that be a wig?"

"That wouldn't surprise me at all. The killer gets this babe to flirt with Endsley and invite him somewhere, then abducts him. The babe would be wearing some kind of disguise, that's for sure. Dark glasses in a bar don't work, but a wig is easy."

"It wouldn't surprise me if we have the same mockup software that Chaffee County does, so I'll get them to email me this file. We can play with it ourselves, change the hair. Maybe that'll help you remember who it is. The notation here says the bartender estimates her to be five-five or so, one-fifteen pounds. She was wearing heels, but the five-five takes that into account. Blue eyes, but he said they sparkled." He looked up at me. "What the hell does that mean?"

I shook my head, to clear it as much as anything. That picture was haunting me. "Contacts to disguise eye-color? Good question."

We discussed the matter for a while, and he summarized the things he was going to talk with Chaffee County about—the computer file of the mockup, the fingerprint information, the possible homing device. I made a copy of the mockup to carry around with me.

When we were finished, it was close to eleven, the Starbucks was all gone, and the other shoe still hadn't dropped.

We began to wonder if it was going to.

\* \* \*

We were all getting more jumpy by the hour, so when Sally's phone rang at about 11:15, everyone came to attention. She buzzed my intercom.

"Annette? It's that Mr. von Stier for you."

"Thanks, Sally. Tell everyone else to let their breath out, OK?" I pushed the blinking button. "Mr. von Stier. Good morning."

"Ms. Trieri, good morning to you. It's Friday morning. How are things going, may I ask?"

"We've had no news of additional victims, I'm sure that's what you're asking about. But it's got all of us on edge. What can I do for you this morning? You sound much better, by the way."

"Thank you, and indeed I am. I got that damned thing out of my arm last night, and I managed to keep breakfast down. I feel almost human. And this morning helped even more. I'd like to thank you for sending Dino Papandreau my way. I haven't seen him for, oh, over a year. He used to visit regularly, whenever Raimer Holtzmann came up this way. And I have to say, I always enjoyed Dino's visits more than Raimer's. You deserve congratulations for putting that charlatan away."

"Well, thank you. And it had the side benefit of getting Dino away from him. Maybe he'll realize his potential now."

"Absolutely! I'm just delighted that he's teaching. And delighted that you sent him over to talk with me. And you win. Maybe you'd be outgunned in an ethics debate with me, but I know my limits."

I chuckled. "Does this mean you're going to tell me what you know about all this?"

"I'll tell you what I can, and that's what I know. I've been thinking about it, and there's quite a list."

"May I call in my assistant and turn on the speaker phone? That would be very helpful to me."

"Certainly. Mr. Peterson deserves to be in on this."

Rather than push more buttons and possibly disconnect von Stier, I put my hand over the receiver and hollered. Derek appeared in my doorway almost instantly. I looked carefully, found the speaker button, and poked it.

"Thank you, Mr. von Stier. Derek Peterson is now with us."

"Fine. Now. Where to start?" His voice had taken on that tinny sound of a speaker, but we could hear him easily. Derek was poised to take notes.

"I suppose that the best place is with facts, and then I'll move to speculation. Informed speculation, but speculation nonetheless." He cleared his throat.

"We've talked a little about my background, the information that Mr. Peterson there discovered about me. That was good work, by the way. Information travels by various ways and means, and it was through my connections that I heard about the events in Kuwait involving the six individuals with whom we're concerned."

I leaned forward toward the phone. "You mean our victims plus this guy Jeffers you mentioned?"

"Right. Mr. Jeffers met an untimely demise overseas—he decided, unwisely, to take a little vacation in eastern Asia before returning from active duty. His head and hands were shipped via express delivery,

packed in dry ice, to a certain address in Kuwait City. In return, a rather large sum of money was deposited in an account of mine in Geneva.”

“That’s something I have a question about, Mr. von Stier. Would you know what the bounties on our victims might be?” I looked at Derek and raised my eyebrows. He nodded.

“I understand that it’s increased since my original claim on it ten years ago. The last I heard, it was two million a head.” We heard a chuckle. “Literally. And this brings me to my first point. The client naturally wishes positive identification before payout. Hence my shipment to him. And hence, also, the method of elimination in the cases here in Colorado. You see, with the public display and identification of the victims, with all the attendant publicity, the positive identification is made easily, and the payout is therefore guaranteed.”

“So you’re saying that all this hocus pocus about jerks and so on is just a diversion?”

“Correct. Apparently, whoever is doing this, and, as I mentioned, I’m amazed at the skill involved, whoever is doing this has decided that a believable smoke screen would be to play on the domestic violence angle. The poems are part of it. It’s true that all five victims fit the description, by the way.”

“Should I assume that you moved here to try to claim the bounties for yourself?”

“Hmm. That’s perceptive, but I’ll not comment on it. Suffice it to say that I’ve done nothing, nothing, whatsoever, outside of your laws, Ms. Trieri.” He stopped to cough, and it sounded as if he took a drink of something.

“Now. I’ll move a little in the direction of speculation. I have contacts in the sheriff’s department here, and I managed to see the file on Hollis Henry. The picture of his head was intriguing. Here’s something that you might be interested in. The commission that was advertised included not only the deaths of the individuals, but it also included a bonus for their suffering. It appears that Hollis, and, by extension, the others here in Colorado, suffered somewhat more than Jeffers did. Whoever is doing this is playing it for all it’s worth. And, thinking about this, it suggests to me that these people were abducted and drugged somehow. I just can’t see any other way for it to play out.”

“We’ve been thinking about drugs, also. We’ve been analyzing some tissue samples, and there’s something there. But we haven’t figured out what it is, yet.” I made a note to myself to call Gil Taylor. I’d not talked with him since Wednesday.

“In my previous lives, I’ve been involved in some, shall I say, coercive travel plans, and one thing we used when we weren’t particularly concerned about the subject’s future health was one or another kind of animal tranquilizer. Many have antidotes, should you need the subject to become alert expeditiously. None of them is particularly good for the subject, but sometimes that’s not a concern. Perhaps that would explain your analysis results.”

“Thank you! I’ll pass that along.” I added a comment to my note about Gil.

“Finally, I’ve been giving some thought to the matter of the bodies. Perhaps you can enlighten me, if there’s information that isn’t public. But it appears that all you’ve been finding are heads. No bodies.”

“That’s correct, Mr. von Stier.”

“What about these bodies? If it was only one, I’d not think much of it. One body can be hidden reasonably securely. But four, and, if today pans out, five? Burial is risky, because of animals in this part of the country, coyotes and so on. There are abandoned mines, but most are barricaded and sooner or later there would be odors. It’s been over a month since the first killing. Five male bodies of average size, minus their heads, adds up to, oh, say, more than eight hundred pounds of protoplasm, Ms. Trieri.

Where could all this meat and bones be? It's almost as much as a small horse. Surely an operative of the skill we're seeing would have a plan for that."

"We've been wondering about that, too, Mr. von Stier. Any ideas?"

"I'm afraid I'm stumped. Perhaps someone has a large meat-locker, a freezer they're using. But, anyway, it's something to continue to think about. I'll certainly do so, because puzzles such as this are hard for me to let go of."

"Anything else?" I looked at Derek and shrugged a question; he shook his head no.

"That's it for now, Ms. Trieri. And thanks again for sending Dino over here. It made my day."

"And thank you, Mr. von Stier. By the way, do you know if Dino was heading back in this direction?"

"Well, he was with a young woman, and I got the impression that the big question on their minds was 'my place or yours.' I'm afraid that's all I can tell you."

\* \* \*

## Seventeen

First on my agenda was Gil Taylor. I needed to talk with him anyway, but the idea of looking for animal tranquilizers was something he needed to hear. Maybe, I thought, he'll be in his lab over the lunch hour. I got lucky.

"Gil! I'm glad to catch you. Sorry I've been so busy."

"I guess we've both been busy. I hope you've been more effective than I've been. These results I got from your tissue samples just have me completely perplexed. Uh, this is by way of saying that the anesthetic idea from Wednesday didn't go anywhere."

"Think of it as a long process of elimination, and you've been eliminating a lot of possibilities. But I got another suggestion this morning that you need to hear. Have you looked at animal tranquilizers yet?"

"Animal tranquilizers? You mean like they use to dart bears that wander out of the mountains into town?"

"I guess. And there are probably others. I understand that some have antidotes that you can use to awaken the animal. Maybe a tranquilizer and its antidote would explain some of the results with multiple chemicals you've been getting."

"Got any trade names, or chemicals or anything? I'm afraid I don't know where to start."

"No..." I was thinking about how I'd start such a search. "...but don't you have a computer there? What was that chemical you told me about, a pair of them, actually. Molecular weight two-something."

"Yeah, I had a 236.7 and a 249."

"What happens if you ask Google to find, say, molecular weight 236.7?"

I heard typing noises.

“Annette, I think I need to get more sleep. I should have thought of this days ago. Geez. Well, let’s see. Hmm. Here’s something, medetomidine attached to a hydrochloride. Says you use it to tranquilize dogs. And it has an antidote, something called atipamezole.” He paused, and I heard more typing. “With molecular weight 249.”

“Bingo, sounds like.”

“Yeah, I guess so. Man, this makes me feel positively moronic. Here I’ve been struggling with this for days, and all it takes is a simple computer search. Duh.”

“Don’t worry. I needed this other guy to suggest animal tranquilizers, I didn’t think of it myself. So, is this stuff in all the samples?”

“Maybe. I need to look at these molecules carefully and see if they break down into the fragments that I’m seeing. Thing is, it’s possible to have more than one molecule with weight 236.7, so I need to check some things. Also, there are some other large molecules in the results, too, but I should be able to find them, now. I’ve been obsessing over these two and ignoring the others, because these two are there in the largest quantities.”

“That means it was probably the main stuff used, I suppose.”

“Yeah, no doubt. Hmm. But look, it says here that it’s only for use on dogs, and that it’s dangerous for humans.”

“Um-hmm. Gil, if you needed to immobilize someone so you could decapitate them, would you worry about side effects?” I tried not to sound too much like an elementary school teacher.

“Oh. No, probably not. But why the antidote?”

“Not sure, but I think it may be that whoever did this wanted the victim to be awake to see what was happening. Maybe some of the other things you see there, the ones you haven’t identified yet, are nerve-blocks or something, to keep the victim still after he woke up. The tranquilizer is to effect an abduction, the antidote is so they can watch what’s happening, and they’re somehow immobilized while they watch. If that fits the drugs you’re finding, it also fits with what we know about the deaths themselves.”

“So, this also says it’s intra-muscular. Did you find needle marks on the victims?”

“Gil, we didn’t find very much of the victims to look at. No bodies, remember?”

“Oh, yeah. Sorry, I forgot. So, what should I do now? You seem to have the answer you wanted.”

“Verify the medetomidine, figure out the other stuff, write up a report, and send us a bill. This will be very helpful when we put the whole thing together.”

“OK. But I feel like I should give you a freebie on this, given that I didn’t really figure it out myself.”

“Your equipment found those molecules, right?”

“Oh, yeah. It did. You’ll get a bill.”

Gil’s right, I thought. Either he needs to catch up on his sleep or he’s been smoking what he’s supposed to be testing.

I didn’t bother with the formality of the intercom.

“Derek! You around?” It wasn’t shouting, exactly, but it was louder than my usual office behavior.

“Right, here, Annette.” He has his mouth full of something—probably a bite of the sandwich he was carrying.

“Oh, sorry to interrupt your lunch. I should have come to find you. Anyway, I just talked with Gil Taylor, and it looks like maybe the tissue samples have some type of dog tranquilizer and its antidote in them. Maybe not, but that’s the initial estimate. As soon as I passed on von Stier’s suggestion of animal drugs, Gil found a match with his results. Or at least a preliminary match.”

He looked thoughtful. “I guess it’s progress. Chalk one up for von Stier. So, have you looked at that mockup lately?”

In fact, I hadn’t, so I did. Yep, there she was. Nope, I still couldn’t place her.

“Hell if I know. But, look, Derek, keep reminding me, OK? Really. Maybe the name will pop into my head.”

“Will do, boss.”

“Any additional items of interest from the chat room transcripts?”

“More of the same, mostly. Little things that would be innocent by themselves, but that look suspicious when you know what we know. Also, I’m working the stuff that looks coded. Substituting bad words for innocuous ones. No results of substance, but I think I may have invented a new party game. You take a page of text from somewhere and replace every instance of some word with some other word. It could make for general hilarity, especially if it involved, you know, adult content.”

“You have my permission to call Milton Bradley, if you think it’ll work.”

“Nah, they’ve probably already thought of it. I take it there’s been no word from out there in the world about our latest victim?”

“Oh, don’t worry, you’ll be one of the first to know.”

“OK. I just don’t want to be left out of the fun. Well, back to the conspirators.”

With nothing better to do, I tackled a pile of neglected administrative paperwork that was sitting on my desk. There were various personnel forms about my staff to be dealt with, travel receipts to put down on other forms so I could get reimbursed, things to read with checkboxes to show that I’d read them so that the bureaucrats in Denver would have their backsides covered, other things to read and check from the FBI in Washington, and a huge amount of crap from the Department of Homeland Security about How To Be Safe. At least that didn’t have to be checked off.

I was speed reading a pamphlet about how to identify possible terrorists without falling into the bad, bad, bad trap of profiling people based on their looks (the method: do it but deny that it’s profiling), when Sally buzzed me on the intercom.

“Annette? It’s Sheriff Hank Allen from Saguache.”

“Thanks, Sally.” Maybe Sam Milstead came home, I thought. I poked the blinking button.

“Hank? How are things over your way? Did Sam Milstead turn up yet?”

“Hi, Annette. No, nobody has seen him. I talked to Gwen, though, and got her calmed down based on what you told me. So that part’s under control. But someone else turned up, maybe that guy Endsley you told me about. Or at least his head did.”

\* \* \*

That’s the trouble with waiting on edge for something to happen. You finally let your guard down, and, bang!, it takes you by surprise.

“Oh. Well damn. Uh, Hank, let me get my assistant on the line.” I put him on hold and successfully got to Derek on the intercom without disconnecting the sheriff. “OK, Hank we’re here. We’ve been expecting something like this since dawn, and I think we were beginning to hope that it wouldn’t really happen.”

“Yeah, well, the perp picked an obscure back road that doesn’t get much traffic. Heads east from 285 just south of Villa Grove, way up in the northeast part of the valley. We still might not know about it, except a guy went down there chasing some cattle that got through a fence.”

“Same MO as all the others?”

“Yep, eight signs, although there’s about no chance anyone would see the northbound ones without seeing the southbound ones first. Now, you understand that we don’t really have a positive ID on the victim yet.”

“Derek, did your research turn up dental records?”

“Got ’em right here, Annette. Sheriff, where can I fax them?” Allen recited a phone number, and I heard Derek put his receiver down.

“Hank, are you calling from the scene?”

“No, I’m back in my office. It’s actually not too far from here, at least in relation to how big the county is. The techs are doing their thing out there, and they’ll bring stuff in after it’s all filmed and so on.”

“I’ve got an atlas here. Are you talking about GG Road?”

“That’s the one that heads east from the highway. The scene is actually on 65 Road, what GG turns into at the curve, about a mile south of that curve near the foothills.”

“I see. And you’re right. ‘Obscure’ is a good word. I’d say this is somewhat more isolated than any of the others, at least in terms of how far it is from highways. I guess the perp is getting nervous.”

“Could be. So, are you coming over to see it?”

“Unless you think there’s a compelling reason for me to, I think I’ll be more valuable here. We’re getting close, Hank. Also, there’s reason to believe that this will be the last one. I don’t want to waste any time, in case the perp is done and thinking of leaving Dodge.”

“I asked because I figured we’d leave the scene intact for you. But, no, I really don’t see any reason for you to spend the time getting here, although I hear you get around pretty well in that Mustang with the lights.” He chuckled.

“Hank, when will your medical examiner look at the head?”

“Oh, probably tomorrow. He works according to his own schedule, unless there’s a real time crunch.”

“Let me make a suggestion. Belinda Edwards, the ME up in Gunnison, made a positive ID that heads number two and four were removed the same way. If she were able to observe your ME’s exam, it could help put things in the right context.”

“We’ll see if we can get her down here tomorrow.”

“Great. And I expect she’ll pass on the message that we’re collecting and analyzing tissue samples.”

“I thought as much. You going to tell me what’s going on now?”

“Hank, you’re now an official member of the club, and you’ll be getting everything that the others have and all the new stuff, too. Lots of reading material. We’ll send a courier out as soon as we get a package put together, and the newest stuff will come by email or by fax. And I’ll say again that we’re getting close. Not close enough to have saved your victim, which is probably Endsley, but close.”

“I just got handed a picture of a bunch of teeth. We’ll see about a positive ID.”

“Good. I’ll need to call Denver. What’s the situation with the media?”

“Nothing yet. I’m going to try to keep it that way, too. But that’ll only last so long.”

“If we can get the ID and tell the Governor ourselves before he hears it on CNN, that’ll be a victory. Anything else for now?”

“I figured you’d be asking about the little ditty.”

“Huh? Oh! The poem! Sure. Geez, I forgot about it. So, right, what’s it say?”

“Ahem. Here goes:

*‘This Takes Care  
Of One More Jerk,  
Beheading Them  
Is Our Life’s Work.’”*

I was scribbling away, but I managed to talk at the same time.

“It fits the pattern.”

“Sounds to me like they’re not done. ‘Our life’s work,’ I mean. But you’re thinking this is the last?”

“I wouldn’t be surprised if that ‘life’s work’ thing is a smoke-screen, designed to keep us guessing. We’ve got information that all of these murders are part of a vendetta against the victims, and Endsley is the last. There’s a two million dollar bounty on these guys, we’re told.”

“Two mil? Damn! This is that business in Kuwait you told me about, huh?”

“Right. That’s why I don’t think there will be more.”

“You know, a guy in a middle-eastern country who’s financing murder for hire in this country fits the government’s definition of a terrorist, seems like.”

“I never thought of that. Although this is personal and not political. Still...what I want to do is to catch the perp and get the whole thing wrapped up. After that we can tell Washington what we know. I’m going to let them deal with a possible terrorist angle.”

“I think that’s what I’d do, too. So, when should I expect this package of stuff?”

“I’ll see who’s available from the State Patrol to run it over to you. I hope you’ll see it this afternoon. And please let me know when you get the head identified.” I gave him my cell phone number, just to be sure.

“Will do, Annette. And, hey. Sorry to ruin your day.”

\* \* \*

Sally’s eyes were big and round and wondering, and I thought everyone else probably felt the same way.

“Sally, buzz everyone and get them in here, OK? And did Candice Garcia get back from Pagosa yet?”

“She came in a few minutes ago. And I’ll get people in here.”

Five minutes later I had everyone filled on the how the other shoe had dropped, and, even though it was bad news, I think everyone felt better that the waiting was over.

When the meeting broke up, I signaled to Candice, who was back in uniform, to come to my office.

“Candice, good job in Pagosa Springs. Von Stier told me he was delighted to see Dino, and we learned several things of interest. How is Dino, by the way?”

“Oh, he’s fine. Um, I’m sorry it took me so long to get back here, we stopped for lunch and, uh, time got away from us a little. Uh...” But I was holding up my hand.

“It’s fine, really. I’ve got something I need you to do, unless you’re occupied some other way.”

“No, I’m available for anything you need.”

“Sally’s putting together a package of stuff I need couriered up to Saguache, to the sheriff there. It’s the case files. He needs them now that he’s a member of the club. You’re the fastest way I can think of to get them there. Even if I called up the helicopter, it’d have to get here first.”

“Now?” Her face had taken a nosedive.

“Yep, now. And if you’re going to have to break a date with Dino, I’m sorry. Tell you what. Take him. Let him ride shotgun. He can help keep you awake. See, I need you to get back here as soon as you can, because I may need you with me tonight or tomorrow. A six-hour car trip with him won’t be the most romantic thing in the universe, but it’ll give you a chance to talk a lot and get to know each other better. Right?”

When I’d suggested taking Dino, her face had lit up, and she was nodding in eager agreement.

“But, Candice, listen. Dino’s probably not like a lot of the guys you know. I think his ego is on an even keel. On the other hand, the last thing you want to do is scare him with your driving. He used to be a chauffeur, so he’s used to smooth cruising in limousines. Be nice, OK?”

She giggled. “Thanks, Annette. And I’ll be careful.” She looked at her watch. “I guess I ought to be back here by about eight.”

“Sounds about right. And call me on my cell phone when you get back, OK? Drive safely.” She was beaming as she walked out.

Almost immediately, I was punching Rod Andersen’s number into my phone.

“CBI, this is Sandy McStain.”

“Hi, Sandy, this is Annette in Durango. Rod must be on another line.”

“He is, Annette. Should I interrupt him?”

“I’d say he’d want you to, even if it’s the Governor. Tell whoever it is to wait, or something. We’ve got our fifth victim.” I heard the empty space of on-hold for only a few seconds.

“Annette? What have you got?”

“Fifth victim, same MO, no positive ID yet but they’ve got Endsley’s dental records to compare with. They’ll call me soonest. ‘They’ is the Saguache County Sheriff, Hank Allen. Found the head on an obscure back road, more remote than any of the others, up in the northeast corner of the San Luis Valley, southeast of a little town called Villa Grove. That’s why it wasn’t found earlier. There’s no hint via the

poem that it's the last, but if it's Endsley, I bet it is. Oh, and Sheriff Allen told me that so far there was no media involvement."

"So far. Well, that'll change. If it's Endsley, we'll need to go public with the Kuwait story, so that we can reassure people that it's over."

"Doing that will jeopardize catching the perp. It'll let him know that we know what's really going on. He'll run for it before we know who's running."

"I'll try to persuade the Governor, but it'll be his call, like we talked about with the women. Anything else new?"

I told him about the conversation with von Stier and how his new information had been helpful.

"Animal tranquilizers, huh? This guy's creative, you've got to give him that."

"Von Stier says he admires the guy's work. A professional compliment, as it were."

"And what about this mockup?"

"We're doing the usual things with it, and I'm carrying around my own copy. I recognize it but can't put a name to it."

"But you think it'll lead to the killer."

"Maybe. Could be that it's just someone hired to lure Endsley out of the bar and into a situation where he could be knocked out with the tranquilizer. And maybe I really don't recognize the picture beyond some generic memory. But right now the mockup is a priority."

"I looked at the copy you sent here, and I sure don't recognize her. Any information from the prints?"

"Only that Endsley kept his truck clean and didn't wear gloves when he was in it. There are some partials, they look like a couple of different females, that we're working on."

"OK. I'd better call the Governor."

"Rod? Can I assume we've had our afternoon conference? I'll call when they get an ID, and if there's anything new, I'll be sure to let you know."

"Just tell me when they get an ID. The Governor will want to know that."

Talking about an ID reminded me, so I took out the computer mockup from Buena Vista. There was the same picture staring at me, taunting me to remember who it could be. But I couldn't.

So I put it away in my portfolio case to take home, to stare at after dinner.

Then I put together an email for everyone on the case list—the members of the club as well as people in the State Patrol—about what Hank Allen had reported and attached a scanned version of the mockup that Derek had passed me. His request to Buena Vista for the computer file was still pending, apparently.

And I was finally out of things to do.

Oh, there were a million things to do, of course, but there was nothing for me to do right then.

Derek was working on the conspiracy angle, trying to assemble a sufficient case to obtain warrants for the women's bank records. Gil Taylor was confirming his analysis results. We wouldn't have an ID on the latest victim until we had it, and the tissue samples would take even longer.

I'd been waiting all day, on the edge of my chair, to hear about the latest victim. I guess I'd been assuming that when the news came in, I'd charge into action somehow.

But now that we knew, there was just more waiting to be done.

I decided to wait at home.

\* \* \*

After the stressful day, the first thing I wanted to do was to work out, to get all the tension out of my body and relax a little afterward. So at home I picked up the mail, threw it and all my stuff onto the hall table, and changed. Then it was 45 minutes on the ski machine and a shower.

When I was finished, it was about 5:00, so I turned on the local news to see if there was anything about our latest victim. I flipped around the channels—our satellite system has both the Denver channels and what passes as “local” in Durango, a version of the Albuquerque stations. There were various rehash stories about the Burma Shave Fridays of previous weeks, but nothing on the new one. That felt good.

Unlike the night before, I had no inclination to cook, nor did I want to go out. All I felt like doing was sitting around in my robe with my hair up in a towel and being a zombie. Maybe, I thought, Hal won’t mind ordering a pizza.

I remember reading things way back when I was an impressionable teenager about how to be a good wife, how you should appear and act when your husband comes home from his hard day at work being the family breadwinner. There were lots of books full of advice in the high-school library. Most seemed to agree that having dinner on the table, being well-dressed—even provocatively dressed—and cheerful, loving, and full of energy was mandatory. One book, probably not in the high-school library, but I don’t know where I saw it, went so far as to suggest wrapping yourself in Saran Wrap (and nothing else) for “those special occasions.” Even when I was a teenager, that seemed to me to be just sticky.

These and other deep thoughts were interrupted at about 5:45 by the chirping of my cell phone. I ran out to the hall and rummaged around in my stuff, grabbing it just in time to prevent its switching over to voice mail.

“Trieri, CBI.”

“Annette? This is Hank Allen. We’ve got a positive ID from the dental records. Mr. Roland Endsley is officially deceased.”

“Good...No, wait. I mean, thanks for telling me and it’s good to have a positive ID. Sorry, I’m a bit worn thin.”

“I don’t blame you in the least. Oh, and thank *you*. Your courier got here with the package. Both of ’em, both couriers, I mean. I guess I didn’t know it was sensitive enough to need that much of a bodyguard. I mean, that guy’s something you wouldn’t want to mess with.”

“Yeah, but he’s a peach, really. Believe it or not, he doesn’t work for me, he’s a philosophy instructor here at the U.”

“Oh. Now I’m all confused. Anyway, it got here, so thanks. Looks like I have some reading to do. And that email you sent got to me, too, so I’m on your list now.”

“When did they get there? I’m wondering when to expect them back.”

“Oh, about 4:30 or so. He said something about two and a half hours. Say! I didn’t think of it at the time, but is that from Durango? Damn. He’s some driver.”

“She’s the driver, Hank. He’s the philosopher.”

“Huh? Oh. Like I said, I’m confused. But thanks anyway. Gotta go.”

I hate to take pleasure in other people's discomfort, but Hank's confusion let me laugh, really laugh, for the third time that day. It helped.

But I was suddenly back on duty, because Rod Andersen needed to hear about the positive ID. So I called his private number, a cell phone, I think, but there wasn't an answer until it switched to voice mail. I left him a message that the victim was definitely Roland Endsley and tried to decide my next move.

The Governor needed the information, and I had no idea when Rod would get it to him. If I just waited, the media might get it first...

It took some creative number searching and no little amount of coercion of reluctant bureaucrats, but ten minutes later I had him on the phone. I resisted the urge to stand while I talked with him.

"Governor, I'm very sorry to bother you, but I believe you need to hear this right away. We made a positive identification of the fifth murder victim. Did Rod Andersen brief you on what he knew earlier?"

"Yes, he did, and he said he'd provide the ID when he had it."

"I'm doing that for him, because I just found out myself, and I was unable to reach him. He has a message waiting for him about it. I'm not sure what he told you, but what I know is that the victim was a Roland Endsley, a cattle rancher from Fort Garland. It appears that he was abducted in the middle of his weekly business trip. He sells cattle feed, and his route takes him east from Fort Garland, up the Arkansas Valley, and back south through the San Luis Valley. He was abducted in Buena Vista. His body, or, rather, his head, was found in the upper San Luis Valley on a county road, Saguache County, southeast of Villa Grove. There's a poem, as usual, and we're still analyzing it. The rest of the MO is the same as the others. As far as I know, there's been no media involvement yet."

"Ms. Trieri, I've been talking with Rod about this every day. He's been saying good things about you, about your work. He says that you're making progress toward catching the killer, even if you haven't been able to prevent the murders. And I'm aware that you were brought in only two weeks ago, after three of the murders had taken place. In fact, I take responsibility for that, whether it's fault or credit, it's mine. Rod's been taking the heat from me, and that's appropriate. I don't want to muck about in your investigation. Now, having said that, you need to know that I sure would like to know what in the hell is going on." He wasn't yelling, but I could understand how he had developed a reputation for intimidation.

"Governor, so would I, so would we all. And we're getting very close. I believe that there will be no more of these hideous beheadings, but until we catch the killer, I can't be sure. I hope you'll forgive me for keeping confidential certain aspects of the investigation so that we can optimize our chances of catching this murderer. You see, I'm certain that if some things we've discovered became public, the killer would immediately leave the state, probably the country, before we can identify him. So, I'm being careful about some of the things I know." Ugh, I thought. Weak ending, Trieri.

"Ms. Trieri, as you know, I have a background in law enforcement, so I understand completely. I presume that you're briefing Rod fully, and that he's keeping things from me. That's fine. But I'm sure you can see my situation. What advice do you have for me?"

My brain went into hyperdrive.

"Well, sir, I hate to say much of anything without having discussed it with Rod. But I'll assume you're twisting my arm. I think I'd recommend that you call an immediate news conference, announce this fifth murder, tell them what you know, and say that you won't tell them more because you want to catch this asshole and you don't want to jeopardize the investigation. I don't know what you know, but I'm hoping you don't know things that will jeopardize it. This means you can pretend to know more

than you do—that makes you look good—but you don't have to worry about letting something slip. And, let's see. I guess I'd suggest you talk with Sheriff Hank Allen in Saguache first, to give him a heads up and, well, I'd recommend giving him credit. I'm betting you can get on the ten-o'clock news with a news conference by eight." There was a long pause. I found I was holding my breath, so I let it out.

"Done. And I'll cover your tail with Rod. And, say, one more piece of advice, please. In prime-time television programs these days, they seem to use the word 'asshole' a lot. Should I really say that I 'want to catch this asshole'? In the press conference, on TV, I mean?"

"Uh, well, sir, that's surely your call." I felt myself blushing. "I just said it because I'm a little worked up over the whole business. And, hey, from a political perspective, maybe it would be good for people in Colorado to see that you're worked up about it, too. Maybe if you can sort of let it slip out because you're righteously indignant, maybe it would be a plus. You know?"

"Yeah, I do. And I'll give it more thought. And, listen. When I get elected President, expect a call from me." He disconnected, and I had to let out my breath yet again.

That, I decided, warranted a glass of wine, so I hauled myself off the couch and into the kitchen, the frumpy housewife in her bathrobe who'd just told the Governor to use potty language on television.

I was pouring myself a glass of a lovely Chardonnay when I heard Hal come in the front door. It was a little after six.

"Hey!" His voice came filtering in from the front hall. "You're home! That's great! Oops...Annette?"

"I'm in the kitchen. Welcome home." I tried to sound as cheery as those old high-school library books said I should.

He came into the kitchen holding a piece of paper.

"Hi, lover! How wonderful that you're here! Uh, I was shuffling around in the mail, which had your stuff on it, and this picture of Maureen Downey fell out of your portfolio. What's with her hair?"

Fortunately, I was standing over the sink, so it didn't make too much of a mess when I dropped my wine glass.

\* \* \*

## **Eighteen**

I don't know which is worse, the type of abrupt shock that made me drop my wine glass, or the slow, lingering kind that Hal got as I explained things.

When he said Maureen's name, I instantly knew that he was right—that's who that picture was, no doubt about it—and the wine glass shattered, of course, making the whole thing more exciting. But I must have looked faint, or something, because he made me sit down. He poured me more wine and proceeded to clean up the glass in the sink.

Then, as he asked questions and, as all the pieces fell into place for me like dominos, he got answers that he couldn't possibly have anticipated, he's the one who began to look queasy. Eventually he sat down across from me at the kitchen table and just stared at me.

“I don’t know if I can bring myself to believe all this.”

He was sitting up straight, with his hands flat on the tabletop. He looked stunned.

I reached over and patted his right hand. “I think I’d be surprised if you did, sweetie. After all, you met Maureen once, right? At Sarah Robinson’s, when that baby llama was born. You saw her in action as the veterinarian, bringing life into the world. This other stuff must seem like very foreign territory.”

“That’s for sure.” He shook himself briefly.

“Tell you what. You just heard all that stuff for the first time, and it was mostly new to you. Let me run over it again quickly, and it will be more familiar to you this time. And if you hear anything questionable, say so. I’d be just as happy as you if this isn’t what it looks like to me. OK?”

He nodded.

“So let’s start with this picture. It was created by a computer program that they have in Buena Vista, one of those programs designed to let witnesses reconstruct faces they’ve seen. We have one, too, and I’m pretty sure it’s this one. Standard stuff. And what happens is a witness to something comes in and, with the help of a computer tech, builds the face he’s seen. They don’t show faces and say, ‘is it this person or that?’ They show chins and ears and so on and build a face. Right?”

He was nodding. “Used to be sketch artists, now it’s computers.”

“Exactly. So. On Wednesday, today’s Burma Shave victim, Roland Endsley, was seen by the bartender leaving the College Peaks Saloon in Buena Vista at about five in the afternoon in the friendly company of a woman with blonde hair. The bartender came in to the Chaffee County Sheriff’s offices and worked with the tech to create this picture, from scratch. I’ve had it all day, and I knew I recognized it, but I just couldn’t come up with a name. You saw it and immediately identified it as Maureen Downey, with different hair, right?”

“Right. But that doesn’t mean she’s the Burma Shave murderer!”

“Nope, it doesn’t. Could have been her, in a wig, but they just went out on a date and everything is innocent, from the murder perspective, at least. Or, it could just be someone who looks a lot like her. But I have to assume it’s her until something compelling changes my mind, and as far as we know, she’s the last person he was seen alive with. Now, from here, things are circumstantial, but they’re still damning. First, Maureen is a large animal vet. All of the first four victims have traces of animal tranquilizers in their tissues, and traces of antidotes. She knows these drugs, it’s her profession, and she has access to them. Second, we’ve found no bodies. Maureen has a licensed crematory to deal with carcasses of large animals. I saw her haul off a horse one day, and she told me that she contracts with the Highway Department to deal with large road-kill. Third, all five of the victims have some kind of large domestic animal at their homes, llamas, ponies, horses, cattle. I saw Maureen at two of these homes. Moreover, she’s well-known in the San Luis Valley, and people are used to seeing her driving around in her pickup truck, sometimes towing a trailer, at all times of the day. Fourth, and I’ll admit I’m starting to stretch a bit, Maureen has some sort of Irish or English accent. I don’t know where she’s from, but I bet it’s the UK. One of the poems used slang that only someone from the British Isles would use.” I decided not to mention the funny looks I’d had from Maureen. “Finally, and I’m still stretching, let me go get my map.”

I went out to the hall and found another of the papers I’d brought home to ponder.

“This is, of course, our little corner of Colorado. These asterisks are the locations where the heads have been found. See this?” I pointed to the newest one that I’d penciled in today. “That’s where they found Roland Endsley’s head today. Let me connect the dots.”

They made, more or less, an ellipse with Del Norte approximately in the center.

“But what’s this mean? These places aren’t where the victims lived.”

“No, but my theory of the crime, the crimes, is that she picked these guys up somewhere, drugged them, took them to her clinic in Del Norte, decapitated them, and then drove out with their heads to put up the signs and so on. She always went out in different directions because it might be that earlier spots would be watched. And she always took the heads more or less in the direction of the victim’s home so that identification would be faster. Someone would recognize him. The farthest one from his home was today, and we had to use dental records. Sometime in there, she cremated the bodies.”

“OK, but how in the world could she have done all this beheading? You’ve been saying it’s professional, almost surgical.”

“That we’ll find out at her place, I’m thinking. We also need to explain the expressions on the faces.” I stared at him with what I hoped was a gently sympathetic expression.

After a minute, he picked his hands up in a shrug. “You’ve said that everything except the picture is circumstantial. But you’re right, there are a lot of fits. So, what’s your next move?”

“I need to go back to the office tonight, get Derek in there with me, and see what we can find on her out there in computer-land. Derek’s a whiz at finding people’s histories.”

“You’re not going anywhere without some food on top of that wine, and some coffee. Why don’t you go get dressed and I’ll make us both some food—breakfast at six-thirty in the evening. That’s the fastest thing I can think of.”

I realized I’d skipped lunch, and I was starving.

“That sounds delicious. Make lots, please.”

Twenty minutes later, we were both eating huge breakfast burritos. Hal’s a wizard at fast, hearty breakfasts, probably because when he gets up early to go fishing somewhere he doesn’t like to waste time. These burritos were made with extra-large flour tortillas wrapped around three scrambled eggs each, hash-brown potatoes from the freezer, diced Black Forest ham, and grated sharp cheddar cheese. Hal poured mild green chile over them, mild, he told me, because he didn’t want to upset his stomach any more than it already was. There was also fresh coffee.

“Suppose you find things on Maureen that bear out your suspicions? Then what?”

“We put together enough information to get a search warrant, and we go over there and see what’s in her clinic. I want her computer, for one thing, to see if she’s that ‘Redeemer’ person in the chat rooms. And we arrest her for something small, something to do with the business with Endsley on Wednesday. Accessory, maybe.” I stuffed another big bite in my mouth.

“What about the other women in the chat room?”

“We’ll see. It’ll be a political hot potato. If we can find evidence that they’ve profited from the murders, that should let us prosecute them. But, otherwise, maybe they just walk.”

“I’m going to have to talk with John Martin about this chat room stuff, because it’s on one of our computers. He’ll ask me if the U is exposed, legally or to bad publicity.”

“Probably not legally; the publicity is something I can’t control. Listen, this was wonderful. I have to run. And could you watch the ten-o’clock news for me? I want to know if the Governor’s press conference is covered.”

“Any particular station?”

“Hey, they’re all about the same, aren’t they? Pick one. Let me know if he uses any questionable language. See ya.” He was scratching his head as I left.

\* \* \*

Derek Peterson was already back at the office. I’d managed to call him while I was getting dressed, and he had already eaten an early dinner, he said.

“Hey, Annette. I got a head start on you.” He jerked his head in the direction of the computer printer, which had a pile of paper in the output tray.

“Thanks for coming in this evening, Derek. And I’d have been here sooner, but my husband wouldn’t let me leave the house without eating something. He looks after me that way.”

“And he recognized the picture right away, huh?”

“More than that. It fell on the floor, he picked it up and said he’d dropped a picture of Maureen Downey. Then he asked about her hair.”

“So it’s a wig?”

“Probably. She has short, red hair, a little longer than mine. And, as I recall, she also has green eyes, so the sparkling blue eye thing must be contacts.”

“And you’re sure it’s her?”

“As sure as I can be. Hal’s reaction to seeing the picture is really the best indicator. But when he said her name, I knew he was right. And all the other stuff started clicking into place. So, what’s in that pile of paper over there?”

“The easy stuff. Hmm, let’s see. Been in the Valley about six years, bought her clinic and the practice from an old guy who wanted to retire to Key West. Before that, she apprenticed as an assistant horse doc, up in Weld County. That was right after she got out of school, the Colorado State large-animal vet program. Good program, by the way, and she was at the top of her class. She started in that program just after the end of the Gulf War.”

“I don’t know how old she is, but doing the math backwards and making a guess, I’d say she didn’t start that program right after her undergraduate degree.”

“Right. She’s forty-two, according to her driver’s license. Before CSU is where it gets difficult, and, presumably, more interesting. That’s where I am now.”

“If it’ll help, there’s a possibility that she may originally be from the British Isles, maybe Northern Ireland, because…Oop. Excuse me.” My cell phone was chirping.

“Trieri, CBI.”

“Annette? Candice. I’m baaack, as they say. Piece of cake.”

“Good work. You impressed Hank Allen with your driving, by the way, except he thought it was Dino. How is Dino, by the way? Was he able to ride with you without getting all freaked out?” I heard a giggle.

“Oh, sure. I started out slow, to get him used to the idea of my being in control. And he liked that fine. Then as I began to speed things up, he got more and more into it, even to the point of helping me.”

“Candice, are we talking about your driving, here, or what?”

“Huh? Ohhhh. Oh my God!”

“Freudian slip, eh? Well, just remember what I said. Listen, we’ve had a big break in the Burma Shave case. But you’ve been on the road, either riding with Dino or driving, since early this morning. Why don’t you get some rest so you’ll be fresh in the morning? We may have an exciting day ahead.”

“Um, it’s Friday evening, and, I’m usually off duty. So Dino and I were going to go out…”

“That’s fine with me. I just need you to be ready to rock in the morning, OK? This will probably be a big overtime weekend.” And we said our goodbyes. I refrained from telling her to go ahead and ravish Dino.

“Overtime? Did I hear overtime? Boss, I need a new roof. That’s great!”

“Derek, you’re exempt, just like me.” His face fell, a great example of bad acting.

“Oh, yeah. Well, maybe this computer stuff will get me a big raise?”

“Nudge, nudge, wink, wink. My official bureaucratic answer is ‘we’ll see.’”

“Just like I say to my four-year-old. So, anyway, I’m making some progress. And looking for a UK connection was a good idea. Thing is, her stuff is buried like von Stier’s was. Much harder to find than all the military records and stuff on our victims. But when I dig into it like I dug into von Stier’s stuff, I’m not finding anything interesting like I did with von Stier. I don’t quite understand. Why would innocuous stuff be buried so deeply?”

“Got me. What’s the innocuous stuff?”

“Well it does seem to have some relevance. She did indeed grow up in Northern Ireland, for a while. But when she got to be school age, her father began to get diplomatic appointments. So she moved around the world a lot when she was a kid. But the connection to us is that she spent her high-school years in Kuwait. Her father was in the British embassy there.”

“Where’d she go to college?”

“Oxford. Took a first in history, says here, and she also took a lot of political science and pre-med-looking things.”

“Then what?” So far, there was nothing incriminating, nothing at all. Getting a comprehensive search warrant, I thought, could be a challenge.

“Yes, well. Then nothing. There’s a complete blank between her graduation from Oxford and when she entered the vet program at CSU. Way too many years to be sitting on a beach somewhere.”

“That’s for sure. We’ll have to keep working that. Let’s see. She’s got a license for prescription drugs, at least animal ones. Maybe there are fingerprints on file for that somewhere. If so, we can run them through the NCIC and, because she’s foreign, Interpol. Say, is she a citizen?”

“I think it’s in the pile on the printer. Naturalized two years ago.”

“Do they fingerprint people for that? Maybe since all the emphasis on terrorism, since nine-eleven and all that, maybe there’s more information.”

“I’ll check.”

“And what about this Kuwait thing? You said she was there in her high-school years? Hmm. Call it twenty-six years ago. And the girls who our victims raped were teenagers during the Gulf War? So…they would have been toddlers when Maureen was in Kuwait. Do you suppose there’s any chance that she babysat for them, or something like that? Knew the family?”

“I think you’re reaching, Annette.”

“Yeah, I am. Free associating. Let’s work the fingerprint angle. If we get lucky, something on her missing years will pop out of Interpol or somewhere.”

\* \* \*

The Saturday morning papers were full of news about victim number five, of course. I’m always amazed by how they can take two or three little facts and make them sound like investigative reporting. On television, of course, they do even more—make it sound like the sky’s falling—with only *one* fact, if that. Which reminded me.

“Say, did you see anything of the Gov last night?” I’d finally returned home about eleven and missed the news.

“More than I planned.” Hal looked up from digging around in half a cantaloupe. “I turned on Channel Nine when you left, to remind myself to watch the news. I was absorbed in some reading, and at about eight, presto! there he was, in a news conference. I guess they carried it live. And I saw him again on Channel Seven at ten.”

“So, anything interesting?”

“In the press conference, he worked himself into a righteous snit, that’s for sure. Got red in the face, raised his voice until the microphones got fuzzy, and talked about how this son-of-a-bitch was going down as sure as he’s the Governor.”

“Uh, so you didn’t hear him say ‘asshole’?” I felt a measure of relief.

“Well, no. Why?”

“Because when I talked with him I suggested he might.” I was blushing again. “I guess he substituted SOB.”

Hal started laughing, almost out of control. “You mean I’m married to the Governor of Colorado’s profanity advisor? Is this a cabinet-level position, or what?”

I wadded up my paper napkin and threw it at him, and it bounced off his nose and into his cantaloupe. But he was still laughing.

“Anyway, maybe you’ll feel better if I tell you that on the ten-o’clock news on Channel Seven, they bleeped it out. But you could still lip-read it.”

“Hmmp.”

“Actually, SOB works, in the context he used it. ‘Asshole’ implies a sort of ‘super-jerk,’ like you’d use to describe the victims, maybe, except you wouldn’t want to do that because they’re victims. What he really needed was the MF word, but he’d never use that in public, I bet.”

“Oh, thanks. An academic analysis of the Governor’s profanity for breakfast. I need another napkin.” But I was laughing, too, at that point.

“So, do you have a plan for the day? I was going to suggest that we walk into the upper Los Piños and see what’s hatching, but it looks as if you might be a tad busy.”

“That’s the understatement of the month, at least. You go. I don’t know when I’ll be home. We may wind up staying over in Del Norte tonight, depending on how things develop.”

“Hmm. I’m not sure there’s much of any place to stay in Del Norte, but you can always go down the road to Monte Vista. I think there are more motels there.”

“We may do that anyway, just to keep a low profile. I have the feeling that Denver is going to assemble quite a task force for this thing. And I don’t even know what kind of thing it’s going to be.” I shrugged.

“I…”

But the house phone was ringing, my line.

“Annette? Sorry to call you at home.”

“Morning, Rod. Not a problem. We were just finishing breakfast.”

“Listen, I’m sorry about last night. Like a dope, I walked off and left my cell phone in my office. When I got home, I had no idea where it was. So I found it just now and got your message. The Governor called me last night, before the press conference, though, so everything’s square. Thanks for calling him.”

“I thought he should hear the victim’s ID soonest. And he asked me for advice, and, well, you know me, I just shoot my mouth off, sometimes.”

“Yeah, he said you suggested the press conference, and I think it was a good idea. Gave him a chance to play the statesman a little, act like he’s really in charge. And he came across well, I thought.”

“Right. Uh, Rod? We’ve got more. We’ve got a solid ID on that picture I sent you, the blonde.” I explained how Hal had recognized it as Maureen, which tripped my memory, and I described the circumstantial evidence as well.

“It sounds as if you think she’s the killer. In addition, I mean, to having enticed that guy out of the bar, so she’s more than an accessory.”

“Don’t know yet, I’m not one-hundred-percent sure. But she sure seems deeply involved, even if she didn’t swing the axe, so to speak.”

“What’s your plan?”

What is this with everyone asking me about my plans? I wondered. I’m hardly awake yet.

“With a high-profile case like this one, I’ve been thinking that someone at a higher level than me would get involved. But based on what we have, most of it circumstantial, I’d like to get an arrest warrant for Maureen Downey and a search warrant for her place. We pick her up and see if we can get a flesh-and-blood ID from that bartender—this will take some time—and meanwhile see what we find at her place. Also, we’re waiting on some requests for information from overseas.” I told him about Derek’s computer searching and our requests to the FBI and Interpol.

“This is your case, Annette, and no one is going to horn in. We can do some things to help, though, like get the warrants. And I’d like to be there, on the team.”

“I’m honored. But, with all due respect, Rod, have you qualified recently?”

“Qualified?”

“With whatever you’ll be carrying.”

“Oh! Right. Yes, in fact, last month. Did well, better than I thought I would, in fact. I make it a point to get to the range at least twice a month.”

“Good to hear. Like I said, with all due respect, but I like to have people who know what they’re about on these little expeditions. It’s just safer.”

“Don’t want desk-bound bureaucrats prancing about with their safeties off, eh?” He chuckled. “But what about other resources? You want the State Patrol SWAT folks?”

“Since you offered, they might just be helpful. We need to keep in mind that all we’re planning to do at this stage is arrest a veterinarian on an accessory charge. But you never know. I don’t have a schedule yet, and if SWAT shows up in Del Norte, it’ll get people talking. Can you alert them without a real mobilization?”

“Will do. Anything else?”

“Not that I can think of. I expect you’ll be calling the Governor, and he could probably use reminding of our conversation, his and mine, about confidentiality so as not to tip off suspects.”

“I’ve been ragging on him for that every day. And I’ll get to Durango just as soon as I can. Probably see you around noon.”

“I’ll be in my office.”

\* \* \*

Derek and Candice were both hard at work when I arrived, Derek on his computer and Candice on the paper it was spitting out. She had a dreamy expression that suggested she was having trouble concentrating.

I decided not to ask.

“Annette! Top o’ the mornin’ to ye, m’ lass. Uh, sorry. I’ve been doing things Irish today.”

“Find anything interesting?”

“Maybe. Probably. Actually, Candice found the Irish one. Mine’s well to the south and east.”

Candice looked up from her reading, or maybe it was her daydreaming.

“Hmm? Oh, you tell her, Derek. You know the background better.”

“All right. See, Annette, Candice ran across an interesting little factoid. Maureen’s father is a Brit, Northern Ireland Protestant, in with the government and so on. That’s how he got his diplomatic appointments. But her mother is Irish Catholic. Now, mixed marriages like this aren’t unheard of over there, and, I suppose, the only way that conflict is going to ever get resolved is if there are more of them. But what’s interesting about this one is that Maureen seems to have become interested in the Irish side of herself when she was in college. I think I mentioned last night that she had a first in history at Oxford. Partly that was due to an undergraduate thesis, which had to do with some of the history of the conflict in Northern Ireland and how the natives, meaning the Irish Catholics, were treated badly just as other natives all over the world were treated badly by the forces of the British Empire. And if you look carefully at the history and political sciences courses she took, they reinforce this radicalization, I guess you’d call it.”

“Uh, sorry to say this, but, so what?”

“Don’t know exactly, except it may be related to her missing years. See, the IRA has a history of recruiting people and spiriting them away for training. Training in all sorts of nasty things, such as assassinations and so on.”

“Oh. Well, maybe that will give you some new ideas for places to look for her.”

“I’m ahead of you. But we need to hear about the inquiries we sent out last night, first. Meanwhile, I’ve been thinking about your idea last night, the business of Maureen in Kuwait.”

“Oh, that was just wild-eyed speculation, completely off-the-wall.”

“Maybe. But maybe not. Consider this. Maureen’s father was in the British embassy there, he had some kind of deputy appointment having to do with oil and other energy issues. One of the girls that our five victims raped was the daughter of a Kuwaiti assistant foreign minister. What with Kuwait’s being a relatively small place, and what with embassy parties and so on, it wouldn’t be at all surprising if Maureen knew the girl, even with the age difference. Baby-sitting, maybe not. But I wouldn’t be surprised if they’d met and so on.”

“So there’s the possibility of a personal connection in addition to the murder-for-hire business?”

“Right, especially in light of this: I found a report that those girls who were victims of the rape by our murder victims were all stoned to death a short time later. This seems to be something that’s done over there, or it was back then, at least in the more radically fundamentalist families. Maybe not in Kuwait generally, they’re reasonably progressive. But among the Islamic fundamentalists, it seems that they assume that the girls do something to entice the sexual assault, and in any case they had sex out of wedlock, therefore they have to die. Stoning is meant as a deterrent.”

Candice had come alert, and I felt my blood pressure take a jump.

“Stoned to death? For being a rape victim? Gee, let’s see if I can keep my temper, here.”

“Yeah, I wouldn’t blame you for exploding. But, see, it’s relevant, because if there was a personal connection, that would make it much more personal for Maureen. Maybe the bounty would just be a bonus, even.”

“Maybe. And maybe she wouldn’t even be concerned about the money and give it, or most of it, to someone else. Like our chat-room women. We need to keep on that one, too, Derek. Stoned to death, huh? I know it’s not politically correct to make generalizations about cultural differences, but that’s just barbaric, plain and simple. Next time something happens over there, maybe we should just nuke ’em all. And these guys vote in the United Nations like civilized countries? Christ!” I was stomping about the hallway in the vicinity of Derek’s office.

“Um, yes, I guess it would be interesting to hear the private conversations in the White House on this topic. But, really, that’s not something we can do anything about. What we can do is to figure out how to get Maureen Downey into custody.”

“You’re right. And Rod Andersen said he’d take care of warrants. He’s coming by for a little visit—he wants to be part of the action, I think. Maybe he’ll have the warrants with him. Also, he volunteered the State Patrol SWAT, if we think we need it. Candice? Do you know if the Alamosa office has a SWAT unit?”

“It sure does, Annette. I tried out for it but I’m too short. They don’t know what they’re missing.” She had her chin tilted up. “But even without me, they’re pretty good. If you need them, they could be ready in a couple of hours, I think. It’s a weekend, and some of them would need to be called in.”

“Annette? What do we do about the sheriff? Del Norte is in Rio Grande County.”

“Isn’t he already in the club? Our first victim was from Monte Vista.”

“He’s on the distribution list, for sure. But he’s not really been involved, because nothing’s happened there. Yet.”

“Yet, indeed. I guess it’s appropriate to have the whole thing end where it started, in some sense. I guess we’ll need to brief him about what’s going on. Maybe I’ll give him a call.”

“Annette?” Candice looked concerned. “Del Norte is a tight little place, and I bet Maureen Downey is something of a community pillar. The sheriff is going to have trouble believing that she’s our murderer, even an accessory. I’d suggest bringing him in only at the last minute.”

“Good point. But is there someone over there we can trust? We’ll need to get some logistical information. Hell, I don’t even know where her place is, except she told me it’s on the southeast side of town.”

“You know, I think I know where it is. There’s a county road that heads south from the east side of town, goes up into the mountains. I’ve been up it, uh, once, I think, and there’s a bunch of buildings on a little side road on the edge of town, right after a curve. Didn’t look like a ranch, though. Maybe that’s her clinic.”

“Oh, that’s right. You work over there, don’t you, Candice? Well, that helps. I’d still feel better if I called the sheriff, though. Maybe I can do it without showing our hand.”

“Just talk to him about the case, Annette. He’ll feel good about a briefing on where things stand, I’m sure.” Derek’s advice, as usual, was sound.

I went back to my office and found the number for the Rio Grande County Sheriff’s Department in Monte Vista.

“Rio Grande County Sheriff.”

“This is Annette Trieri, Colorado Bureau of Investigation in Durango. I need to speak with the sheriff, please.”

“Oh! Yes, ma’am. But, I’m sorry but he’s not here.”

“Is there some way I can get in touch with him?”

“Well, ma’am, he was up most of the night and he’s sleeping in. See, we had a big fire over in Del Norte. He was out there with the fire department. They managed to keep it from spreading, but it destroyed the clinic.”

“Clinic?”

“Yes ma’am, the large-animal clinic, where Maureen Downey treats horses and so on. Burned down the entire thing, they said.”

\* \* \*

## Nineteen

The under-sheriff who was in charge while the sheriff slept in agreed to treat the burned clinic as a crime scene only after I suggested that arson may have been involved. He also informed me that Doc Downey, as he called her, seemed to be out of town, as she hadn’t been around at the scene of the fire, according to the reports he’d heard.

I took the news into Derek’s office, where the two of them were still working on Downey’s missing years. Candice, it seemed, didn’t like office work all that much.

“Sounds as if I should run you over there, Annette. You’ll want to see that the crime scene protection is complete.” She pulled a pair of driving gloves out of a back pocket.

“I kind of feel that way, too, but Rod Andersen told me he’d be here by noon, and he may have warrants. Which we’ll need, crime scene or no. The thing is, they said that the ‘clinic’ burned down, but I don’t know if that means a residence, too.”

“I remember several buildings, probably old, remodeled farm buildings. They were all clustered, but separate so that one might burn and leave the others.”

“That’s what I mean. They said ‘clinic,’ not ‘place’ or something more comprehensive. So the warrants become more important. Maybe I should hit the road and get over there as soon as I can and then, Candice, you can bring Rod over when he gets here.” I watched her brown eyes get even bigger than usual. “And you’re allowed to impress him with your driving, because I’ll need you there as soon as possible.”

I had visions of my boss showing up with white knuckles and the shakes.

“Derek, I hope it’s all right with you to stay here and keep at it. Also hold down the fort.”

“And miss all the fun *plus* the opportunity to maybe spend a night in Del Norte? Aww. Well, OK.”

“I thought you might react that way. I’ll call in now and then to see if you’ve found anything interesting.”

“I’m hoping the FBI report and the others will provide something. I’ve hit a dead end, I’m afraid.”

“Keep at it. I think I’m going to hit the road.”

I pushed my underpowered CBI Explorer to its limits getting there, and it still took longer than I thought it should. But Candice would have been proud of me, I think—I managed to get to Del Norte much faster than on my other trips. In town, I stopped at the gas station with the pay phone to fill the tank and to get directions.

Maureen’s clinic, or what was left of it, was easy to find, given that I knew the side of town it was on and had local directions. I pulled into the drive and was stopped by a uniformed sheriff’s deputy, which made me feel better about the integrity of the scene. My shield got me past him without questions.

The scene was as I had imagined—several buildings remained intact, but one rather large one was burned to rubble. While there would be plenty of charred debris left to keep the fire investigators occupied for some time, it was clear that there would be no flammable material left for them to find—documents, for example, from someone in Kuwait thanking Maureen for her efforts and mentioning a funds transfer to her Swiss bank account.

There were two vehicles in the large circle of gravel that the buildings were clustered around, one fire-engine red and the other white. A Mutt-and-Jeff duo were talking with each other near the burned building, and they looked up at me as I drove in.

As I was getting out of my car, my phone chirped.

“Annette? Officer Garcia and I are just leaving.” Rod Andersen sounded excited, as well he would be if he were sitting in Candice’s passenger seat.

“Good to hear, Rod. I’ll see you in an hour and a half or so.”

“What? Isn’t this at least a two-hour drive?”

“For normal people, yes. But I told Candice to hurry, so hold on. Oh, by the way, did you get warrants?”

“Right. One for her arrest and one for a comprehensive search. Had to do a little arm-twisting for the arrest warrant, though. I hope we find something to justify it better. Um, Officer Garcia said something about a fire?”

“One building. There’s plenty left to search, including the residence. I’m hoping for a computer. See you soon.”

“OK, I’ll be...oh, Lord...” And I heard a blip from Candice’s siren and squealing tires, the kind of squeal that hard acceleration makes, accompanied by her big-block V-8 winding out.

“Have fun, Rod.” And I disconnected.

I had been walking toward the two men by the building, and they were watching me with obvious curiosity.

“Sorry, lady, this is a crime scene, and...Oh. Sorry.” The taller of the two interrupted himself when I held up my shield.

“I’m Annette Trieri, Colorado Bureau of Investigation out of Durango. I asked an under-sheriff to protect this as a crime scene, and I’m glad to see it’s been done. This could be extremely important.”

“Oh. Right. I’m Sheriff Zachary Higgenbottom, and this is Chief Wilfred Lind. He and his guys worked this fire last night.”

I shook hands with both of them. “I heard you were out here, too, Sheriff. Looks as if there wasn’t much you could do.”

The short, stocky fire chief spoke up. “Not really. This building was part hay barn, part clinic, I guess. By the time we got here, it was ‘fully engulfed,’ as we say, and all we could do was to stand around and watch, keep it from spreading, try to keep the heat down a bit. We hosed down the other buildings to keep them intact.”

“I think I can see what looks like outlines of stalls. Any livestock in there?”

“Not that we could tell. And so far, we don’t have a cause, although I’m betting something electrical and the hay.”

“Any strange smells? I don’t mean flesh, but anything chemical?”

“Some. It was her clinic, after all, so we weren’t too surprised.”

“And I was told that Dr. Downey was nowhere to be seen.”

The sheriff spoke up. “That’s right, Ms. Trieri. It’s well known that she travels all over the region for emergencies and so on, so it wasn’t really a surprise. We called her pager, but we haven’t heard anything. Sometimes she’s just plain out of touch, I’m afraid.”

“Sheriff, Chief, there’s a lot more to this than you know about, and it’s all going to hit the fan soon. So I guess I’ll fill you in while we wait. First, I guess I’d like to say that we need to make this entire complex of buildings a potential crime scene. With us here, it won’t be a problem, but I want you to know why.”

They both looked surprised, and, as I told them why we needed to treat everything with care, their surprise grew and grew. Eventually we all went to sit on some lawn chairs in the shade, after Sheriff Higgenbottom called for more deputies.

\* \* \*

It was inevitable that the number of people and cars on the site would grow, and by early afternoon there must have been a dozen vehicles parked on the gravel circle. Chief Lind had called a retired friend of his who had extensive arson investigating experience; the sheriff had called in three deputies to make sure everything stayed intact; Candice had radioed her superiors at the Alamosa State Patrol office, who had sent four officers in; and there were others in plain clothes whom I was never introduced to.

Candice showed up with Rod, lights ablaze, executing a perfect four-wheel drift on the last curve of the paved county road before the driveway, followed by a sliding, left-hand power turn into the drive and a one-eighty on the gravel into a parking spot. The noise of the four-wheel drift—tires and engine—had turned everyone’s heads, and when she finally stopped, a few people actually applauded. She got out and took off her gloves, all business. I waved at her and walked over in their direction.

After a minute, the passenger door opened, and Rod got out, holding carefully to the door frame. He stood, blinking in the sunlight, and I could see his knees trembling. Candice dove in the driver’s side door, rummaged around, and came up with something in her hand.

“Here are your sunglasses, Director Andersen.” She walked around the car and held them out for him, but he just looked confused.

By then I was there as well, so I took his sunglasses from her, pulled mine down my nose an inch, and winked at her.

“Glad to see you’re here, Rod. You look stiff, like you’ve had a long car ride. Let me suggest a little stretching.” If the poor guy hadn’t looked so shaken, I would have had a little fun with him. But that would have been just plain nasty, given his condition.

“I’ve been talking with the sheriff and the fire chief, and they’re up to speed on what’s going on. Once they heard the situation, they called in the help you see here. One guy, in particular, seems to have extensive fire experience—that’s him over there poking around in the rubble. The others are here to secure the scene, and I think some of them are ours, to help with the searches.”

I talked for a little longer to let Rod regain his equilibrium. Eventually he reached out and took his sunglasses from me, and I could see he was recovering.

“Thanks, Annette. Whew. I’m riding back with you, if it’s all right. So. How about some introductions? Then we can get on with a search.” He patted his jacket pocket.

During the introductions, the guy poking around in the rubble offered a preliminary opinion.

“Looks like it started with a short in the wiring in the hay loft.” He pointed generally in the direction of a somewhat taller pile of debris. “But the wiring’s up to code and fairly new, from what I can tell. That suggests to me that it may have been set up to do this somehow, meaning it’s arson. There’s the remains of some kind of electrical box over there, mostly plastic so it melted, but some parts are intact. We get that analyzed, it may turn out to be some kind of timer to actually cause a short and start the fire.”

After that, we worked the search, starting with the other out-buildings. One was full of animal feed and various pieces of handling equipment—ropes and halters, even a couple of cattle prods. A second was the crematory, as much a huge furnace as a building. Another was a garage, and there was Maureen’s big pickup truck sitting next to an empty space.

“Well, now, mostly we see her in this pickup. It’s what she tows the horse trailer out there with, and that other contraption, too.” Chief Lind was referring to the trailer with the hoist that I’d seen in action up in Creede. “Seems like I remember her other vehicle being one of those yuppie sport-utes, some kind of Mercedes, maybe.”

We put one of the State Patrol officers to work on the radio, to get car registration records.

Eventually, we were ready for the house. One of the plain clothes guys announced himself as having lock-picking skills, so he set to work on the back door. Another said he knew computers, so I had him standing by, ready to take on whatever equipment might be in the house.

One thing I've discovered about being a CBI Director is that I just don't meet everyone, and they don't expect me to. They work as anonymous officers, carry out my slightest wish happily, and disappear at the end of the day. I've become used to it, but I don't really like it. I'd rather know something about the people working for me, at least their names. Even if I do tend to forget them from time to time.

The computer guy got my hopes up by allowing as to how he expected to find a system in the house, because there was a two-way satellite dish on the roof. He explained how people in remote areas can subscribe to broad-band computer service linked to their television satellite reception, but a somewhat larger antenna is required, which Maureen had. He also suggested that whatever computer there might have been in the clinic wasn't linked to the one in the house, because there was no indication of the necessary wiring, and it was too far away for a wireless network to be reliable.

As soon as we got in the door, he went snooping, and it took only a minute for him to find the computer. He called me in to watch as he dealt with it. First, he disconnected the power to the satellite receiver and powered down the computer itself by pulling its plug out of the battery-backup power supply—that way, he said, it wouldn't be doing any last-minute disk erasures. There might be some operating system confusion when the system was re-started but that wasn't a concern. Our strategy was going to be to remove the hard disk and look it over separately from the system itself.

The room in which he found the computer was clearly Maureen's business office, and there were filing cabinets and a safe along with all of the other things offices contain. It was obviously going to take some time to pack up what we would be taking and to sort out the rest, so Rod and I left them to it.

When we got outside, Sheriff Higgenbotton was talking with Candice, what would be called "flirting" except for the age difference. She looked slightly uncomfortable, so I decided to rescue her. Rod walked over to talk with one of the State Patrol officers.

"Officer Garcia, I'm glad you were able to get Director Andersen here so quickly. He's been our liaison with the Governor, and he needs to be involved in this stage of the investigation." As I expected, this impressed the sheriff enough that he quit being so friendly with Candice, changing into a more businesslike mode instead.

"Glad to do it, Director Trieri." She smiled. "I hope he's no worse for the wear. I don't think he's used to speed runs. Director Andersen, I hope you're finding what you need to see?"

Rod had walked up behind me.

"Hmm? Oh, yes, Officer, I think we are. Annette? Her other car is indeed a Mercedes SUV, something called an M320. Here's the info." He handed me a piece of paper.

"Sir? You mean like that one?" Candice pointed briefly toward the road.

A boxy vehicle was sitting just past the driveway entrance, and as we looked up, it sped off down the road. I noticed just a flash of auburn through the driver's window.

\* \* \*

"Sheriff! What's down that road? That way, south, I guess?" I was the first to react.

“Nothing much. Mountains. It dead ends, except for some connections to the network of jeep roads to the east, as I recall.”

I turned to the officer with whom Rod had been talking, and used Voice level two. “Officer! Quick! Get out and block the road so that vehicle can’t turn around and get out to the highway.”

Pointing at the receding SUV helped him understand what I was hollering about, and once he understood, he acted, enlisting help.

Sheriff Higgenbottom had yelled for the fire chief, who was a local and knew the roads better than any of us, and the portly little fellow trotted up, gasping for air.

“Wilfred, what’s up that road?”

“Uh...well...nothing much, except a couple of ranch houses...’scuse me while I get my breath...it just dead-ends about ten miles in.”

“Are there any side roads, other connections.” I noticed that Candice had her gloves out.

“Just a jeep road, about six miles up, maybe a little less, on the left. It connects to a whole network of jeep roads between here and Monte Vista, up in those hills. There’s a bunch of other turn-offs, too, but they don’t go anywhere.” The chief waved vaguely toward the mountains to the southeast.

I considered the situation. “OK, you guys make sure she doesn’t get out this way, if she should get around us. And, Sheriff, how about setting up road blocks in the places where she’d be likely to come out to the east? Candice, let’s go get her.”

I was tickled that no one said anything, not even Rod. They just nodded and got to work. But Candice was headed the wrong way.

“Candice? Let’s take my Explorer. That Mustang isn’t going anywhere on jeep roads. How are you at four-wheeling?”

She turned back toward me, and we walked off toward my car. “That’s how I first learned to drive. Used to race my brothers in the back woods. My Dad had this old, old Jeep, a World-War-Two Willys, and I’d follow my brothers around in their four-wheeling hot-rods. Hope you hang on good, Annette.”

The first thing I did after snugging my seat belt was to get on the radio and establish contact with the sheriff and his deputies. We decided that Candice and I would head south up the county road and turn east onto the jeep-road network, while the deputies, all of whom had SUVs, would continue all the way to the end of the road and cover the other dead-end spurs. If they didn’t find the Mercedes anywhere, they would return and help us cover the network of jeep roads to the east. Radios, I decided, are wonderful things.

At first, it was easy. The road became graded gravel just south of Maureen’s driveway, and there was a pall of dust hovering over it. There were pastures on either side of the road, and we could see it wending its way across the open terrain toward mountains. We knew we were on track.

But after a little more than five miles of steady climbing, during which we passed several turnoffs to both sides and the landscape sprouted bushes and stands of trees, our route became less obvious. Eventually, there was a turnoff with a sign. Candice passed it and then, about fifty yards farther, slid to a stop.

“No dust, Annette.”

So she backed up and took the left. She pointed to a little road sign.

“A Forest Service road, this one’s suitable for passenger cars. See? The numbers are horizontal. When they’re vertical, it means it’s a jeep road. Or, just so we don’t do any copyright infringement, a four-wheel-drive road. High-clearance vehicles only.”

Shortly, we crossed the stream we’d been following up the little valley and came to an intersection. The side road had a “No Outlet” sign, so we didn’t turn. But then the road we were on came to a “T” with no indication of which way we should go.

“This,” Candice pronounced, “is gonna be tough. How are you at reading tire tracks?”

“Definitely not in my gene pool. Now, if you need to know how to make an authentic tomato sauce for pasta, well, I can help.”

Candice was poking at the dashboard. “What’s this gizmo? How do you work it?”

The Explorer that the CBI had provided me was under-powered, but it was full of all sorts of electronic equipment. CBI Denver had decided I need such a vehicle—high-clearance, four-wheel drive—after my previous case, so it was a new model. I hadn’t even tried all its bells and whistles yet.

It turned out the thing that Candice was poking at was the navigation system linked to the global positioning system satellites. Eventually she found the right button, and a screen lit up and said “Please Insert Navigation CD or DVD.” So I looked in the glove box and there was a little package. One of the disks said “southwestern Colorado,” so in it went.

And a few seconds later, there was a little blinking dot sitting at a “T” intersection.

Candice and I celebrated with a high-five.

The choice to the left went back to the main road we had come up. If Maureen had gone that way, she was caught. We turned right, and I got on the radio to let them know our progress. We climbed deeper into the hills and the forest.

About a mile later, the road split in two, another intersection, shaped like a “Y” this time. Both choices had little signs with vertical numbers. But the nav system showed that the road to the right—it was actually more straight-ahead, along the little stream—dead-ended after a couple of miles. Again, if Maureen went there, she was caught. We turned left, up the side of the valley.

And now I began to understand what Candice had meant about the differences between the horizontal and vertical signs. It got rough—not just bounce-around rough, but shake-your-insides-into-mush rough. The “road” dodged around trees of all sizes, occasionally squeezing between two, nicking my mirrors. She had long before shifted the Explorer into four-wheel drive and dropped the transmission into low range. Now she was using low-low, and I was holding on for dear life.

We bumped around while the Explorer ground up the hillside, and eventually we came to the top, a little saddle in a ridge. We started down, Candice sped up, and it got bumpier. I’d adjusted my seat forward so I could push on the floor in front of me, and Candice was gripping the wheel while working the brake pedal.

“Candice, if she’s...oof...getting farther ahead of us...ouch...I’m not sure but what she deserves to get away. Geez!”

She had her teeth clenched, so she couldn’t talk.

We were following a small, dry watercourse down a little valley, winding in and out of clumps of aspen, and suddenly there was a road—or perhaps “path” would be more accurate—to the left. But it had a large mud hole in it, with no new tracks. So we kept on straight—or at least we didn’t turn left.

The jeep road continued down the little valley, and we continued to have our livers rattled around, for another couple of miles, at least. The dot on the nav system moved dutifully—and slowly—down the little dashed road on the map.

We came to another intersection, a road to the right. No mud holes this time. Candice slid the Explorer to a stop.

“What do you think?” She was looking up one route, down the other.

“See anything that looks like tire tracks, fresh ones?” I was peering at the dirt surfaces.

“How about dust?” She squinted into the air over the two choices.

“Let’s see what the map says.” But all it showed was us, the blinking dot, and three roads going off to the edges of the screen. One was easy to eliminate, but the other two just sat there, laughing at us.

\* \* \*

“Does this thing have a zoom feature?” Candice was back to poking at buttons.

All of a sudden, the dot—us—got bigger and fewer of the roads showed.

“I’d say yes.”

“OK, OK, how about an unzoom feature?” Almost immediately, we were back to our original size. And then, after one more poke, we got smaller and lots more roads appeared.

“Now,” she traced her finger on the screen, “This right hand road goes over here, this other part of the network, with better roads, looks like.”

I looked out my window. “And it looks like it goes up. It would help if these navigation maps had topography.”

“And straight-ahead goes on down the valley. The road gets better, and then it must emerge onto the flats. Looks like the roads get straight and go along section lines.”

“If she’s taking random turns, we might as well flip a coin.” I was hoping the coin flip wouldn’t send us to the right. It looked even rougher yet, and the stands of trees were thicker.

“But if she’s taking random turns, she’s sure been lucky not to have dead-ended.” Candice looked at me, eyebrows up.

“We know she’s a planner. All the elaborate preparations for the heads on the fence posts, all those signs. Maybe she had an escape route all figured out in advance.” I looked a question at her.

“And if that’s the case, surely she’d want to get out of these mountains as quickly as possible.” She pointed straight down the road, and I nodded. Away we went.

The bouncing and jouncing went on for another mile or so, and finally we came upon an elaborate, four-way intersection with three other choices. But down the valley was obvious, so we barely slowed down.

In fact, we sped up. The road had become a road again—I even noticed a sign-post with horizontal numbers—and, because of clean living or something, we had a recently graded gravel surface in front of us. Candice shifted out of low range and we fairly flew.

“Gosh, Candice. It’s smooth again. How pleasant.”

“And it’s sure easier to handle this thing.” She was actually steering with one hand.

But soon the valley closed in, becoming an almost-canyon, and the curves tightened. I started hanging on again, and Candice started doing the gravel version of that four-wheel drift she'd done with Rod in her Mustang.

The difference was, on every other curve, there was this big drop-off into the creek next to my window. I didn't mind the right turns so much—she had the other half of the road and a wall of rock to play with. But those left turns, well, I began to understand how Rod must have been feeling.

It sort of helped, but it sort of didn't, when I looked over and saw that she had a huge grin on her face. She was concentrating, but she was loving it. This woman, I thought, is in the wrong line of work. Maybe she needs to race cars for a living.

“Annette, I know this is making you nervous. But I don't want to crash any more than you, and I'm being lots more careful than you think. See, there's a trick to getting a vehicle like this around curves like this on gravel. You brake in advance, as little as possible, of course, and, just as you go into the curve, you slide a little the wrong way, uh...like that,” the car twitched briefly, “to throw the back end around to the inside a little, so that when you stomp it at about the apex of the turn, the rear end oversteers a little and gets the car pointed the way you want it to go. Pay attention all the way through next time, and you'll see what I mean. There's a rhythm to it, and it depends on the vehicle, its size and weight and so on. I got enough feel for this thing on the way up the first valley, and it's responding quite well, really. Oop. Looks like things get tighter.”

There was one of those yellow road signs with a wiggly arrow, the first we'd seen.

But she didn't slow down, much.

Strangely, her explanation of technique helped me. I paid attention and began to understand the rhythm of her applications of the brakes and the throttle, as well as her jerks of the steering wheel, and it calmed me down. Every now and then, she'd come extra close to an outside edge, which made me grab on, but mostly it was easier.

I'm sure glad we didn't meet anyone coming up that road, though.

As I got calmed down, I also found that I could take my eyes off the edge of the drop-off, so I stole a glance at the navigation system screen.

“Intersection on the right coming up, can't really tell how soon.”

“What are the choices?”

“Straight becomes a hard left curve, and right splits again. Right looks like the shorter route out to the highway.” I felt the Explorer begin to slow.

“There it is.” She pointed ahead and even put on her turn signal. Habit, I suppose.

Although she slowed, she didn't slow as much as I would have, and the right-hand turn provided me with a good example of the twitch-and-skid turning technique, as I'd come to think of it. Someday I'll try it in my Subaru, somewhere flat, wide, and empty.

Because I was now really navigating, immediately after we turned I gave her the next maneuver.

“Left almost immediately at an intersection, a right curve, and after that we'll have a tough choice after a ways. Maybe we'll see some dust.”

But we didn't need to worry about seeing dust.

She did another of those twitch-and-skid turns, only to the left this time, and then there was that little curve to the right, a tighter one than it looked on the map. On the outside of the curve, perched on a

boulder, was a dark green Mercedes M320. We slid to a stop, and the clicking of the hot metal in the cars sounded as if they were talking with each other.

The M320 had spun a little, one way and then the other, apparently, because we were looking in the open driver's door. Maureen Downey was nowhere to be seen.

\* \* \*

## Twenty

Just to be certain, we got out and looked the M320 over carefully. It wasn't going anywhere without a flatbed truck, though, and Maureen sure wasn't in it.

The surrounding countryside was almost flat, at least compared with where we'd been, but there was cover in the form of rocks, bushes, and stands of trees. We were lower, approaching the meadows and pastures where we'd begun, but there were still aspen and pine here and there. A month from now, I thought, this will be a striking setting, when the aspen turn.

But right then, it was threatening, because we were in the open and Maureen wasn't.

"Now what, boss?" Candice was doing little yoga-like stretching exercises.

"Let's do a quick check around the immediate area. She could be injured and hiding somewhere close by. And I guess we need to assume she's armed." I pulled out my Glock.

We worked our way around carefully, covering a circular area about three hundred yards in diameter around the cars, looking behind rocks and bushes, checking low spots and logs, trying to cover the ground efficiently but still not miss anything. I scared up a few birds, startling myself in the process. In a small clump of trees, Candice got yelled at by a squirrel who just wouldn't shut up. It must have taken twenty minutes for us to assure ourselves that Maureen wasn't in the immediate area.

I was the first back to the Explorer, so I sat down inside to think. Candice got back a few minutes later, and she proceeded to pull burrs out of her socks and gripe about how they itched.

"Any other ideas?" She didn't quite make it sound sarcastic.

"Got me. Hmm. Look. I think we should assume that she's still going to try to get away from us, not just sit around here and wait for us to leave. If she were injured, she would, but she wouldn't have gone far and we would have found her already. So she's probably OK and on foot. Thing is, she probably doesn't know we're here. I mean, she'll assume she lost us back up in the jeep roads, if she thinks we followed her at all. So she'd be heading for the highway, right?"

"So we should just cruise down the road 'til we see her? Hey, maybe she'll be hitch-hiking and we can just offer her a ride!...Uh, sorry, Annette. I'm still a little pumped from that driving."

"Well, look at this." I was pointing at the nav display, and she got in to watch. "Just about all of these roads head out to the highway. The one we're on offers some choices, and they're the shortest. But that other way, back a bit, where we just turned, gets there, too. More to the point, this other way leads more directly into Monte Vista. She probably knows it could take her quite a while to walk out, and she'd be concerned that someone would come along and find the Benz. If it were me, I'd go back to that last intersection and take the other way straight toward town. There are probably more chances to get another car there, and somewhat less chance of being followed that way. See what I mean?"

“I do. And that’s just what I’d do, whether or not I thought I was being followed.”

She fired up the Explorer and took off, picking up just enough speed to do a one-eighty on the road, just like she’d done before in Maureen’s driveway. And I felt just like Rod must have felt. That’s a maneuver I don’t think I’ll ever try in my Subaru.

We went back to the intersection and turned left, and I got on the radio to update the sheriff and everyone. I told them we were taking the most direct route into Monte Vista and that the others should try to cover other routes in that same direction. It would be easy for all of us, I thought, because the trees were becoming more and more sparse, and the landscape was turning into pasture and, ahead, even some irrigated fields.

At least, with Maureen presumably on foot, there was no need for the break-neck pace we’d used before. In fact, as I pointed out to Candice, that rooster-plume of dust that high-speed travel would cause could well be a tip-off, giving Maureen time to take cover while we approached. So Candice took it slowly, under thirty. It gave her time to think.

“Annette, have you got your cell phone?”

“Right here.” I pulled it out.

“Is it getting a signal? Yes? How about this? She probably has a cell phone, too. I doubt that she’d call the triple-A or anything, but it seems like she might just call for help, don’t you think?”

“Meaning that she’d call to get someone, a friend, to come out and pick her up, I guess.” I wasn’t completely clear on where she was going with this, but it looked hopeful.

“Right. And they’d be in a hurry, and they’d leave dust.”

“You probably mean, dust like that way up ahead there?”

“That’s what I was thinking, that dust that’s getting farther and farther away.”

“It is, isn’t it? But if we speed up and she’s still on foot, well...”

“Right. I’m not lobbying to speed up. I’m thinking of whom she might call.”

“She lives in Del Norte, and I bet she knows lots of people in Monte Vista.” I shrugged.

“But she wrecked her car in a strange place going in a strange direction. Wouldn’t she need to be able to trust the friend she calls? Trust them not to ask questions, or trust them to already know the answer?”

“Oh.” The light-bulb went on for me. “I think I know what you’re getting at. Bonnie Scharmatz.”

“Right. Do you know where she lives?”

“I do, and, as I recall, we’re headed straight for her place. It’s on the southwest corner of town, where the town actually turns into country. I *think* this is the road, at least.”

“Let’s watch that dust plume and see where it goes.”

\* \* \*

I knew that this next part would be hard for me to write, but, in some sense, writing about it is the whole point.

Hal was the one who suggested that I put this entire episode down on paper, partly for a record of it, and partly as a catharsis for myself. He thought maybe my telling the story in writing would make the bad dreams stop.

We'll see.

What happened was, we followed the dust plume for several miles, while the nav system obediently tracked our progress on its map. Except for marching stands of cottonwoods along irrigation canals, the trees had disappeared. The countryside was flat and green—San Luis Valley agriculture in action.

After a while, our county road began to parallel the highway, US 160, as it ran straight into Monte Vista from the west. According to the map, our road, about a half-mile south of 160, came into town at about its southwest corner. The map even showed what looked like Bonnie's driveway there, a little dead-end spur running south off our road, right at the edge of town.

Candice was right, we continued to fall behind. Whoever was ahead of us, with or without Maureen, wasn't dawdling the way we were. But the flat terrain gave us a good view of the dust from the car ahead of us.

And about the time we saw the dust plume reaching the edge of town, it stopped moving. We were a couple of miles back at that point, so we couldn't tell why, but one possibility was that they had turned into Bonnie's driveway.

While we were still at least a mile from where I thought Bonnie's place was, Candice pulled over to the side of the road and stopped.

"Annette, have you got binoculars in this car? Seems like you should, somewhere."

"Yeah, I think so, in that box in the back that came loose a while ago." It had been annoying me by rattling around on the jeep roads, but, of course, whenever we stopped, so did it and I forgot about it. "At least this will give me the chance to secure it."

I got out, opened the rear hatch, put the box, a plastic milk carton affair with "CBI" stamped on it, back in its little nook, and refastened the straps that had come loose. Then I took stuff out of it until I found the standard-issue binoculars.

"Got 'em. Now I can safely ask: why?"

"I'm going to cruise by that ranch up there and into town at about the speed I've been holding. How about you take a look through those at what's there. That way, we won't stop and raise anyone's suspicions. If they're watching us with glasses, of course, they'll see everything. But we can only do so much."

"I'll sit low and hold these just over the window-sill."

So we cruised by slowly and I took in everything I could. Candice proceeded on into town and turned around once we were behind some trees from the ranch in question.

And it was indeed Bonnie's place—I recognized it from my earlier visit. There were several vehicles up the drive by the house, including a couple of pickup trucks that looked familiar to me. I didn't have time to get license plates, though, and a second pass seemed risky.

"Also, there's one older car that looks dustier than the others. Fresh dust, you know? On the vertical surfaces of the rear end, like it sticks there before it has a chance to blow off in the breeze while the car is just sitting. And the road there in front of the driveway is oiled all the way into town here. I think that car recently spent some time on dusty roads."

"It would be helpful to get licenses. Look." She was pointing at the navigation system's display. "We could make a big loop—what, about four miles?—and come by from the same direction. That would be way less suspicious, if anyone's watching, than if we cruised by going the other direction. You can scribble down plate numbers and read them out loud so I can scribble, too. We'll figure out the scribbles and call them in."

“It worries me, but I don’t see any alternative.”

Candice didn’t waste any time on the city street north to the highway, on US 160 west to the first county road south, and on that road back to where we’d already been. Once there, she slowed down to a speed even lower than she’d used before.

“I think the trick here is to maintain a steady speed, not to slow down in front of the ranch up there. That way, they won’t think we’re going slow just to look at them.”

“If anyone’s watching.”

“Right.”

That time, we managed to get all four license numbers, and we sat in the shade of the trees in town, with a view of Bonnie’s driveway entrance, while we called them in. We also called in backup, in the form of Sheriff Zach Higgenbottom and his guys plus Rod Andersen and several of our guys.

I recognized two of the pickup trucks because I’d seen them in the driveways of Sarah Robinson, up by Crested Butte, and Amelia Dent, out at Doc Whiler’s place near Creede. The dusty old car belonged to Bonnie Scharmatz, and the newer BMW sedan to Toni Henry. While we waited for reinforcements, we speculated that someone may have picked up Nedra Endsley from Fort Garland, because her only vehicle, the tricked-out dualie pickup that once was her husband’s, was still impounded.

Zach and Rod and all the guys didn’t take as long to arrive as we had thought they might—it seemed they had been following our general direction all along, from monitoring our previous transmissions. And they had already sent a trooper and a flatbed truck out to retrieve the Mercedes, in fact.

Then it was time for strategy. And I found myself in charge of a situation that I didn’t have a clue about.

“I don’t know that we have cause to all go charging in there, guns drawn. So I’m open to ideas, guys.”

It was Sheriff Higgenbottom’s turf, so he wasn’t shy. “Seems like you told me earlier that these women conspired with the Burma Shave killer. And now they’re all together, or at least most of ’em, looks like. You don’t think that’s enough?”

“I would if we had arrest warrants for the conspiracy charge, but that’s still in progress. Rod, we’ve talked about the sensitivity of this, how those women have been turned into victims and heroes. What do you think?”

“We have an arrest warrant for Maureen Downey. If she’s there, that’s plenty of cause.”

“But we’re not sure she’s there. We think maybe she is, but we really don’t know.”

“How about we go in there, guns *not* drawn. We all just drive up in a little caravan, surround the place, and call ’em on the phone. If it’s just an innocent tea party, they’ll be wondering what the hell’s up, and that should be obvious from the phone call. If it’s not so innocent, well, we can play it by ear. For one thing, we can say we have a warrant for Maureen and order everyone out of the house because we have reason to believe she’s in there.” The sheriff was a no-nonsense kind of guy, I could tell.

“OK. Sounds like a plan. We drive up, park around the perimeter, stay covered, and make a phone call. No weapons until it’s clear we need them. Sheriff, would you like to make the call? Or should I?” I was ready to do it myself, but it was his county, after all.

“No, Ms. Trieri, this one’s yours. I’m not sure what I’d say, anyway. Bonnie sold me a pony last Christmas, for my daughter Wendy.” He looked depressed—one of the dangers of small-town law enforcement is having your friends disappoint you.

So, we formed up our little caravan, with Candice and me in the lead, and drove sedately up Bonnie’s driveway. It reminded me of a funeral procession, a premonition that I won’t ever forget. When we reached the house, Candice parked across the front walk, and the other cars circled the house at approximately even intervals. Candice and I positioned ourselves on the far side of the SUV from the house, and then I called Bonnie’s number.

The phone rang for a long time, and I took the opportunity to look the house over. It was a small, single-story farm house with a newer green metal roof. But it needed paint, and the foundation around the basement windows looked like it was crumbling. The porch had flowers in boxes, petunias and something white that looked like sweet alyssum. There were huge, healthy lilac bushes on either side of the porch; they needed pruning, they were so big.

After about twenty rings, I gave up and started over. The phone started ringing again, and it went on and on. There were calico curtains in the windows, I remember, and a brass door-knocker. In front of the large window, in what was probably the living room, there was a little row of hollyhocks. The chimney had a rooster weather vane on it.

Candice tapped me on the shoulder and shrugged a question, and I shrugged an answer. She shifted weight and stood up to change position.

And the house exploded.

Later, it was determined that a large propane tank in the basement had exploded because someone had strapped several pounds of C4 to it and set it off. Why there was a propane tank in the basement was never explained, but the gas line to the kitchen stove started at a bare spot in the side yard.

At the time, of course, we had no idea what it was, just that the house exploded into a zillion fragments. Wood and bricks and glass and metal shards went everywhere, and we all got knocked flat. The force of the explosion nudged my Explorer sideways about seven inches and completely crinkled its safety glass. It was fortunate that we were all, per procedure, hunkered down behind our cars.

All of us except Candice. She had stood up, just briefly, to stretch out kinked muscles. All the intense driving and then the squatting behind the SUV had got to her.

So, when my eyeballs stopped rattling around and my vision stabilized, the first thing I saw was Candice lying face down in a pool of blood, with a golf-club-sized splinter of house sticking out of her back.

\* \* \*

Instinctively, I was desperate to help her, even though a rational voice in my mind was telling me that her injuries were far beyond my first-aid training.

You couldn’t help her, the voice said, even *if* she’s alive.

Trouble was, I didn’t seem to be able to move. I was lying on my left side, sort of sprawled in a very un-lady-like tangle where I’d landed, with my left arm stuck out on the grass in front of me. As far as I could tell, I wasn’t hurt—at least not like Candice was—although every cell seemed to ache, some more than others. I lay there, trying to get my nervous system to make my muscles respond—because I could see my left hand, I concentrated on its fingers. It seemed like an awfully long time before I could make my index finger twitch.

We learned later that the explosion had shattered every window in the southwest quadrant of Monte Vista and some downtown besides. This had the side benefit, from our perspective, of getting everyone's attention, and the emergency responders showed up about the time I was wiggling my whole hand. I was delighted to see them, because the first victim they focused on was Candice.

A few minutes later one came over to me, within my field of view. I tried to wave, but it really didn't work very well. I saw his mouth move, but didn't hear anything. I think I managed to smile and blink a lot, though, because he patted my shoulder, covered me with a blanket (but, to my everlasting thanks, not my head), and went somewhere else.

It turned out that I just had some kind of temporary concussive shock, and it wore off pretty quickly. Twenty minutes later, I was sitting up, and my hearing was beginning to return. I wasn't the only one affected this way—as I was sitting there I saw several others from our law-enforcement cavalcade in similar straits. After about an hour, we were all fine—except for a few abrasions and contusions, lingering body aches, and major cases of tinnitus. The only law-enforcement casualty was Candice. She was taken off in an ambulance while I was lying under the blanket working on my nervous system.

And there were the other casualties, of course. The women in the house died together in a suicide pact—the presence of the C4 residue made it obvious that this was no accident, and we later found confirmation, in Sarah Robinson's diary, of their plan to go out together in a blaze of glory should their conspiracy be discovered. Ultimately, we were able to obtain positive identification of three of them from prints taken from assorted fingers and hands in the debris—one of those was Maureen Downey—and we were able to use DNA analysis to determine that there had been six women killed altogether. Because none of the five women associated with the Burma Shave victims ever turned up, the assumption has been that they all died that Saturday.

We were able to identify Maureen because Derek dredged up a set of her fingerprints, from a connection he made with Scotland Yard. During her years at Oxford, she had been involved in a demonstration for an independent Northern Ireland. Things got violent; she got arrested.

We never did find out where she was between college and graduate school. Also, we never were able to make a real connection between her and the Kuwaiti girl who had been stoned to death for the crime of being a rape victim.

But we did discover that Maureen had received several large funds transfers from a bank in Switzerland, because Derek worked some magic with financial records. Quite sensibly, he started with a bank that had branches in all of the towns close to the homes of the victims—the Western Slope Bank & Trust, based in Grand Junction. Rather than work through the courts, he simply called up their senior vice president and explained the situation. By working with us, the bank was able to avoid the horrible publicity that would have been involved with a more official investigation.

The six women who died in the explosion all had accounts with Western, and there had been a number of remarkable transactions in those accounts in the six weeks prior to their deaths, notably transfers from Maureen Downey into the five others.

The fact that Derek uncovered this information on that Saturday, and did so before they died, is testament to his skills.

Nothing remarkable was discovered in the investigation of the explosion, beyond the amount of propane that must have been involved, but the arson investigation at Maureen's clinic was another matter. They were able to piece together the charred remnants of a strange apparatus of some kind, what one investigator seemed to think was a sort of horizontal guillotine. While we'll never know all the

details of how those five men died, it appears that it was at the clinic and that their bodies were cremated there.

And, eventually, the hard disk we removed from Maureen's computer provided enough information for us to clear the case. It was encrypted, and we had to enlist some expert help—a student Hal knew at FSU who was probably going to work at the CIA after graduation—with a chaos-theory based decoding program. Please don't ask me to explain it.

Sam Milstead, ersatz mayor of Kharma, eventually turned up and was welcomed home, according to Sheriff Hank Allen, with mixed feelings by his wife Gwen. Somewhat reluctantly, he informed the Saguache County Sheriff's Office that he'd received a call from an old high-school buddy and taken off on a week-long drinking spree. They planned to meet up at Sam's cabin, but when they found the road blocked, they drove off in the buddy's car.

After we had all these loose ends tied up—as well, at least, as we were ever going to be able to do so—I called Kristof von Stier to thank him for his assistance. His cancer was back in remission, and it was actually a most pleasant conversation. I think he was still a bit jealous of Maureen's skills at fulfilling the Kuwaiti contract, as he called it—even though our evidence was all circumstantial, he was convinced that the Gulf War rape incident involving five Colorado Army National Guard Reservists defended by a lawyer from Washington DC was behind it all. He seemed satisfied that he had been able to get his share of the bounty for taking care of one of the five Reservists years ago.

Perhaps the most remarkable outcome of the entire thing was that Officer Candice Garcia survived, although it was touch and go there for a while. Emergency surgery removed the piece of two-by-four, which had pierced her all the way through, breaking two ribs, puncturing and deflating her right lung, and slicing her liver. A second surgery repaired some of the damage, and then, after she was flown by flight-for-life helicopter to Durango, a third surgery finished putting her back together.

I went by the hospital several times to see her. A week and a day after the explosion, the following Sunday afternoon, I found Dino there, holding her hand, patiently waiting. She hadn't awakened all week, but her signs were improving continuously, and everyone was optimistic. Dino was talking philosophy to her, rehearsing his lectures for his classes, I guess, just to have something to say.

While I was there, she opened one big, brown eye and smiled at him, a smile that actually worked because they'd removed the breathing tube a day before.

Did you know that really big guys cry really big tears? I actually heard one plop onto the sheet, it was so big.

\* \* \*

And hearing that tear go plop was something of a breakthrough for me. It meant that I was finally whole again, back to where I started.

Although my hearing took a week to recover completely, the rest of me was better much sooner. That fatal Saturday afternoon, as soon as I could hear a little I called Hal, and I told him I was sore, but fine. I knew the explosion would be all over the news, and I wanted him to hear directly from me first.

Even though I told him it wasn't necessary, he got into his Superman mode and drove over in the S4 to pick me up and take me home—I think he beat Candice's time when she'd brought Rod Andersen over earlier. And he did it without the benefit of emergency lights.

For me, the rest of that Labor Day weekend was rather like being in a spa. I got pampered with massages, hot baths, meals in bed, and—best of all—an enforced no-telephone rule. Somehow, I've got to figure out how to get that kind of treatment without getting so banged up first.

Monday afternoon, Labor Day, was glorious. The very first hint of fall had blown in on Sunday, while I was loafing around in bed, but it was still warm enough to do summer things. It was making me feel guilty that Hal was using a university holiday to play nurse-maid to me, and I tried to send him off fishing somewhere.

"I'd rather stay here with you, really. I went fishing on Saturday, way up the Los Piños like we talked about, and I slayed 'em. I'm sure if I went back out, it would just be a disappointment."

I think he was talking extra loud, because my hearing still wasn't quite up to snuff at that point.

"But it's Labor Day. You can't just sit around here and baby-sit me."

"But that's not what I'm doing. I'm watching baseball games on TV. Now why don't you go take another nap? We're going out later."

Rather than argue, I took a nap, falling to sleep wondering what he was talking about, going out.

It turned out that he assembled a delightful Labor Day picnic for us, an early supper—and not just your run-of-the-mill ham-sandwich, potato-salad kind of picnic, either.

I woke up about four, took a shower to really wake up, and got dressed to go out to dinner. Hal was puttering around in the kitchen, and when he saw me come in, he sent me packing.

"You look beautiful, but, I'm sorry, it's all wrong. You need jeans, a light-weight flannel shirt, hiking boots. Go!" He waved in dismissal.

So I went, changed as instructed, and came back. By then he was finished puttering, and he led me out to my car and put me in the passenger seat. The back was full of something covered by a blanket.

We took the shortcut north around the base of the mesa where FSU perches and headed northeast on Florida Road.

"We're going on a picnic, up around Vallecito Lake to the Los Piños Ranch. I've got a spot picked out just above the river."

The Los Piños Ranch, a dude ranch run by a friend of ours, was the site of one of our first vacations together, the place where I'd first learned to fly-fish. Rather than ask a lot of questions, I decided to keep quiet and see what he was up to.

When we got there, I understood why we were in my car. Compared to the Saturday jeep-road chase, it was quite civilized, but the bumpy track to the picnic spot was more suited for my Subaru than for Hal's S4.

He parked, ran around to open the door for me, and proceeded to unload the back. The blanket went on the ground at spot just above the river, next to a little riffle that was gurgling and splashing even through my lousy hearing. Under the blanket in the car was an ice chest, full of decidedly non-picnic-like things. A fresh baguette. A smoked-salmon pâté. Snow-crab legs on ice. Radishes, carrots, and cherry tomatoes carved into little flowers. Chocolate truffles. A dry German Riesling for me and Perrier for him, which he proceeded to pour into stemmed wine glasses.

"So, Hal, this is beautiful, wonderful. But we're married. You don't have to propose to me, you know."

"I know. I just want to celebrate being with you. That was a close call Saturday. Here's to you. Cheers." And he held up his wine glass to clink mine.

I took a long sip and decided I just had to ask.

“So, is it OK for you, what I do?”

“You mean, save the world from bad guys? Of course. I’m proud of it, in fact. It gets a little scary sometimes, though. But then, I’m a college dean, and my little world is dull, stodgy, and really boring for the most part. I can probably use a little excitement in my life. But I feel better when it’s over.”

“And you brought me all the way up here to tell me this?”

“I brought you all the way up here to spend time with you.” He smiled. “But I do have an ulterior motive.”

“Aha! Here it comes.”

“Well, I think I need a change. One of two things, or maybe both. We’ve talked about how Alice Swan is going to retire, probably this winter, and how I’m going to use that to stop being dean, right?”

“Right.” But I really didn’t know where it was going.

“I’m thinking I’d like some kind of sabbatical. And that means making some kind of opportunity for it. It also means figuring out how to make it work with your career, too.”

“Any ideas?”

“I’m working on it. But a sabbatical is temporary, it implies a return to where we are now. And, you know what? I’d like a house in a place like this. That little house on Eighth Street is wonderful, better than ever since you’re there with me. It’s cozy, just right for the two of us, and I can walk up to campus to work. But it’s in town, and town is getting busier and busier and ever more crowded. So, how would you like to live somewhere like this? Trees, a stream, wildlife.”

“Hey, I’m a city girl, remember? To me, wildlife is squirrels.”

“I don’t want a pet bear, or anything like that. But wouldn’t some elbow room be nice? Nobody’s house next door?”

“Where is this place?”

“I need to think about that, too.”

I remembered something I’d said early in our relationship, a line from an old, favorite movie of ours, and I leaned my head on his shoulder as I said it.

“You just keep thinking, Butch. That’s what you’re good at.”

**A Four Corners Mystery**

# Murder Under Glass: A Four Corners Mystery

## Prologue

If ants had names, or serial numbers or some other form of personal identification instead of being interchangeable biological robots, the one that bumbled across the body would have become a national hero, its identity preserved forever as a legend in the history of the colony. And a large colony it was, with thousands of individual nests scattered throughout the several linked structures—that lucky ant would have been famous, if only it had possessed a personal identity.

As it was, the discovery of such an inconceivably huge source of protein sent the ant back toward its nest in a frenzy, its excitement causing it to leave trail of pheromones stronger than usual to mark its way. Soon, its compatriots would turn the original path into an ant superhighway.

It was only because there was blood and small shreds of skin under a fingernail that the ant's attention had been attracted. The finger was poking out from under a moldy leaf, and the ant had been investigating the mold to see if it would make useful food. It wandered across the finger and found the blood, which was dried and turning brown. Then it explored for quite a while, at least in ant time, both under and on top of the porous soil before heading home to gather reinforcements. The blood under the nails would provide food immediately, and when the rest of the body became sufficiently decomposed, the whole thing would be edible—enough for the nest, indeed for the entire colony, for a long, long time.

Of course, in the world of the Arizona desert outside the structures, there would be other scavengers for the ants to compete with, and those other scavengers—coyotes, vultures, a variety of other insects—would quickly claim almost all of the available nutrients in such a rich protein source. But here, inside EcoARC's greenhouses, the ants would have the body all to themselves.

Despite the designers' and builders' best efforts, the ants had managed to sneak in. After spending several years gradually out-competing the other animal species that had also been clever enough to get inside, the ants were almost the only critters left in the place. A few cockroaches managed to eke out a living within the giant greenhouses, but they struggled to survive against the tide of ants. Only by laying eggs in lucky places where the ants didn't run across them were the roaches able to endure. Even so, most of the roach eggs were discovered no matter where they were hidden—ant work-brigades would gleefully carry them home to feed their nest.

But what led to the ants' good fortune also led to their disappointment. The finger that was poking out attracted other attention—that of a graduate student involved in a plant inventory, who thought at first that it was some kind of strange root. It wasn't long at all before humans were scurrying all over the place—rather like the ants, actually, only bigger and on two legs instead of six. But they waved their arms about much like the ants waved their antennae, trying to communicate and figure out what had happened.

On the face of it, things were really quite simple. What had happened was that Dr. Melody Witherspoon had got herself quite dead somehow. It was that somehow that was the cause of all the human arm-waving—not that the ants paid much attention, being preoccupied with scurrying around and trying not to get stepped on.

\* \* \*

## One

The way it all started, I didn't think I'd be involved, at least not professionally. It looked like a local affair, and it was way down in southern Arizona—none of my business, really. But, then, I've learned not to be surprised when things turn out not to match my expectations.

Ever since I've lived in Durango, homecoming week at the U—that is, at Frémont State University—has always been a low-key affair. By the standards of the NCAA Division I-A football factories, our little home-town Division II school is pretty much a backwater.

And this year, I could tell in advance that the homecoming festivities were shaping up to be even lower-key than usual—being married to one of the campus deans puts me in touch with the mood up there. For one thing, the football team had returned to its mediocre ways after several years of unprecedented success, including a Division II national championship, so the big game would probably be a disappointment. For another, the colors of the aspen up in the Animas Valley this year were anti-climactic, because the trees got whacked by an early freeze and a week of wind. And ski season was still at least a month off, despite the frenzy of pre-season marketing hype and equipment sales.

So FSU alumni had no real reason to come to town. In fact, but for the excitement generated by the news from Arizona, Homecoming Week would have been downright sleepy. That certainly would have been my preference, all things considered.

Tuesday afternoon, Hal—Dean Harold Weathers, my husband—brought home a copy of the campus paper, the *Frémont Free Press*, to show me the campus perspective. The story was in the *Durango Herald* as well, and we had talked about it a little over breakfast. But the *Free Press* really played it up.

Hal told me one time that his dual role as Dean of the College of Natural Sciences and as the husband of the Director of the Durango office of the Colorado Bureau of Investigation had made him virtually numb to all sorts of news coming into his office. But I could tell that this really upset him—not too surprising, really, as he had a personal connection to it.

Melody Witherspoon, one of the U's recent graduates, a young woman from the first cohort of Ph.D.s in Hal's new biogeochemistry program, had been found buried inside a greenhouse at the Ecological Archive Research Center in southern Arizona. The local publicity was all the greater because she was a Durango native, high-school prom queen and student body president, the pride of the community throughout her years in college at Frémont State. And now she was dead, under suspicious—even bizarre—circumstances.

According to the Associated Press wire reports in the papers, she had been found buried in a shallow grave in the East Asian tropical rainforest greenhouse, one of several ecological communities maintained at the facility. "Unnamed sources" were speculating that this location had been chosen so that decomposition of the body would be expedited, because most of the other greenhouses were dry enough to preserve tissue almost as effectively as the desert outside. Cause of death was also a matter for speculation at this stage, according to the AP.

In custody was one Jorgé Alvarez, 22, citizen of the Republic of Mexico, working in the U.S. without appropriate documentation—a fact that the *Free Press* downplayed, given its editorial stand in

favor of relaxing immigration restrictions. Alvarez had several deep scratch marks on his left cheek, and testing of skin and blood found under the fingernails of the victim's right hand was underway.

These facts were reported in both papers. But the *Free Press* went farther, including its own reporting on the home-town angle, with intrusive interviews of grieving family members, nostalgic comments from high-school teachers, and a 15-year-old photograph of Melody, age 11, playing with her dog Scupper. In the picture, Scupper, long since deceased, was tugging with great concentration on a Frisbee that Melody was holding.

Hal told me that he had managed to avoid the *Free Press* reporter seeking to interview him about Melody's years at Frémont State. He just didn't want to do it, he said. But it turns out that he would have been a good interview, not only because he knew Melody, but also because he knows about EcoARC, as it's called. That evening, while we were working on the dishes—he washes, I dry—I asked him how.

"I was at a meeting down there a while back. It's a fascinating place." He was up to his elbows in soapy water, working on the pots. He'd fixed a braised chicken breast dish, with new potatoes, sautéed carrots, and a separate sauce involving rosemary and juniper berries, so the kitchen was a mess.

"EcoARC's a private research facility down in Arizona operated by a consortium of drug companies. Its real name is the 'Ecological Archive Research Center, Inc.' They focus on plants that might have biomedical applications. To do the job effectively, they have to maintain the plants in their natural habitats as closely as possible, which explains the name of the place and why they have ecosystems like the East Asian rainforest. EcoARC was built specifically for research, so it's set up with a bunch of greenhouses all linked together by underground tunnels that also serve as air ducts, labs, and so on. From what I can tell, EcoARC has quickly become accepted in the scientific community as a tool for doing ecosystems and other research as well as for its biomedical potential." He scrubbed furiously at something in the braising pan. "Oh, man, this stuff really got welded on. Yuck."

"So this place is down by Tucson somewhere?"

"Yeah. The greenhouses are in the middle of a several-hundred acre preserve in Arizona, in the high desert between Tucson and Phoenix, northwest of the little town of Oracle. The research facility, this greenhouse enclosure where they found Melody's body, is closely controlled in terms of its internal climate and so on. Collectively, it's also big, something like twenty acres under glass altogether, I think. It's not open to the public, except for special educational tours, and much of the research there is proprietary. But they have connections to various research universities, so there are students and other visitors working on research projects, and they work hard to maintain an academic atmosphere, rather than a corporate one." He glared at the pot, rinsed it, and handed it to me to dry off.

"What was this student of yours doing there?"

"She wasn't really my student; she was just in my college. First Ph.D. in our new biogeochemistry program. Her advisor was Jin-Rae Kim, a professor in the Natural Resources Department. Jin-Rae's got connections to one of the drug companies in the consortium, one that's part of an energy conglomerate, I guess, and he got a grant to look into carbon sequestration in arid ecosystems. Carbon's a hot topic just now because of the potential for carbon-credit trading. So Jin-Rae works down there on occasion. Melody was there on a post-doc that she got in a competitive program sponsored by the Department of Energy as part of its global change program. She was working on an extension of her dissertation project under Jin-Rae. Carbon fixation by dryland grasses, as I recall. I think she went down there last summer—or maybe it was last spring."

"This is so awful." Even though I frequently hear about death and destruction as part of my job, it's always hard to manage when it hits close to home.

“Sure is. You told me this morning that the evidence looked fairly solid against that guy they have in custody, the scratches on his face.”

“That’ll depend on the testing, and that could take some days. But there’s probably more that hasn’t been reported. I don’t really know much beyond what’s in the papers, and they didn’t even talk about the cause of death. So, is there anything we can do?”

“I was hoping that there would be a memorial service or something. I want to send flowers on behalf of her friends and colleagues at the U. I put Alice on to that one, partly as a way to get her cheered up. She’s been threatening more and more to retire, and this just might push her over the edge.” Hal’s administrative assistant, Alice Swan, made it possible for him to do his job effectively, I knew.

“How’d you do that? And what’s she going to do?”

“Oh, I walked out to talk to her this morning and found her in tears over the whole thing. She mentioned that she thought she had experienced all the grief she ever would, back when her son got killed and her husband died. But this got to her, revived those old feelings, she said. So I tried to think of something constructive to have her do, and it occurred to me that she could call Melody’s mother and see about arranging a campus memorial service, or something like that. I think it got her out of her funk, to have something to do, to be involved and help.”

“Let me know when it is, the service, I mean. I want to come.”

“Of course, I want us to go together. Oh. Something else—I forgot to call you about it. I agreed to go down to Tucson and retrieve Melody’s body.”

“What?!” I almost dropped the sauce pan he’d handed me.

“Well, before Alice could call her, Mrs. Witherspoon, Mildred, called me. See, she’s single. Melody’s father died when Melody was quite young. And Mildred told me she’s just not up to the trip down there to bring Melody’s body back here for burial. She gave me power of attorney to do it, and told me it’s all arranged with a local outfit, um, Schullmann’s Mortuary. Seems that there’s a family plot in the cemetery down in Bayfield.”

“So you got talked into it.”

“Yeah, I tried to think of a way to get out of it, but I just couldn’t figure out how to say ‘no.’ Anyway, how’s your current case load? Can you get away for a couple of days?” He had that apologetic tone in his voice that he gets sometimes.

“When?”

“Tomorrow. I figure we could take a couple of days and make the most of it. Maybe go up to EcoARC, where they found her body, and see if we can learn anything. I don’t think there’s really much else for us to do except sign papers and ride back with the casket.”

“It’s sort of last-minute, but I think I can do that. Nothing much is happening right now at work. And it would be helpful for me to get closure, I expect. I remember meeting Melody, a couple of times. Personable, bright, a great future ahead of her. This whole thing is sad.” An image of Melody’s face had popped into my mind.

“Sure is. Maybe, like Alice, we can do something constructive and make ourselves feel better. Find out something more about it when we get down there.”

So I got emotionally involved right away. My professional involvement took a little longer to develop.

\* \* \*

It took us two airplane rides—Melody’s body was coming home via Tucson—with a stop at Flagstaff on the first one and a two-hour layover at Phoenix before the second one. After that there was a mix-up at the rental car counter at the Tucson airport, which made me proud of Hal for keeping his temper.

But eventually we were back in control of our lives, for a day or so at least. We headed north from the airport to the interstate, west and north around the downtown Tucson area, and then north on Oracle Highway. Hal was driving, so I got a wonderful view of the spectacular rocks on Putsch Ridge, on the west side of the Santa Catalinas, as the highway took us toward the open high desert.

Because it was nearly supertime, we stopped at a Mexican restaurant in Catalina, a village on the northern fringe of the Tucson metropolitan area, at least for now. Sprawl was gobbling up the fringe and pushing it ever farther into the desert toward the southward-creeping sprawl on the fringe of Phoenix.

The place was full of older couples from the nearby retirement community of Saddlebrooke, and Hal bet me that the food wouldn’t have the heat he likes in his chile. But the guacamole was acceptable, and my margarita, though a tad weak, was at least eight on a scale of ten.

“So tell me again about our schedule. In the rush of getting paperwork done this morning, I’ve forgotten.” I was munching a tortilla chip with a mound of green goop on it.

“After I talked to Mildred yesterday, I called the mortuary and found out the plan. They do this routinely, although not with murder victims. The Pinal County medical examiner has custody, but the autopsy is complete, they have no more questions, and so they’re ready to release the body. It’ll be put in a casket, the kind suitable for traveling, and shipped by air to Durango, where someone from Shullman’s will meet our flight. We’re just along for the ride.”

“So, do we take it to the airport? Like, on the top of the car, or what?” I licked some stray avocado from a finger.

“Yeah, right.” He turned on his mischievous grin. “And, darn it, I forgot to get a car with a ski rack... no, no, of course not. They, I mean Shullmann’s, made arrangements with someone local to take the casket to the airport in a hearse. It should be there when we check in at the airport tomorrow afternoon, unless there’s a hang-up, and for sure by Friday. We sign some paperwork and ride home with it in the hold.”

“And so we’re on our own until then?”

“More or less. One thing we need to do, we need to see if we can get some of Melody’s personal effects to take back to her mother. I promised I’d look into it, but I’m not going to play moving company for her. And I called Bill Longwell, he’s the new EcoARC Director, an old friend of mine. I called him this morning and told him we were coming down to do this. He insisted we stay up there at the Center, it’s about thirty more miles up the road from here, and do a tour tomorrow. I met him when he was working at the National Science Foundation in Washington. Great guy. He’s devastated by this whole thing. It’s on par with that episode at the U a few years ago, when we met— remember? Really, really bad PR on top of the personal tragedy. Also, in this case, the premature end of a potentially brilliant career.”

“And we’re going to stay in this greenhouse place?”

“We could ask, but the ants would probably carry us off if we slept in there. No, in addition to the greenhouses and the labs, it’s a corporate retreat center for the drug companies that run the place, and they have hotel rooms. Really nice ones with fabulous views, incidentally. You’ll see. And a restaurant, tennis courts, all sorts of amenities. Bill is comping our rooms. When I told him you were coming, and

who you are, he even offered to put you on retainer as a consultant to follow the investigation. I told him you were too curious to want to be paid for this, you'd just do it anyway."

"Hmmp. Well, I've read the fine print related to my CBI job, and it's an exclusive contract, so I couldn't take money if I wanted to. Of course, *you* could, I think. Doesn't your faculty appointment allow you to do consulting?"

"Hey, I like that. You do the work, and I get the consulting fee. Great idea!"

"Double hmmp. Here comes dinner." I was glad to be able to change the subject. "Let's see if they know their Mexican food."

The server, a top-heavy young woman sporting big hair and wearing authentic suburban cowgirl duds and rather too much makeup, set plates in front of us with the familiar warning about their being "real hot." As usual, Hal touched his, just to test, and gave me the "Yeah, right" look. I could tell he was disappointed that his chicken enchiladas were covered in salsa and sour cream, rather than green chile.

While Hal used his fork to poke at his sides of beans and rice, I dove in to my carnitas plate, little cubes of marinated and braised pork surrounded by beans, rice, and posole, with a mound of lettuce and tomato quickly wilting on the hot plate. It was excellent.

"So," I have this bad habit of talking with my mouth full, at least with Hal, "What did you mean about getting carried away by ants?"

"Ants? Oh, yeah. In the greenhouses, about the only critters are ants. I don't know the species, but everyone calls them 'crazy ants' because they run around like crazy all the time. They're little black ants, about two millimeters long. They don't sting and they're too little to bite much, but they're so numerous that they've just flat out-competed every other critter that's ever managed to get in there, and they have the run of the place. And because the plants provide them with plenty of food, there are lots, I mean lots, of them. If we stayed in there, even in a really good tent, by morning we'd be covered in the little buggers. Say, this is really quite good, if you don't insist on hot chile. Wonderful salsa."

"Take a look around. The clientele doesn't look like real chile lovers to me."

Because I was sitting against the wall, I could see that the room was two-thirds full of people in their sixties and up, people who had the tanned and weathered skin of folks of northern European descent who had been out in the desert sun too much, playing golf, most likely. At least that's what their plaid pants suggested.

I decided that the margarita, although good, was weak enough that I should have a second, and by the time we were finished with dinner, the sun was setting over the western desert. As we drove north and then east toward Oracle, I watched the sun's last light climb the Santa Catalinas. Just as it reached the peak of Mt. Lemmon, Hal turned left, onto an asphalt road north across the desert. Various warning signs threatened prosecution of trespassers and proclaimed the privacy of the road and its destination.

"You know, if this turns to gravel, I'm going to wonder where you're taking me." I was thinking things like "end of the Earth."

"Don't worry, it's fine. As long as it's not raining. The road crosses a couple of arroyos that can get scary if there's been rain. See, this facility has these great big greenhouses. You'll be surprised by their size. And some of the folks that live around here have this proclivity for target practice. Road signs, just about anything stationary attracts bullets. So they built the greenhouses, with all their glass, well away from the highway, kind of hidden in a little valley. As I remember, it's a dozen miles to the north here, up by that mountain. Black Mountain, I think it's called."

After a while we came to a little guard-house, where Hal assured the skeptical individual peering at us through the gloom that we were checking in at the hotel, and the gate levitated. Hal parked in front of a reception building, went in to the desk visible through the picture window, and returned with keys to our room. This turned out to be a short drive down a hillside, and, just as he said, it did indeed have a fabulous view, even though it was nearly dark by that time.

While I was staring at the darkening desert and the silhouette of Black Mountain from the patio, Hal was on the phone. He finished his conversation and came outside and hugged me from behind.

“Bill wanted me to call him when we got checked in, and he’s coming over with a bottle of chilled wine, and some Perrier for me, so we can talk about all this. Hope that’s OK?”

“Mmm. Sure. I’ll go easy on the wine, though. That second margarita was half too much for me to be really sharp, investigator-wise. Can we sit out here? It sure is beautiful. And still warm.”

“That’ll change pretty quick, but, yes. Let me find a towel and wipe these chairs down.”

\* \* \*

Bill Longwell must have been waiting close by, because there came a knock on the door even as Hal was wiping the desert grit from the last of the patio chairs. I went to the door, introduced myself and welcomed Bill in, and I took him outside, where he and Hal shook hands like old friends.

“Bill! Good to see you again, except for the circumstances. I heard Annette introducing herself. I thought we could sit out here until it gets too cold. Um, unless there’s stuff you’d rather not have anyone hear.”

“I checked, and you’re the only guests in this block of rooms tonight, so there’s no one around. And there’s a south breeze, so maybe it’ll stay warm for a while.”

He began removing items from the various pockets in his sport jacket, and in rapid succession a bottle of Frog’s Leap chardonnay, a liter bottle of Perrier, three stemmed wine glasses, and a waiter’s corkscrew appeared on the little table. Then he patted himself down and found some napkins.

“How elegant! Makes that Mexican place in Catalina where we had dinner seem rustic.” As a child of civilization, I appreciate the little things, especially from a man. That’s one of the reasons I married Hal.

“You had dinner at Maria’s? Once is OK. But if you’re still here for dinner tomorrow, let me know and I’ll take you someplace much better.” He twisted the cap off the Perrier, uncorked the wine, and sat himself within reach of everything. Hal and I followed suit.

“So you’re here to accompany Melody’s body back to Durango, huh? Nice gesture. I talked with her mother, and she was, you know, quite naturally upset. But she was also concerned about getting the body home, so this is a big help to her. Maybe, just maybe, your time here will be something of a help to me, too.” He smiled in my direction.

“Of course, this is way out of my territory, but I’m curious about it. Maybe tomorrow I can pull some professional strings with the medical examiner and get his report. And the same with the sheriff.” With at least a day to kill, I’d been making plans.

“That’d make me feel a lot better, to know what they know. They’re not communicating much. This is Pinal County, not Pima County, where Tucson is. We’re two counties and several light years away from 21<sup>st</sup>-century civilization up here. Things get done in the old-time good-old-boy mode in these parts. Hell, I don’t even know what killed her, I mean, how she died. The sheriff’s also sealed off Melody’s

office here at the Center, which is a real pain for me. Probably has her apartment in town quarantined as well. He seems to think he has an air-tight case against that fellow Alvarez he's got in custody."

"Like I told Hal yesterday, all I know is what's in the papers. And all that's there is the scratches. If that's the sheriff's case, he's on thin ice, because if the DNA test doesn't match, his case is shot."

"I guess he's got some other stuff he's not talking about. But it's frustrating to be out of the information loop. I feel so responsible, yet so helpless."

Hal chimed in. "I've been in situations like this, and I know what you mean. It made all the difference to me when Annette and I were able to discuss things. Even if I didn't really help, talking about things made it seem like I was helping. One thing I've been wondering is whether the reports in the papers are accurate, as far as they go. Any feeling about that?"

"Yeah, from what I've seen. Kelly Rumsford, the graduate student who found her, noticed a finger poking out of the soil in the tropical rain forest, tugged on it and pulled up an arm. Boy, was he surprised!"

That made me sit up straight. "Excuse me, Bill. You said 'he.' The papers in Durango referred to Kelly as 'she.' So there are some errors. Maybe we should hear the whole story from you."

"Oh. Well, sure. Anyway, Kelly was in there doing a plant survey—you know, counting individual plants and classifying them. We track each plant in a big computer database, and he was looking for new shoots, checking health, that kind of thing. This was in the East Asian greenhouse. So he found the finger and the arm and got on the radio—we all carry radios when we're working in there—and summoned help. Art Finnegan, my second-in-command, he arrived first. He happened to be working next door on an ocean experiment, so he took charge."

"Ocean? Hal told me this was a greenhouse."

Longwell grinned. "That's what we call our big tank of saltwater. It's there in its own greenhouse to help humidify the air for the tropical plants, and we also grow corals and other tropical sea-creatures, like anemones. There's research on them as well. See, the greenhouses are all linked together with a zoned climate-control system, so the humid air from the ocean greenhouse gets pumped around everywhere in amounts needed to keep the various biomes at the right humidity. Anyway, Art saw the arm, gave it a little pull and, when it didn't come up by itself, he figured he had a whole body. So he called on his radio to get the sheriff. Then he made everyone stay clear of the area, kind of closed access off so it wouldn't be disturbed any further. The sheriff took about an hour to get here, and he called in help, which took another hour. They photographed everything, carefully dug Melody up, photographed things some more, and carted her off to the medical examiner's office for the autopsy."

"Art Finnegan. Hmm. Why does that name sound familiar?" Hal was staring at the sky. "Oh, I know. Didn't he spend last fall up with us, on a sabbatical or something? Or was it spring?"

"I think you're right. He's been here almost since the beginning, and I offered him the deputy position. He negotiated a semester's sabbatical before starting, last spring. He's a sharp fellow."

"Interesting." I was making mental notes. "The graduate student, Rumsford, is he enrolled somewhere around here? U of A down in Tucson?"

"Actually, he's visiting us, last summer and this semester. He's in the landscape ecology program up at the University of Colorado in Boulder."

"Ah. Anyway, what about this Alvarez fellow?"

"That's going to cause me even more headaches. He and his wife both work here, on the staff. She's a housekeeper, cleans these rooms, in fact. He was on the custodial staff for the administrative buildings

and the labs. The sheriff saw the scratches on his face, concluded that they were made by Melody because she had the blood under her fingernails, and arrested him. Turns out his green card is forged, so he's working for us illegally. Not truly our problem, because the INS admits it's an expert forgery. But still a big headache."

"What about his wife?"

"She's legal. Valid work permit, been here for a couple of years. They've got a kid who was born here, so he's a citizen. Good workers, both of them."

"Was Alvarez a custodian in the greenhouses also?" Hal likes to try to keep up with my questioning, and sometimes he even scores points.

"No, we have special custodial workers in there. People trained on how to clean up without disturbing any of the experimental work. Alvarez wasn't on the access list."

"Last time I was here, we did that inside tour, and getting in was no easy thing. There's the air lock with that key-pad code system. And people in there, usually."

"Yeah, and it's still that way. Also, there are cameras recording activity at all of the entrances. None shows anything out of the ordinary, like Alvarez dragging Melody's dead body into the air lock, for example." Longwell shrugged.

"But it does show her going in at some point?" That, I thought, would be most helpful.

Longwell looked embarrassed. "The video tape cycles every 24 hours. It's a money-saver. And neither Melody nor Alvarez is on any of the tapes. So whoever took her in there did it at least 24 hours before Kelly found her. I'm assuming that the medical examiner's report will bear this out."

I knew enough about this to be careful, "These recording systems can be fooled around with. Depending on the sophistication of who's doing the fooling, the tapes might not be evidence quality. If it did show something, like Alvarez dragging her body in there, that would be something. But no information from those tapes isn't necessarily meaningful, one way or the other."

"But if Alvarez didn't have access, it's hard to see how he could have put her body in there. And, say, I recall that the main entrance goes into the basement. If Alvarez didn't get in there routinely, I don't see how he could have found the rain forest to bury her there, even if he did get her in. It's a rat maze down there. That tour we did got me completely lost." Hal, I know, has a nearly infallible sense of direction, so this was no small admission.

"My thoughts, too. But the sheriff is stuck on Alvarez as the murderer, at least for now. I worry that time's a-wasting and we should be looking for someone else with scratches. But he's definitely in charge of this thing. Annette, maybe you can get something out of him tomorrow. I'd sure appreciate it. And now I have to be off. One last thing to do tonight." Longwell drained his wine glass and we all stood up. "Enjoy the rest of the wine. I'll find you tomorrow."

We walked to the door together and said our good nights.

"Well madam detective," Hal was looking tired, but interested in the whole thing, "Any thoughts on this little puzzle?"

"If Alvarez is in custody, he'll have a lawyer. At least I assume so. And if the lawyer's any good, he'll let Alvarez decide whether to fight the DNA testing. If Alvarez agrees to a match, that's a point in his favor, because it means he believes he's innocent. Assuming he's informed correctly about the test's implications. And, of course, if there's no match, the sheriff's got nothing on him, at least that we know of. The INS does, but that's different altogether."

"What about this thing with the access?"

“Not having seen the entrance or the system, I don’t know. But if it’s as tight as you guys seem to think, that’s another point in Alvarez’s favor. What we really need to find out, in addition to the DNA, is the cause of death. And whatever else the sheriff knows but isn’t talking about, of course. But that’s all for tomorrow.”

“You’re right. And I’m tired. How about a little stroll around before bed?”

“Outside? Um, what’s out there? This isn’t Durango.” I don’t like unfamiliar outdoors environments, and this one seemed really strange.

“Oh, lizards, spiders, the occasional coyote, maybe a mountain lion, snakes. The usual desert stuff. But I’ll protect you.”

“Yeah? With what? Your calculator?”

“No, by guiding you carefully along the roadway, where none of these critters hangs out. Hell, get off the roadway in the dark and the most scary thing is the cacti. Lots of different kinds, all pointy. But, look, there’s a moon. It’ll be beautiful.”

“Too bad I didn’t bring my Glock. Then I could take care of myself out there.”

“Unless you mistook a saguaro cactus for a threatening person and shot it. That would get us both in trouble. Saguaros are protected.”

\* \* \*

Friday morning, the trip back to Durango was uneventful, for all three of us. On the Phoenix–Durango leg, the plane was nearly empty, so Hal and I moved to seats away from everyone else to talk things over. Thursday had been a busy day, too busy for us to leave, and the paperwork on Melody, more complicated than Hal had originally thought, hadn’t been ready anyway. So we stayed until Friday.

With some privacy on the plane, I was making lists to summarize.

“The tour was great, better than I would have thought. Especially inside. And the access security is reasonably tight, although it could be defeated by someone with the right skills. I doubt that Jorgé Alvarez has those skills. That’s the first thing.” I stuck my index finger out, pointing at the seat in front of me.

“Second, there was that encounter with Mrs. Alvarez, when we were packing up to check out this morning. Her English isn’t quite up to where it needs to be for me to understand things completely, but it seems she claims she’s the one who scratched Jorgé. Under what circumstances isn’t clear, but that could be clarified with an interpreter. Of course, her testimony won’t do her husband any good, but it’s another piece of information.” My middle finger joined my index finger.

“Then there’s a tidbit that the sheriff dropped, that Mr. Alvarez claims to have an alibi for the time frame of the death, an alibi that can be verified by his friends. Whether they’ll be willing to testify is a good question, at least in the sheriff’s opinion, because they may be undocumented and afraid to appear in court. However, this alibi is significant, because the time of death isn’t public information. Of course, if Alvarez arranged for his friends to lie for him, as the sheriff thinks, he’d arrange for the right time. But if the alibi’s valid and can be verified another way, Alvarez is scoring points right and left.

“Third, no, fourth, there’s the medical examiner’s report. Rudy Gelinski. Nice guy, competent. Unlike the sheriff. What a piece of work *he* is. But the ME seems to know his stuff. He mentioned that he’s supposed to be retired from his job as ME back in Newark. Pinal County hasn’t a lot of need for a medical examiner, so he’s on call. Anyway, he places the estimated time of death at T-minus-two days or so, plus or minus twelve hours. There are some curiosities about this that your stomach probably

doesn't want to hear about. But, based on other equally gross indications, he places the time of interment at T-minus-eight hours or so, maybe as many as twelve or as few as four. Where she was during the intervening day-and-a-half is a compelling question. And why there's no hint of her on that twenty-four-hour security tape is also curious."

"So, let's see, they found her body early Monday morning, meaning she was buried in there sometime over the previous night, and she was killed sometime over last weekend." Hal was trying to keep things straight, which is often as helpful to me as it is to him.

"Right. Anyway, the ME says that the DNA test will take a few days, but getting Alvarez tested will depend on whether he agrees to it, of course. Meantime, he's looked at Alvarez and says it's possible that Melody made those scratches." I continued on.

"Finally, and we're still on number four here," by now I was holding the four fingers of my right hand out, with my thumb still curled over my palm, "the cause of death. Asphyxiation, but with no signs of violence. She just ran out of oxygen and died. Suffocated. As if somehow she got her air supply cut off when she was asleep and she didn't struggle. Unusual. Points to the possibility of drugs in her system, but toxicology tests are still in progress." I had to stop to take a breath.

"Fifth, and last." I stuck my thumb out, "The defense lawyer. Public defender, just a kid fresh out of law school. Never had a capital case before, or even a homicide. Nervous about doing the wrong thing. Nervous about letting Alvarez agree to the DNA test without a fight, even though it's OK with Alvarez, which, as I've said, is a point in his favor. Nervous about my talking with him. Nervous about just about everything, probably including his own shadow. Given that the sheriff is out to get Alvarez, better representation would be a big help to the defense. I advised the kid to go along with the DNA test, because Alvarez knows whether he's innocent or not. As long as there's a competent translator, Alvarez can make an informed decision. If the DNA test clears Alvarez, the sheriff is back to square one, and he's wasted a week or so focusing exclusively on Alvarez."

"Is the sheriff going to release the ME's report, the cause of death or anything?" Hal was still trying to keep up with me.

"He said he will when he's good and ready. The Tucson paper is talking about a court order, but the sheriff is a feisty old cuss and he'll probably fight it. So it could be a while."

"Which means that we get to be the ones to tell Mrs. Witherspoon how her daughter died. On top of the fact that you weren't able to get any of Melody's stuff released to bring back. That's going to be really upsetting to her."

My heart sank. "Oh. You're right. Damn! How come it's always us? I thought that time with Alice and her husband paid our dues." I like the challenge of case work far more than the social work that is sometimes attached.

"We did that one by enlisting their pastor. Maybe we can find out who's counseling Mrs. Witherspoon, and enlist him. Or her."

"Maybe. This could be tough, though, because we don't know who killed her, and she'll ask, for sure. And we really don't know much about the actual death."

"From what you just said, it doesn't look as if Melody suffered, though. That's something. Say, how about Alice? She's already involved with setting up a memorial service, she's talked with Mrs. Witherspoon, and she's been through something like this." Hal was obviously thinking that Alice could even benefit from the involvement in this affair.

"Have Alice tell her?"

“Get Alice to help us tell her.”

“Hmm. Could work. Let’s think about it. And, of course, talk with Alice about it. At least talking with Melody’s mother will be the end of this for us.” I felt relieved. “This is clearly an Arizona problem, not mine. Or yours, for once.”

If only.

\* \* \*

## Two

We were gone only forty-eight hours, but Alice worked fast. By the time we returned to Durango, she had arranged a memorial service to be held in the Theater in the Sky up on the campus on Monday morning, a week after Melody’s body had been discovered.

An elegant Mediterranean structure used mainly by the theater and dance department, the Theater sat on the highest part of the mesa and would have had a commanding view if there had been windows. It was one of the few remaining landmarks of the “Campus in the Sky,” the old college that had been transformed into Frémont State by an ambitious university president back in the ’80s. Hal never tired of griping about the budget mess that had been left behind when that president moved on to greener pastures.

Melody’s memorial was quite well attended, nearly filling the auditorium, and many of the people there must have been “townies,” because Hal didn’t recognize them. I recognized a few faces because my time in the Durango Police Department had put me in touch with lots of people. The names were all gone, though.

Third on the program, Hal read a short eulogy he’d prepared over the weekend, using what he’d described to me as his “clergyman persona.” But it was clear that he was distracted by Mildred Witherspoon, sitting in the first row squarely in front of the speaker’s podium, with Alice on one side of her holding her hand and a 30-ish man on her other side. It was actually rather humorous. Mildred was dabbing at her nose with a large linen handkerchief and making drippy sniffing noises, which were somehow, we all couldn’t help but notice, timed with Hal’s pauses between sentences.

“Melody’s legacy will be an inspiration to creative students at FSU for generations.”

*SNIFF.*

And so on.

Melody’s graduate advisor, Professor Jin-Rae Kim, followed Hal with a more elaborate eulogy, and the sniffing continued all through his talk—still timed carefully—and those that followed as well. Finally, blessedly, it was over, and we all retired to the lawn for an informal receiving line.

Waiting to pay personal respects to Mildred, who was standing with Alice and that guy—Hal told me he looked familiar, but he couldn’t quite place him—we found ourselves at the end of the slow-moving line, just behind Professor Kim. Hal introduced me.

“How nice to meet you, Professor. I knew Melody only a little, but she seemed so charming and bright. This is such a terrible waste.” I was feeling more involved in this than I had anticipated.

“Yes, it is, it is. And there’s so much mystery about it. Not like she was in a car accident, or had been sick. I fear that her mother won’t be getting closure on this for some time.” Kim, it was clear, was also having trouble with closure.

“Perhaps their last visit together will provide helpful memories.”

“I hope so. And it was recent, so that should help, too.”

“Recent?”

“Oh, yes, I think last weekend, or, rather, the weekend before yesterday’s. I saw Melody on campus late Saturday, and she told me she was going to be seeing her mother on Sunday. So maybe Mrs. Witherspoon can hold onto that last memory.”

My antennae perked up. “Late Saturday? I thought she was working down at that place in Arizona.”

“Yes, but she had come up here to visit her mother, so she stopped by to hand-deliver some reprints of a journal article that just got published. It was her dissertation work, and I’m a co-author.”

“So she brought them to your office on campus on Saturday?”

His smile was shy, and a little embarrassed. “She knows me. I have this habit of working in my lab on Saturdays, when there are no distractions.”

“Do you remember what time it was, by any chance?”

“Oh, probably about four that afternoon. Maybe four-thirty. Ah, if I may say, you seem quite interested in this.”

I felt myself blushing, just slightly. “Oh dear, I’m sorry. It’s habit. I work for the Colorado Bureau of Investigation, and asking questions is a big part of my job. So I listen for details. Ask Hal. I think it drives him crazy.”

As the line crept closer to Mildred and her companions, Hal pointed out to me that, because we were last, we would be trapped, with no easy way to end the conversation.

“Well,” he said, innocently, “I’ll talk to this guy and figure out how I know him and you talk with Alice and Mildred.”

And before I could say anything, we were there. I resolved to extract appropriate retribution from him as the earliest opportunity. Dinner that evening, somewhere fancy, had a nice ring to it, I thought.

I listened to Mildred introduce her son, Al Witherspoon, Melody’s older brother. Hal knew him because Al had been one of the paramedics in the ambulance a year ago when they had dashed up to that trailhead above Hermosa Creek to rescue me. Al was the one who had popped my dislocated shoulder back into place, although I didn’t know it at the time, being unconscious. He and Hal launched into a conversation about the affair and its aftermath, and I was stuck with the other two. Some place *really* fancy, I told myself.

“Mrs. Witherspoon, I’m Hal Weathers’ wife, Annette Trieri. I’m so sorry about Melody. And, Alice, I think this was a wonderful memorial you organized.”

“I’m gratified by how many people are here.” Sniff. “I had no idea that Melody was so well known at the university.”

“She was here for so many years, for both her undergraduate and graduate degrees,” Alice piped up, “I expect she got to know almost everyone. And she was involved in so many different activities. Her sorority is one of the ones that emphasizes community work and she was in several clubs, too. And she

told me, I had a chance to talk with her frequently when she was in our graduate program, she told me that she was tutoring undergraduates in chemistry. A busy young woman.”

“At least you had a chance to visit with her recently. I hope that will be a memory that sustains you, Mrs. Witherspoon.”

“Oh, dear, yes. But I wish I could have seen her one more time. It was two months ago when she was here last.” Sniff.

“But I thought...” The alarm bells in my head were making such a clamor that I stopped.

“...but I thought she was close enough, just down in Tucson, that it would be more frequent. Even so,” I was hoping for a graceful recovery, “that memory will help you, I’m sure. I hope your visit was warm.”

Sniff. “I think she and I were becoming closer. You see, when she went to school here, we grew apart. Perhaps I was too controlling when she was younger and she had to break loose. But I think we were becoming close again. And yes, her last visit was the best in a long time. She was here for a week to finish up a project with one of her community service groups, she said. So she even stayed with me. It will have to sustain me, now.”

“Community service? That’s what Alice just said, that she was involved in a variety of activities. It’s part of the tragedy of this.”

“Oh yes, she was involved in so many different things. Like one that she was here for last time, an organization that helps under-privileged children. I think it’s called ‘Intermountain Social Services.’ I guess they will all just have to get along somehow, now.” Sniff.

The ringing of my personal alarm bells had waned since my recovery from the earlier near-miss with disaster, but now this set them off louder than ever. It was fortunate that Hal came to my rescue.

“Annette, I’m sure that this has been tiring for Mrs. Witherspoon and perhaps we should allow others their turn.” He nodded in the direction of the few stragglers who had lined up behind us, and we were able to escape.

“I hope you have time after this is over to talk. Things are getting stranger and stranger.” I was worried and not a little confused.

“Sure. We can head over to my office right now, if you...”

“Hal! Annette! Haven’t seen either of you lately.” The lanky form of Gil Taylor emerged from the crowd. How we could have missed him was a puzzle, for, at 6-6 or so, his head was well above most of the others. He looked me up and down. “So, you seem to be all recovered, Annette. Glad to hear you didn’t get injured in that explosion.”

He was referring to the horrible end of my previous big investigation, in which he and his chemical analysis equipment had played a crucial role. I just smiled.

“Hey, Gil. How are ya? I didn’t know you knew Melody.” Hal and Gil were old friends, having worked on scientific projects together before Hal’s “promotion” out of active research into the dean’s office.

“Sure. But I wouldn’t have thought you knew her, Annette.”

“Just a little. But I thought she was doing ecosystems studies, not chemistry.” I was puzzled. Gil’s analytical laboratory was used by the Durango police for drug and other analyses, thanks to my work with him on a case back when I was in the PD. I’d also added the CBI to his list of extra-university clients.

“It was during her Ph.D. work. She needed some analyses of trace metals in soils and grasses. So she came to me. This thing is all too sad.”

“Sure is. The people down in Arizona are upset about it, too. I thought maybe some of them would make it up here for this memorial service.” Hal had called Bill Longwell with an invitation on Friday, as soon as we found out about the arrangements from Alice.

“Right, especially Art, since he was up here while she was still a student last spring. He’s the one who talked her into the post-doc down at EcoARC. Although, come to think of it, he was just up here last week, so maybe he didn’t want to make another trip so soon.”

“Art Finnegan?” I was on alert again. “The deputy director? What was he doing up here?”

“Finishing up some stuff from his sabbatical, I think. He stopped by to see me, a week ago Friday, I guess it was, Friday morning. He needed copies of some analyses I’d done for him. Said he lost his originals in the move back south.”

“Alone?”

“Yeah, when he came to my lab he was. But, let’s see, I think he said something about meeting someone later for dinner or something. Said he was glad he wouldn’t have to be driving back to Tucson alone. Is anything wrong?”

“Wish I knew, Gil. What we know is that Melody’s dead, and because her body was found in Arizona, that it’s not my problem. At least I don’t think so.” Although I was beginning to wonder.

\* \* \*

“So, we have Art Finnegan here on Friday morning, T-minus-three days or so, and Melody here on Saturday afternoon, T-minus-a-day-and-a-half, more-or-less. She said she was going to visit her mother on Sunday, but didn’t. But she did work for Intermountain.”

We had retired to Hal’s office to escape the crowd and were sitting on the couch sipping iced tea. Alice was still missing, but Hal said he expected her to return before lunch time.

“Intermountain? Oh, yeah, I overheard something about ‘Intermountain Social Services.’ What’s that?”

“That’s where Melody told her mother she worked, or maybe volunteered. Mildred thinks it’s a community service organization that helps under-privileged children. But I know it as an escort service and private sex club.”

“Say what? Melody was a hooker? The all-American, hometown girl who made good? Don’t tell me!”

“I didn’t. I mean, I didn’t tell you she was a hooker. But Intermountain is widely known in the law enforcement community in Colorado. It’s run out of Denver, but there are branches or franchises or something like that in almost all of the tourist towns of any size. And Durango’s one of those.”

“But escort services are almost always prostitution fronts.”

“Not always. It varies with the company and, of course, with the girls. Intermountain is, or they used to be, affiliated with strip joints, I think. The Intermountain group here used to run Sizzles. Maybe it still does. There was a complaint about them once when I was in the PD. The corporation did damage control, though, and it was the Sizzles manager here that took the fall. And I seem to remember that Intermountain has a web site where you can buy dirty pictures, and they have phone banks for sexy conversations. After you give them a credit card number, of course. And I think they offer private

lingerie showings in the privacy of your home. Or hotel room, or whatever. You know, for guys who are too shy to go to a store to buy underwear for their wives? Yeah, right. Listen. Just give me a gift certificate, OK?"

He ignored the jab. "So Melody was involved in more than just biogeochemistry research, huh? Who'd have thought?"

"Of course, we really don't know what she was involved in. It's just that Mildred mentioned Intermountain."

"Gil said Art was talking about driving back to Tucson with somebody. Suppose that was Melody?"

"Seems like a real coincidence for both of them to be in town the same weekend and to be at the U to tie up loose ends and all. You know what I think of coincidences."

"Of course, you know what the sixty-four-bazillion-dollar question is, right?"

"I've been thinking about one, but I don't know what yours is."

"Could Melody have been killed here in Durango and then hauled back to Arizona for burial at EcoARC?"

"Hmmpf. That was my question, too. And I sure hope not. I'd rather not have to work with that sheriff down there." My memories of him weren't going away soon.

"One thing that would be easy to find out would be how she got up here. Or at least you could eliminate some possibilities. I mean, if she flew up, the airline would have her name in a recent record. Or if she drove her own car up, it's probably sitting around town somewhere and your pals at the PD will run across it eventually."

"I see where you're going. If we eliminate those two possibilities, she probably rode up here in someone else's car, and that makes the Finnegan coincidence one notch less likely to be a coincidence." I have to admit—sometimes Hal's instincts are right on.

"Right. Of course, if that DNA testing matches what's-his-name—Alvarez?—to the tissue from under the fingernails, that takes care of that. Maybe all this is too speculative to really worry about."

"Maybe. But these latest bits of information don't fit at all with whatever picture was beginning to emerge from our visit down there. So it's troubling."

"Anomalous data points on the phase diagram. Makes us scientists crazy."

"Huh? Oh. Another Mr. Science Person lecture coming up, I bet." I giggled, which made Hal break into laughter.

"Hey, I'm a professor under this veneer of dean-ness, right? So, settle in."

I rolled my eyes theatrically in response.

"Now, first, you've got to understand what I mean by 'phase diagram.' One easy example is climate. Make a graph with temperature on the horizontal axis and, oh, humidity on the vertical axis. Data points for the tropics would be hot and humid—right?—somewhere in the upper right corner. Remember how it was in Tucson on Thursday? Hot and dry, so that data point would be toward the lower right corner. Antarctica is cold and dry, it turns out, so that would be the lower left corner. So if you were studying the tropics, you'd have a cluster of points in the upper right corner, high temperature and high humidity. If a few data points showed up somewhere else, they would be anomalies. You'd wonder if the measurements were right, or what. With me so far?"

“Sure. But I’m not measuring temperature and humidity. I’m trying to avoid getting involved in a murder investigation.”

“Of course. Just bear with me. Suppose you had lots of temperature and humidity measurements and you wanted to know where they were from. You make a graph like I described and see where they cluster. Based on this clustering, you make a hypothesis. So if the measurements are in the upper right corner of this temperature-humidity phase diagram, you hypothesize that it’s the tropics. But there are a few other measurements, anomalies, outside the cluster. What’s up with that? Do you need to modify your hypothesis? Or are these anomalies just bogus measurements, because of, maybe, a bad thermometer?” Hal took a sip of iced tea, coughed a little, and continued.

“Or, maybe they fit into the hypothesis in a way that you don’t think of at first. So, an upper-left data point, or little mini-cluster of data points, cold and wet, maybe they’re tropical, too, but they’re just measurements up on a mountain. See?”

I wrinkled my nose in distaste. “So pretty soon you’re going to tell me that I should be making graphs of the facts?”

“I don’t know how to do that with your kind of facts, because I’m not sure what they’re measurements of, at least not in a simple way. But conceptually, the facts, the data points, for a hypothesis about a particular crime, they ought to cluster together, if they’re graphed in the right way. New facts that don’t fit that cluster can mean lots of various things, but one possibility is that you need to modify the hypothesis. Another is that it’s not really a fact. And another is that it really fits in, with the right interpretation.”

“So what you’re saying is that these new fact we just heard about aren’t in the same cluster, on this conceptual graph, as the ones we heard in Tucson.”

“Maybe. Or maybe they would be with a different graph, that is, a different interpretation. I mean, it’s not like there was much of a hypothesis before beyond the possibility that Alvarez did it. I guess the point for me is thinking about it this way leads to new interpretations, which translate into new hypotheses.”

“Yeah, but I don’t want to think about it, this way or any other. I want this to be an Arizona problem.” But I couldn’t help but think that Melody’s presence in Durango was going to make that less likely.

“I understand. But I know you well enough to know that you’re not going to ignore this. I mean, Melody was here during the period of time when she was supposed to be dead.”

“Which means she was killed sometime after Saturday afternoon. Or died, or whichever.”

“And after that she had to get down to Oracle. That’s an all-day drive, maybe nine, ten hours. Even longer for a corpse.” He grinned, pleased with his own joke.

I’ve learned it’s best to ignore Hal’s little attempts at comedy. “There’s one good thing. Whoever is investigating this, assuming that Alvarez is exonerated, will be able to narrow down the timing from what the ME reported.”

There was a knock on the door, and it opened to reveal FSU’s Provost, John Martin. He looked about with some confusion, clearly used to having people available in ante-rooms to guide him into offices.

“John! Come in and sit. I didn’t see you at the memorial service.” I wondered just what was going on that Hal was being honored with a visit from his boss.

“Sorry to just barge in, but Alice is nowhere to be found.” Martin pulled a side chair around to face us on the couch and sat down.

“She’s probably still occupied with Mildred Witherspoon, Melody’s mother. Alice organized that service and has been doing lots of hand-holding lately. I expect her back about lunch time. What brings you this way?”

“Oh, I guess I just need a little company. How’s everything over at the CBI, Annette?”

“Haven’t been there for a few days, but I expect it’s OK. I’ve got the office running just fine without me barring some kind of emergency. Were you at the service, John?”

“Yes, and I suppose that’s why I need company. It was depressing. Oh, not depressing in itself, I mean. Hal, your eulogy was most touching and Jin-Rae Kim did a wonderful job. But just the idea that we needed to have a memorial service for someone like Melody is depressing.” He sighed.

“Anyway, I heard that you two went down to Tucson to bring her body back last week. Did you learn anything about what really happened? There hasn’t even been much discussion on how she died, at least not in the papers. Everyone here is in the dark.”

Hal and I looked at each other, trying to see who wanted to tell the story.

“You’re the reluctant criminal investigator here.”

“Yeah, but you’re the one with the phase diagrams and anomalous data clusters.”

Martin looked back and forth at Hal and me, completely puzzled.

It took only a minute for me to give in. “I guess I should be the one. Wouldn’t want Hal to turn it into another Mr. Science Person lecture,” at which Hal broke into laughter and Martin looked the more perplexed.

I related as much of the story as I knew, in a reasonably ordered fashion, and watched Martin become increasingly depressed.

“So what you’re telling me is that Melody’s visit to Jin-Rae a week ago Saturday narrowed down the time of death but implicates us? This is not good news.”

“‘Implicates’ is the wrong word, John. It means that she was alive and on campus, that’s all. It does raise the possibility that she was killed here in Durango, though.”

“And the fact that Art Finnegan was on campus the day before worries me. We selected him to be a visiting professor during a sabbatical, as I recall. If he’s involved in this, and I agree with you, Annette, that coincidences such as this are always suspicious, if it turns out he was involved in this, we’re going to be sucked into it.”

“Before FSU gets sucked in, John, I’ll get sucked in, and that’s something I’m trying to avoid. I really want this to be an Arizona problem. If we do get sucked in, it’ll become a bureaucratic and jurisdictional nightmare.” Not to mention a personal pain in the derriere, I thought.

\* \* \*

Back in my office that afternoon, I tried to focus on the paperwork that had accumulated during my absence. After our return to Durango on Friday, Hal and I had avoided our respective offices in favor of extending our holiday through the weekend. It was now time to play catch-up.

I was half-way through the weekly CBI summary, distributed electronically each Saturday, when my phone rang.

“Trieri, CBI.”

“Ms. Trieri? This is Donald Parks. I’m the public defender for Jorgé Alvarez, remember me?”

“Indeed I do, Mr. Parks. What can I do for you?”

“I thought you might like to know that we have decided not to fight the DNA testing. Friday afternoon, I sat down with Mr. Alvarez and a translator, and we went over what the test is all about and so on in detail. He agreed readily. He says his scratches were made by his wife, although I couldn’t get him to say why.”

“That’s the story his wife told us. You might want to interview her with the same translator. I’m not sure that why she did it makes any real difference, although it would come up if there were any official questioning, probably. Did Alvarez ever meet Melody Witherspoon?”

“He says he recognizes her picture from seeing her around the EcoARC campus, but he didn’t know her name or anything. They were never introduced. There was no contact.”

“So the DNA test will show that what was under Melody’s fingernails wasn’t Mr. Alvarez’s face, and that should get him off the hook with the sheriff. I understand Alvarez will be having some problems with the INS, though.”

“Yes, but his wife is documented and their son is a citizen, so we should be able to get him residency easily.”

“Are you going to be involved with that, too?”

“Right. I can do it *pro bono* and get points for community service, so it seems worthwhile. Mr. Alvarez is a solid citizen, potentially, at least.”

“Well the sheriff’s got a new problem, but Mr. Alvarez seems to be set. Good work. Thanks for letting me know.”

“No problem. And it was nice meeting you last week.”

I went back to the paperwork and was well into the weekly FBI regional report when my phone rang again.

“Trieri, CBI.”

“Uh, Ms. Trieri?” I recognized Donald Parks’ voice, but he sounded badly shaken this time.

“Mr. Parks? Are you OK?”

“Not entirely. When I was talking with you before, I got another call, which I just returned. It was a reporter for one of the Tucson TV stations wanting a comment from me on a story they’re doing for the news this evening. It seems that Jorgé Alvarez was found hanged in his cell this morning.”

I was too shocked to speak, but finally found my voice. “Really? And you heard about it from a TV reporter rather than from the sheriff or from the DA?”

“That fits with the sheriff’s approach to things. The reporter told me the sheriff was crowing about how this proved that Alvarez did it and now the case is solved. And he also, I guess, was making noises about how this was an example of the dangers of having Mexican ‘illegals’ in the country.”

“He must have an election coming up next month. Did the reporter tell you how Alvarez managed to hang himself? Or does this sheriff leave belts and shoelaces in the possession of his prisoners?”

“Apparently Alvarez tore up his tee shirt into strips and tied them together.”

“And let’s see, it was discovered by one of the deputies probably, who was bringing him breakfast, right?”

“How do you know all this stuff?”

“I’m older than I look, at least in terms of having been in the business a while. What’s your plan?”

“I haven’t thought that far, I guess. I just heard all this and I’m still upset.”

“No doubt. Soon you’ll be mad, bet on it. If you want to keep your options open, make sure that the sheriff doesn’t get the body cremated and be sure to protect your notes from the interview with the translator on Friday. I’d put them in a safe deposit box or somewhere secure like that. Oh, and is the translator at all connected with the sheriff?”

“No, in fact she’s from down in Oro Valley, by Tucson, in Pima County. I don’t think the sheriff knows her.”

“Best keep it that way. One thing you can do is to proceed with the DNA test, and make the results public. Then the sheriff will have to re-open the case file. It won’t really help Alvarez except to clear his name, of course. But it’ll make the sheriff look bad if he doesn’t pursue the case more. And if there is an election coming up, he’ll have to do something.”

“Why would Alvarez hang himself? On Friday we had discussed how the DNA test would prove his innocence. And isn’t suicide considered the worst sin among Catholics?”

“Chances are that he didn’t kill himself, but there will be no way to prove that, at least not with forensic evidence, unless someone screwed up. That’s why I was suggesting you protect the information you have, to preserve it in case there’s a use for it. It’s circumstantial, but it could be useful.”

“You mean that someone killed him in jail? He was being held in solitary, so it couldn’t have been one of the other prisoners. That means it was one of the sheriff’s...”

“Mr. Parks. You told me that you’re new to all this, and that you have a lot to learn. Think of this as an on-the-job lesson in the way things can work. The most important thing is for you to stay in control of yourself and not dash off and do something foolish. Even though you may want to, there’s not a lot you can do. But other people might, if you handle yourself properly. For example, I bet there’s some kind of Hispanic civil rights group around there somewhere, at least down in Tucson. You might talk with them about your suspicions, and even provide them with a transcript of your notes, or the tape of the meeting or whatever you have. But if you take this on by yourself, you’ll lose, big time. Understand?”

“What I understand is that I’m going to have to think this through. But you’re probably right, my best approach would be through a civil rights group, and publicity. Thanks for the advice, ma’am. I appreciate it. And I’ll do what I can to make sure the case gets re-opened. We need to find whoever killed this unfortunate young lady.”

“You’re right on that. If there’s anything I can do, let me know.”

Ma’am? I thought. Maybe I shouldn’t have told him that I’m older than I look. Sheesh.

Just as I was getting back to the FBI report, there was a tap on my door, and Derek Petersen stuck his head in. Derek, a long-time CBI field investigator, had been assigned to be my administrative deputy as a way for him to gain the experience he needed to take over a CBI office someday. So far, he was handling the changed assignment gracefully, helped in the transition, I believe, by the fact that I included him in cases whenever I could. He was especially helpful when there was computer work needed, on identity searches and so on. But it was his administrative contributions that really made my life easy.

“Annette? Got a minute?”

“Absolutely, Derek. Come in, have a seat. What’s up?”

“I’ve got the budget figures for you to review.”

“Are we in the black?”

“Plenty. I think we can even afford those new computers you’ve been wanting.”

“Great. That’s all I need to know. Go for it.”

“You sure you don’t want to see the details?”

“I probably should, but I figure that one of us looking at them is enough of a taxpayer investment in that sort of thing. I’ve got something more puzzling on my mind anyway.”

Derek sat back in his chair looking relieved and interested, so I continued.

“What do you know about Arizona law enforcement? My only experience is with stuff here in the Four Corners region—and that’s the Rez—which is handled by the Navajo Tribal Police or by the FBI.”

“So you mean the rest of the state?”

“Yeah. Is there something like the CBI down there? And how’s our working relationship with them?”

“As I recall, they have a Department of Public Safety that includes the Highway Patrol and several other divisions including an investigative division. I don’t remember any cases recently where we’ve had a lot of interactions. New Mexico, yes, but not Arizona.”

“And I’d bet that the investigative division is responsible for looking into misconduct by law enforcement officers statewide.”

“Probably, except maybe for the big departments in Phoenix and Tucson. I bet they have internal affairs people and so on. But Public Safety probably handles it everywhere else, unless there’s some other group that I’m not familiar with. Not that I’m that familiar with the DPS. Does this relate to your trip to Tucson last week?”

It took me about twenty minutes to tell him the details, and then, because he was a field investigator at heart, he had ten minutes worth of questions.

“So, there are really two issues I see here, Annette. First, there’s the questionable suicide. And I agree with your comments to the lawyer, there’s probably not going to be forensic evidence to show that it’s anything but a suicide. But maybe the circumstances will make trouble for that sheriff. And, second, there’s the question of what really happened to Melody Witherspoon. Reading between the lines, I infer that you think she may have been killed up here, and someone, most likely the killer, transported her body to this EcoARC place, took her inside, and buried her in there.”

“And, if so, I expect that we’ll have to get involved, right?”

“And this is why our relationship with Arizona law enforcement is relevant.” He was nodding in understanding.

“Right. Any suggestions about where to go next?”

He sat back in his chair and scratched his head. “I’d call that medical examiner down there. You said he was a competent guy. Ask him if it’s reasonable that Melody was killed up here and so on, especially in light of the changed window for the time of death.”

I thought about it for a minute. “Not a bad idea, especially since the ME didn’t seem to have any love lost for the sheriff. OK, I’ll do it. Anything else, suggestion-wise?”

“Assuming that this fellow Alvarez didn’t do it, someone else did who has access to those greenhouses, right? You know at least one person who does, or at least I assume he does, that deputy director, Finnegan. You also know that he was here a week ago, the weekend that Melody was killed. Maybe you could find out from the director, Hal’s friend, if anyone else on their staff with access to the greenhouses was out of town that weekend. He might even know if they were up here.”

I had to nod in agreement. “Right. And if he doesn’t know, maybe he could find out from vacation records in personnel, or travel records, or something. One thing we have going for us is that Bill, that’s the director, Bill Longwell is as determined to find out what really happened as anyone. Although I suppose he could be in a conflict of interest position, trying to protect his institution’s reputation from bad publicity.”

“Yeah, but he’s probably smart enough to know that the worst publicity would be if the killer is someone on his staff and he tries to shield them.”

“Hal knows him better than I do, so I’ll ask him to check with Bill. But I expect you’re right.”

“Another thing, simple, would be to run an NCIC check on this deputy guy, the one who was up here a week ago. See if there’s anything in his background that raises red flags. I can do that if you want.”

“I’d doubt that you’d find anything. He’s in a position of trust down there, and they probably did the check.”

He wasn’t at all discouraged, though. “Maybe. But you told me that his boss said he’d been there for a long time. Maybe they didn’t run checks a long time ago when he came on board and they haven’t done one since either. And there’s also the basic legwork to be done. If Alvarez didn’t kill her, who did? Has someone gone over her apartment and so on? I mean, besides the sheriff you don’t trust?”

“Good question. OK, sounds like a plan. You run a check on this guy Finnegan, and I’ll see if Bill Longwell can give us any information about his employees who could have been out of town. Then I’ll call the ME to fill him in, ask about her apartment and so on. After that I’ll wait and see what happens, I guess.”

Somehow I knew that my involvement was only going to escalate.

\* \* \*

That evening, over a dinner of home-made pizza and salad, I filled Hal in about the demise of the unfortunate Jorge Alvarez, and we discussed how to approach Bill Longwell’s employees.

“Sounds like a variant of the old ‘shot while trying to escape’ dodge to me. I bet Bill is going to be livid, because he seemed to feel responsible for Alvarez. Even though he’s new down there, Bill has this extended family attitude about his employees. He’ll take it personally at some level.” Folding two pieces together, Hal had made a pizza sandwich and was talking around a large mouthful.

“You probably don’t want to say anything to him, because I don’t know how it will work, but I’m going to try to pull some strings, gently, with contacts in the Arizona Department of Public Safety. I talked with my boss in Denver about it and he gave me some names.”

“Bill will have seen it on TV tonight probably, or will for sure in tomorrow’s papers. I’ll call him and see how mad he is. Thing is, this business of asking about what he knows about the whereabouts of his people on that weekend may just get him madder.”

“But surely he’ll realize that people with access to the greenhouses are going to be the ones under suspicion. And what we do with people under suspicion is find out where they were at critical times.” I knew that my logic was unassailable, but a little voice in my head also was reminding me that my people skills are often buried by it.

“I know. But it will amount to asking him how many of his people have alibis.”

“Or, more precisely, how many don’t. Look, I can call him, but you know him better and I wanted to ask about it first. I’m not trying to get you to do this.”

“Oh. I thought you wanted me to.” He looked puzzled.

“Only if you want to. Maybe I should call him and then you can, after I find out how mad he is. I’ll talk to the DPS down there and see if they have an investigation planned and then call Bill to tell him what I found out, with a suggestion that someone will be asking about alibis. After I talk with him, I’ll let you know and you can call to tell him about the possible connections here, especially Finnegan’s visit to campus. That’s more your territory.”

“You’re going to be involved in this investigation, aren’t you?”

“I was trying to avoid it, but it looks inevitable. With both Melody and Finnegan having been up here just before she was killed, I’m afraid it’s going to fall squarely in my lap.”

“Fraid so. And with Melody and Finnegan having been at the U during their visit, somehow I think we’re both going to be involved.”

\* \* \*

### Three

On Tuesday, as if recovering from a bad hangover, Durango finally came back to life. The Homecoming Weekend festivities, rather less than festive to begin with, had culminated on Saturday with a 44-10 drubbing of the FSU Golden Marmots by the University of Northern Colorado Bears.

It would have been worse, but the UNC coach, a merciful fellow, had played his third-string defense in the fourth quarter, allowing the Marmots to avoid the humiliation of a homecoming shut-out. However, the humiliation could not be avoided completely, what with the *Free Press* headline “Bears Munch Marmots” displayed in newspaper boxes all over town.

This, combined with sermons in all the churches about the local girl’s death, had made Sunday positively dreary, and Monday, with the memorial service, had been groggily subdued. But, I thought, maybe there’s hope for Tuesday.

By mid-morning, I’d completed my part of the bargain and put in a call to Hal on his private line.

“Weathers, natural sciences.”

“Annette Trieri, CBI here. How’s your morning so far?”

“Fair to middlin’, all things considered. How are things over your way?”

“Confusing, and likely to get more so. But I called to let you know that I’ve talked with Bill Longwell and now it’s your turn.”

“How’d it go?”

“He was nice enough to me, but I hope he cools down before he meets that sheriff in a locked room somewhere. And he reiterated how strongly he wants to see this thing figured out for real instead of the sheriff’s way. So maybe he’ll be helpful.”

“Did you mention Finnegan?”

“No, you’re going to, right?”

“I think maybe not. There’s a rumor going around campus that Finnegan and Melody were traveling together when they were here and that they were having an affair.”

“Where’d you hear that?”

“Alice. She’s plugged into the campus grapevine and this is the current topic of speculation.”

“Do you know if Finnegan’s married?”

“I do and he is. I met his wife at a reception we had for him when he was here on the sabbatical. Strange woman—all she wanted to talk about was her health problems. Also, she needed to take better care of herself. Finnegan’s at the age that guys have their mid-life crises and go trophy hunting. Not that I really know anything about such a thing personally, you understand.”

I chose not to rise to that bait. “So you think they were involved?”

“Not necessarily. But it’s possible, I guess. I won’t talk about this to Bill unless he brings it up. We want him to be cooperative about the alibis, right?”

“Oh yes. We sure do. So don’t scare him off.”

“I don’t think that’ll be a problem. But you said things are confusing. What’s up?”

“Well, as near as I can tell, the blue-haired mafia has been at work.

“Huh?”

“Little old ladies with political clout. I got a call from my boss in Denver, Rod Andersen. He said he had a call from the Governor, who apparently had a call from someone he owes a favor to—someone who is a friend of Mildred Witherspoon. Turns out that this someone and their friends have serious behind-the-scenes pull, both here and in the state government in Tucson. So Rod’s call was a heads-up for me to expect another call. Which came, from the Governor of Arizona—the Gov himself, not just someone on his staff. He’s asked me—and Rod instructed me to agree—to be part of a special investigative team to look into the Pinal County sheriff’s behavior and to investigate Melody’s death properly.”

The pause went on long enough to be puzzling.

“Hal? Are you still there?”

“Yeah, but I’m trying to figure this out. I got sidetracked by the ‘blue-haired mafia’ comment. Mildred’s, as I remember, is brunette with reddish highlights. Anyway, you said it was confusing, and now I believe you. Did you just say you were appointed to some kind of job in Arizona?”

“A consulting position with the DPS investigative division down there. I think they’re going to deputize me temporarily. I’m being given credentials to work with the team assigned to the sheriff’s situation and to Melody’s death.”

“So you’re a consulting detective? All right! Just like Sherlock Holmes. This is too cool!”

“Down, boy. Give me a break. ‘Just like Sherlock Holmes.’ Hardly. For one thing, I’m not getting any consulting fees. For another, you’re the wrong kind of doctor to be my Watson.”

“Does this mean you have to spend time down there, doing whatever you investigators do?”

“I need to get down there as soon as I can to help this team get started.”

“Maybe I can get Bill to put you up at the EcoARC hotel, where we stayed.”

“I’d like that. And, Hal, do you suppose I could take the S4? I want to drive down. That airport stuff we went through is too much of a hassle. And I want to stop off in Winslow on the way back to see an old friend from college.”

This time the pause was longer, but I knew he was still there.

“I guess I would have thought that you’d take your CBI car, that Explorer you’ve been using. You said they got it fixed up.”

“Would you want to drive that clunky thing all the way down to Tucson? Don’t you think your car will get me there faster? And more safely?”

I finally heard a big sigh. “Oh, sure, of course. That’s what we got it for, to be a road car. And I don’t really need it around town. Except, how am I going to pick up chicks in your Subaru?”

“Since I’m certain that you’re referring to juvenile poultry, you can fit lots more of them in my car than yours. Mine’s a wagon, after all.” I never fail to win these little exchanges, and I love every one of them.

“Yes, well, I obviously need to change the subject. What’s your schedule? And who’s this friend in Winslow?”

“Faith Weber. She’s one of the people I used to hang out with at Northwestern. I think she has some kind of teaching position at a college there. We exchange letters now and then, but I haven’t seen her in years.”

“A college in Winslow? Huh. I’ll have to look it up.”

“Anyway, I thought I’d drive straight down, which looks like an all-day drive, eight or nine hours. But if I leave this morning I can be ready to get started on the investigation tomorrow. Seems like the Arizona DPS guys are on a fast track for this thing, so I don’t think I’ll be gone too long. I’ll spend a night in Winslow on the way back.”

“We’re in mid-semester and Thanksgiving’s a long way off—I’m sure not going anywhere. But this is kind of short notice.”

“You’ll survive?”

“Somehow, I guess. I’ll call Bill and tell him you’re coming and get you a room. And talk to him about this alibi stuff.”

“And I’ll call you when I get there.”

“Please do. And drive safely. Watch out for the crazies out there.”

“I will. And, say, please tell Alice how much I appreciated the memorial service she put together. Is she doing better?”

“Much. And she said it helped Mildred, too.”

“Good. I’ll see what I can do about bringing back something from Melody’s place for her. Twist the sheriff’s arm, or something.”

“OK, but don’t get him mad at you. You’ll be alone down there. I’ll worry.”

\* \* \*

Two hours later, a very busy two hours later, I was on the road in Hal's silver Audi S4, trying not to be distracted by the blinking of the portable red bubble light I'd stuck to the dashboard with double-stick tape. I'd not said so to Hal, but I thought that my eight- or nine-hour estimate could be a little conservative—this car would be getting me there faster than that, I could tell.

Before departing, I hustled about, getting my personal life in order, packing and dressing for the trip, and getting my professional self organized as well. In addition to delegating my complete schedule to Derek Petersen, I contacted the Arizona DPS and persuaded them to arrange for an escort to meet me just across the state line, at the Teec Nos Pos filling station on US Highway 160. There, I would top off the gas tank and follow the Arizona State Patrol officer west across Red Mesa and south on US-191 through the Rez, across the interstate to St. Johns, and southwest toward Globe. My CBI credentials would make the short stretch of Colorado roads pass quickly, but they wouldn't pass muster in other states. I didn't want to be stopped in Arizona.

I made good time between Durango and Cortez despite the traffic, and then south of Cortez toward the Four Corners, I was able to let the car show its stuff—nearly 40 miles to the state line took me under 20 minutes. I had to ease back to near the speed limit, which seemed interminably slow, for the brief stretch through New Mexico and the several miles of Arizona before Teec Nos Pos. Pulling in to the gas station, I was pleased to see that my Arizona State Patrol car escort was to be the police interceptor version of the Chevrolet Camaro.

As I was fumbling with the gas cap, I heard a voice behind me.

"Ms. Trieri? I'm Officer Winston Tsosie, your, ah, escort."

I turned to find a barrel-chested young man of medium height, dressed in a State Patrol uniform, standing with his hat in his hand. He had removed his mirrored sunglasses—they were hanging on the outside of his shirt pocket—and the crow's feet by his eyes and his darkly bronzed skin spoke of a life in the desert sun. I shook the proffered hand, and appreciated the dry, gentle grip.

"Good to meet you, officer. I hope that this isn't too much of an inconvenience. Your governor asked me to be on an investigative team down in Oracle, and I need to get there fast and safely. I figured that I didn't know the roads well enough to go it alone, at least not if I want to make good time."

The round face broke into a wide grin, showing straight, bright white teeth and twinkling brown eyes.

"Maybe that's why my captain called me. I've got that car and a reputation. Well, of course, I was up this way and available. And I know the roads, especially the one down through the Rez. But I'll pretend it's my reputation. Say, this sure is a beautiful car. And I've heard they're fast, this S4 version."

"It's my husband's. And, yes, I'm surprised by how fast it is. He has a thing about cars, he can't leave them stock. So he has this mechanic at home who messes around with them. He put a supercharger in his last car, but this one already has two turbos. So he told me he had it 'chipped,' whatever that means. I think it's some sort of computer thing. But it's got even more power, and the speed limiter was turned off. I, ah, hit about 140 for a while on that straight stretch between Cortez and here. The car was fine, even eager for more. The oil temperature went up a bit, but that was all I noticed."

"140? With room for more? Whoa! That *is* fast. I hope you won't be too disappointed if we don't do quite that well. I've done that in my car, but I don't like to. I'd hate to hit a coyote at that speed. And the road isn't quite good enough for that, either, except for short stretches. Between cattle guards and bad pavement, I don't think that I'd feel safe. Especially south of the interstate, on the way to St. Johns. There are some places that could wipe out your suspension." He made a wavy gesture with his left hand

and smiled. “Besides, I’m trying to take special care of that car of mine. They don’t make ’em any more, Chevrolet, I mean, and I want this one to last.”

“I don’t know the road, and that’s precisely why I asked for an escort. Also, I really don’t want to make people too mad.”

“Understood. I know most of the folks in the Navajo Tribal Police—got some cousins on their force, in fact—and they can be sensitive if people don’t respect their laws. So we’re going to tread carefully in the towns down along 191. But they’re OK with some speed in between, if I have my lights going and it’s official. I’ll talk with them on the radio. Oh, right. You’ve got a civilian car. Got a radio?” He bent down and looked into the Audi.

“All I’ve got is a cell phone. I found a bubble to plug into the cigarette lighter and stuck it to the dash. I’d rather have it on top, but I don’t think it would hold in the wind. Actually, I’d rather just put it in the trunk, but it seemed like a good idea to use it.”

“I’ll loan you my portable radio, so you can talk with me, at least. And I hope you’re all right with some advice? Please don’t follow me too closely. We’ll be moving right along, and I’d rather not have to worry about you if I have to brake hard. I’ll try to tap the brake lights whenever I need to slow down, but emergencies won’t allow for that. What I’m hoping is that most people will respect my lights and pull off out of the way. But you can never tell.” He shrugged.

“Officer Tsosie, you’re the expert on this, and I’m going to do whatever you think is best. But if you have a reputation for driving fast, you’re just the person I need for this little trip.”

It was exhilarating at first, zipping past the traffic on US-160 westbound. Tsosie’s lights cleared the way, for the most part, and the visibility of the straight road allowed us easily to pass the occasional oblivious tourist in an oversized motor home.

Just as my exhilaration was waning, I saw Tsosie tap his brakes and turn on his left turn signal. The US-191 intersection, offering points south to Chinle and Ganado, was coming up.

Then the exhilaration renewed itself, for there was no traffic in either direction, nor towns, mostly, and Tsosie opened it up. I gave myself a quarter mile of space behind him and hit the cruise control button when the speedometer read 120. The miles flew by. Occasionally I would see the blinking of brakes as Tsosie slowed for a cattle guard or for a hilltop or curve with limited visibility. He was fast, but he was also careful, I decided.

A few times, he called me on the portable radio with a heads up about an upcoming town, and it took only one conversation for us to evolve to a first-name basis. The camaraderie of our shared on-the-edge experience made it inevitable.

And I got to hear the latest gossip about Rock Point, Round Rock, and Many Farms. At Chinle, I heard about Tsosie’s brother Neville, a guide at Canyon de Chelly National Monument and how their mother had been so fascinated with British history that she named her boys after people she had read about. And at Ganado, I got a recommendation to return to the Hubbell Trading Post to purchase Navajo rugs and to make sure and offer them 25% less than the marked price.

Just as I was being lulled to sleep by the desert, we came to the interstate, I-40, the main east-west artery of the southwest. Eastward for six miles—in three minutes—took us to Sanders, where we turned south again on US-191, toward St. Johns. And Tsosie had been right: this was going to be a little slower, as the roadway was not in the best of shape. He kept it at about 100 except for the really rough stretches. A half-hour later, we stopped for gas in St. Johns, and I was surprised when the car drank 15 gallons for the 230 or so miles since Teec Nos Pos. At these speeds I shouldn’t expect very good mileage, I decided.

At St. Johns, we turned west, and then southwest, eventually picking up US-60 to Globe, down the Mogollón Rim, where the traffic increased and the road became more challenging. Even though most folks pulled over for Tsosie's lights, there were real curves now, and we had to pay more attention, actually to drive instead of just letting the cars run. And Tsosie was using both hands, so our radio conversations ended. This was just as well because as the curves tightened during the descent into and back out of the Salt River Canyon, I had to rein in the S4 so as not to overtake Tsosie's Camaro. It was hard for me not to gloat.

At Globe, we turned south on Arizona Highway 77, which would become Oracle Highway on the fringe of Tuscon. But first, we needed to negotiate the mining districts of the Mescal Mountains. More curves and traffic, and more real driving. I was beginning to tire, but the continued exhilaration kept me awake.

Finally, as we were slowing for the town of Winkelman, Tsosie came back on the radio.

"Annette, when we cross the river just through town, we're going to cross into Pinal County. I got just enough of a briefing about why you're coming down here to know that we need to go a little more carefully from here. You with me?"

"Five by five, as they say. But you don't think we'd be harassed, or anything, do you?"

"Don't know, but I did arrange for a second escort, to take up the rear. So don't be surprised when another car falls in behind you, OK?"

"Got it."

"And we'll be taking it a little slower, maybe around seventy-five, from here."

"Um, I've got a radar detector. Any percentage in turning it on?"

"A radar detector? Why, shame on you!"

I felt myself blush. "Uh, well, remember it's my husband's car. He gave me a big song and dance about how it would remind him to drive safely, blah, blah, blah. Anyway, should I turn it on?"

"Good idea. I don't think the sheriff here has any lasers, so it will give us a heads up if they're looking for us."

"Sounds like you expect trouble."

"I hope not. But, as you'll see when we get there, others do."

"There? You do know where I'm going?"

"Sure. But I've been hearing things you can't because you've got only that portable radio. Mine's got better range. Lots of things have been happening since we've been on the road. Bad medicine, as my grandfather used to say."

We had eased through Winkelman and crossed the Gila River when I noticed a second State Patrol vehicle, one of those Ford Crown Victorias equipped for the police, behind me, lights flashing. It took an effort of will for me not to pull over automatically. My radio crackled.

"Winston—please switch to channel two."

I picked up my portable radio set and saw a little 1-2-3 switch for the first time. Must be it, I thought, and switched.

"...a roadblock just below the east Oracle intersection at the top of the grade. You know where I mean?" This was the same voice that had asked for the channel switch.

“Those bozos. Do they really think they’re going to accomplish anything constructive with this?” I recognized Winston Tsoie’s voice despite the anger.

“It’s all Elwood’s doing. He seems to think he’s God. But I think that they’ve got all their available resources concentrated on that roadblock. So maybe we could take her up the back way.”

“It’s your territory, Sandra. I don’t know all the roads down here.”

“All right. Let me take point.” In the mirror, I saw the trailing car begin gaining on me, and it quickly passed me in the outside lane. Officer Sandra, as I only knew her at that point, waved. I noticed that Tsoie had slowed down and I needed to also. He was talking into his microphone, but I wasn’t hearing anything. So I switched back to channel 1.

“...are you there? Annette?”

“You got me, Winston. I switched over to two.”

“Oh. Of course. Let’s do that again.” So I did.

“Annette? Go ahead and pass me, and I’ll take up the rear. There’s a roadblock on the highway, so Sandra’s going to take us in the back way, whatever that is.”

“I heard. And I think I understand that the sheriff’s office is trying to detain us? Are they serious?”

“Like I said, lots has happened since we’ve been on the road. Strange weirdness.”

During this conversation and the re-ordering of the cars, we had passed through Dudleyville and were headed along a valley bottom. Shortly, we turned toward the right, west, up onto a bench above the valley and came to an intersection with a signpost pointing toward something called “San Manuel” on the left. Sandra turned that way.

\* \* \*

“I still can’t believe you’re here!”

I was sitting on the patio of my room—our room, actually—at the EcoARC conference center enjoying, in no particular order, a cup of tea, the sunset on Black Mountain, and Hal’s presence.

“And I still can’t really tell if it’s OK that I came down.” He knows I have a love-hate relationship with surprises, so he always tries to make them good surprises.

“Yes, of course it’s OK. I’m delighted to see you. It’s just so unexpected. I mean, I spend all day driving and here you are, like magic.”

“Magic indeed, the wonders of air travel. Especially not having to go all the way down to Tucson. But I’m impressed that you got here so fast. Five hundred miles in just under six hours, including stops?”

“Um, well, it *is* a fast car. And I had a State Patrol escort, so we weren’t hampered by such mundane things as speed limits. We made good time.”

I decided not to go into the details of the last few miles, the part in Pinal County. No point in worrying him, I thought. He would have enjoyed hearing about how his car had handled the gravel back road up the hill to Oracle, I realized. But the circumstances might upset him.

My two escorts and I had made for San Manuel, but Officer Sandra turned right just before the town, onto a gravel road that climbed the side of the valley. It was poorly maintained, and through the dust I could see her Crown Vic fishtailing across the road and back. On the badly washboarded surface,

its rear-wheel-drive was struggling for traction. By contrast, I just pointed the S4 up the hill, and its all-wheel-drive made the climb inconsequential. I even had to back off the gas so as not to overtake her.

And then there was the little excitement with the deputy sheriff outside of Oracle, when we had turned back onto the highway. I *certainly* didn't want to tell Hal about that. The deputy must have been on a coffee-and-donuts run for the roadblock crowd, because he was headed into Oracle as we were heading out. We turned left onto the highway toward the EcoARC road and couldn't help but see in our mirrors the sheriff's patrol car make a U-turn and take off after us, lights ablaze and siren wailing. Over our secure radio channel, the two State Patrol officers and I had decided that I should make a run for the EcoARC, where a large contingent of state officers was waiting, while Tsosie and Sandra Kinney, as I had found her name to be, ran interference with the deputy. So I had put the S4 through its paces again, and watched in my mirror as my friends, blocking both lanes, receded into the distance.

Hal was looking relieved. "'Good time' is understating it by a lot. But I'm glad you're OK with my coming down. We didn't have a proper good-bye today, you just left. And if you're going to be here a while, that didn't seem right. So I cancelled my afternoon and got lucky with the airline—the flight to Phoenix wasn't full. And it's really as fast by car from there as it was coming up from the Tucson airport, so I got here easily. I'll head back first thing in the morning."

"Have you had a chance to talk with anyone, to find out what's been going on?"

"No, I got in only a little before you got here. But there did seem to be a lot of State Patrol cars out by the entrance. I had to do some fast talking to get past them."

"I wonder how we can find out. My State Patrol escort referred to some stuff he was hearing on the radio. I think perhaps the local sheriff has been acting out, or something like that."

There was a knock on the door to our room, and Hal got up.

"I'll get it. Bill told me that he'd be coming over with some people, for some kind of paperwork, or something. Maybe we can find out what's been happening."

I was easing myself out of my chair slowly—I was stiffer than I had expected—while Hal got the door, and I heard Bill's greeting and other voices. I turned to see two new people, a man in a business suit and a woman in a State Patrol uniform. It took me a minute to recognize Officer Sandra Kinney, because she had her hat off.

Bill Longwell had the duties of master of ceremonies.

"Annette! Wonderful to see you again, although once again the circumstances leave something to be desired. Let me introduce you to Officer Sandra Kinney, who tells me you've met, sort of, and to Ross Townsend, Deputy Commissioner of the Arizona Department of Public Safety. Sandra, Ross, this is Annette Trieri and her husband Hal Weathers. You've heard of Annette, of course; Hal's just here for a day. He's got to go back to his real job tomorrow—he's Dean of Natural Sciences at Frémont State University up in Durango. You folks say 'hi' to each other while I make a quick phone call. Annette, I expect you're hungry, and I don't want the restaurant to close before we can get over there."

"Officer Kinney, good to meet you for real. Nice driving." I was smiling at the memory of our three-car parade.

Sandra Kinney grinned back. "Winston tells me that it's you who's the serious driver. He said he thought he'd lose you for sure, down in those curves in the Salt River Canyon, but that he just couldn't pull away from you. Surprised him, because he fancies himself something of a hot-shot behind the wheel."

I laughed. "It's the car. What a blast that thing is to drive! If you could get your department to buy those cars for highway work, no one would out-run you folks. Anyway, Mr. Townsend, I expect you're here with some paperwork for me?"

"Am indeed, Ms. Trieri. But, first, what car? One of my jobs is to be on the acquisitions committee."

"It's Hal's, really. I borrowed it to get down here fast. Audi S4, dual turbochargers, about 250 horsepower, which Hal got boosted to 300 or so."

Townsend's eager smile faded. "Oh. Audi. That's German, right? Too bad. One thing we've discovered is that it's mandatory for us to use tax money to purchase only American cars, for political reasons. If we don't, it really hits the fan. Anyway, I'm here to deputize you. Officer Kinney is here to witness for the state, and Bill and Hal can also sign as witnesses."

He produced a Bible and a sheaf of legal-sized papers and got everyone organized. I officially agreed to uphold the constitution of the Great State of Arizona and various other rigmarole. Everyone signed the documents and we shook hands all around.

Finally, Townsend produced a shield. "Now, you understand, Annette, that this is temporary. I'll need this back when the investigation is over because your appointment ends at that time. This is all part of the arrangement going in, so there's no opprobrium attached to turning in the shield."

"Of course. In fact, it'll be something of a relief. The responsibility of carrying one of these things is plenty for me, and having this second one isn't something I want to agree to permanently."

Townsend smiled. "Especially since there are legal inconsistencies between the two states, I bet. Anyway, I've assigned Officer Kinney to you as a combination assistant and bodyguard. I hope that's satisfactory."

"That will be quite helpful, I'm sure. And it will be a pleasure working with you, Sandra. Bill, you said something about dinner. I just realized I'm starving. Sandra, Ross, would you like to join us?"

They had eaten, but Hal and Bill were both hungry.

"I have to check in with the front office to make sure the arrangements for tomorrow's meeting are set, so I'll meet you two over at the restaurant. Hal, you remember how to get over there, don't you?" Bill Longwell was on his way out the door.

"I do, and we'll see you over there. Mr. Townsend, Officer Kinney, I probably won't see you in the morning, so I'll say goodbye now. I hope all this gets sorted out. I know Bill's especially concerned about it. And Officer Kinney, you'll take good care of Annette, I'm sure."

After more leave-taking, Hal and I were alone to make the short walk together across the campus to the EcoARC restaurant.

"You need a bodyguard? What in the world is going on down here?"

"Oh, I don't think it's anything to worry about, really. The local sheriff's bent out of shape, probably, with a suicide investigation aimed at his department. And I'm the out-of-state celebrity, so they're wanting to be extra careful. My perspective is that Sandra can be helpful in keeping me on track with respect to Arizona law. Like Ross said, it's probably different from ours up in Colorado."

"I just don't want you in any danger."

"With all these state cops around? I don't think so. Listen, I don't mean to change the subject, but there is something else I should mention."

"Such as?"

“I said I was starving, and I am. That was hard work, driving down here and having to concentrate and so on. I worked up an appetite.”

“Yeah, and you embarrassed your State Patrol escort with your hot-rod driving.”

“Couldn’t help it with that car. But after dinner, well, you know what fast driving does to me.”

“Oh. OH. Now I see where you’re going. And you spent all day driving fast. Hmm. So, does driving fast make you hornier than just riding along while someone else drives fast?”

“I never had the chance to find out before, but it turns out that it does. And, like I’ve been saying, your car is one *fast* car.”

“Gee. Something tells me that my trip down here to say goodbye to you is going to pay unexpected dividends.”

“Hey, I *said* I was delighted to see you, didn’t I?” I gave his hand an extra squeeze.

\* \* \*

Wednesday morning, our meeting convened promptly at 9:00 AM in the conference room of the EcoARC hotel. Hal and I had awakened early so he could get off to the airport in his rental car, and I was feeling very relaxed. It occurred to me that I might have trouble concentrating—Hal does that to me.

I realized that I would never be able to remember all the names I heard as everyone went ’round the table and introduced themselves, so I took notes. Sandra Kinney was sitting across the table from me, a tactic we had planned in advance so that we could exchange eye signals about things that seemed important. Ross Townsend was seated at the head of the table—as the ranking official present, he was going to chair the meeting. Several people from his office lined the sides of the table.

At the other end of the table was the Pinal County Medical Examiner, Rudy Gelinski, the only county official there. Conspicuously absent was representation from the office of the Pinal County District Attorney, and the Sheriff’s Department, being the subject of the investigation, wasn’t represented either. Bill Longwell was the only EcoARC employee present—he was seated in the row of chairs against the wall.

Ross Townsend cleared his throat loudly to get everyone’s attention.

“Now that we’ve introduced ourselves, I’d like to relate to you my instructions, which came directly from the Governor by way of my boss, the Commissioner of Public Safety.

“The Governor, I’m told, wants this handled carefully and thoroughly. We have two purposes here. One is to discuss the circumstances of the death of a prisoner at the Pinal County jail, one Jorgé Alvarez. He was found hanged in his cell a little over forty-eight hours ago.

“He was in that cell in association with the other purpose of our meeting, the death of Melody Witherspoon. Her body was found a little over a week ago buried in a greenhouse here at the EcoARC Center. Alvarez was a suspect in Ms. Witherspoon’s death. The Pinal County Medical Examiner is with us to provide technical details. Dr. Gelinski, would you care to begin with Mr. Alvarez?”

“Be glad to, Deputy Commissioner.” Gelinski looked down at his notes. “Let’s see. Alvarez was found hanged by a sheriff’s deputy, Deputy Lyle Shaughnessy, who was bringing him breakfast on Monday morning two days ago. A tee shirt, apparently Alvarez’s, had been torn into strips and made into enough rope, about four feet, to do the job. It was tied to the upper part of the bars on the door around the upper frame. Alvarez apparently had been standing on the bed when the noose was put

around his neck. Then he stepped, or jumped, or was pushed off the bed, which strangled him. Didn't break his neck, like a real hanging is supposed to. Other than scratches on his face, which were why he was a suspect in the Witherspoon murder, his only injury was associated with the hanging."

"You're using words that have implications. You said that the noose 'was put around his neck.' And that he may have been pushed. Why? The sheriff's office is calling this a suicide." Townsend looked puzzled.

"Because I haven't formally ruled that it is a suicide yet. That's why we're here. And there are some curiosities."

"Such as?" Townsend was making careful notes as he asked his questions.

"First, this tee-shirt material is stretchy, more so in one direction than the other. So to make this work, either as a suicide or as a homicide, the shirt had to be torn in the less stretchy direction. Otherwise, the foot or so between the bed and the floor wouldn't be enough distance. The home-made rope would just stretch and Alvarez would wind up standing on the floor. So this was carefully planned, either by Alvarez or by someone else."

Gelinski rummaged in a box he had brought. "This got me to thinking, and I had a good look at this home-made rope. Got it here, in fact. Ms. Trieri, I recall you asked me some perceptive questions last week. How about taking a look at it?" He tossed a pair of plastic gloves at me, waited for me to put them on, and tossed a length of white material my way.

I found myself holding a torn-up tee shirt, strips about six inches wide tied together with square knots. It stretched, but not a lot. Examining the knots carefully, I noticed something peculiar about the ends of the strips.

"I don't have a lens or anything like that, but it looks to me as if some of the ends of these strips are a little different from the middles. Does this have to do with how they were torn?"

"I thought you might see that. If you look at the ends with magnification, you'll see that they're cut with scissors, or a knife, as if to get a start on tearing the rest. You can tell because at the edges of the strips the cuts are across the weave in lots of places, while the tears are along the weave. And the ends of the individual fibers aren't quite as frayed where they're cut."

"So whoever tore up this shirt got each strip started with scissors?" I could tell what was coming next.

"That would be my opinion, and I'll testify to it if necessary. It goes without saying that Alvarez didn't have scissors with him in his cell."

Townsend stared intently at Gelinski, and the room was silent for quite a while.

"So you're saying that someone made this so-called 'rope' for Alvarez, he didn't make it himself?" Townsend wanted our thoughts to be stated explicitly, I guess.

"No, sir. I'm saying that scissors, or maybe a sharp knife, were used on this tee shirt before it was torn into strips. That's all. However, I will note that it is not certain that this was really Alvarez's tee shirt. We can check on that by sending it with his tissue sample for DNA analysis."

"What's this about a tissue sample?" Townsend, who had gone back to taking notes, looked up, startled.

"Alvarez's lawyer has told us that he, I mean Alvarez, had agreed to a DNA test to see if the tissue and blood found under Melody Witherspoon's fingernails matched his. I'm getting ahead of myself here, but that was an agreement reached by Alvarez with his lawyer, and it's in writing. His lawyer is insisting

that this test proceed, to clear Alvarez's name. Or, I guess to implicate him further. But Alvarez probably wouldn't have agreed to the test if he knew it would implicate him."

"And you want to see if there is any of Alvarez's DNA in that tee-shirt rope?"

"Yes, sir. If this was Alvarez's tee-shirt, he had been wearing it for some time before Monday morning, because he'd been in jail for almost a week. So it should have enough sweat and maybe skin cells to test. Of course, the part that was around his neck will, but it's the rest I'm interested in. That's why I asked Ms. Trieri to put on the gloves."

"And if it's not his tee-shirt?"

"That would make this business with the scissors is even more important. Especially because of another thing that's occurred to me."

"Which is?"

"Annette, give that thing a stretch to show these folks." I did, and he continued. "Now, as I said before, the tee-shirt was torn up to minimize the stretch in the strips. But it still stretches some, and I bet that if you put some pull into it you could get nearly a foot of stretch out of that four feet or so of tee-shirt rope. So if Alvarez is standing on his bed in his cell tying this thing around his neck and the top of the bars there, he needs to tie it fairly tight to begin with, or else he'll just end up standing on the floor feeling choked, and dumb, probably. In other words, he had to be choking himself while tying the thing up in the first place if it was actually going to strangle him. We could do a couple of experiments with some weights to test this, but I think I'm right. Point is, it makes the suicide scenario even stranger. You put this all together, and it begins to smell funny."

I had noticed that during this speech a note was handed to Bill Longwell, who passed it to Ross Townsend, at the head of the table, who read it and looked around the room.

"Dr. Gelinski, it appears that you're not the only one who thinks there's something wrong with the suicide theory. There is a small caravan of automobiles at the EcoARC entrance out by the main highway. They want in. They seem to think that we're involved in some kind of whitewash of this incident and they want to be heard, it appears. I suppose that we should take a recess and explain what this is all about to them. Any volunteers?"

\* \* \*

## Four

I had a good idea of what the caravan was all about—probably, I thought, a result of rabble-rousing by Alvarez's lawyer, Donald Parks. I decided that it should be handled by someone local, so, when Townsend asked for volunteers, I was very busy working on polishing my notes. But as the group broke up, I was coincidentally finished with this simple task, and I managed to catch Bill Longwell before he ran off to whatever other thing he needed to be doing.

"Bill? Maybe we should chat about the next part of this meeting, where EcoARC becomes a player. Um, I hope that the phone conversations that Hal and I had with you laid the groundwork."

He looked at his watch and grinned at me. "I suppose I don't really have to go over those budget figures this morning, do I? I've been dreading the next part, actually, because I expect that the little matter of alibis, which you and Hal so delicately discussed with me, is going to come up. And these

folks probably aren't going to be as delicate as you two were. One good thing, like I told you, is that I don't really have one. I mean, it's good in the sense that it'll make my people feel better about getting questioned. As in, we're all in this together, me included. Of course, it won't be so good if everyone else has one, I suppose." His grin faded.

"Even though Rudy asked me to check out that tee-shirt rope, I don't think I'm going to be closely involved with the investigation of Alvarez's death. Because that's a problem internal to Arizona law enforcement, I think they'll want me on the sidelines. But that means that I'll have the chance to take more of a lead role in the investigation of Melody's death. Given that there's a chance she was actually killed up in Colorado, I bet they'll involve me closely."

"I hope that's good news for EcoARC, and for me. Like I said, I really don't have an alibi."

"I don't know how much Hal told you, but we'll be asking just about everyone to account for their time before Melody's body was found. If it makes you feel any better, you're not high on the suspect list, with or without an alibi. The time you spent in the military, and particularly those security clearances you had, are solid references. I'm sure you know how deep the background check went for your SCI clearance. And you're not in the NCIC database in any way that would raise suspicion."

He was looking surprised, so I decided to try to smooth things over. "I checked, not only the NCIC but some other resources I have. Had to, just to get a reference point. I know it's probably a little different for you, but it's routine. Speaking of which, we're going to need to do this carefully and by the book. So, squeaky clean or not, I'm not sure it'll be appropriate for you to be part of the rest of this meeting."

Longwell seemed to have recovered his equilibrium. "I've been wondering about that. Is it even appropriate to be having the meeting here?"

"I'm certain that we'll want to go into the greenhouses and look around. Some of these people haven't been in there. So, yeah, we might as well have the meeting here."

"Who's going to conduct the tour under the glass?"

"Under...? Oh, I understand. Inside. Well, my opinion would be that you're the best person to do that. But who knows what Townsend will want to do?" I looked at my watch. "I wonder when this thing will start up again. I'd like to call my office."

"If Townsend went all the way out to the highway to meet these people, I expect he won't be back for the better part of an hour. Before you get tied up on the phone, there's something I need to ask you. When we talked the other day—was it just yesterday?— anyway, when we talked, you weren't very specific about possible suspects among my employees. But Hal alluded to the possibility that someone high up could be involved. Can you tell me more about that?"

I thought quickly about the best way to handle this. I didn't suspect Longwell, but I also knew that my judgment was not completely objective. And "by the book" meant that objectivity had to be paramount.

"Perhaps the best thing to do would be to ask you a couple of questions. I mentioned to you just now that Melody could have been killed in Colorado. I've been talking about this to various people, and I'm beginning to forget what I've said to whom. What else have you been told so far?"

"I guess Hal mentioned that she had been seen on the Frémont State campus on the Saturday, Saturday afternoon, I think, two days before she was found here. Which got me to thinking, of course, about who was with her, assuming that she was killed up there. We don't keep track of people on weekends, but everyone, even graduate students, is supposed to provide information about vacation time and business-related travel during the work week. So I checked our records for the week before that

Saturday to see if anyone was on vacation, or sick, or on travel to Colorado. Of course, this isn't conclusive, because someone could have driven up after work Friday, or on Saturday morning, early. And our record-keeping is done mostly by the honor system. People are supposed to do it, but they sometimes forget."

"And?"

"At a place with this many employees you expect vacations and illness at odd intervals. So there was about the usual number of people out for one of those two reasons. And there were three people on business travel, one to Colorado and two to the East Coast."

"Did you make up a list, or anything like that?"

"Yes, and I thought you might be interested in it, so I brought it with me." He reached into an inner jacket pocket and pulled out a folded piece of paper. "Now, I need to emphasize that this isn't conclusive."

"I understand." I unfolded the paper and quickly scanned it. Kelly Rumsford, the graduate student who had first found Melody's body, was the person on travel to Colorado, I saw. "Do you know where Kelly Rumsford was in Colorado?"

"Probably Boulder, doing something at the University. He's almost ready to defend his dissertation, and he probably had a committee meeting, or something. I imagine he flew up, so there would be airline confirmation of his Tucson-to-Denver itinerary. And that's a long way from Durango."

"Right. Not impossible, but a long drive, as I've discovered the hard way. Do you happen to know if any of these people who reported taking vacation have connections with southern Colorado, if they may have gone there?"

"No, but we can ask, of course."

"And this list is exhaustive, in the sense you checked all personnel records, or whatever. I mean, you didn't leave any of your employees out?"

"I checked all the records, but, as I've been saying, there is no way to tell if someone took vacation and didn't report it, or something like that. This is standard operating procedure in academic circles, the honor system. Everyone works 60- or 80-hour weeks anyway, and we almost have to force people to take vacation. So if someone just goes and does it, even without reporting it, it's sort of an employee relations victory."

I wanted to be sure that he had checked every record, because I was puzzled. Art Finnegan's name wasn't on the list.

\* \* \*

As I was trying to decide how to ask about Finnegan without alerting Longwell to my suspicions, my thoughts were interrupted by a disturbance at the door to the conference room. The conferees had dispersed, pending Townsend's return, and Longwell and I had the room to ourselves, until now.

The door flew open, and through it, walking backwards, came a young woman wearing jeans and a polo shirt with the EcoARC logo on the back. It was immediately clear that she was not walking backwards out of habit. Rather, she was being driven, steered, like a champion cutting horse handles a heifer, by a small, rat-faced man in a dark gray, three-piece suit. He had thick-lensed horn-rimmed glasses on his face and was wielding a briefcase as almost like a bulldozer blade, and the young woman was losing ground quickly. When she finally backed into the conference table, she turned to Bill Longwell and me and began explanations.

“I’m sorry, Dr. Longwell, he’s not on the list, I don’t even know how he got onto the grounds, but you can see that he’s determined to get in here. Should I call the State Patrol? They gave me a cell-phone number.”

“You call whoever you want, you pretty little twit, but I’m in charge of criminal matters in this county and no one, I mean no one, is going to keep me away from this meeting.” The little rat-faced man had a surprisingly commanding voice. From this, combined with his nasty demeanor and his three-piece suit, I decided that he had to be a lawyer.

“Not even the Governor and his Commissioner of Public Safety?” I ventured in a mild voice. “I believe that it was the Governor’s list that she just mentioned.”

“Don’t worry about it, Barbara. And he didn’t hurt you with that weapon he’s waving about, did he?” Longwell, I knew, had been a Navy SEAL before graduate school, and he was still in the reserves. Lawyer Rat-Face was perilously close to having some large bones broken.

“No sir, but I don’t think it’s for lack of trying.” By now, Barbara had put the conference table between herself and her pursuer, and she was clearly feeling better. I put a restraining hand on Longwell’s arm and cleared my throat.

“Perhaps we should introduce ourselves. I’m Annette Trieri, on a temporary appointment by the Governor to the Arizona Department of Public Safety, as Assistant Deputy Commissioner.” I hoped that I remembered correctly the title that Townsend had tossed at me the previous evening. “And this is Dr. William Longwell, Director of the Ecological Archive Research Center, into whose conference room you have just intruded and whose employee you are abusing. So he may be a little upset. Now. You are?” I had begun gently and in an conciliatory tone, but by the end, I had turned it up to Voice of Authority Level Two. Level Three would have shattered the lenses of Rat-Face’s glasses.

But it worked only partly, not nearly as well as I’m used to or expected it to in this case.

“I’m Sibley Jensen, District Attorney for Pinal County. And I’ll thank you not to make specious accusations about my behavior. I know myself to be fully within my rights in my actions here.”

“Actually, Jensen, I believe your proper title is ‘Assistant District Attorney’ and that you’re only acting in the lead job temporarily. So you’re misrepresenting yourself to an official of the Department of Public Safety as well as intruding and abusing.” Longwell wasn’t backing down, so I decided not to, either.

“I will not be so hypocritical as to suggest that it’s nice to meet you, not under these circumstances, Mr. Jensen. You will place that briefcase on the table and you will sit down. Now.”

My Voice Level Two-Point-Five did the trick: he sat, peering myopically about the room. Hal has told me on various occasions how amazed he is at my Voice of Authority, and, truth be known, I’m surprised by it as well. It’s not the volume; rather, it’s something else that makes it work. Rock-steady resolve, with just an undercurrent of menace, or something. I can’t quite figure it out.

“Mr. Jensen. First things first. Perhaps you’d care to tell us how it is that you are here. The State Patrol officers at the entrance are under orders to admit only people on the Governor’s list. EcoARC is closed to visitors today.” I eased up on the Voice, but I kept it there, lurking in the background.

“I came up from below, if you must know. There’s a jeep road up the valley. And, as I said, I have every right to be here.”

“We can let Deputy Commissioner Townsend decide that, when he returns. It may be that he’ll decide to have you arrested for trespassing, unless, of course, you have a warrant. We’ll see. And, of course, we can let Barbara...Bill? Barbara?”

“Lancaster.”

“We can let Barbara Lancaster decide whether to press assault charges. I, for one, would be delighted to testify on her behalf and I expect that Dr. Longwell would also.”

“I am not vulnerable to idle threats, Ms. Tree-ring, or whatever your name is. And I demand to know the exact purpose of this meeting.”

I finally smiled. “Well now, that’s an interesting demand, because it just may be that the purpose of this meeting will evolve due to your presence. So I’m not sure I can say with any real accuracy what it is. So far, we’ve been discussing certain physical evidence related to the death of a prisoner in the Pinal County lockup, a Mr. Jorgé Alvarez. There appear to be, um, some questions about it. And our next item of business was to have been reviving the investigation of the death of Ms. Melody Witherspoon, whose body was found on the premises here about ten days ago. Of course, our agenda may be modified to discuss your situation. I can tell you with some confidence that the others at the meeting will tolerate neither the type of actions nor the attitude you’ve exhibited thus far, Mr. Jensen.” I toned the Voice down yet another notch. “If you’re concerned that Pinal County is being railroaded, be reassured that it is represented here in an official capacity by the medical examiner. He’s been most careful to discuss only facts, not speculation, and the rest of us are following his lead. I expect that the most to come from this meeting will be recommendations to the Governor about convening a grand jury.”

Barbara Lancaster had sat through this discussion with saucer-sized eyes, and now she took advantage of the lull to seek an immediate exit. “Dr. Longwell, do you need me for anything?”

“Actually, Barbara,” I spoke first, “You could see if Officer Kinney has returned. She mentioned something about checking for messages.” Lancaster scuttled out.

Jensen had been thinking while I lectured him and apparently had reached some kind of conclusion.

“Well,” he was trying to maintain a semblance of dignity, “If all you’re doing here is providing recommendations to the Governor, I’m not really needed, am I? And I do have other pressing matters to attend to.”

As he was rising from the table, the door opened to reveal Officer Sandra Kinney. “Annette? Do you need something?”

“Just stand right there for a minute, would you please? Mr. Jensen here bullied Ms. Lancaster before and I’d like to see how he treats you.”

Jensen took a long look at Kinney, a good 4 inches taller, standing in the doorway with a handgun on one hip and a nightstick on the other, filling the space. She stared at him impassively. He sat back down.

“Bill, let’s you and I go for a little walk and continue our conversation. I’m sure that Mr. Jensen can amuse himself for a while with what’s in his briefcase.” I winked at Sandra Kinney, who winked back.

\* \* \*

About a half hour later, the meeting reconvened. Sibley Jensen was still at the conference table with papers spread out around him, pretending to ignore Sandra Kinney. As the other conferees took their seats, Jensen’s use of about four places worth of tabletop became more and more awkward. Finally, Rudy Gelinski arrived, sized up the situation, and promptly pushed Jensen’s paperwork back into a neat little pile in front of him. The smoke coming out of Jensen’s ears was almost visible, and I had trouble keeping a straight face.

“Sib, you’ve got to learn to share, man.” And Gelinski took his place at the end of the table.

Ross Townsend once again brought the meeting to order. “That was quite useful. I had a nice conversation with the folks at the entrance, and we agreed that they should have a representative here. I’d like to introduce Ms. Yolanda Pequin, who is chair of the Tucson chapter of the League for Immigration Reform. LIR,”—he pronounced it “leer”—“as I’m sure you know, is concerned with fair treatment of all immigrants regardless of their legal status. Ms. Pequin understands that her role here is primarily as an observer.” He smiled at her, and she nodded.

“And Annette has informed me that we have another new person at the table, Mr. Sibley Jensen, Assistant District Attorney for Pinal County, currently acting as DA because of a retirement, I believe. Whether he has this position permanently will depend on election results, of course.” His smile in Jensen’s direction was not nearly so warm. “Mr. Jensen is also here as an observer, because my instructions from the Governor did not include him as an active participant. However, I’m sure that Mr. Jensen will be able to add useful information to our deliberations.” Townsend shuffled paperwork.

“Now, Ms. Pequin and I had a chance to talk on our ride in from the entrance and I brought her up to speed on our earlier discussions. As you know, we’re here to provide advice to my boss for next steps, and based on what I heard this morning, I believe that I would entertain a motion to recommend that a grand jury be convened to investigate Mr. Alvarez’s death.” He looked up, eyebrows arched.

“So move.” Rudy Gelinski was the first to speak up. I heard a second from across the table, from someone I had to look up in my notes to identify. Oh, yes, the head of the DPS investigative division. Well, I thought, the local ME and the DPS are behind an investigation of Sheriff Elwood Johnson’s office and that’s some clout.

“Thank you, gentlemen. Is there any discussion of this motion? No? Excuse me, Mr. Jensen, but you’re out of order. All in favor?” There was a chorus of “aye”s. “Opposed?” There was silence, although it was obvious that Jensen would have liked to speak up. “Motion carries unanimously, so noted here. Thank you all.”

“Now, Ms. Pequin, that’s really the end of our discussion of Mr. Alvarez’s situation, so I expect that’s all you’ll be interested in. The other item we have to discuss is the death of someone else.” Townsend looked at her, waiting.

“Thank you for inviting me in. I’m sorry I missed the first part of your meeting, but, as I told you, we only found out about it last night. And you can be sure that we’ll be following the grand jury investigation closely.” She nodded to the room generally and took her leave.

“And now to the matter of the death of Ms. Melody Witherspoon.” Townsend was consulting his agenda. “Although it is still possible that Sheriff Johnson was correct in his suspicions of the late Mr. Alvarez, we need to explore alternatives, especially in light of the information we have already discussed, as well as information that has emerged recently. Annette? Perhaps you would be so kind?”

I related the updated time-line, including the fact that Melody had been seen only 36 hours or so before her body was found. Because Bill Longwell was still present, and because I had not had a chance to talk with him about it, I withheld the information about Finnegan’s coincident visit to Durango.

“Of course,” I concluded, “Sheriff Johnson didn’t know about this. Nor was he aware, when he arrested Mr. Alvarez, of additional testimony providing Mr. Alvarez with an alibi for the time-frame of the killing. I don’t know what the sheriff would have done with this information, but it could well have altered his thinking. He did express skepticism about the alibi, however. In any case, it seems to me that we should seek additional information about how this could have happened the way it did. Especially important is the possibility that Melody may have been killed in Colorado, after which her body was transported here.”

“Thank you, Annette. Rudy? Do you have any comment on this?” Once again, Townsend was busy taking notes.

“Annette talked with me about this new information, and it constrains my time estimates more closely than I was able to in the postmortem. But there’s nothing that she’s said that’s inconsistent with any of my findings. I will say that if she, I mean Melody Witherspoon, was killed elsewhere then transported here, it was done fairly carefully. She wasn’t just stuffed into a car trunk, or something like that. For example, lividity patterns were consistent with her burial position, meaning that she was transported here in about the same position she was buried in.”

Gelinski shuffled his notes. “Also, I have some new information to add. The lab work has come in. The only thing of interest in Ms. Witherspoon’s blood chemistry is a small amount of Valium, at prescription-level dosages. She wasn’t abusing it or using it recreationally, is the conclusion I’d draw. But she was taking it. There was also a very small amount of alcohol present, about what you’d expect from drinking a glass or two of wine with a meal like dinner. Not enough to interact with the Valium, although I suppose she shouldn’t have been operating a vehicle with these two things in her bloodstream together.”

“Rudy?” I was intrigued by this new wrinkle. “When you say ‘with dinner,’ do you mean a specific dinner, like Saturday?”

He blinked several times, thinking. “Probably. I continue to believe that she had been dead for something like 36 hours when she was found. The alternative, Sunday, just doesn’t provide enough time for the deterioration I saw.”

“So, people, where does this leave us? Where do we go from here?” Townsend was obviously one of those rare public officials who prefers meetings to be short and productive.

“Mr. Townsend?” Bill Longwell spoke up. “I’d like to provide some information as well, and after that I need to leave. You see, the fact that Melody’s body was found inside our greenhouse means that there are relatively few people who could be responsible for its getting there, and I’m one of those. So you folks need to consider me a suspect along with others here who have access to the greenhouses. I’ve done some checking, and there are several people who were on record as having been not at work here, that is, they were on vacation, or travel, or sick leave, two Fridays ago, the day before Melody was seen in Durango. Annette has the list. And there are other people who don’t have any real way to document their whereabouts during the time-frame when Melody was put into the greenhouse. I’m one of those. So if you’ll all excuse me…” And he rose to leave.

“Bill? One second.” I had a point to make. “Bill and I have been talking about this, and there are some things that he will be pursuing for us. First, he gave me the list of people unaccounted for two Fridays ago, as he just said. Second, he’s going to assemble a list of employees who were let go over the past couple of years. It’s possible that one of them still has greenhouse access, plus a grudge. Finally, I think that there are many on this committee who haven’t been inside the greenhouses, who haven’t seen where the body was found. Bill has agreed to lead a tour. How does after lunch sound, Ross?” He was calling me by my first name, so, I thought, I’ll return the favor.

“Works for me.” Townsend looked at his watch. “If I recall, lunch will be arriving here in about 20 minutes. Dr. Longwell, where should we meet you?”

“I’ll come by here about 1:00, and we can walk down there together. An after lunch stroll. How’s that?” And Longwell headed for the door.

“Perfect. Now, Mr. Jensen. You’ve been trying to get my attention for some time. What is it you need? I hope it’s not lunch, as there probably won’t be one for you. You’re not on the list.” Townsend’s grin was barely suppressed.

“Do I understand that the investigation of the death of this Melody Witherspoon person is now being handled by this, this woman?” Jensen gestured vaguely in my direction. “Or this committee? Or what?”

“Of course, there will need to be a lead investigator...”

“Who should by rights be Sheriff Elwood Johnson! You know that as well as I!” Jensen’s face was beet-red.

“I know no such thing. In fact, insofar as Elwood’s office is going to be the subject of a grand jury investigation of a related matter, it’s appropriate for his office to be removed from this case. I’d even entertain an motion to that effect.” He looked up, once again with arched eyebrows.

“So move!” It was Rudy Gelinski again. I jumped in this time with the second, and once again, it was unanimous.

“This is outrageous!” Jensen was, apparently, outraged. “You can’t do criminal investigations by Robert’s Rules of Order!”

“Sib, Sib, shut up, will you? You’re making Pinal County look bad here, for Christ’s sake.” Rudy Gelinski was fed up. “We’re not doing an investigation, we’re making recommendations to the Governor and the Commissioner of the DPS. And by making these kinds of objections, you sound like you don’t want this murder to be solved. You’re making us look bad. So just shut up.” Gelinski folded his arms and stared at the wall in disgust.

“Mr. Jensen,” Townsend was still having trouble keeping a straight face, “Dr. Gelinski is correct about our only making recommendations. And I have a different suggestion. There’s really no need for you to take Dr. Gelinski’s advice to, um, quit talking, because you’re excused. We’ll be sure and call you if we need you.”

Jensen’s departure was accomplished with remarkable grace, all things considered.

\* \* \*

“So, after lunch we all took the tour. Same as before, except it really helped me because that place is so complicated.” It was late in the evening and I was calling home. “Also, I learned something new, something important. Turns out that the key-pad code locks they have at the entrances to the greenhouses are recording locks. Bill was surprised, and embarrassed. He didn’t know, at least he says—I need to remember to be suspicious of him along with everyone else. Anyway, his security chief was with us and happened to mention it. Naturally, we requested a list of every code used for the days before Melody was found. And what we found is that Melody let herself in the main entrance at 3:10 AM on Monday morning. Then about five hours later, her body was found buried in the East Asian greenhouse nearby.”

“But I remember something about her having been dead for some thirty-six or forty-eight hours. So a dead person let herself in?”

“Yes, Rudy pointed that out as well. A small problem. It means, of course, that whoever took her body in there knew her personal access code. Our best guess is that she had it written down in her personal effects, on an ID card or something, so the killer found it. Her purse and other things were never recovered.”

“Did anyone ask about the cameras?”

“Did they ever. Ross Townsend—remember him?—he was all over that one. And the security chief hemmed and hawed about it. They recycle the tapes every twenty-four hours, like we were told. But it

seems that the tape for that entrance for that night was just flat missing. Someone pulled it and put another one in. What they looked at before was a tape recycled from another night. They finally figured this out when the people on the lock record didn't match the people on the camera. So whoever did this knew enough to use Melody's code to get in, to find the place to bury her, no easy trick in that rat-maze, and then to find the security center, get in, and swipe that night's tape. And get out by a different door, one without a camera. It turns out that the main entrance doors have cameras, but several other exit-only doors don't."

"Definitely sounds like an inside job."

"Except, as Bill pointed out, one that could have been done by just about anyone with experience at EcoARC. Everyone gets a briefing on just about everything."

"But it still points to someone on the staff. And, wait. Surely the lock records would have been one of the first things looked at that Monday, when they found her body. What's with the delay?"

"That was the question that Ross asked." I sighed. "I'm afraid that Bill and his staff are looking just a little bad on all this. I guess the problem is that they're just not living in the world that I live in, or the other DPS types."

"It is an academic atmosphere. Remember when we had that killing on campus? We weren't prepared for that kind of thing." Hal always seems to recall that episode with ambivalence. The university lost a top chemistry professor, but he gained me. I think he likes the trade-off, but he probably feels guilty about it. "I don't think you can ascribe any bad intent. But what happened with the lock records?"

"The security chief, Stan McGriff, a one-man security department, was on vacation, accounted for with a solid alibi. He's on the list Bill gave me. And since he wasn't there on that Monday, no one thought to get the lock records. Like I said, Bill says he didn't even know the locks recorded. They did look at the tape, but it was the wrong one, and the right one's missing. Anyway, now that's all straightened out, at least the lock records are, and what we found out is that Melody, dead or not, let herself in, at least as far as the official record shows. At about three in the morning."

"Were there any other irregularities?"

"Not obvious ones. Kelly Rumsford, for example, was on there. He went in at, um, 7:30, I think. Found Melody fifty minutes later."

"Are there records of people going out?"

"Why, Hal! I'll turn you into an investigator yet! Good question. And, no, there aren't. Nor are there records of groups going in. One person uses his or her code, and a whole bunch walks in unrecorded, piggy-backing in. After our tour this afternoon and all the questions we asked, that policy may change. Bill and the security guy, McGriff, were talking about initiating what they called 'positive ingress and egress control.' Got to use your code to get in and get out, no groups, no exceptions."

"Oh, that'll go over big in that free-and-easy research environment." Hal knows just how obstreperous academicians can be.

"There's definitely going to be a long discussion. Anyway that was the upshot of our tour. The others were interested to see the place, and they asked a bunch of questions. It was a repeat for me. But at least I don't feel like such an alien in there, having been in a second time." Also, I thought, I wasn't so lost this time.

"Something's been bothering me about this, from a scientific perspective. Got enough energy to hear it? You must have had a long day."

“Hey, I’d rather talk with you than do my notes or watch TV.”

“OK. So you recall that lecture we got about how the whole place is sealed up, except for when they let in air, which they measure, right?”

“Right. I remember terms like ‘mass budget’ and so on.”

“And they compute these budgets to keep track of all the cycling of elements, like carbon, phosphorous, sulfur, and so on, in the ecosystems in there, remember? So they can keep track of plant nutrients and recycling, right? And they’ve got all these complicated measurements that even allow them to keep track of stuff in the individual greenhouses?” He knew an explanation was needed, but I could tell that he was trying to avoid his “Mr. Science Person” persona.

“Yeah. What did they keep calling it? Biogeological cycles?”

“Biogeochemical cycles. There are errors in the budgets, missing amounts of these elements, but they have a good handle on how big the errors are. And they’re lots smaller than similar errors you have to deal with in natural, open systems. That’s the advantage of this big closed system, and that’s why it’s a valuable research facility.”

“So what’s bothering you?”

“OK, bear with me, here.”

“Do I detect Mr. Science Person coming out of his closet?”

“Hey, I’m trying not to lecture. Really.”

“And I’m only teasing. What’s bothering you?”

“Melody’s elements. I mean, whoever did this, whoever buried Melody in there had to have some insider knowledge. We’ve agreed on that. But suppose she isn’t found. Her body breaks down into the soil, the nutrients get cycled and so on, and it would show up in the budget calculations people do routinely in there. So even if no one found her body, someone would find evidence of her. Understand?”

“Um, let’s see. What you mean is that the amount of new material her body would introduce into the system in there is bigger than the uncertainties in their budget calculations?” I waited, but there was no immediate response. “Hal?”

“Sorry, I’m busy being impressed. That’s exactly the right way to say it, and, said that way, I’m not sure of the answer. Maybe the place is big enough that Melody’s elements are in the noise level of the calculations. Hmm.”

Something occurred to me. “Of course, she had lots of elements. Maybe her carbon, for example, wouldn’t show up because there’s already so much in there, but something else, a trace element would.”

“Hey! I’m supposed to be the science guy here. You’ve been hanging around me too long, or something.”

“Are you complaining?”

“Not at all. Well, you’re there and I’m here, but I always complain about that. Anyway, what I was wondering was if the perp here was actually trying to screw up the science in the greenhouse by putting Melody in there.”

“Oh. I see. A motive to put her in there beyond disposing of a corpse. Hmm. Maybe I can get Bill to do some of the budget estimates to see about the noise level thing.” I made a note.

“Good plan. So what’s your schedule?”

“I’m not going to be here too much longer. I have about another day of interviews, then I’ll be headed back.”

“So I’ll see you for the weekend?”

“That’s the idea. After I stop in Winslow to see Faith.”

“And you promise to drive fast, real fast, on the way home? I’ve been, um, lonely.”

“Oh, yeah. Real fast.”

\* \* \*

## Five

Thursday morning, I planned to finish my interviews of employees at EcoARC. I had dealt with the various marginal cases on Wednesday afternoon, after the tour, saving the more high-profile ones for last. I wasn’t surprised that this task should fall to me, given that the Colorado connection in Melody’s death was becoming more and more an issue.

Ross Townsend, on the walk from the conference center at the EcoARC hotel down to the greenhouses, had made a point of talking with me to ask if I would take the lead on this investigation. His people, of course, were my people because I was his assistant, if only temporarily; but I would also have access to resources in Colorado so it made sense for me to be the leader, and so on and so on. His reasoning was impeccable, and I couldn’t decline.

I considered carefully where to conduct my interviews, and I finally settled on the conference room. It was available, private, and had the appropriate furniture. I would have preferred some place less formal, but one of the empty hotel rooms seemed a little too casual, with the bed and the TV sitting there.

Kelly Rumsford was first. I planned to save Bill Longwell for last, probably over dinner, more to provide him with a debriefing than to interview him. I also had on my schedule Art Finnegan, the deputy director.

Rumsford arrived in the usual warm-weather graduate student garb—tee-shirt, baggy shorts, sandals. He was trying to grow a goatee with only marginal success.

“Please sit somewhere comfortable, Mr. Rumsford. I think you’ve probably heard by now what’s going on.”

“Yeah, it sounds like you’re questioning lots of people about the thing with Melody W.”

“Some information has turned up that we need to follow up on. In your case, it doesn’t have to do with Monday, when you found her, but the Friday before.”

“The Friday before? Let’s see... I don’t think I can help you much. I was in Boulder all that week. My committee insisted that I come up for a pre-defense meeting.”

“You say you were there ‘all that week.’ What does that mean, exactly?”

“I went up on Monday, spent the week there, and came back on Saturday.”

“It’s important for me to have corroboration of this. Do you have, say, an airline ticket receipt?”

“Huh? Oh, no, of course not. I drove.”

“Oh. Hmm. I drove down from Durango, and that’s only about half way. All the way to Boulder is a long haul.”

“That’s for sure. It’s a long, long day.”

“What route do you use?”

“Depends. Sometimes I actually go up, or come back, through Durango because of the scenery. But the interstates are faster. I-25 and I-10.”

“And last week?”

“What’s this all about, anyway.”

“I’m asking about the route you used last week. And I’m going to ask if you have any gas receipts that will prove it.”

“And then what?”

“We’ll see. And I’m trying to be as carefully respectful about this as I can, but you do understand that I’m investigating a murder, don’t you?”

“And I’m, like, a suspect?”

“You’re, like, someone who might have important information that I need to hear. And the way I get at this information is to ask questions. To the extent that you provide clear answers, with documentation when I need it, you get classified as being cooperative and that’s that. Unless more questions come up, of course. To the extent that you don’t provide clear answers, and documentation, you’re in another category. At the least that category is ‘uncooperative.’ It may also fall more into the ‘suspect’ range. That all depends on what I learn, or don’t learn, from you, as well as from others.” I paused and tapped my fingers on the table briefly.

“Mr. Rumsford, you’re a student, have been for years and years. You’re used to listening to professional lecturers giving pedantic explanations of complex issues. I’m probably not up to their standards, so I hope I’m being clear. Whatever the case, just like in those classroom lectures, there’s a point to this, but there’s also a limit to my patience. One big difference is that the end result for you in this case has dramatically greater consequences than merely getting an ‘F.’ Are you with me here?”

During this, he had taken on more and more of a sullen expression. “You have no reason whatsoever to treat me this way.”

“Mr. Rumsford. Listen carefully. We law enforcement people are a suspicious bunch. And we’re also keenly aware of historical precedent. One obvious question that pops into my head, and it will pop into the head of any professional who looks into this case, is how it is that you ran across Melody’s body. Could it be, for example, that you found her because you put her there?”

“What!? No, of course not? I found her, I mean, it, her body, because I was doing that plant survey. That was scheduled a long time ago and everyone knows it.”

“Yes, including you, so you would have known the perfect time to put her body there, after killing her, of course. Now, the reason I was asking you about your itinerary on your recent Boulder trip was so that I could eliminate you as a suspect. Then you started being uncooperative, asking me questions instead of answering mine. What do you suppose that does to a naturally suspicious person like me, hmm? How much more difficult do you want to make this for yourself?”

“OK, OK, I went up to Boulder on the interstates, and I came back the long way, across Colorado and down through New Mexico and Arizona. Through Durango. OK?”

“Thank you. I already telegraphed my next question, so it shouldn’t surprise you. Do you have any gas receipts to corroborate this? Or any other kind of dated receipt from a credit card, or anything?”

“Yeah, I did, but I mailed them to Boulder to get expenses reimbursed. The university has them somewhere in its accounting system.”

“Excellent. I’m sure I can find them. Now. Just so I’m clear. You went through Durango on Saturday, almost two weeks ago? What time of day? And did you buy gas there? A receipt will have both time and date.”

“I guess it was mid-afternoon, maybe four. I was partying with old friends in Boulder on Friday and didn’t get much in the way of an early start. And I bought gas out in Bayfield. And again in, uh, St. Johns, I think, in the evening.”

“So you didn’t get back here until pretty late?”

“Way late. Got home about one in the morning. I thought I was going to have to sleep on the side of the road a couple times.”

“You live where?”

“Over in Oracle. In an apartment, a converted garage that this old lady rents to me.”

“Did you know Melody well?”

“Hardly at all. Would have liked to, I’ll say that. But she was post-doc and I’m a grad student, and, well, you know...”

“No, but I can imagine. I’ll be contacting the University of Colorado about your receipts, Mr. Rumsford, and I may have more questions. But for now that’s all. Thanks for your cooperation.”

“I can go?”

“Yep. I’m glad you decided to tell me what I needed to know. Really.”

He left, puzzled, while I finished my notes. Obviously, I thought, he was in the right place at the right time. But I bet he would have tried lots harder to avoid telling me about Durango if he was involved in this. And he certainly wouldn’t have told me about the receipts. On the other hand, maybe that’s exactly what he wants me to think. Also, if he got a late start, why go through Durango instead of the faster way, on the interstates? And I mentally filed away these thoughts for later analysis.

\* \* \*

Art Finnegan was to be next, but first I needed a cup of coffee. Maybe, I thought, they have some up in the hotel lobby. I had a half hour before Finnegan was due to show up, so I decided to take a walk.

Outside, it was a beautiful autumn day in the desert, sunny and warm with just a hint of a breeze. I had a fleeting thought of conducting my remaining interviews *al fresco*. With winter coming at home, I felt drawn to the sunshine and fresh air. But I needed privacy, and outside it would be just too easy to be overheard.

It took only a little persuasion to talk the people in the lobby out of a cup of coffee, and then I was able to pick my way between the spiny plants away from the buildings and into the desert. Walking slowly and carefully, so as not to spill the coffee or get stabbed, I began to appreciate the variety of the landscape. Some of the cacti were familiar from home, such as the prickly pears. Others, like the tall saguaro, were sufficiently famous that I knew about them. Names such as barrel cactus popped into my head from who knows where, when I came across an obvious specimen. But there were many that I had

never seen and couldn't begin to place. Cactus in the form of weird-looking little bushes with a fuzzy covering of what turned out to be spines. Golf-ball-sized miniatures with spikes all over. Hand-like clumps of green thorns growing from the ground. They were everywhere, sprinkled about among the sparsely foliated bushes I remembered were called creosote bush, or greasewood.

Hal and I had taken a walk in the moonlight, but we had stayed on the paved roads. This was different from anything in my experience, and it made me nervous. I noticed I was listening carefully, for what I didn't know. Rattlesnakes? But the only creature I saw was a rabbit watching me warily as it munched on some grass.

Because sitting didn't seem likely—even the rocks were sharp—I finished my coffee standing up and eventually headed back the way I came, back to the conference room. On the stairs down from the lobby, I ran across another admirer of the scenery, a man who was staring across the desert at Black Mountain. As good at describing people as I am, he eluded me despite the fact that he looked vaguely familiar. A perfect person to blend in with the crowd, I thought. Average height, nondescript brown hair, unremarkable glasses, Dockers and a tan EcoARC sport shirt, long-sleeved despite the warm day. Why, I wondered, does he seem familiar?

He must have heard my footsteps, because he turned around as I was coming down the stairs.

“Can I help you?” Even his smile was average. It occurred to me that his question implied a sense of belonging—that fit with the shirt—and that he didn't recognize me. I smiled back but didn't respond.

“Oh, I'm sorry. I don't have my name tag. I'm Art Finnegan, the deputy director of the EcoARC Center. The reason I asked is that there's nothing down here but our conference center, and I'm afraid it's off limits to visitors today.” He cocked his head to the side, clearly expecting some kind of response from me.

“Ah, yes, Mr. Finnegan. It's off limits because I'm about to use it to chat with you. Would you care to come inside? I'm Annette Trieri, Assistant Deputy Commissioner of Public Safety. The Governor has asked me to investigate the death of Melody Witherspoon.”

It wasn't clear to me whether he was surprised at my ability to take control of the situation or he was nervous about the interview to come. But his expression told me that my tactic had worked: his equilibrium was off-kilter.

“Now, Mr. Finnegan,” we had descended the stairs and taken places on opposite sides of the conference room table, “I'd like to find out about two things. Let's start with what you know about Melody Witherspoon.”

“Melody was a post-doctoral fellow here. She was working on the ecology of dryland grasses, both the ones we have growing naturally—it's not really natural in there, but we don't cultivate them so they're growing on their own—and the ones in the experimental part of the greenhouse. I expect you've heard that I was one of the first people on the scene after Kelly found the body.”

“Perhaps you could describe what you found.”

“I was with some students down at the deep end of the ocean—that's what we call that big tank full of saltwater in there—working on the wave-generator mechanism. They needed an extra pair of hands and I was available. We all try to pitch in to help on just about everything around here. Anyway, I got a call on the radio that Kelly needed me to come find him in the rain forest greenhouse. That's just next to where I was, so I got right over there. He had found what turned out to be one of Melody's fingers, and I discovered it was attached to the rest of her. We called the sheriff right away. Took him long enough, but he finally showed up.”

“How is it that she could have been buried in there?”

“That’s what we’ve all been asking. I mean, whoever did it knew what he was doing. She was buried carefully, with some small plants re-planted on top of her. And the leaves and other debris had been scattered over the grave most cleverly. If Kelly hadn’t run across the finger, we probably wouldn’t have found her for a long time, maybe never.”

“I’ve taken only two tours of the greenhouses, so I’m still not very familiar with them. But it’s obviously confusing in there. My impression is that whoever did this must have known his way around, no?”

“Oh, for sure. That’s another thing we’ve all been wondering about. This looks like a job done by someone who has spent a lot of time in there. We’re all spooked.”

“Of course, that suggests that anyone who has experience in the greenhouses is automatically on the long list of possible suspects, as I’m sure you understand.”

“You bet. That’s been the number one topic of conversation around here for the last week and a half.”

“Which leads me to my second question—where were you that weekend, including Sunday night?” His expression didn’t change as I had thought it might. He just looked as average as ever. This suggested to me that he was expecting the question.

The silence stretched out for some time. Finally he gave in.

“Should I have a lawyer?”

“If you’d like. At this point, I’m gathering information about everyone who is knowledgeable about the greenhouses. This is a question I’m asking everyone I’m interviewing. But it’s your right to have an attorney, if you’d like. Do you need one?” That question did elicit a change of expression, to a sour one.

“Unfortunately, I don’t have an alibi for all weekend, just Sunday night. My wife will tell you I was at home then. But the rest of the weekend, I wasn’t. I was here, working alone. I’ve found that this business of being deputy director leaves me time for research only on nights and weekends.” I stared at him long and hard before writing down his answer, but he didn’t flinch.

“How well did you know Melody?”

“About as well as I know any of our post-docs. We try to develop social relationships on top of our professional ones, not deep social relationships, but friendly ones. Especially for new students and post-docs from out of town, it’s helpful. They don’t feel so isolated that way. So I knew her from that perspective. We have Friday evening social hours here, that sort of thing. I’m a marine biologist, though, so I didn’t know her as well as I do some of my own students.”

“Marine biologist? OK. Let’s see. Did Melody have a large circle of friends?”

“I’m not really certain. She was still new, having arrived just a few months ago. I think she was living down in Oracle. She had an apartment there or something, with other students and post-docs in the neighborhood. So maybe she had developed friendships.”

“Why would anyone want to kill her?”

“That’s the tough one. The speculation around here has been that this was some kind of accident, like she blundered into something she wasn’t supposed to see and got killed because of it. Like a drug deal, or something.”

“Are there lots of drug deals around here, Mr. Finnegan? I mean, we’ve already decided this had to be someone with knowledge of the greenhouses and, obviously, access.”

“Maybe not drugs. I thought they caught the guy anyway, that fellow Alvarez that worked here. Maybe it had to do with smuggling illegal aliens from Mexico.”

“Hmm. I’ll have to look into that.” I smiled as disarmingly as I could, given my disgust with his lies. “And, let’s see, you say you were here working that weekend. Did you see Melody while you were here? I seem to recall my husband telling me that postdoctoral types work evenings and weekends also.”

“Your husband?”

“Yes, Hal Weathers. He’s a dean up at Frémont State in Durango.” I tried to look innocent. He looked startled.

“Oh. I see. Well, no I didn’t see Melody here that weekend.”

“Or anywhere else? Like, in town or anything? We need to trace her movements in the days before she was killed.”

“Ah, no, I don’t believe so. Is there anything else?” He was looking at his watch.

“Hmm. Let me look at my notes. You didn’t see Melody at all two weekends ago, and you spent that weekend here, except for Sunday night. No, I guess not, not for now, Mr. Finnegan. And, you see? You really didn’t need a lawyer to tell you what to say, did you?”

“No, I guess not. Be sure to let me know if I can be of further assistance, will you? We all want to get this mystery cleared up. But I bet that fellow Alvarez had something to do with it.”

“Oh, I’ll be in touch, you can count on it.”

\* \* \*

I left for Winslow early the next day, a bright sunny Friday morning. Officer Sandra Kinney escorted me as far as Winkleman, out of Pinal County, just in case the sheriff or his people might do something strange, but there were no incidents. Winston Tsosie had departed the previous day on another assignment up by Flagstaff, so I was on my own for most of the way. I wouldn’t be traveling as fast this time—the trip would take longer, with the overnight visiting Faith in Winslow, but the more leisurely pace would give me the opportunity to think about the meetings and interviews of the past few days.

And the leisurely pace paid off early, before Winkleman. In the San Pedro River valley north of San Manuel, I was treated to the view of a multiple hot-air balloon launch, three brightly colored mushrooms lifting elegantly into the blue sky. It made me think of a story my grandfather used to tell.

He was a first-generation American, son of immigrants who never really learned English, born and raised on the south side of Chicago. The way he told the story, as a teenager he had won a balloon ride in a church raffle. They took off from Grant Park by where the aquarium is now with the expectation that the on-shore breeze would carry them inland. But a wind shift aloft had carried them out over the lake, and all they could do was ride it out. Fortunately for them, the wind was from the southwest—if it had been more from the south, they would probably have crashed into Lake Michigan, there’s so much water in that direction. But instead they were carried across the lake, and that evening they landed on the beach just north of South Haven, Michigan, cold, hungry, and scared. He always said that he had knelt and kissed the sand, just like his parents had kissed the ground on Ellis Island. And years later he returned to that beach and bought property there. My brother still owns the lake-side cottage that’s been in the family for three generations now.

I was lifted from my reverie by the crackle of the radio loaned to me by Tsosie on the drive down.

“Annette? We’re coming up on Winkleman, and I’m going to let you go. I don’t think Elwood or his guys would be so stupid as to try anything out of their county.”

“Thanks, Sandra, thanks for all your help. And I expect you’re right. Even if they knew I was taking this route, I don’t think they’d try anything.”

“And in that car, you can outrun them anyway.” I heard laughter.

“Now that I’ve got Arizona credentials, I guess I won’t be so worried as I was on the way down. You take care, Sandra. I’ll see you next time I’m down here. And I’ll be in touch if I need anything.” I heard the microphone switch clicking that I had learned means “ten-four,” and I waved as Officer Kinney turned off onto a side street.

Keeping to the speed limit seemed interminably slow, so I decided to take advantage of being part of Arizona law enforcement. Feeling guilty, I also turned on Hal’s radar\_detector. With the twisty part of the drive coming up, I knew I would be able to have a little fun with the car before the long straight stretches ahead, up on the Colorado Plateau.

Driving soon became automatic, even at 30 mph over the speed limit, and I began reviewing yesterday’s interviews in my head. Kelly Rumsford had been predictable, rebellious but probably truthful. Art Finnegan, on the other hand, what a piece of work that guy was. Did he really think his lies would stand up to scrutiny? The big question was whether he and Melody had been together in Durango. Unfortunately, hard evidence was lacking.

The interview with Stan McGriff, the one-man security department, had been unremarkable. He had been on vacation the weekend Melody was killed, and, given the normally boring circumstances of his job, it was not unusual that he had made no arrangements for someone to be acting for him. He was sure that he had briefed Bill Longwell and just about everyone else about the workings of the entrance lock systems and the video tapes, but he also wasn’t surprised that they hadn’t remembered. They, he said, had more important things to think about and probably had forgotten his briefing. He was a little embarrassed that all the excitement had occurred in his absence, but he was also philosophical. Murphy’s Law in action, he’d said. But he was emphatic that now there would be much better security arrangements, because the administration would finally have to listen to his suggestions. They had been ignoring him, it seemed.

But the biggest puzzle was Bill Longwell. He and I had met for dinner at the EcoARC restaurant, and it had been strange. He was as polite as ever, but a bit distant, considering our earlier interactions. And for some reason he spent the whole time talking about the Jorgé Alvarez theory of the murder—despite the skepticism he had expressed before, he was back to the far-fetched story being touted by the sheriff and Art Finnegan.

I heard a sudden chattering noise, like an angry electronic squirrel, that abruptly shut up after about five seconds. It took me several blinks to realize that it must be the radar detector, and, indeed, it was lit up full strength. Yielding to discretion, I let off the accelerator pedal, and the car obediently slowed. Sure enough, as I rounded a curve, there was an Arizona State Patrol car sitting on the shoulder. I waved as I cruised by at the speed limit.

Handy little gadget, I thought. No wonder people like ’em. Probably saved me a long, drawn-out explanation of how my DPS credentials make it OK for me to flout the speed limit.

The patrol car faded in the mirror, and I returned to my previous line of thought as well as my faster pace. Must be that someone got to Bill Longwell. There’s just no other explanation. And the most likely people to have got to him work for Pinal County, either at the DA’s office or at the sheriff’s office. I immediately thought of Sibley Jensen. But I realized that it could also be Art Finnegan, given his point of view. What hold could Finnegan have on Bill?

Of course, it really didn't matter if there were some people who still believed that Jorgé Alvarez was guilty, because the DNA testing would take care of that one way or the other. The problem, I reminded myself, was that the more time that was spent on false leads meant a colder trail in pursuit of the real killer.

I should turn this around, look at it from Finnegan's point of view, I thought. If he really did it, what would he gain by extra time? Surely he would know that Alvarez could be proven innocent with DNA testing. And he knows he talked with Gil Taylor two weekends ago. And I told him I'm married to Hal, so all the possible connections must be obvious to him. Of course, if he's innocent of the murder and just trying to hide some hanky-panky from his wife, he might still act the same way. Or would he?

I eventually gave up on these behavioral problems and turned my attention to forensic matters. The previous afternoon, Sandra Kinney and I had driven down to Oracle, to have a look at Melody Witherspoon's place. It turned out that Melody had been renting a little guest house, locally called a *casita*, from a retired couple. Because Melody's purse was never found, there was no key, but the Pinal County Sheriff's Department had broken into the casita and locked it up with a hasp and padlock of their own when they were finished. It took some persuading, but a direct order from the Governor had finally extracted the key from them.

There was surprisingly little of interest to see, though. Being mistrustful of the sheriff and his relatives, I wasn't sure that the place was intact, but at least it wasn't ransacked. I did find several keepsakes, now safely tucked into the S4's trunk, to take back to Melody's mother. And in a bookcase, mixed in with a variety of novels and non-fiction esteem-boosting self-help books (it occurred to me that perhaps they classify as fiction, too) was a diary that would provide, I hoped, useful reading when I had the time.

Melody's office at EcoARC was even more disappointing. The Sheriff's Department had secured it as well, but there seemed to be no need. It was virtually bare, with only a few textbooks and a file cabinet full of photocopied journal reprints. Conspicuously absent was a computer, despite an obvious computer desk complete with slide-out keyboard tray. Because EcoARC was a private facility, Deputy Director Art Finnegan and Director of Security Stan McGriff had insisted on observing Sandra Kinney and me in our visit to Melody's office, but neither would comment on the lack of a computer or notebooks or anything else personal. Sandra and I had both maintained our expressionless demeanors upon hearing this, but now I was trying to understand the implications of the obvious fabrication.

All this time, I was headed north, through the small towns below and then up on the Mogollón Rim—Globe, Carrizo, and finally Show Low, where I turned northwest toward Holbrook and the interstate to Winslow. Faith and I were going out for drinks and dinner.

The next morning, after a late breakfast and an extended exchange of best wishes and promises to get together more often with Faith, I set out east on I-40 to pick up the northern stretch of US-191 through the Rez. North of Ganado, out in the middle of nowhere, I was cruising comfortably along at about 95 when my radio crackled.

"Annette? That's got to be you doing over 90 down there. You want me to sic my cousins on you, or what?"

I keyed the microphone on the portable radio.

"Winston? Where in the world are you? I thought you had to be over by Flagstaff."

"I did and I was. Now I'm up ahead of you on that mesa you're about to come up, watching for white folks in a hurry like you. And I bet you're wondering why your fancy high-tech radar detector didn't give me away, huh?"

“Hmmp. Yeah, now that you mention it, I am. Must be one of those mystical Diné tricks, no?”

“Right. Involving landmarks, a stopwatch, and a calculator. I do it all the time. Got to earn my keep somehow. How did it go down at Oracle?”

“Weird. I thought everything was starting to come together, and last night it fell apart. So, are you going to escort me north to Colorado?”

“You’re doing pretty good on your own, looks like. But I’m due up at Teec Nos Pos, so why not? I’ll wait until I see you come up over the hilltop and then we’re off. Same as before, OK?”

\* \* \*

I made it home by mid-afternoon Saturday, finding Durango in full fall gloom, a cloud deck threatening to drizzle at any time. It was early enough that I decided to stop by the mechanics who work on Hal’s cars to see if they could do an impromptu oil change. The car had behaved so well that it deserved a treat, I thought. Besides, the gesture would earn me major points with Hal, perhaps making up for the high-speed miles I’d put on the car. Maybe, I thought, I can figure out how to get this car for myself. Driving my Subaru will never be the same.

Following Officer Tsosie in his souped-up Camaro was more fun than before, because he knew I could drive up to his standards. We still slowed for the little towns and villages, but the open country sailed by at over two miles a minute. And once again, the short stretch through the northwest corner of New Mexico seemed interminably slow, even though my sense of speed had been moderated during a stop for coffee at Teec Nos Pos, where I returned Officer Tsosie’s radio and thanked him for his helpfulness.

The mechanics were cooperative, and I filled the car with gas and got it washed. I finally arrived at home about 5:00 PM feeling accomplished and responsible, ready for an evening romp with my favorite Dean.

Who was nowhere to be found.

I picked up the telephone and heard it booping, so I went through the process of retrieving the messages. It turned out that there was only one, from Hal, apologizing for being late. He had walked up to the campus to a yet another budget meeting that was going on longer than planned, and I shouldn’t expect him until mid-evening, after dinner. A Saturday evening meeting? Sometimes, I thought, his job is almost as bad as mine.

With nothing better to do, I decided to treat myself to a pizza for dinner and called a pick-up place for a take-and-bake. They, I knew, would prepare it and keep it in a refrigerator for me, so I had time to shower and change.

About 90 minutes later I pulled into the driveway in my Subaru—and, no, it just wasn’t the same—with a ready-to-bake pizza sitting on the floor beside me. I had left the oven on at home to pre-heat.

But I *hadn’t* left the light on in the study, I was certain. Nor had I left the side door open. Nor had that pane of glass been broken.

Nothing, I thought, like catching perps red-handed. On the theory that whoever was in the house would leave by the door he had entered, I backed my car to the end of the driveway by the street, where I could still see the side door clearly. I set my Glock on the dashboard in easy reach and used my cell phone to dial the front desk of the Durango police department’s main station downtown.

“Durango police. Can I help you?” It had been long enough since I left the PD for my position at the CBI office that I didn’t recognize the voice. The entry-level positions turn over fairly quickly.

“Good evening. This is Annette Trieri. I used to be the head of investigations with you folks, but I don’t recognize your voice, I’m sorry to say. Anyway, now I’m with the CBI, and I’ve got a little situation up at my house on Eighth Street that you can help me with.” I related the circumstances and my address. “And the fellow who took over for me was Fred Winders. I don’t suppose he’d be in? I’m sure he’d be interested in this little caper. If you send a patrol car or two this way quietly, Fred can come by and say hi. We’re old friends. Also, if Walt Jankowski is still in, I’m certain he would like to be informed of this. Unless you’d rather I call him myself. I have his office number.” And, to prove it, I rattled it off from memory.

The rookie—front-desk people are almost always rookies—took this in stride, but the Captain’s phone number clearly impressed her, because she gasped and said “Yes, ma’am” rather than asking questions. The phone clicked and I heard a new voice.

“Jankowski.”

“Walt, hi. It’s Annette.” I used to call him “Walt” even when I worked for him, except in public, but we’re friends and colleagues now, so it comes easier. “Want some entertainment?”

“Annette! I heard you’re getting involved in that local girl’s murder, ah, Melody Something. But what entertainment?”

I filled him in and he promised to get there as soon as he could. Meanwhile, I had been watching the house, and, sure enough, there was someone in the study. Once in a while he would step in front of the desk lamp he’d turned on. And it didn’t look like Hal at all. This person was short and fat.

Finally the light went off. Showtime, I thought.

I opened the car door and knelt behind it, and turned the key one click in the ignition. With my Glock resting on the window frame and my left hand reaching across to the headlight switch on the turn signal stalk, I was ready.

Because the electrical power to the car was on, I could see by its clock that it was 6:42, deep dusk even with daylight savings time still in effect. Kind of early for home burglaries, I thought. But maybe they try to catch people when they’re out for dinner.

Shortly, a head poked itself out the door and looked around, and a foot appeared on the porch step. Now!, I thought, to catch him off balance. So I twisted the light switch and pushed the turn signal stem at the same time. High-beams lit up the driveway and the side of the house with the blaze of the noon sun.

“Freeze or die, slimeball!!” Between the lights and my Voice of Authority Level 3, the poor fellow emerging from the house looked like a mouse in the gaze of a bull snake. Damn, I thought, he’s *fat*. Hope he doesn’t have a heart attack.

I had him lie face-down on the driveway, arms out, and I walked over to him to have a little chat before the PD arrived.

“You, my chubby friend, are under arrest. And this Glock of mine is loaded with soft-points that will punch a grapefruit-sized hole in you, so don’t think you can try anything. I don’t know what you’re after, but you sure picked the wrong house to rob. Breaking and entering the home of a Colorado Bureau of Investigation official isn’t going to win you points with the Durango PD, I can tell you. May I ask what you were looking for? You think I have diamonds, or something?”

A muffled voice rose from the driveway pavement. “If you were a real cop, you’d be reading me my rights.”

“No, the police will do that. It’s their jurisdiction. They’ll be here shortly. I’m just going to hold you for them, so I can ask you anything I want. Oops, careful! Please don’t move at all. I’m kind of twitchy with this thing. Now, what were you looking for?”

“Whaddya think, lady? Stuff I can fence, of course. Geez.”

“And why did you pick this house?”

“I saw you come home in that fancy car and leave in the other one. I figured no one would be home for a while.”

“Nice try. But I already know enough to know that doesn’t make any sense. So start over and tell me the truth. That way, I can help you with the PD.”

“What are you talking about? Why else would I risk a B&E? I need money. Geez.”

“OK, have it your way. I think I’ll tell my PD friends that you tried to assault me. That’ll get them happy with you. You see, I used to work for the Durango PD, and they’re still quite protective of me.”

“What?! Christ, you can’t do that. I didn’t do any such thing. And I even waited until you left. C’mon. Christ! You can’t do that!”

“Want to bet? Oh, here they are. Hi, fellas. Look what I’ve got here. Hi, Walt. Fred, good to see you again. How’re Penny and the kids?”

The muffled voice from the pavement sounded urgent. “Don’t believe anything she says! I didn’t touch her! I just broke in to find money! Honest!”

“Man, what’s with him?” Fred Winders was looking surprised, and Walt Jankowski was trying not to laugh.

“Guilty conscience, probably. Better recite the mantra, Fred. Can’t have him not knowing his rights. Say, why don’t you have the guys here take him downtown and book him, B&E, I’d say, and come in. I’ll bake this pizza I’ve got and we can catch up on old times. Hal’s at some dumb meeting until late.”

“Hey! Who says my meetings are dumb? And look at this. I go away to work and come home tired and hungry to find a circus in my driveway. What’s a guy got to do to have a little peace and quiet, anyway?” Hal was walking up the driveway, trying to hide the big grin. No one was going to take him seriously, I could tell. Maybe, I thought, I can get a second pizza delivered.

\* \* \*

## Six

Hal had been amused to find our driveway full of cops, but he wasn’t amused to find that our house had been broken into. Like most homeowners, he considered it a sanctuary, and he felt violated and not a little protective of me. And I felt violated, too despite my experience with police work. When it happens to you, it’s different.

At least the house hadn’t been trashed. In fact, it was puzzling to us that there was little in the way of an indication that anyone had been inside. The broken window pane was a sign, of course, but not even the study was mused.

And so the Saturday evening pizza party was only about half party, because I needed to provide a statement to Winders and because the forensics team needed to go over the house. But we old friends did manage to catch up.

Sunday morning, I was scheduled to visit the PD, to provide follow-up to my statement and to watch the interrogation of the fellow whom I had caught coming out of the house. But as I was about to leave, the telephone reeled me back in.

“Annette? Fred Winders here. Listen, I’m glad I caught you. I don’t know if you really want to come down. Our perp has a lawyer, and you won’t believe who it is. Your old pal Arthur Stepwood.”

“Stepwood? I thought he was disbarred.” Stepwood’s lack of ethics in an earlier case of mine had put him on the Colorado Bar Association’s blacklist.

“Me, too. But I guess he’s been reinstated, or something. Anyway, he’s here representing the guy you caught, whose name turns out to be James Lovett. Goes by Jimmie, apparently. He’s got a Colorado driver’s license with a Durango address, but the NCIC database lists him as having several small-fry arrests down in southern Arizona, south of Phoenix.”

“Any idea of how long he’s been here?”

“A couple of years at least, from his license. And, listen, I’m sorry to tell you this, but Stepwood’s talking about filing a complaint against you. Says you abused his client. Falsely accused him of assault, and hurt his feelings by calling him fat, and made him lie down on the cold, dirty old driveway. Shame on you, you bad, bad person.”

“I did call him ‘chubby,’ but only when no one was around. And I certainly didn’t accuse him of assault. I hinted that I might, but you didn’t hear any such accusation, did you?”

“No, and I’d call ‘chubby’ an accurate description, restrained and polite, even. But Stepwood’s probably bluffing anyway, so don’t worry about it.”

“I sure won’t. But what I’ll think about is why this small-fry crook would get Stepwood. He’s a high-roller guy, at least he was before.” I remembered my case involving him all too well—he’d been representing a local drug kingpin.

“And that’s the word on the street now, too. I was wondering the same thing.”

“But it fits. Look, this guy Lovett is trying to make himself out to be a B&E guy, but he didn’t break into our house for money or stuff he could fence. He looked around the study carefully. I saw him up there, and he was quite methodical. And you know we didn’t find anything tossed. So he was looking for something specific. He didn’t have anything on him, did he?”

“No, he was clean. And he’s not a pro for sure, he had his wallet with him, ID and all.”

“So he didn’t find whatever it was. Now, if he was a true pro, he would have tossed the place to make it look like a standard B&E job. But he didn’t. So he’s small fry, like his record, but he’s working for someone who can afford Stepwood. Someone who wants whatever Lovett didn’t find.”

“Damn, Annette, you’re as sharp as ever. Where should we go with this?”

“You booked him on the B&E, right? And that’s solid. I mean, your guys found his prints in the study, and I caught him coming out the door, for crying out loud. But maybe a plea bargain would be an easy way out, get him back on the street where we can watch him. I want to know what’s going on.”

“You got any big cases in progress, any that this might be related to?”

“Only the thing with the DPS in Arizona, Melody Witherspoon’s murder. Besides, I don’t keep casework at home. You don’t suppose they’d try to break into the CBI office?”

“This guy Lovett might, he’s not too bright. But look, would Hal have anything of interest to anyone?”

“University politics can be rough, but they don’t play this way. And the scientific community doesn’t, either. The best I can do is the Arizona link. If Lovett’s from down there, maybe he’s connected with the stuff I’m involved in. Could be any number of ways he’s connected, but that’s all I can think of generally. Did you find anything else about him?”

“Not really. His wallet has the usual contents, credit cards, some cash, several business cards. They might interest you, they’re from Intermountain Social Services. Remember them?”

“Do I! They still run Sizzles?”

“Yep. But they’ve been low-profile lately. Lingerie parties, mostly, from what I hear. Lap dancing, that kind of thing.”

“Hmm. What do you think the chances are of getting a warrant for his place, the address on his license? If we caught him in a B&E, I’m a credible witness, I think, maybe we could claim he’s got a stash of stolen goods there. Maybe we could find out who he’s working for.”

“He was clean when we brought him in last night.”

“Right. But maybe he was just casing the place and left to get a truck to haul all our valuable stuff away in, before I came home. Which would imply he has a house full of stolen goods for us to find. Think that’ll fly? We ought to do this before he gets out on bail.”

“Hmm. Stepwood’s agitating, but we’re not doing a bail hearing until Monday. So maybe we can look over his place today. Judge Sandose is as helpful as ever. But you won’t be looking for stolen property, it sounds like.”

“No, you will. I’ll be looking for information leading up the ladder. The Arizona connection and these cards for Intermountain got my attention.”

“You’re CBI now and outrank me, I guess. So if you want to come along on this, it’s your call.”

“It’s your case, and because I’m a victim, I have to avoid looking like I’m in it for personal reasons. But the CBI is here to serve local law enforcement, and if you folks invite me in, well, gosh, I guess I’ll have to oblige.” I heard laughter on the other end.

“Annette, you know us dumb small-town cops. Hell, you used to be one. We can use all the help we can find. Let me call you back when I get the warrant. And I’ll keep this quiet from Stepwood.” Now I was laughing, too.

Hal, finishing his coffee while reading the *Sunday Durango Herald*, looked up when I put the phone down.

“Sounds to me as if you’re having altogether too much fun for work. What was that I heard about Sizzles?”

“Remember when we talked about Intermountain Social Services the other day? Melody told her mother she volunteers for them, or some such story. They run Sizzles. That tells you what kind of outfit it is.”

“Yeah, you mentioned the connection then. Do I remember the name from a couple of years back?”

“Sure. Remember when we had our first sort-of date? At Fannie’s Saloon, the lunch?”

“Now, how could I forget that?”

“Right. What did you have to eat? I bet you don’t remember that. You were too busy checking out the scenery.”

“Aw, c’mon. With you across the table from me, how could I be interested in anything else?”

“Easy. You’re a guy. But remember I’ve talked about how Fannie’s is the tame one, and Sizzles is where the real action is?”

“Yeah, in connection with John Martin’s little indiscretion, as I recall. You know? He’s seemed a lot more human ever since he talked to me about that. We’re friends, now. And I don’t think that’s true of anyone else on campus, I mean, everyone else is afraid of him.”

“Confessions will do that to a relationship. But Intermountain runs Sizzles, and Melody worked at Intermountain. The other part of that phone call was that the perp from last night had some Intermountain cards in his wallet.”

“Alongside the condom, no doubt. What a loser.”

“Don’t know about that. But we’re going to try to get a search warrant for his place. Who knows what we’ll find there?”

\* \* \*

On my best day, I couldn’t have predicted what we found there.

After Winders called back with the news that Judge Sandose had cooperated with a nearly wide-open warrant—Lovett had been caught in the act, after all, so there was no room for doubt of his guilt—I stopped by my office to pick up what I think of as my “spy kit.” It consists of a digital camera with an extra lens, a special one for photographing documents, and a high-capacity memory card. There’s also a laptop computer with a huge hard disk and a built-in high-capacity Zip drive. Given time and patience, I could copy the entire FSU library. Batteries aren’t even a problem—both the camera and the computer have A/C adaptors.

Our team assembled at a pre-arranged location a block from Lovett’s address, and Winders went ahead to see if there might be anyone at home. He came back with the news that no one had answered his knock, and so we could proceed with Plan A, as he called it.

Our strategy was to be clandestine, at least as far as James Lovett was concerned. As usual, one of our search team was quite adept at picking locks, so getting in wasn’t a problem. We all wore plastic gloves, and we were careful not to disturb anything unnecessarily. Our first order of business was to dispose of the ostensible reason for the search, a cache of stolen goods. With nothing obvious present, such as a room full of boxed electronic equipment, we began to look more carefully.

Lovett’s place, a large condominium in an exclusive complex on the west bluff, contained the expected household goods, most of which could have been stolen. But because there was only one of everything of potential value—television, VCR, stereo, computer, and so on—we had no reason to suspect that it was. One possibility was the camera equipment, of which there was a wide variety, but that was consistent with the darkroom in a large closet.

Given the Intermountain cards Lovett was carrying, we became curious about the purpose of this equipment. This was finally resolved by the contents of a filing cabinet.

Lovett was a pornographer, there was no other reasonable way to put it. The filing cabinet contained negatives and prints of naked women, mostly young, mostly alone posing in various ways. But there also were several files of couples and other multi-person arrangements. In some of them, furniture in the condo’s bedrooms and living room was identifiable. And there was even one series of pictures taken in

the kitchen, involving two women and several vegetables. If those cucumbers came out of the refrigerator, I couldn't help but think, that would be *cold*.

However, it didn't appear that any of this was illegal. There were copies of release forms with each set of pictures, and the pictures included copies of driver's licenses with birth dates legible. All the models were over 18. There was no violence depicted, nor implied. No signs of drugs could be detected.

When I noticed that the files were alphabetized by the models' last names, I zeroed in on the W's. And there was Melody's release form, with a date several years ago, and driver's license. And, emphatically, Melody herself. But these pictures were less explicit and, mostly, she was wearing underwear. It looked like a lingerie party with pictures. And only one, because her hair and makeup were the same in all the pictures. It appeared that she had modeled several sets of bras and panties, and eventually had been talked into changing in front of the camera.

Feeling like an intruder, not into Lovett's dirty little world but into Melody's life, I used my camera to copy the release form and driver's license pictures and a sampling of the posed photographs. After the sixth, I noticed how Melody's expression was the same in every picture—smiling, vivacious, but obviously pasted on, not natural. A vacant look in her eyes. No wonder, I thought. That's the only way I could manage this, by not really being present.

But the filing cabinet was only the tip of the iceberg. It was Lovett's computer that was the real find. When we looked carefully, we noticed that most of the camera equipment and the darkroom were dusty. But not the two digital cameras. One of these was even hard-wired, via a long cable, to the computer box. This explained the huge library of CD-ROM disks we found in a cabinet, labeled carefully and, again, alphabetized by last name.

Melody was here, also, on disk; on three, in fact. And one of them was dated three Saturdays ago, when Melody was last in Durango. So, I thought, Melody stopped by at the university and was also here, getting her picture taken some more. Did she need money?

I sent one of the search team members out to Office Depot for blank Zip disks—as many, I told him, as they had in stock. The hard disk in my laptop held the equivalent of about 100 of the CD-ROMs, and, with the blank disks coming from the store, I felt confident that we could capture as much of the information as we wanted.

Then it was time to tackle the computer. It was powered up, humming patiently, awaiting instructions. A screen saver had blanked the monitor, so it had turned itself to standby mode.

“Well, Fred, now what? Does that warrant cover computer hacking?” I raised my voice a notch. “And, by the way, everybody—you guys are to be congratulated for your professionalism. I've yet to hear any off-color remarks.”

“Yeah, I think we're all shell-shocked. I mean, a few of these pictures in the right setting, and the remarks would be flying, believe me. But this is overwhelming. I hope you're not offended.” Fred Winders and I are old colleagues, but he's still a gentleman.

“No, and I hope you all aren't embarrassed by my presence. You don't need to be, I've seen it all before. But, anyway, we need to decide on an approach to all this. We know that one of the models in this collection is dead, apparently murdered. And one of these disks has a date on it when she was last known to be alive. Could it be that others have been killed as well? We ought to get a list of all the names and addresses here, by getting copies of all the driver's license pictures. We can run them against missing persons records. But the real question is whether we can get into this computer under your warrant.”

“It says ‘all information, electronic, print, or other, related to possible criminal activity.’ I’d say that about covers everything.”

“Hmm. So far none of this porn is illegal under Colorado law, or Federal law that I know of. Except maybe the Mann Act, if there are out-of-state driver’s licenses, but I haven’t seen any. And that’s hard to prosecute these days anyway. I guess the thing to do is to copy as much of this hard disk as we can, then take it somewhere and examine it at our leisure. Maybe there are business records that would lead to a tax evasion charge. Say, I wonder if he lists ‘pornographer’ on his tax returns?” This brought chuckles from the search team.

Using my camera, we set about making a record of all of the models’ identification from the filing cabinet, with one or two sample pictures per file. And one of the search team members, Officer Peter Ivy, admitted to having computer experience and sat down in front of the keyboard.

Much to his surprise, and mine as well, there wasn’t even a screen-saver password. He bumped the mouse and, after a brief pause, the monitor came back on. It showed, full screen and with exquisite detail, a particularly explicit background picture involving a male model with anatomy so large as to be deformed, two women, and a truly amazing, not to mention unusual, application of a feather duster. Superimposed on this bizarre scene was a variety of program icons, many apparently related to manipulation of photographs and videos.

Ivy couldn’t help himself. “Damn. Uh, with all due respect, ma’am, how could anyone get any work done staring at that? I mean, Jesus.” This comment had the effect of a magnet—everyone gathered around to see what was happening.

“Well,” I was trying to keep a straight face, “What I want to know is, wouldn’t that tickle to distraction? I mean, yeesh, how does he keep it up?” And everyone in the room dissolved into laughter.

After that, it was easier to get the job finished.

\* \* \*

“So, the guy is a pornographer. The question I want an answer to is why did he break into our house?” Hal was folding a pancake around a second helping of mu-shu pork.

“That, my perceptive friend, is what I’ve been wondering. Want to hear my theory now?”

“Theorize away, my dear. You want another pancake yet?”

“Not yet. I’ve got talking to do, between bites. So this will last. OK, here goes.” And I bit off a mouthful of mu-shu pork and wound up with juice dribbling down my chin. I wiped it away with a finger.

“The only thing that makes any sense to me,” I was talking around the bite, “is a connection to Arizona. I mean, I go down there, participate in a meeting involving the investigation of Melody’s death, and when I come back our house is immediately invaded by a guy who’s got dirty pictures of Melody on file, apparently for sale rather than for blackmail, because he’s got a release. So whoever’s behind all this, and I don’t mean Lovett, he’s small fry, whoever’s behind this is threatened by my involvement somehow. And they thought I had something here at home that’s of some danger to them.”

“Well, do you?”

“The only thing I brought back from Arizona is my interview notes, which I dropped off at the office Saturday afternoon, and some stuff from Melody’s apartment. Personal things, keepsakes I’m going to give to Mildred, and a diary. Could someone be so threatened by those notes that they need to steal them? Or the diary?”

“You know better than I. But one of the people you interviewed could have decided he said something so incriminating that he had to get the notes away from you before you figured out the incrimination. Or, another angle, someone you didn’t interview could be worried that someone else, whom you did interview, incriminated him. Or some variant of these two possibilities. Or there is indeed something in that diary. So, I’d make a copy of the notes and archive them carefully, and I’d go over the interviews with a fine-toothed comb to see what might be incriminating. But you’ve figured this out already, I’m sure.”

“Sort of. I was planning on having someone transcribe my notes onto the CBI computer file system. Tomorrow. Maybe I should have made copies today and hidden one set.”

“You said that the offices were intact this afternoon. Did you notice if your notes were where you left them Saturday?”

I closed my eyes and chewed thoughtfully. It took long enough that I bit off another chunk of mu-shu.

“I think so. I put them on my desk, and I seem to recall them today. Yeah, I remember, they were there this afternoon, when I dropped off my computer stuff, I’m sure. So was everything else.”

“So, run over after dinner and make sure they’re still there, and make a copy to hide somewhere. Uh, not here, if you please. Although I suppose that this would be a good place, now that it’s been picked over already.”

“Actually that reminded me—there’s a stack of Zip disks from that search today that need to be protected as well. I can’t bring them here, though...what? What are you staring at?”

“I’m trying to decide if I should come over there and lick that sauce off your chin.”

“Aw. How sweet. But no need.” I wiped it off. “Anyway, I can lock all the stuff in the safe at work. I’ll go do that after we finish dinner.”

“You don’t want to bring it here?”

“You want to have a porn library in your house? Maybe have President Black over for a showing? He could bring Provost Martin. I’m sure that would be fun.”

“Hmm. Guess not. And, hey, be nice. John’s one indiscretion shouldn’t follow him around forever.”

“Yeah, I know. Sometimes I just like to be catty. Now what?” I was wondering why Hal was staring at the ceiling.

“John told me he went to Sizzles that one time, when it wound up being his alibi for the Stiller case, and he talked to you about it, right?”

“A little. All I was interested in was the alibi part. And I let him know that, as a taxpayer, I wasn’t happy with his choice of nightspots. But we didn’t talk about it very much.”

“We didn’t go into detail, either. But maybe it would be a good idea to. See, if Melody was mixed up with this porn creep, from your perspective it’s relevant because she was killed. And it sounds like she may have been killed shortly after her last photo-shoot with him. But from my perspective, and even more from John’s, there’s the bigger issue of the safety of the women students. And maybe the men students as well, if this guy also provides material for the gay porn scene.”

“All we saw was girls, girls, girls, with the occasional male model acting as, um, an orifice plug.”

“And I bet that this creep Lovett set up shop here specifically because of the presence of FSU. I remember we talked at Fannie’s about how college girls like the occasional adventure, and the money would be enticing. And we at the U aren’t going to go moralizing about things like working as a topless

waitress at a place like Fannie's. But this is different. For one thing, Melody's dead. For another, there's HIV and other real dangers to consider. And for yet another, I wouldn't be surprised if there's an extortion angle to this. I mean, if Mom and Dad hear that their little girl's working at Fannie's with her shirt off while she's away at college, well, that would be pretty bad. But if they were to hear that she's become involved with the porn industry, that'd be a catastrophe. The girls would probably go to great lengths to prevent that."

"So what do you think John could contribute?"

"Don't know. But he was in Sizzles and may have seen things that you need to know about. Things that you'd have trouble finding out." Hal grinned impishly. "Of course, you could always send me there as a spy."

I rose to that bait only indirectly. "Or we could find out from John if there were couples and go together, so I could keep my eye on you. But I'm fairly well-known in this town, and so are you, so we probably wouldn't be anonymous. Want to develop a new reputation as the swinging dean and his detective?"

"Oh yeah. Right. Maybe we could even make the front page of the *Free Press*, with one of those tabloid-type surprise pictures. *That* would make parents feel good about sending their kids to Frémont State."

"And wouldn't the Colorado taxpayers, and especially their elected representatives in Denver, feel good about a CBI executive in the same picture?"

He smiled. "Well, if we ever get tired of Colorado, we know one way to get ourselves invited to leave."

\* \* \*

I wasn't a fan of working on Sundays, but whenever I did, it made Monday morning far more palatable. This time was a good example, because I had been out of town almost all of the previous week. My hours spent catching up on Sunday after the search meant that I could start fresh on Monday morning. And a good thing, too, because at 8:30, Rudy Gelinski called.

"Annette? Glad to catch you. Hope you've recovered from our little meeting last week?"

"That was the easy part. It's catching up with all the stuff here that's the hard part."

"That's the way it is for me, too. Amazing how the day-to-day crap piles up when you're out of the office, isn't it? Listen, I called to talk a little more about my report on Melody Witherspoon. Got a minute?"

"Sure do. Maybe we can trade information. I know you're the medical examiner, not the sheriff. But you're my closest link to local law enforcement down there and I need someone to talk to."

"I'm honored. Want to go first?"

"You called, so you must have something in mind."

"OK. I do. Y'see, the information that Melody was seen in Durango on the Saturday before her body was found inside that greenhouse got me to thinking. When I did the autopsy on Monday evening, two weeks ago, I put her time of death at Saturday morning, with some margin for error, of course. According to what I saw, she could have died as late as Saturday evening. And then she was buried sometime between about 10:00 PM Sunday and, approximately, a few hours after the time she's supposed to have let herself in through that recording lock at 3:00 AM or whatever it was. With me?"

“I am. And I also remember your comment about the lividity patterns, how they were consistent with her burial position. So she wasn’t just tossed into a car trunk, say, and driven from Durango to Oracle.”

“Right. She was buried lying on her back, and the blood was pooled along the backs of her legs, her buttocks, and so on. Now. Here’s what I’ve been thinking about. My findings were based on local conditions. I mean, say someone gets dead and lies around outside, outside here in the local area somewhere at this time of year. In that case, what I found in the autopsy is consistent with about a two-day-dead person. You read the report?”

“I did.” I shifted the phone to her other ear.

“Good. That means I don’t have to go into detail. Anyway, what I’ve been wondering about is this: What if she was lying on her back somewhere in that greenhouse before she was buried? I feel reasonably comfortable with the interment estimate, four to eight hours or so, especially with those fudge factors I gave myself. I took into account the climate and the soil in there. But if she was killed in there, or killed just outside and hauled in there and put somewhere, pre-burial, her deterioration would have been accelerated. It’s a lot more humid in there than it is outside, and hotter, this time of year.”

“Hmm. So the 3:00 AM entry could have been whoever going in to bury her, but she was already in there? And therefore she might have been killed after Saturday evening? When?”

“I guess I’d shift things up by at least twelve hours. So as a central estimate, start with Saturday evening and stretch it to at least Sunday morning. Maybe late Sunday morning.”

“I’ve got to tell you, Rudy, I like this new time-line, just for selfish, personal reasons. It means that maybe she wasn’t killed up here in Colorado.” I heard quiet laughter in response.

“But remember, you accepted that temporary appointment to Ross Townsend’s staff, so you’re part of the Arizona DPS now. So you don’t get off completely. You’ve got to see this through.” He laughed again. “For one thing, you’re miles ahead of anyone in Pinal County, investigator-wise. Hell, we need you, Annette.”

“Aw, c’mon. You don’t think Sibley Jensen could handle this?”

“Ugh. Don’t get me started. But you wanted to talk about something, too.”

“Yeah, we had an interesting weekend.” I related catching the would-be burglar and the results of our search of his condominium. “And I was wondering if you did an HIV test on Melody’s blood?”

“No, no reason to. There were no signs of sexual assault, or even recent activity, either. I don’t want to sound prurient, here, but did you look at that last disk you found? Or the other ones?”

“Yesterday, when I came in to catch up. She had graduated from coy underwear modeling with the occasional nudie shot to explicit poses. Alone. You know, masturbation pictures, stuff like that. I suppose that her involvement with this Lovett guy would explain the Valium prescription.”

“Could be. Let’s see. She had just finished her Ph.D., right? And she had a postdoctoral research appointment at EcoARC? Yeah, trying to start up a respectable career in scientific research while being a porn model on the side could lead to some serious stress, I bet.”

“Yes, and possibly serious depression, I’d suppose. Rudy? Is there any possibility that her death was suicide? That she suffocated herself somehow, and then, say, someone found her and decided to bury her in the greenhouse?”

“I can imagine that possibility, I guess. Put it this way: there’s nothing inconsistent with that. Oh, wait. The fingernails. Who’s skin and blood is that? How’d it get there?”

“Right, of course. That would hardly be consistent with suicide. Down your way just about everyone except you, I think, believes that it’s Jorgé Alvarez’s skin and blood.” I told him about my dinner with Bill Longwell and his change of attitude.

“That’s completely bizarre. I mean, he sat through the first part of our meeting, right? When we discussed the inconsistencies of Alvarez’s death? How the sheriff’s story is full of questions? Why would he fall back on the Alvarez theory?”

“Only thing I can think of is that someone got to him somehow.”

“Got to him? As in, blackmail?”

“Something. And it’s hard to figure. The guy’s squeaky clean. Navy SEAL. Really deep security clearance that carried over to his career in research. He started out with some company that was doing top secret stuff for the Navy, it looks like. After that he got involved with some biochemical research that led him to EcoARC. Did a stint at the National Science Foundation in there for a while. Nothing suspicious at all.”

“Must be a family connection.”

“Maybe. But, look, Rudy. Something similar must be going on in the Pinal County Sheriff’s Office. I mean, why would all those guys stick to such a thin story? Has somebody got to them, too?”

“Oh, I doubt it. Y’see, Elwood’s just a good old boy trying to keep the modern world at bay. He hires his in-laws as deputies and tries to run the county according to his rules. That guy Lyle Shaughnessy, for example, the one who found Alvarez’s body, is a brother-in-law, I think. The place is rife with nepotism. So they all stick together. And the reason for picking on Alvarez was simple—it started with the scratches on his face and Elwood saw it as a political opportunity. Y’see, there’s an election coming up, and he’s going to have some real opposition, for the first time in a long while. He needs to divert attention from the accusations about how he runs his office. So this Alvarez thing was just what he needed. Not that it’s going to do him any good.” I heard laughter again.

“Why’s that?” I felt I was missing something important.

“Huh? Oh, yeah, I forgot to tell you. The other reason I called. The DNA test came in first thing this morning. There’s no match between who was under Melody’s fingernails and Alvarez’s face. Elwood, and everyone else down here, is going to have to find a new theory.”

Although I wasn’t really surprised by this information, I was startled to hear it and paused to think.

“Rudy? Let’s keep this between us for a while, OK?”

\* \* \*

## Seven

Now, I thought, Sheriff Elwood Johnson has more problems than just dealing with accusations of nepotism in his office. An innocent man died in his jail, under highly suspicious circumstances. But that’s not my problem. My problem is who killed Melody, and where.

I spent the better part of two hours doing the Monday-morning social ritual with my office staff and briefing my assistant, Derek Petersen, on where things stood. It occurred to me that another benefit of

my hours at the office on Sunday was that I needed less of a briefing from him, as I was already caught up on most of the local business.

Rudy Gelinski's revised time-line complicated matters. If Melody was killed in Arizona, I really had no business being part of the case at all. Melody's involvement with Jimmie Lovett and Intermountain Social Services might be connected with some type of criminal activity—although this was not at all obvious—but that would be an entirely different matter from her murder in Arizona. Unless, that is, Lovett drove her down there and killed her, but even then it would be an Arizona crime.

On the other hand, I did have that Arizona DPS appointment, which Rod Andersen and his boss, our Governor, had urged on me, all legal and documented. And if there was a chance that Melody was killed in Colorado, it made sense to stay involved, even to continue to be the lead investigator.

So, I thought, I'd better get busy investigating. I poked the speed-dial button on my desk phone for Hal's personal office number.

"Weathers, natural sciences"

"Trieri, CBI, here. Doing a survey. Got any new crimes to report today?"

"Nope. It's still early, though. You might get lucky. What's up? I've only got a second."

"Oh, sorry. I wanted to get your opinion on whether I should call John Martin to talk more about Sizzles, like we discussed yesterday."

"Sure. Do it. But not over the phone. Take him to lunch. In fact, ask him now. Here."

I was trying to sort out what was going on, when Martin's voice came on the line.

"Annette? Good morning. Glad you're back. How's the investigation of Melody Witherspoon going?"

"John? I guess I interrupted a meeting, or something. Sorry."

"I just came over to chat with Hal about a couple of things. No big deal. What can I do for you?"

"I want to pick at an old scab a bit, I'm afraid. But it's all in a good cause. Hal's right, though, we should go somewhere off campus, private. I'd like to ask you for as many details about Sizzles as you can remember. It's in connection with Melody."

There was a pause, and I wondered if Martin would be offended.

"I guess we never did talk about the place much, did we?" He didn't sound mad, just thoughtful. "And one of the things that Hal and I were just talking about was your little adventure Friday evening, and what you discovered over the weekend. It looks like I'm going to be holding my breath until *Playboy* publishes its 'Girls of Frémont State' special issue. You think there's a connection between this porn photographer and Sizzles?"

"He had several Intermountain Social Services cards in his wallet, and they run Sizzles."

"Several cards meaning he's connected rather than just carrying a card for reference purposes, no doubt. I think I understand."

"Right. And we know Melody was connected with Intermountain somehow, maybe through this photographer. Also, we know a couple of other things. The suspect in Arizona is—or was, he's dead now—exonerated, by DNA test. Please keep that to yourself, by the way. And the chance that Melody was killed in Arizona went up over the weekend, with a revised time-of-death estimate from the medical examiner down there."

“But she was still mixed up in this porn ring while she was a student here, and she was here two weeks ago, just before she was killed. So, yes, I’d be happy to give you as many details as I can. And off-campus is a good idea.”

“I know you have a hectic schedule...”

“...which I can never manage to carry around in my head more than a half day in advance. But I do recall that I’m free, or at least I can get free, for lunch today.”

I had to laugh. “I’m not the best person to pick lunch spots. Did Hal ever tell you where our first date was? We needed to have lunch to talk about the Stiller case and the best place for me was Fannie’s Saloon. So that was our first time out together.”

I heard laughter on the other end and could only imagine the look that Hal was getting from his boss.

“Fannie’s, eh? I recall that you recommended it to me as a safer alternative to Sizzles. And, given our upcoming conversation, it would be appropriate. But, tell you what, let’s go someplace more socially acceptable for people of our stature in the community.”

“Yeah, Hal and I talked about a reconnoitering visit to Sizzles and came to the same conclusion. How about the Palace? I haven’t been there for ages.”

“Sounds good. But they tend to fill up at noon, so how about 11:45?”

“I’ll meet you there. Thanks for being helpful with this, John.”

“My pleasure. Hal wants the phone back, hold on.” I heard noises of the receiver transfer, and a click.

“Annette? I put you on my speaker phone. Listen, John and I have been talking about whether this is a threat to our women students, at least a threat we should be concerned about. You’ve got all those names and IDs, and we don’t want to invade anyone’s privacy. But it would help us to know how many other women in Lovett’s portfolio are FSU students. It’s something of a dilemma.”

I’ll say, I thought to myself. This is why so many people are not in favor of a national identification-card system.

“We didn’t find any information to suggest that the models were minors; quite the opposite, in fact. There was documentation that they were all over 18. So, legally, they’re adults and can do whatever they want in the way of taking their clothes off. I don’t think the U has anything to say about it. And it follows that providing you with information to match the models with your student database would be an invasion of their privacy.”

“Yeah, that’s what we were thinking. But you see our position, don’t you?”

“Yes, and I’ll tell you what I can do. We’re going to run a cross-check of the models with the NCIC computer and other sources of information, missing persons and so on. If we come up with any matches from those searches, I’ll pass along the appropriate ones. If it turns out there are any other FSU students who were also models and who are now missing or dead, others besides Melody, we’ll have to look into the pattern.”

“At least that’s something, even if it is something after the fact. Shutting the barn door after the horses have run out, and all that. We were trying to figure out how to warn people, the women students, I mean.”

“As in ‘one of our ex-students was a porn model and now she’s dead, so watch out if you get approached by a sleazeball?’ You sure that’s necessary? Or even a good idea?”

I heard a throat clearing, and John Martin's voice, from what sounded like a distance, came on the line.

"Annette, you know how I think. We don't want any of our students mixed up in this kind of thing for their own safety, of course, but we also don't want the U to look bad. Either by allowing, and I mean this despite their being adults, by allowing them to be involved in activities like this or failing to warn them of the danger. I suppose the lawyers might even decide we have a responsibility to warn them."

"By going public with Melody's second job? Oh, that would make her mother very happy with the U indeed. And I can tell you, she has serious political clout. She got me the appointment in Arizona somehow. Look, isn't there a better way to keep the lawyers happy? How about putting out a broadcast warning to the students that you've heard that there's a pornography ring operating in the area and that they're preying on FSU students? And don't limit it to women. What will happen is that the papers will get interested, and you can work with them to flesh out the story, oops, no pun intended, without being specific about Melody."

"Uh, Annette?" It was Hal, using his "did you think of this angle?" voice. "What about the fallout on your friends at the police department? If we warn people of a porn ring and the papers pick it up, won't Walt Jankowski and his people look bad?"

"Hmm. Good point. But, look, they could be the ones to put out the warning, and you folks at the U could amplify on it. When the papers chime in, it'll get wide publicity and it'll be coming from a variety of sources. With all that, it might even work."

"Good thinking, Annette." It was John Martin again. I really detest speaker phones and telephone conferences, but they seem to be inevitable. Whenever I get invited to join a "telecon," I make an effort to be too busy. But this one caught me by surprise.

"Thanks, John. This sounds like a plan. We can talk more about it at lunch, in, ah, about 45 minutes. See you at the Palace."

\* \* \*

As usual, lunch at the Palace was wonderfully elegant and far more food than I'm used to in the middle of the day. It would make me sleepy. And I knew I would feel compelled to work off the calories somehow.

But the discussion with John Martin had made it all worthwhile. It gave me a much better idea of how Sizzles operated—or at least how it had operated a couple of years ago. He was still a little embarrassed at having been found out, and he still couldn't explain what had motivated him to go there. Middle-aged men, he said, sometimes do strange things when their wives are away.

At least he had participated in the full Sizzles experience, or a lot of it. Apparently, there were several levels at which "guests," as they were called, could enjoy themselves. By far most of the guests made it only to the first level—paying the standard \$10 cover to get past the bouncers into the room with the large bar, where they could watch women taking their clothes off, writhing around and climbing on brass poles, and generally trying to be as lewd as possible without touching anyone. If all you wanted was a cold beer on a hot day, at Sizzles the drinks were expensive, the music was loud, and the scenery was distracting. It was also, according to Martin, smoky enough that it was hard to see sometimes and rather raucous, as most of the first-level guests were college guys who were drinking too much.

After an hour at the bar, during which time Martin had spent some \$50 by stuffing bills into G-strings that bumped and ground in his direction, he had asked the bartender if there wasn't someplace more quiet, less crowded. That, plus another cover charge that involved an additional zero, led to level

two. Although he didn't know its name at the time, level two included what Martin had since learned is called "lap-dancing."

Ironically, he had learned this terminology from prime-time television.

His introduction to lap-dancing had been courtesy of a young woman who introduced herself to him as "Chastity," a name, he pointed out, which proved that at least someone at Sizzles had a sense of humor.

She had waltzed into the little room into which he had been ushered, introduced herself, and proceeded to disrobe in a most provocative manner, even going so far as to ask him to help with a couple of zippers. Her outfit was reminiscent of a high-school cheerleader's costume, and, initially at least, she had her hair up in two of those sideways ponytails. The ponytails went the way of the rest of her outfit, and it wasn't too long before she was dancing before him buck naked, blonde hair loose and flying as she swung her head to the music. Try as he might, Martin could not conjure up an accurate memory of such a cheerleader from his high-school days. Of course, that was before silicone.

And silicone was something upon which Sizzles depended heavily, especially in Chastity's case. Martin thought that her enhancements had to involve about a quart of the stuff. Apiece.

At lunch, I found it curious that Martin was able to discuss his Sizzles experience as if it were nothing unusual. He became flustered only a couple of times, and his describing Chastity's lap dance was one.

Watching, and even helping, her disrobe, he said, was one thing. But then she began to circle his chair, rubbing against him, at one point clasping his head between those huge silicone "adornments," as he called them. Eventually she sat on his lap and began wriggling around, finally turning to face him, pulling his face into her incredible chest. This, he said, had been just too much too soon—probably never would have been too soon—and he had, as politely as possible, paid her to stop. This was a new wrinkle for her, apparently, and she didn't quite know how to show her gratitude. So they had just talked for the remaining time, another five minutes.

It turned out that she was from Los Angeles originally, had finished high school and then, needing an income, had turned to flouting her body. She was in Durango as a result of a cross-country road trip with a boyfriend. Their relationship had soured on the way across Arizona, and she had simply left him when they got to Colorado. And now she was one of Sizzles' star attractions, saving money to head back to California someday soon. When the five minutes were up, she picked up her clothes and went on, he supposed, to get dressed and start over for the next guest.

A short time after she left, the door through which he had entered opened, and he took the hint. In the hallway was the usher, an anonymous young woman wearing only a bikini. Following the "in for a dime, in for a dollar" approach, Martin had asked her about other entertainment opportunities. His discomfort with Chastity's repertoire fresh in his mind, he had specified that he preferred to watch rather than participate.

This was the second point at which he had been flustered at lunch.

"You understand, Annette, that I'm not a voyeur, at least not more than the average man. I mean, studies have shown that men tend to be responsive to visual stimuli. To some extent we all like to watch. And I'm probably average in that way. But I just didn't want anyone climbing on me again."

I was careful to keep a straight face. My experience playing poker with my family in Chicago comes in handy in the strangest ways.

In response to his query about additional entertainment, the usher had suggested that Martin wait in the bar for a few minutes until the next show was to begin. A show of what, Martin wasn't told, but a show that would be, apparently, level three of the Sizzles entertainment hierarchy.

It was nearing midnight, and the bar scene was in full stride. Women were undressing and presenting themselves for the inspection of the guests, the music was blaring, the air was dense with tobacco smoke, and alcohol was flowing, all at inflated prices, of course. The college crowd was more rowdy than before, and Martin waited impatiently to be summoned for whatever the show was to be.

At about 12:15—Martin remembered the time because he had been checking his watch frequently—he noticed a number of bikini-clad young women working their ways through the crowd, fetching, it appeared, selected individuals. And there was his very own, blonde with dark roots, at his elbow. He tipped her a \$20 bill. Time, apparently, for the show.

After being relieved of another \$350—this time he used a credit card—he was led down a different hallway to a little theater in the round—literally, as it turned out, because the stage was a giant turntable that rotated slowly throughout the performance.

The house lighting was quite low, and the seats were large and comfortable, well-spaced so that you weren't really aware of not being alone. Each seat had cup-holders in the armrests, a set of opera glasses, and a little box of tissues. I didn't ask what *they* were for.

Martin didn't go into detail because he really didn't need to. The performance was a live sex show, in three acts—each with a premise so transparent as to be humorous. Act one was a businessman and his secretary having sex on a desk—she started out on her knees and ended up on her back; act two was two nurses having sex in a hospital room, bouncing about on an articulated bed with each other; act three was two football players having sex with a cheerleader in a locker room, all together, now, one, two, three—appropriately, Martin pointed out, the cheerleader's performance was quite athletic. If the sets were fake, the sex was real, as could be seen without use of the opera glasses. Each act lasted about half an hour, and the whole thing was over about 2:00 AM. None of the actors or actresses appeared in more than one scene.

“That sounds like work, performing every day like that on cue.” I wasn't surprised at the range of entertainment at Sizzles, but I had never really thought through the details.

“I thought of that, too. They weren't very good actors in the traditional sense, but they managed the sexual performances quite well. Not that I'm an expert critic, you understand, Annette.” He smiled. “If you'll allow me a little joke, perhaps the performances can be credited to Viagra?”

I smiled back, just to be polite. “Could you tell how many people were in the theater, the audience? And was the audience only single men, like yourself?”

“It was hard to tell, with the house lights so low, even when it was over. I recall seeing three couples leaving. I didn't see any single women, which, I suppose isn't surprising. Altogether, at least two dozen people, maybe thirty.”

I thought for a few seconds. “So they take in close to ten thousand dollars for a performance. Hmm. They probably pay the actors less than a third of that, but still it's not going to be truly lucrative, when you consider the other overhead. But when you add it to the bar receipts and the lap-dancing, I suppose it adds up. Did you get any feeling about whether there were other levels?”

“They hinted at different things on different nights. But there wasn't anything specific.”

\* \* \*

I remember when Sizzles was busted for having live sex on their main stage, I thought, and I assumed that they stopped after that. I guess they just took it into the back room. And if all this was happening two years ago, I wonder what they're up to now? Maybe Walt knows, and I need to talk with him anyway. I reached for the phone.

And the interoffice line buzzed, as if the phone resented my reaching for it. It made me jump. I pushed the speaker button.

“Yes, Sally?”

“Director Trieri? There is a gentleman here to see you, an attorney, a Mr. Arthur Stepwood? Oh, excuse me.” And I heard her voice continuing, although muffled.

“Mr. Stepwood? I'm afraid ... Mr. Stepwood!” Her voice came back to normal. “Oh, dear, Director Trieri, he just headed down the hall toward your office. I'm so sorry.”

“Sally, don't you worry about it. But do me a favor. Send Derek and Stan in here, would you, please, soonest? Thanks.”

And by that time the offending party, Arthur Stepwood, Esq., was standing in my doorway, a smirk on his face.

“My goodness. Annette Trieri. Haven't you come up in the world? You're one of the people I have to thank for my temporary disbarment. And now you're harassing another client of mine. I'm beginning to think that you have some kind of personal vendetta against me.” During this speech, he had strolled into my office and taken a seat in the easy chair across from my desk.

I thought I would give Derek Petersen and Stan Hauser a few seconds before engaging in conversation with Stepwood. So I just stared, alternating between my desk top and a point on the wall about a foot over Stepwood's head. Even had he been standing, this would still have left a couple of feet to the ceiling. As it was, I was able to enjoy a poster of Rocky Mountain National Park, a print of a John Ward photograph of an aspen grove on Hallett Peak in autumn, that I had had framed for my wall. I picked it up at the visitor center when Hal and I drove over Trail Ridge Road on our honeymoon. It always brings back good memories.

And then Derek Petersen appeared in my doorway, with Stan Hauser towering behind him.

“Ah, yes, Derek. Thanks for dropping by. Mr. Stepwood here has invited himself into my office at a most inopportune time. Perhaps you and Stan could persuade him to wait outside, out in the waiting area, until I finish up a couple of important things?” While I said this, I shifted my stare to Stepwood. But he wasn't intimidated.

“Do I understand that you are threatening me?”

“Not at all, Artie,” Derek Petersen, along with just about every other law enforcement official in southwestern Colorado, knew Stepwood by reputation. And he also knew that “Artie” isn't Stepwood's preferred form of address. “Not at all. We're going to show you the way to our waiting room. Apparently you got lost.”

Petersen stepped into the room, and Stepwood jumped to his feet, shifting into a defensive karate stance and raising his hands in front of his chest.

“I'll have you know that I have spent quite some time lately learning how to defend myself. You approach me at your own risk.” This so surprised Derek that he stopped short, and I burst out laughing.

Then Stan Hauser stepped into the room, making it considerably more crowded all of a sudden.

After college, Stan played defensive end for the Raiders for a couple of seasons. Then he blew out a knee, and he decided that law enforcement offered better long-range career opportunities than Sunday-afternoon quarterback squishing. His current assignment was a rotation among the various CBI division offices, and he had arrived in Durango in September. At 6'10", he was nearly two feet taller than Stepwood, and he outweighed him by over a factor of two.

“Uh, Director Trieri? Does he come with a handle? I could just carry him out for you.” This caused my laughter to intensify, and Derek Petersen also began to chuckle.

Stepwood looked as if he would get a crick in his neck from staring up at Stan Houser, and his karate stance quickly dissolved as his knees started to shake.

“I believe that I’ll wait outside, Annette.” Stepwood’s voice was also shaking. “Please let me know when you’re available.”

“Thanks, guys,” I got control of myself. “Please show Mr. Stepwood our waiting area. And see if he needs coffee. Or the Men’s Room. Or both. Be generous.”

Now, I thought, I need to remember what those “important things” I’m doing are. Oh, yes, calling the PD. Maybe I’ll call Fred. I reached for my phone.

“Fred? Good afternoon. Annette here. Thought I’d fill you in on a couple of things related to our weekend search.”

“Afternoon, Annette. How’s your day?”

“Too much food so far. Went to lunch at the Palace to have a private place to chat about Sizzles with someone who’s been there. Unfortunately, it’s been a couple of years. But he told me stuff I didn’t know about two years ago.” I sketched an outline of the Sizzles operation for Winders, and got a low whistle in response.

“Wow. Maybe someone knows about all this stuff, but I sure didn’t—at least not that, what did you call it?—level three. We all know about the strippers, and we had a good idea about the lap dancing. That’s standard operating procedure for these places. But not the live sex. I’ll talk with the Captain.”

“Good idea. And here’s a heads up: People at the U want to go public with our discovery that Lovett’s a porn photographer, to warn the women. You folks might want to be out front on that, or at least do it jointly. I mean, a joint FSU-PD statement for the community would carry weight, I’d think.”

“We have a statement coming out today, but I’ll call the U about it first. Who’s office?”

“Call the Provost, John Martin. He’s one of those political types that’s concerned about the welfare of the students, of course, but also worries about FSU’s image. A lot. Finally, guess who showed up here a few minutes ago? Our mutual friend, Artie S., the little twerp. Any idea of what he might want?”

“Stepwood? There? Hmm. Well, there was a bail hearing for Lovett this morning. Despite Stepwood’s bluster and pleading, Judge Sandose decided that Lovett might be a flight risk, and when Stepwood saw this coming he asked to continue the hearing. He’s a twerp, all right, but he’s a smart one. But now that we have copies of all those disks from Saturday, we can talk to the Judge about them and show him some of it. Ultimately, I think he’ll have to set bail at some level, because this is only a B&E complaint. But I expect it’ll be high, not astronomical, but high. And if Lovett takes off, at least we get the guy out of town. And if he skips, we make some money in the process.”

“Yeah, but I need to talk with him first. Privately. Say. He broke into my house, but he didn’t steal anything, right? How about if I work Stepwood a little? He’s probably here to see if I’ll drop the complaint, and I could do some horse-trading to get the information I want plus an agreement for Lovett to leave town forever.”

“Now there’s an idea. I’m sure the DA’s office will plea-bargain this, because there was no violence and he didn’t steal anything. And getting him out of town would be a true community service. I’d say, go for it.”

\* \* \*

“Mr. Stepwood? My apologies for the delay.” After promising myself to be as polite as possible, I had walked out to the waiting area to retrieve the lawyer. “Would you care to come in?” I stepped aside and offered him the way with a sweep of my arm.

“Now.” We were seated in my office. “What can I do for you today?”

His bluster had switched to petulance. Clearly, the bum’s rush out of my office had offended his delicate sensibilities.

“As I was saying before being so rudely interrupted, I’m wondering if you have some sort of vendetta against me.”

“Arthur. Surely you know better. I had no idea that the fellow I caught breaking into my home was your client.” I smiled. “I assure you, if I had known he was your client, I would have considered just letting him off with a warning, even though I did catch him red-handed. Now, I’m certain that you have something more substantive to talk with me about. Really, how can I help you?”

I had a good idea of how I could help him—by dropping the complaint against his client, for starters—but I knew it would be to my advantage to make him ask.

“I understand that you’re involved with some people down in Arizona in an investigation. How’s that going?”

“Surprisingly well, actually. Does it have something to do with the client you mentioned?”

“I’m thinking that you might be interested in information about just that.”

“I might be indeed. However, you should know that the Arizona investigation involves one, and possibly two, murders. It’s my understanding that your newest client is only being held on a simple B&E charge ...”

“It’s your complaint, so you should be aware of it.”

“It was my house. But since the police were there, it’s in their hands. As I was saying, he’s being held on a minor charge, really. But if he has information related to the Arizona murder investigations, he needs to be aware that withholding that information could become a serious matter. So far, those investigations involve the Arizona Department of Public Safety and me. We’ve managed to avoid bringing the FBI in. But because of the interstate angle, they could well become involved. And withholding information from a federal investigation is, of course, a federal offense. So if you or your client has information about the Arizona cases, I’d suggest that you come forward with it. As soon as possible.” I smiled, but it was not a friendly smile.

“Damn, Annette, why is it always so hard with you? I mean, I come here trying to be cooperative, and you have your goons shove me around and then you threaten me and my client with the FBI.”

“Come on, Stepwood, give me a break here. I asked how I could help you, and you didn’t respond, you started asking me about the Arizona cases. You be straight with me and I’ll be straight with you. What is it you want from me? And what are you offering for it?”

“Cut to the chase, hmm? Well, my client, James Lovett, has certain information about Melody Witherspoon that you might be interested in. And, of course, he would like not only to be out of jail but also to have the B&E charge dropped.”

“Of course, for the information to be of use to me, it has to be new to me. For me to decide the information’s value, I have to know what it is. For example, already I know your client is connected to Intermountain Social Services, and I know that Melody worked for them. And I know what business they’re in. So if Lovett thinks he’s going to tell me that Melody worked for Intermountain and I’m going to cut him loose, he’s deluded.”

Stepwood’s expression had become more and more crestfallen, but I could tell he wasn’t going to give up.

“But you don’t know what she did for Intermountain.”

“Don’t need to. I know quite a lot about the Intermountain operation here in Durango, and elsewhere, for that matter, and just knowing she worked for them is enough. However, there may be other information your client could use to bargain with me.”

“Such as?”

“I’d much prefer to discuss this with him in person. There’s really no need for a middle man. With all due respect, Arthur.”

“That can probably be arranged. I’ll need to be present, of course.”

“I suppose that’s inevitable. So here’s an offer. I’ll get the PD to drop the B&E charge in return for two things. First, Lovett is out of here, Durango, southwestern Colorado, the Four Corners Region, pronto. Gone, never to return. Second, he answers a couple of questions to my satisfaction. And my satisfaction will be the sole determining factor in whether I get the PD to drop the charge.” I stared right through him.

“What questions?”

“Who he’s working for in Arizona and what he was looking for in my house.”

“How do we know you’ll be satisfied with his answers? I mean, the truth might not be very satisfying to you.”

“The truth will be quite satisfying to me. But you and Lovett need to understand that I already know a lot more than you think. So I’ll be able to see right through any games the two of you might decide to cook up. For example, if just he repeats his previous story, that he was just looking for valuables, we’ll not only throw the book at him but we’ll make his life in Durango a living hell. Am I being clear?”

“But what if that’s the truth?”

“If that’s what he’s telling you, Mr. Stepwood, you need to have a candid conversation with your client about the importance of his being truthful with you.”

\* \* \*

## **Eight**

At last, I thought, I can settle in to see if there's anything to learn from Melody's diary. It was late in the afternoon, and, between Sunday and Monday, I was finally caught up with everything I could think of.

One of my catch-up tasks had been a methodical search of the material collected from Lovett's computer, and I had made a list of all of the dates of Melody's photo shoots. It will be interesting, I thought, to see what the diary entries for those days read like.

Except that there weren't any. There were entries on the first five pages of an otherwise blank book, the last entry dated a few days before Melody's death. Either Melody had just begun keeping a diary, or volume whatever-it-was in my hand had just been started when Melody stopped writing in it forever. In the second case, I thought, the other volumes need finding.

I examined the book carefully. It was about an inch thick, one of those 8x10-format, leatherette-covered journals that you could buy at just about any large bookstore and lots of other places besides. Nothing was imprinted on the spine, and, in Melody's bookshelf, it had been mixed in with her other hardbacks and trade-sized paperbacks quite anonymously. And aside from Melody's handwriting—the big loopy kind that leads you to expect the i's and j's to be dotted with smiley faces—there was no identifying information, no name, volume number, or anything. If, I thought, that really is Melody's handwriting.

With only five pages, it made sense to make photocopies, so that the book itself could be given to Mildred Witherspoon along with the other keepsakes that I had brought back from Melody's apartment in Arizona. The keepsakes themselves were as unremarkable as the diary, several personal items that I had chosen for their obvious sentimental value—a picture of a young Mildred Witherspoon with a man whom I assumed was the departed Mr. Witherspoon; a stuffed Winnie-the-Pooh; a charm bracelet; Melody's Ph.D. diploma, matted and framed.

I made the photocopies and called Mildred Witherspoon. She answered the telephone after four rings.

"Mrs. Witherspoon? This is Annette Trieri, I don't know if you remember, but we met at the memorial service last week? I hope you found it as comforting as I did."

"Oh, yes, Mrs. Trieri. You're married to Dean Weathers as I recall. Oh. So it's not Mrs. Trieri, is it?" There was a muffled hiccuping noise.

"No—please call me Annette. Mrs. Witherspoon, I'm calling to see if you'll be home this evening. I have a few things from Melody's apartment that I thought you might like to have. I can drop by if you'll be home."

"Oh, my, you mean some of Melody's things? How wonderful! I thought they were being held for evidence, or something, and I'd never see them again. Yes, I'll be here all evening, and I'd be delighted to have you stop by. How did you happen to get them?"

"I may have not mentioned it before, but I'm with the Colorado Bureau of Investigation. I'm the director of the office here in Durango. Because of Melody's connection to the university, I got involved in this case. I've been appointed to a temporary position with the Arizona Department of Public Safety to assist them with the investigation. So I was down there late last week, and I had the opportunity to see her apartment. And I brought some things back that didn't seem to have any value to the investigation, things that I thought might have some sentimental value to you. They're not much, but I hope it's better than nothing."

"How kind of you. I don't know how I'll ever be able to repay you and Dean Weathers for your kindness."

“You don’t have to worry about it. We’re both happy to be of help. Hmm. But, you know, there is something perhaps you would know something about. Was Melody in the habit of keeping a diary?”

“Why, yes she was, ever since junior high school. Private ones, of course, ones that I never read.” I heard a demure chuckle. “I wanted to many times, I still do, actually, but I never have. It just seemed like an invasion of her privacy.”

“If she’s been keeping a diary since junior high school, there must be a set of them somewhere. They weren’t in her apartment.”

“Oh, yes a huge set. They’re here at my house. Even the recent ones. She would either bring them home or mail them to me for safekeeping. I have one here still sealed in its mailing envelope, in fact. It came just a few weeks ago.”

“Really? Mrs. Witherspoon, I think you’ve just repaid me for the things I’m going to bring by. How does a half hour from now sound?”

It sounded good to her, and I got directions to the Witherspoon residence.

I put the phone down and stared at my Rocky Mountain National Park poster. It never ceases to amaze me how getting it framed makes that \$7 poster look like art work from a gallery. Staring at it and imagining myself sitting there on that mountainside always has a calming effect on me, which I needed badly just then.

Those diaries could well be the key to the whole problem, I thought. They’ll probably have insight into what made Melody get into the porn business in the first place and maybe even provide contact information for the people she was dealing with at Intermountain. And maybe there will be something about EcoARC and why things got strange there, especially if she was close to Finnegan.

This, I thought, should break things wide open.

But my excitement was tempered with the realization that Mildred Witherspoon was undoubtedly going to read Melody’s diaries. There would be no way to prevent her—in fact, it was something of a surprise that she hadn’t already.

Which would mean she would learn about the true nature of Intermountain Social Services, most likely. Which would mean that Mildred’s view of her daughter would be forever changed, and not for the better.

But, I thought, my asking about them isn’t what’s going to make her read them— she’ll read them someday, anyway. So I don’t really have to feel guilty.

But I did.

\* \* \*

The Witherspoon place was actually close to our house, down the hill a few blocks and a little north, in an old part of town consisting mostly of remodeled Victorians. I stopped by on my way home, parked on the street, and walked up to the house carrying a paper grocery bag with Melody’s keepsakes. I set the bag on a porch swing and rang the Witherspoon doorbell.

Mildred Witherspoon answered the door with a half-empty highball glass in her left hand and a cigarette in her right—a very different person, I couldn’t help but notice, from the reserved society matron I had met at the memorial service. And although Mildred had seemed lucid on the telephone only a half-hour earlier, now she seemed half-sloshed.

“Oh, yes, Annette. Glad you came over. C’mon in.” She turned unsteadily and walked off down a hallway toward the back of the house. “Hope you don’t mind the smoke too much. I quit years ago, but then I started again. Wanna drink?”

“No, but thanks for asking.” As I followed the wobbly form down the hall, I realized that I had been mistaken about Mildred Witherspoon. At the memorial service, she had been dressed in mourning clothes and was appropriately subdued. But now, it was obvious that Mildred was only a few years older than I, ten at the most. And Hal was right, her hair was brunette with reddish highlights.

At the end of the hall, Mildred turned left, and I followed her into a combination family room and library with one wall entirely covered with bookshelves. A couch and two easy chairs filled the middle of the room, grouped to view a large-screen television.

One of the chairs was occupied by a middle-aged man watching the network news. A talking head was on-screen, talking about something to do with the White House.

“Lee? Hey, Lee, we got company.”

The man in the chair put down his glass, turned slightly, just enough to see me standing in the doorway, and rose. He was tall, with a build on the light side of medium. It looked to me as if he had gone to hair-doctor college to get his plugs done—they were all in rows, like a corn field. I tried not to stare.

“Annette, I’d like to introduce Lee, Leland, actually, but he goes by Lee, Lee Spaulding. Lee, this is Annette Treery, she’s with the Colorado Bureau of Investigation.” Mildred took another pull at her highball glass and stuck the cigarette into her mouth and sucked on it.

“Actually, Mr. Spaulding, it’s Trieri, kind of unusual, hard for people to get sometimes.” I was trying to decipher Spaulding’s odd reaction to me. “I’m glad to meet you.”

Mildred managed to half-suppress a hiccup. “We’re going to be married, Lee and I.” Sniff. “I was going to tell Melody two weeks ago when she said she’d come for a visit, but I didn’t have a chance to. She didn’t come after all.” Sniff. She slumped into the other easy chair and proceeded to sob.

Spaulding was immediately at her side. “Millie, honey, please don’t let yourself get trapped in crying again. You know the doctor said to avoid this.” He looked up at me. “She has a prescription anti-depressant, but she can’t take it with alcohol. She’s been pretty down since...since, well for the past couple of weeks. Took up smoking again, drinking more than before.”

“I can’t say as I blame her. Melody was a wonderful young woman with a great future ahead of her. This whole thing was so sad. I’m sorry to have missed you at the memorial service last week, Mr. Spaulding.” There’s that reaction again, I thought. What is it? Fright?

“Well, you see, we’re engaged, Millie and I, but it’s not public yet. We thought that if we went together, that would be the center of attention rather than the memorial for Melody. Isn’t that right, Millie?” He had been rubbing her back, and her sobs had gradually subsided.

She heaved a deep sigh. “Yes, I would have liked us to go together, Annette, but we discussed it and decided it just wouldn’t be right. Me appearing with a new beau at a memorial service for my murdered daughter. I mean, really!”

“I guess I understand, Mrs. Witherspoon. Um, do you feel up to seeing these keepsakes I brought? Or would that just be depressing?”

“Oh, yes, the things you got from her apartment. Depressing, yes, but uplifting, too, I think. Do you have them?”

“They’re on the porch swing. Mr. Spaulding, would you be so kind as to get the paper bag that’s out there?” He could hardly refuse, so he walked back down the hall toward the front of the house. I knew I wouldn’t have much time.

“Mrs. Witherspoon, there’s something I need to ask you. I’m trying to find out who murdered your daughter, and I think that it would help me to read her dairies. Could you bring yourself to lend them to me? I think they could be a huge help.”

“Melody’s dairies? Oh, yes, you asked about them on the phone. Why, I don’t see why not. I think that in the back of my mind I know I’m going to read them myself someday.”

“Right now, I think they might only depress you more. Ah, that’s not an opinion you asked for, I know, but I hate to see you like this, Mrs. Witherspoon.”

“Oh, please call me Mildred.”

“I will, Mildred. And I’ll take extremely good care of the dairies, believe me.”

I heard Spaulding’s footsteps coming back down the hall. “I think I hear Lee. Now, Mildred, are you sure that these things won’t be too upsetting for you?”

“I’m sure it will reduce me to a puddle.” She thrust out her chin in defiance. “But that’s the way it will have to be.”

She was right—each item that I had brought caused a new round of tears, but tears somewhat different from before. I wanted desperately to leave, to avoid the outpouring of grief and the reminiscences; besides, I was hungry for dinner. But I had spotted a row of identical, or nearly identical, books on the top shelf of library wall. They were about 10” tall and an inch or so thick. There were so many that they extended to the second shelf down, and on the top of those was sitting a large, unopened mailing envelope.

My chance came when Lee Spaulding said he was taking Mildred upstairs to lie down, to rest. And it sure appeared that she needed it. Clutching the Winnie-the-Pooh, she let herself be guided out of the room.

I took the now-empty paper bag and filled it with the last dozen volumes of Melody’s diary, checking first to make sure the ones on the second shelf were the newest. A quick glance at the dates of the entries proved that the earliest one I had was about a little over six years old, which would correspond to just about the time that Melody started modeling for Lovett. I also put in the bag the newest volume, in its unopened mailer.

Then I let myself out and put the bag on the floor of the back seat of my car.

I thought about leaving, but decided it would be less suspicious to wait and say a more formal goodbye to Spaulding and, if possible, Mildred Witherspoon. So I went back into the house, to the library. Spaulding was still upstairs with Mildred, apparently, so I took the opportunity to straighten the bookshelves as much as I could. After some judicious rearranging, the evidence of the missing volumes was far less obtrusive than it been at first.

Then, on impulse, I took a strip of clear tape from a roll I found on the bookshelves, applied it to a thumb-print I found on Spaulding’s glass, and put the tape in my pocket.

It took about five more minutes for Spaulding to return.

“Lee, I’m so sorry that those things upset Mildred. But I promised them to her, and I expect that not returning them would have been even more upsetting.”

“Oh, don’t worry, she’ll be fine. In fact, the way she has that stuffed animal in her grasp, I think this will help her. Really.”

“I’m glad. And now I’m going to have to be leaving. Here’s my card.” Again I noticed the strange reaction to my professional position. “Please feel free to call on me if I can be of any help.”

As I left him in the library, he was staring at my CBI card, wariness etched into his features.

\* \* \*

Back at home, I smelled the distinctive aromas of fennel and garlic, and my mouth watered. Hal was in the kitchen, puttering with salad ingredients. There was a skinny-looking football-shaped thing wrapped in foil on the counter, and a large pot of water was simmering on the stove.

“Oh, hi! Glad you’re home. Hungry? The water’s hot and I can get it to a boil in a flash. And the oven’s hot, too.”

He wiped his hands on his apron and came over to kiss me. I had finally been able to persuade him to wear aprons after he ruined one of his favorite silk shirts by splashing salad oil on it. That was my second major kitchen victory—the first had been getting him to cook without using detailed recipes and turning the process into a chemistry experiment.

“Starved. Let me go change and you can put the pasta in.”

Fifteen minutes later, in front of me sat a plate of green, red, and yellow bell peppers sautéed in a little olive oil with chunks of sweet Italian sausage, accompanied by a side of *al dente* linguini with a touch of marinara sauce—an old family recipe of mine that I’d taught to Hal as an alternative to his forever using stuff out of a jar. The skinny football had been opened to reveal a loaf of garlic bread. He served me a big bowl of salad.

“What would I do without you, anyway?” I was spearing a forkful of peppers and sausage.

“Probably eat pizza all the time. And not the good kind, either.”

“Hey! That was good pizza I got the other night, wasn’t it?”

“The pepperoni one? At least it was the take-and-bake kind. That helped. So, how was your day? Better than mine, I hope.”

“I’ve got a bag full of Melody Witherspoon’s diaries out in the car. And, guess what? Melody’s mother, Mildred, remember her? Mildred’s got a boyfriend.”

“Mildred of Runny-Nose, as I recall. A boyfriend? I don’t remember him from the service.”

“Wasn’t there.” I popped another bite into my mouth. “Guy named Lee Spaulding, Leland. Older by a few years. Dotes on her. They’re planning to get married. Melody didn’t know, apparently. Anyway, I’m hoping that those diaries will provide some insights into who might have killed Melody.”

“Mildred gave you a bunch of Melody’s diaries? I would have thought she would keep such things to herself.”

“She didn’t exactly give them to me. But she did agree that I should look at them to see what could be in there of relevance to Melody’s death.” I related the circumstances of how I actually obtained the books.

“You walked off with them? Isn’t that called ‘stealing’?”

“She did say that it would make sense for me to read them. And I promised to take good care of them. And I’m not going to keep them very long, just a day or so.” I folded a slice of garlic bread in half and bit into it.

“Made you feel guilty, huh?” He shot me a huge grin.

“OK, OK, I am feeling a little guilty about it. But I really need to see those diaries, and I got the ones that Mildred just isn’t in any kind of shape to be reading just yet. The ones starting when Melody began her modeling career.”

“But you also got the more recent ones, right? The ones that may have some information about EcoARC? Those might shed some light on that switcheroo that Bill Longwell pulled on you. Unless you figured it out since talking to me about it the other night.”

“No, I haven’t. It’s still got me puzzled, although we did make a little progress. I guess I didn’t tell you—the DNA test has cleared Jorge Alvarez. So Bill is wrong along with the sheriff and everyone. And you’re right, maybe there will be some clues in these diaries. Guess I better get reading.”

“How romantic. We can read together. I brought home a stack of budget reports about next semester’s projections.”

About an hour later, my phone rang, jangling away from the other room. After supper, we had each plunged into our respective readings, and I had made it as far as Melody’s initial modeling job in the first diary volume that I had swiped.

“Ross! Glad you called. Did you get my updates?”

“Sure did, Annette, and I’m wondering where all this will lead us. I talked with Rudy and heard about the DNA results, too. Elwood Johnson is going to have some issues to deal with, I’ll say that. But I called to talk about this business with Bill Longwell. In your report you said he flip-flopped and was trying to get you to believe that Alvarez killed the Witherspoon woman.”

“Right. And I’ve been wondering what’s going on with him. That’s a very strange position for him to take, especially as he was at the first part of our meeting last week, when we discussed Alvarez’s death.”

“And because we now know that Alvarez didn’t do it, it looks worse.”

“I think something is going on at EcoARC. Longwell must have got leaned on for some reason. He’s too much of a straight arrow to have been involved in this from the beginning.”

“Yeah, I read your comments about his background, and I agree. But what’s going on, do you think?”

“So far, I’m stumped, but I’m going to continue to work on it. Oh. Did you have any luck with the guy I caught in my house? James Lovett?”

I heard Townsend’s trademark chuckle. “Did we ever. I’ll fax you his rap sheet. But, I’ve got to say, he seems like a bit player to me. Probably not worth any more effort than just getting information out of him and sending him on his way.”

“I made a deal with his lawyer—he tells me who he’s working for and what he was looking for, and he gets to leave town. Want me to make sure he doesn’t head back down your way?”

“Oh, he’s probably OK to come back down here. It’ll give us something to amuse ourselves with on slow days.”

\* \* \*

The discussion with James Lovett, which I suspected would be in the presence of the impossible-to-avoid Arthur Stepwood, Esq., was arranged for 8:30 on Tuesday morning, at the county lockup facility near the CBI offices. I took a wild guess that the rotund Mr. Lovett would appreciate something more tasty than the lockup's morning coffee, so I brought him a double mocha from the coffee bar down the block, two shots of espresso mixed into hot chocolate. It smelled so good I almost drank it myself—I could have used it because I had stayed up late reading Melody's diaries.

I also decided I could conveniently forget that Stepwood would likely be there, so I didn't have to get him anything.

Lovett was dressed in a too-tight, bright orange, county-lockup jumpsuit, and he looked like he hadn't been sleeping. He perked up when he smelled the coffee, so I knew I had guessed correctly. And as I had suspected, the lawyer was sitting in the interview room with his client.

"Good morning, gentlemen. Mr. Lovett, I've brought you a cup of coffee, probably better coffee than they've been giving you in here." I set the large cup on the table in front of him, and his nostrils flexed.

Stepwood was clearly annoyed. "I presume that there is no assumption of a *quid pro quo* for this gift?"

"Artie, please. Then it wouldn't be a gift, would it? And you know I don't bribe criminals, I arrest them and provide the DA with what he needs to convict them. But, as we've discussed, that isn't in the cards for Mr. Lovett here, assuming that he's agreed to cooperate. How's the coffee, Mr. Lovett? And, by the way, did you take the picture on that screensaver of yours yourself? Who came up with the feather duster idea, anyway?" I had decided to let Lovett know that his place had been searched.

Lovett, in the middle of a large slurp of coffee, nearly choked, and Stepwood began pounding on his back to stop the coughing fit.

"Whatever are you referring to Ms. Trieri? You seem to have upset my client."

"Like I said yesterday, Artie, you need to make sure your clients are candid with you."

"How do you know about that?" Lovett had regained his voice. "And, anyway, it's all legal."

"Mr. Lovett, please. Surely you know I wouldn't be making this deal with you if I had more charges to bring? And naturally we were able to obtain a search warrant to look for stolen property. I mean, remember, I caught you in the act of burglarizing my house, no?"

"Right, right, now what do I have to do to get out of here?"

"Just tell me what you were really looking for in my house and who you're working for. The truth, this time. You only get one more chance."

"Or what?"

"Or, first, we formalize the charge of breaking and entering my place. Then, while we wait for your bail hearing, we find you a very interesting roommate, name of Bubba, probably, a friendly sort of fellow, *very* friendly, and we tell him what your profession is, what you do with your cameras. After that we let nature take its course. Ever been someone's girlfriend, Mr. Lovett?"

"Now just hold on there!" Stepwood was incensed. "This is outrageous. You're totally out of line, threatening my client like this!"

“I’m just predicting the future, Mr. Stepwood. And, as you know, this is all being recorded, so I’m not saying anything I’m afraid to have made public. What will it be, Mr. Lovett? Answers? Or a new and, ah, stimulating social life?”

“Stepwood told me that part of the deal is that I have to leave town. When?”

“As soon as you can pack up your possessions, with no dawdling and absolutely no more shoots. We’re not going to be unreasonable, but you’re not working in this town any more, or even in the region. Clear?”

“What’s ‘region’ mean?”

“I’m told that they won’t mind if you go back to Phoenix, if that’s what you’re asking, and neither will I. But if you set up shop any closer than that, I’ll be in your face before you can catch a breath. So. Who got you to break into my house?”

“Who’s going to know what I tell you?”

“Besides me, Mr. Stepwood here, and the camera guys, and whoever looks at the tape. I’ll have control of the tape, though, so if you keep your word, no one will see it.”

“OK, I talk to you and nobody else.” Lovett polished off his coffee with gusto.

I looked at the large mirror on the wall. “OK, guys, leave the tape running, please, and go take a break. And, Artie, I think he means you, too.”

“I’m not going anywhere. My client needs representation.”

“Beat it Stepwood. Thanks for your help and all, but I don’t need you for this. Beat it. You know where to send your bill.” Lovett waved his hand in dismissal, and I made sure not to laugh.

“So tell me, Mr. Lovett, where will he send his bill?”

“Intermountain. I figured you’d know that already.”

“So I suspected. And just to be clear, you’re right—we didn’t find anything illegal at your place. But we did find that you had a shoot a couple of weeks ago with a young woman who turned up dead within a few hours. So what that means is that wherever you go, you can be sure that you’ll be under the microscope. Now. Tell me who put you up to breaking into my place.”

He heaved a deep sigh. “Right. It was my cousin Elwood down in Arizona. Elwood Johnson.”

“Elwood Johnson the sheriff of Pinal County? I see. What were you looking for?”

“Anything about that meeting you were at. He called me and told me about that meeting and said he had to know what was going on. Said he figured you might have notes or tapes or something.”

“So Johnson’s your cousin? What about this deputy, ah, Lyle Shaughnessy? Is he any relation?”

“Lyle? Nah, I know him, but he’s married to Elwood’s sister. My mother is Elwood’s wife’s mother’s sister, so we’re cousins, me and Elwood, or cousin-in-laws, or something. I’m not related to Lyle. But what’s up with all this, anyway? I mean, Elwood just wanted me to look for anything that might have to do with the meeting, he didn’t tell me what it was about.”

“Let’s just say that Elwood’s got himself in a pickle, one he doesn’t need going into an election. And he dragged you into it as well. But now you’re not, assuming you hightail it out of the area. I ought to be able to get you out of here by noon. And, listen, thanks for not ransacking our house, you know?”

\* \* \*

## Nine

After making the necessary telephone calls and filling out the paperwork to get Lovett released, I returned to my office. Fred Winders had promised to keep an eye on Lovett to make sure he left town in a reasonable time frame, Arthur Stepwood, Esq., was nowhere to be seen, which was a good thing, and it was time for lunch. A productive morning, I thought.

I noticed that I had telephone messages—one from Rod Andersen, my boss in Denver, one from Hal, and two from Bill Longwell down at EcoARC. Well, I thought, the boss comes first, so I returned the call from Andersen, only to find that he had gone to a lunch meeting already. Hal's message also concerned lunch, specifically was I available? And Bill Longwell's office didn't answer my return call, so I assumed they were at lunch, too. Is there a message for me in all this? I wondered. It sure is making me hungry.

I left voice mail for Hal that I was sorry I'd missed him for lunch, but that I'd see him for dinner. Then I drove down past the south end of town to Fannie's Saloon. Despite its less than high-class reputation, Fannie's does have good food, and, besides, I wanted to talk with the owner.

Hal and I ate lunch there on our first "date." It was actually more of a business lunch, because I needed to talk with him about a murdered professor, and I was already at Fannie's to investigate a harassment complaint, back when I worked for the Durango Police Department. Hal made something of a fool of himself, but in an endearing kind of way. That was one of the things that led me to fall for him. And despite the distractions of all the topless young women walking around the place, Hal had actually managed a credible conversation and focused his attention on me. Most of the time, at least.

The harassment investigation had required that I interview both the waitresses and dancers as well as the management, so I had been introduced to the owner, Fannie Sullivan. In another time and another place, Fannie would have made the perfect madam, perhaps running the house of ill repute in some dusty cowboy town. But at this time, in Durango, she was just the proprietor of a topless restaurant and bar, trying to make a living in a college town by providing titillation for the guys and employment for the more adventuresome young women.

I showed the bouncer attending the door my CBI shield and quickly reassured him that I just wanted lunch.

Inside, I looked around for a minute, ignoring the dancers, and finally spotted Fannie sitting at a table by one of the few windows that wasn't completely blacked out. She was working on a set of what looked to me like accounting books, a coffee cup near her left hand. I headed over in that direction, and Fannie eventually looked up.

"Why, Annette Trieri, as I live and breathe! And I hear you're moving up in the world, working for the CBI now. Don't tell me, *please* don't tell me that I've somehow attracted the CBI's attention."

I laughed at Fannie's worried expression. "No, Fannie, not at all. I came in for lunch and a conversation with you, if you've got the time."

"For you, I sure do. I'll never forget how well you treated us before. I was worried about that complaint you were investigating. You want a lunch menu?" She leaned to look around me and raised her voice. "Bitsy! Bitsy, bring me a lunch menu, willya?"

I knew from my previous experience at Fannie's that the girls always used pseudonyms while on the floor or on stage, descriptive ones. So I wasn't surprised when Bitsy turned out to be on the flat-

ched side, her credentials for working at Fannie's being most optimistically described as "perky." Quite the opposite of "Busty," the server whom Hal had embarrassed that other time while making a fool of himself.

I ordered a grilled chicken sandwich with iced tea, and "Bitsy" scampered off in the direction of the kitchen. I watched the men's eyes following her and couldn't help but laugh.

"Fannie, I've got to say that I just love this place. Not for the naked girls, of course, but for how much I always learn about men every time I come here. It just kills me that they're so fascinated with breasts. It's like they missed out at the body parts store, so now they've got to envy ours."

"Ain't it the truth. That's one reason why I'm so glad you did that investigation a couple of years back. The usual PD guys would have been too distracted to function. You saw right through that line of bull, though. So what's on your mind today?"

"Your competition across town."

"You mean the Sizzles bunch? Oh, they're not really my competition, I'm so far from being in their league. I mean, this is just a tittie place, like Hooters without shirts. Sizzles is full-out raunch, from what I hear."

"That's what I hear, too. I interviewed someone who spent a long evening there, along with the better part of a kilo-buck, it sounded like. His evening culminated with a viewing of the live version of what you see in porn videos, apparently. And he said that somewhere during the evening he had his face rubbed by a pair of humongous siliconized boobs. To his credit, he didn't like it much."

"Sounds about right. All-the-way strippers, lap dancers, and treats for the voyeur. It wouldn't surprise me if they can make 'private' arrangements for call girls as well. That stuff's not for me, I can tell you that."

"To your credit. I'm curious, though. Do any of your girls go from here to there?"

"Hmmp. Not if I can help it. The ones that do tend to be the ones that I have to let go, for coming on to the customers too strong, or for drugs and stuff like that. I don't have any real way of keeping track, beyond what I hear from my girls. They gossip a lot."

"The reason I'm interested in all this is that a girl who used to be a student at the U turned up dead in Arizona, a day after she had been up here. I got involved because of that local angle, and during the investigation we found out that she had done some modeling for a porn photographer who works for Intermountain Social Services. They're Sizzles' parent company."

"Yeah, Intermountain is a regular porn conglomerate. Just like WalMart is forcing the Mom and Pop hardware and clothing stores out of business, Intermountain is putting the pressure on places like mine. So what's this girl's name?"

"Melody Witherspoon. You must have read about it in the paper, last week there was a service."

"Oh, right. Her? Wow, who'da thought? I mean, some of my girls are local, and we keep it quiet so their folks don't know about it. But, geez, this Melody Witherspoon was the real deal, huh? Prom queen, class president, all that stuff. Amazing. If you're going to ask, she didn't ever work here, at least not that I remember. We get some girls who use fake names, even after we explain that we'll protect their identities and that we need their real names for the health benefits and social security and so on. But I didn't recognize her from her picture. How'd you find this out, can I ask?"

"We got a warrant for a guy who tried to burglarize my house, the idiot, he turned out to be the photographer. He had pictures of her. And, of course, lots of other girls. And some couples, including

some very peculiar stuff. But Melody was always solo. Graphic, though, toward the end. She did a shoot the day before she was killed.”

“So do you think the photographer killed her?”

“No, we didn’t find any evidence of that. He’s actually just a harmless little sleazeball. But I do wonder about the rest of the Intermountain crowd. And this got me to wondering if maybe some other girls who worked for them might also have died suspiciously. You wouldn’t have heard about any such thing, would you? Through the grapevine?”

Fannie thought for a minute, and “Bitsy” came back with my lunch.

“You know, I do remember hearing something, back about the time of that complaint you investigated. I was so distracted that I didn’t pay much attention, though.”

“Would any of the girls who are still here remember?”

“You know, Wanda might. She’s been here for almost as long as I have.” Fannie grinned. “Just like me, she put her shirt on a while back, and she uses her real name, now. She’s over there tending bar.” Rather than shout, Fannie picked up a cell phone, pushed a button, and I heard a ring from the bar.

Shortly, Wanda was sitting with Fannie and me, sipping the iced tea she had brought with her, being introduced. Like Fannie, she remembered my fair treatment of the place during the harassment investigation, so the conversation wasn’t burdened by unreasonable levels of mistrust.

“I remember what you’re taking about.” Wanda had one of those almost southern accents that, I thought, would drive men wild, especially if she was half undressed.

“It was the girl we called Big Willie. Tall, kind of stocky. Blonde, the bottle kind. She worked here for about six months and left, I never knew why.”

“I canned her.” Fannie looked disgusted. “She was propositioning the customers. And, I think, doing dope.”

“Oh!” Wanda’s surprise was evident. “Well, anyway, her friend Ima said she went to work over at Sizzles for a while, and she got a job in Denver at another Sizzles there. Ima lost track of her after that, said that Willie just disappeared. Later we found out she had died, but we never knew why.”

“Do you remember her real name?” I had a notebook out.

“We called her Big Willie, but her name was Agnes. Agnes something. Jefferson. That’s it, Agnes Jefferson.”

I wrote it down, but I really didn’t need to. I remembered seeing the name in James Lovett’s files—“Agnes” had sort of jumped out at me, not being the kind of name one associates with girlie pictures.

\* \* \*

So, I thought, as I drove back to my office, more or less two years ago, another of Lovett’s models winds up dead. Different circumstances, because Agnes had, apparently, moved to Denver. But she was still associated with Intermountain there. I’d better call the Denver PD and see what they know about this. Or, better yet, I’ll just mention it to Rod when I call him back. I wonder what he wants.

As I was approaching the US-550 intersection south of town, the radio in my Explorer crackled. Ever since my first CBI case, which had involved tracking a suspect through the back country, the CBI had equipped me with a Ford Explorer with four-wheel-drive and plenty of ground clearance. Not as

much fun or as comfortable as Hal's S4, and woefully underpowered by any standard, but far more expendable. Plus it had a police radio.

And now I was hearing on that radio an exchange between two Durango officers, who, it seemed, were pursuing a suspect. With the new rules, they were not supposed to engage in high-speed pursuit unless there was one of a short list of compelling reasons. In this case, it sounded to me as if they didn't have a reason on the list, so the pursuit was as much by radio as by ground. I grabbed the mike.

"Break, break. This is Annette Trieri, CBI. I'm northbound at the south 550-160 intersection. Can I assist?"

"Officer Peter Ivy here, ma'am, remember me? Yes, maybe you can. We're trying to tail a suspect who's headed your way, southbound. He's driving like a madman, and we're not authorized to pursue at full speed. I've got help at the mall exit, but she's stuck in traffic and can't use her lights. She needs to lay low."

"What am I looking for?"

"Black BMW, seven series, Colorado vanity plate B-I-G-T-O-O-T."

"A guy with vanity plates is trying to run? I gather this isn't a rocket scientist we're dealing with."

"Probably not. The car may be stolen."

I was maneuvering for a U-turn, to be ready for the BMW, when a second voice came on the radio.

"Peter? Shirley. He just passed the mall entrance. Still southbound. I'll get after him as soon as I can get clear of this traffic. Can the CBI pick him up?"

"I'll sure try. Should I apprehend him, or just tail him?"

"It's your call. We'd like to get him, but don't get hurt, hear?"

"Don't worry. I have a strong streak of self-preservation. Ask Fred Winders about me some day. Oops, there he is, coming up fast. Damn, you're right. Driving like a madman, like you said. Weaving all over the place. Doesn't look drunk, though." I pulled back onto the highway, southbound now, accelerating as hard as the underpowered SUV would let me. The BMW shot by before I came up to speed.

"OK, team, he's got way more car than I do, so I'll follow as best I can. Call the La Plata Sheriff's Department and tell them what's going on. We're coming up on the 550 turn off, and he's headed that way, up the hill, southbound toward New Mexico. Whoa, he spun out, nearly wiped out a pickup. But now he's headed up the hill."

I had to slow to a crawl to negotiate the 180-degree turn to the right onto US-550, and then I felt as if I should get out and push to help the Explorer get going up the hill. Behind and below me, still coming the other way before the turn, I saw two Durango police cruisers, now with their lights flashing.

Up onto Florida Mesa, our little caravan raced south along the bluff above the Animas River, through the Southern Ute Reservation. I saw the two Durango cars gaining on me, so I grabbed my mike.

"Peter? Trieri here. You guys seem to have more car than I do, too, plus you've got lights. Why don't you pass me and see if you can get closer to our friend up there?" There was a double-click in response, and shortly the two cars glided by my Explorer. We all waved at each other, briefly.

As the two cars pulled farther and farther ahead, I began wondering just what I was contributing to this situation, beyond another car going too fast on a rural highway. But the speaker crackled.

“Ms. Trieri? Ivy here. Suspect just tossed something out the passenger side window, it landed in the ditch. Just where I’m passing...now.” I visually marked the spot and began braking as I keyed my mike.

“Got it. I’ll retrieve it for you and let you go. I can’t seem to keep up. Good luck.”

“Thanks. We’re getting a road block set up at the bottom of Bondad Hill, way up ahead where the highway crosses the river. Tire spikes, I think. Out.”

I stopped my SUV about 50 yards before my best estimate of the spot that Ivy had noted and hunted around in the back to find the magnetic bubble I knew was in there somewhere. Eventually, I had it on top, plugged in, and giving traffic at least a little warning that something was going on. I found some plastic gloves, put them on, and began walking up the ditch ahead of my parked car.

It took me two passes to find it, because the weeds were high enough to make things difficult. But there it was, a heavy-duty ZipLock bag, the gallon size, stuffed so full that I was surprised it hadn’t burst open. Inside were other, smaller, bags, one containing currency, another with a white powder. And another with what looked to be compact disks.

I walked back to the car, found a roll of crime-scene tape and tore off a six-inch piece. Somewhere in the back, I knew, there was a satchel full of other stuff useful for investigations, and, after rooting through a variety of equipment, I found a good-sized nail. Poking it through the tape, which was tougher than I’d thought, I walked back to the bag on the ground, stuck the nail in the ground next to it, and finally picked it up, by its corners. After I put it in the back of the car, I walked the ditch again, for at least a quarter mile, to make sure there was nothing I’d missed.

\* \* \*

Back in my car, headed south toward the road block, I listened to the radio traffic. I had used my cell phone to call into my office, to let Sally know where I was, and I had also called the local State Patrol district office to make sure they were in the loop.

The radio traffic was less than informative, partial conversations, brief acknowledgements, seemingly random clicks. But as I came around the curve about halfway down Bondad Hill, the long grade from the top of Florida Mesa down to the Animas River, I could see a considerable amount of activity down below. There were five police cars, lights blinking madly away, scattered about the highway in the vicinity of the bridge. A black sedan, which I suspected was the rogue BMW, was sitting perpendicular to the highway with its rear tires in the left-hand ditch. On the far side of the bridge was a long line of cars sitting in the hot October sun, blocked by one of the blinking police cars.

I pulled off the road near the cluster of police cars, and walked over toward a little group of officers in various flavors of uniforms. Catching Ivy’s eye, I gave him a covert thumbs up, with a “Shhh” gesture and a wink for good measure. He was in the midst of an animated conversation with an officer wearing what I recognized to be a La Plata County Sheriff’s Department uniform. Meanwhile, down the hill were coming two State Patrol cars, new arrivals who would probably further confuse matters.

The only person present who didn’t look confused was a Southern Ute police officer, who remained off to one side, leaning against his battered Blazer. At well over six feet tall with a football lineman’s build, and with jurisdiction, he could have been running the show, but instead he chose to stay on the sidelines, arms crossed, looking bemused at the confusion. I gave him a “why me?” gesture, and he laughed quietly and nodded.

“Ladies and gentlemen! Attention, please!” I used my Level 2 Voice, and it worked as I had hoped. “For those of you who don’t know me, I’m Annette Trieri, Director of the CBI office in Durango. I want to congratulate all of you on a successful cooperative effort here. I assume that the driver of this BMW

is securely handcuffed in the back of someone's car? I'll be sure to pass along my praise for your efforts to your superiors."

This had the effect of pre-empting whatever arguments were going on, and things calmed down considerably. By then the two State Patrol officers had arrived, parked, and were approaching the group. Before they could do anything, I showed them my shield.

"Fellas, we have some sorting out to do here, but you know what really needs to be done? Let's see if we can get traffic moving again."

This wasn't the job the troopers had in mind when they'd arrived, but I outranked them in the scheme of things.

"Officer Ivy, where is the suspect? And who is he?"

"In the back of *his* car, ma'am. And I need to take him in." Ivy was pointing at one of the county officers.

"Maybe, maybe not. First things first." I looked at the Southern Ute officer and took note of his stripes. "Sergeant, this is your jurisdiction. But this collar involves hot pursuit, and it started back in Durango. Do you want responsibility, or can we take the suspect back to town?"

The response involved a wide grin, the "safe" gesture that baseball umpires use, and the comment, "He's all yours. I'll be on my way."

"Thank you. I think." I turned to the others. "Officer Ivy, do you have ID on the suspect?"

"Yes, ma'am. Michael Shaughnessy, age 22, Arizona license, nothing outstanding. Made a lot of noise about his father being a deputy sheriff down by Tucson somewhere."

I tried carefully to mask my surprise. "OK. What I think is that this is La Plata County, the Southern Utes have just declined jurisdiction, and so the suspect goes to the county lockup for whatever charges the sheriff may decide to file. Peter, Shirley, you two must also have charges to file, and I'll be sure and put in a good word to Walt Jankowski about your work." The mention of their captain's name calmed the two Durango officers, and things quieted down even more.

The Southern Ute officer drove off, eastward down a gravel road, and one of the county officers drove off north, with the suspect in the back. The other county officer was busy retrieving the spike belt that had stopped the BMW. And the two State Patrol officers were directing traffic. I turned to the two Durango officers.

"Thanks for not objecting, Shirley, Peter. And this approach is in your best interest. For one thing, neither of you has to wait around for the tow truck to take that BMW back to the yard, that county guy will have to do it. For another, think about what the county guys have to file in the way of charges. Running over a spike belt, and speeding, if they got him with a radar? I don't think that's going to get them much. And for yet another thing, I've got the bag of stuff our suspect there," I gestured at the county car making its way back up the hill, "tossed out of his car back up top. I handled it carefully and you should be able to get prints off it to prove it's his. Unless he was wearing driving gloves. Was he?" I looked from one to the other.

"Not that I saw." Ivy responded first. "Although he could have left some in the car."

"What's in the bag?" Officer Shirley Rice finally spoke.

"Cash, a mysterious white powder. Some CDs." I grinned. "You know, the kind of stuff that you run across in farmers' ditches all the time."

Rice got the joke instantly. “Yeah, that’s what his lawyer will tell the judge, I bet. Good thing about the prints.”

“If you get any, but you should. Tell you what. Let me retain custody until we get back to town, so the deputy over there doesn’t get too suspicious. You guys head back and work on your reports, and I’ll come by the station and have a chat with Walt and log in the evidence with you.”

“How come you’re doing this?” Ivy didn’t seem used to cooperative police work.

“You’re new, so you don’t know, but I used to work at the PD, I was the head of investigations. Walt’s an old friend of mine. And, besides, this really is your collar, I mean you started chasing him. Why, by the way?”

“Really it was about a blowing a red light, at first. We had this low-key stake-out going at a place up town, we were supposed to watch for this car leaving. Lieutenant Winders put us onto it. And when he left, he left in a big hurry, with complete disregard for our local ideas of propriety. So we started chasing him.” Rice shrugged as if to dismiss the importance of the whole thing.

“*Lieutenant Winders?* Why, I didn’t know Fred got bumped up. I just talked to him the other day, and he didn’t say anything, the turkey. I’ll have to get him a bottle of something. He used to work for me, when I was the lieutenant.” I shook my head in disbelief. “So, anyway, the guy takes off, commits some minor traffic violations, well, maybe not so minor, and now we’ll get him for something a tad more serious, assuming that powder turns out to be something other than powdered sugar. What was the place you were watching?”

Ivy tacked a sheepish grin on his face. “That strip joint, Sizzles.”

“Yeah, and he kept wanting to go inside to do the stakeout. In uniform, yet. Guys!” Rice stuck her elbow in his ribs, but Ivy was too busy turning red to say anything. It occurred to me that someone at the Durango Police Department should be careful not to assign these two young people together too much.

“Sizzles, huh? No kidding. I’ll tell you what. I want to know what’s on those computer CDs I’ve got in the car. I’ll see you guys back at the PD, OK? I want to say thanks again to the deputy there.”

But what I really wanted was to get a few minutes alone with my computer and the CDs in that ZipLock bag.

\* \* \*

It went quickly. I wore gloves and handled the three CDs by their edges, and they weren’t encoded or anything to make the copying process difficult. Afterwards, I arranged things in the big ZipLock bag the way they had been to begin with. I didn’t really pay attention to what was on the CDs, because I was trying to return my phone messages while swapping the things in and out of my computer. There was one more since I’d left for lunch, from Ross Townsend down in Arizona. But my boss still came first.

“Rod? Glad I caught you this time. You called this morning?”

“Oh, yes, thanks for calling back. Listen, there’s something strange going on with that Arizona investigation you’re involved in.”

“Tell me about it. It keeps getting stranger every day.”

“I got a call from the Governor, and he had been talking with the Governor of Arizona. It seems that the legal department of the biggest company in the consortium that runs that Ecowhatever place is making noise. They don’t like all the attention, it seems.”

“Yeah, no one does. But when a dead body turns up in your greenhouse, there’s going to be some attention, no?”

“You know that and so do I, but these legal eagles have other ideas. They’re talking about private property, they’ve cooperated with the investigation, now it’s time for the cops to go away. The fact that they were able to lean on the Governor down there is significant.”

“How come it came to you through our Gov?”

“Their Public Safety Department got a call and they said that you, as a temporary law enforcement official down there, are running the investigation. So their Gov called ours, and he called me.”

“So, what’s the bottom line?”

“I think that they won’t make any real changes, you know, terminate your appointment or anything like that, it would look too bad. But I get the impression that your job could get harder. You need cooperation down there to make this dual appointment work, and that could stop. Also, I doubt that the access to Eco...what’s it really called again?”

“EcoARC. Short for Ecological Archive Research Center.”

“Right. I don’t think they’ll be letting you in so casually.”

“Interesting. First, their director, a friend of Hal’s, does a one-eighty and starts claiming that the guy they arrested is the murderer, even though he should know better. Now, the legal department weighs in. Someone’s got some real clout and is using it.”

“Are you sure that the guy they arrested didn’t do it?”

“DNA tests cleared him. But so far, that’s a secret. I want to use it if I can. Thing is, there are other inconsistencies that Bill Longwell, the director, is aware of. So he should know better.”

“So, OK, now you know what I know. You be careful down there.”

“I sure will. Thanks for the heads up, Rod. Oh, by the way. Could you have someone look into the death, in Denver, I think, of an Agnes Jefferson about two years ago? I think it could have a bearing on this case.”

“Sure, I’ll do it myself. Got to keep my hand in somehow.”

I rang off and considered whom to call first, Bill Longwell or Ross Townsend. It seemed to me as if neither call would be pleasant. But Longwell had called first, twice, so I owed him.

This time everyone was back from lunch.

“EcoARC, director’s office. Can I help you?”

“This is Annette Trieri. Bill called me a couple of times this morning, and I’m returning the calls.”

“I’ll see if Director Longwell is available.” The tone of voice seemed calculated to be holier-than-thou, and I was appropriately annoyed.

“Annette? Listen, can I call you right back? Are you in your office? Ten seconds.” And he hung up. But, as promised, my phone rang again almost at once.

“Annette. Sorry, I wanted to use my cell phone for this call. And I’m going for a walk outside, so if you hear me breathing hard, or other odd noises in the background, that’s why.”

“Bill, if you’re concerned about being listened to on the office phone, you should know that cell phones aren’t all that secure, either.”

“Yeah, but it’s my personal one, and I don’t think it’s that much of an issue. But I don’t trust my office phone. So, why I called is to apologize. I got my arm twisted into trying to persuade you that Alvarez was the killer. I know he really couldn’t be, though, after hearing all the stuff at the meeting last week. I thought about it all weekend and decided that if I get leaned on, what I have to do is to lean back. So I called to get this off my conscience.”

“Apology accepted. And, you know, it could help my investigation for me to know who was leaning on you.” I wondered how he would respond to the hint.

“Yeah, I thought you’d ask. And I know that I’m in no position to ask for favors, but it would help me if I could duck that question for a day or two. So I can do my own leaning back first, you know?”

“OK, but I really didn’t ask anyway, I just suggested that it would be helpful. If I ask, it’ll be important, and official, OK? And since I’ve got you on the phone, there’s something else that’s come up. Through a chain of phone calls, I’ve heard that some of the lawyers on the EcoARC Board, or something like that, are wanting this whole thing to be over, so they’re going to have EcoARC quit cooperating with the investigation. Do you know anything about that?”

“This is the first I’ve heard of it, and it certainly isn’t something I can endorse. I guess that I have to do what the Board orders me to do, if it comes to that, unless I want to resign. But I think it’s our responsibility to cooperate in every way possible.” Longwell sounded offended that someone would be making decisions for him.

“That’s something I’m truly glad to hear, Bill. I expect I’ll be getting back down your way soon, so I’ll be seeing you.”

I decided to call Ross Townsend from my cell phone, so that I wouldn’t be too late getting to the Durango Police Department main station downtown. I put the re-packed ZipLock bag into my shoulder bag and headed out to my car. I had pre-dialed Townsend’s number, so I had only to hit the “send” button when traffic eased up.

“Ross? This is Annette Trieri calling back.”

“Oh, thanks, Annette. Listen, I have to run off to a meeting, but I wanted to let you know that there’s something strange happening to your investigation. I’m getting pressure, political pressure, to get you to ease off.”

“I heard about this, but it’s indeed strange because I haven’t really done anything to ease off from. Where’d your pressure come from?”

“The Governor’s office, via my boss. I reminded him that we’re dealing with a murder here, not something that the Governor would like to be accused of covering up. I mean, I put it gently, but there it is.”

“There it is indeed. I heard that EcoARC is going to stop cooperating, too. But I just talked with Bill Longwell, who, by the way, apologized for trying to get me to believe in the Alvarez theory of the murder, he said he’d been leaned on, too. Lots of leaning going on. But anyway, he said he’d cooperate and hinted he’d resign if the EcoARC Board told him not to cooperate.”

“That’s good to hear, not the resigning, but the cooperation. We’ll need it.”

“Ross? There’s one more thing. I think that Lyle Shaughnessy’s kid just got picked up by the La Plata Sheriff’s Department on some traffic charges here. And there could be drugs involved. I don’t know what connections there could be to our investigations.”

There was a long pause. “That’s odd, but I don’t know either. Listen, I gotta go, I’ll call you tomorrow, OK?”

By then, I had negotiated the traffic and pulled in to the parking lot of the police station downtown. I carried my shoulder bag with the evidence in the front door. Yet another officer whom I didn't know sat at the desk.

"Good afternoon. I'm Annette Trieri of the Colorado Bureau of Investigation. I guess I should see Fred Winders first."

"Oh, yes, Ms. Trieri, they're all expecting you. In the captain's office, down the hall."

Oh, crap, I thought. I took too long copying those CDs and now they're going to give me trouble. My conscience has a way of coming out of hiding at the most inopportune times.

\* \* \*

## Ten

"Phone calls, guys, I had to return phone calls." I had the excuse ready when I walked through Captain Walt Jankowski's door.

Jankowski, Fred Winders, and another person, whom I remembered was a fingerprint technician, looked up, surprised and dumbfounded.

"I mean, I meant to get here sooner, but I got...uh, so, anyway, I'm sorry to keep you waiting." This didn't seem to have any effect, either.

"Fred, you didn't tell me you got a promotion." Finally, something broke the spell.

He looked surprised. "Oh. No, I guess I didn't. I just never thought to, I guess, because it was a couple of months ago, and we haven't talked for a while. I forgot. Sorry."

"Well, congratulations, late ones but sincere. Couldn't have happened to a more deserving officer. So, I've brought you a little something I picked up in the countryside earlier." I set down my shoulder bag, put a plastic glove on, gingerly lifted the ZipLock bag out, and put it on Jankowski's desk.

"We're still waiting for the reports from Rice and Ivy, but they briefed me." Jankowski was standing now, looking at the plastic bag from all angles.

The technician closed in. "May I?" He didn't wait for an answer before he began dusting the bag.

"So, Fred, what's this all about? Ivy told me that you had him and Rice watching Sizzles so they could tail this car if it took off, or something like that." I was watching the technician carefully.

"That's about it. After our conversations and the business with that guy Lovett, I thought it might be a good idea to keep an eye on that place. Especially today, with Lovett being released and all. I can't say we expected this to happen." Winders shrugged.

"And the county guys have the driver in custody, right?"

Jankowski spoke up. "Yeah, they were actually quite nice about it. They faxed over his prints and ID information. That's why we're so interested in this bag."

The technician had used tape to lift several fingerprints from the large bag and progressed into the inside bags, which he was now dusting carefully.

"The car's registered to the Sizzles manager, one Tory Dowd. We're running a check on him, and the county forensics guys are going over the car now, so we'll see what they find. But he wasn't driving,

the driver was a guy named Michael Shaughnessy, out of Arizona. He claims that Dowd loaned him the car, and if Dowd doesn't complain, the county won't be pushing auto theft charges, or anything like that. They do have some violations on him, though. So do we." Winders picked up the bag with the white powder, which the technician had finished with, and opened it. He stuck in a finger, which came out with a dab of white on it, and touched it to his tongue. "Hmm. Tastes like sugar to me, but we need to have it tested to be sure. Do you suppose the cash is fake, too? Oh, wait. It's sweet like sugar, but there's something else in there."

"Walt, Fred, I've got to put in a good word for your two officers, Rice and Ivy. They handled this whole thing about as well as anyone could have. And it's my doing that the county got the collar. Your people were going to push hard to get it, but it seemed to me, at the time, that it just wasn't worth the hassle. Especially as the bag there is in your hands now." I was hoping that the two senior officers would understand.

"Stands to reason that county would bring the guy in, they really did catch him, and it wasn't inside the city. So Rice and Ivy handled the chase well?" Jankowski seemed interested in how his junior officers were progressing.

"Looked like it to me. They didn't do anything foolish, and they didn't have justification to go all out. That's why he got as far as he did, outside the city and all. I'm happy that I was able to help. But your people were great. Let me suggest that you keep an eye on them, though. There seemed to be sparks, friendly ones, between them." I turned to Winders. "Now, Fred. Ivy told me the driver was from somewhere in Arizona down by Tucson. Do you know any more?"

"Casa Grande address on his license. He's 22, told the county guys he works at Sizzles, was out doing an errand for his boss, and he doesn't understand what this whole thing is about. He's making out like his biggest worry is the damage to his boss's car. He's also talking about his father, a deputy sheriff."

"Yeah, that's what Ivy said. There's a Shaughnessy, a deputy sheriff, involved in the Arizona end of the Melody Witherspoon case, indirectly. This all gets curiouser and curiouser." I filed this new fact away for future reference and moved on to the next thing on my mental list.

"Fred, are you having Lovett watched?" I wanted to know what the pornographer's next move would be after getting out of the lockup.

"Yeah, and last we heard he was at his place loading stuff into his car. We expect him to be gone by evening."

"Good. Do you suppose you could tail him for a ways, see where he heads? Or, better yet, I'll get the State Patrol to do it, so they can see which state line he crosses. We may be getting a little closer to figuring out what happened to Melody. But, say, one more thing has come up. What do you guys know about her mother, Mildred Witherspoon?"

Jankowski picked up on that one. "Not a lot to know, in the sense that she's nearly an open book. Lived here all her life, married young, and widowed young, left with two kids and a pile of money. See, Alfred Witherspoon was the scion of one of the old mining and railroad families here, and he was, oh, maybe 50 when he married Mildred, who was about 21. I was just starting in the department back then, but I remember it was something of a scandal in the better social circles here. A few years later, he keeled over from a heart attack, just after Melody was born."

"So Mildred has money? I was at her house last night, and it's something, that's for sure. Beautifully restored Victorian, big, well-furnished."

“She may be the richest woman in the county. I don’t know the numbers, but she’s probably worth high eight or low nine figures.”

“Which, on her death, would be split by Melody and her brother Al.” I could almost feel the gears turning in my head.

“Actually, they probably both have trust funds already. Al’s part of the fire department’s rescue squad, as I guess you know, and he does it for the community service, and probably the thrills. But he doesn’t need to.”

“And Melody sure didn’t need the money from Intermountain, then, did she? Maybe that was for the thrills, too. But, you know, she sure didn’t look thrilled in some of those pictures. If there’s money involved with the Witherspoons, though, maybe this will be relevant. Did you guys know that Mildred’s got a boyfriend?”

This had the effect that I had hoped for.

“What? Really? After, what, a quarter century of being a professional widow, she’s got a boyfriend?” Jankowski was astonished.

“Interesting timing, isn’t it? Maybe,” I mused, “we should look into the details of the trusts. If they revert to Mildred on the untimely deaths of the children, perhaps Al should be on guard. And then, of course, Mildred, too. You said ‘high eight figures’? Or nine? I had no idea so much money was involved. I think I’d better run a check on Mr. Leland Spaulding.”

\* \* \*

“So the driver turns out to be named Shaughnessy, like one of Elwood Johnson’s deputies, with an Arizona license.” I was neatly slicing my way around the T-bone of a large steak that Hal had grilled outside, taking advantage of the beautiful fall evening.

“All this is getting just a little too cozy for me. Elwood’s cousin-in-law is our burglar, James Lovett, who works for Intermountain. Elwood’s brother-in-law, I think, could be the brother, or father, I guess, of this other guy who works for Intermountain. Melody worked for Intermountain, and Elwood seems to be trying to cover up her murder with a false suspect, who died in his custody.”

“Does Intermountain have offices, or a branch or something, down in Arizona?” Hal dug into his baked potato.

“Probably. I’ll check when I’m down there. I’m going to fly down to Phoenix tomorrow.”

“Not driving again?”

“I want a car that’s a little less of an attention grabber. Some kind of anonymous rental car. And flying to Phoenix and driving to Oracle, like you did, will save me a little time and, better yet, energy. That drive tired me out, even in that great car of yours.” I grinned. “I guess you know what I want for Christmas this year.”

Hal was very quick to change the subject.

“Sorry I missed you for lunch, especially if you’re off to Arizona tomorrow. I had a free couple of hours for once.”

“Me, too. I mean sorry for missing lunch with you. But then I wouldn’t have been on my way back from Fannie’s, which is why I got sucked into the car chase I just told you about.”

“You went to Fannie’s for lunch? Now I’m really sorry I missed you. But you went there alone? Is there something you’re not telling me?”

“I wanted to interview Fannie herself. Find out what she knows about Sizzles and Intermountain. Turns out that there’s another girl who worked for Intermountain and turned up dead, Fannie’s bartender told me about it. So it was helpful.”

“I suppose it makes sense that she would keep an eye on the competition.”

“She said she really doesn’t think of them as competition. She thinks of them as a level or two up from her operation. She called Fannie’s a ‘tittie place,’ and she thinks of Sizzles as way more hard-core. She sounded offended by the notion.”

“Maybe she doesn’t think of them as formal competition, but she knows they are in some sense. I mean, if Sizzles didn’t exist, Fannie’s would have far more business. And, I bet, pressure to be more than a topless joint. So Sizzles actually keeps Fannie’s in its niche. I wonder if she’s thought of that.”

“Probably. She’s well-tuned into the nuances of running her little business. Anyway, the other girl who turned up dead was in Denver at the time, and Rod Andersen is going to look into that for me.” I popped the last bite of steak into my mouth.

“Got your boss working for you, huh? I knew you’d succeed in the CBI. When are you leaving for Phoenix?”

“Late morning. I need to go into the office early and finish up a couple of things.”

“Look, if you’re going to go off and leave me all alone again, why don’t we go out for dessert? Maybe if I treat you well you’ll be motivated to come home.”

Hal has a way of teasing that does a fair job of putting me off balance. I’m never completely sure that there isn’t some element of truth behind his little jibes, no matter how good-natured they sound. So I don’t like to tease back. But I can’t take it too seriously, either—I don’t want to encourage him.

“I’ll be back, you can count on it, probably by Friday. But if you want to bribe me with dessert, I won’t turn an offer like that down. Should I get dressed up?”

“You look fine to me. Let’s go see if they have a table at Mahogany Grill. Don’t they have a dynamite chocolate thing there? Chocolate Avalanche, or something? Maybe we can split one.”

“Mahogany Grill? Chocolate Avalanche? Gee, maybe I’ll come home Thursday.”

\* \* \*

Wednesday morning, I went into my CBI office early, as I had threatened the evening before. The memory of being wooed with dessert and flowers lingered—how did he arrange the flowers? I wondered—and it would have been nice to linger in bed as well. But there was much to be done, and, besides, Hal also had to go in for an early meeting. It was a good thing, I thought, that we had our little *tête-à-tête* last night.

Although my flight to Phoenix was reserved via one of those electronic tickets, I still had paperwork to do. I was planning to take my Glock, checked in my suitcase, and there were forms that needed filling. I also wanted to have a look at the CD-ROMs that I had copied from Michael Shaughnessy’s plastic bag.

The first thing I noticed on opening my office door was that my phone message light was on. Voice mail that had arrived sometime since the office staff left yesterday was seeking attention. I punched the appropriate buttons.

“Ms. Trieri, this is Al Witherspoon. I’d like to talk with you at your earliest opportunity, if I could. And thanks for coming to the service last week. It was nice.” And he left numbers where he could be reached. I decided to call him back on my way to the airport, later in the morning, and I tackled the firearms transport paperwork.

Just as I was finishing up, my phone rang. Because it was still too early for the receptionist, I answered it myself.

“Trieri, CBI.”

“Annette? Morning. It’s Fred Winders. I thought you might be in early.”

“Why, Fred, good morning. And, hey, congratulations again on your promotion. I owe you a bottle of something. What kind of wine do you drink?”

He laughed. “We drink the kind that comes in boxes, mostly. So whatever you get will be better than what I’m used to. And thanks. I’ll try to live up to your standards. So, anyway, I called about that evidence you brought in yesterday.”

“The bag of stuff?”

“Right. You saw me taste a little of the powder, right?”

“Right. You said it tasted like sugar, only with something else.”

“Yeah, well, ahem. It’s embarrassing. But I think that something else is some kind of powdered Viagra or something just like it. Er, high-strength.”

It took a minute for me to comprehend just what he was saying, and I couldn’t help but giggle.

“Oh, Fred, I’m sorry. I don’t mean to laugh. But I think I may understand what makes you think that. Are you, um, OK?”

“Yeah, I’m fine. A little tired. I’m not too sure about Penny, though. She insisted on sleeping late this morning. And when I kissed her goodbye to leave for work, she mumbled something about bringing more home.”

“Do I understand you to be saying that it works as advertised?”

“I don’t know what’s in the advertising. But, uh, I don’t know quite how to say this…”

“Fred, it’s me. Just say it.”

“It’s embarrassing. But I had an erection that just wouldn’t go away. I mean, nothing we could do would make it go away, and, ah, we really tried. It was very peculiar. Not bad, exactly. But a little scary. I guess if it had been intentional, it could have been, well, fun. But since I wasn’t expecting it…”

“Fred, I’m sorry to be laughing, but if Penny wants you to get more, well, hell, get more. But, seriously, even though I’m laughing, this is good to know because it says something about Sizzles, you know, how they run their operation. I was told by an eye witness that they were staging live sex scenes for audiences, a couple of years ago at least. All the way, bodily fluids, you name it. At least that’s what I was told.”

“Hmm. So this stuff suggests they may still be doing it? Uh, so to speak? Sorry. Accidental pun, honest.”

“Indeed. This isn’t my concern, really, because they’re in the city limits. But maybe you guys could get someone in there undercover. It’ll cost, but I can provide some tips about how they work. Or at least how they did a couple of years ago.”

“We may take you up on that offer. I’ll talk with the Captain.”

“Fred, I’m leaving for Arizona today and I need to get some stuff off my desk. But thanks for calling. This is useful information. I hope you’re all back to normal.”

“Oh, yeah, I’m fine. But it was a weird experience. Have a good trip.”

“I will, thanks, Fred.” And I turned to the copies of the CDs with new motivation.

But before I could do anything with them, my intercom buzzed. The receptionist had arrived.

“Morning, Sally. What’s up?”

“Director Trieri, there’s a young man here who insists on seeing you right away. He says it has something to do with the Melody Witherspoon case.” I had finally persuaded Sally that first names were appropriate, but when outsiders were present, Sally reverted to the formalism of titles.

“I’ve got to leave for the airport by nine, but I have a few minutes before then. Why don’t you bring him back?”

Two minutes later, having declined a cup of coffee, Ernesto Ang, as he introduced himself, was sitting across my desk. He was, I decided, best described as “Latin casual,” dressed in a designer polo shirt and chinos. He sat relaxed, sure of himself, with his legs crossed at the knees, an alligator tassel loafer suspended in mid-air for me to see. He wasn’t wearing socks, despite the brisk fall morning.

“Thank you for seeing me without an appointment, Director Trieri. I’ve only recently learned that you are investigating Melody Witherspoon’s death.” He had a trace of an accent—not Spanish, I decided. Maybe it was Portuguese.

“And I’m told that you have information about it?” I could tell that this person was used to charming his way through interactions, and being in charge as well.

“I may. I’m here in Durango visiting the university for a couple of years on an exchange program. I’m a professor at the University of Sao Paolo, you see, and we have a new program in biogeochemistry. So I’m a visiting faculty member here.”

“I seem to recall that Melody was in the Ph.D. program in biogeochemistry at the university here.”

“Yes, she graduated shortly after I arrived. And that’s what brings me to see you.”

I waited, and the pause stretched on. Eventually, he gave in.

“Yes, well, you see, I am not married, and she is, ah, was, a very attractive young woman. So, I asked her out to dinner. We had a very pleasant evening, but it became clear to me that our relationship wouldn’t be going anywhere. So I was determined to maintain a friendship, as, you know, professional colleagues. And we continued to interact on that level, the scientific studies we had in common. Anyway, about three weeks ago, she came to me with a package and asked me if I would do her a favor. She asked me to keep it and, if something strange should happen to her, to give it to someone in authority. I didn’t know what she meant then, but it’s become clear to me since.”

I had been listening politely, but the mention of a package made me pay close attention.

“So you have a package for me from Melody, even though she didn’t know it would be me. Did she actually say ‘something strange’ or was she more specific?”

“She really did say those words, ‘something strange.’ I asked her what she meant, but that’s all she could say.” He reached down and picked up the briefcase he had set on the floor. It seemed to match his shoes, I noticed.

He removed a book-sized package wrapped in brown paper from the briefcase and set it on my desk. It was too small to be another volume of Melody's diary, so I was at a loss to think what it could be. But I had already recognized the implications of all this, that Melody had suspected that something might happen to her. And now Melody's brother Al was trying to get in touch with me.

It me took another five minutes or so to get Ernesto Ang out of my office. I owed him, and I wanted to be polite. Eventually, though, I was alone with the package.

But as I was about to open it, my intercom buzzed.

"Annette? You said you needed to leave for the airport about now."

There are simply not enough minutes in the day, I thought.

\* \* \*

As I settled into my seat, I was once again glad to be living in a small market for air travelers. I know that having an entire row to myself is a luxury, and I appreciate it when it happens.

Despite having to dash out the door for the airport, I had taken the extra minute to rip the brown paper off Melody's package, knowing I wouldn't be able to do anything about it. But I couldn't leave without some idea of what was in there.

It turned out to be a standard VCR tape, unlabeled. So I wrote "MW" with a felt pen on it and locked it in my desk. I thought of taking it with me, on the possibility that I could watch it in Arizona, but I decided that it was potentially too valuable to risk.

And I had left behind the CD-ROMs from the Shaughnessy kid's ZipLock bag as well, for the same reason.

Given the attitude of the EcoARC lawyers and the Pinal County sheriff, I wasn't quite sure of what I was walking in to. But at least my paperwork had passed muster at the airline check-in desk, and my 9-millimeter Glock 26 semi-automatic was packed away in the belly of the airplane in my suitcase, along with three full magazines.

My browsing the airline magazine lasted only about fifteen minutes before the matter at hand intruded. It was my conversation with Al Witherspoon, on my cell phone while I was on my way to the airport, that was at the top of my consciousness, because he had wanted to talk about that matter, his sister's death.

"Thanks for calling back, Ms. Trieri. I heard through the grapevine that you're investigating Melody's death."

"Call me Annette, please. I don't think I'd be here if it weren't for your having rescued me, so I feel like we're friends. And, say, you folks must have a good grapevine. I got a temporary appointment in Arizona with the DPS down there."

"I have some information that may be relevant. See, Melody and I were always close, because, you know, our father died when she was just an baby. I was four. So I've always been protective of her, and we've kept in touch since growing up."

"This whole thing must be especially tough on you, then. I'm sorry."

"Yeah, well, I'm used to fatalities because of my job. But this one *is* tough, because on top of it's being Melody I don't know what happened."

“And that’s what I’m trying to find out, what happened. I’m on my way to the airport, in fact, to fly down there and see if I can pull the pieces together. There’s been some progress, but I’m not finished yet.”

“I certainly want to do anything I can to help, and that’s why I called. I’ve got some letters that Melody wrote me that might be interesting to you.”

“Letters? Hmm. Can you give me a preview now?”

“What I thought might be most relevant are some passages that she wrote about a guy down where she was working, that eco place, EcoARC I guess it’s called. There was a graduate student there that was mooning over her, as she put it, and he wouldn’t take ‘no’ for an answer, it sounds like. She expresses what I’d call affection at first, but that turns to annoyance when he persists. She was lonely down there, but not lonely enough to get involved in a bad relationship, and I think she was feeling stalked. Thing is, I saw in the paper that her body had been found by a woman named ‘Kelly,’ and this guy was Kelly, too.”

“The paper had it wrong, her body was found by a guy named ‘Kelly,’ Kelly Rumsford, a graduate student. Undoubtedly the same person. Listen, Al, can you make copies of those letters and drop them off at the CBI office? It’s kitty-corner across the street from the Sheriff’s Department.”

“Will do.”

“And when I get back, probably Friday, I’ll have a look at them first thing. Maybe we can get together and chat?”

“Be glad to. I want to get this cleared up, probably more than you do. Also, there’s another thing I’d like some advice about.”

“Let me guess. Your mother has a new boyfriend, and you’re not quite sure about him.”

“Hey, how did you know?”

“Met him the other night, when I went by her house to drop off a few of Melody’s personal effects. I’ll be glad to talk with you about him. I need to, in fact. If it will make you feel any better in the meantime, we’re having him checked out.”

“Hey, that’s great! So, good luck in Arizona and call me when you’re back. We can do lunch, as they say.” He had seemed cheered up by my interest in Leland Spaulding.

The whine of the jet engines changed pitch as the airplane began its descent into Flagstaff, yanking me out of my reverie. Out the window on my left, the rocks of the Painted Desert twenty-thousand feet below blurred into an Impressionist swirl of color, and I could see ahead the high country of the San Francisco Peaks and the dark forests surrounding Flagstaff.

So, I thought, Kelly Rumsford became an annoyance to Melody, even stalking her. Which means he was being less than completely candid with me in that interview. Maybe his return from Boulder via Durango had more to do with her than the scenery. I made a mental note to have another conversation with him.

During the time on the ground in Flagstaff, I made written notes of the conversation and organized my schedule for the afternoon and Thursday. Bill Longwell, whom I’d probably have to meet somewhere other than EcoARC, was a priority, and so, now, was Kelly Rumsford. I would also probably have to take the time to drive into Tucson to see Ross Townsend at the DPS headquarters. And maybe he could advise me about whether to interview Sheriff Elwood Johnson. I had been avoiding that little chore, but it was looking more and more inevitable. Now that there were two connections in

Durango to his office, James Lovett and the Shaughnessy kid, I knew I was not going to be able to avoid much longer.

As the new set of Phoenix-bound passengers began boarding, I realized that I might have to share my row, so I tidied up. I also began taking bets with myself about my fate regarding a seat-mate—would it be an obese person who would slop over into my personal space on top of me, or a mother with a squalling infant who would spit up on me? How lucky do you feel today, Trieri? I asked myself.

It turned out to be a special day indeed. Down the aisle and into the seat beside me came a wannabe cowboy, a scrawny individual dressed in denim and leather, silver and turquoise, with high-heeled, pointy-toed boots made from the skin of some kind of exotic reptile and a hat with a brim as wide as his shoulders. Before sitting down, he put up the arm-rest between the seats, and, after sitting down, he leaned over to look out the window, nestling his left arm snugly into my right breast.

“Beautiful day out there, ain’t it darlin’?” His left arm made a rubbing motion.

I calmly reached around with my left hand and grabbed his neck, with my thumb jammed into the pressure point in the vicinity of his carotid artery. Because his head was more-or-less in front of me, I was able to whisper in his ear.

“OK, scumsucker, you’re going to sit up, right now, and the arm-rest is coming back down. And if you touch me again, both of those boots are going up your ass, side-by-side, heels first. Understand?”

He was far more polite after that, even going so far as to find another seat so that I could have the row to myself again. Must have been that he really wanted a window seat.

\* \* \*

## Eleven

After picking up my rental car at Sky Harbor Airport, I headed toward the interstate for Tucson. Previously, I had planned to cut east and south on the back road to Oracle, where my motel was, but now I needed to be sure that my cell phone would work. I had plans to execute.

A call to Ross Townsend at the Department of Public Safety confirmed that he would be able to meet me that afternoon, in Casa Grande, and it also got me his fax number. Then I called my office in Durango to see if Al Witherspoon had dropped off the copies of Melody’s letters. He had, over lunch, and I asked Sally to fax the letters to Townsend. His task was to use them to obtain a search warrant of Kelly Rumsford’s apartment in Oracle. Between these various successful calls, I also tried, unsuccessfully, to reach Bill Longwell, but all I managed to do was to leave voice mail messages at his several numbers.

About the time I had completed all of this combined telephoning and driving through the heavy traffic of the Phoenix urban interstates, I hit the edge of town, and the traffic thinned out. Some variant of Murphy’s Law, I thought. I decided to test it by making one more call, to my motel in Oracle to verify my late arrival, and it worked—I immediately became absorbed into a surge of cars and trucks playing some weird kind of leapfrog.

About half way between Phoenix and Tucson, Casa Grande, the seat of Pinal County, was the headquarters for Sheriff Elwood Johnson’s department. But I wasn’t ready to meet with him just yet, so Ross Townsend had agreed to meet me at a restaurant on the interstate, at one of the Casa Grande exits

on the far north side of town. That made it easy for Townsend to find me, and it would make it easy for me to head east, later, on a side road to catch the Pinal Pioneer Parkway and head over toward Oracle.

I knew I would be there first, as Townsend had grumped about being tied up in a meeting, so I decided to have a late lunch. The restaurant, a local clone of Denny's, was almost empty, so I took a booth by the window and watched the traffic as I waited for my broccoli-cheese soup and chicken-salad sandwich.

About the time my food arrived, so did a patrol car with "Pinal County Sheriff" emblazoned on the side. This, I thought, might be interesting.

A tall, lean gentleman—I couldn't think of him any other way—with hair going gray on the sideburns sticking out from under his big western hat unfolded himself from the front seat and strolled into the restaurant.

"Howdy, Sheriff Johnson. The usual?" The waitress behind the counter was clearly familiar with the afternoon routine.

"Got any blueberry today? Fresh, I mean?"

"You're in luck. We got some from Annie's this morning. Want it *a la mode*?" By then she had set a steaming mug, which I assumed was coffee, in front of him.

"Naw." He patted his stomach. "Got to stay trim-looking for TV. Those cameras make you look fat, I'm told." She smiled knowingly and disappeared into the kitchen.

While he was waiting, I ate and pretended to watch the traffic outside while studying his reflection in the window. He sipped his coffee and casually glanced around the restaurant, stopping to stare briefly in my direction. I was glad that my previous meetings in his county had not involved him—even the time I went to the departmental office, I'd missed him. Finally, his pie arrived, and he began putting it away by the forkful.

Because I had to wait for Ross Townsend, I was in no hurry, so I ate slowly. Johnson, I assumed, would take me for a business person stopping for lunch between Tucson and Phoenix, so I wasn't concerned that there were only a few other customers in the restaurant. At the same time I didn't want to draw attention to myself, because I just wasn't ready to confront Johnson, and certainly not alone and on his turf.

He had wolfed down the blueberry pie, but now he was working on his second cup of coffee as if it were a five-star brandy. So I ate more slowly, chewing each bite twenty times, like the diet books suggest. My waitress came, and I ordered some pie for myself, blueberry, just to be perverse. Johnson accepted a refill on his coffee, and, even though it didn't seem possible, slowed down more. This, I thought, is ridiculous. I need to do something to distract myself.

So I called Hal, on his direct line.

"Weathers, natural sciences." I was delighted to catch him in his office.

"Hi, lover. Thought I'd check in and let you know I got here OK."

"Already? I thought it would take you another half hour or so to get over to Oracle."

"I'm not all the way there yet. I stopped for lunch on the way. A late lunch, except it's an hour earlier because they don't have daylight time, remember?" Oops, I thought. I really don't need to let on that I'm from out of state. Damn. But Johnson didn't flinch, I noticed, so maybe he didn't hear that. Old guy, might be a little deaf anyway—wasn't that waitress talking loudly to him before?

"...dinner in that little burg." Hal's voice sounded a bit concerned.

“Huh? I’m sorry, I missed that. My cell phone’s a little flaky here. Sorry.”

“I said that I hope you can find a reasonable dinner in that little burg, you know, Oracle?”

“Oh, right. Me, too. I remember a little cafe, but I don’t know if they’re open in the evening.”

“Right. Oracle Grill or something, was it?”

“I don’t remember the name, but I know just where it is.” I wasn’t going to let any more information about myself or my destination slip out. “Anyway, if it isn’t, I can stop and pick up some yogurt, or something. I’m having a good lunch, as lunches go. Maybe I’ll just call it ‘dinner’ and have a snack later. So, anyway, how’s your day?”

“Oh, the usual. Except Alice is talking more and more about retirement. How am I going to deal with that?”

“It keeps coming up, and she keeps putting it off. But sooner or later, it’s going to happen.” As I said this, I noticed Ross Townsend getting out of a car in the parking lot. “Oops, listen, I need to run. I’ll call you this evening, OK?”

“Is everything all right?”

“Oh, yes. It’ll be interesting. I’ll let you know.” Interesting indeed, I thought. I wonder—do Johnson and Townsend know each other?

Sitting by the window, I was also facing the door, and Townsend noticed me the minute he walked through it. But Elwood Johnson was sitting at the counter all by himself, in his uniform, and Townsend also noticed him. So he stopped to consider what to do next, and I knew at once that Townsend recognized Johnson. Which means they do know each other, I thought. Well. Now what?

It took Townsend only a few seconds to decide.

“Well, I’ll be a three-footed mule, it’s Sheriff Elwood Johnson. Haven’t seen you for ages, Elwood. How’s it going?” Townsend had walked over to the counter, approaching Johnson from the side opposite to where I was sitting, and clapped the sheriff on the shoulder.

“Why, Ross! How ya doing? Son of a gun! Long time no see. What brings you up this way?” I was surprised that there seemed to be no animosity between them. Townsend, after all, was in charge of the investigation of Johnson’s department.

“Just stopping for coffee. Got a meeting up north. Oh, hi, miss. A cup of coffee to go? Large and black?” Johnson’s waitress disappeared to fix up the coffee to go.

As Townsend moved to sit down next to Johnson at the counter, he glanced at me. I pointed at the ladies’ room and raised a hand with all five fingers spread out. He nodded just enough for me to see, and I gathered up my things, dropped a ten on the table—more than enough for lunch plus a hefty tip—and walked toward the rest rooms.

\* \* \*

I used my five minutes to make another phone call, and then I walked back out into the dining area. Townsend was sitting at the counter, alone, and I could see that Sheriff Johnson’s patrol car was gone. I walked up behind Townsend.

“Ross, I don’t know how you did it, but congratulations. I thought he’d never leave.” He turned to look at me, an impish grin spread across his face, and he stood and directed me toward a booth well away from the waitress behind the counter.

“I got him interested in something I heard over the grapevine, something about that nose-Colorado investigator broad being down here again, over Oracle way. Say,” he suddenly looked concerned, “you’re not really staying over there by any chance, are you?”

“No, I made other arrangements.” In the ladies’ room, I had called Sally, back in my office, to find me a place to stay down in Oro Valley, outside Pinal County. “But there is the issue of serving the warrant on Rumsford, assuming you were able to get one.”

“Right, got it here.” He tapped his jacket pocket. “Normally it would be served by Johnson’s department, and they’d do the search. But that doesn’t seem like the right approach, somehow. I’ll get my people to do it. Want to be in on the fun?”

“If it can be arranged, yeah. I’d like to see what Mr. Rumsford might have for us. And say, maybe we can do something with the wild goose chase you sent Johnson on, too. I have a reservation in Oracle, not to stay there but in case I need it. I was going to cancel. But we could use it as bait for Johnson. If you told him I’d be over there, he’ll likely call around to see where I might be staying. We could have some of your people waiting for him. Maybe get someone, Sandra Kinney comes to mind, to pretend to be me, check in, see what happens. Of course, she’d need backup.”

“Sounds a little like entrapment to me.” Townsend looked skeptical.

“Hmm. Maybe. But maybe not. Look. You told him something that led him to believe that I was over that way, right? But that’s all. Not where I’d be staying, not when I’d be there, nothing else, right?”

“Right. But I knew you weren’t over there.”

“Not when you said it, of course not, you saw me sitting right over by the window there. But you knew I’d come down here to go to Oracle for the investigation. So you didn’t really tell him anything that wasn’t going to be true. I do have that reservation there, after all. And if he goes off chasing after me, that’s not your fault. And if he goes to the trouble of finding out where I’m staying and shows up at the motel and causes problems, you certainly didn’t entice him to do that, right?”

“Hmm. How about if we have you get a double room, with the intent to share it with Sandra? Then, she can check in under your name—that’s what the reservation is for—and wait for you to arrive. When you call and say you’ll be unable to get there, she can stay on, in uniform, and see what might happen. That way, if Elwood or his boys show up to make trouble, they’ll have a lot more of a problem claiming entrapment. Sort of turn the entrapment into a sting.” Townsend had a far-away look in his eyes, and he was nodding.

“Creative thinking, Ross. I like that. Do you think Johnson will try something?”

“Good question. But there are too many connections to him and his department to ignore. Alvarez’s death. That guy Lovett, Johnson’s brother-in-law, breaking into your house. And now the Shaughnessy kid.”

I laughed. “You’ll never guess what he was carrying, what he tossed out of the car during the chase. There was cash, and some computer disks that I still need to look at. What was most suspicious was some white powder. We naturally thought it was cocaine or maybe heroin, but it turned out to be high-strength Viagra, or something similar. He works at a porn place that we suspect does live sex shows, though, so maybe that’s part of the business.”

“But Viagra is a prescription drug, and if he had a bag full, he ought to be able to prove it’s legit. Does he have a prescription?” Townsend was smiling again.

“Not for that many doses, for sure. What I don’t know is whether there’s a real connection to Melody Witherspoon. We do know she was working for the same company as the Shaughnessy kid, though.”

“Live sex shows?”

“Girlie pictures. Lovett was photographing her. But that’s the connection back to Johnson’s office.”

“This is getting confusing. We’ve got this student, Rumsford, and we’re going to search his apartment.”

“Right. On the strength of the letters in which Melody claims he was stalking her. I haven’t really seen the letters, by the way. Do they say that?”

“Enough for the judge to give us the warrant. That along with his statement about having been out of town and through Durango on the weekend she turned up dead, and, of course, finding her body.”

“Right. So he’s one suspect.”

“And we’ve got this weird thing with Johnson’s office, the dead suspect who was exonerated by DNA test...”

“Which I’m keeping quiet, by the way.”

“Oh.” He scratched his chin. “Yeah, good idea. But that puts more heat on Johnson’s department, an innocent suspect getting dead in their custody. And apparently Johnson sic’d his brother-in-law on you, to swipe your notes from the meeting—you have that testimony on tape, right?”

“Right. Something’s fishy in Johnson’s office, for sure. And there may be a connection to Melody’s death, but who exactly would be a suspect isn’t clear.”

“And there’s the other connection to Johnson’s office, the Shaughnessy kid, who works for the porn company that Melody worked for.”

“A company that has had at least one other model turn up dead.”

“Right. And finally there’s the situation at EcoARC, where their lawyers are putting political pressure on us to back off.”

“And where I haven’t been able to get in touch with Bill Longwell today. He’s got voice mail at three different numbers to call me on this.” I waved my cell phone, “I’m not going to worry about him, though, until tomorrow. Also, Longwell’s deputy, Art Finnegan, has suspect written all over him, although it’s circumstantial so far.”

“Oh, right, I forgot about Finnegan. So it’s not as if you don’t have possibilities.”

“Nope, and now there’s one more.” I told him about Mildred Witherspoon’s boyfriend and her fortune.

“OK, you’re in charge of the murder investigation, and I’m handling the investigation of Elwood and his crew. To the extent that the two are linked, we need to keep exchanging information. Otherwise, we can go our separate ways.”

“Except I need your resources.”

“Right. They’re your resources, too, of course. And I think I’ll move ahead with that sting using your reservation in Oracle for bait. See if Elwood or any of his people take the bait.” Townsend’s smile turned nasty.

“If anything peculiar happens, it should be later tonight, so we ought to be able to execute the search warrant first.” I drummed my fingers on the table. “Um, I’m not one to delve too far into hypothetical situations, but I do like to examine contingencies. Suppose we turn up something at Rumsford’s that clearly implicates him in Melody’s death. That takes care of the murder investigation, but it leaves the weird stuff with the sheriff’s department hanging, and it also leaves lots of questions open about EcoARC’s behavior, at least their lawyers’ behavior.”

“If Rumsford turns out to be the murderer, I’m not going to be concerned about EcoARC unless there’s evidence of some crime. And I think it would mean that Elwood’s office is just trying to cover up incompetence. That’s the kind of election-year behavior that you almost expect, actually.” Townsend shook his head, annoyed.

“But if there’s nothing truly damaging at Rumsford’s that doesn’t necessarily exonerate him, of course. It’s just that we’ll have to keep the other possibilities in mind.”

“Right. Now, you said that the Alvarez guy was exonerated by the DNA test. But that means that somewhere around here, someone else has scratch marks, the guy whose skin was under Melody Witherspoon’s fingernails, right?”

“Yep. And I haven’t seen anyone else with facial scratches. But there are other places where she could have got someone. An arm, or back.” I cocked my head sideways, curious about this new topic.

“There’s the answer. We just line up everyone who’s evenly remotely under suspicion and have them all take their shirts off.” Townsend laughed.

“Or just get DNA samples from all of ’em. Or both.”

“If only it were that easy. OK, tell you what. Let’s head over to Oracle, and I’ll line up people for the search on the way over. Follow me, and you shouldn’t have trouble with Elwood or his people.”

\* \* \*

Kelly Rumsford lived on the west side of Oracle, down a confusing succession of gravel side streets from the main road, in a converted garage. Ross Townsend and I were met on the outskirts of town by Sandra Kinney and two other State Patrol officers, and Sandra, more familiar with Oracle than anyone else, guided us to Rumsford’s place.

The five of us were piled into my rental car—the less attention we attracted, the better, Townsend remarked. Once there, Sandra explained that garage conversions were all the rage in Oracle, because the combination of students and post-doctoral researchers from EcoARC made for a sellers’ market in the rental business.

Rumsford was not in his garage apartment when my DPS team and I arrived, so, rather than break anything, we rang the doorbell of the house. It was answered by an elderly woman who was not at all happy to see us. Mrs. Hazel Boyd, as she introduced herself, was Rumsford’s landlady, and she was obviously going to be giving her tenant a hard time about a visit by the police. But, on being shown the search warrant, she provided a key to the garage apartment rather than have her door bashed in.

After donning gloves I led the way. Once inside, I immediately understood why Melody Witherspoon’s complaint about being stalked needed to be taken seriously.

Pictures covered the walls—some poster-sized, some only 8x10—all of Melody. A few reminded me of Melody’s early modeling jobs, the underwear shots, but most appeared to be candid photographs taken somewhere locally, perhaps on the EcoARC campus, I decided. Some were actually quite good photographs, composed, well-lit, and precisely focused.

“Looks as if our friend Kelly will have some explaining to do.” I remarked to Ross Townsend, who, with the three uniformed officers, was staring agog at the display.

“He does seem, um, preoccupied with this one subject, doesn’t he? I assume this is Melody Witherspoon?” Townsend, apparently, had never seen a picture of her. Without waiting for an answer he continued. “OK, team, let’s see if there’s anything here that might classify as more than a harmless obsession.”

Townsend and the officers began a methodical search of the apartment, while I gravitated to the computer that was sitting on a table in the corner. I bumped the mouse, and, after a brief interval, the monitor turned itself on and displayed a picture, of Melody leaning against a fence, staring off at a mountain in the background. A number of program and other icons were superimposed on the edges of the picture. A sense of *déjà vu* sent a shiver up my spine. Oh, God, I thought. More porn?

“Ross, does the warrant cover this?” Despite the foreboding, I knew I had to explore what Rumsford might have on his computer.

“Sure does. And if it’s password protected, just unplug it and we’ll take it. And leave him a nice receipt, of course.”

But there didn’t seem to be a password, as the icons were there for the clicking, so I sat down and clicked the filesystem manager. The top-level directories had the usual names, and there was an extra one labeled “Mel.” Under it were sub-directories labeled with dates, and I supposed that there would be pictures and perhaps text files associated with the times. So I clicked the most recent one, labeled with a date in late August. Inside were dozens of picture files, so I picked one at random and clicked it.

It took a couple of seconds for the program that was going to display the picture to load, and then the picture appeared so suddenly, and explicitly, that I gasped. That got the attention of the others, and they clustered around. Except for one “Oh my God,” uttered by a male voice, there was silence. I knew I’d been through this before.

There was Melody, lying on a couch, manipulating a huge black dildo in such a way that there was no mistaking her intentions for it. The pose was one that would normally be associated with a gynecological exam, except that Melody’s body was contorted so that she could look directly into the camera lens. She wore heavy makeup, but nothing else, and she was licking her upper lip. As with the pictures I had seen on Lovett’s computer, Melody had a distant, not-quite-there look in her eyes.

Despite the attention-grabbing pose, however, my thoughts were focused on the little label in the lower right-hand corner of the picture. Below a banner reading “www.real-hot-babes.com” it said “Copyright © IMSS” and in smaller letters “JL Studios.” “Intermountain Social Services” and “James Lovett” immediately popped into my head, and I now understood why Lovett used a digital camera.

“At least this guy doesn’t have *these* things plastered all over his walls.” Townsend’s disgusted tone of voice said it all.

Sandra Kinney spoke up. “Imagine if he did, what his landlady would think. He’d be out of here in a minute.”

One of the uniforms, the guy named Wesley, I thought, cleared his throat and said, “Y’know, as much as I’m a raging heterosexual bachelor, I’ve gotta say, I prefer the pictures on the walls. I’m going back to work.” The gathering broke up after that as everyone else followed suit.

I saw no particular need to explore the other pictures on the computer, but I made spot checks in a few of the directories at random to verify that the other pictures were of Melody. And I made notes of the dates of the directories. Perhaps, I thought, I can correlate them to some of that stuff I read about in Melody’s diaries.

Although they were terribly depressing to me, the computer pictures had the effect of reinforcing everyone else's resolve to do a thorough search, and they all redoubled their efforts. Nothing any of us found, however, could be construed as evidence of a murder. Although it was clear from the pictures, the photographs and the computer pictures both, that Rumsford was obsessed with Melody Witherspoon, we knew that more would be required to persuade a jury of his guilt. Finally, Ross Townsend called things to a halt.

"Annette, this is your show. Where do you want to go with this?"

"We ought to make this search complete by going over his car carefully. And I'm going to have to talk with Mr. Rumsford again, that's for sure. The sooner the better. And, I think, the more formal the setting the better. Where's the closest State Patrol office?"

Sandra Kinney spoke up. "Down the hill in San Manuel. But that's here in Pinal County. The next closest is in Oro Valley, on the northern edge of town."

"OK. Sandra, you need to be up here for the sting, right?" Kinney nodded—she'd been briefed earlier by Townsend.

"So," I continued, "Ross, maybe we can have someone stay here to pick up Rumsford and bring him down to Oro Valley for questioning tonight. And someone else will need to stay here and go over his car. I don't know about who's on what schedule, but maybe you do. And I guess someone needs to go with Sandra and be her backup, in case she needs it at the motel. Right?"

Raging heterosexual bachelor Wesley volunteered to stand by and pick up Rumsford, and the other uniformed officer, Thomas Moody, would go with Sandra to act as backup.

Ross Townsend had to return to his office in Tucson to catch up on the day, but first he called down to the San Manuel State Patrol office to have a forensics expert come up to go over the car when Rumsford arrived.

I just wanted to find wherever Sally had reserved me a room in Oro Valley and take a shower. I felt dirty, partly from the air and car travel but mostly from my use of Rumsford's computer, from what I had been seeing and from just using it. I decided I didn't want to know what he was doing when *he* used the thing.

I left my cell phone number with everyone and hit the road. Sally, I knew, would have found me a room in a nice motel and have directions to get there as well. Once again, I thanked my lucky stars to have good staff in the CBI office.

\* \* \*

It was a Marriott. Sally apologized over and over, because the rates were way above my official per diem, but it was the only thing available. I hushed her up and reassured her that this was really the best thing that could have happened, because up-scale was just what the doctor ordered for my psyche. To make matters even better, on the way into town I passed the State Patrol office, so I knew exactly where I would need to go later.

I checked in and stood in a hot shower for a long time, and then I ordered a snack from room service. I turned on the Weather Channel, just to have someone talking at me, to keep my mind off what I had seen on Rumsford's computer.

It was about 8:00 when the call finally came. Rumsford was on his way down to the State Patrol office and would be there in about twenty minutes. Paperwork for him, the search warrant and so on, was waiting for me at the desk.

I took my time, and, after thinking about it, dressed in the outdoors clothes I'd brought—jeans, hiking boots, a flannel shirt. This, I thought, is no time to stress my femininity. I had a fleece jacket for the chill of the October desert.

At the State Patrol office, I picked up the file and, curious about Rumsford's state of mind, asked to be shown to the observation booth for the interview room. The technicians were filming, and I shook hands with both of them. In the interview room, on the other side of the one-way mirror, Rumsford was pacing, wringing his hands, looking grim. I suspected he was not only worried, but mad as hell. So I decided on the silent approach— let him blurt out whatever he wanted.

I found a vending machine and got myself a Diet Pepsi, but nothing for Rumsford, and walked into the interview room and sat down. Rumsford was obviously surprised to see me, for he stared at me in shock for at least a minute. Finally, he got his voice back.

“You! What the hell are you doing here? Are you why I got dragged all the way down here at this time of night? Who the hell do you think you are, anyway? This is Arizona, not Colorado! I'll have you know that I've got a big deadline tomorrow, some results I need to get written up are due along with another chapter of my dissertation. I don't need this crap!”

I didn't say anything; instead, I took a sip of my soda. Then I unfolded a copy of the search warrant and pushed it across the table in his direction.

“What's that?” He looked at for a few seconds, and finally picked it up and began to read it. When he recognized its contents, he gasped. The color drained from his face, and he sat down heavily in the chair opposite me.

“Jesus. A search warrant, for my place? Does this mean you were out there? Look, I know exactly what you're thinking. But, ah, but...look, everything I told you before was true, OK? And I know enough not to volunteer information to people questioning me, and you didn't ask about any of the stuff at my place. Right? So now you've been there, but that doesn't change the fact that everything I told you before is the truth. OK?”

I leaned forward just far enough to rest my chin on my hand, elbow propped on the table. I stared at him.

“So, like, I fancy myself a photographer, and Melody was a great model, OK? Nothing wrong with that, is there? And it's not like I was selling her pictures, or anything. I was just using her for practice. I wanted to get a release from her, but, ah, but I never got around to it, OK? And those candid shots are standard fare for photographers. OK?” I could see that he was really getting worked up.

“And I know for sure you didn't find anything incriminating at my place, because there isn't anything there that is. I've got a bunch of pictures of Melody hanging on my walls, that's all. OK? So what the hell's going on here, what's this Gestapo bullshit, anyway? I get grabbed and hauled down here and I've got lots of stuff I should be doing!”

Just then, my cell phone chirped for attention, and Rumsford nearly jumped out of his chair. I held up one finger and cleared my throat.

“Excuse me for just a minute.” Then, into the phone, I said, “Trieri, DPS.”

“Annette? Hope I'm not interrupting anything.” Sandra Kinney sounded exhilarated, so I didn't say anything. “They did it. Johnson's people, I mean. Thomas watched from the parking lot as two deputies pulled up to the motel office and shook down the clerk for your, that is, my, room number. Thomas called me to warn me, and I didn't answer their knock. So they kicked the door in. I was in the bathroom by then, and they forced their way in there, too. No warrants or anything. Thomas came storming in, and

between the two of us, we've got them dead to rights. We'll be down there, to the Oro Valley office, with them in a half hour or so."

It was all I could do not to smile. "Good work, officer. I'll see you then." And I pushed the "End" button.

I looked up and said to Rumsford, "I looked on your computer."

He blinked once and again as his color changed from indignant pink to deathly white. He opened his mouth, and closed it. He took a deep breath, and said, "Oh."

After a pause, he continued, his brain obviously trying desperately to come up with something sensible. "OK. Ah, so, um, I found some other pictures of her on the internet. But I didn't take them or put them there or profit from them, that's for sure. And there's nothing illegal about downloading pictures from the internet, right? I mean, she was over eighteen, way over eighteen. An adult. What kind of pictures she let get taken of her was her business as an adult. Right? So what's the problem here? Why am I here?"

He had dropped the search warrant onto the table, so I pushed it his way and pointed to the third paragraph, tapping on it. He picked it up and read.

"...based on decedent's complaint about subject's stalking behavior...' What? Does this say Melody thought I was stalking her? But that's crazy! She hardly knew I existed. I mean, I asked her out once, only once. She said 'no.' And 'stalking' means, well, doesn't it mean repeated contact, annoying someone, stuff like that? I didn't do any of that. I mean, I'm infatuated with her, sure. But I never bothered her, honest. Geez, a few pictures and you get accused of stalking. What's the world coming to, anyway?"

I let him babble on for a while, and after a while I decided it was time to bring this monologue to an end. I cleared my throat again, and he put his hands down on the table and looked at me.

"Mr. Rumsford. Let me review the facts. One. You were in Durango the weekend that Melody was probably murdered in Durango. Two. Her postmortem was consistent with having been transported long distance after being killed. Three. You 'discovered' her body. Four. You have an extensive collection of pictures of her, stealth pictures that you took as well as pornographic pictures you claim to have found in the internet. Five. You were unsuccessful in courting her, giving you motivation for jealousy, and you were sufficiently persistent in your behavior that she thought she was being stalked. Six. You know that your behavior is suspicious because you were less than candid with me in our previous interview. To me, and I do have quite a bit of experience with this kind of thing, this all adds up to your being a potential suspect in her murder. You're a graduate student in—what?—biology? You're used making observations and deducing things from those observations, adding facts together into a coherent whole, right? Surely you can see how this all appears to an investigator such as myself?"

He took two deep breaths, put his head down on his hands, and began to sob.

\* \* \*

## Twelve

Officer Sandra Kinney was still pumped when I ran into her in the hallway, and she announced with glee that she had also called Ross Townsend. He had come to the office, in order to be part of the questioning

of Johnson's deputies, and I decided to wait around and see how things went. Maybe, I thought, I'll watch them from the observation booth.

I had just finished supervising Kelly Rumsford's release. In the interview room, I had patiently waited for him to regain his composure. He finally did, by lifting his head off his arms and asking me how he could persuade me of his innocence.

"What can I do to prove to you that I didn't kill her? I mean, I know that you can't prove that I did, because I didn't. But maybe there's some way to convince you to go looking somewhere else for Melody's killer. Surely it makes sense that if I'm obsessed with her, I'd want her killer to be found, and tried and convicted. Right?"

So I had been able to get Rumsford to sign a consent form to submit to a DNA test and to have a physical. Both were in progress while I waited—the State Patrol office had a physician on call for emergencies, and he was drawing Rumsford's blood and examining him for unusual scratch marks.

I had finished my paperwork and was on my way to the front door when I ran into Officer Sandra Kinney.

"Ms. Trieri, um Annette, are you upset with me? Did I call at a bad time?"

"You called at an awkward time, because I was interviewing Rumsford. But it wasn't a bad time, and I'm not at all upset. Sorry I was short with you, but I didn't want him to know what was up."

"Oh. That makes sense. So are you going to be here for the interviews with the Pinal County deputies?"

"Wouldn't miss it. Who are they?"

"I'm going to question Lyle Shaughnessy, and Thomas is going to question the other one, Henry Reeves. This will be a little different from the usual interrogation, you understand, because of professional courtesy. And they've already asked for legal representation. Ross will be here, too, and both Thomas and I are going to wear ear pieces so he can shoot us questions to ask and provide information. He'll be in the observation booth between the two rooms, trying to watch both interviews."

"And I think I'll be in there with him. Do you know if Elwood Johnson is coming down?"

"No, but I wouldn't be surprised to see him. I'm sure that he's aware of this, either from the lawyers the deputies called or from the grapevine up there."

"So what do you think they're going to say?"

"It'll be interesting to see. We're going to tell them about the statement we got from the motel clerk. He told us how Shaughnessy specifically demanded your room number, asking for you by name and title. So they aren't going to be able to claim it was some kind of mistake, like they were trying to take down a drug dealer or something and accidentally broke into your room. I wouldn't be surprised if their lawyers recommended to them that they put the blame on Elwood."

"I'm surprised that Lyle Shaughnessy was one of them. Seems like he should be on some kind of leave, after that episode with the dead prisoner."

"They're a little behind the times up there." Kinney opened the door to the interview room and went in, leaving me standing around the corner from the observation booth. As I was starting around the corner, my cell phone chirped at me.

"Trieri, C...DPS."

"Annette? Oh, good, I found you. This is Bill Longwell." His voice didn't sound quite right, I thought. "Where are you? We need to talk, in person."

“I’m at the State Patrol branch office in Oro Valley. Bill, are you all right? You sound, I don’t know, stressed, or something.”

“Oro Valley? Let’s see...oh, I know where that branch is, on the highway. I’m on my way past there, so I’ll stop by.”

“I’ll tell the person at the front desk where to find me. But you didn’t answer my question. Are you all right?”

“That depends. I guess so. I need a job, though. Do you suppose that Hal would know of any openings for someone with my background at Frémont State?”

“Uh ...”

“Oh, don’t worry, I’m fine. Really. I’ll be down there soon and tell you all about it. Give me, say, half an hour. OK?”

“Sure. But there’s no rush. I’ll be involved in an interrogation, so take your time.”

“Oh. In that case, I’ll go home first and clean up. Take me about an hour. See you later. I’ll wait for you somewhere, they must have a waiting room.”

That, I thought, was very bizarre. But it sure sounds like he got fired, or resigned. What in the world is going on up at EcoARC?

I finally made it into the observation booth, just as Shaughnessy was providing his personal information for the camera, in the room on the left. Reeves was sitting with his arms crossed, a stubborn expression on his face. His lawyer was talking earnestly in his direction, but the sound was off, so I couldn’t hear what was being said. Ross Townsend sat on a stool in the middle of the booth, two headsets in hand, listening to one, presumably the one from Shaughnessy’s room, I decided. He nodded to me in greeting.

Sandra Kinney was questioning Shaughnessy, and occasionally Townsend would make a comment into the headset mike. A minute or two later, I noticed the other lawyer, in Reeves’ room, get up and push a button. The door opened and Officer Thomas Moody walked in, everyone shook hands and sat down. After that things got very confusing, because there were two sets of activity to watch. Eventually, I decided to focus on watching Shaughnessy’s body language. Out of the corner of my eye, I could see Ross Townsend trying to orchestrate the whole thing.

Townsend acted as if he were watching a tennis match, swiveling back and forth on his stool, trying to follow both sets of questions and answers, and occasionally commenting into one or the other microphones on the headsets he had. As things progressed, it became clear that most of his attention was on the Shaughnessy questioning, however. Either Sandra Kinney needed more help than did Thomas Moody, or the conversation in there was the more compelling of the two.

It took only about fifteen minutes before Thomas Moody stood up, followed by Henry Reeves and his attorney, and they all shook hands again. Moody opened the door and everyone walked out. Townsend winked at me, and nodded his head in the direction of the now empty room.

“Told all. Said Elwood put ’em up to going after you. Blamed Shaughnessy for their behavior at the motel, said he was in charge and he, I mean Reeves, is a junior officer that was just going along on an assignment. Over here, though, it’s a very different story.”

He nodded at Shaughnessy’s room. “His lawyer has been advising him in whispers, which I can’t hear, and he’s claiming it was all a big mistake. But his lawyer’s not happy about that.”

I had an idea.

“Ross, do you know if Shaughnessy ever worked at EcoARC?”

“Good question. Let’s ask.” He pulled the headset mike in front of his face. “Sandra? When you get a chance, ask Shaughnessy how long he’s been with the Pinal County Sheriff’s Department, and what he did before that. What we really want to know is whether he ever worked at EcoARC, and when.” I saw Sandra Kinney nod slightly.

Ross moved the mike away and said softly, to me, “She’s doing a great job so far. She’ll work in this question when she gets a chance, so as not to alert them to our interest. It may take a while, though. How did it go with Rumsford?”

I provided a summary and mentioned that he had agreed to the DNA test and the exam.

“So if the DNA test exonerated the first suspect, Alvarez, it should also exonerate Rumsford, huh? And the fact that he agreed to it has to be a point in his favor, right?” Townsend was nodding his approval.

“That right. Assuming there’s not a match, of course. Although I still think he knows more than he’s letting on.”

\* \* \*

I finally realized that more than an hour had passed, and I went looking to see if Bill Longwell had arrived. I found him sitting in the lobby, drinking coffee. The first thing I noticed was a scrape on his forehead, and the second was a bandage on the back of his right hand, over his knuckles.

He noticed me staring at his hand, and he shook his head and looked at the ceiling.

“I’d say ‘don’t ask,’ but you will anyway.” His grin was sheepish, somewhat embarrassed.

“I guess you must be all right, with that kind of attitude. You want to talk about it? I guess I’d assume it was just an accident at home or something, except there aren’t many ways to injure your knuckles but for the one that I know about. Who’d you hit?”

“We weren’t properly introduced, I’m afraid. But it seemed like they didn’t think I’d hit back.”

“They?” I thought I had a strange day today, but it sounds like yours was truly bizarre.” I shook my head. “And what’s this about your needing a job, anyway?”

He sighed. “Oh, yeah. That. Well, the day started badly and only got worse. There was a phone message—voice mail—waiting for me when I got in this morning. You remember I asked for some time to look into that business about who was leaning on me to pretend that Alvarez was the killer? Yesterday? Gee, was that only yesterday?”

“Yesterday afternoon. Yeah, I remember.”

“So, let’s see, how do I explain this? First, you have to understand about the EcoARC Consortium. All spelled out, that’s the official name for the outfit that runs the Center. The Consortium is a bunch of drug companies, mostly little ones that started in the high-tech boom. Guys from universities and other places started little companies because they had figured out something or other about gene splicing or the genome or something, and they were trying to cash in on their ideas. But they were small companies and didn’t have the resources for a large research facility like the big companies, they couldn’t afford it. So a bunch of them got together and formed the Consortium. With me so far?”

I nodded and asked, “I assume this was just the little companies that were dealing with drugs derived from plants, right? I mean, EcoARC is greenhouses, not cages of mice.”

“Mostly, that’s right. See, EcoARC does two things, really. We try to replicate complex ecosystems, ones that include species of possible importance, and we also test engineered species in otherwise natural ecosystems, at least as natural as we can make them inside the greenhouses. This second job, testing new species, doesn’t get a lot of publicity, and that’s by intent.”

“Because the public might go nuts if it found out.”

“Basically, yeah. It’s complicated and we’re extremely careful, but we’ve seen other examples where misinformation by groups of neo-Luddites makes for lots of trouble.” He shook his head.

“Anyway, what happened this morning is that the voice mail message was from one of my board members, a new one, Detlef Schultz, he’s Swiss. He’s the chief legal counsel for a big conglomerate based in Geneva that recently bought up two of the little companies in our consortium, so he thinks he holds two EcoARC board seats. That’s the trouble with these little companies—if they get a little successful, they’re ripe for plucking by the big boys.”

“But a big conglomerate shouldn’t need EcoARC, right? They’d have the resources for their own facilities.” I had begun taking notes, but I was also trying to pick up on the subtleties of the discussion.

“Right, and they’ve been making noises about pulling out. But they’re afraid of losing out on some research that’s in progress, so they haven’t. Also, I think they feel like being part of the consortium gives them insider information about the other companies that they can take advantage of, if they want to buy another of them.” He stopped briefly to think.

“So I called Schultz back and he got all over me about the bad publicity that your investigation could cause. Said he’d heard about it from people out here, but he didn’t say who. To make a long story short, I ended up telling him where he could stuff his objections, and he told me that I would be fired by the board. So I told him what he and the board could do to themselves—anatomically impossible, but colorful—and I quit. I guess I lost my temper there. So I need a job.”

“Except you resigned verbally to a single board member over the phone, and if he’s Swiss, I’m betting that English isn’t his first language. So if you change your mind, you could claim it was all a misunderstanding.”

“Hmm. You’re probably right, if I want to. But I’m not sure I do. I’d have to grovel. Besides, with Detlef on the board, things are different, not the way they were when I was hired. Worse.” He looked defiant.

“So, what about your face? Did you bash yourself with your telephone, or just bang your head on the wall in frustration, or what?”

He touched his forehead and winced.

“I got my head banged on the wall for me. Since I quit, I decided I should get the personal things I really want to keep out of my office. So, late this afternoon, I had just put a box of my stuff in the back of my car, and this guy grabbed me from behind. Before I could react, he had me in an arm lock, and he marched me over to the side of the building and shoved me into it. Stucco, like rough sandpaper. Then he punched me in the right kidney. Pissed me off, I’ll tell you.”

“By your office? At EcoARC?”

“Yep.”

“I thought the place was closed to the public and visitors now. Does this mean it was someone who works there?”

“Our security isn’t all that great. You remember Sibley Jensen, right?—how he just drove up the jeep road and crashed the meeting last week? And it wasn’t anyone who works there, because I’d have recognized them, even though it was almost dark.”

“What did they want?”

“Not really sure. See, while I was being marched over to the wall, I remembered I used to be a SEAL. And when I got my face sanded and he hit me, I went berserk. Broke one guy’s knee and the other one’s jaw—it made a very satisfying crunching noise. But that’s how I hurt my hand. I forgot how hard a face can be.”

“So then what?”

“I was just so mad at everything to do with that place, I left them there and took off. Called you from my car. Since you said you were busy, I went home and got a little cleaned up. Had dinner?”

\* \* \*

We found a restaurant not too far from the State Patrol building, one of those so-called “neighborhood” eateries that gets advertised on national television every half-hour or so. I always wonder how the same restaurant, with virtually the same interior decorations and menu, can be the “neighborhood” restaurant in places as diverse as Durango’s tourist downtown, the San Fernando Valley in Los Angeles, and my native north side of Chicago. As well as Oro Valley, Arizona. The miracle of marketing, apparently. And the homogenization of America.

After enduring the chirpy, scripted speeches from the hostess, welcoming us to “our” neighborhood place, and from the server, touting the specials and pushing hard to sell appetizers, we finally were left alone to talk for a while.

“I need to pick your brains a little, Bill.” I had decided to enlist Longwell’s assistance, and to do this I needed to fill him on matters I had been keeping to myself.

“Let’s see. Where to begin?” I took a sip of the coffee that had been set in front of me. “First, I need to say that I’ve not been completely candid with you about a couple of things. Your position as director of EcoARC made for a conflict of interest. Naturally, you want to get this homicide cleared up, but, at some level at least, you also feel protective of your people. And because some of them could be suspects, there’s a conflict. So I haven’t told you everything I know, or suspect.”

“And I’ve said for a while now that I really don’t have an alibi, so I’m a potential suspect as well.”

“Technically, you’re right, but I think I’ve decided not to worry about that. However, someone who is high on the list is Art Finnegan.” I watched him carefully for a reaction.

He looked surprised. “Art? Really? Can you tell me why?”

“He did a sabbatical up in Durango last spring. Remember?”

“Sure. He negotiated it with me as part of a deal for him to stay on as my deputy.”

“And he met Melody there. He was in Durango the weekend she was killed, and he lied to me about it, that’s what has me suspicious about him.”

“Ah. There have been rumors about his sleeping around. I guess his marriage isn’t all that healthy.”

“And he could have lied to me for that reason, sure. But there’s another thing. I’ve read Melody’s diaries. She was meticulous about her diaries, had volumes and volumes of them stashed away at her

mother's house. Art's in them. It appears that he started hitting on her when he was up at FSU and continued when she came down here to EcoARC."

"Ouch. Bad deal, there. It would be OK except for his position. I wish I'd known, I'd have put a stop to it. That's one of those power-differential situations where she automatically would have a sexual harassment claim, if she wanted to use it."

"From her diaries, it's clear that she knew that, but she was holding it as her ace-up-the-sleeve. But, really, what was more intriguing to me was not their relationship, but comments she made about his work. And that's what I want to pick your brains about. For starters, Art's a marine biologist. What's a marine biologist doing out in the middle of the desert?"

Longwell laughed. "It is weird, isn't it? Well, we needed someone with a good working knowledge of seawater to keep that big tank of the stuff we have in there happy. See, we're trying to grow plants from all over, including rainforests, and they need humidity. The people who built EcoARC's greenhouses put a lot of thought into this problem and finally decided to go with an approach that's been used before—an 'ocean,' meaning a big tank of salt water. It's salt water because fresh water is too hard to keep fresh. It eventually gets salty anyway. One difference between us and other places that have done this is that we have a bunch of long, high-tech greenhouses side-by-side-by-side, all connected with underground tunnels and air ducts, with the ocean next to one of the end greenhouses. That way, the rainforest greenhouses can sit on either side of the ocean greenhouse. Then, going down the row, the greenhouses get drier and drier. That way, we can accommodate just about any kind of ecosystem we want to."

"You must filter the air as it circulates between the different greenhouses, then."

Longwell looked impressed. "Right. HEPA filters, for pollen and everything, and the air flow is monitored and its constituents are measured. And we also keep track of what the filters catch. So, we've got this big tank of salt water, and Art uses it for his own research as well as keeping it happy to act as a whole-system humidifier."

I stared at my coffee cup and thought for a minute.

"Melody also talked about Art's research, but it was cryptic."

"I'm not surprised. The two of them were working on a similar problem, carbon sequestration. Art had been working on obtaining raw materials for new pharmaceuticals from sea critters, anemones, sea cucumbers, urchins, critters like that, but he had trouble keeping them alive. So he moved in the direction of carbon sequestration."

"Hal talks about that as if it's common knowledge, but I'm a little in the dark. Also, I'm not clear on why EcoARC is doing it. Melody, I know, was working on grasses, or something."

"Remember I mentioned that our little drug companies, when they succeed, are ripe for plucking by the big companies? That happened with one of them a few years ago, it got grabbed up by a big conglomerate—a different one from the Swiss one that Detlef works for—a big conglomerate that also does petrochemicals. And companies that do petrochemicals are interested in carbon sequestration. Burning fossil fuels—oil, gas, coal—puts carbon dioxide into the atmosphere, causing the climate to warm up. To mitigate this, it's likely that some kind of market-driven trading system will develop. In fact, there's already a small market for what's called 'carbon credits.' If you're, say, Texaco and you can show that you're pulling carbon *out* of the atmosphere, you're not so likely to get dinged by the government for marketing a product that's putting carbon *in* to the atmosphere. So these companies are looking for ways to take credit for pulling carbon out of the atmosphere."

"And Melody was working on how dry-land grasses do that?"

“Right. Mostly, though, it isn’t the grass. It’s the soil the grass is growing in. If you take lousy soil, you know, clay or sand, and get grass to grow in it, after a few years the soil is far more organic, and that organic component is carbon, mostly. So you’ve sequestered carbon and, if you’re Texaco, you get points. And you can sell those points on the carbon credit market. So, if you’re, say, Conoco and need points, you can buy ’em.”

“But how does Art’s work fit in?”

“Oceanic sequestration. It’s a natural process that’s actually a critical part of the natural carbon cycle. The idea is to use it to combat global warming by speeding it up. It works in two stages. First, oceanic phytoplankton, microscopic plants, algae and so on, they turn carbon dioxide into plant material by photosynthesis, just like grasses and trees do. Then, little bitty critters, called zooplankton, eat the phytoplankton, and they turn the carbon from the phytoplankton into little shells made out of calcium carbonate. When the zooplankton die, or when they get eaten and the predator excretes them, the shells fall to the sea floor, and, presto, all the carbon is turned into mud and eventually rock. Limestone is made this way.”

“I see—Art was trying to make this more efficient. Now some of Melody’s comments begin to make sense. She was talking about how different strains, I think that’s what she called them, do different things to each other.”

“Right. In the real ocean, phytoplankton growth is limited by trace chemicals, nutrients, minerals. An important one is iron. Some experiments out in the real ocean have shown that you can put iron onto the surface of the ocean, I forget the actual chemical they used, but it had a lot of iron in it, you put it onto the surface of the ocean and, bang!, the phytoplankton grow like crazy, it’s called a ‘phytoplankton bloom.’ Then, because there’s a big food supply, the zooplankton multiply like crazy. But when the iron is used up, it all stops, so it’s not a very useful way to extract a lot of carbon from the atmosphere. To get any real effect you’d have to keep dumping the iron chemicals in, continuously and all over the place. Art’s been working on engineered phytoplankton that don’t need so much iron. But putting engineered organisms into the real ocean is not something we really want to do without a complete understanding of what could happen, so he’s going to use our tank of saltwater. Actually, I think most of his work is still in the small aquarium stage at this point.”

“I remember a comment Melody made—something like ‘all the forams died.’ It had to do with a particular strain Art was working on.”

“What? I didn’t know about that. Uh, ‘forams’ is ‘foraminifera,’ the zooplankton order. Meaning, ‘order’ as in ‘species, genus, family, order, class.’ So, taking Melody’s comment literally, if Art has a phytoplankton that killed all the forams, he’s got something that kills a lot of critters. Little critters, but really important ones.”

Just then, our server showed up, followed by a second person laden with a tray of food.

\* \* \*

Three chirpy minutes later—after assuring the server that, yes, everything we ordered was there and looked just fine; and, no, we didn’t need anything else, not catsup, not mustard, not the restaurant’s special steak sauce (the thought of that on my chicken Caesar salad made me slightly nauseated); and, yes, golly, we were sure hungry and looking forward to eating this wonderful meal!—Bill and I were able to continue in private.

He took a big chomp out of his bacon cheeseburger and chewed for a minute.

“Of course, maybe Art didn’t do anything new or different. There’s a number of algal species that are naturally toxic. You’ve probably heard of ‘Red Tides,’ right?”

I looked up from poking at my salad and nodded. “Yeah, something to do with lots of fish dying.”

“The preferred term is ‘Harmful Algal Bloom,’ and it’s become more and more of a problem over the past several years. No one really knows why, though. Anyway, maybe Art stumbled across a way to select in favor of harmful algae that can get along without much iron. But if it kills all the zooplankton, that’s a problem because usually there are some that are able to survive.” He laughed. “And the irony of this, of course, is that you need the zooplankton to sequester carbon, so Art’s used his carbon sequestration funding to find a way to prevent carbon sequestration. Wonder what the sponsor thinks. If he’s told them.” He took another big bite.

“Melody seemed to think she had found out something she wasn’t supposed to. Is this something Art would keep secret?” I was hungry, but I was having trouble getting started eating. Something was worrying me.

“Don’t see why.” Chomp. “Unless Art thought he had something he could sell to the highest bidder. Except we have strict protocols, both about using engineered organisms with the utmost care and about keeping discoveries linked to funding sources. It’s the only way we can make this consortium work.”

I finally summoned up the appetite to take a bite of my salad and discovered it tasted quite good, actually.

“So,” I talked around the mouthful, “Art discovers some kind of super—what did you call it—super harmful algal bloom in one of his aquaria. And these aquaria are in a room in there, presumably, contained within your greenhouses. So at least it isn’t out there in the world. I wonder what had Melody so worried. Because she was. Do these things do anything else except kill zooplankton and fish?”

“I was in Florida once when a bloom happened. Stunk up the place big-time. It wasn’t only the rotting fish everywhere, there was some kind of smelly gas released by the algae.”

For some reason, this made me even more hungry, and I really dove into the salad. I noticed the Caesar dressing was authentic, with the strong hint of anchovies I like. We ate for a while, and finally Bill polished off his cheeseburger.

“The smell was kind of the rotten-egg sulfur smell, along with the fish, so the gas must have been some reactive sulfur compound.” Longwell looked thoughtful. “I don’t have a clue about what Art’s algae would do, though.”

“Does he monitor his experiments for gases released?” I popped the last piece of chicken into my mouth. “I’m still hungry. Wonder what they have for dessert?”

“He would be the one to know about it. He’s the only one with access to his tank room, except for me and Stan, in case of emergencies. But it’s sealed, the door has an air lock, I mean, so maybe he does.”

“You don’t suppose that...Oh. I just remembered something. Melody might have had Art in a position to blackmail him. But she didn’t need money. Maybe she would have blackmailed him as a way to get him to stop hitting on her.” I was looking around for the server, now nowhere to be seen.

“She didn’t need money? She was a post-doc. They’re chronically poor.”

“Not Melody. She was a trust-funder. I don’t know how much, but I don’t think money was an issue for her. That, by the way, is something I’m keeping under the table as a possible motive, the money. Maybe not Melody’s, but her family’s. But this thing with Art would seem to be about something else.”

“So what should we do?”

“You said his room, the lab where his tanks are, might be monitored for its air. Is that recorded? Could we find out its history? That could be useful information, no? Oh. And remind me to tell you about Rumsford, too.” I stood up and waved at our server, who was lurking across the room behind Bill.

“Yes it would be useful, and please tell me about Kelly.”

“OK, after I order dessert. I don’t want to lose the opportunity.”

After hearing the choices from the server, whose attention I had finally attracted, I ordered a chocolate brownie with ice cream. Bill just ordered more coffee.

“Melody wrote to her brother that she thought Kelly was stalking her. That was enough to get us a warrant, so we searched Kelly’s apartment today and found the place covered with pictures of Melody. And his computer...his computer had some, also. So it’s clear from his apartment that he was obsessed with her, and we could probably persuade a jury of stalking.” I wasn’t ready to publicize Melody’s private life more than absolutely necessary.

“I guess it wasn’t a huge secret that he had a crush on her. But this sounds, um, unhealthy. So you suppose he’s connected with her death?”

“He volunteered a DNA sample, so it probably wasn’t his skin under her fingernails.”

“Oh, yeah, I forgot about that. She had scratched somebody. You don’t suppose Art has scratch marks somewhere?”

“Could be. But, remember, we’re only concocting theories, here. Art may not have anything to do with this whole thing, beyond fooling around on his wife. There are a couple of other lines of investigation as well.” I summarized the capture of Lyle Shaughnessy earlier that evening.

“Elwood’s guys, coming after you? Whoa. That’s just nuts. Although I guess it fits with what happened to me earlier. I wonder if that was Lyle?”

“Not if you beat them up the way you described. I saw Lyle and another deputy this evening, and neither had any bones broken recently. But Lyle seems to be the leader of, um, the questionable activities. His partner this evening caved right in, blamed the whole episode on Lyle and Elwood.”

“Figures. I heard that Lyle is Elwood’s brother-in-law, or something like that. So, anyway, do we have a plan? Want to go look at Art’s setup?”

“Who knows you’ve quit?”

“Just Detlef, and he’ll probably go through channels to let everyone else on the board know. So I’ve got time to go back up to EcoARC, if need be.”

“Maybe we should check out the data on the air in Art’s tank room.”

“I can do that. What are you going to be doing tomorrow?”

“Interviewing Elwood, it looks like.” My smile was grim. “I think I’ll take back-up.”

\* \* \*

## Thirteen

Because I had called Hal after getting back to my hotel after dinner Wednesday evening, I wasn’t surprised by the weather on Thursday morning. Hal had warned me that the first cold front of the fall

would be making it down past Phoenix, maybe all the way through Tucson. Being married to a weather weenie, I thought, has its occasional uses.

He had actually hinted that this might happen when I was packing Wednesday morning, so I'd come prepared for a ten- to fifteen-degree drop in temperatures. Jeans, a sweater and heavy jacket, and my hiking boots were once again the appropriate clothes, for warmth this time, rather than for effect. In fact, I wondered if the sheriff would take me seriously dressed this way. If he didn't, of course, that would just give me even more of an advantage.

I hadn't been kidding around about taking backup with me, and it seemed like a good idea to take both Sandra Kinney and Thomas Moody. They had a piece of this case, after all, having arrested Elwood Johnson's two deputies the night before. I wondered if Johnson had any idea about the statements from the motel clerk and Deputy Henry Reeves. Combined with the previous issues surrounding Melody Witherspoon's death, this new complaint put Sheriff Elwood Johnson in a peck of trouble.

The protocol issue—where to have the meeting—was resolved by Ross Townsend. He had persuaded Johnson to meet, first thing, with state Public Safety personnel at the State Patrol offices in Casa Grande, and he went so far as to talk the district captain into offering his personal office for the occasion.

But even with this arrangement, there wasn't a lot of trust in play. Officers Moody and Kinney and I drove up from Oro Valley in an unmarked state car, hoping to avoid attracting the attention of Johnson's deputies, should any be on the lookout for us.

Johnson arrived fifteen minutes late, and he was accompanied by Assistant District Attorney Sibley Jensen. Sandra Kinney and I exchanged looks of amusement.

"Sorry I'm late, ladies, officer," Johnson's half-hearted apology to Sandra and me, and to Thomas Moody, set the tone. "I hope it's appropriate that Sib here came along. I understand that I'm under some cloud of some sort, and Sib is here to represent the county."

"Thank you so much for coming, sheriff." I had decided in advance to take an extremely slow-fuse approach to any and all baiting. "Mr. Jensen, how nice to see you again. Perhaps we can clear a number of issues up and make progress together on the main event." I introduced everyone around.

"Now. Sheriff, Mr. Jensen, what I'd like to do is work backwards in time, beginning with last night. And, to be clear, we're going to be recording all of this. OK?" I barely paused. "I'm going to quickly run through a number of matters, without making judgments or drawing conclusions, just so you'll know where the Arizona Department of Public Safety stands. To the extent that you may not agree with what I'm about to say, we can take note of your disagreement for future discussion. But what I really want to focus on is what brought me down here originally, the death of Melody Witherspoon and the discovery of her body in the EcoARC greenhouse. I would think that clearing that case would be a priority for you as well. Moreover, if we can clear that one, much of the other stuff will become moot. Does this make sense?"

Jensen had adopted a sullen expression, staring at the wall over Sandra Kinney's head, and Johnson was examining his left thumb-nail throughout my little speech. Rather than respond right away, he let a silence lengthen while he picked at a hang-nail. Finally he cleared his throat.

"Well, now, little lady, I'm not so sure it does. I'll stipulate that I do indeed want to clear the Witherspoon case, and I maintain that I have done so. It's too bad that the perp went and hung himself, but that's the way it goes sometimes. As for other 'matters,' as you put it, I'm sorry, but I'm afraid you're barking up the wrong tree. This here's my county and my jurisdiction, and you're out of yours, by several hundred miles. I dispute the legality of your joint appointment, and I have half a mind to arrest you for impersonating a police officer. I reckon I could force a show-down with the State Patrol

here, but that doesn't seem politic, so I'm thinking what I'll do is just let you off with a warning, a written one."

I mentally lengthened my personal fuse by a factor of three and took a deep breath.

"OK. Let's talk about the Witherspoon case for just a minute. It's my understanding, and I've seen this documented, that your strongest evidence against the late Mr. Alvarez is the scratches on his face. Because Ms. Witherspoon's body was discovered with blood and skin under her fingernails, you made the connection to Mr. Alvarez, an EcoARC employee. Isn't that correct?"

Sheriff Johnson merely smiled like the Cheshire Cat, but Sibley Jensen sat up straight and looked alert.

"For your case to fly, then, that skin under Melody's fingernails must be from Mr. Alvarez's face. But it's not. That's been shown using a DNA test."

Johnson's smile twitched just a hair. He was clearly used to playing cut-throat poker.

But Jensen wasn't. His eyes bulged, and he couldn't contain himself. "What? Those scratches on Alvarez's face aren't from the victim? My God, an innocent man killed himself. In our jail, yet." He looked surprised, as if remembering something. "If he really did kill himself. Elwood, what's been going on over at your jail, anyway?"

Somehow, Sheriff Johnson managed to maintain his Cheshire Cat poker face. "Excuse me and Mr. Jensen a minute, would you little ladies, officer?" His voice was pleasant, but his gray eyes were steely.

"Sheriff Johnson." Knowing I had the upper hand, I was going to try to keep to the point. "The recording of this meeting will be given to the grand jury that will be investigating your office. Mr. Jensen is aware of this grand jury, as he was present when the recommendation to the Governor was formulated. You do understand that you and your office are in some legal difficulty, right? I don't think your leaning on Mr. Jensen will help matters. But this isn't why we're here. We're here to try to make headway on the Witherspoon case. If it will make you more cooperative, perhaps it would interest you to know that neither Mr. Lovett nor Mr. Shaughnessy, either Mr. Shaughnessy, actually, Lyle or his son, are primary suspects at this stage. That could change should evidence emerge, of course. But right now we are looking in other directions. And it seems to me that your cooperation on clearing this case would help your situation with that grand jury."

I could almost see the gears turning inside Johnson's head. After a brief staring contest—it came out a draw—he finally made a decision.

"Well, now, I reckon if she didn't scratch Alvarez's face, it does weaken our case against him some. And that makes his suicide all the more unfortunate. And, of course, it also means that we've still got a killer out there. You picked up that kid who found the body yet?"

"He's agreed to a DNA test, knowing the situation, and he's been examined by a physician, who found no scratches. We do have some issues with him, however. But we don't think he's the killer. In a similar way, we also have issues with Mr. Lovett and the two Shaughnessys. It seems to me that those 'other matters' I mentioned, the ones involving you and your office, could be related to all this. There's no indication, however, that they're directly related to Ms. Witherspoon's murder. So even though there are some things you're going to be dealing with, matters the grand jury will be considering, it isn't Ms. Witherspoon. And by helping with that case, really helping instead of just grabbing the first suspect at hand, you can help yourself in the other matters, too." I had decided that repetition just might help things along.

"You got a primary suspect? Or are you just fishing?"

I couldn't help but to smile. "If we're fishing, it's casting to rising trout, not just trolling blind. What can you tell me about EcoARC and its security situation?"

Johnson snorted. "I wouldn't grace it with that word. 'Security' is too strong. Used to be, they offered off-duty hours to some of my people, but that all changed with that new, high-falutin' director they hired. Got himself some kind of full-time guy, but it's only one guy and he doesn't know crap. I heard he was out of town when the murder and burial went down. I don't call that 'security,' not by a long shot. Used to be, my guys would do off-duty patrols out there and they put the word out: nobody messes with this place. And no one did."

"Did you, or any of the fire departments you know about, ever have to respond to any emergencies out there? I mean, any kind of emergency, crime, medical, anything?"

Johnson actually looked interested, for the first time. "Now that you mention it, there have been a couple. A few years ago, some fella had a heart attack. I think the Oracle emergency folks responded. I think there was a fire one time. And I remember a recent chemical spill situation several months ago, maybe...last June? July? I'd have to look it up. We got called in by one of the employees, but by the time the county HazMat people got there, it was all cleared up, they said. I went to that one myself. We all got shoo'd off by the assistant, what's his name? Ah...Finnegan. Somebody Finnegan."

\* \* \*

I wondered if Art was covering something up. If so, what else has he covered up? And does Bill Longwell know about this? I thought for a minute, and changed course a little.

"How widely known is it that they're doing genetic engineering out there?"

"I suppose we all figure some stuff like that's going on. That's what these research places do these days. It hasn't been in the papers, though, so I don't know what the general public thinks." Johnson was tapping his fingers on the desk, thinking.

"Do you mean to say there are questionable activities out there?" Jensen had been quiet, but the genetic engineering comment had grabbed his attention.

"I don't know about 'questionable,' at least from your perspective. If there are county zoning regulations about that, though, I'd say it was on your plate, Mr. Jensen. But here's where I'm going with this. Mr. Jensen, do you remember the discussion at the meeting last week, Rudy Gelinski's comments about the time line leading up to the discovery of Ms. Witherspoon's body? Rudy was convinced that someone had murdered her some time earlier and took her in there and buried her. Remember?" I was looking at Jensen, who nodded.

"Rudy and I have talked about it, and I asked him how his time line would change if Melody had been killed inside the greenhouse, her body kept in there prior to burial. He said that would change things a lot, because the deterioration he observed would have been sped up. Especially in the tropical greenhouses, the high humidity ones."

Jensen seemed intrigued. "So this means that even though she was seen up in Colorado on Saturday, she may have been killed here on, say Sunday morning, or something? In which case, your involvement would seem unnecessary, at the least."

"Exactly correct, except that I'm officially appointed and involved up to my eyebrows, with all due respect, Sheriff, and there are additional ties to Colorado anyway. We haven't eliminated all the Colorado possibilities, is what I mean. But in terms of actual suspects, this altered time line narrows the possibilities."

“It’s always been apparent that someone from EcoARC was involved, though.” Despite his Neanderthal attitude, Johnson was no dummy, I decided.

“At least as an accomplice, yes, because of the security locks and getting into the greenhouses and so on. That probably eliminates a bunch of people whom you may be concerned about protecting, Sheriff.”

He looked me straight in the eyes and said, “I have no idea what you’re talking about, little lady.”

“You said that Finnegan ‘shoo’d you away’ from EcoARC when you and the HazMat team arrived to deal with the chemical spill. Was there any information about what kind of chemical it was, what they did to contain it, anything?”

“Nothing. I was kind of perturbed, you know? And so was the HazMat team leader. He asked all sorts of questions, but all Finnegan would say was that there was a small ‘lab accident,’ and that they had got it cleaned up already. But they’re way the hell out there in the desert, surrounded by lots of private land. They have some kind of extremely high temperature incinerator for hazardous stuff, and they didn’t have injuries, or anything. We really didn’t have any reason to pursue it.”

“Do you know that Lyle’s son Michael works in the sex industry, pornography, prostitution, all that? Michael’s your nephew, isn’t that correct?”

Johnson looked sharply at me and the two officers, and he took his time answering. “What does this have to do with anything? You already said that neither Lyle or Mikey were suspects.”

“And they’re not. But there are pieces of the Witherspoon puzzle that involve the sex industry, at least that’s what it looks like. Did you know that Michael works for that crowd? And that James Lovett does, too?”

“Well, now, I knew that Jimmie got Mikey a job of some kind up in Colorado. And Jimmie, of course, is a photographer, told me he’s a fashion photographer, models, fancy clothes, all that.”

“Models, yes, clothes, no. Michael Shaugnessy has some kind of gopher job with the company that markets the pornography that Lovett creates. And they have affiliates down here, Phoenix for sure, maybe Tucson. They like to use college girls as their models. They seem to start slowly, clothes, underwear, then, as the girls get comfortable with it, progressing to no clothes and active sex on camera, some of it solo, some of it with companionship of various kinds. We haven’t found anything illegal, you understand, the girls are all over eighteen. But I was wondering if you knew about their involvement. I don’t think this is the sort of thing you’d want going on in your county.”

“God-damned right it’s not! We got enough problems without perverts like that sneaking around.”

“No offense, Sheriff, but a couple of these ‘perverts’ seem to be your wife’s family. And it appears that your difficulties, the ones that have the grand jury’s attention, relate to things you’ve been doing to protect these people.”

Once again, I could see wheels turning, and I noticed that the poker face was gone. In fact, as the wheels turned behind the face, the face itself was getting progressively redder. Must be working up a head of steam, I thought. But when he spoke, he seemed surprisingly calm.

“One thing I sure hate, and that’s being played for a fool. It must be the case that Melody Witherspoon was one of Jimmie’s ‘models,’ because otherwise you wouldn’t be bringing it up. If Mikey works for that crowd, he probably knew her, and maybe Lyle did, too. Lyle was the one made the collar of Alvarez, and he worked hard to persuade me that Alvarez killed her. And, at least before the DNA test, there was enough evidence to sway a jury, ain’t that right, Sib?” The question was rhetorical, so Jensen only nodded while the Sheriff plunged onward. “I suspect that Lyle figured that getting the case

cleared quickly would prevent any of this stuff from becoming public. Reckon I'll have to have me a little talk with Lyle. So, Ms. Trieri, what is it you want from me?"

Well, glory be. He actually does know my name, I thought. "So far, so good, Sheriff. This information is most helpful. What you can do now is cooperate. Let me do what the DPS wants me to do, and see if you can get people in your county to help. One thing, for example, is to find the date of that chemical spill incident. I have contacts at EcoARC that I can use to find out more if we get the date. And maybe find out if there are other such incidents that didn't get called in. See, to me all this stuff about your wife's family doesn't really matter except for how it helps put the Witherspoon puzzle together. That's still a jumble, pretty much. I expect that some of it will matter to the grand jury, but cooperating with my investigation will help you there. And, hell, as far as I'm concerned, you can take whatever credit for this thing that you can get away with, once we get it all sorted out. I'm certainly not going to try to grab any headlines."

Johnson stared at a corner of the ceiling for a minute. "I guess I can live with that. No hard feelings about those, um, 'other matters,' then?" He smiled, stood up, and extended his right hand.

I looked at it for a few seconds, and finally took it. With just a hint of a smile, I said, "No hard feelings, Sheriff. But I think I'll still be careful about speed limits in Pinal County."

\* \* \*

On the mid-morning ride back to Oro Valley, the tension level among the two State Patrol officers and me was much lower than it had been on the way north to Casa Grande earlier. For one thing, the sight of a sheriff's office patrol car didn't set us on edge. For another, we had Elwood Johnson's performance to critique.

"The guy is a real piece of work, isn't he? It's a good thing the DA was there, Jensen, because I don't think the Sheriff would have caved in without him." Thomas Moody, who was driving, had been silent all morning, watching and evaluating, apparently.

"That was a different Sibley Jensen from the one we saw last week, huh, Annette?" Sandra Kinney was turned sideways in the passenger seat so she could talk to me in the back.

I looked up from my notes. "I was glad that he showed some remorse about Alvarez's death. Makes me feel better about the DA's office."

Moody laughed. "I'm impressed with how you worked him, Annette. Especially because he wasn't exactly polite, uh, 'little lady.'" I looked up to see his big grin in the mirror and laughed myself.

"I couldn't tell if he was doing that intentionally, to antagonize me, or if that's just the way he is. But I figured the way to get him to cooperate was to show him how it's in his best interest to. And I got lucky. He didn't seem to know about his in-laws' connections to the porno crowd. I think that pissed him off some. Oh. Speaking of Elwood's in-laws. Sandra? I had to leave last night. Did you find out if Lyle ever worked at EcoARC?"

"He said he had done some overtime and off-duty security work there, but he was never an employee. And, Annette, you handled that whole thing with Elwood very well. I think I would have bopped him at about the second 'little lady.'" Sandra Kinney looked grim, but then her face morphed into laughter. "Actually, it's quite amusing. I'm in uniform and you're in, I don't know, hunting clothes, or something like that. It's not like we're in dresses and heels. Doesn't seem like we look like 'little ladies' at all. So where is this all going, Annette?"

“You two have your own charges to pursue, or not. Even if Lyle was looking for me at Elwood’s instigation, he found you and whatever attempted assault charges are appropriate are all yours. And, let’s see, the other stuff—that roadblock incident last week, I’d say let’s just forget about that. Alvarez’s death, of course, is going to be looked at by the grand jury, and it sounded as if Elwood’s faith in Lyle’s handling of it has been shaken. I’m not going to worry about how Elwood put James Lovett up to breaking and entering my house, because we’ve settled that one. I’m still not sure how all this fits together, but I feel way less concerned about Elwood’s involvement. It seems like it’s his in-laws’ doing things he didn’t really know about that was the problem.”

“You seemed focused on that chemical spill at EcoARC that Elwood mentioned.”

“Yeah, there’s something fishy going on out there. The director, the new ‘highfalutin’ one that Elwood mentioned, Bill Longwell, got roughed up last night as he was getting in his car. Art Finnegan, Bill’s deputy, has been less than candid with me. And I think there’s still more to be learned from Kelly Rumsford, if we can get him to cooperate fully. Excuse me, who could that be?” My cell phone had started chirping, and I dug it out.

“Oh, hi, Bill, we were just talking about you... There are? Is it a huge computer file or something?... This is certainly good news. Listen, could you email the whole thing to Hal? I’ll call him and let him know it’s coming and why. And I’m glad you called. I had a conversation with Sheriff Elwood Johnson this morning. It went quite well, actually, to my surprise, and he mentioned that there was some kind of chemical spill out at EcoARC, sometime last June or so. Apparently the county Hazardous Materials team got called. Do you know anything about that?... No? Hmm. Well, let me find out the date and we can talk about it again. Please don’t mention it to anyone, OK?... No, I’m going home for the weekend. After last night and this morning, I need some R&R, better food than that chicken thing I had last night, Hal’s home cooking. And I can look over his shoulder at that computer file you’re going to send him.... OK, you take care. ‘Bye.’”

As I pushed buttons for Hal’s office, I said to the people in the front seat, “Bill Longwell, EcoARC Director. He’s my inside information source. Oops, excuse me again. Hal? It’s me... No, I’m fine. And I’m going to come home this evening, don’t know exactly when yet. I called to warn you that Bill Longwell is going to be emailing you a big computer file, data of some kind. If you can’t read it, don’t worry, we’ll get Bill to tell us how... OK, I’ll see you this afternoon or evening. Love you too. ‘Bye.’”

“What,” I continued to the two officers, “did we do before these nifty little gadgets?”

“They do have their drawbacks, like in theaters and restaurants. And church, of all places.” Thomas Moody, I decided, spent his Sunday mornings in a traditional mode. I punched up more numbers on my phone.

“Ross? Good morning. You did a great job setting up the meeting with Elwood... Right. Went fine. We’re headed back south to Oro Valley, got just what we need... Yes, Elwood decided to cooperate. He didn’t know that his wife’s relatives were in the porn industry, and I’m sure he’s not happy about it... Yeah, and he’s distancing himself from Lyle’s handling of the Alvarez so-called suicide... No, I’m going to head home, catch up on my other job’s paperwork tomorrow, do some serious R&R this weekend. The Witherspoon investigation is at a cusp, and things need to go on hold for a few days. You know, like letting grape juice ferment into wine. Also, I need to deal with some details up in Durango... OK, I’ll call tomorrow. Thanks for all your help.”

I checked the battery and discovered it was still hanging on, so I called my hotel to warn them I’d be checking out by noon and the airline to arrange for a return to Durango. They put me on a mid-afternoon flight that would get me home for a late supper.

“OK. All done being rude in the back seat.” My battery was dying anyway. “Sorry about all that, but it got all my business done for the day. Now I need to get out of the hotel and up to the airport in Phoenix for a flight at three. I don’t suppose Winston Tsosie is anywhere around these parts?” I saw Thomas Moody’s puzzled look in the mirror, and Sandra Kinney laughed.

“C’mon, Annette, all you have is a rental car, you couldn’t keep up with him in that!”

“Oh, yeah. I forgot. Maybe you could escort me up there. I bet I could keep up with you. Oh, sorry, sorry. That’s mean. And after all you’ve done for me.”

But Sandra only laughed harder. “Hey, that’s what friends are for, to give each other a hard time!”

Thomas Moody looked all the more puzzled.

“Sandra, it really would help if I got up to Phoenix quickly. Um…”

“I’ll make a couple of phone calls while you pack and check out. And I promise to drive so that you can keep up.”

\* \* \*

Everything worked. Surprised and pleased, I found myself pulling into my driveway in Durango at 7:00 that evening. Considering that was 6:00 Arizona time, I felt lucky to be home so early.

Sandra Kinney had escorted me from Oro Valley up to the Phoenix airport, getting me there in plenty of time to make it through security and so on and catch my flight with ease. It wasn’t at all like the drive with Winston Tsosie, because the interstate was full of traffic, and we had to keep our speed reasonable. Not that the rental car could have managed much more anyway.

The airplane was comfortably empty, so I had a row to myself without having any unpleasant encounters. And I was even able to stop at my CBI office and pick up mail and the videotape from Melody that Ernesto Ang had given me Wednesday morning.

Best of all, Hal had promised to have dinner for me when I got home. As I walked through the door, I recognized the distinctive aroma of green chile chicken enchilada casserole, and I realized that I was actually hungry for it.

Some time ago, I traveled down to Santa Fe for an investigation, and my reaction to the chile labeled “medium” at a local restaurant had prompted Hal to put me on a training regimen. If I couldn’t handle the heat in medium chile, albeit Santa Fe medium, I really didn’t deserve to live in the Southwest, he reasoned. So he had been training me with increasingly spicy chile dishes ever since. Now that I had finally caught up with his tastes, I actually enjoyed his creations, and the casserole was one of the best. I had come to appreciate the little buzz the chile gives me—some kind of endorphin rush, I read somewhere—as well as the taste of the green chiles and cumin together with the roast chicken. And Hal always served it to me with a Cuervo Gold margarita—since I was finally home, I thought maybe I’d get him to make two for me.

He wasn’t in the kitchen, so I went to the bedroom, unpacked, undressed, showered, and got refreshed for dinner. Then, following the noise, I found him in the study, peering at a computer screen full of wiggly lines in various colors. He seemed oblivious to my arrival because of the noise I’d followed—a CD he’d made with various 35-year-old rock and roll bands, bands of the loud and raucous variety, was cranked up. As I walked into the study, The Who were reminding Hal, and now me, to be sure and not get fooled again.

But before I could get over to his chair to surprise him, he jumped up and grabbed me in a bear hug.

“Welcome home, darlin’. Let me turn this down.” I heard him because he was talking right into my ear. He reached over and turned a knob, just as Roger Daltry was inviting everyone to meet the new boss (who, apparently, bore an uncanny resemblance to the previous boss), and the closing chords faded away.

“How’d you know I was here? You got eyes in the back of your head?”

“Yeah, all of us professors do, so we can watch the students while we’re writing on the board. No, seriously, I smelled you. And you smell good.” He dove for my neck, but I giggled and pulled away.

“Food! You promised me food! And that smells too good not to eat.”

“Yum, just like you. But, OK, we’ll have dinner. First. Want to see what I’ve been doing?” He waved in the direction of the computer screen.

“Can you print it out? We could look at it at the table. I’m starved.”

“Will do. And I’ll be right down. Table’s all set, all that’s needed is to get the chicken out of the oven and the salad out of the ’fridge.”

Hal must have been hungry, too, because we ate without talking until little beads of sweat began to pop out on his forehead. That, Hal had told me, was the appropriate level of heat in chile—one comfortable serving makes you start to sweat a little. I could feel the roots of my hair getting damp. Then we slowed down.

“So, now we can talk about these graphs you’ve got. What is it?”

“What Bill Longwell sent me. I really don’t know what it is though, beyond the obvious. Variations of something with time, over the past couple of years, according to the dates. It looks like gas samples, at least some of it.”

I remembered that I hadn’t described the data that Longwell would be sending. “I can understand how you could tell about the dates, but what’s this about gas samples?”

“This green line here is probably carbon dioxide. See, the numbers on it tend to hold steady for weeks at a time, and they’re at different levels between 300 and 700 parts per million. That’s what the data values in the file are. And that’s what you would do if you were running a carbon dioxide experiment in a greenhouse—control the CO<sub>2</sub> level at amounts like this.”

“Why these amounts?”

“Back before the industrial revolution, the atmosphere had about 275 parts per million of carbon dioxide. Now it’s closing in on 400, and it’s projected to get much higher over the next several decades. And I know that they do CO<sub>2</sub> experiments down at EcoARC.”

“So what are the other lines?”

“I can’t be sure without documentation, but it looks like other trace gases. Which ones depend on the kind of experiment they’re doing. If it involves plants, this one, which is in parts per trillion, really tiny amounts, could be a gas called isoprene.”

“Does all this mean anything?”

“Got me. There are several places where things change a lot, sometimes quickly, in a matter of days, like here,” he pointed to a step in a red line, “and sometimes more slowly and steadily, like this purple line. But without knowing what the gases are, if they are really gases, there’s no way to know if either of these is significant.”

“I’ll call Bill tomorrow and see if he knows anything more. I think this is air sample data from an experiment that Art Finnegan has been doing. He has a sealed room full of aquaria containing some kind of genetically engineered plankton. Bill told me a bunch of stuff about carbon sequestration. And Melody’s diaries have comments about what Finnegan’s doing. She didn’t seem happy.”

“Oh. Probably Art is trying to develop phytoplankton that are more efficient at sucking carbon dioxide out of the air, or ones that can grow without being so sensitive to trace nutrients like iron, or something like that. You need to do this stuff in an aquarium, because you surely don’t want some kind of weirdly engineered critter loose in the real ocean, at least not until you’re absolutely sure it won’t have unforeseen consequences.”

I guess I should have expected that Hal would know about this stuff, but it surprised me that he was almost able to summarize the conversation I’d had with Bill Longwell in a few sentences.

“One of Melody’s diaries has a comment that all the forams died. Bill says those are—what did he call them?—oh, zooplankton, and they eat the phytoplankton.”

“Right. You wouldn’t want those little guys loose in the ocean, because we need the forams. Bigger critters eat them, and we probably eat some of those bigger critters. Offhand, I don’t know which. But if Art’s engineered some phytoplankton that kill forams, he’s got a problem algae on his hands. Sounds like you had an exciting time of it down there. Anything else happen?”

“Huh. This plankton stuff was the least of it, although I’m beginning to think it may wind up being the most important.” I filled Hal in about Kelly Rumsford’s obsession, Sheriff Johnson’s foibles and apparent conversion to sanity, and Bill Longwell’s possible change of employment status.

“He quit, on principle, eh? Good for him. You think he’d be interested in being Dean of Natural Sciences at a small, financially teetering state research university here in the Southwest? Maybe I’ll give him a call tomorrow.”

“You could ask him about the graphs, too.”

“Right. Talk science even. Give both of us a change from administrative foolishness. So you were down there—what?—one night? And all this stuff happened? Too bad you weren’t busy or anything.”

“Actually, there’s one more thing that didn’t happen, yet. Wednesday morning some guy named Ernesto Ang came by my office, before I left town.”

“Ernesto? Why would he come by your office? Oh, I know—he was hitting on you.”

“No, he wasn’t, but why do you say that?”

“Oh, he thinks he’s God’s gift to women. Ever since he got here, he’s been chasing anything female and under about 45. But what *did* he want then?”

“He delivered a videotape that Melody had left in his keeping, to be given to, ‘someone in authority,’ I think he said, if something should happen to Melody.”

“A videotape? Made when?”

“It sounded like around the first of this month. Something like a week, maybe two, before she was killed. Want some after-dinner TV?”

\* \* \*

We cleaned up the kitchen first, and Hal had to remember how to use the VCR. He had graduated to a DVD player some time ago, and getting all the equipment switched so that the VCR would play on the TV and through the sound system—the sound wouldn't play through the TV speakers, the way it was hooked up—was something he hadn't done in months. It's a complete mystery to me.

But eventually he got it to work, and Melody Witherspoon appeared on the screen. Hal backed the tape up, cued it to the beginning, and waited while I went to fetch the coffee I had started brewing.

When I walked in with the coffee, I really looked at the TV, and I saw one of the first frames of the tape, a picture of Melody sitting on a rock wall with her arm half raised, a little gizmo of some kind in her hand. In the background was a nicely composed view of the side of a hill covered with scrub oak trees and cactus amid a jumble of boulders. She was wearing sneakers, jeans, and a sweatshirt with the Frémont State logo on the front. I decided that she was also wearing just a touch of makeup, quite professionally done, and her hair looked wind-blown.

"What's she doing with her hand?" That was the only thing that looked unusual to me.

"I watched the first few seconds before, to make sure it was working, and she lowers her arm from this point. I think it may be a remote control for the camera." Hal helped me settle in to the couch. "Ready?"

I nodded, and he pushed a button on his remote control. Melody came to life, lowered her arm, and cleared her throat.

"I don't know who is seeing this first, or what the circumstances are. But I expect that my family will see it at some point, so let me start out by saying that I'm sorry, Mom, and Al, truly sorry for what you're about to hear. I know that you're both proud of me, for what I've done in school and all that. Well, hold on to that, OK? Because I'm going to be talking about some things that I'm ashamed of, and I expect you'll be ashamed, too. But just remember that I love you both more than anything else. And, again, I'm sorry. Just remember, what you're going to hear doesn't change the person that you've known all these years. It's just that there's also another person, another Melody Witherspoon, someone you haven't known." Melody paused and took a deep breath.

"The reason I'm making this tape, and I'm making it in the hope that nobody will ever see it," she held up the gadget in her hand, "by using this remote control, so I'm the only one here, uh, I'm making it because I'm concerned that something bad is going to happen to me. Actually, something bad has *already* happened to me, but what I'm worried about is that something worse may happen, like, I may die somehow." Melody's image swiveled around, looking at the view, and turned back to face the camera again.

"It's strange, sitting in this beautiful, secluded place and thinking about all this. If I could just stay here, it seems like everything would be all right. But I know that can't happen. They would find me eventually. OK, so here goes. It's complicated, so bear with me. And, one more time, I'm really sorry, Mom, Al.

"About six years ago, when I was still an undergraduate, I saw an ad in the *Frémont Free Press* for a photo-shoot, for women who want to be fashion models. I guess I've always been someone who likes to try new things, so I wanted to try this. It sounded, you know, glamorous. And this was before I had decided on graduate school, so I had an idea that maybe it could turn into a job. So I went and stood in line.

"To my surprise, they really liked me. I tried on lots of different outfits, and the photographer, a guy that I've come to know is named James Lovett, he must have run through eight or ten rolls of film. He

told me that it was really only the audition, but that he used more film on me than on anyone else and I should expect a call-back. He also asked a lot of questions, whether I'd be able to travel to location shoots, if I had any other contractual obligations, and so on." She paused, cleared her throat again, and took another deep breath.

"So the call-back came, and I went and signed up. There was a consent form with a picture of my driver's license and a bunch of other stuff. And that same day, after I signed up, they did another shoot of me, this time for real, or so they told me. It was party dresses, about a dozen, all by the same designer. I changed clothes so often that I began to lose my feelings of modesty, and toward the end of the shoot, I was standing around in my underwear while Jimmie and his assistant, some gay guy whose name I've forgotten, they discussed which dresses they needed to re-shoot." She sighed and rolled her eyes.

"Now, I realize that this was all planned out. First, they got me to stand around in front of them in my underwear without being uncomfortable. Then, in later shoots, they suggested that I might make a good underwear and swim-suit model, like for the Victoria's Secret catalog, or something. After that, it was easy for them to suggest that I just pose nude. And, when I got used to that, they started suggesting that I pose in more and more sexually explicit ways." She tossed her head and blinked at the camera several times.

"So here's the hard part: I guess that, as of now, I'm what you'd call a porn star, at least if you can be a porn star without being in movies and pictures of people having sex. Um, if I'm not a porn star, I'm the closest thing to it you *can* be, at least.

"So, Mom, Al, that's what I'm ashamed of and I'm so sorry." She blinked again, several times, clearly fighting back tears.

"That's all the background for why I'm making this tape. See, it turns out that these people, the people who were paying me to have pictures taken of me, so that they could sell the pictures on the internet and elsewhere, these people are kind of like drug dealers. They start you out easy, on the soft stuff, and bit-by-bit they move you into harder and harder territory. Soon, they've got their hooks into you so deep that you just can't escape. With me, it isn't the money, it's the potential for bad publicity. This is because, while I was doing all this modeling, and it didn't really take much time, I graduated, stayed at FSU for grad school, got a doctorate, and now I have a prestigious post-doctoral appointment here in Arizona. I feel like I'm on my way to a rewarding and stimulating career. But if the people at Intermountain, Intermountain Social Services, that's the company I model for, if they tell the world about my, my other life, any future science career will be shot." She shrugged and raised both hands in a gesture of helplessness.

"I'm someone who has always tried to take charge of my future. So I decided I had to do something about these real and implied threats the Intermountain people were making when I told them I didn't want to model any more. I decided that what I needed was something I could threaten them with if they threatened me. Create a stand-off, I guess. I think I have that figured out, and, if it gets to the police, there's information in a safe deposit box, information that should make them very nervous. The key to the box, and the name of the bank, is sewn in the spine of the volume of my diary that I just mailed to you, Mom. Please let the police have it, and provide permission for the bank to let them open the box. What the information is about is, their models have a habit of disappearing— that's what I'm worried about for myself—and I've assembled some lists.

"I guess I should say that I don't blame Jimmie for all this. He's actually been pretty much of a friend. He takes the pictures, but he hasn't hassled me at all. He was the first one to warn me about Intermountain when I told him I wanted to quit, and he's also warned me not to try to threaten them with the lists. I guess he may know about some of the girls that disappeared, or something. Anyway, he's harmless, really, even kind of sweet. Also, he never really coerced me into anything I was

uncomfortable with at the time, and he even warned me about how to protect myself against going places I don't want to go.

"And because I don't want innocent people to be hurt by this, let me say that I don't blame anyone who has found my pictures on the internet for anything. It's my fault for getting myself into this, not the guys who like to look at the pictures." She shook her head and sighed again.

"And even though some of my worst fears have been realized, some guys I know through work found the pictures, I know I can't blame or hold anything against them. One thing is for sure. If I had it to do all over again, I'd sure not answer that first modeling ad. But since I did, maybe this tape and the lists will wind up having some positive effects.

"Um, so that's about it, I guess. Mom, Al, just remember that I love you very much. And I'm sorry." There was a hint of a smile on Melody's face as she raised her arm and twitched a finger. The tape switched to snow.

Hal reached over and wiped a tear from my cheek.

"That's the Melody I remember—the self-assurance and the attitude, not the subject matter. Um, I was going to find out how much fast driving you did today and see if a rambunctious homecoming would be in order. Hope it's OK if I don't go there tonight."

I sniffled, shook my head to clear the cobwebs, and patted his hand.

"It's fine, perceptive, even. I'm going to be up for a while, though, working on this. I just got re-motivated."

"You know that I'm here if you need a sounding board."

"I always do. What do you think about that monologue?"

"I think you need to find that diary and see if it has the safe deposit box key in it. And then see what's in that box."

"Tomorrow morning, first thing."

"And it seems to me that leaning on James Lovett might be in order, if you can find him. It sounded as he may know something about who was leaning on Melody."

"Um-hmm. I think I know just how to do that. Elwood will be quite helpful, I bet. He wasn't at all happy when I told him that his cousin-in-law is a pornographer. But what about Melody herself? Any feelings about that?" I leaned over and put my head on his shoulder.

"It's sad, that's for sure. And I imagine it was hard for her, going public like that. It really came out when she was addressing herself to her family. And that talk about two Melodys, for example, it sounds as if she was essentially leading a double life. Stress city. So what do you suppose really happened?"

"I thought I was figuring it out, but this puts a new spin on things. I was watching that tape and thinking that all we have to do is find the Intermountain enforcers. But now it occurs to me that we also have to figure out how those people could have put her body into the greenhouse."

"So there must be a connection between Intermountain and EcoARC?"

"If they're involved, yeah." I yawned and stretched. "I guess the thing to do is to look in the spine of that last diary tomorrow, and see what's there."

"Oh, yeah, you've got her diaries, don't you? Did you ever hear anything about having swiped them?"

“Mildred should remember that I asked to take them, unless she was too drunk. And I’m hoping that Spaulding won’t notice that they’re missing. Which reminds me, I need to see if there’s a report on him in that mail I brought home.” I stretched again, stood up, and took the coffee cups into the kitchen. A minute later, I returned to the TV room, a sheaf of paper in hand, reading the contents of the large envelope.

“Well, well, well. I’m glad I lifted that thumb print. A search on Leland Spaulding didn’t turn anything up, but the print did. Whew! Look at this list! The guy must have a monogrammed wardrobe. Louis Simpson. Lee Stuckey. Lawrence Smith. And on and on. Hmm. Standard MO—finds a rich widow, woos her, tries to get her money. Seems like there aren’t any convictions, though ... nope. I guess no one has prosecuted him, even for using false names for misleading purposes. Must be he gets them—the women, I mean—to buy him off. Avoid embarrassing publicity and all that.”

“So he’s some kind of con man?” Hal had extracted the VCR cassette, and he added it to the pile of mail that I had put on the couch.

“I guess that’s what I’d call him. Probably, though, he’d just say he’s a lonely guy in search of true love.”

“And the fact that he seems fixated on rich widows is just coincidental?”

“Single women in their 50s tend to be either divorced or widowed. I’d think that Mildred Witherspoon should know this, though. Just to protect herself. I think maybe I’ll give Al a call.” I wandered off, and found my cell phone in the bedroom.

“You going to tell him about the tape?” Hal’s voice was filtering down the hall from the front of the house.

“Not yet. First things first.”

My first try failed—Al had left a message on his home phone that he was at work. So I tried to find the emergency medical response group in the phone book, but it wasn’t there. Must be that everyone calls them via 911, I thought. Finally, I called the Durango Police Department and talked the front desk officer out of the number. I tried it, and a woman answered. She promised to fetch Al Witherspoon.

“Hello? Hope this is good, I had a really top-notch poker hand going.”

“Al? Annette Trieri. And I’m sorry to interrupt your poker game.”

“Oh. Hi, Annette. For you, I guess folding with three kings is OK. What’s up?”

“Remember I told you I was going to run a check on Lee Spaulding?”

“Oh, yeah. Find anything?”

“His real name is Lindon Saunders, for a start.”

“‘Real name’? This doesn’t sound too good.”

“Let me change the subject for a minute, if I could. I’d like to ask you about your trust fund. I don’t mean to pry, but I’m curious to know what happens to it if you should have a fatal accident.”

“If Mom’s still alive, it reverts to her. Like Melody’s did, I guess. If she’s not, it’s just part of my estate.”

“And what about your mother’s trust?”

“Same thing. Now that Melody’s dead, the whole thing goes to me, I think. Unless I’m dead first, then it’s part of her estate. Um, is this going where I think it’s going?”

“Where do you think it’s going?” I believe it’s always better for people to figure out bad news for themselves.

“The guy whom my mom calls ‘Lee Spaulding’ is really named ‘Lindon Saunders.’ My sister’s dead, so her trust has reverted to my mom. Should I assume I’m next?”

“I honestly don’t know. Saunders doesn’t have anything in his record to indicate that he goes around killing people. But he does have a history of relationships with rich widows, all settled out of court, quietly, it appears.”

“Any indication of marriages in which his new wife dies?” An edge of concern had crept into his voice.

“Nope. Could be that he just never got that far; could be that he’s using the same MO on your mother, and that he’ll break it off before a wedding happens, if he can get her to write him a big check.”

“Not if I can help it. What are you going to do?”

“I called you to get advice, actually. Seems like your mother might like to have a look at Mr. Saunders’s NCIC file, which I just happen to have a copy of. But I don’t know her well enough to know if she’d believe it. Sometimes people in love tend to be blind to reality. She might even resent my intrusion.”

“You really think she loves him?” He sounded disgusted.

“It’s hard to tell. The only time I saw them together, he was absolutely doting on her, and she was eating it up. But I really don’t know any more than that.”

“That’s my experience, too. They’re like lovebirds. Christ.”

“You know her better than I do. Would you like to spring the NCIC file on her?”

“I don’t know. I already had one big argument with her, and I don’t know if she would believe it, coming from me. Uh, what if you spring it on her?”

“I worry that she’d be suspicious of my motives for having it. She knows I’m investigating Melody’s death, so she’ll assume that I think Saunders is a suspect.”

“Which is true, or you wouldn’t have checked him out. But aren’t you checking out everyone remotely associated with this? So it’s part of the overall investigation, right?” He was obviously working hard to get me to break the news.

“I’d sure feel better if we did it together. And early in the day might be a good idea, if she’s still drinking in the evening. We need her sharp. What are you doing tomorrow morning?” I heard a huge sigh from the other end.

“Looks like I’m going to visit my mother with you. What time?”

\* \* \*

Arrangements were challenging. Al Witherspoon and I agreed that it would not do to call Mildred that evening, because the chance that she’d be incoherent was too great. So we had to call her in the morning, talk with her, not “Spaulding,” persuade her not to start drinking early, and get her to come to brunch without him. This last part was turned out to be the easiest, because she wasn’t ready to go public with her relationship yet. It was the one before that presented the most difficulty, and it worked only by agreeing to take her to the Edgewater Grill in the Doubletree Hotel down by the river, which Mildred maintained served the best Bloody Marys in town.

I had time to go in to my office Friday morning, and the first thing I did was to find the second-to-last volume of Melody's diary. Feeling along the spine, I discovered a small key-shaped hard spot. When Sally stuck her head in to say welcome back, I was poking at it with a letter opener.

"Morning, Sally, and thanks—I'm glad to be back. Anything happen while I was gone?"

"Just the usual. We helped the PD and the Sheriff's Office on that guy that got picked up Tuesday, but that's about it. Derek played peacemaker, I think. What are you doing? Can I help?"

"I don't know. I'm trying to get a key out of the spine of this book."

"Did you try opening it to a middle page, opening both covers past flat? Normally, you don't want to do that, of course, because it could break the spine of the book."

I looked up and shook my head, surprised that Sally would know to make such a useful suggestion. Setting the letter opener on the desk, I carefully opened the diary as instructed, and held it vertically. A little key plopped onto my desk. I peered into the tunnel between the spine of the cover and binding and saw a slip of paper near the top, which I was able to ease out with the letter opener.

"Thank you, Sally! Just the trick I needed."

"I used to work in the library at the high school. You'd be amazed what the kids used to pass around to each other that way."

"Stealth notes, eh?"

"Oh, that's not the half of it." Sally giggled. "I even found a condom one time, in the spine of *Dr. Zhivago*."

"A condom in *Dr. Zhivago*'s spine?"

"Um-hmm. It said on the package that it had 'pleasure nubs,' whatever that means. Uh, not *Dr. Zhivago*, the condom."

I shook my head, mentally changing the subject. "I don't even want to think about it. So what's on the schedule for today? I have a meeting downtown at ten."

"There's the directors' conference call at two."

"Oh, right. I'll be back in time for that, which is probably good, since I missed it last week. Could you tell Derek I'd like to see him, when he comes in? Thanks."

I saw that I still had an hour or so before I needed to leave for downtown, so I turned to my computer. I had created a new directory for the contents of the three CDs from Michael Shaughnessy's plastic bag, and now I finally had time to see what I had copied.

An hour later, feeling somewhat soiled from early-morning porn viewing, I made my way into the Edgewater Grill. I spotted Mildred Witherspoon and her son Al by the windows looking over the Animas River.

"Mildred—thanks so much for coming. Morning, Al." Because there was only water in the glasses—unless Mildred was drinking pure vodka at ten in the morning—I decided they hadn't been waiting long. "Mildred, I hope you're beginning to recover from your shock?"

"Oh, I'm making progress." There was bitterness in her laugh. "I promised to have only one Bloody Mary this morning. Compared to last week, that's progress."

"Maybe it will help if I tell you that I'm also making progress, progress toward learning about what happened to Melody. You remember we talked about my borrowing her diaries?"

“Oh, yes, I do, vaguely. Lee tells me some have disappeared, so I assumed that you have them.” Mildred’s news was unsettling to me, but there was nothing to be done about it.

“Yes, I do, and they’re quite safe. I’ll bring them back to you when all this is cleared up. They’re very helpful. For one thing, I found a key to a safe deposit box in one, with a note about the bank and account number. I think it would help my investigation to see what’s in that box.”

“What bank? And if we’re going to talk about Melody, I’d better get that one Bloody Mary into me. Where’s our waiter?”

“It’s a bank down in Arizona—it looks like a branch of the Tucson Bank and Trust in the northern suburbs. In order for me to get into the box, I’ll need a consent form from you. I took the liberty of bringing one, I hope that’s OK?”

“Sure, sure, here, let me sign it. Where’s...oh, there.” Mildred Witherspoon half rose out of her chair and waved at the other side of the room. A college student wearing an apron approached. Mildred took command.

“We’re ready to start ordering. I’ll have a Bloody Mary, a double.”

“Mom! That’s not one, that’s two.” Al put his hand on her sleeve.

She shook him off. “Oh, hush. You want some coffee or something?”

“Ma’am, I’m not sure I can get you a Bloody Mary. We do that on weekends, but I don’t think the bartender is here yet. Not until eleven.” The student had moved around to stand between Al and me, putting the table between himself and Mildred. She looked daggers at the young man, who seemed to shrink under her glare.

“Oh? Send the manager over, immediately, please.” And she waved a hand in dismissal. “Now, where were we? Oh, yes. Let me sign this thing.”

“Thank you, Mildred, this will be most helpful to my investigation. Now. There’s something else I’d like to talk with you about. As you can imagine, my investigation of Melody’s death involves looking at all possible angles. Because it’s so mysterious, we need to be sure to examine anything and everything. As a result, all sorts of curious information comes to light.”

“Yes? Oh, excuse me.” Mildred had been watching the approach of a middle-aged man from across the room. “Mr...ah,” she squinted at his little badge, “Mr. Spencer, your server tells me that there’s a problem with my ordering a Bloody Mary. I can understand how these students can be confused. Could you please see to it that I get one, a double? Thank you, very much.”

If Spencer was also confused, he disguised it well. After considering the situation for a few seconds, he made a decision.

“Of course, ma’am. I’ll make it myself. Right away.”

“Anyway,” I plunged onward, “one of the things I’ve done is to look into the backgrounds of everyone remotely connected with Melody and her friends and family. You and Al, of course, are not part of this, being her immediate family. But others, including for example, the director of the center in Arizona where Melody worked, and other people there, are. And there are some people here in Durango as well. Um, including Mr. Spaulding.”

“You’ve done a background check on Lee? How amusing. May I ask why?”

“It’s really just part of the routine of this type of thing. When we don’t have specific indications of where to look, we look everywhere. Al probably knows about this from his connections to law enforcement.” I looked his way for help.

“Right, Mom. And, well, I don’t really know, but I expect that Lee seems mysterious to the police because you and he haven’t really gone public, you know? They must be wondering who this person is who has moved in with Durango’s wealthiest widow.”

Great, Al. Some help, I thought.

“Usually we wouldn’t care. But because there’s been a murder, or so it appears, we’re interested in everything out of the ordinary. I hope you’re not offended, or anything.” I could see that Mildred was again watching something on the other side of the room. Must be the manager with her drink, I thought.

“Oh, thank you *so* much, Mr. Spencer.” Mildred took the tall glass with the stalk of celery in the red liquid, and immediately drained about half of it. “Ahh. Much better. Now. Um, no I’m not offended, just puzzled. You must be leading up to something.”

“I am. You see, there’s really no such person, officially, as ‘Leland Spaulding.’ There is someone, however, named ‘Lindon Saunders’ who has Lee’s fingerprints and looks exactly like him, someone who has used a number of aliases, all with initials ‘L-S.’ This Saunders person has a long history of relationships with wealthy single women, all of which relationships have ended abruptly. ”

“Oh, now I see. You’re worried about me. You, too, Al?” Mildred looked kindly at her son, and she reached over and patted his hand. “Well, that’s sweet of both of you.” She took her glass and drained it.

“But you don’t have to worry. You see, I’ve been rich and single long enough to know how to protect myself. In the safe in my study, there’s a dossier on Mr. Saunders at least two inches thick. I know all about him. But he treats me like a queen, he’s there when I need him, and he hasn’t asked me for anything, so far at least. And he smells good. When it all wears thin, I’ll be most happy to send him on his way with a fat check for his time.” Her self-assured smile seemed impossible to argue with.

\* \* \*

Back in my office, I was finally able to regain my equilibrium. I knew I shouldn’t be surprised that Mildred Witherspoon was in control of her own life, but Mildred’s degree of confidence in her ability to do so had been unexpected. And it raised another question: could Mildred know what Intermountain Social Services was really all about? She was involved in a variety of community groups already, and, especially in light of her Saunders dossier, it would make sense that she would have the group her daughter mentioned checked out.

I had slipped Al Witherspoon a copy of Melody’s videotape when we were saying our good-byes in the parking lot and asked him to call me before watching it. So I wasn’t surprised when Sally buzzed my intercom to tell me that Al was on line one.

“Al? I guess we shouldn’t have been concerned about your mother, huh?”

“Hi, Annette. No, I guess not. She sure surprises me sometimes. So, um, I thought I’d watch this thing now.”

“Ah....you won’t want to do this with a group.”

“No, I’m at home. Oh, I know what you mean. I’m on the late shift this week, that’s why you caught me at the station last night. But I’m at home now. I’m off until six.”

“Oh. Good. The tape was made by Melody. In fact, it’s how I found out about the safe deposit box I got your Mother to sign the consent for, remember?”

“Oh, geez...”

“And I thought you ought to see it yourself before deciding when, and how, to show it to your Mother. But she’ll need to see it, too, because eventually she’ll be reading Melody’s diaries. I think this would be a good introduction.”

“What’s on it?”

“You’ll see. It’s Melody, talking. It appears to have been made a couple of weeks or so before her death. Um, watch the thing, watch it a couple of times if you want to, it’s short, and call me back, OK?”

I made a copy of the safe-deposit-box permission form that Mildred had signed, taped the key onto the original and put it into an overnight delivery envelope to Ross Townsend, and I also made a quick phone call to him to warn him about what was coming his way. The paperwork on my desk had piled up, so I dug in, concentrating on CBI matters that would likely be discussed in the afternoon conference call. After about a half hour, my intercom buzzed again. Al had called back.

“Al? I hope you’re OK to talk about this a little.”

“Oh, yeah. In fact, maybe that would help get me calmed down. I’m ready to go after that creep Lovett, wring his neck. Is he in the phone book?”

“Maybe, but we already ran him out of town.” I related the story behind Lovett’s departure. “But after hearing Melody’s comments, it’s clear to me that he knows something about the Intermountain enforcers, so I’m going have to look him up again.”

“Punch his lights out for me, willya?”

“Well...tell you what. Like it or not, I expect that all this is going to get around, sooner or later. All your friends, including the police and fire department people, are going to be on your side. What I’ll do with Lovett is tell him about this. It will keep him far away from Durango forever, I’d think. But what about Intermountain Social Services? You ever heard of them?”

“Sure. It’s common knowledge that they run Sizzles, at least among the people I know. I think there’s even a little footnote on the Sizzles sign on the door. You know, ‘Sizzles, a service of IMSS’ or something, which everybody knows is Intermountain. But I had no idea that Melody was hooked up with that bunch. Lord.”

“Do you suppose ‘common knowledge’ about Intermountain would extend to your Mother? Do you think she’d know about them?”

“Hmm. I guess it’s hard for me to imagine that she wouldn’t. She knows just about everything else about this little town. And she’s thorough, as we discovered this morning. So I bet she does.”

“Then she won’t be destroyed by what’s on that tape.”

“Huh? When she hears that Melody worked for Intermountain...”

“She already knows. Remember at the memorial service, Hal was talking with you in the receiving line? I was talking with your mother. And she mentioned that Melody worked with them. She talked about as if it were a community service group, or something like that, said they help under-privileged children.”

“I suppose it’s possible that they do, somehow. Maybe they have a public face that people like my mother would see. The people I know, and you too, are linked to law enforcement or the fire department communities. And we hear things that most people don’t.”

“Al, I’ve got an idea. Have you got time to hang with me a minute?” I glanced at the clock and saw that I still had an hour before my conference call.

“Let me try something. What if I type in ‘Intermountain Social Services’ into a Google search?” My fingers almost kept up with my words. “There we go... First hit, hmm, let me link to it...yes! A nice conservative home page about needy children and how people can help by sending money. Tax-deductible, even. Does your mother have a computer?”

“For sure. She’s probably the most computer literate person in town, for her age group, at least. In fact, it wouldn’t surprise me if that’s how she assembled the file she has on Lee, I mean...what’s-his-name, Saunders. There are people-finding services out there that are highly effective, I’m told.”

“Maybe that explains it. She thinks Intermountain is a service group and that Melody was helping needy children. I guess maybe Intermountain has that web site to protect its real identity. Hmm. I saw one of their pictures with ‘copyright IMSS’ on it, just like that sign you mentioned. Let me try a search on that...Aha! IMSS doesn’t have a site of its own, at least not the one we’re looking for. There’s the International Mass Spectrometry Society, and the International Museum of Surgical Science, and some museum in Italy...and a medical imaging company. But Intermountain is missing. Oh, it seems to be mentioned on the real-hot-babes.com site, though, not Intermountain but IMSS. I also saw that URL on a picture. OK, so the tape is going to be something of a shock to her.”

“That’s for sure. Maybe I can catch her tomorrow morning when she’s still lucid. Give her another double Bloody Mary and turn it on.”

\* \* \*

## Fifteen

The conference call went on and on and on. And on. I asked Derek Petersen to sit in, and because he had been acting for me so much of the time in the past couple of weeks, I really didn’t have much to say. He spoke up every now and then from his office down the hall. I needed to listen, however, to keep up with what was going on state-wide in the CBI. But it was tough, because most of what was going on had to do with the budget, which was Derek’s territory. Crime-wise, things were quiet.

Just as I was nodding off for the umpteenth time, I heard my name mentioned, which jolted me awake.

“...found out about the person you asked about, Agnes Jefferson. And I think it’s worthwhile mentioning to everyone.” Rod Andersen was holding forth. “A Denver PD report had an Agnes Jefferson, black female, late twenties, found deceased in an alley near Five Points—that’s one of the tougher parts of Denver, for those of you who don’t know—dead of a heroin overdose, syringe hanging out of her, ah...” there was the sound of papers shuffling, “...left ankle. Several priors for prostitution. No one claimed the body. That sound about right, Annette?”

“I didn’t know she was African-American, but the drugs and prostitution fit. Is there a picture you can fax me? I’d like to see if anyone here can ID her.” I was thinking of the pictures in the James Lovett files as well as the women at Fanny’s.

“Will do. And, for everyone else, here’s the context.” Andersen cleared his throat. “Let’s see—there’s a company that’s close to one of Annette’s cases, an outfit called Intermountain Social Services. Agnes used to work for them in Durango and then in Denver. Intermountain runs the strip joints called ‘Sizzles.’” I heard various exclamations of recognition from the other listeners.

Anderson continued. “And we’re wondering if some of the girls they employ have been disappearing. Annette’s case involves such a thing, and here’s this Agnes Jefferson one.”

“Rod?” Being the relative newcomer, I still didn’t recognize all the voices, but I thought this voice was the guy from the Grand Junction office, Rory Furman. “Sounds like this Agnes Jefferson doesn’t really qualify as a ‘disappeared’ one, though. Just a dead junkie.”

“Except there were no needle marks on her, just the one that killed her. The Denver PD has a note about this in her file, but they just didn’t have the manpower to do anything more. Could have been a convenient way for this outfit to dispose of someone they didn’t need any more. Anyway, consider this a heads-up.”

“Rod?” I thought my new information would be relevant. “It might interest people to know that Intermountain operates like a stealth corporation. I did a web search on ‘Intermountain Social Services’ and found only a web site that solicits donations for under-privileged children.” I sketched the rest of the story for them. “We know that Sizzles is pretty open and public—they have to be to draw customers. But their parent company is almost invisible.”

“Did it look fraudulent?” It sounded like Furman again, offended.

“No, it looked legit. I didn’t follow up, haven’t had time to yet. But it’s actually smart. Think about it. Here’s a company that’s hiring young women, college girls, to pose for dirty pictures. What do the girls tell their parents they’re doing to earn money? There’s the Intermountain web site to refer the parents to. My victim told her mother it was volunteer work. Probably, others just say they’ve got a day-care type job, or something.”

“Annette?” Furman sounded more offended than ever. “Would you mind if I go after this? My wife runs a day-care center, and she does lots of volunteer work for kids. This sleazy outfit needs shutting down.”

There was a nasty laugh from someone, and a voice said, “Rory, you sure she’s not working for Intermountain, are you?” But no one else laughed.

“Bite me, Harmon. Geez.”

“Calm down, guys, calm down.” Rod Andersen used his Director-is-not-happy tone of voice. “Rory, I think that’s a good idea, especially because it’s not confined to Denver, or Durango or Grand Junction. That OK with you Annette?”

“Sure is.” I was relieved to have someone else take on that new task. “And I’ll have some more information shortly from Arizona. I’m hoping it will be a list of their enforcers. That should help you, Rory.”

“Damned straight. I’ll enforce them, is what I’ll do. Buncha damned perverts.”

“OK, good. Now let’s see.” Again, Rod Andersen shuffled papers audibly. “OK, that’s about it except for one last thing—something I’m sure you’ve all been waiting for—succession planning. Ever since we made the moves in the Durango office and instituted their plan, I’ve heard nothing but good things from the Governor’s office. So I want to start a discussion of succession plans. Someone I talked to called this the hit-by-a-truck theory of management. No one is indispensable and every organization should have a plan for succession in case something happens to people in critical positions—if they get hit by a truck, for example. Let’s start with you, Harmon.”

My plan was in place and being used as an example for the others, so I tuned the whole thing out. At least, I thought, I avoided having my “To Do” list get any longer. Rory Furman has a good idea, but I

sure don't want to follow up on it. And he seems awfully bent out of shape about Intermountain. Maybe he has teen-aged girls.

I was snapped out of my reverie by the blinking light, my other line. The rest of the conference was droning on without me, so I put them on hold and pushed the blinking button, just as Sally stuck her head into the office and held up a hand-lettered note, in big letters, that said "Ross Townsend on 2."

I nodded and, into the phone said, "Ross?"

"Hope it's not a bad time, Annette."

"It's the weekly telephone conference with my fellow CBI division directors. But I'm fine to escape for a while. Hang on a sec, can you?"

I put my hand over the receiver and said to Sally, "Tell Derek I'm on another call, could you? He can cover for me." Sally nodded, and I went back to the phone.

"Sorry, I'm juggling various things here. What can I do for you, Ross?"

"I just wanted to follow up on your interview with Elwood. The transcript makes it look like he's going to let Lyle take the fall."

"Fall? Oh, you mean for Alvarez?"

"That, and the attempted assault on Officer Kinney."

"Hmm. Assuming that she decides to press charges. I think we might have some ability to persuade her either way, depending on what seems like a good strategy. Also, in the Alvarez case, Lyle will take the fall assuming there's sufficient evidence to rule the death a homicide, right? And that's in the hands of a grand jury, right? So it's going to come down to what Elwood says to them."

"With the transcript of your interview as evidence, of course, so he'll need to be consistent." Townsend's chuckle made it sound as if he didn't think that Elwood would have much luck with consistency.

"Right, and there's also the testimony of his deputy, the one with Lyle when they raided the motel, um, Henry what's-his-name, the guy who wasn't very happy with the whole thing."

"Reeves. Henry Reeves. Anyway, it'll be amusing. And, by the way, we're all set for tomorrow, when the key arrives. We'll get a court order, and I'll send Sandra Kinney to the bank to retrieve whatever's in that box."

"Tomorrow's Saturday. Is this going to work?"

"We checked with the bank and it's open until one. I've got a judge all lined up for the order, so I'm sure we'll be able to get what's in that box. Want me to send it to you?"

"If it's not too many pages, could you fax it back here?"

"Will do. Otherwise, I'll FedEx it to get there Monday."

"Perfect. I'll be sure and look for it."

"Whoops, now I've got another call. I'm expecting one from my boss, so I'll be in touch, OK?"

"OK, talk with you later, Ross." There went my excuse for skipping out on the rest of the conference call.

\* \* \*

The conference call finally ended at about 4:30—after 2 ½ hours of mostly bureaucratic blather, I was free. Even though I had been wearing one of those lightweight, hands-free telephone headsets, I had a sore ear. I decided to head home a little early because I would be coming in the next morning to look for the fax from Arizona. I started to pack up, but just as I was about to walk out the door, my phone rang again. Aarrgh!

“Annette? Fred Winders. Listen, we’re going to have to release Michael Shaughnessy soon. You want to question him or anything?”

“What happened? Did he make bail?”

“Your favorite shyster is involved, and he forced the issue of bail and paid it.”

“Stepwood? Hmm. I guess that makes sense—he seems to be on retainer to Intermountain. What’s the schedule?”

“We have until about seven this evening to finish up paperwork.”

“You got him downtown?” I heard a grunt of assent. “I’ll be right up.”

So I wasn’t going home after all, but at least I was headed in the right direction. The main police station, where Fred had Mikey Shaughnessy entangled in paperwork, was about half-way home.

On the way across the river and up the hill to the station, I thought about strategy. Stepwood would have to be present, of course, and I needed a briefing from Fred before doing anything. No point in covering the same ground all over again. But my interview with Elwood was still fresh in my mind. He wasn’t at all happy with Michael’s choice of employer, and that might be useful information. And the quantity of that powdery stuff that Fred had sampled was sufficient to be an issue, if it really was a prescription drug. People who cart large amounts of prescription drugs around need to do it the right way. Furthermore, Michael was clearly on his way to New Mexico with the stuff. Maybe, I thought, I could make an issue out of that. Threaten to bring in the FBI to look into interstate prescription drug-running, or something. That wouldn’t scare Stepwood but it might scare Michael, especially combined with implied threats from his Uncle Elwood.

But that strategy would depend on what that stuff was. At the stoplight near downtown, where US-160 peels off to the west, I punched up Gil Taylor’s number on my cell phone.

“Hello? Gil Taylor here.”

“Gil, Annette Trieri. How’s the mystery substance business?”

“Booming. Nobody seems to know what they’ve got, and they all want me to tell them. What’s up?”

“I’m calling to find out if you did an analysis on some white powder for Fred Winders at the PD. He probably would have brought it by on Wednesday morning.”

“Are you in on this one, too?”

“I’m going to interview the guy who was carrying it right now. Fred’s already worked him over, so I need a new angle. But that depends on what that stuff is.”

“I figured out what it isn’t. Any of the usual suspects, I mean. Nothing on the controlled list. So I had to ask Fred for a hint, for what he suspected it is.”

“So he told you his ‘experience’?”

“Ah, well, what do you know about it?”

“He told me the whole thing. I had a lot of trouble not laughing my head off. Fred and I go way back, and I’m glad for it. Otherwise, I think my giggles would have offended him.”

“Oh, OK. I didn’t want to give away any secrets. It seems like he could be sensitive about it.”

“I’m sure he is. And I’m sure he appreciates your discretion.”

“Yeah, well, anyway, his hint put me on the right track. I looked up the formula for tadalafil and figured out how to identify it. And there it was.”

“Formula for what?”

“Tadalafil. That’s the short name of a very complicated chemical formula that’s the active ingredient in Cialis. What’s interesting is that the powder was almost pure tadalafil itself, with none of the fillers that Cialis pills have. Potent stuff.”

“That’s what Fred thought.” And, God help me, I started giggling again. Fortunately, Gil laughed, too.

Between chuckles, he went on. “Fred told me they had several ounces of the stuff. Considering that Cialis comes in doses of a ten milligrams or so, they could have something like ten thousand doses there.”

“This is a prescription drug, so it seems like the guy they caught with it was probably playing fast and loose with the law, huh?”

“You’re the law. But, you know, if it was me, I’d just claim that I had a prescription for it, but I didn’t have the documentation on me.”

“A prescription for ten thousand doses of Cialis?” My giggles evolved into real laughter at the thought. “Isn’t that the stuff that’s supposed to work for three days? So that’s what, something just shy of a hundred years’ worth? A lifetime’s supply?”

“Oh. Right. Well, that does seem unrealistic. But can you bust him for having it?”

“I’m thinking maybe I can put a scare into him. But I’m afraid his lawyer will call my bluff. Anyway, you told me what I needed to know. Thanks, Gil. And, if it makes you feel better, this just might help me find Melody’s killer.”

“You know, I’ve been wondering. There wasn’t any information about how she died, in the papers or anywhere. So she was murdered?”

“It sure looks like it. And it wouldn’t surprise me at all if there’s some connection to that tadalafil—is that what you called it?—that tadalafil powder you analyzed. Thanks Gil.”

By the end of this conversation, I’d made my way through traffic to the Durango police headquarters downtown and managed to find a parking place. Friday afternoon on Main Avenue was in full swing, and the town was hopping despite the cool fall weather. Just thinking about so many people having so much fun put me in a good mood, and I actually began relishing the possibility of running into Arthur Stepwood again. The old Randy Newman song “Short People” popped into my head, making me smile. Artie, I thought, was surely one of those with no real reason to live.

But my smile faded and my mood darkened when I walked in to the police station. Maybe I should have used the back door instead of entering through the main lobby, because the lobby was where I ran into Stepwood. I was ready for him, having that song in my head, but not the guy he was with. He had a predatory look about him, and he smelled of some kind of leathery cologne, that old horse blanket aroma without the rancid sweat.

“Well, well, Annette Trieri.” Stepwood was wearing a condescending smirk. “I kind of thought you might be down this way. Figured you’d come down to talk with my client before they let him out. I need to introduce you to Tory Dowd, another client of mine. Tory, this is the director of the local Colorado Bureau of Investigation office, Annette Trieri.”

I was certain that Dowd knew my name, but he did a fair job of pretending he didn’t and acting impressed. I couldn’t resist a little dig.

“Oh, a client of Artie’s? Are you just getting out of jail, too?” But it hardly fazed him—he just tilted his head back and laughed.

“No, no, not this time.” And he looked straight at me with a boyish grin. It took me a second to realize that he was used to charming people and that he had me in his sights. But because I knew his occupation, I was vaccinated against his contagion. I decided to ignore him.

“Mr. Stepwood, you’ve guessed right—I’m told that there will be a few minutes before all the paperwork on your client is in order, so there’s time for me to chat with him briefly. Should I assume that you’d like to be present?”

“Why would you want to talk to him?”

“A couple of reasons. One thing we in the CBI do is follow up on local arrests with respect to how law enforcement agencies treat suspects, you know, Miranda rights, no brutality, all that. I’d like to ask Mr. Shaughnessy some questions about how the sheriff’s people treated him. And I also need to talk with him a bit about his uncle.” The blank look on Stepwood’s face was well worth my trip downtown, never mind the results of the upcoming interview.

\* \* \*

And that was a good thing. Except for the opportunity to yank Arthur Stepwood’s chain, the interview turned out to be a waste of time—about all I got of Michael Shaughnessy was the civilian equivalent of “name, rank, and serial number.” Stepwood just wouldn’t let him answer questions about anything relevant. I mentioned that I’d been in contact with Michael’s uncle, and that did get something of a rise, but Stepwood managed to smooth that over as well.

The one thing that got *my* attention was a remark by Michael Shaughnessy that his job with Intermountain was a combination of errand runner and computer programmer for their web site. That got me to thinking about the possibility of finding information about Intermountain on the real-hot-babes web site that would relate to Melody’s list and her experience with IMSS.

So Hal and I spent our Friday evening exploring the sleazy world of on-line porn, at least Intermountain’s little corner of it. I got him involved because he’s much better with computers, and besides, I just didn’t want to do it by myself.

I sure am glad that he’s an even-keeled guy, otherwise it could have been a disaster.

I was coming down the hall with cups of coffee I’d gone downstairs to fetch when I heard a soft “Uh oh.” Hal’s dismay was almost tangible.

“What happened?” I set his cup on the desk and looked over his shoulder at the computer screen.

He shook his head and sighed. “Did you ever read those old, classic fairy tales when you were a kid? The Grimm Brothers, Hans Christian Andersen? I vaguely remember one about a woodcutter who had this problem with his axe, or his trees, or something. Every time he chopped a chip out, two more instantly grew in its place. Most frustrating. And he had to get the tree cut down to rescue the princess, or some such thing. Well, watch this.”

His screen was covered with little windows showing women in various stages of undress, and I watch as he moved the mouse to the little “X” that would close the topmost one. He clicked it and it vanished, but two more instantly popped up in its place. He closed one of them, and two more appeared just after it disappeared.

No wonder the screen was getting so cluttered, I thought.

“So, what’s happening, anyway? That never happens on my computer.” And I was glad that it hadn’t—I think I would have unplugged the thing and thrown it in the trash, or maybe the river.

“They’ve structured their windows to do this. While you were downstairs, I had to agree to an ‘I am over 18 years of age and I agree to blah blah blah’ button. It was blocking the part of the site you want to see. So I agreed. And then this started happening. Let’s see if I can fix it.” He reached around to the back of the computer box and extracted a wire. “If the network is disconnected, it can’t possibly do this. I hope.”

His next mouse click succeeded in closing a window without opening any new ones, and he cleared the screen by closing all the windows. Pictures of naked women, several of well-muscled, hugely endowed naked men, and a variety with couples doing lascivious things to each other disappeared in succession.

“So that’s that? You just unplug the network?” Maybe, I thought, I wouldn’t have to trash my computer after all, should this happen to me.

“Let’s see.” He fumbled with the cable, feeling behind the system box for the right connector, and I heard it click into place. Then he opened his internet browser program.

“Oops. That’s not my home page. It got changed.” It didn’t seem as if he was angry, just surprised.

More little windows started appearing every few seconds, a few with naked people but many others as well, advertising all sorts of things, even some that looked legitimate. It took only a minute before his screen was completely filled again with overlapping ads.

“Wow. This is remarkable. I must have agreed to have some software installed or something. It’s reaching out to some kind of advertising server. I need to stop this.” And he reached behind the computer and extracted the wire again. The ads stopped popping up.

“Now what?”

“We didn’t accomplish what we set out to, that’s for sure. We got ambushed instead. Um, I guess what I’d like to do is to use a different computer for this search of yours and fix this one later. I’d rather not use this one any more for this, because it’s the good one. I’ve got an old computer up in the attic that I’ve been meaning to give to the thrift store. It’s set up with only a browser, and it won’t matter if all this weird software gets installed on it. When we’re done, I can just wipe its disk and rebuild its operating system from scratch.” He was shaking his head in disbelief.

It took only a few minutes for him to dig out the older computer and set it up. He hooked it to the network and the monitor and the other gadgets, and we were back in business. Before too long, the screen was covered with pornography again.

Hal, however, was reading a page he had printed, the page with the “...I agree to blah blah blah...” on it.

“How odd. The only thing here that could refer to this software that got installed is the privacy statement. The reference to it is in a slightly different shade of blue, see?” He held it up for me and pointed. “It must be a link to another place that discusses it, a link that isn’t obvious and that you get only one chance to read. Man. These guys are insidious.” He was shaking his head again.

We went back to the screen and spent an hour or so exploring around on the IMSS-related web sites, including the one called real-hot-babes.com and a variety of other ones that specialized in various peculiar sexual tastes.

And then we hit pay-dirt—emphasis on “dirt.”

The part of the site that advertised videos teased viewers with still shots, and I recognized Melody in one of them, dressed as she had been in the last photo-shoot before she was killed. Hal didn’t recognize her for the makeup and the clothes, which from his perspective were quite unusual, but I knew what to expect. The page advertised previews, so we picked one.

And there was Melody, taking those clothes off, swaying to some un-heard music— Hal hadn’t hooked speakers to this particular computer. At one point she looked at the camera, and her expression was even more distant than in the photographs I’d seen. Vacant.

Hal noticed it, too. “She looks drugged. Totally spaced out. And that makeup sure makes her look different. I wonder…”

He stopped because, now completely naked, Melody was sashaying across the room, and as the camera panned another person had appeared, male, seen in profile with his head turned away from the camera. She dropped to her knees in front of him and began unbuckling his belt.

“Aw, Melody, geez…” Hal sounded sick.

But we were spared the details, because just as the scene was becoming explicit it also became censored, via that trick of blurring the parts of the picture with big squares the way they do on TV when they don’t want to show someone’s face.

Except the face wasn’t the part of the anatomy being obscured in this case.

The blurring was followed by an ad that told us we could obtain the uncensored, complete episode if we merely provided a valid credit card number via the IMSS secure site.

That, however, was less interesting to me than what I noticed just before the blurring started. The man in the scene had placed his right hand on the back of Melody’s head, and I noticed a pinky ring, an unusual one with what looked like the head of a snake on it, with green gemstones for eyes. It wasn’t visible for more than about two seconds, but that was long enough for me to recognize it.

I’d seen it earlier at the police station on the little finger of Tory Dowd’s right hand.

\* \* \*

I woke up a little when Hal finally came to bed, but it wasn’t until Saturday morning breakfast that he told me about it. He got up first and was toasting a bagel when I came into the kitchen.

“So, did you get your good computer fixed?” I yawned and reached for the coffee pot.

“I’m not sure. We’ll see. And I don’t know whether to be mad or impressed. That software that installed itself was some piece of work, taken altogether. I guess if I ever meet the guys who planned it all out, and I happen to have a gun, well… I expect the next thing would be that you’d have to arrest me for manslaughter or something.” The bagel popped out of the toaster, and he began to slather it with cream cheese.

“So what happened? How did all that work?”

“A whole suite of software got installed, some of it legitimate, in the sense that you could probably buy it and put it to good use. There was a nifty clock synchronizer, a program that goes to the National

Institute of Standards and Technology website and uses its atomic clock to set your computer's clock. And there was another program that supposedly scans for viruses or something like that. But they were all strung together in a way to reach out and grab ads almost continually, and they were installed in places where you wouldn't normally look. Also, they were archived in such a way that if you uninstalled them, they switched on some kind of master program, one with a really innocuous name, something like 'winweb.' To all the world, it looks like a part of the operating system, but what it really does is to check all of this bogus software and tell it to reinstall itself if some of it's missing. Damn." And he was shaking his head yet again. "Also, you'll be glad to know, a huge, long list of porn sites got added to my list of favorite web places, and the site that the home page got reset to was really a front for more porn sites."

"How did you find all this stuff to fix it?"

"I've got a couple of utilities that track weird software down. For example, one utility looks for what's called 'spyware,' programs that report to their owner what your computer is being used for. A lot of that stuff got installed with names similar to lots of other names. There was a number of new program directories that I knew shouldn't be there. The hard part was finding that master program, webwin or whatever it was called. I kept killing things off and they kept reappearing. Very frustrating, especially at two in the morning, I can tell you. And that wasn't even the end of it. There were some other things that kept changing their names every time they re-installed themselves." This time he just shrugged.

"I'm sure sorry that I got you involved in this."

He walked over and kissed me. "Oh, don't worry about that. I guess I consider it an educational experience. I mean, I've got all these firewalls and virus filters on my computer, but this still happened. It just goes to show how delicate the balance is; I mean, how easy it is to bypass all that stuff if you agree to one little thing."

He smiled. "Besides, just think how much of a problem this would have been if you'd used your computer at work. For all I know, this software can copy itself across a local network, like the one inside your office. So your staff comes to work on Monday and guess what's all over their computer screens?"

"Oh, yeah. That would make the Governor happy, wouldn't it? But, well, I'm sorry. You don't bring your work home like I do." I was feeling guilty as hell for involving him and causing so much trouble.

"Hey, it's fine, really. And we found what you were looking for, didn't we? But it sure was a shock, seeing Melody like that. In her video tape, I mean, the one she narrated for her family, she said she wasn't doing real sex videos. So I wasn't quite prepared for that. At least it stopped before things got too far. I mean, I can imagine what happened next, but I really didn't want to see it."

"She must have crossed the line just recently, after she made that tape for her family. Maybe it was the drugs, or maybe the threats she talked about. Extortion or something. I'm really sorry to have dragged you into this." I apologized again.

He smiled again and hugged me. "C'mon, it's OK. Honest. Besides, I've got a plan for a little revenge. I'm going to give that old computer to Tim Langer. I didn't uninstall any of the software, and so it's got the complete record of what happened when the software installed itself. I bet he can reverse engineer it. The IMSS web site is going to get itself hacked." His grin, somehow, was both self-satisfied and mischievous.

That comment caught me in mid-yawn, so it took me a minute to understand its implications. Tim Langer, I knew, was a computer hacker extraordinaire, a student at the University whom we had caught and rehabilitated. The last I had heard a few months back was that after graduation he was in line for a

computer security job at the electronics conglomerate where we'd caught him hacking in. He was so good his victims wanted him to work for them.

"You're not going to do anything, um, illegal, I hope?"

"*Moi?*" Hal looked as innocent as a cat with yellow feathers in its whiskers. "Last night, one thing I did was to go back and start over, and I read the privacy statement that I noticed the first time through, or I guess it was the second time, all that garbage. And it doesn't say anything about software getting installed on the user's system, no warnings, no nothing. So what IMSS is doing is hacking into the computers of people who browse their web site, and they're doing it in a dishonest way, by using that 'I agree...blah, blah' button to get access. And surely they're not doing anything illegal. So neither will we." Now he just looked smug.

"So what are you going to do, or have Tim do?"

"I'm not sure exactly what's possible. I'll leave that up to Tim. One thing I thought of is to change some of their little information windows that pop up, like the one that told us how to get a copy of Melody's video. Make it say something like 'How would you feel if you recognized this woman as your sister or your daughter?' If we could do it in a way that the IMSS programmers couldn't un-do it, at least not easily, well, that would be fun. Another possibility would be to create a big pop-up window that warns people that they are likely to get their systems hacked into if they go any farther. Generally speaking, I thought of warnings, stuff like that."

"I guess the best thing for me to do is to pretend I didn't hear any of that—although off the record, more power to you, of course. So, did you manage to capture any of those video frames with the ring?" I'd gone to bed while Hal was working on that.

"Yep. Several, from three different previews. One is very clear—the hand with the ring along with a recognizable view of Melody's face. Is that what you wanted?"

It was exactly what I wanted, and I felt triumphant when I drove down to the office after breakfast with color prints of the ring frames in my briefcase. And I felt all the more triumphant because Hal had also managed to capture and print some frames of Melody still dressed in the same clothes she was taking off in dated pictures from James Lovett's files—dated the weekend she died.

Although the pictures were something of a triumph, I still had a long morning ahead of me. Waiting for the fax from Ross Townsend, I knew, would require my trying to be patient and not fidgeting too much. Although I really didn't expect anything until noon, I decided to type up my notes from the interview with young Mr. Shaughnessy.

The fax finally arrived about eleven, and I was reminded again that almost everything in criminal investigations is a matter of timing. At that point I knew Michael Shaughnessy would be out on bail hanging around town somewhere unless he was violating its conditions. It didn't matter that the fax came after he was released, because Melody didn't mention him.

But Tory Dowd didn't have any such conditions restricting his travel, so he could be anywhere. And he was the one that Melody talked about the most in those papers that Sandra Kinney had retrieved from the safe deposit box. That tidbit, combined with his role as the stud in Melody's porn videos, made me really, really want to talk to him—and not for social purposes.

\* \* \*

The rest of Saturday, I decided, would need to be spent trying to track down Tory Dowd. I had the notion that he would probably be making himself invisible, but this isn't as easy here as it is in real cities—Durango just isn't that big a place. Besides, I thought, a guy who drives a high-end BMW isn't set up to blend in.

I was tempted to call Derek Petersen, to put his computer-search wizardry to work on the problem, but I decided that could wait until Monday. I've learned that having willing and ready employees, not to mention smart and motivated ones, is a privilege not to be abused. They're too hard to replace.

I didn't find Dowd in any of the obvious places to look—the telephone book and so on—and I was thinking about what to do for lunch, when Sandra Kinney called from Oracle. It made me feel better, somehow, to know that Arizona law enforcement also worked weekends.

“We made an image of the hard disk in Kelly Rumsford's computer, Annette. He was demanding the computer back so he could complete his research work, or his thesis or something, and we really didn't have any reason to keep the whole thing. But what this means is that we're able to have it available for you to look at without coming down here. I thought you might be interested.” Her voice had that enthusiasm that I remembered from my early days as a cop.

“Have you looked at it, I mean, looked at what's there, on the disk?” I was wondering whether Rumsford might have purchased those porn videos with Melody and Tory Dowd.

“Just briefly. And I can see why he wants it back, there seems to be a lot of some kind of data, along with several chapters of what looks like a long technical paper, probably his thesis. But there's also a huge amount of stuff relating to our victim. His own pictures, like the ones we saw in his apartment, candid shots, and lots of porn he undoubtedly downloaded.”

“Did you run across any videos? I'm asking because we discovered that she made some, you know, with sex scenes, just before she was killed.” I explained what Hal and I had found the night before.

“There's a directory called 'videos' with movie files, yeah. But I haven't looked at them at all. There's just so much that I haven't had time. But, look, you can see it. We've got it on a server and I had the computer guys create a login for you. It's got a password and everything.” She carefully spelled out two complicated strings of characters and told me the name of their computer. “The computer guys don't want you to change these, because they don't want anyone else to have access to this stuff. Beyond the evidence thing, there's the problem that we don't want the media to find out that we have porn on a state computer.”

I had to laugh. “I understand. ‘Arizona State Patrol Porn Site’ is not a headline that you or Ross needs to have the governor see, right?”

“Or that we need to have anyone else in the department see, for that matter. The computer guys are way paranoid about this. They're sweating bullets that someone will find out. But it's evidence, for crying out loud, and we've got to keep it somewhere.” Her indignation was beginning to show.

“And, in terms of its being against policy to have porn on your computers, it's flat illegal to have cocaine and so on, but I'm sure there's some in an evidence room somewhere. So I'd take that approach with this whole thing and not worry about it. I mean, if it's got passwords like this one, no one's getting in there by accident.” I was hoping that a matter-of-fact approach would calm her down. “Besides, I have the feeling that you won't need to keep those files around very long. Rumsford isn't a suspect, or at least not more than a weak accomplice-type suspect. I'll spend some time today looking through the files for anything that might be useful. Maybe they can be taken off the system and burned onto a disc or something. You folks must have a DVD burner there.”

“That’s a great idea, Annette. Let me know when you’re finished, and we’ll get them off-line. That’ll keep the evidence intact and keep the computer gurus happy, too. Oh, and before I forget, the results from the examination of Rumsford’s car came in.”

I had completely forgotten about that. “Did they find anything?”

“No, and that’s the strange thing. It’s a 1987 Honda Accord, with almost two hundred thousand miles. Various minor scratches and dings on the outside and, for that aged car, the appropriate amount of wear and tear on the inside. But except for the driver’s seat, there was no hint that anyone had sat in the car. The seats are worn and all, but there was nothing there, you know, threads, hairs, the usual stuff that we’d find. The investigator, and this was someone I know, a good guy, he suggested that maybe the car had been detailed in the last couple of weeks, or at least very thoroughly cleaned—vacuumed, dusted, scrubbed, polished.”

Because of my preoccupation with Melody’s porn videos, on which I thought I might find a better picture of Tory Dowd, this didn’t really sink in. I made a mental note and filed it away for future reference.

I resumed my search for Dowd, but, because I didn’t know how to find the real thing, I spent some time looking for a virtual version of him on the Arizona server that Sandra had told me about. The most logical place for that was in the video in which I’d recognized his pinky ring, but finding that particular video was something of a crap shoot. Kelly Rumsfield had at least two dozen of the short movies in his ‘videos’ directory, named in various ways. Most appeared to relate to clothes— “BlueDress.mpg” caught my eye because that was what Melody had taken off at the start of the video in question. But that was simply a strip-tease, apparently made earlier than the one with Dowd, because Melody didn’t look so spaced out, so vacant. Also, her makeup wasn’t so shoveled on. Quick looks at several others with clothes-related names proved that they were also just strip-tease clips.

That turned my attention to the other names, and I finally found the one I was looking for in a file with the prosaic title “BlowJob.mpg.” There was Dowd’s ring on the hand on Melody’s head, and then, past the point at which the censoring on the preview had occurred and after several shots of Melody’s face stuffed uncomfortably full of Dowd’s anatomy, there was his head—his face wearing an expression of over-acted ecstasy. Just what I wanted. I didn’t bother to watch the video to its inevitable, messy end.

The shot of his face was the perfect thing to tie him to her. Her list was part of the puzzle, but the two of them together in that video was really the keystone. I was almost certain that now I’d be able to obtain an arrest warrant for him—for precisely what charge I wasn’t sure, but I was confident that something would occur to me.

My earlier thoughts about the importance of timing in investigations welled up in my mind—something about the timing of Melody’s death began teasing me.

A week or two before she died, she became concerned for her own safety, concerned enough that she made a videotape confessing her other life and providing information about a safe deposit box with a list of her blackmailers. In the confession, she implied that her other life did not include full-out, hard-core pornography.

A day or two before she was killed, she returned to Durango for what turned out to be her last photo-shoot with James Lovett, which involved her wearing and taking off a blue dress. To all appearances, she also made her first real sex videos in that time frame. They were undoubtedly her last.

Then she was killed and her body was buried in the East Asian tropical rainforest at EcoARC.

Shortly after that, apparently, IMSS decided to go ahead and market her sex videos. Whether she was alive or dead was not their concern, it seemed, just profits.

The treatment of people like meat was a hallmark of the sex-for-profit industry, I knew. But this seemed like a new low, and it happened in my town, on my turf.

There was no doubt in my mind that I'd figure out something to charge Tory Dowd with.

\* \* \*

After a few minutes of teeth-gnashing over this IMSS sleaziness—exploiting a dead person for profit, someone I knew personally, no less—it dawned on me that the reason I was able to link Tory Dowd so closely to Melody was Kelly Rumsford's obsession. He had downloaded Melody's sex video to his computer.

Although my computer skills are nowhere near Hal's or Derek's, I do know a few tricks. It took me only three tries to figure out how to view the dates on which the files on Rumsford's computer were created—the dates had clearly been preserved when the Arizona DPS people made the hard-disk image, because they were not all the same. Most of them seemed to be the dates I'd seen when I'd examined Rumsford's computer during the search of his apartment. And the date on the video was the day before Rumsford had found Melody's body. Which meant that IMSS had wasted no time at all getting that video up and for sale. Forget post-production work—just get the raw footage out there to generate profit.

It also meant that Rumsford wasn't quite slimy enough to have downloaded a sex video of the person whose dead body he had already found. That made me feel just a tad better about him—not much, but a little. I mean, if he'd downloaded that video, say, on that Monday, well ...

Rumsford had passed the physical we'd subjected him to on Thursday night—no scratches anywhere—so he wasn't my prime suspect for Melody's murder. But it was clear to me that he was involved more than he was letting on. Call it my intuition or something like that, but there was something more than he had told me. Two interviews and incomplete candor: something or someone had a powerful hold on him. During the first interview, he would have been motivated to hide his obsession with Melody, of course. But that couldn't have been holding him back during the second interview, two days ago, I thought. What could it have been?

As I was pondering this question, I heard the front door to the office suite close and realized I'd forgotten to lock it. Our office hours normally don't include weekends, and there's no receptionist out front, so when any of us comes in, we keep the door locked.

"Hello? Is anyone here?" A male voice I almost recognized sounded lost, and I walked out to the waiting room to see whom it belonged to.

"Why, Tim Langer! How nice to see you again, Tim. Whatever ... oh, wait. I bet I know why you're here."

"Oh, hi, Ms. Trieri, um, no one was here when I came in ..."

"Right, it's my fault. We're not really open for business on Saturdays, normally, at least. I just forgot to lock the door behind me when I came in to get a few things done. But you're welcome to come in. Come on back to my office and have a seat." I jerked a thumb over my shoulder and led the way.

He hesitated, but with a little urging I managed to get him seated in my office. I decided I would save him the trouble of broaching the subject.

"So, I bet you came to see me because my husband called you and you're worried about getting into trouble."

He looked startled. "Well, yeah, that's about it. Are you in on it, too?"

“Oh, no, in fact I told him I didn’t want to hear about it. But this morning I discovered some things that will guarantee I look the other way. What did he tell you? Or ask you to do?”

“Dean Weathers said he and you were looking on a web site for information related to one of your cases, and his computer got a virus from it—except it sounded to me more like what we call a ‘Trojan Horse’ than a regular virus. He said it installed lots of nuisance software on his computer and wondered if I could reverse engineer it to get back at them somehow.”

I just waited patiently, wearing my best poker face, looking at him. He squirmed in his chair and finally continued.

“Um, see, all the technical stuff is easy. We, I mean, he and I would have to figure out a strategy for getting back at them and all, you know, *what* to do. But *how* to it would probably be a snap. Except because I promised you I’d go straight I’m not sure I should. See, I’ve got a job lined up next spring, after I graduate, with that big company I tried to hack into before, and I don’t want to do anything to jeopardize that.”

“Hmm. I guess I need to steer this conversation carefully. First, everything we’re saying here is off the record, OK?” I stared at him while he looked surprised and finally nodded slowly.

“And there’s no way I can give you permission to do this. All I can do is to pretend I don’t know anything about it. That’s why I told Hal I didn’t want to hear about it. But I’m glad you came by, because even though I don’t want to hear about it officially, it’s a good thing for me to know about, unofficially. That’s so I can head off trouble if any should arise.”

“So, it’s OK?”

“I told you I can’t give you permission. But I will say, way, way off the record, that nothing would delight me more than to have the company that runs that web site look like a bunch of idiots. And if it costs them money, well, gee, that would be a shame.” I hoped my smile would provide him with the unofficial encouragement I wanted to convey.

“I’m still a little concerned about my job next spring.”

“You spent time with Chuck Shure, right? That day or two in the basement apartment, when you and he and Jamie were kidnapped? Do you think he would object to Hal’s little plan?” When I rescued the three of them, they had been working on a weapon with which to electrocute their captor, so I knew Shure to be a fan of guerilla warfare tactics.

“Mr. Shure would probably help us, if he knew about it. But I’m worried about their computer security people, the ones who are going to hire me.”

“How about if I call Chuck, put in a good word? Of course, I’m assuming in all this that you won’t get caught by the IMSS computer security people.”

“IMSS? That must be the target, huh? No, I’m certainly not going to get caught.”

“Intermountain Social Services. If you look that up, you’ll find it’s a charity. But the real organization behind the charity is a porn outfit. They run the strip bar here called Sizzles, and they also market porn on their web site ... you’ll be hacking into a porn site, so if that’s going to bother you, I mean having to view lots of pornography, you’d better call Hal and bow out.”

“Oh, a porn site, huh? Dean Weathers didn’t tell me that. So, you and he were surfing a porn site? For a case?”

I felt a blush sneaking up my neck, and an overwhelming urge to explain took over. “It turns out that a woman who went to school here at FSU got killed in Arizona, and we found out she was modeling for IMSS. So, we were looking for information about her on the web site. And, uh ...”

I realized how lame this must sound, just like the perps that I'd picked up throughout my career, all of whom seem to think that they have to explain themselves, all of whom sounded utterly insincere. Hey! I really don't need to justify myself to a college senior, I told myself.

"Anyway, we eventually found the information I need for the case, but Hal's computer got all this Trojan Horse software installed on it in the process. Ticked him off. So he thought that you might be able to extract some revenge."

"He told me what he has in mind, changing the warning and so on, putting in pop-ups to make users feel guilty. But I've got some ideas, too. You probably don't want to hear about them, though." Langer smiled in a way I knew was supposed to make me ask, but I didn't.

"Just be aware that IMSS seems to play rough if things don't go their way. I don't want to see you get hurt over this, OK?"

"Don't worry about that. I'm an expert at covering my tracks. Thanks for listening—I've got to run. Dean Weathers is going to bring me a computer, the one with the software on it." I saw him to the door and locked it behind him.

As promised, I called Charles Shure, president and CEO of UNELECO, and someone I knew well enough from that previous case that I had his personal number. Surprised to hear from me, he could only laugh about the purpose of the call. He hadn't heard that Tim Langer had been hired by his computer security department—a multi-billion-dollar corporation is just too large for the CEO to know everything—but he let me know there wouldn't be any problems for Tim, no matter what happened with the forthcoming IMSS caper.

And he also mentioned he was looking forward to seeing me later in the evening, at a cocktail party and reception at the university—something about the FSU Foundation and corporate donors that Hal would be attending with, Shure hoped, me. I managed to cover up the fact that this event was news to me and promptly called Hal.

Hal and I have a relationship that allows each of us whatever flexibility we need for our careers, and we're able to schedule plenty of time together as well. About the only thing I do that might be considered to be part of a traditional wife's role is to let Hal show me off at university events such as this reception that Shure mentioned. Because I work in law enforcement, a culture that doesn't provide much in the way of dress-up opportunities, I've come to enjoy these activities. But Hal usually lets me know about them well ahead of time.

What, I wondered, do I have that I can wear this evening?

\* \* \*

Hal was contrite, embarrassed, even. "Tonight? Oh, *man*, I completely forgot about it! I mean, it's on my calendar at the office, but I just forgot to tell you. I think you were out of town when it got scheduled for me, and I just spaced it. And it's tonight, or, rather, this evening, at six at the faculty club. Can you manage?"

I considered just how much blood I should try to extract for this little goof.

"As far as I know, but, gee, I'm not sure I have a thing to wear..."

"I guess I owe you one. Surely there's something across the street, over at the mall, that I can get for you?"

“You mean at Sears? Yeah, right. Listen—don’t worry. I’ll stop downtown on my way home in a little while and see what I can find there. What kind of reception is this, anyway? What are you wearing?”

“Suit and tie. It’s not truly formal, but it’s dress-up. I’ll probably wear that dark gray pin-stripe suit, the one I call my funeral suit, remember it? With a white shirt and a tie suitable for the evening. The reception’s one of those affairs that President Black arranges for potential corporate donors, and if he got Chuck Shure to come, it must be a big deal. I’m supposed to go and schmooze the guests, impress them with all the nifty high-tech research that the college is doing, the usual stuff like that. But you know how much I enjoy having you with me at these things.”

And I like them, too. Hal is adept at maneuvering me onto center stage, and I have fun showing off. There’s nothing like wearing a knock-out dress of some kind, and standing in the middle of a group of rich industrialists and mentioning what I do for a living. It’s amazing how quickly their eyes shift from my décolletage up to my face.

“Tell you what. I’ll find something to wear to the reception and you can take me out to dinner afterwards for not telling me sooner. I think maybe a little shopping would be therapeutic anyway, get my mind off all this filth I’ve been dealing with lately.”

“Speaking of which, any progress?”

So I told him about Melody’s list, finding a clear picture of Tory Dowd in the video, and the visit from Tim Langer.

“I’m just about to leave to take Tim the computer. And we’ll be careful, don’t worry. You said that this guy Kelly had all of Melody’s videos and so on filed on his computer? Sounds like he’s got a problem.”

“Yeah, he admitted to an obsession. He also took his own pictures, candid shots of her wherever he could get them, probably on the EcoARC campus. Those aren’t porn, of course, but they fall into the same obsessive behavior pattern.”

“But he’s not on Melody’s safe-deposit-box list, huh? So she saw him as more of a nuisance than a threat.”

“She used the word ‘stalking’ in a letter to her brother, Al, but that list is what she was really worried about. Oh! That reminds me ...” I scribbled a note to myself. “I need to check on one more thing, and then I’ll go see what kind of slinky new outfit I can find for tonight.”

“Well, good luck. I hope you find something, although I think you look great in just about anything. Or nothing, not that I’d suggest that for tonight. It’s supposed to be cold. And I’ll make reservations at downtown for a late supper. And, listen, I’m sorry I forgot about this reception, darlin’.”

I tried to reassure him that it really wasn’t a problem and then turned my attention to the note I’d scribbled—“KR’s clean car?”

Although all five of us in the search on Thursday had been preoccupied with the pictures of Melody on the walls of Kelly Rumsford’s apartment, it hadn’t escaped my attention that he couldn’t be described as a meticulous housekeeper. Put simply, the place was a mess—what you’d expect from a single, male graduate student. Horizontal surfaces covered with layers of dust or empty pizza boxes, overflowing trash cans, and a bathroom that needed a high-pressure steam cleaning.

How was it that his car was so clean that the DPS investigator found nothing except traces of Rumsford himself on the steering wheel and driver’s seat? Some guys, I know, are compulsive about

their cars, keeping them clean and shiny and scratch-free. But this was just an old Honda with more miles than it deserved, not a candidate for a show car.

The only reasonable answer was that he recently cleaned it carefully, or had it cleaned, and all traces of its other occupants had been eliminated. Despite my suspicious nature, I've come to realize that there are such things as genuine coincidences in life, and they even happen in relation to cases I'm investigating. Sometimes.

But not this time, I thought.

\* \* \*

I have this ambivalence about shopping. Early in our relationship, Hal cured me of the compulsion of driving all over town to find the best price on potatoes and other groceries—and in return, I cured him of compulsive use of cookbooks—but I still like bargains. I'm definitely not a recreational shopper, one of those people who goes to malls to pass the time. I shop for specific things I need (or want), and I don't like wasting time at it. But I do enjoy finding what I'm after, especially if it's on sale.

This time, I struck gold, black gold. Not oil, but a barely decent, little black Donna Karan, probably left over from summer because its price was down to where I could afford it—definitely not a cold-weather garment. Cut low and high—I don't mean in the Puritanical sense—I just fit into it. It would work, I decided, only if I didn't have to sit down or bend over—and from experience I knew that these receptions consisted entirely of standing around talking to people. Also, later at the restaurant, I'd be sitting with my legs under a table, so that would keep me from getting arrested.

On the theory of not going half way, I also found a pair of black stiletto pumps with three-inch heels. These would make me about an inch taller than Hal, and the men at the reception would line up like dominoes waiting to be knocked over.

One of the virtues of a short haircut is that it doesn't have to be "done" for special occasions such as this. As a result, I was able to get home, change, and be ready to go out by a quarter to six. Hal was waiting to go, watching some college football game or other, and when he heard me say "I'm ready," he turned off the TV and stood up. Then he took one look at me and sat back down, eyes a-goggle.

Success! I thought.

"Holy...uh, you know, most of these rich guys that I'm supposed to schmooze at this reception are old, way older than Chuck Shure or me. And the purpose of this thing is to weasel donations out of them, not to give them heart attacks. At least not until they change their wills in favor of the U. You're gonna kill half the guys there."

I walked over to him and pulled him to his feet, and then I stooped the inch necessary to kiss him.

"Oh, they'll survive. And just think how much fun you'll have when I leave with you, with all of them watching and wishing."

"Hmm. Well, promise me one thing?"

I just stared the question at him, and he smiled.

"Promise me that I get to help you out of this little number later, OK?"

That was an easy promise for me to make.

He stepped back and looked at my shoes. "Oh. That's why you're so tall. I'm betting you don't want to walk up the hill in those."

Our house—and it's been almost a year now since I began to think of it as “our” house instead of Hal's—is on Eighth Street, below the mesa that the U sits on. It's a short hike up to get there. I thought about doing it in the shoes I'd bought.

“No, not really. On the other hand, I don't know if I can get in and out of your car decently, either. Maybe if I stood real still, you could take me up there on one of those mover's hand trucks, so I wouldn't have to bend over or sit.” Suddenly self-conscious, I pulled at the hem of the dress, which turned out to be at about my knuckles.

“Hmm. How about taking your car? It's not so low-slung as mine, and maybe you can get in and out of it more easily. And I won't park where there's a crowd. Besides, you'll want a coat. It's chilly, at least for that dress, or, or whatever it's called.”

The coat was a good idea, and not only because of the temperature. It gave me something to take off when we got to the reception. Provost John Martin ran into us going up the steps into the faculty club, and he started on a harangue about some administrative matter or other with Hal. Martin continued the harangue while we approached the coat-check, run by a student group—and I took off my coat.

The student, a bulky one, probably one of the football players, who was taking coats stopped and stared, his mouth open. There was the briefest pause in the background conversation among the dozen or so other people in the ante-room, which told me that I'd been noticed. Even John Martin reacted.

“...and I think what we need to do, Hal, is to ensure that there is a more uniform approach to the development of course syllabi next semes...” Like the student, his mouth was hanging open.

I reached out and poked his arm. “‘Semester,’ John, the word is ‘semester.’ Now, John, I need a glass of wine, and then whom should Hal and I talk to first?”

Martin tried to talk but succeeded in producing only a small gurgling noise. He was spared further embarrassment by a familiar voice behind me.

“Annette Trieri! My, my—you look stunning, especially because, if I recall correctly, the last time I saw you, you were wearing a CBI jump suit of some kind and a kevlar vest.”

We all turned, and there was Charles Shure, looking me up and down.

“This,” he said, “is probably not as functional for police work, but it's certainly my preference. How are you, Annette? Hal, good to see you again.” He stuck out his right hand to shake.

We walked off toward the bar, leaving John Martin and the student coat-checker staring after us.

Charles Shure, one of the twenty or so most powerful industrialists between the Mississippi and the West Coast, had built UNELECO from a family electronics business that his grandfather had started after World War II. The company had since branched out to include just about everything from mining to timber to agriculture and all the associated manufacturing. Most recently, they were moving into the world of biotechnology.

Shure, however, was still a computer and electronics nerd at heart. The previous summer he had become closely involved in my case concerning serial murders of more than a dozen environmental activists. He, along with Tim Langer and a woman from the university had been kidnapped by the man behind it all, in large part because of a mistake of mine. That I was the one who led their rescue evened things up in my mind, but Shure still seemed to feel in debt to me. Mostly, that just meant that he was friendlier to Hal and me than was his usual style.

As he guided us through the crowd, Shure lowered his voice a notch. “So, Hal, what's this I hear about you and Tim Langer scheming against some porn outfit? So you'll know why I know, Annette

called me to get reassurance that Tim won't lose his job opportunity with us if your little plan goes bad somehow."

Hal looked startled, but he tried to make the best of it. "Annette and I were surfing this web site, looking for information related to a new case of hers, and I got a bad virus from it. Tim says it's probably what's called a 'Trojan Horse.' Whatever it's called, it installed lots of nuisance software on my computer, software that was a bitch to uninstall. It took me several hours to get the whole mess cleaned up, and I bet most people would never get all of it uninstalled—they'd just be stuck with it forever. I decided to see if Tim and I could figure out how to, um, extract a little revenge."

By then we'd reached the bar, and Shure, used to being in charge, ordered me a glass of Chardonnay, Hal a Perrier on ice, and himself a Crown Royal, neat.

"And Tim, I take it, is going to do the actual hacking for you. Well, good. I want him to keep his hand in. That'll make him more valuable to us next spring. Annette told me that our computer security division is going to hire him."

I took a sip of my wine and glanced around the room. Surreptitious glances slid my way and quickly elsewhere. The men were licking their chops, and the women were sharpening their claws. We're having fun in the old town tonight, I thought. Time to get to work.

"Chuck, I don't mean to be rude, but Hal's supposed to schmooze you and the others here for donations. As I recall, you're already one of the U's biggest supporters, so we'd be ungracious to hit you up for more. But we should probably go after some of the others. I think that President Black over there is watching Hal's technique, sizing him up for a promotion or something." I nodded toward the end of the room to my right.

Shure broke into laughter. "Are you nuts? Annette, he's staring at you and trying not to step on his tongue. I bet he doesn't even notice Hal standing here, or me, either."

I worked at suppressing the blush I felt starting. If one got going, people would see it long before it got up to my neck.

"Besides, Annette, Hal, you don't want to schmooze those other guys, you want to talk with me. I remember your telling me, Hal, that you're ready for a sabbatical. Well, I've got an offer for you. Want an interesting job?"

\* \* \*

## Seventeen

Hal and I, being two highly trained, experienced professionals holding responsible leadership positions in our respective organizations, stared at Shure like a couple of morons.

But maybe he didn't notice—at least he didn't immediately withdraw the offer.

"C'mon, let's get away from the center of the crowd." He started leading us over toward the side of the room, to an empty spot where we'd have more privacy.

"I came to this little soirée because President Black asked me to. He told me, just like you did, Annette, that he wasn't expecting me to pony up more donations. He said he just wanted me here to draw the others. I guess he was able to tell these guys that I'd be here so they ought to come, too. Anyway, here I am and I have two things I want to accomplish. I need to talk with Jin-Rae Kim about

his grassland sequestration work, and I want to talk with you two about this sabbatical business. I don't see Professor Kim yet, but Josh Black assured me he'll be here." He was looking around the room.

"Chuck? Professor Kim was one of the last people to see the victim in my current case alive, so I definitely want to come back to this." Bells were ringing in my head.

"Huh? Sure. How strange." Shure was obviously surprised.

Hal chimed in. "Moreover, this victim was Kim's student before she got her post-doc, and she was the one doing the grassland sequestration work."

"'Curiouser and curiouser, said Alice.' Well, fine, when he gets here, that'll remind us. But since you're here, let's talk about this sabbatical business. You up for it?" Shure's mild smile belied, I knew, shark-like business acumen.

"Up for a sabbatical? You bet. My administrative assistant is going to retire in December, and I don't have the energy to train a new one. I want to go back to teaching. And a sabbatical first is my reward for being a dean all these years." Hal and I had talked about this many times, and by now it wasn't a question of whether, just when and how.

"So, how would you like to organize and, for a while at least, direct a new climate institute I want to set up?"

Hal almost managed to hide his surprise. "Fascinating. Tell me more. I have to say that I didn't think climate was part of UNELECO's portfolio, though."

"Our interest is from the perspective of computing. See, Hal, UNELECO has developed some new computer chip technology that increases processing speed significantly. We've also used this technology to improve networking. We want to find out if this new technology will have commercial potential. Proving the chips and the advanced networking out at a high-visibility research institute like I have in mind will provide us with a leg up on marketing. And, as a computer weenie myself, I'm personally embarrassed at how far behind the rest of the world both our supercomputer technology and our climate modeling efforts have become, and I want to do something."

He took a small sip of his whisky. "All this came up when I was on a committee convened by the Secretary of Commerce. We were supposed to look into competitiveness of the U.S. computer industry, and it turns out that the Europeans and the Japanese are way ahead of us in climate modeling. It has to do with what kinds of computer chips we make here. Climate modelers like big mainframes that require specialized, expensive processor chips. U.S. industry tends to make chips for small, personal-computer-type systems. You can link these small systems together in clusters, but clusters have limitations that hinder climate modeling. And some other kinds of modeling, too, but I suppose climate came up because the National Oceanic and Atmospheric Administration is part of the Department of Commerce. The Secretary had climate on her mind, I guess."

"So what's your interest, specifically?"

"Like I said, we, I mean my company, UNELECO, we have this new, really fast processor chip, and we also have a new networking technique that involves some innovative memory management techniques that take advantage of our new chip technology. I thought we could put the two together in a configuration that would be optimal for climate modeling. Between the tax write-offs for a non-profit institute, the marketing potential, and the real-world test-bed for our products, I figure it's a winner for us. But I need someone I can trust to set it up and make it go."

"I'm flattered, Chuck. And intrigued. But you must have an idea of what kind of budget would be involved, and facilities and so on. Also, a time line for the institute as a whole. Do you envision something that will, you know, last forever? Or is this a short-term thing?"

“We’re going to be developing new computing technologies for the foreseeable future, so I’d say ‘forever,’ at least in the sense that it’s to be ongoing, not just, say, five years. I suppose that it’s possible that the climate problem could be solved someday, so we’d need to have other candidate problems to work on, problems requiring big computer horsepower. So maybe we shouldn’t call it a climate institute. And as for facilities, I thought we’d find a chunk of land somewhere and build one. A campus of some kind. I’ve got somewhere in mind, actually.”

“And budget?”

Shure’s serious expression evolved into an mischievous smile, and he gave me a nudge with his elbow. “Budget? Well, now, this sounds like a negotiation. Should I assume you’re accepting an offer to do this?”

Hal laughed. “Consider me a consultant at this stage. Budget for the institute is important, though, because if it’s under-funded, even with the best computer in the world it will fail. And doing climate is an expensive proposition, as several federal agencies have discovered. We’re talking millions per year, tens of millions, in fact, plus facilities.”

“How about a billion-dollar endowment?” Shure’s poker face was inscrutable, and I could see Hal trying not to let his jaw hit the floor. He took a few seconds to find his voice.

“Ahem, well, yes, that would be very helpful. Perhaps even adequate. Especially if it’s invested aggressively. Um, and if the computer hardware is donated, or something like that, at least the big iron.”

“‘Big iron’? Oh, you mean the heavy-duty processing capability. You’ll have to put up with the new experimental chips we’re making, but you can have plenty of those. What I’d like to do is to put together a system that benchmarks at least in the top five in the world, hopefully at the top. It would be nice to beat IBM to the peta-flops benchmark, for example. Production runs of whatever climate models you adopt should be pretty fast, I’d think.”

Hal looked surprised, and I could tell he was impressed. But I had no idea what that meant, so I asked.

“Hmm? Oh, that would be a computer system capable of a billion billion floating point operations per second, a peta-flops it’s called. A system like that would revolutionize climate simulation in this country, if it could be utilized to its full capability.” Hal thought for a minute and then continued. “But it would depend on the system architecture and how well we can match models to it. Those benchmarks are really nothing more than stunts to produce big numbers, and production runs are usually way slower. But, still, that level of compute-power is what climate modeling in this country needs to get revitalized. And related to that is the need to build on what’s been accomplished so far, to work with the federally supported climate research community and so on. There’s no point in reinventing wheels for this.”

Shure nodded. “Absolutely. That’s one of the reasons I’ve been looking for property up in the Fraser Valley, in eastern Grand County. It’s just across the Front Range from Boulder, where the National Center for Atmospheric Research and NOAA are. And it’s close enough to the Denver airport—a couple of hours, except in rush hour, I think—to make it fairly easy for people from all over to visit. I’ve already made arrangements with the railroad, I’m on the Board of Directors, to put a fiber bundle through the Moffatt Tunnel to get a hundred or so gigabytes per second networked over to Boulder. I figure we can work with the folks there, provide computer resources for them, stuff like that. Also, I’ve got some leverage with respect to land. Turns out that the church group that rents space in my headquarters building has a youth camp there, if you want a campus out in the woods. I can make them an offer they can’t refuse.” Shure’s smile wasn’t quite chilling, but I could see how it could be.

I’d been listening to this conversation with only half my attention—the business about peta-flops piqued my interest a little, but mostly I was thinking about how I could arrange my CBI job to

accommodate a move away from Durango. I was also watching the room, having positioned myself against the wall we were near. Because I could see the door, I spotted Professor Kim before either Hal or Chuck Shure did.

“Excuse me. You guys keep talking, but, Hal, don’t agree to anything yet, OK? We’re going to have to talk about all this. Anyway, I just spotted Professor Kim, and I’ll go get him.”

\* \* \*

Frémont State University takes pride in its diversity program, and both its faculty and student body sport a fair number of Latinos and American Indians. African Americans and Asians, however, are in short supply, at least in comparison to the California schools. And among the Asians at FSU, people of Korean extraction are far and few between. So I didn’t have any trouble recognizing Professor Jin-Rae Kim, despite having met him only briefly at Melody’s memorial service a couple of weeks back.

I wriggled my way through the crowd toward the entrance where I’d seen Kim, grateful for my additional height because of the improved visibility. The crowd, to my relief, parted for me, as if the men were afraid to touch me and the women just didn’t want to.

When I got close enough, I re-introduced myself. “Professor Kim, I don’t know if you remember, but I’m Annette Trieri, Hal Weathers’ wife—we met at Melody Witherspoon’s memorial service. Hal is talking with Charles Shure over by the wall over there, and I’ve come to take you to them. Mr. Shure would like to speak with you.”

“Ms. Trieri, how nice to see you again, and may I say you look truly beautiful. Do you suppose we could detour by the bar so I could get a drink?”

“A good idea, I need a refill.” I held up my empty wine glass. And it was also a good idea from my perspective because I wanted a minute or two with Kim for my own purposes.

“Professor, Charles Shure mentioned that he wanted to talk with you about carbon sequestration. I understand that’s what Melody was working on.”

“Quite right, and she should be the one to have this conversation. But, well ...”

“It turns out that I’ve become involved in the investigation of her death. I think I mentioned to you before that I’m with the Colorado Bureau of Investigation. I recall you said that you had seen her on the Saturday afternoon before her body was found down in Arizona. I wonder if I could ask you more about that?”

“Of course, although I’m not sure there’s much more for me to tell you.” We’d reached the bar by that time, so he turned to the bartender. “Ah, a gin and tonic for me and, what’s that, Ms. Trieri, white wine?”

“Chardonnay, please. And no one thinks they have anything to tell me, but it’s remarkable how little details are often critical to investigations such as this. Do you know why Mr. Shure would be interested in carbon sequestration? UNELECO isn’t an oil company, is it?”

“No, no, but they do own vast areas on the Colorado eastern plains. Ranches they’ve bought up over the years. Mr. Shure’s people contacted me a while back about how they might improve the quality of the soils with different strains of grasses, apparently for the future. They seem to believe that someday there will be a sufficient supply of water to allow agriculture out there, not just cattle grazing but actual farming. First, though, they need the soil to be in better shape. More recently, there’s an interest in this carbon sequestration issue, because they think they can make money on it. But, as I said, they really need to be talking to Melody.”

“So they wouldn’t want to stop Melody’s research, or anything like that?”

“Oh, my goodness no. On the contrary, I think they would have funded her research after her post-doc, if she’d only lived to get a faculty position somewhere.”

“You told me before that Melody came to see you on that Saturday, I guess it would be three weeks ago, at your laboratory, in the afternoon. She brought you some reprints of an article, right?”

“That’s right. And she still had her keys because she let herself into the building and into my lab. It was about four when she came to see me, and we talked for, oh, for about an hour, I guess.”

“You were probably talking about how her post-doctoral appointment down in Arizona was going, stuff like that?”

“Yes, mostly. She asked about some of the students she knew, students who were a year or two behind her. But mostly we talked about how her research was going.”

“And how *was* it going?”

“Quite well, by all accounts. She had good things to say about the Eco place, about their facilities and so on, and she was talking about several more research papers.”

“Did she say anything about specific people at EcoARC?”

“Let’s see. She mentioned that her dryland grass sequestration work wasn’t the only carbon-related research there. The deputy director, Art Finnegan, I remember meeting him when he was here last spring, he was working on oceanic carbon sequestration, so the two of them had talked about doing a joint paper. She said they drove up from Arizona together, but she was going back with someone else. Something about some kind of conflict, or something. I assumed she meant a scheduling conflict.”

“There were rumors about an affair.”

“Really? How odd. I never knew Melody to have much of a social life. She told me once that when she was an undergraduate, here at FSU, she had such a busy time of it with her sorority and all that she just got fed up. So she decided, when she was finishing her graduate work, to focus only on her research. She would hang out with the other students in my group sometimes, but they’re mostly workaholics.”

“Hmm. Maybe as a post-doc, she decided to resume her social life, at least a little. You said she was planning to return to Arizona with someone else. Did she say with whom?”

“I didn’t get a name, but she said something about a guy who had a crush on her. I think he’s a graduate student at EcoARC. He was picking her up at five, so I walked her outside. She got into a Honda of some kind, a sedan. Not a new one.”

“Would you recognize the driver if you saw him?”

“Maybe. She got in and lowered her window to say goodbye a final time and I leaned down to shake her hand. I didn’t know how final it would really be, or I wouldn’t have let her go. But I got a look at him. Do you think he’s who killed her?”

“That’s the same question I’m asking myself. First, I need to show you a picture of someone to see if we’re thinking of the same person, though. Tomorrow’s Sunday— could I stop by your home with a photograph? It would take only a minute, literally.”

“I’ll be home all morning, please do stop by. I’d feel much better if this whole thing were cleared up, and I’d be delighted to help.”

“I think you already have, Professor. Let’s go find Chuck Shure and my husband. I’ve got to get out of here—there’s work for me to do.”

\* \* \*

Late the following afternoon, I was on the last Sunday flight to Phoenix. It was beginning to feel as if I was commuting to Arizona for my job, and it was getting old.

This made the discussion that Hal and I had over breakfast the more pertinent, because the prospect of working somewhere besides Durango and Oracle seemed intriguing.

“You know that I’ve been thinking about this sabbatical business for a long time, and now that Alice is finally going to retire in a couple of months, it’s time for me to do it.”

“And it certainly sounded like Chuck Shure had an attractive offer for you.”

“Right, although it isn’t my only alternative. I’ve been working on something else, something to keep me working for the State of Colorado. But I thought about it most of the night—didn’t get much sleep, actually—and I might just be able to do both. But I’m worried about you. You just started for the CBI—when?—last April, or May? I’m sure not leaving town without you, and I don’t want my plans to screw up your career, either.”

“I’ve been wondering about that, about how to make it all work. I slept like a baby, though, after what you did to me last night, so I’ve still got to figure it out.” I’d winked at him at that point.

“You told me I could get you out of that little dress, and, you know me. One thing leads to another.” He’d winked back.

It was a good thing I was alone in the row of seats on the airplane, or someone surely would have asked me about the silly grin on my face. And there was no way I wanted to explain it.

In some ways, that breakfast conversation was the highlight of my day. Of course, I made progress on the case, even though it was Sunday, but my heart wasn’t in it. For one thing, the news that Kelly Rumsford had continued to lie to me in our second interview was flat-out depressing. When Jin-Rae Kim positively identified him from among the stack of mug-shots I showed him, I couldn’t even get mad. Just more depressed. Now I was going to have to arrest him for obstruction, something that I really didn’t want to have to do.

Then there was Art Finnegan. He’d lied to me about some things—that he didn’t admit to being in Durango was especially troubling—but most of those things could have been construed as being unrelated to Melody. But if they drove to Durango together, he lied about something directly related to her—another case of obstruction.

Unfortunately, all I had on that was hearsay, Jin-Rae Kim’s account of a conversation with Melody. It probably wouldn’t be enough to support an arrest warrant, although it might be worth a shot. Arresting Art Finnegan was a priority for me. I wanted him to have a physical exam as soon as possible, one that would find any scratch marks he might have before they could completely heal.

About the only thing I remember about that flight was that, at Flagstaff, the same wannabe cowboy who had groped me the previous week came walking down the aisle toward me. Even though the flight was only about a third full, he obviously had me in his sights, because he was headed straight for my row. But he must have recognized me from the last time, and I was spared another encounter when he kept going right on down the aisle, toward the back of the plane.

And he didn’t even say hello. Rude, rude, rude, I thought.

I finally arrived at the Marriott in Oro Valley at about ten-thirty. Even though it was too expensive, it was close to the State Patrol office, and I needed pampering. I ordered a snack from room service—just before their closing time—and settled in.

That Sunday was the first day of standard time in Durango—Halloween was later in the week—so it was the same time there and in Arizona. I called Hal to talk more about our future, something I'd been thinking about on the plane and during the drive down from Phoenix.

"Hey there, I got here. And I even managed to get a room service order in before they closed. A nice crock of French onion soup."

"Was your flight OK?"

"Just fine, a row to myself and everything. Couldn't ask for more. It gave me time to think."

"You figure anything out?"

"Not specifically, but I sure am tired of commuting to this job in Arizona. What I did decide is that there's got to be a way somehow for you to do this sabbatical thing and for me to make my job work. I just don't have all the details filled in yet."

"I haven't agreed to do it. I'm just considering it. And Chuck didn't give me a deadline or anything." I could visualize his shrug.

"But that's why it's such a good offer. No pressure, a situation that seems as ideal as you could invent it yourself. A great location, seems like."

"You remember we went skiing there, right? At Winter Park – Mary Jane, when we drove over Berthoud Pass and those thugs who were chasing us crashed?"

"Sure. You said you were also working on alternatives for your sabbatical, though. What's that about?"

"Nothing firm. But remember our picnic on Labor Day? When I talked about moving out of town to somewhere less crowded?"

"When you were shouting at me because my ears weren't back to full strength yet, after that explosion, right. It sounded like a wonderful dream. You mean you want to make it come true?"

"Here's what I was thinking. I've been talking with people in Denver, at the Colorado Commission for Higher Education. It's the group that coordinates all the state colleges and universities, and they have opportunities for people to do internships, help them out with planning for future educational needs, stuff like that. I thought I could do a stay-at-home sabbatical, travel around working on issues for them and oversee building our new house in the process. I don't have a site for the house yet, though. We'll have to find some land somewhere."

"But you could still do this consulting for the Denver people from Fraser, right?"

"Maybe, on a reduced basis, certainly not full-time. I expect that organizing that institute for Chuck would take most of my energy."

There was a knock on the door, and I walked over to let the room-service guy in. He set up my food, I signed the tab and gave him a cash tip, and Hal and I were alone again.

"Well, whatever you do, I'm coming with you, so that's that."

"Was that your food I heard? Don't let your soup get cold."

"It's got one of those cheese crusts. It's not getting cold any time soon."

"So what's your day like tomorrow? You going to be able to get home?"

"I hope so, but I doubt it. Probably Tuesday evening. But I think I may wrap this thing up on this trip, so it'll be the last."

“You be careful. I worry.”

\* \* \*

He *sounded* worried, and that stuck with me until the next morning. Then, I got so busy I didn’t have time to worry about Hal’s worrying about me anymore.

The first thing to happen was a call from Ross Townsend so early it woke me up. I’d left him a phone message telling him I would be at the Marriott, so his call wasn’t unexpected. But his news was.

“You’ve probably got a schedule all planned out, Annette. I’m sorry to do this—but the grand jury investigating Elwood’s operation is convening today, and the first thing they want is to talk to you. I’m thinking you ought to be done by noon. If it’s any consolation, I’m after you.”

“You? Why?”

“Probably one of the things they want to talk about is your appointment. Elwood’s been bitching about it, and they probably want to understand your status better. But they’ll also be asking you about your investigation and about that cut-up tee-shirt that Rudy showed you at the meeting. They’ll ask me about your appointment and so on, and about our investigation of Elwood’s department.”

“So we’re friendly witnesses, then?”

“Most definitely. The guy who’s running the show works for me. So it’s not a threat, it’s just a time sink.”

“Now I understand, Ross. But, listen, there are some things I need to get done. Will this grand jury meet up in Casa Grande? Because if so, I need to hit the road. Can you set some things in motion for me?”

“What do you need?”

“Another arrest warrant for Kelly Rumsford, and for him to be picked up and detained for questioning, my questioning, at the Oro Valley State Patrol offices. This time we charge him with obstructing and destroying evidence. He’s lied about when he last saw our victim, Melody Witherspoon, and I have a witness who made a positive ID of him from the pictures we took last time we brought him in.”

“So it’s just obstructing, not murder?”

“We don’t have any real evidence of murder, but the destruction of evidence is getting close. See, Melody got into his car in Durango, and my witness thinks they were headed back here. So if that’s true, she rode from Durango to Oracle in his car, alive, at first, at least. But the car’s too clean to show any signs of her, meaning he cleaned it to eliminate them. Destruction of evidence. Obstruction compounded. Because of the grand jury, I won’t be able to meet with the judge, but maybe we could talk on the phone. I’d think that whoever gave us the previous warrant would spring for another one with this new information.”

“Not a problem. We’ll have Rumsford at Oro Valley by noon, assuming he’s not left the state.”

“OK, good. Thanks. I’ll be making phone calls from my car on the way up to Casa Grande, and I’ll probably see you there. Ross, I think I’m getting close to clearing this Witherspoon murder.”

“Good to hear, Annette. I’ll see you in Casa Grande, no doubt.”

I didn’t know where I’d be that evening, so I packed up my things and checked out of the Marriott. I also spent a few minutes loading up my cell phone’s memory with several numbers I’d need on the road.

The first call was to Bill Longwell. I tried his cell phone not knowing where he'd be, but it turned out he was in his office.

"Yeah, I just came into work like you suggested last week. No one seems to know about my little tiff with Detlef, so I'm still in charge, it seems."

"Bill, there are a couple of things I need to talk with you about. I'm on my way to a grand jury hearing, though, and this afternoon I have to question a suspect down in Oro Valley. Can we talk a minute now?"

"Sure. What's up?"

"First, I'm going to see if I can get an arrest warrant for Art Finnegan, on a charge of obstructing the course of an investigation. I don't know if I can pull it off, because part of the background is hearsay. But there's no reason to think it's not true. It seems that Art and Melody drove up to Durango together the Thursday, or maybe Wednesday, I guess, before she was killed. And he lied to me about that. You understand that this has to remain between us."

"Of course. I've been wondering about him lately. Somehow this doesn't surprise me."

"OK. The other thing I want to talk about is that data you sent to Hal. He and I looked at it last week, and he wasn't sure of what some of the numbers meant. Did he ever call you about it?"

"No, he didn't. He sent email thanking me, but he didn't ask any questions."

"Hmm. He must have forgotten. We got kind of busy over the weekend. Anyway, do you know what those numbers are? What I mean is, Hal made graphs of them—there were several different things that he plotted as a function of time. He identified one of them as carbon dioxide, from its values, and he thought another one might be isoprene because its numbers were so small—he called it a trace gas. But there were others he couldn't identify. Can you?"

"Not off the top of my head, but I can look into it. You say he made graphs? Do you know how?"

"I think it was some kind of spreadsheet program. They weren't very sophisticated, but they did show lots of cycles of these gases, or whatever they are, up and down and up and down over time, with some of them going all the way to zero every now and then. If this is the record of the gases in Art's experiments, it would be useful to know what they are. Maybe some of his behavior could be explained if we knew what was going on."

"Hmm. Maybe it's more than just gases, maybe there are critter counts in there. The zeros could be what Melody mentioned about all the forams dying."

"Maybe. That's what I need to understand, though."

"OK, I'll look into it. Are you staying down in Oro Valley again?"

"I did last night, but I've checked out. I don't know yet where I'll be tonight. Can I call you this afternoon?"

"Absolutely."

"Oh, and did you ever find out anything more about those goons who attacked you and ended up the worse for it?"

"Nothing. But it coincided with Art's acting more strangely than ever, so I'm wondering what's going on."

"Hmm. I'm beginning to think they were enforcers for a bunch that Melody was involved with, people that Art may just be involved with, too. I'll let you know more when I do."

“Enforcers? What is this, some kind of mob thing?”

“Something like that. I’ll be in touch.”

\* \* \*

## **Eighteen**

During the rest of the drive up to Casa Grande, I kept thinking about that statement to Bill Longwell while dodging morning traffic. I’d taken a shortcut from Oro Valley over to the interstate, and once headed north at 85 miles per hour—I was merely trying to keep up—I discovered just how eager people in Tucson are to get to their jobs in Phoenix.

Why, I wondered, had I suggested that Art Finnegan is involved with the IMSS crowd? Not that I’d explicitly named IMSS to Bill, but that’s what I must have been thinking when I said to him that Art might be involved with the same bunch that Melody was.

I’ve learned to trust my instincts, and a subliminal Freudian slip such as that must, I thought, mean something.

Perhaps it had to do with the fact that Art was part of Melody’s safe-deposit-box list, not at the top of the list like Tory Dowd, but on it nonetheless. Melody hadn’t trusted Finnegan, but I’d been assuming that was because of the difference in power in their relationship. Yet, as Bill had mentioned at one point, that power differential actually worked to Melody’s advantage, because she was sitting on an automatic and pre-decided sexual harassment claim, if she had chosen to pursue it.

On her confessional videotape, Melody had said that “some guys” at EcoARC had found her pictures on the internet. That sounded like more than one. Who besides Kelly Rumsford might have found them? Could Art Finnegan also have found Melody’s pictures and used them to blackmail *her*, to create a stalemate of sorts?

And what about the connection to Lyle Shaughnessy? He’d worked off-duty hours at EcoARC as a security guard, before Bill Longwell hired a full-time professional. Finnegan had been at EcoARC forever. Lyle’s son worked for IMSS.

Maybe, I thought, that Freudian slip of mine had some basis in reality. Maybe Art really is connected to the IMSS crowd somehow.

Could he have driven Melody up to Durango knowing she was finally going to cross over the hardcore porn threshold?

What could have happened to motivate Melody to ask Kelly Rumsford for a ride home instead of just going back with Finnegan?

Suddenly a mini-van swerved in front of me, and I snapped back to reality—doing 85 in morning rush-hour traffic with distracting questions bouncing around in my head. I realized I needed Hal just then. He’s always a calming influence when I get all wound up—there’s something about his academic outlook that keeps him steady, and that helps calm me. Even that time when we were being chased by the thugs over Berthoud Pass down into Winter Park, when we barely knew each other, I was the one who was losing it while he drove and formulated escape plans—and it was a good thing that Plan C, or D, I forget, worked, too. I smiled at the memory, and vowed to myself to follow him to the end of the earth, if necessary.

As an alternative to that, though, the Fraser Valley seemed quite attractive.

In Casa Grande, I stopped at a gas station just off the interstate to ask directions to the court house, and, after one false start, I found it and dashed in through the front door just at 8:30. The woman at the information desk directed me down a hallway toward the back of the building, where I found the place to check in, sit down, and wait. I was told the grand jury had convened at 8:00, but that they were still hearing background and instruction. I was next, however.

I finally had a chance to catch my breath, and I looked around the waiting room. Elwood Johnson was slumped in a chair in one corner, his big western hat so low over his eyes I thought he might be asleep under it. But he must have seen me, because he raised a hand to his hat and tapped an index finger on the brim.

Sitting two chairs away from Elwood was Henry Reeves, the deputy who had been with Lyle Shaughnessy during the raid on the motel. He was alone, sitting quietly, reading a magazine.

Across the room from the two of them, Lyle was huddled with his attorney, engrossed in a low conversation. They looked at me curiously, and I realized that although I knew them on sight from having been in the observation booth during Lyle's questioning, they didn't know me.

About that time, the door to the hall opened, and Rudy Gelinski strode in, carrying a cardboard box the size of a case of wine—I noticed, in fact, that it said "Woodbridge" on the side. He saw me and smiled, and headed over to sit with me, setting the box on the other chair next to him.

"Good to see you again, Annette! And maybe, just maybe, we'll make some progress today."

That remark got the attention of Lyle Shaughnessy and his lawyer, and they both stared bullets at Rudy. But they had the good sense not to say anything.

"I sure hope so, Rudy. And I hope this goes quickly, because I've got a ton of other stuff to do. Regardless of how this grand jury business plays out, I think I'm making progress on my other case." I tapped my ear and tilted my head toward Lyle, and Rudy nodded imperceptibly in understanding.

"Good to hear. We'd all like to get that one cleared." He looked around the room. "Do you suppose this is all? Seems like we're missing someone."

"Ross Townsend will be here. He said he's after me, so he ought to be here soon. And I bet Sandra Kinney will be here eventually, maybe this afternoon. Also, I expect that there will be at least a second day, so they'll be able to call in people who come up today."

"Of course. I didn't think of that. Say, there's a rumor making the rounds about big changes at that EcoARC place. I heard they're going to phase out the academic research and concentrate on stuff that has commercial potential." He was only making conversation, I could tell, but this was a topic I thought was important.

"Meaning, I expect, no more graduate students or post-docs. Crash goes the rental housing market in Oracle. But if you're right, it's important because EcoARC could lose its non-profit status. That would change everything. I don't think Bill Longwell would want to continue to run the place under those circumstances."

"And the county probably wouldn't be so lenient with them, either. There's been rumors for a long time about genetic engineering out there, and everyone's spooked by that possibility." He shrugged. "I learned enough about it that I'm not concerned the way that most folks are, but we do live in a democracy, of sorts. Most folks would rather not see that stuff happening in their back yards, and so neither will the county commission."

“Well whatever they do, I’m sure they’re quite careful. For one thing, that’s why, or at least one reason why, they have those closed greenhouses, to keep their stuff contained. For another...” But the door to the jury room opened, and a woman called my name.

\* \* \*

It went the way Ross Townsend had suggested it might, and I was finished and out of there in two hours. When I left the jury room, Ross was waiting outside for his turn, and, in passing, he told me that the warrant for Kelly Rumsford had been obtained and was being executed. He thought that Rumsford would be in custody as soon as I could make it back to Oro Valley.

On the interstate, the traffic was much easier to deal with, because there was less and it was slower, only about 75. I used the drive back south to try to relax, clear my mind, and switch gears for the upcoming interview with Rumsford.

After a pleasant lunch with Sandra Kinney, who had brought Rumsford to the State Patrol office and was waiting for the next thing to do, I got down to business. Rumsford was brought from one of the holding cells to an interview room, where he found me waiting for him. Unlike his previous visit to the State Patrol, this time they had dressed him in an orange jumpsuit, and his hands and feet were shackled. He was not a happy camper. But, then, neither was I. However, I realized I would have to tread carefully.

Into the interview room with Rumsford had come a young man with an emaciated look, wearing a cheap blue suit and carrying a briefcase; his glasses had white tape on the nose-bridge, and his shoes needed a shine—Donald Parks, Pinal County public defender, just as I remembered him from when he was representing the late Mr. Alvarez.

“Ms. Trieri, how nice to see you again. I’m representing Mr. Rumsford. Even though my client has been brought here to Oro Valley, his case will undoubtedly be adjudicated in Casa Grande, once the business with the sheriff gets settled. I understand the grand jury convened this morning.”

“Nice to see you, too, Mr. Parks. Yes, they got started, and I was their first witness. I think it will be cleared up fairly quickly. I’m not sure what role you’ve played in that little drama, but I think that the sheriff and his cronies are going to find that justice applies to them as well as to the people they arrest.” Even though I smiled, I was disappointed to be across the table from Parks this time. We seemed a better match when we were on the same side.

“I appreciate your advice, Ms. Trieri, about not losing my head over that incident. I think I was much more effective in taking the route I took, rather than confronting Sheriff Johnson and crowd.” He smiled slightly. “Now. Mr. Rumsford tells me that this is the third time you’ve detained him for questioning. Why are you harassing my client?”

Ah, me, I thought. A new lawyer, still full of piss and vinegar, and still wet behind the ears. But surely, in law school, they teach these bozos to learn as much about both sides of the story as possible before latching onto one. Maybe he forgot.

“Mr. Rumsford has been arrested for obstruction of a murder investigation and destruction of evidence pertinent to that investigation. You see, I have a credible eyewitness who saw the murder victim sitting in Mr. Rumsford’s car, even shook hands with her there, about thirty-six hours before Mr. Rumsford found her body in the EcoARC facility, where he works. Yet there was no trace of the victim in Mr. Rumsford’s car, and he has lied consistently to me about his contacts with her. So ...” I shrugged. “So, I’m afraid your best strategy will be to negotiate a plea of some kind. Otherwise, Mr. Rumsford will be going to the state prison for a while, and, well, given his age and his, um, fine features, I’d say

he's likely to have some interesting social interactions in there." During the last part of this, I was staring at Kelly Rumsford, watching his eyes get bigger and bigger.

"Ms. Trieri, please! That was completely uncalled for." Parks had been confused by my side of the story, and his covering up his confusion with indignation about the facts of life was a lawyer tactic with which I'm all too familiar.

"Sorry, Mr. Parks, but there's no judge here to sustain your objection. Besides, you'd probably be overruled anyway. Facts are facts, no matter how unpleasant they are. I don't know what your client has told you, but I know what he's told me, and lots of that is on tape. My witness is a professor who knew the victim quite well, and he's made a positive ID of Mr. Rumsford as the driver of the car in which the victim was sitting. I've got about as air-tight a case as I've known of. Like I said, I think your best strategy will be to negotiate a plea of some kind. Mr. Rumsford is afraid of telling me the truth for reasons I don't fully understand, but if I can be persuaded that he will do so—and if he does to my satisfaction—I'm certainly open to alternatives to his inevitable status as someone's sex toy in the state pen." I gathered up my things. "I'll leave you two to chat about this, with the equipment off. I'll be somewhere in the building." I made the "cut" sign of a finger across my throat to the mirror on the wall, and walked out.

Sandra Kinney was waiting for me in the hall.

"Sandra! You're still here?"

"I hope it's OK, I was watching from the booth. I thought I might learn something about tactics. Annette, you're good." I could see a hint of hero worship in her eyes.

"If Rumsford had been alone, I would have done about the same thing, maybe not so strongly. But this nitwit of a lawyer accused me of harassing his client, so he was going only on what Rumsford had told him. He wasn't prepared for the reality of the situation at all. I don't know what will come of their conversation, but if it's not a request for some kind of plea bargain, Parks isn't really doing his job."

"Do you really think that Rumsford could wind up in the state penitentiary?"

"I don't know, really. I'm not that familiar with Arizona law. But it makes a good threat, no?" I smiled. "Sometimes hyperbole is a good tactic in these situations, Sandra. If you use it and get called on it, you can just ignore whatever they call you on and move ahead. But almost every time, the suspect, or defendant, or whatever, will remember the threat and act so as to avoid it. It's a way to steer matters in the direction you want to go. So, are you still assigned to me?"

"Absolutely, that's why I'm hanging around. When you're not here, I go on patrol or work on background for your case."

"Hmm." I fumbled in my bag and pulled out my cell phone. "Let me make a call." I pushed a speed-dial button, and got an instant "hello?"

"Bill? It's Annette. I'm back down in Oro Valley, and I should be done here by, oh, by about three or three-thirty, I guess. Can I come up to see you?"

"Sure, Annette. I'll give them your name at the gate. Do you have a plan?"

"That depends on your protocols. You're the director, right? Does that give you any kind of jurisdiction over people's offices? If you think there's something out of line, can you do an unannounced search?"

"Yes and no. Technically, yes. I'd probably want to take Stan McGriff along, because security is his turf. Although he's down in Tucson today. But the thing is, there are some people here who I really

don't want to piss off, because they might leave if I just barged in and searched their office, or lab, for that matter.”

“But there's no requirement for a warrant or anything, right? You're the boss, it's a private facility, people really don't have an expectation of privacy. Right?”

“Technically, yes. But ...”

“Don't worry about pissing anyone off, Bill. That won't be an issue, I'm sure. So my plan needs some fine-tuning, and I'll be thinking about it. One thing I'd like to do is talk more about that data from Art's lab. And, say, I guess seeing the lab would be a good idea as well. How's that?”

“Not a problem. Annette? I have to ask. Do you really think that Art's involved with the mob?”

“This morning I said ‘something like that,’ and what I meant was that maybe he's involved with a company that markets pornography, creates it, too, for that matter. You see, Melody was involved with them, although I'd like that to remain as private as possible.” There was a long pause. “Bill? You there? Did this thing disconnect?”

“Sorry. I was finding a chair to sit in before I fell down. Uh, right, private it will be. I'm having trouble absorbing this, though.”

“I'm not surprised. She led a double life, and there's the possibility that Art found out about the other half.”

“So I guess what you want to do is to search Art's office and lab to see if you can find anything relating to this.”

“And I figure you won't mind pissing Art off, right?”

“I might even enjoy it. See you later.”

\* \* \*

Sandra Kinney and I were in the hallway, discussing my plan for the EcoARC visit, when Donald Parks came to find me. I wanted Sandra to come with me to EcoARC, both to be another set of eyes as well as to do her job of body-guarding me as might be needed. But I didn't think it would be a good idea for her to be in uniform, so we had to decide what type of undercover “look” she should adopt. We settled on an academic preppy, post-doc-wannabe approach just as Parks walked up, and I sent her home to change.

“Ms. Trieri, I think we may be able to reach an agreement. It's certainly the case that my client will do whatever's necessary to avoid a trial. What can you offer us?”

“Mr. Parks. The first thing, the very first thing, is for you to stop screwing with me. I already made you an offer, at least the part of it that I expect. Without some response on that, we're going nowhere.” In point of fact, I was not quite sure what my authority was in this situation.

For one thing I wasn't on my own turf—Arizona law was a bit of an unknown for me. For another, jurisdiction was all messed up. By rights, a plea-bargain negotiation should have been conducted by the Pinal County District Attorney—currently the inimitable Sibley Jensen, Acting. But the murder wasn't a Pinal County case, because of the problems at the sheriff's office. The most likely answer that I could think of would be that a negotiation should be handled by the Arizona Attorney General's's office or someone else at that level.

But if I was going to move things forward, I needed an answer now. Well, I thought, if I screw up, the worst they can do is fire me. Then I can go home.

Parks finally stopped sulking. “Mr. Rumsford and I have discussed the situation, and I can tell you one thing—he’ll have to tell you the rest.”

Meaning you know one thing to tell me, I thought.

“Mr. Rumsford has been less than candid with you because he is afraid that his quest to obtain his doctorate will be side-tracked. Not by you or by the legal system for his involvement with Ms. Witherspoon, mind you; sidetracked by someone who has threatened him with such a thing if he does not keep quiet about what he knows.”

“Who?”

“An Art Finnegan, I understand him to be deputy director of the EcoARC.”

“Hmm. So Art Finnegan is blackmailing Rumsford by threatening to squelch his Ph.D. somehow. OK, now we’re getting somewhere. I take this as a sign of faith on the part of your client, Mr. Parks. Now, let’s go see him and get my other questions answered. After that, maybe he can go home.”

“Just like that? All charges dropped?”

“No, just like that on a recognizance release. After you hear the story, I’ll want to talk to you, alone, one more time about how much of a slap on the wrist you think he deserves. And the state’s attorney will need to be consulted. You’re representing him, Mr. Parks, but you’re also representing justice. Before you object, wait until you hear the story. Oh, and if Kelly’s not completely candid with me, well, I’m getting more than a little impatient with him. It’s now or never, if he wants to deal.”

In the interview room, Kelly Rumsford was sitting with his elbows on the table, his head in his shackled hands. He looked pathetic—I had him just where I wanted him.

“Mr. Rumsford, your lawyer here tells me you’re ready to cooperate. No more lies, no more omissions, nothing but the whole truth and nothing but the truth, right?”

“What’s in it for me?” He looked scared, but he still had a little backbone.

“For one thing, I’ll send you home on a recognizance release, which means you have to agree to appear in court when summoned. That will get those things off your arms and legs and your own clothes back. And Mr. Parks tells me that Finnegan has been blackmailing you with threats about your Ph.D. being screwed up, or something. I can promise that will not happen, absolutely. In fact, that won’t happen even if you’re busy being Bubba’s girlfriend in prison. Finnegan will be a non-factor in your degree, I’ll make sure of it. I have enough connections to make that happen. As for the obstruction charge, that depends on what you have to say and how the State of Arizona feels about it. I represent the State just now, so if you impress me I think Arizona might just be lenient.”

“How can you be sure Finnegan won’t screw up my degree?”

“Because I’m married to a guy with higher education connections in Colorado. He’s a dean at the state university in Durango, and he knows people all over. All he has to do is call your committee chair. Finnegan’s credibility will be zero after that.”

“OK, where should I start?”

“Start with when you were in Boulder, three and a half weeks ago. No, wait. First, when did you first find Melody’s pictures on the internet?”

“About, um...” He stared at the ceiling, apparently counting. “...I guess about two months ago. Toward the end of August.”

“You downloaded some videos the day before you found her body, right?”

“Oh god. Yes, you’re right, I did. I’m sorry I found them, now. I’ve stopped going to that web site since.”

“Were those the first explicit sex videos of her? I’m not asking to embarrass you, Kelly, I’m asking you as a sort of ‘Melody expert.’ This is the one time that your obsession with her might actually be of use.”

“They were, and I was shocked. Um, turned on, I guess, but shocked. Up to that point, all there was of her was, you know, nudie pictures, some more risqué than others, and a few strip-tease videos. Those last ones I ran across on that Sunday were something completely new for her.”

“Did she mention them at all during your trip back from Durango?”

“Uh...” He looked at Donald Parks in desperation, but Parks was engrossed in an examination of a hangnail.

“Kelly! You heard me say that I have a witness putting her in your car on Saturday afternoon, thirty-six hours before you found her body. She told the witness she was riding with you back to Oracle. I’m not going to ask you if you got her here alive, because he wouldn’t let you answer anyway. But she was in your car, alive, for a while at least. I need to know what you talked about.”

“OK, OK. No. She didn’t mention them at all. I didn’t want her to know that I’d found the pictures of her, so we didn’t talk about anything like that. She did say, though, that she was glad I was able to give her a ride, because she and Dr. Finnegan had some kind of fight...say! I never thought of this. But she said something about how he forced her to compromise her principles. I thought it had to do with publishing, the old argument about who should be first author or something like that, because we were talking about research and so on. That’s mostly what we talked about, research. And it was great! We actually had something in common, even though I’m tropical and she was high-plains.”

What a relief it was to see something real. Maybe he had a crush, an obsessive crush, on her, but he also had more, something in common with her as a person.

“And, I have to tell you. I got her here alive, I mean to Oracle. It was about three in the morning, Sunday morning. I dropped her off at her place. She was asleep for the last couple of hours, but she was alive at three when I watched her unlock and walk in her front door. Those ten hours with her were about the best of my life. Even when she was asleep. She looked so peaceful. And then Monday morning was the worst.”

I don’t know what it was, but something made me turn to the mirror and gesture to the guys behind it to come in and take off his shackles.

\* \* \*

Sandra Kinney wasn’t back from changing into street clothes when I was finished with Rumsford and his lawyer, so I pattered around by assembling the paperwork for an arrest warrant for Art Finnegan on obstruction charges. I was going to try to get Rumsford’s charges dropped, or at least reduced to being an idiot, and I needed to arrest someone for obstructing justice, because it sure was being obstructed. It might as well be Finnegan, I thought.

Sandra finally showed up at about 3:30, dressed in cuffed slacks and an Oxford button-down shirt with a blazer, carrying a small day-pack slung over one shoulder. Very preppy. It also made her look way younger than she looked in uniform—the post-doc-wannabe cover suited her just fine.

We borrowed an unmarked car from the State Patrol office and headed up the road toward Oracle, turning off to the north toward EcoARC before getting to town. At the gate, the guard seemed more

suspicious than ever, but he checked his list and let us in. I had to explain about bringing Sandra, and invoking Bill's name worked wonders. We got there a little after four.

Bill was in his office, working on a spreadsheet on his computer. There were graphs, and I recognized the data that Hal had shown me.

"Bill, do you remember Officer Sandra Kinney? She was at our meeting here a couple of weeks back, in uniform. We thought it would be better if she blended in here at EcoARC this time."

"Glad to see you again, Sandra. And blend in you will, at least for someone new here. You look like a post-doc candidate on a job interview. You'll find, though, that the people who work here, ah, dress down from your level somewhat." Bill's unconscious compliment about our subterfuge made Sandra beam.

"So it looks like you've got Art's data there." I pointed toward his monitor.

"Yeah, and I took your hint about the spreadsheet approach, so it's not very sophisticated. But the graphs sure do what you said. And I've found out that what goes to zero there, and there and there," he was gesturing at the screen, "is the oxygen content of the ambient air in Art's lab. It's a sealed room, so that cycling is some kind of natural thing with the tanks and so on."

"Here," he pointed at another place where the line dropped to zero, but this time it rose quite abruptly afterward, "here is a place where something else happened, probably someone opened the door. See, the oxygen jumps back, but the other gases respond, too. This is most likely dilution by the air outside the lab."

"So what's happening in there, anyway?"

"There are cycles associated with the plankton in the tanks. I expect that there are lights on some kind of timer to simulate the daily solar cycle, and when the lights are on, the plankton photosynthesize, making oxygen. When the lights go off, other things take over. Something oxidizes, which gobbles up the oxygen. Also, the plankton respire, using oxygen in the water and releasing carbon dioxide, just like we do in the air. You can see here that the CO<sub>2</sub> in the air rises somewhat when the oxygen is depleted. I haven't figured out what all of these other numbers are, though. Probably some of them are measurements in the water, dissolved trace gases and other nutrients."

"It looks as if this period of zero oxygen is several hours, at least if the total cycle is a day. I mean, there's a quarter of the cycle or so with no oxygen. That could be six hours, no?"

"Yep, and that's probably a good interpretation. If you look at the data," he clicked the mouse on the spreadsheet itself and moved everything to the right, "you can see the first column has numbers that look like times. And this period of zero oxygen, which is really just a very, very low value, maybe in the noise of the instruments, covers what looks like six hours."

"So, if someone were in there for that time, they'd suffocate, right? Six hours of no oxygen. Are there any toxic gases in there?"

"What are you saying, Annette? No, there aren't any toxic gases that I can tell. I'd know because my permission is required when we do anything remotely toxic around here. But what are you saying?"

"It's looking like Melody Witherspoon arrived in Oracle perfectly healthy at three in the morning on the Sunday before Kelly Rumsford found her body. Twenty-four hours later, her code was used to activate one of the greenhouse entrance locks. In the meantime, she died, and the autopsy results indicate non-traumatic suffocation. She wasn't strangled, she wasn't bonked on the head, she wasn't poisoned with carbon monoxide or anything. She suffocated, died from lack of oxygen. Furthermore,

according to the medical examiner, for her to have died on Sunday, her body needed to have been in a warm, damp environment the whole time.”

“You think she died in this lab? How could that have happened? Is that why you were asking about Art before?” He began to look a little frantic.

“I’m working on things circumstantial just now, Bill, so don’t get too excited. There’s no hard evidence, just circumstance. This oxygen thing is another circumstance in a long list. And even if Melody did suffocate in Art’s lab, it could have been an accident. But having a close look at that lab seems in order, and Art’s office might be worth looking at, too, because of that connection I mentioned on the phone.”

Although the office was closer, we decided to start with the lab. The walk over there took us out of the administration building across the carefully landscaped campus, and into an airlock protecting the greenhouses from the outside air—or maybe the outside world from what was inside the greenhouses, if you believed some people.

This was my third time under the glass, and even so, it was amazing to me. Sandra had been on the tour conducted at the meeting about the Alvarez death, but she was also filled with wonder. Bill, however, was all business, taking shortcuts that got Sandra and me completely lost. Eventually, in what must have been the second basement, we came to a hallway with several large doors, doors of the type used on submarines, with large wheels on the outside to seal the things shut. On the wall outside of the one Bill walked up to was a computer monitor, showing graphs not unlike the one he had made using his spreadsheet program.

“This doesn’t show anything unusual, see? It’s very much like those cycles you saw over in my office. Maybe we can get the data for the dates around when Melody died. That would tell us if the hatch was opened at critical times.”

He began to crank the wheel counter-clockwise, and, from movies, I could picture large bolts sliding out of the inside of the door frame. “Sorry, Art, wherever you are, but your experiment’s toast, for now at least.”

The wheel stopped turning, and Bill flipped a latch. The big door eased open with a little sigh, and we got hit with a puff of damp, musty air.

“All the labs are under slightly positive pressure, to ensure that leaks are outward rather than inward. That way, it’s easier to monitor and isolate the experiments in these relatively small rooms. But with this thing open, there will be a complete exchange of air between the basement here and the lab.” He pulled the door open on its well-oiled hinges and stepped over the sill into the windowless room. Sandra and I followed.

It was strangely lit, with banks of fluorescent lights suspended over glass tanks. The colors made us all look deathly ill, and the air exchange was still in progress, because the musty smell was nearly overwhelming.

“These lights are what Art uses to simulate sunlight for the plankton. It must still be the daytime cycle. And you can see how everything is instrumented.”

Indeed, there were gadgets hooked by wires everywhere. In fact, it seemed as if wire management, routing them without tangling them, eliminating trip hazards, keeping them labeled, was as big a job as keeping the aquaria themselves in good shape. The wire routing problem was compounded by what looked like miles of plastic tubing. Each aquarium had its little bubbler, with the multitude of tubes running to a big pump on a platform up by the ceiling in the middle of the room.

“Now, Annette, if Melody was in here when she died, someone had to lock her in here, either purposefully or accidentally. Or, I guess, she could have locked herself in. But there are all sorts of safety systems.” He pointed at the big door. “See? There’s a wheel in here, it was turning in here when I was turning it out there, and identical latches. There’s an intercom, there on the wall over there. There’s a panic button.” He pointed at a big red doorbell button on the far wall by the intercom.

“I just don’t see how she, or anyone, could suffocate in here.” He stepped over the sill into the hall and gave the inside wheel a little twist, in the direction of the big red “open” arrow, which was clockwise on this side. The wheel spun freely.

“Huh? That’s odd. It should be all the way open already.” He stepped back into the room, walked over to the far wall, and took the cover off the intercom box. “Hello. Come look. This thing is completely disconnected. Something very strange is going on here.”

Then he hit the panic button, but nothing happened.

“There ought to be lots of noise outside.” He shrugged and looked worried. “It sure looks as if someone’s sabotaged all the safety systems. We’d better go look into this.”

But that was easier said than done, for behind us we heard a whoosh and a heavy thunk, and the door shut with an ominous click, making us all jump about a foot. We could only watch as the big bolts eased back into the door frame, sealing us inside. And then the lights went out.

\* \* \*

## Nineteen

“Well, that’s a helluva note.” Bill Longwell managed to keep the panic out of his voice.

I’d shut my eyes when the lights went out and expected complete darkness when I opened them. We were in a hermetically sealed, windowless room.

But instead I was greeted by an eerie, greenish glow. It appeared to come from the aquaria, and, given how many of them there were, the glow suffused the room with a hint of light, enough to see two silhouettes in the gloom.

Sandra noticed it, too. “It’s not dark. I thought it would be dark.” She wasn’t as successful as Bill at keeping her panic suppressed.

“Bioluminescence. Critters in tanks are glowing. It’s something you see in the real ocean, in boat wakes at night sometimes.” Bill’s mind was clearly elsewhere, however.

“Annette? Did I hear you two talking about no oxygen after the lights go off? Are we going to suffocate?” Sandra’s panic was closer to the surface than before.

“Not for a while, Sandra, so don’t get too freaked out yet, OK? On those graphs, it took two or three hours for the oxygen to go away, so we’ve got time to do something.” I surprised myself by how calm I felt. “Bill? It seems like there would be normal room\_lights in here. Not everyone who uses these laboratories would have grow-lights and aquaria, no?”

“Right. There’s a switch over by the door, I expect. If I can find it in this gloom. Without tripping over anything.” I heard Bill’s feet shuffling, and his silhouette moved toward the door.

“No worries, mate.” I used my best Australian accent, probably lousy under the circumstances. “Besides, you’re the Navy SEAL, right? Hell, this should be a snap for you.”

“Absolutely. I’ll just whip out my rocket launcher and blow a hole in the wall. Oh, wait. I left it in my office.” His shuffling was making progress, but slowly.

Fumbling in my bag, I pulled out my keychain, which had one of those little diode lights on it. Very helpful for finding where to put the car key in the dark without scratching the car door, and, I hoped, very helpful in finding things when locked in hermetically sealed laboratories two stories underground.

I pointed it toward the door and pressed the button, and the room lit up enough to make us squint.

“This probably won’t last very long, but it sure helps now, doesn’t it? Got any sunglasses?” I could see Bill making a beeline for a light switch, and the fluorescent lights on the ceiling blinked on.

He turned around and smiled at us. “That improves things. Now. Annette, you’re right about our having some time, but if you remember the graphs, the oxygen declines to zero smoothly over the next two or three hours. If it’s two hours, then after an hour it’ll be half gone, after a half hour it’ll be a quarter gone. A quarter gone relative to where we’re starting here, about thirty-five hundred feet, is like being on an eleven-thousand foot mountain, or something like that. Air’s thin, but it’s the lack of oxygen that makes you breathe hard. So we’ll be a lot better off if we fix this little problem as soon as we can.”

“I was thinking the same thing. So, what zaps the oxygen, anyway?”

“I’ve got to assume it’s something in the tanks. They’re continually aerated with the bubblers, so the room air gets depleted of oxygen as it cycles through the tanks.” Bill scratched his head.

“Sounds like we should turn off the pump, then. No bubblers, no aeration, no chance for what’s in there to gobble up our precious oxygen, right?” I’m not a scientist, but I bet I could play one on TV, I thought.

Sandra had wandered off behind the racks of tanks, and her voice now filtered over the noise of the pump in question. “Annette? There’s a ladder over here. And a toolbox.”

I looked at Bill Longwell and shook my head. “Man. I’ll tell ya. Used to be you could count on killers to do a good job. But ya just can’t find good help anywhere.”

Sandra appeared from behind a rack of tanks carrying a step ladder, and she stared at me in surprise. Bill Longwell was also looking question marks my way.

“Hey, if it’s a toolbox with tools in it, the worst case is that we can take this door apart. Even better, maybe we can fix it. Don’t you think?” I shrugged. “First thing, though, is to get this pump unplugged. No, no let’s wait a minute and think about this.”

“Are you crazy?” Bill clearly thought I was.

“Let’s take just a minute, we can afford it. Whoever locked us in here must intend to come back and get us, right? And he’ll see the monitor in the hall, right? If we unplug the pump, the normal cycle of the gases in here will change, and he’ll know we did something, and when he opens the door, he’ll be on the alert. On the other hand, if we find the timer and turn the grow lights back on, the oxygen levels will stay up so we can breathe while we fix the door, or whatever, and then we can turn off the lights and get out of here. The monitor will look normal, the culprit will come back to fetch our bodies, and we can grab him. Right?”

“Uh, I guess...” Bill looked uncertain, and Sandra didn’t say anything.

“The timing of everything will be a little off, on the monitor, but we opened the door already, and we have to open it again to get out. He’ll know about the first time and just assume that’s what’s got

things off a little. Where do you suppose the light timer is?" I began wandering the room, looking for outlets with a timer, and I noticed that Sandra was, too. Bill, with nothing else to do, set about examining the door.

After about a minute, Sandra found the timer, which turned out to be a heavy-duty version of those things that people use to turn their Christmas lights on automatically. We moved its clock setting back an hour, which turned the grow lights back on and would keep them on for another fifty minutes or so.

Bill, meanwhile, had the toolbox open and was fumbling with the big wheel on the inside of the door. He asked to use my little diode light to see better, and Sandra and I left him to it. A light went on in my head, and I thought of something else we could be doing in the meantime.

"Sandra, let's assume that Melody Witherspoon was locked in here, like we are. Maybe the lights went out and spooked her like it did us, or maybe she was shoved in here when the lights were out and oxygen was already depleted. In either case, she must have grabbed her captor and scratched his arm, or something."

"OK, so she was locked in here and suffocated?"

"Right. But it wouldn't be instant, she would have had some time. What would she do? Wouldn't she try to leave a message, or try to escape or something like that?"

"You're saying there should be some evidence of her somewhere. We need to get a forensic examiner in here, then."

"And maybe, just maybe, we can find something now."

So while Bill fumbled with the door, making encouraging noises all the while, Sandra and I examined the walls and the tanks carefully for any signs of Melody's presence.

"Annette? If Melody were locked in here in the dark, she'd have the green glow, that biolum- whatever from the tanks, right? Or maybe she would have even found the switch."

"Hmm. Right. And any message would likely depend on whether she found the light switch. With just the green glow, it would be a lot harder to do anything, even if her eyes adapted completely. I don't think ours quite did."

"And even if the oxygen were depleted, when the door got opened for her to be put in here, there would be some additional oxygen let in. So she'd have at least a little time."

"But she wouldn't know how much time, and in the dark, she'd want to do something fast." I was taking cues from Sandra's reasoning, and she from mine. It was a wonderful example of being on the same wavelength.

"So." Sandra had walked to the door, where Bill was mumbling under his breath. "She could most likely either try to scratch something here on the wall, maybe in this soft plaster, where there's nothing to be seen, or she'd walk toward the nearest glow, the nearest tanks."

Sandra walked over to the rack of tanks nearest the door and began misting them with her breath by blowing on them gently from an inch or two away. On the third one, she found what she was looking for.

"Look! A hand print, and 'MW'." She misted the tank again, a little lower. "Amazing! Here's something that says 'AF did it'." She looked up in triumph.

There was a click and a sigh of air from the direction of the door.

"Ladies, shall we?" Bill Longwell also looked triumphant as he shoved the door open with his foot.

\* \* \*

“You’re right, Annette. It’s a sad day when murderers are so incompetent that we could escape so easily.” Bill was shaking his head in mock despair.

“It’s weird. Whoever did this—and I think we all have a suspect in mind—whoever did this went to the trouble of disabling the intercom and the panic button, and he disconnected the wheel inside the door. But he must have assumed the person, or people, he would be locking in there would be disabled as well. To leave the tools in there—that’s just plain stupid. Not that I’m complaining, you understand.” I was trying to size up the situation for next steps while I ranted. “By the way, how did you fix the door?”

“Thanks to our suspect’s stupidity, mostly. He’d removed three set screws, big machine screws that go through a collar on the wheel. They screw into threaded holes in the shaft that goes through the door to the other wheel which turns the gears that drive the bolts. The three set screws were in the tool box, so I put ’em back in, after I figured the whole thing out. So, now what?” Bill looked ready for anything.

“I’ve been thinking about that. When AF, whoever that may be, wink, wink, locked Melody in there, he came back using her ID card at about three in the morning to move her body. I’m not sure that he’ll wait that long this time, but he’ll probably wait for a couple of hours. I’d like to be waiting and catch him red-handed trying to find our bodies.” I looked at my watch. “It’s getting close to six now, so I sure hope he comes back before three. That’s nine hours away.”

“Annette? What are we going to do about food?” Sandra, young and healthy, was apparently used to regular meals.

I turned and looked the question at Bill Longwell.

“There are vending machines, and of course our restaurant is open for another couple of hours. But you probably don’t want us to be seen.”

“Right. Not by anybody. But if we can’t go get food, maybe it can come to us.” I pulled out my cell phone, but it didn’t have a signal.

“Won’t work, Annette. We’re too far underground with too much steel around us. We could go upstairs, I guess ... but there are land-line phones around. I think there’s one down the hall on the left.” He pointed over his right shoulder.

“OK. What kind of pizza do you guys like?” I took orders and walked off to find the phone.

An hour and a half later, we were in an empty laboratory just down the hall from Finnegan’s lab, eating pizza and telling a wide-eyed Kelly Rumsford about our little adventure. I’d called him on the theory that he would be willing to do just about anything to get in my good graces and keep quiet about it, and also that he deserved to hear firsthand what had happened to Melody. He brought four large pizzas with various toppings, a variety of drinks, and what seemed to be a huge amount of other junk food. The pizza would get cold, if we had a long wait ahead of us, but Kelly said he knew about a bootleg microwave oven up in the first basement. Officially, food and associated equipment wasn’t allowed inside the greenhouses, but it was an open secret that almost everyone had their ways around the rule. People spent so much time working under the glass that food was a necessity.

We ate two of the pizzas while we set up for a stakeout. I tried to send Kelly home, but he said he was staying, no matter what, so I gave in. He and Sandra went down the hall with the remaining pizzas, to another empty lab, and Bill and I stayed put, leaving our door open just slightly. The lights from the

hall gave us just enough light to feel comfortable. Between Sandra and me, we had Finnegan's lab flanked on both sides with law officers, and all there was to do was wait.

Bill and I talked in whispers about Hal's sabbatical opportunity, and it turned out to be a big help to me. After I explained my dilemma of wanting to go to Fraser with Hal but also wanting to continue my career, Bill immediately cut to the chase.

"Why don't you just ask your boss, that guy Andersen you mentioned, ask him how you can be of service up in Fraser? Tell him what's going on, what you want to do, and ask him what's available there. I mean, it never hurts to ask."

We also talked about his future, and I mentioned that someone would need to replace Hal at FSU. That got him interested enough to ask questions about the school and Durango, and I wound up playing informal recruiter for a while there.

And I finally came to understand what Hal had meant about the ants in the greenhouses. At first, there didn't seem to be any, but after a couple of hours I noticed that the nearly-empty pizza boxes appeared to have changed color. My little diode flashlight showed me that they were now the color of ants, a sort of off-black. An orderly brigade of the creatures were marching in lines to and from the boxes, carrying off crumbs. I started paying more attention to my arms and legs, brushing them off every few minutes.

About ten, we heard footsteps in the hallway, two people not trying to be quiet, carrying on a conversation. Bill and I crept over to the cracked-open door to peek into the hall, and before too long I watched Art Finnegan and another guy walk by in the direction of Finnegan's lab. After they passed, Bill whispered in my ear that the other guy was one of the two goons who had attacked him, the one whose jaw got crunched by Bill's fist.

That explained why half of the overheard conversation consisted mostly of grunts and mumbles. His jaw must have been wired shut.

They passed our door, and we heard noises from the hall suggesting they were opening another of the lab doors, probably Finnegan's. I risked opening our door a little wider and was able to see them at work—soon they had pulled the other door open and entered Finnegan's lab.

As I started down the hall, I felt Bill grab me by the arm. He had a finger to his lips as he slipped past me and quickly closed the door to Finnegan's lab, locking him and his accomplice inside—just as Finnegan had locked us in.

Sandra and Kelly were nowhere to be seen. I walked down the hall to where they'd hidden themselves. There was no noise at all, so I peeked in. They were asleep, Sandra with her head on Kelly's shoulder, sitting on the floor, leaning against the wall. An alarming number of ants was investigating them.

Rather than embarrass them, I found another open door and slammed it as hard as I could. Seconds later, they emerged from their hiding place, looking confused and still half asleep, but hopping around, frantically brushing insects off themselves.

But they woke up when Bill told them what he'd done.

"I figure we can leave them in there for a few minutes, until the oxygen level gets down to, say, half of normal. Like being at twenty thousand feet or so."

He gestured to the monitor, which showed an oxygen spike associated with the door's having been opened. The spike was beginning to drop as the minutes passed.

“That’ll give them a taste of what they were dishing out. We can always go in and get them before they’re in any real danger. Or not.” His smile was icy.

“But, Bill, you fixed the door. Why aren’t they opening it?” Sandra had waked up enough to figure this one out.

He reached into his pants pocket and he held out his hand, with three rugged little machine screws in it.

“I un-fixed it, too.”

\* \* \*

“They were unconscious when we opened that lab back up, but by then we had an oxygen bottle on hand to revive them. Sandra had come well-equipped, with her sidearm and three sets of handcuffs in her day-pack. Some post-doc! We cuffed them, revived them, and Sandra read ’em their rights. And, just by happen-chance, so to speak, in the process of reviving them, we discovered four parallel, almost-healed scratch marks on Art Finnegan’s left arm. DNA testing is under way.”

It was Tuesday evening, and Hal and I were cooking dinner while I told him the story. I’d be returning to Arizona at least once more to testify, but mostly I was finished down there. One of the many things I’d accomplished earlier in the day was to return my Arizona credentials, the shield and paperwork. It felt liberating.

“Uh,” Hal was working on a braising sauce for chicken breasts. “If I understood you, you just said that you’re alive because of Art Finnegan’s incompetence. If he was better at killing people, you’d be dead. And you wonder why I worry about you. Geez!”

“I know. I’m sorry. But just because Finnegan killed Melody that way didn’t mean he could get me, especially because I was there with Bill Longwell, and Sandra Kinney, too. At worst, if we hadn’t been able to open that door, we would have been stuck there for a while. We figured out how to prevent the oxygen depletion right away. In fact, I’m surprised that Melody didn’t.”

“Did you figure out who the other guys is, the one with the wired jaw?”

“It took all morning, but, yeah, we identified him. He’s employed by IMSS, as I suspected, and he seems to be their muscle, along with the guy whose knee Bill broke last week. This cements the connection between Art and Tory Dowd, as far as I’m concerned. Which reminds me, did you and Tim Langer make any progress on your, ah, your little project?”

His worried look morphed into a little smirk. “I thought you didn’t want to hear about it. I mean, gee, you might have to arrest me for something.”

“Right, right. But I’m off duty now, and, frankly, I have to say that the Colorado Bureau of Investigation has many, many other cases that are way more important than what inconveniences the IMSS web site may experience. Why, just today, when I picked up my car at the airport, I saw several cars parked on top of the yellow lines in the parking lot. I’ve got to get out there with my ticket book before I can possibly do anything about poor, beset-upon IMSS. Assuming that they’re really beset upon.”

“Go check it out. I got that old computer from Tim and set it up in the den, with the little monitor. See what you find at [real-hot-babes.com](http://real-hot-babes.com). This has to simmer for at least a half hour.”

Upstairs, I typed [www.real-hot-babes.com](http://www.real-hot-babes.com) into the old computer’s web browser and was quickly rewarded, if that’s the word, with the by-now familiar front page of the IMSS porn site. At least it was familiar at first glance, but then I noticed something different. A little box that had previously said

something like “All the hottest girls! All the newest pictures!” now said “Haven’t you got anything better to do? More naked women. Big deal.”

I slid the mouse across the screen, aiming for the link that would take me to where Melody’s videos were. But before I reached the link, a pop-up window appeared. It contained an animated cartoon picture of a carnival barker—somehow it reminded me of Tory Dowd—whose pants kept falling down, revealing his miniscule private parts. Just as his pants hit the floor, a dialog balloon appeared that said “Uncle Wiggly says: If this is how you get your girls, you are sure one pathetic loser!”

I moved the mouse to close that pop-up window, and as soon as I closed it, another one appeared, with the same animation but a different dialog. This one said: “Uncle Wiggly says: Don’t get your mouse sticky! Whatever you’re holding in your hand, drop it right now and go wash! ”

These pop-up windows appeared whenever I closed the previous one or whenever I clicked back on the main page and slid the mouse toward one of its links. I was stuck, at least as far as I was concerned. I could see how anyone who was cruising the web for porn, free or not, would get frustrated and go somewhere else.

And I was also getting an encyclopedia worth of quotes from Uncle Wiggly, some amusing, some clever, some just stupid. All-in-all he was becoming quite tiresome.

But even so, I was laughing my head off.

The novelty wore off after about five minutes, and I went back downstairs to see how dinner was coming.

“So it looks as if you set IMSS up so that no one can get past its main page.”

“More or less. It can be done, but if you manage to get past the main page, you get more of the same. Each page is set up to act like a video game—Tim told me he actually used video game software techniques—that dares you to get to the next level. And those pop-up quote are randomized, as is the software that controls them. What I mean is, the files that generate the pop-ups and so on have names generated randomly, names that change each time the program is accessed. And they’re stashed away in a very obscure sub-directory somewhere on the IMSS server, so they’re very hard to find. *And* their dates, the ‘last modified’ thing, are also randomized, to dates and times over the past year.”

“Turn-about is fair play, huh?” I was munching on a carrot that I’d swiped from the salad he was preparing.

“Yep, only what Tim did to them is far, far more sophisticated and entrenched than what their software did to me. For one thing, the IMSS server is a Linux system, the kind of system that Tim specializes in. When he found out he’d be hacking a Linux system, he actually got the giggles, like a mad scientist.”

“I guess I read somewhere that only Windows computers can get viruses.” This time it was a stalk of celery.

“Most viruses attack Windows systems because that’s what most of the computers out there to be attacked are. But Tim didn’t really do a virus. He hacked himself an administrative login on the IMSS computer and just programmed it. He says that they’re not going to be able to do anything except start over. And there’s something else that you probably *really* don’t want to hear.”

“Well, thanks for teasing me about it. Now you’ve got to tell me.”

“OK, but don’t say I didn’t warn you. One thing that Tim installed on their computer is a seek and destroy program that finds all pictures and videos on their system and corrupts them, writes random bits so that they can’t be read. So even if someone did manage to get to the part of the IMSS site that has the

dirty pictures, they couldn't see them, they wouldn't load properly. And he also disabled the software that takes credit card numbers, so everything on the site is free—free, unreadable pictures.”

“And you and Tim did this? Oh, you bad, bad person. Momma spank.”

“Gee, that sounds like it could be fun. Maybe later? But, see, the thing is, when an IMSS systems person tries to track this all down, he'll discover that all the damage was done by a user named ‘dowd-underscore-t’. So Tim and I can't really take credit.”

\* \* \*

After dinner, I remembered it was Halloween; or, rather, I was reminded of it by the big bowl of bite-sized candy bars in the front hall. Hal's weird leather Mardi Gras mask, the one he got in New Orleans when he was there at a conference, was sitting there, too. He puts it on when the doorbell rings and makes a fool of himself for the kids extorting candy from us.

It had turned chilly, a mid-autumn cold snap with the feel of winter about it, so Hal lit a fire in the living room fireplace, and we sat and watched it while we waited for trick-or-treaters. And, because we knew we'd have way too much candy for those who show up—we always seem to—we had mini-Mounds bars for dessert.

“Bill Longwell called me today.” Hal was unwrapping candy bar number two. “He said that the EcoARC board has decided to phase out the student and post-doc programs, and they're going to move away from the basic research they've supported.”

“I heard a rumor about that. Yesterday morning. Wow. A lot's happened since then.” I was trying to nibble, a technique that keeps me from eating too many of those little things.

“Anyway, he's looking for a job. And he says he's fallen in love with the southwest. Said you mentioned FSU as a possibility.” He was maintaining a completely neutral expression, so I couldn't tell if my conversation with Bill was a good thing or not.

“We had a couple of hours of conversation to make while we waited for Art Finnegan to show up. So we talked about a lot of things. And I remembered you'd mentioned him as a replacement for you, so ...”

“Oh, I'm not upset, don't worry. I don't know how much leverage I'll have in naming my replacement, though. But I think he'd be a great choice, a great addition to the faculty at the U.”

“Surely you could recommend him.”

“Oh, sure. I can serve as a reference, a really strong one, if he applies for the position, or I could recommend him out of the gate when I tell John Martin I'm stepping down.” He frowned, so I snuggled.

“I guess the thing is, I've been thinking about this and talking about it for a long time. I've known that Alice would retire, and that always seemed like the time for me to make a change. But now she is, and if I'm going to do something, it's time to fish or cut bait. If I'm going on sabbatical next semester, in January, I need to tell John tomorrow. Gulp.”

“Did you talk with Chuck Shure again?”

“I've spent most of the past two days on the phone talking with all sorts of people. Chuck, people at NCAR and at the university in Boulder, people at the CCHE. Yesterday, Chuck and I even talked money and term of appointment as director of this new institute and everything. I would have told you all about it, but I didn't hear from you last night because you were too busy chasing bad guys.” He poked me gently in the ribs.

Before I could say anything, the doorbell rang, and Hal got up to put his mask on and play boogey man and give away candy. From his greeting, I decided it must have been a group of grade-school kids, old enough to be by themselves, but young enough that he didn't come on too strong and send them screaming down the sidewalk. That mask is something, I'll tell you.

"Anyway," He came back into the living room with the mask still on, and I burst into laughter. "Huh? Oh, yeah." And he took it off and sat down beside me again.

"Anyway, what needs to happen is that we need to decide what to do. Both of us, not just me."

"If you're asking my opinion, what I think is that we should start looking for a place to live in the Fraser Valley, the sooner the better. And I'm going to get some new skis." I tried not to look defiant and went for serene instead.

He smiled. "Um-hmm. That's all well and good, but without a second income our lifestyle is going to take a hit. Even with the big raise Chuck's giving me. I mean, what kind of allowance are you going to want?"

"Ha, Mr. Smarty-pants. What you don't know is that one of the things I did today, on the way to the airport, was to have a long talk with my boss. I may just surprise you and not need an allowance. So there!" Now it was my turn to poke him in the ribs.

"You mean to say you've got a job? Up there? Well, hell. What am I going to do for a receptionist now? An institute like this one is going to need a real babe for a receptionist. I figured you could wear that little black number...Ouch!" And he burst into laughter despite the hard poke. "OK, OK, seriously, what did you talk with Rod about?"

"One of the things that Bill and I talked about was how I should handle this. And he suggested I call Rod and just lay it out, as in 'I'm moving there and what do you have for me?' That's not exactly how I put it, but that was the gist. I guess I played a little on my status as the only female CBI district director and as something of a rising star. And I let Rod know that Derek Peterson is completely ready to take over the Durango office. Also, I hinted that my experience with the CBI so far has been beyond the call. I mean, in my three big cases, I've been shot at, blown up, and locked in an airless room, to use just a little hyperbole. That's more than anyone expects. Also, I told him that I have an offer from the Arizona Department of Public Safety."

"Truth?"

"Yep. An informal offer, but I think it would stick. Ross Townsend offered my temporary position on a permanent basis, if I should want to move to a warmer climate. He emphasized the warmer part, and tonight is making me understand what he meant." I snuggled again.

"So what did Rod say?"

"It turns out that that part of Grand County is growing like crazy, and the infrastructure there is really, really stressed. Law enforcement, in particular, is struggling to keep up with the growth and the increasing sophistication of the crime—they're just overwhelmed. He's been trying to figure out how to help out by getting them some consulting help."

"A match made in heaven, then. And it's interesting. I got the same story from the Colorado Commission on Higher Education. They need someone to scope out the situation and work with the people there to make recommendations. In the future, there will be some kind of higher education up there, it's just a matter of what kind of institution and who runs it."

"So you're going to consult for them, or what?"

"I'll work for them part-time and, officially, consult for Chuck, at first, at least."

“All right! It sounds like we have a decision. We’re moving to Fraser! Uh, when?”

“January, I guess. Packed yet?”

“Almost. But you’ve got to promise me one thing.”

“What’s that?”

“Make sure your new institute has occasions when I can wear that black dress. I like the way you look at me in it.”

And this time, the poke was more of a caress.

A^Four Corners Mystery

# Frozen Stiff: A [Different] Four Corners Mystery

## Prologue

When the pain of the biting cold faded and sleepiness began to wash over her, she realized, somewhere deep in the recesses of her mind, that she was in serious trouble. But it was such a relief not to hurt any more that she ignored the alarm bells in her head.

Ever since she had regained consciousness with a headache that could have dropped a polar bear, the cold had been overwhelming, seeping into her very soul. She had spent an eternity shivering, but it didn't have its intended effect—rather than warming her up, it only sapped her strength faster. And even though she was walking as briskly as the conditions would allow, she just got colder and colder.

If only she had listened to that nice guy she'd met down in Santa Fe yesterday. He had warned her that the weather up here in the mountains could change with surprising speed, and did it ever. Last night had been barely tolerable for her, curled up in a ball under the low boughs of a fir tree. She had long since grown tired of the granola bars, but they had enough calories to keep her going, while they lasted. Then this morning, what had started as a nice fall day—chilly, but sunny and warming up—had suddenly turned vicious, with wind, a cold rain changing to snow, and finally these blizzard conditions.

She knew she was too far from anywhere and too deep in the canyon to get a cell phone signal, probably, even if her battery wasn't dead, even if she hadn't dropped the thing somewhere, maybe when she had stopped by that big rock to rest.

And then ... what had happened? She was walking up the little side valley, thinking about her dilemma again, resolving to put a stop to the madness somehow, to prevent the slaughter, and ... then what?

All she could remember was waking up cold, and with the unbelievable headache. It made her usual migraines seem tame, even benign.

It didn't help at all that these mountains were so confusing. Steep valleys winding here and there, with little side canyons going nowhere. Rocks and cliffs, and cliffs and rocks—that all looked alike. She knew she had to go down before going back up, but how much and when to turn off the trail down the stream was just a mystery.

This side canyon she was in just now certainly wasn't the right one. The cliffs up there behind her weren't something she had encountered before, and there was no way she was going up them anyhow. If only she could find the right trail and get back to the car, she could get warmed up.

Ah, here. The big rock, where she rested before. The one like a toadstool, with a little shelter under its side, the downwind side. Just a little rest, maybe that would help restore enough strength to find a way out of this awful place. As she settled into a hunched-up sitting position in the lee of the big rock, she pulled her windbreaker over her head and stuck her hands into her armpits.

So tired, sleepy.

What would her father do? He was always talking about his hunting trips when he was younger, trips into the Sacramento Mountains in the fall. If you get lost, he said, stay put. Someone will find

you—assuming someone knows that you're missing. But no one knew that she had come up here, except that guy downtown yesterday. Of course, he wouldn't know she hadn't returned last night.

And her father had always talked about what you should carry, even on the shortest hikes. Matches. A space blanket. Rain gear. All that other stuff that she'd neglected to bring as well.

I'm sorry, Daddy, I'm so sorry. I screwed up, I should have listened to you.

He would be frantic, of course. She was supposed to call him tonight, she remembered.

And she also needed to make that other call, as difficult as it would be, she must—the madness *had* to stop. No matter the history of injustice, the collusion with the Zionists, the seductive infidel decadence that was corrupting the faithful. There was simply no way she could let all those people die like that. No way. She had to stop it. Had to.

Just a little rest, she thought, maybe then I can go on, find the car. So sleepy ...

\* \* \*

## One

After it was over, on the road down the mountain in Terry's big Ford Excursion with the heater blasting, the four of them talked about it, finally agreeing that the only reason we were able to find her body that day was the dogs.

Maybe in the spring someone else would have eventually run across her remains, after she had been through the repeated freeze-and-thaw of March and April and served as a snack for a variety of critters and started to smell. But then and there, hidden away by the snow in early December, it was because of the dogs, they figured.

I think we were all jealous of them, Ketchum and Filly, curled up snug against each other, sound asleep in the back—Filly was snoring, and the rest of us would have liked to doze off, too. But we had to keep Terry awake and on the road, hard as it was for him to see with the wind blowing the snow around out there in the gloom. None of us trusted the guard rails, and we all knew how far down it would be if Terry went off the road on one of those deceptively sharp curves.

Also, staying awake was good because they needed to talk about it—so did I, to tell the truth, but I just couldn't, not at that point.

The dogs deserved to sleep, though, having covered at least twice as much ground as the rest of us, and they had done it without the benefit of snowshoes. On the other hand, when they found her, their work was done. It was the rest of us who had to haul her body out.

Ketchum had finally found her, with Filly close behind. She was sitting under the shelter of a mushroom-shaped rock the size of a garden shed, behind a three-foot snow drift. Even though she was nearly frozen stiff, there must have been enough scent floating through the cold, still air for Ketchum to pick her up. We were about five hours into our search of the upper Rio Nambe drainage and slogging up the bed of a side creek, thankful for the lull between surges of wind and snow. Ketchum and Filly were following in our snowshoe tracks, when all of a sudden he let out a small yelp and poked his nose up in the air, snuffing and puffing like a little black steam engine.

“What'cha got, boy, what'cha got?” You could tell Terry was proud that Ketchum had picked up the scent first.

He and Chug competed in just about every way imaginable, even with silly things like whose dog had the better nose, as if they somehow had control over that. But they were best of friends despite it all, and they had even talked about breeding Ketchum and Filly. I can't say for sure about Filly, but Ketchum would have obliged, given his affinity for humping Terry's right leg. And, besides rooting for Ketchum as a guy thing, I think we all had a voyeuristic curiosity about the geometry of the actual consummation. But the size of the pups might have given Filly problems, and there was also the issue of what a cross between a black Lab and a Jack Russell terrier would look like.

With Terry's encouragement, Ketchum bounded off up the creek bed, the untracked snow splashing out from under his belly, and Filly, yapping away, floundered after him. They disappeared around a rock up ahead at a bend in the stream, but we could still hear Filly's excitement so we picked up our pace to see what they had found. Soon it sounded to us like they weren't getting any farther away, and after a while a black face peeked back around the rock to see what was taking us so long. When we finally caught up, they were sitting patiently next to the mushroom-shaped boulder, making snow angels with their tails, a big one for Ketchum beside the tiny one for Filly, waiting for the praise they knew was coming. It was all a game to them, even if they didn't feel the competitive urge that Terry and Chug did.

She was alone in the lee of the big rock, leaning sideways up against it, huddled up with her face on her bare knees, arms folded across her chest, her green windbreaker pulled up over her head, one of the most heartbreaking things I've seen in a long, long time. It looked as if she was asleep, but we all knew that was too much to hope for. She'd been out there for at least 24 hours in blizzard conditions without proper clothing, far too long to have survived.

An old friend once told me that "... there's no such thing as bad weather, just bad clothes." When we saw her sitting there, I thought of that, and it occurred to me that her gravestone should read "Died of Bad Clothes." But I guess people would just confuse that with a fashion statement.

This kind of thing happens around here now and then, and that's one of the reasons for the existence of our Back-country Emergency Rescue Team. Thing is, the weather will surprise you. The locals, both the natives and those of us who have lived here a while, have figured this out, and we're prepared when we go up there. But the tourists, well, they get fooled by the nice weather in town, drive up the ski-hill road in shorts and a light jacket for a day hike, and get blind-sided by a snowstorm. And this year it was especially deceiving, with temperatures in the 70s the first weekend of December.

On Saturday, that is. Sunday, it all changed. The first big storm of the season plunged in from the northwest, dumping two feet of snow above Los Alamos in the Jemez Mountains and about the same amount in the Sangre de Cristos. The folks at the ski areas were ecstatic, of course, and the four inches in town charmed the tourists. The piñon trees, what's left of them, and the juniper on the hillsides, as well as the adobe walls we have around town, they all look just wonderful with a frosting of snow—it's the stuff of calendars and postcards. But up in the Sangres it can be deadly.

So it seemed clear that the woman in the green windbreaker had gone up there Sunday morning for a hike and got caught in the storm. When we found her Monday afternoon, it was too late. She must have taken the side creek when the main trail got snow-covered and the visibility went to hell in the blizzard. To the uninitiated, it might look like the right way, and it *was* in the right direction, at least. But it was really just a little creek bed that eventually petered out at the base of some impassable cliffs. Whether she made it to the cliffs and turned back before stopping at the mushroom rock was something we'd never know.

Anyway, I was listening to Terry and Chug and Steven and Ronny talking about finding her and how clever the dogs were and our long return hike, towing her body on the toboggan. Her body was semi-frozen, kind of like grocery-store chicken, where you can still bend the joints, so we straightened her out, wrapped her in a blanket, and lashed the package onto the toboggan for the hike out. The whole

affair was now on top of Terry's Excursion, and we were headed back into town, to the emergency room at St. Vincent Hospital. They were talking, but I wasn't, because when we uncovered her head while wrapping her up, I recognized her.

\* \* \*

Living in Santa Fe means living with tourists, and this is fine, really, even fun once you get used to it. Part of getting used to it is being a good citizen and helping out when they get lost. And get lost they do, because it's a confusing little town, with streets that arbitrarily change their names, streets that loop around and almost tie themselves in knots, and street numbers that have no particular relationship to what people in the rest of the country think of as "blocks." It's easy to recognize—you see someone wearing a puzzled expression standing on a corner and holding a map, and ten-to-one it's a lost tourist. If the map's upside-down, twenty-to-one.

Saturday morning, I was down on San Francisco Street, the narrow, dark part west of the Plaza, and here was this gorgeous lady—and I mean she was *stunning*—standing across from the corner at Galisteo with an upside-down map, swiveling her head around like an owl. I couldn't really see her expression because of her big dark glasses and floppy hat, but I could still tell she was gorgeous. And, because of the map, lost.

I've had some experience with this kind of situation, and a couple of times I think I made matters worse. For some reason, the lost tourist—each was a single woman—must have thought I was trying to hit on her, and she hurried off in a direction that probably made her even more lost. So I'm careful and use an approach that's polite, to the point, and not at all aggressive.

"Excuse me? I live here, and you look like you might be lost. Maybe I can point you in the right direction?" It helps to put a gentle inflection into the questions, to sound helpful. With her, it worked, or at least it didn't frighten her off down Galisteo, probably not where she needed to go.

"Oh, well ... um, yes ... that is, I hope so. I was supposed to meet some friends for brunch at Café Pasqual's, but I'm having trouble finding it. Thank you for asking. You're so kind."

So Galisteo would have worked after all, a block of it over to Water Street and then east for a block up to Don Gaspar. While these directions popped into my head immediately, it took me a minute to get them downloaded to my mouth. She had taken off her dark glasses, and I was entranced by her sky-blue eyes—and when I say "sky-blue," I mean the Santa Fe sky-blue, which is truly entrancing. I managed to cover my confusion with a coughing fit.

"Excuse me, uh, again. This dry fall air even gets to us locals. Ahem. Your friends picked a dynamite place for brunch, but I hope they got there to stand in line and get a table. Otherwise, you'll be standing with them." And I proceeded with the directions and waved my arms around to illustrate the route. She glanced at her watch and looked down Galisteo.

"May I ask you a personal question? Not too personal, just how long you've lived here?"

I actually hadn't counted for a while, so I did the math in my head. "Twelve years, plus a little. Interesting. I haven't thought of that recently. Seems like a long time, at least compared to some folks. Santa Fe has been growing like crazy for the past few years."

"Maybe you can give me some more advice, then. I was thinking of getting out of town for a few hours, and I've heard there's a ski area somewhere around here."

"Sure is. Santa Fe has its own little ski area just up there." I waved in a generally northeast direction. "North on Washington and right, east, on Artist Road, which becomes Hyde Park Road and

takes you up there. It's about fifteen miles from here. But it's not open for skiing yet. We've had such a warm fall that there's just no snow up there. Same with the other areas, like Taos. Taos is a couple of hours north. They're not open either. Not enough snow. It's been too warm."

Good going, motormouth, I thought to myself. Suave. Maybe I should explain that they're not open. Because there's no snow. Duh.

"I guess they wouldn't be open, if it's been like this. No, I wasn't going to ski, I just wanted to get away, maybe go for a little walk, do some thinking. I thought that at least there would be a good road, you know?"

All this time, her eyes had continued to mesmerize me, and I was thinking how easy it would be to fall head over heels for her.

"Well, there's weather moving in tomorrow, what they're calling the first big storm. So be sure to be careful. The weather can change quickly, and it gets dangerous real fast up there. And the road is good, but it gets challenging when there's snow on it. So my advice would be to go up there today, before the storm."

She smiled, and I felt my heart jump.

"Careful is what I do, so I'll go up today. Maybe after this brunch thing I'm headed to. Thanks for your help." And off she went, down Galisteo toward Water Street.

But she must have changed her mind, because now she was on the top of the Excursion, wrapped in a blanket and, as the air warmed up as we descended the mountain, probably thawing out.

\* \* \*

By the time we arrived at St. Vincent, Steven had a report of our search and day-late rescue typed up on his laptop. He was by far the most experienced in our little group, and he would plug the thing into a printer at the nurses' station when we got to the hospital, print out a hard-copy of it, have us sign it, and we'd be out of there in less than a half hour. He'd been spending most of the drive down the mountain, since about the Nordic ski trail parking area, quizzing us, reviewing facts, and typing madly away.

Everything was reasonably straightforward, except for the original phone call. The issue of who had phoned in the missing person report wasn't our problem, but it was puzzling anyway. We had been rousted out early that morning, rescued from having to go to work, with a report of a missing hiker on the Winsor Trail. Monday morning is a strange time for calls like this—usually they'll come in Saturday or Sunday evening and we wind up spending all night wandering around in the woods, calling out names, scaring the wildlife. Scaring us, too, sometimes. You've got to experience personally the sudden awakening of a randy bull elk in the middle of a moonless fall night to get the full effect.

At the hospital, the dogs woke up, looked around, and yawned. We got out and started fiddling with the toboggan on the top, and they went back to sleep. They didn't have as much experience as Steven, but more than I, and they knew the drill.

We had called ahead, of course. Even here in Northern New Mexico, there are cell towers almost everywhere, so the hospital folks were expecting us. Ronny is a paramedic, but we always make sure that dead folks are declared dead by an MD. Unless, that is, we were just bringing in parts. That happens sometimes, too, when we run across the remains of someone who has been out there for a while, and the critters get to them.

But this time it was a whole body, pretty fresh, actually, so a genuine doc was going to have to do the honors. The other guys all walked into the emergency room behind the orderlies pushing the

gurney—we had transferred the body from the toboggan to it. I stayed behind, using the excuse that I was going to walk the dogs. I just didn't want to look at that poor woman's dead body any more. It seemed like a much better idea to remember her from the Saturday morning encounter.

St. Vincent is on a ridge south of downtown, and it affords an expansive view to the south and west. Lights were beginning to come on down toward the airport, over by the community college, and in the neighborhoods between there and the hospital. Even though it was getting dark, cooling down from the warmth of the early December sun, it was still quite comfortable compared to where we'd been all day. At our highest point, the saddle on Raven's Ridge above the ski area, we had been three-quarters of a mile higher than in town. It was full winter up there. But down in town, the sun had been out all day, apparently, and much of the snow had melted.

As we strolled around, the dogs were having lots of fun sniffing among all the bushes and winter-dressed flower beds surrounding the hospital. Now that they were off duty, they could use their amazing noses to explore, and they were tugging me all over the grounds. And it gave me time to think.

I've done about a half-dozen of these search-and-rescues where we're too late to do a real rescue, and we wind up toting out a body instead of a grateful hiker. It's always depressing, although sometimes our gloom is tempered with anger or black humor. The stupid things that people do, or don't do, that wind up getting them dead is sometimes just too much, and on the way out with the body the jokes fly.

I let the dogs wander to their hearts' content for about twenty minutes and then started working them back toward the parking lot. If the half-hour ritual of printing and signing the report held to schedule, it would be just about time to leave when I got the dogs back in the Excursion. But as I started back, I noticed a Santa Fe Police Department patrol car heading up the drive toward the emergency entrance, fast. He didn't have his lights or siren going, but he was certainly not dawdling. About a minute later, there went another one, followed closely by a New Mexico State Police cruiser. Then there were a couple of unmarked cars, dark-colored, full-sized sedans, official looking. Each one parked in the fire lane, and the driver—in one case there were two passengers as well—got out and quickly went into the hospital. I had a sinking sensation that we might not be getting home for a while.

Back at the Excursion, I was bedding the dogs down when Steven strolled up. He turned his back to the evening breeze and lit a cigarette while I locked up with the key that Terry had given me earlier. Ketchum immediately sprawled on the doggie bed stuffed in there with all our gear behind the back seat and looked to be asleep instantly. It was, after all, his car. Filly, on the other hand, was pacing nervously back and forth across the top of the back seat, displaying remarkable balance. I knew she was high strung, but I think maybe she was also prescient and sensed that something was wrong.

"Just our luck." The cigarette smoke combined with the fog from Steven's breath to make him look like a dragon. "I hope you don't have a big date tonight. I think we may be here a while."

"What, they don't like your report?"

"Oh, my report's fine. It's just that who it's about isn't."

"Huh? Should we know who it is?"

"I didn't, until they told me. And we're not in any kind of trouble—it's just that they want us around to answer questions for a while."

"So, who is it?"

"Elizabeth Davidson." The blank look on my face must have been blanker than usual, because he laughed. "Yeah, that was my reaction, too. How about Elizabeth Prince? Or Elizabeth O'Malley? Either of those names ring a bell?"

“Oh. So she got remarried to some guy named Davidson, huh? Either of the Senators here yet?”

“I hear Saint Mike’s going to fly up from Albuquerque. Bill Prince is probably not going to show, though. Anyway, they want us to hang around in case there are questions, ‘they’ being the Nimbies. The police got here first and claimed jurisdiction, but the Nimbies showed up and took over.”

They would, I thought. The New Mexico Bureau of Investigation—whose agents we all call “Nimbies”—just loves to assert itself over local officials.

“What questions? All we got is a babe-sicle, dead for quite a while before we found her.” We never use such terms as babe-sicle in public, preferring to keep our black humor to ourselves. But with each other, it’s standard operating procedure.

“Yeah, well, the doc in there unwrapped her and recognized her immediately, so he called the cops. And he noticed something we didn’t, a contusion at the base of her skull. He thinks someone may have knocked her unconscious and left her up there to freeze. So we’re looking at something quite different from the usual lost-and-frozen tourist.” He took another deep drag on his cigarette.

“Damn. That sounds like murder. Of the Senator’s daughter, and the other Senator’s ex-wife. Who’s this guy Davidson?”

“Got me. Just be glad we found her and treated her with respect and all that. Saint Mike will look on that favorably. And that sure couldn’t hurt.” Trailing cigarette smoke, he turned and headed back toward the emergency entrance, and I followed.

He was right. Saint Mike’s favorable view of us would be a Good Thing. Michael T. O’Malley, Senior Senator from New Mexico, in his fifth term, over 27 years in the U.S. Senate, was responsible for ensuring, literally, billions of dollars of federal spending in the Land of Enchantment each year. Between the military bases, the national laboratories, and the federal support for research at the universities, his influence in the Senate provided something like half of our impoverished state’s income. That’s why just about everyone called him Saint Mike.

And it was his only daughter that we had unceremoniously carted down the mountain on the top of Terry’s Excursion.

Furthermore, she was the ex-wife of our other Senator, like his colleague a Republican, and, like his colleague, of considerable stature in the Senate. William R. Prince was in his third term, recently re-elected despite the messy divorce. Overcoming this handicap in the heavily Catholic Hispanic voting community had been a major success for Prince, and it was to Saint Mike’s credit that he had endorsed Prince’s reelection despite it all. So the babe-sicle whom I had met in a much warmer state of being on Saturday morning downtown was something of a celebrity in most of our state, if not in the movie-star vacation land of Santa Fe.

And apparently she had been murdered.

Great. Just great. At least I didn’t have a hot date that night. But, damn, I was hoping to see the Broncos and the Raiders on Monday Night Football.

\* \* \*

**Two**

Inside the lobby, the police officers were sulking, probably because the Nimbies had taken charge and were strutting around, puffed up with self-importance. My BERT pals were sitting along the far wall, half asleep, so I went over and joined them. It took about fifteen seconds for a Nimbie to march up to me, a look of official curiosity, stern and authoritative, on his face.

“You are?”

I stood up and found myself looking down at the top of his head. “I’m Sandy Livingston, I’m with these guys. I’ve been outside walking our search-and-rescue dogs. Didn’t want them to mess up Terry’s SUV. Did I hear Steven right about this being a homicide?”

“I can’t comment on that. But it looks like something different from the usual search-and-rescue you guys do. We are going to need statements from each of you, on top of that report. So don’t plan on going anywhere for a while, OK?”

“No, it’s not OK, not even close. We, all of us, have been up in the mountains all day. We put in about ten miles with maybe four thousand vertical feet of elevation gain, a lot of it in blizzard conditions. We found Ms. Davidson, quite dead, and brought her out. We’re the heroes in this thing. And we’re exhausted and starved. You keep us here with this officious horseshit and you’re going to lose the cooperation of the Back-country Emergency Rescue Team. Next time you’ve got a missing person up there, you can goddamn well go up and get her yourself. You need statements, we can come in tomorrow and give them. Got it?” I maintained a completely calm, even sleepy demeanor through this little speech and stared down into his eyes.

Those eyes, a sort of cow-flop brown, I decided, narrowed, and his face got all pinched up. I guess it was because he was thinking, and it caused him pain. But at least he was smart enough to know that he couldn’t alienate us, that the NMBI needed BERT far more than we needed them. I don’t know whether he knew I was the Governor’s nephew, and I didn’t care—that wasn’t a card I wanted to play anyway. But I did know that these NMBI guys were more bark than bite. He finally seemed to make a decision.

“Sorry, I didn’t know the circumstances. Let me give you guys a number to call in the morning, OK? And you can give your statements then.”

“Thank you. And I’m afraid I’m being a little short-tempered. Like I said, we’re exhausted. And starved. Tell you what. We’ll be over at Tiny’s for the next couple of hours, if something important comes up. St. Francis and Cerrillos, OK? Oh, and if you really need to be doing something tonight, you can check out a car we saw up at the bottom of the parking lot at the ski basin. Looked like one of those standard rental cars— maybe it was hers.”

It’s easy to be generous when you win.

He almost smiled. “Got it. Thanks for the tip.”

We all trooped out to the Excursion and headed out to St. Michael’s Drive, which got its name before we got our generous Senator, and turned west toward the big intersection with St. Francis Drive. Santa Fe—the City of Holy Faith—has a surprising number of these religious-sounding streets.

A couple of miles north, at the Cerrillos intersection, Terry pulled into the parking lot. Tiny’s is one of those places that we locals consider our secret—it’s hidden away behind a shopping center and so doesn’t attract much tourist traffic. Most of the out-of-town crowd sticks with the trendy places that sound like they’re named after someone’s Mexican aunt. And Tiny’s has a wider selection of menu items than just the usual chile-covered burritos and enchiladas of the low-end tourist places, but it doesn’t have the froufrou creations, or snooty atmosphere, of the high-end places. It’s just right for a bunch of hungry guys. They knew us, so they weren’t surprised when we asked for a couple of bowls of water, which Terry and Chug took outside for the dogs.

By the time they got back, the two pitchers of beer we ordered had arrived, and I was starting to pour it into glasses. Terry, whose owning the biggest vehicle made him the designated driver, just looked sadly at his iced tea.

“We’ve got some hungry dogs out there, guys. Those snacks we brought for them disappeared faster than this beer’s going to.”

Chug picked up a three-quarters-full pitcher, tilted his head back, and poured it in his mouth, demonstrating how he got his nickname. He had this trick of opening his throat, or something like that, so he didn’t have to slow down to swallow normally. He left just enough in the pitcher to propose a toast.

“Gentlemen! Now that I’ve taken the edge off my thirst, I believe that we should all raise our glasses to our good friend and colleague Sanford Gentworthy Livingston the Third, Esquire, gentleman and all-around good guy, for getting us away from the clutches of that hospital and those evil Nimbies. Without his efforts, we would probably still be sitting in that waiting room.”

Glasses were raised and, because it was all true, even if it sounded corny with all the flourishes, there were comments of “Bravo,” and “Hear Hear.”

I raised my glass. “Thank you, Charles, and I should tell you that I gave them your address and phone number instead of mine, so when they come in the night with their arrest warrant for being a meanie to a Nimbie, a serious crime as you know, don’t be surprised.”

That got a few laughs. Then we got busy destroying the chips and salsa the waiter had brought.

It’s true that my full name is Sanford Gentworthy Livingston III, but Chug just threw in the Esquire for the hell of it. I’m definitely not a lawyer. And even though the full name makes me sound like I’m some kind of British nobility, it’s really just a bunch of old family names thrown together by my paternal great-great grandparents. They did this, I guess, to honor ancestors from generations before them, when people used last names for everything. Honoring ancestors was the type of thing people did in the Midwest in the late nineteenth century. Because my great-grandfather, the first Sanford, was quite the patriarch—he was the founder of a wildly successful law firm in Indianapolis—my grandfather and my father were bribed with promises of being remembered in his will to continue his name. He died when I was about 3, secure in the legacy he had established, I’m told. If I ever have a son, though, I think I’ll spare him the embarrassment, so there won’t be a Sanford Gentworthy Livingston IV. I’ll go with one of those trendy California-sounding names, maybe Derek.

The food arrived, combination plates containing mixtures of four different entrees for each of us except Ronny, who got two orders of green chile cheeseburgers with fries. And there were more chips and salsa with two bowls of guacamole this time, and another pitcher of beer, which we kept on the opposite side of the table from Chug. It got quiet for a while. But I live alone and eat in silence a lot, and having a group to socialize with was too good to pass up.

“So, did you guys give statements while I was outside, or what?”

Ronny maneuvered a big lump of cheeseburger into his left cheek.

“Naw, we just told the Nimbies we had all contributed to the statement Steven wrote and agree to it. One of ’em, that stuck-up one, told us we’d be questioned separately about it, like we’re some kind of suspects, or something.”

“They don’t really think we’re somehow involved, do they?”

“I don’t think they think.” Steven made no attempt to keep his low opinion of the Nimbies under wraps. “But to be fair, this will be a high-profile investigation and they’ve got to move carefully.”

“So what’s your story going to be? Just what’s in the report?”

Steven looked puzzled at this question, and Ronny stopped eating and just looked at me. The other two shrugged and grunted behind their burritos.

“Of course. What else?”

“I was asking because I know something more, and I need to decide if I should just answer questions or volunteer information. I suppose they’ll have a general ‘do you know anything else that might be relevant?’ question anyway.”

Terry swallowed a mouthful of beef and beans.

“You know more than we do? How?”

“I met her Saturday morning, downtown. I mean, I bumped into her. She didn’t introduce herself, she was just a lost tourist, as far as I could tell.” And I proceeded to fill them in on my encounter.

“So you actually warned her about the storm? And told her it was coming in yesterday?” Steven looked surprised.

“Yeah, and she seemed to hear it, I mean she thanked me and all, and told me she’s careful about things like that. So it’s strange that she’d go up there Sunday afternoon.”

“How do we know she went up there Sunday?” Chug more or less burped out the question, and I looked at him, startled more by the question than the belch. I hadn’t thought of that.

“I guess we don’t. Although it must have been cold up there Saturday night as well, and wouldn’t she have been completely frozen stiff if she’d been up there for two days? And wouldn’t it be compounded by rigor?” We all know just enough medical stuff to be dangerous, and I’m probably the most guilty.

“Maybe. But it’s been a warm fall, and the ground was probably above freezing, including that rock, Saturday and Sunday morning, at least. So maybe by being under it, or somewhere like that, she could have spent the night before the storm up there as well. And it was sunny yesterday morning, wasn’t it? Before the storm?” Ronnie looked around the group for confirmation.

I’m the resident weather weenie in the BERT, but I tend to pay attention only when unusual things happen. I knew the storm was coming, and, knowing that, I just had tuned everything else out. There were a couple of NFL games on Sunday that had grabbed my attention.

“Yeah, it was.” Terry is such an avid skier that he tracks the day-to-day weather in anticipation of when he can get on the mountain with skis under him. “And it was windy Saturday night, which probably kept it warmer in the valleys, isn’t that what you’ve told me, Sandy?”

“Right. So maybe she could have gone up there Saturday. Which means I was one of the last people to see her alive. Damn.”

\* \* \*

My status as resident BERT weather weenie was the result of my professional background. I was always good in math and physics—it just seemed to come naturally, a lot more easily for me than for my classmates—so I pursued it all the way to a Ph.D. About the time I went to graduate school, the fashionable thing in mathematical physics was the new specialty called nonlinear dynamics. What you do in the study of nonlinear dynamics is basically computer programming, and that appealed to me a lot more than working on particle physics experiments in some underground accelerator facility—to do that you have to be a plumber, or at least have the knack.

I don't think anyone really knows what nonlinear dynamics is, but all of us who do it are good at pretending to. What it's about is trying to understand the "big picture" of complex systems—physical systems, economic systems, biological systems, social systems, systems of systems that are mixtures of all these—without having to understand all of the underlying details of all of the processes within these systems. Did I mention it's about systems?

Anyway, one such complex system is the weather, so I've managed to learn a lot about it and that makes me a weather weenie—a title of distinction to my way of thinking.

Another complex system is the economy, and that's what I worked on during my graduate studies. I got my Ph.D. for developing a method that explains certain behaviors in the stock market, and, putting my money where my mouth was, I also got comfortably well-off at it. In fact, my method worked so well that I kept using it until just a few years ago. It predicted the October 1987 crash back when I was still in graduate school, and, more recently, the collapse of the dot-com economy, and I got out of the market both times before it wiped out so many other people. I got back in after the '87 crash at just the right time to make a killing. But just as I was about to get back in the second time, after the dot-com collapse (hey, any successful method uses the "buy low and sell high" trick; it's just a matter of timing), those scumbag al-Qaeda terrorists took out the World Trade Center, and the market dove some more. I knew then and there that I had been lucky—my method could never have predicted such an event. So, rather than push my luck, I converted everything to some conservative annuities and quit speculating altogether. Now I'm a self-made trust-funder.

Because I'm not paying attention to the market anymore, I have time for other things, and the weather as a complex nonlinear system has become more and more fascinating to me. I've got a research position at the Santa Fe Institute working on certain aspects of predicting seasonal weather patterns—SFI made its bones on nonlinear dynamics, and they like to have people with experience in a range of specialties on staff. And so I'm the resident weather weenie there as well as in BERT.

Actually, the math and physics thing works quite well in combination with my volunteer work in BERT. We spend a lot of time hiking in the mountains, year 'round, and I derive equations in my head while hiking, the times when it's boring, at least. It's really easier than most people think. I mean, if you're literate and you know the Pledge of Allegiance, you could spell it out in your head with no problem, right? And if you worked at it a little, you could spell it out backwards, even. But if you were illiterate and didn't know the Pledge, it would seem like magic for someone to do that. It's exactly the same with what I do. I know the equations I start from, and I'm mathematically literate. No magic involved at all.

In fact, on that Monday when we were slogging up the Winsor Trail to see if we could find the missing hiker who turned out to be Elizabeth Davidson, I was working on a new transformation of the Navier-Stokes equations based on an idea I heard from a guy up at the Los Alamos National Laboratory. The Navier-Stokes equations are basically Newton's Laws written for fluids, and they describe how the atmosphere works. This idea had promise, I thought.

But the trouble with doing this stuff in your head is that something comes along as a distraction and you lose your place. It was Ketchum's yelp, when he first got a whiff of Elizabeth's body, that brought me out of my mathematical trance on Monday.

So I went into the Institute on Tuesday morning to see if I could re-create on paper all the stuff I'd done in my head on Monday. But there are distractions in the office as well as in the woods, and just as I was getting rolling, I was interrupted by a phone call. I should have been expecting it, I guess.

"Mr. Livingston? This is Detective Orlando Aguilar of the NMBI." He didn't call it "nimbie" like everyone else did—they seem to be sensitive about that. "We need to get a statement from you concerning your search yesterday."

“I was expecting your call, detective,” I lied. “When would be a good time? And where? Are you guys over in the state government complex somewhere?”

“We’re down on South Cerrillos in the Public Safety Building, across from the auto park. And we’d like you here as soon as you can get here.”

“You mean way down past the mall? OK. But it’ll be a while, I’m afraid. I’ve got to walk home and get my car, and it’s probably a good half-hour drive down there, or more if there’s a traffic holdup. I’m up on Hyde Park Road.” I looked at the clock on my computer screen. 9:33, to the microsecond, because it was automatically linked to the atomic clock up in Boulder. “How about eleven? I’ll have a phone with me and I can call you if I get held up.”

“We’ll expect to see you then.”

\* \* \*

Having been a Santa Fe resident for more than a decade had allowed me to find just the right place to live. The real-estate market here is bizarre, what with the movie stars, the rich folks from the coasts and Texas, and the celebrity wannabes all trying to out-do each other’s second homes. Normal folks, if there are such things here, can take advantage of all this with patience and strategic offers on properties that come on the market.

It amazes me that people will plunk down the cost of a flashy house—often a megabuck or more—on impulse. They come to Santa Fe on a short visit, stay a while longer, get infatuated with the place, and, next thing you know, they’ve bought a second home here. But after a while they find that they’re not using it enough to justify its upkeep, or they get divorced and need the cash or something, so they put it up for sale. As a result, the turnover is significant, and, for people like me who just want a nice house to live in, opportunities abound.

I spent my first several years here in a condo, all the while watching the market carefully. When a house on the hillside just below the Institute became available, I jumped on it, and then I spent six months or so remodeling it before moving in. It’s a simple one-story in the Santa Fe stucco style, with a big garage and a little guest house, and it suits me perfectly. I also built a landscaped trail up the hill through my back yard to the Institute’s grounds, so I have a private path to and from work. It climbs the hillside in a series of switchbacks among those piñons and junipers that I mentioned before, the ones that look so picturesque with snow on them.

It’s funny. Those little trees are seldom more than about fifteen feet tall, around here at least, almost like big bushes. But when you’re walking among them, you feel like you’re in a forest. And they support a robust ecosystem, because both species provide cover and food for a variety of birds. I’ve also done a fair job of restoring the ground cover with native grasses—it had been over-grazed severely before the land was subdivided in the ’60s—so there are cover and seeds for ground squirrels and rabbits as well, and their presence attracts coyotes. As a result, I have a back-yard nature preserve that I get to walk though on my way to and from work.

I’ve been lucky with this property, because my trees are still in good shape. The vast areas of dead piñon trees that we’ve had to deal with here in the southwest in recent years bypassed me—there must be some local wet spot or something that’s keeping my trees alive. It wouldn’t surprise me if runoff down my hill from the Institute’s parking lot actually helped.

On that Tuesday, when I was walking down the hill to get my car so I could drive down to the Nimbie headquarters to give my statement, my cell phone let loose with its custom ring-tone, the first loud power chords from the Van Halen tune *Jump*. I had been having a conversation with a scrub jay—

they remind me of giant, bad-tempered bluebirds—trying to reason with it but not succeeding. It must have been one of the pair that thought of my bird feeder as their personal lunch counter, and I expect it was scolding me for having forgotten to put out more of those oily black sunflower seeds over the weekend. It swooped from tree to tree, following me down the switchbacks of my path, squawking. When the cell phone rang, it stopped and cocked its head sideways, listening. If I couldn't reason with it, maybe my cell phone could, I thought.

“Hey there, Sandy, guess where I am?”

I recognized the sultry voice with mixed feelings for what would likely be about to happen.

Alex was one of those professional Santa Feans who worked, more or less, at about five jobs. If I recall correctly, at that time she was writing an astrology column for a local weekly, working part-time in an aroma-therapy shop downtown, peddling healing crystals at Tupperware parties, and doing a couple of other ridiculous metaphysical things that I could never keep straight. Definitely not a nine-to-five type, where she was just then was probably in my house somewhere. She had a key.

We had been involved in an on-again off-again affair for a couple of years, recently off-again so I was a little surprised, and pleased, to hear from her. I thought of her as a sweet, dear person and would have asked her to marry me, except she was just such a flake. I mean, I'm a mathematical physicist, for crying out loud. Even though I'm supposed to be an expert on complex systems, this lady was just too complex for me to begin to understand, big-picture-wise or any other wise. Also, her temper bothered me, from the perspective of a long-term commitment.

But, damn, she had this porn-star enthusiasm for sex, anywhere and everywhere, any way and every way. I'm usually not one to follow my dick around, but when someone as striking as she is grabs it and tugs, what can I say? She told me once that she liked our sex together so much because her orgasms cleaned out her chakras. Mathematical physicist and weather weenie I may be, but I'm street-smart enough to have smiled and agreed with her on that one. I don't know about the chakras, though; what it did for me was to clean out my sinuses, better than anything except the green chile stew they have down at the Horseman's Haven Cafe.

I read somewhere that men reach the peak of their sexual potency in their late teens and early twenties, while women reach theirs in their thirties—which explained her enthusiasm, I guess, and made me feel like a teenager again.

So my mixed feelings involved a sinking sensation that I'd probably get in trouble with the Nimbies for being late for my meeting, on the one hand, and, boing!, an instant erection, on the other. Chances were good that she was down at my house, waiting for me either in bed or in the hot tub.

The reason I thought this was that it had happened before—she'd call me at work and invite me home for a mid-day romp. I'd go back to work and people would ask me why I looked so tired and dreamy-eyed. I had a long list of publicly acceptable excuses ready to go.

I knew that I'd have to play her game, though, even if I didn't have time for a romp. She expected it and had proven before that she could be unbelievably bitchy if I didn't go along.

“Hi, darlin'. Um, let's see. In the kitchen, doing the breakfast dishes?”

“No, silly. Guess again.”

She could play this game for just about as long as it took me to get down the hill. But it occurred to me that she probably didn't know that I had a head start this time, as I was about half way there when she had called. So I could play her game and sneak up on her before she expected me.

“Oh. Hmm. I recall a big pile of laundry. Maybe you're in the utility room?”

She giggled. “No, but you’re getting warmer ... guess again.”

I had picked up my pace, frustrating the scrub jay’s scolding, and I hemmed and hawed on the phone while I tip-toed around to the southwest side of the house, where the hot tub sat on the porch. But she wasn’t there. That was good, actually, because sex in the hot tub, as titillating as it is to fantasize about, is actually just sloshy, and its, um, aftermath tends to muck up the filter. So I tip-toed into the house, feeling sneaky.

“Are you going to guess again, you bad boy? My chakras are just sooo clogged up.”

By now, I could hear her over the phone and in person. The in-person voice was coming from the direction of the bedroom, so I headed that way. But she wasn’t there, either.

“Sandy ... are you trying to sneak up on me?”

The in-person voice was from the open bathroom door, and there she was, quite naked, quite spectacular, sitting on the edge of the tub shaving her legs. All the way up. She must have sensed my presence, and she looked up with a grin.

“Here.” She was holding out her pink plastic shaver for me. “There are some spots I can’t reach very well.” She blinked several times.

It occurred to me that the Nimbies were going to be furious.

\* \* \*

### Three

What with an early lunch and an encore, it was nearly 1:00 by the time I got to the Public Safety Building. Even though I had called them twice, once about car trouble and again about a massive traffic slow-down, both fictitious, I could tell that Detective Aguilar was not at all pleased with my timing.

“Let me explain something to you, Mr. Livingston. We’re trying to run a homicide investigation here, and, because I believe you know the identity of the victim, you can probably guess at the pressure we’re under. Senator O’Malley has been calling us about every fifteen minutes, and as soon as his helicopter lands over at the airport, any time now, he’s going to head right over here. And we need to have our story straight so we can make sense to him. Whatever it is that you’ve been doing, it’s not a good enough excuse. I don’t care about car trouble, I don’t care about traffic, I don’t care about excuses of any kind. Now that you’re finally here, let’s get on with this. I’ve got half a mind to keep you in custody for a while afterwards, just to let you know how serious we are. It might not stick, but an obstruction charge would be enough for me to make your life miserable.”

I’ve learned that it’s best to just let these rants go and to focus instead on pertinent information.

“I couldn’t get a straight answer last night, so this is the first I’ve heard of a homicide investigation. But that means that you’ll be even more interested in my statement. It’ll be quite a bit longer than the others, my BERT pals’ statements, I imagine.”

He had walked away from me in the direction of some glass-walled offices, and this stopped him short.

“You don’t say. That makes your timing even worse. Get in here and let’s get going.” He was holding open a door to one of the offices, and the tape recorder on the desk in there looked ready to roll.

It turned out that he didn't care very much about the part of my statement that dealt with the search-and-rescue, because the other guys had all said the same thing, what was in Steven's written report. He did quiz me about the car in the parking lot that I'd told the Nimbie at the hospital about, though. I reiterated my previous statement and said I didn't have anything to add to it.

But he ate up the stuff about my Saturday morning encounter with Elizabeth. We went over it three times, and each time he stimulated some additional memory that enhanced my description. Still, it wasn't much for him to go on. But he hadn't known about the brunch, so now he had additional people to interrogate, if he could find out who they were. I sure didn't know.

Just as he was about to start in on his fourth run through my story, the door opened and a uniformed officer stuck his head in.

"Lando, the Senator's here. Wants to see you, like, yesterday."

"Send him in. We've actually got something he'll want to hear." He looked at me. "This, my friend, will be your punishment for being late. Senator O'Malley is about to question you. I can't wait to hear this."

I can't say this scared me, but it was a little intimidating. Fortunately, I still had really, really clean sinuses. You never want to be interrogated by a Senator when your sinuses are clogged up.

About ten seconds later a short, bullish man, full of bluster, clearly used to being in charge, marched into the little office. It was amusing to see him in person. You see these politicians on TV all the time, and they come across bigger than life. And Senator O'Malley was certainly charismatic, handsome in a rugged way, graying around the temples, piercing blue eyes. But the bigger than life part vanished in person, because he was short, down around five feet or so.

"You Aguilar? I want to hear everything you know. Who the hell's this?" He twitched his head in my direction.

I stood up before Aguilar had time to respond. "Senator, I'm terribly, terribly sorry about your daughter. I'm Sandy Livingston, I'm a member of the search-and-rescue team that found her yesterday."

And he changed. His posture sagged, he suddenly looked ten or fifteen years older, bluster gone. I pushed a chair around behind him and actually guided him into it. Aguilar was just standing there, sort of at attention. I think he was scared.

Senator O'Malley took a deep breath and let it out.

"Sit down, son, sit and tell me all about it, all the details. Please. Tell me whatever you can about my Betsy."

I'm barely on the near side of forty, and it's been a long time since anyone called me "son," even my Dad, but it worked somehow, coming from him. I pulled a chair around to face him and sat, with our knees almost touching. He had his head in his hands, looking at my shoes.

"Sir, I don't know if it will help any, but I don't think any of us had the impression that she suffered. When we first found her, we thought she was just asleep."

He looked up at me. "I was at the hospital last night, talked with the doctor who did the exam of her body, and with the medical examiner. They both told me that she had a bruise on the back of her neck, that she had probably been unconscious. Something about the bruising was consistent with her having been alive for some time after she was knocked out."

"Senator, I heard about the contusion last night, but I didn't know those details. If she was knocked out, that would have been instantaneous, and if she froze without waking up, there wouldn't have been pain. So maybe she didn't suffer. That's the best I can tell you."

“What about other details?”

So I filled him on the place we found her and everything else I could think of, and I talked about Saturday morning. He had me repeat the story twice and asked penetrating questions each time, even raising points that Aguilar had missed. Eventually he seemed satisfied with what I was able to tell him, as far as it went.

“Mr. Livingston, thank you for being so patient with me on this, but I’m sure you understand how much interest I have in it. I’ll have my people follow up on this brunch you said Betsy was going to. We’ve also got to get this business with the missing-persons call straightened out. Congress is in recess just now, so I’m in Albuquerque for the next few weeks. I’ve got people there and people in Washington I can put on this.”

“Senator, don’t you think that your involvement will, you know, get jumped on by the media? I mean, the NMBI is working on this, and they have a solid reputation. And that won’t put the spotlight on you. Right, Detective?” I looked over at Aguilar, who was nodding—probably for my not having said “nimbie,” but the Senator thought he was agreeing with me.

“That right, Detective? You guys on top of this?”

“Y-yes sir, Senator, we’re all over it like ... like ...”

“Like a cabrito on a chile bush, or something, I know. Or a duck on a June bug, as my esteemed colleague the Senator from Indiana would say.” He looked at me and arched an eyebrow. How did he know to do that? I hadn’t told him where I was from.

“At ease, detective, I’m the only old fart here allowed to say folksy stuff like that.” He was grinning, and Aguilar seemed to relax a little. “Detective? Could you please ask your Chief to step in here for a minute? I’d sure appreciate it.”

“Yes sir, Senator. Right away.” Aguilar scurried out, and O’Malley turned to me.

“What I really want is to talk to you alone for a minute, son. Now ...” He stopped when I held up my hand.

“Excuse, me Senator, but I imagine that everything in here is recorded, sound and video. Should we perhaps go for a walk?” I’m not paranoid, but I am a pretty quick thinker. If he wanted Aguilar out of the way, he probably didn’t want to be overheard.

His response surprised me with how astute he was—he nodded almost imperceptibly and continued talking as if he hadn’t been interrupted.

“No, I just wanted to thank you personally for your efforts on this thing. It’s so close to my heart that I want to make sure you understand I’m not just saying this for political purposes. It’s personal with me, and I owe you one.”

I grinned and winked, playing along. “Gee, Senator, I’m not real political, but I can probably think of a way for you to get out of my debt with a vote or two in the Senate.”

He looked startled and laughed. “Now, don’t push it, son.”

The door opened and Aguilar walked in with a guy in a crisply pressed uniform. O’Malley turned on his million-watt smile and became a politician again. I tuned them out.

\* \* \*

“You’re a quick study, son, I like that. I appreciate your reminding me about the recording equipment in there.”

We were strolling around the meager grounds of the Public Safety Building, being watched closely by the several suspicious suits standing by the Senator’s car.

“Now, you understand that I have nothing but the highest respect for the Nimbies.” His use of the popular diminutive startled me. “I helped get legislation passed through the Round House to found the NMBI, and I’ve managed to help get them federal law-enforcement funding on a couple of occasions. But I’d feel a lot better about this thing with my Betsy if I had a closer connection to it. Even though I’ll be in-state for a while, I really can’t get too involved, like you were saying in there. But I have a couple of questions that I don’t think the Nimbies are prepared to look into, now or ever. I think you could, though.”

“Well, Senator, I’m a volunteer member of the Back-country Emergency Rescue Team here in Santa Fe, but, gee, I’m not a detective or anything like that. My day job is being a mathematical physicist at the Santa Fe Institute.”

“I know. You got your Ph.D. at Berkeley and spent a couple of years at MIT. You’re something of the family black sheep, having chosen science over law—you were supposed to get your J.D. from Harvard and join the family firm in Indianapolis. And just to tie up the loose ends, you have a girlfriend, no pets, no police record or military record, two cars, and lots of money. Oh, and, of course, your mother is the Governor’s wife’s sister.” He grinned somewhat sheepishly. “You sure you don’t want my people to look into that brunch? They’re good.”

Of course, this was all public information, but I felt naked. I suppose that if you’re experienced with the armed forces or security clearances, having other people know all about you is standard operating procedure. But it was weird for me, coming out of the blue like that.

“If you know all about me, Senator, you’ll know that I’m not likely to be of much help.”

“Not in the usual way, I agree, not like a private investigator or anything like that. But one thing I have questions about is something you can help with—the place where you found her. I heard last night about that bruise, and I haven’t been able to think about anything else. How could it have happened? I mean, not how she was attacked, but how she ended up there. If someone assaulted her, he must have been there. I’m thinking of footprints. And you said she wasn’t sitting in the snow, she was sitting under this rock you described. Of course, now there are lots of footprints—yours and the other guys’. But, still ... I can’t help but think it might be possible to find some other indications of what actually happened. Did she walk there herself? Or was she carried? For example.”

“You know, Senator, when we were up there, we thought we were looking for a lost hiker. And when we found her, we didn’t think for a minute about foul play. Let me see ... what we did was to walk up to the edge of the snow on our snowshoes, take them off, and we tromped all around on the bare ground under the rock where she was sitting. So there won’t be any useful footprints under the rock, but there might be under the snow. If all this went down before the storm, I mean. And if there was someone else there, it probably happened before the storm, because we didn’t meet anyone on the trail, and it would have taken an expert not to get lost up there.”

“So if someone went up there and, say, swept away the snow, there might be more footprints?”

“Right. And if there are two sets, hers and someone else’s, we’d know more about what happened. I mean, it could be that the bruise happened accidentally, or it’s a couple of days old, or something.”

“There you go. See? This is exactly what I was thinking, that you could help me out on this.”

“Sure, but, if the Nimbies are treating this like a homicide, that’s a crime scene, and I shouldn’t go messing about with it.”

“No, you’re right. And I wouldn’t ask you to, even if I’m not being recorded.” I could see him smiling. “But the fact that you had that idea is what I need. Ideas. We can pass that one along to the Nimbies and let them deal with it. Hell, you’ll probably be just as glad not to have to go all the way up there again, right? Anyway, I was also thinking of something else. The brunch business. I don’t know for sure who it might have been with, but I think I can find out. And if you talk with these folks, they just might be a little more forthcoming than if the Nimbies do. Betsy’s circle of friends has this anti-establishment attitude. If you just say that you met her Saturday morning and feel bad about it and want to talk, I bet they’d tell you stuff they’d never tell the Nimbies.”

“You know, when I talked with her Saturday, I thought she was a lost tourist. But she grew up in New Mexico. How come she was lost?”

“We never spent much time in Santa Fe, and Bill Prince lives in Las Cruces. So I expect she just doesn’t,” he suddenly looked crestfallen again, “... that she *didn’t* know the town. And, you have to admit, it’s a confusing little place.”

“Oh, yeah. And it’s a good thing that it’s small, or we residents would never get it figured out. So, if you want me to look into this stuff, Senator, maybe you have an idea of who’s behind it.”

“I do. I wasn’t going to tell you if you didn’t ask, because I thought you might be better off with a fresh perspective, untainted by my prejudices. But since you asked, I’ll tell you. You know she divorced Bill, of course.”

“Hard to live here and not know that.”

“Right. And she married this guy Davidson.”

“Who’s a mystery to me and everyone I’ve asked.”

“That’s because you don’t watch enough B movies, and C and D and E ones. Derek Davidson.” Great, I thought. There goes the name of my first-born son. “Hollywood stunt man, as he never tires of calling himself. I guess he’s what girls would call a ‘hunk.’ I never understood what Betsy saw in him—and I guess now I never will.”

“Seems like a strange pairing. How did they meet?”

“On a cruise ship, of all places. Right after her divorce, she busted loose and took a singles cruise. There he was, tall, blonde, tanned, and available. I guess she was lonely.”

“And you think he may have been behind this?”

“Maybe it’s just that I want it to be him.”

“You don’t think it could have been, for example, Senator Prince? No offense—but I have to ask.”

“I don’t think so. Bill’s a straight-up guy. He was hurt by the divorce, which was Betsy’s idea, but he treated her fairly and isn’t one to hold a grudge. That’s why I supported him for re-election.”

“And your help is why he got re-elected. So do you know if this guy Davidson had a motive for wanting Bets ... your daughter out of the way?”

“Money. He’s chronically broke. He has lifestyle aspirations that exceed his income, considerably. For example, he spends the winter in Telluride, at a trophy home he bought, so he can be seen by the right crowd. And it’s not like he’s a movie star—he’s just the stand-in that gets banged around in the stunts. And Betsy had lots of money, from me and from Bill, in the form of a trust and in some life-

insurance policies. And, who knows, maybe Davidson took out more life insurance on her. I'll have this checked on."

"By those staffers who are so good about finding out about people, no doubt. But, look, Senator, I'm still not clear on what I can really do for you. I can talk with the brunch crowd, when you find out who they are. But I don't see myself being very helpful with Davidson, especially if he's up in Telluride. I mean, even if the Nimbies were on our side, we couldn't just waltz up there and grab him. Could we?"

"If we get real evidence, we can get him extradited, if need be. And I know some people in Colorado who could be helpful, if it comes to that. But what I was looking for now was just an indication that you would help me out. What the specifics are can wait. I won't insult you by offering to pay you, but I do want to emphasize that I am serious about this and can provide whatever is appropriate for compensation." And he looked serious, almost pleading. So I grinned again.

"Hmm. Back to the votes in the Senate, eh?"

He grinned back. "All depends on what the issue is and how I was going to vote anyway."

\* \* \*

When I finally got home, it was close to 5:00, and the missed-call light on my house phone's ID box was blinking. Five new calls, it said, with two "unavailables"—slimeball telemarketers too slimy to want to be identified, no doubt—and calls from Steven, Terry, and Joyce Ortiz, the secretary for my part of the SFI. Her message was a relay of several urgent calls from the Nimbies that I'd missed while being preoccupied earlier with Alex.

I half expected to find Alex asleep in the bedroom where I'd left her. Clean chakras do that to her, and once she slept for two days straight after our romp. I have no idea how she managed her part-time jobs when she did this, but in Santa Fe lots of strange things are possible.

Both Steven and Terry had essentially the same news, that the Nimbies wanted some of us to trek up the Rio Nambre with them so they could examine the place where we found Elizabeth Davidson. I'm the BERT member with the most flexible schedule—the other guys have real jobs and families, except for Chug, who's working hard to avoid both. Therefore, it seemed that I was being nominated for another long snowshoe outing. And another storm was coming in on Wednesday. Great.

On the other hand, if I went up myself, I could be part of the investigation that Senator O'Malley wanted without getting on the wrong side of the Nimbies. He and I had agreed to what corporate America calls "deferred compensation" for my work on the mystery of his daughter's death without specifying what form that compensation would take. I figured that doing a big favor for someone as powerful as he could only lead to good things down the road.

Maybe, I thought, I could persuade him not to back my uncle for another term as Governor. What a disaster that whole thing was. Just because a guy is successful at running a grocery-store chain doesn't mean he can run a state government.

When the phone rang, I had the TV tuned to the news and weather on one of the Albuquerque stations, which was presenting a new talking head trying to make sense of a convergent pair of jet streams over Arizona. Albuquerque is a small TV market as such things go, so it attracts two sorts of on-air talent for the news and weather—people who are personally committed to the area for some reason, and ladder-climbing youngsters. The weather here is tough to forecast, even tomorrow's weather. And despite official forecasts from the National Weather Service and customized ones from private forecasters to lean on, it's a real challenge to go on camera and put your reputation out there for people to judge day in and day out. The weather folks with experience take this in stride and with humor; the

youngsters get flustered and move on to easier, and, if possible, bigger, markets as soon as they can. I figured this new one wouldn't last long, even if she was a classic beauty and had a Hispanic surname. But I still needed to watch her segment to see the satellite pictures and animations of computer simulations so I would know what to expect when I took the Nimbies up there.

It didn't look good.

The phone had a female voice talking at me. "Please hold for Senator Bill Prince."

Normally, I would have said "no" and hung up, but compassion seemed appropriate here—the guy's ex-wife had been murdered. And I did want to talk with him, just to see if he could add any useful information to what I'd learned from Senator O'Malley.

"M-m-m-m-mister Livingston? I hope this isn't a b-b-b-bad t-t-t-t-time?"

My God, I couldn't help but think. We've got one Senator who's short as a stump and another who stutters. How in the world did he manage to give speeches? Drugs?

"Senator, I appreciate your call. I expect this whole thing is upsetting to you. Let me reassure you that I've agreed to work with Senator O'Malley to do everything possible, and some things that aren't, to discover what happened to Elizabeth and to bring whoever did it to justice."

This seemed to calm him down, and his stutter faded significantly.

"T-that's what Mike told me. He suggested I call you to see if you have any questions. I don't know what I m-might be able to tell you, but I'll sure try to do everything I can to help."

"I hope Senator O'Malley told you that I'm just a search-and-rescue team member, not a detective or investigator. I'm still a little mystified why he asked me to do this, but I'm glad to help. Now, please don't be offended, but I expect that you understand that you could be a suspect in this thing. Your divorce wasn't your idea, I believe, and therefore you have a potential motive. And because you're in a position of power, you have both means and opportunity, by hiring others." I read mystery novels now and then, and some of the jargon had soaked in. "Senator O'Malley has vouched for you, and that's good enough for me. But I don't know about the official investigation."

"Yes, I'm aware of this issue, and I'll do whatever I can to c-cooperate with the NMBI. That's all I can d-do. I'm glad that you don't suspect me."

"Besides what Senator O'Malley told me, it just doesn't make sense that you'd be behind this. From what I know of you, you're far too smart to do something like this for revenge. So I'm going to focus on other things. Tomorrow, I'm going to trek up to the place where we found her, in a storm it looks like, and then I'll talk to some folks here in Santa Fe. Did Senator O'Malley tell you about the brunch?"

"The Saturday morning one, yes."

"If he finds out who the brunch crowd was, I'll see if I can talk with them. Maybe they'll know when she went up there and if she went with someone."

"It seems like s-she must have gone up there with *someone*."

"Probably. But I'm a scientist and I always think of questions to ask. Like, was that bruise old, not related to her death in any way? Or maybe she fell and banged her head, got disoriented and sat down to rest. Maybe she just went up there and got lost and froze. Or maybe she mentioned to someone that she and so-and-so were going hiking. Who knows? So I'm going to ask around. I'll see if I can get a copy of the autopsy."

"If you need any strings pulled, just c-call."

“Will do. And there’s something you might have an opinion on. I don’t mean to reopen old wounds, but it’s pertinent, honest. Do you have an opinion about Elizabeth’s new husband?”

I heard laughter being smothered.

“Do I have an op-pinion? Let’s see. How long do you have to listen? Except that my opinion isn’t suitable for family listening, so c-cover the kids’ ears.”

“Do you know if she had assets that he would now have access to?”

“She sure did. I mean, have assets, at least. A trust from Mike, something like a million invested in stocks, and life insurance from him and from me, about three million altogether. Don’t know if Davidson increased the insurance or not.”

“With him the beneficiary, no doubt. May I ask why you had so much life insurance for her?”

“In case of children or as a long-term investment, if it wasn’t needed as insurance. I talked about it with Mike, and that was his reasoning, too. There’s a \$10 million policy on me, for the same reason. I bet that’s not Davidson’s reasoning, though.”

“Sounds like you and Senator O’Malley share opinions about this guy. I’ll keep that in mind.”

\* \* \*

## Four

I spent the rest of the evening preparing for the next day’s outing, so it was just as well that Alex had disappeared. She could be a real distraction. Instead of thinking about her, I turned on the mindless nattering of the announcers of an NBA game on cable to provide company. Early in the season, the games are mostly glorified practice sessions, but sometimes exciting things happen. Through the magic of instant replay, I could putter about getting ready without missing anything worth seeing.

Growing up in Indianapolis in the late ’60s and ’70s meant that the Home Team was the Pacers, at first in the ABA with those stupid multi-color basketballs and finally in the NBA. Here in Santa Fe, there’s no real “home team” for any sport, unless you’re interested in the second-tier college competitions or minor-league pro sports down in Albuquerque. So I’ve adopted the Denver Nuggets to follow—I figure they can use all the help, fan-wise, they can get. That Tuesday night, the Nuggets were getting stomped, their usual fate, by the Pacers, and my loyalties were being tested.

About 6:30 the phone rang, and I recognized Alex’s voice, not sultry this time, but sobbing. There’s something about being called up by a woman in tears, especially a girlfriend in tears, that makes me feel guilty. What, I was thinking, did I do this time?

It took some careful soothing, but I finally discovered that Alex had seen a story about Elizabeth Davidson’s death on the TV news and was upset because they had been in college together, down at New Mexico State in Las Cruces. Alex had dropped out after three years, and Elizabeth had graduated, *summa cum laude*, but they had been sorority sisters for Alex’s three years.

And I had to sit down when Alex mentioned that she’d last seen Elizabeth on Saturday morning, at brunch. This so startled me that I missed her next few sentences, but it didn’t matter because I knew I’d have to get together with her and discuss the whole thing in detail. The sooner the better.

That's how I wound up spending the night with Alex over at her place in the forest between the villages of Pecos and Glorieta. You head east on the interstate for about fifteen miles to the exit by the Baptist Conference Center, and then take a turn to the north on a dirt road by the Glorieta Battlefield, the site of a locally famous Civil War altercation between some guys in blue uniforms and some in gray ones. She found this place by accident, but its proximity to the conference center persuaded her that it was meant for her, because she could direct her meditation energies toward counteracting the evangelistic misogyny, as she put it, of the Baptists.

She was certain that misogyny was what kept getting her chakras all clogged up. I kept thinking I should write the head of the church a thank-you letter, but they're so loosely organized that I couldn't figure out where to send it.

Alex had left out her "come in, I'm meditating" signal for me—a misplaced flower pot on her porch—so I walked in, trying not to let any of the cats out. At that point, she had five cats, I think, but it was hard to keep track because she also had a soft spot for strays that came and went as they pleased. I'm allergic to cats, so we tended to spend our time together at my place. Not even Horseman Haven's green chile stew could fix the things her cats did to my sinuses. It looked like I was going to be snowshoeing in a snowstorm with the Nimbies and a head full of snot on Wednesday. Great. Just great.

But cats or no cats I had to talk with Alex, both to calm her down and to find out what she knew about Elizabeth. Also, to tell the truth, to let her know that I'd been in the day-late rescue party and that I was going to work on Saint Mike's behalf. Otherwise, I'd have a real reason to feel guilty the next time she called me in tears.

She was meditating in the solarium, bathed in the soft glow of several dozen candles from her aroma-therapy shop. The resulting olfactory stew, combined with the cat dander, started me off in a sneezing fit, which brought her out of her trance. She jumped up, grabbed me in a full-body hug, and burst into tears all over again. Between the raw sexuality of her body, her tears, and my memories of earlier in the day, I felt myself progressing toward the boing! stage, and she must have, too. She pulled back and kissed me gently.

"Oh, Sandy, not right now, OK? I'm just too upset." This produced an instant un-boing reaction, which was just as well for both of us.

"And that's why I came over. You and I need to talk about this. I had no idea you knew Elizabeth Davidson. You never mentioned it."

"Well, no, silly, there wasn't any reason to. I mean, there are lots of people I haven't mentioned to you, y'know? Did you know her, too?"

That's when I had to tell her about our BERT search party on Monday and its sad result. And that got me into trouble, because, she thought, I should have told her all about it that morning. If I had known she and Elizabeth were friends, I would have, at least that was the story that I stuck to.

It took some doing, but eventually I got her calmed down. If she didn't completely believe me, at least she wasn't mad.

"Look, I just didn't know, OK? But lots more has happened since then anyway, so it's a good thing we're talking now. For one thing, I've got to hike back up there tomorrow with the Nimbies, to look for clues. For another, Senator O'Malley, Elizabeth's father, has asked me to look into what happened. All that came about this afternoon, so I couldn't have told you this morning."

"You're going to investigate her death?"

"'Investigate' may be a little strong. But I'm going to look into a couple of things. Did they say anything on TV about what happened to her?"

“Just that she died of exposure. But they also said that they haven’t ruled out foul play, whatever that means.” At that point it dawned on me that Alex must use waterproof makeup, because her face was tear-stained but her mascara was intact. Strange how you notice little things at inappropriate times like that.

“That’s what I’m looking into. And, look, I have to ask you about Saturday morning. You said you saw her then.”

“We had brunch at Café Pasqual’s, with some other friends from college.”

“I knew she was there, because I gave her directions on how to get there. She was lost over on San Francisco Street. We talked a little bit and she mentioned going up to the ski area, so I warned her about the storm on Sunday. But I didn’t know who she was at that point.”

“You talked to her Saturday? This is getting stranger and stranger. Like there’s some mystical force at work.” She looked around nervously.

“I don’t know about that,” I had learned long ago not to argue with her strange beliefs, “but I do know that whatever you guys talked about at brunch is something I need to hear about. Who was there?”

“Eight of us. Three couples and Betsy and me. The three guys mostly ignored us and talked about football.”

“OK, listen. The ‘foul play’ stuff might be murder.” She looked truly spooked. “The people at the hospital found indications that Elizabeth may have been assaulted and left up there to die. So the Nimbies are going to be talking with everyone who might know something, including you and the other people at that brunch.”

Her eyes were saucer-sized, so I hurried on. “I don’t think any of you is under suspicion, but you might have information that’s important. And there are two things I need to talk about. Did Elizabeth make any comments about going up to the mountains, after your brunch or any other time?”

“No, she didn’t talk at all about what she was going to be doing. I think we all assumed she’d be heading back to Colorado.”

“To Telluride?”

“Yeah, I guess. She talked a little about being there with her new husband.”

“That’s the other thing I need to know about. Did she talk at all about him?”

“It was kind of sad. She mentioned that she probably made a mistake, getting married again so soon. I think she was unhappy with that guy Davidson.”

“Did he come down from Colorado with her?”

“I don’t think so. He would have come to brunch, probably. Um ... Oh. I remember. She said something about how he was meeting with a producer of a new movie, so he was still up in Telluride.”

“She didn’t say anything about their relationship?”

“Not much beyond what I said, that she was thinking she got re-married too soon. But she didn’t seem happy when she talked about him. Um, Sandy? Do you really think the Nimbies will want to talk with me?”

I definitely did not want to know why she would be concerned about that. “Why don’t you call them in the morning? Ask for Detective Orlando Aguilar, I’ll write it down. You can go down to their offices and talk to them, and get it over with. OK?”

“I guess. It’s better for me to go there than for them to come here, that’s for sure.”

“If you call Aguilar and tell him you’ve talked with me, that should smooth the way for you to go see them. I expect that they’ll want names and phone numbers of your friends at the brunch, so take your address book. But what they’re looking for is information. None of you is under suspicion. OK?”

“It feels awkward, but I expect that’s the best thing to do.”

“It is, because they’ll find out that you all were having brunch with Elizabeth anyway, and come find you if you don’t find them.” She looked spooked once again. “So Elizabeth seemed unhappy in her new marriage. Anything else you can tell me?”

“Not really, we just gossiped and caught up on stuff. Sandy? I know you don’t like my cats, but can you stay with me tonight anyway?”

“Baby, it’s not that I don’t like them, I *love* your cats, really. It’s just that I’m allergic to them.” Coincidentally, I sneezed, for about the twenty-fifth time. “And I have to leave really early anyway to meet the Nimbies up at the ski area. If I’m here, I’ll have to get up about five. Listen. If you don’t want to be alone, why don’t you follow me home?”

“Oh, I need to be here in my, my spiritual place. But I understand.” Her eyes filled up with tears, which spilled down without dissolving that miracle mascara. “I guess I thought you loved me more than that. That you’d stay to help me through this.”

Oh, *man*.

\* \* \*

Wednesday morning, as promised, I managed to get up at about five, get home, finish assembling my gear and put it in the car, and make it up to the ski area parking lot at first light, in time to meet the Nimbies I was guiding. My sinuses were completely stopped up and I was sneezing about every ten minutes, despite the antihistamine I had found in Alex’s medicine cabinet. With the misery of it all, not the least of which was Alex’s mood swings, I had managed to get something like three hours of sleep.

And, as promised, the weather went all to hell. I tried to be philosophical about it, thinking about how I would be tickled to death if I were on my way up the hill to go skiing. And even though I wasn’t, we needed the snow badly, if we were going to establish the base we needed for a good ski season and to have an adequate water supply next summer.

When I got to the bottom of the parking lot, by the Winsor Trail access, it was snowing hard, probably an inch an hour or more, and there was more wind than I wanted to deal with. The car’s thermometer said 5 degrees, and because it was set for the U.S. rather than Canada, I knew it was cold out there. I was about provide my opinion of the situation in a series of colorful adjectives when I was hit by another sneezing fit. This, I could tell, was just going to be too much fun.

Another car was sitting there, motor running, windows all fogged up, so I deduced that it was occupied, probably by the Nimbies I was supposed to meet. If I was going to become an investigator for Senator O’Malley, I figured I should start deducing whatever presented itself.

I maneuvered my car around to be as close to the other one as possible, window to window, and tapped my horn. The foggy window next door lowered itself a few inches, so I lowered mine also.

“Hiya! I’m Sandy Livingston. You guys going up the hill this morning?” I had to shout over the noise of the wind. The window came down a little more, and I could see a face surrounded by the fluff of the fur around the hood of a goose-down parka.

“God help us, I guess we are. Hope you know that trail really well.”

“Oh, yeah, don’t worry. And it’ll be less windy in the woods. Listen. Follow me around to a better parking place. We’re likely to get plowed in if we park here.”

One advantage of working with the BERT was being a member of the in-crowd at the top of the mountain. I got a free season ski pass every year, access to the close-in employee parking, and other perks like first rides up the lifts on days I got there in time. And because I spent a lot of time up there, I knew the drill for the snowplow routes. Although the ski area wasn’t open yet, the plows would be by later on, and I knew if we stayed where we were, we’d have to shovel our way out that afternoon.

It took fifteen minutes or so to get organized and on the trail, and another thirty to get up the switchbacks to the saddle at the lower end of Raven’s Ridge, to the Wilderness Area Boundary. We didn’t stop to sign in on the ledger that was kept there, because the wind was howling. Back down in the trees, though, it was more bearable.

High winds, blizzard conditions, and 5 degrees is intimidating weather, but, like I said before, there’s no such thing as bad weather, just bad clothes. I was dressed for it and so, fortunately, were Jake Williams and Ricardo Montoya, the two Nimbies who were assigned to this little expedition. I asked and found out that they weren’t being punished or anything; in fact they had volunteered. Volunteered, they hastened to point out, before they knew what the weather was going to do.

Another hour of steady walking got us to the mushroom rock, where the BERT guys and I had found Elizabeth two days before. Contrary to popular opinion, walking on snowshoes is not really very different from just walking. You tend to keep your feet slightly farther apart with a wider stance, but that’s mostly psychological. Modern, high-tech snowshoes are lightweight, and they have crampons—metal teeth—on the bottoms so you don’t slip even if you try to. After your first day, you’ll notice a new set of sore muscles, on the outside of your hips from the wider stance, but that’s about it.

The two Nimbie guys were used to snowshoeing, so we made good time. It was getting close to nine as we approached the rock, and we decided to take a break and discuss strategy. Their plan was to quickly go over the ground under the overhang of the rock and then to explore the ground under the edge of the snow more carefully with whisk brooms they had in their packs. The first order of business was to photograph everything. I decided to stay out of the way as best I could and to get under the shelter of rock, out of the wind, when they were finished there.

I waited around trying to be patient, hopping and stomping my feet to keep the blood flowing, and finally they signaled that I could get under the rock. The wind for this storm was from a slightly different direction from the last storm, so to get out of it, I settled into a spot a little way around the rock counter-clockwise from where we had found Elizabeth. Just as we suspected, the ground was completely tramped up. The five of us on the BERT rescue weren’t concerned with a crime scene, so we had not tried to be careful. But I was sitting toward the edge of the area where we’d all been, and I could see farther around that there were no footprints at all. None of us had walked all the way around the rock and, apparently, neither had Elizabeth. Or whoever was with her.

So, I asked myself, how could all this have gone down?

Thinking about this got me to looking around carefully, and I finally noticed a curious bump in the snow out by the edge of the rock’s overhang. Maybe it was there on Monday, and maybe not. The change in the wind direction had blown the old snow around, and the new snow was accumulating in different spots. So it was hard to tell. And there were rocks of all sizes all over the place anyway. But this bump in the snow got my attention for some reason.

So I brushed away some snow, grabbed at it, and came up with a cell phone, the little flip-open kind, a Motorola. I dusted off the snow from it, opened it up, and pushed the power button, but the battery was dead. It probably had been left on, and two days in temperatures around zero would be hard

on a battery, I thought. So I put it in a pocket in my parka. It occurred to me that I ought to give it to the Nimbie guys, but I was feeling connected to Senator O'Malley just then. He'd want to see it, I was certain, because it might have information he would be interested in. The Nimbies could wait.

Out of curiosity, I fumbled around taking off gloves and unzipping things until I found my own cell phone, in a pocket in my shirt. I flipped it open and watched its screen. Yep, there was a signal, kind of weak, but a signal. Probably a cell tower on Tesuque Peak, the top of the ski area. My phone remembers the last several numbers I've called, so I thought maybe the other one would have a record of whom Elizabeth had tried to call. Or, if she was indeed unconscious, the other person.

The Nimbie guys, Williams and Montoya, were around the other side of the rock from me, so they couldn't have seen anything. But I was feeling guilty anyway, so I decided to do something nice for them. I unzipped my backpack and unloaded my gas stove and a one-quart pot. It didn't take too long to melt a pot-full of snow and get the water boiling, and I poured in about half a box of chocolate-flavored instant coffee. Even though I was downwind, a gust or eddy must have carried the aroma back to them because before I could yell at them they appeared.

"How's it going over there? Want a break?" The look of surprise and gratitude on their faces said it all. And when I pulled out a bottle of Peppermint Schnapps and poured in a hefty slug, I thought they might cry.

\* \* \*

Even though I'll still call them "Nimbies," my respect for the NMBI took a giant step forward that day. In the space of about an hour, Williams and Montoya found new footprints under the snow and even managed to get plaster casts, with a quick-setting concoction that smelled like it involved rubbing alcohol. They took several dozen photographs, using a digital camera so fancy I wanted one, and they even tried to dust the mushroom rock for latent fingerprints near where Elizabeth had been sitting. I resolved to get the cell phone I found to them as soon as I could.

The hike out was tougher and slower because it involved a thousand feet more of climbing, so we didn't get back to the cars until about 2:00. On the last leg, the 500 feet down from the saddle, all I could think about was about the heated seat in my car and how good it was going to feel cranked up to high. Even though I was dressed for the weather, my butt was cold. For some reason there's never enough insulation in the layers I put on to keep my backside warm, even with all the exercise.

When we finally got down, the road had been plowed, and it looked as if the snow was beginning to let up a little. Jake and Ricardo were impressed with my choice of parking places: where they originally had been sitting was now covered in a huge drift of that packed stuff that snowplows leave in their wake. As it was, we had just over a foot of new snow to push through to the plowed road surface. They had come up the hill that morning in a Nimbie SUV, and my Audi allroad—the souped-up station wagon with the small "a" and the big engine—will handle anything, so we were on our way in no time.

Before I started down the mountain, the first thing I did was to turn on my seat heater, all the way up. Then I rigged my cell phone to its car cradle and the no-hands setup and called Senator O'Malley's office in Albuquerque. He had said, with Congress in recess, he would be spending most of his time there and had given me the number of his direct line, which was now programmed into my phone.

"Senator O'Malley's office. May I help you?" A professional voice with just a slight Spanglish accent answered.

"The Senator gave me this number as his direct line. I'm calling with some information about his daughter. This is Sandy Livingston calling from Santa Fe."

“This is his direct line, but he’s in a meeting just now. He mentioned that you might be calling and said he would call you back as soon as he can. Where can he reach you?”

I left my cell phone number and concentrated on willing the seat heater to hurry up. I also concentrated on my driving. The road up to the ski area, State Road 475, is paved, but it’s narrow and winding. Even in the summer, it’s hard to average more than about 30 mph, in a normal car, at least. During that snowstorm, it was covered with the packed, slick aftermath of the snowplow runs. They had sprinkled gravel—crushed volcanic rock, actually—but it was snowing hard enough that it was already covered up again. With all-wheel-drive and serious snow tires, my car is a unbeatable going uphill, but going down can still be a challenge. The tires helped, but I was still slipping around like a puppy on ice for the first time.

The heat from the seat finally soaked through my layers of clothes at about the Aspen Vista trailhead, and a warm glow began to work its way into my buttocks and up my spine. That helped. And then, about half-way down to Hyde State Park, the phone rang. Senator O’Malley must have a pager, I thought, when I recognized his voice.

“Erma told me you have news about Betsy?” He was all business.

“Yes, sir, I do. Lots, actually. First, you can call off your people, because I have a list of everyone who was at the brunch on Saturday. Entirely coincidental that I got it, just an example of Santa Fe’s small-town nature. And right now, I’m on my way down the hill to town. A couple of investigators from the NMBI and I just finished our hike up to where we found her the other day.”

“Anything I should hear?”

“Oh, yeah. They got plaster casts of some footprints that weren’t mucked up by us on Monday, and I found a cell phone. Battery’s dead, so I don’t know what it will tell us, but I’ll fix that when I get home. What I’ll do is to copy down all the information I can find on it, give that to you, and pass the phone to the Nimbies.”

“They should probably have it already.”

“Right. I thought of that, but I figured you’d want whatever information it has. Like, who she, or its owner, called recently. Also, if there are voice mail messages or caller IDs or anything like that.”

“Do you know whose it is?”

“Not until I get a live battery in it. It’s a Motorola, but that’s it.”

“Betsy had one of those.”

“So do I and a gazillion other people. But I’ll find out and let you know.”

“Son, you’re doing an old man right.” An old, very powerful man, I thought. “I have a good feeling for people, and I knew when I asked you to get involved in this that you were the right person. But be sure to get the phone to the Nimbies so you don’t get hit with a tampering charge. If you need a little clout, I’ll be there for you.”

“Yes, sir.”

“And I know I’m imposing, but what would you think about a trip to Telluride?” His question took me aback, but just for a second or two.

“I hear they have snow, Senator, lots of it. And, you know, I haven’t been able to ski here yet ...” I let the idea dangle there, and I heard the rumble of his chuckling on the other end.

“I’ll make some arrangements with law enforcement up there and get your expenses handled somehow. You’re doing great, son. Just keep me informed. Gotta go, this damned meeting is starting up again. Thanks for everything.” And the line went dead.

That’s the thing about People In Charge. When they want something, they know how to stroke you just enough to keep you happy, to make you want to help them more.

\* \* \*

## Five

When I finally got around to my voice-mail messages that evening, I listened to an aide to Senator O’Malley telling me to expect an express delivery on Thursday morning. Of what, it wasn’t clear, but I was going to have to sign for it, so would I please be at home between 9:30 and 10:00? By the time I got the message, I had tidied everything up and had a report ready to email to the Senator, although I didn’t quite know what address to send it to.

Upon getting home early that afternoon, I had plugged in the mystery cell phone to get it charged up—the charger for my phone fit the plug, so I just used it. Then I stood under a hot shower until the water began to cool off—a long time, because I have a 50 gallon water heater that I keep turned up high. I made myself a huge, greasy lunch—breakfast actually, in the sense that it was lots of bacon and eggs, with green chiles and a couple of tortillas smeared with refried beans—and a big pot of coffee. It was about 4:00 when I finally sat down at my desk to tackle the mystery phone. Outside, the snow drifting down onto the piñons and junipers looked to be almost over, picturesque as ever. At my house, there was about a foot of new snow, which meant that there would be eight inches or so down in town.

Best not to go anywhere this afternoon, I thought. The good citizens of Santa Fe, not to mention the tourists, would have the streets snarled up for hours. It takes about three good snowfalls each winter before people learn how to drive in winter conditions all over again, and this was only the second.

The phone was a treasure-trove of information. Elizabeth had obviously figured out all its bells and whistles and made use of them. When I got its battery charged and turned it on, it told me that it had a 310 area-code number and that it belonged to Betsy. I had to turn it off and on again to get its entire number written down, and then I did an area-code and prefix lookup on the internet and discovered that it was a Los Angeles phone, the northwest part of Los Angeles including Malibu. So Derek Davidson lived in Malibu and Telluride—no wonder he was chronically broke.

There was a single caller ID from a number I didn’t recognize, but since it was from 970—western Colorado—I immediately thought of Telluride. There was also voice mail waiting, but I couldn’t do anything about that because I didn’t know Elizabeth’s security code. The list of speed-dial numbers was too long to analyze, but I copied them down. One was the direct-line number Senator O’Malley had given me.

The recently-called-number list was also instructive. There were three calls to two different 310 numbers, maybe to Davidson’s house and/or his cell phone, I supposed. The 970 number ID’d as having called this phone was on the recent list as well. And there were several calls to local numbers, presumably associated with setting up the brunch. But it was troubling that she had called Alex twice—once Friday and again on Saturday afternoon, after the brunch. Alex hadn’t told me about that.

I began to worry about the trust angle of our relationship. Alex was a bit flaky, but that was mostly a veneer, a misdirection to make people underestimate her. If she was using that trick on me, I had to worry.

I ended up spending nearly an hour with Elizabeth's phone and even went so far as to look up its user manual on-line to make sure I wasn't forgetting anything. I assembled all the information I had into an email for Senator O'Malley and realized that I didn't know how to send it to him.

So I picked up the house phone to call him and that's when I found out I had the voice mail telling me that I had delivery coming from O'Malley's Washington office in the morning. There was also a message from Orlando Aguilar, thanking me for my help earlier in the day. He also said that the plaster casts that Jake and Ricardo had obtained were of two different footprints. One matched the shoes that Elizabeth had on when we brought her in, and they wanted all of us BERT guys to bring in the boots we had been wearing on Monday to see if they matched the other one. We were all supposed to come by the Nimbie offices in the morning. Well, I thought, that will give me the opportunity to turn in the phone.

I called Senator O'Malley. It was about 5:00 and I thought that maybe his daily schedule in Albuquerque would be winding down and he'd be available.

"Mr. Livingston, how good to hear from you again." Long-distance caller ID, I guessed.

"Afternoon, Senator. I got a call from one of your aides about a delivery from your office in the morning."

"Right, and I'll tell you all about it in a minute. What do you have for me?"

"A report that I'll email to you, if you'll tell me an appropriate address. I didn't want to send it to your public senate office address. For one thing, I figured it would get buried in with the usual crush, and for another, it may be sensitive, I don't know."

"Hmm. Good thinking." He rattled off an alternative. "Can you give me a quick summary?"

"Here's something I just heard that's not in the report: the Nimbie guys I took up to the site today found a footprint under the snow that's not Elizabeth's. Because it was under the snow, it's probably not mine or one of the BERT's either, but we're going to check that out tomorrow." I also gave him an overview of what I'd discovered from Elizabeth's phone.

"Excellent. I'll have one of my people do a reverse look-up of all the numbers you found. And I'll have her email the names and addresses back to you, so you'll have them, too. I'll also need to see what I can do about getting the cellular company to give me Betsy's voice mail security code. Let's see. I can get her voice mail from here, can't I?"

"Yes, but only if you get it before the Nimbies do. I'm going to turn in the phone tomorrow morning."

"Oh, yeah, you need to do that, don't you? Tell you what: I'll get someone started on that tonight. Got just the person. Now. Let me bring you up to date. The package coming your way has a credit card in it, in your name but with my office here as the billing address. You'll never see a bill. I think you have to make a phone call to get it activated and set up one of those PIN numbers, and you can use it to get cash and everything. It's an unlimited ceiling card in one of those rare metal colors. That'll take care of your expenses for this whole thing. There's also some information about an appointment I got for you with the Colorado Bureau of Investigation tomorrow afternoon, up in Durango. I figured you could get there by late afternoon, stay overnight, and head on to Telluride on Friday, maybe get there in time for some skiing. There's information about reservations in the package you'll be getting, I think at the Strater in Durango and at some condo or something in Telluride."

“Sounds like you’re running a travel agency, Senator.” I was learning to recognize the rumbling noise as mirth. Crusty old fart that he was, he had a good sense of humor. “So I talk with the Colorado Bureau of Investigation tomorrow and head to Telluride. OK. Any agenda for the meeting tomorrow?”

“They’ve been briefed. And I don’t have any specific things to suggest about Telluride. It would be nice to know where Davidson was last weekend, of course.”

“For sure. I thought I’d just check some things out—his behavior, for one thing. I mean, he ought to be in some kind of mourning, you’d think. And his whereabouts last weekend is something I want to find out about. Oh, one more thing, Senator. Maybe your people could do a discreet background check on one of the people whom Elizabeth called on Saturday. I’d look into it, but I have a conflict of interest, because she’s my girlfriend. Alexis Hall. Elizabeth called her Saturday afternoon, but Alex didn’t tell me about it, and I’m wondering what’s up.”

“You suspect your own girlfriend? Son, I’ll turn you into a detective yet.”

\* \* \*

By hustling, I managed to be on the road at 10:15 Thursday morning, shortly after Senator O’Malley’s package arrived. As promised, it included a Platinum MasterCard and information about reservations and my appointment at the Colorado Bureau of Investigation office in Durango.

I know I should have been flattered to get a platinum card, but secretly I had been hoping for something better. I mean, with all the credit-card inflation that’s been going on, platinum cards have become passé. I figured that O’Malley’s office would at least get me whatever the next thing up is. Titanium? Molybdenum? Beryllium?

Here in Santa Fe, the local joke is that the banks up in Los Alamos—up there in the “Atomic City”—should issue plutonium cards. They could even make them glow in the dark. But that’s the trouble with banks—no sense of humor.

Down at Nimble headquarters, Detective Aguilar had appreciated my showing up bright and early at 8:00, for the shoe test, but he had been less than gracious about Elizabeth’s cell phone. I tried to act innocent—I’d picked it up, put in a pocket, and forgotten about it, was my excuse—but he hauled out his threat to hold me for obstruction again, just like on Tuesday when I was late. It was amusing to see the look on his face when I mentioned that I would have brought it in yesterday except that I was on the phone with Senator O’Malley.

And it was interesting to find out that none of the shoes from the BERT members matched the cast they had taken. So it looked as if Elizabeth had been up there with someone else, because one of those mystery prints had been on top of one of hers.

Wednesday’s storm had blown through leaving enough snow to make the winter-sports crowd happy and to keep the highway crews busy all night. By Thursday morning, the roads were mostly cleared off, with gravel patches where the snow was still packed, and the sky was that crystalline blue we have here. Like Elizabeth’s eyes, I remembered. At the time, as I recall, it didn’t seem at all odd that I was thinking more of Elizabeth than I was about Alex.

The drive from Santa Fe to Durango is about four hours of delicious scenery, and, once you get north of Española, almost no traffic all the way to Pagosa Springs. You wind up the Chama River Valley for a while, then climb up to a plateau where the fantastic rock spires in Georgia O’Keeffe’s paintings form the edge of the next higher plateau. With the bright sunshine on all the new snow, the reds and pinks and purples of the rocks didn’t need artistic hyperbole to be spectacular.

The long stretch past Ghost Ranch and the Amphitheater picnic area was warming enough that the snow on the roadside was already beginning to melt, but it cooled off noticeably up the grade to Cebolla, up on the high plateau. The change from the sage-covered flats, with piñon and juniper on the hillsides, to the piñon and ponderosa of the higher plateau always makes me feel better somehow. As much as I like piñons, ponderosas are real trees instead of just overgrown bushes.

This far northern part of New Mexico always reminds me of Colorado, a foreshadowing of the sub-alpine forests to the north. Chama, the little town snug against the mountains between Colorado and New Mexico, serves as a southern gateway to the San Juans, as well as the western terminus of the Cumbres and Toltec Narrow Gauge Railroad, which comes in from Antonito, Colorado, to the east and north. My route took me the other way, northwest from Chama, over the Continental Divide, and into Colorado at Pagosa Springs.

The Continental Divide is one of those geographic landmarks that usually brings to people's minds visions of snow-capped mountains, rugged peaks, and very thin air. And in Colorado, that's a reasonably accurate vision, all the way north to Wyoming. Just northwest of Chama, however, the Continental Divide runs across a pasture, barely discernible as a slight ridge in the rolling, high-plains prairie. It's quite the anti-climax. But even so, crossing it to the Colorado River drainage, what everyone calls the "Western Slope," always gives me a little charge for some reason. And with a couple of feet of new snow glinting in the sun under a blue sky, on that particular trip it was more than just a little charge. But it wasn't just the snow and the sky—something about leaving Santa Fe and all my personal baggage behind for a few days was uplifting.

Past the turnoff west toward Farmington, the highway to Pagosa Springs climbs into the southern San Juans, and soon it not only looks like Colorado but is. The rest of the drive to Durango is the mountain-and-valley country that teases you with peeks at views every now and then and frequently takes your breath away with an open vista of mountains on a grand scale.

The problem is that it's filling up with subdivisions and traffic, in the form of trophy homes that are absurdly ostentatious and SUVs driven by people who think four-wheel-drive makes them invincible. Between Pagosa Springs and Durango, US 160 is nearly saturated, and there's no point in trying to make good time.

On that trip, the drive was especially depressing for me, because I hadn't done it for several years. As Pagosa Springs was reaching farther and farther west with developers busy turning historic ranches into vacation-home subdivisions, Durango was reaching farther and farther east. The two won't meet for some time yet, but it's in the cards. It makes me feel like an old-timer, but I remember when the road to the Durango airport east of town was considered way out in the country, and the Animas River Valley south of town was the industrial strip. Now, according to the directions that O'Malley's office had sent, the offices of the Colorado Bureau of Investigation were south of the old part of town in the business park across from the main mall, but that I shouldn't be distracted by the other mall, the new one. Two malls? A business park? What, I wondered, had the Chamber of Commerce wrought?

The business park was a mixture of warehousey-looking concrete buildings and prefab offices, all one story and rather glum in the winter whites and grays. Predictably, the Colorado Bureau of Investigation was in one of the pre-fabs, a sterile, government-issue double-wide. But at least it was easy to find, with its big CBI logo over a smaller sign that said "Annette Trieri, Field Office Director."

\* \* \*

I guess I'm either a lonely guy in denial or maybe just a pushover. I mean, I nearly fell for Elizabeth Davidson during a chance street-corner encounter. And I was in love with Annette Trieri, Colorado

Bureau of Investigation, from the moment I laid eyes on her. I noticed the gold band on the ring finger of her left hand right away, but it didn't matter—I knew I was a goner.

I had been musing about what to call the employees of the Colorado Bureau of Investigation. After all, I thought, if I call the home folks “Nimbies,” it would only be fair to call these folks “Seebies.” That thought spawned others, about the investigators in the other nearby states—logically, they would become “Arbies” in Arizona, despite the fact that it would make them sound like a sandwich, and “Ubies” over in Utah. Or, better yet, “Hubies” to make them sound cute. But then I met Annette Trieri and the Colorado organization snapped into place as the “CBI” for me.

A receptionist led me down a government-drab hallway, into an office decorated with framed posters of national parks and monuments in Colorado. It was a nice touch—they brightened up the place and made the little room seem bigger somehow. She was sitting with her back to the door, tapping at a computer keyboard, but she heard us, I guess, and jumped up to introduce herself. And I was instantly smitten.

She must have been used to this reaction from guys, because she took it in stride. I mumbled out my name somehow, let myself be seated in a chair next to her desk, and listened in a daze as she talked about how she had received a phone call from the senior U.S. Senator from Colorado the day before.

“... called me yesterday. He made it as clear as could be that he'd really appreciate it if I help you out. I think he owes Senator O'Malley a favor or something.” She smiled, and I hoped my mouth wasn't drooped open. “And I owe him, because he's been helpful in getting federal funding for some of our pet projects. He told me about Senator O'Malley's concerns, how tragic the whole thing is. And how you've volunteered to help out. Or maybe you were drafted. But he didn't tell me anything about you or your background. Do you have any experience with law enforcement or investigations?”

I was hearing her words, but I guess the communications among my ears, my brain, and my mouth were having bandwidth problems, like when you try to browse the internet using a really, really slow telephone modem. There was a long pause, during which she cocked her head to the side and raised her eyebrows with a quizzical smile.

“Uh, well, ah, no, not really. I'm a volunteer on the Back-country Emergency Rescue Team we have in Santa Fe, so I work with local law enforcement down there sometimes. But I don't really have any real experience with real investigations or anything. Um, Senator O'Malley seems to think that I can contribute to this whole thing by virtue of my outsider perspective, I guess. And so far, I've been lucky. For one thing, maybe you heard this, I was with the group that found her body. It was something of a shock, because I had accidentally bumped into her in downtown Santa Fe on Saturday. And my gir ... ah, a friend of mine knew Elizabeth and had brunch with her on Saturday. So there's a vague connection. And I found Elizabeth's cell phone up where we found her body. So, I guess Senator O'Malley thinks I can help somehow.”

About that point it occurred to me that I had to figure out how to get the motormouth thing under control, and quickly. “Anyway, I came up here at his suggestion to go to Telluride to check out Elizabeth's husband. He seems to be under some, ahh, suspicion. For some reason. I guess.”

A little voice in my head was shouting “LAME!!!”, but I was happy to have finally run down. Either she didn't notice, or she was too gracious to show it.

“I did some checking this morning. This guy you're asking about, this Derek Davidson, is also someone we're aware of. I'd call our interest 'more than casual,' but there's nothing formal in progress. The deal is that we got asked by the Telluride town marshal to look into his background. CBI does this kind of thing for local law enforcement all the time. It seems that Mr. Davidson has been living a highly

visible existence up there. Flamboyant behavior. Women. Parties. Like that. They were wondering about drugs.”

“Both Senator O’Malley and Senator Prince—he was married to Elizabeth for a while—they don’t seem to think much of Davidson, that’s for sure.”

“They’re both sensible fellows. It turns out that Davidson has other names and a long career history. Before he got into the movie stand-in business, he had a little legal adventure under the name of David Stevenson. He got caught in a major drug sting operation, coke, it was, but got off on a technicality. Before that a girlfriend charged him with battery, and he got put on probation, as Steven Jorgenson.” She laughed. “The guy needs a dictionary of names, I guess, or a better imagination.”

“Both Senators seem to think he’s been living beyond his means and is after Elizabeth’s money. She had trusts and life insurance. So . . . Davidson?” It was my turn to laugh. “Now I’m confused—yeah, that’s right, Davidson, he’s got motive. One thing I’m going to try to find out is where he was last weekend. Also how he’s behaving. I mean, his wife just died. He ought to be, you know, upset, or something.”

“I kind of thought so, too. So I called the marshal up there to see if he has any information. Seems that Davidson’s been partying almost continuously since Monday night. Bar-hopping with various sweet young things in tow.”

“Drowning his sorrows, no doubt?”

“If you ask him, sure. All perfectly innocent, I bet. And he seems to have been AWOL over the weekend.”

“I’m told that Elizabeth expressed regrets about their marriage on Saturday, to her friends in Santa Fe. Sounds like she knew something.” I realized that the conversation was actually working, that I’d begun to treat her as a real person rather than Aphrodite.

“So Mr. Davidson-Stevenson-Jorgenson begins to look suspicious. I’ve got a folder of information here—it includes how to contact me and the marshal in Telluride. He’ll be expecting you. I’ve asked him to cooperate, because you can do all of us some good by finding out what’s going on with this guy. And I’ve also asked him to spread the word.”

I left feeling good about the investigation, about her, and even about myself. And I decided that I was glad she was married—if not for that wedding band, I’d have made a seriously big doofus of myself. As it was, I hoped that I’d covered my foolishness well enough.

\* \* \*

## Six

I started for Telluride early Friday morning, because I’d seen on the TV weather the night before, from the same pretty face in Albuquerque via the station’s Durango translator, that yet another storm was moving in.

The Strater lived up to its reputation for elegance, and I had a great dinner Thursday evening just down the street, by the train station. Thursday Night Football was on, and I managed to keep occupied by watching it and studying Annette Trieri’s file of information about Derek Davidson, or whatever his real name was, at the same time. She had included pictures, a list of the movies he had been in, and his

rap sheet. And I hauled out my computer, called up my internet service for email, and sent a progress report to Senator O'Malley. I thought he would want to hear what I'd learned about the background and behavior of his daughter's bereaved widower.

Getting to Telluride from Durango offered two possibilities on paved roads, but with weather going to happen, I forsook the better scenery of Silverton, Red Mountain Pass, and Ouray in favor of the slightly shorter, and lower, trip over Lizard Head Pass. That way also involved less traffic. You head west and then northwest over to the Dolores River Valley, northeast back up the valley to the pass, and down to the San Miguel Valley and Telluride.

That got me there by 10:00, and it was just starting to snow. I drove around and scouted out where I would be staying, finally finding it to be up the hill from town in something called Mountain Village. But there was parking and a ticket sales kiosk at the foot of a nearby lift, so I had a ski-in, ski-out condo. Thank you, Senator O'Malley! I began scheming in my head to come up with a good reason to stay a week or two, instead of just for the weekend.

The trouble with being in BERT is the free ski pass we get. I never pay for lift rides, so I'm spoiled rotten. They wanted nearly \$80 for a one-day lift ticket at Telluride, and that was a serious case of sticker shock for me. Even though I had Senator O'Malley's credit card, it just offended my sensibilities to pay that much for a day of riding up the mountain, even the mountain at Telluride.

But at that point it was snowing hard, in fluffy, light, December flakes, and my offended sensibilities were quickly mellowed by thoughts of new powder.

One thing about Telluride that I hadn't expected—I didn't feel as much like an alien as I usually do on my telemark ski equipment. From the lift, I could see lots of folks on the hill were cruising around with freed heels. I guess I'm used to all the tourists from Texas visiting Santa Fe who act like telemark skiing is some kind of weird fertility rite, pointing and gawking. Of course, that only reinforces my notions of superiority.

Feeling superior isn't why I took it up, though. I got started because of BERT—there are times when we need skis to get to our search and rescue location, and backcountry skiing is done on cross-country equipment, so you can walk up hills and skate and glide across flats when you need to. Telemarking is just the style of turns you use when your heels aren't clamped to the skis the way they are in alpine equipment, when they're free to lift clear of the binding as you push forward onto your toes. Otherwise, the equipment is much the same, because modern telemark boots have plastic shells, modern telemark bindings can release like alpine bindings, and modern telemark skis aren't much different from alpine skis. And, of course, I'm completely modernized.

For me, there are two significant advantages besides the backcountry necessity of telemark equipment. First, the boots are way easier to walk in, like stiff hiking boots instead of lightweight cement overshoes, because they flex forward nicely. And second, the style is just so graceful and relaxed, at least once you get used to it. It feels kind of like walking down the mountain with big gliding strides instead of swerving back and forth and bouncing in those parallel turns. Moreover, you can always revert to alpine-style turns on telemark equipment, but it doesn't work the other way.

It's also a great way to meet women, because it provides a far better conversation starter than, say, "Hey, doll, wanna see my tattoo?"

And that's exactly what happened to me that Friday at Telluride. On my very first lift ride, I got on the chair with two women, somewhere in their mid-twenties, eye-catching in their tight-fitting ski outfits, and I remarked about how many tele skiers I was seeing. They came back with, yes, you see it a lot at Telluride, but they couldn't fathom how anyone could manage to do that. So I launched into my discussion about how easy it really is, and how relaxed and graceful it feels, kind of like dancing, how

you don't even feel like smashing through bumps like you see alpine skiers doing, how they could learn it with a single lesson. They got fascinated, we talked, and I bet I could have wound up at least at lunch—if not in a hot tub—with them if I'd tried.

But it was the first ride of the day, and I wanted to ski the powder and explore the mountain. They didn't look like the type that could keep up.

Ah, the sacrifices we sometimes have to make for our sport.

So I spent about two hours riding up and skiing down, taking advantage of the new snow and enjoying every minute, managing to cover most of the mountain. Its size finally persuaded me that the lift ticket price wasn't all that unreasonable. Compared to my little home area in Santa Fe, Telluride is just enormous, with about three times the vertical.

By 1:00 I was getting tired and hungry, so I stopped at an Italian restaurant on the top of a ridge to grab some lunch and rest a little. I planned to ski a few more runs and take the Plunge—nearly 3000 vertical feet of double-black-diamond bumps—all the way down to town in time to visit the local constabulary that afternoon. Then, later, I would ride the gondola back to my condo in Mountain Village. Telluride may be doing what so many ski-resort towns have done—grow explosively, gentrify, and crowd the old-timers out—but at least it's doing it with a little forethought. That gondola, for example, is designed to make getting around easy, which helps the traffic and parking problem, and keeps down the air pollution.

Sitting in the restaurant enjoying the view, such as it was with the snow falling so hard, I wondered where the crowds were. Apparently, most everyone had been intimidated off the mountain by the weather. There were only a few people in the place, including a small, rowdy bunch at the bar. A couple of especially obnoxious squeals finally got my attention, and I turned to shoot them a dirty look.

There were three babes standing around a guy on a barstool, alternately pressing up against him and stroking his shoulders and hair. One was massaging his back with her ample chest—even though she was wearing a ski suit, it occurred to me that could be rather pleasant. His left hand, with no ring on it, was patting a nicely rounded rump, and the other, sporting a pinky ring, was curled around a beer glass. He'd say something, they'd giggle and squeal and move in close. One whispered something in his ear and, I couldn't help but notice, flicked it with her tongue. He turned sideways to respond, and I was surprised—or maybe not—to see that it was bereaved widower Derek Davidson.

\* \* \*

In real life, he looked even more like a god than he did in the file pictures I got from Annette Trieri. Of course, the mug shots were lousy, but the file had several publicity photos as well, stills from movies he'd been in and candid shots on sets. He looked like a blonde Arnold What's-His-Name, only without the cheekbones and pumped up muscles—and that explained some of the movies I recalled from Annette's list.

No wonder Elizabeth had fallen for him, and no wonder that bevy of babes was climbing all over him. Well, I thought, bereaved widowers need solace in whatever form they can find it. And it occurred to me that maybe I could help.

They didn't seem to be going anywhere in a hurry, so I finished my lunch and had a second beer while I watched the scenery and tried to recall the plots of a couple of the movies that were on the list in Davidson's file. Finally I paid my bill and walked back to the grope-fest at the bar.

“Excuse me? Mr. Davidson?” He looked up with a photo-ready smile on his face, but his eyes told another story.

“Mr. Derek Davidson? I’m awfully sorry to interrupt, but I wanted to say how much I enjoy your work. Without you, there would be some really boring movies out there.” My smile was as genuine as I could manage.

In return, his smile broadened in appreciation, but the eyes just got harder.

“Why, thank you very much. Which is your favorite?”

“And I also wanted to say that I’m terribly sorry about your wife’s death last weekend. My sincere condolences. It must be hard on you.” His eyes widened, and his smile dimmed.

“Wife!! You didn’t say anything about a wife!” Ms. Round-Rump seemed truly surprised.

“She died last weekend? While you were with us? You didn’t tell me that, you scumball.” Ms. Ear-Licker had a certain sense of decency, apparently. And Ms. Chest-Masseuse took a step back, a look of indignation on her face.

“Thanks, a lot, pal.” There was real menace in Davidson’s voice. “And I asked you which of my movies you were referring to.”

“I just came up from Santa Fe to do some skiing, we don’t have enough snow down there yet? But it was in the papers on Tuesday and Wednesday. It sounds like they don’t think that it was just an accident. Boy, I sure am sorry, and I hope for your sake, for your peace of mind, they find whoever killed her.”

Ms. Chest-Masseuse gasped. “Your wife was killed? Last weekend? And you’re here with us? You’re right, Tiff, ‘scumball’ for sure. Let’s get out of here.” And the three of them gathered their stuff and stalked off, leaving Davidson and me staring at each other. I was still smiling, but he sure wasn’t.

“All right, you son-of-a-bitch, you’ve ruined my plans for the afternoon, and you’re not answering my question. Which I asked for a specific reason.” And he stood up, grabbed me by the collar of my ski jacket, and yanked me close. “The reason is that I think you haven’t seen my movies. That you’re just bullshitting me. I think you’re working for the heat.”

I reached up to my collar and, before he could react, slipped my thumb under the little finger of his left hand, grabbed it, and twisted. With his finger bent backward past 90 degrees, his attitude adjusted—he released his grip, and he began to sink to the floor. I increased the pressure until he was on his knees.

“If you think I work for the police, surely it isn’t a good idea to assault me. I could arrest you. But I won’t because I don’t. I’m just an adoring fan. Or I was until I discovered what an asshole you are.” I held the finger firmly and watched his jaw muscles twitch for a few seconds before continuing.

“I’m leaving now. I suggest you sit here and contemplate your sore hand for a while. You touch me again, you’ll have some broken bones. And if you think this hurts,” I gave the finger a little twitch, and he winced, “you should see what I can do to knees.”

All this happened fast, and neither the bartender nor anyone else in the place noticed anything before I turned and walked away. And I didn’t hear any ruckus behind me. Score: Livingston-1; Davidson-0.

One problem with telemark equipment is that getting into the bindings is a little more complicated than those alpine step-in bindings, where you just line up your boot, stomp your foot down, and away you go. I have cable bindings that require squatting down on one knee, fumbling around, and snapping the heel-lock into place. It’s a vulnerable position to be in if someone is mad at you. And I had a feeling that might be the case.

So I picked up my skis and poles and walked away from the restaurant, up a little rise to where I could see both entrances, and turned and put my skis on, watching all the while.

As I was fumbling with my bindings and watching the doors, I was also thinking about skiing. If you've seen World Cup skiing or the Winter Olympics on television, what you've seen are ski racers using alpine equipment. They do this not because it's easier or more popular; they do this because it's a faster way to get down the hill. Of course, a good telemark skier can ski faster than a mediocre alpine skier, especially on real-world ski runs as opposed to those ice-covered race courses. But I had the notion that Davidson would be better than mediocre. Of course, I'm better than merely "good," but how much of a skill advantage I would have was a good question. As was whether that advantage would make up for my disadvantage of slower equipment.

On the other hand, it was still snowing hard, and, while I was in at lunch, another two inches or so had accumulated. There was at least a foot of new powder on the ground, chopped up where people had skied it and creamy smooth where they hadn't. My telemark skis are great powder skis—they float like corks. Maybe Davidson would be at something of a disadvantage there.

On yet the other hand, he knew the mountain. I didn't.

And at that point, I figured there were too many hands to count, so I should just ski down to town and not worry. Maybe watch my back, but not worry.

Except I wouldn't have to, because there he was, coming out the same door I had. I felt an adrenalin surge putting my body on high alert, but he just went straight to the ski racks, found and stepped into his equipment, and skied off down the mountain without looking my way. Away from town, I noticed, over toward an intermediate run in the other direction, down to the Prospect Bowl, not down the Plunge.

Maybe, I thought, that adrenalin will be helpful to get me down what I'd heard called the toughest run in Colorado.

\* \* \*

I called him Saturday morning at about 10:00, at what I thought would be a reasonably decent time, not too early. But my idea of a decent time and his were clearly not synchronized—he seemed barely awake.

I'd puzzled over how to reach him all the way down the Plunge, finally remembering about the phone numbers stored in Elizabeth's cell phone. I had them in my notes, and there were three possibilities, two with California area codes and one with the code for western Colorado. Naturally, I made the local call first, and he answered after six rings.

"Yeah? This better be good."

"I think my favorite was that scene in 'Accidental Spies,' where you do the stand-in for Arnold hanging from the landing gear of the crop-duster to rescue the girl. The timing on that was exceptional. The audience in the theater I was in was going nuts. It was just great work. How's your finger?"

I could hear labored breathing during the long pause.

"OK, so you *have* seen my movies, at least that one. How'd you get this number? Who the hell are you and what do you want?"

"Long story, Mr. Davidson. And I'll trade you everything I know for one little piece of information. How do I get hold of that girl called 'Tiff,' the one who called you a scumball yesterday? If I can talk with her, I may be able to do you a very big, a huge favor. Which I'll explain after I talk with her."

The pause went on longer this time, but the breathing was somewhat easier.

"Look, pal. I don't know who you are or what you want, but I do know that I got no reason at all to trust you. What the hell's going on, anyway?"

“What’s going on is that you’re the prime suspect in the murder of your wife. And there are two U.S. Senators, at least, who have the same opinion of you that Tiff does, and they want to hang you up by your balls. Also, the Colorado Bureau of Investigation is interested in you, for a variety of reasons including the murder. Based on what I saw yesterday, I don’t have a very high opinion of you, either, but my main concern is finding out who really killed Elizabeth. And I heard something yesterday that’s led me to believe that maybe it wasn’t you, or at least you didn’t do it personally. So if I can talk with that babe who was licking your ear yesterday in the bar, I just may be in the position to do you the favor of getting those Senators off your case, not to mention conventional law enforcement. At least as far as Elizabeth’s death is concerned. Understand?”

“Who are you working for?”

“Like I said, I’ll trade you everything I know for information about how to talk to Tiff. OK?”

“So her old man thinks I killed her, huh? He didn’t like me from the start, the old windbag. And I gotta tell you, I don’t like him, either. And to make things worse, it turns out that his daughter took after him, personality and controlling nature and everything. A real ball-buster. Too bad for me I didn’t find that out until after we got married. So I’m glad to be separated from her, but I sure as hell didn’t kill her. And here’s Tiffie’s number, unless she and her friends blew town already.” And he finally rattled off a phone number. “Ha! My little joke. They were blowing just about everything else in sight. You talk to her and call me, OK? That’s the deal, right?”

“You got it. And let me suggest that you lie low for today, at least. I’ll get back to you as soon as I can.”

As much as I thought Derek Davidson was a Grade-A asshole, what I had told him was true: all I really wanted to do was to find out who was responsible for Elizabeth’s death. Maybe it’s the scientist in me, trained to set personal feelings aside and go wherever the research leads. Or maybe I felt that I owed it to the Senator, for placing so much trust in me. Davidson, I thought, would end up getting whatever he deserved without my setting him up. What I needed was to find Elizabeth’s killer.

Friday afternoon, after wearing out my legs negotiating the moguls of the Plunge, I’d spent a couple of hours in town in the offices of the Telluride Marshal’s Department, where, with persistence and patience, I had finally worked my way into the office of the Chief Deputy. After explaining why I was in town and dropping Annette Trieri’s name into the conversation, I found he became most cooperative, and he offered to help however he could. He told me that Annette had called, and that he had also talked with the police department up in Mountain Village about me. They were all on my side. Davidson, it seemed, was someone the entire department was ready to send packing.

After talking with Davidson on Saturday morning, I called the Chief Deputy with the number Davidson gave me for Tiff, to see if it could be attached to an address. Ten minutes later, he called me back with the information. It was a condo in Mountain Village, a couple of blocks down the hill from mine. Small town coincidences, just like in Santa Fe, were inevitable, I decided. He also gave me a name at the Mountain Village Police Department and suggested I contact him if I needed assistance up on the hill.

So, at 10:45 on Saturday morning, exactly a week after I’d run into Elizabeth Davidson on San Francisco Street in Santa Fe, I found myself ringing the doorbell of a nondescript residence in Mountain Village, one of those places where you desperately need to remember the number because there are no other distinguishing characteristics to remind you where you’re staying. I wasn’t expecting much, because the snow had continued overnight, and that morning the sky was blue and the sun was cutting sharp-edged shadows everywhere. Surely, I thought, anyone who was here for a ski vacation would be on the mountain. And the locals were undoubtedly lined up waiting for the lifts to open two hours ago.

But, no, the door opened a crack, and an emerald-green eye peeked out. I manufactured my most charming smile, or at least what I thought was.

“Hi! I’m Sandy, and I’d like to talk with Tiff if I could. Is she here?”

“Do I know you?”

“Well ... not very. We all bumped into each other yesterday at that Italian restaurant up on the mountain. I’m afraid I’m the one who broke up your little party. And Tiff is the only one of you whose name I know. But I really do need to talk with her. There’s no trouble, or anything. Just conversation.”

“My name’s Adrienne, call me Addie.” And the door opened to reveal Ms. Round-Rump standing there wrapped in a towel. “We’re just getting ready to go ski. Want to come?” And she smiled almost wickedly.

\* \* \*

## Seven

It turned out that Tiffany, Adrienne, and Shelley were staff assistants in a large stock brokerage in Los Angeles, visiting Telluride for ten days of skiing and general vacation. They were due to leave the next day, so I was fortunate to have caught them. Adrienne chatted me up while she watched me hang up my coat. She apologized for not hanging it up for me, but she thought she’d better hang on to the towel instead. I wasn’t going to touch that one, no matter what.

She led me into the dining room, where Tiffany, already dressed and ready to ski, was sipping coffee, staring out at the view of the mountain. Adrienne scampered back down a hall toward, I assumed, her clothes.

“Good morning—I’m sorry to barge in like this, but I’d like to talk with you for a minute? I’m Sandy Livingston. We met yesterday, very briefly. At the restaurant up on the mountain?”

“Yeah, I won’t forget that. And I guess I owe you for getting the truth out, as disappointing as it is.”

“I can tell you’re almost set to ski, so I won’t keep you. And, I don’t mean to defend him or anything, but he really is single, now, and he told me that he wasn’t getting along with his wife, uh, before.”

She giggled. “We saw your little confrontation, just before we left. He’s not used to being on his knees, that’s for sure. But you talked to him more?”

“Yeah, I called him this morning and apologized, sort of. Got him to open up a little. See, his ex-father-in-law suspects him in his wife’s death. He says he didn’t even know about it, although I’m not sure I quite believe that. But it’s very possible that he’s not to blame.”

“So, what happened?”

I gave her the edited version of Elizabeth’s story, leaving the foul play angle as vague as I could and avoiding specifics of the time line.

“So, the reason I need to talk with you is that you said something yesterday that got my attention, something about being with Davidson last weekend. Can you be more specific about when?”

“Why should I? None of us owes him anything. The jerk.”

“Yeah, I thought about that. And it would be easy to let Davidson take the fall for this thing. But it’s possible that he wasn’t involved, or that he was involved but not directly. What I’m looking to do is to find out what really happened. I feel connected, you know? I met her last Saturday, and she seemed like such a nice person. And I was on the rescue team that found her body. I’ve talked with her father, the Senator, and I saw past his politician mask to the real person, the concerned and upset and heartbroken father in there. So, I want to find out what really happened. And if you were with Davidson, here, last weekend, he couldn’t have been in Santa Fe. Right?”

“Right. He wasn’t—he was here. See, Shelley and Addie and I got here a week ago yesterday, and we met him last Saturday, Saturday morning, on a lift ride up the mountain. We came back here that afternoon, and we’ve all been sharing him all week, here and at his house. And downtown, some. The three of us are such good friends that we can do that and make it work. Although I’m especially upset, because I was really beginning to like him a lot. Beneath all that macho stuff there’s a nice guy in there, believe it or not. And he lives in Malibu and I have a place in Westwood, so I was beginning to think beyond this week of vacation. And then you came along and started talking about his wife. It pissed me off, you know? Not you, but him being married and not telling.”

“So, just to be clear, you met him a week ago today, and you or one of your friends were here with him ever since, at least for the most part?”

“We met him last Saturday morning, yeah. And,” she blushed, “I’m surprised we’re not starting to grow gills, we’ve all spent so much of the time since in his Jacuzzi together. I don’t know how he could have been in Santa Fe between when we met him and now. So he didn’t kill her. I guess he could have arranged for someone else to do it, but that doesn’t seem like him. Like I said, he’s really a nice guy, once you get past his bravado.”

A third person entered the room, preceded by a well-endowed chest, which was stuffed into a ski outfit. Shelley, I assumed.

“Tiff, are you ... Oh. Hi there! Where were you last night when we needed you? I’m Shelley.”

“And I’m Sandy. Sorry about the scene in the bar yesterday. It wasn’t worthy of me.”

“Bar? Oh, yeah, you’re the guy that Derek went to his knees for.” She giggled. “Bet he’ll never live that down.”

“I won’t tell on him if you guys won’t. And, look, I shouldn’t have been so catty yesterday. But I was a little ticked off that he just lost a wife and he was fooling around already. I didn’t know that they were separated.”

“They were? Officially?” Tiffany seemed to sense a ray of hope.

“I guess I don’t know about ‘official,’ but they weren’t together, were they? So, anyway, I’m sorry I broke up your party. But it looks like you guys are about to hit the slopes. Need company? I remember there’s a quad chair around here somewhere.”

Which is how it all got started, by skiing. Perfectly innocent.

But one thing led to another. Predictably, it started with a conversation about my telemark ski equipment and their fascination with the style. Because Saturday was their last night in Telluride, and I was new to town and needed to be shown all the hot night spots, they were happy to have me escort them around later. And let’s just say that these girls were *very* good friends. At some point during the evening, when I surprised myself by how much I was feeling like a teenager again, I thought of Alex. It made me realize that all the fun I was having with these three lovelies was going to make me feel very guilty someday.

Guilty, guilty, guilty. But in the meantime, talk about clean sinuses ...

\* \* \*

Sunday morning I took them across the valley to the airport, where we said our goodbyes in a very sexy group hug with me in the middle. I promised to look them up when I got to Los Angeles; they promised to find me if they got to Santa Fe; the hypocrisy flowed like the drinks had the night before. But it was friendly, and—who knows?—maybe we would see each other again. Just in case, I made a mental note to see them separately. Even feeling like a teenager again wasn't really enough to deal with the three of them together.

After that it was time to let Davidson know that his alibi was secure, as least as far as his presence in Telluride was concerned. He wasn't answering his phone, though, even after I let it ring an obnoxious number of times, so I looked up his address in the CBI file, found it on a map, and drove by.

It was on the bluff overlooking the Telluride valley, clearly a trophy home, but it was dark, with a For Sale sign out front. I called the agent, and discovered that it had been listed only the day before, the owner was "motivated"—Realtor-speak for "in a hurry and willing to negotiate"—and would I like a showing?

It occurred to me that I might be able to learn more about Davidson and his relationship with Elizabeth if I were able to look through the house, so I acted interested by talking about how I'd been driving around and was struck by the beauty of the place and its view. I went on a little, with the expected comments about how I wasn't sure that the house would be in my price range and so on, but that it was one of the best properties I'd run across. Telluride, I said, has everything I ever wanted as a vacation destination, and it's close enough to my home in Santa Fe—I made certain to drop *that* name into the conversation—that it seemed like a real possibility. Blah, blah, blah. I probably sounded just like all the people who buy second homes in Santa Fe.

The agent ate it up, and we made an appointment for 2:00.

Between seeing the girls off and the appointment, I managed to work in a couple of hours of skiing—that platinum card was really coming in handy—so at 2:00 I was feeling comfortably accomplished as I pulled up to Davidson's house. And there was the agent, right behind me in a Jeep Grand Cherokee. Doris Weatherby was a middle-aged, matronly woman, somewhat overweight—quite the contrast to the young ladies I'd spent the night with.

She introduced herself and immediately began apologizing. The house, being listed only yesterday, wasn't really prepped for showing, it might be a mess (it certainly was yesterday), she couldn't get in touch with the owner today, and so on. I thought of it as a sales technique. I had told her of my genuine interest on the phone, and she had said the right things to raise my expectations. Now she was intentionally lowering them, so when I actually saw the house, I'd be all the more impressed. Which meant that it was time for me to lower her expectations a notch or two in return.

"Hmm. Only a two-car garage. Do you know if it's heated?" She looked deflated.

"Oh. No, I don't. Let's check when we get inside. Do you need a bigger garage? Do you have, um, family?" She was fumbling with the lock-box on the front door, trying to get the house key out.

"I might be able to make do. See, sometimes I'll be driving up here, like this time, and sometimes I'll be flying. I'll need two cars here—a summer one and a winter one. So the third one would be here the times I drive up. And nothing beats keeping a car in a heated garage for comfort and convenience. But it's not a deal-breaker." This cheered her up a little.

She finally got the door open and we walked into the entrance foyer, or vestibule, or whatever such things are called. It was designed to impress and even intimidate, with a cathedral ceiling probably 30 feet high at the peak, graced by a large, ornate chandelier and a grand staircase up to the second floor balcony, which encircled the room we were in. A large portrait in oil of Davidson, in full fox-hunting regalia sitting on a horse, stared down from the opposite wall. The pack of foxhounds was tearing apart something under the horse.

“Gee,” I said, “Do you suppose the painting comes with the house? I could have someone paint my face on it. It would fit my style perfectly.” The sarcasm went right over Doris’s head, however.

“Um, probably not, but I can ask. Let’s see. Before I forget, why don’t we check the garage to see if it’s heated? I think it’s through that door over there.” She was moving off to the left, past the base of the stairs through what looked to be a mud room, so I followed.

It turned out that the garage was heated, and, of more importance, full. A shiny red BMW M5 sat next to a dirty green Dodge Durango. Either Davidson was home or he’d ridden the bus to go skiing. But that was lost on Doris, as she was too deeply focused on her sales pitch to think of such things.

“Now.” she was leading me back into the house, “Just to the left here is the kitchen, a large one as you can see. Hmm. It’s going to be lots more attractive when it’s cleaned up, as I’m sure you can tell. But note the professional appliances, Sub-Zero ’fridge, Garland range. And this kind of quality is seen all throughout the house in every way. The windows and doors are by Pella, and ... um, Mr. Livingston?”

I was listening with only one ear, but that was enough to catch my name. I’d been staring out the floor-to-ceiling windows of the dining room, across a large deck toward the spectacular view to the north. The snow on the deck was pristine, undisturbed except for a curious pattern of dark spots. It appeared that the spots had rained down after the snow stopped early the previous day.

“I’m sorry, Doris, but I have my own way of looking houses over. Do you know what’s just upstairs from where I’m standing?”

“Yes, I believe it’s the master suite, with more windows and its own deck, more like a balcony, really. You can see outside stairs just off of the left there. Of course, the main staircase in the foyer also goes up to the second ... Mr. Livingston? I, uh, I need to be with you, because the owner still has ...”

I could hear her trotting after me as I bounded up the main stairs. I picked a door that looked as if it might be over the dining room, but it was locked. The next door was obviously a guest room of some kind, and the others were too far around the balcony to lead to rooms over the dining room. So I kicked the first one in and was smacked in the face with a blast of cold air.

Well, I thought, at least he opened the window.

I found him lying crumpled on the floor in front of the open door to the upper deck’s catwalk, the back of his head missing—that, I thought, is probably what’s sprinkled down there on the snow on the main deck—and a snub-nosed Smith & Wesson .38 Special in his right hand.

Doris finally caught up with me, and then I had two bodies on the floor. She took one look at Davidson and fainted in a heap.

Fortunately, she landed on the carpet.

\* \* \*

“I can’t honestly say I’m sorry about this.” Assistant Chief Randolph Winters of the Mountain Village Police Department was shaking his head. “Davidson was a significant trouble-maker in this town. The

marshal and his guys down in the valley say the same thing. They also told me I should help you out because you were going to be investigating him. Do me a favor and don't investigate me, OK?"

Doris had responded to smelling salts, but fainted again when she woke up in the same room as the body. Two burly officers carried her to the next room for re-revival. I was quite happy that Doris had been with me, though, as there would be no question about my own involvement. The subterfuge I'd used to get into Davidson's house was enough to raise suspicion, despite my CBI letter of introduction.

"Chief, I'm not an investigator, but a couple of things here seem strange. Like, if you were going to do this, wouldn't you do it facing the view? I mean, why stand in front of the window looking back into the room. That's what he must have been doing, right?"

"Yeah, you're right. But he also opened the window, like he didn't want to mess things up or anything. So maybe he stared at the view for a while and turned around and did it."

"And there's no snow on this catwalk up here, but there's snow on the deck."

"There's brains up here, though, and blood, that's for sure."

"Could you have your guys check for footprints on top of the brains and blood? That would make me feel better."

"What're you driving at here, Livingston? You think someone shot him and set things up to make it look like suicide?"

"Maybe. Thing is, he was left-handed. One of those publicity pictures in his file shows him signing autographs. And there's a poster on the wall behind him, with the lettering correct, so the picture wasn't printed backwards. He's got the pen in his left hand."

"And the .38's in his right hand, isn't it? Damn. You bet we'll check for footprints. We also need to see if it's possible to lock this bedroom door from the outside. It looks like one of those doors you can *unlock* from the outside, like bathroom doors, but locking them is a different matter." He stared at me in disgust. "Why do things always have to be so complicated?"

"You're right, Chief. I mean, the guy should have just taken a drug overdose, instead of using a gun. People are just so darned inconsiderate." I was smiling so he wouldn't take all that guff the wrong way, but I think it was a close thing anyway.

He finally smiled. "Or, better yet, he could have just had a heart attack, in bed or someplace convenient. Then we could all go skiing. But, noooo, he has to go and get himself whacked, the inconsiderate jerk. Got any thoughts on who?"

"Got me. I came here thinking he whacked his wife. Apparently he did have some redeeming qualities, but I didn't see them. However, it's becoming clear that he didn't kill his wife, at least not personally. So at least I got that part figured out. But now he gets it. I suppose the logical thing to think is that he and his wife were done by the same person. But who that is? ... well, I've got no clue."

About then, a plainclothes officer came into the room from the hall.

"Chief? We've got footprints coming off the deck into the side yard and out to the street. Looks as if they came down from up here."

"Any indication of age?"

"Probably yesterday afternoon, maybe mid-day. The sun hit some and missed some."

"Hmm. Pick a likely pair of shoes from the closet up here and see if there might be a match."

"Right. And I'll send O'Leary up to have a look at this part of the deck."

“Thanks. And, listen, call the Sheriff’s Office, and the marshal downtown. And notify the CBI down in Durango, OK? I think this may blow up on us. Livingston here thinks it’s tied to a murder in Santa Fe.”

“Another state? Geez. Does this mean the FBI’s gonna want in?”

“Not if I can help it, or if the CBI can help it, either.”

“Nor,” I jumped in, “if the NMBI can help it. They don’t trust the Feds either.”

“So, talk to me, Livingston. I could tell you were holding back a bit earlier. And, first, tell me where you were all day yesterday, just to clear that much up.”

“Skiing, during the day, with Tiffany from Westwood and her friends Adrienne and Shelley. Don’t worry, Chief, this isn’t my handiwork. I’ll admit, though, that I gave Doris a load of crap so I could get in here and look around. I wanted to see if I could learn anything about Davidson’s relationship to his wife. I found out he wasn’t in Santa Fe last weekend, but he could have set her up, or something.”

“He was a real suspect?”

“Only because of motivation, I think. He had a reputation of being broke, and she had money that he would come into, maybe. We need to check her insurance policies and her will to find out for sure. Also, his father-in-law, Senator Mike O’Malley, didn’t like him very much.”

“Bad guy to have not like you.”

“Really. But it’s compounded by the fact that our other Senator didn’t like him either. So he was on more than one powerful shit list. The motivation to kill her got magnified by these Senators and the investigation got launched.”

“And you called Doris Weatherby just to look around in here?”

“Right. I talked with Davidson yesterday morning, about 10:00, to get Tiffany’s, the one from Westwood, Tiffany’s phone number. I talked to her yesterday. And I called him this morning to tell him that she cleared him, but he didn’t answer. I drove by the house and saw the sign with Doris’ name on it. So I called her.”

“Did someone mention my name?” Doris walked into the room, on wobbly legs, and immediately looked at the body. Fortunately, for her and for the two burly cops, someone had thrown the bedspread over it. “Oh, Mr. Livingston. I’m so sorry I fainted. I was going to explain the passive solar heating to you, I think. But maybe we should do it another time?”

“Good idea, Doris. Thanks for taking the trouble to show me the house, and I’m sorry this all happened today. How about if I call you this week, when things have settled down?” She gave me her card and, gratefully, escaped.

“Why’d you kick the door in?” The Assistant Chief, it seemed, wasn’t finished with me.

“A couple of things. First, the garage is full—it has two cars in it, and the driveway had virgin snow on it before I pulled in. It stopped snowing Friday night, and I don’t think that Davidson is—was—the type to take the bus. And, of course, he wasn’t answering the phone, but I talked with him Saturday morning. I saw the spots on the snow down on the main deck, when I was standing in the dining room. It looked like a spray of something from an upstairs window, right above where I was. I asked and Doris told me the master suite was up here. So I put things together and decided kicking in the door was justified. It was locked, after all.”

“Locked from the inside. And you figured out it wasn’t suicide? When?”

“Pretty much while I was waiting for you guys to get here, which you did in good time, I have to say. That phone over there should be the only place where my prints are ... um ... I think in the whole house. Certainly on this floor. Anyway, it was the facing away from the window thing that got me started thinking about it. And I think I can see footprints on the catwalk here, on top of the blood and so on. But an expert needs to verify that.”

“Makes sense to me, and I think it will to the DA, too. So I’d say you’re clear, Livingston. But maybe you should stick around for a day or two.”

“Really? Can you, you know, make that official? I don’t want folks to think I’m just hanging around here to ski.”

\* \* \*

## Eight

I’d been remiss in my reports to the Senator, but now I had plenty to tell him. After I got back to my condo, I called him before dinner. What, I wondered as I punched numbers into my cell phone, do U.S. Senators do on their Sunday evenings? But just as I got to the last digit, the condo’s phone rang.

“Livingston? Winters here. Listen, I thought you’d want to know that we’re back to suicide.”

“Huh? How’s that?”

“The shoes. We’ve positively identified the shoes that Davidson was wearing as the ones that made the footprints outside. They fit the tracks in the snow perfectly, even to the tread pattern. And there aren’t any tracks on the blood and stuff on that upper part of the deck, the part without the snow. I don’t know what you saw, but they weren’t tracks.”

“So, let’s see. Your theory is that he intentionally went to the bedroom, made a trip outside, down the deck stairs and around the side of the house, back in the front door and up to the bedroom, where he locked himself in, opened the window, turned his back on the scenery and ate a bullet. While holding the gun in his off hand? Really?”

“Got any better ideas?”

“Not off the top of my head. Although since you’re betting everything on his shoes, wouldn’t it be possible for the perp to have taken another pair, same kind and size, from Davidson’s closet and used them to get away? Seems like that would make as much sense as the wrong-handed suicide theory.”

“Assuming Davidson was in the habit of keeping identical pairs of shoes. Why are you working so hard to avoid the suicide theory, anyway? And what about the no tracks on top of the blood?”

“Surely you noticed that he was in front of the right-hand sliding door, and there was another one to the left, away from where the blood was. I bet it’s unlocked. What kind of shoes were those that matched the tracks? I didn’t notice. Running shoes?”

“Yeah, running shoes.”

“Two pairs of identical running shoes isn’t uncommon. You find a pair you like, you buy a second pair before the company stops making them. Or you run every day and you want two pairs to alternate, so they can dry out completely between uses.”

“Aw, crap, Livingston, how come you’re just making my life so complicated?”

“Sorry, Chief. But if you go with the suicide as the official verdict, the perp will have succeeded. You know, ‘the terrorists will have won’ and all that bullshit. Hey, look, maybe I’m full of it. But that wrong-handed thing bothers me. You’re taking residue samples from his gun hand, right?”

“Of course. Standard procedure. And the field test showed he’d fired a gun.”

“How about his teeth?”

“Teeth? Huh?”

“I read a story once about how eating a bullet often produces chipped teeth, from the fore-sight on the gun barrel and the recoil. If he really did this, using his off hand, you’d think that might happen. And maybe not symmetrically, you know, kind of off kilter to one side? On the other hand, if someone put the gun in his hand and forced it into his mouth, it might have been held more steady. See?”

“Geez, Livingston, what is this? Amateur detective night? Look, we’ll check on all this stuff, but we’ve got to go with suicide as our preliminary finding. OK?”

“Checking is the important part, Chief. And a preliminary finding of suicide is fine, because it will get in the paper and make the perp think he’s succeeded. That will put him off guard.”

“OK. Suppose I go along with all this nonsense. What’s your theory?”

“I’m trying to keep an open mind, Chief. I mean, it could be that whoever killed Elizabeth Davidson also killed Derek, that there’s some reason that both had to be got out of the way. We initially thought that Davidson was after his wife’s money, that’s why I came up here in the first place. Maybe somebody else still is, and they had to knock off Derek to get it. Or maybe there’s another reason. We know that Davidson has been involved in shady stuff in the past, like cocaine. Maybe both of them knew something, or owed somebody something, or, uh, something.”

I give seminars and other presentations where I have to think on my feet to answer questions, so this kind of free-lancing with ideas wasn’t new to me. But in this case, I knew that I was out of my depth. And, I think, the Assistant Chief knew it, too.

“As opposed to he was despondent over his wife’s death, especially because he didn’t know about it until you caught him in a bar with three babes, and he just offed himself? What’s that principle scientists use to judge competing theories? Somebody’s razor?”

“Yeah, yeah, ‘Occam’s Razor.’ The simplest theory is the best, to paraphrase it. But if he was so despondent as to kill himself, why the subterfuge, the trip outside, the wrong hand holding the gun?”

“Oh, hell, I don’t know. Maybe the guy was ambidextrous, he wrote with his left and shot himself with his right. Look, we could debate this forever. I’m sensitive to your connections in Washington and with the CBI, but I’ve got to move ahead with this thing. We’ll go with suicide as our preliminary finding for now. And the thing for you to do is to think up some piece of evidence that we can use to be sure it wasn’t suicide. I know that’s too much like proving a negative, but, given the evidence we’ve got, I’d say the burden of proof is on you. OK?”

“Not OK, exactly, but I understand your position. I’ll come by tomorrow morning. Is that all right?”

“See you then.”

\* \* \*

My cell phone was patiently awaiting the last digit of the Senator’s phone number, so, after gathering my thoughts about what to say to him, I supplied it and hit the “Talk” button. There were several clicks, forwarded calls bouncing around, I guessed, and finally a deep, pleasant “Yes?”

“Senator? Sandy Livingston here. Sorry to bother you.” The background noise on the other end sounded like a rather boisterous cocktail party was in progress. A mumbling of different voices was almost drowned out by a mariachi band.

“Howdy, son. No bother at all.”

“Sorry I didn’t call yesterday, Senator. I got tied up all day following a lead.” This was only a small lie—the three girls hadn’t exactly tied me up. But they had made me lie spread-eagled on the bed for quite a while, and they threatened to tie me up if I moved too much.

“No problem at all. Anything new?”

“More than you probably want to hear now. It sounds as if you’re at a party. How about if I give you the summary and send details in email?”

“Sounds fine. And you’re right. I can’t really talk much here.”

“And I know you’re going to have questions. So here goes: You’ll remember when I talked with you Friday evening about how I’d run across Davidson at a bar with three honeys hanging all over him, and that one had said something about being with him last weekend. Right?”

“Yup, and you were going to check that out.”

“Right. I did, and she’s quite clear that Davidson was here in Telluride Saturday a week ago, all day, and ever since then. So he couldn’t have been in Santa Fe when Elizabeth was killed. But that’s only the tip of the iceberg.” And I proceeded to sketch out Davidson’s death and the questions attached to it.

“No shit? Dammit! That sure complicates matters. You think it’s not suicide?”

“I’ve got to respect the local police, they’re the professionals. But I do have some questions. And maybe you can help, or your connections can. I’ll send details in the email, but it seems like some investigation of Davidson’s will and so on would be in order. If he wasn’t after Elizabeth’s money, maybe someone else was but he got in the way. There’s also the possibility that he was involved in something shady that got him in trouble, and maybe Elizabeth, too. Anyway, I’ll send details of what I know, OK?”

“Sounds fine. I’ll check my email late tonight. How’s the skiing?”

“Outstanding. I feel guilty about it, it’s so good. Not guilty enough to make me stop, but, well, you know. And I think skiing is how I managed to get the information from that girl about Davidson, by the way. We connected because of it. She was mad at Davidson for not telling her he was married, and she really didn’t want to supply an alibi for him at first. So maybe it’s all in the line of work.” A gentle shading of the truth now and then seemed to me like a good way to stay on his good side.

“You want my people to check out those three babes for you? Make sure you’re not going to get taken?”

Ouch, I thought. So he’s got someone watching the watcher. That meant I’d have to be very careful about how I did that truth-shading.

“I doubt if I’ll ever see them again, so it’s probably not worth the bother. But thanks. And I’ll send out this information soonest. Thanks, Senator. Oh, and the local police want me to stick around for a couple of days, until Davidson’s autopsy is completed, I guess.”

“Try to keep out of trouble, then. And I’ll look for the email. Now. Back to the battle. Good to hear from ya, son.” And he disconnected.

I put together everything I knew into a long email message and was just getting ready to upload it to the Senator's private address when my cell phone let loose with *Jump*.

"Hello? This is Sandy."

"Mr. Livingston? This is Annette Trieri down in Durango. I just read a curious report that the Mountain Village PD put out. I assume you know about it?"

"I guess it depends. Is it about Derek Davidson's death?" I was surprised. She reads police reports on Sunday evening? Some dedication.

"That's the one. Suicide, it says here, at least that's the preliminary finding."

"Yeah, I'm the one who found the body, me and a real-estate agent. She fainted; I called the cops. But I'm not so sure about the suicide thing."

"Oh?" I could tell she was instantly on alert.

"There are some, well, issues, questions about it." I filled her in on my concerns.

"Hmm. I'd have to think about it, but the only thing that grabs me is the gun in the wrong hand. Even if he was trying to be cryptic about his suicide, with the tracks in the snow and everything, for someone to use their off hand to eat a bullet is unlikely. I'm thinking maybe I should come up for the autopsy."

My heart did a flip-flop, but as much as the thought of seeing her again was most pleasant, I didn't want to annoy the locals.

"Oh, well ... the Assistant Chief of Police, the guy I've been dealing with, would really be pissed if he thought I brought you in. He's already unhappy with me for asking all these questions. Not that I wouldn't welcome your expertise, but I think he'll be even more unhappy."

"You mean Randy Winters? Oh, don't worry about him. He's a friend of mine. Besides, I think my husband could stand to get away for a day or two to do some skiing. He's been kind of unsettled lately. His staff assistant is retiring, and it's got him all strung out. The thing is, I have some information about this Davidson guy that may have a bearing on the circumstances. It seems he was in debt up to his chin. He ran through all the legitimate sources of cash—you know, loans from banks and so on—and he was borrowing from some folks in Las Vegas. Folks who charge very high interest and make their collections emphatically." I heard a gentle laugh. "They're quite good at using uncooperative folks like Davidson to send messages to other, um, clients."

"This seems subtle for the mob, though. Making it look like a suicide and all."

"Not if they have video of it. But maybe I'm wrong. What I want to see in the autopsy is if there are specific marks on the body that will give it away. So I think I'll come up. Any recommendations on where to stay? And how's the snow?"

"Snow's great, and I got put in a condo up in Mountain Village. There's a central reservations number in the information booklet they have here." I recited it for her. "Maybe we can talk about all this tomorrow, but I'm wondering how Elizabeth's death might tie into this Las Vegas thing."

"Good question. But that's why you're there, right? To figure that out yourself? I'm going to worry about the Colorado death before I take on a New Mexico one. See you tomorrow."

"OK, I'll keep my cell phone turned on. And maybe we can all go skiing together."

Wow, I thought. Now all I have to do is keep from acting like a total doofus in front of her husband. The lucky bastard.

\* \* \*

By that point in the evening, Sunday Night Football was just starting the second half. Riding the gondola into town for dinner seemed like a real pain in the ass, and a cold one at that, so I ordered a pizza to be delivered and settled in to see how badly the Packers were going to beat the Texans.

Besides, I owed the Senator his email, and it was time to check my email at the Institute and see what I'd been missing at work. One thing for sure—I knew I needed to keep busy to avoid acting like a doofus in front of myself over the prospect of seeing Annette Trieri again.

So, after I sent off the Senator's email message and downloaded my email, instead of reading it I stared at the TV while trying to figure out what in the world was happening to me. I had a comfortable relationship with Alex—apart from her cats, at least—that was fulfilling enough that I'd actually considered marriage. But for her metaphysical flakiness along with her volatile temper, I probably would have proposed. I was still a little disturbed by Elizabeth's phone call Saturday afternoon, the one that Alex hadn't told me about, but that was probably just more of her flakiness.

And I'd just spent almost 24 hours in the company of three of the most delightful, and uninhibited, women I'd ever met. Surely, I thought, that should satiate me for the time being. Hell, as close to 40 as I was, I should have been completely worn out, acting like a grownup, not thinking about sex at all. My BERT pals with families sure acted that way, and they were younger than I.

But, thinking about it, I realized that I wasn't feeling the guilt that I'd anticipated. It wouldn't do for Alex to find out about my 24 hours of bliss, of course, because that would be a major hassle, but I just couldn't summon up guilt about being unfaithful to her.

Instead, my immediate concern was embarrassment at the prospect of Annette's finding out about the 24 hours. What in the world was that about? Reaching for the unattainable ideal? High-school infatuation? A case of terminal doofusitis?

Eventually, I did what any red-blooded American guy does when he's overcome by a fit of introspection—I turned up the volume on the TV and let myself get absorbed into the football game. That, after all, is what's *really* important—who beats the crap out of whom.

Which is why I almost didn't hear my cell phone ringing.

Fortunately for me, it happened just as the ex-jock color commentator said something so ridiculous that the other guy was dumbstruck, and I heard the phone during the pause, just before they both burst into laughter. I found the remote and turned the sound down with one hand and flipped the phone open with the other.

"Sandy?" Alex's voice was small, and it was wavering.

"Alex! Darlin'! What's wrong? You sound, um, scared, I guess." I felt the hair on my neck standing up.

"Are you home yet?"

"No, I'm stuck in Telluride for another day or two. What's wrong?"

"The cops came, the state ones."

"To your house? The Nimbies?"

"Yeah. They came with a s-search w-warrant." She had started sobbing, and I thought I knew why.

"Did they take your place apart? Where are you now?"

“At home. They didn’t arrest me or anything. But they did make a mess. Um, I forgot to go down there and do the statement thing like you suggested. So they came here.”

“What was the warrant for? They should have told you.”

“Telephone stuff. My cell phone and its memory, my answering machine tape, things like that. Documents, papers, letters and so on. And computer stuff. Email. All kinds of things.” Email? Alex? That was news to me.

“Alex, I didn’t even know you had email. So they took your cell phone and your computer? But they didn’t find anything that made them arrest you on the spot?” I’d been assuming that she had a personal stash of drugs around somewhere and that was the issue.

“No, I mean yes they took the phone and the computer and the answering machine tapes, and no they didn’t arrest me. Th-they scared off my k-kitties.” This sent her into a full-out bawl.

“Oh, now, I’m sure the cats will come back. Put some food out. They’ll come back and you’ll feel better. Look, was there anything on the phone or the computer that you’re worried about their finding? Do you want me to have my lawyer call you?”

“N-no, I want you to hold me.”

Oh, *man*. But I couldn’t help but notice that I still didn’t really feel guilty about anything.

“Well, I’m here and you’re there, and I’m sorry that I’m not there to hold you. Listen, did you get the mess cleaned up? If you do, it will make you feel better. Maybe you’ll feel mad, but that will be better because you won’t feel so helpless. You know?”

“Yeah, I know.” Sniff. “But I think I’ll just go to sleep tonight. I mean ... oh, this is just so upsetting.” Sniff. “And you’re not here for me ...” And she lapsed into wailing.

Looking back on all this later, I realized it was somewhere during this conversation that it dawned on me that our relationship wasn’t going anywhere, now or ever. It wasn’t a thunderbolt from the blue, or anything, and I certainly didn’t feel the need to dump her. Nor did I want to abandon her in this time of need. But I just lost interest, somehow.

“You’re right, I’m not. But you know why I’m here, to find out what I can about the death of your friend Elizabeth, right? And, say, that reminds me. She called you from her cell phone a week ago yesterday, in the afternoon. I think you told me she called you in the morning, before that brunch, but you didn’t say anything about the afternoon call. What was that about?”

“Huh? What do you mean? Wait! You’re asking me about a phone call I got? Where do you get off with questions about who I talk to on the phone?” She always amazed me with her ability to switch moods in an instant.

At least, I thought, it stopped her crying.

“I’m trying to find out everything I can about Elizabeth’s last hours, that’s all. It’s like putting together a puzzle and each piece is important. I’m not prying, and you know I don’t usually ask you about stuff like this. But the lady’s dead, Alex, and I’m trying to find out everything I can. According to her cell phone record, she called you Saturday afternoon, and I was wondering what you talked about. Maybe there’s something there that will fit together with something else I’ve found out and this will all begin to make sense.”

“You’ve got a lot of damned gall, buddy. Here I call you up because the cops tore apart my house and I need some TLC, and you start grilling me about a phone call that happened a week ago. This just sucks. Tell you what. You take those cell phone records, or whatever they are, and shove them, hard. And I hope they’re sharp.” And she slammed her handset down.

As an example of how she could be bitchy, this was top-notch. But, even for Alex, the abrupt change of mood didn't really make much sense to me—I just got more suspicious.

I also made a mental note to call a locksmith in Santa Fe in the morning, to have all the locks on my house changed. With any luck on my part, Alex wouldn't go over there before then.

\* \* \*

## Nine

Monday morning looked like snow again. First thing, I called a Santa Fe locksmith and persuaded him to go up to my house and change the exterior locks. It took some doing, but telling him about my secret key under the rock by the back porch did the trick. It would be amusing, I thought, to see how Alex reacted to this change in her world. Probably another snit. And try as I might, I just couldn't bring myself to care.

Then I called Joyce, my secretary at the Institute, to let her know I'd be out of the office for a few more days.

About 9:00, as I was getting ready to head out the door to take advantage of the new snow on the slopes, my cell phone let loose with its distinctive chord progression.

“Sandy? This is Annette Trieri. Listen, I need a favor. Hal and I are just coming over Lizard Head Pass, and we'll be down to Mountain Village shortly. I'm supposed to meet with the medical examiner for the autopsy at ten. So could you and Hal go off skiing? You've been there all weekend, I guess, so you must know where the good snow is. I'm hoping to be done by lunch time.”

On hearing her voice, my heart leapt; on hearing her request, it sank. Great, I thought, I get to babysit her old man all day. Just what I want to be doing. But I couldn't very well say no, so I told her where they could meet me.

While I was waiting for them to come by and drop him off, I tried to work myself into the right frame of mind. Maybe, I was thinking, I could get him lost in the trees and buried in an avalanche. Then she and I could run off together.

I know, I know. Really, really dumb. But that's how we guys think sometimes.

Trouble was, it turned out that Hal Weathers, Dean of Natural Sciences down at Frémont State University in Durango, was a great guy, and there was no way I could even dislike him, let alone contrive to get him buried in an avalanche. And we had a lot in common. Cars, for example—he and Annette showed up in his Audi S4, the smaller, performance-sedan version of my station wagon, equipped for winter with four studded snow tires and a truly elegant ski rack. And his scientific background was weather and climate. And he was a really good skier, at least for someone fifteen years older than I. And obviously we shared the same sophisticated taste in women.

The fact that I secretly envied him his wife was somehow cancelled out for me by his open envy for my Audi allroad and my ability to ski expert bump runs on telemark equipment. Of course, he could buy an allroad and learn to telemark but I didn't know quite what I could do about Annette, so the cancellation wasn't entirely complete.

Anyway, we spent the morning skiing our legs off and, on the lift rides, talking shop and cars. After hearing me talk up my allroad, he allowed that he was going to consider giving Annette his S4 and

trading her Subaru in for one, if he could find one with low miles and in good shape. And after he explained to me how he was going to host a scientific conference on climate in the southwest at Frémont State in a couple of years, I asked to be included on the mailing list and told him I'd give a paper. And I invited him down to the Santa Fe Institute to give a technical talk on climate modeling uncertainties.

It was a regular guy-style love-fest. So much so, in fact, that I almost resented it when Annette finally joined us for lunch and we had to quit talking shop.

But only almost.

She showed up for lunch about 1:15, at that Italian place at the top of the Plunge where we had agreed to meet, where I'd interrupted Davidson and the girls on Friday. Annette was wearing a form-fitting ski suit that made my eyeballs bulge out. I hoped no one noticed.

"How's the snow? Did you leave any for me?" She sounded hungry for powder. It had been snowing most of the morning, not heavily, but there was enough new accumulation to make those of us who appreciate powder happy.

"Plenty. The snow's been keeping the crowds down, and the conditions are just the way you like 'em." Hal was looking around for a waiter. "At least they were when we came in a while ago. Now that the sun's out, though, we won't have much time to eat and get out there before the new snow's all chopped up."

He was right. The weather had cleared, the sun was out, and the fair-weather skiers were going to be on the mountain in no time, flocks of them. So we hurried through lunch and managed to get back outside before there were too many other people out there.

Skiing itself is inherently a solitary activity, although staying on the same runs and stopping for little rests provides chances for conversation. It's the lift rides that allow companionship. We managed to stick to the triple chairs and therefore didn't have to share with strangers. This let us talk about our case, and Annette described her morning, leaving out the really gory details.

"The cause of death, of course, was obvious, but I didn't say anything about our speculations on the manner, murder or suicide. I wanted the ME to go at it objectively. But she did have the report from the scene, so she knew about the gun in Davidson's right hand. And she also figured out he was a southpaw—something about tennis muscles that I couldn't quite see when she showed me. That made her suspicious about the gun, of course, and she got to thinking about murder instead of suicide."

"If he played tennis left-handed, it would stand to reason that he'd shoot left-handed, too, seems like. So much for the ambidextrous theory." I felt proud to be able to contribute and added my information about the poster I'd seen Davidson in, the one where he was signing autographs left-handed.

"That's something I hadn't really paid attention to, but it's good to know about. And there's more." Annette was on a roll. "The ME is ready to testify if necessary that the ballistics are all wrong for Davidson to have shot himself holding the gun in his right hand. She decided the angle of the entry wound isn't right for it to have happened that way. Of course, there are traces of powder on his right hand, so her theory is that someone helped him shoot himself, held the gun in his hand at an unnatural angle in his mouth. Because Davidson was a big guy, this must have been an even bigger guy helping him, or maybe more than one guy. Or else they had him intimidated another way, I guess. And there was another thing. She was surprised by the damage to Davidson's head. She asked me what kind of bullets were in that S&W, because the one that he ate did far more damage than she said would be usual with normal loads. And I checked, the rest of the bullets in that S&W are just your standard revolver load. Her theory is that the one that Davidson ate was a hollow point, probably dum-dummed. It seems unlikely that he'd do that himself."

“Does this support your theory that the Las Vegas crowd is using him as an example of what happens to people who get behind on their loan payments?” I had been thinking about possible connections between Elizabeth’s death and what happened to Davidson, and the mob angle seemed like good possibility.

The upper lift house came into view, and we all began getting organized to stand up and ski away. Hal put up the foot rest.

“It doesn’t contradict it, at least. Which way?” Annette kicked her legs a couple of times and looked around at the trail signs.

“How about ‘down’? And let’s try something easier, maybe left?” Hal stood up and slid off, and Annette and I followed, toward a blue sign. A cruiser. I reminded myself not to show off too much in front of Annette.

\* \* \*

Reminder or no, I couldn’t help making long, sweeping, high-speed turns ahead of Annette, kneeling into the telemark position far more deeply than was necessary for the blue, intermediate run’s relatively gentle slope. That deep crouch, at least, gave me the control I needed to keep from breaking a leg when I hit the patch of ice.

When I was growing up, I always thought that show-off prima donnas deserved to go face down in the mud, or snow or water or whatever surface they were showing off on. So I guess I got what I deserved. But damn, it hurt, especially my pride. The bruise on my hip was going to be bad enough, but I wasn’t sure how long it would take my psyche to heal.

At least she didn’t laugh.

With my tail between my legs, I managed to limp my way down the rest of the hill and back to my condo, carrying the pieces of my shattered ego for later reassembly. I promised to meet the two of them for dinner that evening. Although still stiff, and walking rather off-kilter as a result, I was able to make a credible entrance for dinner by virtue of having spent the afternoon soaking in the condo’s hot tub—alone, which was just as well. I was wrinkled, prune-like, but I felt much better.

Between the hot tub and dinner, I walked around in circles, little circles, in the condo’s living room to try to keep my leg from tightening up, and I made various phone calls to get some work done, such as it was. I caught the Senator between meetings and brought him up to speed about what now looked more clearly to be Davidson’s homicide. He reassured me that he would start some inquiries about the possible Las Vegas connection, something I didn’t want to go anywhere near. There was voice mail to listen to—it turned out to be nothing important—and I decided to do the politic thing and call Alex. She wasn’t in, so I left as soothing an apology as I could manage, even warning her about having changed my locks. I used the excuse of burglars in the neighborhood, always a credible excuse in Santa Fe. I didn’t tell her that she wouldn’t be getting a new key.

And I put in a call to Deputy Chief Randy Winters, not to gloat or say “I told you so,” but to ask him if there was anything else I could do to help. I was hoping he’d say “no” so I could hit the road for home Tuesday morning. I could tell that my hip was going to be too sore for a few days to be able to ski.

“Well,” he sounded resigned to dealing with the homicide, “I don’t think there’s anything more, really, because we’ve got your statement. All the speculation, even though it seems like you were right, that isn’t going to be part of the official record. Which is probably a good thing for you, because if we ever arrest anyone, the record will be available to their lawyer. If it really is someone from Las Vegas, you don’t want to be featured in that record.”

“That’s for sure. I don’t mind being there at the level of a possible house-buyer who found things, but that’s it. Dealing with those guys is not my thing at all.”

He got contact information from me, and I promised to stay in touch. I also called the Telluride Marshal, just to let him know what was going on and that I would be leaving. He seemed glad to get closure on Davidson’s situation, and, though he didn’t say so specifically, to have me out of his town.

I met Hal and Annette at a little steak house close to my condo—they insisted that it be close so I wouldn’t have to limp too far. They seemed genuinely concerned about my accident, not really amused at all, which spoke volumes to me about the type of people they were. My BERT friends and I always had a lot of fun with each other’s ski goof-ups, and, if I had taken that spill in front of them, I’d never hear the end of it.

Annette looked great, dressed in a cable-knit sweater over jeans, and hiking boots. And Hal, escorting her in a way that unconsciously showed her off, was what’s called “distinguished,” I guess, appropriate for a dean. It occurred to me that my boyish infatuation with Annette seemed to be evolving into a more mature friendship, with just a hint of lust lurking around the edges. Maybe it had to do with having met Hal, and liking him. Or maybe it had to do with the spill. Guy psychology is something that’s as much a mystery to me as it is to the experts.

“How’s the leg?” Hal was the first to ask.

“I’m glad to see you walking.” Maturing friendship be damned, Annette’s smile still made my legs wobble, even the good one.

“Oh, I’m fine.” The prototypical guy response. “Stiff, and I think I’ll stay off the skis for a few days. But I’m fine—and hungry. I’m glad you suggested this place. I think I need some serious protein.”

Annette laughed, and it was her first jibe. “We thought you could get a raw steak to put on the bruise—you know, like putting one on a black eye—in addition to getting a grilled one.” The thought of slapping a raw steak on my hip made me laugh, too.

I don’t know when a slab of beef ever tasted so good. Annette and I shared a bottle of Raymond Napa Cabernet—it turned out that Hal stuck with Perrier, without making a big deal of it—and the simple dinner of steak, baked potato, and salad was just perfect. We had a wonderful conversation that included a history of their relationship, how they had met on one of Annette’s cases involving a dead professor, the attempted hit on the two of them by professional killers and how Hal had out-driven them in his Audi, and fly-fishing. So Hal and I had yet another thing in common besides cars, skiing, and taste in women—and I had another thing to be jealous about. Durango’s proximity to first-class trout water made the little streams around Santa Fe, and even the Rio, seem like barren trickles.

I thought about all this in an extended fit of introspection—introspection without football announcers to distract me—while driving home Tuesday morning. It started with the grass-is-greener issue of better trout water up in Colorado. But that led to some kind of mental dam burst, and other issues came flooding out.

I had surprised myself in the brief conversation with Elizabeth Davidson the previous weekend with the realization that I’d spent over twelve years in Santa Fe. And even though the ski area was less than half an hour up the hill from my house, as ski areas go it was small—of course, just about anything would seem small after skiing Telluride. My only real emotional tie to Santa Fe, the relationship with Alex, had come unraveled. The friendships I had with the guys in the BERT were pretty much focused on BERT activities, and I could join an emergency rescue team anywhere. I liked my position at the Institute, but sometimes I felt as if they just barely tolerated my presence—it wouldn’t do for them to piss off someone who donated a post-doc’s worth of funding each year. And wouldn’t it be nice to *earn* professional respect from them, or anyone, rather than buying it?

Sure, I told myself, Santa Fe is a OK place to live—great climate (except for the water problem), great people (except for the crime problem and the nepotism that pervades just about everything), outstanding restaurants and cultural activities (but pricey). On the other hand, there are other places that are nice as well, maybe nicer. Had I become too comfortable in my little Santa Fe rut?

And there was the larger issue of New Mexico as a third world country, something that had always bothered me, but something that living in Santa Fe disguised reasonably well. It was brought home to me once again as I drove south from Chama. In most parts of the country, little rural towns are friendly, safe places. But north of Santa Fe, all of the houses and stores in the little villages sported bars on the windows and doors and an unseemly number of razor-wire-topped fences. And the sense of uncivil civilization got worse as I finally reached the villages on the north end of Española, the little valley town just north of Santa Fe. Poverty in the desert in the winter was just flat-out pathetic.

Maybe, I thought, it was time for a change.

\* \* \*

But real life confronted me when I got home around noon. My garage-door opener let me in the house, and I found new keys on the kitchen counter, left there by the locksmith. The mailbox was full, as I had forgotten to stop delivery, and my bird feeder was empty. I could feel the accusing stares of the jays and juncos watching me as I trudged around in the snow to fill it.

And snow there was. Apparently, it had been falling off and on since I'd left last Thursday. Once again, my choice of a house with a south-facing driveway paid off—even a little daily sunlight melted it clean.

After avoiding it for as long as I could, in mid-afternoon I finally put in a call to the Nimbies. Detective Orlando Aguilar seemed almost happy to hear from me.

“I understand from the Senator’s people that you’ve been out of town for a few days, Mr. Livingston. Up in Colorado?”

“Yeah, the Senator asked me to look into some things for him. I hope you haven’t been trying to get hold of me?” I was just being polite, because I knew he hadn’t left any messages.

“Do I understand that you are now employed by the Senator?” A certain edge crept into his voice.

“Me? Not hardly. Just doing a favor for someone whom I respect a lot. Have you folks made any progress on the death of his daughter? Last time I talked with him he was, naturally, still concerned about it.” I’m a firm believer in the concept of the best defense being a good offense.

There was a long pause. “Mr. Livingston, you can be sure, and so can the Senator, that we’re doing all we can. It would help if you were more cooperative, I must say. Such things as keeping that cell phone you found from us don’t help.” It appeared that he believed in the same concept.

“We’re both after the same thing, I think, although maybe for different reasons. The truth about what happened to Elizabeth, I mean. I’m sure it will help both our causes if we share information. I’d be curious to know, for example, why you got a warrant to search Ms. Hall’s house and if you found anything relevant.” I was trying to be polite but not to back down.

“And we would be quite interested in what you found in Colorado.” And so was he.

“Perhaps we should get together and discuss our respective progress. I’m back in Santa Fe, so I’m at your disposal.”

“How about if we meet somewhere to talk? I’ll bring my chief investigator. I’ve got a team full-time on this now.”

Which is how I was introduced to Angie, as I came to call her later. Like I said before, I don’t know if I’m a lonely guy in denial; or maybe I just have a thing for female cops. But meeting Angie washed Annette completely out of my hair, to paraphrase an old Broadway song. And, best of all, Angie wasn’t wearing any rings.

I suggested we meet at a restaurant I knew about, a place that would be fairly empty at that time of day. Mucho Gusto is a little hole-in-the-wall place, opened by the chef of the Old Mexico Grill when that Santa Fe stand-by closed, and I was glad that Aguilar knew where to find it and agreed to it. Rather than the standard Northern New Mexico cuisine served all around town, they had dishes that are more traditional south of the border. I liked Horseman’s Haven for getting my sinuses cleaned out, at least via food, and Mucho Gusto for such things as paella and grilled salmon with unique salsas. And they had truly remarkable barbecued ribs.

But that afternoon, I was busy being entranced by Aguilar’s chief investigator, Detective Angela Espinosa. I talked, but I don’t remember if I made a fool of myself or not.

I do remember that I told them that Derek Davidson couldn’t have murdered Elizabeth, because he was in Telluride at the time, and that he had probably been murdered while I was in Telluride, even though it was set up to look like suicide. And that it was possible that Elizabeth was killed either by someone Davidson hired or by whoever killed Davidson, although that theory needed to take into account the very different methods the killers used.

And Aguilar told me about the car I had seen and told his people about, the one in the ski area parking lot the day we hauled Elizabeth’s body out. Numerous phone calls had eventually identified it as her rental car, out of a franchise at the Albuquerque airport. And that they’d obtained the search warrant for Alex’s place because she wasn’t responding to their requests for an interview. Beyond that, however, there wasn’t any useful information, or at least he wasn’t telling me if there was.

They asked a lot of questions, playing “good-cop, bad-cop,” with Angela, bless her heart, as the good one. It seemed a natural fit, mostly because I couldn’t imagine Aguilar in any other role than the bad one.

After being whip-sawed for a while, I realized that they were just asking the same old questions again, the ones I’d already addressed in my original statements to Aguilar. So I had a great idea.

“Detective Aguilar, it’s occurred to me that these questions are covering a lot of old ground, stuff that you and I have discussed before. Maybe it would be better if I just started at the beginning and told Detective Espinosa the whole story. Then she’ll have the complete picture, at least as far as I know it, and she can ask questions as they come up.” I looked pointedly at my watch and at Angela. “And besides, it’s getting on toward dinner time. I haven’t eaten since breakfast, and that was in Telluride. Why don’t we order some real food instead of just these chips?”

It was so reasonable, I guess, that Aguilar had to go along with the idea, and Angela clearly wanted to hear the whole story. Aguilar finally decided he didn’t need to hear it again, so he left us to it. And there I was, having dinner with another entrancing young lady.

I found out later that Angela’s family had been in Santa Fe for over 300 years. Her appearance reflected her family’s inevitable mixture of bloodlines—her aquiline Spanish nose tucked between high Native American cheek-bones accented her deep brown eyes, and her rich black hair, pulled back into one of those severe, no-nonsense buns, framed everything beautifully. I couldn’t help but wonder how that hair would look when it was let down.

I ordered the barbequed lamb tacos, served on soft wheat tortillas, another of the chef's unique specialties. She decided on the daily special, a paella, which they served as a rice and seafood soup, quite spicy. And we talked.

I told her the whole thing, including my encounter with Elizabeth before we found her body and my work for Senator O'Malley. She asked lots of questions about Telluride—the good-cop, bad-cop routine hadn't gone beyond my brief summary—and I didn't hold anything back, except for the 24 hours with the brokerage secretaries.

“The thing is,” I was trying to summarize while working on dessert, a flan, “the farther I've gotten into this, the more motivated I am to get it figured out. At first it was just feeling sorry for Elizabeth, and for her father. Davidson was a convenient villain there, for a little while, but now he just seems like another victim. But his death may not be related to Elizabeth's. It may even be that hers was purely an accident.”

“Unfortunately, it's got to the point that we're going to have to prove that it was an accident, if that really is the case. Or, putting it differently, we'll have to prove that it wasn't murder.” Even her voice was entrancing.

I smiled as friendly a smile as I could. “Ah, yes, the old prove-a-negative conundrum. How do you prove all crows are black? By proving there are no non-black crows? I'd say we have quite a challenge here.”

She laughed and tossed her head. “Well, with you working for the Senator and me for the Governor, how can we fail?”

“I'm not sure, but I know we'd better not. And we can probably make sure we don't by working together.”

That, I thought, would make staying in Santa Fe worthwhile indeed.

\* \* \*

## Ten

Wednesday morning, I went up to my office at the Institute for the first time in over a week, tromping a trench in the snow up the hillside. I'd kept up with the email, so that wasn't vying for my attention, and there wasn't any snail mail to speak of.

With nothing else demanding my attention, my introspection of the day before, particularly my realization that my position at the Institute might well be due entirely to my donations to the organization, came back to haunt me some more. Despite my best efforts to ignore it, I began wondering whether I was just taking up space, whether they were just keeping me around to humor me.

But I was diverted from that impending fit of self-doubt by a telephone call.

“This is New Mexico Republican Headquarters. Please hold for State Director John Kurkle.” The secretary's voice had that grating, nasal tone, and she sounded bored.

“No thank you.” And I hung up. It seemed unlikely that the Director of the New Mexico Republican Party would be wanting me to volunteer to run for office, but I had no reason to talk to him in any case. And waiting for him to come on the line just wasn't something I wanted to do. Let him call me himself, I thought.

It took about three minutes before the phone rang again.

“Mr. Livingston? This is New Mexico ...” It was the same nasal, bored voice, and this time I didn’t wait so long to hang up.

The thing that bothered me was that my opinion of State Director John Kurkle was about the same as my opinion of used-car salesmen, lawyers, and other con men. Why in the world the Republicans of New Mexico would keep electing him as their leader was something that I couldn’t understand, not that I really cared that much. But my uncle was a Republican, and, because he was the Governor, I had a connection to state politics whether I liked it or not.

The problem I had with Kurkle was that he was pit-bull mean. Sure, his job was to advance the Republican cause, and that usually meant doing so at the expense of the Democrats. But he was just plain mean, as nasty an individual as I’d ever come across.

I’ve read enough history to know that there has always been plenty of mud-slinging and other questionable tactics in American politics. But Kurkle took back-stabbing, personal attacks, and general unpleasantness to a new low, as far as I could tell. So I really had no reason to talk with him.

But after another five minutes, the phone rang yet again—this time it was the great man himself.

“Livingston? Why do you keep hanging up on Donatella? I need to talk with you. And don’t you dare hang up on me!”

“Excuse me? Do you have a wrong number? Is there some reason I should be intimidated by that sort of crap?”

He obviously wasn’t used to having his bluff called. “I’m calling Sanford Livingston, and if I have a wrong number, my apologies. It’s important that I talk with him, however, and I believe this is his number.”

“Why in the world would it be important for you to talk with me, Kurkle? Are the Republicans running short of funds, or something?”

“It *is* you. Good. Now you listen ...” Once again, I hung up. I figured that if he really did need to speak with me, he’d eventually be motivated to modify his behavior.

But he didn’t call back, so I went about my day. There was a seminar just before lunch that sounded stimulating, and one of my colleagues had left me a manuscript to review, something about fractal patterns in road networks. The heyday of papers dealing with fractals had passed several years before, but every now and then someone resurrected the idea as applied to yet another phenomenon. What I always asked the authors of these papers, and what I still wanted to know, was, so what? Sure, they’re a nice mathematical description of this and that and the other thing, but what does that tell us?

After the seminar, which I don’t remember at all, I was on my way home for lunch, slip-sliding down the trench I’d made earlier in the snow, trying not to fall on my bad hip, when my cell phone let loose. This time, I knew it wouldn’t be Alex waiting for me at home. Without a key, she wouldn’t bother to come by.

“Livingston here.”

“Son, glad I caught ya.” The Senator’s voice was becoming familiar and comfortable to me, like old slippers.

“Senator! Nice to hear from you. And you’ll be glad to know that the Nimbies have a crackerjack investigator on your daughter’s case. Not that guy Aguilar you met, but an Angela Espinosa.”

“Well, now, son, you be sure and remember that girls from old Santa Fe families take romance more seriously than secretaries from Los Angeles on vacation. Far more seriously.” That rumbling chuckle told me he was ribbing me a little.

But the words told me he was keeping close tabs on me, and once again I wondered what I’d gotten myself into, working for him. Before I could think of an appropriate rejoinder, though, he continued.

“But that’s not why I called. Son, I need a big favor.” He sighed. “I need you to call John Kurkle. And I need it so much I’ll even say please.”

I was taken completely aback. “With all due respect, sir, what’s he got on you? I mean, haven’t I read that you aren’t one of his big supporters?”

“Son, just between you and me, that’s true, more true than has been reported. Hmm. Let’s see, I guess I’ve been trusting you so far, so I might as well keep on. But don’t let this slip to anyone, hear? See, I’m being nice to him just now, even though I think he’s last summer’s pond scum. Next spring, at the party meetings, I’m going to see to it that he’s not re-elected to be state chairman, but I don’t want him to get wind of this now. So I’m being nice. And he called me just now and asked me—well, no, he actually demanded, more or less—that I make you call him. He seems to think you’ve been a tad rude to him.”

“‘Last summer’s pond scum,’ eh? Yeah, Senator, I think that’s a good description, actually. But I wasn’t really any ruder than he deserved. Um, did he suggest why he wants me to call him? I’ll feel better calling him if I know what it’s about.” Not arguing was a no-brainer, really. I didn’t want to say no to Saint Mike, at least not for something this trivial.

“That’s the funny thing. I wondered, too, so I asked him. And he didn’t want to say, didn’t even want to admit to not wanting to say. Ducked the question, even when I asked it again.” He sounded as puzzled as I.

“And I’m not even a registered Republican. I’ve been out of town and not really paying attention—has my uncle been acting up or anything like that?”

“Not that I’ve heard, son. Politically, things are real quiet just now, even in Washington, pretty much. We’re in recess, the White House seems preoccupied with Christmas decorations. Your uncle is behaving, for once. You don’t suppose it could have anything to do with Betsy, do you?”

“I suspect you’d know that better than I, Senator. Did he know Elizabeth? I mean, he must have run into her at party events, I suppose, but did he know her more than just casually? Uh, I’m not trying to suggest anything improper, you understand.”

“I do understand, son. But what you may not know is that he’s been chasing Betsy’s skirt ever since he met her, before she married Bill. And now that I think of it, he was pretty sour on that whole thing. And even worse when she ran off and married that jerk Davidson.”

“You don’t suppose ...”

“I don’t know what to suppose, son. But that’s why you’re on the job, right?”

“I guess so, sir. Me and the Nimbies, or at least Detective Espinosa.”

“Just you remember, son, what I said about girls from Santa Fe, especially ones whose families have been there for a long time. They’ve got strong tradition.”

What all, I wondered, did he know about me, anyway?

\* \* \*

During the call from the Senator, I'd managed to slip and slide all the way home, and the prospect of having to call John Kurkle after lunch—I was glad that his number was on my office phone rather than at home—motivated me to indulge in a margarita, then two. Not the best thing to accompany a can of vegetable beef soup and crackers, but better than you might think. Especially the second one.

Sometime in the morning, the sun had come out, and by the time I was heading back up the hill after lunch, it was warming up and beginning to drip. The sunshine, the blue sky, and the white of the snow on the dark trees reminded me of one of the benefits of living in Santa Fe—its beauty. And my appreciation wasn't dampened at all even when a gallon or so of snow slipped off a tree branch onto my head—I just laughed. It's wonderful, what a couple of margaritas at lunch can do for a bad attitude. I resolved to try to carry that light-hearted feeling into the upcoming phone call.

But my resolve was strained to its very limits. Kurkle, apparently, felt that he had won some sort of victory and didn't hesitate to rub my nose in it. Knowing the Senator's strategy helped me, because I was able to keep telling myself that Kurkle was in for a big surprise come spring. But Kurkle had fun at my expense, too much fun.

I won't give him the satisfaction of repeating all of his oily gloating here; besides, I tuned most of it out. What refocused my attention on his commentary was the reason he wanted to talk with me.

“So, since you finally decided to call me, I assume that you're going to tell me what I want to know, right?”

“Well, I told Mike I'd call you, yeah. But I didn't commit to anything else.” He was consistent in referring to “Senator O'Malley,” and I thought maybe I could push his buttons with the informality. Not that I'd call the Senator by his first name in any other circumstance.

“Are you telling me that I have to call Senator O'Malley again, waste more of his valuable time getting you to behave? You need to learn to respect your betters, pal.”

“You know, Kurkle, it's interesting. Before I met him, I thought Mike was like any other powerful politician. But since I've come to know him, my respect for him has increased by several orders of magnitude.” I thought maybe that using technical jargon might also push his buttons a little. “So what is it you want me to tell you about, anyway?”

“I need you to tell me everything you know about the investigation of his daughter's death. Both what you've been doing and where the NMBI is. It's official business.”

“Whose official business?”

“I'm not at liberty to say.”

“Oh. Well, if it's official business, then you should make the request official, do it through the proper channels, don't you think? Call the NMBI, ask them for their records under the freedom of information act, or something like that. Conducting official business with a phone call to an unofficial person like me just doesn't seem to be the right way to go about it, you know?” I was trying to maintain as casual a tone as I could, but his request had set off all sorts of alarm bells in my head.

I was expecting an explosion of sarcasm and threats, but instead there was an uncomfortably long pause. Maybe, I thought, he's slowly counting to ten.

But when he spoke again, it was in a completely different tone, gentle, persuasive, and even polite. “And we have put in those official requests, Mr. Livingston, we have. But, you see, such official requests take time, and time is something we can't waste just now. I need to find out about the investigation immediately. It's really very important—it could have an enormous impact on Senator O'Malley's future, and the Governor's, too.”

“And you don’t see anything improper about demanding information about an active murder investigation? You don’t think that keeping the investigation uncompromised is a more appropriate course of action? That would seem to me to be the law-and-order approach to this. But, then, I’m not a lawyer.” It had occurred to me that I might be able to find out his real motivation if I could argue without seeming to.

“Mr. Livingston, Sandy—may I call you Sandy?—you can be sure that in any other situation I’d agree with you. If you know anything about me at all, and if you know anything about our party platform, you’ll know that we believe the first priority of government at all levels is protecting its citizens—and that means a strong defense abroad and an uncompromising stance against crime at home. And you can be sure that I’ll treat the information about this investigation with extraordinary care and discretion.”

“I’m sure you will, Mr. Kurkle. You have a reputation as a fierce political competitor, but you’re also known for your integrity.” As hard as that was for me to say, I knew that strokes, even hypocritical ones, would help me get information. “But I’m afraid that I just don’t see how what I know could be important to you, or the party, for that matter. And I feel bound by the agreement I made with the Senator.”

“I understand completely, Sandy. But if the Senator knew what I’m about to tell you, I’m sure he would agree that it’s appropriate for you to confide in me.” His oiliness was almost making my telephone feel slippery. “You see, there are people who are trying to use the Senator’s daughter’s death against him, and against the Governor, too. They want to exploit the situation to attack the Senator personally, and that would spill over onto the Governor, your uncle. It would make both of them suffer politically, which is the real agenda. But if I know the status of the investigation, I just may be able to stop it, I know I can. You see?”

What I saw was that he was feeding me a load of crap. We were engaged in a game of who could be more coy—and I realized I was playing against a master.

“I have to say, Kurkle, that I don’t see at all. You’re clearly not telling me the whole story. But, regardless of that, I don’t really know what to tell you about the investigation. Do you have specific questions for me? Maybe that would help me get started on the information you want.” I thought maybe I could get him off balance with a combination of directness and apparent motion toward his goal of pumping me.

“I understand you were part of the rescue team who found Elizabeth, or found her body, I guess. And then you disappeared for a few days. Where did you get off to?” His voice had changed from oily persuasiveness to eager anticipation, and I decided he probably really didn’t know I’d been up in Telluride.

So I decided that the whole truth wasn’t necessary. “Well, the Senator asked me to follow up on a rumor he had heard, something about Elizabeth’s new husband—what’s his name?—Derek Davidson, that’s it. So I drove up to Durango to talk with some people up there. The Senator wanted it done informally, and he thought having me do it would be a good informal approach.”

“And?”

“And I talked with them and found out that the rumor wasn’t true. See, the Senator had heard that maybe Davidson was in town the weekend Elizabeth died. But he wasn’t, he was up in Colorado.”

“That’s it? You were gone for almost a week.” He didn’t seem to realize he was telling me that he had been paying attention to my whereabouts.

“Well, yeah. It’s been snowing here, right? Up there, it snowed even more. I figured as long as I was up there, I might as well get some skiing in. Haven’t been able to do that here this year, and the opportunity was too good to pass up. Say, I haven’t been back long enough to check—did they open Ski Santa Fe yet?” I thought it might help my cause to keep him off balance with little changes of subject like this.

“Uh, I’m not sure. Anyway, when you got back, you went straight to the NMBI.” He was having me *closely* watched, I realized.

“They called me, actually.” My compunctions about altering the truth for his benefit were zero. “Demanded to see me, something about an inconsistency in the report I gave after the rescue operation. It turned out to be a misunderstanding on their part. And then they asked me about where I’d been because they couldn’t find me for those days I was in Durango. You know how they are, compulsive about details. But, look, I don’t understand. How does where I was this past week relate to anything that could affect the Senator’s political future?”

“One more thing—you went up to the ski basin last Wednesday, was that with the NMBI?”

“Right. They needed someone to show them where we found the body, so I took them up there. They noted the spot on a map and took a couple of pictures, probably bad pictures, because the weather was just awful. See, all of the other guys in BERT have jobs they can’t ditch easily, and I was the only one available. But, like I said, what does this have to do with the Senator’s future? It sounds to me like you’re just following me around. Hope it’s keeping you amused.”

“Very perceptive, Sandy, and you’re right, I have been, or my people have been. You see, the Senator’s enemies think he is running a separate investigation using you. They plan to go public with a story of how that separate investigation will be a cover-up of what really happened. This will damage the Senator’s credibility and hurt the party. See why I’m concerned with all this?”

I didn’t, but I did see that he concocted that story on the fly. “Oh. I guess. Well, I hope what I’ve told you will help head off trouble.”

“It will if you’re cooperating fully with the NMBI, because then the Senator is working with them. This other story will fall on its face.”

“You can tell everyone the Senator’s cooperating.”

\* \* \*

If I managed to hide most of the truth from Kurkle, he managed to hide his true motivations, so I called it a draw. But it seemed probable that his interest could bear on the investigation, so I called the NMBI. It was a good excuse, at least, to talk with Angela.

“Detective Espinosa here.”

“This is Sandy Livingston, detective. I hope I’m not interrupting anything?”

“Not at all, Mr. Livingston. What can I do for you? Oh. I also have another question, don’t let me forget, please.” Her voice made me think of her hair, how it would look unbunned.

“Maybe we should take your question first.”

“Good idea, then there’s no chance I’ll forget. I need to ask about your relationship with Alexis Hall, the woman whose house we searched.”

Alex was one topic I’d been hoping to avoid. We had talked about the search briefly the day before at Mucho Gusto, but I really didn’t want it to come up again. No luck, though.

“Well, we’ve been seeing each other off and on for a while. I think maybe we’ve decided it’s best to go our separate ways. At least I feel that way, and that’s the impression I’ve been getting from her. She told me she was at brunch with Elizabeth the Saturday I met her, I mean met Elizabeth.”

“Right. Do you know why Ms. Hall may have been at that brunch?” Her voice had an edge that worried me.

“She told me that she and Elizabeth went to college together, they were in the same sorority. Old friends. Apparently that also applies to the other people at the brunch, um, three other couples I think it was. The thing about Alex is, she’s what I’d call flighty, has five part-time jobs or so, isn’t reliable, doesn’t seem like the type to ever settle down. And she wants her own way all the time, instead of having the ebb-and-flow that a real relationship functions with. So we’ve gone our separate ways.” I hoped I didn’t sound as desperate as I was beginning to feel.

“I see. So what did you call me about, Mr. Livingston.” The edge was still there, and my desperation grew.

“About a very strange telephone conversation I just had, with John Kurkle, the Republican Party Director here in New Mexico.” I summarized the little contest over who could tell whom less real information.

“He wanted information on our investigation, eh? That’s very curious.” Her voice had softened, and I imagined that during the pause she was writing notes furiously.

“Mostly my investigation, if you can call it that. All I told him was that I went to Durango to verify that Davidson wasn’t here in Santa Fe the weekend before last and that I showed your people where we found the body. No details and nothing about Davidson’s death.”

“And he claims he’s trying to protect Senator O’Malley from some kind of political attack? And the Governor, too?” She sounded as skeptical as I felt.

“I think the business about the Governor was just to suck me in—the Governor’s my uncle. And the story about the Senator seems too thin to be believable. I’m afraid I don’t have a clue about Kurkle’s real agenda, though. Oh, but there’s one thing. The Senator told me that Kurkle was after Elizabeth, had been since before her first marriage—he used the phrase ‘chasing her skirt.’ So I suppose Kurkle could have the same kind of personal interest in the whole thing that the Senator does.”

“Mr. Livingston, you’re being too kind to the man.”

“Yeah, probably. Say, could you call me Sandy? Every time you call me Mr. Livingston, it takes me a second to remember that you’re talking to me. Everyone calls me Sandy, except maybe your boss, Detective Aguilar.”

“I’ll try, if you’ll call me Angela.” Progress! I thought.

“Thank you, Angela. Anyway, I try not to be too suspicious about people I dislike—and I can tell you that I think of Kurkle as last summer’s pond scum.” The Senator’s description seemed to me to be too good not to adopt, and it made her giggle. “But it could be that he has a more sinister motive in wanting to know about the investigation, I suppose.”

“You probably don’t have any idea of where he might have been on the Saturday that Elizabeth went up the mountain.”

“Sure don’t. And you’ve decided she went up on Saturday, not Sunday?”

“That’s our best estimate. The hotel where she was staying, the Eldorado, reported that her room wasn’t used Saturday night. Her belongings were left there, but the room wasn’t slept in.”

“Hotel room? Of course! You know, I told the Senator going in that I’m not an investigator, and he still wanted me to, um, to be his link to all this and to ask around on my own a little. Which is why I went up to Telluride. But this proves me right. I didn’t think of that. You’re the one who knows how to do this sort of thing, not me.”

“A lot of what we do in an investigation is detail work, stuff that you might not think of. Like the hotel. We called around until we found where she was registered. Never did find a key, though. Or her purse, either, which is a little strange.” Her voice was back to the friendly tone that had mesmerized me over dinner the day before. “And this business about Kurkle is something I’ll have to look into.”

There was a pause with the tapping of her fingers on a computer keyboard in the background, so I remembered a question of my own. “Angela? Yesterday, Detective Aguilar was pretty vague about the rental car, Elizabeth’s car. And you said you didn’t find her purse in it?”

“Oh, right. No purse or much of anything beyond the paperwork. But we did find suggestions that it had been broken into, by an expert or by someone with the key. Her fingerprints were all over it, like you’d expect, but a number of them were smeared or partly obliterated, like someone wearing gloves had been inside it, going over everything.”

“And there was no identification on her, either. The only thing was her phone, which I found on the ground. Strange.” Someone, I thought, had tried hard to cover this whole thing up.

Her typing had been continuing, in fits and starts, and when she spoke again she sounded excited.

“Hmm. Now this is something. Kurkle’s the state director, eh? It turns out he lives on the southeast side of Albuquerque, southeast of the University, and the state party office is on the northeast side, on Osuna. So he probably commutes to work across I-40 and north on I-25.”

“I guess. But ...”

“The call that got your guys, your BERT team, out of bed Monday morning and out looking for Elizabeth—it came from a pay phone, in the lobby of the Marriott on Louisiana. Which is right on Kurkle’s way to work, just off I-40.”

“I didn’t know there were pay phones anymore.”

“There aren’t, except for places like hotel lobbies. He could have stopped there and then continued on to work by any number of routes.” She was indeed excited now, even breathing fast.

I was astonished. “So you think Kurkle made the call? Wow. Well, I guess that would explain his call to me about the investigation. Is there a recording of it, the search-and-rescue call? Maybe I could recognize his voice or something.”

My mind was racing off in two separate directions. Kurkle’s making that call the previous Monday morning would certainly explain his interest in the case and, in my mind at least, make him a suspect. But it also seemed far-fetched to think that someone like him would be that deeply involved like this.

“We’ve got the recording here. I’d play it over the phone, except it’s not very good anyway and you should hear it over headphones. When can you come down here?”

I looked at my watch and did some arithmetic. The time that Aguilar had called me, I’d allowed ninety minutes, but Alex had shanghaied me so it took far longer.

“Give me forty-five minutes. Say, 3:30. I’ve got to go home and get my car.” The prospect of seeing Angela again got me moving—I knew I’d be there with time to spare.

\* \* \*

## Eleven

The ski area had opened, it turned out, and I decided to spend Thursday morning testing my sore hip. With the machine-made snow they had been working on plus the three recent storms, there was even a decent base with a top layer of new powder, all chopped up. Except for the fact that I'd spent several days skiing at Telluride, it would have been a good first day. As it was, Ski Santa Fe seemed tiny compared to what I'd quickly become used to. And short—I felt as if I spent as much time riding the short lifts up as I did skiing down the short runs.

Still, it was fun to be at my local area again. It felt like home, and my hip cooperated by complaining only a little. And the drive up and then back down gave me time to think about the previous evening.

I had made it home from the Institute to get my car and then all the way across town to Nimbie headquarters in record time, only to be shown to a waiting area, where I cooled my jets for the next hour. Angela told me later, amid profuse apologies, that she was called into a safety stand-down meeting at 3:30, just as I was arriving. It seemed that there had been several minor accidents that were all attributed to carelessness, and having a stand-down meeting was the stock answer for such things—she described it as the “Johnny threw a spit-wad and we all get detention” approach to management. Such meetings were mandatory, no exceptions, and I just had to wait.

But my having to wait had the silver lining that our meeting started later and ran into the dinner hour. So we went out again, this time to the Outback Steakhouse in the business park next to the Nimbie offices. Why in the world anyone would think a chain steakhouse was needed in Santa Fe, with all of its top-rated local places, is a mystery to me. But I was grateful it was there, because it made an easy and non-threatening choice for my second dinner with Angela.

We talked and ate, re-hashed the Kurkle phone call, and made plans to investigate it further. At the Nimbie office, I had listened to the recording of the search-and-rescue call that put BERT into action looking for Elizabeth, but I couldn't swear that it was Kurkle. The voice sounded muffled, and there were traces of some strange accent, but there were also inflections that reminded me of him. We decided to see if we could obtain another recording of him—he was always appearing on television talk shows to denigrate the Democrats—and do a computer analysis of the two to compare them.

I spent most of the time gazing into her beautiful eyes—a soft light brown, and lashes out to here—and trying to keep my end of the conversation professional. But eventually it drifted toward somewhat more personal areas, such as my day job. I talked about my fascination with the complexities of the weather. We agreed that the water shortage in Santa Fe wasn't going away soon, at least not unless the climate miraculously turned tropical or, of somewhat lower probability, the city council developed the good sense God gave a gopher and put a stop to the willy-nilly development of new subdivisions. We also agreed that gophers are rather stupid, as critters go.

And, best of all, we made plans to get together on a regular basis to keep the information related to the investigation flowing.

Thinking about this pleasant evening on my way down from skiing put me in the best mood I've been in a long time. Maybe, I started to think, Santa Fe isn't such a bad place after all.

Back down in the foothills, I pulled into the parking lot at the Institute, got out, and started the process of climbing out of my ski suit. It's one of those one-piece overall suits, a powder suit, as they're called, and I had it on over my work clothes, jeans and a button-down shirt. There was a jacket in the

back of the car—despite the warm sun, the December air was chilly. Just as I was wriggling out of the powder suit’s sleeves, I heard a voice behind me.

“You Livingston?”

I turned, the sleeves off but the two legs still on so that the suit was now dangling awkwardly behind me, to see a burly fellow in his early twenties, with a shaved head and tattoos on his neck, standing about ten feet away. His two companions had taken up flanking positions a few feet just behind and on either side of him. They were standing in what photographers call the “fig-leaf” position, a sort of parade-rest but with their hands clasped together in front. The posture doesn’t look at all relaxed, and it accentuates shoulder bulk. Even though they were wearing winter jackets, there was plenty of that bulk visible—all three of them looked like wrestlers.

I’ve seen enough movies to believe that this arrangement of three people means trouble. The rear hatch of my car was open, so before answering I sat down on the back of the car to get all the way out of my powder suit.

“I’m Sandy Livingston, yes. What can I do for you guys?”

“My name’s Jaime Espinosa.” He just let that hang there for a few seconds, and it gave me time to recall that Angela had mentioned that she had a brother who was overly protective of her. “And these are my friends. I want to talk to you about my sister.”

“Angela? She mentioned she has a brother. Good to meet you, Jaime.”

“I want to know what your intentions are.” As archaic as it sounded, it fit with what Angela had told me.

“And you probably want an honest answer, no bullshit, right?” He shot a suspicious look at me, but nodded. “Well, I just broke up with my girlfriend, and I’m available. And Angela’s a terrific young lady, in all respects, as I’m sure you’re aware, and I didn’t notice any extra jewelry on her ring finger. But, see, just now, we’re working on a case together. Did you hear about that woman who died up in the Sangres a week and a half ago? It was Senator Mike O’Malley’s daughter, and he asked me to look into certain aspects of it for him. Angela is the NMBI lead investigator. So we’ve teamed up. And, terrific young lady or no, I don’t believe in mixing business with, ah, other things. Right?”

By that time, I had my powder suit off and my shoes on. In the back of the car, there were two ski poles—ski poles with ice tips, sharp points designed to dig in—within easy reach. And I had been on the fencing team in college. So I just sat and stayed as relaxed as I could, under the circumstances, and smiled at him.

He squinted, and I could see his arms flexing under his jacket.

“I don’t want her hurt—me and my friends here don’t want her hurt. Understand?”

“Sure. But, look, with the training she’s been through she probably knows enough judo and karate to break my back, or whatever else she wants to break, if she needs to. I’m certain she can take care of herself. Not that she’ll need to with me, though, you know?” I kept smiling.

“That’s not what I’m worried about. Her last boyfriend dumped her and left the state, and I didn’t think she’d ever get over it. Also, it got my folks upset, and I don’t want that to happen again, either.”

“Oh. Well, we’d have to develop a personal relationship before anything like that would happen, and we’re nowhere close to that. I had dinner with her yesterday and Tuesday, and we talked business. Jaime, how do you think she’d feel if she knew you were here?” The question startled him, and his demeanor changed slightly to something a little less menacing.

But then the bluster returned. “She’d probably try to beat the shit out of me. But if you tell her, I’ll know it was you and come back and find you.”

“Jaime, come on. I already said that she’s a terrific young lady. I certainly want the best for her, just like you. I’m not some coyote on the prowl. And she’s probably a lot more resilient than you think. She’s also smart—I bet she learned a lot from that experience with the boyfriend that dumped her. Tell you what.” I fumbled in a portfolio that was in the back of the car. “Here’s my business card—I work here at the Institute. Phone numbers, email, everything. You can find me any time you want to talk about this. But you don’t need the extra muscle, and you don’t need to threaten me. All you have to do is tell me she’s upset, if that should somehow happen. And I’ll fix it, promise. I’m certainly not going to skip town, because I live and work here. It’s my home. Right?”

He began nodding slightly while he was looking over the card. “Yeah. And I just stopped by to let you know I’m concerned about her. I don’t want her in risky situations, emotional or otherwise.”

“Message received. But she’s a detective with the NMBI, for heaven’s sake. Seems like that puts her in situations a lot more risky than anything to do with me. And, say, that reminds me.” I paused and stared sharply at him and his two companions for a second. “This particular case has some possible risks. I don’t think they would involve Angela, because the sort of people we may be dealing with don’t like to go after law officers. But I may be. At risk, I mean. You guys need a job, by any chance?”

\* \* \*

It turned out that they all had jobs, quite good ones in fact, as master carpenters in home construction. No doubt they were helping to fill up all those willy-nilly new subdivisions that Angela and I had discussed.

My question surprised them, though, and their curiosity got the better of them. What had made me ask was the possibility that either John Kurkle or someone associated with Derek Davidson’s murder could be trouble for me. It seemed as if it might be useful to have on call three bulky guys who knew how to stand around and look menacing.

I couldn’t really tell if they were flattered or scared to be offered jobs as hired muscle, but, whichever it was, they had fun talking about it. In the end, I wrote down Jaime’s cell phone number, and we agreed that I’d call him if something appropriate came up, meaning that all they’d have to do is put in an appearance and look tough. They weren’t sure at all about any greater level of involvement than that. Tito, the toughest looking of the three, with scars on his face and a missing front tooth, allowed that his wife might have something to say about it, if she were to find out.

Between that encounter and the morning of skiing, I felt as if I’d had a full day, and it was only about noon. But when I got into my office, I found voice mail waiting, from Angela and from the Senator—so the afternoon looked as if it was going to keep me busy, too. It seemed likely that Angela had additional information about Kurkle and that the Senator wanted to hear from me because I didn’t call him the night before. That dinner with Angela had lasted a long time, not that I’m complaining.

I called Angela first and got her voice mail, so I told her I’d call back later. Then I called Senator O’Malley. He had not heard any of the information about Kurkle, and I thought he would find that amusing, at the least.

“Well, son, were you able to bring yourself to do me that favor, to call Kurkle?”

“Yes, Senator, I did. And I think he’s now a suspect.” I explained what Angela and I had learned and what we were working on.

“Son, it’s hard for me to believe, but it’s also not hard for me to believe in some ways. You know?”

“I do, Senator. We’ll know more when we do the voice analysis. But there’s still one thing that’s puzzling me. The questions that Kurkle asked me seem to suggest that he’s been following me, or having me followed. I guess that makes him somewhat more of a suspect in my mind. But I can’t figure out how he got started on this with me, unless he started out by following you, or his guy did, and then I got picked up. Anyway, I’m confused.”

“It does sound confusing ... but, say, you know maybe I can find out a couple of things. I’ll need to make some calls and get back to you. Shouldn’t take too long, so don’t go anywhere.”

Because he used my cell phone number for his calls, it really didn’t matter if I went anywhere as long as I carried it around. So I walked down the hall to talk with the author of the fractal paper I’d been given to review. At the Institute, we try hard to follow the protocol of having papers reviewed locally before they are sent out to journals for the usual anonymous pre-publication review, because it means that we have better manuscripts out there in public. But it also means that we need to be careful about our reviews, because they’re not anonymous and often the authors are friends. Because I wasn’t very impressed with the fractal paper—to me, road networks just didn’t behave that way at all—I needed to draw on my reserves of diplomacy so I wouldn’t hurt his feelings.

I managed to get my concerns about the paper across and was saved from what appeared to be turning into an argument by my cell phone, which had been part of my strategy all along. The Senator and I conversed as I was walking back to my office.

“I think I’ve got it figured out, son, and I have to apologize. It’s partly my fault.”

“Senator, we were talking about whether John Kurkle is having me followed, or maybe doing it himself. How could that be your fault?”

“Well, son,” I heard a big sigh, “Now be patient with me on this, OK? When I asked you to help me understand what happened to Elizabeth, I did it without knowing very much about you or very much about what you’d get involved with. I wanted to make sure you didn’t get into any trouble on my account and, well, frankly I didn’t know how much I could trust you. So I pulled some strings and had some of your activities surveilled. Not all the time and not close up, just where you were and who you met with. That’s how I knew about the secretaries in Telluride.”

“I kind of figured, Senator. But Kurkle didn’t seem to know about that.”

“No, he wouldn’t. See, in having all this done, and it’s not that uncommon, really, I didn’t get into the details, never do. I just passed the word, back to Washington, in fact, and I knew it would happen. Well, it turns out that one of the ways it happens, in New Mexico at least, is through the party, through Kurkle’s office. He has operatives he can call on to watch people as needed. I don’t know whether he was watching you himself or who it might have been. But that’s why he’s asking those questions. He put two and two together and figured out that you’re looking into Elizabeth’s death. And, inadvertently, I put him onto it. Sorry.”

It felt strange, being apologized to by this most powerful of New Mexicans. “Interesting. And there’s really no need to apologize, Senator, although I expect you’d rather not do things inadvertently. But I view it as a good thing. After all, in a sense this has flushed him out of his cover. Maybe he’s not involved beyond your little errand of watching me, but, then, maybe he’s into things at some deeper level. That call to BERT about your daughter could have been him. And if it was, he’s got some serious explaining to do.”

“You’re right on that one, son. Tell you what. Since I’m here in Albuquerque, I can ask around personally and find out who’s been doing the watching. That’ll give us more information about his level of interest in all this.”

“Good idea, Senator. And in the meantime, I’ve started making my own plans in case push comes to shove.” I explained the arrangement I’d made with Jaime Espinosa and his two friends. And I was wrong—O’Malley hadn’t been amused by the situation with Kurkle at all, but this made him laugh out loud.

“See? What did I tell you about her family? But it sounds like you handled it perfectly, son. Good work. And, listen, don’t go getting those guys in any trouble, hear? Wouldn’t be fair to them.”

“Actually, Senator, I don’t plan to use them very much. If I employ them, then I have to pay them, and if I do that, then there’s the issue of taxes and so on. Even if I use that platinum card you got me to get cash to pay them, I’m not sure I’m comfortable with having records of all that in your office, both for your sake and for mine.”

“Hmm. Thanks for thinking of that, son. Beyond saying that, I guess I should have no comment, though. But, listen. As I recall, that card still has a ways to run before it expires. Why don’t you keep it on hand in case more expenses come up? No telling whether you might have to get up to Colorado again, or somewhere else, you know?”

“All right. But I won’t use it except for business related to this investigation.”

“Fine, son. And keep me informed.”

I’d made it all the way back to my office during the conversation with the Senator, and just as I was putting my cell phone away, my office phone rang.

“Sandy Livingston.”

“Sandy! Glad I caught you. It looks like it’s him.” Angela’s voice was more excited than I’d yet heard it.

“Him who?”

“Kurkle. At least it’s an eighty per-cent chance, according to the sound tech. I got a videotape of him from a TV station and did a computerized voice comparison with the phone call.”

“Interesting, especially in light of what I just heard.” I told her about the Senator’s comments.

“So this means he found out about your involvement in the investigation accidentally? No wonder he was pumping you for information. Was he the one following you?”

“We’re not sure. The Senator’s going to look into it. Listen, Angela. An eighty percent chance of a match is pretty good, but it’s not conclusive, right? I mean, you’re not going to be able to get a warrant with that, are you?” In weather forecasts, that kind of accuracy is something to celebrate, but I had the idea that in court, a good defense attorney would make it look like random chance at best.

“We really don’t have any basis for a warrant. Making a call to your search-and-rescue team isn’t against the law, after all. But it tells us where to focus our energy, right?” Her excitement hadn’t been dampened in the least by my caution.

“I guess that’s true enough. We know he has motive, and the phone call implies he knew she was up there, which suggests opportunity. Have you got a plan?”

“I’ve been thinking about one. How about we get together for dinner again and talk about it?”

She didn’t need to ask twice.

\* \* \*

“Did my brother come and see you today?”

Of all the questions she could have asked me while we were waiting in the bar for our table, I can't imagine one that would have caused me more consternation. I hadn't promised Jaime not to say anything, but the rapport we had developed in our discussion earlier made me want not to. And I certainly didn't want to lie to Angela. So I waffled.

“Huh? Why?”

“He's not hanging around out there.” She gestured over her shoulder toward the parking lot across the street.

We'd met downtown at Pranzo, by Santa Fe standards a fancy Italian place in the Sanbusco Center. Despite the little plaque on the building, few tourists knew that the center's upscale-sounding name was constructed as a pseudo-acronym from its previous incarnation, the Santa Fe Building Supply Company, a lumberyard.

“Uh, you mean ...”

“I mean that the turkey's been watching my every move. At first I think he was worried that Lando was after me, but then you came along.” She had a fierce look in her eyes, and I could see why Jaime might be a little concerned for his health, especially because he probably wouldn't fight back.

So I waffled some more.

“You know, of course, that it's a well-known fact that Anglo guys like me have a thing for sexy Latina girls, that we just can't keep our hands to ourselves.” I winked at her and hoped my smile was just rakish enough to put her off balance a little.

No luck, though. “Hmmp. You've been doing pretty good so far, mister. And you're changing the subject—did Jaime come see you today? I swear I'll kill him.”

“Well if you're going to kill him anyway, then it doesn't matter if he came to see me, does it? Um, want a drink? You're out of uniform, so it should be OK, right?”

And out of uniform she was indeed, wearing high-heeled cowboy boots, tight jeans, and a wonderfully form-fitting v-necked cashmere sweater. With her hair down. Maybe I'd been doing a good job keeping my hands under control so far, but with her dressed the way she was, I was in for a real challenge.

She heaved a huge sigh. “Yes. Margarita, rocks, no salt, premium since you're buying, and a double. That turkey.”

“Oh, he's just being a brother, worrying. And I'll tell you about it if you promise not to do anything to him. He's afraid you'll beat him up.”

“When is he going to realize that I can take care of myself, anyway?”

“He did say something about being more worried about your emotional well-being than anything else.”

“Ha! If he and my Dad had their way, I'd be in some kind of weird arranged marriage. Or a convent. What do you think that would do for my emotional health, huh?”

“If it'll make you feel any better, I think Jaime and I are friends now, pretty much.”

“You mean he didn’t threaten to break you in two? Did he have Tito and Willy with him?”

“Yeah, and they’re going to work for me, if I need some hired muscle. Actually, Jaime didn’t threaten me, he just asked what my intentions are.”

“About me, I presume. I’ll kill him.”

“You want to know what I told him?” I was having trouble not laughing my head off, but I knew that would just turn the whole thing into a disaster.

“Well, if he didn’t break you in two, you must have told him something that’ll be a big disappointment to me, that’s for sure.”

If her initial question had been a source of consternation for me, this statement was a complete show-stopper. I think I probably sat and stared at her with my mouth hanging open for a good thirty seconds. Sometime in there, the waitress set a margarita in front of Angela and a Corona in front of me. Finally I found my voice.

“Angela, I have to tell you that the implications of that statement have me completely dumbfounded.” I shook my head to clear it and took a deep breath. “Anyway, what I told Jaime was that you and I are working this investigation together and I don’t believe in mixing business with other things. Of course, it’s business only for you; for me it’s more of a hobby. And you might also like to know that when I say I believe something, it doesn’t mean that the matter is closed or that my beliefs are set in stone.”

She looked at me, squinting, maybe trying to figure out what I’d said. Then she took a big gulp of her margarita.

“I guess if I can say off-the-wall things, you can, too. But you’re right about being careful about personal relationships in a business setting. And I’d say, let’s get this damned case cleared, then.” She smiled, and I could swear that her right eye actually twinkled when she winked at me. It must have been the lighting.

I managed to steer the conversation to less risky topics—Jaime would have approved, I think, even if Angela didn’t. We were finally shown to a table in the dining room and a server took our orders, the *osso buco*, a lamb version, for me and a linguine with grilled salmon in a light cream sauce for her.

Just as our salads arrived, my cell phone started up in my pocket, not something I wanted to happen in a nice restaurant like Pranzo. I excused myself and dashed for the door.

“Son, you there?” I had flipped it open to get the thing to shut up but not actually talked into it.

“Sorry, Senator. I needed to get clear of the dining room.” I’d stepped outside and was reminded of how cold it was by the goose-bumps that popped up on my arm.

“Yet another dinner with your favorite detective? Well, son, I’ve warned you all I can. Now, why I called was to tell you what I found out about our mutual friend John Kurkle. And I’m afraid that I was right—he wound up getting asked by my people in Washington to keep an eye on you. He did some of the surveillance himself and farmed some out to a bunch of college guys he pays as part-timers. I almost had him called off, but then I remembered what you said about its being a blessing in disguise.”

“Maybe I can think up something to amuse him. Set off on snowshoes up the Winsor Trail again, something like that.”

“Good idea—give it some thought. I’d better let you get back to dinner. G’night, son.”

I was grateful that the conversation was short, because of the temperature outside. And there was also the company inside I’d abandoned so abruptly.

As I walked back to our table, I saw Angela alternately poking at her salad and staring off into space. She smiled as I walked up.

I smiled back. “Sorry I dashed off like that. This damned phone always pushes my buttons somehow, like Pavlov’s dogs, and I know how I don’t like it when other people use theirs in restaurants and other quiet places. It turned out to be Senator O’Malley, though, so I’m glad I talked with him. He found out that Kurkle has been tailing me himself, at least some of the time.”

“I’ve been thinking.” Her smile grew. “Slowing down is a good idea. For one thing, it’ll give us both time to get blood tests.”

I’m sure she had fun watching my reaction—it probably progressed from a blank stare to surprise and a bit of shock, which I no doubt tried, but failed, to cover up with my natural savoir-faire and sophistication. Somewhere in there I sort of fell into my chair, knocking over my beer glass in the process. Fortunately, it was empty.

“Blood tests.” Hey, talk about a witty response! George Clooney, move over.

“Well, in this day and age, it just seems like a good idea. You know, HIV?”

I managed to stall for time by pouring the rest of my Corona into the empty glass. I had no doubts about its being a good idea—my last blood test had been back in graduate school before the stock market paid off for me, when I sold pints to the blood bank. I have trouble counting all the girlfriends since then—I can never remember if there were two Debbies or three. And, she was right, in this day and age...

“I guess I don’t even know where to get one.” I thought maybe that if I treated the topic as if I were, say, getting an oil change for my car, I would project maturity and wisdom—except I knew perfectly well where to get my car’s oil changed.

“That’s probably because you were in college in the mid-eighties. Ten years later, we all learned the drill, at least those of us smart enough to cast off our cultural shackles. I’ll get you a phone number tomorrow. And most medical labs do them, too, but not anonymously.”

“I had no idea things changed that much. But you’re right, it just wasn’t something we worried about. So, what’s the protocol? We compare each other’s results? Like ... I don’t know ... like exchanging report cards?”

“You can make fun if you want, but it’s deadly serious, literally.” She looked slightly peeved.

“I’m not making fun, honest. It’s just a new thing for me. Really. And you’re absolutely right—it’s serious and it’s a good idea. Um, it’s just that I keep thinking about the motivation.” I couldn’t help but grin, and it made her grin back.

“Oh, you mean having SEX?” Her emphasis on the last word was enough to make people at nearby tables turn and look. And this, combined my discomfort, made her burst into laughter.

I was deeply grateful that the arrival of our entrées rescued me.

\* \* \*

## Twelve

She stuck to her guns, about slowing down, I mean.

Even after a second double margarita and an after-dinner *grappa*, at which point she was becoming dreamy-eyed and talking with a little slur, she didn't relent. Not that I pushed on her, mind you, because the slow-down strategy suited me, too. I think that Senator O'Malley's warnings must have sunk in.

She was certainly in no condition to drive, but she told me she'd expected to wind up that way and had come in a cab. So I drove her home, to a casita that was the guest house of a good-sized adobe on East Palace, just before it ends at Alameda. She told me she'd found it by accident one day when she was doing interviews for an investigation in the neighborhood. There was a small "For Rent" sign in a window, and when she found out she could afford it, she couldn't pass it up. Her family was upset that her finding the casita meant she'd have to move out of the family compound in Agua Fria, and that's when her brother had started watching her like a hawk. But even so, having her own place with its greater degree of independence was well worthwhile.

Her comment about her brother made me invent an excuse to turn down her invitation to come inside for a cup of coffee. I'm not sure, but I think she was relieved.

After watching in through her door, I kept going east onto Alameda and then turned north on Gonzales to head up to my part of town. The hill up the first block or two is steep, straight up the Cerro Gordo ridge, and I used my allroad's turbos to good effect, accelerating hard all the way up. Then, just over the crest, I killed my lights, turned on to a little side street, and made a quick U-turn. All the talk about Angela's brother and, earlier in the evening, about John Kurkle and his college-student watchers had made me paranoid, I guess.

There's nothing like positive feedback. It works for behavior modification and is a wonderful technique for training pets and children—reinforce the behavior you're seeking, and they learn fast. It's also effective in other ways, such as reinforcing paranoia. When the bad things you're so worried out turn out to be true, well...it reminds me of the old Henry Kissinger quote "even a paranoid can have enemies."

The bottom of Gonzales Road, under the trees, had ice and compacted snow on it from the recent storms, and I had felt my allroad's all-wheel-drive scrambling its way up the hill, using all four snow tires to get a grip. Almost any other vehicle, I thought, would require more care and time to get going, and then the steep part of the hill would slow them down, too. So I waited patiently, parked in the dark on the side street, to see if anyone else was coming.

It probably took less than a minute, but eventually someone did—without lights. It looked like a customized version of one of the small Japanese sedans, the type of car you see a lot around Santa Fe and Albuquerque. It roared by where I was parked, making that sort of high-pitched putt-putt noise caused by an overstressed four-cylinder engine exhaling through a fat after-market tailpipe. I pulled out a block behind him, leaving my lights off.

That section of Gonzales, although paved, has a 25-mph speed limit because of its residential character and a couple of deceptive curves. Mr. Putt-Putt was flouting the speed limit and without his lights he seemed nervous about the curves. Between the moonlight and the brake lights that kept flashing on and off, following the noisy little car was easy.

He blew the stop sign at Hyde Park Road, making the quick right-left zig-zag that put him on the north part of Gonzales, where it turns into a narrow, gravel lane. That's the dusty way to get to my house, and my suspicions grew. I also wondered if he could maintain control on the hill down off the main ridge, given the speed he was carrying.

Feeling clever, I used my transmission to slow down at the stop sign and do what we New Mexicans think is good enough—a low-speed rolling not-stop. That also kept my brake lights off, a ploy I thought would be useful if the people ahead were looking back.

I'd been trying to guess who it could be. One possibility, Jaime Espinosa, with or without his friends, seemed unlikely. For one thing, Jaime, Tito, and Willie had met me in the Institute's parking lot in a pickup truck—it had been parked behind the three of them when they were standing in the triangle looking tough. It was customized, but it wasn't a little sedan. For another, I thought Jaime would stop following me after Angela's place. Surely, as soon as he saw her get out of my car and go inside alone, he would have quit worrying, at least for this night.

Another possibility, John Kurkle, didn't make much sense, either, as he wouldn't be driving a car like that. I was betting that he drove one of those super-sized SUVs, maybe even a Hummer. He seemed like the type to need such a symbol of enhanced manhood.

That left either Kurkle's minions, the college students that the Senator told me about, or someone associated with Derek Davidson's murder. I couldn't decide which would be the lesser of evils. Mob hit men would be harder to deal with than college students, even football players—although I wasn't entirely sure about Young Republicans. At least, I thought, you could probably reason with mob hit men.

I let my car coast in second gear down the hill on the narrow part of Gonzales and watched the sedan's brake lights signal its route. When it passed my driveway without slowing significantly, I felt my heart-rate moderate a bit.

Instead of following them—they seemed to have gone straight onto Paseo del Sur instead of turning left to continue on Gonzales (another bit of Santa Fe street trickery)—I turned into my driveway and pushed the garage-door button on the visor. The house was greeting me with its lights on, because I have timers set to make it look occupied when I travel, and I relaxed a bit more when the garage door opened. I even used the brakes. Once inside the garage, when I shut the garage door, the feeling of relief was joined by one of stupidity—to think someone was tailing me like that, really! At least, I thought, I was alone, and no one else would ever have to know about this little fiasco.

But the relieved and stupid feelings both vanished when I walked into the kitchen from the garage.

“Ah, Mr. Livingston. You're finally home. And how nice of you to have left the lights on for us.”

The speaker was seated on a stool at the breakfast counter. I couldn't help but notice the automatic handgun—with a very long barrel, which looked like a silencer to me—on the counter near his right hand. And his companion, seated on one of my dining-room chairs in the corner across the room, was also hard to miss. The chair was turned facing the corner, but he was facing the room, with a full view of everything.

They were both dressed in black, jeans, sweaters, gloves, and watch caps, and the guy in the corner had dark glasses on. And both wore full sets of facial hair, neatly trimmed. They looked vaguely Middle Eastern to me, small and wiry, olive skin, but missing the high cheekbones of the local Northern New Mexico natives. There was a trace of an accent, neither the local melodic Spanglish inflection nor anything Semitic, but rather faintly British.

If it hadn't been for the handgun—and it immediately occurred to me that they both probably had them, although I saw only one—I might have dashed back into the garage for a weapon. The machete that I use for trimming the chamisa bushes was hanging on the wall just over by the ski rack. But instead, I just stood very still and tried to sound as calm as I could.

“You gentlemen have the advantage of me, obviously.”

“Yes, that's true, isn't it? Well, you can call me Mr. Smith and my colleague over there is Mr. Jones. We're here to talk with you.” His little smile was ingratiating, not unlike the expression many of the local shopkeepers use sometimes.

“No offense, but usually when people want to talk with me they don’t have suppressed automatics at hand. And I don’t know quite what you’d want to talk with me about that requires the timing and your breaking into my house. I mean, you could have just called me.”

“You have information we need, Mr. Livingston. And the timing is unfortunate, I agree. I assure you, however, that our skills are such that your home hasn’t suffered any damage from our presence. And neither shall you, if you choose to cooperate.” The smile widened slightly.

“I don’t see any reason not to. But, look, I just got home from a long evening in a restaurant. How about if I take off my coat and then use the bathroom? Uh, I had tiramisu for dessert, and it seems to have gone right through me. I’ll be in much better shape to answer whatever questions you have if I can get comfortable. And much less accident prone.”

A friend of mine once told about this little problem with tiramisu—the sweet rich cream combined with the coffee and rum had an instant laxative effect on him, on a first date with the woman of his dreams, no less—and it seemed like a good way for me to buy some time to think.

Mr. Smith’s smile remained, but his eyes hardened in suspicion. “I suppose that’s not an unreasonable request, now, is it? But I’m afraid that we’ll have to be a little careful. Why don’t you tell Mr. Jones where you want to go, and he can precede you? And I’ll follow.”

Tossing my coat on a chair in the living room as we passed through, I pointed the way to the master bath, which Mr. Jones checked carefully, as if I would have a stash of rifles in the shower, or something.

Eventually they left me alone in there. I’d warned them to be a little patient and turned the exhaust fan on before I closed the door, so I’d earned myself a few minutes of privacy with enough noise to mask any sounds I might make.

What I’d been thinking about ever since I concocted the tiramisu story was the stash of Alex’s sleeping pills, high-strength Seconal and something called Mebaral, that was still in my medicine cabinet. One of the Seconal pills, I remembered, knocked Alex out for the night, and she was among the more drug-tolerant people I knew.

\* \* \*

While making preparations, I flushed the commode three times for effect and made a lot of splashing noises while I washed up. In the meantime, I’d crushed up four of Alex’s Mebaral tablets and emptied the powder from a half dozen of her Seconal capsules into a little portable pill box I normally use for taking vitamins on short trips. It’s small and flat, like one of those old, metal aspirin boxes that you can never get opened without spilling the pills all over the place. Slipping the little box in my waistband behind my belt buckle, I went out to deal with my two visitors.

Mr. Jones, dark glasses and all, was waiting for me in the bedroom, and he patted me down briefly before following me out into the living room, where Mr. Smith was looking over my bookcase. The pat-down missed the pillbox, to my great relief.

“Feel better, Mr. Livingston? Good. Now, I suggest we all make ourselves comfortable while you tell us everything you know about Elizabeth O’Malley Prince Davidson.” He still had that ingratiating smile, but his eyes weren’t quite as hard as before.

“Everything? Well, that could take a while. Is there something in particular you’d like to know?”

“We’d like to know the truth, Mr. Livingston. You see, we already know some things, and if you tell us everything, we’ll be able to compare what you tell us against what we know—a useful check on whether you’re being truthful. So, yes, everything.”

“OK. But as I said, it’ll take a while. If we’re going to get comfortable, how about if I make some coffee? I’ve got an espresso maker in the kitchen. You can watch, of course. And, um, I won’t need a knife or anything, so I don’t think there’s any reason for you to worry.” I was succeeding reasonably well in maintaining a casual detachment, I think.

“My goodness, Mr. Livingston. What a thoughtful host you are.” Mr. Smith looked a question at Mr. Jones, who nodded slightly. Apparently, his search of me hadn’t raised any suspicious. Also, I think the dark glasses were putting him to sleep, and a dose of caffeine probably sounded appealing to him.

In the kitchen, they watched my every move. First, it was the coffee beans. They wanted an explanation of why I keep two jars, dark-roast and light-roast. I told them that the light-roast was for regular coffee, like what I make for breakfast, while the dark-roast was for espresso—completely true, as far it goes. But what I didn’t tell them was that the dark-roast beans were decaf.

Then they had to inspect the cabinet where the espresso maker resides. Mr. Jones even took it out and put it on the counter for me. After that, they wanted to know what was in the sugar bowl, so I ate a spoonful to prove to them it wasn’t rat poison, or whatever they were worried about. And all the time I was keeping my belly pressed firmly against my belt buckle to hold the pillbox in place. It made talking normally a little difficult.

Eventually, though, they seemed satisfied and took up their original places in the kitchen, Mr. Jones in the corner facing the room with a chair-back protecting him—he was now fiddling with his handgun—and Mr. Smith on a stool at the counter with his automatic close at hand.

When I was a kid, I was fascinated by magic. At first it was because I really thought there was such a thing, and then, even after I learned it was only sleight-of-hand and diversion of the audience’s attention, it stuck with me. As an adult, if that’s an accurate description of a forty-ish bachelor who has never really grown up, I’ve found that the old tricks are still great fun at parties. And my nephews and nieces think they’re extremely cool—I am definitely their favorite uncle. Pulling a dollar coin out of a kid’s ear and then giving it to him or her is a guaranteed way to make a friend.

But this little episode of making Mickey-Finn espresso was the first time that the old sleight-of-hand tricks were of any real, practical use. I managed to turn my back on Messrs. Smith and Jones to fumble with the espresso maker and, in the process, I slipped about a third of the Mebaral/Seconal powder into each of the three cups. Then I set them—regular teacups, with double-shots of doped-up espresso in each—onto the counter by the sugar bowl, on the opposite side of Mr. Smith from his automatic. They each took a taste and made a face. Smith commented on the bitterness and started adding sugar, stirring the concoction well. I made excuses about the dark-roast beans and how the espresso maker puts out strong stuff while Jones and I followed suit. I kept stirring and then pretending to sip, but mostly I was talking.

While making the espresso, I’d begun an introductory patter on everything I knew about Elizabeth. In the time-line of what I knew about her, it was just about when I got to the start of the BERT expedition where we found her body that they started drinking the espresso.

And it was just about the time that I talked with Senator O’Malley about working the case for him that they began yawning. I’d been careful to turn my little lecture into as much of a drone as I could manage in the meantime, using a soft, soothing voice, answering questions slowly, carefully, and pedantically. I don’t think I’ve ever been so boring, even in my most technical seminars.

I was a little concerned that when they felt themselves becoming sleepy they might get suspicious and do something untoward, like shoot me. But it worked out just fine— somewhere on my way to Telluride, Mr. Smith started snoring and Mr. Jones leaned his head back onto the wall and dropped his automatic on the floor.

One advantage of being a do-it-yourself homeowner is having all sorts of gadgetry around—my garage includes a workshop with a ridiculous array of tools and parts. After donning a pair of disposable latex painter’s gloves and relieving the dozing duo of their armaments, which I stashed in a cupboard, I scrounged up several of those large, plastic zip-ties that the police now use as disposable handcuffs. My stock on hand was for bundling landscaping materials, but they were strong enough to use on people, too.

So it wasn’t too long before I had a pair of sound-asleep mystery goons tied up on the floor of my kitchen. I’d bound their wrists and ankles and taken the additional step of strapping Mr. Smith’s left leg to Mr. Jones’ right wrist and vice-versa. They looked quite cozy.

Then I examined the meager contents of their pockets. Mr. Smith had a small role of currency, but nothing else. Mr. Jones also carried cash, and he had a plastic motel-room key and a driver’s license, along with car keys labeled “Avis,” as well—and, according to the license, his name really was Jones, William Jones, of Toronto, Ontario, Canada. But even with his dark glasses off, he looked like a William Jones about as much as my grandfather, Sanford Gentry Livingston, Jr., looked like an Abdullah Mohammad.

Car keys implied a car, so I put on my coat and went looking. It took some time, but eventually I found that they’d parked a couple of blocks away, down at the curve where Gonzales Road magically morphs into Vallecita Drive, a spot where teenagers park and drink beer, if the tossed-about empties are any indication. Still with the gloves on, I drove the rental back to my house and parked it in my driveway.

At that point, I wondered what next steps I should take. It was about one in the morning, but I was far too pumped up to sleep, despite my snoozing guests. I really didn’t want to have to interrogate them myself. Maybe, I thought, Angela would be sobered up.

Her phone rang through to her answering machine, so I started over. It took four tries, but I finally woke her up.

“What? Jesus, what time is it? Who is this, anyway?”

“Angela, it’s Sandy. I’m sorry to wake you up, really. But I’ve got a situation here. How are you feeling?”

“Not as good as I was earlier, that’s for sure. Ugh. What situation?” She was struggling to be sober and alert, but I could tell it was a close thing.

As I explained my little adventure, though, she fought her way through her impending hangover and, by the time I had the rental car in my driveway, she was ready to rock.

“You shouldn’t have moved the car, Sandy. And I’m glad you weren’t hurt. You say they’re out?”

“Sleeping like babies, should be for several more hours. And they’re well secured anyway. I hope I didn’t cut their circulation off with the zip-ties.”

“Give me ten minutes ... no, make it fifteen. You’ve got a computer, right? Does it have a scanner?”

“One of those all-in-one scanner, printer, fax machine things, yeah.”

“OK, good. And you’re probably hooked to the internet. Listen, here’s what’s going to happen. I’ll get there shortly, but I might not be first. I don’t know who’s available, but I’m calling for help, so don’t be surprised if someone else shows up first. In uniform, I’ll make sure.”

“So you’re coming over? You know where I live?”

“I am, and you bet I do. I always know where guys live before I suggest mutual blood tests. See you soon.” At that point, she’d sounded almost chipper.

It’s amazing how a little adrenalin in the system can fight off a hangover.

\* \* \*

In preparation for my middle-of-the-night visitors, I made a pot of real coffee, extra strong and without additives, and turned on the outside lights. Most of my neighbors are part-timers, people whose houses in Santa Fe are used maybe three weeks a year. I wasn’t worried about disturbing anyone.

True to her estimate, Angela arrived about fifteen minutes later, hair in her severe bun, wearing a crisply pressed tan uniform and carrying a large briefcase that turned out to be full of investigator’s toys.

Before she opened it and got to work, though, she walked up to me, threw her arms around my neck, and kissed me in the most thorough fashion I think I’ve ever experienced.

“There!” She smiled and panted a little along with me. “I wanted to do that before, but I was a little too sloshed to remember to.”

“Oh. Well, um, feel free, anytime. Yum. You taste good.”

“Yeah, well, I feel pretty lousy, although that perked me up some. So these are your two friends, eh?”

But I wasn’t ready to move on to them just yet. “You sure you don’t need more perking up? You look like you just might.”

The second kiss was more tender, gentle and exploring, clinging, turning eager toward the end. Eventually she pulled back and rested her head on my chest.

“Sandy? You took a big chance with these guys. They could have killed you.”

“The only time I worried, really, was when they were getting sleepy. I thought one of them might react badly. But they just dozed off. And I had to do something. I think they were going to find out what they wanted me to tell them and then kill me anyway.”

“I suppose. I’m sure glad you’re OK, though. So, maybe we should get on with it?”

“Uh ... you mean with us? Or with them?” But she was saved from having to answer me by the doorbell.

“That’ll be Lando. Do me a favor and wipe the lipstick off, OK?” She walked off toward the living room to get the door.

The rest of that long night was busy. Even though Orlando Aguilar was Angela’s boss, he pronounced the situation to be her case and put himself at her disposal. She immediately sent him off with the motel key to the Santa Fe Inn to find out what he could about our two captives. Perhaps, she thought, there would be identification in their room.

And then she opened her briefcase. The first order of business was fingerprints, which she scanned into my computer and transferred to a server at the NMBI office. Then she worked some magic and got into the NCIC database and some other places.

Fifteen minutes later she found them, and it was strange.

“Look at this, Sandy. You’ve got two Saudi Arabian computer salesmen tied up on your floor. Says here they once had tourist visas and were part of some kind of exchange thing set up by the State Department. But that was four years ago.”

“Why in the world would the Saudi Arabian computer salesmen want to know about Elizabeth?” I was even more mystified than I’d been before, when they were just two anonymous goons.

“I’d like to know that, too. Did they ask about anything in particular?”

“They just wanted me to tell them everything I know. So they could check on whether I was telling them the truth, they said.”

“That means that something you know, or know about, is important to them. Must be that they’re not really computer salesmen. This is pretty weird, Sandy.”

“Very weird. And it means that there’s more to Elizabeth’s death than we’ve been thinking, right? And maybe to Davidson’s, too.”

“Could be. Let me see what else I can find. Do I smell coffee?” She went back to the computer, and I played waiter.

It took her another half hour, but then she found some files buried deeply in the computers of the Department of Homeland Security. By then, my adrenalin was wearing off, and I was wanting sleep.

“Sandy? Look at this. Here’s a terrorist bulletin. It identifies these two by name, a bunch of names, actually, and here are their fingerprints and some passport numbers.” She clicked on a link to another site. “They’re on a watch list. It says to call this counterintelligence office at the FBI if they’re identified in the U.S. And they’re not from Saudi Arabia, they’re from Syria and they’re connected to the Hezbollah terrorist group.”

“Hmm? In the country? So should we call the FBI? You’d lose control of things at that point, right?” I yawned, and she got a great view of all my dental work.

“Now you’re the one who needs perking up.” She smiled and came over to sit by me on the couch.

“You seem to be pretty good at that. Hope I did as well.” I yawned once more, but then she kissed me again and the sleepiness went away.

“You did great. But Lando will be back any time, I bet. And you’re right. We call in the Feds and we lose control. But we’ll have to see what Lando finds. If it’s their real passports, any of those I saw listed, well, we’re stuck. But if all we know is that they’re Smith and Jones, I think we’ve got some wiggle room.”

“Mmm. Speaking of wiggle room ...” I wiggled my way down into the couch, and leaned my head on her shoulder. “What we need to do is to have some time alone with these guys after they’re awake. Maybe get Senator O’Malley involved. What do you suppose they think I know?”

“Got me. Sandy? Is there anything about this business with Elizabeth you haven’t told me? Because nothing you’ve told me seems like this big of a deal, that two guys from Syria who once pretended to be Saudi Arabian computer salesmen would want to question you, I mean.” She leaned her head on mine while I considered what to say.

“The only thing I haven’t talked about is what I did in Telluride last Saturday, the day before I found Davidson’s body. But that couldn’t have anything to do with tonight, these two goons, I mean.”

“So tell me, and maybe I’ll see it from a different angle.”

I paused to think about what to say.

“When were we introduced, you and I?” My sense of foreboding was growing by leaps and bounds.

“Tuesday. Lando and I got together with you at Mucho Gusto, late afternoon. He finally left, and you and I had dinner there.”

“All right, hold onto that thought. I didn’t know you existed until Tuesday.” And I sketched my day with the secretaries from Los Angeles, leaving out the salacious details but emphasizing how all our sex was fully protected. In a way, it was liberating, to get that out in the open. The longer it remained my secret, the worse it would be whenever it finally came out.

“See? Those two bozos on the kitchen floor wouldn’t care about that, right?”

“Right. And I’ve been reminding myself that we didn’t meet until Tuesday. But I’ve got to tell you, this business of blood tests is suddenly more important than ever to me, at least if that’s how you’ve behaved in the past.”

“And I think it’s a fine idea, even though I’ve been only with Alex, Alexis Hall, I mean, for the past, oh, year at least. Two years, now that I think about it. I’m sorry if you’re offended, or upset or anything. I think I was pulling away from Alex, pulling away emotionally, and I just sort of busted loose. But this doesn’t get us closer to why these guys are interested in what I know about Elizabeth.”

She pulled away from me and stood up; I toppled over sideways on the couch.

“Sandy, I need to get used to the idea that you were in an orgy last weekend. I’ll be OK, but give me a little time, all right? Now. No it doesn’t. Get us closer to understanding what these guys want, I mean. What else could there be?”

“The only two things I really know about are where we found her body and her phone. Her phone! Say, maybe that’s it. Maybe they think I know something from having found her phone.”

I sat up straight, then got up to pour myself some coffee. All things considered, Angela had taken the news about my time in Telluride with remarkable grace, and I was determined to put it behind us.

“Angela? Did your people figure out how to get those messages that Elizabeth had on her phone? Or do you know if the Senator did?”

“What is it with guys, anyway? You go off on a little vacation, some girl twitches her tail at you, and you fall all over yourself? Don’t you have any sense of dignity? Or self-control? Christ!”

She was typing madly away at my computer, so I couldn’t very well accuse her of not paying attention to the case at hand. Maybe, I thought, she’ll get this out of her system tonight.

“Well?”

“Oh, sorry. I thought those were meant as rhetorical questions. Um. I guess I don’t know what it is with us guys, and we do tend to fall all over ourselves sometimes, and I think that guys have very different senses of dignity and self-control from women. Sometimes, we don’t have much self-control at all.” I could tell this would get tiresome very quickly.

“It sounds like you think sex is no different from ... from skiing or tennis or something. It’s just a game, a sport.” One night of this, I thought, is about all I want to put up with.

“You know, there’s truth in that, at some level. I mean, it *is* fun. And if everyone involved is grown up and ready and willing and wants to have fun, well, why not?” I could tell that this was going to lead to an explosion, but I slogged ahead anyway. “But at another level, it’s more than fun, so don’t think that’s all I see in it, OK? At another level, the level I think everyone strives for, it’s special, not just fun, but really meaningful. I guess I don’t know what to call it exactly, but at that level just calling it ‘fun’ is serious understatement. And I think everyone, not just men versus women but different men and

different women, everyone has his or her own level of selectivity along the way to finding this special, meaningful level that I think we're all looking for. Uh, sorry if I sound like I'm lecturing. I don't mean to."

"Was it that special with your Ms. Alexis Hall? Or was it just fun?" Her typing was going to break the keyboard, I thought.

I never really liked Detective Orlando Aguilar, not from our first interaction the day I met the Senator nor any time since. Still don't, for that matter. But I sure was glad when he returned that night from the errand she'd sent him on.

\* \* \*

### Thirteen

I slept until noon. We had worked until about 5:00 am, and then we agreed to meet at one at Nimbie headquarters for a debrief. Senator O'Malley would be invited. By then, we thought that our two guests might be awake, although the dose, and combination, of barbiturates I'd given them made that anybody's guess.

Aguilar had no trouble finding their room, because although they didn't know it, Smith and Jones were under arrest. The night clerk at the motel didn't bat an eyelash when Aguilar asked for their room number. It turned out they were registered under Smith's name.

And it also turned out that their passports, Canadian passports, were in their room, one for William Jones and one for Richard Smith, along with three other credit cards, some cash, and another car key, a key with the Volkswagen logo on it.

When he saw the terrorist watch list that Angela had found, Aguilar had wanted to call the FBI immediately, but she and I persuaded him that there was no particular hurry. For one thing, the suspects were asleep. For another, we couldn't be absolutely, 100% sure that it was the same people. And for yet another, it would be an irreversible move, something that couldn't be undone.

Even though there was a distinct chill in the air between Angela and me for the rest of the night, we had an unspoken agreement to conspire to keep Smith and Jones away from the Feds as long as we could. Nor did we tell Aguilar about the computer-salesman cover they had used in the past.

After I roused myself out of bed just after noon on Friday, I hustled around to get to the Nimbie office on time, and, part way there, got a call from Senator O'Malley. Santa Fe has a law about not using cell phones in cars, unless you have it hooked to a hands-free setup of some kind, and I had to decide whether to hang up on the Senator or be the only person in the entire city who paid attention to that law. The Senator won out.

"Son, I got a funny call this morning about a meeting I should come to at the Nimbie headquarters this afternoon, at one. Don't think I can make it, though. You know about this?"

"Yes sir, I do." And I described the events of the previous night. "The best idea that Angela and I had was that these guys think there was information on Elizabeth's cell phone that I know about. So one thing that the Nimbies will want to know is whether you or your people got to Elizabeth's voice mail. Angela tells me that there weren't any messages when they finally got the phone from me and the password from the phone company."

“And you, of course, know that there were messages. Right, son?”

“I recall telling you about them, yes. But I’ll leave it to you to decide whether to tell the NMBI. I don’t know what the messages were, but maybe they were too personal for you to want to go public with.” I was hoping he’d tell me, though, because I wanted to know why those two bozos were so interested in me.

“I surely don’t want to be withholding evidence, of course. But I have to say, son, some of what my people found is puzzling to me, and a little disturbing.”

“Senator, I’m all ears if you want to tell me.”

“Well, there were four messages, three of them prior to that brunch that you directed Elizabeth to and one after, that evening. That last one was from your ex-girlfriend, Alexis Hall. The others were from people confirming the brunch, although one of them was a little strange. It said ‘Butchie says he’ll bring the document.’ And we checked, this ‘Butchie’ is one Bertram Cale, husband of Amanda Cale, who’s one of Elizabeth’s circle of friends. Thing is, Bertram Cale works at Kirtland Air Force Base here in Albuquerque. Sandia National Laboratories are at Kirtland, and Cale is an engineer employed by a small, private subcontractor on several projects that are joint between the Air Force and Sandia. He’s a biochemical engineer and he’s working on something to do with anthrax. Anti-terrorist research. Top secret.” He sighed, a deep wheezing heave of air. “I’m afraid of what all this could mean. I’m just afraid.”

“What about the message from Alex?”

“It sort of fit with the others.” I heard shuffling papers. “Here it is. Hmm. Says ‘Betsy, please call me. We said we’d supply the document this week, remember? And you said we shouldn’t double-cross them. Betsy, we’ve got to give it to them. Please, please call me.’ Son, I just don’t like the looks of this.”

“Actually, Senator, it may be that Betsy’s the hero in this, especially because the two guys at my house seem to still want this information. Maybe she prevented them from getting it.” I explained the dual personalities of Messrs. Smith and Jones.

“You say they’re on the terrorist watch list? And they’re not supposed to be in the country? Well, I reckon you’ve got reason enough to hold them. But it sounds like the FBI will be interested in them, too.”

“Senator, we’re also not rushing to call in the FBI. Call it, um, a carefully considered procrastination.”

“Well, that just might be a good idea, son. As much as I respect the FBI in Washington, I’m afraid I have to say that the people they post to these big square states out here in the southwest tend not to be their best. What’s the plan, if I may ask?”

“We want these two guys to wake up so we can ask them some questions. I’m curious to hear their stories. All they have is their Canadian passports, so our response will be to call the local Canadian consulate. Turns out I know the consul, and he’ll be very interested in the connection of Canadian passport holders to the terrorist watch list.”

“You know him? You get around, son.”

“Through my uncle. He, I mean the consul, he’s a party animal and always shows at parties at the governor’s mansion. Which I go to also. We usually get drinks, go out onto the patio, and talk soccer. I got a ball from my car one time, and we kicked it around until Uncle Jake’s security guys made us stop. Senator, what about this business of a document and so on? That definitely sounds like something the FBI needs to get involved with.”

“Eventually, yes. But I’d like to find it first, see if Betsy had it or what. You know?”

“Senator? Can I ask a tough question? Did you have any inkling of this business with Elizabeth before you asked me to get involved?” It bothered me that he might have involved me without telling me all the relevant background.

“I guess I could ask you a hard question, too, son—did you have any inkling that your girlfriend, Ms. Hall, had any involvement with stuff like this?” There was just a slight edge to his voice, but I couldn’t tell if he was angry.

“Well, Senator, my answer is ‘no,’ definitively. Of course, I’ve always known that Alex is something of a flake, and her politics are way, way to the left of yours, mine, and most other people’s, even most other people in Santa Fe. But I wouldn’t have suspected espionage. How about you?”

I heard another huge sigh. “To be honest, son, I’ve got to be more equivocal. The thing is, Betsy got involved in some strange stuff after college. Spent several years overseas, working in refugee camps and all sorts of other places. In the Middle East as well as in Africa. She never talked about it when she came back, though. And when she was in college, she used to argue politics with me all the time, and then she didn’t when she came back. I never could understand what changed her, except that I figured maybe she had enough of it when she was involved in those relief organizations. She came back about five years ago, turned into a socialite, and ended up marrying Bill Prince. The rest you know, I think.”

“Senator, this is all very, very strange. And I’m still on your side in this, OK? But it helps me to know ... ah, shit. Oh, sorry, Senator, but I’ve got a Santa Fe cop on my ass, lights going, wanting me to pull over, I think.”

I had taken the round-about way to the Nimbie building in order to avoid the mid-day crush of traffic on Cerrillos Road. From my house, that means heading south down St. Francis after crossing downtown, and then taking the interstate to the south end of Cerrillos to come back north to headquarters. At the city limits, there was the “No Cell Phones” sign, but I’d ignored it. That, I thought, must have been the issue, because otherwise my driving was exemplary—I wasn’t even speeding by a mile per hour. Of course, maybe that was it. Going the speed limit in Santa Fe is really going too slow to be safe.

“Well, don’t hang up, son, maybe I can talk to him for you.”

“OK—thanks, Senator.”

By then, I’d pulled over, off the highway into the parking lot of a furniture store, and the officer was approaching my window. I lowered it and had my registration and proof of insurance at the ready.

“Sir, didn’t you see the sign back at the city limits, the one about the cell phone ordinance? May I see your ... Oh, thank you.”

I’d handed the cards to her. “Officer, don’t tell me you’re going to do me the honor of making me the only person ever cited for violating the cell phone ordinance? Why, I’m proud, I guess.”

“Sir, sarcasm isn’t likely to be helpful.”

“You’re absolutely right, officer, my apologies. But, listen, the reason I was on the phone was that Senator Mike O’Malley called me. I would have stopped to talk with him but I’m running late to a meeting over there at the NMBI headquarters.”

“Blatant falsehoods are also unlikely to be helpful, sir.”

“You don’t believe me, officer? Here, talk to the man.” I handed her my phone.

It occurred to me that successful politicians almost always have distinctive voices. That's partly, I suppose, because we hear them talking so much and come to recognize their inflections, pitch, and so on. But their voices are seldom normal, whatever that means, seldom the anonymous voice of Joe Public.

Senator O'Malley's voice was perhaps the most distinctive in the entire state, even if you count my uncle. With O'Malley it was actually his voice, with my uncle it was his Texas accent—but O'Malley still won the most distinctive title, hands down.

The officer sure recognized it. She took the phone from me looking skeptical, then she straightened to attention and turned beet red. Finally she let loose with a string of "Yes sir, Senator, yes sir"s and eventually handed the phone back to me. I put it in my shirt pocket, still on.

"Sir, the Senator asked me only to give you a warning, because he told me that he did, in fact call you. And that you are, in fact, due at a meeting over there. Would you like an escort?" She was scribbling furiously on her ticket pad. "Sign here, please?"

"No, thank you officer, it's a meeting but it's not an emergency. I'll drive real carefully to get there. It's just a couple of blocks. Oh, and I'll finish the phone call sitting right here, if that's OK?"

"Certainly, sir. Have a nice day." She marched back to her patrol car and pulled away, glad, it appeared, to escape unscathed.

"Senator, thanks. I think you gave her something to tell her friends. Now ... oh, right. It's very helpful to me to hear what you said about Elizabeth. And, as I said, it may be that she's a hero in this, because it sounds as if maybe those documents didn't get where they were intended to."

"But where could they be? That worries me, a lot, son."

"Me, too, Senator. But I think I may be able to get more information about them. And you can help—give me about fifteen minutes and then call Nimbie headquarters and ask for Detective Orlando Aguilar. He'll be in this meeting with Angela and me, the one you can't come to, and if you demand to talk with him, it'll give the two of us time to talk privately. I need to tell her about this conversation. Uh, but don't say anything about the FBI, OK? We don't want to encourage him."

"Be glad to, son. And can I ask how it's going with Detective Espinosa?"

I had to laugh. "Senator, I'm just not sure. I was making good progress there, but then I had a little setback when I had to tell her about those Los Angeles secretaries in Telluride. Your advice has been right on the money, I'll say that."

His familiar, rumbling laugh told me that he sympathized.

\* \* \*

We met in Angela's office, a glass-walled space in a sea of desks. At least we would be able to talk privately. She was pleasant, if a bit distant, and Aguilar was all business. It didn't take long for the call to come through, and he scurried out to talk with Senator O'Malley.

"Angela, Senator O'Malley called me while I was on my way down here, and that call to Aguilar was my way of getting a chance to talk with you privately."

"Is there something you'd like to tell me, then?"

"Yeah, one thing I'd like to do is to take you in my arms and hold you and tell you that I'm sorry you're so upset about last weekend and that I hope you can get past it. But that doesn't seem quite

appropriate here.” I gestured to the sea of desks visible through her walls, took a breath, and kept talking.

“So let me stick to business. Elizabeth, maybe, and more likely Alex Hall could be involved in espionage for our two Syrians.” I related the voice messages from Elizabeth’s phone and the Senator’s confusion about his daughter.

“So maybe we *should* bring in the FBI. It sounds like there might be a classified document floating around somewhere.” She had listened with an increasing sense of alarm, I could tell. “Oh, and, you know, if you did take me in your arms and all, it just might work. But you’re right. Later.”

Her smile just about melted me. But business was business, and Aguilar would be back soon.

“Angela ...” But she was holding up her hand for me to stop.

“When it’s just the two of us, I’d like it a lot if you’d call me ‘Angie.’ But just when we’re alone.” That did melt me, my knees at least. I had to sit down.

“OK, Angie. Gosh, that sounds sweet.” I shook my head to clear it. “Right. Before Detective Aguilar comes back—do you know what the search of Alex’s place found? She told me that the warrant included all sorts of telephone message equipment and computer stuff, along with documents on paper. Have you, or has anyone, gone over all that? See, that voice mail from Alex to Elizabeth sounded as if maybe Alex had the document from the Kirtland guy, this Butchie character, and Elizabeth was supposed to get it to the Syrians. But she, Elizabeth, I mean, she was having second thoughts.”

“So you think Elizabeth made contacts in the Middle East when she was there years ago? Hmm. That makes sense, I guess. Tell you what. After Lando comes back and we finish up with him, we’ll go over what we took from Ms. Hall.”

“What about the two Syrians?”

“Still out, last time I checked at least, about a half hour ago. You really did it to them.” This time, it wasn’t a romantic smile, but rather a devilish one. Still cute, though.

“Here comes Aguilar. Let’s see. What are we going to talk about with him?” I wanted to be on the same page she was on.

“He’ll want to talk about two things, bringing in the FBI and my role as lead on the case. I think he thinks it’s over my head, or will be if the FBI’s involved.” Now she looked disgusted, not quite so cute.

“Like you said, though, with classified stuff floating around, they do become more relevant. But maybe we can have a look at Alex’s document first.”

Aguilar strode into the office, full of purpose and, it appeared, himself.

“That was Senator O’Malley. He needed to talk with me. He wants progress reports about his daughter. What can we tell him?”

I turned slightly sideways and winked at Angie with the eye he couldn’t see.

“I think you should tell him that we have our first credible suspects, Mr. Smith and Mr. Jones. And they may be suspects in her husband’s murder as well.”

“Oh, them, yes. But they’re on the FBI watch list. We need to call in the Feds.”

This time it was Angie’s turn. “Lando, we talked about this last night. Murder takes precedence over a terrorism watch list, and the Feds could still mess things up for us. What’s to lose if we keep them until we can question them, a few more hours at the most?”

“Hmm. Good point. If they’re suspects in the Colorado murder, should we call someone up there? Is the CBI involved in that?”

The mention of the CBI put Annette Trieri into my head, and I was rather proud of myself that it didn’t make me feel like a doofus. That feeling seemed to be exclusively associated with thoughts of Angie at that point.

“Detective, I know just whom to call. I met her when I was up there last week, and then she and her husband,” I put that in specifically for Angie’s benefit, “met me in Telluride after Derek Davidson was murdered. I’m sure she’ll want to know about your two, um, guests.”

Just then another officer stuck his head in Angie’s door. “Lando, the two suspects you brought in last night are finally waking up.”

Aguilar looked at Angie. “Well? Shall we go see what we can find out?”

“Lando, they’ll be groggy for a while, and dehydrated and in need of the bathroom. And food, I’d guess. Why don’t you go make sure they’re healthy and so on and we’ll catch up on reports?” Angie, I thought, didn’t miss a trick.

He left, once again full of purpose, if not of himself this time, and Angie and I hurried down the hall to the evidence room. After some paperwork, we were handed two large plastic tubs full of stuff from Alex’s house. I could tell it was from Alex’s house because it took me all of fifteen seconds to start sneezing from the accumulation of cat dander.

When Angie found out what the sneezing was all about, she couldn’t stop laughing.

“You’re allergic to your girlfriend’s house? Must have been a great relationship.”

“I’m allergic to my EX-girlfriend’s cats, and I spent as little time as I could at her house. Do you have cats?”

“Nope, I have fish, tropical fish.”

“Angie, to borrow a line from an old movie, I think this is the beginning of a beautiful friendship. Now. What are we looking for? Some kind of multi-page document with big labels, I guess. Wonder what it looks like?” And I sneezed again.

We sorted through telephone records, credit card bills, personal and business correspondence, and all sorts of other paperwork that I would never have thought that Alex would keep around. It went quickly, because we decided that a classified document would be several pages at least, probably stapled with some kind of special cover. But there just wasn’t anything like that. It was all miscellaneous correspondence and old bills.

When we finally reached the bottom of the second tub, all that was left was a disorganized pile of computer CDs and diskettes. A light bulb went on in my head.

“Angie, we’ve been thinking of a document as something on paper. But it could as well be a computer file, don’t you think? In fact, if you were going to smuggle information, would you do it on paper or on a computer CD?” I was feeling rather stupid, and I could tell she did, too.

She looked at me cross-eyed. “Duh. Well, at least we’ve eliminated all the paper. Let’s see what these CDs tell us.”

Mostly, they didn’t tell us much. There were various software distribution disks, some recognizable and some quite obscure. Did you know, for example, that you can get a computerized catalog of aromatic candles on CD?

We sorted and stacked, and things were looking bleak. But then as we were finishing up I noticed that Angie had put a CD with the Numerical Recipes in FORTRAN on the top of one of her piles. This is familiar software to me—it consists of a huge library of mathematical computer programs put together by a Harvard professor and his colleagues to solve all sorts of problems in science and engineering. Recipes, just like the title, and the language the programs are written in is FORTRAN, the formula translating language that, until a few years ago, was the standard for scientists and engineers. What Alex would be doing with it was a complete mystery.

“Angie ...”

“I like it when you call me that. Makes me tingle.” This time I was already sitting down, which was just as well.

“Tingle good, I hope. Hand me that top disk there, the numerical one, would you please? Thanks.”

“What is it? Looks strange.”

“Very strange, for Alex. Not for me or my colleagues, but strange for Alex.” I looked more carefully at the label, and there was a little Sandia National Laboratories thunderbird logo, with a small-print “unauthorized distribution prohibited” warning.

“We need to look at this on a computer, Angie. Maybe not here, though. I think I should take it home.”

“You sure? Really? I can check it out from the evidence room.”

“You don’t want it on the NMBI computers, just in case.”

My knowledge of matters classified is miniscule, but I do know that classified information can “contaminate” computer systems. Once it becomes public, it’s less of an issue—whoever classified it in the first place just ignores the whole thing, everyone issues “no comment” statements and acts as if nothing happened. But on controlled computer systems, like NMBI’s, it can be a real problem. The Feds can come in and confiscate anything they want to, if they think a system has unauthorized classified information on it.

I wasn’t concerned about my computer at home, but I didn’t want the Nimbie computer systems to become contaminated with classified information—there was no telling how their network worked. For all I knew, their system had automatic backups that copied any new information to an archive, or even to multiple archives. Anything designated classified by the defense establishment could have been a real disaster.

So we packed up the tubs and checked them back in, and Angie checked the single disk out of the evidence room without commenting on why. The less fanfare, we figured, the better.

\* \* \*

Back in Angie’s office, Detective Aguilar was pacing, obviously impatient for our return.

“Where’ve you two been? They’re awake and demanding lawyers, so let’s get in there. Not you, Livingston, you’re a civilian.” He stalked out.

Angie shrugged. “Maybe it’s really better if you wait this one out. They could recognize you, and that’s something we can save for later. OK?”

She smiled and trotted out, chasing Aguilar.

Angie's office, while glassed-walled, was designed to give her a little privacy while she was at her desk, and I couldn't help but notice the laptop computer sitting there. Right next to it was the numerical recipes disk, where she'd left it. Maybe, I thought, I won't have to take this CD home after all. I went over to examine her computer.

It had one of those abstract-in-motion screensavers going, and, when I swiped the touchpad, a password box appeared. Password cracking isn't something I know much about, but I wasn't even sure I wanted to try. It didn't seem ethical. On the other hand, there was a CD drive right there on the front of the machine, calling out to me. I finally resolved to myself to try only a few possibilities, the more obvious ones that people tend to use.

I ran through all of the names I knew in her family, trying them with and without capitals. Then, just out of curiosity, I tried mine. To my embarrassment, "Sanford," with the capital "S," lit up the screen.

I unplugged the network cable from the back of the laptop and opened the CD reader. It took what seemed to be a terribly long time to read the disk, but, I reminded myself, these laptops always do. Eventually the additional icon appeared, and I clicked it, revealing the directory of files and folders on the CD. And there was the familiar file structure, with a folder with all the program modules—the recipes themselves—and the other one with examples. Plus an additional folder I didn't remember, one called "man." Normally, such a thing would contain documentation—the manuals—of the contents of the disk, and, when I clicked it, that appeared to be the case. But in there was also a large file in standard portable document format called "SNLsys.pdf".

I took a deep breath and clicked it open. The pdf reader took a few seconds to load, and then I was greeted with an ominous-looking page with red borders and the words "Top Secret National Security Information" printed over a warning box informing me of the dire things that could happen to me if I was looking at it without authorization. Despite myself, I felt a little adrenalin rush.

I wasn't authorized, of course, and I probably should have stopped there. But the Senator had said something about anthrax, and I thought it would be a good idea to verify that what I had was what the Senator was talking about. So I scrolled down a few lines and discovered that the document had originated at the Aberdeen Proving Grounds in Maryland, which surprised me. Apparently classified documents are like the technical papers that I read at work—reprints get around. I scrolled a little farther, to the title, and read

*Nano-polymeric cryo-encapsulation (C)*  
*of B. anthracis spores against UV degradation. (C)*  
*Part II: Chemical reactivation sequence (C)*

As I said, I don't know squat about classification, but it didn't take me long to decide that those parenthetical "C"s meant that even the title was classified. So I tried to forget it while I closed the file viewer and the file index and found the "recently used" list and purged it.

But when you try to forget something, you can't. Besides, a corner of my brain was working on what those words meant. About the time I ejected the CD from the computer, the whole thing came together. Someone had figured out how to use ultra-cold temperatures to encase anthrax spores—maybe spore-by-spore, if that's what the "nano" meant—in a polymer so they would survive exposure to ultraviolet light, and this particular document provided a chemical recipe to break down the polymer so the spores would be reactivated. I felt prickles on the back of my neck and realized my hair was standing on end. There was no doubt in my mind at that point that I should have stopped before reading that title.

With the CD back in its paper envelope and Angela's computer plugged into the network and back to its previous state, I looked around for something innocent to be doing. She's a cop, I thought.

Shouldn't there be a copy of the *Police Gazette* somewhere, or maybe *True Crime*? But all I found was a stack of FBI bulletins on a credenza and, under the in-box on her desk, the current copy of *Bride*.

That scared me as much as the top-secret title had.

Blood tests and *Bride* magazine. Using my name as her computer password. Wanting me to call her "Angie."

After three dinners? And a couple of kisses? The Senator, I thought, really knew what he was talking about.

Looking back on it, I can see that I was suffering a bachelor panic attack—my precious freedom was suddenly being threatened, and I was having mixed and contradictory feelings about the whole thing.

At the time, though, I broke into a cold sweat. If it hadn't been for that CD, I think I would have bolted for the door and not stopped until I got to Mexico. As it was, I had to do something responsible with that top-secret report.

My cell phone wasn't getting much of a signal, so I used the phone on Angie's desk to call Senator O'Malley.

"I found it, Senator. I'm talking on a land line, so I'm not going to be too specific, you understand, but it was in the stuff that the NMBI took under their warrant, remember?"

"And maybe you had it right, son. Maybe Betsy's the hero. I think I'll hold onto that thought. What are you going to do with it?"

"Senator, I wish I knew. Do you know anything about what to do with ... ah, with this sort of thing?"

"What I've seen, is people use special shredders, they use 'em on everything, documents, diskettes, CDs, you name it. Saw a guy accidentally use one on his tie once, almost pulled him into the shredder with it. Everything gets turned into confetti."

"I wonder if there's one around here somewhere. The Nimbies have sensitive stuff, I'm sure."

"Don't, son. We'll need that for evidence. There's a spy at Kirtland, and your Ms. Hall has some questions to answer as well. I think we really ought to call in the FBI."

"You're right, sir. But the trouble with that is that we'll lose control of the two Syrian guys. Did you hear about Elizabeth's rental car, sir?" I plunged ahead without waiting for an answer. "See, it was in the parking lot by the ski area, where you'd expect it to be, but it was empty. None of Elizabeth's belongings. Her purse was never found. And many of her fingerprints in the car were obliterated, as if by someone wearing gloves. But the car didn't have any broken windows, or anything. Also, she wasn't carrying any ID or anything."

"I'm hoping you'll tell me what you think this means, son."

"Well, the two Syrian guys got into my house somehow without actually breaking in. I mean, nothing was broken. I checked last night. And they bragged about it. They could have broken in and rifled her car, too. Or maybe they were up in the forest with her and stole her keys."

"I said before you're a quick thinker, son, and I was right. Still, I think you should call the FBI. But if they give you trouble about that item you have, make sure they call me. And, say, how do you know it's the real deal? Don't tell me you read it."

"Only the title, Senator. That was enough. I don't even want to know more."

His rumbling laugh was back. “Smart move, son. And that’s how I feel when I get intelligence briefings. They tell me stuff I just flat don’t want to know about. I try to forget it as soon as I can.”

“That’s what I’m trying to do with that title, Senator. I’ll stay in touch.”

The CD was sitting on Angie’s desk, crying out to me that it was top secret and hide me, Hide Me, HIDE ME. But, of course, to the world it just looked like a volume of software for science and computer nerds. When that thought finally soaked in, I began to reason the situation out—why would Angie have a CD of FORTRAN computer programs? If someone saw it, what would be her explanation? Where would she stash such a thing, if she had it, say, to give someone as a gift?

I guess I decided that if she had it as a gift for someone, then she’d put with her personal possessions. And for lack of any better thing to do, I slipped it into the *Bride* magazine under her in-box.

\* \* \*

## Fourteen

The FBI bulletins were both scary and boring. To think that there were such evil people wandering around out there made me want to crawl in a hole and hide.

But I also couldn’t help but think that they should have hired an ex-reporter from the *National Enquirer* or one of the other tabloids to write their stuff. The prose needed spicing up, and it would have been easy, given the raw material. I managed to get nearly all the way through the stack on Angie’s credenza before she and Aguilar returned.

When I saw her look at her desk, not see the CD, and then look at me in panic, I winked at her, trying to be reassuring. I would have said something, but Aguilar was holding forth.

“Jesus! We’ve got two guys with Canadian passports who are also on the terrorist watch list, under different names. And they’re in our lockup. This is nuts! What’s with you people?”

Angie looked a little scared and intimidated, so I took him on. “Calm down, detective. First of all, they have Canadian passports. If they’re really Syrians, like the watch list says, that means they might be traveling under falsified credentials, and I’d say you’re justified in holding them for the FBI. Second, I don’t know what they told you, but I bet it was a different story from what we know. So why don’t we just call in the FBI and let them handle it? And third, I caught them red-handed having broken into my home, and they held me captive at gunpoint. That’s sufficiently criminal, isn’t it, to justify your holding them here?”

He calmed down a little after that, especially, I think, because I had suggested calling the Feds.

“I guess you’re right. We shouldn’t be in any real trouble. And there were a couple of agents around here earlier today—I’ll go see if I can find them. You people stay right here.” And he dashed off.

I looked at Angie. “Boy, he certainly is excitable, isn’t he?”

“What did you do with it? Where did it go?” She was practically hissing, trying to keep her voice down yet communicating a definite urgency.

“You mean the CD? I looked at it on your computer, and it’s got the ...” I looked around for eavesdroppers “... document. Bingo, as they say.”

“You looked at it here? What about that business of contaminating our systems?”

“I unplugged your laptop there from the network. And I cleaned up after myself. So everything’s fine. I’m the only one contaminated—I read the title. Pretty spooky.”

She looked around again. “So where is it? And what do we do now?”

“It’s hidden in plain sight, so to speak. Don’t worry about it, at least as long as we’re in here. And what we do is wait and give it to the FBI with a little explanation, and then we have them call the Senator. Calm down. Everything’s fine, really.” We were still in her glass-walled office, so I still couldn’t take her into my arms to reassure her like I wanted to.

“But you didn’t want the FBI called in. What gives?” She was calmer, but puzzled.

“I still don’t, but the longer we wait the worse we’ll look. We’ve got to tell them about that document, after all”

“Let’s think about that. We know, at least we think we know, that she was involved in espionage somehow with these Syrians. A go-between who was putting together the source with the recipient. Maybe she was supposed to make the delivery.” She sat down at her desk, leaned her elbows on it, and nibbled on the end of her right thumbnail. Even deep in thought she was beautiful.

“But it appears she may have been having second thoughts. When I ran into her downtown the day she died, she said something about getting away to do some thinking. And that phone message from Alex suggested that somehow the pipeline had been interrupted.” I couldn’t let go of my notion of Elizabeth as hero.

“Could you do me a favor and try to call her ‘Alexis’ or, better yet, ‘Ms. Hall’?”

This took me completely by surprise. It was silly, but I could also understand it—a little. And it seemed to fit with some of the other little things that were popping up, the things that had precipitated that panic attack of mine.

“OK, right. Anyway, Alexis called her that Saturday afternoon while she was up there on the Winsor Trail and left the message about how ‘we’ had to give ‘them’ the document ‘this week.’ As if whoever ‘them’ is was waiting for it, in town, maybe.”

“Sandy, I’m sorry. I don’t know why I said that, about calling her ‘Alexis.’ I’m just sort of confused, I guess.” She gave me a little apologetic shrug.

Enough, I thought, time to have it out. “Me too, Angie. You know, there are several little things that don’t quite add up, or maybe they do but I forgot my math. Like, well, we seem to be on a fast track to intimacy, in some ways more emotionally than physically. And your computer password—I guessed it by accident when I wanted to read the CD. And where I put the CD, in your magazine under the in-box there. And the blood test thing. I’m trying to see how all this fits together.”

When I mentioned the magazine, she practically dove for it, leafing through it to find the CD.

“Oh, God, I’m so relieved. I got to worrying about this thing while we were in with the Syrians. It’s evidence checked out in my name, and the chain of custody is important. I really shouldn’t have left it lying around. All you did was look at it on the computer, right?”

“Right”

“Right. OK. So, the computer, the password, yeah. And you’re wondering about, what? The blood tests and ... and this?” She held up the magazine, looked back and forth at it and me a few times, and then burst into laughter, a delighted, fun laughter.

And then it changed as she started to tease me. “Got you worried, lover? They have some really beautiful gowns in here. And articles on which stores to register at, what all the most fashionable silver

patterns are, what to have the groom wear, how to have the best reception, how long to wait to get pregnant, all that stuff.”

I could feel the panic attack lurking around the fringes of my consciousness, seeking an entry. But she was shaking her head no, as if to tell me not to let it in.

“C’mon, Sandy. We’ve had—what?—three dinners? Two, maybe three kisses? I mean no offense, but do you think I’m crazy? You haven’t met my family, except for Jaime and he hardly counts. I haven’t met yours. I don’t know very much about you, certainly not the important stuff. Hell, I haven’t even tried you out in bed!” She stood up and walked over to me. “Screw the glass walls. You need a hug.”

It really did help, even if there were quite a few of her NMBI colleagues out there watching with mounting curiosity. Them, I could handle. But I also saw Aguilar coming down the hall with two suits.

“Angie? Here comes Aguilar with the FBI, I think.”

She pulled back and winked at me. “Hang in there. You never can tell what’ll happen after the fourth dinner.”

The two FBI agents, Chet Hornby and Lou Collingswood, seemed fixated on the watch-list status of the two Syrians, and they began to grill me about how I’d captured them.

I put up with it for a while but finally decided enough was enough.

“Gentlemen, with all due respect, you’re going about this all wrong. Let’s start over from a different angle. What if I told you that we have circumstantial evidence that these two individuals you’re so worried about are involved in espionage—espionage for which we not only have direct evidence but also know who the traitor is?” To their credit, my question’s circumlocution didn’t faze them.

“What direct evidence?” It was Hornby’s turn to ask the question.

I picked up the CD that Angie had taken out of the magazine. “There’s a top secret document on here, associated with what looks like biological warfare research. Senator Mike O’Malley has telephone-message evidence of where it came from and where it was going.”

I handed it to Collingswood, who was nearer. He peered closely at the CD through the clear plastic front of the envelope, then wrinkled his nose.

“What the hell?” He took a big sniff. “What *is* that? Shalimar?”

\* \* \*

The FBI guys were methodical, and they took the rest of the afternoon and went on well past dark. Angie and I eventually ended up at the Outback next door again for dinner. The actual questions they asked were straightforward; it was the complexity of dealing with the classified issues that took most of the time. They were absolutely paranoid about the possibility that classified material had somehow been compromised— and, of course, it had, in the sense that I’d seen that top-secret title.

They weren’t at all amused when I suggested that all someone had to do was to change the title of the report to make the title I’d seen a non-issue.

But my attitude was, so what? What harm could possibly come from the fact that I knew about the existence of a way to protect anthrax spores against ultraviolet degradation and then to reactivate them? It’s not like I knew any details that I could accidentally tell someone. Maybe the fact that such a thing could even exist, or was even being thought about, was considered sensitive, but all it took was a little imagination to think such a thing up. Even those two Syrians would have been capable of that.

What I thought was that Hornby and Collingswood were more concerned about paperwork than compromised secrets.

Anyway, after we figured out why a classified report on anthrax smelled like Shalimar—credit *Bride* magazine for having a blow-in scratch-'n-sniff where I'd stashed the thing—and then related the CD's recent history, they wanted to look at it. It took some persuading, but finally we got them to agree that the NMBI was a good enough location for a quick peek, and they had me show them exactly what I'd done before. This allowed them to verify that Angie's computer wasn't contaminated and to see the title for themselves. Before that, though, they had to make Aguilar, Angie, and me recite an oath about not divulging any of the information, blah, blah, blah. It was a good thing all three of us were U.S. citizens.

And afterward, they had to deal with the NMBI evidence-transfer paperwork, far more than I would have thought. I think Angie took delight in a little pay-back for all the classified rigmarole. Somewhere in there, I called Senator O'Malley on his private line—the FBI duo were suitably impressed—and they made arrangements for his statement to be taken formally in Albuquerque.

Hornby and Collingswood finally ran out of things to make us do, and they left with the CD, a hint of Shalimar wafting down the hallway after them. Just to be polite, Angie and I invited Detective Aguilar to join us for dinner. We weren't *too* disappointed when he told us that he had a wife and children to get home to.

"I guess we have a lot to talk about, huh?" I'd ordered us one of those giant onion-flower appetizers that Outback offers. We were both sticking to iced tea and had to settle for gratuitous deep-fried calories to indulge in. "But here, in public, we can't talk about that document we saw, that's for sure."

"Did you really think I'm husband-hunting?" She picked the one topic that I was hoping to postpone indefinitely.

"I don't know what I was thinking. Really, I guess I was just confused. But what's that magazine doing in your office?"

"One of my old friends is getting married, which reminds me, I need an escort to her wedding, if you're not doing anything Sunday. Got a tux? Or a nice suit?" She smiled, then shook her head. "No, no, don't worry, I'm teasing. I got the magazine to see what people wear to weddings these days, and tomorrow my job is to find a dress. I know it's out of line to ask you to come at this point—I was planning on going by myself anyway. So don't worry about it. And, believe me, that magazine isn't my idea of recreational reading. It's really quite appalling. And, let's see. My password. Right, well, see, the damned computer system forces us to change our passwords once a week, and it also keeps a list so we can't just switch back and forth. So I ran through my family's names and some friends and then you came along. So I just used you. Hope it's OK?"

I decided to return to a better subject to see if I could redeem myself for having been such an idiot. "It's fine, really. But, look, going to a wedding alone seems, I don't know, lonely, I guess. And it's not like I have other plans, except for the usual NFL games."

She tilted her head a little and looked bemused. "All right. Let's give it more thought. But I guess I shouldn't be on your case too much, about thinking I'm man-hungry, I mean. I'm about the only single girl I know. All my friends from high school have three or four kids and weigh about fifty pounds too much. And my friends from college up in Colorado are turning into soccer moms at an alarming rate. My family thinks I need to get married and start popping out babies, that's for sure."

"I guess that goes along with your brother's being so protective. But you're on a different track, it seems like. A law-enforcement career, huh?" I had to move the iced-tea glasses and some of the tableware to make room for a giant plate the waitress brought us.

“I don’t know about a career, but so far, so good. At some point I’ll probably get bored and figure out the next thing. And that might just be settling down, I don’t know. But you’re—what?—ten years older than me? I bet you’re not following the traditional pattern in your family, either.” She ripped off a chunk of battered and fried onion, dipped in the spicy mayonnaise sauce, and took a bite.

“I’m sort of the family black sheep. I was supposed to go to law school and join my father’s law firm, which was his father’s and his father’s before him, back several generations. But instead I went into science at Berkeley and MIT, and then moved to Santa Fe. I think they all suspect I’m gay, but they’re too mid-western to broach the topic.” I was trying to nibble, because with the sauce those damned onions probably have 500 calories per slice.

“If you’re gay, pal, my intuition is severely out of joint. Or at least you sure do kiss a girl convincingly for a gay guy.” At the rate she was gobbling the onion, I couldn’t help but wonder how she didn’t look like her high-school friends, the overweight ones.

“No, I’m too attracted to women.”

“Glad to hear it. But with that mid-west upbringing, how come you’re not married?”

“I just never got around to it, I guess. But I do seem to be moving in that direction—I don’t want to upset you or anything, but I actually thought about it a little when Alexis and I were still seeing each other. I came to my senses last week, though. Good thing, too, or I’d be talking about ‘my honey, the spy.’” I was hoping that mentioning Alex wouldn’t set her off again.

But she passed right over it. “I have a feeling that Ms. Hall is in for a change in living arrangements. But speaking of spies, we don’t want to get sidetracked and forget about our real investigation, do we? We really don’t have anything more than speculation connecting those Syrians to Elizabeth Davidson’s death.”

“Yeah, if she was murdered at all. Although you said it before—at this point we’ll have to prove that she *wasn’t* murdered, if that’s the case. I guess I don’t know where to go from here.”

Our salads had arrived, and she began munching on lettuce. “We make a list. Either she wasn’t murdered, she just died by accident. Or she was killed in connection with this espionage business. Or she was killed for another reason, maybe something in connection with her husband, or something else, like the John Kurkle angle.”

“When I got those two Syrians knocked out and tied up, I thought everything was solved, that we’d figure out how to prove they killed both Elizabeth and Derek Davidson.”

“They told Lando and me that they’d been in town only for a couple of days, that they could prove they were on the east coast before Tuesday. We didn’t push too hard, because they demanded lawyers. But if what they said is true, someone else killed Davidson, and Elizabeth, too, if she was murdered.” She seemed to like the combination of the salad dressing and the onion flower. “But we’ll have to see that proof, I mean the east coast documentation.”

“If they didn’t kill Davidson, then I sure hope that whoever did isn’t after me. I think I used up my bag of tricks on those two Syrian guys. Say! Can I hire you to be my bodyguard when you’re off duty?” I tried to look innocent. “You know, nights and weekends?”

“I thought you were going to hire Jaime and Tito and Willy for that.”

“No, they’re just for when I need hired muscle to back me up, when I need someone to help me look intimidating. Besides, you’d be a much more interesting bodyguard.”

“Especially the night part, I guarantee it.” Now she was the one who was trying to look innocent.

Despite her hints and teasing, we returned home separately after dinner. I was actually glad for that, having been up almost the entire night before. Even though I'd slept until noon, I was practically dozing off over dessert. I guess that all-nighters are easier when you're college age than twenty years later.

Saturday morning, my main task was to make sure I had something appropriate to wear to the wedding. We'd reopened our discussion of going together and decided it would be appropriate—if nothing else, it would give Angie's friends something to gossip about.

Angie's old high school friend Carmen Martinez had a Sunday afternoon ceremony scheduled in the Cathedral—the St. Francis Cathedral, built in the late 1800s by the Archbishop Jean Baptiste Lamy, whose efforts were chronicled by Willa Cather in *Death Comes for the Archbishop*. It simply wouldn't do for me to show up at the Cathedral wearing a turtleneck and sports jacket. Fortunately, my one suit was waiting for some appropriate occasion in its plastic cleaner bag, all pressed and ready. Better the occasion should be a wedding than a funeral, I thought. And even better yet, I still fit into it.

I was thinking about whether I should go find an up-to-date tie when the phone rang.

“Sandy? This is Annette Trieri”

Despite myself, my heart did a little flip. “Annette! Good morning! How's everything in Durango?”

“About the usual, I guess. How's your leg?”

“Almost back to normal. A little stiff. What's up?” I shook my leg and it actually felt almost whole again.

“We've made some progress on background for the Davidson murder. I jumped to a wrong conclusion—it probably wasn't the Las Vegas loan sharks. We've discovered that Mr. Davidson had a serious gambling jones, but it wasn't in Nevada, it was in New Mexico. Both of the houses, the Telluride one and the Malibu one, are mortgaged to their full appraised value, and he had personal loans on top of that. Apparently, one of those loans, a very high-interest one, is in connection with the casino down your way. Hal and I are going to drive down to Santa Fe today, and I've got an appointment at three this afternoon at the NMBI to begin looking into this angle.”

“The casino?”

“Right. There's an Indian casino somewhere by Santa Fe, no?” All of a sudden she sounded like my fifth-grade teacher.

“To say the least. Let's see if I can remember them north-to-south. There's Taos, then there's the one the Picuris folks have up in the foothills. In the valley, there's the Ohkay Casino the San Juan Pueblo runs and the Big Rock Casino of the Santa Claras—they're both in Española. Then there's the Cities of Gold in Pojoaque, and Camel Rock, the Tesuques' place just north of Santa Fe. Between Santa Fe and Albuquerque there's the San Felipe Casino Hollywood just off the highway and the Santa Ana Star Casino in Bernalillo, and on the north and south edges of Albuquerque there are the Sandia and Isleta Casinos. Finally, there's the Route 66 Casino that the Lagunas run and another one, Sky something, run by the Acomas, both of those are west of Albuquerque on Interstate 40. And those are just the Pueblos' casinos—the Apaches also have several, one just south of the Colorado border somewhere, Dulce, I think, and others down south by Ruidoso. I imagine there are others, too, down by El Paso, probably.” I wondered if I'd forgotten any. “Oh, yeah, there's another one farther west on the interstate, Interstate 40, way out by Grants. I can't remember its name, either.”

There was a long pause. “Oh.”

“Right, well, see, with all of these small Pueblos, each of which is a sovereign nation, it’s sort of Balkanized. Everyone wants his share of the pie.”

“And you wouldn’t have any idea which one of these Davidson might have gone to? He didn’t say anything?” Now she sounded like one of the students I’d tutored when I was a graduate teaching assistant.

“I didn’t know he was ever here in New Mexico, although I suppose it makes sense. Say, you know, lots of movies stage location shoots here, especially westerns. Maybe he did stunts in some of them. You could find out where the locations were and zero in on what casinos may have been closest.”

“Not to mention that his father-in-law lives in New Mexico.”

“Right, in Albuquerque.”

“So should Hal and I go stay in Albuquerque instead?”

“Not unless you have a good reason to punish yourselves. Stay in Santa Fe, and I’ll show you the good local restaurants. It’s only about an hour to Albuquerque from here, if you really need to go down there.” I had the notion of showing Angie off to them as a way to make up for some of my doofusitis in Telluride.

“I stayed in Santa Fe for one of my cases a couple of years ago. It was at a condo on a street by a creek, a little uphill of downtown, I think. Residential neighborhood.”

“Sounds like East Alameda, and if it’s where I think it is, it’s by what we call a river down here. Tell you what. I’ve got a little guest house, one bedroom and bath, kitchen and sitting room, you can stay there if you’d like. It mostly gets used when my family comes to visit now and then. It’s at least as nice as the condo you stayed in, I’m sure. And before you say anything, believe me when I tell you it’s no trouble, really. I have a housecleaner with not enough to keep her busy. She loves it when the guest house gets used.”

“Well, thank you. I won’t argue, but I’ll insist that we take you out to dinner a couple of times. You show us where and it’s our treat—that is, just as long as I can control how my chile is served. I about got my head knocked off when I was there by so-called ‘medium’ chile at a place downtown, the Plaza Restaurant, I think. Hal’s been upgrading my taste buds, as he calls it, but I still don’t like things really hot.”

“He’s been upgrading your taste buds? Does that mean he’s trying to train you to like hot chile?” I wondered briefly if this might constitute some type of domestic abuse.

“Right. And I’ve actually learned to like it much hotter than I ever thought I would. Way, way hotter than anything I grew up with in Chicago.”

“One place we could go is where local folks go for chile—people with asbestos mouths. If he likes hot chile, that’s the place, but it’s only open for breakfast and lunch.” Teach *him* a lesson, I was thinking.

“As long as they have alternatives for me, it would be fun to see what he thinks of the really hot stuff.” I heard a soft chuckle.

“If you’re here until Monday, we can drop you off at the NMBI building after breakfast there—it’s close by. Meanwhile, is there anything I can do to help your investigation? You sure helped mine, such as it’s been.”

“I’ve obviously got some work to do to track this casino business down. How *is* your investigation, by the way?”

I told her about having teamed up with the NMBI and my adventure with the Syrians.

“You mean to say that Elizabeth Davidson was involved in some kind of terrorist spy ring?” She sounded as if she couldn’t believe it.

“It seems quite possible. But it also could be that she had second thoughts at the last minute and was killed for it. And I’ve been wondering if her husband’s murder could be related to this somehow. We don’t have any real evidence connecting these Syrians to the deaths, though.”

“Right. That’s another wrinkle, isn’t it? If these guys were going to pay Elizabeth for that top-secret document, I’d guess it’s possible that there was a connection—maybe this was how Davidson planned to pay back those high-interest loans, but she changed her mind.”

“Say, I hadn’t thought of that. Right. Suppose Davidson had told whoever he owed the money to that Elizabeth was going to get it. So they watched her, and when she had second thoughts, they killed her and then Davidson because he couldn’t make his payments. Annette, this is the first real hypothesis I’ve heard for this thing, and I’m glad to hear it.”

“You sound like Hal. He just loves hypotheses. Then it’s fitting the available data to a phase diagram and looking for outliers. I guess you scientists all think alike.” I was glad to hear her laughing.

“Well, that’s what you get for having amateur detectives like us around. But we keep you amused, don’t we?” I couldn’t help but think of Angie in this context.

“Just as long as you don’t go off and get yourselves in trouble, yeah. Sandy, I’ve got to run, but we’ll give you a call from the road later, OK? I’ve got your cell phone number.”

Get ourselves in trouble? Ha!, I thought, What does she know? I’ll just use magic on ’em, like I did with those first two morons.

\* \* \*

## Fifteen

Although I had told Annette the truth about my housekeeper, I also wanted to be a good host, so I walked over to check the guest house, only to discover that the locksmith hadn’t changed its key. So I had to rummage around in my kitchen junk drawer to find one of the old ones that he’d made obsolete, mostly. Fortunately, there was still an extra one floating around in the drawer.

The casita was just musty enough to want airing out, and the thermostat was set too low for comfort. What few staples there were in the kitchen needed beefing up with fresh coffee, at least, and a variety of other things if I were to feel good about my hospitality. I made a list and took fresh linens out of the closet, then debated with myself about making up the bed, finally deciding to let them do it. That way, they’d know the sheets were fresh and not feel as if I had to work for them.

I’d never given much thought to the Pueblo casinos as anything other than tourist attractions and hangouts for local gamblers, but the notion that there would be loan sharking and other shady activities associated with them made sense. I thought that maybe Angie would have more information, so I used it as an excuse to call her. It turned out she already knew about Annette’s upcoming visit.

“I don’t know how I’m going to manage to do everything I need to! Aguilar is having me come in to this meeting with her this afternoon, but I’ve got to find a dress. And the good places don’t open until ten or eleven.”

“But Annette told me the meeting’s at three. That’s lots of time.”

“Time? Sandy, you’re a really great guy and I like you a lot. A lot. But I’ve got to tell you that you obviously don’t know beans about shopping for dresses suitable for occasions like this wedding.”

“OK, well, I’m sure you’re right. If there’s any way I can help, just let me know. Oh, by the way, do you know what color you’re going to get? I thought I’d buy a new tie, and I wouldn’t want the color to clash with your dress.” I really was trying to be helpful, but all I heard on the phone was semi-hysterical laughter.

“You crazy man! Just get yourself something understated, not flashy. Conservative suit, white shirt, club tie or something similar, it’s so easy for you.”

I thought it best to change the subject. “Angie? Do you know anything about the casino business here in New Mexico? Is there an underworld associated with it? Loan sharks, you know, all the stuff you hear about Las Vegas?”

“Sandy, that’s the last thing I want to think about just now. I’ve got to find a dress, don’t you understand? And shoes. Shoes! Do you know how long it takes to find shoes?”

I knew it usually took me a half hour or less to find shoes, but I didn’t think that was what she wanted to hear.

“OK, tell you what. Who at the NMBI should I ask about casinos? Tell me that and I’ll let you go find your new dress and shoes. Please?”

“Oh, just call Jaime. He’s probably up at Camel Rock right now. He’s into gaming in a huge way, and I bet he knows this stuff. ’Bye, I’ve got to go.” And she disconnected.

And he did know, far more than I would have thought. I called him on the cell phone number he’d given me, and we had a conversation in which his half was punctuated by booping and beeping and ringing and dinging and the other sounds of a casino’s main floor at nine-thirty in the morning. When he understood what I wanted to know, he asked me to hold on while he rigged up his hands-free headset so he could talk while he played.

Then he proceeded to give me an education in the finer points of New Mexico gaming. Eventually, he got to the interesting part.

“The only place I know that extends credit is the Land of Enchantment Casino and Hotel in downtown Albuquerque. It’s not on pueblo land, but one of the tribes leases the land from the city, I forget which one. They have some deal with the city that makes it legal Indian land and lets them have gambling there. And it’s not really run by the tribe, it’s run by a contractor, a company that specializes in running casinos. They have connections in Vegas and other places like that.”

“You ever play there?”

“Just once. Me and Tito and Willy went there once. Tito went bust after a while and got offered credit. Except, of course, that wasn’t how it was presented to him. That would be illegal. It was much more subtle, Tito said something about the guy offered to stake him to play. But Tito’s smart enough to ask questions, and he asked enough to find out what the interest rate would be. The guy wanted his money back plus ten percent by closing.”

“Call it ten percent per day, huh? Pretty steep, especially since it probably compounds.”

“Yeah, that’s for sure. Tito knew me and Willie’d be good for it, so he borrowed a grand from the guy and then got lucky. Turned it into about twelve hundred, paid the guy back, and walked out with his left-over hundred, scared shitless. We’ve never gone back.”

“Jaime, remember our little conversation about how you three might be able to help me out once in a while? I just may have an idea for you. Would you be game to go back there and sort of make out to be my muscle?” I explained that I wanted to see if I could buy outstanding loans owed to the casino and it would help if I looked the type. To do that you don’t want to be alone.

“You sure about this?”

“Nope, not until I discuss it with your sister and with a Colorado Bureau of Investigation detective. But I thought I’d mention it to you first, since you told me about this place.” Such implicit flattery couldn’t hurt, I thought.

And I was right. “Let me talk to Tito and Willy. This could actually be fun, huh?”

“That’s what I’d hope for, Jaime. And we could wear wires so that the police could listen to make sure we don’t get in over our heads.” I heard an extra loud booping just then—Jaime apologized and disconnected. He must have hit a jackpot.

The idea wasn’t as far-fetched as Jaime probably thought it was. One way we could find the casino where Derek Davidson had accumulated his debt would be to pay likely places a visit and offer to purchase Davidson’s loans. This would take a certain amount of inside knowledge, knowledge that Jaime and friends had, and it would take negotiating skill. An offer to pay the full price, for example, would be completely inappropriate, because Davidson’s death was undoubtedly known to everyone in the casino business, given the publicity. The only rationale for even a discounted offer would be that the purchaser, a role I was prepared to play, had inside access to Davidson’s estate and could recoup the investment that way. So it would take negotiating skill and not inconsiderable chutzpah.

I worked on various tactical plans as I did the shopping, and I also tried out various possible sales pitches that I might use to Annette and Angie. I knew that they would not want any of us amateurs doing this.

But there were good arguments in favor of our doing it. Tito knew the guy at the Land of Enchantment Casino that we needed to approach, and I could easily play the role of a rich playboy looking to make a little extra money. New Mexico is a small state, in terms of population, and I thought that the underworld probably had a good idea of who worked for what police agency. Undercover cops would be smelled out in a flash.

Besides, it was my idea.

While Angie had an assortment of fine dress shops from which to choose, my choices for men’s apparel, especially finer shops, were limited. That’s one of the problems with Santa Fe—if you want men’s clothes in more traditional styles, it’s tough. Bolo ties, those silver-tipped leather braids with clasps in any style you can imagine, are everywhere, but regular neckties aren’t. Down at the mall, all of the anchor stores had ties, I knew, but I didn’t want Angie to look at the label on my new tie and see it was from Mervyn’s, or Penney’s either.

I finally remembered seeing an assortment of ties in a shop off the lobby of the Inn at Loretto downtown. They’d be overpriced by a factor of two, I knew, but at least they’d be reasonably current in terms of fashion. And maybe the sales person would know what color would be appropriately conservative.

My first stop was at one of the medical labs down by the hospital, where I got some blood drawn for the HIV test Angie wanted me to have. It confused them when I didn’t have a lab order from my doc and when I didn’t insist on anonymity like most people do, but offering to pay cash for it smoothed the way. That, it turned out, was the easiest errand of all.

The other errands took me most of the morning. It was getting close enough to the holidays that weekend parking downtown was a nightmare, so I had to resort to the valet at the Loretto, something I resent—trusting strangers with my car isn't something I do very well. Besides, I have this unfortunate tendency to lose the little identification tickets they hand me.

But I finally found everything I needed, and I headed home with a new tie, silk in a rich, dark maroon with little deep-blue snowflakes. I also had a bag of staples for the guest house, including not only coffee but wine, bottled water, and assorted snacks, and another with Sunday brunch for me and, I hoped, Angie. I didn't really expect her to spend the night, but the possibilities for a pre-wedding brunch seemed worth a shot.

Maybe all the talk of casinos had put me in a mood to gamble.

\* \* \*

At home, there were two messages waiting on my phone. Senator O'Malley wanted to know if there was any progress and to talk to me about the FBI, and Detective Aguilar wanted me to call him for a reason he didn't specify. He sounded even grumpier than usual, however, so I didn't think it could be good. Just to get it out of the way, I called him first.

It turned out that Annette had called him earlier and insisted I be invited to the meeting at three, so he was even more out of sorts than usual. I guess he was within his rights, having been forced to include an amateur in his investigation, first by a U.S. Senator and then by an out-of-state investigator. And it probably didn't help that I had been managing to stay a step ahead of him—and I was also seeing one of his employees, possibly one he had his eyes on for himself. How a guy with a family could be jealous of such a thing was something I just couldn't understand, but I was prepared not to be surprised.

Thinking about it, it occurred to me that I should probably go out of my way to be nice to the guy. I learned a long time ago how futile and stupid it is to antagonize people in positions of power—even if you're right, you'll lose. My first experience with this in any significant way was back in fifth grade in Indianapolis, when Mrs. Zales was trying to teach us North American geography. She was talking about rivers, pointing to all of the big ones on this huge map she had hanging on the wall, and, of course, they all flowed north-to-south, generally speaking, *down*, from high up on the map toward the floor. The Colorado, the Mississippi and its tributaries, the Hudson, the Tennessee River, all flowed *down*. Water, after all, flows *downhill*. I still remember her emphasis.

By the time she got to the St. Lawrence, the poor lady must have completely confused herself, because, after she pointed out how all the Great Lakes are interconnected, she began talking about Niagara Falls and how the water flows *down* from Lake Ontario to Lake Erie—north-to-south, more or less, just like all the other rivers.

Well, I'd been swimming in Lake Michigan, unlike most of my classmates, and I knew for sure it wasn't salty. And because she had stressed how the lakes are all connected, I knew that she had it wrong—that Niagara Falls must flow northward, toward Lake Ontario and eventually to the Atlantic. Up, on the map at least.

My mistake was in telling her so, in no uncertain terms, in front of the class. The principal and I had a nice long chat about that, and I had the privilege of staying after school and doing clean-up chores. I did get an "A" in geography that term, though.

But Detective Aguilar wouldn't be giving out grades, so I realized that my best approach would be to ingratiate myself with him somehow. Maybe, I thought, Senator O'Malley would have something I could pass along later.

“Howdy, son, glad you caught me. I was just going out for lunch, and then I’ll be on my way up to Santa Fe. Got a meeting at three with the Nimbies and that Colorado investigator, what’s her name, Treery?”

“Trieri, Senator, I think it’s an old Italian family from Chicago. And I’m coming to the meeting, too. I hear she insisted, and Detective Aguilar didn’t seem too happy about it when I talked to him just now.”

“Got his nose all bent out of shape, huh? Well, we’ll straighten it right out. I’ve got some interesting information for him. Turns out those two fellas you caught in your house were carrying bogus Canadian passports. They’re in something of a pickle.”

“Who are they, Senator?”

“Near as we can figure, and by ‘we’ I mean the FBI and some other organizations I won’t name over the phone, they’re mercenaries who work for various Middle Eastern terrorist groups. Their real names are Amir Hassan and Halim Mohammad. They probably want that ... ah ... information you know about because they’re planning some kind of attack, or something like that, or maybe they want to sell the information to someone else. Either way, it’s a good thing you caught them.”

“They talked, it sounds like. And it didn’t take long, did it?”

“Yep, and I don’t want to know under what circumstances. The other thing I found out is that my Betsy was part of a spy network they’d set up here, but she didn’t come through with this information for them. So I’ve got kind of mixed feelings about it. At least she did the right thing at the end.” He sounded old and defeated.

“I’m sorry, Senator, not that she did the right thing, of course, but that she was mixed up in this at all. But did they say anything about how she died? Did they have her killed?”

“The questioning didn’t go into that, I’m afraid. That’s not the concern of these agencies, although they may change their tune when we have budget hearings.”

“Senator, Annette Trieri suggested a possible link between Elizabeth’s murder and Derek Davidson’s.” I related the gambling-debt hypothesis that Annette and I had discussed.

“You say she figured out that Davidson owed people here in New Mexico somewhere? Interesting. I don’t remember that the two of them, I mean him and Betsy, that they spent much time down here. But, then, it probably wouldn’t take very long for him to have run up a big tab at one of the casinos. Any idea which casino it could be? I’ve got some pull around these parts.”

“Not really, Senator. I have this idea of asking around to see if there’s a gambling debt or two of Davidson’s I could buy up at a discount, on the excuse that I’ve got an in with the estate that no one else will be able to take advantage of. That way, I might be able to find out what organization had its hooks into Davidson and proceed from there. You know, try to find out if they have enforcers and see if they might be suspects. Based on what Angie’s brother told me, we were going to start at the one downtown, the Land of Enchantment place.”

There was a long pause. “Son, I’m not sure I like that idea. I asked you to do some investigating for me, I know, but this seems like a recipe for disaster. I don’t think you want to get on the bad side of the casino finance crowd. Trust me on this one, OK?”

“I kind of thought that Annette and Angie would try to talk me out of it, too, and maybe I’d just as soon they did. But, look, it doesn’t have to be me, and it doesn’t have to be this approach I thought of. It just seems like we should check this possible connection out.” I wasn’t sure if it was the thought of

going down to Albuquerque or dealing with the casino crowd that bothered me more, but I was a little surprised to find myself relieved to hear the Senator's opinion.

“Angie, huh? Getting in deeper and deeper are ya? Anyway, that does seem like a good idea, if we can find the right person to do it. But let's talk it over at this meeting. Son, I've got people waiting to take me to lunch. I think maybe they might want me to vote for something or other.” His rumbling chuckle told me he got that a lot.

I spent a while putting things away and straightening my place for the company that was coming. Then my suit got a quick going-over with a lint brush, and I polished up my dress shoes. The idea of getting all dressed up and going to the wedding with Angie began to seem fun. As I was fumbling with my new tie, trying to remember how to make a perfect Windsor knot, my cell phone rang.

“Sandy? Hi. Hal and I are just coming up the hill past the opera.”

“You made good time, Annette. Got that map I emailed you?”

“Right here. Looks like we should see you in a few minutes. Did you get invited to the meeting?”

“I talked with Detective Aguilar, but he didn't sound real happy about it. I'm coming, though. And Senator O'Malley will be there, too. I talked to him about our casino hypothesis, so he'll want to push ahead, I'm sure.”

“OK, good. Encouragement from the likes of him can only help. Here, Hal wants to talk to you.”

“No! Wait...”

“Huh?” She was still there.

“I got busted yesterday for talking on my cell phone while driving. And you're in the city limits by now, or almost. There's a city ordinance.” I wasn't too worried, but there was no reason I could think of I really needed to talk to him.

“Oh. Well, he wants to know if it makes sense for him to go skiing while we're at that meeting.”

“Sure. The lifts run until four, and it shouldn't take him more than twenty minutes to get there from my house. Getting back will take him longer, though, because of the traffic. But that's OK, it's still not far.”

“I'll let him know. See you soon.”

\* \* \*

They arrived shortly after Annette's phone call, and, after unpacking the car and getting a key from me, Hal left to head up to the ski area. I showed Annette the guest house and explained its eccentricities—just about everything in Santa Fe has eccentricities that need explaining—and then we made a little tour around town on our way to the Nimbie offices.

I found where she'd stayed during her other trip to Santa Fe, at least where I thought it was, and she recognized it. And she explained how she'd been abducted briefly, then escaped and, thinking that even the Santa Fe Police were after her, had taken the long way around the east side of town to get back to the airport. I managed to duplicate her route, and, since it took us past Museum Hill, we killed an hour at the Wheelwright looking over an exhibit of Navajo rugs. I couldn't help myself: downstairs in the Case Trading Post I bought two more to add to my small collection, a beautiful gray/tan/off-white Two Gray Hills and a Ganado in a startling color combination, red with orange highlights. And I helped Annette pick out an Eye-Dazzler—she told me she had wanted to start a collection for some time but didn't know where to begin.

I couldn't help but think that if I'd been escorting her around a week before, I'd have been in doofus city, but Angie's presence in my life had quickly changed things. Annette had turned into a friend instead of some kind of prey.

The meeting at the Nimbie offices was predictable. Aguilar tried to take it over, but Senator O'Malley made sure he didn't. Annette was provided with enough background to understand where our investigation had led, and the NMBI and the CBI agreed formally to coordinate efforts in case there was a connection between the deaths of Elizabeth and her husband. The Senator's news about the Syrian guys produced both amusement and concern about spies in our midst, and Annette's theory that Davidson's gambling debts could be connected to both murders got a thorough airing. I didn't say anything, but the implications of the title of the top-secret document had me worried as well.

And I found out about Alex.

Kirtland Air Force Base employee Bertram Cale—he actually worked for an Air Force subcontractor there—had been arrested by the FBI on a charge of espionage. Under questioning, he had shown himself to be a spy of the amateur variety, for very little persuasion was needed before he broke down completely and told all. “All” included the tidbit that Alex had been the main arranger of the whole thing. She and Elizabeth Davidson had been volunteers together at refugee camps in the Middle East—something else that Alex hadn't bothered to tell me—and she knew that Elizabeth still had connections there. Alex also knew that Cale had access to information that certain people over there would be interested in. Cale had made an unauthorized copy of the electronic document and burned it onto the CD, with the FORTRAN library to disguise it, and passed the CD to Alex. That the information didn't reach its intended destination was something that Cale didn't know anything about—in fact, when told of its intended destination, he promptly vomited. Apparently, Alex had persuaded him that she was going to give it to a public-health group so they could assess its possible use for vaccines in case of an outbreak of anthrax. Cale, a Green Party supporter, thought that would be a noble use for the classified technology and so compromised his security oath.

Alex had a variety of federal officers trying to find her to take her into custody, and it was unlikely that I would be seeing her again, unless it was at her trial.

As Aguilar and the Senator were filling us in on these details, my head was spinning so much that I felt like the little girl in that movie about the exorcist. For one thing, I was wondering if there was anything of mine at Alex's place. Surely the Feds would have done a more thorough search than did the Nimbies, and if they found something pointing to me, well, I'd be next on their list. But mainly, I was simply having trouble assimilating the fact that my sweet, flakey, erstwhile girlfriend could have masterminded this whole caper. I mean, she had trouble remembering to put gas in her car.

I must have been off in the ozone somewhere, thinking about this, because the next thing I knew was that Angie, seated next to me, poked me in the arm.

“Sandy? You there?”

“Huh? Oh, sorry, I guess I got sidetracked on Alex, uh, Alexis. How she could have managed to do all this is just not computing for me. Did I miss something?”

“Son, we've been speculating that the Feds may eventually get interested in Betsy's death, but for now it's still an NMBI case. And it seems to be stalled. Any ideas?”

“Oh. Well, there's the gambling angle, how Derek Davidson may have planned to use the money from the Syrians to pay off his debts. But wait, I hadn't thought of this before, that would assume he knew about Elizabeth's involvement in the spy business, and I'm not sure that makes sense. Anyway there's still the John Kurkle angle.”

“Who?” Annette, being from Colorado, couldn’t be expected to understand New Mexico politics, so I let Senator O’Malley explain it.

“Thank you, Senator. I think I understand. But he wouldn’t have been complicit in Davidson’s death, surely?” Annette was clearly skeptical.

“That depends whether he was the one who was watching me when I was up in Telluride.” I had come to like and respect the Senator, but this little dig just popped out. He took it in stride, though.

“No, wasn’t him, son. I relied on Colorado connections for that.”

Everyone else was looking mystified, so, rather than explain, I plunged ahead.

“Kurkle was having me watched here, and I expect he could have been tailing Elizabeth, too. The real question is, where was he on the Saturday she went up the Winsor Trail, after that brunch she went to? Annette, I know this may not have anything to do with Davidson, but if we can show that to be the case, it’ll help you avoid a needless diversion, right?”

“Absolutely. And there’s every possibility that their two deaths are unrelated. We need to figure that out.” She smiled at the group. “I’m wanting to be as helpful to your case as I can, but I don’t want to get in the way or send you off chasing wild geese. That gambling hypothesis of mine may be completely bogus. Sandy’s right. There’s no reason to think that Davidson would have been privy to Elizabeth’s espionage connections.”

“I think I have to agree, Ms. Trieri. My Betsy was a master at keeping things to herself. Especially after she came back from her time in the Middle East, it was hard to get her to open up about anything.” The Senator was shaking his head. “I’m trying to hold on to the fact that she seems to have squelched this spy deal, but the whole thing is still disturbing. On top of her death, I mean.”

Annette reached over and patted his hand. “Senator, I can’t imagine how hard this must be for you, one thing on top of the other. I hope it helps that there is progress toward unraveling Betsy’s death. We know now that Davidson didn’t do it, for example. That, I think, was where you were coming from initially. And there’s a solid team at work here, from what I can see. I hope they’ll be able to help me figure out what happened to Davidson. And I’m sure they’ll get Betsy’s death explained.”

I suddenly understood why she was a CBI executive. Leadership.

\* \* \*

## Sixteen

That evening, the four of us went to dinner at the Plaza Restaurant. Hal seemed to want chile three times a day, so I thought we’d start him out with a taste of what Annette had mentioned having on her previous visit. After the Nimbie meeting, I took Annette home and we waited for Hal to return from the ski area and for Angie to come by so we could all go together. Riding down there in the back seat of my allroad, Hal was like a kid in a candy store, commenting on how much more room it had than his car, being impressed with the handling for a car of its size full of people, digging the notion of a hot-rod station wagon.

We parked a couple of blocks north on Lincoln and walked to the Plaza, Angie and I leading Hal and Annette. I used the opportunity to mention, quietly and as casually as I could, that my blood test results would be ready on Tuesday morning.

She bumped me gently with her elbow. “Good boy. Mine are in. Next things next.”

I spent the rest of the short walk trying to get my heart rate under control.

Even though it was Saturday night, it was too early for the real holiday crowds, and it was cold—the locals were staying home. We were seated almost immediately in a booth.

Hal was amused by the warning on the menu about how the restaurant couldn’t be responsible for too-hot chile, and he proclaimed that it must apply tourists rather than chile lovers like himself. After that, his reaction to their “medium” chile was quite gratifying, and it made Annette laugh. As she ate her meatloaf—the Plaza has a somewhat eclectic menu—she explained that his face was turning the shade of red that she associated with his trying to hide the discomfort he was really feeling.

“But don’t worry, he’ll be OK. He loves this sort of thing. And, listen, I don’t want to talk shop any more, but I’m thinking that my presence here in New Mexico isn’t going to lead to progress. I wasn’t aware that there are so many casinos, so I’m going to have to think of a plan B. But part of that means I’m free tomorrow. Do you ski, Angela? I know Sandy does.” She was looking back and forth at Angie and me.

It occurred to me that I didn’t know if Angie skied or not. How convenient that I don’t have to ask her myself, I thought.

“Oh, I do, I’d love to go, but I’m sorry we can’t tomorrow. I shanghaied Sandy into going to a wedding with me. One of my friends from high school is getting married at the Cathedral.” Angie shrugged, and I mentally put a check mark by skiing on my compatibility list.

“That reminds me. Did you find your dress and shoes?” I couldn’t help but to wink at Annette.

“Oh, don’t get me started. I thought I was going to go crazy. There wasn’t time to get the dress altered, so I had to find one that fit perfectly. Nobody had both dresses and shoes, I had to run all over the place to find a match. And I didn’t have makeup in the right shade. Aiee!”

I just had to say it. “Well, you’ll be glad to know that I found a nice maroon tie.”

If we’d been alone, I think she would have hit me. But Annette was laughing, and even Hal was smiling through his chile-induced tears, so Angie just shot me The Look.

“Angela, I know just what you mean. A couple of months ago, Hal, absent-minded Dean Weathers here,” Annette stuck her thumb in Hal’s direction, “remembered to tell me with about two hours to spare that we had to go to a cocktail party at the university, one of those big deal fund-raising events. I got lucky, though, and found a dress just in time. I hope you did as well—of course, you wouldn’t want to wear something like that little black number I found for the party to a cathedral wedding, I expect. You wouldn’t want to outshine the bride, for one.”

Hal coughed to get his voice working. “Hey, if you wore that dress in any kind of church, you’d be excommunicated in a second.”

“I worried about that, both those things, actually. Gotta be decent and gotta not be too much. One thing about being a bridesmaid is that you wear what you’re told to, but I don’t have that excuse. Anyway, I found something that will be OK at the wedding but will also knock Mr. Maroon Tie’s socks off.” Angie looked smugly in my direction.

I decided to change the subject back to safer ground.

“Annette, if you’re skiing tomorrow, you ought to consider Taos. Hal’s done Ski Santa Fe, right?” I looked at him.

“Right. Again would be fine, because I was there only for a couple of hours. But Taos sounds interesting. I’ve certainly heard lots about it. What is it, an hour or so north?”

“Ninety minutes, if the weather and traffic cooperate. It’s way past Taos the town, and you have to go right through the town, a slow process, to boot.” I made a snap decision not to try to explain the locals’ shortcut. “But I’ve heard they have great snow. I’d come if I could, but you heard the lady.”

“Sandy, we’d planned to stay for several days, but I think I’d better get back to Durango. I need to get cracking on my plan B to figure out who killed Davidson. Can we ski Taos and get home tomorrow?” Annette, I could tell, was apologizing for accepting my hospitality and then leaving so soon.

“Hmm. Well, I’d guess Taos to Durango is about four hours as a worst case. I don’t know if US 64 is open west of Tres Piedres just now, that would be shortest—it takes you to Chama and then Pagosa Springs. But you can always get up to US 160 at Fort Garland and then head west, or go over to Tres Piedres and then north to Alamosa. And, of course, you’re welcome to stay, but I understand. Tell you what: get this thing cleared and come back for a week or so of skiing and more food. You can do the museums and so on, add to your new rug collection.”

“New rug collection? What new rug collection?” Hal’s antenna perked up instantly.

Annette patted him on the shoulder. “Nothing, dear. Now finish your green chile.”

“No, really. The only kind of rug collection you’d start in Santa Fe is Navajos, I’d imagine. And I like that idea, because we’ve got a wonderful gallery in Durango to go to, Toh-Atin, on Tenth Street, I think, maybe Eleventh. I’ve always wanted to buy stuff there. What did you get?” And he dutifully popped the last bite of chicken burrito, sopping with medium green chile, into his mouth, as the sweat ran down his forehead.

So Annette told him about her new Eye-Dazzler and made me explain the two I’d purchased. That surprised Angie, because she didn’t know I had a Navajo rug collection.

“That’s because when you were at my place the other night, you were preoccupied with those two Syrians I had tied up. You didn’t get the tour.”

“What!?” Hal and Annette managed this in perfect harmony, and I had to explain my trick with the sleeping pills.

“... so that’s really how the whole espionage connection got tangled up in this. Without those two, we would have had some cryptic telephone messages, but I bet that classified document would still be sitting in the evidence room. Right, Angela?”

“Yeah. Yeah! I forgot about all that, those connections. Without those two Syrian guys, we’d still be thinking that Kurkle, or maybe some goon hired by Davidson, was responsible for Elizabeth’s death. And we still need to keep thinking about that, I guess. The Syrians are spies, but we don’t have any evidence that they’re murderers.” Angie looked thoughtful.

“Say, that’s something worth considering. Davidson was in Telluride, so he didn’t kill his wife. But maybe he hired someone to do so, as a way to get at her money, insurance and everything—and the insurance money was going to be used to pay the killer. But something goes wrong with the money, so the hired killer goes back to Telluride and kills Davidson.” Annette was sitting up straight, staring off into space.

“Gee, I’m sure glad you don’t want to talk shop, dear.” The chile-induced red in Hal’s face was slowly returning to normal behind his big smile.

“Three-to-one, you’re outnumbered. Get some dessert.” She leaned sideways and kissed him on the cheek, and he smiled.

This little glimpse at domestic bliss made me wonder whether I'd ever have such a solid relationship—would Angie and I end up that well-adjusted to each other?

“I was going to anyway. Nothing like chocolate after chile.” Hal waved for the waiter and then looked around at us all. “But, look, if you're thinking about hired killers and that insurance money, shouldn't you have an idea of the beneficiaries? I mean, this guy Davidson was probably a beneficiary, sure, so he'd be on the list. But there are often secondary beneficiaries, in line after the primary ones die, or, in this case, get killed. They ought to be on your list, too.”

“Right, we have people at NMBI working on that one. It's complicated because of the multiple residences, though. There are probably some policies in California that we haven't found out about, yet. And maybe in Colorado, too, although I bet CBI could get on to those.” Angie watched Annette nodding. “Here in New Mexico, we found some information about policies she had via her father and her first husband. But I haven't had a report on them yet. I should hear something on Monday.”

The waiter came, and we all ordered dessert and coffee, flan all around except for Hal's chocolate decadence. He looked pleased with himself.

“What's a 'Kurkle'?” Hal was the only one who had missed the afternoon explanation.

“From what I heard earlier, that's a good way to put it.” Annette explained what she had learned. “I can't think of anyone in Colorado who compares. Maybe some of those gadflies up at the Independence Institute in Golden.”

“Sounds like his only motive would be love scorned. Don't you law enforcement people consider that weaker than money?” Although he probably didn't realize it, Hal was giving me a lesson on how to be an amateur detective. You ask pertinent questions when you get a chance and go skiing while there are boring meetings among the professionals.

“Where'd you find this guy, Annette?” Angie was smiling. “I want one. Mine's still in the cowboy mode, capturing bad guys and tying them up and all.” She bumped me with her elbow.

“Yeah, but he's going to this wedding with you, no? He ought to get big points for that, I think. Try getting my guy here into a church and you'll see what I mean.”

Hal was rescued by the arrival of the coffee and then the desserts.

\* \* \*

I walked up to the Institute on Monday morning, but I just couldn't manage to concentrate on my research. Angie was expecting to hear about the beneficiaries listed in Elizabeth Davidson's various insurance policies and other investments, one of the few real lines of inquiry into her death we had going. My little science project seemed mundane by comparison.

After the Saturday night dinner, we all went back to my place. I was glad that Hal and Annette's impending arrival had motivated me to do housecleaning that morning, especially the part about getting all of Alex's bottles of pills and so on out of the bathroom. I definitely didn't want Angie running across the “so on” things. But it wound up not mattering. Hal and Annette planned to get up early to drive up to Taos, and Angie was exhausted from her stressed-out shopping trip, so no one stayed for long.

The wedding on Sunday was pretty much what I expected—lots of people all dressed up and lots of religious mumbo-jumbo. The bride was “beautiful” in the sense that brides always are, and her maids of honor were all dressed in those coordinated outfits—uncomfortable-looking, never-wear-them-again outfits—that a bride's retinue wears. But in the sense of truly beautiful women, the only one I could really put into that category was Angie. She was a knock-out. It was chilly, so she was wearing a

camel's hair overcoat, and when she took it off at the coat rack, she took my breath away. The dress she'd found was somehow both conservative enough for the cathedral and sexy enough to make heads turn.

While I was trying to figure out what to say, she complimented my tie.

Big cathedral weddings, apparently, demand big, lavish receptions, and this one, across the street at the La Fonda Hotel, went on and on. We finally escaped at about eight that evening, both so tired out that I dropped her off at her place and went home alone. Monday was a work day, after all, and my blood test results wouldn't be in until Tuesday anyway.

I kept thinking back to my comment to Jaime, about not mixing business and pleasure. It sure would be nice, I thought, to get this Elizabeth Davidson murder all figured out by Tuesday evening. Maybe it would help if I pushed things a little, take a gamble. I picked up my office phone and called Senator O'Malley.

"Morning, son. How was the wedding?"

"Not my style, Senator. I'm more for a small, private affair somewhere like my living room. Senator, I called for some advice about our investigation. We have a professional opinion that there's about an eighty per-cent probability that the phone call to BERT about Elizabeth two weeks ago this morning was made by John Kurkle. I mentioned the possibility to you, I think, but we got a real sound technician to do a computer analysis. Angie and I have been sitting on this information, because we got distracted by those Syrian guys and some other things. But since we don't have any evidence on those two goons, I think we should follow up on the Kurkle angle. What do you think about our questioning him?"

"Like I said the other time, it's hard to believe but at the same time there's some sense to it. And if it's your only lead, I'd go after it." There was a slightly menacing tone in his voice.

"Senator, you're the senior Republican in the state, and Kurkle is the party chairman. Would you like to be present at his questioning? The reason I ask is, I think you may know him well enough that you could function as a sort of lie-detector for the NMBI."

"Son, I like that idea. Seeing that pond scum sweat is something that would amuse me a lot. When? And where?"

"As soon as I can persuade Angie that it's a good idea. And where is a good question. I guess I was thinking that the NMBI could just pick him up for questioning. But maybe there's another way. What if you and Angie and I just descend on his office and demand to see him? Would your presence make that work?"

"Damned well better. I do have some clout with the party, you know. I think that's a good idea, son. Let me know when."

"I'll get back to you. Thanks, Senator."

Getting Angie on the phone was becoming as natural as brushing my teeth. "Did I tell you how beautiful you looked yesterday?"

I could almost feel her blush.

"Only about a dozen times. And like I said, don't get threatened but I think we made a handsome couple." I hoped she didn't feel my blush.

She continued before I could say anything. "I was just about to call you. We got beneficiary information on Elizabeth's policies. Almost all of her money was set up to go to various environmental organizations and a couple of children's charities. Davidson wasn't in line for a dime, at least from the

policies we know about, so there weren't secondary beneficiaries after he died. This means that none of his creditors has access to her money. I called Annette, and she has similar information from her sources in Colorado. The money angle seems like a dead end."

"Well, in a way that's a relief. I've been thinking about some of the ideas that I've had, and I don't like 'em. Investigating casino loan sharks, for example, just isn't something I really want to get involved in. But it sure makes things bleak." On the other hand, I thought, it would strengthen my case to bring in Kurkle. "Angie? Do you think that it's worth following up on that eighty per-cent chance that Kurkle made the phone call to get BERT mobilized?"

"We probably should. But how?"

"Why don't we just ask him about it? Maybe if we had the Senator sit in with us, Kurkle would be less antagonistic. He doesn't want to make the Senator mad, after all. And the Senator knows him pretty well. Maybe he could tell if Kurkle is lying."

"You think he would do that? The Senator, I mean?"

Then and there, I made a decision that, in retrospect, shaped my future with Angie. Instead of continuing to pretend to work out a plan with her, I 'fessed up.

"I'm sure he would. I already talked with him about the idea. We talked about the three of us walking into the Republican Party offices and demanding to see Kurkle. Question him on the spot. See what happens."

There was a long pause. "You know, for a civilian, you've got good instincts. Let's do it. I guess it means a drive down to Albuquerque. Are you available today?"

"Absolutely. But I need to set up a time with the Senator. I'll head down your way and call him while I'm on the interstate, just to be legal. Hey, you know, I'm looking forward to seeing you again. Even if you are in uniform."

"Aw. You're sweet. See you soon." The happiness in her voice made my day.

On the way back down the hill on my trail through the trees, I couldn't help but notice what a beautiful day it was. What the hell, I thought, I'll take the summer car. The Senator can meet us at the party offices.

My Audi allroad, basically a mid-sized station wagon with off-road capabilities, is my all-purpose vehicle, and, in winter, I use it almost exclusively. But in the summer, at least when the monsoon isn't threatening, I drive my restored '88 Porsche 959—the racing version. Actually, "restored" isn't quite accurate, because much of the restoration has involved subtle updates—the use of various modern parts and technologies, as well as creature comforts, that would horrify purists, including, probably, the ghost of Ferdinand Porsche himself. But I want to drive the thing on the street, not race it or just look at it sitting in the garage, without feeling *too* guilty about emissions and safety and so on.

I took its cover off, and fired it up, pleased that it sounded healthy. Then I headed out to pick up Angie for the run to Albuquerque. Maybe, I thought, we'd have time to go down the Turquoise Trail, the two-lane state road that winds through the foothills of the Galisteos and the Sandias. It's prettier, less busy, and, in that car, way more fun than the interstate.

Good citizen that I am—or was turning into, what with having a Nimbie girlfriend—I waited until I was outside the city limits before calling Senator O'Malley.

"Damn, son. What's that noise?"

"Oh, that's my car, Senator. This one's not quite as civilized as my new one. Can you hear me all right?"

“I suppose so. What’s the plan?”

“When can you meet us at Republican Headquarters? Oh, and where is it, anyway? Uh, we can probably get there within an hour or so.” I was banking on using Angie’s credentials to allow me to push the speed limit.

“An hour? You still in Santa Fe? Well, I guess I don’t want to know. Let’s see. I suppose I can get there by about eleven. How’s that? Then you won’t have to break any of the traffic laws of our fine state, son. And, let’s see. They moved. It’s on Osuna, just west of the interstate. Get off at the San Mateo exit.”

“We’ll see you there at eleven, Senator.”

I felt smug, in my new-found good-citizen behavior, to finish the phone call just as I passed the city limits sign on South Cerrillos, and I didn’t call Angie until I parked in front of her building. Not wanting to be too much of a Pollyanna, I parked in a no-parking zone, but, then, I was waiting in the car for her to meet me.

When she came out the front door, she looked around in confusion, and I tapped the horn to get her attention. But even that didn’t work, so I got out and stood beside the car.

“Sandy! What in the world is that thing?”

“It was under the car cover in my garage. It’s my fair-weather car. I thought you might enjoy a ride down the Turquoise Trail.”

She walked down the steps with a look of amazement on her face, and then walked a circle around the car. Finally she open the passenger door and looked in.

“Since I’m trying to persuade you that I’m not husband-hunting, I guess it wouldn’t do to ask where the child seats go, huh?”

\* \* \*

I turned south on Cerrillos, which is the north end of the Turquoise Trail, and tried not to accelerate too hard. She was in uniform, and I figured she just might write me a ticket if I didn’t behave. Because it was only 9:30, we had plenty of time to get there for our appointment with Senator O’Malley and his pond scum, so I really didn’t need to hurry anyway.

On the phone, the Senator had noticed the cabin noise of the 959, but it really wasn’t bad. My unconventional restoration had put quite a bit of effort into civilizing the vintage race car, and the extra weight of all the sound-deadening material I put in was well worth it, to me, because it made conversation possible. Even with all the stuff I put in it, though, the total weight was just under 3300 pounds, and, putting out about 450 horsepower, it did fine. I’ve always thought that anyone who’s really interested in cars should have the opportunity to own something in the ten pounds per horsepower class, and, at just over seven pounds per horsepower even with me in it, that 959 was something.

I could tell that Angie thought so, too, but she was studiously avoiding saying anything about it, beyond the wisecrack about child seats. She made conversation about the wedding until we got south of the penitentiary, but then I came up behind a slower moving, customized pickup truck.

“Oh, Sandy! That’s Jaime, and it looks like Tito and Willy are in there.”

Indeed, there were three shaved heads visible through the back window of the cab.

“Sandy? Pass ’em, OK? Fast. And hit the horn when we’re beside him, so he’ll look and I can wave.”

“What? Are you nuts? What are they doing down here, anyway?”

“On their way to a job, probably. There are lots of new houses being built down this way, and they’re finish carpenters. C’mon, pass ’em. Please?”

“Geez, Angie, I was just getting Jaime to trust me, I think.” But I downshifted three gears, checked for oncoming traffic, and stomped it.

Not having experienced that sort of acceleration before, except maybe on an amusement park ride, she let out a squeal of surprise. But when I tapped the horn, she pulled herself forward to wave. I tried not to look, but there seemed to be something more than surprise on Jaime’s face. So I ran through the gears and kept my foot down until the speedometer said 140.

“OK, OK, I believe. Holy shit, Sandy. At least we were past that school zone back there.” I slowed to something less outrageous, a good idea anyway with houses coming up.

“You think he recognized you?”

“For sure.” Her smile was ear to ear. “I’ll probably never hear the end of it, but it’s worth all the coming grief. Is he trying to catch up? Don’t let him.” The seats in that car, not-quite racing seats, don’t lend themselves to turning and looking back, so she was scrunched down, trying to see with the right-hand outside mirror.

With the sets of S-curves into Madrid coming up in a few miles, I knew they would never catch us, unless I let them. That 959 does more than go fast in a straight line. But then in the mirror I saw Jaime’s signal go on, and he turned onto a side road.

I slowed to just above the speed limit, and we returned to being law-abiding citizens. The Porsche took those S-curves like it was on a slot-car track, and we eased through the village of Madrid.

On the grade up the hill south of town, in the middle of small talk about my shopping experience on Saturday and all the traffic and crowds downtown, she suddenly sat up straight.

“Oh! I just remembered. After we talked on the phone this morning, I had a little time, so I was catching up on things. I was looking over the stuff that Lando found in the motel, the one where the Syrians were staying. Remember?”

“Yeah, he found a car key and a some credit cards, didn’t he?”

“Right. And a changes of clothes, some cash, and some other assorted stuff. Including what looks like a valet car check receipt. It doesn’t have a name on it, though. Just ‘valet’ and a number.”

“Well, that’s probably where that other car is. Was it a VW key? I think that’s what Lando said.” I was trying to remember foggy, middle-of-the-night details, and couldn’t.

“I think so. Anyway, your comment about buying your tie at the Loretto reminded me.”

“I got one of those receipts on Saturday, a little blue slip of heavy paper with a ‘valet parking’ and a number on it. They took it when I got my car back. Cost me five bucks, for about fifteen minutes.”

“Sandy, the one I found in the stuff Lando got from the motel is blue. You don’t suppose ...”

“Hey, who knows. Santa Fe’s a pretty small place. We can check the lot for Volkswagens when we get back.”

“Good plan. And I also put a trace on recent activity on those credit cards. The one that Jones, or Smith, I forget which, had on him and the others from the room.”

“Any idea of when that information will come back? That could tell us where they’ve been, what they’ve been doing. Maybe verify their claim that they were on the east coast when Elizabeth turned up dead.” If we couldn’t find the killer, I thought, maybe we could make progress by eliminating suspects.

“It’ll probably be in when we get back to Santa Fe. This electronic stuff is fast. But I think the main thing is to find this Volkswagen.” She had her cell phone out. “Well, crap. No signal.”

We were behind some of the Cerrillos Hills, but I knew the road opened up about a mile ahead. I put on more speed and she watched her phone for a signal.

“Oh, good.” And she started poking buttons. “Lando? Angela. Listen. We’ve got a new lead in this investigation, and I’ll need to get back to Santa Fe as fast as I can ... No, I need to keep this appointment with Senator O’Malley. That’ll probably take an hour or so. Then we’ll get right back there. I’ll have Sandy hurry, and you have no idea of what that implies.” She looked at me and winked.

“I’ll need an escort, a patrol car with lights, at the Republican Headquarters, uh ...” She looked at me and I said “on Osuna” quietly. “Republican Headquarters on Osuna, at about noon. OK? Thanks. See you about one.”

“So are you going to ride in the patrol car or with me?” I tried to look innocent.

She reached over and patted my arm. “Oh, with you for sure. I just want an escort so we don’t get stopped. I could get you out of a ticket, but it would take time. And we need to get back to Santa Fe as soon as we can. Besides, the escort won’t go much over ninety, I bet, and he’ll slow down for traffic. We’ll be safer. No offense, Sandy.”

I had to smile. My conversion to upstanding citizenship was going to happen even if it wasn’t my idea.

We cruised through the hamlet of Golden and were approaching the north edge of San Antonito, on the east side of the Sandias, when she raised the topic of the top-secret document.

“Sandy, I know we’re not supposed to talk about it, but I’ve been wondering about that title we read on my computer on Friday. You know, that document on the CD.”

“We’re not supposed to talk about it when someone else might be eavesdropping, but I doubt that’s possible now. What are you wondering about?” I downshifted a couple of times to get the car to slow to the suburban speed limit that we had encountered.

“What it meant. I never really figured out what it was about. I know I don’t really need to know details, but I ought to have some idea of it if it’s related to our two Syrian guys.” She looked perplexed when I glanced her way.

“That makes sense. Let’s see if I can remember it. The first part was something to do with ‘nano-polymeric’ encapsulation, right? That’s just a technical way of saying coating little bitty things with a polymer shell. And it was ‘cryo-encapsulation’, meaning it’s done at extremely cold temperatures. Then it was the ‘B. anthracis spores’ reference, that’s just the spores of the bacteria that cause the disease anthrax. So they’re using ultra-low temperatures to coat anthrax spores against ultraviolet light degradation. See, anthrax is really pretty common, but its spores—those are the sort of seeds that carry the bacteria through lean times—they don’t survive exposure to UV light. And even the amount of UV that the Sun puts out is enough to kill them. But encasing them in this polymer, I guess, allows them to survive.”

“Why would anyone want to do that? Aren’t they better off dead? We don’t need extra anthrax spores around, do we?”

“I sure don’t think so. But who knows? Your government and mine has all sorts of strange reasons to research all sorts of bizarre things. Anyway, the last line of that title was about part two, so there’s a part one of that document somewhere. Our part two was about how to chemically remove the polymer, I guess, and to reactivate the spores, to make them dangerous as well as to make them vulnerable to UV light. It must be that part one has to do with how they’re encapsulated in the first place.” I glanced over again and saw her staring out the side window.

“So, if these guys you caught, or anybody, really, had some encapsulated spores, our document would tell them how to un-encapsulate them and reactivate them? Sandy, I’m beginning to get a very bad feeling about this.” I could feel her eyes on me.

“I had a bad feeling about it when I read it, I’ll say that.”

“What would they look like, these spores, I mean?”

“Can’t say for sure, but probably the polymer coating reflects light, and the ‘nano’ reference suggests a powder. Maybe it would be white, or silver-colored. But I don’t really know. I imagine the chemical sequence the title referred to is pretty complicated, though, and probably involves liquid chemicals. So the powder would get liquefied in the process of getting the polymer off. And then, I guess you’d have a pretty dangerous liquid on your hands.”

“Not on *my* hands, thank you. I don’t want anything to do with this stuff.”

\* \* \*

## Seventeen

We stopped for coffee and tried to reverse the mutual depression brought on by the anthrax discussion, and then we found the Republican Party offices by 10:50. After about five minutes of conversation about the possibilities for that valet ticket, we watched a Lincoln Town Car drive up and deliver Senator Mike O’Malley.

Inside, he received an emperor’s welcome. The front-office staff made so much fuss that a private-office door with a name plate reading “John Kurkle” opened, and a short, portly man, just an inch or two taller than the Senator, walked out to find out what was happening. This, Senator O’Malley told us later, was just his plan.

Kurkle was surprised, to say the least. “Why, Senator! Well, I’ll be damned. How good to see you! To what do we owe the honor today?”

“Howdy, John. I came down to talk with you, got a few minutes for me?”

Kurkle suddenly looked wary, but he could hardly say no. “Of course, sir, come in to my office. Can we get you coffee or anything?”

“No, thanks. John, have you met Sandy Livingston and Angela Espinosa? They came down to talk with you, too. Let’s all go into your office.”

If Kurkle had been wary before, now he looked positively suspicious. He made a big show of arranging chairs for us, and it began to seem as if he was stalling for time, to think. That, I decided, is just fine. My presence will probably make him think we want to talk about his phone call to me. Then, when we ask him about his search-and-rescue phone call, he’ll be off balance.

When we were all seated, Kurkle went on the offensive. “What’s this all about, Senator? I feel ambushed.”

“Well, John, Ms. Espinosa here, as you can probably tell, is with the NMBI. She’s the lead investigator in the death of my daughter. And Mr. Livingston, whom I believe you’ve talked with on the phone about the same topic, is doing some behind the scenes research for me. Ms. Espinosa?” Senator O’Malley looked her way.

“Mr. Kurkle, I need to ask you about something associated with this investigation I’m leading. It has no direct criminal connections, but it could provide us with information we need to move the investigation forward.”

Kurkle had a sour look. “Should I call my lawyer?”

“As I hinted, Mr. Kurkle, there is no suggestion that you’re under any suspicion. What I need to ask you about is this. Two weeks ago this morning, at 7:30, someone called the Santa Fe Back-country Emergency Rescue Team’s search-and-rescue hotline. We have evidence that you made that call. What I need to know is the basis on which you made that call. How did you know that Elizabeth Davidson was up in the Sangres and in need of rescue?”

Kurkle hemmed and hawed, squirming in his chair. But he didn’t deny Angie’s assertion. “Well, I was worried about her. And I’m not the mountain-man type.”

“That’s your motivation for the call, Mr. Kurkle. I need to know how you knew she was up there.” Angie had begun to play a role I hadn’t seen before—patient, cordial, yet persistent.

Kurkle paused, apparently considering his options, and we waited. Eventually Angie decided to continue.

“Mr. Kurkle, while the BERT hotline has much the same status as 911 lines, meaning it has official status and the calls are recorded, making calls to it carries no legal implications. What I mean is, it’s not illegal to call the BERT. Oh, I guess if you made lots of nuisance calls, false ones, there would be some implications. But that’s not the case here. Part of the system, though, is that the calls are recorded, and their origin is recorded. The call about Elizabeth was placed from the lobby of the Marriott on Louisiana, and a computer has matched it to your voice. We also have verification of your presence there from a hotel desk clerk. All I need to know is how you knew she needed BERT’s help.”

Kurkle heaved a big sigh and looked at the Senator. “Senator O’Malley, I’m terribly sorry about Elizabeth. You know, I think, that I’ve been attracted to her since before she married Bill. After the divorce, I was hoping that I’d have the chance to get to know her better, but then she went and married this guy Davidson. I heard, though, that it wasn’t going well, so I was hoping to be able to talk with her. So, uh, so I sort of followed her around waiting for an opportunity when she was up in Santa Fe.”

He paused in what was obviously a confession for the Senator’s benefit to look at me. “I saw you talking with her downtown, Livingston.”

Then he turned to Angie. “And I followed her, discreetly, when she went up to the ski basin on Saturday afternoon. There were lots of other people, Saturday, because the weather was nice. She parked and walked off up the Winsor Trail.”

Because he stopped, Angie decided to prompt him. “She walked up the Winsor Trail on Saturday afternoon, but you called BERT Monday morning. You must have more information, Mr. Kurkle.”

“Yeah, well, see, I didn’t quite know what to do at that point. I wasn’t dressed for hiking and, besides, it seemed too contrived for me to just ‘accidentally’ run into her in the forest. So I sat there in my car and tried to figure out what to do for a while. Then I drove back down to town. I knew she was

staying at the Eldorado, so I thought I'd try to bump into her in the lobby or something." He paused and heaved another big sigh. "I know, I know, I still haven't answered your question. I'm just providing background. Anyway, I called her via the hotel's front desk, late Saturday evening, but she wasn't in. Then she wasn't in Sunday morning either, so I drove back up to the ski area and found her car, and I began to get worried. But maybe, I thought, she ran into friends on Saturday and went home with them. So I waited up there most of the day to see if she would come for her car. But she didn't, and the weather went to hell. So I finally came back to town. Then, when she wasn't at the hotel Sunday evening, I got really worried, and after checking Monday morning one more time, I finally called BERT."

"Thank you! That explains a lot, Mr. Kurkle. And as I said, your calling the search-and-rescue hot line isn't something I worry about. I just needed to know why." Angie gathered her thoughts. "Now, I need to ask another question, and this one is the payoff for us. You said there were lots of people up at the ski area parking lot on Saturday, right? How about Sunday, before the weather changed? In particular, were there any cars besides Elizabeth's up there when you arrived, especially any that may have been there Saturday, too?"

"I think I see what you're getting at. I hadn't thought of that before. Let me think." Kurkle closed his eyes, apparently trying to picture the scene. "When I left on Saturday, there must have been at least two dozen cars up there. Elizabeth's was down at the lower end of the parking lot, by the Winsor Trail, by that restroom building they have down there, and there were several other cars there, too. I was higher up, in a clump of cars closer to the base of the ski area. On Sunday, Elizabeth's car hadn't moved, and it had frost on its windows. I saw that because I drove right by it. There were also some other cars there with hers, but they hadn't been there overnight, or at least they weren't all frosted up. And there was also one car up by where I'd parked, so I parked there again, near the other one. It had frost, too. And this is probably what you're really interested in. While I was waiting up there on Sunday, before the weather got really nasty, two guys came out of the woods. They went to one of the cars parked lower down and disappeared for a few minutes, then they came up to that car I was parked near. They were pretty well bundled up, but I got a good look at them when they took off their parkas. They also had small backpacks. They put everything in their car and drove off. I waited about another hour, and then decided the weather was just getting too bad to stay up there."

"Which car down lower did they go to?" Angie had leaned forward and was sitting on the edge of her chair.

"I couldn't tell, because there were several cars down there all in a clump."

She looked disappointed. "Do you remember what kind of car you were parked by, what car they got into there?"

"I think it was one of those Volkswagen Touaregs." He pronounced it "tregs." "You know, the SUV. Sort of dark silver, but it was pretty dirty."

She looked pleased. "Ah. Good! Let's see. Was there anything unusual about those backpacks?"

"One of them had what I assumed was a small shovel in it. There was a handle sticking out of the top."

"Do you think you would recognize these two men if you saw them again?"

"Probably. They took off their parkas before they got in their car, and I was pretty close. I was pretending to ignore them, but I got a good look."

Angie stood up. "Mr. Kurkle, I want to thank you. We'll have someone get in touch with you about an identification of some people, and then there may be testimony at some point down the road, I don't

know. But this has been invaluable. If you had an attraction to Elizabeth, then you must have been worried about her and now you must be upset about her death. I think you can take pride in having helped us identify her killers. Now. I have to get back to Santa Fe. Excuse me.”

She opened her cell phone and walked out into the front office.

“Is that it, Senator?” Kurkle looked relieved.

“Reckon so, John. Gotta say, I’ve not been too happy about your obsession with Betsy over the years. But it sure paid off in the end. Thanks, John. That’s from the heart.” The Senator’s emotions were very close to the surface.

Angie had walked all the way outside and was waiting for me in the warm December sun. The Senator followed me out.

“Well, son, I guess even last summer’s pond scum can have redeeming qualities. I sure wish he’d come forward with this information before, though. Next spring, he’s toast.”

He turned to Angie, now off the phone. “Detective Espinosa, I want to thank you for your efforts in this case. I’ll be writing a thank-you letter to the NMBI chief, and I’m sure he’ll have something good to say to you. And, son, you keep that platinum card, I’ll make sure it doesn’t expire. I want you on retainer, so to speak. OK?” He smiled his million-dollar politician smile. “Never can tell when we might need some other terrorists put to sleep, right?”

His driver was holding the door, and he got into the Town Car and left us standing in the parking lot.

I looked at Angie. “That didn’t take very long, did it? I guess your escort’s not here yet.”

“I called, and he’s on his way, just coming through Bernalillo now. But I don’t want to wait. Let’s go.”

“You know how to drive a stick?” Holding out my keys, I tried to make the question innocent, but she still looked surprised.

“My Forester has a five-speed. You mean you’d let me drive this thing?”

“You’re in a hurry, right? And I’m a civilian. I’m afraid I don’t have the right lights to make it official, but I bet you can pretend this is an unmarked car, or something.”

I almost laughed at her expression, like a kid on Christmas morning.

\* \* \*

The trip back up to Santa Fe was, well, interesting. She had me make some phone calls while she drove, and I managed to get patched through to her escort. Northbound, we passed him going southbound between the north end of Albuquerque and Bernalillo—a long stretch with no exits—and I pointed out my car to him when we passed by. I managed to turn around a little in that form-fitting seat and saw him make a dusty U-turn across the median, but he was never able to catch us.

He wasn’t able to catch us, because Angie drove the 959 the way it was designed to be driven—and she had a huge smile on her face the whole time. Including the stretches of city streets on each end, we made the fifty miles or so back Nimble headquarters in just under a half hour. I’d like to think the car appreciated the exercise.

Once there, she shut the car off and sat for a minute, savoring the experience. We got out, the car making its cool-down ticking noises between us.

“Sandy, I’m going inside to get the Volkswagen key and that valet slip. Then we can check out the Loretto’s parking lot, OK? Be right back.” She tossed me my car keys.

If I had that much fun each time I went to a valet parking lot, I wouldn’t resent them so much. I drove her across town to the Inn at Loretto, and she had me cruise right by the waiting valet and pull directly into a space in his lot. He chased after us, waving his arms, and she got out to greet him.

“Official police business. Go away.” Her uniform made it work, almost. He took a few steps back toward his kiosk, but then hung around enough to watch us.

We didn’t find any Volkswagen Touaregs in their lot, though. When we asked, the valet told us that the receipt we had wasn’t one of theirs, it was too much of a dark blue. Theirs were lighter, he said.

So, for us, it was back to wondering. At least we knew what model of Volkswagen we were looking for. I took Angie back to NMBI headquarters.

“Sandy, I’ve got lots and lots of work to do this afternoon. I was going to suggest that I make you dinner, but I’m afraid I’ll be here until late.”

“Can I help?”

“I think this is going to be official paperwork, mostly, so, no, I’m afraid not. Call me in the morning?”

So I drove home and walked back up to the Institute for the rest of the afternoon. I had about as much luck concentrating as I had earlier that morning, but somehow the day passed.

On Tuesday morning, I walked up to the Institute first thing to try to accomplish something constructive. But as soon as business hours started, I called the medical lab, for my blood test results. I really hadn’t been thinking about it, but I felt relief wash over me when they told me that everything was fine. Some other feeling washed over me, too—probably anticipation.

Then I called Angie.

“Oh, Sandy, I’m so glad to hear from you! I worked until about eleven last night, and I’ve been on the phone all morning. Those credit card activity traces came in. Our friends have been busy guys—they used the credit cards for cash, starting in Canada, up in Toronto. After that, they came into the country via Detroit, it looks like. Then there’s a gap of a month until they arrived here. Recently, they made a cash withdrawal at an ATM here in town, on Cordova, the Friday before you found Elizabeth’s body. So they were lying about being on the east coast.” She stopped to take a breath.

“So they could have killed her, then.” Spies these guys may be, I thought, but they’re obviously not up on their tradecraft.

“They were here, at least, and Kurkle’s statement puts them up on the Winsor Trail. And, Sandy? They were in Telluride when you were. There’s a cash withdrawal there, on the Friday before you found Davidson’s body. I called Annette Trieri, and she put me in touch with the police in a place called Mountain Village. It seems there was some trouble when they tried to rent a condo using cash. They had the money, and even had enough for a damage deposit, but then there was trouble when they wanted the deposit back in cash. So the police up there remembered them. I faxed pictures up and got a positive ID. Best of all, John Kurkle ID’d them late yesterday afternoon, in person.”

They *really* needed to brush up on their tradecraft, I thought. “So we’ve put them in the right places at the right times to have killed both Elizabeth and Derek Davidson. But it’s still pretty circumstantial, isn’t it? We obviously need to find that Touareg.”

“And I think I’ve got that one figured out. Where are you? Can I pick you up somewhere? Turns out that the Hilton uses dark blue valet receipts.”

I told her I'd meet her there and ran down the hill to get my car. It was something of a miracle that I didn't break my neck on the slippery trail.

I drove downtown in my allroad—no way do parking valets *ever* touch the Porsche. The guy at the Hilton gave me a dark blue ticket and drove off in my car to park it somewhere around the back, and I waited out front, listening for squealing tires, ready to rip his head off. But he must have been careful.

Presently, an official Nimbie vehicle, one with lights and everything, turned in, and I watched as Angie pulled the same stunt at the Hilton as she had made me pull at the Loretto—the valet had to jump out of her way this time. I followed her on foot as she cruised around the parking lot, looking for Touaregs. Eventually she pulled to a stop behind a gray one with Ontario plates and lowered her window.

“What do you think, Sandy?” She flipped a switch, and her emergency lights started flashing, which told me what she thought.

“I think we should see if that key works.”

And it did.

Unlike Angie's brother Jaime, I don't have experience in casinos, and my stock-market successes came slowly and incrementally—moreover, I usually found out about them a day or two after they happened. I think, though, I now know what hitting the jackpot feels like. Opening and searching that Touareg was positively exhilarating.

And scary, when we fully appreciated what we'd found.

First, there was the obvious—luggage with clothes and the other personal items you'd expect cross-country travelers to have, including a portfolio holding a variety of passports and, strangely, an envelope with tickets to the upcoming Rose Bowl game in a couple of weeks. Also, there was a stack of credit cards, which Angie thought might explain the gap between Detroit and Santa Fe in the records she'd obtained. And there were two trench coats, peculiar ones that had a dozen inside pockets each, maybe to hold all those passports, we speculated.

Then there was confirmation of what John Kurkle had told us, two goose-down parkas, winter hiking boots, and two backpacks, one with something sticking out the top.

“Grenade launcher? Is that what that thing is? No grenades?” I was mystified, but Angie recognized what she'd found.

“No,” she was rifling through the pack's pockets, “but here are a couple of CO<sub>2</sub> cartridges and some other stuff. Very weird.”

“Wait a minute.” I had to think. “Don't riot-control police use gas-powered grenade launchers to shoot those beanbag things, for crowd control? I remember reading about that somewhere, something about someone getting killed even though the beanbags are not supposed to be lethal.”

“Oh, right. I know what you're talking about. I think we even have some around NMBI somewhere. I didn't make that connection.” Her eyes were thoughtful, staring straight ahead.

“So what would our Syrian spies be doing with a grenade launcher? Do you suppose it's standard equipment for people on the terrorist watch list? Oh. Wait. Elizabeth had a bruise on the back of her neck. You don't think ...” I almost had it, but there was something missing.

“Maybe I do think that, Sandy. Maybe they followed her up into the mountains, ambushed her from behind by knocking her out with a beanbag, and searched her for the disk that Alexis Hall had. Then they left her to freeze. And they took her car key and searched her car while Kurkle watched.”

“Well, I’m no law officer, but that sure sounds like murder to me. Or, maybe, assault and battery and then negligent homicide, if the DA is feeling magnanimous.”

But the scary stuff was still waiting, underneath the parkas and the clothes, in two aluminum suitcases, one about the size of a briefcase and one a little larger. Angie had to pop open the locks using one of those multi-tools she carried in a holster on her belt.

The larger one only confused us, as it contained twenty compressed air horns, like the ones that people use at sporting events to make noise. Except these had their tops off, and there were several attachments of various sorts in the box as well. It looked as if the whole affair was designed to allow filling of the cans using whatever compressed air sources might be available—including, maybe, the compressor included with the Touareg to inflate its space-saver spare tire, I thought, at least if Touaregs are like my allroad.

“Damn, Angie. I sure wouldn’t want to be sitting in front of these guys at the Rose Bowl game. They must be huge Michigan fans, or something.”

But my feeble attempt at a joke was lost on her. She was looking puzzled as she opened the other aluminum suitcase, then her expression turned to horror and she gasped. “Oh, God, maybe not, Sandy. Look at this.”

The international biohazard symbol is a circle with three other broken circles in the shape of a three-leafed clover superimposed on it. Snuggled into the foam packing inside the smaller aluminum suitcase sat twenty little bottles full of a silvery liquid, or perhaps an ultra-fine powder, with seals on the caps that had bright red symbols on them.

Angie’s voice was shaking. “Now we know why they wanted that top-secret document, I guess. How many people does the Rose Bowl hold?”

“Over a hundred thousand, if I remember right.”

“That’s what I remember, too.”

\* \* \*

Because the bottles were sealed, we decided to do things as quietly as we could manage, but we didn’t succeed very well. Angie called Orlando Aguilar, and he called the HazMat team from the city, just to be safe. They brought with them a contingent of Santa Fe city police, and pretty soon the Hilton’s parking lot was full to overflowing, but not with hotel guests—they were all looking out the windows at us. Before we were finally able to get away, the two FBI agents who had taken the computer disk, Hornby and Collingswood, arrived and proclaimed the whole thing a federal case—probably true, I thought, if the Touareg had come into the country via Detroit. Lots of state lines between Michigan and New Mexico, after all.

After about the fifth time I was ordered by someone in uniform to get the hell out of the parking lot, each time to be rescued by Angie, she took me aside.

“Here, Sandy, take my shield. This is a horrible breach of protocol, and if you lose it, I’ll lose my job. Also, don’t let Lando see that you have it. But I can’t do my job if I have to keep these idiots off your back all the time. Just show it and tell them you’re with me.”

But as the situation matured, Angie’s job began to evaporate. Other people took over after talking with her, and pretty soon she didn’t have anything to do but stand around. It felt good when she decided to stand by me.

“Sandy? You know we’re all here right now because of you, because you caught those two Syrian guys, right? And you probably saved tens of thousands of lives at the Rose Bowl, too.” She gave my right hand a little squeeze, and I squeezed back.

“Well, I just caught those two guys by accident, to save my own skin. I had no idea about all this.”

“Remember how they killed Derek Davidson? I guess they thought that Elizabeth had told him about the document thing. But remember how they killed him? I’ve been getting chills thinking about how they would probably have killed you that way, if you hadn’t pulled that stunt you did.”

“Tell me about it. That’s why I’ve been practicing my card tricks. Don’t want to lose those old skills, because you never know when they’ll come in handy. Oh. By the way. I called the lab about my blood test. I’m fine.” I’d been wondering how she’d react to that.

“Well, good! I am, too.” She smiled at me. “So, listen. I didn’t have a chance to make you dinner last night because I was too busy to. Instead, I put in lots of overtime yesterday, so I thought I’d take the afternoon off today. This thing looks like a wrap, for me, for today, at least. And it’s time for lunch. How about I make you something to eat? My place.”

“Sure! Sounds great. Can I bring anything?” It suddenly occurred to me that my heart rate might not be compatible with my age.

“Well, I’ve got all the food I didn’t make yesterday, lots of food. And there’s champagne in the ’fridge. Hmm. Oh, I know. You’re going to need to shave in the morning, right? On your way over, why don’t you go home and pack an overnight bag?”

## **Eighteen**

Maybe it’s a variant of Murphy’s Law that, when you’re in a hurry, every little thing that could possibly slow you down does so. At first, it was getting out of the parking lot. I would have gladly paid the Hilton’s ridiculous parking fee, but first I had to get the car unblocked. Between the HazMat folks, the police, the fire-and-rescue crowd, and the FBI, the lot was completely grid-locked. I finally managed to get out of there by setting the allroad’s suspension all the way up to high and driving, gently, over a couple of those concrete parking-lot barriers and a curb or two.

Then there was the downtown traffic to negotiate. All the ruckus in the parking lot had drawn a crowd of on-lookers, including passers-by in their vehicles, and cars and trucks in the streets around the Hilton were moving at glacial speed.

When I managed to get clear of that mess, I found myself in the middle of an unannounced construction project. Apparently a water main had failed, causing a minor street flood on Grant by the civic center, and a city crew was busy standing around, leaning on their shovels, discussing what to do. We motorists were on our own, and that meant people jockeying back-and-forth, making U-turns in the middle of the street.

At that point, it would have been smooth sailing but for the fender-bender at the Paseo-Washington intersection. A tourist in a bulky motor home had misjudged the northward left turn off Paseo and clipped the front end of a Jaguar whose nose was sticking out too far. Because most of the police were down at the Hilton and the two drivers were involved in a shouting match, the intersection was considerably less than functional.

There are side streets, though, and in my high-clearance mode I managed to bump over curbs and even use a few sidewalks to make my way around to Hyde Park Road. But there I wound up behind a huge pack of bicyclists laboring up the hill at about two miles per hour, occupying the entire right lane and then some. For reasons unknown, there was an unusual amount of downhill traffic, and I couldn't pass.

And why they picked that day to grade the upper part of Gonzales Road, the part I needed to use to get home, was a question I had plenty of time to ponder. The gravel had become a teeth-shaking washboard and it really needed work, I knew, but why today?

After all that, the fact that the UPS guy had parked his truck across my driveway to make a drop-off across the street seemed trivial.

Finally, over two hours after Angie's suggestion that I go home—normally a ten-minute trip—and pack an overnight bag, I pulled into my garage. I'd called her a couple of times and discovered that she also had a problem with the Hilton's parking lot and the downtown traffic. But the second time, while I was behind that pack of cyclists, she was at her place and wondering where I was.

At home, I dashed into the house and began trying to get organized. I took a quick shower to rinse away the fear and shock of finding all that anthrax and the frustration and anger over the traffic delays, and then I considered what to pack. Clothes, bath gadgetry, and a cold bottle of Pouilly-Fuissé from the refrigerator formed a little pile, just right for the shoulder bag that was included in a luggage set I'd bought a few years earlier—and stored away somewhere.

Like most Santa Fe houses, mine was built on a concrete slab and had a flat roof with, in most of the rooms, exposed ceiling beams. Very picturesque, but very lean on storage space. I was fortunate to have lots of closets and an oversized garage to make up for a lack of an attic and a basement. But that was still not enough, and I'd been using my guest house as well, so when I couldn't find the bag anywhere I went out there to look around.

I'd checked on Sunday morning and found that Hal and Annette had left things tidy, just as they had found them, even to the point of running the linens through the washer and drier. So it was something of a surprise to discover a lived-in mess in the casita. I felt a little like Papa Bear after Goldilocks' visit. But that explained itself quickly.

"Well, well. If it isn't the two-timing son-of-a-bitch who hasn't called me for almost a week." Alex's voice was slurred a little. It seemed she'd found the wine I'd left for my weekend guests.

She was sitting in the corner of the living room where she could see out the window and be hidden by the way the door opened into the room. She startled me, but because I recognized her voice, it wasn't a real fright.

But the gun was. I turned to look at her and found myself staring at the business end of a small semi-automatic she was holding. Alex with a gun seemed to me like a tree-hugger with a chain saw—a contradiction in terms if there ever was one. Her various new-age Santa Fe connections were just incompatible with firearms.

I knew I had to be extremely careful, and I stood perfectly still.

"Alex!" I didn't have to feign surprise. "What in the world are you doing here? Do you know there's an arrest warrant out for you? A Federal one?"

"That's why I'm here, idiot. Well, that and because you had the locks changed on the house. That little trick ought to cost you, I think. Maybe I'll shoot one of your ears off." She raised her aim a little, holding the pistol rock-steady.

“Geez, Alex, c’mon. I told you about the locks. And I did try to call you. You haven’t been home.” I decided that a lie couldn’t make matters worse and maybe it would help. “Do you know what you’re doing with that thing? You never told me you had a gun.”

“What I didn’t tell you would surprise you, buddy. And, yes, I know what I’m doing. See that clock? Pick a number.” She waved the pistol toward the kitchen door, through which a clock was visible on the far wall.

“OK, OK, I believe you. It just seems so ... I don’t know ... so out of character.” I didn’t really know what to do, but stalling for time seemed like a good idea.

“‘Out of character’? You mean, an aroma-therapy flake like me, a Santa Fe new-age crystal-gazer shouldn’t have a gun? Hmm. Well, you’re probably right. But I’ve got the gun, so what should that tell you about me? Huh? It probably never occurred to you that I’m not really the helpless bimbo that you took me for. Pig.” With her free hand, she picked up a glass from the table by her chair and took a swig. “So, since you’re here, maybe you can tell me something I’ve been wondering about. You screwing that little *mojado* bitch yet?”

Maybe she wasn’t the Santa Fe flake she’d pretended to be, but she’d been around the southwest long enough to know how to insult people. Referring to New Mexico natives as wetbacks was at least as bad as referring to people of African descent using N-word.

While pondering how she knew about Angie, I waited long enough to realize that she wasn’t asking rhetorically. “Alex, I never talked to you about any of my other relationships, and I never asked about yours. I’m not a kiss-and-tell kind of person. Turns out, though, that Angela and I aren’t romantically involved. We’ve been working Elizabeth Davidson’s murder.”

“Ah, yes, Elizabeth. Poor Betsy. From what I can figure out, her eastern Mediterranean friends weren’t as patient as she thought they would be. And it’s too bad. We could have made a lot of money *and* helped advance the cause.”

“Uh, ‘cause’? What cause?” Although I had to ask, the answer was already dawning on me.

She smiled, a sort of dreamy smile with evil overtones. “Why, bringing the Great Satan to his knees, of course. Hadn’t you heard? Oh, of course you wouldn’t have, being a trust-fund parasite instead of a productive contributor to society. You scum. I should just shoot you right now and put you out of your misery. But, no, that would be too kind. I think you need to suffer.”

“Alex? What are you talking about? I mean, we’ve been together for a couple of years now. Where is all this coming from? What happened to that sweet person I’ve been in love with? Do you know I’ve been thinking about asking you to get married? What’s going on here, anyway?” Keep her talking, I thought. Stall, stall, stall.

She looked surprised at first, but then her eyes narrowed in suspicion and she actually hissed. “You what? Liar! You just dumped me, and now you’re telling me you were thinking about marriage? I hate liars!”

She raised the pistol toward me, and I saw her index finger begin to move inside the trigger guard.

\* \* \*

In addition to flat ceilings with exposed beams and other southwestern touches, houses in my neighborhood have fancy exterior doors. Some people hang true works of art on their front entrances; others, like me, have solid doors made from thick oak planks with carved filigrees on the outside. I think it was the casita’s solid door that saved me.

As soon as I saw Alex's finger begin to move, I dove out the door and landed on the porch. The pop from that little pistol, surprisingly loud, told me I'd made it just in time—and, later, I dug a lead slug out of the oak, a souvenir of the adventure.

Even though my hip was still stiff from the previous week's spill, I jumped up like a gymnast and sprinted back toward the house. Alex had been sitting in a low-slung chair that I always struggle to get out of, and I was hoping against hope that, between the chair and the wine, she'd be slow to get after me.

In the main house, I grabbed my cell phone and, from the top shelf of one of the kitchen cupboards, the two suppressed semi-automatics that the Syrians had "accidentally" left behind. Then I slipped out the side door—the door on the side of the house away from the casita, the side next to the hill up to the Institute.

I wasn't quite sure what I was going to do with the automatics. Defending myself—meaning, getting into a shoot-out with Alex—didn't really seem like a good strategy, even though I had firepower on my side. I think I grabbed them instinctively, afraid that Alex might find them. Looking back on it now, I doubt she would have, but at the time I wasn't thinking too clearly.

I was sure about the phone, however. As I scurried up the trail to the Institute as fast as I could manage, I pushed the speed-dial button with Angie's number in it. She answered on the first ring.

"Sandy! What's taking you so long, anyway? I'm all hot and bothered here, and I need your body!" Normally, she would have taken my breath away with a comment like that, but at the time I didn't have any for her to take.

"Angie! Listen, I'm sorry, but I've got a real problem. It's Alex. She was hiding out in my casita, and now she's trying to shoot me." I had to stop talking to pant. "I think I'm getting away from her, but I can't be sure. I'm headed up the path to the Institute."

"What?! Holy sh... OK, OK, listen. You keep running. If there's a way to do it safely, I mean without getting into problems with the snow, get off the path and into those trees of yours, see if you can hide. I'll get my tail over there as fast as I can, and I'll get help on the way, too. What's she thinking, anyway? Jesus!" I could hear background noises that suggested she was already on the move.

"I'm armed, but I don't really like the idea of shooting her." My sentences were getting shorter because of my increasing need to breathe harder.

"You're armed! What? Where'd you ... Oh, never mind, I don't want to know. Just keep going, OK? You're in good shape, maybe you can outrun her. Please don't get into a shoot-out, OK? Or shoot the ground, maybe the report will scare her off." I heard a motor start in the background. "Listen, I need to call 911, but I'll call you right back."

And my phone went dead, surprising me so much that I stopped and stared at it for a few seconds. That was enough time, though, to give me an idea.

My hillside is mostly covered with piñon and juniper, but there are several places where limestone rock outcroppings intrude, making small cliffs. Above them are slabs of bare, exposed rock, one of which bordered the trail where I was standing for a few dozen feet. I carefully knocked the snow off my right shoe and stepped onto the slab and then cleaned my left shoe off before stepping over there with it. Then, staying on solid rock as best I could, I walked off the path across the hillside until I put at least a hundred yards of trees between me and the path. I sat down behind a tree with especially thick foliage near the ground and tried to make myself small.

Angie's suggestion was still ringing in my ears. If I had an unsuppressed pistol, I thought, perhaps I could make enough noise with it to scare Alex off. If she thought I was shooting back, maybe she'd give up on me. I put the phone in a pocket and set one of the pistols down. The silencer on the other one

unscrewed with surprising ease, and it went into another pocket. Then, with a handgun in each hand, one still suppressed and another ready to make noise, I turned to toward the trail to keep watch.

I'm surprised I didn't shoot my foot or something when my phone played its chords, I was wound so tight.

"Yeah?" I was whispering.

"OK, Sandy, the cavalry is on its way. I'm just coming up to the Hyde Park Road intersection now, and I think I'll pull in to the Santa Fe Institute lot and come down your trail. Where is it? Are you OK?"

"Northwest corner. And, to tell the truth, I'm scared out of my mind."

"Good. It'll keep you alert. Have you seen her?"

"No, but I'm too far from the trail to see much of anything. You be careful coming down, OK?" About then, I heard a distant thwok, thwok of a helicopter, getting closer. "Is that helicopter with you?"

"Yep, our guys. They'll hover and use a loudspeaker to let her know she's outnumbered and outgunned. Listen. I'll see you soon. Right now, I've gotta coordinate this thing on the radio. 'Bye.'" And my phone went dead again.

With the helicopter getting louder and louder, I realized that there was no chance that I was going to hear Alexis' footsteps, so I redoubled my watch of the area between me and the trail.

"ALEXIS HALL, THIS IS THE NMBI. DROP YOUR WEAPON AND STAND IN THE DRIVEWAY WITH YOUR ARMS SPREAD!" To call the helicopter's public address system a mere loudspeaker would be to understate things a bit.

I was up the hillside far enough that the helicopter was just about at eye level for me, hovering over my house, or maybe over the road out in front of my house. I could see an officer sitting in a side entry hatch, M-16 at his shoulder, scanning the ground below. Over to my left, I saw three State Patrol cars coming down the hill toward my driveway, and to the west there were more coming up Gonzales from the other direction.

"ALEXIS HALL! COME OUT UNARMED AND YOU WILL NOT BE HARMED. WE HAVE YOU SURROUNDED." The helicopter began a slow circle around my house, the hatch with the sharpshooter sitting in it tilted slightly toward the ground.

I suddenly felt a cold spot on the back of my neck, like a half-inch ice cube.

"Those damned things sure are noisy, aren't they, Sandy?" I could feel Alex's breath on my left ear. "Why don't you set those guns down, slowly and carefully? If I'm going to have to shoot you, I'd like it to be sporting."

\* \* \*

I was in no position to haggle, so I laid the two semi-automatics in the dirt under the tree in front of me.

"Oh, dear. Bad Sandy. I want them. Take the one with the silencer and carefully put it back here beside you. Do it!" She was talking quietly, but forcefully, and she sort of screwed the barrel of her pistol into the back of my neck for emphasis.

"Good boy! Now the other one. And be careful. I'm a little nervous." Her breathing was fast enough to verify this for me. "Thank you. Now put your hands on top of your head, fingers laced together, and lean forward. And hold still."

I did so, and a few seconds later, when the helicopter came closer to us, I heard a heavy thup thup thup right behind me. The helicopter noise changed as it veered off.

“There, that should give us a little privacy, for a few minutes, at least.” She sighed. “Poor Sandy. I bet you didn’t think I’d find you up here, did you? You probably thought I didn’t know about your little trail, even. What you didn’t know is that all those times you left me in bed asleep, well, I wasn’t. I was doing sprints up and down your hillside here. Girl’s gotta keep her figure somehow. So, what’s their plan, Sandy? Are they coming down from the top?”

“Alex, what in the world is going on here? This is all crazy!” I tried to talk normally, conversationally, but it probably came out strangled.

“Please don’t talk so loudly, Sandy. Like I said, I don’t want to have to shoot you just yet. And answer the question.” She prodded me in the back of the neck with a gun barrel—it felt like a bigger one, and it was warm.

“Alex, I don’t know what’s going on. I saw some patrol cars coming down Gonzales, but I don’t know their plan.”

“But you did call them, didn’t you? Tsk tsk. Bad, *bad* Sandy. You made a pretty good boy-toy for a while, but you’re a lousy co-conspirator. Well, I think you’re going to be my passport out of here. Stand up—use your hands if you have to, but put ’em back on your head when you’re standing—and let’s work our way over to the trail. Then go up. And, remember, I’m right behind you with this thing.” Another prod reminded me of what thing she meant.

While I walked, carefully and slowly, trying to balance on the uneven rocks with my hands on my head, Alex talked. She told me of how she and Elizabeth had been in the Middle East together, and how they had been recruited into Hezbollah to be sleepers for future work in the U.S., for something in the nature of this anthrax attack in particular. Perversely, she seemed proud of the fact that their plan was to kill as many as a hundred thousand innocent people.

Because the organization operated as independent cells, she didn’t know who was going to be the contact for the classified document, and that’s why Elizabeth was involved: she knew. But Elizabeth had second thoughts, and everything got screwed up.

It wasn’t clear to me, but it seemed as if Alex didn’t know about the fate of the Syrians or the document. And there was little chance that she knew about our discovery of the Touareg earlier in the day. With the gun in my back, I didn’t feel like it was the right time to tell her, either.

When we reached the trail, I turned right to go up it, but she stopped me.

“Let’s just stand here for a minute, Sandy. Not that I don’t trust you, but I’d like to be sure that there isn’t an army coming down. Please be very quiet.” She poked me with the silencer again.

The helicopter had been gone for a few minutes, and things were returning to normal in my little nature preserve. I heard jays squawking down by my feeders, and there was a hint of a breeze sighing through the trees. And there were voices, sounding confused, down by the house.

“OK. Let’s go, quietly.” And I started up the trail.

Two switchbacks later, I saw a flash of tan through the trees, tan the color of Angie’s uniform. It was up the hill, at the apex of the next switchback, and very brief. I hoped that Alex hadn’t noticed.

“Alex? Do you really think you’re going to get away with all this?” I didn’t shout, but I wasn’t trying to be particularly quiet, either. My question got me an especially hard poke in the back.

“Sandy!” She was hissing again. “What did I say about being quiet? And to tell the truth, I don’t care if I get away with it. Dying for the cause is something that I’d be proud to do.”

About half-way up to where I saw Angie—or what I thought was Angie—my phone let loose, the opening chords of *Jump* shattering the winter silence.

“What’s that?” She hissed.

“My phone. Want me to get it? It’ll ring for a long time before it goes to voice mail. I’ve got it set that way, at least 30 seconds.”

“Get it! Fast!”

“Hi, this is Sandy.”

“Got her attention, didn’t I?” Angie sounded gleeful. “Act like it’s a wrong number.”

“Who?” I said, with as much confusion as I could muster.

“Watch ahead, and when you see me step into the trail, fall to the ground instantly, no hesitation, no questions. Got it?”

“Oh, well, sorry, I don’t think you’ve got the right number.”

“Good going. Remember, no hesitation.” And she disconnected.

“I sure hope you’re not scamming me.” The voice behind me was not happy, and I got another poke in the back.

We were struggling up a slippery place on a straight stretch, and I was having trouble keeping my balance with my hands on my head. I wanted to watch the trail up the hill, for Angie, but I also needed to look down to keep my footing. I heard Alex having trouble behind me, too.

Then, as if by magic, Angie appeared in the middle of the trail about fifteen yards ahead, in a two-handed shooter’s stance, weapon pointed straight at me. I flopped to the snow as fast as I could, banging a knee on a rock in the process.

And nothing happened, or at least not right away. I could hear Alex breathing hard, and the jays were still squawking down by the feeders.

Angie spoke first. “Drop the weapons, Ms. Hall. Do not move, and drop the weapons. Do it. NOW!”

I realized that with her arms at her sides, Alex could still have me in her sights, so I rolled away down the hill. I wound up on my back, with a view of Alex through the branches of a juniper.

“Well.” Alex sounded amused. “If it isn’t the Nimbie *puta*. How does it feel to betray your people, huh? Fall in with the Anglo establishment, sleep with the white guys, turn your back on your origins?”

“Drop the weapons, Ms. Hall. NOW!”

“I don’t think ...” Alex began to raise her arms, and in quick succession there were four loud booms that echoed off the hillsides while she crumpled to the ground in a heap.

“Angie!?”

“I’m fine, Sandy. You OK? Good move, by the way, rolling like that.” I could hear her coming closer and watched as she knelt to check Alex for a pulse.

“She’s dead, Sandy. Come on up.” Angie began talking on her radio, all business.

I lay on my back and watched the world for a while, trying to sort out what had just happened. My heart was still pounding, and I discovered that my breathing was perilously close to panting, so I concentrated on getting things under control. Eventually, the adrenalin in my bloodstream began to fade little by little, and I tried to focus on something peaceful.

The sky seemed like a good candidate. Its deep blue was mottled with small clouds clipping by, from a direction that I decided must be the west. It made me feel better to be getting my bearings.

Finally I struggled to my feet and brushed snow off myself, and started up the hill. My knees were shaking—the left one hurt from where I banged it—and I felt light-headed, so I stopped to take some deep breaths. Even though it had begun to fade, I could tell the adrenalin was not going to wear off completely for quite a while.

Angie was on the radio, talking matter-of-factly with the others. When I reached her, she winked at me.

“I don’t know what the ruling will be, but from my perspective this comes down to a case of ‘suicide by cop.’ She deliberately raised her weapons, both of them, in my direction, well after I directed her to drop them, after she thought it over for a while. And I’ve got a witness. Wait one, over.” And she grabbed me in a bear hug.

“Oh, man, I’m so glad you’re OK. You really had me worried, Sandy. Let me finish this, OK?”

And she went back to the conversation on the radio, giving me more time to absorb the events, something that I needed to do, it seemed. She signed off the conversation about the time I was beginning to hear real voices coming up the hill through the trees.

I hugged her this time. “Well, I had me worried, too, I guess. It was spooky having a gun pointed at me that way, and she even took a shot at me down in the guest house. That was something else. And that was an Alex I never knew about, I’ll tell you.”

“Yeah, but it’s over now, all except the paperwork. We can put it all behind us and get on with our lives.” She gave me a squeeze and then leaned back and smiled at me. “I mean, we talked about how it’s not a good idea to mix business with pleasure, right?”

“I remember that conversation, and I’ve been having second thoughts ever since.”

“Well, it doesn’t matter anymore, right? I mean, the business part is over, right?” She had that impish smile going.

“Riiiiight”

“So, do I remember that you have a hot tub? And a big bed?”

The bed part got my attention. “Yeah, of course, just down there.”

“Well, it’s a good thing I fed my fish then. I don’t think they’ll be seeing me for a while.”

**A Four Corners Mystery**

# Developing Murder: A Four Corners Mystery

## Prologue

Riding up the mountain, Lannie Young couldn't decide whether she just had a cold bottom or whether she was literally going to freeze her ass off—leaving patches from her cheeks behind, sticking to the seat when she got off at the top, maybe. It was one of those philosophical questions that she pondered now and then as a way to help distract herself from her misery while sitting on ski lifts.

And she was truly miserable—at 9:07 on a Friday morning in late January, still trying to wake up, Lannie was sitting alone on the Zephyr quad-chair at Winter Park enduring weather so bad that it had closed Berthoud Pass and scared the tourists into huddling in front of the fake fireplaces in their rented condos. The thermometer at the base read minus twelve, and it looked to be snowing at a rate of more than six inches an hour. At least, she thought, it isn't blowing, which means it should be eight or ten degrees warmer at the top.

No wind was good news, but better news was that it had been snowing like this off and on most of the night. She and the handful of other hard-core powder hounds riding the lifts at the opening bell would have between two and three feet of new, light snow to play in for most of the morning.

Because this was her first ride up, she was freezing, especially her backside. A run or two would get her warmed up, she knew from experience, but, damn, it was *cold* this time, even inside her new, insulated powder suit. She wriggled around and kicked her legs to keep the blood flowing—because she intended to check out the new snow on Outhouse for her first run, she needed her legs to be ready.

Yet again, she was glad that the Zephyr was a high-speed lift—at least she wouldn't have to sit too long. On the last, flat stretch before the upper lift house, she kicked her legs more and took deep breaths, getting psyched.

At the top, there were two little groups of unidentifiable people standing around, hopping up and down to keep warm while they argued about which run to do first. Lannie ignored them and turned left toward Outhouse. Through the gate with all the signs—signs with black diamonds, signs declaring there to be no escape to an easy run once through the gate, signs with every type of dire warning except skulls and crossbones—she saw no tracks.

Yes! she thought, and whooped her delight aloud. A first-tracks run down Outhouse in 3 feet of champagne powder! This is why I put up with the grind of selling real estate up here, dealing with all those people who have too much money to know how to spend it wisely. And the scumbag developers and their builders—ten-thousand square-foot log cabins, indeed. Which reminded her of the appointment with the assistant district attorney that afternoon. Well, she thought, the powder will be all chopped up by then so I won't be missing anything here.

As soon as she was through the gate, the slope increased, and she began to pick up speed. Her fat, flexy powder skis began to float, and she immediately started a gentle hopping motion, like being on a trampoline, to get them bouncing so she could turn. Between the falling snow and the spray she was making, she could barely see, but the trees along the edge of the run were visible as a wall of darkness. There, she knew, would be where the snow was absolutely the best, so she angled left, toward the steep side of Outhouse, near the trees.

At the top, she had been so focused on getting into the powder that she hadn't noticed one of the groups there breaking up, heading off in various directions. Or that one of the men was following her. Now, on the run itself, she was so concentrating on making perfect *wedeln* turns, linked S's, over to the edge of the trees, back toward the center of the run, over to the edge of the trees, that she didn't notice how fast he was overtaking her.

But she did notice the shove from behind, a ski-pole tip in the small of her back, just as she was going to launch into a right turn away from the trees. She couldn't help but notice—for one thing, it *hurt*; for another, the shove sent her out of control, and she had to fight not to lose her balance. Of course, this completely disrupted her turn, and she continued to pick up speed as she flew downhill into the forest.

She managed to dodge the first two trees, mostly, brushing by several smaller branches, snapping them off. But the third, a 12-inch lodgepole pine, got her, one of its large, lower branches catching her chin-high. In a fraction of a second, it crushed her mandible and then caught under her upper teeth, snapping her head back with a twisting motion. The force pulverized her three lowest cervical vertebrae and severed her spinal cord in an instant. Like a flying crash-test dummy, she tumbled deeper into the trees, finally coming to rest in a heap some fifty yards from the edge of the steep mountainside clearing that was Outhouse.

And the snow continued to fall, creating a new hump, another rock-like mound of white amid the spruce and fir.

\* \* \*

## One

The Saturday we drove from Durango to Fraser was spectacular, the perfect transition to our new home. And, in retrospect, we needed a good transition. If we had known what was awaiting us in Fraser, we might have just stayed put.

It was just after a big snowstorm had blanketed the mountainous half of Colorado, more of a blizzard, really, and the sky was that deep blue that makes the new snow on the ground so startlingly white—or maybe it's the other way around.

Actually, we were late. We had intended to make the move in early January, but we discovered that pulling up roots to relocate, even for only a year or so, involved way more than just packing to go on a long vacation. It was so complicated and there were so many details to finish off that we ended up living out of a Durango hotel room—it was really a suite, downtown on Main Avenue—for ten days, because we'd rented our house to people who arrived in the second week of January.

But the spectacular drive across Colorado's high country made us forget all that.

By the time we got as far north as Silverthorne, it had been nearly twenty-four hours since the snow stopped, plenty of time for the road crews to get things plowed out. But much of that day had involved wind, so Hal decided to take the low road to the Fraser Valley in order to avoid two additional crossings of the Continental Divide. The highway over Fremont Pass had been more challenging than he would have liked, and he said he didn't want to deal with road conditions like that again. He rationalized the extra thirty or so miles from Silverthorne to Fraser via Kremmling and Granby as bypassing both the

potential traffic mess at the Eisenhower Tunnel on I-70 and the likely avalanche closures on Berthoud Pass.

Besides, he said, we had been over Berthoud Pass the other times, first when we were being chased by those goons in the rental car and then when we were on our second honeymoon the previous spring. Hal explained that I needed to see the broad meadows and rolling hillsides of the Colorado River Valley, and the cliffs and spires of Byers Canyon. If we were going to live up here for the next year, he said, I needed to get to know the territory.

Just like the first time, a ski trip to Winter Park while we were dating, we had left Durango before first light and made it to Silverthorne for lunch. Unlike the first time, though, it didn't seem to Hal that anyone was following us, so he was much more relaxed. He likes fast driving, and it has the side benefit of making me feel sexy. But he doesn't like being chased by bad guys with guns. His years of experience as Dean of Natural Sciences at Frémont State University just haven't prepared him for such things. Academic politics is bad news, to be sure, but it involves words, not bullets.

Anyway, we were in my Subaru Outback on this trip, and, with its little four-cylinder engine, it didn't qualify for driving fast, at least not in Hal's book.

"Let's see. The other time we came up this way, we kept going up the interstate, east, right? And now we're headed, what, north? On State Highway 9?" I was looking at an atlas of Colorado, trying to trace our route.

"Right. Around the Williams Fork Mountains instead of over them, or, I guess, instead of under them via the tunnel. North, then east, then back south a little. Less traffic, trust me. Also, this is a beautiful valley, down the Blue River. We'll be coming back over here to do some fishing this summer."

"OK. Then what? We get to Fraser, we have to find this subdivision that your friend Win built his new house in?"

"With the help of that hand-drawn map that's in there somewhere, yeah. Hope we didn't lose it. He told me the directions over the phone, but they were so strange that I got him to fax me that map." He looked over at the atlas in my lap. "Find it?"

"Um-hmm, here it is. I guess we can worry about it when we get there. But you said we were staying in his guest house, right?"

"For a while, at least. I called him to see if we could stay in his condo, like we did last time. I thought we could stay there for a few weeks until we find something more long-term. But he launched into this story about how he sold the condo and bought land in this subdivision, and then he built a house and a barn and a guest house, which he offered us for the whole year—the guest house, not the barn. I had to do a little song and dance to commit to only a month. I mean, what if we don't like it? But I didn't ask him that."

"This subdivision—it says here on his map that it's called 'Middle Earth Estates.' And comparing his map to the atlas, it looks like it's up on the side of a mountain. Uh, Sheep Mountain, it says in the atlas. 'Middle Earth Estates?' Where'd they get a name like that?" I wrinkled my nose, knowing that Hal would understand just the level of distaste I was feeling.

"Well, this part of Colorado is called 'Middle Park.' But mostly it's developer talk. Marketing hype. Knowing Win, it'll be a top-of-the-line development. Large tracts of land. Probably a gate with a guard, all that kind of stuff. That's why I didn't want to commit to a year without checking it out in person, without both of us checking it out."

“Good plan. Especially because the streets in this place seem to be named rather strangely. ‘Hobbiton Hollow,’ for example. And Win’s address, 151 Lothlórien Lane. What a thing to have to put on your stationery, for crying out loud.”

“More hype. Win told me that the guy who developed the place has a kid who’s just at the age for the Tolkien books, you know, *The Lord of the Rings*. And when they were about to plat the subdivision, the first movie came out. So that’s where the names of the roads came from. Probably made the kid happy, but ... I don’t know. Maybe all the more appropriate names like ‘Pine Tree Way’ and ‘Aspen Drive’ were taken.” He was shaking his head.

“So, anyway, we get to Fraser and turn right, coming from this direction, and then use Win’s map. But I’ve been looking at Grand County in this atlas, and it’s a big place. Fraser is actually kind of tucked into one corner.”

“The fastest growing corner, because of the ski areas and the scenery. And the easy access from Denver. So that’s where we both start. Criminal investigation and educational resource needs are where the people are—and that’s where Chuck wants me to put together this new institute as well.”

“It looks like we get to Grand County on this road, just north of this big reservoir, Green Mountain Reservoir.” I had the atlas turned sideways. “And then we’re in Grand County the rest of the way.”

“And the little town of Kremmling is one of the places we’re going have to be concerned about, because it’s an important community center. Did you ever read that Grand County History I found?”

“I looked at the first chapter and almost dozed off reading the title. ‘The County Grand: Physical Geography.’ Or something like that. Yawn.” And then I actually did yawn. Long car trips always put me to sleep, and staying awake for most of this one meant that I had a sleep deficit building up.

“I never said I read the thing. I just found it. I think it’s on the back seat at the top of the box of books.”

“Does this mean you want me to get it?”

“When you get bored with that atlas, why not? Read us a little about where we’re going.”

I unbuckled and knelt on my seat to rummage around in the back. “Ah, yes, here it is. *The County Grand: A History*, by Carla Fraser. Carla Fraser. Now why would that name ring a bell?”

I turned back around and re-buckled my seat belt. “Well, I can’t remember. Good thing for you I don’t get car sick, if you want me to read. Let’s see, how about the physical geography stuff first? I guess if I’m reading aloud I won’t go to sleep.”

“Or if you do, I’ll know it’s truly boring. I’m all ears.”

I opened the book and cleared my throat. “Ahem. OK, here we go...”

## **Chapter 1**

### **The County Grand: Physical Geography**

In terms of size, Grand County, Colorado, is only a couple of townships shy of the entire state of Delaware. Big as this sounds, you can count its municipalities on two hands and still have a couple of fingers left over to count its ski areas. With fewer than nine people per square mile, there’s plenty of elbow room—but that’s up more than 50% since the 1990 census, so some folks are beginning to feel crowded. Even so, it’s still

mostly empty, especially compared with the sprawl of the counties of the Colorado Front Range, just a short hop over the Continental Divide to the east.

Of course, if you count tourists, the elbow room shrinks, especially where they tend to congregate: the towns of Grand Lake and Winter Park; Rocky Mountain National Park and the Winter Park / Mary Jane ski area. And, if you're backpacking, the Indian Peaks and James Peak Wilderness Areas seem almost full, because backpackers have a different notion of "elbow room" from the rest of us.

Grand County is home to the headwaters of what is now called the Colorado River. Originally, the small stream that arises just below La Poudre Pass and then flows through a spectacular canyon known as Little Yellowstone was called the Grand River. Only when it finally joined with the Green River in the Utah Canyon Country below Moab was the interior West's major waterway called the "Colorado." Now it's the Colorado River from the start, first wending its way south through the oxbows of the Kawuneechee Valley toward Grand Lake, then joining with the Fraser River near Granby to become more than just a small mountain stream before it heads west.

"It goes on. More river stuff and..." I flipped pages, "...looks like geology, lots of stuff about mountains and rocks, and yet more river stuff. Do you really want me to continue? I mean, I can, but I'm putting myself to sleep."

"Well, the last thing I need to do is to go to sleep. Maybe we should just enjoy the scenery. Or you can take a nap. We can save that history for when we have insomnia."

"Good. I'd rather watch the scenery anyway, if I can stay awake. I gather that big lake we went around was Green Mountain Reservoir?"

"Right. And here's the county line, so you can watch the real thing go by instead of just reading about it. I think, maybe, that last ridge up ahead, way up there, is where we drop into the Colorado River Valley. Kremmling is just down there. Then it's up the river past Parshall and Hot Sulphur Springs to Granby and then our new home. For a while at least."

"I know we've talked about this over and over, but I'm still worried that you're not happy with this change." I yawned again.

"It's hard to see how it could have worked out any better. I mean, it's just too cool that you were able to cut that deal with the CBI, becoming a Deputy Director at Large to come up here to work with the sheriff's office on its future. And I'm certainly ready for a sabbatical, so scoping out the educational needs of the growth areas up here is a good justification to be here. The U and the State will realize their investment in me. On top of that, the opportunity to set up this institute was just too good to pass up."

The opportunity was indeed remarkable. Hal's tenure as a dean at Frémont State had been stimulating—a refreshing break from the usual faculty grind of teaching, research, and assorted service activities. It had also been highly successful, according to the Provost, but Hal was ready for a change. For one thing, his cynicism had been growing more and more dominant in his thinking about university administration—not a good attitude for a dean to have. For another, the person who really ran the dean's office, Alice Swan, Hal's administrative assistant, had retired. Hal simply didn't have the energy to break in a new assistant. He had explained all of this over dinner on numerous occasions, each explanation sounding progressively more desperate.

So he was open to the idea of new opportunities.

The cocktail party had been the kickoff for one of President Black's fundraisers, and movers and shakers from industry in Colorado were there. Among them was Charles Shure, President and CEO of UNELECO and one of the twenty or so most powerful industrialists between the Mississippi and the West Coast.

Hal's presence at the cocktail party was one of those duties associated with his appointment as dean, one of the more pleasant ones, actually. He and the other deans, plus some department heads, were supposed to schmooze the potential donors into becoming actual ones. And he took me, as he always does, to show me off and to surprise people who've never met me. As he put it one time, privately, introducing people to a knock-out babe in a little black dress, a babe who turns out to be a Colorado Bureau of Investigation director, creates wonderfully amusing double-takes.

But then Shure asked, casually, if Hal would be interested in heading up a new research institute, underwritten with a billion-dollar endowment, that would use advanced computing hardware to simulate regional climate, and Hal forgot all about schmoozing for donations.

\* \* \*

"So I'm looking forward to all this." He looked at me and reached over to pat my leg.

In Kremmling, we turned east on US Highway 40, up the Colorado Valley. Here, the valley was wide and the surrounding hills were rolling, sometimes tree-covered, everywhere glistening in the sun. Bare cottonwoods lined the river banks, and the parking lots for the public-access fishing leases were empty.

The grade up Byers Canyon was still snow-covered and icy, and even though the road was sanded, I felt more secure for the all-wheel-drive and the new snow tires Hal had bought for the trip. Still, it was clear that the car needed more power. The business of the transmission's continually shifting up and down was a real pain, with all the surging. But even though I was still sleepy, the scenery made staying awake worthwhile—red and orange spires of rock topped with the white of the new snow.

At the top of the grade, we caught up to a state highway department gravel truck, and Hal had to slow to the speed limit through Hot Sulphur Springs, something unusual for him. With me in the car, I think he feels as if he can speed with immunity. One day, I'd like him to get pulled over so I can just watch while he tries to talk himself out of a ticket. And if he tries to bring me into the discussion, I'll just bat my eyelashes and play dumb.

Slowing down for the town, though, was helpful, because it allowed me to catch a glimpse of the Grand County Court House and the sheriff's department office building, where I would likely be spending much of my time—and where I was hoping I'd fit in.

Then he was able to pass the creeping truck on the flats east of town, and we had the road to ourselves through Windy Gap, where the Granby section of Middle Park opened up in front of us, the backside of the Front Range towering white and serene over everything. I finally dozed off for a while, until I felt the car stop.

"Are we there yet?"

"Sort of, a grocery stop. Want to come in, or wait here and sleep?"

"Oh, I'll come in and get waked up. Where is this?"

"Fraser. You might as well begin learning this store, where things are and so on, because we'll be in here a lot. It's the only real supermarket in this part of the valley."

We loaded up on staples and a couple of dinners and breakfasts, and then set out for the subdivision, with me navigating from the hand-drawn map. We turned off the highway onto a county road, and soon we were driving through a forest, a forest of dead trees.

“Hal? What’s all this about, all these dead trees?”

“The drought, and some kind of beetle, I think it’s called the Ips beetle. Sucks the life out of the trees and they die. There are thousands of dead acres up here. It’s pretty depressing.”

And it was. After four miles or so, all plowed but increasingly narrow and wooded, with much of the lodgepole forest dead, we came to an imposing gate post made of bundled tree-trunks on either side of the road, with a spanning sign reading, in a very elaborate script,

### **Middle Earth Estates**

*Private*

More smaller, but quite obvious, “private” signs decorated the posts. A hundred yards farther there was an official-looking sign informing everyone that the road was private and there was no access to public lands. The message was loud and clear: if you don’t belong here, go away.

“Good.” Hal was taking it easy, because the road was snowy and slippery despite being plowed, “At least there isn’t a gate, or a guard-house. We can come and go as we choose without being watched. I guess.”

“That’s a good omen. Let’s see, take the next left. That should be Lothlórien Lane. There was a fancy street sign back by the gate-post, so maybe there will be more. And then Win’s place is the first driveway on the right. Number 151. Not a lot of traffic, huh?”

“Looks like we’re probably the second or third car on it since it was plowed, must have been this morning. So, no, I guess not a lot. Win told me there are something like two dozen parcels of land in this subdivision, about half of them have houses so far. They’re each about 35 acres, so there should be lots of elbow room. Moreover, Win said he bought four of the lots, so he’s got almost a quarter section.”

“So, how much does property up here go for, anyway? I mean, from what you just said it sounds like there should be—what?—ten or eleven lots for sale.”

“Something like twenty thousand an acre, I think. For that, you get underground utilities including natural gas and TV cable. And lots of dead trees. But not water or sewer. So you get a million dollar lot and have to put a septic tank in it. And uphill, I guess, a well. Ah. Here we go.”

We’d come to an intersection with another of those fancy street signs sporting more of the elaborate script. Hal turned left, and the road wound up a little valley, disappearing around a curve into the spruce and fir. Every now and then there was a clump of bare aspen trees for variety.

Just around the curve, we came upon a driveway on the right, with a slab of sandstone standing like a monument next to it, “151” chiseled prominently into its face. Ahead, the road appeared to wind around the shoulder of a ridge while the driveway looked as if it was headed up to the top. Fortunately, it was plowed as well, somewhat more thoroughly than the road, in fact, as there were gravel spots showing through here and there. Because there were no berms of snow on the sides of the driveway, Hal pointed out that his friend Win, or at least Win’s caretaker, must have an industrial-grade snow blower.

A half-mile farther, after two switchbacks to make the grade manageable, the driveway reached the top of the ridge, and the valley opened up before us. Confronted by more than 180 degrees of view including rolling hills of snow-covered conifers with the Indian Peaks of the Front Range centered a few miles across the valley, all we could do was stare in amazement. Shoshoni, Apache, Navajo, Arikaree,

and North Arapahoe Peaks—as I’ve since learned their names to be—watched us impassively from their 12- to 13-thousand foot vantage points.

After five minutes of pure gawking, Hal continued up the driveway, around the last switchback, and came to the guest house—not that we would have known without the map, as it looked to be at least twice as large as our house in Durango, a three-story wall of windows bisected by a rock chimney, with wings on either side. But the map said clearly that the first thing we’d come to on the driveway was the guest house.

“So this is a ‘room with a view’ kind of place, huh?” I was trying to hide my astonishment, but I know I failed.

“Looks like. Let’s see if this is the right place. Where’s that garage-door opener Win sent?”

The main driveway led past the right side of the house, and the right-hand wing turned out to be a large, two-car garage with its driveway apron cleared off. The door began opening when I pushed the button of the gadget I retrieved from the glove compartment.

“Before we go in, let’s see where the driveway goes.” Hal kept the car pointed up the main driveway.

The ridge kept rising, but the driveway stayed almost level, traversing the hillside. After another quarter mile or so, through a large aspen grove, we came around a curve and discovered the main house. It was now clear that we were, indeed, staying in the guest house, as it was a mere scale model for this larger structure, more properly described as a hotel than a house, at least by the look of the façade.

Hal kept driving around the circular drive past the front doors—an appropriately grand entrance—and then back down the driveway. Neither of us said a word until he pulled into the guest-house garage and killed the engine. I pushed the button on the remote, and the door closed behind us.

Hal sat behind the steering wheel, staring ahead at the garage wall. “You know, Win’s condo was quite nice, penthouse, four bedrooms, all that, but I always thought it was, well, small. Looks as if he felt that way, too. And, besides, with this guest house he won’t have to worry about riff-raff like us staying in his own digs any more. Not that I’d want to. I mean, he always asked me to make certain the toilets flushed, remember? In that place, it would take a couple of days to make the rounds of all the bathrooms, looks like.”

When he finally stopped babbling, I sighed. “I thought we were doing OK, I mean, financially. We both have respectable salaries, there’s our portfolio of retirement investments and so on. Two nice cars. A lovely house. What are we doing wrong?”

I was also staring at the bare garage wall talking in a monotone.

“We’re working stiffs, that’s what. Win was always the entrepreneur, even in college. He invested, took risks, put together deals. It worked. And look at Chuck Shure. Built a business empire from the ground up, with a start from his grandparents, I guess. Unless we win one of those monster lottery jackpots, we’re just in a different world from those guys.”

“Well, let’s see what we’ve got to move into inside this place. Look at it this way. We get the fun of moving ourselves into a new home. I bet Win and Chuck never get to have that experience.”

\* \* \*

Although my car was full of our things, it was still not a lot of stuff—mostly just clothes and on top, of course, skis. There would be a small truck arriving Monday, with more, and Hal’s Audi S4 was packed full of other things that we were afraid might get broken by the movers. It was waiting for someone to

fly back to Durango to fetch it. Our furniture was staying behind, though, for the visiting professor from Switzerland and his wife who were renting our house on Eighth Street.

And it was a good thing we left most everything back in Durango, because the guest house was completely furnished, including linens and kitchenware. Our own furniture wouldn't have fit into the place. But we immediately decided to pack the various knick-knacks away so that we could substitute our own—making the place more familiar in that small way, at least.

It took us only about two hours to get settled, and somewhere in there the sunset happened. And the full moon rose over the Front Range.

“Did you plan this?” I was standing in front of the wall of east-facing windows, once again astonished at the view. Hal walked up and put an arm around me.

“Coincidence all the way. Romantic fellow that I am, I wish I could have planned it, though. Think we'll ever get used to this?”

“Maybe it won't be quite so mesmerizing, but I bet it'll always be spectacular.” I leaned into him.

“We need to stare at it a lot, because we might decide that we're too isolated up here. The commute, after all, could be an adventure after snowstorms. And there's no newspaper delivery and other in-town amenities like we're used to.”

I was skeptical. “For this, some isolation is worth it. And the commute as well—what was it altogether, five, six miles? That seems manageable. Maybe we can carpool, go into town for breakfast and the newspaper every morning.”

“You don't sound eager to go somewhere else.”

“You kidding? Abandon this view? And what about the hot tub, the heated garage, did you notice that? What about that kitchen, with the automatic boiling water spigot thing and all that other stuff? Think we're going to find a rental with all this? For this price?”

“Yeah, well, free is hard to beat, that's for sure. So, how about I turn on the fire and put together that casserole we talked about? It can cook while we watch the alpenglow over there fade.”

“Uh, ‘turn on the fire?’ I didn't see any firewood.”

“Gas log. Watch.” He walked over to the mantle, picked up a funny-shaped remote control, pushed a button, and a fire burst to life in the fireplace between the windows.

“So what's this huge chimney for, if it's just a gas log?”

“It was probably designed as a regular wood-burning fireplace, and then Win decided to do the environmentally correct thing and avoid the wood smoke. Besides, I bet the whole chimney eventually warms up and heats the entire house. Kind of inefficient, but probably a lot better than a real fireplace would be.” He pushed another button, and there was a beeping noise as two ceiling fans 25 feet above our heads began to spin.

After supper, we settled on the couch to watch the fire and the moon over the valley. Hal had made what the cookbooks call cassoulet, three kinds of white beans with various leftover bits and pieces of meat in it, simmered all day. He and I had long ago begun calling it franks and beans, because his fast version involved canned white beans and smoked pork sausage with a liberal dose of *herbes de Provence*.

We were working on after-dinner cups of tea when lights came up the driveway, first headlights on the trees and then taillights, and finally, when the car turned the last switchback, headlights in our faces. Shortly, the doorbell rang.

“Expecting anyone?” Hal could tell, though, that I was as surprised as he. And then I heard his surprise level ratchet up a notch when he opened the door.

“Good evening, I’m sorry to intrude. But I’m told that Annette Trieri is staying here?”

“She is. Please come in out of the cold, officer.” Hearing my name, I walked up behind Hal.

“I’m Annette Trieri. What can I do for you ...” I looked quickly at the insignia on the shield the officer was wearing on his bomber jacket, “... sheriff?”

“Ms. Trieri, I’m Sheriff Francis Schmidt. But please call me Fran. We talked on the phone a couple of times. I’m sorry to bother you at this time of night, but I heard you’d made it up here today. And I’d like to talk with you for a minute.”

“Come in. Coffee? Hal makes a mean cup of decaf this time of the evening. Oh, yes. Sheriff, this is Hal Weathers, my husband. While I’m up here working with you folks, he’s going to be doing some consulting with the school system about their future. Seems they have some of the same problems with growth that your office does.”

“Pleased to meet you, Mr. Weathers. And, yes, a cup of decaf would be just the thing.” They shook hands and Hal headed off toward the kitchen.

“So, sheriff, what’s on your mind this evening?”

“It seems that you came at a good time. It looks like we’ve had our first homicide in a long while. Yesterday, we think. Found the body today. And there are complications.”

\* \* \*

## Two

“Complications?” Hal’s voice echoed slightly from the direction of the kitchen. “That’s what she likes, sheriff, complications. Cream and sugar, sheriff?”

“Black, please.” Fran Schmidt lowered his voice, unnecessarily, because Hal had the coffee grinder going. “Ms. Trieri, this is pretty sensitive stuff, what I need to talk to you about.”

“Don’t worry about it, sheriff. If Hal doesn’t hear it from you, he’ll hear it from me. I talk about all my difficult cases with him. It helps me think them through. Let’s go sit in the living room.” I led him toward the couch in front of the fireplace.

“Well,” he still looked doubtful, “OK, then. See, the reason it’s sensitive, and the reason for the complications, is the victim. Pillar of the community, active in church, all the right things for a close-knit county like ours. And the circumstances are compromising.”

“Compromising complications?” Hal walked into the living room with a steaming mug of coffee, thanks to the instant hot-water spigot. “She’ll really like this, sheriff. And don’t worry, I’m the soul of discretion. I guarantee that some of the things I’ve heard in my role as dean make this criminal stuff look tame. And if it will make you feel better, I’m a State of Colorado Official Person, just like she is. That’s what working for the Colorado Commission on Higher Education gets me.”

“Oh, that’s right. I remember that when we talked on the phone, Ms. Trieri...”

“Please, Fran, call me Annette. We’re going to be working together for the next six months, at least. And go ahead and call him Hal. He doesn’t answer to official-sounding greetings very well.”

“...uh, Annette told me that you were going to be working with CCHE and the school system here on growth issues, and—what was it?—post-secondary education. And some kind of new institute? Then this will interest you, for sure.” He took a sip of the coffee and then a larger one, and nodded appreciatively.

“Say, this is good! I keep thinking I’ve got to quit using that instant coffee, and this is the clincher. Anyway, what happened is that we got a call this afternoon from our new school superintendent, Emily Griggs. She moved here last fall, and, being new to the community, she bought a condominium near the ski area, one of those places that had reduced its prices because the units weren’t selling well. She’s single, and she’s a skier, so it made sense. Anyway, today she called my office and said that someone needed to get over to her place as soon as possible. The office called me at home and I went.”

“Now, to be clear, you mean the Winter Park Ski Area, not the other one?” I had shifted into my analytical mode.

“No, the other one, SolVista. It’s closer to Granby, where the school district offices are. Her place is in one of the smaller condo buildings right near the base, over the first ridge from the highway. So, anyway, I go over there and what do I find but, sprawled on her couch, the body of Tobias Summers.”

“Your pillar of the community and so on. Any obvious signs of a struggle or cause of death?”

“Nothing obvious, aside from some empty liquor bottles, so we’re going to have to wait for the autopsy. But he was only partly dressed, and he looked like hell. Now, I know that sounds strange, I guess you’d expect a dead guy to look like hell, so let me explain. See, Tobias Summers is—was—maybe the richest man in the upper valley here. He’s a lawyer and a developer, and he’s what you’d call a clothes horse. Armani suits and so on. Impeccably groomed. But it was clear that he hadn’t shaved for a couple of days, and he was wearing worn out jeans and a tank-top shirt. No shoes—in fact we didn’t find any shoes that would be his anywhere in the condo.”

“So what’s Emily Griggs’ story?” I was sitting on the edge of the couch, trying to memorize every detail.

“Says she was out of town, went down to Denver on Thursday and spent the last two nights down there. Came back this afternoon after the roads opened. But she doesn’t have anyone who can verify that she was in Denver, she says.”

“Unless she slept in her car, she has a motel receipt.”

“I thought of that, but she says she paid cash and tossed the receipt. She went down to go shopping. That’s not unusual, by the way. People do it all the time, although they don’t always stay overnight. She got stuck down there by the weather.”

“If she went shopping, she should have some dated store receipts.”

“Yes, but she doesn’t. She says she couldn’t find what she went down there for, so she didn’t buy anything.”

“Not even gas receipts? I bet gas is cheaper down there and you’d expect her to buy some. Hmm.” I stared at the ceiling, way up there. “So you’ve got a pillar of the community dead on the couch of the superintendent of schools, whose story is thin. Let me guess. This guy Summers was married, family, all that stuff?”

“Right. That’s part of the complications. His wife is a teacher at the middle school in Granby. Works for Griggs, with a couple of layers of management in between, of course.”

“The richest guy in the valley is—was—married to a middle school teacher? Interesting.”

“She obviously doesn’t need the income, in fact I think I remember some newspaper story about how she donates it to the teachers’ retirement fund or something like that. She likes kids, I guess. She and Tobias have five kids of their own, in college and older. If I recall, there are a couple of grandchildren.”

“So, I guess I’m getting the picture here. But there’s one thing that isn’t clear. Why do you call this homicide? Maybe he just had a heart attack or something.”

“You’re right, maybe ‘homicide’ is a tad premature. But, see, Summers was healthy as a horse, participated in the Grand Triathlon this year in the over-forty category and came in second or third. And he was a straight arrow, LDS Church deacon, didn’t drink or anything, no reason to think he’d be fooling around. And here are the liquor bottles and Griggs’s story that doesn’t stand up. I mean, if he was fooling around with her, say they were having sex and he had a heart attack, why would she make up a story that she can’t defend? This lady is no dummy—she’s got a doctorate from the University of Denver. So I smelled something fishy and decided to go with the assumption of homicide until I hear different.”

“Did you arrest Emily Griggs?”

“No, but I made her agree not to leave the valley. If she runs, well, that will tell us something, won’t it?”

\* \* \*

Sunday morning, we went into town, as we had discussed, for breakfast—more like brunch, by the time we got there—and the newspaper. Sharky’s Eatery, recommended by the sheriff as the locals’ favorite for breakfast and lunch, was still full of people in brightly colored ski outfits putting away high-calorie meals in preparation for a day of exercise. The current dictates of ski-suit fashion seemed to be oriented toward various exotic shades of reds and blues, and those of nutrition leaned toward large, well-stuffed omelettes with huge mounds of hash browns.

I mentioned to the harried waitress with the nametag reading “Mindy” that Sheriff Schmidt would probably be joining us, and our status immediately jumped several levels. After a short wait, we were shown to a corner table set for four.

“He said he might stop by, but what I really wanted was space to spread out the paper.” My ability to manipulate circumstances this way always makes Hal glad to be on my side.

The combined Denver paper, the Sunday *Denver Rocky Mountain Post*, as Hal likes to call it, was soon spread across the table amidst cups of coffee and plates of the house favorite. Because we hadn’t planned to ski, we made a pact with each other to figure out some form of exercise later in the day, to make up for the calories.

The front sections of the paper were full of national headline news and various matters of interest to the folks in the Denver metropolitan area, so it took some hunting for me to find the short story about the untimely death of a prominent real-estate developer in the Fraser Valley.

Meanwhile, in the business section Hal ran across his own name in a story obviously adapted from a press release put out by the UNELECO public relations machine. It named him as the founding director of a new non-profit institute to be established by the Charles and Rebecca Shure Foundation for the purpose of putting the “United States back on the world map of global environmental research.” To

Hal's relief, details about when, where, and how much were lacking, as most of the story was puffery about the Foundation and its benefactors.

"Hey, this is interesting!" I was working on my hash browns and talking at the same time. "This short story about Summers' death doesn't have anything in the way of details, but there is a comment here about how he was planning a new development called 'Tabernash Meadows' that has generated lots of controversy. Are there real estate ads in this paper?"

"Are there real estate ads in this paper?" Does a bear...well never mind. Here." And Hal shoved a huge pile of newsprint my way. "Your real estate sections, ma'am, all twelve of them. Most of the ads will be for developments down in the metro area, but I bet there's a 'mountain' or 'high country' section also." He went back to his omelette and the puff piece about Charles Shure.

After considerable shuffling and reshuffling, I found it.

"Here we go. 'Tabernash Meadows, the Best of the Fraser Valley,' according to the ad agency. Looks like they're planning a subdivision, hmm, just south of Tabernash or something. I guess that would be just north of here. It talks about affordability. Says that the first phase should be available next summer."

"There's a huge empty pasture along the railroad tracks there, maybe that's where. The other side of that sports complex by our county road. Remember?"

"Sort of. Below, I mean, east of, that first little bluff, huh? By the tracks. Gee, that'll be peaceful, trains going by all the time. Plus the traffic on the highway. Says here that they're planning eight hundred new homes. Or seven hundred and ninety, actually."

"Times, say, three and a half people per home is something like twenty-eight hundred new residents. More than twenty per cent of the entire county. Wonder what it'll do to infrastructure, water, sewer, all that?"

"Here comes Sheriff Schmidt, with company. Let's ask him. Hi, Fran! Have a seat, I'll clear up this paper." I pushed piles of newsprint around, clearing the two empty places.

"Annette. Hal. Good morning. Let me introduce you both to Officer Janelle Kennedy, one of my under-sheriffs. Joined us last summer, fresh from the Marines, Shore Patrol. Janelle, this is Annette Trieri and her husband Hal Weathers." We both stood and shook hands with the tall, strikingly beautiful woman in uniform.

"I've been telling Janelle about your assignment here, Annette, and how it's starting out with a bang, so to speak." Schmidt surveyed the table as he and Kennedy sat. "Haven't seen the paper yet, anything in it?"

"A short story about the death of Mr. Summers, they're not saying what happened."

"Yeah, that's not surprising. We didn't tell them anything. Um, I should tell you that we're planning to release Ms. Griggs's condo back to her. Janelle and my forensics guys spent all the time there they need, they say. But maybe you'd like to look it over or something?"

"Not me. I'm all thumbs when it comes to forensics. But I'll be interested to see their report. And I'd say that if they're done, giving the condo back to Emily Griggs is a good idea, it'll give her less excuse to rabbit."

"That's what I thought, too." Janelle Kennedy's voice was as beautiful as the rest of her, with a southern accent to boot.

"Janelle," Hal chimed in, with a big grin, "Something tells me you're not originally from around here. That accent, for one thing."

She smiled and held up her left hand, reaching it out toward the window and appraising its back carefully.

“I guess I don’t exactly blend in with the snow, do I?” The milk chocolate skin was indeed something of a contrast with the scenery outside. “No, I’m originally from Savannah. And you know what? It’s damned cold here. But my husband got a job with that outfit that’s running the ski area, so here we are.”

“Cold indeed, even for us. Durango doesn’t get anywhere near this frigid.” Hal polished off his cup of coffee and looked around. “So, we were just talking about something in that story about Summers, this new subdivision he was developing just north of town. The story says it’s controversial. Is it likely to move ahead without him?”

“I’ve been wondering the same thing.” Schmidt was also looking around for a waitress, and finally waved for a cup of coffee. “Especially because my folks owned the land next to this piece he was going to put the subdivision on. They used to lease the meadow for summer pasture, in fact.”

“Seems like that many houses would have a huge impact on the community, hell, all the communities here. No wonder it was controversial.” Hal got a refill on his coffee as a bonus when Schmidt’s new cup came.

“Yep, even some folks in the Chamber of Commerce had reservations about it. But Summers, well, he was a force around here, one that wouldn’t be denied sometimes. And from what I’ve heard, he’s been calling in all sorts of favors to try to get this approved. There’s been lots of opposition, from local environmental groups and others, too, but it was looking as if he’d carry the day. Now I’m hoping that the whole thing will just go away, so then I won’t have my budget stretched so thin. Our plan was for Annette to help me figure out how to deal with this growth, but maybe it won’t be so critical now.”

“There’s still growth up here, though. There’s something for me to do, I bet.” I wasn’t ready to re-locate back to Durango yet.

Hal was staring off into space, like he does when he’s doing math in his head. “I’ve been looking at land prices up here, on the internet over the past few months. Even if these lots were small, I’d be surprised if they went for less than, oh, 80 grand apiece. So that many lots would gross something close to 64 million. Less infrastructure costs and so on, it’s still a lot of green, and it just counts the land.”

“Especially,” Fran Schmidt was unhappy, “because I recall something about how Tobias wound up getting the property for a song. Never heard the details, but there was some kind of complicated three-way land and water-rights swap involved. He paid somebody something like four million or so and wound up with that parcel. So he would be looking at least a ten-fold profit margin, if you factor in the development costs, in only a few years. Not bad, huh?”

Janelle Kennedy looked startled. “Sounds like this might provide someone with a motive to want Summers dead.”

“You got that right, Janelle.” The sheriff shook his head. “Y’know, it used to be quiet up here, rural. That’s all changing, though, with these wheelers and dealers moving in. Tobias had been here for a long time, but there’s lots of newcomers just like him, or trying to be.”

It was my turn to look around for a waitress. “Well, you saw that place we’re staying—and it’s only the guest house. This kind of wheeling and dealing is how you get to be able to afford such things. Unlike us working stiffs.”

“Yeah,” Hal saw Mindy, and waved at her, “but look who’s the real stiff. You deal with that kind of money and controversy, you run risks that folks like us just don’t have to worry about.”

\* \* \*

It was Sunday, so everyone had the day off except merchants and ski area workers, and we had enforced vacation. But we didn't want to ski, because word of all the new snow had spread around Denver. We knew Winter Park would be unpleasantly crowded. So, after brunch and a stop at the grocery store, we went home—we were determined to think of this small mansion as “home,” at least until we found something more appropriate.

Despite the fact that most of our belongings were not due to arrive until Monday, there was plenty of puttering around to be done, to get moved in. Hal went exploring while I rearranged our hasty unpacking of the evening before.

I was in the middle of figuring out the underwear drawers in the dresser when I heard a shout from somewhere downstairs, seemingly far away. It didn't echo, but almost.

Rather than shout back, I went hunting. I knew he wasn't upstairs, so I started with the rooms on the main floor, and then headed down to the basement. Eventually I found him in a little mud room by the walk-out basement door, examining a pair of snowshoes.

“Look what I found!” He was wearing the grin of a ten-year-old. “Toys!”

“Right.” I'm a skier, but my other winter sport is sipping cocoa in front of the fireplace. I'm especially good at it if there's a shot of peppermint schnapps in the cocoa. “Now all we need is a sled and some dogs. You can play Sergeant Preston of the RCMP.”

“Not at all. This is great! We can go wandering around the woods here, get a little exercise, avoid the crowds. And it's free.”

“Aren't those things heavy? And they must make you walk like a duck.”

“No, no. Maybe the old kind, those huge wooden ones with moose-hide decks. But these new hi-tech ones are lightweight and shaped so you just walk. Here, feel this.”

I took the snowshoe from him and had to agree that it was lightweight, and the spikes on the bottom looked as if they'd be useful for slick spots. So, after a half hour of fooling around, finding the right clothes, digging out our new insulated boots, figuring out the bindings, we were standing at the edge of the driveway, next to a three-foot cliff of snow, ready to go.

“So, how do we do this again? Just walk? Where?” I was not at all confident that the big things on my feet would work as advertised.

“Well, this is all new snow, so we've got to make a trail. I'll go first and stomp the snow down; you follow and step in the spots I miss. Then we'll have a trail to come back on, and for next time.”

“Next time?” My expression elicited an unsympathetic laugh.

But it worked, after a fashion. Hal was obviously getting a lot of exercise, lifting his snowshoes clear of the unpacked snow and stomping down until the snowshoe supported his weight. He wound up standing about half-way between the level of the plowed driveway and the top of the untracked snow. He floundered off around the corner of the garage, in the direction of the aspen grove across the front of the house and down the hill a bit. Gingerly, I stepped up the eighteen inches onto Hal's tracks and set off after him, using the ski poles that he had given me for balance.

It took me only about a dozen steps before it stopped feeling weird, and I fell right into the rhythm. I tried to step on the spots where Hal's snowshoes hadn't completely compacted the snow, but even

there I sank only a few inches. And it wasn't too long before I was using the poles in rhythm with my steps and not leaning on them, much.

"Don't forget to check out the scenery." Hal's voice startled me, and I looked up to find him standing in the aspen grove, watching my progress. I realized I had been watching my feet, a common beginner's mistake for skiers that I had adopted for my snowshoes.

So I made it a point to look up every other step and soon found that I could actually manage to look down only every third step—the scenery was sufficiently compelling that I was motivated. And it was so quiet—the soft scrunching of the snowshoes and Hal's heavy breathing were the only sounds to be heard.

Hal's track weaved its way through the aspen grove on a slight uphill traverse, making a loop around the house and generally following the ridge line. As the aspen gave way to spruce and fir and his weaving changed to accommodate the wider spans of the lower branches, it occurred to me that this was like walking in a well-groomed park. Because the snow covered all the undergrowth, there was none of the usual stepping over deadfalls and bushes involved in summertime walking in the woods. And, unlike the lodgepole woods lower down on the mountainside, here most of the trees were still alive.

Hal took us up over the ridge and down through the trees, which changed back to aspen, around to the main driveway, breaking maybe three-quarters of a mile of new trail altogether. He stopped on the plowed driveway and leaned on his ski poles.

"Whew. Well, that's my exercise for the day. How are your legs?"

I had noticed twinges on the outsides of my legs just below my hip joints and decided that it had to do with walking with my feet slightly farther apart than normal. Not at all like a duck, but definitely not like I usually do, either.

"OK, mostly. This is easier than I thought it would be. I think I'll do some stretching when we get back, though."

"Speaking of which, we can either take these things off and walk back on the drive here or go back the way we came. It'll be easier this time, especially for me. But it depends on whether you've had enough of these snowshoes for one day."

I thought for a minute and opted to go back the way we'd come. There was something quite appealing about those quiet, park-like woods that drew me that way, sore legs or not. And because Hal let me go first, I felt as if I had the place to myself—even the scrunching was softened because Hal wasn't breaking trail this time, and he wasn't breathing nearly so hard. The only sound was a freight train laboring its way up the valley far below.

And the view was different this time. At the edge of the aspen, just before the dark forest of spruce and fir took over, there was a little clearing with an opening toward the south. The runs of the ski area at Winter Park were dotted with tiny figures. Hal proceeded to tromp out a small circle, a platform of packed snow amidst the three feet of untracked powder.

"Maybe tomorrow we can bring a ground cloth and sit here and have a picnic. If there's sun, at least."

\* \* \*

**Three**

Monday morning, I felt creaky. When we had finally made it back to the house the previous afternoon, my legs were protesting enough to get my attention. Snowshoes, I decided, require different muscles from either walking or skiing. And despite half an hour of yoga to stretch things out, the next morning it hurt all over again.

But even with the aches, I managed to do more yoga, which helped. Then, after some breakfast, I drove over to Hot Sulphur Springs for an appointment with Fran Schmidt. We planned to begin a discussion of staffing levels relative to growth projections.

Just about the time we were finishing up, his computer bonged and a sultry female voice announced that he had new mail. Like so many other people, he couldn't ignore it—I think of it as Pavlovian—and he turned to his keyboard. It took him only five seconds of reading to react.

“Whoa! What the hell? Annette, come look at this.” I got up, carefully, aware of a twinge in my hip, to read over his shoulder. After all of the usual header material I found a carefully composed letter:

Dear Sheriff Schmidt:

You'll find my body in the garage. The keypad code for the garage door, the right-hand one, is 1-9-1-6, the year I was born – my memory has been fading, and this is how I've managed to avoid locking myself outside for the past several months. I turned off the garage heater and cracked the window, and I'm going to leave the door open until I get sleepy. So, what with the cold nights and sub-freezing days we're having, I should be quite solid when you get here.

You'll find a notarized document that has instructions about my cremation on the hood of the car. It will be in a file of papers with a will and so on. Therefore, unless you think there will need to be an autopsy, you might have your folks bring a pine box. (I'm 6'1" tall, by the way, and reasonably thin, about 170.)

You'll also find an empty bottle of sleeping pills in the downstairs bathroom and an empty bottle of Glenlivet by the cot in the garage, with the remote door opener – at least that's my plan. That should give you a clear hint of the cause of my death. And the time (assuming that I got this delayed email business to work right) would be about three and a half days before the time on this message. I'm fastidious enough that I'm going to make sure that things are tidy for you – I'd hate to think that people would have to clean up after me.

I'm thinking that there will be some discussion of all this, and people will be asking why. So to clear that up, in the folder with the will and so on there's an essay. But the sound-bite version is that I'm old, in lousy health, and I'm terribly lonely. And I don't want to be a burden to anyone. So I think this is for the best.

I hope it's not too much bother.

Best regards, Mike McMurphy

“Wow. Like a message from the grave or something. You know this person, Fran?”

“I know of him, more like. Met him in passing a few times, had a couple of conversations with him. He's a minor celebrity in these parts, reclusive, somewhat mysterious, but famous. An author. Lives, or lived, I guess I need to use past tense here, way up Crooked Creek Road above Fraser. He bought out an

old mining claim a few years back and had a nice house built, beautiful view, surrounded by National Forest. I remember some controversy about it.”

“Any reason to think this isn’t straight up?”

“No, not really. I ran into him in the grocery store over in Fraser a couple of weeks ago, and he was looking old, I mean, older than his age, if you can believe it. Frail. Kind of confused, actually, so I chatted with him for a while and asked him if there was anything I could do for him. But he turned me down. Said he was getting his driveway plowed out whenever it snows so he can get into town. Must have been costing him a bundle, because he’s way up there.”

“Even if he planned this out carefully, it seems strange. Age, poor health, and loneliness don’t just switch on. They develop over time, it seems like. Do you know of any recent events that may have precipitated this?”

“His wife died about six months ago. Long battle with cancer. He’s definitely gone downhill since that. And he *is*—uh, was—old, ninety or something like that. But I guess I better see who’s over that way and send him up there to see if this is on the up and up.” Schmidt pecked at a few keys, and a patrol schedule appeared on the screen.

“Mind if I tag along? This note seems kind of pat, you know? Too neat. Besides, I haven’t been up Crooked Creek Road. I need to get to know the county.”

“Don’t see why not. Hmm. Looks like Janelle is on patrol over that way.” He looked up at the clock. “Probably about to have some lunch. Let me find out where she’s going to eat and you can meet her there. You can take her a copy of this email, too.” He clicked a screen button and a printer hummed.

“Janelle? Oh, yeah, Janelle Kennedy, yesterday at brunch. So, how should we handle this?”

“Well, let’s see. McMurphy, or this email from him, has that code for his garage, 1916, so I suggest you use it and see if his body is really in there. If so, you’ve got cause to enter the house. If not, there’s some kind of hoax going on, and you should see if he’s around somewhere. I think our radios will work up there, and, if not, he’s got a phone. If there’s any hint of anything strange, go carefully. Two unattended deaths over the same weekend is probably some kind of record around here.”

“OK. I usually treat anything involving a body as a potential crime scene until shown otherwise. We’ll see what there is in the way of tracks in the snow, too.”

\* \* \*

Officer Janelle Kennedy was having lunch in Sharky’s, at a table with three other women in civvies. Kennedy was facing the door, and she waved me over to the table, where an extra chair was waiting.

“Ms. Trieri, please join us, and I’ll introduce you around. This is Millie Sabelhousen, Tina Granger, and Fiona Simpson. Girls, Annette Trieri, the Colorado Bureau of Investigation here in Grand County.”

“Everyone should call me Annette, including you, Janelle.” I looked at Janelle’s brown eyes and nodded for emphasis. “Do you suppose I have time for a bite before we take off?”

“Fran called me, and from what he said it sounds like another few minutes isn’t an issue. Nobody up there is going anywhere, it sounds like. Besides, you might like to hear the rest of this little discussion we’re having. We’re being subversives—trying to revolutionize the school district.” Kennedy’s grin was more humorous than subversive, but I noticed that the other three women shot nervous glances at each other.

It seemed a little strange to me that we wouldn't dash off to see about the McMurphy situation, but I was determined to fit in with the local culture. And if that meant a relaxed attitude about chasing after leads, well, so be it, I thought.

I decided to be reassuring. "Well, if you're not in a hurry, I'll get a sandwich. And I know for a fact that the CBI is interested in subversive activity, so you'll have to tell me all about it. Except mostly our interest has to do with the middle-eastern-terrorist variety of subversives, and you don't look the type. So if it's about the schools, I don't think we'll be too concerned. Besides, the school district is democracy at its most fundamental level. I bet what you're doing isn't subversive, it's just good-old-fashioned democracy in action. Anyway, I'm here only to assist the sheriff's office with some planning. And he griped about the school district all morning." I stopped feeling guilty about little white lies years ago.

I looked around the table and smiled broadly at all of them. "I remember a Mark Twain quote, something like 'God created idiots for practice, and then he created school boards.' Or maybe I've got it backwards." They all laughed, and their concern dissolved.

Just as Janelle started to explain about the school board, a waitress appeared. I decided I was hungry, so I ordered a cheeseburger and fries. After all, I thought, we're going up into the mountains, and who knows when I'll be able to eat again?

"So, Annette, what we were talking about was how the school board has decided that their main goal is higher test scores. So they're requiring the principals to require the teachers to make sure that the students get higher scores on those awful standardized tests the State of Colorado sends out. 'Teaching to the test,' it's called."

"Why would the state send out standardized tests? Are they supposed to be experts, or something?"

Fiona Simpson, a thin woman with sharp features onto which she had smeared too much makeup, spoke up. "They're not experts, really, but the policy, which the legislature mandated, is that financial aid to school districts depends on test scores. It's not exactly that the rich get richer, but districts with consistently poor scores that don't improve get penalized."

"In law enforcement, we call that kind of behavior 'bribery.' But I guess if government does it, it's different, no?" The coffee I'd also ordered was set in front of me, and I warmed my hands with it for a minute.

Millie Sabelhousen, one of those short, round, bubbly women whom you'd suspect was a high school cheerleader before her calorie intake caught up with her, snorted her disgust. "What it does is allow the school board to enforce a standardized, rote curriculum. They don't have to deal with real issues in education today, all they have to do is get our kids to learn to answer multiple-choice questions correctly. And none of these tests has anything the least bit controversial on it. Evolution? Hah! My Donnie wants to go to medical school. How's he going to get into a good pre-med program without a strong biology course or two in high school?"

"For that matter," Tina Granger, athletic, dressed for skiing, had her two cents to contribute as well, "any of our high-school-aged children who want a quality university experience need more than just the ability to get good test scores. They need a real education. My Beatrice is in the middle of her junior year, and she's starting to think about where she should apply. She's been getting straight As, but all that will do is to get her into Colorado State, or maybe, if she's lucky, CU-Boulder. I'd like to see her go to an Ivy League school, or maybe Cal Berkeley. Hmmph. Fat chance, with this test requirement crap."

"Well, my Nathan is still in middle school," Janelle Kennedy sipped her coffee, "so we have some time yet before college is an issue. But I'm still upset about this. Learning is something you've got to learn to do, and these standardized tests are just not the kind of thing that is conducive to learning. But,

look. There's another side to this. Before we moved here, we lived in Los Angeles for a several years while my husband worked at Disneyland. And if you think the schools here are bad, you ought to check out the schools in LA. Even in Orange County, in Irvine where we lived, they were mostly just baby-sitting services designed to keep the kids off the streets. At least here they're trying, even if they're misguided."

"I wonder how this will affect my husband's job." It seemed to be my turn so I jumped in. "One of the things he's going to be doing here is working with local officials to assess higher education needs in the local area. The Colorado Commission on Higher Education is trying to plan for the future, and eastern Grand County is a place they're watching."

"Watching for what? A place to put another Colorado Mountain College campus, or something? They have good programs, but, c'mon, they're only a two-year institution, a community college." Tina Granger made no attempt to hide her ambitions for her daughter.

"Good question. I've heard Hal talk about how difficult it is to commute to anywhere from here, west Denver or the CMC campuses in Dillon and Steamboat. Or Vail. On the other hand, since Grand County is part of the CMC District, that's what a two-year college would be here, wouldn't it? But, look, maybe they'll get more ambitious and decide that a branch of CU or CSU would be appropriate. The closest four-year colleges are in the Denver area, right?" I thought for a second and began ticking numbers off on my fingers.

"I mean, if Pueblo, Alamosa, Gunnison, Durango, and Grand Junction can have four-year colleges, why shouldn't there be one up here somewhere? Maybe some place like Kremmling, I don't know." From conversations with Hal, I had been learning about Colorado higher education lately, and this seemed like a good time to show off some of my new-found knowledge.

Millie Sabelhousen looked interested. "You think that's possible?"

"Another good question. If your child is in high school now, though, I doubt that there will be anything in time for him. But who knows what they'll decide for the future? First thing, though, is to get the local house in order. I hear your school district's new superintendent is in a bit of a pickle." I wanted to find out what the local grapevine knew about Emily Griggs' situation.

"I'll say." Fiona Simpson didn't hesitate. "Of course, you probably know more than I do, Janelle, but I heard she was having an affair with Tobias Summers and he dropped dead while they were having sex!"

"And him with a wife and children. A wife who's a teacher in the district, yet. That's terrible." Millie Sabelhousen was shaking her head at the shame of it.

My cheeseburger arrived, so I was able to eat instead of talk, which gave me the excuse I needed to avoid correcting their inaccuracies. As the gossip progressed farther and farther from the truth, I winked at Janelle, and she winked back.

After a few minutes of speculation that impinged on a world of complete fantasy, Tina Granger summed things up. "Anyway, the tragedy of it all is that there was some hope that Dr. Griggs would be able to stand up to the school board and their new philosophy of teaching to tests. And now it looks like she'll be fired."

The tragedy of Tobias Summers' death seemed to be secondary to this group.

\* \* \*

Janelle and I had the excuse of checking out the McMurphy cabin, so, to our mutual relief, we were able to escape from the gossip-fest as soon as I finished my burger. While Janelle worked the sheriff's department Dodge Durango carefully up the snow-packed surface of Crooked Creek Road, I called home.

"Hal? Did the movers come yet?" They were due in mid-morning, but we were skeptical, given the obscure location of where we were staying.

"About eleven, and they're about half done or so. The garage is filling up, but I'm going to leave room for your car. Right side."

"The garage is filling up? Aren't they taking things in?"

"Oh, sure, but there are boxes and boxes that don't have an obvious destination. I guess we should have collected everything in one place at home instead of having them pick it up from all the different rooms. I had no idea there was so much stuff. And there's not even any furniture. It's astounding." He sounded overwhelmed.

"Oh, dear. I'm sorry to leave it to you like this," I lied.

"Don't you worry. I'm going down to Denver and then to Durango tomorrow, so you'll have some time alone with it all." He chuckled. "I'll clear a path between the bedroom, the bathroom, and the kitchen, though."

"I don't understand how it could be like this. I mean, yeah, there were boxes in just about every room of the house in Durango, but this new house is as big, maybe bigger"

"But the rooms don't all match up. The bedroom and the kitchen are obvious, but we didn't decide where to have the study, and our living room at home doesn't seem to be the same as the main room here. So there are lots of boxes that I don't know where they go." He probably shrugged when he said this—I could just picture it.

"Oh. Well don't worry about it. I'll take a stab at it while you're gone." It would give me something to do in this new house while he was away, I thought.

"Works for me. But I've got to warn you about the miscellaneous problem."

"Huh? We've got miscellaneous problems? What miscellaneous problems?"

"No, a problem with miscellaneous boxes. Seems like there must have been two or three from each room. So now there are a couple dozen or so, all in the garage, all labeled as 'miscellaneous-one' or 'miscellaneous-two'. I guess we're not exactly experienced with this process, are we?" At least he was laughing.

"Oh, no. You're right—I remember now. I guess it'll be an adventure."

"Speaking of which, how's your day?"

"I'll fill you in tonight. Do we need anything for dinner?"

"Maybe you could find something prepared at the store. Or bring a pizza or something—the kitchen may not be in very good shape. I don't know if I'll have time to get to it. I want to get the computers and the stereo hooked up. First things first. See ya later, sweetie." Hal's priorities were strange, I thought, but at least the equipment would be ready to use when he was away.

I would have liked to talk more, but my phone was losing its signal in the little valleys leading into the foothills of Byers Peak—a sign that it was time to go to work, I thought.

During my conversation with Hal, Janelle had driven us farther and farther up a winding, steep mountain road that had been recently plowed—when Hal disconnected we were past any other car tracks. Finally we came to a dead end, a parking lot, it appeared, with the road ahead closed by a gate.

“Oh, hell, I must have missed the driveway.” Janelle turned the Durango around to head back down the hill and parked. She fumbled with a stack of paperwork and came up with a spiral-bound book that turned out to be a detailed set of county maps.

“These show every address in the county, supposedly. There are probably some new ones missing, but McMurphy’s place is on it, I’m certain.” She turned pages.

“Oh. Here. See? We’re here, just at this gate...” she pointed to a spot on one of the roads, “...and this is McMurphy’s driveway, a couple of curves down. It’ll be on the right.”

She handed me the book of maps, and I studied it while she eased the SUV back down the hill. Two curves later, she slid to a stop by a mailbox that was nearly buried by the drift from the snowplow. The driveway itself hadn’t been plowed, which was why we’d missed it on the way up—its entrance was blocked by a four-foot drift. She leaned over and looked at the map I was holding the book open to.

“Oh, great. This driveway has to be a half-mile long, at least. And uphill, too.” She shook her head.

“And it looks as if there’s at least a foot of new snow in there. That’s going to be quite a hike.” I could feel my leg muscles complaining in anticipation.

“Let’s think about this for a minute, Annette. Fran got this email suicide note today, right? Email that was set up to arrive today but was actually sent, or posted for sending or whatever, several days ago? Did you see it?”

“I’ve got a copy of it, in fact.” I extracted the email’s printout from my shirt pocket. “We expanded the header information, which is all that stuff at the start.”

“Hmm. Says here, assuming his plan worked, that his time of death would have been three and a half days before the date on the mail. Do you suppose that means before today? Or before this other date here,” she was pointing at the middle part of the header information, “when it looks like it was posted for sending?”

“Before today, that is, before this morning when the mail arrived, would be—what?—last Thursday evening, right? Wasn’t that when the storm was starting?” I remembered that Hal and I had watched the weather carefully on the days before our Saturday drive. “But that other date is Saturday, right? That must be some intermediate posting time, between when he originally put it out there on the delayed mail send and when it was due to arrive. Anyway, that date would imply a time of death on Tuesday, I guess. Assuming all this is on the up-and-up.”

“Let me remember. Last Tuesday, I think, was before that storm when we were having some nice weather. Well, I mean nice in the local context. Sunny and calm, but cold. I went skiing, as I recall.” She had her head cocked to the side, thinking.

“Is your point that the weather could have played a role in this?”

“Not sure. I’m just trying to set the context. The thing is, we need to check out the email story, see if there’s a body up there and all, but we need to be ready to treat this as a crime scene. But we also need to be ready to bring a body out, and that means getting a vehicle up there. But if we get it plowed, we’ll wipe out any tracks just under the new snow. See the dilemma? Too many ‘buts,’ and they contradict.”

“Quite right. Hmm. I’m not sure I can be completely objective about what’s the best thing to do, because my legs don’t want to hike up there much. We went snowshoeing yesterday and they’re hurting. And, actually, that’s the answer, as much as I hate to say it. Snowshoe in through the woods beside the

driveway, see what's up there, then, if need be, look for tracks under the new snow before getting it plowed. Lord. Did I see snowshoes in the back of this vehicle?" The complaints from my legs had become hard to ignore.

Which is how I wound up on snowshoes for the second time in two days. My legs, at least, gave up on complaining after only a few minutes of slogging. I guess they saw the futility of it.

Fortunately, I'd dressed for the occasion. That morning, the thermometer at the house had read zero, and I'd been scared into dressing in several layers. It almost never gets that cold in Durango, and when Hal told me it would probably be colder in the valley, I went overboard, even to wearing the insulated boots I'd used on the snowshoes on Sunday.

Janelle and I took our time preparing for the hike up to McMurphy's house. We didn't want to forget anything, the snowshoes needed adjusting, and we needed psyching up anyway. But eventually we were ready and set off, taking turns at breaking a trail through the trees beside the driveway. I quickly understood why Hal had been breathing so hard during our outing on Sunday.

It was nearly an hour later, an hour of some of the toughest exercise I've ever experienced, because the snow in the woods beside the driveway was at least five feet deep, that the house came into view. We each took another turn leading the way, and I was the one to actually reach the garage doors first. Between gasps for breath, I outlined my idea of a plan.

"OK. So, we've got a code for this door, and, assuming the power's still on, we should be able to get in. Supposedly, the garage will be the same temperature as out here, more or less. But I think we should be careful about what we do in there, unless it's obviously not a potential crime scene. Right? And if we find a body, in my book that's automatically a crime scene, at first, at least."

"Right." She was breathing hard, too. "If we open the door, we should be able to spot a place right inside where we can take off these damned snowshoes and leave them without messing up anything else. Then we can look around carefully and decide what to do next."

I took off my right glove and punched 1-9-1-6 into the keypad by the right garage door, and, with creaks of protest, it began to rise.

\* \* \*

## Four

"I'd say, it looks like his plan worked."

Indeed, it was almost as I had pictured it. A car, a battered, fifteen-year-old Subaru wagon in the left-hand stall, had a file of paperwork sitting on its hood. In front of us, toward the far end of the right-hand stall under an open side window, was a cot with an old man lying on it, looking peacefully asleep, dressed in sweat pants, a sweater and a jacket, and gloves. A nearly empty bottle of Glenlivet single-malt sat on the floor next to his right hand, which was dangling over the edge of the cot. A garage-door opener was next to the bottle. And it was cold in there.

Janelle and I stood just inside the snow line made by the garage door and managed to take off our snowshoes within the space of about a square yard. We left the garage door open and carefully walked past the cot, checking briefly to make sure the man was indeed dead, into the house. He must have turned down the main thermostat, because it was only about 60° inside—but compared to the garage, it felt tropical. Janelle and I made a little pile of coats and sweaters in a chair in a corner, and I went

looking for a telephone. Janelle began a search for the master bathroom, at my suggestion, to look for pill bottles.

I was put through to Fran Schmidt immediately.

“Fran? It’s just as he described it in that email, at least on first glance.”

“How’s the road?”

“The road’s fine, but the driveway isn’t—it hasn’t been plowed since last week’s storm, so we snowshoed in, through the woods next to the driveway. We’re trying to observe as much crime-scene protocol as we reasonably can. I’ll tell you, I’ve had my exercise for the day, and I think Janelle has, too.”

“We’ll need to plow the driveway, I guess, to get his body out.”

“Right, but I thought we might do a search under the new snow for tire tracks, or people tracks or whatever. Janelle and I talked about the timing of this and decided he died either last Tuesday, before the storm, or last Thursday during it. If there’s foul play involved in this, there may be tracks under the new snow.”

“I’ve got a guy who’s an expert at that sort of thing. I’ll send him up right away.”

“And meanwhile, Janelle and I will start working this house over. We’ll leave the garage for last—it’s not going anywhere and the cold has preserved everything. Maybe we could have a plow standing by, along with a forensics team for prints and so on. When your guy is finished with the driveway, they can go to work and maybe we can get this closed off before dark.” Although there was a lot to be done, I had my hopes.

And Fran Schmidt’s people turned out to be remarkably efficient. Maybe it was because they hadn’t had many chances to swing into a full-out investigative mode and everyone was motivated. Or maybe they, too, just wanted to finish up before dark. Whatever it was, it was impressive.

The snow-track expert arrived on snowshoes at the house a little over an hour later, having already taken care of the lower end of the driveway. He thanked Janelle and me for making such a nicely packed path up the hillside and immediately went to work with a broom and a shovel on the upper part of the driveway, near the garage entrance and then a little lower down. Although I was busy searching the house for anything unexpected, I noticed that he took a large number of photographs and several plaster casts.

About the time he finished, a snowplow came grinding its way up the driveway and cleared off the area in front of the garage. As it was turning around to leave, a car full of technicians arrived, and they set to work dusting everything in sight, starting with the garage. Janelle joined in their efforts.

I felt superfluous, but then that was entirely appropriate, I decided. I was, after all, the CBI advisor, not a real part of the team. So I got permission from the fingerprint crew and made coffee and hot water for tea. Norman Dzung, the track expert, was especially grateful, having spent quite some time outside.

It was about 4:30 and the activities were winding down when Fran Schmidt arrived followed by a large, black SUV that turned out to be the medical examiner’s car. Out of it came a pine box, and shortly Michael McMurphy was on his way to the county offices for his post-mortem. Janelle rode down the hill in the ME’s vehicle to fetch her SUV.

I poured Fran and myself the last of the coffee, and we sat down in front of the windows in the living room to talk over the afternoon. The sun was behind Byers Peak by then, but there was still light on the backside of the Front Range across the valley.

“Fran, I’m amazed and impressed. I didn’t think this thing could get wrapped up by dark, but your people have been wonderful. Efficient, on-the-ball, even having fun, from what I’ve seen. You’ve got a great crew.”

“Well, it’s not quite wrapped up, but I think we can call it a day and go home. There’s still the autopsy and some other matters. I want to compare the pictures and impressions from the driveway with cars we know had business here. And there are the fingerprint results and so on to go over, as well as those papers that Mike left on the car. My people are good, though, aren’t they?” He smiled like a proud father.

“So good that I’m unclear on the concept of why I’m here, why you requested CBI advice. I mean, my big contribution to this afternoon was making this coffee. Well, that and helping Janelle tramp down the snowshoe path that got us up here. I’ve been wondering if I’ll be able to walk tomorrow.” I flexed my legs, and they whined at me.

Schmidt laughed, but his laugh was tinged by cynicism. “What you don’t know, Annette, is that just about all of my people east of Hot Sulphur were here today. If anything else had happened, there wouldn’t have been anyone to deal with it. And west of Hot Sulphur, I think there are only two people on duty now. So even something like this stretches us thin. And as the population in the east county grows, we’ll be stretched even thinner. You’re here to bail us out, to tell us how to manage.”

“Ah. Not that there’s any pressure on me, or anything, huh? I guess the issue is that your budget probably won’t grow as fast as the county, so you can’t just plan to scale up what you’re doing now to meet future needs, right?” I sipped my coffee.

“That, plus the fact that demands on the department will probably grow faster than the county grows. There will be new types of crimes, not just more of what we’re used to, and that means we’ll need training and new types of expertise. And our budget is going to be constrained by all those stupid constitutional amendments that the voters agreed to in the past couple of decades. So we’re looking to the future and needing help. Here’s to you.” And he raised his coffee mug in a toast to me, his help for the future.

“Like I said, my first day on the job involved making coffee, for the most part. Maybe I can do better tomorrow.” And we both laughed.

Janelle arrived, back with her car, and she decided to warm up with a cup of tea before we all left. Fran Schmidt took advantage of the opportunity to get debriefed on the forensics searches.

“As far as I know, there really isn’t much of interest, Sheriff. I found an empty pill bottle in the bathroom, a prescription for Seconal, dated about two weeks ago. A month’s worth of doses, bottle empty.”

Schmidt looked surprised. “Was it from the Safeway? I saw Mike in there a couple of weeks ago. Maybe that was the day he bought them. Whew.”

“If he ate a bottle of those, plus most of that bottle of Glenlivet, well, that’s going to be pretty lethal, I’d think.” Janelle shrugged. “But that reminds me. The one thing we ran across that’s puzzling. See, we dusted everything in the garage that we could think of as well as various things in the house. And we took McMurphy’s prints from his body. Everything was consistent—the guy obviously lived here. But there was one thing.”

We waited while she sipped her tea.

“The thing is, there were no prints on that Glenlivet bottle. None at all.”

\* \* \*

With Yo-Yo Ma's recording of the Bach Cello Suites serenading us, our dinner pizza seemed elegant and the piles of boxes melted into the background. Hal's high priority on getting the electronic equipment hooked up suddenly made sense to me.

Janelle had recommended a hole-in-the-wall take-out place in Fraser as having the best pizza around, so I'd tried it, negotiating with the manager to get a half-baked pie to finish off in our oven at home. Fortunately, Hal had cleared the cardboard away from the stove, so we were able to cook.

The piles of boxes all over the house weren't quite as bad as I had envisioned, but they were still intimidating. Half of the garage was occupied by boxes labeled "miscellaneous," most of which I didn't recognize, and the main-floor rooms each had their own cardboard groupings sitting around taking up floor space. In setting up the electronic equipment, Hal had picked the southeast bedroom to be the study, so it had both full boxes and empty ones flattened in a pile, and, leftover from the stereo equipment, there was another stack of flattened boxes taking up space in the main room.

But there were just enough of our own belongings scattered around to make the place begin to look like home, and the Bach, one of our favorites, sealed the deal for me.

Besides, the pizza and the company were just right.

"You mean to tell me that you've been here—what?—two full days, and you've got two suspicious deaths? Goodness. Do you think they're going to want you to stay around?"

"Today's wasn't so suspicious as the other one, though—it looks more like a suicide. Although, I don't know, something's bothering me about it. Anyway, we'll know more after the autopsy. But, I have to say, I'm glad you took me out snowshoeing yesterday. Today would have been impossible without that first lesson you gave me. Except I don't know if I'm going to be able to walk in the morning." I poured myself another glass of wine. "So tell me about where you're going tomorrow."

"To pick up the other car, mostly. But first I've got an appointment in Denver, at the CCHE to talk about...oh, I guess you'd say to talk about parameters for my work for them here. What the future possibilities are and so on. And after that I'll get a cab to the airport and catch the last flight to Durango. I've got a spot on the 7:30 shuttle to Denver in the morning, it leaves from that hotel by the Safeway down in Fraser." He reached across the table for another piece of the pizza.

"So you'll be back here on Wednesday?"

"Late, probably. I've got a meeting in Colorado Springs with Chuck Shure for lunch on Wednesday. I thought I'd try to get over to Alamosa tomorrow evening, stay there to get a head start on the drive to the Springs."

"Hmm. Back Wednesday night. I don't know how much of this mess I'll have under control by then, but I'll give it a try. Depends on how much new information about these two new cases develops over the next day or two, probably, how busy I get with them." I was hoping to get rid of most of the cardboard, but it looked daunting.

"How involved are you going to be?"

"If it's anything like today, probably not much. They've got a highly competent team of folks here, and my job, after all, is to advise them on planning for the future. But if they ask for help, I'll certainly pitch in. I want to make a good impression, after all. Today, though, my job was mostly to make coffee and tea."

“But before you said you weren’t sure about the suicide theory of today’s death, or the dead body you found today, or however you put it. That must mean you’re involved at some level.” He bit into yet another piece of the pizza.

“To the extent that I’m hearing about what’s being discovered and can’t help but think about it, sure. But they really didn’t need me to be there to help. On the other hand, I’m glad I was there, because I was able to see Sheriff Schmidt’s people in action. I guess I had the idea that what they need here is better people, but I learned today that what really they need is *more* people, at least if the growth continues.”

“I wonder if that same conclusion applies to the schools.”

That made me remember the conversation at lunch about the shortcomings of the school board, so I related it to Hal.

“Teaching to these tests is a big problem.” Hal, I could tell, was about to launch into one of his academic lectures. “And as far as higher education here is concerned, it’s compounded by the fact that Grand County is part of the tax district that supports the Colorado Mountain College. One obvious way to provide opportunities here would be to open a CMC branch in the east county, and the type of secondary education they’re offering here would fit well with that. But the problem is, that’s setting their sights too low. If the area is to be anything more than a destination resort and haven for second homes for people across the mountains there, it needs a real economy. This institute I’m supposed to put together, for example, will need to hire a whole range of people. It’s inevitable that the top scientists will be imported, but if the educational opportunities around here were right, I could hire technicians and computer programmers and all kinds of other support staff from the local talent pool. But as it is, it looks as if I’ll have to import them, too.”

“So you’re saying that the ladies at lunch have the right idea, it sounds like.” I found this amusing, given that they were as interested in gossip as they were in the school board’s deficiencies.

“Maybe. Not every kid can reasonably expect to get into Harvard, no matter how good the high schools are. But I guess I think the high schools should be good enough that the best kids, smartest or whatever, should have a fighting chance. And if the school district here is focused on these standardized tests, they’re not aiming high enough. The kids will be ready for CMC, sure. But that’s just not good enough. Sorry, I guess I’m an academic elitist.” He grinned in that abashed way of his.

“I speculated at lunch that maybe there could be a branch campus of one of the big universities up here, or maybe over in Kremmling or somewhere. Would that, or something like that, help?”

“That’s exactly what’s needed, because it would give the local school board something to shoot for. See, if the local high-school graduates didn’t have the education necessary to get into that local branch, the school board would clearly be failing. So a local four-year campus would be a real boost for everything educational. I’m convinced that’s one of the reasons that the schools in Durango are as good as they are, that Frémont State has raised the bar for the school board. So, listen, I could talk about this all night, but we’ve got a house full of boxes. Want to do some organizing?” He stood up and gathered an armload of dinner dishes to take into the kitchen.

I went looking for the CDs that Hal had unpacked in the hope of finding some music that would be a little more conducive to moving boxes—the Bach makes me want to just sit and dream. I had rock ’n roll in mind, but all I found was classical, so I settled on Mozart, a disk of the early symphonies. With the volume way up.

Hal and I spent three hours organizing, unpacking boxes, and creating an ever larger stack of flattened cardboard in the garage that eventually eclipsed the miscellaneous box pile. We found where we’d packed the various items needed to live in a civilized fashion, including the laundry soap, the

kitchen gadgets we just couldn't live without, and the winter clothes—including the long underwear—that we hadn't been able to fit into the suitcases in the car.

After that, I figured I could get along without him for a day or two. But no more.

\* \* \*

When we got up on Tuesday morning, it was still dark, but because Hal's shuttle to Denver left at 7:30, we had little choice. And the thermometer said zero again. I couldn't help but wonder if this was going to be a daily occurrence—and if so, whether I'd ever get used to it.

But the house was warm and the shower was hot, so getting going was possible. Hal had packed a small overnight bag for himself the night before, and by seven we were in the car headed down the hill into town. We got him to the shuttle in plenty of time.

At that point, it wasn't dark any more, but it was still too early to accomplish anything, so I found the Tuesday Denver papers at the grocery store and stopped in at Sharky's for breakfast. The option of driving all the way back up to the house, only to be confronted by the rest of the unpacked boxes, just did not seem very attractive.

It was too early for the ski crowd, but Sharky's was busy serving coffee and various breakfast options to people on their way to work. I was shown to a small booth, where I sequestered myself behind the newspapers. Coffee arrived, and then breakfast—I was feeling proud of myself for having ordered oatmeal—and I began to feel content.

But I had the booth to myself for only about fifteen minutes. Just as I was finishing Ed Quillen's column on the editorial page of the *Post*, an informed rant about water problems in the Colorado mountain communities, a voice broke into my little world.

"Excuse me? Are you Annette Trieri, from the CBI?"

Vowing to be polite, even though I really didn't want to be disturbed, I lowered the paper to find a woman in her early thirties or so, trim and attractive, dressed in a blue cashmere sweater over gray wool slacks, peering at me through thick-lensed glasses. I decided she must have left her coat on the rack by the door, which suggested to me she was a regular at Sharky's.

"I am. Can I help you?"

"Ms. Trieri, I'm sorry to disturb you, but I wanted to introduce myself. I'm Emily Griggs, the school superintendent. At least for today I am; that may change soon. I've heard you're part of the investigation that involves me."

I masked my surprise and decided a formal response was appropriate. "That's correct, although I'm not part of the investigation in a truly official capacity. Yet, at least. I, ah, need to ask why you're here. I'm new to the valley, but I understand you live and work in Granby, or close enough. Did you come up to Fraser to find me?"

"Oh, well, no, not specifically. I had a breakfast meeting here that just finished up. But your appointment is common knowledge, and one of the people at my meeting saw you in here with Janelle Kennedy and Fran Schmidt on Sunday. So I took a chance. I hope I'm not interrupting?"

"Please, sit down. Coffee or anything?" I waved to my waitress and tried to adjust to the notion that my appointment was common knowledge. "Ms. Griggs, it's not entirely appropriate for us to be meeting. Your lawyer would probably have a heart attack, and I'm not sure that the district attorney would like it either. At least we're in a public place, and you should know that I'll be reporting our conversation to the sheriff when I see him later this morning. Clear?"

“I don’t understand. Why is this a problem?”

“Unless something has happened that I don’t know about, you’re one step removed from being a murder suspect, and you may be placed under arrest by the sheriff at any time. I believe the sheriff has made it clear to you that you’re not to leave the county. Correct?”

“Well, yes, but...” She stopped when I raised my hand.

“Therefore, let me do what the sheriff may not have been done, just so we can be absolutely clean about this. I need to remind you that if you are arrested, anything you say to me can and will be used against you in a court of law, if the district attorney so chooses, and that you have the right, at the county’s expense if necessary, to legal representation in any conversations we may have. You’ve not been arrested, but you need to keep this in mind. Understand?”

“I do, I know all that.” She took a deep breath. “But I still need to talk with you. You’re new to the valley, like I am, and I think you may have a somewhat more cosmopolitan outlook than most of the folks here. At least I hope so. I need some advice.”

“I don’t see how I’m in a position to advise you on anything, Ms. Griggs.”

“I understand your perspective, believe me. But let me explain. Please?”

I couldn’t very well just get up and walk out—besides being rude, it would mean I’d stiff the waitress. So I reminded her of her Miranda rights again and waited.

“I expect you’ve heard most of the first part of this, but I need to tell the full story. You see, I came home from a trip to Denver on Saturday and found Tobias Summers’ body in my apartment, my condo. I called the sheriff, and the fact that I don’t have any real documentation of my trip to Denver has put me in the position of being the sheriff’s prime suspect, or ‘person of interest,’ as he called me. Even though I haven’t been arrested, I don’t think he has any other people in mind.” She fidgeted with her teaspoon.

“Now for the new information, at least information that I didn’t tell the sheriff.” She lowered her voice noticeably. “I was in Denver to visit my partner. She’s a vice-president at a bank there, and until she can find something appropriate here, we have a commuting relationship. Frankly, it sucks. But what’s worse is that I still haven’t decided if this community is ready for me to be its school superintendent if I’m out of my little closet. So that’s why I haven’t told the sheriff about this. But, obviously, Susan could provide me with an iron-clad alibi, if I asked her to come forward. Further, we were at a party Friday night, and the other people there would back up her story.”

She paused for a drink of the tea the waitress had brought. “I’m not at all concerned about my legal exposure, beyond its effect on my career. But I am concerned that the sheriff, by being distracted by me, will miss an opportunity to find the real people behind Summers’ death.”

It was her last comment that resonated most strongly with me, although I suspected her strategy of keeping her personal life private was wise, at least until she understood the local culture better.

“I’ll need to talk to your partner—Susan?—but then maybe I can persuade the sheriff to broaden his investigation. I’ve developed a good relationship with him already. I think I may have to tell him the circumstances of your alibi, but I also think he’ll be discreet about it. And I’m fairly certain that he won’t have a problem with it, or if he does that I can persuade him not to. But if there’s the possibility that you’ll lose your job, as you suggested before, I don’t know that I can do anything about that.”

“I’ll take that chance. If they’re going to fire me for being an almost-suspect, they’ll probably fire me if I trot Susan out. But if the sheriff makes it clear that I’m a sort of victim, too, and that I’m cooperating, which I have and will, that should take care of the situation. I think.”

“Ms. Griggs, what do you know of Tobias Summers? Why would he have wound up at your place?”

“Well, that’s the question that I’ve been obsessed by ever since I got home Saturday. I met him on various occasions, public occasions, receptions and the like, and his wife is a school system employee, but those are the only connections. I’m baffled.” And she did indeed look baffled.

“From what the sheriff told me, it appears that this was arranged in such a way as to compromise his reputation, Tobias Summers’, I mean, and yours, too. To me, I guess that implies a common enemy. Can you think of anything you and Summers might share? Political leanings? Religion? Anything?”

“He and I are about as far apart as you can imagine. If you know anything about him, you can probably believe this easily. He is, or he was, a Mormon, a family man, a lawyer possessed of right-wing politics, an educational Neanderthal, and a rape-and-pillage, take-no-prisoners developer. I’m none of those and an environmentalist to boot, although I don’t go advertising it. I thought of this also, this business of common enemies, but it’s part of why I’m baffled. I mean, that old saying ‘the enemy of my enemy is my friend’ could hardly apply more. You know?” She was shaking her head and had a blank look on her face.

She gave me contact information for her partner, Susan Maloney, and I assured her that both my sense of fair play and my desire to see justice done would motivate me to persuade the sheriff of her innocence. We also discussed how to meet with the sheriff in a way that would be suitable to both of them and agreed to keep in touch.

Afterward, I paid my bill and left for Hot Sulphur Springs more puzzled than ever. Unraveling the circumstances of Tobias Summers’ death was going to be a corker.

\* \* \*

## Five

At the sheriff’s office, the day was just getting started. The aroma of brewing coffee permeated the building, and the day shift was settling into their start-up tasks. Because Fran had introduced me to everyone Monday morning, I was able to wander around saying “good morning” to people without being treated like too much of an outsider, but it was clear to me that not everyone was comfortable with my presence. I promised myself that I’d work hard to change that, to become part of the team.

Fran wasn’t in when I got there, so I scrounged myself a cup of coffee and went looking for Norman Dzung to see if he had anything to say about the tracks he’d found under the new snow on the driveway at the McMurphy place.

Dzung’s office was larger than I expected, but then I saw why. Its walls were lined with locked cabinets, and the tables and desks in the room were piled high with stacks of paper and inch-thick white bricks. The bricks turned out to be plaster casts of various things, tracks mostly, of tires, animals, and people. I knocked on the door frame, and he looked up from his computer screen.

“Annette! Good morning—good to see you again. Did you ever get home last night?”

“We managed to close things down up there about dark, so it wasn’t too bad. I thought I’d stop by for a chat about what you found yesterday.”

“Actually, it’s what I didn’t find that I’m wondering about. Remember that there was a car in the garage, an old Subaru? It had very distinctive snow tires on it, a Swedish brand called Gislavad, studded tires. For the life of me, I couldn’t find any tracks from them in the driveway, not even right behind where it was parked in the garage. Apparently it hadn’t been moved since the previous time the

driveway was plowed. And, assuming that McMurphy was calling to get his driveway plowed after each storm, that would be a couple of weeks ago.”

“Sheriff Schmidt told me he ran into McMurphy at the Safeway a couple of weeks ago. I’ll have to ask him if that was before or after that storm, see if he remembers. So what *was* there?”

“Delivery truck tracks, probably the local FedEx guy, I’ve seen his tires at various places. The snowplow, of course. A couple of other vehicles, which look to me like SUV all-season tires—I suppose they could have made it up the driveway in four-wheel-drive if it was plowed. And down at the bottom, a couple of vehicles that went up and backed down, probably scared off by the first switchback. At the house, three people got out of one of the SUVs and it looked to me as if they walked over toward the front walk, toward the front door. They were all wearing Sorels, those insulated leather boots that everyone around here has. Two of them were close in size, the other was much smaller. They returned to the SUV via the garage door.”

“Any indication of what was last?”

“The SUV with the three people. Their tracks were on top of everything else.”

“Hmm. I need to talk with Fran. Is it possible to get a tire brand for that SUV, and then to match that with a list of possible models of vehicle?”

“That’s what I was just getting to work on.” He gestured toward his computer screen, which was displaying side-by-side photographs of a tire-track photograph and a tire tread. “I should have it figured out later this morning.”

“When you do, let Fran know. That’ll help move things ahead, I’m certain.” And I went off to see if the sheriff had arrived yet.

It turned out that he was looking for me, and we bumped into each other in the main hallway. After warming up our cups of coffee—I went with decaf because I could feel the beginnings of a caffeine buzz—we settled into his office.

“Fran, my husband suggested that you folks may start to think of me as some kind of jinx, what with these bodies turning up since I’ve arrived.” I tried to make light of it, but I’m not sure I succeeded.

He looked surprised, then burst into laughter. “Perfect! I hadn’t thought of that, but it’s the perfect explanation. I’ve been wondering what would have brought this on all of a sudden—two bodies in three days, that’s some kind of record around here.”

“I had an interesting conversation with Emily Griggs this morning, not of my doing, I assure you.” I related my discomfort with that situation and how I’d Mirandized her, and then I explained her situation as best I could. He took it in stride.

“Oh. Now I understand. Well, I sure wish she had been more candid on Saturday, because I feel like we’ve wasted a couple of days. Although I guess we were distracted yesterday anyway. But, still...so, let’s see. We’ll need a statement from this Susan person, maybe I can get someone in Denver to take it for me.”

“I talked with her on the phone this morning, while I was driving over from Fraser. She’s ready to give as formal a statement as you need, and she’ll also provide names and contacts for the Friday evening party as well, if you want them. I can get someone from the CBI office to depose her, if that will help.”

“We’ll need to do that, and some people from the party, too. There’s an additional wrinkle, though. We interviewed Mrs. Summers, Mandy, on Sunday. She told us that her husband went down to Denver for business on Wednesday, and she hadn’t heard from him since. Because of the storm, he must have

come back up here, dead or alive, on Saturday in the same time frame as Emily Griggs.” He looked at me with one arched eyebrow over the rim of his coffee mug.

“Have you established a time of death yet?”

“The ME did an autopsy yesterday morning. The best estimate is early Saturday morning, meaning as soon as he could have got up here. Which is strange, because of his condition, a couple days of beard, I mean. As if he was partying in Denver for several days straight and then was transported up here first thing Saturday just after the roads opened and then keeled over. Massive stroke, it turns out.”

“Emily said she didn’t get here until early afternoon.”

“Right. She called us about 1:30.”

I thought for a minute. “I suppose it’s possible that Emily and he were together in Denver, that she brought him up here and he died with her in her apartment, or was killed. But it seems implausible. Susan Maloney told me that Emily left Denver on Saturday at about eleven.”

“Hmm. Two and a half hours, with the ski traffic, yeah, that would be reasonable. Especially if she stopped for lunch. I think we’d be better served to turn our attention elsewhere. Of course, that raises the question of where.”

“Right. But at least it eliminates that false lead. Oh, I need to ask you about Michael McMurphy. You said you ran into him at the grocery store in Fraser a couple of weeks ago. Do you remember if that was before or after the previous storm? Apparently there was one around that time.”

He looked at the ceiling in thought. “During it, as I recall, just as it was starting. It was late afternoon and weather was moving in, it had started to dump snow. He was hurrying home, as much as he could in his condition. He seemed frail.”

“Norman told me that there were none of his car’s tracks in the driveway under the newer snow.”

“Meaning that Mike hadn’t been out in his car since the driveway was plowed after that previous storm, huh? Did Norman find anything else?”

“He’s working on a report, I think.” I didn’t want to steal Norman Dzenge’s thunder, especially after I’d encouraged him so.

“Interesting. I’ll have to find out who plows his driveway and when it was last done, before yesterday, I mean. I guess it’s possible that the actual time of death could be any time between when I saw him and when that email got sent, or posted or whatever.”

“Assuming he did the actual posting, right.” I know enough about computers, having lived with Hal for a three years, that I know they can be used to send false clues.

“Huh? You think someone else could be involved in this?”

“Just keeping an open mind, Fran. Until the ME officially declares it a suicide, it’s just an unattended death, right?” I smiled as innocently as I could.

“Yeah, I guess...excuse me.” His phone had rung. “Yes, Ellie?...*What?*”

Schmidt looked at me sharply. “Well, who’s over there, anyone? It’ll take me at least a half hour to get there, and more to get up the hill...OK, I’ll saddle up. But see if you can page Janelle. Today’s her day to ski, I think. Maybe she’s there somewhere.”

He shook his head. “Could be there’s something to that jinx stuff after all, Annette. A snowboarder just found a body in the woods by one of the runs at Winter Park. We’d better get over there.”

\* \* \*

Fran Schmidt's departmental vehicle, outfitted for winter with studded snow tires as well as with a new instant-on radar unit, made me jealous. It was a Ford Explorer, just like the CBI car I had been driving in Durango, but this one had far more engine than mine—a team of Clydesdales under the hood instead of a miniature pony. He turned east on the highway and then almost immediately veered off to the right, onto a side street.

He must have seen the question on my face. “Short cut, the county road over Cottonwood Pass. I checked yesterday, and they plowed it Sunday afternoon—we finally persuaded them to keep it open to allow shorter response times for calls in the southeast county. It comes out just at the bottom of that big grade north of Tabernash, the one down from Red Dirt Hill, remember?”

I thought I understood what he meant, but I decided to wait and see where he was taking me. And it didn't seem like I'd have to wait long—Fran had his emergency lights on and wasn't holding anything back.

About ten minutes later, after climbing over a little saddle, which I decided must be Cottonwood Pass, and then down into a valley and across a stretch of pasture, we slid to a stop at the intersection with the highway, and I recognized where we'd been. Fifteen more minutes later, after several judicious chirps from the siren to move people out of the way, we pulled into the drop-off circle at the Mary Jane base of Winter Park Resort. Fran was on the phone most of the way, so I had to figure out for myself where we were.

“I think I remember this, from the time Hal and I spent a week skiing here. There's a restaurant, right?” It seemed only vaguely familiar to me, as our condo—Win's condo, actually—had been over at the other base area, the Winter Park side.

“Right. And Janelle told me this is where they'll be bringing the body out. It's hard to get to where they found it from here, though—I mean, if we need to see the place. Maybe we won't.”

I'd been trying to ignore the snowshoes in the back of the Explorer, and this news was welcome. My legs were working, but not without protest. I really didn't want to spend any more time on snowshoes so soon.

We left the Explorer parked under a prominent sign that said “Don't Even Think Of Parking Here” and walked through the base building and up a flight of stairs to the loading area for an old lift, which wasn't running. I remembered it as being slow with hard seats, but that it accessed a part of Mary Jane that you couldn't get to any other way.

Gliding down the lower part of the ski run was a parade of people, including several wearing ski patrol parkas, two of them guiding a toboggan. I recognized Janelle Kennedy, despite her ski clothes and goggles, bringing up the rear. Her dark chin gave her away.

Because the lift wasn't running, we had the loading area to ourselves, which was just as well. It's not uncommon at ski areas for people to be brought down the hill on these toboggans, but it's very seldom that they're dead. And in this case, the package wasn't wrapped up like a mummy as they usually are—apparently the victim had frozen into an awkward position, because there was a red-and-blue striped arm of a ski suit with a gloved hand sticking straight out at a funny angle.

Janelle skied over to Fran and me, executing a perfect check stop right next to us, and took off her goggles.

“Good timing, sheriff. And the emergency rescue ambulance should be here in just a minute. I'd hate to have to wait around too long—I think we may draw a crowd if the word gets around.” She was breathing only slightly harder than she would in normal conversation.

“What’s it look like up there, Janelle?” Fran was squinting against the glare, staring up the hill.

“She was about a third of the way down Outhouse, in the woods off to the left side—left as seen coming down the hill. Uphill from the body, there were several broken branches, including a two-inch one. That looks like what killed her. She’s got a season pass with a picture. It’s a Lannie Young. I’ve got the folks back at the office working on more information.”

“Lannie? Oh God, Lannie? That’s horrible.” Fran had a shocked, unbelieving look on his face. “Lannie? She’s a truly expert skier. How in the world could this have happened to her?”

“Don’t think we’ll ever know, sheriff. The ’boarder who found the body said it was completely covered with snow—he thought it was a rock, but it shifted a little from his weight when he went over it. Then he looked back and saw the color of the ski suit. But we can get an idea of when it happened by checking the scan records, when they last scanned her pass, and where.” Janelle took off her gloves and hooked them to her belt.

“Anything out of the ordinary, for a thing like this, I mean?” Fran sounded deeply depressed.

“The big branch crushed her lower jaw, and she probably got her neck broken. But there’s a tear in the back of her suit, right in the middle of the back, so she probably spun around from that impact and got poked by yet another branch. The woods aren’t too thick up there, but there are lots of dead branches sticking out from some of the trees.” She leaned a pole on the binding on her right heel, it clicked open, and she stepped out of the ski. “Sheriff, you look awful. Somebody else can take statements, why don’t you go home?”

“Yeah, that’s probably a good idea. This one’s tough. Mike McMurphy was old and in bad health, and I was prepared by his note. And, truth to tell, I really didn’t like Tobias Summers much anyway. But Lannie, gez. Lannie. I used to date her. She’s my wife’s best friend. Damn. Mary’s going to be devastated.” He stared at the ground and shook his head.

That Fran had dated his wife’s best friend was confusing, but I let it pass as a quirk of the small community. “She’s right, Fran, you go on home. I’ll help Janelle and we’ll see you tomorrow, OK?”

He trudged down the steps toward his car, and I turned back to the assembled group. “Janelle? It sounded like you’ve called in some help or something?”

“I expect we’ll see a couple of other people from the office as well as the emergency rescue people soon. Cell phones are such a blessing—you ever talk on one and ski at the same time?” Despite the situation, she couldn’t help but grin, her white teeth flashing.

“Seems like it would cramp your style though. So, you said the body was covered with snow. Does that mean she’s been there since—what?—Friday?” I counted days backwards in my head.

“Probably. Her skis, we lashed them to the toboggan, they’re powder skis, and that would fit with her being up here since Friday. The scan records will tell us for sure. But for now, the fact that she’s frozen completely solid, like McMurphy was yesterday, backs that up. So the ME has another autopsy that will have to be thawed out first.”

“Speaking of McMurphy, I talked with Norman Dzung this morning, and he says that McMurphy’s car wasn’t out of the garage since before the previous storm. So we really don’t know for sure when he died. It could have been as long as two weeks ago.”

She looked surprised. “And because he was frozen the whole time, it’ll be impossible for the ME to figure that one out, won’t it? And that complicates things. I mean, if it wasn’t really a suicide. That computerized note could have been sent incorrectly, or something, so that’s not really part of the timing issue, is it?”

“I was thinking that, too. McMurphy could have screwed that up. Or, I suppose, someone else could have done it intentionally, to mislead us.”

About that time, the ambulance showed up, along with two deputies, and things got busy. They eased the toboggan around the building to the drop-off area on the drive and loaded the body, and the deputies began taking statements from the ski patrol. At least, I thought, the crowd today is sparse and they're mostly ignoring all this. Gawkers we don't need.

\* \* \*

“You don't know how prescient your question last night was, about whether they would let me stay around. We found yet another body today. I'm wondering when they're going to pull the welcome mat.” It was late, and Hal had called me from Alamosa. He was bedded down in a motel for the night, and I was having a cup of tea before turning in. An afternoon and evening of unpacking boxes had me exhausted, but it had the reward that I'd found the little two-cup teapot packed in with the miscellaneous kitchen ceramics. One miscellaneous box down, another couple dozen to go.

“Another one? Didn't the sheriff say the other day that the Summers thing was their first homicide in a long time?”

“Right, he did, and it seems like they're making up for lost time, or something. This one today was frozen, too, like the one yesterday. A skier who died last Friday, most likely. Hit a tree.”

“Oh. Sounds like maybe an accident? So there's a ski accident, a suicide, and one real homicide. Maybe that's not so bad.”

“From the perspective of the sheriff's office, though, it's three unattended deaths in almost as many days. More than they're used to. And questions keep popping up. We're going to have to wait for the autopsies to be sure that the ski accident and the suicide really are. And it's complicated by the fact that the ski victim was a close friend of Fran and his wife.”

“That doesn't help things, not at all. But, look, this is just why you're up there with them, to see how they handle this kind of overload situation and to help them plan for how to do better with it in the future. And you can help out while you're at it. Seems like maybe you have more experience with strange cases than they do.” Hal has this scientifically objective perspective that can be cold and calculating at times.

I took a sip of tea and thought about this. “At least it looks like the school superintendent isn't a suspect, like Fran seemed to think on Saturday.” I told him about my conversation with Emily Griggs.

“So she does have an alibi, but she just doesn't want it to be public. I guess that makes sense—without knowing the sense of the community about such things, discretion is probably the smart approach. But that means the circumstances of Summers' death are more complicated. You said he was supposed to be in Denver on business? How come he didn't shave for several days, then came back to Granby after the storm, got into her apartment, and drank himself into a stroke on Saturday morning? And why her apartment? This is all too strange. I guess I'm glad it's not my problem.” He sounded as confused about the whole thing as I felt.

“And for once in recent months, it's not really my problem, either.” As relieved as I was to be able to say this, I had a nagging sensation that I might not be off the hook completely. “But how was your day? If you're in Alamosa, it must have gone according to plan, more or less.”

“I'm not sure I want to take that shuttle over Berthoud Pass again, but other than that it was fine. With only four of us in that van, and not that much luggage, it had power to spare, and the driver made

full use of it. I think he beat our time when I was skidding around during the car chase with those thugs, and he wasn't even being chased by guys with guns."

"You're saying he was pushing the speed limits? Well, I guess that's inevitable. He probably drives it every day and knows every curve, just how fast he can take it under what kind of road conditions."

"And half the time he has a van full of eager skiers, wanting to get to the resort as fast as possible, yeah. Anyway, he got me downtown by nine despite some rush-hour traffic, and I grabbed some breakfast and made my meeting with time to spare."

I poured myself the second cup of tea from the little pot. "Did the people at the CCHE give you your marching orders?"

"I think they were expecting me to have an agenda, or something like that. Or else they're used to people like me doing these internships and trying to take the place over. Whatever it was, they seemed a little afraid of me, or maybe in awe. It was pretty strange. But we talked for most of the morning, and I took a little group out to lunch and they loosened up. And what marching orders I have involve assessing the situation up there and writing reports. I'm glad I have the real job creating the institute, because this advisory stuff alone would leave me underemployed, I think."

I had to laugh. "You're used to working harder than you realize. Besides, with what I've been hearing, assessing the education situation up here could turn into the advisory equivalent of sticking your whole arm into a hornets' nest. I don't suppose you discussed any of the possible alternatives with them, like what we talked about last night?"

"In fact, we did, after lunch. I wanted to get a feeling for what kind of planning is in place, what the university systems are thinking, stuff like that. And it turns out that both CU and CSU, at the systems levels, have been considering the possibility of a northern mountain campus, most likely in Grand County, probably in the vicinity of Kremmling. So you hit it right on the nose. CSU has more elaborate plans in place, probably because they're still smarting from when we pulled out of their system, back when we became FSU."

Hal had told me the story of how Frémont State's original role had been as an undergraduate liberal arts campus in the CSU system. When the name changed to Frémont State, they had also severed ties with the parent system, and now they had perpetual budget problems as a result.

"No doubt it's way too soon to suggest this possibility again, but there are people up here who will be delighted to hear that. Although I expect it will be a good-news/bad-news thing for them. The ones I talked with would much rather have it be the University of Colorado, for the prestige factor." Or, I thought, Harvard.

"Definitely too soon to say anything more to them than you already have. Although, you know, if they really want this kind of thing to happen, what they need to do is to organize. Form a committee, lobby their state legislators, talk with the CSU people. It won't happen just because I think it's a good idea. Not even though I'm apparently God's gift to higher education in the eyes of the CCHE. And now that I think about it, it won't be too long before you might want to mention it again, to those women you were talking about. See, I won't be able to suggest such things, because I'm supposed to be the objective advisor. But if you dropped the right hints, it might get things rolling in a way that would support my recommendations. That could conceivably make things actually happen years ahead of when I could make them happen alone. See what I mean?"

"Sounds as if you've made up your mind already."

"Only in connection with my other job, what I see as my real job. Like I was saying last night, I'm going to need to hire lots of skilled people, and I'd much rather hire those people from the local area.

And Chuck Shure told me before that he views this institute as an ongoing concern, so these recruiting issues will be a continuing thing. A real university up there would help a lot, in the long run.”

“Speaking of Chuck, you’re going to see him tomorrow?”

“Yep. He’s going to present me with the endowment he’s set up to underwrite this institute. And, I guess, we’re going to talk more about his vision for it.”

“What? He’s going to give you the endowment?”

“Right. He’s going to me a check for a billion dollars and I’ll bring it up to the valley and deposit it at that little bank in Fraser. It’ll be fun to watch the beads of sweat pop out on the manager’s forehead...no, no, of course not. There will be some paperwork or something, I don’t know. I need to have spending credentials of some kind so I can draw on the funds needed to get the institute rolling.”

“Oh. Well, OK. I had this vision of your bringing home a suitcase full of cash or something.”

“Right. Plus a fork lift to move it around with.”

\* \* \*

## Six

The first thing I did Wednesday morning was to check the outside thermometer. I’d managed to stay warm overnight without Hal in bed beside me by wearing flannel pajamas and wool socks—even though the house thermostat was set on 65° for the night, it seemed cold without him there.

The outside thermometer said 10°, a full ten more degrees than Monday and Tuesday, and I felt a glimmer of hope. But then I noticed the tops of the fir trees were swaying in a considerable breeze.

C’mon, Trieri, I thought. You’ve got layers and layers of warm clothes, a thoroughly winterized, all-wheel drive car that starts the day in a heated garage with a remote-control door opener, and a hot tub set to 106° for when you get home.

But none of that seemed to make up for the chill I got watching the snow blowing off the tree-tops.

I remembered another, far more civilized, version of swaying trees—coconut palms, swaying in the trade winds blowing onshore at Key Biscayne. I’d gone there while on an administrative leave—one of those leaves that police officers get put on after they shoot a civilian—and Hal showed up. I barely knew him at the time, but he took me under his wing and played tour guide, putting to use his knowledge of the Miami area gained from having been in graduate school there. And even though he’d tracked me down without an invitation, I wasn’t the least bit threatened because he was a perfect gentleman—for as long as I let him be, at least. We wound up spending several days in Miami and the upper Florida Keys, and then, back in Durango, we began playing that old “whose place are we staying at tonight?” game. A few weeks later I moved in with him.

It occurred to me that Hal would probably be having a greasy-spoon-diner breakfast somewhere in Alamosa before hitting the road for Colorado Springs. Knowing him, I figured he’d order something running to at least a thousand calories chock full of cholesterol. OK for you, buddy, I thought—let’s see what we have in the refrigerator.

Fifteen minutes later, I was working my way through a large plate full of bacon and eggs, hash-browns and toast, and a huge mug of steaming coffee. I didn't even bother to clean up the kitchen before heading out the door to the sheriff's office in Hot Sulphur Springs.

I arrived just in time for the morning briefing, and I couldn't help but notice a number of suspicious glances directed my way. It was my third morning at the departmental office, so people were beginning to recognize me, but it appeared that they were also beginning to associate me with bad luck. I had the feeling that if another body turned up, I was probably going to run out of town. What, I wondered, could I do to fit in better?

Fran's briefing was low-key and sad, his friendship with the latest victim clearly influencing his presentation. He managed to avoid any references to me during the briefing, for which I was grateful, and, in response to a question, he mentioned that the medical examiner would be doing the McMurphy autopsy that morning. After he was finished, he walked over to the side of the room where I was standing.

"Morning, Annette. I'm about to head down to the morgue, want to come along?"

"I do, Fran. You look like you're taking Lannie Young's death hard."

"Me and Mary both. I can't figure it out. Lannie was probably the best powder skier I know. I guess accidents like this just happen, though." He held a door for me, and we started down the hallway toward the stairs to the basement.

Morgues aren't my favorite places, although I've learned to handle their smells and chill. But how people can work in them every day for hours at a time is just beyond me. The Grand County morgue was similar to all of the others I've been in, but I quickly discovered that the medical examiner was something else again.

"Sheriff, hey, what's happening, dude? And who's this? New deputy? Cool!" The greeting was ebullient, and the greeter was best described as an aging hippy. Even dressed in scrubs, he looked as if he belonged at a psychedelic rock concert—tinted granny glasses, beard, ponytail and all. The music echoing in the stark room completed the image. I didn't recognize it, but later I spotted a CD case with something called Quicksilver Messenger Service on the label.

"Annette, George Neering, our ME. George, this is Annette Trieri. She's with the Colorado Bureau of Investigation, remember I talked about this? She's here consulting with us for a few months." Fran had raised his voice and made a point of talking slowly and enunciating.

"Oh, yeah, far out. I do remember. Right. Ms. Treery, glad to meetcha." He was nodding his head to the music.

"Tri-er-i, George. Can we back off the music a little? We need to talk." While Neering was walking over to his boom-box, Fran turned to me. "He's a little deaf, Annette. Probably too many rock concerts when he was younger." The music faded into a background drone.

"So, Sheriff, are you and Ms. Tri-er-i here to watch me work on the McMurphy dude? I think he's thawed enough."

"That's right, George. We want to verify the suicide, be certain there isn't anything questionable. What's your schedule today?" Schmidt wasn't talking so loudly now, but he was still speaking more slowly than usual.

"Well, man, I don't know. I've still got some paperwork on that Summers dude to finish up. You said that was a priority, man."

“It is, but that was before we found McMurphy and Lannie. You told me the whole story yesterday, right?”

“Right, man, the whole thing, every detail, except for, you know, I always write it up more formally.” Now Neering was nodding to his own inner metronome.

“So we’ll need the paperwork eventually, but now we have these two new bodies for you. I’d like to be sure about McMurphy. If you can’t find any evidence contradicting the suicide then we can move on. When do you think you’ll be able to get to Lannie Young?”

“Oh, man, that’s so sad. I really liked that lady. She was one of my favorite people. She helped me find my house, we skied together. And, man, could she party. We’ve gotta find who killed her, man. But she’s still too frozen to work on today, sorry, man.”

My instincts came to attention, and Fran’s head snapped up. He was the first of us to speak.

“Say what? I thought she just skied into the trees and caught a branch.”

“Well, yeah, man. Caught a branch on the chin, looks like it broke her neck. You don’t want to see that. But let me show you something else.” Neering walked over to a wall covered by what looked by giant file drawers and pulled a lower one open.

We followed, and there was the red-and-blue striped ski suit arm we’d seen yesterday. Lannie Young was lying on her side, facing away from us with her head covered, and Neering was pointing at the small of her back.

“See this?” He pointed at a tear in the fabric of the insulated suit.

“Right, George. Janelle mentioned it yesterday, like Lannie got poked by a branch when she was spinning around after hitting the tree.” Fran’s voice was husky, and he was breathing through his teeth with his jaws clamped.

“Yeah, well, I wondered about it, you know? So I cut her suit open a little.” Neering pulled back a flap of several layers of fabric to reveal slightly bluish skin. There was a dark, reddish dot just to the left of Lannie Young’s spine, about between her kidneys.

“Take a close look at that, Sheriff, while I go get something.”

Fran and I bent over to have a close look at the wound, not touching it. Apparently, after ripping through her ski suit, whatever had stabbed her had come straight in, for there was no asymmetry, no scratching, just a circular red dot about the size of a fat pencil. It had several radial lines that were somewhat darker than the rest. The skin didn’t appear to be punctured, although it must have been close.

“Ever seen a perfectly round broken branch, Sheriff? I mean, doesn’t that look just a little too *round*, man?” Neering had returned and was holding a ski pole. “But take a look at this.”

He held the tip of the pole next to the wound, and the resemblance was remarkable, even to the way the radial lines matched the little teeth on the tip.

“Ice tip, sheriff. Dime a dozen. Looks to me like she was pushed, man.”

\* \* \*

“Sorry I lost it there, Annette. Doesn’t happen very often. I guess I’m stressed out.”

We were sitting in the office working on cups of coffee and strategy. Sheriff Fran Schmidt was apologizing, unnecessarily as far as I was concerned, for the string of expletives he’d let loose with on

hearing George Neering's assessment that Lannie Young had been murdered. For his part, George had taken it in stride, even agreeing with the sentiment.

"I thought you were pretty restrained, actually, Fran. And it didn't seem to faze George at all, or if it did he hid it well. And he seems to be on top of the McMurphy issues."

"George is quite the character, isn't he?" The smile that accompanied this was his first in quite a while. "I've known him for at least twenty years, and I still can't quite figure out if it's all a front or if that's really him, the way he presents himself."

"I've known several MEs, and he's definitely unique. At first he seemed like a brain-dead ex-hippy. But there's an analytical mind in there somewhere. What did he decide about Tobias Summers?"

Schmidt stood and stretched. "Stroke victim. But it doesn't look accidental or the result of normal activity. George found a needle mark in a strange place, up inside his nose. We're waiting on blood toxicology."

"If somebody pushed Lannie Young into the trees to kill her, it means they were trying to make it look accidental. And the setup in Emily Grigg's condo was obviously designed to make it look like some kind of tryst between the two of them, Summers and her. You suppose there's a connection?"

"Good question. Lannie was active in the community, but not in school district issues, as far as I know. She spent her time helping with the disabled ski program, at least in the winter. Got herself a lifetime ski pass, in fact. And she was also a force in the land trust we've got here. It's a group that gets ranchers to take tax breaks for setting up their land in conservation easements instead of selling it to developers."

"We've got a group like that in Durango, as I recall. What did Lannie do for a job?"

"Real estate agent. It's kind of an oxymoron, I guess, environmentalist and real estate agent. But there are lots of folks around here who need to sell a house or some land and who are tree huggers. Lannie was doing pretty well, from what I've heard. And she also did it in a green sort of fashion—she encouraged people to remodel rather than build new houses, put a lot of emphasis on solar heating, stuff like that."

"She sounds like a polar opposite of Tobias Summers. And, it's funny, but Emily Griggs thinks of herself as his opposite, too. Still, two homicides in the same time frame when you don't usually have any just seems too coincidental."

"I was thinking the same thing."

I thought for a minute. "Let's see. You said Summers had a needle mark in his nose, in the inside, right? I suppose the right stuff in there could induce an immediate stroke. But how do you suppose he got so disheveled?"

Before he could answer, there was a knock on the door frame, and a large woman, large in width rather than height, announced her presence with a commanding voice.

"What's this I hear about Lannie Young, Fran? And who's this?" She looked at me with obvious suspicion.

"Annette, this is Donna Little, assistant district attorney; Donna, Annette Trieri of the CBI. Annette's here at my request to help us do some strategic planning. And I don't know what you've heard about Lannie." The tension between them was obvious, and curious to me.

"I heard she got killed skiing, that's what."

"Last Friday, most likely. Janelle's checking the scan records at Winter Park."

“Well, that would explain why she didn’t show up for our meeting, I guess. I’ve been wondering.” The big woman shrugged and leaned against the door frame.

“You had a meeting scheduled with her Friday? What about?” I could see that Schmidt was on the alert.

“Don’t know that it’s any of your business, sheriff.”

“Strange. I thought part of my job was homicide investigation. And usually, in such things, the DA’s office pitches in and helps.”

“Homicide? You sure? I heard she just caught a tree. Don’t make things up to weasel information out of me, Schmidt.” Her tone was insulting, no mistake about it.

“Ms. Little, as of about a half hour ago, the investigation of Lannie Young’s death classifies in my department as a homicide investigation. This means two things. All information about it, including that it’s a homicide investigation, is to be considered confidential, for official use within Grand County law enforcement only. And anyone who isn’t forthcoming with information relevant to the investigation is obstructing it. Clear? Now, if you had a meeting scheduled with her Friday afternoon, it’s pertinent to the investigation until I think it isn’t. Do you want to assist or obstruct?” He was calm enough, but his tone was icy.

“You threatening me, Schmidt?”

“I’m telling you the lay of the land, Ms. Little. Right now, I’ve got an understaffed department to run, a department that’s suddenly been handed two homicides and a questionable suicide to investigate. Seems to me the DA’s office would want to help.”

“I’ll give it some thought.” And she turned and stalked off, her huge backside wobbling with each step.

Schmidt looked at me and rolled his eyes. “Sorry you had to see that, Annette. Her boss the DA is a Republican and I’m a Democrat, and she seems to think of me as the enemy.”

“It seemed almost personal.”

“Yeah, well, that too. Long, long ago, just after high school, she and I were an item. I broke it off poorly and she’s never forgiven me, so she rubs my nose in whatever’s available to rub it in. Anyway, I’ll call the DA and this will get straightened out.” He shook his head. “I wonder what that meeting was about. Maybe it wasn’t anything, but...”

The telephone interrupted him, and he picked it up.

“Schmidt here...What?...You don’t say. Thanks, George. Let’s get the blood tests expedited, OK?”

He looked up at me. “Well, well. Seems that Mike McMurphy has a needle mark in his nose, too. Same spot as Tobias Summers. As far as I’m concerned, we’ve got us three homicides, Annette, two of them connected for sure and the third, too, probably. Welcome to Grand County.”

\* \* \*

Janelle Kennedy was on the phone, in the middle of a conversation in which Lannie Young’s name kept coming up, when I found her in her office. She winked at me and pointed toward her computer, then, when I must have looked confused to her, shooed me at it. So I sat down and started reading.

On the computer screen several windows were open, but on top was the title page of a document by Michael McMurphy, *Water Wars: Front Range Associated Water Board’s Attack on the Human Rights*

of *Colorado Citizens*. If ever there was a political polemic, I thought, this would be it. I began reading the introductory section, and my initial impression was immediately confirmed. After two paragraphs, I was relieved to hear Janelle hang up her phone.

“How far did you get?” Her voice was tinged with amusement.

“Not far past the title. Where’d this come from?”

“Off a floppy disk that I found at McMurphy’s place, sort of hidden away. His computer was completely blank, in terms of his personal writing—someone reformatted the hard-drive recently and re-installed the operating system, looks like. But old Mike must have made this as a back-up or something. Looks like he was on the warpath against frob.”

“Uh, ‘frob’?” I blinked a couple of times, feeling stupid.

She smiled. “Front Range Associated Water Board. FRAWB. The Colorado mountains’ worst nightmare come true. They control water rights all over the upper Colorado, South Platte, and Arkansas watersheds, and they’re rich enough and intimidating enough, in terms of their legal department, to make people offers they can’t refuse.”

She was shaking her head. “I haven’t been here long, just about a year and a half, but I’ve heard enough people bitching about them that it’s clear they’re a problem. From the perspective of the people here, at least. I guess from the perspective of Denver and the suburbs over there, FRAWB is just doing what it’s supposed to be doing.”

“You think McMurphy might have been killed in connection with this document? What is it, an essay?” I squinted at the computer screen. “Or a book?”

“I’d guess either is possible. Look down at the bottom of that page.” She pointed to a little box below the text. “See? The document has 350 pages, so it sounds like a book. And he was a writer with a good reputation, even famous, so people would probably listen to him.”

“So what do you think is going on here, Janelle?”

“Good question. But George called me and said that McMurphy’s got to be considered a homicide. That means that whoever did it planned and executed it carefully, including setting up that phony email suicide note and its timing.”

“And the other two homicides were also set up to look like something else. Somebody’s trying to be clever.” My experience has been that murderers who try to be clever are every bit as likely to be caught as ones who just whack people outright. Maybe it takes a little longer to catch the clever ones, but we usually get them.

“If we get lucky, they’ll be too clever for their own good.” She smiled, clearly thinking the same thing as I.

I walked around the desk and sat down. “Are you finding out anything useful about Lannie Young?”

“We’ve got a team searching her place now. That was a guy at the land trust she used to work with, volunteer work.” She shrugged. “But I’m having trouble asking the right questions without giving away the homicide, so I didn’t get very far with him. He did say that she was concerned about water issues here in the Fraser Valley. Two people concerned about water issues, two people dead.”

“I heard Fran say something the other day about Tobias Summers’ wheeling and dealing in water, too.” I closed my eyes to try to visualize when he had talked about it.

“Right, Sunday morning at brunch, when we were talking about that new subdivision.”

“That’s right. So we have three people killed in ways meant to look self-inflicted or accidental, all three of whom had connections to local water issues. But Tobias Summers doesn’t fit with the enviro orientation of the other two, right?”

Janelle thought about it. “No, although he must have needed water for that new subdivision, so he could have got on the bad side of FRAWB. On the other hand, it’s hard to believe that FRAWB is going around killing people. For one thing, they’ve got enough money and political clout to do what they want anyway. For another, it’s bad for PR.”

“How do they operate, anyway?” My knowledge of water resources was limited to turning on the faucet, mostly.

“They own water rights and buy up more. Partly, they do it by investing in land, ranches for sale and that sort of thing, land that has rights associated with it. And they go after senior rights, the ones that get water even in drought years. As I understand it, they own lots of land as a result, and because they’re a public entity or a non-profit or something like that, they don’t have to pay the usual property taxes. Here in the Fraser Valley, I’ve heard that they’re the second biggest landowner after the federal government with its national forests.”

“And the water they have rights to, they export it across the mountains to the cities and suburbs of the Front Range, right? Plus they don’t pay property taxes. No wonder people here feel like they’re getting stiffed.” I was a newcomer and I felt offended, so I could imagine that the long-timers didn’t like it at all.

“Right, they send their water over to the Front Range through all these tunnels, and they sell it to local water companies in the cities and so on. This gives them the money to lobby the legislature and to buy more water rights. Did you ever see that old Jack Nicholson movie *Chinatown*, where he gets his nostril sliced open by that little hood played by the director, Roman Polanski? That story had to do with the Los Angeles water grab, where they dried up the Owens Valley east of the Sierras.”

“You mean that could happen here?” I couldn’t believe that any place with as much snow as I’d been floundering around in for the past few days could dry up.

“Oh, probably not exactly like that. But if there’s no water here for local use, the developers and chamber-of-commerce types don’t have the resources they need for growth. And, as I’m sure you know, growth is the way you create jobs and prosperity, at least according to the politicians.” Her expression was as sarcastic as her words.

“I wonder how Emily Griggs fits into all this. It looks as if Summers was abducted, or some such thing, down in Denver, held captive for a couple of days, and then brought back here and killed. Why would they involve the school superintendent in this?”

She stood up and looked out the window. “I’ve been thinking about that, too, Annette. Fran talked with me about what Emily told you, and I suppose that could have something to do with it. They needed a way to stage Summers’ death, and maybe whoever did the actual killing knows about her relationship and decided to set her up for a fall. I’m absolutely certain that there are people up here who would have a fit if her relationship were public knowledge. Just like there are people here who don’t approve of me and my husband. Bigotry can cover a lot of ground.”

“Have you run into problems since you’ve been here?”

“Not really, at least not the in-your-face kind. Here in the east part of the county, tourism is king, and public bigotry and tourism don’t mix. I think there may be some resentment behind my back, though, even here in the department. Also, I’ve heard some second-hand comments about the ‘keep to your own kind’ thing.”

“Huh? As in, stay on the other side of the tracks?”

She smiled. “You haven’t met my husband Daniel, have you? We met in the service, the Shore Patrol, he’s a white guy from New York City. Can’t jump, no rhythm at all, but he’s a through and through sweetheart. Did security for Disney and then got a job with the ski area here. They wanted to hire me, too, but Danny and I decided that one of us working there would be enough. Meanwhile, Fran was looking for a new under-sheriff, so I jumped at the chance. And now the homecoming queen from the wrong side of the tracks in Savannah is living on the right side of the tracks in the coldest place on Earth, freezing her chocolate backside off.”

“You may be from Savannah, Janelle, but you looked at home on those skis yesterday. Which reminds me, I’ve been here the better part of a week and I haven’t been skiing yet. These dead bodies keep turning up. How inconsiderate!” I couldn’t help but laugh, and she joined in.

“No, but you’ve learned all about snowshoes, it seems like. I’m betting that we’re going to be too busy for recreational skiing, but I think you ought to see the spot where we found Lannie Young’s body. And I want to have another look at it with this new information in mind, that she was pushed. Tell you what, my ski day yesterday was interrupted, so I can take tomorrow morning to go skiing—maybe we could retrace Lannie’s movements. The scan records came in, and we know she got on the Zephyr lift at the Winter Park main base at 9:01 Friday morning. That was the last time her pass was scanned. And you can meet Danny, he’ll be around the base offices somewhere looking for any excuse to get in a run or two.”

“Great idea. Hal will be back this afternoon, and I expect he’ll be ready to ski tomorrow. I’ll ask him tonight.”

\* \* \*

## Seven

I debated with myself whether to go home by way of the short-cut that Fran Schmidt had used, but then I remembered seeing a City Market in Granby—by going the long way, I could stop and pick up some groceries. My unpacking of the day before had put the kitchen in workable shape, and I had the idea of making Hal a special homecoming dinner.

But when I got back to the house and opened the garage door, Hal’s Audi S4 was sitting there. It took only a second before he emerged from the garage to greet me.

“I almost made it, got the garage empty, I mean. Sorry.” His hug was what I was interested in, so I didn’t pay much attention to the apology.

Then we walked inside with arms full of grocery bags, and I saw what he meant. Almost all of the boxes were gone, the flattened ones taped together leaning against a wall and the full ones down to a last half dozen. After setting the groceries in the kitchen, we returned to the garage and pushed the remaining boxes against the wall next to the flattened ones. Hal pulled a second remote door opener from a pocket and handed it to me.

“Now we can both have warm cars in the morning. It’s beginning to feel like we’re moved in at last.”

We caught each other up while we made dinner.

“I found out something interesting today.” Hal was pounding on slices of pork tenderloin with a meat mallet, thinning them down to a quick-sauté thickness. “Chuck Shure is something of a control freak. I guess I shouldn’t be too surprised to find this out, but it just hadn’t occurred to me. He’s been doing behind the scenes work for me without asking. My new institute now has a building, or will when it’s finished.”

“Is that a good thing? Or not?” I was dicing a shallot and peeling garlic cloves.

“I had the drive all the way here to think about it without knowing much, but I guess it will be OK. He bought out a failed condo development in downtown Winter Park. A steel framework of a building that has been sitting there for a couple of years, looking ugly, and the town government keeps threatening to condemn it but never has. Meanwhile, the people who bought into the development when it was still on paper want their money back, or a condo to live in. It’s a legal mess. But Chuck pulled strings and bought various people out, so we now own it, we the institute, I mean. Not you and me, thank heavens.”

“I think I saw what you’re talking about when the sheriff and I went through town yesterday. A real eyesore with some snooty sounding name that I don’t remember. So, what’s going to happen? The thing gets turned into offices?” Shallots don’t make my eyes tear up as much as onions, but I was still starting to sniffle.

“Right, and big rooms for computer equipment. I’ve got the condo plans with me, and one thing I get to do is figure out how to modify them to work for us.”

“Sounds like he was taking advantage of an opportunity. It doesn’t sound overly controlling.”

There was an extra loud whap from the Hal’s mallet. “No, but that’s not all. He also invented a name. All by himself.” Whap.

“So, you going to make me guess?”

“Well, I’ve mentioned how this part of Colorado in general is sometimes called ‘Middle Park.’ There’s South Park, where Fairplay is—you know?—that huge open expanse of high grassland. And there’s North Park, north of here, where Walden is, another open region. So this is in the middle, not as big and open, but it has enough flat terrain to be called ‘Middle Park.’ So, as Chuck told me, he was thinking about something built on that. He didn’t want it named after himself or his company or something about the environment, so he settled on the locale.”

“This ‘park’ business confuses me. ‘Winter Park’ is the name of the ski area. That’s not flat, I remember clearly.”

“Right, well, that’s the other kind of ‘park,’ I guess, the kind you play in instead of the big flattish area. Anyway, Chuck came up with ‘Middle Park Advanced Research Center’ for the name.”

I stared at him, looking right through him, turning it over in my mind.

“Ohhh, I get it. M-P-A-R-C, a play on words, eh?”

“Well, yeah. The National Center for Atmospheric Research down in Boulder goes by its acronym, pronounced ‘en-car,’ so this place could become ‘em-park’ for short. Clever, huh?”

“Hmm. Maybe too clever. But he’s the money behind the thing, so what are you going to do?”

He looked up and smiled. “Change the subject. How were your two days?”

“Ha! Well, let’s see. Last night I mentioned that a third person had turned up dead, right? The ski accident?”

“Right.”

“Well, it doesn’t look like an accident after all. And the suicide from Monday doesn’t look like a suicide. And the developer whose body was found in the school superintendent’s condo, that wasn’t an accidental death, or natural causes, either. All three are now considered homicides. And two seem closely linked.” Now I was making the whapping noises as I smashed garlic cloves with a flat of a knife blade.

“I’m very confused.”

“You and me both, lover.” I smiled at him to emphasize that my tone of voice wasn’t aimed his way. “Here’s the run-down, as near as I can tell. First to die was the apparent suicide, the one we got the note from and found the body on Monday. But it may have all been staged with the death as long as nearly two weeks ago. He was a writer, working on a new book exposing water-rights hanky-panky. But his computer was wiped. Fortunately, we found a back-up copy on a diskette he’d squirreled away. It would look like a suicide except for some unexplained tire tracks and a needle mark inside his nose. Also, there are some irregularities with fingerprints.”

“Second to die, we think, was the skier.” I had begun dicing the flattened garlic cloves, and I was being careful not to dice my fingers. “Looks as if she was pushed into the trees with a ski pole. Everyone agrees that she was a highly accomplished powder skier and that a fatal accident like that seems too unlikely. Turns out that she was also interested in water-rights issues.”

The shallots had been simmering long enough, so I added the diced garlic. “And finally, Tobias Summers died of an apparent stroke on Saturday. Except he also has a needle mark inside his nose. And to get so disheveled and unshaven, he must have been abducted down in Denver on Wednesday. Plus, his new subdivision needed water, so there’s this water-rights link to all three deaths. That’s what we know now.”

Hal had started tossing the shallot and garlic in the pan. “The cliché in Colorado is that water flows uphill toward money. What’s the money behind the local water issues?”

“An outfit that people here call FRAWB, the Front Range Associated Water Board. But I’m having trouble thinking of them as an organization that underwrites murder for hire.”

“FRAWB, huh? Sounds evil, called that. But it’s strange. Chuck Shure told me today that Front Range Water might be our first paying customer, MPARC’s, I mean. They want to fund studies of climate change and how it will affect water resources—snowpack, runoff, stuff like that—in the Central Rockies. And you’re right. It’s hard to think of them as murderers, even indirectly. Especially at this level. Even Summers, as big a wheeler-dealer as he was, in Front Range Water’s world he was small potatoes.”

\* \* \*

It snowed again on Wednesday night—there were hints of weather moving in earlier in the day, and then about dinnertime it let loose. Hal and I got up early on Thursday and found a foot of new powder awaiting us. The driveway hadn’t been plowed, so we took my Subaru down the hill to town, pushing a little wave of snow ahead of us out to the county road.

Janelle and I had agreed to meet in the Winter Park cafeteria when it opened at 7:30, so Hal and I skipped breakfast at home and went straight there. The food wasn’t nearly as good as we’d had at Sharky’s, and it was about twice as expensive. But it was filling and provided the fuel we’d be needing to ski.

About the time we sat down with our trays of breakfast, Janelle showed up, accompanied by a distinguished looking man in a Winter Park ski suit—not a uniform, exactly, but distinctive and official-

looking. Slightly taller than Janelle, putting him at about 6'2" or so, he had an athletic build and walked easily in his ski boots.

“Hal, Annette, this is my husband Daniel Kennedy. Everyone calls him Danny. He’s got passes for you and is going to escort us around this morning.” We all shook hands, and Janelle went off to find two cups of coffee.

“I know Annette needs to look over the site where you found the body on Tuesday, but didn’t I hear that’s on Outhouse? I’d like to do a couple of blue cruisers first, to get my legs warmed up.” Hal had suggested this strategy on the drive over as a way to get into the new powder.

“The lifts don’t open to the public until nine, but I have some pull around here.” Daniel Kennedy’s strong New York accent was modulated by the smooth, deep voice of an opera baritone. “How about if you finish breakfast, no hurry, and then we help the ski patrol check out the conditions before we tackle Outhouse? On days like this, I figure they need lots of help. And I need to warm up, too. I’m trying to make these old knees last as many years as I can.”

I tucked a bite of breakfast burrito with chile, truly wimpy chile even by my standards, into my cheek. “Janelle tells me that you’re head of security here, Danny. I guess I don’t know what security problems a ski area has. Um, I’m interested on a professional level, because I’m with the Colorado Bureau of Investigation.”

“Yeah, Jan said you’re here to help the department with growth issues. And I have to say, they need the help.” He sat down at the table with us. “Mostly, our security concerns relate to three areas: petty theft, things like skis and poles and snowboards people leave sitting around; bad behavior, including people going too fast and recklessly, trying to cut into lift lines, drunks being jerks, stuff like that; and a few bigger issues that come up from time to time, like what we’re doing officially today. And I don’t want to talk about it here in public, but we have the usual amount of employee-related security issues.”

“Janelle said you were with the Disney people before this. Is it about the same kind of problems here?”

“More or less. Disneyland and Winter Park are both big recreational facilities. Relatively little truly violent crime in both cases. Mostly, I see my job as preserving the good experience for as much of the clientele as possible. And this involves working with the safety people, too, of course. Also, there’s some PR. I’ve got a date with the county commission tonight for some of that.” He smiled as Janelle returned with coffee for the two of them.

Hal looked up sharply from his breakfast tray. “Oh! That reminds me. Sorry to interrupt, but I don’t want to forget again. Annette, I’m going to the county commission meeting tonight, too. I set it up Monday and forgot to tell you. Five-thirty until who knows. Don’t make me dinner.”

“PR stuff, too?” Daniel looked amused at the thought.

“I guess that’s a good description of it. I’m going to announce this new computing center I’m setting up here. If it goes well, it’s PR; if it falls on its face, well, we’ll see.” Hal grinned. “If you get tired of working here in the next few months, let’s talk. I need to hire a whole bunch of different kinds of people for this thing.”

We polished off our breakfasts and coffee and went outside to buckle up. By a little after eight we were riding up the Zephyr lift, braced against the crisp, single-digit air temperatures under the blue sky that the storm had left in its wake. And the foot of new snow at our house translated to 18 inches at the top of Winter Park—too much new snow to make it possible to ski easy runs.

We spent almost an hour checking out the snow conditions on the steeper runs back to the base—Daniel dutifully reported each time via his radio that the conditions seemed pretty good but that we

needed to check again to be sure—and caught a last ride up just before the lifts opened to the public. In the maze leading to the lift, there was a fair-sized crowd of early-morning powder hounds waiting impatiently, stomping their skis and puffing clouds of steam in the cold air.

With the new snow, Outhouse wasn't nearly as intimidating as usual. There were no exposed rocks, and it was easy to keep to a reasonable speed. Because there had been little wind, the hills and valleys of the mogul field were still visible, making it possible to follow the contours of the surface without surprises. We worked our way down the steep slope toward the area of the fatality—it was easy to spot because of the yellow tape that the ski patrol had used to cordon off the spot.

When we stopped at the edge of the run to discuss how to approach what we now considered a crime scene, Hal spoke first.

“I don't want you folks to rush through your investigation on my account, so, tell you what. I'll just ski on down and take the cat road back over to the same lift and meet you here. Fifteen, maybe twenty minutes or so. I can keep doing that until you're done, OK?” He tried to look innocent, but I knew better.

“You just want first tracks in this powder, don't try to con us, buddy. But that's probably a good idea. We don't need you standing around griping about how slow we are.” I blew him a kiss. “Be careful down there, OK?”

He took off down the steep hill in a cloud of snowflakes, and I turned back to the other two. They were both watching with a mixture of envy and relief—I think their two winters of skiing hadn't quite prepared them for the challenge of new powder on Outhouse.

“So, Janelle, what did you find the other day? Can you point it out before we go in there?” I knew there was no way we could walk around on foot, so we would be side-stepping on our skis. A general overview first would make that much easier.

“Well, you remember we found out, through the good auspices of my friend here,” Janelle twitched a ski pole in the direction of her husband, “that Lannie Young scanned in at the Zephyr lift at 9:01 last Friday. Same place we just were. And she didn't scan in anywhere else. Chances are, she took this run first to catch the new snow before it got chopped up. According to Fran and various other people, she was a hard-core powder skier.”

Daniel was nodding agreement. “And there was more new snow Friday morning than today. Plus, it kept snowing for most of the day Friday, snowing hard.”

“So whatever happened would have been covered up?”

“Right, Annette.” Now Janelle pointed into the woods, toward the big rectangle of yellow ribbon. “Her body was down toward the far left end of the lower ribbon there. From the broken branches, it looks as if she entered the trees about here at a fairly shallow angle.”

“It's as if she was about to make a turn back toward the center of the run when she was pushed. That sent her out of control. She missed the first two trees and hit that branch about head high on the third one. See where it's broken off?” Janelle had her ski pole pointed down the hill into the trees.

I scanned the trees to the left and just above where we were standing. “Seems like, if she was skiing fast down the hill and someone overtook her to push her hard enough to tear her suit and make that wound I saw, well, wouldn't that be likely to put that person out of control, too? What's that?”

I'd seen a flash of color two trees into the woods from where I was standing, well uphill from the taped-off area.

\* \* \*

Hal got more runs in than he bargained for, and eventually he tired himself out and stood around with us to watch Norman Dzeng at work.

Janelle and I decided to call Dzeng after a brief discussion of the new swatch of fabric I'd seen on the branch above the crime scene. Our thinking was that it may have been torn from the perp's ski suit after he pushed Lannie, and we could reinforce this theory if his tracks from the tree that he scraped led down toward where the body was found. Presumably, he would want to check the results of his handiwork.

While waiting for Dzeng, we all took turns guarding the scene and skiing, using the need to keep warm as an excuse. When Dzeng finally arrived, a little after ten on backcountry skis, we were ready for a break.

He skied down Outhouse to where we were waiting for him, executing perfect telemark powder turns with a huge smile. I could tell he would rather have kept going, but he checked to a stop just above us. He was wearing a bulging backpack with snowshoes strapped on its outside, and soon he had the pack off and was on those snowshoes, carrying a shovel and working his way above and around the tree with the fabric swatch. He carefully reached out from above the tree and retrieved the fabric from the short, jagged stump of a branch and put it in a zip-lock bag. Then he looked down the hill at the taped-off area.

"Janelle? You said the body was down at the lower left corner down there?" He was pointing with a ski pole.

"Yep, just to the right of that tree the tape's wound around." She was nodding.

Dzeng studied the terrain and the trees, detoured on his snowshoes well into the trees and down and back about twenty feet below the tree that had snatched the fabric from someone's ski suit. Then he started digging, snow flying over his head and downhill.

After about fifteen minutes, he stopped for a breather. "Janelle? Can you get the camera out of my pack? How about getting a picture of this with the tree up there in the frame? Thanks." Then he went back to playing badger.

Fifteen more minutes of digging plus considerable snowshoe tromping created a platform just downhill of a six-foot wall of snow. He got the camera from Janelle and took at least a dozen pictures of the wall from various angles and distances. Then he waved us over.

I didn't know quite what to expect, beyond snow, but with Dzeng's help there was plenty.

"OK, here's what I was looking for." He used a ski pole like a pointer, starting at the top of the wall, the surface of the new snow.

"This top foot or so is new snow from last night. There's less here than on the run out there because of the trees. Then there's a couple feet of snow from last Friday, this layer here. There was more before it settled. These," he leaned forward and brushed a spot on the wall gently with his glove, "are ski tracks. See how the snow is compressed under them? And how they make slots filled with somewhat different snow?"

He looked wistfully at his skis stuck in the snow at the edge of the run, about twenty feet uphill. "If I had my skis here, I'd be able to prove this next assertion. I brought my powder skis today, the wide ones. And these tracks are wider. That means that the skier here was at an angle to my cross-section—see how the track on our left is a little deeper?—he had his weight more on his right ski and was turning into the woods."

He turned to look downhill, and we all swiveled our shoulders around to follow—standing on skis in a clump, we couldn't move our feet very much without getting tangled up.

"I'm betting he made a right turn around that tree there," he pointed with his pole, "to get over to the body. I'm going to make another smaller cross-section there to see."

While we waited and watched Dzeng dig another trench and platform, Daniel gamely side-stepped up the hill and fetched Dzeng's skis. It dawned on me that I should have done that, as it would have warmed me up. Standing around in the cold was testing my ski clothes to their limit.

Shortly, Dzeng had another cross-section of the snowpack ready for our inspection. There were the two tracks again, this time with the one on our right a little deeper. And there was another track, much wider.

"Janelle, do I remember that you said the body was first found by a snowboarder? Did he say which way he came down the hill?" Dzeng looked up at her.

"Right, that's probably it. He said he came out of the woods about here, I think. But that was on Monday."

"Yeah, that's consistent. He didn't compress the snow so much, but I'd say there was more snow under him than our guy with the torn suit." He looked over the cross-section one last time and nodded. "OK. My assessment is that whoever left that swatch of fabric I've got here in the bag skied down here by the body, and that it was most likely on Friday morning."

He pointed at the two tracks. "See how the snow that's on top of the tracks reflects the light a little differently from the snow right beside it? That's because the character of the daytime snow on Friday was different from that overnight. It was just a little warmer, I'd guess. So, I've got pictures and I see you've been making a sketch, Janelle, and I think we're all set. Hey! Thanks for fetching my skis, Dan."

"No problem, as all my twenty-something employees say. Norm, when do you think we could take down all this yellow tape?"

Dzeng shrugged and looked at Janelle. "Your call, Under-Sheriff Kennedy. We completely finished here?"

She thought about it. "Well, tell you what. I hate to do this, Norm, but one more trench would be a good idea, then we can take the tape down. I want to verify that the guy who left these tracks came into the woods up there where he would have pushed Lannie instead of from up higher in the trees like that 'boarder. Does that make sense?"

Dzeng was crestfallen. "It does, I'm sorry to say. But you folks have to come up and look, ha ha, so you get your exercise, too." He set off on his snowshoes up the hill toward a spot mid-way between the ski run and the tree that had grabbed someone's ski suit.

I felt a poke in the back. "Annette? I'm freezing. I'm going down to get some hot coffee, where we ate breakfast. Meet you there?" Hal had that please? please? expression.

"And I need to get back, too. I heard my code on the radio a couple of minutes ago." Daniel had an earpiece to listen to the ski area's goings on.

"Dan? Before you go, just a second, OK?" Dzeng tromped back down the hill to our position, and then he fumbled in a pocket. "I want to have a close look at your ski suit, the back."

"Look at this, folks." Dzeng was holding the bag with the swatch of fabric he'd taken off the tree next to the yoke of Daniel's ski suit on his left shoulder. From the texture and weave as well as the color, an unusual purplish mauve, it looked like a match to me.

It must have looked like it to Hal also. “Hmm. Dan? I’d say you may have one of those employee-related security issues you mentioned earlier.”

\* \* \*

## Eight

The five of us convened in Daniel’s office at the Winter Park base.

“Hal? Did you say something about needing a security guru for your new organization? You promise there won’t be anything like this to deal with?” Daniel was smiling at his own rhetorical question.

But Janelle’s sense of humor was in hibernation. “Annette? I think I need to back away from this investigation. If a ski area employee is a suspect, I’m too close to Danny and he’s too close to the company for me to be seen as truly objective. I can take on the other two, but this one seems like it might have conflict-of-interest perceptions.”

“I understand. But if all three are linked, then what? Can Fran afford to have you sidelined for all three? Let’s hold that thought for now, though. Danny, I’m going to assume that you’re as interested in finding out whose ski suit that fabric got torn off as I am. Right?” I looked Daniel’s way.

“Absolutely.” He was nodding. “One positive aspect of this big, impersonal corporation that runs the show here now is that nobody gets special treatment. If this were a Mom-and-Pop outfit, I might get pressured to protect somebody. But the company will want this thing sorted out as soon as possible. And I can help, because there’s only one source for these ski suits. Either someone is wandering around with a badly torn suit or someone ordered a new one very recently. But I think Janelle’s right about the possibility of perceptions of conflict of interest, at least until we get more information about whose suit that fabric’s from.”

“You don’t think that the company would try to cover this up?” I was determined to probe a little to gauge his reaction.

Daniel shook his head and frowned. “I strongly doubt it. We have some bean-counters in the front office whose first reaction to something like this would be cover-up, but there are also cooler heads that will prevail, I’m sure. One thing that concerns the company is what I’ll call substantive PR. The implications of having a killer on the staff are substantive. Lots of other things, particularly the local folks who are upset with corporate policy that’s changing their comfortable little world, that stuff the company doesn’t worry much about. I kind of wish they did, but I don’t make that policy.”

“What do you know about the company’s involvement in local water-rights issues? You folks make snow early in the season, right? How does that relate to who owns the water rights?”

“I’m not familiar with all the details, but I believe that an organization called Front Range Water owns the rights to what flows out of the creeks here into the valley. But they don’t worry about us, because what we pump out of the creeks gets stored as snow and they get all of it back. Or at least nearly all of it.” Daniel shrugged. “And even if there were some kind of corporate connection, I don’t see how that could possibly relate to someone’s killing Lannie Young.”

Hal cleared his throat. “Sorry to butt in, but I’m curious. Does Winter Park try to make it snow, you know, by cloud seeding with those ground-based iodide burners like they use farther west?”

Daniel thought for a minute. “Not that I’m aware of. I know what you’re talking about, though. What I’ve heard discussed here is that nobody thinks they work well enough to justify the investment. Plus, we generally get lots of snow. Maybe the burners they use at Vail and Aspen help us somehow, we’re downstream, after all.” He grinned.

I couldn’t think of any other questions. “So, I guess the plan is for you to find out whose ski suit got torn up, right, Danny?”

“I should be able to find out pretty soon. First thing I’ll do is see who has ordered new ones recently, then I’ll figure out how to do an inspection of the troops to see if anyone has a suit that’s been mended on the shoulder.”

Norman Dzeng broke in. “Dan, it looks like the fabric matches your suit, but maybe it matches other retail ones, also.”

“Maybe, but probably not. Each year, we try to get unique suits designed for the ski area employees to wear, sort of like having uniforms. Sometimes next year’s retail products look like ours, but then they’re a year behind. And this color isn’t something I’ve seen on anyone else. I’ve got to say, I think it’s hideous.”

Dzeng nodded understanding. “That leaves only one other possibility—our perp may have ordered more than one suit at the beginning of the year, so neither recent orders nor a torn suit will give him away. But something else will. If you can figure out how to have people take a medical exam, I bet you’ll find that our perp has a gash on one shoulder. From that third cross-section I dug, it looked as if he was seriously out of control when he banged that tree. I’m thinking that fabric didn’t get torn off without collateral damage.”

\* \* \*

“Ladies and gentlemen, I appreciate the opportunity to tell you about a new organization that will soon be founded here in eastern Grand County, over in the upper Fraser Valley. My name is Harold Weathers—I’ll invite everyone to call me Hal—and I’m here to coordinate the founding of this organization while I’m on sabbatical leave from my regular position as Dean of Natural Sciences at Frémont State University down in Durango.”

I was listening from a back corner as Hal, standing at a podium diagonally across the room from me, addressed the Grand County Board of Commissioners at the court house in Hot Sulphur Springs. It was the part of their weekly meeting set aside for public participation and comments, and he had three minutes of celebrity to enjoy, if that’s the right word.

“I’ve been asked to organize a center that will, we hope, assemble and operate the world’s fastest computer. Of course, given the pace at which technology develops, what constitutes the world’s fastest computer is a moving target, but it’s one that we think we can hit.” Hal looked up from his notes and smiled at the commissioners.

“Now, I’m keenly aware that my time here is limited, so rather than to go into detail, I thought I’d simply announce our intention to form this organization and then see if you have questions. As you can imagine, there will be reams of information becoming available in the next few months.”

A woman with a name plaque that read “Commissioner Frieda Swank” spoke up. “Mr. Weathers, you said you are a dean at Frémont State? I don’t quite understand why you wouldn’t be creating this new computer center in Durango. Why here?”

Hal grinned his little devil grin. “Commissioner Swank, you made me lose a bet with myself. I thought that might be the second or third question. I figured the first one would be about where the money is coming from.”

The commissioner looked surprised. “Oh. Well, that, too.”

“The Middle Park Advanced Research Center, which we’ll be calling by its acronym, M-P-A-R-C, pronounced ‘em-park’, will be underwritten by a consortium of high-tech companies, mostly by UNELECO in Colorado Springs. The details are complicated and involve a private foundation, but UNELECO figures in big. They want to use MPARC as a test-bed for their new computer chip technology. Because they want these chips to do useful work, along with being fast, they think that a test-bed that involves real-world computing would be the best thing for their purposes. So we’re going to focus, at first at least, on computer modeling of Earth’s climate, which has been and continues to be one of the most significant computational challenges out there. I’m taking this project on because I’m an earth scientist by training, and I have to tell you it’s tremendously exciting to me. And, to answer your question directly, Commissioner Swank, we’re founding MPARC over in the Fraser Valley because of its proximity, relative to a number of attractive locations, to Boulder, which is a sort of Mecca for this kind of science, and to the Denver metro area. We’re trying to achieve a balance between isolation and availability of big-city amenities and an airport hub. We will be having lots of visitors and plan to host workshops and conferences with people from all over the world. And as much as I would have liked to see the Center founded in Durango, we’re just a little too remote way down there.”

Commissioner Ned Grassel waved a pencil in the air. “This seems pretty ambitious. How big an organization are we talking about, anyway?”

“Probably somewhere around two hundred full-time professional employees, eventually, with facilities and other such operational services contracted out. About half of the MPARC employees would be high-level scientists and engineers, people who probably don’t already live here. Maybe, but probably not. The rest can probably be hired from the local talent pool, we’ll see.” Hal shrugged.

Grassel looked surprised. “So you’re telling us that you’re creating two hundred new jobs?”

“Professional positions, yes. And more, if you count contractor jobs. Plus, we’ll be doing as much of our procurement locally as we can, and I’m certain that there will be a few new businesses created as a result of that.”

Commissioner Alva Hathaway, whose little name plaque also said “Chair,” leaned forward and peered left and right at her colleagues behind the long table. She looked suspicious.

“Mr. Weathers, to me this sounds too good to be true. We’ve had any number of people come before us with plans and promises, but they always want some kind of subsidy, a tax break of some kind, maybe, or something else. Before we get too excited, what is it you want from us?”

Hal was nodding. “I understand your suspicion. But I’m here merely to announce our intentions, not to ask for anything. We’ll be working with local government because we need offices and there will be building inspections and so on. I think probably we’ll have to approach the Town of Winter Park, but I’m not certain. This is going to be a non-profit organization, so it will qualify for property tax exemptions, but we’ve already discussed how to make sure that we pay our fair share of the costs of local services.”

Ned Grassel had been scribbling on a note pad. “Say, I just did a little estimate here. Sounds as if you’ll be putting five million a year or so into the economy here.”

“Well, Commissioner Grassel, we believe that we’re going to have to pay competitive salaries and benefits to our professional staff, competitive with positions over on the Front Range, and if you add

that to the contractor wages and the workshop lodging and catering and so on and do the math, well, I think we're looking at more like five times that much."

Grassel dropped his pencil in surprise. "Holy sh...uh, well, goodness me. But I'm curious about something. Big computers like this need to be connected to the world, right? Not just with the sort of narrow version of broadband we have up here, either. How are you going to get the kind of connections you need?"
